EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report AS IS. Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Compliance Status (Open/Resolved) relates to whether a violation has been corrected/uncorrected. Dismissed violations do not require filing a Certificate of Correction.

ECB Hearing Status and the **ECB Penalty Due** are separate from **Compliance Status** (i.e. a penalty is still due in many cases even when the violating condition has been fixed).

Severity Class	
Class 1 - Immediately Hazardous	HAZ - Hazardous - 1968 Building Code
Class 2 - Major	NON-HAZ - Non-hazardous - 1968 Building Code
Class 3 - Lesser	

Violation Status Descriptions	**ECB Hearing Status**
OPEN - No Compliance Recorded	CURED/IN-VIO - In Violation/no hearing required
OPEN - Certificate Pending (Certificate of Correction submitted and under review)	STIPULATION/IN-VIO - No hearing required/in violation
OPEN - Certificate Disapproved (Certificate of Correction disapproved/not in compliance)	IN VIOLATION - Hearing decision completed
RESOLVED - N/A-Dismissed (at ECB - no Certificate of Correction required)	DISMISSED - Hearing decision completed
RESOLVED - Certificate Accepted (Certification of Correction Accepted/in compliance)	DEFAULT - Respondent failed to appear at hearing
RESOLVED - Cure Accepted (early correction accepted - in violation/no penalty or hearing)	PUBLICLY-OWNED - No hearing required
RESOLVED - Compliance Insp/Doc (condition verified by Inspector or by Dept. documentation)	PENDING - Awaiting ECB hearing or decision
	ADMIT/IN-VIO - In Violation/no hearing required
	WRITTEN OFF - Imposed penalty legally uncollectable

Compliance Status (Open/Resolved) relates to whether a violation has been corrected/uncorrected. Dismissed violations do not require filing a Certificate of Correction.

ECB Hearing Status and the **ECB Penalty Due** are separate from **Compliance Status** (i.e. a penalty is still due in many cases even when the violating condition has been fixed).

Severity Class	
Class 1 - Immediately Hazardous	HAZ - Hazardous - 1968 Building Code
Class 2 - Major	NON-HAZ - Non-hazardous - 1968 Building Code
Class 3 - Lesser	

Violation Status Descriptions	**ECB Hearing Status**
OPEN - No Compliance Recorded	CURED/IN-VIO - In Violation/no hearing required
OPEN - Certificate Pending (Certificate of Correction submitted and under review)	STIPULATION/IN-VIO - No hearing required/in violation
OPEN - Certificate Disapproved (Certificate of Correction disapproved/not in compliance)	IN VIOLATION - Hearing decision completed
RESOLVED - N/A-Dismissed (at ECB - no Certificate of Correction required)	DISMISSED - Hearing decision completed
RESOLVED - Certificate Accepted (Certification of Correction Accepted/in compliance)	DEFAULT - Respondent failed to appear at hearing
RESOLVED - Cure Accepted (early correction accepted - in violation/no penalty or hearing)	PUBLICLY-OWNED - No hearing required
RESOLVED - Compliance Insp/Doc (condition verified by Inspector or by Dept. documentation)	PENDING - Awaiting ECB hearing or decision
	ADMIT/IN-VIO - In Violation/no hearing required
	WRITTEN OFF - Imposed penalty legally uncollectable

FOIL Request No. 13-3587
11/26/2013

Ms. Lynelle Cardone
Emteque LLC
1350 Broadway Suite 1901
New York, NY 10018-

Dear Ms. Cardone:

This is to acknowledge receipt of your Freedom of Information Law request seeking records regarding: **317 & 331 Madison Avenue; 48 E. 43rd Street; 51 E. 42nd Street, New York, NY 10017.**

I have referred your request to the following Records Custodian(s) / Freedom of Information Law Coordinator(s) who may possess the records you are requesting:

Dr. Fawzy Abdelsadek - Region 2
2 Hunters Point Plaza 4740 21st Street
Long Island City, NY 11101-5407 (718) 482-4507

You may expect a response to your request by **12/27/2013.**

If I can be of further assistance, please contact me at (518) 402-9522 . Refer to request number **13-3587** , if you write or call.

Sincerely,

Ruth L. Earl
Records Access Officer

APPENDIX H

QUALIFICATIONS OF THE ENVIRONMENTAL PROFESSIONAL

WES LINDEMUTH, CHMM, ASP

Professional Experience

Emteque, LLC, NYC, NY—Senior Project Scientist (2012 – present)

Dock Street, Brooklyn, NY—Project Manager responsible for the oversight of excavation activities on this OER site during the development of a 46,000 square foot site for mixed use. Work involves the removal of historic fill and other contaminants from the site. The site is currently participating in the NYC Voluntary Clean-up Program, and the excavation is in process. Work will involve the removal of approximately 33,000 cubic yards of contaminated soils and the execution of endpoint sampling and foundation vapor intrusion barrier installation to achieve Track 1 SCOs.

310 West 118th Street, Harlem, NY—Project Manager responsible for spill closure and the closure of the OER reporting for this site in Harlem which involved the removal of and underground storage tanks and the removal of historic fill materials associated with the basement slab and elevator pit installation.

Brooklyn Botanical Garden, Brooklyn, NY—Project Manger currently involved with site soils investigation as they relate to NYCDEP CEQR review process. Has completed the management of a limited Phase II subsurface investigation and currently engaged in conversations with DEP regarding a more extensive Phase II subsurface investigation to meet the NYCDEP requirements under CEQR.

TRC Engineers, Inc., New York, NY—Senior Project Scientist (2006 – 2012)

NYC School Construction Authority, New York City, NY (Associate Project Manager: 2006 – 2012)
Served as Associate Project Manager in connection with proposed new construction, alteration, and leasing of New York City Public Schools including 25 Phase I ESA Environmental Site Assessments, 15 Phase II Environmental Site Investigations, five Vapor Intrusion and Indoor Air Quality Investigations, three UST Closures, four Petroleum Spill Investigations, six PCB Remediation projects, four Product Safety reviews, review of two excavated material disposal plans (EMDPs), preparation of state pollution discharge elimination system (SPDES) permits, Long Island well permits, chemical bulk storage tank closure plan, and New York City Department of Environmental Protection (NYCDEP) sewer use permits. Responsibilities have included all aspects of scope of work and cost estimate preparation, client meetings, subcontractor supervision and work plan implementation, emergency response, report writing including development of conclusions and recommendations.

Spectra Energy, NY/NJ Expansion (Associate Project Manager: 2011 – 2012)
Served as Associate Project Manager during the construction of a natural gas pipeline from New Jersey to New York. The project consisted of the construction of approximately 20.3 miles of multi-diameter pipeline, associated pipeline support facilities, and six new metering and regulating stations. Supervised a team of 10 environmental inspectors performing oversight of construction activities including excavation and off-site disposal of non-hazardous and hazardous soil, treatment of groundwater prior to discharge to the ground surface or surface water body, spill reporting and cleanup, stormwater erosion and control inspection, worker health and safety oversight, and compliance with the Federal Energy Regulatory Commission (FERC) approved work plans. Responsibilities include team supervision, team health and safety oversight, review and distribution of daily reports, soil disposal management and tracking, responding to client requests regarding construction operations.

Professional Experience (cont.)

New York Families for Autistic Children, Queens, NY (Associate Project Manager: 2011 - 2012)
Served as Associate Project Manager providing environmental consulting services to the New York Families for Autistic Children (NYFAC) in connection with acquisition of a city environmental quality review (CEQR) property located in Queens, New York. Services included the review of prior reports and regulatory correspondence (i.e., conditional negative declaration), performance of an Indoor Air Quality Survey, cleanout of two drywells, and vapor intrusion sampling. Responsibilities included all client coordination, proposal preparation, report preparation, and invoicing.

AIMCO, West Harlem Portfolio, Manhattan, NY (Senior Project Scientist: 2006 – 2012)
Performed pre-acquisition due diligence surveys for 95 apartment buildings located throughout Harlem, New York for AIMCO, a real estate investment trust company. Responsibilities included preparation of Phase I Environmental Site Assessments reports for each property as well as radon sampling and implementing several Phase II ESIs. Performed construction oversight for remediation projects including oversight of the removal of an underground storage tank system and oversight of in-situ chemical oxidation for groundwater remediation for AIMCO.

Queens West Development Corporation, Queens, NY (Site Construction Manager: 2008–2010)
Served as the Site Construction Manager during the remediation of a 9-acre designated Brownfield (NYSDEC BCP Site Nos. C241095 and C241096) site in Long Island City, Queens, NY. Supervised the excavation of approximately 100,000 tons of soil under negative-pressure enclosures (tents), removal of LNAPL via high-vacuum extraction and implementation of an in-situ chemical oxidation pilot test using direct injection methods and a 5-foot diameter soil mixing/injection tool, post-excavation (end point) soil sampling, post-remediation groundwater well construction and sampling and soil gas sampling. Supervised supplemental remediation activities including excavation of approximately 10,000 yards of "grossly contaminated" soil below a lower permeability "peat" layer and the water table. Responsibilities included the daily reporting to NYSDEC Region 2, oversight of excavation, dewatering, management of separate phase product, off-site transportation and disposal of excavated material, post-excavation sampling, procurement of clean soil backfill, backfilling of excavations and implementation of the site stormwater pollution prevention plan, community air monitoring program, and health and safety oversight. TRC received a certificate of completion from the NYSDEC in December 2010.

NYC Economic Development Corporation, NY (Assistant Project Manager: 2006 – 2012)
Served as Assistant Project Manager in connection with seven Phase I Site Assessments, four Phase II Environmental Site Investigations, one hazardous material building inspection, an underground storage tank closure and two in-situ soil characterizations. Responsibilities included all aspects of preparation of Phase I ESA reports, all elements of Phase II ESI field investigations, confined space entry during inspection of an underground storage tank vault, and preparation of two winning proposals for in-situ soil characterization. Additionally, responsible for the field inspection services during initial preparation of the Bush Terminal Landfill for development into a park. Responsibilities included inspection of dynamic compaction activities on the landfill, storm water management, soil gas sampling, and installation of groundwater monitoring well network.

National Grid, Rockaway Park Former MGP Site, Queens, NY (Site Health & Safety Manager: 2009 – 2012)
Served periodically as the Site Health and Safety Manager during the remediation of the National Grid Rockaway Park Former Manufactured Gas Plant (MGP) Site located in Queens, NY. TRC served as a subcontractor to Posillico for National Grid during the remediation of the 9.8-acre Rockaway Park Former MGP Site. The remedial activities performed included the excavation of over 150,000 tons of contaminated soil under negative-pressure enclosures (tents) for off-site disposal. Responsible for providing daily health and safety briefings (tool box talks), performing real-time air monitoring in the exclusion zone, implementing the necessary PPE level, performing daily and weekly Health and Safety Inspections, and ensuring all site workers were in full compliance with the approved Site-Specific Health and Safety Plan (HASP).

Professional Experience (cont.)

GDF SUEZ, Astoria Energy Power Plant, Queens, NY (Article X Environmental Inspector: 2010 – 2011)
Served as an Article X Environmental Inspector working on behalf of Suez Energy (owner) during the construction phase of a state-of-the-art Power Generating Facility in Astoria, NY. Article X Environmental Inspector responsibilities included verifying all construction activities and environmental measures were performed in compliance with the certificate conditions, as well as all federal, state and local statutes, ordinances, rules and regulations. Responsibilities included client coordination, oversight of hazardous and non-hazardous waste tracking and disposal, stormwater pollution prevention plan inspection, and health and safety compliance.

