RE: Greenpoint Lumber Yard Brooklyn, NY

Order No.: 0307061

Dear Mimi Sotiriou:

American Analytical Laboratories, Inc. received 14 samples on 7/16/2003 for the analyses presented in the following report.

There were no problems with the analyses and all data for associated QC met EPA or laboratory specifications.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Lori Beyer

SDG NARRATIVE

SDG Narrative

AAL Work Order: : 0307061
Sample Matrix : Groundwater
Project : Greenpoint

INTRODUCTION
This narrative covers the analysis of twelve (12) groundwater and the associated quality control samples (Field Blank and Trip Blank) in accordance with protocols based on SW846 Methods 8260, 8270, 8081, 8082, 6010 and 7470.

HOLDING TIMES
The analytical holding time for these analyses was met.

CALIBRATIONS
Initial Calibration: All required minimum RRFs and maximum %RSD requirements have been met in accordance with the method.

Continuing Calibration: All required minimum RRFs and maximum %D requirements have been met in accordance with the method.

TUNE PERFORMANCE
All Tune (BFB) specifications met QC requirements.

METHOD BLANKS
The method blanks associated with these samples did not contain any target compounds at or above QC limits with the exception of the volatile method blank analyzed on 7/19/03 [applicable to samples MW9, MW10, MW11, MW12, MW13, MW14, MW15, MW16 Found Well, Field Blank and the Trip Blank] which was determined to contain toluene within acceptable levels. Toluene was detected in sample MW13 and has been qualified, "B," as required. The level detected in MW13 (12 ppb) is consistent with lab contamination levels and therefore cannot be attributed to sample matrix constituents.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE/DUPLICATES
MS/MSD/Dup analysis was performed as required. Results are submitted as an appendix to this report.
Spike recoveries and RPD fell within established ranges except where noted on the summary sheets. No laboratory action is required for MS/MSD outliers.

INTERNAL STANDARDS
All area responses and retention times fell within acceptable ranges.

SURROGATES (SYSTEM MONITORING COMPOUNDS)
Surrogate recoveries are summarized in the appendix to this reort.

SAMPLE COMMENTS
Samples were analyzed as per the required protocols.

Volatile and Semivolatile analysis of MW13 was initially analyzed undiluted. As a result of Napthalene concentrations exceeding the instruments linear calibration range for both analyses, a secondary (1:10) dilution was performed as required. Results have been hybridized on the Form I's.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on floppy diskette has been authorized by the Laboratory manager or his designee, as verified by the following signature." This statement shall be directly followed by signature of the Laboratory Manager or his designee with a typed line below it containing the signer's name and title, and the date of the signature.

DATA REPORTING QUALIFERS

For reporting results, the following "Results Qualifers" are used:

Value	If the result is greater than or equal to the detection limit, report the value
U	Indicates the compound was analyzed for but was not detected. Report the minimum detection limit for the sample with the U, i.e. "10U". This is not necessarily the instrument detection limit attainable for this particular sample based on any concentration or dilution that may have been required.
J	Indicates an estimated value. The flag is used: (1) When estimating a concentration for a tentatively identified compound (library search hits, where a 1:1 response is assumed.) (2) When the mass spectral data indicated the identification, however the result was less than the specified detection limit greater than zero. If the detection limit was 10ug/L and a concentration of 3ug/L was calculated report as 3J. This flag is used when similar situations arise on any organic parameter i.e. Pesticide, PCBs and others.
B	Indicates the analyte was found in the blank as well as the sample report "10B".
E	Indicates the analytes concentration exceeds the calibrated range of the instrument for that specific analysis.
D	This flag identifies all compounds identified in an analysis at a secondary dilution factor.
P	This flag is used for Pesticide / PCB target analyte when there is >25% difference for detected concentrations between the two GC Columns. The higher of the two values is reported on Form I and flagged with a "P".
N	This flag indicates presumptive evidence of a compound. This is only used for tentatively identified compounds (TICs), where the identification is based on a mass spectral library search. It applies to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the flag is not used.

EXECUTIVE SUMMARY

The Newtown Creek Water Pollution Control Plant (WPCP) is being upgraded to meet the wastewater treatment standards of the Clean Water Act pursuant to a 1995 modified judgement on consent between the City of New York and the State of New York. The facility currently occupies a 36-acre site in the heavily industrialized Greenpoint area of Brooklyn. Facility upgrading will require construction of additional wastewater treatment facilities to provide secondary treatment and nitrogen removal, and improve the plant's ability to handle combined sanitary and storm flows in wet weather (EIS NYCDEP, 1996).

For the upgrade, sludge will be barged directly from Newtown Creek WPCP via a new sludge loading dock located at the DSNY Greenpoint Marine Transfer Station (MTS) Site.

Additional elements, under Contract NC-50, include construction of a new double Sludge Force Main, purchase of a new sludge barge and tug or transport vessel, and off-site demolition of the East River Sludge Storage Tank.

Proposed construction of these elements will require demolition of buildings and structures, and excavation and disposal of on-site soils in various areas. Hazardous materials located within these buildings will be identified and mitigated prior to demolition or disturbance of existing structures in accordance with Federal, State, and local regulations. Additionally, chemical compounds present in the subsurface at these sites may result in special disposal requirements for excavated soils. The Environmental Design Report will evaluate the potential environmental concerns associated with the presence of hazardous materials including:

- Asbestos-containing Materials
- Lead-containing Materials, e.g., lead-based paint
- PCBs in Paint
- Contaminated Soil

During the Asbestos Survey of the East River Sludge Storage Tank, asbestos-containing bulk material identified included Millboard Pipe Insulation - approximately 100 square feet. According to EPA/NESHAP and New York State regulations, all friable and non-friable asbestos containing material (ACM) that might become friable must be removed prior to any demolition and/or renovation activity that may disturb ACM or preclude access to the ACM for subsequent removal.

During the Lead Survey of the East River Sludge Storage Tank, a total of 44 XRF readings were collected with 7 readings indicating the presence of lead-based paint at or above the 0.5 percent by weight (or 1.0 milligram per square centimeter) classification level. This action level is established by the Department of Housing and Urban Development (HUD) in Chapter 7 of the *HUD Guidelines for the Evaluation and Control*

of Lead-based Paint Hazards in Housing (1997 Revision). All XRF shots that tested positive for lead (greater than or equal to the Department of Housing and Urban Development (HUD) action level of 1.0 mg/cm^2) were located in the Pump Room. These positive components included the following: a metal motor, a metal pump, metal piping (including an 18" pipe), an 18" metal valve, and a metal pipe support.

During the Lead Survey of the DSNY Greenpoint MTS Site, a total of four paint chip samples were collected and analyzed for lead with lead being detected in all four samples. Results ranged from 70.8 to 13,700 mg/kg. According to HUD, lead-based paint is present if lead levels exceed 5,000 mg/kg. One sample, collected from an orange cleat, exceeded the HUD standard.

During the PCB-In-Paint Survey of the East River Sludge Storage Tank, a total of nine paint chip samples were collected and analyzed for PCBs. PCBs were detected in all nine samples and there was one exceedance of Toxic Substances Control Act (TSCA) standards (50 mg/kg). This exceedance (120.0 mg/kg) was sampled from the light blue metal door casing in the storage room.

During the PCB-In-Paint Survey of the DSNY Greenpoint MTS Site, a total of four paint chips were collected from railings, piping, and cleats along Whale Creek Canal. PCBs were detected but did not exceed HUD standards. Ten paint chip samples were collected from the MTS building, and were positive for PCBs; however, the HUD standard was not exceeded.

During the geoprobe soil investigation at the East River Sludge Storage Tank, a total of four discrete samples and four composite samples were collected. Samples were analyzed for TCLP VOCs, SVOCs, and metals. There were no exceedences of the RCRA TCLP limits in any of the samples.

In 1997, a 1,000-gallon capacity No. 2 fuel oil UST, located southeast of the East River Sludge Storage Tank, was abandoned in place by filling with sand in accordance with all New York City Fire Department regulations. All associated tank piping was removed. Visible signs of petroleum contamination or odor were not observed during tank closure proceedings.

Soil samples collected at the East River Sludge Loading Dock and along the lumbar yard easement contained SVOCs at levels that exceeded the concentration limits in TAGM and STARS. DRO and GRO were also detected; however, there are no cleanup criteria for either of these compounds. Test pit samples collected at the East River Sludge Loading Dock contained SVOCs at levels that exceeded the concentration limits in TAGM and STARS. These soils, when excavated, would be classified as non-hazardous industrial waste or non-hazardous petroleum-contaminated waste.

Soil samples collected at the DSNY Greenpoint MTS Site, along Whale Creek Canal, contained Metals at levels that exceeded the concentration limits in TAGM. DRO was also detected. SVOCs were detected at levels below TAGM. VOCs were non-detect.

These soils, when excavated, would be classified as non-hazardous industrial waste or non-hazardous petroleum-contaminated waste.

Dust suppression activities should be implemented during construction to reduce inhalation risks. Site workers should be directed to use gloves and appropriate PPE such as coveralls to reduce dermal contact risks. Planned excavations should be continuously monitored for hazardous atmospheres.

In general, the Contractor is responsible for controlling visible dust caused by work operations and the moving of vehicles and equipment. The Contractor will implement dust control when soils are exposed, before, during, and after the work activity ceases. The Contractor's air monitoring operations and dust minimization activities will be in accordance with his site-specific health and safety plan (HASP). All contract work involving lead and/or PCBs shall be performed to minimize the creation of airborne dust; minimize the quantity of hazardous waste generated; protect the health and welfare of all site personnel and the public; and avoid adverse environmental impacts.

The Contractor shall control and minimize noise caused by operation and movement of vehicles and equipment to the greatest degree practicable. Noise levels shall conform to the latest OSHA standards, and all other applicable Federal, State and local regulations.

1.0 INTRODUCTION

1.1 REPORT STRUCTURE

This Environmental Design Report presents the East River Sludge Storage Tank site history, results of field investigations performed at the East River Sludge Storage Tank in 2000, results of field investigations performed along the new Sludge Force Main Route in 2006, including laboratory analyses, and conclusions and recommendations regarding Plant Upgrading demolition and construction activities. The report is structured as follows:

- Section 1, Introduction, provides project background information and a description of the work.
- Section 2, Site Description, presents site locations, histories, and a description of existing facilities at the sites.
- Section 3, Surveying and Sampling, describes the methods used to sample potential lead-containing paint, potential PCB-containing paint, potential asbestos-containing material (ACM), and soil. The number of samples collected and field observations are also discussed in this section.
- Section 4, Analytical Results and Findings, describes the results of paint, potential ACM and soil sample analyses.
- Section 5, Hazardous Materials Impacts to Construction Activities, evaluates findings and presents recommendations for potential remediation measures during demolition and construction activities.

1.2 PROJECT BACKGROUND

As part of the resolution for the approval of the Uniform Land Use Review Procedure (ULURP) process undertaken for land acquisition and usage, NYCDEP will demolish the East River Sludge Storage Tank. With the demolition of the tank and the expected increase in sludge production due to implementation of the upgraded treatment processes, the existing 18-inch force main from the Newtown Creek WPCP to the East River Sludge Loading Dock will not be capable of handling the sludge load. Sludge will be barged directly from Newtown Creek WPCP via a new sludge loading dock located at the DSNY Greenpoint Marine Transfer Station (MTS) Site.

Additional elements for the Newtown Creek Water Pollution Control Plant (WPCP) Upgrade, under Contract NC-50, include construction of a new double Sludge Force Main, and purchase of a new sludge barge and tug or transport vessel.

1.3 PROJECT STRUCTURE

An assessment of environmental concerns related to construction activities was initiated, specifically lead-containing paint, PCB-containing paint, asbestos, and potentially contaminated soils. The purpose of the assessment is to provide information regarding potential environmental concerns associated with construction and/or demolition activities for inclusion in the contract documents for the contractor's information and appropriate response. Results of the investigations are presented in this report and are used to conduct a preliminary evaluation of measures for worker safety during construction and/or demolition, and disposal options for demolition debris and excavated material.

2.0 SITE DESCRIPTION AND BACKGROUND

2.1 LOCATION

The East River Sludge Storage Tank is located approximately half a mile west of the Newtown Creek WPCP at the intersection of Dupont Street, Commercial Street, and West Street. The East River Sludge Loading Dock is located directly west of the Sludge Storage Tank along the East River and adjacent to the mouth of Newtown Creek where it flows into the East River. . The locations of these existing structures are shown in Figure 2-1. The new Sludge Force Main, at the DSNY Greenpoint MTS site, is located adjacent to the Newtown Creek WPCP along Whale Creek Canal and Newtown Creek.

2.2 SITE HISTORY

2.2.1 East River Sludge Storage Tank

As shown in Figure 2-1, the East River Sludge Storage Tank is located approximately three quarters of a mile west of the Newtown Creek WPCP at the intersection of Dupont Street, Commercial Street, and West Street on a 90-by-100 foot fenced-in site. The height of the concrete tank is approximately 60 feet above grade, and the tank has a storage capacity of approximately 800,000 gallons, with a diameter of 80 feet. An enclosed area directly beneath the tank bottom is used to house the sludge pump, piping, valving, miscellaneous support equipment, electrical equipment storage rooms, and an area for maintenance.

2.2.2 East River Sludge Loading Dock

The East River Sludge Loading Dock is used to moor sludge vessels that receive sludge from the Newtown Creek WPCP. Sludge from the Newtown Creek WPCP is pumped from the plant to the vessel loading facility at the dock through the existing 18-inch diameter sludge force main. The existing 18-inch force main leaves the Newtown Creek WPCP on the northwest plant boundary, at the corner of Provost and Green Streets. The force main then travels north on Provost Street to Freeman Street; west on Freeman Street to Franklin Street; north on Franklin Street to Dupont Street; and west on Dupont Street to the East River Sludge Storage Tank. From the tank, an 18-inch gravity line runs west-northwest to the East River Sludge Loading Dock (via a permanent easement through the lumberyard. Vessels transport the sludge to a dewatering plant at the Hunts Point WPCP for processing.

The East River Sludge Loading Dock was constructed in 1966 and is approximately 20 feet wide by 730 feet long. The dock is a concrete structure with a steel and timber fendering system for berthing the transport vessels. The northern 266 feet and the southern 240 feet sections of the dock are relieving platforms with concrete deck on corrugated steel deck. The middle 225 feet section of the dock consists of a tremie-filled

NOTE:

BASE MAP INFORMATION BASED ON DELORME STREET ATLAS 7.0 COMPUTER PROGRAM.

GREELEY AND HANSEN ◆ HAZEN AND SAWYER ◆ MALCOLM PIRNIE	DEP	CITY OF NEW YORK DEPARTMENT OF ENVIRONMENTAL PROTECTION BUREAU OF ENVIRONMENTAL ENGINEERING WP-283 NEWTOWN CREEK WPCP UPGRADING OF FACILITIES	STORAGE TANK AND SLUDGE LOADING DOCK SITE LOCATION PLAN SCALE: 1"=4,000'	MARCH, 2001 FIGURE 2-1

area of concrete from top of dock to mudline. The top 3.25 feet of the piles are encased in concrete. A retractable fender system is provided for the entire length of the dock.

As part of the Newtown Creek WPCP upgrade program, the structural condition of the dock was investigated in December 1996. The investigation revealed that the dock requires significant structural rehabilitation to maintain a service life consistent with the upgraded Newtown Creek WPCP.

The East River Sludge Loading Dock is located on property owned by the New York City Department of Business. However, the property has been leased to a private lumber exchange terminal on a long-term business agreement. Permanent easements on the property include the area occupied by the dock and an access corridor to the dock from the Sludge Storage Tank and the nearest city street.

2.2.3 Newtown Creek Sludge Loading Facility

The DEP is proposing to construct a new sludge loading facility on the DSNY Greenpoint MTS site along Whale Creek Canal. The DSNY Greenpoint MTS site, which includes an MTS facility that was used as a marine solid waste management facility and a storage building, is currently inactive. The DSNY Greenpoint storage building is used as a storage facility.

With the approval of DSNY's New York City Comprehensive Solid Waste Management Plan (SWMP) in July 2006, DSNY no longer requires the Greenpoint MTS facility for marine solid waste management and transport. As a result, DSNY has released the use of the MTS site for DEP use. DEP would utilize the MTS building for boat storage and office space and the waterfront periphery of the site for development of the proposed sludge loading facility and access roads.

The proposed sludge loading facility would include a new sludge loading dock and new sludge force mains adjacent to the DSNY Greenpoint MTS site along Whale Creek Canal. The proposed sludge loading facility along Whale Creek Canal would service the Newtown Creek WPCP and would be referred to as the Newtown Creek sludge loading facility. The proposed Newtown Creek sludge loading facility would enable sludge to be pumped from the existing sludge storage tanks at Newtown Creek WPCP to the proposed Newtown Creek sludge loading facility for marine transport by barge to the dewatering facility at Wards Island WPCP.

2.3 INVENTORY OF POTENTIAL AREAS OF CONCERN

Potential areas of concern at these sites include the following:

- Asbestos-containing Material
- Lead-containing Paint
- PCB-containing Paint

- Soil Contamination
- UST

3.0 SURVEYING AND SAMPLING

3.1 ASBESTOS SURVEY AND SAMPLING

3.1.1 East River Sludge Storage Tank

An asbestos survey subcontractor, Donohoe Environmental, Inc., conducted an asbestos survey at the East River Sludge Storage Tank. This survey was performed in June 2000.

The survey was performed according to the Environmental Protection Agency recommended procedures found in EPA 560/5-85-024, NYS Industrial Code Rule 56-1.9 (a-e), and NYC Title 15. These procedures call for the visual inspection of the building for suspect ACM and analysis of representative samples of such materials. In addition to the required visual inspection at the East River Sludge Storage Tank, fiberglass insulated systems were penetrated to determine the substrate in several locations.

All accessible areas were inspected for three basic types of asbestos used in building materials:

- **Surfacing Material** that is sprayed-on, troweled on or otherwise applied to surfaces, such as acoustical plaster on ceilings, fireproofing materials on structural members, or other materials for acoustical, fireproofing or decorative purposes.
- **Thermal System Insulation** applied to pipes, fittings, boilers, breaching, tanks, ducts, or other structural components to prevent heat loss or gain, water condensation, or for other purposes.
- **Miscellaneous ACBM** means building materials on structural components, structural members or fixtures such as floor and ceiling tile, transite wall panels, transite pipe, roofing shingles, roof flashing and many other materials that are exclusive of surfacing or thermal insulation.

With the exception of the fiberglass insulated systems at the East River Sludge Storage Tank, only exposed materials have been sampled and identified. There is a possibility that ACBM is still located within walls, floors, ceilings, and utility chases that were not visible or accessible. In most cases, materials were assumed to be present (i.e., Aircell pipe in pipe chases) when it was not visible or visible on only one floor.

Survey information was collected by means of visual inspection, interviews, sample collection, and sample analysis. A total of 3 samples were collected for asbestos analysis at the East River Sludge Storage Tank.

3.1.1.1 Methodology

Samples were collected using the following protocol:

1. Prior to sampling, the inspectors inventoried suspect ACM and recorded the location, description, and quantity of suspect materials.
2. Suspect materials were then grouped according to functional spaces (spatially distinct units within a building, i.e., an office or a corridor) and homogenous sampling areas (ACM which is uniform in texture and color and appears identical) to determine sample locations and quantity.
3. In general, a minimum of three samples (full depth core samples) were collected for each suspect material identified. However, depending on the size of the sampling area and the inspector's discretion, up to 9 samples may be collected from each functional space/sampling area.

Samples were analyzed using polarized light microscopy (PLM) in accordance with EPA Method 40 CFR 763, subpart F, App A. This is the recommended EPA method for determining the presence of asbestos in building materials, such as pipe and boiler insulation, acoustical coatings, spray-on fireproofing, plasters, ceiling tiles, and floor tiles. The PLM procedure involves taking a small amount of the suspect material, isolating the fibers present, and identifying them based on the crystalline properties observed. In addition, non-asbestos fibrous materials can also be identified including glass, mineral wool, cellulose, gypsum, and synthetic fibers. The results of the analysis are reported as a percentage of the total sample. The PLM method is sensitive to concentrations of asbestos down to 1%.

Non-friable, organically bound (NOB) material (floor tiles, roofing, mastic flashing) determined to be negative for asbestos by PLM analysis are considered positive by the NYS Environmental Laboratory Approval Program until proven negative by transmission electron microscopy (TEM) – (NYS ELAP Protocols 198.1/198.4). Therefore, TEM analysis was performed on all NOB materials where no asbestos was detected using PLM. The method of analysis is AHERA Method 40 CFR Part 763, May 30, 1987.

3.2 LEAD-BASED PAINT SURVEY AND SAMPLING

3.2.1 East River Sludge Storage Tank

A lead-based paint survey was conducted at the East River Sludge Storage Tank in June 2000 by Mandell Lead Inspectors, Inc. to evaluate the presence of lead-based paint on structures and components. The results of the lead-based paint survey can be used to determine where demolition activities will require compliance with OSHA's Lead in Construction Standard, and are also pertinent to

the selection of an appropriate disposal site for demolition debris with painted surfaces.

The survey included all accessible areas, but did not include those areas where exploratory demolition would have been needed, such as within walls, soffits and enclosures. Therefore, this inspection does not guarantee that all painted surfaces within the facility were tested for lead paint, and it should not be used as a specification for abatement.

An X-Ray Fluorescence (XRF) Lead-in-Paint detector was used as a lead-based paint-screening tool. No paint chip samples were taken due to the fact that none of the XRF readings were inconclusive.

3.2.1.1 Methodology

3.2.1.1.1 XRF

The XRF screening was performed by Mandell Lead Inspectors, Inc. and was used to delineate painted areas that contain lead at concentrations greater than the NYC Health Code and Department of Housing and Urban Development (HUD) action level of 1.0 mg/cm^2. The survey was conducted on painted surfaces (walls, ceilings, doors, doorframes, railings, etc.) including those that are stained, shellacked, varnished, or coated to assess existing conditions.

Each XRF measurement consisted of one reading made on the painted surface at each test location. Before beginning the testing, the recommended nominal open-shutter time (or nominal time) was determined. Based on the 1997 revision of the Department of Housing and Urban Development (HUD) guidelines, one XRF reading was taken at each testing combination. This reading was taken according to the manufacturer's instructions.

The following standard operating procedure was used for the survey:

1. Prior to the beginning of testing, the XRF instrument manufacturer's recommended warm-up and quality control procedures were followed and quality control readings (i.e., calibration checks) were taken.
2. A set of three nominal-time calibration check readings were taken before testing began, every four hours thereafter, and at the end of the testing. The calibration check reading averages should not differ from the Standard Reference Material (SRM) paint film, or equivalent, developed by the National Institute of Standards and Technology (NIST) by more than the calibration check tolerance specified by the manufacturer for the specific instrument used.
3. The results were recorded on a Calibration Check Form.
4. The average of the three calibration check readings was computed and recorded. Note: If the initial calibration readings fall outside the

specifications, testing shall not begin until the instrument is fixed and the calibration check reading averages fall within the calibration check tolerance range. For an instrument that fails a continuing calibration check, all readings taken since the last successful calibration check shall be repeated.

5. The XRF probe faceplate was pressed flat against the surface of the test location.
6. Each location was marked on the environmental drawings and recorded in a logbook. Test locations were not selected in areas where the paint was thickest or thinnest (e.g., in corners, where there are obvious depressions in the painted surface, where paint has obviously been scraped in the past, or where the paint is thin or worn). Mandell Lead Inspectors, Inc. coordinated with Joint Venture (JV) field oversight staff in selecting paint surfaces to be tested.
7. Mandell Lead Inspectors, Inc. indicated components that could not be tested with the XRF or that had inconclusive XRF results to JV field oversight staff (Note: no inconclusive readings were obtained during the survey).

3.2.2 DSNY Greenpoint MTS Site

A lead-based paint survey was also conducted at the DSNY property in November 2006. The survey included railings, piping and cleats along Whale Creek Canal, on the western side of the property. A total of four paint chip samples were collected and analyzed for lead.

3.2.2.1 Methodology

1. Sampling locations are chosen based on a visible inspection of the area. In general, only paints that cover a substantial square footage of wall/floor/component space are sampled. The Malcolm Pirnie field team determines which painted surfaces should be sampled.
2. A paint scraper (with a disposable blade) is used to remove all layers of paint down to the substrate at each selected sample location. The paint chips are collected on clean sheets of aluminum foil, which are used to transfer the chips into laboratory-certified, pre-cleaned, glass sample containers.
3. Each time a sample is collected, a new piece of aluminum foil and a new pair of disposable nitrile gloves are used to prevent cross-contamination. In addition, a new paint scraper blade is used at each sample location.
4. Each sample container is labeled with a unique sample number, and all pertinent data (*e.g.*, substrate, component, and sample location) is recorded in a field logbook and on drawings.
5. Paint chip samples are analyzed for total lead (EPA test method SW846-6010B).

Notes:
1. A total of 16 Composite Samples were collected.

2. A total of 8 Discrete Samples were collected.

3.2.3 Marine Transfer Station

At the Marine Transfer Station (MTS) located on the DSNY property, one bulk sample was collected and sampled for TCLP VOCs, SVOCs, Metals, PCBs and RCRA Characteristics. The material sampled was glazed yellow ceramic block.

3.3 PCB-IN-PAINT SURVEY AND SAMPLING

3.3.1 East River Sludge Storage Tank

A PCB in paint survey was conducted at the Sludge Storage Tank in October 2006 to evaluate the presence of PCBs in paint. The survey included all accessible areas, but did not include those areas where exploratory demolition would have been needed, such as within walls, soffits, and enclosures. A total of nine paint chips were collected and analyzed for PCBs.

3.3.1.1 Methology

1. Sampling locations are chosen based on a visible inspection of the area. In general, only paints that cover a substantial square footage of wall/floor/component space are sampled. The Malcolm Pirnie field team determines which painted surfaces should be sampled.
2. A paint scraper (with a disposable blade) is used to remove all layers of paint down to the substrate at each selected sample location. The paint chips are collected on clean sheets of aluminum foil, which are used to transfer the chips into laboratory-certified, pre-cleaned, glass sample containers.
3. Each time a sample is collected, a new piece of aluminum foil and a new pair of disposable nitrile gloves are used to prevent cross-contamination. In addition, a new paint scraper blade is used at each sample location.
4. Each sample container is labeled with a unique sample number, and all pertinent data (*e.g.*, substrate, component, and sample location) is recorded in a field logbook and on drawings.
5. Paint chip samples are analyzed for total PCBs (EPA test method SW846-8082).

3.3.2 DSNY Greenpoint MTS Site

A PCB in paint survey was conducted at the DSNY property in November 2006. The survey included railings, piping, and cleats along Whale Creek Canal, on the western side of the property. A total of four paint chip samples were collected and analyzed for PCBs.

3.3.3 Marine Transfer Station

A PCB in paint survey was conducted at the MTS located on the DSNY property in December 2006. A total of ten paint chips were collected and sampled for PCBs. Materials sampled include red concrete columns, gray metal walls and beams, gray concrete walls, red metal railings and stair risers, red piping and a yellow metal cleat

3.4 ENVIRONMENTAL SUBSURFACE INVESTIGATION

3.4.1 East River Sludge Storage Tank

3.4.1.1 Geoprobe Investgation

Environmental soil borings were advanced at the East River Sludge Storage Tank on September 25, 2000. Joint Venture (JV) personnel collected environmental soil samples from 4 boring locations in the area around the perimeter of the storage tank. These locations were identfied as DP-P1, DP-P2, DP-P3, and DP-P4. MPI personnel conducted air monitoring for personnel health and safety. Air monitoring was conducted by JV personnel to detect Volatile Organic Compounds (VOCs) and combustible gases. All borings were advanced by Geoprobe direct push drilling techniques.

Two environmental soil samples were collected from each of the 4 boring locations: one composite and one discrete. The locations and depths of the environmental soil samples are summarized in Table 3-1. Boring locations are shown on Figure 3-1.

The soil samples were analyzed by Chemtech. The composite samples were analyzed for Toxicity Characteristic Leaching Procedure (TCLP) semi-volatile compounds (SVOCs) and metals. The discrete samples were analyzed for TCLP VOCs. Sample results are presented in Section 4. One field blank and one field duplicate were analyzed with the samples for quality assurance/quality control (QA/QC) purposes. Field screening of each depth interval for volatile organic contamination was conducted using a 10.6 eV photo ionization detector (PID).

To prevent the possibility of cross-contamination between boreholes, the drilling rig and all drilling accessories were thoroughly decontaminated prior to arrival on-site and between all drilling locations. A pressurized steam cleaner was used for decontamination activities. Split-spoon samplers were decontaminated between sampling intervals at the same borehole. Two-inch outside diameter (OD) split-spoon samplers were used along with acetate liners throughout the drilling program.

3.4.2 East River Sludge Loading Dock

3.4.2.1 Soil Borings

Geotechnical and environmental soil borings were advanced at the Sludge Loading Dock and lumberyard easement, located between the dock and the east river sludge storage tank, between September 7 and September 20, 2000. Mueser Rutledge Consulting Engineers, Inc. (MRCE) collected and classified soil samples from eleven boring locations during the geotechnical boring program. MRCE also collected and classified bedrock cores from eleven locations during this time. These locations were designated B-1 to B-11. JV personnel were present during the geotechnical borings to conduct air monitoring for personnel health and safety. The air monitoring was conducted to detect VOCs and combustible gases. All borings were advanced by mud rotary techniques.

Environmental soil sampling was conducted at eight of the eleven locations (B-4 thru B-11). Environmental soil samples were collected from each of the eight boring locations: two composite samples and one discrete sample. The locations and depths of the environmental soil samples are summarized in Table 3-2. Boring locations are shown on the previous figure, Figure 3-1.

The composite samples were collected from each boring to evaluate the disposal characteristics of the entire interval expected to require excavation while containing laboratory costs.

Discrete samples were collected to investigate for potential contamination at specific depth intervals. The intervals for discrete sampling were selected based on field observations (odor or staining) and PID screening results. Field screening of each depth interval for VOCs was conducted using a 10.6 eV PID.

The soil samples were analyzed by Chemtech. The composite samples were analyzed for Full RCRA Characteristics, including ignitability, corrosivity, and reactivity; full Toxicity Characteristic Leaching Procedure (TCLP) for VOCs, SVOCs, metals, pesticides, and herbicides; total petroleum hydrocarbons (TPH) – gasoline range organics (GRO) and diesel range organics (DRO); and polychlorinated bi-phenyls (PCBs). The discrete samples were analyzed for Target Compound List (TCL) VOCs and TCL SVOCs. Sample results are presented in Section 4. Two field blanks and two field duplicates were analyzed with the samples for quality assurance/quality control (QA/QC) purposes. Field blanks are samples collected from a final rinse of sampling equipment with deionized demonstrated analyte-free water after the decontamination procedure has been performed. The purpose of the field blank is to determine whether the sampling equipment is causing cross-contamination of samples. A field duplicate is a co-located grab sample that equally represents a medium at a given time and location.

NEWTOWN CREEK WPCP UPGRADE
EAST RIVER SLUDGE STORAGE TANK AND LOADING DOCK
BORING PROGRAM

TABLE 3-3
SOIL SAMPLING PARAMETERS, METHODS, CONTAINERS AND PRESERVATION

FRACTION	METHOD	CONTAINER	PRESERVATION

TPH - GRO	SW - 846 8015B	(1) 4-ounce widemouth jar	$< 4^{o}$ C
TPH - DRO	SW-846 8015B	(1) 4-ounce widemouth jar	$< 4^{o}$ C

To prevent the possibility of cross-contamination between boreholes, the drilling rig and all drilling accessories were thoroughly decontaminated prior to arrival on-site and between all drilling locations. A pressurized steam cleaner was used for decontamination activities. Split-spoon samplers were decontaminated between sampling intervals at the same borehole. Three-inch OD split-spoon samplers were used throughout the drilling program.

3.4.2.2 Test Pits

Test pit excavations were conducted at the Sludge Loading Dock between September 7 and November 13, 2000. A total of six test pits were excavated along the existing bulkhead and were designated TP-1 to TP-6, and are also shown in previous figure, Figure 3-1. Each test pit was approximately 4 feet wide by 4 feet long by 3.5-6.5 feet deep. The test pits were excavated with a small backhoe and by hand with shovels to the top of the concrete relieving platform, where depths were measured to obtain platform elevations. JV personnel were present during the test pit excavations to conduct air monitoring for personnel health and safety. The air monitoring was conducted to detect VOCs and combustible gases.

