Biennial Reports:

Last Biennial Reporting Year: 2005

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "RODRIGUEZ" INSPECTOR NOTES: DURING A SPDES INSPECTION, J. LAMALFA INFORMED THAT APPROXIMATELY 1 GALLON OF #6 OIL SPILLED ON THE DOCK. THE OIL SEEPED THROUGH THE DOCK OPENINGS ANDWENT INTO THE WATER INSIDE THE BOOMED AREA. KEN'S MARINE ALREADY HAD CLENED THE WATER AND LEFT. CON EDISON WILL FINISH CLEANING THE OIL STAIN IN THE DOCK. CON EDISON WAS INSPECTING THE EXISITING #6 LINE ON THE DOCK TO CERTIFY IT GAS FREE FOR A FUTURE WELDING OPERATION. THE PROJECT IS TO WELD TOGETHER THE EXISITING #6 PIPELINE TO A NEW PORTION OF PIPELINE THAT WILL GO FROM THE DOCK TO INSIDE THE STATION.(ARs) 11/20/2002: STATION CLEANED THE SPILL. THE CHECK VALVE IS IN PLACE AND OPERATIONAL. THE STATION IS USING THE #6 LINE AND THEY WERE PUMPING OIL DURING THE INSPECTION. THERE IS A STAIN ON THE DOCK, BUT NO FREE PRODUCT WAS VISIBLE. THE DOCK IS MADE OF WOOD AND THE STAIN WILL NOT COME OUT. (ARS) E2MIS NOTES 0206371While preparing the dock fuel oil line for cleaning by the Jet Trader, 1 gallon of No. 6 Fuel oil sprayed out of the check valve on to the dock and into the water. The Operators on the dock had prepared an area with plastic and pads to prevent oil from getting on the dock. The spray of oil went past the protected area and into boomed area around the Jet Trader. Ken's Marine was called 12:24. Ken's Marine arrived on-site with wrong boat at 13:15. Response boat arrived at 13:30. Clean up complete 15:30. Checked with ERT S. Mahoney, USCG is not responding to this spill. Released Ken's Marine after visual inspection showed no visible floating globules or visible sheen in water. Two 55 gallon drums of waste generated to be disposed of as non-hazardous waste. Investigation in