Stewart EFI, Yonkers, NY (Senior Project Scientist: 2011)
Served as a Senior Project Scientist and field team leader during the Site Investigation, Remedial Investigation and Remedial Alternative Analysis of NYSDEC Voluntary Clean-up Program (VCP) Site No. V00691-3, and Voluntary Clean-up Agreement (VCA) Index No. W3-1005-04-06 located in Yonkers, New York. The Site consisted of over four acres developed with two parking lots, a residential structure, and a 200,000 square foot industrial building formerly utilized for metal parts manufacturing from 1942 until 2008 when manufacturing operations ceased. Field team leader responsibilities included mapping of on-site floor drains and piping, oversight of a geophysical survey, and implementation of a soil and groundwater investigation program. Responsible for report preparation including formulating conclusions and recommendations, subcontractor coordination, laboratory analytical results review and comparison to applicable regulatory criteria, and coordination with the client and NYSDEC. TRC received a release and covenant not to sue letter from the NYSDEC in October 2011.

Con Edison Inc., New York City, NY (Senior Project Scientist: 2006 – 2010)
Served as Senior Project Scientist for several subsurface investigations and hazardous materials building inspections at Consolidated Edison properties in New York. Served as Project Scientist in connection with six hazardous material building inspections and two Phase II Environmental Site Investigations for Consolidated Edison properties. Responsibilities included implementation of Phase II Environmental Site Investigation field programs and inspections of former substations to identify hazardous materials and characterize building materials prior to planned demolitions.

Atlantic Environmental Solutions, Inc., Hoboken, NJ (Project Scientist: 2005)
Supervised residential and light commercial projects involving: underground storage tank compliance (NJ); soil and groundwater remediation (NJ); Phase I ESAs, Phase II ESI; ISRA, BUST applicability (NJDEP), UST tightness testing (NY), Indoor Air Quality (NY and NJ); and managed asbestos surveys in several states. Project responsibilities included project coordination and implementation, proposal writing, client and subcontractor coordination, NJDEP case manager coordination, report preparation, and budgeting.

EMILY SPOKOWSKI
SENIOR SCIENTIST

Professional Background

Ms. Spokowski came to WCD Group with a background in IAQ, having performed over 500 water intrusion/mold inspections consisting of site visits, data analysis, reporting, and recommendations. Other experiences include: VOC, dust, water, and comfort parameters testing; asbestos, lead and remediation project oversight; HVAC system inspections; providing peer review and legal consult; client management; and training . At WCD Group she functions in the capacity of Senior Scientist and is currently supporting our staff Certified Industrial Hygienists, Mr. R. Christopher Spicer and Mr. D. Joshua Cupriks.

Professional Experience

Senior Scientist **03/2011 – Present**
WCD Group

Hurricane Sandy Phase I & Tier II Reports – GIS mapping, records review, Tier II, and Phase I preparation for applicants of government funded buy-back and remediation programs for homes damaged by Hurricane Sandy.

2 Broadway, New York NY – Performed a follow-up investigation to indoor air quality complaints at an MTA office space, including a thorough visual examination of the office, air sampling for VOCs, comfort parameters, and dust, and inspection of the building's HVAC system. A report and recommendations were prepared following the investigation.

220 East 9th Street, New York NY – Emteque was asked to investigate environmental conditions in the site's basement parking garage after receiving an OSHA complaint regarding potential exhaust fumes, ACM, and mold growth. Ms. Spokowski performed a visual inspection of the space for signs of mold growth/water damage and ACM, as well as performed bulk sampling for potential ACM. Additionally, she used a 5-gas monitor to record real-time data readings of gases that are common contributors to IAQ problems.

94 Union Street, Jersey City NJ – Prepared 19 computer-generated diagrams to indicate the sampling locations of potential ACM bulk samples.

747 Madison Avenue/30 East 65th Street, New York NY – Renovation activities at two retail stores on Madison Avenue caused health and safety concerns at the adjacent residential cooperative building in which the three properties share a basement. Ms. Spokowski provided on-site air monitoring for the total dust concentration and liaised with site contractors and management to implement measures to reduce the airborne concentration of construction dust.

60 Water Street, New York NY. – Oversaw soil removal from the site. This included managing the chain of custody, visibly inspecting the site for excess amounts of dust, setting up equipment for data-logging air monitoring, and photographing/detailing the general work conditions and events.

625 Madison Avenue – Performed a visual water intrusion and mold investigation of a corporate office space. This included a thorough examination of the space and moisture testing. Recommendations were provided and implemented on site.

919 Third Avenue, New York NY – Performed airborne mold spore sampling at a corporate law firm. Following the inspection she performed data analysis of the results to verify their statistical significance.

DRAFT

September 11, 2014

Ms. Jan M. Hilgeman
Vice President – Construction
Hines
499 Park Avenue
New York, NY 10022

Re: Phase II Environmental Site Investigation Report
317 and 327 Madison Avenue, 48 East 43rd Street, and 51 East 42nd Street
New York, New York 10017
Block 1277, Lots 20, 27, 46 and 52
CEQR No. 14DCP188M
WCD Project No. 14-6882

Dear Ms. Hilgeman:

At the request of Hines, WCD Group, LLC (WCD) conducted a Soil and Groundwater Phase II Environmental Site Investigation (ESI) of the property located at 317 and 327 Madison Avenue, 48 East 43rd Street, and 51 East 42nd Street (Block 1277, Lots 20, 27, 46 and 52) in Manhattan, New York 10017 (hereafter referred to as the "Site"). *Figure 1* presents a Site Location Map.

The Site consists of four adjacent lots encompassing approximately 43,313 square feet, improved with a total of four (4) structures that occupy the entire property footprint. The four (4) on-site buildings consist of a 22-story, a 14-story, a 7-story and a 17-story structure. The on-site buildings are occupied by commercial office space with first floor commercial retail space. A one-story basement is located beneath each building and a 2-story basement is located beneath a large portion of the property. The existing structures were constructed from 1913 to 1923.

WCD understands that Hines plans to redevelop the Site. The planned development includes the demolition of the four (4) existing structures and construction of a mixed use structure with full basement encompassing the entire property footprint. To allow construction of the new building the Site will be excavated to a depth of approximately EL +16 or 45 feet below surface grade (i.e., sidewalk).

The primary objective of the Soil and Groundwater Phase II Investigation was to evaluate the condition of subsurface soils and groundwater for the presence of contamination and characterize subsurface soils during the installation of geotechnical borings (installed by Langan Engineering and Environmental Services, Inc. and their sub-contractor Warren George, Inc.) at the Site. The analytical data collected during this study will also assist in preliminarily characterizing the soil anticipated to be excavated for construction of the new building as well as to investigate an open NYSDEC spill case associated with the Site. To accomplish these objectives, fourteen (14) soil borings were advanced on the Site, and six (6) soil samples and three (3) groundwater samples were collected and submitted for laboratory analysis.

BACKGROUND

WCD previously performed a Phase I Environmental Site Assessment (ESA) of each of the four (4) buildings in January 2014. The evaluation revealed no evidence of RECs and/or VECs in connection with the Site except for the following:

One (1) on-site REC/VEC was identified associated with the presence of an on-site NYSDEC spill case listed as open. The New York State Department of Environmental Conservation (NYSDEC) was notified of a release on September 9, 2013 as a result of a release of No. 2 fuel during the cleaning and fuel oil

removal from the 7,500-gallon aboveground storage tank (AST) located in the lowest basement level of 317 Madison Avenue, New York, NY. The NYSDEC assigned Spill Case Number 13-05985 to the Site. The Spill No. 13-05985 is currently listed as open. The building's boiler was converted to natural gas and the AST is currently out-of-service.

Additional, the Phase I ESAs also revealed on-Site environmental concerns associated with suspect asbestos-containing material (ACM), lead-containing paint (LCP) and polychlorinated biphenyls (PCBs) in building materials.

WCD performed an inspection of the tank room on May 30, 2014. The tank room is constructed of poured concrete floors and brick walls. No cracks or penetrations were observed in the floor or walls of the AST room. The floor and walls of the tank room were screened with a photoionization detector and no elevated readings were recorded.

The 7,500-gallon out-of-service AST was registered with the NYSDEC and petroleum bulk storage (PBS) number 2-612267 was assigned to the Site.

DESCRIPTION OF PHASE II ESI FIELD ACTIVITIES

The Phase II ESI field activities were performed from July 10 to August 26, 2014 and consisted of the following:

- Advancement of fourteen (14) geotechnical borings; continuous soil sampling to a maximum depth of 10 feet below top of slab (btos) or EL 48 to 33 and EL 34 to 24 and selection for laboratory analysis of six (6) discrete and six (6) composite soil samples from six (6) borings with sufficient sample recovery.

- Installation of three (3) groundwater monitoring wells and the collection of three (3) groundwater samples for laboratory analysis.

A Site Plan showing all the sampling locations, Site features, tax block and lot number, and anticipated groundwater flow direction is provided as Figure 1. Representative photographs of the field investigation activities are included in Attachment A.

The scope of the field activities and methods are described below.

Subsurface Soil Investigation

A soil sampling program was conducted as part of the Phase II Investigation. Soil samples were collected to assess the current environmental conditions and to preliminarily characterize subsurface soil at the Site. Figure 2 shows the locations of the geotechnical borings advanced at the Site. Fourteen (14) geotechnical soil borings were completed and six (6) soil samples were selected and submitted for laboratory analysis. Soil sampling was conducted in accordance with the procedures set forth in the NYSDEC DER-10 Technical Guidance for Site Investigation and Remediation, dated May 2010 (DER-10).

The subsurface soil sampling was completed between July 10 and August 26, 2014. Warren George, Inc. was retained as a subcontractor by Langan Engineering and Environmental Services, Inc. for drilling services. Direct push and mud-rotary drilling methods, utilizing an electric tripod drill rig, were used to retrieve soil samples from the fourteen (14) boring locations. Soil samples were collected continuously from below the top of slab to 10 feet btos (EL 44 to 33 and 35 to 24), and every five feet from 10 feet btos to a maximum depth of EL 21 (bedrock surface) in 2-foot long, 2-inch diameter split spoon samplers. A description of the soils retained in each sample core was logged by WCD's on-site environmental

scientist and the soils were screened in the field for the presence of volatile organic compounds (VOCs) with a PID. The soil boring logs are presented in Attachment B. Upon completion of each boring the boreholes were backfilled with drill cuttings and grouted to the floor slab.

During the drilling program, there was no evidence of contamination (i.e., elevated PID readings, visual and olfactory indications of petroleum) observed in the soil borings. In general, fill material consisting of red/brown/grey sand, silt, gravel, red brick, concrete, ash and decomposed rock was encountered at the borings advanced on-site. Groundwater was encountered at approximately EL 25 to 28.

The procedure WCD followed for the selection of discrete soil samples for analysis was as follows:

- Six (6) boring locations (LB-1, LB-2, LB-3, LB-5, LB-11 and LB-13) provided sufficient soil for laboratory analysis. Soil samples from the referenced boring locations were collected to characterize on-site soils for off-site disposal/recycling soil samples. Samples were analyzed as follows:

    - One (1) discrete soil sample was collected from each referenced boring location from the two foot depth interval exhibiting the highest potential for contamination (based on field observations and PID readings), and submitted for laboratory analysis (6 discrete samples total). The discrete grab samples were analyzed for the target compound list (TCL)/CP-51 VOCs +10, extractable petroleum hydrocarbons (EPH), total petroleum hydrocarbons (TPH) – gasoline range organics (GRO) and diesel range organics (DRO).