One composite sample was collected from each test pit to evaluate the disposal characteristics of the entire interval expected to require excavation while containing laboratory costs.

The soil samples were analyzed by Chemtech. The composite samples were analyzed for Full RCRA Characteristics, including ignitability, corrosivity, and reactivity; full TCLP for VOCs, SVOCs, metals, pesticides, and herbicides; TPH – GRO and DRO; and PCBs. The discrete samples were analyzed for TCL VOCs and TCL SVOCs. Sample results are presented in Section 4.

3.4.3 DSNY Greenpoint MTS Site

Geotechnical and environmental soil borings were advanced along the proposed route of the new Sludge Force Main in 2005. Thirty-six soil samples were collected from 12 soil borings in April and June 2005, as part of the *Newtown Creek WPCP – Phase II Hazardous Materials Analysis, August 2005 report*, for the proposed NYCDEP Nature Walk Project. The data for the soil borings collected along Kingsland Avenue and Whale Creek Canal are being used to represent general soils conditions in the vicinity of the existing sludge force main and near the proposed sludge force main.

The six soil borings installed along Kingsland Avenue were 15 feet deep and the 6 soil borings along Whale Creek Canal were only 7 feet deep due to the presence of submerged materials, type unknown. Two discrete and two composite soil samples were collected from each 15-foot core. One discrete and one composite sample were collected from each 7 foot deep boring. Discrete soil samples for

TCL VOCs analysis were selected from an area with the highest PID readings within the fill and native soil zones, where available, and also analyzed for TCL SVOCs and TAL Metals. Composite soil samples were collected from within the 0 to 10 foot zone and within the 10 to 15 foot zone in each core, when possible, and analyzed for TCLP (VOCs, SVOCs, Pesticides, Herbicides, Metals), PCBs, Total Petroleum Hydrocarbons-Diesel Range Organics (TPH-DRO), Total Petroleum Hydrocarbons-Gasoline Range Organics (TPH-GRO), and RCRA Characteristics (Corrosivity, Ignitablity, and Reactivity (Sulphur and Cyanide) . Groundwater was encountered at an average of 8 feet bgs at the boring locations.

3.4.4 Environmental Soil Sampling Procedures

3.4.4.1 Startup and Mobilization: Work was carried out in Level D, which includes coveralls or suitable work clothes, latex gloves (during sampling activities), boots (steel toe and shank), safety glasses and hardhat.

3.4.4.2 Analytical Parameters: Parameters analyzed are provided in Table 3-3. The analytical laboratory followed "Test Methods for Evaluating Solid Waste" SW-846 analytical protocols.

3.4.4.3 Sample Bottles: Sample containers used, described in Table 3-3, arrived on-site within one day of laboratory preparation. Sample containers were laboratory cleaned, pre-preserved and sealed with the appropriate documentation. Following sample collection, samples were placed in a thermal chest containing ice packs to ensure a temperature of 4° Celsius. Samples were protected from breakage by the use of appropriate packing material. Samples were shipped to the laboratory using overnight delivery services.

3.4.4.4 Soil Sample Identification: Environmental soil samples were collected during the geotechnical boring program, and sample location ID's were designated accordingly, e.g., B-1, B-2, etc.

3.4.4.5 Soil Sampling Methodology: Environmental soil samples were collected as follows:

- Plastic sheeting was laid out along with sampling equipment, sampling containers and documentation forms.
- Monitoring equipment was field calibrated prior to the start of the day's activities. The PID was used to monitor ambient air quality and screen soil samples for the presence of VOCs. All screening results were recorded in the field logbook. The Workers' breathing zone was also monitored for VOCs. A Combustible Gas Indicator (CGI) was used to monitor for gases.
- For all analytical parameters (except VOCs), a sample aliquot was collected from each split spoon and placed in a stainless steel bowl. The aliquots were

homogenized to create a composite sample to represent a specified composite interval (example: 0 to 10 feet) using a trowel and bowl. A sufficient sample was then placed into a sample container. The sampling container was then placed in a cooler at $4^{O}C$ and held for laboratory analysis.

- **VOC Analyses:** Prior to homogenization, an aliquot for VOC analysis was taken directly from the split spoon, packed tightly into pre-cleaned sample container without mixing and with the aid of a stainless steel tool. The sampling containers were then placed in a cooler at $4^{O}C$ and held for laboratory analysis.

- **Homogenization:** The following procedure was used to homogenize composite soil samples: The soil sample was placed into a decontaminated, stainless steel bowl, and thoroughly mixed using a decontaminated stainless steel spoon. The soil in the bowl was scraped from the sides and bottom of the bowl, rolled to the middle of the bowl and initially mixed. The sample was then quartered and moved to the four corners of the bowl. Each quarter of the sample was mixed individually and then rolled to the center of the bowl and the entire sample mixed again. The sample was then transferred to the appropriate sample containers.

- **Equipment Decontamination Procedures:** To reduce the possibility of cross-contamination between sample locations, all tools and accessories were thoroughly decontaminated prior to arrival on-site. Tools and accessories were also decontaminated between each sampling location. The sampling equipment was decontaminated as follows:
  - Rinse with potable water
  - Wash thoroughly with non-phosphate, laboratory-grade detergent (Alconox or equivalent) in clean tap water
  - Rinse with tap water
  - Rinse with distilled or deionized water
  - Wipe with Hexane
  - Rinse with demonstrated analyte-free water
  - Wipe with Isopropyl alcohol
  - Rinse with demonstrated analyte-free water
  - Rinse with 10% Nitric Acid (HNO3)
  - Rinse with demonstrated analyte-free water
  - Air dry
  - Wrap in aluminum foil until next use.

- **Control and Disposal of Contaminated Materials:** Drill cuttings from sampling activities, considered contaminated, were collected and stored on-site pending characterization and disposal. Each sampling location was returned to natural grade and condition. Drill cuttings and drilling fluids were stored in 55-gallon drums and staged on pallets at an appropriate location pending waste classification and disposal. Decontamination wastes,

consisting of spent alconox/tap water solution and soil residues, were drummed in NYSDOT-approved 55-gallon drums and staged on pallets at an appropriate location pending waste classification and disposal. All investigation-derived waste (IDW) except that from boring location M-1014 was subsequently disposed of as non-hazardous, non-RCRA petroleum-contaminated water and non-hazardous, non-RCRA petroleum-contaminated solids.

- **Personal Protective Equipment (PPE):** Although Level D protection was anticipated to be used during the field investigation, some disposable personal protective equipment (PPE) was necessary, e.g., latex gloves. Diligent efforts were made to minimize contaminated PPE in order to dispose of it as non-hazardous material. Every attempt was made to remove surface contamination so that PPE (e.g., gloves, and other disposable items) could be disposed of as ordinary trash.

- **Sample Documentation and Chain of Custody:** Sample custody during the field investigations was completed in two phases. The first phase encompassed sample collection, packaging, and field custody procedures. The second custody phase involved sample shipment, method of shipment, airbill numbers, and date and time documentation. Both phases of sample custody were conducted to provide that:
  - All samples were uniquely identified
  - The correct samples were tested and traceable to their source
  - Vital sample characteristics were preserved
  - Samples were protected from loss or damage
  - A record of sample custody and integrity was established and maintained through the entire custody process.

- **Field Documentation:** A bound field logbook was maintained to record daily activities. Entries were made in indelible ink and the pages consecutively numbered. Incorrect entries were corrected by a single stroke through the error and were verified with the recorder's initials and date of correction. Entries to the logbook included:
  - Date
  - Start and finish times
  - Summary of work performed (including samples collected)
  - Names of personnel present
  - Names of visitors
  - Weather
  - Calibration of equipment
  - Observations and remarks

  The following information was recorded in the field log book at the time of sampling:
  - Sample designation

- Name of sampler
- Method of collection
- Time and date of sampling
- Type of sample
- Analyses
- Field measurements and calibration (if applicable)
- Soil type and/or observed conditions which may impact the chemistry of the sample.

- **Field Custody Procedures:** All samples collected from the site were identified with a sample label and recorded on a chain-of-custody form. Indelible ink was used to complete sample labels, then labels were covered with clear plastic waterproof tape.

- **Sample Labels**: Sample labels were required to include the following information:
  - Site Name
  - Sample Number
  - Sample Matrix
  - Parameters to be Analyzed
  - Date of Collection
  - Time of Collection
  - Type of Preservation
  - Sampler(s) Name

- **Sampling Numbering:** A unique sample number was used to identify each sample. The sample identification scheme used is as follows:

  The **Soil Boring** samples at the sludge storage tank were labeled as follows: SSF/DP-P1/4-8/102600:

SSF:	Sludge Storage Facility
DP-P1:	Direct push soil sample, sample location ID
4-8:	The depth interval (in feet) from which the sample was collected
MMDDYY:	Date of Sampling

  The **Soil Boring** samples collected at the sludge loading dock were labeled as follows:
  B-4/E-01/0-10/102600:

B-4:	Sample location ID
E-01:	An environmental soil sample, sample 01 from that location

0-10:	The depth interval (in feet) from which the sample was collected
MMDDYY:	Date of Sampling

Fieldblank: FB-01/MMDDYY

- **Chain–of-Custody Record:** The chain-of-custody provides an accurate written record that can be used to trace the possession and handling of the sample from the time of collection to analysis. The chain-of-custody form was completed for each sample at the time of collection and was maintained while shipping the sample to the laboratory. The following information was entered on the chain of custody form:
  - Project number - the alpha-numeric designation that uniquely identifies the project site (e.g., 2439-062)
  - Project name – Sludge Storage Tank, Newtown Creek WPCP; Sludge Loading Dock, Newtown Creek WPCP,
  - Signature of sampler(s)
  - Sample number - the sample identification number for each sample in the shipment
  - Date - a six-digit number indicating the month, day and year of sample collection (MM/DD/YY, e.g., 08/10/00)
  - Time - a four digit number indicating the time of collection based on the 24-hour clock (e.g., 1300)
  - Sample matrix - the matrix (e.g., soil or aqueous) of the sample
  - Parameters for analysis - the analyses to be performed for each sample
  - Remarks - any appropriate remark, as necessary.

- **Sample Shipment:** Custody of samples was maintained through the shipment of samples to the selected laboratory. Samples were in the custody of JV personnel until relinquished directly to the laboratory by sampling personnel or shipped via the following procedures:
  - Coolers were used for shipping making certain the cooler drain (where applicable) was taped shut.
  - About 3 inches of inert cushioning material (i.e., bubble wrap) was placed in the bottom of the cooler.
  - Sample bottles were placed in clear reusable bags keeping the labels visible, and bottles packed in the cooler. To minimize the possibility of breakage, bottles were separated by placing sealed bags of ice on the bottom, top and sides of the samples. The remaining spaces were filled with packing material. Ice was double bagged with the inner zip lock seam at the bottom of the outer zip lock bag.
  - When shipping the samples by common carrier (e.g., Fed Ex), the chain-of-custody under "relinquished by," was signed by JV personnel, the carrier name and airbill tracking number entered under "received by," and a copy retained for field records. The chain-of-custody record was placed in a waterproof plastic "ziplock" bag and affixed with tape to the inside lid

of the cooler.

- Signed custody seals were applied to the front and back of the cooler so the seals bridged the cooler and lid.
- The lid was secured by completely wrapping with strapping tape at either end of the cooler. Completed shipping label was attached to top of the cooler.
- The cooler was shipped by overnight express to the project laboratory: Chemtech

3.5 UST INVESTIGATION

An underground storage tank (UST) is located at the southeast corner of the East River Sludge Storage Tank site. In 1997, the 1,000-gallon No. 2 fuel oil UST was abandoned in place by the NYCDEP. Due to the non-contiguousness of the Sludge Storage Tank facility and the Newtown Creek WPCP, this tank was not part of the existing Petroleum Bulk Storage Registration. Also, because the total capacity for storage at the East River Sludge Storage facility is less than 1,100 gallons, the tank was not regulated by NYSDEC and did not need to be registered prior to closure.

4.0 ANALYTICAL RESULTS AND FINDINGS

4.1 ASBESTOS SURVEY

Donahoe Environmental, Inc. conducted the analysis of bulk samples collected from the East River Sludge Storage Tank in June of 2000. Analytical results are provided in Table 4-1 and shown on Figure 4-1. Sample analysis was conducted using Polarized Light Microscopy (PLM) in accordance with EPA Method 600/M-4-82-020.

Estimates of quantities and the condition of asbestos-containing materials were made based upon visual inspection of those areas accessed. Samples found to contain more than one percent asbestos are considered Asbestos Containing Materials (ACM) under Federal and State regulations. Appendix A contains the complete Asbestos Inspection Report by Donahoe Environmental, Inc.

ACM identified in the asbestos survey included:

- Millboard Pipe Insulation - approximately 100 square feet.

4.2 LEAD-BASED PAINT SURVEY

4.2.1 East River Sludge Storage Tank

The lead-based paint survey was intended to investigate the Sludge Storage Tank for the presence of lead-based paint prior to demolition work. An X-Ray Fluorescence (XRF) gun was used as a lead-based paint-screening tool.

During the inspection, a total of 44 XRF readings were collected with 7 readings indicating the presence of lead-based paint at or above the 0.5 percent by weight (or 1.0 milligram per square centimeter) classification level. This action level is established by the Department of Housing and Urban Development (HUD) in Chapter 7 of the *HUD Guidelines for the Evaluation and Control of Lead-based Paint Hazards in Housing (1997 Revision).* All XRF shots that tested positive for lead (greater than or equal to 1.0 mg/cm^2) were located in the Pump Room. These positive components included the following: a metal motor, a metal pump, metal piping (including an 18" pipe), an 18" metal valve, and a metal pipe support. Appendix B, which contains the Lead Paint Inspection Report by Mandell, provides more information regarding the inspection, and target areas. The results, description and overall condition of the painted surfaces at these locations are provided in Table 4-2, and Figure 4-2.

The HUD guidelines were established for residential housing with the protection of children as a primary concern. However, the presence of lead paint requires

consideration in regard to any repainting or demolition debris disposal activities based on the requirements and the OSHA Lead-in-Construction standard.

Of the samples collected at the Sludge Storage Tank, 16% exceeded the NYC Health Code and HUD guideline of 1.0 milligram per square centimeter. The locations of the samples that exceeded the NYC Health Code and HUD guideline are illustrated in Figure 4-2

4.2.2 DSNY Greenpoint MTS Site

Lead was detected in all four samples with results ranged from 70.8 to 13,700 mg/kg. According to HUD, lead-based paint is present if lead levels exceed 5,000 mg/kg. One sample, collected from an orange cleat, exceed the HUD standard. However, any detectable concentration of lead is subject to the requirements of the OSHA Lead in Construction Standard. Analytical results are shown on Figure 4-3.

4.2.3 Marine Transfer Station

There were no detections other than metals (Barium, Cadmium, and Lead); however, the levels did not exceed TCLP standards.

4.3 PCB in PAINT SURVEY

4.3.1 East River Sludge Storage Tank

PCBs were detected in all nine samples and there was one exceedance of Toxic Substances Control Act (TSCA) standards (50 mg/kg). This exceedance (120.0 mg/kg) was sampled from the light blue metal door casing in the storage room. Analytical results are shown on Figure 4-4

4.3.2 DSNY Greenpoint MTS Site

PCBs were detected (Aroclor 1254: 0076-0.34 mg/kg) but did not exceed TSCA standards. Analytical Results are shown on Figure 4-3.

4.3.3 Marine Transfer Station

Six of the ten samples, collected from red concrete columns, gray metal walls and beams, gray concrete walls, red metal railings and stair risers, red piping and a yellow metal cleat, were positive for PCBs (Aroclor 1254: 0.096-1.200 mg/kg); however levels did not exceed TSCA standards.

B= reported value is less than the contract required detection limit, but greater than or equal to the instrument detection limit.
D= dilution.
*= duplicate analysis not within limits.
ND= non-detect.
NE= Criteria not established.
EXCEEDANCES
=the sample exceeds the New York DEC TAGM Guidance criteria.
=the sample exceeds the NYSDEC STARS Memo #1 Guidance criteria.

Soil sample results were compared to the soil cleanup objectives in NYSDEC Technical and Administrative Guidance Memorandum (TAGM): Determination of Soil Cleanup Objectives and Cleanup Levels (1995), the NYSDEC's Spill Technology and Remediation Series (STARS) Memo #1: Petroleum-Contaminated Soil Guidance Policy, August 1992, and the Resource Conservation and Recovery Act (RCRA) Characteristic limits for hazardous wastes (40 CFR Part 261) to evaluate the presence or absence of contamination.

4.4.1 East River Sludge Storage Tank

4.4.1.1 Geoprobe Investigation

Discrete Samples

Four direct push discrete samples were collected from the grounds immediately adjacent to the Sludge Storage Tank. These samples were analyzed for TCLP VOCs as shown in Table 4-3. There were no exceedences of the RCRA TCLP limits in any of the samples.

Composite Samples

Five direct push composite samples were collected from the grounds immediately adjacent to the Sludge Storage Tank. Sample DP-P5 is a blind duplicate of sample DP-P2. These samples were analyzed for TCLP SVOCs and TCLP metals as shown in Table 4-4. There were no exceedences of the RCRA TCLP limits in any of the samples.

4.4.2 East River Sludge Loading Dock

4.4.2.1 Soil Borings

Discrete Samples

Eight discrete samples were collected from eight boring locations. These samples were analyzed for TCL VOCs and TCL SVOCs as shown in Table 4-5.

Six samples (one from each of the following locations, B-4, B-5, B-6, B-8, B-9, and B-10) had results that exceeded the TAGM criteria for SVOCs. The following polycyclic aromatic hydrocarbons (PAHs) exceeded the criteria in all locations except B-5: Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, and Benzo(a)pyrene. The criteria for Dibenzo(a,h)anthracene was exceeded in the samples from B-4, B-6, and B-10. The only exceedence from location B-5 was Benzo(a)pyrene. The criteria for 4-Nitrophenol was exceeded in the sample from B-6.

Five samples (one from each of the following locations, B-4, B-6, B-8, B-9, and B-10) had results which exceeded the STARS criteria for between six and thirteen PAHs including Naphthalene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, and Benzo(a)pyrene, and Benzo(g,h,i)perylene. The results for Indeno(1,2,3-cd)pyrene were also exceeded at locations B-5 and B-10.

There were no exceedences of the TAGM or STARS VOC criteria.

The Agency for Toxic Substances and Disease Registry (ATSDR) describes PAHs as a group of over 100 different chemicals that are formed during the incomplete burning of coal, oil and gas, garbage, or other organic substances like tobacco or charbroiled meat. PAHs are usually found as a mixture containing two or more of these compounds, such as soot. PAHs are ubiquitous in soils and total PAH concentrations in urban soils have been reported to range from 25,000 to about 585,000 parts per billion (ppb).

Composite Samples

Sixteen composite samples were collected from eight boring locations. These samples were analyzed for Full RCRA Characteristics, including ignitability, corrosivity, reactivity, TCL VOCs, TCL SVOCs, DRO, GRO, PCBs, and Full TCLP including VOCs, SVOCs, metals, pesticides, and herbicides as shown in Table 4-6.

Thirteen samples (from seven boring locations: B-4, B-5, B-6, B-8, B-9, B-10, and B-11) had results which exceeded the TAGM criteria for between one and six PAHs consisting of: Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, and Dibenzo(a,h)anthrancene. The criteria for 4-Nitrophenol were exceeded in one sample from location B-6.

Twelve samples (from six boring locations: B-4, B-5, B-6, B-8, B-9, and B-10) had results which exceeded the STARS criteria for between two and thirteen PAHs consisting of: Napthalene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, and Benzo(a)pyrene, and Benzo(g,h,i)perylene. The criteria for Indeno(1,2,3-cd)pyrene was also exceeded in eight samples (from five locations: B-4, B-5, B-6, B-8, and B-10).

Seven samples had detections of DRO and two samples had detections of GRO. There are no cleanup criteria for either of these compounds.

There were no other criteria exceedences.

4.4.2.2 Test Pit Samples

Discrete Samples

Six discrete samples were collected from six test pit locations. These samples were analyzed for TCL VOCs and TCL SVOCs as shown in Table 4-7.

Benzo(a)anthracene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, and Benzo(a)pyrene exceeded the TAGM criteria in TP-01 and TP-04. The Chrysene result from TP-04 also exceeded the TAGM criteria.

TP-01 and TP-04 also exceeded the STARS criteria for SVOCs. TP-01 had STARS criteria exceedences for Chrysene, Benzo(k)fluoranthene, and Benzo(a)fluoranthene. TP-04 had STARS criteria exceedences for Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Chrysene, Benzo(g,h,i)perylene, Naphthalene, and Acenaphthene.

All of the SVOCs which exceeded guidance criteria were PAHs.

There were no exceedences of the TAGM or STARS VOC criteria.

Composite Samples

Six composite samples were collected from six test pit locations. These samples were analyzed for ignitability, corrosivity, reactivity, TCL VOCs, TCL SVOCs, DRO, GRO, PCBs, and full TCLP. Table 4-8 shows the results.

Composite samples from test pits TP-01, TP-04, and TP-05 exceeded the TAGM criteria for between one and six PAHs consisting of: Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, and Benzo(a)pyrene, and Dibenzo(a,h)anthracene.

Composite samples from test pits TP-01, TP-04, and TP-05 exceeded the STARS criteria for between one and thirteen PAHs consisting of: Napthalene, Acenaphthene, Fluorene, Phenanthrene, Anthracene, Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, and Benzo(a)pyrene, and Benzo(g,h,i)perylene. The criteria for Indeno(1,2,3-cd)pyrene was also exceeded in TP-05.

DRO was detected in two of the samples.

There were no other criteria exceedences in any of the samples.

(1) Values in parentheses are the Method Detection Limits (MDLs).

QUALIFIERS
J= estimated value.
B= reported value is less than the contract required detection limit, but greater than or equal to the instrument detection limit.
ND= non-detect.
NE= Criteria not established.

EXCEEDANCES
=the sample exceeds the Guidance criteria.
=the sample exceeds the NYSDEC STARS Memo #1 Guidance criteria.

There were no exceedances for TCLP parameters or RCRA characteristics detected in any of the composite soil samples collected. TPH - GRO were not detected in any of the soil samples.

TCL VOCs were not detected in any of the discrete soil samples collected. Five TCL SVOCs, Benzo(a)anthracene, Benzo(b)fluoranthene, Benzo(a)pyrene, Chrysene, Benzo(k)flouranthene exceeded the TAGM soil criteria along Kingsland Avenue. Along Whale Creek Canal, concentrations detected at 3 to 3.5 feet bgs include Phenanthrene at 7.1 mg/kg, Fluoranthene at 11 mg/kg, Pyrene at 10 mg/kg, and Anthracene at 1.9 mg/kg, all well below the TAGM objective of 50 mg/kg.

Nine TAL Metals exceeded the TAGM soil criteria along Kingsland Avenue and Whale Creek Canal: arsenic, beryllium, chromium, copper, iron, nickel, selenium, vanadium, and zinc. At one soil boring location, eight metals exceeded the TAGM objectives at both the 3- to 3.5 foot depth and the 13.5 to 14.0 foot depth.

Mercury exceeded the TAGM criteria of 0.1 mg/kg in all but two sampling locations along both Kingsland Avenue and Whale Creek Canal. The highest concentration of mercury (1.2 mg/kg) was from the 3 to 3.5 foot interval. Mercury at the 13.5 to 14.0 foot depth was below the TAGM.

PCBs were detected in two soil samples along Whale Creek Canal but were below the TAGM criteria. The maximum PCB concentration was 32 ug/kg from the 0 to 5 foot depth interval from one of the two sample locations. TAGM RSCO for PCBs is 1,000 ug/kg.

TPH – DRO were detected in four of the sampling locations along Whale Creek Canal, and one of the sample locations along Kingsland Avenue. Results ranged from 5 to 90 mg/kg.

Analytical results, specifically TAGM exceedances, indicate that low level soil contamination is present in the soil samples collected. Soils would be classified as a non-hazardous industrial waste. Soil contamination discovered in this area is consistent with the current and former land uses and surrounding industrial land uses.

4.4.4 QA/QC SAMPLES

A total of two field blanks were collected throughout this sampling program. These samples were analyzed for TCLP VOCs, SVOCs, and metals as shown in Table 4-9. Di-n-butylphthalate was detected in one field blank. Selenium was detected in the other field blank. Neither of these detections exceeded the RCRA TCLP limits.

4.5 UST INVESTIGATION

In 1997, the 1,000-gallon capacity No. 2 fuel oil UST was abandoned in place by filling with sand in accordance with all New York City Fire Department regulations. All associated tank piping was removed. Visible signs of petroleum contamination or odor were not observed during tank closure proceedings. One direct push discrete sample (SSF-DP-P4) was collected from the grounds immediately adjacent to the abandoned UST. The sample was analyzed for TCLP VOCs as shown in Table 4-3. There were no exceedences of the RCRA TCLP limits. A direct push composite sample was also collected from the same location. The sample was analyzed for TCLP SVOCs and TCLP metals as shown in Table 4-4. There were no exceedences of the RCRA TCLP limits.

5.0 IMPACTS TO CONSTRUCTION ACTIVITIES

5.1 SOIL SAMPLING AND DISPOSAL CONSIDERATIONS

All material to be excavated will be in-situ sampled by the Contractor to determine disposal. The Contractor shall provide a Field Sampling Plan to test all soils and fill materials for presence of chemicals to determine if material is Hazardous Waste, Industrial Waste, Petroleum-contaminated Waste or Construction and Demolition Debris. Materials to be excavated will be classified as regulated solid waste or non-regulated solid waste as follows:

Regulated Solid Waste:

1. Hazardous Solid Waste: Material shall be considered a characteristic hazardous waste when it exhibits any of the following characteristics: ignitability, corrosivity, reactivity, or toxicity for Volatile Organic Compounds (VOCs), semi-VOCs, metals, pesticides, or herbicides, as defined in 6 NYCRR Part 371 or 40 CFR Section 261. Under New York State (NYS) regulations, a material that contains greater than 50 ppm of PCBs is considered a hazardous waste. The Environmental Protection Agency (EPA) considers greater than 50 ppm of PCB to be a PCB-contaminated waste under Toxic Substances Control Act (TSCA). All hazardous waste shall be considered unsuitable, and shall be disposed of at an approved permitted hazardous waste landfill.

2. Industrial Waste: Solid waste generated by manufacturing or industrial processes. Such processes may include, but are not limited to the following: electric power generation; fertilizer/agricultural chemicals; inorganic chemicals; iron and steel manufacturing; organic chemicals; and all other materials as defined in 6 NYCRR Part 360. The forms of such wastes are exemplified by but not limited to: liquids such as acids, alkalis, caustics, leachate, petroleum (and its derivatives), and processes or treatment wastewaters; sludges which are semi-solid substances resulting from process or treatment operations or residues from storage or use of liquids; solidified chemicals, paints or pigments; and dredge spoil generated by manufacturing or industrial processes, foundry sand, and the end or by-products of incineration or other forms of combustion.

   Soil and fill material containing industrial waste shall be considered industrial waste. Evidence that a soil or fill material contains industrial waste shall include visual identification of waste, chemical odors, vapor emission, chemical staining, and analytical data that exceeds that exceeds the concentration limits in (1) NYS DEC Technical Administrative Guidance Memorandum (TAGM) HWR-94-4046 for VOCs, semi-VOCs, organic pesticides/herbicides, and heavy metals; or (2) Spill Technology and

Remediation Series (STARS) Memo # 1, NYSDEC, August 1992 guidelines, whichever is more stringent.

3. Construction and Demolition (C&D) Debris: Uncontaminated solid waste resulting from the construction, remodeling, repair and demolition of utilities, structures and roads; and uncontaminated solid waste resulting from land clearing. Such waste includes, but is not limited to bricks, concrete, and other masonry materials, rock, and uncontaminated soil. Uncontaminated solid waste means C&D debris that is not mixed with other solid waste (i.e., industrial waste) at the point of generation, processing or disposal, and that is not contaminated with spills of a petroleum product, hazardous waste, or industrial waste. Soil and fill material may only be considered uncontaminated if it is associated with analytical data that meets the concentration limits in the NYS DEC TAGM or STARS Memo #1, NYSDEC, August 1992 guideline, whichever is more stringent.

4. Petroleum-contaminated Waste: Exhibits a discernible petroleum-type odor, contains visible petroleum product, may be associated with a reported spill, or material associated with sample data that exceeds concentration limits in STARS Memo #1, NYSDEC, August 1992.

Non-regulated Solid Waste: This applies to materials that, before being beneficially used (as determined by the NYS DEC), were solid waste. Material is no longer considered solid waste when used as described: uncontaminated soil which has been excavated as part of a construction project, and which is being used as a fill material, in place of soil native to the site of disposition; non-hazardous contaminated soil which has been excavated as part of a construction project, other than a NYS DEC-approved or undertaken inactive waste disposal site remediation program, and which is used as backfill for the same excavation or excavations containing similar contaminants at the same site. Excess materials on these projects are subject to the requirements of 6 NYCRR Part 360; non-hazardous petroleum-contaminated soil which has been decontaminated to the satisfaction of the NYS DEC and is being used in a manner acceptable to the NYS DEC; recognizable, uncontaminated concrete and concrete products, asphalt pavement, brick, glass, soil and rock placed in commerce for service as a substitute for conventional aggregate; nonhazardous petroleum-contaminated soil when incorporated into asphalt pavement products by a producer authorized by the NYS DEC; and all other uses as described in 6 NYCRR Part 360, Section 360-1.15.

Materials to be excavated includes all material removed from the ground regardless of type, character, composition, moisture, or condition thereof. All material will be classified by the Engineer, prior to excavation, following receipt of in-situ soil sampling results from the Contractor, and disposed of accordingly.

The Contractor's Field Sampling Plan will include an indication of the specific frequency of in-situ samples per unit volume as required by the approved disposal facililty chosen by the Contractor, but not fewer than one composite sample for each 500 cubic yards of material to be excavated. Parameters analyzed shall be at a minimum full RCRA Characteristics and TCLP VOCs, Semi-VOCs, Metals, Pesticides/Herbicides, and all other required Disposal Facility criteria.

5.2 EXCAVATION ACTIVITIES

Given the presence of SVOCs in soil samples collected at levels that exceed the concentration limits in TAGM and STARS, and the presence of DRO and GRO, excavated soils may be classified as non-hazardous industrial waste or non-hazardous petroleum-contaminated waste. Routes of exposure to SVOCs include dermal contact and inhalation of contaminated dust. Dust suppression activities should be implemented during construction to reduce inhalation risks. Site workers should be directed to use gloves and appropriate personal protective equipment (PPE), such as coveralls to reduce dermal contact risks. Planned excavations should be continuously monitored for hazardous atmospheres.

5.3 CONSTRUCTION DEWATERING

A Long Island Well Permit is necessary when wells are installed to withdraw water for any purpose and when the total capacity of such well or wells on any one property is in excess of 45 gallons per minute (gpm) or 64,800 gallons per day (gpd). This includes temporary or permanent dewatering wells.

To direct dewatering effluent to the sanitary or combined sewer system, a NYC DEP Wastewater Quality Control Permit and a NYC DEP Sewer Use Permit will be required. The Sewer Use Permit is applicable only if pumping rates during dewatering exceed 10,000 gallons per day.

Under the Wastewater Quality Control Permit, pre-treatment of dewatering effluent prior to discharge may be required. In general, the treatment system will consist of an oil/water separator and a carbon treatment system. Prior to dewatering, a pilot test of the effluent treatment system must be run and a sample of treated effluent analyzed for TPH, pH, copper, nickel, zinc, cadmium, chromium (VI), lead, mercury, TSS, BTEX, PCBs MTBE, tetrachloroethylene, and naphthalene, and flash point. Analytical results must be submitted to the NYC DEP prior to the startup of dewatering operations. It should be noted that there is a laboratory two-week turn-around time for some of these parameters and that the Contractor should factor this into his overall schedule. In addition, permitting agencies must be notified in writing prior to the commencement of discharge. Each permit is valid for one year and must be renewed at the end of that period.