59TH STREET STATION (Continued) **S102239101**

progress. INVESTIGATION REPORT On September 19, 2002, Operations was preparing to clean the dock fuel oil line in preparation for tie-in work starting September 21, 2002. Three operating mechanics were assigned to work the job. The OMA's and the Shift Supervisor discussed the operation. It appeared to have four phases: 1. Removal of residual oil from the west end of the fuel oil line west of the check valve. 2. Removal of residual oil from the east end of the fuel oil line east of the check valve (east & west sections separated by check valve) 3. Removal of the check valve flapper by opening the top flanged cover 4. Removal of the remaining oil with steam and vacuum after replacing topflange cover. There was never any written station procedure and there was no operating order. The Jet Trader was contracted to collect the residual fuel oil and the steam/water from cleaning the 6" fuel oil line. Initially, the Jet Trader appliedsuction on a 3" connection on the west flange of the dock line. This removed residual oil from the check valve west of gate valve V049 to the west end of the line. A vent valve west of the check valve was throttled open to facilitate flow. The evolution was stopped after 2 hours when the tankerman on the Jet Trader felt (by hose pulsing) that they were drawing more air than residual oil. The next evolution was to remove oil from the pipe east of the check valve. The Jet Trader was repositionedand Ken's Marine was called to boom the Jet Trader. The Jet Trader's suction hose was attached to a 3/4" drain at the east end of the line. Gate valves P61 and V049 were open, the MOV Emergency Shut Down Valve was closed (this valve remained closedduring all phases of this evolution) and the vent valves east and west of the check valve were throttled open. Prior to start applying vacuum, the Shift Supervisor and one of the OMA's left the dock for approximately 20 minutes to get some flexiblehoses to apply steam to the line for a later stage. After 10 to 15 minutes of suction, the two OMA's dedused that because they felt suction at the vents with the vacuum in progress, the line was empty and pressure free, and that the line was clear enough to remove the cover on the check valve. The area around the check valve had plastic sheeting and pads deployed to minimize any residual oil that might spill during removal of the check valve cover and flapper. The OMA's were in the process ofloosening the bolts on the check valve cover when the cover "popped" and sprayed about 1 gallon of No. 6 oil about 5 feet in a northerly direction. The oil went past the pre-deployed pads which were positioned to reach approximately 2 feet in all four directions from the check valve. The oil seeped through voids in the pier deck timbers and entered the water within the boomed area. ROOT CAUSES: 1. There had been no written procedure that detailed the steps of this evolution, along with indicators that each step was successful. 2. There was no proof positive that the line was pressure free. 3. The OMA's did not realize that having the vent valve west of gate valve P61 open "short-circuited" the suction process and left residual oilin the section west of the vent valve. The OMAs didn't realize that suction at the two vent valves was not an indicator that the oil line was pressure free. 4. A leg of oil (approx 2 feet of head) probably existed immediately east of the check valve. 5. The leg of oil probably dropped, flooding the 6" suction line enabling a pressure condition at the check valve CORRECTIVE ACTION: Operations needs to develop a written procedure for this and other non-routine dock evolutions.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead DEC Field was "RODRIGUEZ" E2MIS 151238 22-NOV-2003 12:16 Operator M. Bland (I.D.# 50412) while attempting to lubricate 114 Boiler feed pump could not correctly determine the level of oil in the resevoir and as a result overfilled the oil resevoir. the oil drained out of the top of the resevoir and on to the floor where it entered the floor drain. The oil was noticed streaming into the drain collection pit as an oil and water mixture. The drain was blocked off and and spill pads were placed in the pit. No oil, or oil sheen was observed draining into the sump pit where there is a pump that sends water to an oily water seperator. Cleanup is continuing and is expected to be completed within the 2 hour constraint. Notified CIG operator S. Mckeever at 11:56 and received ERT contact at 12:11 A. Fiore. Sewer/Waterway: NO Fire/Smoke: NO Substance: Lube oil Source: 114 BFP LO Reservior Cause: Over fill Private Property:NO Clean up completed at approximately 14:00. There was NO entry in to waterways or sewers. The spill was contained within the station. After investigation it was determined that initial report of 12 gallons spill was incorrect. It appreas the correct amount is approximately 4 gallons. Operator only use four buckets (12 gallons total) to filled reservoir and oil leaked durting last bucket fill. Operator was filling reservoir with buckets through funnel. After filling with four buckets, the oil leaked because of overfilling. There is a level indication on the reservoir but it is not readable. ROOT CAUSE: Inattention to detail and unreadable level indication. CORRECTIVE ACTION: Operator was instructed regarding attention to detail and work order was entered to repair of replace level indicator. Update: 01-MAR-2005 by J. Burke Level sight glass on 114 BFP reservoir was replaced and the level can be easily seen in sight glass at present time. This incident is being submittedto the NYSDEC for review and closure.

DEC Memo: Con Ed e2mis #150555: 10/1/03 At approx 1109hrs, Mike Bernardo discovered an oily water spill of approx 30gal beneath boiler 114. The amount of water in the mixture was approx 27gals and the amount of lube oil in the mixture was approx 3gals. The source of the spill is still being determined. The mixture consists of mainly water which spilled in the basement concrete flooring in the

59TH ST GENERATING STATIO (Continued) **S104501267**

vicinity of the Air Pre-Heater and the FD fan. A slight sheen was noticed in sump #3 and that sump pit pumps were shut off. Pigs were placed in the gutters. There was no oil in the oily water separator and no oil was discharged to a waterway or city sewer. Cleanup is in progress. Sample of oil water taken by Results for oil signature analysis. Inspection of area indicates that oil likely to have come from three sources over time: 114 ID Fan Turbine pedestal and Fan I/B bearing pedestal (oil from bearing seal leaks); 114 FD Fan duct between FD Fan and Airpreheater (oil sucked into FD fan from bearing seals); and 114 FD Fan Turbine pedestal and Fan I/B and O/B bearing pedestals (oil from bearing seal leaks). Watch and house maintenance cleaned up about 3 drums of waste. WO# 59T-03-45406 entered to clean up oil water mixture. AllState Power Vac called in to clean up oil water under 114 FD Fan duct and oil on ID and FD Fan pedestals. Heyrich is scheduled to perform Boiler wash on Boiler 115. Scope of that contract covers work cleaning FD Fan duct work. Heyrich will start cleaning 114FD Fan duct work of oil on 03-OCT-2003. All-state Power Vac completed clean up. Pedestals powerwashed. Floor cleaned. All clean up waste handled as non-hazardous waste. 3 drums liquid and 7 drums oily solid debris placed in non-hazardous wastearea for disposal. Heyrich cleaned inside 114 FD fan ductwork. Waste to be disposed off as non-hazardous waste as part of bolier wash contract. All clean up completed by 16:00 03-OCT-2003