    - One (1) five-point composite soil sample was collected from each of the referenced boring locations (6 composite samples total). The composite samples were analyzed for TCL/CP-51 SVOCs +20, TCL Pesticides, TCL PCBs, TCL Herbicides, TAL Metals (cyanide and hexavalent chromium), RCRA characteristics (ignitability, reactivity and corrosivity) and toxicity characteristic leachate procedure (TCLP) Resource Conservation and Recovery Act (RCRA) metals.

The samples were collected and containerized in accordance with NYSDEC/USEPA protocols. Each container was properly labeled, preserved, and placed in a cooler for transport via courier to Alpha Analytical of Westborough, MA. Alpha is a NYSDOH ELAP-certified analytical laboratory. Standard chain-of-custody procedures were followed. Summaries of the analytical results are included in Table 1 through Table 5, and copy of the analytical report is attached in Attachment D.

Groundwater Investigation

Warren George installed four (4) groundwater monitoring wells at Site boring locations LB-2, LB7, LB-11 and LB-13. Three (3) of the monitoring wells, LB-2, LB-7 and LB-12, were selected for groundwater sampling and were developed on August 22 and 25. The wells were then gauged and sampled on August 25 and 26, 2014. The primary purpose of the gauging and sampling was characterize current groundwater quality conditions at the Site. Figure 2 shows the locations of the four existing groundwater monitoring wells. The groundwater sampling logs are provided in Attachment D.

Warren George installed a 2-inch slotted polyvinyl chloride (PVC) well screen at boring locations LB-2, LB-11 and LB-12; a 1.5-inch slotted PVC screen was installed at LB-7. Each well consists of a 10-foot well screen and 25-foot riser. Silica sand was placed in the annular space around each well for stabilization and filtration.

Following installation, the wells were developed and sampled using Teflon tubing and submersible bladder pump system until the water was reasonably free of turbidity and field readings (pH, conductivity, temperature and dissolved oxygen) sufficiently stabilized.

Prior to sampling each monitoring well, the concentration of VOCs in the headspace was measured using a PID and the well was gauged with an electronic oil/water interface probe. The data was recorded in a field logbook.

The groundwater monitoring wells were sampled following USEPA "low flow" sampling procedures. Groundwater monitoring wells were purged using a stainless steel bladder pump lined with a poly bladder, operated by compressed carbon dioxide, and disposable Teflon lined tubing. Groundwater quality field parameters (i.e., turbidity, temperature, conductivity, pH, oxygen-reduction potential, salinity, and dissolved oxygen) were monitored during well purging using a Horiba U-52 water quality meter equipped with a flow-through cell. The flow rate was maintained between approximately 200-500 milliliters per minute (ml/min). Each groundwater monitoring well was purged until three consecutive stable field parameter readings (at one minute intervals) for the field parameters were recorded.

Water level measurements were recorded during the purging process to confirm that drawdown did not exceed the USEPA-recommended maximum of 0.3 feet, when possible. Groundwater sampling logs are included in Attachment C.

Samples of groundwater were collected immediately after purging in accordance with USEPA guidelines. Groundwater was allowed to flow directly from the Teflon-lined tubing into pre-cleaned laboratory-supplied sample glassware. One trip blank was collected for quality control purposes.

No elevated PID organic vapor readings were recorded at wells LB-2, LB-7 and LB-12. There were no visual or olfactory indications of contamination observed in any of the groundwater samples collected. A slight sulfur-like odor was identified from water collected at LB-12. Non-aqueous phase liquid (NAPL) was not encountered in any of the groundwater monitoring wells during gauging with an electronic oil/water interface probe or sampling.

The samples were containerized in accordance with NYSDEC/USEPA protocols. Each container was properly labeled, preserved, and placed in a cooler for transport via courier to Alpha which is a NYSDOH ELAP certified laboratory. Standard chain-of-custody procedures were followed.

The groundwater samples were analyzed for TCL VOCs +10, TCL SVOCs +15, TCL PCBs and TCL Pesticides, TAL metals (total and field filtered), cyanide and hexavalent chromium. In addition, in support of potential dewatering for building construction, one groundwater sample LB-2 was analyzed for the New York City Department of Environmental Protection (NYCDEP) Sewer Use Parameters. One trip blank sample was submitted for analysis of TCL VOCs +10. The laboratory analytical reports are included in Attachment D.

Purge water and decontamination water from the groundwater sampling were contained in properly labeled steel 55-gallon drums and staged on-Site (pending disposal). Used disposable PPE and sampling equipment (e.g., gloves, tubing, tape, etc.) were placed in heavy-duty plastic bags and disposed of properly on-site.

SITE DESCRIPTION AND PHYSICAL CHARACTERISTICS

The Site consists of four adjacent lots encompassing approximately 43,313 square feet, improved with a total of four (4) structures that occupy the entire property footprint. The four (4) on-site buildings consist of a 22-story, a 14-story, a 7-story and a 17-story structure. The on-site buildings are occupied by commercial office space with first floor commercial retail space. A one-story basement is located beneath each building and a 2-story basement is located beneath a large portion of the property. The existing structures were constructed from 1913 to 1923.

The Site is located in the midtown area of New York City, which is mixed use, consisting of commercial, residential and institutional structures. The Site is bounded to the north by 43rd Street followed by mid- and high-rise commercial buildings with first floor retail space, to the east by Vanderbilt Avenue followed by Grand Central Terminal and mid- and high-rise commercial buildings with first floor retail space, to the south by 42nd Street followed by mid- and high-rise commercial buildings with first floor retail space, and to the west by Madison Avenue followed by mid- and high-rise commercial buildings with first floor retail space.

A site location map is shown on Figure 1 and a sampling location plan is shown on Figure 2.

Topography

Based on field observations, the topography of the immediate Site area is relatively flat. The topography of the surrounding area generally slopes downward to the east. According to the United States Geological Survey (USGS) 7.5-Minute Quadrangle Map (Brooklyn, NY 1995), the elevation of the Site property ranges from approximately 58 to 62 feet above mean sea level (amsl). A copy of the topographic map is presented in Figure 1.

Geology and Soils

The unconsolidated surficial deposits in NYC consist almost entirely of Pleistocene till and stratified drifts. The till was deposited as a ground moraine, is typically discontinuous and less than 25 feet deep in most areas (Perlmutter, Arnow, 1953). The soil survey of New York City classifies site soils to be Pavement and Building. Underlying the unconsolidated Pleistocene deposits is the pre-Cambrian Manhattan Formation, also known as the Manhattan Schist. The schist is typically dark-gray to black micaceous rock composed of biotite, muscovite, quartz, feldspar and small amount of accessory minerals. Locally the formation contains dikes and veins of pegmatitic material. Bedrock has been mapped to contain some joints, irregular fractures, faults and in some places chemical weathering has filled these openings with clay (Perlmutter, Arnow, 1953). Bedrock was encountered during installation of soil borings at the Site at depths ranging from 21 to 43 feet above sea level. In general, fill material consisting of red/brown/grey sand, silt, gravel, red brick, concrete, ash and decomposed rock was encountered at the borings advanced on-site.

Hydrology

The Site is located 3,600 feet west of the East River. Based on a review of the United States Geological Survey (USGS) 7.5-Minute Topographic Quadrangle Map (Brooklyn, New York, 1995), the assumed hydraulic gradient direction is east (towards the East River). Estimated groundwater levels and/or flow directions may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, and dewatering operations. Groundwater was encountered from approximately 25 to 28 feet above sea level at the Site.

DISCUSSION OF FINDINGS

This section presents a discussion of the findings of the Phase II Investigation. Tabulated results of laboratory analyses are presented in the Tables section of this report. Laboratory quality control (QC) issues for specific media, if present, are discussed in the appropriate sections below. Based on a review of the data, the data quality is acceptable for the intended use. The complete laboratory analytical data packages are included in Attachment D.

Applicable Regulatory Standards

This subsection identifies the NYSDEC regulatory standards and guidelines used to evaluate the soil

sample analytical results.

Soil Cleanup Objectives (SCOs)

The Unrestricted Use SCOs found in 6 NYCRR 375-6, Remedial Program Soil Cleanup Objectives are the appropriate standards for use in evaluating the results of the analyses of the ESI soil samples. Soil which is free of contaminants above these standards is suitable for "unrestricted use" which is the land use category without imposed restrictions, such as environmental easements or other land use controls.

In addition, the Soil Cleanup Levels (SCLs) for Fuel Oil Contaminated Soil found in Table 3 of Commissioner Policy 51 (CP-51), "Soil Cleanup Guidance", dated October 21, 2010 were used to evaluate the VOC and SVOC soils data. CP-51 replaces the Technical and Administrative Guidance Memorandum (TAGM) 4046: Determination of Soil Cleanup Objectives and Cleanup Levels (January 24, 1994); the Petroleum Site Inactivation and Closure Memorandum (February 23, 1998); and Sections III and IV of Spill Technology and Remediation Series (STARS) Memo #1 (August 1992).

Groundwater Quality Standards and Guidance Values

The results of the analyses of groundwater samples were compared to New York State Class GA Groundwater Standards and Guidance Values (Class GA Values), in the NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Guidance Values. Ambient water quality standards are enforceable regulatory limits. Where ambient water quality standards do not exist, ambient water quality guidance values were used to evaluate the results.

TCLP Lead Waste Characterization

Analytical results for the TCLP lead waste characterization sampling were compared to the 6 NYCRR Part 373 and 40 CFR Part 261 regulations for characteristic hazardous.

Subsurface Soil Sampling Findings

Based on a review of the data, the data is suitable for its intended use.

Volatile Organic Compounds (VOCs) in Soil

The results of the analysis of the soil samples indicate that no VOCs were detected at concentrations above corresponding Unrestricted Use SCOs and/or SCLs in any of the samples. The analytical data is summarized in Table 1. The analytical data package is presented as Attachment D.

Semi-Volatile Organic Compounds (SVOCs) in Soil

The results of the analysis of the soil samples indicate that no SVOCs were detected at concentrations above corresponding Unrestricted Use SCOs and/or SCLs in any of the samples. The analytical data is summarized in Table 2. The analytical data package is presented as Attachment D.

Metals, Cyanide and Hexavalent Chromium in Soil

The results of the analysis of the subsurface soil sampling indicate that six (6) analyzed metals were detected at concentrations above corresponding Unrestricted Use SCOs. A summary of the compounds and concentrations which exceed Unrestricted Use SCOs is provided below:

Metals Detected in Soil at Concentrations Greater than Unrestricted Use SCOs

Sample ID Date Sampled Collected Sample Depth Units	LB-11 (11-21 ft btos) 7/22/14 mg/kg	LB-3 (1-10 ft btos) 7/15/14 mg/kg	LB-5 (3-5 ft btos) 8/7/14 mg/kg	Unrestricted Use SCO mg/kg
Copper, Total	**73**	**66**	26	50
Lead, Total	19	**350**	13	63
Mercury, Total	0.08	0.03	**1.2**	0.18
Nickel, Total	21	**39**	22	30
Chromium, Hexavalent	0.96	**1.5**	0.86	1

Notes:

Bold **=** Result exceeds Unrestricted Use SCO
mg/kg = milligrams per kilogram
bgs = below ground surface
BTOS = Below top of slab

As the table indicates copper, lead, mercury, nickel, and chromium, hexavalent were detected in one or more soil samples above their respective Unrestricted Use SCOs. WCD attributes the detected metals concentrations exceeding the regulatory criteria to the characteristics of fill material and naturally occurring concentrations at the Site. The analytical data is summarized in Table 3 and the analytical data package is presented in Attachment D.

Pesticides and Herbicides in Soil

The results of the analysis of the subsurface soil sampling indicate that pesticides were not detected in any of the soil samples analyzed. The analytical data is summarized in Table 4. The analytical data package is presented in Attachment D.