5.4 ASBESTOS-CONTAINING MATERIAL

According to EPA/NESHAP and New York State regulations, all friable and non-friable asbestos containing material (ACM) that might become friable must be removed prior to any demolition and/or renovation activity that may disturb ACM or preclude access to the ACM for subsequent removal. This should be accomplished through preparation of specifications requiring state-of-the-art equipment and methods of abatement. A New York State-certified project designer must prepare the abatement design documents. Independent project monitoring/management should be performed to oversee removal activities and to provide safety for area occupants and workers during the removal operation. Asbestos abatement must be conducted in accordance with New York City Local Law 56.

5.5 LEAD-BASED PAINT

If construction and/or demolition activities at the Sludge Storage Tank result in a disturbance of paint, or if paint removal is conducted, monitoring for lead contamination and the appropriate disposal of paint wastes and residues will be required. The disposal of painted components must be conducted in accordance with applicable State and Federal regulations, including the Resource Conservation and Recovery Act (RCRA) hazardous waste regulations.

Under RCRA regulations, lead-contaminated waste is regulated as a hazardous waste if the Toxicity Characteristic Leaching Procedure (TCLP), a laboratory analytical procedure that simulates the leaching action in a landfill, results in a test leachate with a lead concentration in excess of 5.0 milligrams per liter. According to the EPA's March 1993 report, *Applicability of RCRA Disposal Requirements to Lead-based Paint Abatement Waste*, solid wastes such as woodwork, plaster, doors, and similar building components were generally found to be hazardous wastes when the lead level in the paint exceeded 4.0 milligrams per square centimeter (mg/cm2). Out of 44 XRF readings taken, 7 readings met or exceeded this guideline.

Wastes intended for recycling are exempt from the definition of solid/hazardous waste under the RCRA regulations. However, the operators must be notified of the presence of lead paint on disposed material to ensure proper handling.

Construction work where an employee may be occupationally exposed to lead is regulated by OSHA in 29 CFR 1926.62. Work covered under this standard includes but is not limited to: demolition or salvage of structures where lead or materials containing lead are present; removal or encapsulation of materials containing lead; new construction, alteration, repair or renovation of structures, substrates, or portions thereof, that contain lead, or materials containing lead; and

transportation, disposal, storage, or containment of lead or materials containing lead on the site or location at which construction activities are performed.

The standard limits worker exposure to 50 micrograms/cubic meter of air over an 8-hour Time Weighted Average (TWA). Various levels of employee exposure/types of work tasks are listed in the standard with corresponding Personnel Protective Equipment (PPE) (such as respirators), as well as monitoring and medical surveillance requirements. The contractor will be responsible for following the requirements of OSHA's lead standard during work tasks to be conducted at the Sludge Storage Tank.

It is recommended that the results of the lead-based paint survey be attached to the contract specifications/bid documents for the contractor's information and assessment of disposal options for any demolition debris generated. It is also recommended that the contractor be directed to sample and characterize (i.e., by TCLP lead analysis) demolition debris with painted surfaces to determine the appropriate disposal activities.

5.6 PCB-IN-PAINT

For construction and demolition activities affecting materials and structures coated with PCB-containing paint, refer to the "Guidelines for the Safe Handling of Paint Dust & Residues" issued by the NYCDEP's Bureau of Wastewater Treatment (BWT). All contract work involving lead and/or PCBs shall be performed to minimize the creation of airborne dust; minimize the quantity of hazardous waste generated; protect the health and welfare of all site personnel and the public; and avoid adverse environmental impacts.

If demolition activities are to take place, additional sampling may be necessary to characterize any materials that were not identified during this investigation, and determine the extent of PCB contamination from surfaces that were painted with PCB-containing paints. In addition, monitoring for contamination during work-related activities and properly disposing of wastes and residues containing PCBs that are generated during these activities will be required. The disposal of PCB-containing materials and contaminated surfaces must be conducted in accordance with any applicable local, state and federal regulations, including the Toxic Substances Control Act (TSCA).

Under TSCA, disposal requirements for PCB-containing materials (including paint) or PCB-contaminated surfaces generally become applicable when the concentration of PCBs in a material are $\geq$ 50 ppm, or the concentration of PCB residue on a surface is $\geq$ 10 $\mu g/100\ cm^2$. However, certain PCB-containing materials (e.g., light ballasts) may be able to be recycled under the EPA's universal waste regulations.

The results of this investigation will be attached to the contract specifications/bid documents for the contractor's information and for the assessment of disposal options for any demolition debris generated. The contractor will be directed to sample and characterize (e.g., totals analysis) demolition debris with PCB-containing materials (including painted building components) and/or PCB-contaminated surfaces, as well as any suspect materials or surfaces that were not identified or sampled during the investigation to determine the appropriate disposal or recycling requirements.

5.7 FUGITIVE DUST EMISSIONS

The Contractor is responsible for controlling visible dust caused by work operations and the moving of vehicles and equipment. The Contractor will implement dust control when soils are exposed, before, during, and after the work activity ceases. Dust control will also be required on the weekend. Application of water when visible dust is present on-site, or other such methods, will be subject to the Engineer's approval. The use of chemicals for dust control, including calcium chloride, will not be allowed.

Care will be taken to minimize the formation of dust when loading and transporting materials to and from the work area. To prevent dust generation, application of water to roadways and active work areas will be utilized as required. The Contractor's air monitoring operations and dust minimization activities will be in accordance with his site-specific health and safety plan (HASP).

5.7 NOISE CONTROL

The Contractor shall control and minimize noise caused by operation and movement of vehicles and equipment to the greatest degree practicable. Noise levels shall conform to the latest OSHA standards, and all other applicable Federal, State and local regulations. Noise precautions shall include the following:

- All construction equipment powered by an internal combustion engine shall be equipped with a properly maintained muffler.
- Air compressors shall be operated in accordance with the manufacturer's instructions for proper noise abatement.
- Air powered equipment shall be fitted with pneumatic exhaust silencers.

All sound attenuation measures shall comply with the following City noise code regulations:

- Exterior Mechanical Equipment: the Building Code of the City of New York, Title 27, Chapter 1, Subchapter 12, Subarticle 1208.3, Paragraph 27-770, concerns windows of dwelling units facing mechanical equipment and the

noise output limitation from exterior mechanical equipment as measured within the interior of the dwelling unit.

- Ambient Noise Quality: the Building Code of New York, Title 24, Chapter 2, Subchapter 6, concerns ambient noise quality criteria and standards which indicates the maximum outdoor sound levels in specific ambient noise quality zones for day-time and night-time standards.

APPENDIX A
Asbestos Inspection Report

DONOHOE ENVIRONMENTAL, INC.

White Plains, New York 10602

Re: Asbestos survey for the Newtown Creek WPCP pump building on Dupont Avenue in Greenpoint, New York.

Dear Ms. O'Shea:

Enclosed are the results of analysis for 3 bulk samples taken from the above location. The material collected was millboard pipe insulation found in the pump building. There is approximately 100 linear feet of millboard pipe insulation in the building.

The bulk insulation samples collected were analyzed in accordance with the protocol set forth in EPA method 600/M4-82-020. This method utilizes polarized light microscopy and dispersion staining techniques to identify asbestos fibers. All samples were analyzed in a NVLAP certified laboratory

The samples were analyzed by *Scientific Laboratories, Inc.*, an ELAP and NVLAP accredited laboratory.

Feel free to call if you have any questions.

Sincerely,

Timothy J. Donohoe

LEAD PAINT INSPECTION REPORT

INSPECTION FOR: Malcolm Pirnie, Inc.
104 Corporate Park Drive
P.O. Box 751
White Plains, NY 10602-0751

PERFORMED AT: Sludge Storage Tank
Dupont Street
New York, NY

INSPECTION DATE: 06/22/00

INSTRUMENT TYPE: SCITEC
XRF TYPE ANALYZER
Serial Number: 1411

ACTION LEVEL: 1.0 mg/cm2

OPERATOR LICENSE: NY/EPA Certification # NY-01-042003-167

THIS REPORT IS NON TRANSFERABLE

The measurements contained within are accurate to the best of our knowledge. Mandell Lead Inspectors Inc. does not under any circumstances make any representation guarantee or warranty as to the reported or future condition of the property.

SIGNED: Stuart A Casciano Date: 6-23-00

1.0 EXECUTIVE SUMMARY

At the request of Ms. Lee Guterman, Deputy Director of the Industrial and Environmental Hygiene (IEH) Division of the New York City School Construction Authority (NYCSCA), TRC Engineers, Inc. (TRC) conducted a Phase I Environmental Site Assessment (ESA) of the Site located at 235-241 Franklin Street, Brooklyn, New York 11222 (the "Site"). The legal description for the property is Block 2494, Lot 1. The purpose of the Phase I ESA was to identify conditions that would impact the use and development of the Site as a public school. The Site is located in an area that primarily consists of low-rise residential and commercial buildings.

The Site is improved with a one-story automobile repair facility, office trailer, and paved parking areas. The Site encompasses approximately 20,000-square feet in area. The Site building occupies an approximately 1,250 square foot footprint. The Site is bounded to the north by Dupont Street followed by a playground, to the south by a three-story residential building followed by Eagle Street, to the west by paved parking areas and the New York City Department of Environmental Protection Newtown Creek Plant Sludge Storage, and to the east by Franklin Street followed by low-rise residential and commercial buildings. Historically, the Site was occupied by low-rise residential and commercial buildings (from at least 1887 to 1905), commercial buildings including a garage and automobile repair facility with pump house and gasoline underground storage tank (circa 1916), and lumber storage (from approximately 1942 to at least 1996). The current improvements (i.e., automobile repair facility, office trailer, and paved parking areas) have been in existence since at least 2001. Historic uses of surrounding properties primarily consisted of residential, commercial, and industrial uses.

The main objective of the Phase I ESA is to identify recognized environmental conditions and environmental concerns that may affect the suitability of the Site for use as a public school. Recognized environmental conditions are defined in American Society of Testing and Materials (ASTM) Standard Practice E 1527-05 as the presence or likely presence, use, or release on the Site of hazardous substances or petroleum products. In addition, other environmental issues and conditions that, in the opinion of the *environmental professional* conducting the assessment, would not be considered *recognized environmental conditions* are identified in this assessment. These may include *historical recognized environmental conditions* or *de minimis* conditions. The Phase I ESA also includes a preliminary evaluation of specific potential environmental issues or concerns that are, according to ASTM E 1527-05, considered non-scope considerations. These issues include radon, asbestos-containing materials (ACM), polychlorinated biphenyls (PCBs) light ballasts, exterior lead-based paint (LBP), chemical storage, wetlands, regulatory compliance issues, dry cleaner and other industrial emissions, mold, biological agents, and methane. The Phase I ESA included a review of federal, state, and local records, previous reports (if available) and historical documents; visual observation of the Site and adjoining properties; and interviews with selected Site representatives.

The assessment requested by the NYCSCA is intended to identify conditions that would have the potential to impact the value of the Site or the development and use of the Site as a public school facility. This assessment was conducted for purposes of environmental due diligence in order to qualify for the innocent landowner, bona fide prospective purchaser, or contiguous property owner defenses under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). The Phase I ESA included, but was not limited to an assessment of the following potential environmental issues: current and historical site use; current and historical use of adjoining properties; regulatory agency records review; on-site solid waste management and disposal practices; on-site hazardous materials and petroleum products management; chemical storage, ACM, PCBs and exterior LBP management; wetlands;

regulatory compliance issues; dry cleaner and other industrial emissions; radon; mold and moisture intrusion; biological agents, and potential for methane generating materials.

Summary of RECs

This Phase I ESA has revealed no evidence of *recognized environmental conditions (RECs)* in connection with the Site, except the following:

- The Site was historically (circa 1916) developed as an automobile repair facility and garage. The Site is currently (since at least 2001) used as an automobile repair facility and for automobile parking. The potential subsurface impact from these operations is considered a REC.

- According to Historic Sanborn Maps, there was a gasoline underground storage tank (UST) on-Site from approximately 1916 to at least 1951. According to a prior Phase I ESA report, there was an abandoned 275-gallon aboveground storage tank on-Site. The abandoned 275-gallon aboveground storage tank was not observed during the Site reconnaissance. The possible presence and unknown status of the petroleum storage tanks at the Site is considered a REC.

- Oil staining was observed on the floor throughout the Site building, specifically near the electrical lift and floor drain and is considered a REC.

- Based on a review of City Environmental Quality Review (CEQR) Environmental Designations, the Site has an "E"-Designation associated with "window wall attenuation and alternate ventilation" and "underground gasoline storage tanks testing protocol". The "E"-Designation for underground storage tanks testing protocol is considered a REC.

- The Site reconnaissance revealed the presence of an automobile repair facility on an adjacent block. This facility, located at 246 Franklin Street, is identified in the regulatory agency database report as "Pat & Doms Body & Fender Repair Inc.", and is listed as a historic small quantity generator. This facility is also listed in the NY Manifest database for hazardous waste generation activity. The potential subsurface impact from auto repair operations on adjacent property is considered a REC.

- Review of historic records, including a prior Phase I ESA report, indicated that the Site is located in an area that was historically occupied by manufacturing operations with underground storage tanks and automobile repair activities. Review of historical records also revealed the use of adjacent properties as lumber yards, chemical facilities, and commercial laundries. Additionally, review of Historic Sanborn Maps revealed the historic (from at least 1951 to approximately 1978) presence of a dry cleaning facility upgradient of the Site. These historic property uses are considered a REC.

- Manhole # 64829 is located adjacent and northeast of the Site, at the intersection of Franklin and Dupont Street. This location is listed in the New York Spills/Leaking Tank Incident Reports (NYSpills/LTANKs) database in connection with three (3) spill cases, including one open case (Spill Case No. 9907940). This location is also listed in the regulatory agency database report orphans summary as a historical large quantity generator and in the NY Manifest database for hazardous waste generation activity. The potential subsurface impact is considered a REC.

- "Nuhart & Company" (also known as "Harte & Co." and "Dynamit Nobel-Harte, Inc."), located at 49-55 Dupont Street, adjacent to the Site, is listed as a historical large quantity generator with reported violations. This facility is also listed in the Petroleum Bulk Storage (PBS) database, Chemical Bulk Storage (CBS) database, and NY Manifest database for hazardous waste generation activity. Additionally, "Con ED – V3283", located at 55 Dupont Street, is listed as a historical large quantity generator and in the NY Manifest database for hazardous waste generation activity. Since this property is located adjacent to the Site and there are documented hazardous waste violations and hazardous waste generation activity associated with the property, it is considered a REC.

- One (1) historic large quantity generator ("Interflo Technologies") with reported violations is located in close proximity (within one-eighth of a mile) to the Site. This facility is also listed in the NY Manifest database for hazardous waste generation activity. Since this facility is located in close proximity to the Site and there are documented hazardous waste violations associated with the facility, it is considered a REC.

- The adjacent property to the west (Block 2494, lot 6) is listed in the regulatory agency database report orphans summary for an "E"-Designation associated with "window wall attenuation and alternate ventilation" and "underground gasoline storage tanks testing protocol". The "E"-Designation for underground storage tanks testing protocol is considered a REC.

Summary of Environmental Concerns

This Phase I ESA has revealed no evidence of environmental concerns in connection with the Site, except the following:

- Based on the estimated age of the Site building, suspect asbestos-containing materials (ACM) may be present and this is considered an environmental concern;

- Suspected lead-based paint (LBP) was observed on the interior and exterior surfaces of the Site building during the Site inspection. Based on the estimated age of the building, the painted surfaces may contain lead and LBP is considered an environmental concern; and,

- Fluorescent light fixtures and exterior caulk were observed during the Site inspection. Based on the age of the building, the fluorescent light fixtures and exterior caulk may contain polychlorinated biphenyls (PCBs). The potential presence of PCB-containing articles is considered an environmental concern.

Recommendations

TRC recommends the performance of a comprehensive Phase II Environmental Site Investigation (ESI) to determine if the identified RECs have affected the suitability of the Site for use as a public school facility.

In addition, TRC recommends that any ACM, LBP, and/or PCB-containing light ballasts/exterior caulk affected by the preparation of the Site for use by the public school system must be identified prior to and properly managed during demolition or renovation activities.

2.0 INTRODUCTION

This report summarizes the results of the Phase I ESA for the proposed site being considered for construction of a public school located at 235-241 Franklin Street, Brooklyn, New York 11222 (the "Site"). The legal description for the property is Block 2494, Lot 1. The Site is improved by a one-story automobile repair facility, office trailer, and paved parking areas.

The Site encompasses approximately 20,000-square feet in area. The Site building occupies an approximately 1,250 square foot footprint. The purpose of the Phase I ESA was to identify conditions that could potentially impact the use and development of the Site as a public school.

A Site reconnaissance was performed at the Site on May 27, 2008 by Ms. Angela Hernandez of TRC. The temperature during the Site visit was approximately 70 degrees Fahrenheit and the weather conditions were partly cloudy.

2.1 Selected Definitions

The following terms are used throughout this report and, for purpose of clarity, corresponding definitions are provided. These terms are fully defined in ASTM E 1527-05.

Environmental Professional – A person meeting the education, training, and experience requirements as set forth in 40 CFR § 312.10(b), necessary to conduct a *site reconnaissance*, *interviews*, and other activities in accordance with this practice, and from the information generated by such activities, having the ability to develop opinions and conclusions regarding *recognized environmental conditions* in connection with the *property* in question.

Recognized environmental conditions – The presence or likely presence of any *hazardous substances* or *petroleum products* on a *property* under conditions that indicate an existing release, a past release, or a material threat of a release of any *hazardous substances* or *petroleum products* into structures on the *property* or into the ground, groundwater, or surface water of the *property*.

2.2 Purpose and Scope

The purpose of this assessment is to identify *recognized environmental conditions* and certain other environmental issues or concerns as they existed at the Site at the time of the Site visit. The assessment is intended to identify conditions that would have the potential to impact the value of the Site or the development and use of the Site as a public school facility. The assessment was also conducted for purposes of environmental due diligence in order to qualify for the innocent landowner, bona fide prospective purchaser or contiguous property owner defenses under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). The Phase I ESA included, but was not limited to an assessment of the following potential environmental issues: current and historical site use; current and historical use of adjoining properties; regulatory agency records review; on-site waste management and disposal practices; on-site hazardous materials and petroleum products management; ACM, PCB containing equipment and LBP management; wetlands; regulatory compliance issues; dry cleaner and other industrial emissions; radon; mold and moisture intrusion; biological agents, and potential for methane generating materials.

This evaluation was conducted by qualified *environmental professionals* utilizing a standard of good commercial and customary practice in accordance with ASTM E 1527-05. The scope of work completed for this evaluation included the following:

- Documenting the physical characteristics of the Site through a review of available topographic, geologic, wetland, flood plain, and groundwater data and Site observations.

- Researching the Site history through a review of reasonably ascertainable standard sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports and interviews.

- Documenting current Site conditions, via observations and interviews, regarding the presence or absence of hazardous substances/petroleum products; the generation, treatment, storage, or disposal of hazardous, regulated, or medical wastes; the presence of electrical equipment that utilizes oils which potentially contain PCBs; and the presence of storage tanks (above and below ground).

- Determining the use of adjoining and nearby properties to identify the likelihood for environmental conditions (if present and/or suspected) and concerns to migrate onto the Site.

- An evaluation of information contained within federal and state environmental databases and other local environmental records, within specific search distances.

2.3 Additions, Deviations, Deletions, and Data Gaps

The following environmental issues that are outside the scope of ASTM E 1527-05 were also evaluated:

- A review of available radon data for the Site vicinity;
- A review of available wetlands data;
- A visual assessment for water damage and mold;
- A visual assessment for suspect ACM;
- A visual assessment for suspect LBP;
- An assessment of potential methane generation on-site or migration to the site;
- Regulatory compliance;
- PCB light ballasts;
- Biological agents; and
- Air emissions from dry cleaners and other industrial sources.

No deviations, data gaps and deletions from ASTM E 1527-05 were necessary in conducting this assessment except:

1. Interviews, as required by ASTM E1527-05, were not performed since the current owners are unavailable. However, the lack of interviews did not affect the environmental professional's ability to identify RECs.

2.4 Limitations and Exceptions

TRC has prepared this Phase I ESA using reasonable efforts in each phase of its work to identify recognized environmental conditions associated with hazardous substances, wastes and petroleum products at the Site. The methodology of the Phase I ESA was consistent with ASTM E 1527-05. Findings within this report are based on information collected from observations made on the day of the Site investigation and from reasonably ascertainable information obtained from governing public agencies and private sources.

This report is not definitive and should not be assumed to be a complete or specific delineation of the conditions above or below grade. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other construction purposes. TRC makes no representation or warranty that the past or current operations at the Site are or have been in compliance with all applicable federal, state, and local laws, regulations, and codes.

Regardless of the findings stated in the report, TRC is not responsible for consequences or conditions arising from facts that were concealed, withheld, or not fully disclosed at the time the evaluation was conducted.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.

The regulatory agency database search report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The report focuses on the Site and neighboring properties that could impact the Site. Neighboring properties listed in governmental environmental records are identified within specific search distances. The search distance varies depending upon the particular government record being checked. The regulatory research is designed to meet the requirements of ASTM E 1527-05. The information provided in the regulatory database report is assumed to be correct and complete.

3.0 SITE DESCRIPTION

3.1 Site Location and Legal Description

The Site is located at 235-241 Franklin Street, Brooklyn, New York 11222. The legal description for the property is Block 2494, Lot 1. The Site is improved with a one-story automobile repair facility, office trailer, and paved parking areas. The Site encompasses approximately 20,000-square feet in area. The Site building occupies an approximately 1,250 square foot footprint. The New York City Department of City Planning (NYCDCP) zoning map 12c indicates that the Site is designated as zone R6, which is a residential district. Based on a review of the City Environmental Quality Review (CEQR) Environmental Designations, as part of the New York City Zoning Resolution, the Site is labeled with an "E"-Designation (E-138) associated with "window wall attenuation and alternate ventilation" and "underground gasoline storage tanks testing protocol".

An "E"-Designation is a zoning map designation that provides notice of the presence of an environmental requirement pertaining to potential hazardous materials contamination or noise or air quality impacts on a particular tax lot. "E"-designations are established as part of a change in zoning that would allow additional development to occur on property, or would permit uses not currently allowed.

It is likely that the "E"-designation for the "underground gasoline storage tanks testing protocol" is a result of the Site being in close proximity to a gas station and/or the presence of an underground fuel oil tank(s). Therefore, the "E"-designation is considered a REC. The "Declaration of Single Development Parcel Pursuant to the New York City Zoning Resolution" is presented in *Appendix K*.

A map showing the location of the Site is presented in *Appendix A*. A site plan showing the physical layout including adjacent land use is presented in *Appendix B*. Photographs of the Site and surrounding areas are included in *Appendix C*.

The Site is located on a portion of the block bordered by Dupont Street to the north followed by a playground, to the south by a three-story residential building followed by Eagle Street, to the west by paved parking areas and the "New York City Department of Environmental Protection Newtown Creek Plant Sludge Storage", and to the east by Franklin Street followed by low-rise residential and commercial buildings. Historically, the Site was occupied by low-rise residential and commercial buildings (from at least 1887 to 1905), commercial buildings including a garage and automobile repair facility with pump house and gasoline underground storage tank (circa 1916), and lumber storage (from approximately 1942 to at least 1996). The current improvements (i.e., automobile repair facility, office trailer, and paved parking areas) have been in existence since at least 2001. Historic uses of surrounding properties primarily consisted of residential, commercial, and industrial uses.

The current owner of the Site, according to records maintained by the New York City Department of Finance, Office of the City Registrar, is Greenpoint Landing Associates, L.L.C. The purpose of the Phase I ESA was to identify conditions that could potentially impact the use and development of the Site as a public school.

Based on the review of the Historic Sanborn Fire Insurance Maps, no significant changes to the Site have been noted since the most recent Sanborn Map, dated 1996, except:

- The Site was historically (from approximately 1942 to at least 1996) used for lumber storage. The Site currently is occupied by a one-story automobile repair facility, office trailer, and paved parking areas.

3.2 Physical Setting

3.2.1 Topography

Based on field observations, the topography of the Site is generally flat. The topography of the surrounding area generally slopes downward to the west and downward to the north, towards the East River. According to the United States Geological Survey (USGS) 7.5-Minute Quadrangle Map (Brooklyn, NY 1995) and information contained in the regulatory agency database search report, the elevation of the Site property is approximately 12 feet above mean sea level (amsl). A copy of the topographic map is presented in *Appendix A*.

3.2.2 Geology

The geology of Kings County consists of unconsolidated glacial deposits overlying crystalline bedrock. Based upon available literature (Buxton, Soren, Posner, and Shernoff, 1981), the subsurface geology for the Site likely includes the following formations: Pleistocene upper glacial deposits, Gardiners Clay, Jameco Gravel, Cretaceous Raritan Formation consisting of sands and clays, and crystalline bedrock. The depth to crystalline bedrock for the area is estimated to be approximately 80 feet below ground surface (bgs).

3.2.3 Soils

According to "Geology of Staten Island and Western Long Island, Kings and Queens Counties, New York," by Geneva R. Roberts-Dolgin, the Site is underlain by glacial till that consists of a mixture of clay, silt, sand, gravel, and boulders. It is also likely that the soil underlying the Site consists of urban land due to New York City's long history of urban development. Urban land can be defined as soil that has been altered by human activities, thus making the soil unidentifiable.

Soil cores collected during a subsurface investigation performed by TRC in May 2008 generally consisted of fill material composed of ash, brick fragments, and silty sand, underlain by fill material consisting of light brown silty sand.

3.2.4 Hydrology

According to "United States Geologic Service (USGS) Fact Sheet FS134-97", the upper glacial aquifer is the uppermost hydrogeologic unit on Long Island; it consists of till deposits (clay, silt, sand, gravel, and boulders) along the north shore and outwash deposits (mostly sand, gravel, and clay) to the south. The outwash deposits are highly permeable – horizontal hydraulic conductivity is estimated to be 270 feet per day (Franke and Cohen, 1972); till deposits are typically less than half as permeable (Smolensky and others, 1989; Buxton and Shernoff, 1995).

The Site is located approximately 500 feet east of the East River. Based on topography, the presence of the nearest surface water body, and information provided in the USGS Fact Sheet, the regulatory agency database report, and review of prior reports, the assumed hydraulic gradient direction is northwest towards the East River and groundwater is expected to be approximately twelve (12) feet bgs. The

groundwater depth of 12 feet bgs was confirmed by a subsurface investigation performed by TRC in May 2008.

The current United States Fish and Wildlife National Wetlands Index map for the area of the Site was reviewed to determine if the Site is located in a regulated wetlands area. Based on a review of the map and observations made during the Site reconnaissance, the Site is not located within a regulated wetland area. A copy of the wetlands map is included in *Appendix D*.

The Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) for the Site area (Community Panel Number FM3604970202F) was reviewed to assess whether the Site is located within a designated flood plain or flood zone. The Site is located in an area labeled Flood Zone X, which is an area determined to be outside the 0.2% annual chance floodplain. A copy of the FIRM map for the Site area is included in *Appendix E*.

3.2.5 Radon

Radon is a colorless, odorless radioactive gas that results from the natural breakdown of uranium minerals in soil, rock, and water, which subsequently enters the atmosphere. It can concentrate in buildings, entering through cracks and other penetrations of a building foundation or floor slab. Some areas are more likely to have elevated concentrations of radon than others, reflecting subsurface lithologic conditions.

According to data provided in the New York Radon database presented in the regulatory agency database report (Appendix I), three (3) locations were tested in zip code 11222 (which encompasses the Site). At all three (3) of these locations, radon concentrations were less than 4.0 picoCuries per liter (pCi/L).

According to data in the Federal Area Radon Information for Kings County, NY presented in the regulatory agency database report (Appendix I), based on 51 locations, the average radon level for living areas is 0.750 picoCuries per liter (pCi/L) and the average radon level for basements is 1.370 picoCuries per liter (pCi/L).

In addition, the New York State Department of Health (NYSDOH) maintains a database of radon test results on a local and county level. According to the NYSDOH, a total of 367 radon tests have been conducted in Kings County. The average radon level was found to be 1.91 pCi/L.

All of the published results cited above are below the United States Environmental Protection Agency (USEPA) radon action level of 4.0 pCi/L. As such, TRC concludes that it is unlikely that elevated levels of radon gas are present at the Site.

4.0 ADJOINING PROPERTIES

The area of the Site consists of residential and commercial structures, primarily low-rise (one- to four-story) buildings. The following table summarizes the adjoining property uses:

Direction	Facility Name/Description	Street Address/Location	Current Use
North	• Dupont Street • Playground • Three-story factory • Commercial Street • Vacant Lot	• Public Street • Playground • 2 Clay Street • Public Street • Vacant Lot	• Public Street • Playground (“Greenpoint Playground) • Three-story factory (“Harte & Company”) • Public Street • Vacant Lot (“NYCHA”)
East	• Franklin Street • Four-story residential building • Three-story residential building • Three-story residential and commercial building • Three-story residential building • Two, four-story residential buildings • Four-story residential and commercial building	• Public Street • 274 Franklin Street • 270 Franklin Street • 268 Franklin Street • 266 Franklin Street • 262-260 Franklin Street • 75 Eagle Street	• Public Street • Four-story residential building • Three-story residential building • Three-story residential building with 1st floor commercial (occupied by a grocery store) • Three-story residential building • Two, four-story residential buildings • Four--story residential building with 1st floor commercial (occupied by a grocery store)

Direction	Facility Name/Description	Street Address/Location	Current Use
South	• Three-story residential building • Eagle Street • Three-story factory • Four-story residential buildings • Four-story residential and commercial building • Two-story residential building • Three-story residential building • Four-story residential building • One-story commercial building	• 63 Eagle Street • Public Street • 32 Eagle Street • 225 – 215 Franklin Street • 68 Eagle Street • 254 Franklin Street • 252 Franklin Street • 250 Franklin Street • 246 Franklin Street	• Three-story residential building • Public Street • Three-story factory • Four-story residential buildings • Four-story residential building with 1st floor commercial (occupied by a church) • Two-story residential building • Three-story residential building • Four-story residential building • One-story commercial building (occupied by a automobile repair facility)
West	• Parking areas • "NYCDEP Newtown Creek Plant Sludge Storage"	• Parking areas • "NYCDEP Newtown Creek Plant Sludge Storage"	• Parking areas • "NYCDEP Newtown Creek Plant Sludge Storage"

The Site is located in a highly developed urban area of Brooklyn consisting primarily of low-rise residential and commercial buildings.

The Site is bordered to the north by Dupont Street, followed by a playground ("Greenpoint Playground") and a three-story factory ("Harte & Company"), followed by Commercial Street and a vacant lot ("New York City Housing Authority"). To the east of the Site is Franklin Street, followed by low-rise (two- to four-story) residential and commercial buildings (occupied by residential units and grocery stores).

South of the Site is a three-story residential building, followed by Eagle Street, followed by a three-story factory, low-rise (two- to four-story) residential buildings, a church, and an automobile repair facility. The Site is bordered to the west by paved parking areas and The New York City Department of Environmental Protection Newtown Creek Plant Sludge Storage.

RECs were identified as a result of the review of adjoining properties; specifically, the presence of an adjacent industrial facility and automobile repair facility.

The adjoining properties have not experienced significant changes since the most recent Sanborn Fire Insurance Map, dated 1996, except:

- The addition of a low-rise (three-story) residential building, adjacent and south of the Site, at 62 Eagle Street. Historically, this property was developed as "Roamer Linen Supply Co".

Refer to applicable portions of Sections 5.0 and 6.0 for descriptions of the historical uses of the surrounding areas and for the results of review of regulatory agency databases.

5.0 HISTORICAL USE RESEARCH

5.1 Land Title Records and Tax Records

TRC reviewed prior ownership information for the Site provided by the New York City Department of Finance Office of the City Registrar. Public deed records and tax records from 1981 to 2005 were reviewed. The current owner of the Site is listed as Greenpoint Landing Associates, L.L.C. Deed information is presented in the tables below.

Block 2494, Lot 1:

Year	Deed Listings
2005	Lumber Exchange Terminal, Inc. to Greenpoint Landing Associates, L.L.C.
1989	Green Street Terminal Corporation to Oceania Trading and Shipping
1983	Oceania Trading & Shipping to Green Street Terminal Corporation

The review of current and historical ownership information did not reveal evidence of a REC associated with prior ownership of the Site. Copies of the Office of the City Registrar documents are presented in *Appendix K*.