Recovered: Yes
Resource Affected: Soil
Oxygenate: False
DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL"
E2MIS 120189 AT 1550 HR, AT THE HP PARKING AREA, A 1 OZ SPILL OF HYDRAULIC FLUID WAS DISCOVERED. THE FLUID WAS ON A CONCRETE SURFACE AND CLEANED UP IN APPROX. 15 MINUTES. NO FLUID ENTERED THE TRENCH SYSTEM. CIG,R.ROACH NOTIFIED FOR SPILL. SAMPLE PROFILE TAKEN SHOWED HYDRAULIC TYPE LIQUID WITH NO HAZARDOUS WASTE CHARACTERISTICS. SOURCE WAS NEVER DISCOVERED.
Remarks: FOUND OIL IN THE PARKING LOT & CON ED CLEANED IT UP W/ 1 OIL PAD

DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL" e2mis 130085 0905, 2/23/00 - Small amount of unknown dielectric oil found on concrete floor of station basement. Estimated quantity less than 1 fluid ounces. Retired feeder cable directly above spill with open end cut showed evidence of dielectric oil leeching out of cable. Further inspection of area showed second cable in same condition with small spill of unknown oil on concrete floor below. Amount again estimated at less than 1 ounces. No oil entered any waterways, sewers or trenches. Samples to be taken of fluid for analysis. Station could not collect sufficient quantity to determine PCB content. Oil spill to be treated as possible PCBs for cleanup.Vendor called in to perform clean up. Vendor Clean Harbors completed cleanup at 2000 hours. The transformers the cables were connected to were removed from service over 15 years ago and the cable ends left cut. Over time a small amount of dielectricoil leaked from the cut ends. The ends of the cables were now capped to prevent fluid spills.
Remarks: retire feeded cables leaking.clean up pending results 130085

DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL" E2MIS 104237 ON 14-FEB-1997 AT 12:35 L. SANCHEZ FROM ASTORIA TRANSPORTATION REPORTS OIL SPILL AT 61 AVE & MARATHON PKWY. APP. 50 GAL. OF NEW DIELECTRIC TRANSFORMER OIL IN VS 8078,OILWAS PUMPED INTO STORM SEWER AT 251 PL. & 61 AVE.BY I&A . OIL RAN DOWN CURB LINE I&A INSTALLED PADS AROUND SEWER AND CLEANING UP AREA ,ALSO STAINS ON SIDEWALK STORM SEWER OPP. 249-39 61 AVE WAS PLUGGED UP NO OIL ENTERED THAT SEWER.DRISCOLL 22254=====C.I.G. ROACH NOTIFIED AT 12:38 ON 14-FEB-97 TANKER DRIVER IS SHANNON#53339 TANKER SUPV IS KALABER#46717 2-14-97 1510HRS .. V.MARCHON I&A MANAGER REPORTS THAT SPILL WAS THE RESULT OF A FAULTY AUTO SHUT VALVE ON THE TANKER TRUCK. THE TRUCKS DRIVER HAD SET THE AUTO SHUT OFF FOR 185 GALS, KNOWING THAT THE TRANSFORMER HELD 210GALS. WHEN HE NOTICED THAT THE GAUGE WAS AT 260GALS HE IMMEDIATELY SHUT OFF THE TRUCK PUMP. 50 GALS OF OIL OVERFLOWED FROM THE UNIT. AT THE TIME I AHAD A PUMP IN THE STRUCTURE TO KEEP THE WATER DOWN . THIS RESULTED IN ABOUT 15 GALS OF OIL BEING PUMPED OUT OF THE SRUCTURE AND ONTO THE STREET. ABOUT 35 GALS OF OIL REMAINED IN THE STRUCTURE. THE OIL PUMPED UP ONTO THE STREET ENTERED A STORM DRAINOPP 249-45 61AV. IT BYPASSED THE DRAIN OPP 39 BECAUSE IT WAS PACKED TO THE TOP WITH MUD. D.E.P. AND RON JAMES OF CONED QNS ENVIRONMENTAL ON LOCATION AS WELL A CLEANUP CREWS. CLEANUP IS IN PROGRESS. DOUG ADAMS OF THE U.S.C.G. CALLED THE CONTROL CENTER AND SPOKE TO L.NICASTRO, SHIFT MANAGER REGARDING DETAILS OF THE SPILL. NOTE... THIS WAS NON-PCB

