audio-vision: the impact of digital media on public and private space.

From the telegraph to the iPhone, communication technologies have expanded the capacity of the human senses. This lecture will consider the architectural consequences of these technological developments and their impact on our sensory experience of space. Can architects and designers harness new technologies to craft multisensory environments that promote productive social interactions in public space?

Joel Sanders is the Principal of his New York based studio Joel Sanders Architect. Sanders is a Professor of Architecture (Adjunct) at Yale University. JSA projects have been featured in international exhibitions including the MoMA, SF MoMA, The Art Institute of Chicago and Cooper-Hewitt National Design Museum.