5.2 Historical USGS Topographic Quadrangles

TRC reviewed available historical USGS topographic quadrangles provided by EDR for information regarding past uses of the Site and surrounding properties. The following table presents descriptions and interpretations from review of historical USGS topographic quadrangles.

Year	Comments
1900 Brooklyn, 1:62,500 scale	**Site:** The Site appears to be developed. No indications of occupants or use(s) are discernable. **Surrounding Properties**: The Surrounding properties are sparsely developed. The East River is approximately 500 feet west of the Site. Newtown Creek appears north of the Site. "Calvary Cemetery" is east of the Site. No indications of occupants or use(s) are discernable.
1947 Brooklyn, 1:25,000 scale	**Site:** No changes from the previous topographic map are noted. **Surrounding Properties**: Surrounding properties are developed. "St. Anthony's" is southeast of the Site. "Long Island Depot" is north of the Site. "McCarren Park" is southeast of the Site. "Cooper Park" is southeast of the Site. "Gas Holder BUG Co." is southeast of the Site, adjacent to "Cooper Park". "Gas tanks" are south of the Site, adjacent to "McCarren Park". The "Williamsburg Bridge" is southwest of the Site. No other significant changes from the previous topographic map are noted.
1956 Brooklyn, 1:24,000 scale	**Site:** No changes from the previous topographic map are noted. **Surrounding Properties**: "Franklin Street" is east of the Site, followed by "Manhattan Avenue". "Dupont Street" is north of the Site. "West Street" is southwest of the Site. "Eagle Street" is south of the Site, followed by "Freeman Street". "PS 31" is east of the Site, across Franklin Street. "St. Anthony's" is now labeled "St. Anthony's of Padua School". "JH 126" is southeast of the Site. "Long Island Depot" is now labeled "Terminal Yards". Several "gas tanks" are southeast of the Site, adjacent to "Cooper Park". "Gas tanks" are northeast of the Site, adjacent to Newtown Creek. "Radio Towers (WNYC)" are northwest of the Site. No other significant changes from the previous topographic map are noted.

Year	Comments
1967 Brooklyn, 1:24,000 scale	**Site:** No changes from the previous topographic map are noted. **Surrounding Properties:** "Sewage Disposal" is southeast of the Site. "Gas tanks" are no longer shown adjacent to "McCarren Park". "Holy Family School" is southeast of the Site adjacent to "McCarren Park", followed by "Brooklyn High School of Auto Trades". "St. Alphonsus School" is southeast of the Site. No other significant changes from the previous topographic map are noted.
1979 Brooklyn, 1:24,000 scale	**Site:** No changes from the previous topographic map are noted. **Surrounding Properties**: No significant changes from the previous topographic map are noted.
1995 Brooklyn, 1:24,000 scale	**Site:** No changes from the previous topographic map are noted. **Surrounding Properties**: No significant changes from the previous topographic map are noted.

The review of the historical USGS topographic quadrangles did not reveal the presence of recognized environmental conditions at the Site and surrounding areas, nor did it reveal any indications of historic filling or significant changes in topography. Copies of the historical USGS topographic quadrangles are included in *Appendix F*.

5.3 Historical Aerial Photographs

TRC reviewed aerial photographs of the Site and surrounding areas provided by EDR in order to identify historical land uses that may have involved hazardous substances and petroleum products. The dates of the photographs reviewed ranged from 1954 to 2006. The following table summarizes descriptions and interpretations from the aerial photography reviews:

Year	Comments
1954	**Site**: The Site appears to be developed. No indications of occupants or use(s) are discernable. **Surrounding Properties**: The surrounding properties are developed with what appear to be low-rise residential and commercial buildings. The East River is approximately 500 feet west of the Site.
1966	**Site**: No changes from the previous aerial photograph are noted. **Surrounding Properties**: No significant changes from the previous aerial photograph are noted.
1975	**Site**: The Site appears developed as a low-rise commercial building. **Surrounding Properties**: The "New York City Pollution Control Sludge Storage" appears adjacent and west of the Site. No other significant changes from the previous aerial photograph are noted.
1984	**Site**: No changes from the previous aerial photograph are noted. **Surrounding Properties**: No significant changes from the previous aerial photograph are noted.
1994	**Site**: No changes from the previous aerial photograph are noted. The photograph is of poor quality. **Surrounding Properties**: No significant changes from the previous aerial photograph are noted. The photograph is of poor quality.
2006	**Site**: The Site is developed with a low-rise commercial building, trailer, and associated parking areas. The Site is shown in its current configuration. **Surrounding Properties**: No significant changes from the previous aerial photograph are noted.

The review of aerial photographs did not indicate the presence of recognized environmental conditions at the Site and surrounding areas. Copies of reproducible aerial photographs are included in *Appendix G*.

5.4 Historical Fire Insurance Maps (Sanborn Maps)

A search for historical fire insurance maps for the Site and adjoining properties was conducted by EDR. The following table presents descriptions and interpretations from historical fire insurance map review. Descriptions presented in bold font are considered RECs.

Year	Comments
1887	**Site:** The Site is developed with a three-story property labeled "Franklin Hall" and a portion of a two-story residential dwelling. The Site is not shown in its current configuration. **Surrounding Properties**: Surrounding properties are developed with low-rise (one- to three-story) residential and commercial buildings. "Dupont Street" appears north of the Site, followed by "Commercial Street". "Franklin Street" appears east of the Site. "West Street" appears west of the Site. "Eagle Street" appears south of the Site, followed by "Freeman Street". Southwest of the Site across Eagle Street is a property labeled "J.H. Searles Veneer Factory", followed by a property labeled "Blacksmith" and a property labeled "Gaskell, Greenlie & Co". **North of the Site across Dupont and Commercial Streets is a property labeled "Reeves & Church Lumber Yard",** followed by a property labeled "Boat Shop". Southwest of the Site on the corner of Freeman Street and West Street is a property labeled "Machine Shop". Southwest of the Site, on West Street and Huron Street is a property labeled "John C. Orr & Company" with lumber storage, followed by a "Theodore S. Bird Shipyard". Southwest of the Site across West Street is a property labeled "C. Winant's Spar Yard". **Southwest of the Site on Freeman Avenue is a property labeled "A.K. Meserole & Co. Coal Yard" with a one-story "lime shed", followed by a property labeled "New York Dye Wood Extract and Chemical Company with approximately 15 wooden dye tanks, logwood and oil storage, and a tank house".** South of the Site, on West Street between Freeman and Greene Streets, is a property labeled "Lubricator Factory".
1905	**Site:** The Site is developed with low-rise commercial buildings and stables. The Site is not shown in its current configuration. **Surrounding Properties**: Surrounding properties are mostly developed with low-rise residential, commercial, and industrial structures. Adjacent and southeast of the Site is a property labeled "International Mahogany Co". North of the Site across Dupont and Commercial Streets the properties formerly labeled "Reeves & Church Lumber Yard" and "Boat House" are no longer shown. **North of the Site across Dupont and Commercial Streets is a property labeled "Bergen Co. Lumber Yard".** Northeast of the Site across Franklin Avenue is a property labeled "East River Co. Silexco Soap". Northeast of the Site, across Franklin Avenue on Dupont Street is a property labeled "Blacksmith", followed by a several properties labeled "Logan Iron Works". Northeast of the Site, across Franklin Avenue on Dupont Street is a property labeled "Gaites Peace & Co." and a property labeled "Abendroth & Stein Sheet Metal Works". "J.H. Searles Veneer Factory" is no longer shown. **South of the Site across Eagle Street is a property labeled "A.W. Barnes Soap Works" with tanks and a coal shed.** Southwest of the Site on West Street is a property labeled "P.M Dingee Lumber Shed". "Gaskell, Greenlie & Co" is now labeled "Wm Gaskell & Son". Southwest of the Site on West Avenue the property formerly labeled "Machine Shop" is now labeled "Machine & Bult Shop". Southwest of the Site across West Street the property formerly labeled "C. Winant's Spar Yard" is no longer shown. **West of the Site across West Street is a property labeled "Nesmith and Constantine Log Storage Yard".** East of the Site across Franklin Avenue is a property labeled "Hinds & Co Mineral Water Works". East of the Site on Franklin Avenue is a property labeled "Public School No. 31". East of the Site, on the corner of Dupont Street and Manhattan Avenue is a property labeled "Packing House" with several "rendering tanks". No other significant changes are noted from the previous Sanborn Map.

Year	Comments
1916	**Site: The Site is developed with low-rise commercial buildings including an automobile repair shop and garage with pump house and gasoline underground storage tank (UST).** This Site is not shown in its current configuration. **Surrounding Properties:** North of the Site across Dupont and Commercial Streets is a property labeled "Alberene Stone Co., Tub Storage". Northeast of the Site, on the corner of Clay Street and Manhattan Avenue is a property labeled "Edwards Hotel". The "N.Y. State Barge Canal Terminal" appears north of the Site, across Dupont and Commercial Streets. "International Mahogany Co". is no longer shown. East of the Site on Franklin Avenue the property formerly labeled "Public School No. 31" is now labeled "Samuel Dupont School". Southeast of the Site on Freeman Avenue is a property labeled "Greenpoint Metallic Bed Co". Southeast of the Site on Freeman Avenue is a property labeled "Garage", followed by a property labeled "Prepared Foilage MFG". Northeast of the Site, across Franklin Avenue on Dupont Street, the properties formerly labeled "Blacksmith" and "Logan Iron Works" are no longer shown and a property labeled "Post & McCord Warehouse" is now shown. The property formerly labeled "Gaites Peace & Co" is no longer shown and a property labeled "Recooperage" is now shown with three (3) air compressors. Northeast of the Site, across Franklin Avenue on Dupont Street, the property formerly labeled "Abendroth & Stein Sheet Metal Works" is now labeled "John Stein Sheet Metal Works". South of the Site across Eagle Street is a property labeled "Gotham Can Co". West of the Site across West Street the property formerly labeled "Nesmith and Constantine Log Storage Yard" is no longer shown. **Southwest of the Site on West Street the property formerly labeled "P.M Dingee Lumber Shed" is now labeled "Export Auto Case Co".** No other significant changes are noted from the previous Sanborn Map.
1942	**Site: The Site is developed with a property labeled "Lumber" with pump house and gasoline UST.** The Site is not shown in its current configuration. **Surrounding Properties**: Adjacent and north of the Site is a "public park" with a "comfort station". North of the Site across Dupont and Commercial Streets is a property labeled "Greenpoint Coal Docks, Inc". North of the Site across Dupont and Commercial Streets the property formerly labeled "Alberene Stone Co." is no longer shown. North of the Site across Dupont and Commercial Streets, the property formerly labeled "Bergen Co. Lumber Yard" is no longer shown. Northeast of the Site, across Franklin Avenue on Dupont Street, the properties formerly labeled "Post & McCord Warehouse", "Recooperage", and "John Stein Sheet Metal Works" are no longer shown. Northeast of the Site on Clay Street is a property labeled "Metal Wood Box MFG". Northeast of the Site across Franklin Avenue is a property labeled "Scrap Metal", followed by a property labeled "Iron Works". Northeast of the Site and adjacent to the "Edwards Hotel" is a property labeled "Prntg". **Adjacent and south of the Site is a property labeled "Roamer Linen Supply Inc. Steam Laundry".** Southwest of the Site across Eagle Avenue the properties formerly labeled "A.W. Barnes Soap Works", "Machine & Bult Shop, "Wm Gaskell & Son", and "Blacksmith" are no longer shown. **.** Southwest of the Site on West Street the property formerly labeled "Export Auto Case Co." is no longer shown. South of the Site across Eagle Street the property formerly labeled "Gotham Can Co." is no longer shown. **South of the Site across Eagle Street is a property labeled "Long Island Coat, Apron, & Linen Supply Co".** Southeast of the Site on Freeman Avenue the property formerly labeled "Greenpoint Metallic Bed Co" is no longer shown. Southeast of the Site on Freeman Avenue the property formerly labeled "Prepared Foilage MFG" is now labeled "Warehouse Furniture". East of the Site across Franklin Avenue the property formerly labeled "Hinds & Co Mineral Water Works" is no longer shown. East of the Site, on the corner of Dupont Street and Manhattan Avenue the property formerly labeled "Packing House" is no longer shown. East of the Site, across Franklin Avenue on Dupont Avenue, is a property labeled "Parish School of Sts. Cyril and Methodosius". No other significant changes are noted from the previous Sanborn Map.

Year	Comments
1951	**Site:** No significant changes from the previous Sanborn Map are noted. **Surrounding Properties: "Long Island Coat, Apron, & Linen Supply Co" has expanded.** Northeast of the Site across Franklin Avenue the property formerly labeled "Scrap Metal" is no longer shown. **Northeast of the Site on Clay Street is a property labeled "Harte & Co. Inc. Division Chemical Fabrics Co. MFG Plastic Film".** Northeast of the Site on Clay Street the property formerly labeled "Metal Wood Box MFG" is no longer shown. Southeast of the Site on Freeman Avenue the property formerly labeled "Garage" is now labeled "Furne Warehouse". **Southeast of the Site across Franklin Avenue is a property labeled "Dry Cleaning" and "Pressing".** Southeast of the Site across Franklin Avenue is a property labeled "Warehouse". The "N.Y. State Barge Canal Terminal" is now labeled "City of N.Y. Dupont St. Pier". **Southeast of the Site on Eagle Street is a property labeled "Auto Rep".** "Lumber Storage" is shown west of the Site across West Street. No other significant changes are noted from the previous Sanborn Map.
1965	**Site:** The Site is developed with a one-story property labeled "Trim Saw". The Site is not shown in its current configuration **Surrounding Properties: "Long Island Coat, Apron, & Linen Supply Co" is now labeled "Consolidated Laundries Corporation". North of the Site across Dupont and Commercial Streets the property formerly labeled "Greenpoint Coal Docks, Inc" is now labeled "Lumber Exchange Terminal Inc".** Northeast of the Site, on Dupont Street, are two (2) properties labeled "MFG". Northeast of the Site across Franklin Avenue the property labeled "Iron Works" is no longer shown. Northeast of the Site and adjacent to the "Edwards Hotel" the property formerly labeled "Prntg" is no longer shown. **Southeast of the Site across Franklin Avenue the property formerly labeled "Warehouse" is now labeled "Auto Painting".** Southeast of the Site on the corner of Franklin Avenue and Freeman Avenue is a property labeled "Prntg". **Southeast of the Site on Eagle Street the property formerly labeled "Auto Rep" is now labeled "Auto Painting".** No other significant changes are noted from the previous Sanborn Map.
1978	**Site:** No significant changes from the previous Sanborn Map are noted. **Surrounding Properties:** "Lumber Storage" is shown adjacent and west of the Site followed by "New York City Pollution Control Sludge Storage". Southeast of the Site on the corner of Franklin Avenue and Freeman Avenue the property formerly labeled "Prntg" is no longer shown. Southeast of the Site across Franklin Avenue the property formerly labeled "Dry Cleaning" and "Pressing" is no longer shown. East of the Site on Franklin Avenue the property formerly labeled "Samuel Dupont School" is no longer shown. "Lumber Exchange Terminal Inc" is no longer shown. "City of N.Y. Dupont St. Pier" is no longer shown. No other significant changes are noted from the previous Sanborn Map.
1979	**Site:** No significant changes from the previous Sanborn Map are noted. **Surrounding Properties:** No significant changes are noted from the previous Sanborn Map.
1980	**Site:** No significant changes from the previous Sanborn Map are noted. **Surrounding Properties:** No significant changes are noted from the previous Sanborn Map.
1981	**Site:** No significant changes from the previous Sanborn Map are noted. The map is of poor quality. **Surrounding Properties:** No significant changes are noted from the previous Sanborn Map. The map is of poor quality.
1983	**Site:** No significant changes from the previous Sanborn Map are noted. The map is of poor quality. **Surrounding Properties:** No significant changes are noted from the previous Sanborn Map. The map is of poor quality.
1986	**Site:** No significant changes from the previous Sanborn Map are noted. **Surrounding Properties:** No significant changes are noted from the previous Sanborn Map.
1987	**Site:** No significant changes from the previous Sanborn Map are noted. **Surrounding Properties:** No significant changes are noted from the previous Sanborn Map.

Year	Comments
1988	**Site:** No significant changes from the previous Sanborn Map are noted. **Surrounding Properties:** "Lumber Storage" is shown west of the Site, across West Street. No other significant changes are noted from the previous Sanborn Map.
1989	**Site:** No significant changes from the previous Sanborn Map are noted. **Surrounding Properties:** "Consolidated Laundries Corporation" is no longer shown. No other significant changes are noted from the previous Sanborn Map.
1991	**Site:** No significant changes from the previous Sanborn Map are noted. **Surrounding Properties:** Southeast of the Site on Eagle Street is a property labeled "Church". No other significant changes are noted from the previous Sanborn Map.
1992	**Site:** No significant changes from the previous Sanborn Map are noted. **Surrounding Properties:** No significant changes are noted from the previous Sanborn Map.
1993	**Site:** No significant changes from the previous Sanborn Map are noted. The map is of poor quality. **Surrounding Properties:** No significant changes are noted from the previous Sanborn Map. The map is of poor quality.
1995	**Site:** No significant changes from the previous Sanborn Map are noted. **Surrounding Properties:** East of the Site, across Franklin Street on Dupont Street, is a property labeled "Senior Citizen Housing". **North of the Site across Dupont and Commercial Streets is a property labeled "Two Guys Towing and Auto Repair"** followed by a "playground". No other significant changes are noted from the previous Sanborn Map.
1996	**Site:** No significant changes from the previous Sanborn Map are noted. The map is of poor quality. **Surrounding Properties:** No significant changes are noted from the previous Sanborn Map. The map is of poor quality.

As a result of the review of Historic Sanborn Maps, the following RECs were identified:

- The historic (circa 1916) use of the Site as an automobile repair facility and garage.
- The historic (from approximately 1916 to at least 1951) presence of a gasoline underground storage tank on-Site.
- This historic (from at least 1951 to approximately 1978) presence of a dry cleaning facility upgradient of the Site.
- The historic (since at least 1951) presence of automobile repair facilities in close proximity (i.e., adjacent or upgradient) of the Site.
- The historic (from at approximately 1887 to at least 1996) uses of adjacent properties as lumber yards, chemical facilities, and commercial laundries.

Note that properties located north and northwest of the Site which would typically be considered RECs (i.e., printing facilities) were not listed as such based on the presumed down-gradient hydraulic direction or considerable distance from the Site.

Copies of the historic Sanborn Fire Insurance Maps are included in *Appendix H*.

5.5 City Directories

A review of historic city directories was conducted by EDR. The following table presents descriptions and interpretations from the historical city directory reviews:

Year	Comments
1928	**Site:** Addresses not listed **Surrounding Properties**: No addresses listed
1934	**Site:** Addresses not listed **Surrounding Properties**: No addresses listed
1940	**Site:** Addresses not listed **Surrounding Properties**: No addresses listed
1945	**Site:** Addresses not listed **Surrounding Properties**: No addresses listed
1949	**Site:** Addresses not listed **Surrounding Properties**: Residential listing on Dupont Street.
1960	**Site:** Addresses not listed **Surrounding Properties**: "Gruenberg Electric Co. Inc." is listed for 9 Commercial Avenue. "Century Elec. Co. Motors" is listed for 7 Commercial Avenue. Residential listing on Dupont Street.
1965	**Site:** Addresses not listed **Surrounding Properties**: No addresses listed
1970	**Site:** Addresses not listed **Surrounding Properties**: No addresses listed
1973	**Site:** Addresses not listed **Surrounding Properties**: No addresses listed
1976	**Site:** Addresses not listed **Surrounding Properties**: No addresses listed
1980	**Site:** Addresses not listed **Surrounding Properties**: No addresses listed
1985	**Site:** Addresses not listed **Surrounding Properties**: No addresses listed
1992	**Site:** Addresses not listed **Surrounding Properties**: No addresses listed
1997	**Site:** Addresses not listed **Surrounding Properties**: No addresses listed
2000	**Site:** Addresses not listed **Surrounding Properties**: No addresses listed
2005	**Site:** Addresses not listed **Surrounding Properties**: No addresses listed

There were no RECs identified from the review of the Historic City Directory Abstracts. Copies of the historic City Directory Abstracts are included in *Appendix J.*

5.6 Prior Reports

TRC reviewed the Phase I Environmental Site Assessment (ESA) Report and Phase II ESI Report (the "AKRF Reports") prepared by AKRF, Inc. for the property known as Greenpoint Lumber Yard, located in Brooklyn, New York. The AKRF Reports were prepared for Park Tower Realty Corporation and are dated July and October, 2001, respectively. The Site is located on a portion of the Greenpoint Lumber Yard property (identified as a portion of "Area 8" in the AKRF Reports). According to the AKRF Phase I ESA Report, Block 2494, Lot 1 was historically occupied by residential dwellings and stores (from at least 1887-1905), a garage and automobile repair shop with a pump house and an underground storage

tank (circa 1916), vacant land (circa 1951), and the Lumber Exchange Terminal Inc. (from at least 1965 to 2000). "Far Better Towing, Inc. / R-D Towing Corporation was the occupant of the Site at the time the AKRF Phase I ESA Report was prepared (July 2001). The AKRF Phase I ESA Report indicated that the Site is occupied by an office trailer and one-story brick automobile repair shop and is used to repair, park, and auction seized vehicles.

The evaluation of the Phase I ESA Report revealed recognized environmental conditions (RECs) consisting of the historical and current use of the Site as an automobile repair facility and for automobile parking, the presence of an underground storage tank and 275-gallon abandoned aboveground storage tank on-Site; the presence of a hydraulic lift system on-Site; the presence of petroleum products stored on-Site; the presence of upgradient RCRA generators with Class One RCRA violations; and the historical uses of adjacent properties as a lumber yard where pressure treatment was performed. Additionally, the Phase I ESA Report indicated that the Site is located in an area that was historically occupied by manufacturing operations with underground storage tanks and automobile repair activities.

Based on the findings of the Phase I ESA, AKRF performed a Phase II ESI at the property known as Greenpoint Lumber Yard. The Phase II ESI consisted of the completion of five (5) soil borings and five (5) soil borings/groundwater monitoring wells, and the collection of soil and groundwater samples for laboratory analysis. None of these borings and/or monitoring wells are located on-Site. However, one (1) groundwater monitoring well ("MW-4") is located immediately adjacent and southwest of the Site. Several semi-volatile organic compounds (SVOCs) and metals were detected in soil samples exceeding the TAGM 4046 Recommended Soil Cleanup Objectives (RSCOs) in MW-4, which were considered indicative of petroleum contamination. VOCs and SVOCs were not detected in groundwater.

Due to the confidential nature of the reports, copies are not included as an Appendix to this report.

5.7 Other Historical Sources

There were no other historical sources reviewed in preparing this report.

5.8 Historical Use Interviews

No historical use interviews were conducted since the Site owner or representative was not available.

5.9 Historical Use Summary

The following table summarizes the findings of the research pertaining to historical Site use:

YEARS	HISTORICAL USES		SOURCE(S)	COMMENTS
	Site	Surrounding Properties		
1887-1905	Site is developed with residential and commercial buildings.	Developed with residential, commercial, and industrial structures	Historic Sanborn Maps	Earliest records identified; Adjacent properties occupied as lumber yards, chemical facilities, and commercial laundries (from approximately 1887 to at least 1996)

YEARS	HISTORICAL USES		SOURCE(S)	COMMENTS
	Site	Surrounding Properties		
Circa 1916	The Site is developed with low-rise commercial buildings including an automobile repair shop and garage with pump house and gasoline underground storage tank (UST).	Developed with residential, commercial, and industrial structures	Historic Sanborn Maps	Adjacent properties occupied as lumber yards, chemical facilities, and commercial laundries (from approximately 1887 to at least 1996)
1942-1951	The Site is developed with a property labeled "Lumber" with pump house and gasoline UST.	Developed with residential, commercial, and industrial structures	Historic Sanborn Maps	Adjacent properties occupied as lumber yards, chemical facilities, and commercial laundries (from approximately 1887 to at least 1996); Automobile repair facilities in close proximity to the Site (since at least 1951); Dry cleaning facility upgradient of the Site (from at least 1951 to approximately 1978)
1965-1996	The Site is developed with a property labeled "Trim Saw" and is used for lumber storage.	Developed with residential, commercial, and industrial structures	Historic Sanborn Maps	Adjacent properties occupied as lumber yards, chemical facilities, and commercial laundries (from approximately 1887 to at least 1996); Automobile repair facilities in close proximity to the Site (since at least 1951); Dry cleaning facility upgradient of the Site (from at least 1951 to approximately 1978)
From at least 2001-Present	The Site is developed as a one-story automobile repair facility, office trailer, and paved parking areas.	Developed with residential and commercial structures	Site Visit	Automobile repair facility in close proximity to the Site

As a result of the review of the historic records for the Site, RECs were identified and consist of the following:

- The historic (circa 1916) use of the Site as an automobile repair facility and garage.

- The historic (from approximately 1916 to at least 1951) presence of a gasoline underground storage tank on-Site.

- This historic (from at least 1951 to approximately 1978) presence of a dry cleaning facility upgradient of the Site.

- The historic (since at least 1951) presence of automobile repair facilities in close proximity (i.e., adjacent or upgradient) of the Site.

- The historic (from at approximately 1887 to at least 1996) uses of adjacent properties as lumber yards, chemical facilities, and commercial laundries.

6.0 REGULATORY AGENCY RECORD REVIEWS

The database search results discussed in this section, provided by Environmental Data Resources, Inc. (EDR) of Milford, Connecticut, were reviewed for information regarding documented and/or suspected releases of regulated hazardous substances and/or petroleum products on or near the Site. TRC also reviewed the "un-mappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Un-mappable sites are listings that cannot be plotted with confidence, but are identified as being located within the general area of the Site based on the partial street address, city name, or zip code. In general, a listing cannot be mapped due to inaccurate or incomplete address information in the database that was supplied by the corresponding regulatory agency. Any listings from the un-mappable summary which were identified by TRC as a result of the area reconnaissance and/or cross-referencing to mapped listings are included in the corresponding database discussion within this section.

6.1 Federal and State Regulatory Agency Database Reviews

A review of federal and state records for the Site was accomplished by contacting offices of federal and state regulatory agencies and review of the listings compiled in the regulatory agency database search report (*Appendix I*). The results of the review of the federal and state records are presented below. Copies of the correspondence are included in *Appendix L*.

United States Environmental Protection Agency (USEPA)
The USEPA is responsible for protecting human health and the environment. To that end, the USEPA develops and enforces regulations that implement environmental laws enacted by Congress. USEPA is responsible for researching and setting national standards for a variety of environmental programs, and, in certain instances, delegates to states and tribes the responsibility for issuing permits and for monitoring and enforcing compliance.

A Freedom of Information Law (FOIL) request dated May 16, 2008 was filed with the USEPA to determine if the agency holds additional records pertaining to the Site. As of the date of preparation of this report, no response has been received. Upon receipt of a response, TRC will review the response and, if conclusions contained within this report are affected, TRC will submit an addendum to the NYCSCA.

New York State Department of Environmental Conservation (NYSDEC)
The NYSDEC is responsible for protecting New York State's natural resources and environment, and controlling water, land and air pollution.

A Freedom of Information Law (FOIL) request dated May 16, 2008 was filed with the NYSDEC to determine if the agency holds additional records pertaining to the Site. As of the date of preparation of this report, no response has been received. Upon receipt of a response, TRC will review the response and, if conclusions contained within this report are affected, TRC will submit an addendum to the NYCSCA.

New York State Department of Health (NYSDOH)
The NYSDOH Bureau of Environmental Exposure Investigation is responsible for investigating the potential for human exposure from environmental contamination, primarily at inactive hazardous waste sites. Activities include water sampling and treatment; dump site, construction site, and spill investigations; and emergency event investigations. For every state, federal superfund, Brownfield, and voluntary clean-up site, a bureau specialist is assigned to coordinate and communicate health-related activities.

A Freedom of Information Law (FOIL) request dated May 16, 2008 was filed with the NYSDOH to determine if the agency holds additional records pertaining to the Site. As of the date of preparation of this report, no response has been received. Upon receipt of a response, TRC will review the response and, if conclusions contained within this report are affected, TRC will submit an addendum to the NYCSCA.

A summary of sites identified through review of the Federal and State regulatory agency databases is provided in the following table:

Federal and State List	Last Updated	Search Radius*	No. of Sites within Search Radius	Site Appears on List	RECs Identified
National Priorities List for Federal Superfund Cleanup (NPL)	01/31/2008	1 mile	0	No	No
De-listed NPL Site List	01/31/2008	½ mile	0	No	No
Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS), including CERCLIS NFRAP Sites	01/09/2008 and 12/03/2007	½ mile	0	No	No
Resource Conservation and Recovery Information System – Corrective Action Activity (RCRIS CORRACTS) and Non-CORRACTS Treatment, Storage, or Disposal Facilities (RCRIS-TSD)	03/26/2008 and 03/06/2008	1 mile / ½ mile	2	No	No
Resource Conservation and Recovery Information System Generators/Transporters (RCRIS Gen/Trans)	03/06/2008	¼ mile	1**	No	**Yes**
Federal Institutional Control/Engineering Control Registries	04/04/2008	Site	NA	No	No
Emergency Response Notification System (ERNS)	12/31/2007	Site	NA	No	No
Hazardous Substance Waste Disposal Site Inventory (HSWDS)	01/01/2003	½ mile	0	No	No
New York State Inactive Hazardous Waste Disposal Sites (SHWS)	02/05/2008	1 mile	0	No	No
New York State Deleted Inactive Hazardous Waste Disposal Sites (DEL SHWS)	02/05/2008	1 mile	2	No	No
Solid Waste Management Facilities Sites (SWMF)	01/03/2008	½ mile	6	No	No
New York State Spills Information (NY Spills)/Leaking Underground Storage Tanks (LTANKs)	02/05/2008	½ mile	152/21	No	**Yes**
Petroleum Bulk Storage Tanks (USTs/ASTs)	12/06/2007	¼ mile	12/10	No	**Yes**

Federal and State List	Last Updated	Search Radius*	No. of Sites within Search Radius	Site Appears on List	RECs Identified
Chemical Bulk Storage Tanks (USTs/ASTs)	12/06/2007	¼ mile	1	No	**Yes**
State Toxic Release Inventory System (TRIS)	12/31/2006	Site	NA	No	No
New York State Voluntary and Brownfield Cleanup Program Sites (VCP/BCP)	02/05/2008	1 mile	4/0	No	No
Registered Dry Cleaners	06/15/2004	¼ mile	1	No	No
NY Manifest	02/15/2008	¼ mile	15	No	**Yes**
Manufactured Gas Plant Sites (Coal Gas)	07/11/2002[2]	1 mile	4	No	No

* The surrounding area search radius indicates the radial area (measured from the perimeter of the Site) for which the database review was performed.
** The database search identified one (1) registered RCRA hazardous waste conditionally exempt small quantity generator (CESQG) and 14 RCRA non-generators (Non-Gen) within one-quarter mile of the Site.
[1]NA – Not Applicable
[2]This database consists of a compilation of historic resources (as early as the late 1800s) prepared by EDR that does not require updates. The last MGP in New York State ceased operations in 1972.

The Site location as listed in the regulatory database search report is located approximately 25 feet from the up-gradient Site perimeter, 50 feet from the cross-gradient Site perimeter, and 150 feet from the down-gradient Site perimeter. This information was used to calculate the search distances.

As the above table indicates, the Site is not listed in any of the databases.

The following subsections provide a discussion of the listings which have been identified within the search radii and are in the table above:

National Priorities List of Federal Superfund Cleanup (NPL)
The NPL is a subset of the CERCLIS, and lists properties that are ranked as high priority for cleanup under the federal Superfund program.

Neither the Site nor any other facility within one mile of the Site is listed in the NPL database.

Delisted NPL Site List
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the USEPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425 (e), sites where no further response is appropriate may be deleted from the NPL.

Neither the Site nor any other facility within one-half mile of the Site is listed in the Delisted NPL Site List.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)
The CERCLIS list is a compilation of known and suspected uncontrolled or abandoned hazardous waste sites which are, or were, under investigation by USEPA but have not been elevated to the status of a Superfund (NPL) site. Former CERCLIS sites that have been granted the status of No Further Remedial Action Planned (NFRAP) are also included in the database.

Neither the Site nor any other facility within one-half mile of the Site is listed in the CERCLIS database.