Polychlorinated biphenyls (PCBs) in Soil

The results of the analysis of the soil samples indicate that no PCBs were detected at concentrations above corresponding Unrestricted Use SCOs in any of the samples. The analytical data is summarized in Table 5. The analytical data package is presented in Attachment D.

Total Petroleum Hydrocarbons in Soil

The concentrations of TPH-DRO detected in soil range from not detected to 70.2 mg/kg. The concentrations of TPH-GRO detected in soil range from not detected to 0.054 mg/kg. The concentrations of NJ EPH detected in soil range from not detected to 97 mg/kg. There are no applicable regulatory comparison criteria for TPH. TPH results provide information on soil disposal options for soil excavated for new building construction, since disposal facilities in the New York City metropolitan area typically require TPH analyses prior to accepting soil for disposal. The concentrations of TPH noted in the samples will not impact potential soil disposal options. The TPH concentrations detected are consistent with the typical characteristics of urban soils. The analytical data is summarized in Table 6. The analytical data package is presented in Attachment D.

TCLP RCRA Metals in Soil

Lead was detected in the TCLP extract of one composite soil sample, LB-3 (1-10) at a concentration of 8.2 mg/L exceeding the EPA regulatory level of 5 mg/L. No other metals were detected at concentrations above the corresponding EPA regulatory level. Based on the results a portion of the soil will be characterized as Hazardous Waste for disposal. The analytical data is summarized in Table 8. The analytical data package is presented in *Attachment D*.

Groundwater Sampling Findings

Based on a review of the laboratory data qualifications, the usability of the data for its intended use is not affected.

Volatile Organic Compounds (VOCs) in Groundwater

A review of the results of the analyses of groundwater for VOCs indicates that one (1) VOC (toluene) was detected in one sample (LB-2) at a concentration greater than the Class GA Value. A summary of the compound and concentrations which exceed Class GA Values is provided below:

VOC Exceeding Class GA Values in Groundwater

Sample ID Date Sampled Collected Units	LB-2 8/25/14 (µg/L)	Class GA Values (µg/L)
Toluene	**7**	5

Notes:
Bold = Result exceeds Class GA Value

Toluene, the VOC detected above Class GA Values in groundwater as listed above, was not detected in soil above Unrestricted Use SCOs in Site soil samples. The VOC detected in groundwater above Class GA Values is attributed to historic fill and not to a Site release. The analytical data is summarized in Table 7. The complete analytical data report is presented in Attachment D. One trip blank sample was also analyzed for VOCs. VOCs were not detected in the trip blank sample.

Semi-volatile Organic Compounds (SVOCs) in Groundwater

A review of the results of the analyses of groundwater for SVOCs indicates that one SVOC (Bis(2-Ethylhexyl)phthalate) was detected at concentrations greater than the Class GA Value. A summary of the compound and concentrations which exceed Class GA Values is provided below:

SVOCs Exceeding Class GA Values in Groundwater

Sample ID Date Sampled Collected Units	LB-12 8/25/14 (µg/L)	Class GA Values (µg/L)
Bis(2-Ethylhexyl)phthalate	**6.4**	5

Notes:
Bold **=** Result exceeds Class GA Value
N/A = Not applicable

The SVOC detected in groundwater above Class GA Values can be attributed to the presence of on-site historic fill. The analytical data summary table is presented in Table 8. The complete analytical data report is presented in Attachment D.

Metals in Groundwater

A review of the results of the analyses of groundwater for metals indicates that three (3) naturally occurring metals (Iron, manganese, and sodium) were detected at concentrations greater than the Class GA Value. WCD attributes the concentrations of naturally occurring metals to the characteristics of regional water quality and not to on-site operations. A summary of the compound and concentrations which exceed Class GA Values is provided in Table 9.

The analytical results are summarized in Table 9. The complete analytical data report is presented in Attachment D.

Pesticides in Groundwater

The results of the analysis of the groundwater sampling indicate that pesticides were not detected above the applicable regulatory criteria in any of the groundwater samples analyzed. The analytical data is summarized in Table 10. The analytical data package is presented in Attachment D.

PCBs in Groundwater

The results of the analysis of the groundwater sampling indicate that PCBs were not detected above the applicable regulatory criteria in any of the groundwater samples analyzed. The analytical data is summarized in Table 11. The analytical data package is presented in Attachment D.

NYCDEP Sewer Discharge Parameters in Groundwater

The results of analysis of a groundwater sample (LB-2) for the NYCDEP Sewer Discharge Parameters indicate that the results do not exceed the NYCDEP Sewer Use Discharge Parameters. If dewatering is necessary during construction activities, treatment of dewatering effluent may not be required prior to discharge to the municipal sewer.

SUMMARY OF FINDINGS

WCD performed a Phase II ESI at the Site consisting of the advancement of soil borings and installation of groundwater monitoring wells, as well as the collection and laboratory analysis of soil and groundwater samples. The results of the Phase II ESI indicate the following:

- Field observations and screening during soil sampling did not reveal the presence of petroleum impacts or other physical evidence of contamination in any of the soil samples.

- In general, fill material consisting of red/brown/grey sand, silt, gravel, red brick, concrete, ash and decomposed rock was encountered at the borings advanced on-site.

- The results of the analyses of soil samples revealed that the metals copper, lead mercury, nickel and chromium hexavalent were detected in one or more soil samples above their respective Unrestricted Use SCOs. WCD attributes the metals concentrations exceeding the regulatory criteria to the characteristics of fill material and/or naturally occurring concentrations at the Site. No VOCs, SVOCs, PCBs or pesticides/herbicides were detected any of the soil samples at concentrations above Unrestricted Use SCOs and/or CP-51 SCLs.

- Lead was detected in the TCLP extract of one composite soil sample, LB-3 (1-10) at a concentration of 8.2 mg/L exceeding the EPA regulatory level of 5 mg/L. No other metals were detected at concentrations above the corresponding EPA regulatory level. Based on the results a portion of the soil will be characterized as Hazardous Waste for disposal.

- TPH-DRO, TPH-GRO and EPH was detected in soil samples at concentrations that will not adversely impact potential soil disposal options.

- No visual indications of contamination were identified during groundwater sampling. No elevated PID readings were recorded in the headspace from any of the wells. Groundwater was encountered at approximately 25 to 28 feet above sea level at the wells installed at LB-2, LB-7 and LB-11.

- The results of the analyses of the groundwater samples revealed that one VOC (toluene), one SVOC [Bis(2-Ethylhexyl)phthalate], and three (3) naturally occurring metals (Iron, manganese, and sodium) were detected above the corresponding Class GA Values in one or more groundwater samples collected at the Site. No PCBs or pesticides were detected in any of the groundwater samples at concentrations above the applicable Class GA Values. The VOC and SVOC concentrations detected in groundwater above Class GA Values are attributed to the presence of historic fill at the Site. The metals detected in groundwater above Class GA Values are attributed to the characteristics of the aquifer.

- The results of analysis of a groundwater sample (LB-2) for the NYCDEP Sewer Discharge Parameters indicate that the results do not exceed the NYCDEP Sewer Use Discharge Parameters. If dewatering is necessary during construction activities, treatment of dewatering effluent may not be required prior to discharge to the municipal sewer.

CONCLUSIONS AND RECOMMENDATIONS

Based on the results of WCD's Phase II ESI, WCD concludes the following:

- Visible and olfactory indications of contamination were not observed in any of the collected soil and water samples. No elevated PID readings were collected from the soil samples or well headspaces.

- In general, fill material consisting of red/brown/grey sand, silt, gravel, red brick, concrete, ash and decomposed rock was encountered at the borings advanced on-site to maximum depth of approximately 21 feet amsl. Bedrock was encountered from 21 to 43 above mean sea level.

- The results of the analyses of soil samples revealed that no VOCs, SVOCs, PCBs or pesticides were detected in any of the soil samples. The metals copper, lead mercury, nickel and chromium hexavalent were detected in one or more soil samples above their respective Unrestricted Use SCOs. WCD attributes the metals concentrations exceeding the regulatory criteria to the characteristics of fill material and/or naturally occurring concentrations at the Site.

- Lead was detected in the TCLP extract of one soil sample above the EPA Hazardous Waste criteria. WCD concludes that a volume of soil excavated during site redevelopment will be characterized as Hazardous Waste for disposal.

- TPH-DRO, TPH-GRO and EPH was detected in soil samples at concentrations that will not adversely impact potential soil disposal options.

- No visual indications of contamination were identified during groundwater sampling. Groundwater was encountered at approximately 25 to 28 feet above sea level. The results of the analyses of the groundwater samples revealed that one (1) VOC, one (1) SVOC, and three (3) naturally occurring metals were detected above the corresponding Class GA Values in one or more groundwater samples collected at the Site. The VOC, SVOC and metals detected in groundwater above Class GA Values are attributed to the presence of historic fill and characteristics of the aquifer.

Based on the results of the Phase II ESI, WCD recommends implementing the following remediation and environmental control measures during Site redevelopment.

- Site development should involve coordination with the NYSDEC to ensure closure of spill case following completion of development.

- To prevent any potential volatile organic compounds VOCs in soil vapor from entering the new building, a soil vapor barrier should be integrated into the building design.

- WCD recommends properly characterizing the soil to identify appropriate material handling, reuse, and/or disposal requirements. Excavated material should be managed in accordance with applicable federal, state, and local laws and regulations and in consideration of the results of the characterization sampling and analysis. Based on the results of the analyses of soil samples collected during the Phase II ESI, a portion of the material excavated from the Site is expected to be Hazardous Waste and should be identified Hazardous Waste for bidding purposes. Additionally, the project construction specifications should require completion of waste characterization sampling by the contractor.

- Dewatering may be necessary during remedial excavation and the water may not require treatment prior to discharge to the municipal sewer. Dewatering, groundwater treatment, and disposal should be performed in accordance with applicable local, state and federal regulations. Dewatering required during construction should be minimized to mitigate potential influx of contaminated water from off-site sources toward the Site.

- If landscaped areas are incorporated into the development of the Site, a minimum 2-foot thick layer of environmentally clean fill should be placed over existing soil in those areas. Building foundations, pavements and other impervious surface materials would be considered engineering controls for purposes of providing a physical barrier between known contaminated media and building occupants and/or the general public.

Based on the Phase II ESI results, additional investigation is not recommended for the Site.

Please do not hesitate to contact us at (212) 631-9000 if you have any questions.

Sincerely,
WCD CONSULTANTS

Project Number: 14-6882

Lab Number: L1416329
Report Date: 07/29/14

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Lab Number: L1416329
Report Date: 07/29/14

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Metals

L1416329-02 and -04 have elevated detection limits for all elements, with the exception of mercury, due to the dilutions required by matrix interferences encountered during analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Michelle M. Morris

GLOSSARY

Acronyms

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NI - Not Ignitable.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

Report Format: DU Report with 'J' Qualifiers

Project Name:	HINES	**Lab Number:**	L1416329
Project Number:	14-6882	**Report Date:**	07/29/14

Data Qualifiers

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised April 15, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.
EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.
EPA 8330A/B: PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT.
EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.
EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;
EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

For a complete listing of analytes and methods, please contact your Alpha Project Manager.

Lab Number: L1419498
Report Date: 09/03/14

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: HINES
Project Number: 14-6882

Lab Number: L1419498
Report Date: 09/03/14

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The sample was field filtered for Dissolved Metals.

At the client's request, the Trip Blank was analyzed.

Total Metals

L1419498-01: The dissolved results are greater than the total results for some metals. The sample containers were verified as being labeled correctly by the laboratory. The samples were field filtered.