59TH ST GENERATING STA (Continued) **S103570296**

DIELECTRIC TRANSFORMER OIL. A SAMPLE WAS TAKEN TO THE ASTORIA CHEM LAB. 1710HRS- 2/14/97 R.SALADINO OF THE FLUSH OPS REPORTS WASHED AREA WITH SLICKS, OIL & WATER PICKED UP BY TANKER. CATCH BASIN WAS ALSO CLEANED OUT.. U.S.C.G., NYC D.E.P., CONED CENTRAL ENVIRONMENTAL AND CONED QNS DIV ENVIRONMENTAL WERE ALL ON LOCATION. SITE CLEANUP IS COMPLETE. UPDATE---UPDATE---UPDATE------- R.RICE I&A SUPV OF JOB REPORTS THAT THE FOLLOWING PEOPLE WERE ON SITE. D.E.P.--AL GORDEN AND CARLOS TWANO ARRIVED 1500HRS USCG--ANTHONY BUCK AND DOUG ADAMS. ARRIVED 1635HRS 14ST ENV AFFAIRS--GLEN NEWEL ARRIVED 1445HRS. MR.RICE ALSO REPORTS THAT WHEN CLEANUP WAS COMPLETE MR.ADAMS AND MR.NEWEL WENT TO ALLEY POND CREEK TO SEE IF ANY OIL HAD ENTERED THE WATERWAY. V.Gambino, e.n.71836 resolves incident after discussing incident with Ron James who had been on site. All spill sites have been cleaned, all notifications were made. 17-Mar-1997.

Remarks: WHILE PICKING UP AN OLD FUEL HOSE OIL SPILLED ONTO GROUND APPROX 4 OUNCES WENT IN TO HUDSON-CONTRACTOR BEING SENT TO SITE

DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "ENGELHARDT" Sigona called DEP communications - they indiacated that Mustafa FAwza had a report on this incident. Called Con Edison (Mr. Brennen) - he said Fire Dept. was on-scene.Tank is 1400 gallons, contains 98 solution sulfuric acid. Station chemist is making arrangements with a chemical cleanup company to respond. Minor leak is going to concrete moat - some went through moat. Soda ash was applied to neutralize. Advanced Environmental to pump out remaining acid in tank and do clean up. USCG arrived on site and then left. 4/29/95 - Sigona follow up call - Mr. Soldman, Con Ed supervisor. All waste acid was neutralized at Astoria Wastewater tTReatment FAcility. Tank was cleaned along with all waste. The spill was inspected on 11/22/05 by John Burke #73625 and was found to be free of acid. The two acid tanks were cleaned and closed in accordance with CBS regulations in DEC. 1999 and the tanks are curently free of any product. The tanks were retired in place. Request DEC closure. Closed. 1/4/06. GB
Remarks: IN CONTAINMENT MOOT. WILL REMOVE TO ANOTHER TANK BY TRUCK (TANK HAS PINHOLE LEAK)

DEC Memo: DEC Inspector Notes: 6/24/03 - responded to the site, met with John Burke and others. Station was finishing a fuel oil pipeline hydrotest. The test eas completed and they were removing the water from the pipe by using a pump located on a barge. Acoupling in the barge broke causing water and oil mixture to be sprayed on the dock and into the river. At the time of arrival, oil sheen and some globs of oil were noticed in the water. The barge deck was covered with oil. Ken's Marine will performthe cleanup. USCG responded. Clean up procedure: clean sides of barge, remove barge, clean wood piles and water. (ARS) E2MIS 148849 dock fuel oil line hydro was completed this morning. 'jet trader' supplied pump and hose connection while docked on pier southside. it was boomed during entire sequence. while hose under vacuum, emptying fuel pipe residual contents into boat internal tank, boat connection loosened. about 30 gallons of #6 fuel oil spilled on jet trader, onto pier and into the water. some of this sprayed fuel oil went outside boom and into the water on the southside. ken's marine was notified at about 10:10 for immediate cleanup response. pier cleanup being conducted by pics. tidal conditions also being monitored. station forces responding. update @13:30- uscg and nysdec arrived for inspections. incident command system setup and coordinated by erg group. ert rep on site. tide is running out (ebbing) in southerly direction making initial booming/pad placement critical.