Resource Conservation and Recovery Information System (RCRIS) – Treatment, Storage, or Disposal Facilities (TSD) and RCRIS Corrective Action Activity (CORRACTS)
The Resource Conservation and Recovery Act (RCRA) program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRIS database tracks facilities that treat, store, and/or dispose of hazardous waste as defined by RCRA (referred to as TSD facilities). The RCRIS CORRACTS database identifies TSD facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA.

Neither the Site nor any other facility within one-half mile of the Site is listed on the RCRIS-TSD database.

The Site is not listed in the RCRIS CORRACTS database. Two (2) sites are listed in the RCRIS CORRACT database within one mile of the Site. The addresses listed for the two (2) sites are cross-gradient and located across Newtown Creek. Considering these sites are located greater than one-half mile from the Site across Newtown Creek which provides a hydraulic barrier, the sites are not considered RECs.

Resource Conservation and Recovery Information System Generators/Transporters (RCRIS Gen/Trans)
This list includes operations that generate or transport hazardous waste for which a hazardous waste generator identification number or transporter permit is required.

The database search identified one (1) RCRA large quantity generator (LQG) within one-quarter mile of the Site. The RCRA LQG listed in the RCRIS Gen/Trans database is located greater than one-eighth of a mile northeast (crossgradient) of the Site; therefore the site is not considered a REC.

Additionally, the database search identified one (1) registered RCRA hazardous waste conditionally exempt small quantity generator (CESQG) and 14 registered RCRA non-generators (Non-Gen) within one-quarter mile of the Site. The following sites listed in the RCRA Non-Gen database have the potential to impact the environmental integrity of the Site and are considered RECs:

Listing	Distance/Direction	Assumed Hydraulic Gradient	Map ID Number	Status/Available Data
"Dynamit Nobel-Harte, Inc.", 49-55 Dupont Street, Brooklyn, NY	<1/8 mile east-northeast	Crossgradient	A4 A5 A6 A7 A8	RCRA-Non Generator NYD001468354 and historical LQG with four (4) reported violations. The first violation was reported on July 1, 1986 for "generators-general" and compliance was achieved on January 30, 1987. The second violation was reported on January 27, 1987 for "generators-general" and compliance was achieved on January 27, 1987. The third violation was reported on August 21, 2001 for "listing-general" and compliance was achieved on September 11, 2001. The fourth violation was reported on May 7, 2002 for "generators-general" and compliance was achieved on June 5, 2002. This site is also listed on the Aerometric Information Retrieval System (AIRS), the National Compliance Database (NCDB), the New York – Facility Information System (FIS), and the NY Manifest database. This site is considered a REC since it is listed as a historical LQG with violations and is located adjacent to the Site.
"Con ED – V3283", 55 Dupont Street, Brooklyn, NY	<1/8 mile east-northeast	Crossgradient	A10	RCRA Non-Generator NYP004006656 and historical LQG with no reported violations. This location is also listed in the NY Manifest database because of the generation of hazardous waste including miscellaneous PCB wastes and petroleum oil. This location is listed as a REC since it is listed as a historical LQG and corresponds to the address listed for "Dynamit Nobel-Harte, Inc.", located adjacent to the Site (see description above).

Listing	Distance/Direction	Assumed Hydraulic Gradient	Map ID Number	Status/Available Data
"Pat & Doms Body & Fender Repair Inc.", 246 Franklin Street, Brooklyn, NY	<1/8 mile south-southeast	Crossgradient	29	RCRA-Non Generator NYD091584581 and historical SQG with no reported violations. This site is also listed on the NY Manifest database because of the generation of hazardous waste on-site including unknown waste. This site is considered a REC since it is listed as an automobile repair facility and is located in close proximity to the Site.

Listing	Distance/Direction	Assumed Hydraulic Gradient	Map ID Number	Status/Available Data
"Interflo Technologies", 19 Clay Street, Brooklyn, NY	<1/8 mile northeast	Crossgradient	33	RCRA-Non Generator NY0000374314 and historical SQG with 19 reported violations. The violations pertain to "TSD – general facility requirements", "TSD-financial requirements", "TSD-container use and management", "generators-general", "TSD-corrective action for SWMUs", "TSD-contingency plans and emergency procedures", "TSD-preparedness and prevention", "generators-records/reporting", "generators-pre-transport", "TSD-closure/post-closure", "TSD-general", "LDR-general", "Transporters-general", "Transporters-manifest and record keeping", "TSD-manifest/records/reporting", and "generators-manifest". All of the violations were reported on June 2, 1994 and compliance was achieved for all of the violations on or before August 1, 1995. This site is also listed on the NY Manifest database because of the generation of hazardous waste on-site including non-listed ignitable waste, halogenated solvents, and unknown waste. Additionally, this site is listed on the NCDB, the Integrated Compliance Information System (ICIS), and the Federal Insecticide, Fungicide, & Rodenticide Act (FIRFA) / Toxic Substances Control Act (TSCA) Tracking System (FTTS) (FTTS Inspection No. 19941118E2002 2). This site is considered a REC since the site has reported violations, has generated spent halogenated waste, and is located in close proximity to the Site.

The RCRIS Gen/Trans listing is merely a listing of all facilities that, due to the amount of hazardous waste generated, are required to register with the USEPA for tracking purposes, but are not necessarily those with reported contamination incidents. Based on distances, current regulatory status and the

absence of reported releases, the remaining facilities are unlikely to have an impact on the environmental integrity of the Site.

Federal Institutional Control/Engineering Control Registries
The Federal Institutional Control/Engineering Control Registries are listings of sites with engineering controls and/or institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining at a site. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or affect human health.

The Site is not listed in the Federal Institutional Control/Engineering Control Registries.

Emergency Response Notification System (ERNS)
The Emergency Response Notification System (ERNS) is a national database used to collect information on reported releases of oil and hazardous substances.

The Site is not listed in the ERNS database.

Hazardous Substance Waste Disposal Site Inventory (HSWDS)
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that USEPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared for. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites. The sites on the list will not automatically be made Superfund sites; rather each site will be further evaluated for listing on the Registry.

Neither the Site nor any other facility within one-half mile of the Site is listed in the HSWDS database.

New York State Inactive Hazardous Waste Disposal Sites (SHWS)

The New York State Inactive Hazardous Waste Disposal Sites database, compiled by the NYSDEC, maintains information regarding the investigation and cleanup of suspected hazardous waste sites.

Neither the Site nor any other facility within one-mile of the Site is listed in the SHWS database.

New York State Deleted Inactive Hazardous Waste Disposal Sites (DEL SHWS)
The New York State Deleted Inactive Hazardous Waste Disposal Sites database, compiled by the NYSDEC, maintains information regarding sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites.

The Site is not listed in the DEL SHWS database. Two (2) sites are listed in the DEL SHWS database within one mile of the Site. The addresses listed for the two (2) sites are potentially hydraulically crossgradient of the Site. However, considering the two (2) sites are located greater than one-half mile from the Site they do not represent RECs.

Solid Waste Management Facilities Sites (SWMF)
The SWMF database is a comprehensive listing of State permitted/recorded solid waste management facilities.

The Site is not listed in the SWMF database. Six (6) facilities are listed in the SWMF database within one-half mile of the Site. The six (6) SWMF facilities are all listed as "inactive". None of the SWMF facilities identified within the search radius are expected to have an impact on the environmental integrity of the Site due to their locations (i.e., hydraulically downgradient) and/or distances (i.e., greater than one-eighth mile from the Site).

New York State Spills Information Database (NY Spills)/Leaking Underground Storage Tanks (LTANKs)
The NY Spills database, including LTANK sites, was researched to identify listings within one-half mile of the Site.

The database search identified a total of 152 reported NY Spills and 21 LTANKs incidents within one-half mile of the Site. The following location listed in the NY Spills/LTANKs database has the potential to impact the environmental integrity of the Site and is considered a REC:

Listing	Distance/ Direction	Assumed Hydraulic Gradient	Map ID Number	Status/Available Data
"Manhole #64829", Franklin Avenue/ Dupont Street, Brooklyn, NY	<1/8 mile northeast	Crossgradient	A1 A2 A3	The location is listed in the NY Spills/LTANKs database due to a dielectric fluid spill affecting the sewer (Spill Case No. 9907940). According to the database report, four (4) gallons of dielectric fluid were released onto 1,500 gallons of water in "manhole #64829", possibly from a transmission feeder line. Reportedly, the spill is "not cleaned up yet" and "clean-up is pending results of testing". However, the NYSDEC closed the spill case on February 5, 2004. Since corrective action was not taken and the spill location is adjacent to the Site, this is considered a REC. This location is listed in the NY Spills/LTANKs database for two (2) additional spill cases (Spill Case Nos. 0006371 and 9903563). Spill Case No. 0006371 was reported to the NYSDEC when three (3) gallons of unknown petroleum were released onto 6,000-gallons of water in "manhole #64829". Reportedly, clean-up was completed on September 1, 2000 and the NYSDEC closed the spill case on June 3, 2004. Spill Case No. 9903563 was reported to the NYSDEC when 15 gallons of unknown petroleum were released onto 5,000 gallons of water in "manhole #64829". According to the regulatory agency database report, the spill case was being treated as a benzene contamination and "cathodic protection testing" was performed. Reportedly, 3,300 gallons of liquid and 100 pounds of material were removed from the manhole. The NYSDEC closed the Spill Case on January 30, 2004.

None of the remaining NY Spills/LTANKS facilities identified within the search radius are expected to have an impact on the environmental integrity of the Site due to the nature of the incidents, their closed status and/or their distances and locations with respect to presumed groundwater flow gradient direction.

Petroleum Bulk Storage Tanks (USTs/ASTs)
The NYSDEC petroleum bulk storage (PBS) tank database was researched to identify listings for the Site and adjacent properties.

A total of 22 PBS facilities were identified within one-quarter mile of the Site. The following site listed in the PBS tank database has the potential to impact the environmental integrity of the Site and is considered a REC:

Listing	Distance/ Direction	Assumed Hydraulic Gradient	Map ID Number	Status/Available Data
"Nuhart & Company", 49-55 Dupont Street, Brooklyn, NY	<1/8 mile east-northeast	Crossgradient	A4 A5 A6 A7 A8	This location is listed in the PBS database for 12 inactive closed in place USTs. This site is also listed on the AIRS database, the NCDB, the New York – FIS, the NY Manifest database, and the chemical bulk storage database (CBS Facility No. 2-000444). Additionally, this site is listed as RCRA non-generator NYD001468354 and historical LQG with four (4) reported violations. This site is considered a REC since it is listed as a historical LQG with reported violations and is located adjacent to the Site.

The PBS Tanks database is merely a listing of all facilities that are required to register their storage tanks for tracking purposes and not necessarily those with reported contamination incidents. Based on the absence of reported releases and/or distances from the Site, the remaining facilities listed in the PBS Tanks database are not expected to have an impact on the environmental integrity of the Site.

Chemical Bulk Storage Tanks (USTs/ASTs)
The NYSDEC chemical bulk storage (CBS) tank database was researched to identify listings for the Site and properties within the search radius.

The Site is not listed in the CBS section of the regulatory agency database search report. One (1) facility is listed within one-quarter mile of the Site. The following site listed in the CBS tank database has the potential to impact the environmental integrity of the Site and is considered a REC:

Listing	Distance/ Direction	Assumed Hydraulic Gradient	Map ID Number	Status/Available Data
"Nuhart & Company", 49-55 Dupont Street, Brooklyn, NY	<1/8 mile east-northeast	Crossgradient	A4 A5 A6 A7 A8	CBS Facility No. 2-000444. There is no further information provided in the regulatory agency database report regarding this listing. This site is also listed on the PBS database, the AIRS database, the NCDB, the New York – FIS, and the NY Manifest database. Additionally, this site is listed as RCRA non-generator NYD001468354 and historical LQG with four (4) reported violations. This site is considered a REC since it is listed as a historical LQG with reported violations and is located adjacent to the Site.

New York State Toxic Release Inventory System (TRIS)
The Toxic Release Inventory System (TRIS) is a database used to collect information and report releases of toxic chemicals to the air, water, and land in reportable quantities.

The Site is not listed in the TRIS database.

New York State Voluntary and Brownfield Cleanup Program Sites (VCP/BCP)
The Voluntary and Brownfield remedial programs involve mostly private entities and private funds to remediate contaminated sites and return the properties to productive use. The NYSDEC VCP/BCP database was researched to identify listings for the Site and within a one mile radius of the Site.

Neither the Site nor any other facility within one mile of the Site is listed in the BCP database.

The Site is not listed in the VCP database. Four (4) VCP sites were identified within one mile of the Site. None of the sites identified within the search radius are expected to have an impact on the environmental integrity of the Site due to their locations (i.e., hydraulically downgradient) and/or distance (i.e., greater than one-quarter mile from the Site).

Registered Dry Cleaners (NYSDEC)
The registered dry cleaners database was researched to identify listings within one-quarter mile of the Site.

The Site is not listed in the Registered Dry Cleaners database. The regulatory agency database search identified one (1) registered dry cleaner within one-quarter mile of the Site. The registered dry cleaning facility ("Aphrodite Cleaners") is located potentially hydraulically upgradient of the Site. However, considering the facility is located greater than one-eighth mile from the Site, the registered dry cleaning facility does not represent a REC.

NY Manifest

The NY Manifest database is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

There are fifteen (15) NY Manifest facilities listed in the regulatory agency database search report within one-quarter mile of the Site. The following site has the potential to impact the environmental integrity of the Site and is considered a REC:

Listing	Distance/Direction	Assumed Hydraulic Gradient	Map ID Number	Status/Available Data
"Nuhart & Co", 49-55 Dupont Street, Brooklyn, NY	<1/8 mile east-northeast	Crossgradient	A4 A5 A6 A7 A8	This location is listed on the NY Manifest database because of the generation of hazardous waste on-site including non-listed ignitable waste. This site is listed on the NCDB, the New York – FIS, the AIRS database, the PBS database, and the CBS database (CBS Facility No. 2-000444). Additionally, this site is listed as RCRA non-generator NYD001468354 and historical LQG with reported violations. This site is considered a REC since this site is listed as a historical LQG with violations and is located adjacent to the Site.
"Con ED – V3283", 55 Dupont Street, Brooklyn, NY	<1/8 mile east-northeast	Crossgradient	A10	This location is listed on the NY Manifest database because of the generation of hazardous waste on-site including PCB wastes and petroleum oil. This location is listed as RCRA non-generator NYP004006656 and historical LQG. This location is listed as a REC since it is listed as a historical LQG and corresponds to the address listed for "Nuhart & Co", located adjacent to the Site (see description above).
"Pat & Doms Body & Fender Repair Inc.", 246 Franklin Street, Brooklyn, NY	<1/8 mile south-southeast	Crossgradient	29	This location is listed on the NY Manifest database because of the generation of hazardous waste on-site including unknown waste. This site is also listed as RCRA non-generator NYD091584581 and historical SQG. This site is considered a REC since it is listed as an automobile repair facility and is located in close proximity to the Site.

Listing	Distance/Direction	Assumed Hydraulic Gradient	Map ID Number	Status/Available Data
"Interflo Technologies", 19 Clay Street, Brooklyn, NY	<1/8 mile northeast	Crossgradient	33	This location is listed on the NY Manifest database because of the generation of hazardous waste on-site including non-listed ignitable waste, halogenated solvents, and unknown waste. This site is listed as RCRA non-generator NY0000374314 and historical SQG with reported violations. This site is also listed on the NCDB, the ICIS, the AIRS and the FTTS databases. This site is considered a REC since the site has reported violations, has generated spent halogenated waste, and is located in close proximity to the Site.

The remaining facilities listed in the NY Manifest database are not expected to have an impact on the environmental integrity of the Site since the facilities do not have listed RCRA-violations associated with their hazardous waste generation activity, are located greater than one-eighth mile from the Site, or are located in a hydraulically cross- or down-gradient direction.

Manufactured Gas Plant Sites (Coal Gas)
Manufactured gas sites were used in the United States from the 1800's to the 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water and produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils, and other compounds are potentially hazardous to human health and the environment. The byproducts were frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination. The NYSDEC manufactured gas plant sites database was researched to identify any listings for the Site and within a one-mile radius of the Site.

The Site is not listed in the Manufactured Gas Plant Sites database. Four (4) Manufactured Gas Plant facilities are listed within one mile of the Site. None of the Manufactured Gas Plant sites within the search radius are expected to have an impact on the environmental integrity of the Site due to their location (i.e., hydraulically cross- or downgradient) and/or distance (i.e., greater than one-half mile from the Site).

Orphan Listings
A review of the Orphan Listings in the database search report indicated a total of forty (40) listings. The following Orphan sites have the potential to impact the environmental integrity of the Site and are considered RECs:

Listing	Distance/Direction	Assumed Hydraulic Gradient	Map ID Number	Status/Available Data
"Tax Block 2494, Lot 6", West Street, Brooklyn, NY	<1/8 mile west	Crossgradient	NA	This location is listed for an "E"-Designation associated with "window wall attenuation and alternate ventilation" and "underground gasoline storage tanks testing protocol". Since this property is located adjacent to the Site, the "E"-Designation for underground storage tanks testing protocol is considered a REC.
"Manhole #64829", Franklin Avenue/ Dupont Street, Brooklyn, NY	<1/8 mile northeast	Crossgradient	NA	This location is listed in the NY Manifest because of the generation of hazardous waste including cadmium, miscellaneous PCB wastes, and petroleum oil. This location is also listed as RCRA non-generator NYP004039392 and historic LQG with no reported violations. Since this location corresponds with the location listed in the NY Spills/LTANKs database for Spill Case Nos. 9907940, 0006371, and 9903563 and is located adjacent to the Site, this is considered a REC.

The remaining Orphan sites are not considered RECs based on their estimated distances from the Site (none adjacent or on the Site block) and/or the nature of the activity/release.

6.2 Local Regulatory Agency Research

A review of local records for the Site was accomplished by contacting offices of New York City regulatory agencies. The results of the review of local records are presented below. Copies of the correspondences are included in *Appendix L*.

New York City Department of Buildings (NYCDOB)
NYCDOB records for the Site were researched to determine whether there were any references to buildings, tanks or other structures, property use or inspection reports that may indicate the presence, past use, or release of hazardous substances, wastes or petroleum products on the Site.

Review of the NYCDOB records indicated that there are three (3) complaints and two (2) DOB violations recorded for the Site. There are no Environmental Control Board (ECB) violations recorded for the Site.

The three (3) complaints are associated with illegal electrical wiring, illegal stairway, and an illegal trailer and were all resolved; therefore no RECs were identified. The two (2) DOB violations are associated with construction and remain active. Based on the nature of the DOB violations, no RECs were identified from the DOB records review.

New York City Fire Department (FDNY)
The FDNY is responsible for the enforcement of local fire codes pertaining to the use and storage of flammable and hazardous materials. FDNY information concerning underground storage tanks, sealed or removed underground storage tanks, and history of leaks at the Site was requested in a record search form dated May 16, 2008.

TRC has not yet received a response from the department. Upon receipt of this information, TRC will review the response and, if conclusions contained within this report are affected, TRC will submit an addendum to the NYCSCA.

New York City Department of Health (NYCDOH)
The NYCDOH Bureau of Environmental Investigations (BEI) maintains files of health related environmental incidents in the City of New York. These incidents may include spills of hazardous chemicals, citizen complaints regarding asbestos issues, or reports of chemical odors or fumes. NYCDOH information concerning the Site was requested in a letter dated May 16, 2008.

TRC has not yet received a response from the department. Upon receipt of this information, TRC will review the response and, if conclusions contained within this report are affected, TRC will submit an addendum to the NYCSCA.

New York City Department of Environmental Protection (NYCDEP)
The NYCDEP maintains files of incidents involving environmentally regulated materials. The records maintained by the NYCDEP include reports of spills of hazardous chemicals and citizen complaints on environmental issues. NYCDEP information concerning the Site was requested in a letter dated May 16, 2008.

TRC has not yet received a response from the department. Upon receipt of this information, TRC will review the response and, if conclusions contained within this report are affected, TRC will submit an addendum to the NYCSCA.

7.0 USER RESPONSIBILITIES

7.1 Environmental Liens or Activity and Use Limitations

Environmental Data Resources, Inc. (EDR), in conjunction with National Real Estate Information Services, performed an environmental lien search for the Site. The results of the search indicate that no environmental liens or activity and use limitations associated with the Site were identified. The Environmental Lien Search Report is provided in *Appendix K*.

7.2 Valuation Reduction for Environmental Issues

There was no information available at the time of the assessment regarding the relationship of the purchase price of the property to the fair market value of the property. If information is received regarding valuation reduction for environmental issues which changes the conclusions or recommendations presented in this Report, an addendum will be submitted.

7.3 Knowledge or Experience of the User

There was no information available at the time of the assessment regarding the user's specialized knowledge or experience that is material to recognized environmental conditions in connection with the property.

7.4 Commonly Known or Reasonably Ascertainable Information

There was no information available at the time of the assessment regarding the user's knowledge of any commonly known or reasonably ascertainable information within the local community about the property that is material to recognized environmental conditions in connection with the property.

8.0 SITE RECONNAISSANCE AND INTERVIEWS

8.1 Methodology and Limiting Conditions

The Site reconnaissance was performed on May 27, 2008 by TRC representative Ms. Angela Hernandez. Ms. Hernandez was not escorted on the Site reconnaissance. An employee of "Far Better Towing", the current Site occupant, granted Ms. Hernandez access into the Site building. The temperature during the Site visit was approximately 70 degrees Fahrenheit and it was partly cloudy.

8.2 Site Reconnaissance

The Site is located at 235-241 Franklin Street, Brooklyn, New York 11222 (the "Site"). The legal description for the property is Block 2494, Lot 1. The Site occupies a portion of the block bordered by Dupont Street to the north, Franklin Street to the east, Eagle Street to the South, and paved parking areas and "New York City Department of Environmental Protection Newtown Creek Plant Sludge Storage" to the west.

The Site is located in an area that primarily consists of low-rise residential and commercial buildings. The Site is improved with a one-story automobile repair facility, office trailer, and paved parking areas. The Site encompasses approximately 20,000-square feet in area. The Site building occupies an approximately 1,250 square foot footprint.

The Site building is currently used as an automobile repair facility ("Far Better Towing"). The Site building has two (2) roll-up garage doors: one (1) on Franklin Avenue and one (1) in the rear of the Site building. Automobiles enter and exit the Site from an entrance on Franklin Street. Adjacent and north of the Site building is an office trailer. The office trailer was locked and therefore not inspected during the Site reconnaissance. Paved parking areas are located to the adjacent south and west of the Site building. There were approximately thirty (30) automobiles in the paved parking areas on the date of the Site reconnaissance. An eight (8) foot high metal fence surrounds the perimeter of the Site.

The Site building is divided into two (2) main areas. The northern portion of the Site building is a storage area. An air compressor, grease container, car batteries, battery chargers, tools, automobile parts, sealed bags of "vaporize rock salt", brake fluid, fire extinguisher, tire storage, and electrical power enclosures were observed in the northern portion of the Site building. The southern portion of the Site building is a storage and repair area. An electrical lift, tools, automobile parts, tire storage, a 5-gallon container of hydraulic oil, several empty gasoline containers, lockers, coolers, propane tanks, a ceiling-mounted fan, and two (2) refrigerators were observed in the southern portion of the Site building. A floor drain was observed adjacent to the electrical lift. Oil staining was noted on the floor throughout the Site building and this is considered a REC. According to an employee of Far Better Towing, operations at the Site include oil change services. Reportedly, waste oil is stored in drums, which are periodically picked-up by an outside source.

A pile of refuse consisting of tires, household waste, furniture, and a 55-gallon drum, presumably used for waste oil storage, were observed behind the Site building. On the north side of the Site building, adjacent to the office trailer, a portable bathroom, several garbage cans, a small open-top dumpster filled with household waste, and a refrigerator were observed.

The Site building is of brick construction with a flat wood framed roof. Interior finishes consist of painted brick walls and a concrete floor. According to a Far Better Towing employee, the roof of the

building has recently been repaired due to constant leakage. Electricity is supplied by Consolidated Edison Company of New York. There was no stationary heating equipment (e.g., boilers or furnaces) noted during the Site reconnaissance. Additionally there was no evidence of an aboveground storage tank or an underground storage tank (e.g., vent line or fill port) observed during the Site reconnaissance.

The Site is located in a highly developed urban area of Brooklyn consisting primarily of low-rise residential and commercial buildings.

The Site and adjoining properties have not experienced significant changes since the most recent Sanborn Fire Insurance Map dated 1996, discussed in Section 5.4, except:

- The Site was historically (from approximately 1942 to at least 1996) used for lumber storage. The Site currently is occupied by a one-story automobile repair facility, office trailer, and paved parking areas.

- The addition of a low-rise (three-story) residential building, adjacent and south of the Site, at 62 Eagle Street. Historically, this property was developed as "Roamer Linen Supply Co".

8.3 Current and Historical Interviews

The following knowledgeable persons were interviewed with regard to the Site pursuant to ASTM E 1527-05 Section 10:

8.3.1 Current Property Owner

Name	Title/Company	Years Associated with Site
Greenpoint Landing Associates, L.L.C.	Owner	3

The current owner of the Site is Greenpoint Landing Associates, L.L.C. Greenpoint Landing Associates, L.L.C. was unavailable for an interview at the time of the preparation of this report.

8.3.2 Current Site Operator or Key Site Manager

Site operators or key site managers were not available for interviews.

8.3.3 Site Occupants

Site occupants were not available for interviews.

8.3.4 Past Owners, Operators and Occupants

There were no prior owners or occupants available for interviews.

8.3.5 Report User

Name	Title/Company	Years Associated with Site
Ms. Anna Ciecierska	Project Manager/NYCSCA	<1

TRC was informed by Ms. Ciecierska of the NYCSCA that the NYCSCA is considering purchasing the Site for use as a public school.

8.4 Hazardous Substances and Petroleum Products Storage and Handling

8.4.1 Hazardous Substances

During the Site reconnaissance, TRC noted the presence of several small containers primarily of brake fluid and various aerosol cans. Evidence of a release (e.g., staining) was not observed associated with these materials and therefore, the presence of these containers is not considered a REC.

8.4.2. Petroleum Products Storage and Handling

During the Site reconnaissance at Lot 41, TRC noted the presence of the following:

- One (1) 5-gallon container of hydraulic oil.
- One (1) 55-gallon drum, presumably used for waste oil storage.
- Several containers of petroleum products throughout the Site building.

Oil staining was observed on the floor surface throughout the Site building, especially near the electric lift and floor drain. This is considered a REC.

8.5 Solid Waste Generation, Storage and Disposal

Solid waste generated on the Site is disposed of by the City of New York. During the Site reconnaissance, TRC noted the presence of a pile of refuse behind the Site building consisting of tires, household waste, furniture, and a 55-gallon drum, presumably used for waste oil storage. On the north side of the Site building, adjacent to the trailer office, are several garbage cans and a small open-top dumpster filled with household waste.

8.6 Polychlorinated Biphenyls (PCBs)

Polychlorinated biphenyls (PCBs) are toxic components of dielectric and hydraulic fluids that were formerly used in electrical equipment such as transformers and hydraulic elevators/lifts as well as in certain building products. The manufacture and use of PCBs was banned in the United States in 1978.

Suspect PCB-containing fluorescent light ballasts were noted throughout the Site building during the Site inspection. Exterior caulk was observed around the garage doors. Since the building was constructed before 1978, the potential for the presence of PCB-containing light ballasts and exterior caulk is considered an environmental concern.

8.7 Asbestos-Containing Material (ACM)

TRC conducted a limited visual survey (i.e., within accessible areas only) for the presence of suspect ACM within the Site. The intent of the survey was to identify exposed suspect ACM through preliminary non-destructive observations. In accordance with the SCA scope of services, no sampling of suspect ACM was performed during this investigation. Pursuant to applicable asbestos control regulations and guidelines, TRC considered any observed suspect materials to be asbestos-containing. The following table summarizes suspect ACM identified at the Site.

Material	Estimated Amount	Location	Friable	Condition
Exterior Caulk	50 sf	Throughout	No	Poor

The presence of suspect ACM is considered an environmental concern. Prior to Site renovation, a comprehensive asbestos survey should be performed and any ACM identified should be properly managed during Site demolition or renovation activities.

8.8 Lead-Based Paint (LBP) Survey

During the Site inspection, a limited visual assessment of all accessible painted surfaces was performed. No sampling or intrusive work was performed, as this is outside the scope of this Phase I ESA. In accordance with SCA's current interior LBP Inspection protocol, all painted interior surfaces are assumed to be LBP. For this Site, the interior painted surfaces were generally found to be in poor condition with evidence of damage or disrepair. Therefore, interior LBP is an environmental concern. Any interior paint that is damaged or in disrepair, or that may be disturbed in any way during construction activities, must be handled in accordance with SCA policies and procedures. Painted surfaces were observed on the exterior of the building. These surfaces include fencing and the exterior masonry façade. Any construction work that may disturb these painted surfaces should be inspected, and tested as appropriate, in accordance with SCA's current exterior LBP policies and procedures.

8.9 Regulatory Compliance

If the combined above ground and underground petroleum storage capacity on-Site exceeds 1,100 gallons, prior to demolition, the facility must be registered and closed in accordance with the requirements of NYSDEC petroleum bulk storage regulations (6 NYCRR 612 – 614). According to Historic Sanborn Maps, there was a gasoline underground storage tank (UST) on-Site from approximately 1916 to at least 1951. The capacity of the suspected on-Site UST is unknown. According to a prior Phase I ESA report prepared for the Site, there is an abandoned 275-gallon aboveground storage tank (AST) on-Site. The abandoned 275-gallon AST was not observed during the Site reconnaissance. There were no other potential regulatory compliance issues noted during the Site reconnaissance.

8.10 Other Environmental Conditions (Methane, mold, etc.)

During the Site inspection, an employee of Far Better Towing informed TRC that the Site building has a history of storm water leaks and the roof has recently been repaired due to this issue. There was no evidence of active mold growth at the Site.

Based on the review of historic sources, including Historic Sanborn Maps, topographic maps, and visual observations of the Site and surrounding area, it does not appear that the Site property was the subject of

historic filling or is located in an area of buried wetlands or other organic-rich deposits which would be a source of methane gas. Therefore, methane is not considered an environmental concern at the Site.

9.0 SUMMARY OF FINDINGS

The Site is located at 235-241 Franklin Street, Brooklyn, New York 11222 (the "Site"). The legal description for the property is Block 2494, Lot 1. TRC understands that the NYCSCA is contemplating the construction of a public school at this location.

The Site is improved by a one-story automobile repair facility, office trailer, and paved parking areas. The current owner of the Site, according to records maintained by the New York City Department of Finance, Office of the City Registrar, is Greenpoint Landing Associates, L.L.C. The Site encompasses approximately 20,000-square feet in area. The Site building occupies an approximately 1,250 square foot footprint. The Site is bounded to the north by Dupont Street followed by a playground, to the south by a three-story residential building followed by Eagle Street, to the west by paved parking areas and the "New York City Department of Environmental Protection Newtown Creek Plant Sludge Storage", and to the east by Franklin Street followed by low-rise residential and commercial buildings.

Historically, the Site was occupied by low-rise residential and commercial buildings (from at least 1887 to 1905), commercial buildings including a garage and automobile repair facility with pump house and gasoline underground storage tank (UST) (circa 1916), and lumber storage (from approximately 1942 to at least 1996). The current improvements (i.e., automobile repair facility, office trailer, and paved parking areas) have been in existence since at least 2001.

The historic (circa 1916) use of the Site as an automobile repair facility and garage is considered a REC. The historic (from at least 1916 to 1951) presence of a gasoline UST on-Site is considered a REC. The current use of the Site as an automobile repair facility and for automobile parking is considered a REC. Additionally, although not observed during the site reconnaissance, according to a prior Phase I ESA performed for the Site, there is an abandoned 275-gallon aboveground storage tank on-Site. Since the 275-gallon AST was not observed, this represents an unknown condition and a possible discharge and therefore, this is considered a REC.

The New York City Department of City Planning (NYCDCP) zoning map 12c indicates that the Site is designated as zone R6, which is a residential district. Based on a review of the City Environmental Quality Review (CEQR) Environmental Designations the Site has an "E"-Designation (E-138) associated with "window wall attenuation and alternate ventilation" and "underground gasoline storage tanks testing protocol". The "E"-designation for underground storage tanks testing protocol is considered a REC.