The WG717237-1 Method Blank, associated with L1419498-01, has a concentration above the reporting limit for Potasium and Sodium. Since the associated sample concentrations are greater than 10x the blank concentration for these analytes, no qualification of the results was performed.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NI - Not Ignitable.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

Report Format: DU Report with 'J' Qualifiers

Project Name:	HINES	**Lab Number:**	L1419498
Project Number:	14-6882	**Report Date:**	09/03/14

Data Qualifiers

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised April 15, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.
EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.
EPA 8330A/B: PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT.
EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.
EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;
EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Report Date: 08/15/14

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics

The WG712613-1 Method Blank, associated with L1417905-02, has a TIC detected. The results are qualified with a "B" for any associated sample concentrations that are less than 10x the blank concentration for this TIC.

Metals

L1417905-02 has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

Cyanide, Total

The WG712633-2/-3 LCS/LCSD recoveries (123%/79%), associated with L1417905-02, are above our in-house acceptance criteria, but within the vendor-certified acceptance limits.

The WG712633-2/-3 LCS/LCSD RPD (47%), performed on WG712633-2, is above the acceptance criteria.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NI - Not Ignitable.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

Report Format: DU Report with 'J' Qualifiers

Project Name:	HINES	**Lab Number:**	L1417905
Project Number:	14-6882	**Report Date:**	08/15/14

Data Qualifiers

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised April 15, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.
EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.
EPA 8330A/B: PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT.
EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.
EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;
EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

For a complete listing of analytes and methods, please contact your Alpha Project Manager.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: HINES
Project Number: 14-6882

Lab Number: L1415650
Report Date: 08/12/14

Case Narrative (continued)

Report Submission

This final report replaces the partial report issued July 22, 2014 and includes the results of all requested analyses.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Total Metals

L1415650-02 has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Lisa Westerlind

GLOSSARY

Acronyms

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NI - Not Ignitable.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

Report Format: DU Report with 'J' Qualifiers

Project Name:	HINES	**Lab Number:**	L1415650
Project Number:	14-6882	**Report Date:**	08/12/14

Data Qualifiers

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised April 15, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.
EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.
EPA 8330A/B: PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT.
EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.
EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;
EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

For a complete listing of analytes and methods, please contact your Alpha Project Manager.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

This report replaces the report issued August 13, 2014. TCLP Lead was re-extracted on L1417994-02, and the re-extract result is now reported.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

TCLP Metals

L1417994-02 TCLP Lead re-extraction date and time: 08/31/14 14:30

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

Authorized Signature: Kelly Stenstrom

GLOSSARY

Acronyms

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NI - Not Ignitable.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

Report Format: DU Report with 'J' Qualifiers

Project Name:	HINES	**Lab Number:**	L1417994
Project Number:	14-6882	**Report Date:**	09/05/14

Data Qualifiers

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised April 15, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.
EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.
EPA 8330A/B: PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT.
EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.
EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;
EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

For a complete listing of analytes and methods, please contact your Alpha Project Manager.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: HINES
Project Number: 14-6882

Lab Number: L1415590
Report Date: 08/12/14

Case Narrative (continued)

Report Submission

This final report replaces the partial report issued July 21, 2014 and includes the results of all requested analyses.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics

The WG706086-1 Method Blank, associated with L1415590-02, has a TIC detected. The results are qualified with a "B" for any associated sample concentrations that are less than 10x the blank concentration for this TIC.

Metals

L1415590-02 has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NI - Not Ignitable.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

Report Format: DU Report with 'J' Qualifiers

Project Name:	HINES	**Lab Number:**	L1415590
Project Number:	14-6882	**Report Date:**	08/12/14

Data Qualifiers

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised April 15, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.
EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.
EPA 8330A/B: PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT.
EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.
EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;
EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

Project Name: HINES
Project Number: 14-6882

Lab Number: L1419355
Report Date: 09/03/14

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: HINES
Project Number: 14-6882
Lab Number: L1419355
Report Date: 09/03/14

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

The samples were field filtered for Dissolved Metals.

A Trip Blank was listed on the Chain of Custody, but not received in the laboratory.

Volatile Organics

The WG717922-5 Laboratory Duplicate RPD, performed on L1419355-01, is outside the acceptance criteria for toluene (110%). The elevated RPD has been attributed to the non-homogeneous nature of the sample utilized for the laboratory duplicate.

A matrix spike could not be performed due to insufficient sample volume available for analysis.

Semivolatile Organics

The WG717183-2 LCS recovery, associated with L1419355-01, was below the acceptance criteria for 1,2,4-trichlorobenzene (27%); however, re-extraction could not be performed due to lack of additional sample. The results of the original analyses are reported; however, all results are considered to have a potentially low bias.

Semivolatile Organics by SIM

L1419355-02 has elevated detection limits due to the dilution required by the sample matrix.

PCBs

The surrogate recovery for L1419355-01 was outside the acceptance criteria for decachlorobiphenyl (29%); however, re-extraction could not be performed due to lack of additional sample. The results of the original analysis are reported; however, all associated compounds are considered to have a potential bias.

Project Name: HINES
Project Number: 14-6882

Lab Number: L1419355
Report Date: 09/03/14

Case Narrative (continued)

Pesticides

L1419355-04 has elevated detection limits due to the dilution required by the sample matrix.

Metals

The WG717237-1 Method Blank, associated with L1419355-02 and -04, has concentrations above the reporting limit for potassium and sodium. Since the associated sample concentrations are greater than 10x the blank concentration for this analyte, no qualification of the results was performed.

Dissolved Metals

L1419355-02, -04: The dissolved results are greater than the total results for some metals. The sample containers were verified as being labeled correctly by the laboratory.

Non-Polar Material

A laboratory duplicate could not be performed due to insufficient sample volume available for analysis.

CBOD, 5 day

A laboratory matrix spike could not be performed due to insufficient sample volume available for analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NI - Not Ignitable.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

Report Format: DU Report with 'J' Qualifiers

Project Name:	HINES	**Lab Number:**	L1419355
Project Number:	14-6882	**Report Date:**	09/03/14

Data Qualifiers

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised April 15, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.
EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.
EPA 8330A/B: PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT.
EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.
EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;
EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, **EPA 350.1**: Ammonia-N, **LACHAT 10-107-06-1-B**: Ammonia-N, **SM4500NO3-F, EPA 353.2**: Nitrate-N**, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**
EPA 624: Volatile Halocarbons & Aromatics,
EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs
EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045**: PCB-Oil.
Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF**.

Report Date: 08/08/14

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY
For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: HINES
Project Number: 14-6882
Lab Number: L1417248
Report Date: 08/08/14

Case Narrative (continued)

Report Submission

There was not enough of either sample left to perform the PCB and Herbicide analyses and they were cancelled with the client's authorization.

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Semivolatile Organics by SIM

L1417248-02 has elevated detection limits due to the dilution required by the sample matrix.

Total Metals

L1417248-02 has elevated detection limits for all elements, with the exception of mercury, due to the dilution required by matrix interferences encountered during analysis.

Cyanide, Total

The WG710797-2 LCS recovery (134%), associated with L1417248-02, is above Alpha's in-house acceptance criteria, but within the vendor-certified acceptance limits. The results of the original analysis are reported. In addition, the LCS/LCSD RPD (81%) is above the acceptance criteria.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL - Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).

EPA - Environmental Protection Agency.

LCS - Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD - Laboratory Control Sample Duplicate: Refer to LCS.

LFB - Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

MDL - Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

MS - Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD - Matrix Spike Sample Duplicate: Refer to MS.

NA - Not Applicable.

NC - Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

NI - Not Ignitable.

RL - Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD - Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

SRM - Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Total: With respect to Organic analyses, a 'Total' result is defined as the summation of results for individual isomers or Aroclors. If a 'Total' result is requested, the results of its individual components will also be reported. This is applicable to 'Total' results for methods 8260, 8081 and 8082.

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.

C - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

G - The concentration may be biased high due to matrix interferences (i.e, co-elution) with non-target compound(s). The result should be considered estimated.

Report Format: DU Report with 'J' Qualifiers

Project Name:	HINES	**Lab Number:**	L1417248
Project Number:	14-6882	**Report Date:**	08/08/14

Data Qualifiers

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

I - The lower value for the two columns has been reported due to obvious interference.

M - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.

NJ - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.

P - The RPD between the results for the two columns exceeds the method-specified criteria.

Q - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

S - Analytical results are from modified screening analysis.

J - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

ND - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

Report Format: DU Report with 'J' Qualifiers

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised April 15, 2014

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility
EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.
EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.
EPA 8330A/B: PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT.
EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene,1,4-Diphenylhydrazine.
EPA 625: 4-Chloroaniline, 4-Methylphenol.
SM4500: Soil: Total Phosphorus, TKN, NO2, NO3.
EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility
EPA 8270D: Biphenyl.
EPA 2540D: TSS
EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water
EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7**: Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;
EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2**: Nitrate-N, Nitrite-N; **SM4500NO3-F**: Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, SM2320B, SM2540C, SM4500H-B**
EPA 332: Perchlorate.
Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water
EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;
EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;

Re: Soil and Groundwater Investigation Work Plan
317 and 327 Madison Avenue, 48 East 43rd Street and 51 East 42nd Street
New York, New York 10017
Block 1277, Lots 20, 27, 46 and 52
CEQR No. 14DCP188M
WCD Project No. 14-7123

Dear Ms. Hilgeman:

WCD Group, LLC (WCD) is pleased to present this scope of work to conduct Soil and Groundwater Investigation services for the properties located at 317 and 327 Madison Avenue, 51 East 42nd Street and 48 East 43rd Street, New York, NY 10017 (the "Site"). The Site was assigned City Environmental Quality Review (CEQR) No. 14DCP188M. The primary objective of the Soil and Groundwater Investigation will be to evaluate the condition of subsurface soils and groundwater for the presence of contamination and characterize subsurface soils during the installation of geotechnical borings (to be installed by others) at the Site. WCD understands Hines plans to demolish the four (4) existing structures and redevelop the Site.

The Site encompasses approximately 43,313 square feet and is improved with a total of four (4) structures that occupy the entire property footprint. The four (4) on-site buildings consist of a 22-story, a 14-story, a 7-story and a 17-story structure. The on-site buildings are occupied by commercial office space with first floor commercial retail space. A one-story basement is located beneath each building. In addition, a 2-story basement is located beneath a large portion of the property. The legal description of the Site is Block 1277 Lots 20, 27, 46 and 52. The existing structures were constructed from 1913 to 1923.

BACKGROUND

The New York State Department of Environmental Conservation (NYSDEC) was notified of a release on September 9, 2013 as a result of a release of No. 2 fuel during the cleaning and fuel oil removal from the 7,500-gallon aboveground storage tank located in the lowest basement level of 317 Madison Avenue, New York, NY. The NYSDEC assigned Spill Case Number 13-05985 to the Site. The Spill No. 13-05985 is currently listed as open. The buildings boiler was converted to natural gas the AST is currently out-of-service. WCD performed an inspection of the tank room on May 30, 2014. The tank room is constructed of poured concrete floors and brick walls. No cracks or penetrations were observed in the floor or walls of the AST room. The floor and walls of the tank room were screened with a photoionization detector and no elevated readings were recorded. The AST will be registered with the NYSDEC and the NYSDEC will be petitioned to close the open spill.

WCD understands that to allow construction of the proposed new structures the Site will be excavated to a depth of approximately EL +16 or 45 feet below surface grade. The depth to groundwater at the Site is unknown however, flowing water is located in the second basement level at an estimated elevation of EL +20. Based on available literature bedrock is expected to be located at approximately EL +40 or 18 feet bgs (the Site basements are expected to be underlain by a small amount of fill followed by bedrock).