Based on field observations, the topography of the Site is generally flat. The topography of the surrounding area generally slopes downward to the west and downward to the north, towards the East River. According to the United States Geological Survey (USGS) 7.5-Minute Quadrangle Map (Brooklyn, NY 1995) and information contained in the regulatory agency database search report, the elevation of the Site property is approximately 12 feet above mean sea level (amsl) and groundwater is expected to be at approximately twelve (12) feet bgs and flow towards the northwest.

The Site is located in a highly developed urban area of Brooklyn consisting primarily of low-rise residential and commercial buildings. The Site reconnaissance revealed the presence of an automobile repair facility on an adjacent block. This facility, located at 246 Franklin Street, is identified in the regulatory agency database report as "Pat & Doms Body & Fender Repair Inc." and is listed as a historical small quantity generator. This facility is also listed in the NY Manifest database for hazardous waste generation activity. This is considered a REC.

Historic uses of surrounding properties primarily consisted of residential, commercial, and industrial uses. Review of historic records, including a prior Phase I ESA report for the Site, indicated that the Site is located in an area that was historically occupied by manufacturing operations with underground storage tanks and automobile repair facilities. Review of historical records also revealed the use of adjacent properties as lumber yards, chemical facilities, and commercial laundries. Additionally, review of Historic Sanborn Maps revealed (from at least 1951 to approximately 1978) the presence of a dry cleaning facility upgradient of the Site. These historic property uses are considered a REC.

The NY Spills database, including LTANK sites, was researched to identify listings within one-half mile of the Site. Manhole # 64829 is located adjacent and northeast of the Site, at the intersection of Franklin and Dupont Street. This location is listed in the NY Spills/LTANKs database in connection with three (3) spill cases, including one (1) open case (Spill Case No. 9907940). This location is also listed in the regulatory agency database report orphans summary as a historical large quantity generator and in the NY Manifest database for hazardous waste generation activity. This is considered a REC.

"Nuhart & Company" (also known as "Harte & Co." and "Dynamit Nobel-Harte, Inc."), located at 49-55 Dupont Street, adjacent to the Site, is listed as a historical large quantity generator with reported violations. This facility is also listed in the Petroleum Bulk Storage (PBS) database, Chemical Bulk Storage (CBS) database, and NY Manifest database for hazardous waste generation activity. Additionally, "Con ED – V3283", located at 55 Dupont Street, is listed as a historical large quantity generator and in the NY Manifest database for hazardous waste generation activity. Since this property is located adjacent to the Site and there are documented hazardous waste violations and hazardous waste generation activity associated with the property, it is considered a REC.

One (1) historic large quantity generator ("Interflo Technologies") with reported violations is located in close proximity (within one-eighth of a mile) to the Site. This facility is also listed in the NY Manifest database for hazardous waste generation activity. Since this facility is located in close proximity to the Site and there is documented hazardous waste violations associated with the facility, it is considered a REC.

Tax Block 2494, Lot 6, the adjacent property to the west, is listed in the Orphans Summary for an "E"-Designation associated with "window wall attenuation and alternate ventilation" and "underground gasoline storage tanks testing protocol". The "E"-Designation for underground storage tanks testing protocol is considered a REC.

Additionally, the Site reconnaissance revealed environmental concerns associated with suspect asbestos-containing materials, suspect interior lead-based paint, suspect PCB-containing light ballasts and caulk material.

10.0 CONCLUSIONS AND RECOMMENDATIONS

TRC has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-05 and the requirements of the NYCSCA. Any additions to, exceptions to, or deletions from this practice are described in Section 2.0 of this report.

Summary of RECs

This Phase I ESA has revealed no evidence of *recognized environmental conditions (RECs)* in connection with the Site, except the following:

- The Site was historically (circa 1916) developed as an automobile repair facility and garage. The Site is currently (since at least 2001) used as an automobile repair facility and for automobile parking. The potential subsurface impact from these operations is considered a REC.

- According to Historic Sanborn Maps, there was a gasoline underground storage tank (UST) on-Site from approximately 1916 to at least 1951. According to a prior Phase I ESA report, there was an abandoned 275-gallon aboveground storage tank on-Site. The abandoned 275-gallon aboveground storage tank was not observed during the Site reconnaissance. The possible presence and unknown status of the petroleum storage tanks at the Site is considered a REC.

- Oil staining was observed on the floor throughout the Site building, specifically near the electrical lift and floor drain and is considered a REC.

- Based on a review of City Environmental Quality Review (CEQR) Environmental Designations, the Site has an "E"-Designation associated with "window wall attenuation and alternate ventilation" and "underground gasoline storage tanks testing protocol". The "E"-Designation for underground storage tanks testing protocol is considered a REC.

- The Site reconnaissance revealed the presence of an automobile repair facility on an adjacent block. This facility, located at 246 Franklin Street, is identified in the regulatory agency database report as "Pat & Doms Body & Fender Repair Inc.", and is listed as a historic small quantity generator. This facility is also listed in the NY Manifest database for hazardous waste generation activity. The potential subsurface impact from auto repair operations on adjacent property is considered a REC.

- Review of historic records, including a prior Phase I ESA report, indicated that the Site is located in an area that was historically occupied by manufacturing operations with underground storage tanks and automobile repair activities. Review of historical records also revealed the use of adjacent properties as lumber yards, chemical facilities, and commercial laundries. Additionally, review of Historic Sanborn Maps revealed the historic (from at least 1951 to approximately 1978) presence of a dry cleaning facility upgradient of the Site. These historic property uses are considered a REC.

- Manhole # 64829 is located adjacent and northeast of the Site, at the intersection of Franklin and Dupont Street. This location is listed in the New York Spills/Leaking Tank Incident Reports (NYSpills/LTANKs) database in connection with three (3) spill cases, including one open case (Spill Case No. 9907940). This location is also listed in the regulatory agency database report

orphans summary as a historical large quantity generator and in the NY Manifest database for hazardous waste generation activity. The potential subsurface impact is considered a REC.

- "Nuhart & Company" (also known as "Harte & Co." and "Dynamit Nobel-Harte, Inc."), located at 49-55 Dupont Street, adjacent to the Site, is listed as a historical large quantity generator with reported violations. This facility is also listed in the Petroleum Bulk Storage (PBS) database, Chemical Bulk Storage (CBS) database, and NY Manifest database for hazardous waste generation activity. Additionally, "Con ED – V3283", located at 55 Dupont Street, is listed as a historical large quantity generator and in the NY Manifest database for hazardous waste generation activity. Since this property is located adjacent to the Site and there are documented hazardous waste violations and hazardous waste generation activity associated with the property, it is considered a REC.

- One (1) historic large quantity generator ("Interflo Technologies") with reported violations is located in close proximity (within one-eighth of a mile) to the Site. This facility is also listed in the NY Manifest database for hazardous waste generation activity. Since this facility is located in close proximity to the Site and there are documented hazardous waste violations associated with the facility, it is considered a REC.

- The adjacent property to the west (Block 2494, lot 6) is listed in the regulatory agency database report orphans summary for an "E"-Designation associated with "window wall attenuation and alternate ventilation" and "underground gasoline storage tanks testing protocol". The "E"-Designation for underground storage tanks testing protocol is considered a REC.

Summary of Environmental Concerns

This Phase I ESA has revealed no evidence of environmental concerns in connection with the Site, except the following:

- Based on the estimated age of the Site building, suspect asbestos-containing materials (ACM) may be present and this is considered an environmental concern;

- Suspected lead-based paint (LBP) was observed on the interior and exterior surfaces of the Site building during the Site inspection. Based on the estimated age of the building, the painted surfaces may contain lead and LBP is considered an environmental concern; and,

- Fluorescent light fixtures and exterior caulk were observed during the Site inspection. Based on the age of the building, the fluorescent light fixtures and exterior caulk may contain polychlorinated biphenyls (PCBs). The potential presence of PCB-containing articles is considered an environmental concern.

Recommendations

TRC recommends the performance of a comprehensive Phase II Environmental Site Investigation (ESI) to determine if the identified RECs have affected the suitability of the Site for use as a public school facility.

In addition, TRC recommends that any ACM, LBP, and/or PCB-containing light ballasts/exterior caulk affected by the preparation of the Site for use by the public school system must be identified prior to and properly managed during demolition or renovation activities.

11.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

TRC Engineers, Inc. (TRC) has performed a Phase I ESA of the property located at 235-241 Franklin Street, Brooklyn, New York 11222 (Tax Block 2494, Lot 1). The scope of the Phase I ESA was consistent with the requirements of ASTM Standard Practice E 1527-05 and of the NYCSCA. Signatures of the Environmental Professionals who participated in conducting this Phase I ESA are provided below. Qualifications for these individuals are provided in *Appendix M*. TRC declares that to the best of their professional knowledge and belief, they meet(s) the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. TRC has the specific qualifications based on education, training and experience to assess the subject property. TRC has developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

SITE PHOTOGRAPHS

Block 2494, Lot 1
Brooklyn, New York 11222
May 27, 2008

Photograph 1. View of Site taken facing west across Franklin Street. The Site consists of an automobile repair facility, trailer office, and paved parking areas.

Photograph 2. View of "Greenpoint Playground" located adjacent and north of the Site, across Dupont Street.

Photograph 3. View of "Harte & Company" located adjacent and northeast of the Site, across Franklin Street.

Photograph 4. View of grating for a possible underground transformer located adjacent to "Harte and Company", taken facing north on Franklin Street.

Photograph 5. View of residential and commercial buildings located adjacent and southeast of the Site, across Franklin Street. Automobile repair facility is located on adjacent block at 246 Franklin Street.

Photograph 6. View of low-rise (three- and four-story) residential and commercial buildings located adjacent and east of the Site, across Franklin Street.

Photograph 7. View of Franklin Street taken facing south on Franklin Street. Note adjacent three-story residential building.

Photograph 8. View of paved parking areas located on-Site and the "NYCDEP Newtown Creek Plant Sludge Storage" located adjacent and west of the Site.

Photograph 9. View of paved parking areas, trailer office, and Site building, taken facing east towards Franklin Street. There were approximately 30 cars in the paved parking areas during the Site visit.

Photograph 10. View of interior southern portion of Site building. Note electrical lift, ceiling mounted fan, and tool storage.

Photograph 11. View of electrical power boxes, air compressor, grease container, tires, and automobile batteries stored in northern portion of Site building.

Photograph 12. View of tires, bar-be-que, propane tank, and miscellaneous equipment storage located in southern portion of Site building.

Photograph 13. View of small area of petroleum staining inside Site building.

Photograph 14. View of electrical lift and adjacent drain located in southern portion of Site building.

Photograph 15. View of tool storage inside Site building. Note suspect PCB-containing fluorescent light ballast.

Photograph 16. View of flat wood framed ceiling and suspect PCB-containing fluorescent light ballast.

Photograph 17. View of entrance of Site building and adjacent trailer office.

Photograph 18. View of the grease container, battery chargers, tires, and other miscellaneous equipment storage located in northern portion of Site building.

Photograph 19. View of sealed bags of "Vaporize rock salt" located in northern portion of Site building.

Photograph 20. View of tools, automobile parts, and other miscellaneous storage located in the southern portion of the Site building.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

14 DUPONT STREET
BROOKLYN, NY 11222

COORDINATES

Latitude (North):	40.735420 - 40˚ 44' 7.5''
Longitude (West):	73.958660 - 73˚ 57' 31.2''
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	587930.6
UTM Y (Meters):	4509697.0
Elevation:	12 ft. above sea level

USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY

Target Property Map:	40073-F8 BROOKLYN, NY
Most Recent Revision:	1995

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

FEDERAL RECORDS

NPL..... National Priority List
Proposed NPL..... Proposed National Priority List Sites
Delisted NPL..... National Priority List Deletions
NPL LIENS..... Federal Superfund Liens
CERCLIS..... Comprehensive Environmental Response, Compensation, and Liability Information System
CERC-NFRAP..... CERCLIS No Further Remedial Action Planned
LIENS 2..... CERCLA Lien Information
RCRA-TSDF..... RCRA - Transporters, Storage and Disposal
RCRA-SQG..... RCRA - Small Quantity Generators
US ENG CONTROLS..... Engineering Controls Sites List

EXECUTIVE SUMMARY

US INST CONTROL ..... Sites with Institutional Controls
ERNS ..... Emergency Response Notification System
HMIRS ..... Hazardous Materials Information Reporting System
DOT OPS ..... Incident and Accident Data
US CDL ..... Clandestine Drug Labs
US BROWNFIELDS ..... A Listing of Brownfields Sites
DOD ..... Department of Defense Sites
FUDS ..... Formerly Used Defense Sites
LUCIS ..... Land Use Control Information System
CONSENT ..... Superfund (CERCLA) Consent Decrees
ROD ..... Records Of Decision
UMTRA ..... Uranium Mill Tailings Sites
DEBRIS REGION 9 ..... Torres Martinez Reservation Illegal Dump Site Locations
ODI ..... Open Dump Inventory
MINES ..... Mines Master Index File
TRIS ..... Toxic Chemical Release Inventory System
TSCA ..... Toxic Substances Control Act
FTTS ..... FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
HIST FTTS ..... FIFRA/TSCA Tracking System Administrative Case Listing
SSTS ..... Section 7 Tracking Systems
ICIS ..... Integrated Compliance Information System
PADS ..... PCB Activity Database System
MLTS ..... Material Licensing Tracking System
RADINFO ..... Radiation Information Database
FINDS ..... Facility Index System/Facility Registry System
RAATS ..... RCRA Administrative Action Tracking System

STATE AND LOCAL RECORDS

HSWDS ..... Hazardous Substance Waste Disposal Site Inventory
SHWS ..... Inactive Hazardous Waste Disposal Sites in New York State
SWTIRE ..... Registered Waste Tire Storage & Facility List
CBS UST ..... Chemical Bulk Storage Database
HIST AST ..... Historical Petroleum Bulk Storage Database
CBS AST ..... Chemical Bulk Storage Database

AIRS ..... Air Emissions Data
RES DECL ..... Restrictive Declarations Listing

TRIBAL RECORDS

INDIAN RESERV ..... Indian Reservations
INDIAN LUST ..... Leaking Underground Storage Tanks on Indian Land
INDIAN UST ..... Underground Storage Tanks on Indian Land

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL RECORDS

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/26/2008 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Lower Elevation	Address	Dist / Dir	Map ID	Page
KOSAN INDUSTRIAL CORP	*5-49 49TH AVE*	*1/2 - 1 NNE*	*244*	*783*

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/06/2008 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/06/2008 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 03/06/2008 has revealed that there are 14 RCRA-NonGen sites within approximately 0.25 miles of the target property.

HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 15 HIST LTANKS sites within approximately 0.5 miles of the target property.

MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 MOSF UST sites within approximately 0.5 miles of the target property.

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 02/05/2008 has revealed that there are 152 NY Spills sites within approximately 0.5 miles of the target property.

NY Hist Spills: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 111 NY Hist Spills sites within approximately 0.5 miles of the target property.

VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the VCP list, as provided by EDR, and dated 02/05/2008 has revealed that there are 4 VCP sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there are 4 Manufactured Gas Plants sites within approximately 1 mile of the target property.

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

DYNAMIT NOBEL-HARTE, INC (Continued) **1000149832**

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification:	Non-Generator
Description:	Handler: Non-Generators do not presently generate hazardous waste

DYNAMIT NOBEL-HARTE, INC (Continued) **1000149832**

Handler accessibilty indicator: Transferred to the program or state equivalent.

Handler Activities Summary:

U.S. importer of hazardous waste:	Unknown
Mixed waste (haz. and radioactive):	Unknown
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	Unknown
Furnace exemption:	Unknown
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No
Off-site waste receiver:	Commercial status unknown

Other Pertinent Environmental Activity Identified at Site

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all

INTERFLO TECHNOLOGIES (Continued) **1000911977**

Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

EPA Region: 02
Land type: Private
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Handler accessibilty indicator: Transferred to the program or state equivalent.

Handler Activities Summary:
U.S. importer of hazardous waste: Unknown
Mixed waste (haz. and radioactive): Unknown
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: Unknown
Furnace exemption: Unknown
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS

NYCT-CROSSTOWN ANNEX (Continued) **1000140970**

CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Biennial Reports:

Last Biennial Reporting Year: 2005

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

LIQUI MARK CORP-71 GREEN ST (Continued) **1000911978**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Remarks: DEC Sigona) met on-site with property owner. Also, received a copy of site assessment by Flour Daniel GTI, who assessed the site for potential buyer Bulova Corporation). Soil Mechanics supervised cleaning of oil-water separator which contained free product. Also, a gasoline 550 gallon UST was found to be improperly closed. Tank being removed on 12/28/98. Soil mechanics sent proposal to install five monitoring wells. DEC Sigona) sent letter approving the site investigation plan.DEC sigona) reviewed a series of investigatory and remedial reports prepared for the DEC by Soil Mechanics Enviornmental Services from December 1998 to June 1999. The site has been cleanup to a level slightly above groundwater standards. But because of the industrial setting in Greenpoint, the cleanup is acceptable. see reports) A letter was sent to Belfer Realty Development, dated July 2, 1999.

Remark: TANKS TO BE REMOVED AS WELL AS SOIL CONTAMINATION-WILL NOTIFY DEC PRIOR TO DOING SAME.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Start DECRemark - 0106864 Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL" 10/2/01: K.Goertz called back Ms.Sotiriou. Her company performed a phase 2 investigation. The property is over 20 acres in area. Several borings and monitoring wells were installed. Of all the soil samples and gw samples collected, only one came back with contaminant concentrations above standards and that was napthalene at 18 ppb in the groundwater. All other results met standards and all soil samples met TAGM 4046. (KG) 4/12/04-Vought-Spill transferred from Tipple/Goertz to Rommel as per Rommel. 12/06/05 - Based on contact by Goertz and information obtained from the party that reported the spill, the spill was closed this date. DE END DECRemark - 0106864
Remarks:	Start CallerRemark - 0106864 SOIL SAMPLES TAKEN AT ABOVE LOCATION REVEAL CONTAMINATION. PROPERTY OWNER TO BE ADVISED OF RESULTS. END CallerRemark - 0106864

DEC Remarks: 10/2/01: K.Goert called back Ms.Sotiriou. Her company performed a phase 2 investigation. The property is over 20 acres in area. Several borings and monitoring wells were installed. Of all the soil samples and gw samples collected, only one cameback with contaminant concentrations above standards and that was napthalene at 18 ppb in the groundwater. All other results met standards and all soil samples met TAGM 4046. KG)
Remark: SOIL SAMPLES TAKEN AT ABOVE LOCATION REVEAL CONTAMINATION. PROPERTY OWNER TO BE ADVISED OF RESULTS.

DEC Memo: Start DECRemark - 0304748 Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL" See spill # 9604494 (JHO) E2MIS 149650 8/5/03 08:35 HRS. D.MASIELLO #37672 OF CONSTRUCTION MANAGEMENT REPORTS THAT DURING DIGGING OF TEST PIT IN STREET AT 08:25 HRS. FOUND SOIL CONTAMINATED WITH UNKNOWN AMOUNT OF UNKNOWN OIL. DIGGING WAS STOPPED ONCE OIL WAS FOUND -- AMOUNT OF AFFECTED SOIL UNKNOWN AS OF THIS TIME. CREWS WERE ON SITE TO LOCATE AND IDENTIFY FACILITIESFOR A CITY PROJECT. CHEM LAB WAS NOTIFIED AND WILL RESPOND TO TAKE A SOIL SAMPLES. PIT IS COVERED WITH STEEL PLATES. CREWS WILL FILL PIT WITH CLEAN FILL AND RESTORE ROADWAY TO ORIGINAL CONDITION PENDING TEST RESULTS AND CLEANUP. Lab Sequence Number: 03-06482-001 TOTAL PCB 38 ug/Kg (ppb) TPH Method 8100 6530 ppm Lab Sequence Number: 03-06482-002 Benzene 3.28 ug/L (ppb) 8/18/03 The resuslts of the soil samples from the test pit indicate high level of petroleum contaminant and all otherorganics non detect or less than regulatory limits. The test pit was backfilled and street restored. Since this a interference project near our #7 abandoned fuel pipe lines. All previously known spills will be cleaned up during the removal of pipe line and as per guidance provided by DEC. The status of the spill is being changed to REMG - Remediation plan to be prepared. 9/24/03 Bharat Mukhi spoke to Jane O' Connell from DEC and requested that this spill could be merged with another open spill (DEC spill No. 9604494) from the same location. She agreed to that. This spill is being closed. As stated above the work plan to remove pipe line #7 is in progress and Spills along that pipe line will be addressed at that time. END DECRemark - 0304748

Remarks: Start CallerRemark - 0304748 test pit has contaminated soil in it. con ed 149650. END CallerRemark - 0304748

DEC Memo: Start DECRemark - 9313255 Prior to Sept, 2004 data translation this spill Lead DEC Field was "ENGELHARDT" 2/8/94, 5:00 PM: At site. Sewage was backing up into basement of 6 apartment buildings. DEP investigated yesterday and found a solid slug of #6oil in the manhole at corner of Eagle & Manhattan. Con Ed, MEG and a construction contractor are on-site. Con Ed to conduct pressure-decay test at 10:00 PM to determine if leak is theirs (pipeline no. 7 runs adjacent to sewer line). Con Ed to sample of oil - frozen block. Blockage is thought to be #6 oil and is north of manhole. OK'd pumping out manhole that is filled with sewage due to blockage, and pumping this into clear manhole in an effort to clear the sewer line of sewage so that steam can be injected to mobilize the oil. This is having little effect. 6600 gallons removed and watre level in vault only dropped about a foot. In 100 feet of 12" diameter pipe there is only

EAGLE ST & MANHATTAN AVE. (Continued) **S102147733**

500+ gallons. At about 8:30 PM Con Ed noticed low-pour oil coming into the manhole on Eagle & Manhattan. Con Ed began excavating at this corner - MEG vacing out manhole. Sometime around 10:15 PM Con Ed was going to switch oil in pipeline back from low-pour (which had been pumped into the line to shut itdown) back to high pour because they need to use Ravenswood for energy generation. Left scene about 10;15 PM. MEG was to have 2nd vac truck arrive. They were also to have "trash pump" arrive in order to pump the sewage from the backed up manholeto a downstream manhole. (CAE) 2/9/94, 9:45 AM: Con Ed still on scene as well as MEG and construction contractor. Excavation now to top of pipe. Oil is now seeping into the trench. Oil no longer seeping into sewage manhole, but there is about 10-20 gallons of solidified oil caked in the bottom of the manhole. When repair is complete MEG will inject hot water to soften the oil in the sewer line and remove via vac truck. MEG has been pumping sewer - 2 x 5000 gallon loads reduced backup sizeably. Now continuously vacing out - sewer manhole that was full is now empty. No one noticed a big plug of oil coming down the sewer at any time and MEG says they did not break though the blockage, just that they finally removed enough sewage to empty the vault. (CAE) 2/9/94, 4:00 PM: Con Ed still has not found leak, but there was a considerable quantity of oil flowing into the trench. The pipe was exposed halfway, but the bottom is still buried. (CAE) 5:30 PM: returned to scene. Con Ed did not find leak in original excavation (on Manhattan Ave. north of Eagle St.). Are continuing to excavate southwest (around corner). Sewer still being pumped out by MEG. (CAE) 2/10/94, 10:45 AM: still had not found leak. They are going to putlow-pour oil back into line to try to find leak. So far 600 gallons of oil removed and almost 4 roll-offs of contaminated soil. Sewer was cleared last night by MEG with high-pressure steam. Found a small log coated with oil that was blocking sewer.(CAE) 2/11/94, 8:10 AM: Con Ed located and clamped leak at 3 AM. Are getting ready to do pressure test. Con Ed will clean up as much as they can. (CAE) 2/15/94: oil is again clogging sewer causing backup into basement of building at north endof block. Con Ed dug two test pits - oil contaminated but no flow found. Doing pressure decay test to determine if there is another leak. (CAE) 2/16/94, 11:40 AM: Pressure decay test last night revealed no leak. To date removed 6 full roll-offs,7th is half-full, and 4500 gallons of oil/water mixture. 3/29/94: End point sampling of spill - took 5 samples with Mariela Gonzalez (Con Ed Remediation): Sample 1 - mild petrol odor (oil & grease, SVOCs) Sample 2 - no visual or olfactory contamination (O&G) Sample 3 - " " " " " (O&G, SVOCs) Sample 4 - visually saturated with oil (no analysis) Sample 5 - appears to be clean backfill (O&G) There was some residual oil on some of the old brick wall inside the trench and someon the sheeting but most had been removed. Several feet of soil/gravel had been backfilled already. Con Ed said this was so that workers could work becuase there was so much water on the bottom of the trench. John Mitchell (Con Ed UT) said this was done routinely at all pipeline spills. Told him that in the future we either need to do sampling before backfill or we need to bring equipment capable of doing sampling through the backfill. (CAE) 10/10/95: This is additional information about material spilled from the translation of the old spill file: LOW POUR OIL. 5/3/00: During construction activities by NYCDDC contractor, fuel oil contamination was uncovered on Manhattan Ave just north of Eagle St (spill # 0001377). This led toCon Ed conducting expedited tightness testing of section of pipeline no. 7 between Manhattan Avenue at Newtown Creek to the intersection of Eagle Street and Franklin Ave. (JHO) Following completion of the tightness test, an excavation was completed from the initial repair site (Eagle St/Manhattan Ave corner) north along Manhattan Ave to Dupont St. Contaminated soil was removed, and post-excavation soil samples were collected. In addition, 4 monitoring wells were installed for collection ofground water samples. (JHO) 6/8/01: Con Ed submits Summary of Investigation and Remediation Report, which includes

EAGLE ST & MANHATTAN AVE. (Continued) **S102147733**

analytical results for soil and groundwater samples. Soil and gw results indicate no residual dissolved-phase contamination exceeding guidance values/standards, however one of the wells exhibits 0.01' of product during one of the gauging events. DEC requests assitional monitoring and gw sampling. However, wells were paved over, so 2 new wells were installed to replace them. (JHO) 2/22/02: First set of gw samples, as well as additional soil samples (collected during installation of 2 new wells) submitted - results indicate no residual contamination above guidance values/standards. No free product noted in either well. (JHO) 4/12/02: Second set of gw sampling data submitted. No VOCs above gw standards, 6 SVOCs slightly above standards. However, no correlation between gw and soil (no detectable concentrations in soil). (JHO) 1/29/03: Closure request and Remediation Certification received from Con Ed. (JHO) 4/23/03: Closure request and Remediation Certificate approved. (JHO) END DECRemark - 9313255

DEC Remarks: 2/21/97: Ken Sudol - Control Center. Mr. Bell is on-site supervisor. Closed street. Two 5 wet stains.. Steve Romero - customer called in oil on ground. Field crews said it looks like asphalt leaching temporary asphalt laid down. John MitchellUnderground Transmissions - MEG expected to arrive on site @2100 hrs. John Mitchell checked 4 monitoring wells around pipeline - found no oil in them. John Michell 2045 hrs): temporary asphalt weeping 5 spots. Wells all OK - pumped out earlier today. Pressure decay test on pipeline on 2/20 passed. Crew to monitor thoughout the night. 2/25/97: John Mitchell - false alarm.

Remark: THEY JUST FOUND OIL ON TOP OF THE GROUND.ABOUT 5 FEET ROUND IN SIZE IT MAY BE FROM A FUEL LINE BUT HAS NOT BEEN CONFIRMED. NYFD WAS ON THE SCENE AND LEFT.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRA-NonGen:

Date form received by agency:	01/01/2006
Facility name:	APHRODITE CLEANER
Facility address:	1019 MANHATTAN AVE BROOKLYN, NY 11222
EPA ID:	NYD987003795
Mailing address:	MANHATTAN AVE BROOKLYN, NY 11222
Contact:	NICHOLAS - NANAS
Contact address:	MANHATTAN AVE BROOKLYN, NY 11222
Contact country:	US
Contact telephone:	718391319
Contact email:	Not reported
EPA Region:	02
Classification:	Non-Generator
Description:	Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name:	NICHOLAS NANAS
Owner/operator address:	1019 MANHATTAN AVE BROOKLYN, NY 11222
Owner/operator country:	Not reported
Owner/operator telephone:	(718) 389-1319
Legal status:	Private
Owner/Operator Type:	Owner
Owner/Op start date:	Not reported
Owner/Op end date:	Not reported

Handler accessibilty indicator: Transferred to the program or state equivalent.

Handler Activities Summary:

U.S. importer of hazardous waste:	Unknown
Mixed waste (haz. and radioactive):	Unknown
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	Unknown

APHRODITE CLEANER (Continued) **1004758453**

Furnace exemption: Unknown
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Historical Generators:
Date form received by agency: 05/22/1992
Facility name: APHRODITE CLEANER
Classification: Conditionally Exempt Small Quantity Generator

Hazardous Waste Summary:
Waste code: D000
Waste name: Not Defined

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

MTA NYCT GREEN STREET SUBSTATION (Continued) **1001818172**

corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste:	Unknown
Mixed waste (haz. and radioactive):	Unknown
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	Unknown
Furnace exemption:	Unknown
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No
Off-site waste receiver:	Commercial status unknown

Historical Generators:

Date form received by agency:	09/20/1999
Facility name:	MTA NYCT GREEN STREET SUBSTATION
Classification:	Large Quantity Generator

Hazardous Waste Summary:

Waste code:	D000
Waste name:	Not Defined
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN

MTA NYCT GREEN STREET SUBSTATION (Continued) **1001818172**

OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Violation Status: No violations found

LOT 1,TAXBLOCK 2532 (Continued) **S106970369**

Property Shark says legal address is: 194-200 Franklin St, Brooklyn, NY 11222 Contaminated Soil Letter sent to: Property Owner Int'l Stripping & Dye Company 200 Franklin St Brooklyn, NY 11222 8/10/2005 Sangesland spoke with Carolyn Cadalaso of Advanced Cleanup Technology. She asked what work was needed. She was told a letter went out to the building owner (she will try to get a copy through the owner).Advanced Cleanup Tech completed a Phase 2 report on the site. Sangesland asked her to review the DEC letter, prepare a work plan to resolve the contamination and then submit a package to Mr. Koon Tang. 10/31/05 - Carla Sullivan wrote in her email: "...The three gasoline USTs, filled with concrete, were removed. The tanks were found tight, and the concrete vault and surrounding soils were found free of contamination and set at 7 feet below grade.The contamination is below 8' bgs. Apparently, the tanks were installed in a dirty "hole". All work is being conducted within the confines of the building, and due to structural concerns, not all of the contaminated soil can be removed. The depth of the contamination is in the GW at 15' bgs, GW will be treated with 2,000 pounds of ORC." - KST 10/31/05 - send Carla Sullivan an email asking for RI Report and a RAP for the contaminated soil and GW. - KST 11/01/05: This spill case transferred from K. Tang to J. Kolleeny. Reviewed ACT Phase II report which indicated closed gasoline tanks impacted soil and groundwater; reviewed 10/14/05 work plan letter from Laurel Env'tal stating that closed tanks will be removed and ORC applied to groundwater. Spoke with Carla Sullivanand Scott Yanuck of Laurel - working inside existing site building, they removed concrete-filled tanks and encountered substantial contaminated soil starting at 8 feet below grade. Contaminated soil will be removed to extent possible without endangering building, end-point soil samples will be collected, ORC will be applied to water table, and 2 wells will be installed inside building. JK of DEC sent email to Ms. Sullivan (cc'ed Yanuck) requesting that wells be gauged to determine water tableelevations & GW flow direction, and sampled, and that a summary report be prepared and submitted with soil and groundwater data and recommendations for further investigation/remediation as necessary. - J. Kolleeny 12/22/05: Received remediation report summarizing remedial activities at site (tank removal, soil excavation, application of ORC), and requesting spill closure, via email on 12/21/05. Entered report into eDocs on 12/22/05. Report will be reviewed. - J. Kolleeny 01/06/06: In response to email from Scott Yanuck of Laurel Env'tal inquiring about status of my report review, I sent him an email on 1/4/06 with preliminary review observations, stating: I looked quickly at the report, and usually in a case like this, with some residual soil contamination and a downgradient well with 1,800 ppb of benzene and 3,570 ppb total BTEX, we would require follow-up groundwater monitoring to evaluate effectiveness of ORC that was applied, and request installation of an off-site well to delineate leading edge of the plume. I understand and appreciate that Laurel did a lot of source removal work and applied a lot of ORC, but I want to see that plume is stable (not migrating), with groundwater contaminant levels decreasing,before I can close out spill. As of 1/6/06, have not received any response from S. Yanuck. - J. Kolleeny 01/24/06: Received email from S. Yanuck of Laurel Env'tal on 1/23/06 asking if DEC has made a decision on Remedial Corrective Action Report and request for spill closure, and stating that if spill is to remain open, they will collect another round of GW samples from existing wells, but they would strongly prefer not to install off-site well. I sent email reply on 1/24/06 saying that K. Tang agreed spill cannot be closed yet, and reiterating need for an off-site well to delineate leading edge of plume. Sent letter on 1/24/06 to Mr. Jan Chmielewski of 200 Franklin LLC, with copy to S. Yanuck, requesting installation of off-site well across Franklin Street to the west, plus at least 2 rounds of groundwater monitoring; asked that a work plan be submitted. - J. Kolleeny 02/03/06: Received email from S. Yanuck of Laurel Env'tal stating that off-site

LOT 1,TAXBLOCK 2532 (Continued) **S106970369**

well would be installed on Monday Feb.6th, with attached copy of sidewalk permit and site plan showing proposed well location. I emailed back that proposed well location looked good, and stated that soil should be screened with PID during installation, and at least one soilsample collected, probably at groundwater interface. Scott did not respond. - J. Kolleeny 02/24/06: Sent email to Scott Yanuck of Laurel Env'tal asking if off-site well was installed as planned, and if he has any data, including field observations, PID readings, etc., to report. - J. Kolleeny 02/27/06: S. Yanuck of Laurel sent email late on 2/24/06 (at 8:19 pm) saying well was installed, no PID reading or odor in soil, very low VOCs in GW; he will forward over a letter report early nextweek. - JK 2/28/06: Received letter report from S. Yanuck, via email, with groundwater sampling results for new off-site well MW-4 and 3 existing wells. Data show contaminant levels stayed much the same in on-site wells MW-3 (total BTEX just under 4 ppm) and MW-1 (total BTEX about 1 ppm), and low exceedances for benzene (9 ppb) and MTBE (27 ppb) in off-site well MW-4. Laurel argues that plume is stable and has not migrated; they request spill closure. Changed spill priority status to P2, since site is in monitoring phase. - J. Kolleeny 03/06/06: Received email from S. Yanuck asking if I'd made a decision regarding request for spill closure. I sent email response saying that spill cannot be closed yet and noting that my letter of January 24, 2006 required at least two quarterly rounds of groundwater monitoring to establish that remedial actions were effective (i.e., resulting in decreasing trend of dissolved contamination) and that plume is stable and not migrating. I pointedout that the Feb. 6th groundwater results show contamination on-site has not decreased, and low levels of benzene and MTBE in well MW-4 suggest edge of plume extends off-site. Said I would send out a response letter in next day or so. - J. Kolleeny03/07/06: Sent letter to Jan Chmielewski of 200 Franklin LLC (the RP), with cc to Scott Yanuck of Laurel, responding to latest groundwater report, stating that spill cannot be closed at this time, requesting water levels measurements to determine up-to-date groundwater flow direction, and another round of GW sampling within 3 months. - J. Kolleeny 03/13/06: Received email from Scott Yanuck of Laurel Envt'l with attached letter stating that they have surveyed the new well MW-4 top of casing,taken depth to water measurements from all four wells and determined up-to-date groundwater flow direction, and attached the updated groundwater flow map as requested in my 3/7/06 letter, and they will schedule another quarterly groundwater samplingevent. - J. Kolleeny 03/14/06: Sent email to Scott Yanuck saying new groundwater flow map is ok, but doesn't show water table contours as requested. He sent email reply that he will work on drawing in inferred contour lines, but that there is notenough data for Surfer (a program that takes water elevation data to generate water table contour maps) to work with. - J. Kolleeny 05/26/06: Received electronic copy of May '06 Groundwater Monitoring Report via email from Scott Yanuck of LaurelEnv'tal. - JK 06/02/06: Received hard copy of May '06 groundwater monitoring report. Will review. - JK 06/14/06: Reviewed report, groundwater contaminant levels in wells MW-1 and MW-3 have declined substantially, but significant contaminationremains. Issued letter to RP (and copied Scott Yanuck) asking for another round of quarterly sampling, plus a sensitive receptor survey, indoor air monitoring and soil gas sampling from beneath earthen floor of site building. - JK 08/14/06: Received work plan for groundwater monitoring and sensitive receptor survey (soil gas and indoor air sampling) dated Aug. 4, 2006 from Scott Yanuck, Laurel Envt'l (in eDocs). Plan involves round of groundwater sampling, and sampling soil gas at two locations 2 feet below earthen floor, plus indoor and outdoor (for background) air samples. I sent email okaying plan on 8/14/06. - J. Kolleeny 10/05/06: Received email on 9/26/06 from Scott Yanuck of Laurel Envt'l with report attached summarizing round of groundwater sampling, indoor/outdoor air sampling, and soil vapor sampling at the site in August 2006. After

LOT 1,TAXBLOCK 2532 (Continued) **S106970369**

preliminary review of report, I sent email to Scott on 10/3/06 noting that the groundwater results only provide data for BTEX + MTBE,whereas earlier sampling rounds were analyzed for full range of gasoline-related VOCs. Scott sent email reply that he would ask the lab to re-evaluate data from the GC runs, if possible. I replied that was fine, and that if they can provide data forall VOCs, I'd like Scott to revise data table to include line for total VOCs, in addition to total BTEX. Also asked for revised figure showing two soil vapor sampling locations, and for clarification of soil vapor sample nomenclature, since samplesare named "SV North" and "SG-4." - J. Kolleeny 10/06/06: Received email from Scott Yanuck late on 10/5/06 with revised report, including groundwater results for all gasoline VOCs (revised Table I), fig. 3 showing soil gas sampling locations, andrevised Table II with soil gas samples labelled "SV North" and "SV South." Table I still lacks line for total VOCs, which I requested on two occasions. Report is in eDocs. - J. Kolleeny 10/20/06: Issued reply letter (in eDocs) to Laurel Environmental report dated 9/26/06. My letter notes that indoor air sampling and sub-slab soil gas sampling suggest no serious impact to indoor air from the spill, but also states that the spill cannot be closed at this time, due to rebound of contamination in well MW-1 and change in groundwater flow direction, which suggests plume is not adequately delineated to the south. I stated that contaminant levels in MW-1 warrant additional monitoring and possibly additional remediation, and I requested installation of an additional monitoring well immediately south of former tank location (i.e., inside building), or if that isn't feasible, in sidewalk along India Street south of site building. - J. Kolleeny 11/03/06: Received email from Scott Yanuck of Laurel Envt'l with work plan dated Oct. 31, 2006 for installation of requested additional well and possible replacement of damaged well MW-1 (in eDocs). Work plan also discussed 3 possible approaches for additional remediation, but says a finalchoice will be made after well installation and latest groundwater data. I sent email approving plan with modifications: 1. Proposed well MW-5 should be installed as close as possible to location of end-point soil sample EP-S. During well installation, soil should be screened with a PID; a sample from interval with highest PID reading and a sample from just above water table should be submitted for laboratory analysis of gasoline-related VOCs. 2. After installation of new well(s), groundwater samples should be collected from all existing wells and analyzed for gasoline-related VOCs (i.e., not simply for BTEX compounds). DEC will refrain from commenting on three remedial strategies mentioned in work plan until one of these strategies is formally proposed, based on results of upcoming round of groundwater sampling. - J. Kolleeny 02/09/07: Reviewed Laurel Envt'l report dated Jan. 30, 2007 with proposed additional remedial activities, plus revised text and figs submittedon Feb. 6 and 9, 2007 (in eDocs). Report presents results of additional borings and wells installed at site in Nov. 2006, with soil and groundwater data showing significant residual soil contamination in two areas and increases in groundwater contaminant levels in wells MW-1 & MW-3 (significant GW contam. also in new wells MW-5 & MW-6, minor contam. in MW-8 & MW-10). Laurel proposes additional soil excavation in two areas, plus installation of 4 injection wells to apply ozone to groundwater, to oxidize hydrocarbons and increase dissolved O2 to stimulate biorem. I sent letter approving plan to RP Jan Chmielewski by mail and to Scott Yanuck of Laurel by email, on 2/9/07. - J. Kolleeny 02/28/07: Visited site with Ainura Doronova (new employee in training) to observe excavation of contaminated soil as proposed in additional remedial activities plan. Arrived at 11:00 A.M., they were digging with backhoe inside the building, and fairly strong odors were evident; workers were wearinghalf-face respirators with cartridges. Met with Scott Yanuck of Laurel Envt'l and Jan Chmielewski, owner. They had dug down about 7-8 feet and intended to go to 13-14 feet, where they expect water table to be. Stockpile of removed contaminated soilhad PID

LOT 1,TAXBLOCK 2532 (Continued) **S106970369**

readings of 300-400 ppm. Took 2 photos (in eDocs image folder). - J. Kolleeny 03/02/07: Received email on 3/1/07 from Scott Yanuck regarding on-going remediation work: "We stayed late yesterday and finished the excavation and endpoint sampling - samples were taken from all four sidewalls at a depth of 10' - 12'; PID readings were all well below 50 parts per million on these samples. Got bottom as clean as possible, but never hit groundwater even down to 14.5', which was the extent of reach on the extendahoe backhoe. We will be installing the injection and monitoring wells tomorrow." - J. Kolleeny 05/24/07: Received email on 5/23/07 from Scott Yanuck of Laurel Env'tal with attached Report On Additional Remedial Activities, dated 5/22/07 (in eDocs). Report summarizes excavation of an additional 182 tons of contaminated soil performed in February-March '07, with end-point soil sample results showing almost no petroleum-related compounds detected, and no TAGM 4046 exceedances. Also summarizes installation of 8 1-inch ozone injection wells, with ozone injection beginning on March 22, 2007. Report states that quarterly GW monitoring commenced on May 18, 2007. Scott's email states that GW results will be availablenext week. I sent email reply stating: "Thanks for report. Please include north arrow on site plans for future reports. Also, would it be possible to sample more of 1-inch ozone injection wells during future GW sampling events? It makes me uneasywhen wells with contamination are destroyed and replacement wells are installed some distance away from original well - if sampling of new wells shows much lower contaminant levels, I'm not sure if results are truly representative, or if some quirkof subsurface geology has resulted in new well "missing" GW contamination. Could wells IP-6, IP-5 and IP-1 be added to list of wells being sampled for next event? If sample results suggest that they are redundant of other wells being sampled, theycould be dropped from list for subsequent sampling events." - J. Kolleeny 05/25/07: Received email reply from Scott Yanuck late on 5/24/07: "Will make sure north arrow is added on future reports. I don't think that it will be a problem to add additional wells for sampling in the next round....I am hopeful that we can close after next round if everything looks OK." - J. Kolleeny 06/13/07: Received Groundwater and Ozone Injection System Monitoring report by Laurel Environmental, dated June 11, 2007 (in eDocs). Report states that ozone injection system began operating on 3/22/07, and that weekly or bi-weekly sites visits are conducted to confirm that ozone is reaching groundwater, rather than air above injection wells. Report alsopresents results of 5/18/07 groundwater sampling event, along with past GW data. Results show significant decreases in contaminant levels: MW-1 went from 10,000 ug/L total VOCs on 11/6/06 to 392 ppb total VOCs on 5/18/07 (benzene went from 3,500 ppbto 150 ppb), MW-3 went from 1,410 ug/L total VOCs on 11/6/06 (280 ppb benzene) to 734 ppb total VOCs on 5/18/07 (benzene 120 ppb), MW-8 went from 57 ppb total VOCs to 0 ppb. Report states that another quarterly sampling event will be performed. No DEC response required. I noticed mistake in Table 1 - GW data, incorrect sampling dates for well MW-8; emailed to Scott Yanuck of Laurel, who sent corrected table (in eDocs). - J. Kolleeny 08/07/2007: This spill case was transferred to A. Doronova. -AD 08/25/2007: Received Groundwater and Ozone Injection System Monitoring Report submitted by Laurel Env. dated August 22, 2007. The report states: The ozone system has been running nearly continuously since begining of the operation on March 22, 2007. The injection of ozone was rotated between the eight injection points, with four points receiving ozone at one time. During weekly monitoring of levels of DO, dissolved ozone, ozone headspace and ambient ozone, elevated levels of DO and dissolved ozone were detected at each site visit. On August 1, 2007 a round of GW samples was collected from the three on-site and two off-site wells. The results of groundwater sampling indicated that total concentration of VOCs in each monitoring wells were below 1,000 ppb. The labdata show increasing of total VOCs in MW-1 from 392 ppb (05/2007) to 444 ppb (08/2007); decrease of total

LOT 1,TAXBLOCK 2532 (Continued) **S106970369**

VOCs in MW-3 from 734 ppb to 357 ppb and same ND level for wells - MW-2 and MW-8. Injection points were sampled for the first time and showed following concentrations of total VOCs: O ppb for IP-1; 144 ppb for IP-2 and 251 ppb for IP-3. The GW flow direction was to the west during reported round of surveying. Based on the results of this monitoring round Laurel Env. states that GW quality continuing to improve with time at the site and requests to close this spill case. AD 09/06/2007: Received an email from S. Yanuck. He proposed to install one temporary monitoring well across the Franklin Street to investigate if there is any off-site plume migration. Sent an email with well installation approval and saying that, if no any petroleum contamination will be detected in a newly installed well, case closure request might be approved. AD09/24/2007: Received an email and e-copy of a letter report from S. Yanuck of LEA regarding installation of one temporary well across Franklin Street. A groundwater sample was collected for VOCs. The report states that no VOCs were detected in the collected sample. Based on the result of this sampling event and on the data of previous monitoring rounds LEA requests a closure of this spill case. AD 09/24/2007: Issued a NFA letter addressed to Simon Whitley of Complete Management Services (site owner) cc: to J. Kolleeny; S. Yanuck and file. This decision was made based on submitted analytical data and remedial actions performed at the site. In addition, this site is listed as "E" restricted by NYCDEP, so future mitigation work such as:- removal of any additional contaminated soil found during pre-construction excavation at the site; - installation of vapor barrier beneath new slab; - installation of sub-slab depressurisation system; will be required at the site by the NYCDEP in conjunction with the construction of the proposed building. AD END DECRemark - 0505566

Classification: Large Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Violation Status: No violations found

DEC Memo: Start DECRemark - 0408568 Con Ed e2mis no. 156097: On NOV 3, 2004 at 14:45 hours, EH&S representative W. Murphy #76378 reports the following: Mr. Crossman indicated that on 10/27/04, at approximately 1030 hours, he was on location at ManhattanAve. n/o Ash St. in Brooklyn to install a rectifier. The area n/o Ash St. on Manhattan Ave. is the site of an ongoing NYC public improvement project utilizing Tully Construction. While on location, Mr. Crossman observed a crew - believed to be fromTully Construction - excavating at the site of a possible water main break at the NE corner of Manhattan Ave. & Ash St. Mr. Crossman noted that soil from a 6'x 6'x 4' excavation was black in color; he noted that the soil had no odor. Mr. Crossman spoke with a member of the Tully crew who indicated that, based on his experience and observations, the "entire area" was oil contaminated. On 11/2/04 at approximately 1000 hours, Mr. Crossman returned to the location to connect A/C power to the rectifier and noted that a trench had been dug, anodes buried, and the trench filled. He reported his observations to Gas EH&S William Murphy (#76378) at 1120 hours. Subsequent investigation revealed that, after Crossman's initial visit on 10/27, Tully was contracted by Con Edison to excavate and bury anodes at a location on the east side of Manhattan Ave. approximately 150' n/o the water leak excavation. On 11/03/04 Murphy visited the location and spoke with M&C Construction Representative John O'Hora (#11367) and Gas Corrosion Supervisor John Dimiceli ((#48440). O'Hora indicated that the public improvement project had begun about 6 weeks earlier and that he was assigned to monitor the contractor for Con Edison. He also indicated that heobserved the contractor dig the anode trench (8 to 9' deep x 30' and an additional 30' length 2 - 3 ' deep for access to AC supply). O'Hora indicated that he observed no contamination and that the contractor had not made any reports to him of contamination. Gas

MANHATTAN AVE & ASH ST (Continued) **S106721600**

Corrosion Supervisor Dimiceli indicated that he had seen no oil contamination in the anode trench. While on location, Murphy examined an excavation to the transmission feeders and a second excavation and observed no obvious contamination. The anode trench was back-filled. The excavation for the water leak was back-filled. END DECRemark - 0408568

Remarks: Start CallerRemark - 0408568 Con ed NOT responsible, Noitced possible soil contamination. END CallerRemark - 0408568

DEC Memo: Start DECRemark - 0709505 12/3/07 - Raphael Ketani. I spoke to Fred Barilla at P.W. Grosser Consulting (631) 589-6353. He said that PWGC did an investigation because the site is going to be turned into a residential property and DEP gave it an "E" designation. They did a subsurface investigation and a geophysical investigation. Three anomalies - suspect USTs - were detected. Two of the anomalies had contaminated soil in their vicinities. Seven borings were performed. The commercial buildingwill be demolished. I asked Mr. Barilla whether he had any data. He said he had soil and groundwater data. I asked him for copies of all of the data and any figures and pictures so that DEC can evaluate the conditions at the property. I told himthat DEC will determine whether the investigation has been complete enough for the site conditions. He said he will send all of the documents. I also asked for the owner's

COMMERCIAL SITE (Continued) **S108957288**

information. He said he will send it to DEC. The site is in the western part of Greenpoint, Brooklyn, probably a couple of blocks from the East River. 12/5/07 - Raphael Ketani. Today, Mr. Barilla sent me the soil and groundwater analyticals. 12/6/07 - Raphael Ketani. I reviewed the soil and groundwater data. Borings B-1 and B-3 to B-6 were almost completely non-detect for soil VOCs. B-2 had the dirtiest results. There were 9 VOC exceedences and many other high hits where no standard was available. Boring B-7 had 8 VOC hits with one exceedence. Borings B-3,B-4 and B-6 had SVOC exceedences. However, they were not particularly high (13,000 ppb maximum) and consisted of the same benzo series species, with a few associated combustion products. All of the other analytes for these borings and the other borings were non-detect. Regarding groundwater analyticals, wells B-2GW, B-6GW, and B-7GW had, for the most part, the same hits and exceedences. The highest hits were as follows:
B-2 B-6 B-7 1,2,4 trimethylbenzene 160 510
600 1,3,5 trimethylbenzene 52 160 120 total xylenes
960 2230 170 toluene 280 630 "U"
ethylbenzene 180 400 48 naphthalene150 32 53
(all other SVOCs were "U", except for low hits of 2-methylnaphthalene)
Boring logs for B-2 and B-7 indicate PID detectections of up to 1906 ppm total volatiles for the interval from 5’ to 15’, with some low level contamination detected from 0’ to 5’. I contacted Mr. Barilla and told him that the DEC will require more remediation work for the soil, groundwater and any tanks that are found. He said he understood. I sent a letter describing the work that needed to be done to the architect. The DEP and Mr. Barilla were "c-c’d."
The owner is: Miriam Chan, 32 Tower LLC, c/o James W. Chen, JWC Architect, PLLC, 19 W. 21 Street, Ste 604, New York, 10010, (212) 253-0855. DEP contact: Terrell Estesen, NYCDEP, Office of Environmental Planning and Assessment, 59-19 Junction Blvd., 11th Floor, Elmhurst, NY, 11373-5108, (718) 595-4473. Mr. Barilla’s address is: Fred Barilla, P.W. Grosser Consulting, 630 Johnson Avenue, Ste 7, Bohemia, NY, 11716. 1/4/08 - Raphael Ketani. I spoke to Mr. Barilla today. He said that the Phase 2 report was finished and that he will mail it out very soon. I told him that, from the soil and groundwater analyticals that DEC has received so far, the soil will need to be excavated and the groundwater will need to be collected. I added that post excavation and collection samples will also have to be taken. He said he understood. I told him that DEC will not wait for this work to be done after the building is torn down andthe ground is excavated. I told him that the investigation work has to start as soon as possible. He said he understood DEC’s requirements. 1/11/08 - Raphael Ketani. Today I received the January 2008 Phase II Environmental Site Assessment Reportfrom PW Grosser Corp. I started my review of the Phase II. 1/23/08 - Raphael Ketani. I finished my review of the Phase II. It contained the same soil and groundwater analytical results as I had received on 12/5/07. I sent a letter on 12/6/07 tothe architect, DEP and Mr. Barilla describing the additional work that DEC was requiring to remediate the site. I also spoke to Mr. Barilla (631) 589-6353 on 1/4/08 about the additional work. I spoke to Mr. Barilla about the 12/6/07 letter. He said he is waiting to get the permits to pull the tanks from DEP. He said that once he has this permit, then the rest of the work on the site will proceed. I told him that DEC is requesting that the remediation work take place soon. He said he will lean on the DEP to give him a quick turnaround on the permit application. END DECRemark - 0709505

Remarks: Start CallerRemark - 0709505 SOIL BORING NEXT TO SUSPECTED TANK; END CallerRemark - 0709505

Recovered: 0.00
Resource Affected: Soil
Oxygenate: False
DEC Memo: Start DECRemark - 0700400 4/12/07 This site was inspected on 4/6/07. Photos available. Nobody on-site. No PBS registration. Believed to be five 275 gallon ASTs on-site. Four believed to contain motor fuel and one containing used oil. Used oil tank had approximately 5 inches of product in the secondary containment area. Trail of product leads from secondary containment dike to the East River. Movie available of this. Two areas, approx. 9 sq. feet each, of petroleum staining on unpaved ground. Both spills were unreported. I reported them today. None of the tanks are labeled. The motor fuels tanks do not have secondary containment. No monthly inspections or reports available. Fill ports are not labeled. DSHM inspected the siteat an earlier date. I was contacted by DOW this morning and they plan on an inspection as well. NOV was prepared for mailing. Waiting for owner and /or operator contact. bf 1/8/08 Received message from Jill Haimson of Preferred Environmentalrequesting a site meeting. office:(516)546-1100 ext.32 cell:(516)647-4211 I called her this morning and site meeting will be held 1/9/08. bf END DECRemark - 0700400

DEC Memo: Start DECRemark - 0509371 11/4/05 - Raphael Ketani. The site is located on the street just south of the Newtown Creek and west of the Pulaski Bride. I called up Elizabeth Read, Esq., of Sive Paget and Riesel, 460 Park Avenue, 10th Floor, NY, NY, 10022 ((212) 421-2150). 11/8/05 - Raphael Ketani. Elizabeth Read called me back to tell me that the owners' address is Star Candle Co., 29 Ash St., Brooklyn, 11222. 11/9/05 - Raphael Ketani. I am sending an "old soil contamination letter" to Ms.Read and to the owners. 12/5/05 - Raphael Ketani. Case transfered to Steve Sangesland at his request as he was the original case manager for a spill some years back and knows the site. 12/22/05 - Sangesland reviewed a Phase 2 report submitted by James Rhodes of PW Grosser Consulting. Report confirms that there was long term fill material on the site with some SVOC and some metals. This is all historical coal ash material. Consultant specifically stated that there was no visible sheen or leakage from the bulkhead. Color photos comfirm this. Spill Event Closed. END DECRemark - 0509371

Remarks: Start CallerRemark - 0509371 SITE WAS UNDER A DUE DIALENGENCE INVESTIGATION AND SEEMS TO BE HISTORIC. HAS NOT BEEN CLEANED UP YET END CallerRemark - 0509371

DEC Remarks: 02/09/01 Reassigned from Tibbe to Sangesland. See also 8708297. 2/20/2001 Bob Olsen at Enviro-Comp submitted a report showing boring work and water samples which show high levels of volitiles. Mr. Olsen says that the problem is due to Mobil and not from his site. 2/21/2001 - Sangesland spoke to Mark Tibbe about the site. He said the site is NOT within the product plume of Mobil Greenpoint however it MAY be in the dissolved phase plume. Mark said that he told Mr. Olsen to prove the groundwater flow by installing wells on his site and prove that the groundwater flow was in that direction. There also seems to be a problem with the data, because the concentrations are not consistant in all the borings at each depth. If the problem wasfrom Mobil, there would not be such a wide range of values on a single site. Sangesland spoke to Mr. Olsen and asked him to prove his point that the problem is from Mobil by way of hydrogeology. Sangesland told Mr. Olsen to install 3 wells and identify flow direction. 5/16/2001 - Sangesland along with Rommel and DEC attorney) met at the DEC offices with Steven Gurewitsch Star Candle), Bob Olsen Enviro-Comp), James Periconi attorney). This meeting went over a series of technical options open to Star Candle to resolve the problems at the site. Problem is contaminated soil under the slab of the garage floor. Groundwater is approx. 5 ft deep. DEC suggested that the slab be opened, bad soil be excavated and the area back filled and repaved. Sidewall endpoint samples were discussed. DEC thought we had an understanding that this would be done, however 2 hours after the meeting Mr. Steven Gurewitsch called to say they would not do the work we discussed. Issue remains open.

DEC Memo: Start DECRemark - 0111517 Prior to Sept, 2004 data translation this spill Lead DEC Field was "FOLEY" 03-05-02 Foley and Rodriguez inspected 11th St conduit with Gas Operations EH&S staff Lima Jones. There is one section of the conduit which has water infiltration resulting in a "muddy" area. "Mud" is orange in color, jelly like in texture and appears to be biological. It is within this area that the black substance is bubbling out of the trough. The black oily substance is noticeableonly when the trough is agitated. Current in trough is relatively strong, pushing the substance downstream. However, did not see oil collecting in trough downstream. There is also a significant amount of sediment in the trough, making it even more difficult to see. There is no sheen in the sump. Sump is murky--could not see to the bottom. END DECRemark - 0111517

Remarks: Start CallerRemark - 0111517 con ed # 141670 caller states that there is an oil type material in the conduit seems to be seeping in thru the wall samples have been taken clean up pending results on samples taken dec rep was on scene of this spill END CallerRemark - 0111517

VCP:

Program Type:	VCP
Site Code:	57559
Assessment:	Soils contaminated with metals and semi-volatile organic compounds were identified at this site. Contaminated soils have either been excavated and disposed of offsite or are covered by a concrete slab or the onsite building. Groundwater has not been impacted, however, the area is served by a public water supply. Volatile organic compounds were not detected at this site, therefore, exposures associated with soil vapor intrusion are unlikely.
Env Problems:	The contaminants of concern in soil at the site were Semi Volatile Organic Compounds (SVOCs)and heavy metals. The groundwater has not been impacted by the contaminants. In 1998, the Pase I and Phase II Environmental Site Aassessment have revealed that the contaminants of concern in soil were above TAGM 4046 RSCO. The SVOCs had excedences ranging from non detected to Benzo(a)anthracene 43ppm, benzo(a)fluoranthene 1500ppm, benzo(b)fluoranthene 41ppm, benzo(k)fluoranthene 26ppm, benzo(a)pyrene 41ppm, Chrysene 38ppm,Dibenzofuran 12ppm. Some of the havy metal excedences were Arsenic 52ppm, Selenium 5.6ppm,

101-105 WEST STREET (Continued) **S108524782**

Chromium 49ppm, Cadmium 12.5ppm, Lead 1930ppm,Zinc 1490ppm, Mercury 3.5ppm. The source was presumed to be in the fill material and also produced by uncontrolled dumping. During the remedial phase, the site has been excavated and the end point samples showed that the concentrations of the contaminats levels were very close to TAGM 4046 RSCO. The excavation has been backfilled with clean soil. The remediation was completed in 2002.

Site Desc: 101-105 West Street is located in the Greenpoint area of Brooklyn, NY 10310, Block 2556, Lot 58. The site is a 0.2-acre parcel used as a construction material storage yard. It is located between Kent Street and Java Street, on the west side of WestStreet. A commercial property borders the site to the east. The intended use of the site remains to be a construction material storage yard. The surrounding uses are mainly residential with some commercial divisions. Contamination at the site waspredominantly in the soil and represented by Semi Volatile Organic Compounds and metals, and resulted from historic fill and uncontrolled dumping of oil and oil-related products from trucks loading construction materials. The Remedial Investigationwork plan was approved in 1999 and the RI was completed in 2000. The groundwater is 8-10 feet below ground. The soil is sandy and it is covered with 3-4 feet of fill material. The Remedial Work Plan was approved in 2001 and the field remedial workwas completed in 2002. The remedy involved excavation of the entire site and off site disposal. Clean backfill material has been placed in the former excavation. Remedial work at the site is completed.

FINDS:
Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Resource Affected: Soil
Oxygenate: False
DEC Memo: Start DECRemark - 9908882 8/3/05 File review (KMF): 10/21/99 Rommel Notes: Spoke to Mr. Kodogiannis. At 8am leak detector went off for diesel tank. He called maintenance. Apparently, Tully Construction may have ruptured line from submersible pump to dispenser island. Piping is double walled. Breaking up concrete now. Unknown exact amount lost. Have to do inventory. Maybe 500gal because pumped diesel from 8am-3pm. Diesel turned off since 3pm. Amoco S/S between Huron and Greene St. Not registered in database. Independent Amoco. Piping should be exposed in 1hr. Invoice from Alvin Petroleum dated 10/21/99. Alvin was called on location on a diesel pump out of order. Traced out electric and found OK. Checked STP motor and leak detector, found OK. Found possible problem underground. Suggest line test. Tank installation details provided by Keith Culley, Crawford. K. Culley got the info from Jan Sienkiewicz, President of Arek Petro Corp (50 Division Place, Bklyn NY 11222 (718-486-0011, 718-486-0022 fax)). 12/22/99 NYCDEP permitted dewatering for tank installation. There are water tank waste sampling data submitted by Geologic Services Corp. for Arek.