INVESTIGATION SCOPE OF WORK

WCD understands that Langan (or similar firm) will be retained by Hines to perform a geotechnical investigation at the Site. The proposed geotechnical investigation (to be performed by others) will consist of the installation of sixteen (16) borings to the bedrock surface and then coring at least five (5) feet into the bedrock surface. WCD understands that spilt spoons samples will be collected continuously to a depth of 10 feet bgs and every five (5) feet thereafter to the bedrock surface. The proposed soil boring locations are shown on the attached Figures.

The number of the proposed soil samples, described further below, were selected to provide representative samples of soil sufficient to obtain approval letters from typical soil disposal/recycling facilities. In addition, groundwater samples will be collected to determine the condition of groundwater at the Site and obtain the analytical data necessary to obtain a NYCDEP Sewer Use Permit to allow dewatering of the Site.

WCD will perform the following tasks under this proposal:

Task 1 – Health and Safety Plan/Mobilization

Under this task WCD will prepare a brief site-specific Health and Safety Plan (HASP) for the Soil and Groundwater Investigation. The HASP will be prepared by WCD to assign responsibilities and establish personnel protection standards and mandatory safety practices and procedures for the field investigation program. The HASP is intended to minimize health and safety risks resulting from known and potentially hazardous materials encountered during the field investigation and will be developed in accordance with pertinent guidelines.

Task 2 – Soil Sampling

Soil sampling will include the following:

- WCD will observe the installation sixteen (16) geotechnical borings at the Site. The boring locations will be determined by Langan.

- WCD understands Langan will use steel casing to advance 2-foot long 2-inch diameter split spoon samplers to collect soil samples. Soil samples will be collected continuously to approximately 10 feet below grade surface (bgs) and every five (5) feet thereafter to the bedrock surface. Soil samples collected from each boring will be screened by WCD with a PID and inspected for indications of contamination (e.g., staining, odors, etc.). Geologic descriptions of the soil and field screening results will be recorded in field logs.

- To characterize on-site soils for off-site disposal/recycling soil samples will be selected at each boring location for laboratory analysis as follows:

    - One discrete soil sample which represents the two foot depth interval exhibiting the highest potential for contamination (based on field observations and PID readings), will be submitted for laboratory analysis from 0 to 10 ft bgs.

    - The discrete grab sample collected from 0 to 10 feet bgs will be analyzed for the target compound list (TCL)/CP-51 VOCs +10, extractable petroleum hydrocarbons (EPH), total petroleum hydrocarbons (TPH) – gasoline range organics (GRO) and diesel range organics (DRO).

  - One (1) five-point composite soil sample will be collected from each boring from the 0 to 10 foot interval (16 composite samples total). The composite samples will be analyzed for TCL/CP-51 SVOCs +20, TCL Pesticides, TCL PCBs, TCL Herbicides, TAL Metals (cyanide, mercury and hexavalent chromium), RCRA characteristics (ignitability, reactivity and corrosivity). In addition, if the total concentration of a detected metal indicates the material may be characterized as hazardous (i.e., the detected total concentration is more than 20 times the RCRA toxicity regulatory level) the sample will be analyzed for toxicity characteristic leachate procedure (TCLP). For the purposes of this proposal it is assumed one (1) soil sample will be analyzed for TCLP lead.

- Soil samples will be containerized in laboratory prepared jars, labeled, sealed, and placed in a chilled cooler for shipment to the laboratory. Soil samples will be analyzed by an ELAP-certified laboratory approved by the NYSDOH.

- WCD will not collect samples of bedrock for laboratory analysis.

Task 3 – Groundwater Sampling

Groundwater sampling will include the following:

- WCD will observe the installation of at least one (1) groundwater monitoring well at the Site. The groundwater monitoring well location will be determined by Langan. In addition, WCD will collect a sample of the standing water located in the basement.

- WCD understands Langan will install groundwater monitoring wells using dedicated threaded one-inch diameter schedule 40 polyvinyl chloride (PVC) well casing and 10-slot well screen WCD will produce well construction diagrams.

- The groundwater monitoring wells will be completed with a secure locking plug and protective flush mount manhole. Well construction diagrams will be prepared for each well.

- Following installation, the groundwater monitoring wells will be developed using a submersible or peristaltic pump until the water is reasonably free of turbidity and field parameter readings (pH, conductivity, temperature, and dissolved oxygen) sufficiently stabilize. Fifty nephelometric turbidity units (NTUs) or less will be the turbidity goal, but not an absolute value. The groundwater monitoring wells will be allowed to equilibrate for at least 1 day prior to sampling.

- Prior to sampling, head space measurements will be collected from each well using a PID. An oil/water interface probe will be used to gauge the depth to groundwater and measure the thickness of light non-aqueous phase liquid (LNAPL), if present. If LNAPL is encountered, a sample of the LNAPL will be obtained for laboratory analysis, if sufficient LNAPL volume is present. If LNAPL is present in a well, groundwater from that well will not be analyzed.

- Groundwater sampling will be performed in accordance with USEPA's "Low Stress (low flow) Purging and Sampling Procedure for the Collection of Groundwater Samples from Monitoring Wells", January 19, 2010 revision. Data will be recorded in the field logbook.

- Groundwater samples collected from the monitoring wells will be analyzed for TCL VOCs +10, TCL SVOCs +15, TCL PCBs and TCL Pesticides, TAL metals (total and field filtered), cyanide and hexavalent chromium. In addition, in support of potential dewatering for building construction, one (1) groundwater sample will be additionally analyzed for the New York City Department of Environmental Protection (NYCDEP) Sewer Use Parameters. Since dedicated sampling

equipment will be used, an equipment blank sample is not required. However, a laboratory-prepared trip blank will also be analyzed for TCL VOCs +10.

- Groundwater samples will be containerized in laboratory prepared jars, labeled, sealed, and placed in a chilled cooler for shipment to the laboratory. Groundwater samples will be analyzed by an ELAP certified laboratory approved by the NYSDOH.

- Decontamination water, development water, purge water, PPE and disposable sampling equipment will be drummed and staged on the Site, pending receipt of the laboratory waste characterization results. IDW will be properly disposed off-site at a permitted facility.

Task 4 – Report Preparation

A Soil and Groundwater Investigation Report will be prepared after the laboratory results are received. The report will document the results of the sampling effort, present soil and groundwater sampling data, present the analytical results and include comparisons of the analytical data to the appropriate guidelines and regulations, as published by the USEPA, NYSDEC and NYCDEP. The report will also include an evaluation of the quality of the analytical data and the reliability of the data for its intended use.

The report will also provide conclusions, and recommendations for further sampling or additional actions, if appropriate. In addition, the report will include remedial cost estimates, based on the results of the investigation, as appropriate.

SCHEDULE

Upon acceptance of the Site Investigation Scope of Work and Proposal by Hines, WCD will submit the Site Investigation Scope of Work to the NYCDEP for review and approval. Upon acceptance of the Site Investigation Scope of Work by the NYCDEP, WCD will coordinate with the geotechnical investigation contractor (Lagan) regarding performance of the work. Laboratory data is expected to be received five (5) days after the date of delivery of samples to the laboratory. WCD will prepare and submit a Soil and Groundwater Investigation Report within three (3) weeks of performing the work.

If you have any questions or require additional information, please contact me at (212) 631-9000.

Respectfully Submitted,

WCD GROUP LLC

GENERAL NOTES:

1. BACKGROUND INFORMATION PROVIDED BY A SURVEY PERFORMED BY LANGAN ENGINEERING, ENVIRONMENTAL, SURVEYING AND LANDSCAPE ARCHITECTURE, D.P.C, DATED 13 DECEMBER 2012 REVISED 17 OCTOBER 2013, ENTITLED "TOPOGRAPHIC AND UTILITY SURVEY".
2. ELEVATIONS SHOWN ON THIS PLAN ARE IN BOROUGH PRESIDENT OF MANHATTAN DATUM, 2.75 FT ABOVE USG&CS DATUM (MEAN SEA LEVEL AT SANDY HOOK, NJ, 1929).
3. LIMITS OF EXISTING BUILDINGS AT ONE LEVEL BELOW GRADE LEVEL ARE TAKEN FROM:
   - 51 EAST 42ND STREET – INFORMATION BASED ON A DRAWING PROVIDED BY SL GREEN REALTY CORP. ENTITLED "51 EAST 42ND STREET, BASEMENT";
   - 331 MADISON AVENUE – INFORMATION BASED ON A DRAWING PROVIDED BY SL GREEN REALTY CORP. ENTITLED "331 MADISON AVENUE, BASEMENT";
   - 317 MADISON AVENUE – INFORMATION BASED ON A DRAWING PROVIDED BY SL GREEN REALTY CORP. ENTITLED "317 MADISON AVENUE, BASEMENT";
   - 48 EAST 43RD STREET – INFORMATION BASED ON A DRAWING PROVIDED BY SL GREEN REALTY CORP. ENTITLED "48 EAST 43RD STREET, BASEMENT";

DRILLING NOTES AND PROCEDURES:

1. CONTRACTOR TO PLACE "ONE CALL" FOR UTILITY MARKOUT PRIOR TO DRILLING.
2. DRILLING WILL BE PERFORMED UTILIZING A TRUCK MOUNTED DRILL RIG.
3. STEEL CASING (4–1/2 INCH OUTER DIAMETER) AND BENTONITE DRILLING FLUID OR REVERT WILL BE USED TO SUPPORT THE SOIL DURING DRILLING. A 2–1/2–INCH–OUTER–DIAMETER SPLIT SPOON SAMPLER WILL BE USED TO OBTAIN SOIL SAMPLES FOR CLASSIFICATION AND LABORATORY TESTING.
4. IN CASE THE BOREHOLE COLLAPSES, USE CASING ALL THE WAY DOWN THE BORING DEPTH.
5. FOR THE TOP 10 FEET, THE CASING WILL BE ADVANCED IN 5–FOOT SECTIONS. THE BORING WILL BE DRILLED USING DRILLING FLUID AHEAD OF THE CASING TO ALLOW FOR CONTINUOUS SPLIT SPOON SAMPLING.
6. BELOW 10 FEET, SPLIT SPOON SAMPLES WILL BE OBTAINED AT 5–FOOT INTERVALS. THE CASING WILL BE ADVANCED TO ABOVE THE SAMPLE LOCATION, A 3–7/8–INCH–DIAMETER TRICONE ROLLER BIT WILL BE USED TO CLEAN SOIL CUTTINGS OUT OF THE CASING, AND A SAMPLE WILL BE OBTAINED FROM THE SOIL BELOW THE CASING.
7. IF THE CASING HITS AN OBSTRUCTION (I.E. BOULDERS), A 3–7/8–INCH–DIAMETER TRICONE ROLLER BIT WILL BE USED TO DRILL THROUGH THE OBSTRUCTION (AHEAD OF THE CASING), AND THE CASING WILL BE ADVANCED.
8. IF BEDROCK IS ENCOUNTERED, CASING WILL BE ADVANCED TO TOP OF ROCK AND BEDROCK WILL BE CORED IN 5–FT RUNS USING AN NX–SIZE CORE BARREL, WHILE MAINTAINING INTERNAL FLUSH RETURN.
9. THE BOREHOLE WILL BE TREMIE GROUTED UPON COMPLETION. THE CASING WILL BE PULLED OUT OF THE GROUND AS THE BOREHOLE IS GROUTED.