---------- 04/12/04 TRANSFERRED FROM TIBBE TO VOUGHT. 8/3/05 Reassigned from Vought to Foley. Foley is PM for adjacent property at 305-319 McGuinness Blvd (Spill #0400807). 06/20/06: Re-assigned from Foley to Yau. (Yau)07/05/06: Prepared and sent an old spill letter to the property owner through certified mail. A site investigation report (SIR) is mandated by 08/05/06. (Yau) 07/10/06: Received invoice bills from property owner showing removal of contaminated soil and collection of groundwater samples. Waiting for laboratory results for collected samples. (Yau) 08/29/2006: Chris Tomasello called and inquired if our case file has any site investigaton report or tank closure report. Told him our file only has a tank installation report. Chris would like a copy of the installation report. After speaking to Joe, Chris must file a FOIL Request before we can send him a copy. Chris can come in and take a look if he prefers. Agreed that an investigation will be conducted since no report is available regarding the site status. (Yau) 10/16/06 Re-assigne from Yau to Chanda (Chanda) 10/31/06 Kartik Chanda of DEC called property owner(Mr. Gus Kodogiannis) to get updated information regarding this spill case. 10/31/06 Chanda receaved a phone call from Mr.Christofer (ASR) and inquired if our case file has any site investigation report or tank closure report. 11/15/06: Chanda sent a letter to the RP (Gus Kodogiannis), requireing taht a Site Investigation Report be submitted to DEC for review by 12/15/2006. 12/21/06: Chanda spoke with Mr. C. Tomasello (ASR) to get update information regarding this site. He stated that the investigation work is going and he needtime extension to submit SIR. 12/21/06: Chanda received a time extension request by email from Chris Tomasello (ASR). 12/26/06: Chanda approves the time extension request based on the reasons presented. An investigation summary report is due to March 15,2007. 3/16/07: Chanda received an electronic copy of the Site Investigation Summary Report for Pulaski service Station by email from ASR. 3/26/07: Chanda received a hard copy of the Site Investigation Summary Report for Pulaski Service Station on 3/26/07. 4/10/07: Chanda reviewed the Investigation Summary Report and has the following comments: 1. ASR is suggested that it is highly likely that the contamination detected in the site was emanated from the adjacent, up-gradient, former Getty site(i.e., at 305 McGuinness Blvd.). but, DEC's review of the report shows that the adjacent site at 305 McGuinness is not up-gradient, but cross-gradient of the subject site

PULASKI SVCE STATION (Continued) **1000158146**

based on the GW flow direction. 2. The edge of total VOC plume emanating from the adjacent site is about 100-250 ppb, while the total VOC concentration detected in MW ASR-3 of the subject site is 5,540 ppb. This shows that the contamination at the subject is not from the adjacent site. Based onthe above reasons,the Department requires the followings: 1. Delineation of soil and groundwater contamination. 2. Submit the tank tightness and pressure test perform prior to March 11, 1997, and repair work performed on the tanks and associates fuel lines prior to March 11, 1997. 4/10/07: Kartik Chanda of DEC sent a letter to RP (Gus Kodogiannis) and his consultant (Chris Tomassello), requiring that the above documents must be submitted to the Department for review by June 10, 2007.6/12/07: Chanda called to Steven Muller, ASR, to get updated information regarding the site, and left message. 6/19/07: Chanda received an investigation work plan (IWP) from Advanced Site Restoration LLC(ASR)on 6/14/07. The IWP is proposed threemonitoring well installation to delineate soil and/or groundwater contamination at the site. On 6/18/07, Chanda reviewed and approved the IWP with one additional soil boring/ monitoring well; the additional well will be determined that the contamination source come from upgradient another spill case or not. On 6/19/07, Chanda sent an approval letter to RP (Mr. Gus Kodogiannis) and his consultant (ASR), requiring that an investigation summary report be submitted to DEC for review by 8/18/07.9/6/07: Chanda received a Final Investigation Summary Report (FISR) from Advanced Site Restoration, LLC., dated July 2007. 10/16/07: Chanda reviewed the final Investigation Summary report and has the following comments: 1. The soil analyticalresults from soil borings ASR-4, ASR-5, ASR-6 and ASR-7 showed elevated levels of VOCs. The levels of BTEX concentration ranged 64 ppb to 22,900 ppb. The levels of MTBE concentrations ranged from 00 ppb to 1,200 ppb. 2. The groundwater (GW) analytical results showed elevated levels of VOCs for monitoring wells ASR-4, ASR-5, ASR-6 and ASR-7. The levels of BTEX concentrations ranged from 883 ppb to 4,860 ppb. The levels of MTBE concentrations ranged from 160 to 630 ppb. 10/24/07: Chanda visited the site and meets with RP and his consultant, Steven Muller and Richard Levato of Advanced Site Restoration, LLC(ASR).Chanda discuss about the findings of investigation. It is concluded that they will submit the Test Results on USTs and will search the sources of contamination on/off-site area. 1/14/08: Chanda received an email (see eDocs) from Steve Muller, ASR regarding the site updated information. He stated that a GW monitoring report will be submit to DEC as soon as possible for review. END DECRemark - 9908882

Remarks: Start CallerRemark - 9908882 construction work on the road ifo the gas station workers hit the underground fuel line fuel is seeping into the ground no clean up is underway at this point END CallerRemark - 9908882

DEC Memo: Start DECRemark - 0004377 Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL" DEC Inspector notes: 7/12/00: During routine maintenance check of manhole found approx. 25 gallons oil from unknown source. There is 345 kV feeder in manhole, but no known leaks. OIl appears old - weathered. Corporate tanker (over 50 ppm) is on-site, but waiting for Clean Harbors to respond. S&TO is responsible organization. Chem Lab has taken samples. Located on NY Waterway property. (JHO) e2mis no. 132330: FDR Q35L&M and discovered 25 gallons of what appears to be old oil on top of 1,000 gallons of water inside MH 19726. Clean up pending lab results. Lab Seq # 00-06729 PCB <1 ppm Clean Harbors reported to location and double washed manhole. MAnhole was treated as 50-499ppm PCB since the lab reports were not ready. Con Ed tanker removed liquids from manhole. FOUND OIL ON 2" CAP ON FEEDER Q35L. INSTALLED TIFLON AND NIPPLE AND RE-INSTALLED2" CAP. END DECRemark - 0004377

DEC Memo: Start DECRemark - 0400807 send Cont. Soil Ltr 5/21/04 Assigned to Foley. Rommel 5/21/04 Contaminated soil letter sent by Sangesland on 5/4/04. Rommel received call from Rachel Ataman (631-462-5866) from Hydrotech who said we should have received report. Requested she resend. 5/21/04 Rachel Ataman, Hydrotech, did phase 1, phase 2 and delineation work. Will be sending reports. Working on Remediation Plan. 5/25/04 Received Phase II site assessment(Hydrotech, 4/20/04) and supplemental Phase II letter report(Hydrotech, 5/7/04). Will be sending remediation work plan when it is complete. 6/14/04 Received Remedial Action Plan prepared 6/9/04 by Hydrotech. 7/1/04 Phase II and supplemental site assessment reviewed. VOCs identified in soils around the concrete pad and within the drywells. No levels of any VOCs or SVOCs above TAGM were detected around the floor drain or hydraulic lifts. 6/13/06: Sun approves Supplemtal Remedial Action PLan

VACANT AREA/FORMER GETTY (Continued) **S106385221**

(RAP) dated April 10, 2006and letter report dated June 2, 2006 submitted by Hydro Tech. The approved RAP is to inject 810 pounds of ORC into 40 injection points. The injection points will be situated over 3 rows, each row will have 15 points. The points will be 5 feet apart and the rows will be 17 feet apart, THe rows will be situated on site and along the sidewalk of McGuinness Blvd and Huron Street. (Sun) 7/2/04 RAP reviewed and conditionally approved. Requested two additional well locations, one south(area of SP-11) and one west(area of MW-1) of concrete patch. 7/7/04 Spoke to R. Ataman, Hydrotech. Excavation to begin Thursday 7/8/04. 1/5/05 Spoke to R. Ataman, Hydrotech. Will send groundwater investigation report this week. To alsocheck with owner on property fencing. 1/19/05 Spoke to R. Ataman, Hydrotech. Will be sending groundwater results out tomorrow. 1/21/05 Received Quarterly Status Report (Sept-Nov 2004) from HydroTech. It does not appear from the report that the Remedial Action(as approved on 7/2/04) was implemented. Total BTEX in groundwater ranged from 48ppb(MW-1) to 22590ppb(MW-4). MTBE ranged from ND(MW-1) to 510ppb(MW-3). See spill #9111459, PBS 2-146595. Previously operated as a Getty station(as 315 McGuinness). 3/25/05 STIP issued(certified) and due back on 4/18/05. 4/14/05 STIP returned undeliverable. 4/29/05 Requested that ECO Deo Read III attempt to deliver stip to 390 Berry St. 5/18/05 Site visit. Spoke to Bill, Project Manager from Superior Construction (cell 347-242-1268). Obtained owner info: Isaac Hagar, 217 Havermayer St, Brooklyn NY 11211(718-599-8600). Requested ECO Lakeman attempt to deliver stip to 217 Havemayer Street. Stip due 6/9/05. 5/23/05 Spoke to M. Robbins, Hydro Tech. They are still consultant for Mr. Isaac Hagar. Faxed him a copy of 5/19/05 letter. He will coordinate with Mr. Hagar. 5/24/05 ECO Lakeman attempted delivery at 217 Havemayer and was unable to locate Mr. Hagar. Requested M. Robbins of Hydrotech forward the letter to Mr. Hagar. 5/26/05 Mailed letter to 217 Havemayer by certified mail(7004 1160 0001 8318 4170). 5/27/05 Received Remedial Action Report(HydroTech, 9/10/03) and Quarterly Status Report for 12/04-2/05(HydroTech, 4/11/05). 840 tons of petroleum contaminated soil was excavated in the central and northern portions of the site. The excavation was approximately 65' wide, 36' long, and was extended below the water table. Groundwater was encountered at 4-6'bgs. A total of 1500lbs of ORC was injected into the excavation sidewalls and bottom. Endpoint samples taken from area of excavation ranged from ND to 781040ppb(EP-5) total VOCs. Appears that most of the soil contamination is along the northand eastern sides of excavation(along Huron and McGuinness). No bottom samples taken. Groundwater samples collected on 2/16/05 from six on-site wells. Total VOCs ranged from 13ppb (MW-4) to 12906ppb(MW-6). 6/1/05 Spoke to ECO Chris Valenty.He issued stipulation letter to Mr. Isaac Hagar on 5/20/05. 6/16/05 Email from M. Robbins, Hydrotech. He met with Mr. Hagar who signed Hydrotech's proposal to perform the work described in DEC's most recent letter. Mr. Hagar has not yet paid Hydrotech. M. Robbins gave the stip to Mr. Hagar and told him to sign it. He said he would review it with his lawyer and give it back to M. Robbins next week. 7/7/05 Email from M. Robbins- Hydrotech will be starting field work next week. They will need a letter to obtain sidewalk permits. 8/8/05 Email from R. Ataman, HydroTech. Will install MW south of MW-7. 8/9/05 STIP effective. Investigation summary report due 10/8/05. RAP due 12/7/05. 9/14/05 Received vapor barrier/ventilation system design from HydroTech. 12/9/05 Received report for installation of 6 monitoring wells and 2 samples taken from beneath the building foundation. Only contaminated soil encountered above RSCO, during well installation, was for benzene(166ppb) at SP-6A, 6-8'bgs. Concentrations of VOCs in groundwater were as high as 77724ppb(MW-3) and 51756ppb(MW-2), in the sidewalk to the north, and also in the sidewalk along McGuinness Blvd in MW-5 at 57074ppb. Lower levels of VOCs were detected in the northwest corner of the site, in MW-1, at 7674ppb, and to the east, in MW-4 and MW-6, at 8366ppb and

VACANT AREA/FORMER GETTY (Continued) **S106385221**

14152ppb respectively. In summary, 841 tons of contaminated soil was removed. ORC was injected into the sidewalls and bottom of the tank excavation as a slurry. No VOCs were identified in the two samples collected from excavation. Benzene was the only contaminant detected in soil, in the boring east of the site. HydroTech expects that the elevated concentrations in MWs crossgradientand downgradient of the site will decrease over time due to source removal and ORC injection. Total VOC concentrations decreased from 22710ppb(8/04) to 13ppb(2/05) in former MW-4 and from 4355ppb(8/04) to 1950ppb(2/05) in former MW-2. 12/21/05 Spoke to Rachel Ataman and followed up with email. In order to fully delineate and get a better estimate of the contaminant plume, additional monitoring wells are warranted. Based upon those results and the next quarterly round, a remedial action plan can be submitted. Requested they submit a plan for the additional investigation prior to beginning any field work. 2/27/06 Spoke to R. Ataman, Hyrotech. Report for supplemental investigation condcuted in Jan 2006 submitted via email. Monitoring well MW-8 was installed on the sidewalk along the north side of Huron Street, adjacent to an Exxon gasoline station. Monitoring wells MW-10 through MW-12 were installed into the median in the middle of McGuinness Blvd. MW-10 is located to the south of Huron Street. Monitoring well MW-11 and MW-12 are located to the north of Huron Street downgradient of the Exxon Station. The depth to water ranges from 5.90 feet in MW-4 to 7.26 feet in MW-11. 3/20/06 Spoke to Caroline Cadalso, AdvancedCleanup Technologies(631-293-4992 X21). They are the consultant for Norfolk Bank, the lender for the owner. Inquired about the status of the spill. 4/11/06 Received supplemental RAP for ORC injection prepared by HydroTech. The Area of Concern isthe dissolved phase VOC plume present beneath the northern portion of the site and approximately 50 feet downgradient of the site.The total VOCs are at 8,366ppb in MW-4(located on the northeast corner of the Site) to 77,724 ppb in MW-3(north of theSite on the southern sidewalk of Huron Street). Propose to inject 810 pounds of ORC powder and 874 gallons of water; 20 pounds of ORC powder and 22 gallons of water per hole. Following the injection of the ORC slurry, a groundwater monitoring program will be implemented conducting gauging and sampling on a monthly basis. Samples will be obtained from each well and analyzed for dissolved oygen, dissolved iron and manganese, Redox potential and pH. Additional samples will be obtained from each well on a quarterly basis and analyzed for BTEX and MTBE. 5/3/06 Provided comments on RAP via email to R. Ataman, HydroTech. Requested more information regarding the length of the plume, contaminant mass sorbed to the soil, hydraulic conductivity,radius of influence, and groundwater data used to calculate oxygen demand. I also requested looking into placement of wells outside of the treatment zone to determine the effectiveness of the injections and to ensure groundwater is being treated andnot just migrating. 11/14/06-Sun: Kris Almskog (631-589-6353)of P.W. Grosser Consulting is the new consultant for the RP. He informed DEC today that he recently installed some monitoring wells inside the building and performed quarterly monitoring and sampling of the groundwater. He will submit a revised remedial action plan to RP and DEC for approval. (Sun) END DECRemark - 0400807

Remarks: Start CallerRemark - 0400807 saw no tanks but did do soil samples and they came back over the DEC limit for contamination. No clean up yet need DEC to help with the clean up decisions. They aren't sure where to start or how to go about doing it. END CallerRemark - 0400807

DEC Memo: Start DECRemark - 0412885 e2mis no 157525 3/9/05 - 1645hrs - James Sullivan # 85560 Mech A Maintenance Services reports found clear water in MH4299. While pumping structure noticed oil on water. Disconnected pump and secured sewer (with oil packs) that was a block away from structure which had not been affected by either the water or oil. Did see 1/2 gallon of unknown oil on curb line of street along with 1 gallon unknown oil on 50 gallons water in structure. No sewers or waterways appear to be affected. Sample to be taken from structure. #9 has been dispatched to location to cut service. Env. Ops OS notified and crews dispatched to location to clean up street as 50-499. Clean up of structure pending sample results. A crew will remain on location until results are received. Update - 1719hrs M. Lacker OS reports env. stop tag # 31669 placed. Chain of custody # DD05234. Crew will bring sample to chemlab.
UPDATE - 3/9/05 - 1845HRS WILLIAMS REPORTS HE HAS CHECKED CATCH BASIN AND DOES NOT APPEAR TO BE AFFECTED BY SPILL. HE ALSO STATES STREET APPEARS DRY - NO OIL SEEN ALONG CURB. HE DOES SEE 2 SMALL LOCATIONS WHERE WATER IS SITTING AND IS FREEZING AT THIS TIME. CREWS WILL REMAIN ON LOCATION UNTIL SAMPLE RESULTS COME BACK AND TANKER WILL BE ORDERED TO CLEAN THE STRUCTURE AND THE STREET. SPILL IS CONTAINED. Lab Sequence Number: 05-02098-001 - Aroclor 1260 < 1.0 ppm
UPDATE - 2120HRS RESULTS RECD. <50 TANKER ORDERED WILL BE DISPATCHED 11PM - ENV. OPS CREW WILLCLEAN AFFECTED AREA OF STREET NOW AND MIDNITE CREW WILL BE DISPATCHED TO LOCATION TO CLEAN STRUCTURE. UPDATE 10-MAR-2005 03:20 HRS. ENVIR. OPER. MECH-A J.IOCCO EMP# 31669 REPORTS: DBL. ASTORIA TANKER REMOVED ALL LIQUID FROM STRUCTURE. ENVIR. CREW THEN DBL WASHED STRUCTURE WITH BIO-GEN 760. NO SUMP IN STRUCTURE, ENVIR. TAG# 31669 REMOVED. THIS CLEANUP IS 100 COMPLETE. END DECRemark - 0412885

Remarks: Start CallerRemark - 0412885 They have 1/2 gallon of unknown petroleum on 50 gallons of water. con ed #157525, there is also 1/2 gallon of unknown oil on the sidewalk. END CallerRemark - 0412885

DEC Memo: Start DECRemark - 0230011 Prior to Sept, 2004 data translation this spill Lead DEC Field was "SAWYER" 1/8/04-Vought-15000 gallon #2 fuel oil tank on property. Spill transferred from Vought to Austin. 12/16/05- Spill transferred from Piper to Vought. 01/27/04 - Sawyer - Spill transferred from Austin to Sawyer. 05/17/06-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin. 6/7/06 - Raphael Ketani. I reviewed the case record for the site, including the Phase I and Phase II reports written by JLC and the May 10, 2002 Phase II Site Investigation Report prepared by AKRF Inc. I found that the site has high concentrations of some PAHs. Though this looks like historical fill. VOCs were very low. The last contactwas a letter dated January 31, 2003 written by Mark A. Chertok to Lou Oliva requesting closure of the case. I tried calling Mr. Chertok (212) 421-2150 to find out whether any other investigations had taken place on the site since January 2003, but could only leave a voice mail message. 6/15/06 - Raphael Ketani. I received a call from a legal assistant at Sive Paget & Riesel, P.C. She said that the reports I had were all of the information for the site. She said that there were no other investigations and asked that the case be closed. I spoke to Ioana Munteanu-Ramnic (DER Region 2 Enviro. Engnr.) about the site and she that she believed a 10,000 gal. tank had been discovered when the bulkhead on the west side of the site had been replaced. 6/16/06 - Raphael Ketani. I called up Steve Zahn (Region 2 Program Manager in Marine Resources) and he said he was aware of the bulkhead replacement, but not about the tank. He said he will ask around his unit and see whether anyoneis familiar with the discovery of a tank. I called up Mr. Chertok and asked him about the tank. He said that a lot of tanks had been discovered in the phase I and phase II parts of Queens West through work by the Voluntary Program, but the Tennisport is phase IV. He said he will check his records and let me know if something was on the site. 6/19/06 - Raphael Ketani. I received the following e-mail from Andrew Walker of Region 2 Marine Resources: Hi Raphael, Steve had me check ourpermit

QUEENS WEST TENNISPORT (Continued) **S106004541**

file regarding whether we had any knowledge of an old storage tank being on the site and its removal. From my review of the file, it appears that the only portions of the project we were aware of was shoreline stabilization, a stormwater pipe, and dewatering. As far as I could see, nothing indicated a storage tank. Let me know if you need any further info. Drew Andrew C. Walker Marine Biologist, NYS DEC, Region 2 47-40 21st Street Long Island City, NY 11101 acwalker@gw.dec.state.ny.us Phone: (718) 482-4061 6/27/06 - Raphael Ketani. I viewed the northwest corner of the site. The construction company exposed a large (5000 gal.?) tank in the vicinity of TMW-3. The tank had a hole at the top that may have been formed by the backhoe hitting it or by the tank folding in the middle. I called up Mr. Chertok and asked him what was going to happen with the tank and whether it was clean. He said he will get back to me. The soil and water analyticals had only 1 VOChit and a number of SVOC hits that were below TAGM. 6/28/06 - Raphael Ketani. Ms. Christine Leas (212) 421-2150, representing the law firm for the construction project, called to say that what I saw is a riveted conduit, not a tank. I left a message for her stating that I will go to the site and view the object up close. She called me back and said that Steve Cantor, an engineer for the project, will meet me at the site and help explain the structure. She said he is a substitute engineeras Larry Ford and Peter Torpor (718) 786-2034 are out right now. I visited the site with Mr. Cantor and took a number of pictures. I also met Al Boehm, P.E. and project engineer, of Spearin Preston & Burrows, Inc. who explained that the structurewas a coal conveying pipe. I could see wires inside the pipe which was about 6 feet in diameter. There were, also, old pilings from when the end of the pipe was next to the water. There was also a pool of green flow tracing dye on one side of the pipe. I told Mr. Boehm and Mr. Cantor that the dye needed to be cleaned up. 6/29/06 - Raphael Ketani. I left a message for Ms. Leas that the green flow tracing dye has to be cleaned up and an official letter sent to this effect before I will closethe spill case.
7/6/06 - Raphael Ketani. I received e-mailed pictures from Ms. Leas of the testing dye before and after it reacted with the sunlight and evaporated. Based upon the dye letter, the phase I and phase II reports produced by JLC, thephase II SIR produced by AKRF, and other documentation in the case file, I am closing the case. Ms. Leas asked for a case closed letter. I will send one. END DECRemark - 0230011

Remarks: Start CallerRemark - 0230011 Reported total SVOC carcinogens at 55,531 ppm at 6'-8' soil sample. Information discovered in review of AKRF Phase II report. END CallerRemark - 0230011

DEC Memo:	Start DECRemark - 0011791 assigned to C. Whitfield in acklog initiative; no files received from region. Spoke to Joel Lehrman of R & Z Metals on 12/21/05. He said the "unknown material" was a biodegradable substance, for which they paid a fine in court. He does not recall which court. He may be confusing this incident with a May 2000 spill of 25 gallons of methylene diphenyldiisocyanate that was absorbed and contained. Since there are no other resources to contact, the spill report says 0 gallons spilled, and the company is still operating in the building, I am closing the spill per guidance issued with initiative. END DECRemark - 0011791

DEC Remarks: As a followup to previous inquiries, DEC Sigona contacted ECO s Crowley for further information on March 12, 2001 for report on ECO imnvestigation and findings. ECO Crowley did not perform any folllow-up, she indicated that a truck at the facilityhad leaked a blue material reportesdly aluminum based. Ms. Crowley did not request MSDS, and spills did not respond. The facility was asked to cleanup the contamination. No further action.
Remark: unk material ifo the above business - will call spill response as soon as this call is terminated

DEC Memo: Start DECRemark - 9714505 Prior to Sept, 2004 data translation this spill Lead DEC Field was "DEMEO" DEC (SIGONA) investigated the spill on 3/30/98 at 3:30 P.M. The facility is a maintenance yard across the street from the Crab House Restaurant onBorden Avenue in Long Island City. There is track area where trains are maintained. Oil drains to separator UST. The system has major problems, overflows with product during floods, oil on floor and ground. Earlier on the day of 3/30/98 at 7:30 A.M. workers discovered that their aboveground 275 tank spilled all of its contents onto ground and track areas. The spill was caused by a broken watch glass on the tank which apparently was broken by vandals. LIRR hired Trade-Winds Environmental to perform a surface cleanup. There is an on-going groundwater remediation system in progress to remove a significant free product plume under the track maintenance facility. This area was further impacted by this surface spill which was onlycleaned up on the surface. It is unclear how much product leached under the track area. 7/8/03 TJD No DEC file. LIRR submitted letter, dated 2/24/03, summarizing historical spills at LIC Passenger Yard. Specific to spill #9714505, LIRR states: "spill located in oil-house which has been removed as part of Phase 1 reconstruction of yard. Soils along this area have been removed down to the water table and disposed." Further stated in LIRR correspondence, spill #9714505 is in area of yard that has been remediated as part of phase 1A of yard reconstruction. Disposal documents and endpoint analysis are included with LIRR submission. Spill #9313234 is designated as the primary spill for LIC passenger yard and will remain open until all phases of yard reconstruction

METALS FACTORY (Continued) **S107522410**

973-560-0400) at Environmental waste management. As per Joanne this property is in use by Metal factory. Metal Factory: Hergl metal Factory Person runnig metal factory: Berry Goldsammler (718) 729-2200 Ext. 226 Owner of the Property: R. D. Management. (212) 265-4491 Main Office of management: Mr. Edward Cohen City Closet Storage 214 W 29th St New York, NY 10001-5203 (212) 736-4491 FAX: 212-736-4494AS per Joanne, the metal company is using the AST for storing solvent that they use in metal processing. the AST is open and has one 5 ft deep pit underneath it. company storing TriChloro Ethane (TCE) in tank. Environmental Waste Management has found contamination in soil underneath tank. they found PCB, Methylene Chloride, PetroChlorodene etc. Ms. Stott going to mail me the laboratory results they have for soil and water samples. they have finished delineation and once the tenant move out from property on 1st Feb, 2006, the building will be demolished and Environmental management will remove debris from site. they will do excavation and will take end point samples for investigation. Left message for Barry at hergl at 11:53AM. from the Reverse Phone Directory, the Address i found for Barry's phone (718) 729-2200 Lan Metal Products Corporation 261 Borden Ave Long Island City, NY 11101-5803 (718) 729-2200 FAX: (718) 894-4767 NO CBS RECORDS. Left message for Edwardat main office as well as for a managing person at R. D. Management. Received call from Donna at R. D. Management and she directed me Mr. Richard Birdoss, who was not in office. i left message for Richard. Received call from Richard, but i was on phone and i couldn't make it. Left message again for Richard on (914) 645-6908. talked with Richard and he told me that Mr. Al Rossi at R.D. Management hadling this property. Received call from Mr. Rossi from R.D. Management. R.D. Management has baught this property recently. the address they got from city for this site is: 2-30 51st ave. this property is in corner of borden ave and 51st ave. Mr. Rossi doesn't know about previous owner. Contact address where we can send letter:-Al Rossi R. D. Management 810 7th Ave 28th Floor New York, NY 10019 (212) 265-6600 Ext. 305 FAX: (212) 765-8449 Main owner of this property: Fe 51st Avenue LLC C/O R.D. Management 810 7th Ave New York, NY 10019 Possible Previous Owner (from property Shark) Landau Cynthia 1476 Great Plain Ave Needham MA 02492-1237 Landau, Freda 2 Borden Avenue NY NY, 11101 01/30/06-Hiralkumar Patel. left message for Ms. Stott at Environmental Waste asking lab results and site plan.Received call from Stott, and she already sent out results in mail on friday 27th Jan. and we will receive it soon. she is going to send me site plan in email soon. With the help of Reverse PHone Directory, the previous owner is: Landau Cynthia1476 Great Plain Ave Needham MA 02492-1237 PH. (781) 455-0045 (H) (617) 645-7895 (C) As per Cynthia, her father has sold out the metal facotry in Aug. 1995. and the Lan Metal Products Corporation were running this business as a tenant forlast 10 years. Cynthia has sold out the property in Aug. 2005 and as per th contract she has with current owner, whatever contamination the new owner find, that is there responsiblity to clean up. Cynthia is not responsible for cleanup. I have askedCynthia to send me copy of that clause in email. Received call from Environmental Waste Management, and they will contact the current owner and give me call back regarding the time and date of site visit. Received Lab results in mail from Environmental Waste Management. Need to review. As per the reports i got, EWMA has sent out 11 soil samples from 7 locations on 25th May, 2005 and found some SVOC and high VOC contamination in samples. but they haven't reported that to DEC in May/June.then EWMA took 27 samples from 8 locatoins on 22nd Sep., 2005. Sample no. Depth Concentration (ppm) Trichloroehtane B-1 7/7.5 41.9 B-2 3/3.5 21.1 B-3 4/4.59.04 B-5 2.5/3 14.6 B-6 3/3.5 8.66 B-7 4/4.5 13.8 B-10 4/4.5 25.5 B-11 4/4.5 25.1 01/31/06-Hiralkumar Patel. Received site plan.

METALS FACTORY (Continued) **S107522410**

02/01/06-Hiralkumar Patel. REceived email from Ms. Stott from EWMA ---------- Good morning. I wanted to confirm our site meeting for Tuesday February 7th at the above referenced Property. Please let me know what time you would like to meet. Thanks and have a good day. ---------- Emailed back confirming day. also asked to get MSDS on day of site visit. Email from Ms. Stott ---------- Let's plan on meeting at 10 am. If your schedule changes and this is no longer a good time, please let me know and we can reschedule. Thanks. ----------02/03/06-Hiralkumar Patel. send out CSL, STIP to old owner (Ms. Cynthia) and metal factory owner (Berry) through certified mail. Receipt numbers are as follow: Cynthia: 7004 1350 0004 5755 5157 Berry: 7004 1350 0004 5755 5164 also faxed to AlRossi, Berry and Ms. STott at EWMA. As per Vought, we can handover STIP to current owner on site visit on 7th Feb. 02/06/06-Hiralkumar Patel. Spoke with Mr. Eli Hertz (Cell: 9917-335-6010, FAX: 888-410-0671), President of Lan Metal Products Corporation. he probably meet us on site on 7th Feb. 02/07/06-Hiralkumar Patel. visit site with DEC Vought. met with Robert Edgar and Joanne Stott from EWMA, Eli Hertz, demolition contractor and representative of Al Rossi. - two monitoring wellson sidewalk of property. - Concrete collection pit under tank - tank size - 7'*3.5'*8.5' - property had several empty drums on different locations. - in process, metal get cleaned in TCE before dry powder coating. for cleaning, they dip metal inTCE tank, which gets heat from bottom (gas heating system). vaporized TCE cleans metal. as the vapor rises in tank, the cooling coils on top of tank condense the vapor and collect back in tank. after some time, they take out slurry from tank for disposal. once the metal get clean, it goes into oven for drying, which in the other part of building, through conveyor belt system. - tank still has TCE in it. - this factory was in service since 1954. and previous owner was using painting also at property. Mr. Hertz was running this factory last 8 years. - because there is high contamination of TCE at 7.5' near to grounwater level, Vought asked to take groundwater sample near tank. and Vought has asked Robert to do field screening during demolition. Handover CBS application form for registration of tank. Modified STIP has been sent out to Ms. Cynthia, Eli Hertz and El Rossi. Faxed to Eli Hertz, Al Rossi, Ms. Stott and Robert Edgar. 02/14/06-Hiralkumar Patel. Received Certifiedmail receipt from Eli Hertz. 02/16/06-Hiralkumar Patel. Received Certified mail receipt from Ms. Cynthia and Mr. Rossi. 03/03/06-Hiralkumar Patel. Left message for Al Rossi. he is out of office and back on monday. 03/07/06-Hiralkumar Patel. Leftmessage for Ms. Stott at EWM. Received call from Ms. Stott. they have installed two temparory monitoring wells near the tank which used to store TCE. they found some exceedence (TCE & MeCl2). she will send us RAP for approval before implementing it.03/08/06-Hiralkumar Patel. Received message from Al Rossi (Cell: 914-263-5756) from RD Management. Left message for Mr. Rossi and asked about STIP as we haven't received signed STIP from any party and deadline for this is 15th Mar. 2006. 03/13/06-Hiralkumar Patel. Received call from Ms. Stott. she was requesting time limit extension and she has already sent out letter to Department for this request. i asked her to check with her client about STIP as the deadline is 15th Mar and we haven'treceived signed STIP from any party. she will check with current owner. 03/15/06-Hiralkumar Patel. Received signed copy of STIP in email. STIP was signed on Mar. 14 2006. STIP signed by El Rossi. they will send original in mail. 03/17/06-Hiralkumar Patel. Received letter from Ms. Stott from EWMA requesting time limit extension for RAP submission. they are expecting to finish RAP by late April or early May 2006. as per the CAP sent with STIP, they need to submit RAP within 60 days of effective date of STIP. Still Randy needs to sign STIP once we receive original. so EWMA has sufficient time for RAP submission. no need to send time

METALS FACTORY (Continued) **S107522410**

extension letter. Left message for Ms. Stott informing her that they don't need any kind of letter if they plan to submit RAP by early May. 04/21/06-Hiralkumar Patel. Left message for Mr. Rossi as i haven't received original copy of signed STIP from Mr. Rossi. Left message for Ms. Stott at EWMA. received call from Ms. Stott. she will send me the original letter if she gets it. they are working on RAP and will submit soon. i asked her to fax me water sample results and she will do it. 04/25/06-Hiralkumar Patel. Discuss groundwater contamination with Randy Austin, Koon Tang and Jeffery Vought. as per Randy, we can't handle this site as this is purely chemical contaminated site and Spills program does not have regulatory authority. and as per Koon, they can't handle this site even for the same reason. Randy suggest to handover this site to either city DEP, if it is E Designated site, or to Brownfield program. As per Randy there are no vapor mitigation (vapor barrier) requirements because of lack of regulatory authority. 04/27/06-Hiralkumar Patel. Received copy of signed STIP in fax. 04/28/06-Hiralkumar Patel. Spoke to Ms. Stott. as per Ms. Stott this is not an E desingated site. suggest her to apply in Brownfield program as this is not petroleum contaminated site. and gave her Daniel Walsh's number (718) 482-4599. they will contact Mr. Walsh. 05/02/06-Hiralkumar Patel. Jeff left note on my table as i was out of office yesterday. as per Jeff's note, he received call from Rob Edgars (973-560-1400 Ext. 159) and they are not willing to do Brownfield. they request an administrative closure of this case. 05/03/06-Vought-Received closure request from EWMA Edgar as "no discharge of petroleum has occurred on the property, the Property was not a chemical bulk storage facility and there is no information indicating that a release of a reportable quantity of hazardous substances or petroleum products occurred at the property. "...the reporting of the incident and assigning of Spill Case 0512415 to the Property was an adminstrative error. EWMA respectfully requests that you correct this administrative error by rescinding Spill Case 0512415". Spill closed and no NFA sent as per DEC Austin. Vought called Rob and left message that spill number was closed. END DECRemark - 0512415

Remarks: Start CallerRemark - 0512415 DOING SOIL TESTING, FOUND CONTAMINATION, BUILDING IS DUE TO BE DEMOLISHED AND AFTER THAT HAPPENS COMPANY WILL CLEAN UP SOIL; END CallerRemark - 0512415