Re: Vanderbilt Corridor and One Vanderbilt
317, 331, 335, 341, 345, 347, 383 Madison Avenue; 51 East 42nd Street; 44, 48 East 43rd Street; 50, 52 Vanderbilt Avenue; and 45 East 45th Street
Block 1277, Lots 20, 27, 46, and 52; Block 1278, Lot 20; Block 1279, Lots 23, 24, 25, 28, 45, and 48; Block 1281, Lot 21; and Block 1282, Lot 21
CEQR # 14DCP188M
New York, New York

Dear Mr. Dobruskin:

The New York City Department of Environmental Protection, Bureau of Environmental Planning and Analysis (DEP) has reviewed the June 2014 Environmental Assessment Statement prepared by the New York City Department of City Planning (DCP) and Green 317 Madison LLC (317 Madison) (applicant), the January 2014 Phase I Environmental Site Assessment Reports (Phase I), and the July 2014 Phase II Environmental Site Assessment Work Plan (Phase II Work Plan) prepared by WCD Group, LLC. It is our understanding that the applicant is proposing a series of discretionary actions that would facilitate commercial development along Madison and Vanderbilt Avenues in Manhattan, improve pedestrian circulation within Grand Central Terminal and its vicinity, and allow greater opportunity for area landmarks to transfer their unused development rights. The area affected by the proposed actions includes the five blocks of the proposed Vanderbilt Corridor between East 42nd and East 47th Streets and the 12,820-square-foot portion of Vanderbilt Avenue between East 42nd and East 43rd Streets in the Grand Central Subdistrict of the Special Midtown District of Manhattan Community District 5.

DCP is proposing the following actions:

- Zoning text amendment to: 1) create the "Vanderbilt Corridor" and a new special permit under which the City Planning Commission may approve bonus floor area (the "Grand Central Public Realm Improvement Bonus") in connection with public space and transit improvements related to development within the Vanderbilt Corridor; 2) increase the maximum floor

area ratio (FAR) from 21.6 to 30.0 for sites in the Vanderbilt Corridor utilizing the existing Landmark transfer special permit available in the Grand Central Subdistrict of the Special Midtown District; and 3) modify the uses permitted in the Vanderbilt Corridor to allow the development, conversion, or enlargement of hotels only by a new special permit. The proposed Vanderbilt Corridor includes five blocks along the west side of Vanderbilt Avenue between East 42nd and East 47th Streets. Block 1277, located between East 42nd and East 43rd Streets, has a site area of 43,313 square feet and is occupied by four 7- to 22-story buildings. Block 1278, located between East 43rd and East 44th Streets, has a site area of 43,313 square feet and is developed with one building. Block 1279, located between East 44th and East 45th Streets, has a site area of 43,261 square feet, and contains four office buildings, a ventilation building for the under-construction East Side Access project of the Metropolitan Transportation Authority, and the Yale Club building. Block 1281, located between East 45th and East 46th Streets, has a site area of 43,313 square feet, and contains the Roosevelt Hotel. Block 1282, located between East 46th and East 47th Streets, has a site area of 43,313 square feet and contains one office building.

- A City Map amendment to designate the portion of Vanderbilt Avenue between East 42nd and East 43rd Streets as a "public place" dedicated to pedestrian uses, to be owned by the City under the jurisdiction of the New York City Department of Transportation.

317 Madison is proposing to apply for the following:

- Special permits proposed pursuant to the proposed Grand Central Public Realm Improvement Bonus and FAR transfer to facilitate the redevelopment of the block bounded by East 43rd Street to the north, East 42nd Street to the south, Madison Avenue to the west, and Vanderbilt Avenue to the east. The special permits would involve public realm improvements in the surrounding area and the transfer of excess development rights from the New York City Landmark Bowery Savings Bank located at 110 East 42nd Street.

317 Madison owns the portion of Block 1277 (Lots 20, 27, 46, and 52) in the proposed Vanderbilt Corridor and bounded by East 42nd and East 43rd Streets and Madison and Vanderbilt Avenues (the "One Vanderbilt development site"). Under the proposed actions an approximately 67-story commercial tower containing approximately 1.8 million gross square feet of space (the "proposed One Vanderbilt building") would be built. The commercial program for the proposed One Vanderbilt building is expected to include the following components: approximately 1,079,000 square feet (sf) of office space, approximately 246,000 square feet of trading floors, approximately 53,000 sf of retail, approximately 27,000 sf of restaurant space, and approximately 55,000 sf of rooftop amenity space, which may include tenant amenity space, restaurant space, and a public observation deck. This expected program would also include approximately 343,500 sf of space for circulation, mechanical, core, back-of- house, and loading uses. The building would have two levels below grade: the first level would connect to the pedestrian circulation network serving Grand Central Terminal and the second level would contain a loading dock accessible from East 43rd Street via two truck elevators. It is proposed that most of the new retail space would be located along Madison Avenue at grade, with possible additional retail space on the second floor and on the first below grade level. Pursuant to the

proposed zoning text amendment and special permit, the proposed One Vanderbilt building would include on-site transit-related improvements.

There are no specific proposals to redevelop the four blocks of the proposed Vanderbilt Corridor north of the One Vanderbilt development site (portions of Blocks 1278, 1279, 1281, and 1282), but it is conceivable that one or more of these sites would be redeveloped in the foreseeable future pursuant to the proposed actions.

The January 2014 Phase I report for Block 1277, Lot 20 revealed that historical on-site and surrounding area land uses consisted of a variety of residential, commercial, and industrial uses including commercial, institutional, and residential properties, parks, hotels, a safety deposit box facility, churches, a school, a library, dry cleaners, Grand Central Terminal, banks, a museum, a chemist club, the Cornell Club of NY, a substation, restaurants, an athletic club, a synagogue, clothiers, auto repair, and parking garages. Fluorescent lighting fixtures and electrical equipment may include polychlorinated biphenyl (PCB)-containing components as well as mercury-containing components. Based on the age of the subject building asbestos containing materials (ACM) and lead based paints (LBP) could be present in the on-site structure. The New York State Department of Environmental Conservation (NYSDEC) SPILLS database identified 57 spills within a 1/8-mile radius of the project site and the NYSDEC leaking storage tank incident reports (LTANKS) database identified 92 LTANKS within a 1/2-mile radius of the project site. It should be noted that there is active status spill (Spill No. 1305985) on the subject property. The regulatory agency database search identified three (3) manufactured gas plants sites within a 1-mile radius of the subject property.

The January 2014 Phase I report for Block 1277, Lot 27 revealed that historical on-site and surrounding area land uses consisted of a variety of residential, commercial, and industrial uses including commercial, institutional, and residential properties, parks, hotels, a safety deposit box facility, churches, a school, a library, dry cleaners, Grand Central Terminal, banks, a museum, a chemist club, the Cornell Club of NY, a substation, restaurants, an athletic club, a synagogue, clothiers, auto repair, and parking garages. Fluorescent lighting fixtures and electrical equipment may include PCB-containing components as well as mercury-containing components. Based on the age of the subject building ACM and LBP could be present in the on-site structure. The NYSDEC SPILLS database identified 47 spills within a 1/8-mile radius of the project site and the NYSDEC LTANKS database identified 90 LTANKS within a 1/2-mile radius of the project site. It should be noted that there is active status spill (Spill No. 1305985) located adjacent to and west of the subject property. The regulatory agency database search identified three (3) manufactured gas plants sites within a 1-mile radius of the subject property.

The January 2014 Phase I report for Block 1277, Lot 46 revealed that historical on-site and surrounding area land uses consisted of a variety of residential, commercial, and industrial uses including commercial, institutional, and residential properties, parks, hotels, a safety deposit box facility, churches, a school, a library, dry cleaners, Grand Central Terminal, banks, a museum, a chemist club, the Cornell Club of NY, a substation, restaurants, an athletic club, a synagogue, clothiers, auto repair, and parking garages. Fluorescent lighting fixtures and electrical equipment may include PCB-containing components as well as mercury-containing components. Based on the age of the subject building ACM and LBP could be present in the on-site structure. The

NYSDEC SPILLS database identified 47 spills within a 1/8-mile radius of the project site and the NYSDEC LTANKS database identified 90 LTANKS within a 1/2-mile radius of the project site. It should be noted that there is active status spill (Spill No. 1305985) located adjacent to and south and west of the subject property. The regulatory agency database search identified three (3) manufactured gas plants sites within a 1-mile radius of the subject property.

The January 2014 Phase I report for Block 1277, Lot 52 revealed that historical on-site and surrounding area land uses consisted of a variety of residential, commercial, and industrial uses including commercial, institutional, and residential properties, parks, hotels, a safety deposit box facility, churches, a school, a library, dry cleaners, Grand Central Terminal, banks, a museum, a chemist club, the Cornell Club of NY, a substation, restaurants, an athletic club, a synagogue, clothiers, auto repair, and parking garages. Fluorescent lighting fixtures and electrical equipment may include PCB-containing components as well as mercury-containing components. Based on the age of the subject building ACM and LBP could be present in the on-site structure. The NYSDEC SPILLS database identified 51 spills within a 1/8-mile radius of the project site and the NYSDEC LTANKS database identified 92 LTANKS within a 1/2-mile radius of the project site. It should be noted that there is active status spill (Spill No. 1305985) located adjacent to and south of the subject property. The regulatory agency database search identified three (3) manufactured gas plants sites within a 1-mile radius of the subject property.

Block 1277, Lots 20, 27, 46 and 52 ("One Vanderbilt development site")

The July 2014 Work Plan proposes to conduct soil and groundwater sampling. Sixteen soil borings will be conducted. Soil samples will be collected continuously to approximately 10 feet below grade surface (bgs) and every five (5) feet thereafter to the bedrock surface.

To characterize on-site soils for off-site disposal/recycling soil samples will be selected at each boring location for laboratory analysis as follows:

- One discrete soil sample which represents the two foot depth interval exhibiting the highest potential for contamination (based on field observations and photoionization detector readings), will be submitted for laboratory analysis from 0 to 10 feet bgs and analyzed for Target Compound List (TCL)/CP-51 volatile organic compounds (VOCs) +10, extractable petroleum hydrocarbons, total petroleum hydrocarbons – gasoline range organics and diesel range organics.

- One (1) five-point composite soil sample will be collected from each boring from the 0 to 10 foot interval (16 composite samples total) and analyzed for TCL/CP-51 semi-volatile organic compounds (SVOCs) +20, TCL pesticides, TCL polychlorinated biphenyls (PCBs), TCL herbicides, Target Analyte List (TAL) metals (cyanide, mercury and hexavalent chromium), RCRA characteristics (ignitability, reactivity, and corrosivity). In addition, if the total concentration of a detected metal indicates the material may be characterized as hazardous (i.e., the detected total concentration is more than 20 times the RCRA toxicity regulatory level) the sample will be analyzed for toxicity characteristic leachate procedure (TCLP). For the purposes of this proposal it is assumed one (1) soil sample will be analyzed for TCLP lead.

At least one (1) groundwater monitoring well will be installed at the Site. In addition, a sample of the standing water located in the basement will be collected. Groundwater samples collected from the monitoring wells will be analyzed for TCL VOCs +10, TCL SVOCs +15, TCL PCBs and TCL pesticides, TAL metals (total and field filtered), cyanide and hexavalent chromium. One (1) groundwater sample will be additionally analyzed for the New York City Department of Environmental Protection (NYCDEP) Sewer Use Parameters.

Based upon our review of the submitted documentation, we have the following comments and recommendations to DCP:

Block 1277, Lots 20, 27, 46, and 52; Block 1278, Lot 20; Block 1279, Lots 23, 24, 25, 28, 45, and 48; Block 1281, Lot 21; and Block 1282, Lot 21 (Vanderbilt Corridor and One Vanderbilt development site)

- Based on prior on-site and/or surrounding area land uses which could result in environmental contamination, DEP recommends that an "E" designation for hazardous materials should be placed on the zoning map pursuant to Section 11-15 of the New York City Zoning Resolution for the subject properties. The "E" designation will ensure that testing and mitigation will be provided as necessary before any future development and/or soil disturbance.

Block 1277, Lots 20, 27, 46 and 52 (One Vanderbilt development site)

- DCP should inform the applicant that the Phase II Work Plan should be developed in accordance with Chapter 12, "Hazardous Materials" of the City Quality Environmental Review Technical Manual and focused on adequately characterizing the subject site rather than characterizing on-site soils for off-site disposal/recycling.

- DCP should instruct the applicant that an Investigative Health and Safety Plan should be submitted for review and approval.

- DCP should inform the applicant that two soil samples should be collected from each test boring/probe. One surface soil sample should be collected from the upper two feet of soil (0-2 feet bgs) and one subsurface soil sample should be collected between 2 feet bgs and the maximum proposed excavation depth (based on visual/olfactory evidence of impacts and/or elevated soil screening readings obtained using accepted field instruments). If no evidence or elevated readings are noted during borehole advancement, the subsurface soil sample should be collected from the two foot interval below the proposed maximum excavation depth(s) and/or the groundwater interface (whichever is encountered first).

- DCP should inform the applicant that a minimum of two (2) groundwater samples should be collected from the subject site.

- DCP should instruct the applicant that all soil and groundwater samples should be collected and analyzed by a New York State Department of Health (NYSDOH) Environmental Laboratory Approval Program (ELAP) certified laboratory for the presence of VOCs by

United States Environmental Protection Agency (EPA) Method 8260, SVOCs by EPA Method 8270, pesticides by EPA Method 8081, PCBs by EPA Method 8082, and TAL metals (filtered and unfiltered for groundwater samples).

- DCP should instruct the applicant that soil vapor sampling should also be conducted. The soil vapor sampling should be conducted in accordance with NYSDOH's October 2006 Guidance for Evaluating Soil Vapor Intrusion in the State of New York. The soil vapor samples should be collected and analyzed by a NYSDOH ELAP certified laboratory for the presence of VOCs by EPA Method TO-15.

- DCP should instruct the applicant that the site plan should depict the proposed soil, groundwater, soil vapor sampling locations.

- DCP should instruct the applicant to include a quality assurance and quality control plan for the acquisition, handling, and analysis of samples taken.

- DCP should inform the applicant that remediation of Spill No. 1305985 should continue in accordance with NYSDEC requirements.

- DCP should inform the applicant that ACM, LBP, and suspected PCB-containing materials may be present in the on-site structures. These materials should be properly removed and/or managed prior to the start of any renovation/construction activities and disposed of in accordance with all federal, state, and local regulations.

The applicant should be directed to coordinate further hazardous materials assessments through the Mayor's Office of Environmental Remediation (OER). It should be noted that OER may have additional requirements for the subject properties. Future correspondence and submittals to DEP related to this project should include the following CEQR number **14DCP188M**. If you have any questions, you may contact Mr. Wei Yu at (718) 595-4358.

Sincerely,

Maurice S. Winter

CEQR # 14DCP188M
New York, New York

Dear Mr. Dobruskin:

The New York City Department of Environmental Protection, Bureau of Environmental Planning and Analysis (DEP) has reviewed the September 2014 Phase II Environmental Site Investigation (Phase II) prepared by WCD Group, LLC for Block 1277, Lots 20, 27, 46, and 52. It is our understanding that the applicant is proposing a series of discretionary actions that would facilitate commercial development along Madison and Vanderbilt Avenues in Manhattan, improve pedestrian circulation within Grand Central Terminal and its vicinity, and allow greater opportunity for area landmarks to transfer their unused development rights. The area affected by the proposed actions includes the five blocks of the proposed Vanderbilt Corridor between East 42nd and East 47th Streets and the 12,820-square-foot portion of Vanderbilt Avenue between East 42nd and East 43rd Streets in the Grand Central Subdistrict of the Special Midtown District of Manhattan Community District 5.

DCP is proposing the following actions:

> Zoning text amendment to: 1) create the "Vanderbilt Corridor" and a new special permit under which the City Planning Commission may approve bonus floor area (the "Grand Central Public Realm Improvement Bonus") in connection with public space and transit improvements related to development within the Vanderbilt Corridor; 2) increase the maximum floor area ratio (FAR) from 21.6 to 30.0 for sites in the Vanderbilt Corridor utilizing the existing Landmark transfer special permit available in the Grand Central Subdistrict of the Special Midtown District; and 3) modify the uses permitted in the Vanderbilt Corridor to allow the development, conversion, or enlargement of hotels only by a new special permit. The

proposed Vanderbilt Corridor includes five blocks along the west side of Vanderbilt Avenue between East 42nd and East 47th Streets. Block 1277, located between East 42nd and East 43rd Streets, has a site area of 43,313 square feet and is occupied by four 7- to 22-story buildings. Block 1278, located between East 43rd and East 44th Streets, has a site area of 43,313 square feet and is developed with one building. Block 1279, located between East 44th and East 45th Streets, has a site area of 43,261 square feet, and contains four office buildings, a ventilation building for the under-construction East Side Access project of the Metropolitan Transportation Authority, and the Yale Club building. Block 1281, located between East 45th and East 46th Streets, has a site area of 43,313 square feet, and contains the Roosevelt Hotel. Block 1282, located between East 46th and East 47th Streets, has a site area of 43,313 square feet and contains one office building.

- A City Map amendment to designate the portion of Vanderbilt Avenue between East 42nd and East 43rd Streets as a "public place" dedicated to pedestrian uses, to be owned by the City under the jurisdiction of the New York City Department of Transportation.

317 Madison is proposing to apply for the following:

- Special permits proposed pursuant to the proposed Grand Central Public Realm Improvement Bonus and FAR transfer to facilitate the redevelopment of the block bounded by East 43rd Street to the north, East 42nd Street to the south, Madison Avenue to the west, and Vanderbilt Avenue to the east. The special permits would involve public realm improvements in the surrounding area and the transfer of excess development rights from the New York City Landmark Bowery Savings Bank located at 110 East 42nd Street.

It should be noted that 317 Madison owns the portion of Block 1277 (Lots 20, 27, 46, and 52) in the proposed Vanderbilt Corridor and bounded by East 42nd and East 43rd Streets and Madison and Vanderbilt Avenues (the "One Vanderbilt development site"). Under the proposed actions an approximately 67-story commercial tower containing approximately 1.8 million gross square feet of space (the "proposed One Vanderbilt building") would be built. The commercial program for the proposed One Vanderbilt building is expected to include the following components: approximately 1,079,000 square feet (sf) of office space, approximately 246,000 square feet of trading floors, approximately 53,000 sf of retail, approximately 27,000 sf of restaurant space, and approximately 55,000 sf of rooftop amenity space, which may include tenant amenity space, restaurant space, and a public observation deck. This expected program would also include approximately 343,500 sf of space for circulation, mechanical, core, back-of- house, and loading uses. The building would have two levels below grade: the first level would connect to the pedestrian circulation network serving Grand Central Terminal and the second level would contain a loading dock accessible from East 43rd Street via two truck elevators. It is proposed that most of the new retail space would be located along Madison Avenue at grade, with possible additional retail space on the second floor and on the first below grade level. Pursuant to the proposed zoning text amendment and special permit, the proposed One Vanderbilt building would include on-site transit-related improvements.

There are no specific proposals to redevelop the four blocks of the proposed Vanderbilt Corridor north of the One Vanderbilt development site (portions of Blocks 1278, 1279, 1281, and 1282),

but it is conceivable that one or more of these sites would be redeveloped in the foreseeable future pursuant to the proposed actions.

Block 1277, Lots 20, 27, 46, and 52 ("One Vanderbilt development site")

During the July and August 2014 fieldwork, Warren George, Inc. advanced 6 soil borings (LB-1, LB-2, LB-3, LB-5, LB-11, and LB-13) to approximately 21 feet below grade surface (bgs). One (1) discrete soil sample was collected from each referenced boring location from the two foot depth interval exhibiting the highest potential for contamination (based on field observations and photoionization detector readings), and submitted for laboratory analysis (6 discrete samples total). The discrete grab samples were analyzed for the target compound list (TCL)/CP-51 volatile organic compounds (VOCs) +10, extractable petroleum hydrocarbons (EPH), total petroleum hydrocarbons (TPH) – gasoline range organics (GRO) and diesel range organics (DRO). One (1) five-point composite soil sample was collected from each of the referenced boring locations (6 composite samples total). The composite samples were analyzed for TCL/CP-51 semi-volatile organic compounds (SVOCs) +20, TCL pesticides, TCL polychlorinated biphenyls (PCBs), TCL herbicides, Target Analyte List (TAL) metals (cyanide and hexavalent chromium), Resource Conservation and Recovery Act (RCRA) characteristics (ignitability, reactivity, and corrosivity), and toxicity characteristic leachate procedure (TCLP) RCRA metals. Four (4) groundwater monitoring wells were installed at boring locations LB-2, LB7, LB-11, and LB-13. Three (3) of the monitoring wells, LB-2, LB-7, and LB-12, were selected for groundwater sampling. The groundwater samples were analyzed for TCL VOCs +10, TCL SVOCs +15, TCL PCBs and TCL pesticides, TAL metals (total and field filtered), cyanide, and hexavalent chromium.

The soil analytical results revealed VOCs, SVOCs, pesticides, and PCBs concentrations were either non-detect (ND) or below their respective New York State Department of Environmental Conservation (NYSDEC) 6 NYCRR Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs). Several metals (copper, hexavalent chromium, lead, mercury, and nickel) were detected above their respective NYSDEC Unrestricted Use SCOs.

The groundwater analytical results revealed pesticides and PCBs concentrations were either ND or below their respective NYSDEC Technical and Operational Guidance Series (1.1.1): Class GA Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations. One VOC (tolune), one SVOC (bis(2-ethylhexyl)phthalate), and several metals (iron, manganese, and sodium) were detected above their respective NYSDEC Class GA standards.

It should be noted that the Phase II investigation deviated from the recommendations in DEP's August 8, 2014 letter.

Based upon our review of the submitted documentation, we have the following comments and recommendations to DCP:

- DCP should inform the applicant that additional sampling will be required. The sampling should be conducted in accordance with the recommendations in DEP's August 8, 2014

letter (attached).

- DCP should inform the applicant that remediation of Spill No. 1305985 should continue in accordance with NYSDEC requirements.

Block 1277, Lots 20, 27, 46, and 52; Block 1278, Lot 20; Block 1279, Lots 23, 24, 25, 28, 45, and 48; Block 1281, Lot 21; and Block 1282, Lot 21 (Vanderbilt Corridor and One Vanderbilt development site)

- Based on prior on-site and/or surrounding area land uses which could result in environmental contamination, DEP recommends that an "E" designation for hazardous materials should be placed on the zoning map pursuant to Section 11-15 of the New York City Zoning Resolution for the subject properties. The "E" designation will ensure that testing and mitigation will be provided as necessary before any future development and/or soil disturbance.

The applicant should be directed to coordinate further hazardous materials assessments through the Mayor's Office of Environmental Remediation (OER). It should be noted that OER may have additional requirements for the subject properties. Future correspondence and submittals to DEP related to this project should include the following CEQR number **14DCP188M**. If you have any questions, you may contact Mr. Wei Yu at (718) 595-4358.

Sincerely,

Maurice S. Winter