59TH ST GENERATOR STATION (Continued) **S106015358**

ic team members met @ 12:30 for status and cleanup plan. ken's marine has two water boats, material supply truck ans vac truck with skimmer on site. jet trader has its own cleanup crew working also. trader will be cleaning along sides and top edge before leaving pier. final cleanup will take place at their facility. ken's marine had been on site withon 1/2 hour of initial spill. they had placed additional boom around the spill area, and began placing pads in the water. after departure of jet trader, pier pilings and underside will be cleaned of residual f.o. 1410: IC meeting. Clean up progressing according to plan. Ken's Marine and Clean Water are concentrating on cleaning the sides of the Jet Trader to allow her to leave dock area to be cleaned and decontaminated at Clear Water's facility on Staten Island. KSea superintendent (Bernie Casey) on site. Clean up today will concentrate on Jet Trader and gross oil in river. Ken's Marine will return tomorrow to decontaminate the boom, piling and other areas of dock. Incident downgraded from Significant to Routine. ICS disbanded. 1519: Received call that USCG okayed Jet Trader to depart Pier 98 after vessel hull is clean enough not to leave sheen in river without USCG inspection. 1800: Jet Trader declared clean enough to leave without producing sheen. Ken's Marine doing additional clean up of gross contamination in boomed area on north side of Pier 98. 25-Jun-2003: 0715: Ken'sMarine on site with Tug Bergen Point, 26 foot boom boat and rack truck. Action Plan for today is to clean boom and pilings on Pier. Gross contamination of oil found inside containment boom; suspect some oil is "trapped" under pier structure. Deployed snares to collect this contamination. Sweep boom previously deployed was picked up and new boom was deployed. Using hotsy to decontaminate pilings and boom. 1330: Meeting with plant personnel to determine alternate means to remove hydrostatictest water in pipeline. All State PowerVac (APV) on site to prepare proposal. Agreed on plan to use APV vac truck to remove water from pipeline. 1625: Clean up operations terminated for today. Pilings and pier deck surfaces are decontaminated. Boom decontamination needs to be completed. New sweep deployed on both sides of boom on south side of pier and outside boom on north side of pier. Snares left between booms in heavily contaminated areas. 26-Jun-2003: 0700: Ken's Marine on site. Sweep boom and snares previously deployed were picked up and new sweep boom was deployed. Pockets of oil contamination were found inside containment boom; deployed snares to collect this oil. Using hotsy to decontaminate boom. Deployed snares to collect oil washed off by hotsy. APV on site to remove remaining oil/water mixture from pipeline. Layed poly down from beginning of pier to 20 feet past pipe bridge. Set up hoses from vac truck to P6 valve. Each connection wrapped in plastic and taped.Whole length of hose wrapped in plastic and taped. 1300: Completed removal of oil water from Dock FO pipeline. APV cleaning up hoses and plastic. 1700: Clean up of boom appears complete. No visible sheen in water. New sweep deployed on both sides of boom on south side of pier and outside boom on north side of pier. Clean up operations terminated for today. Ken's Marine directed to return at 0700 to inspect sweep boom and replace if needed. Ken's Marine to send workboat to allow for USCGinspection of site from water level. 27-Jun-2003 0700: Ken's Marine on site with workboat and small pick up truck. Inspected sweep boom and looked clean; left boom in place. 0821: USCG Inspectors GM3 Christian Wood and MST3 Mike Kenfield on site to clear pier for operations. Wood asked if Con Edison had determined to make any changes to the hydrostatic test procedure for the future. They were informed that we are looking into a procedure that is similar to the procedure used on 26-Jun3-2003 and that we were still planning to discuss continuing operations with Clean Waters but with a modified procedure. Visually inspected boom from dock; then visually inspected entire dock area by boat. Team was satisfied with clean up and clearedus for barge operations.

Remarks: Above material spilled during hydro drill at above location when hose broke. Arrangements being made for cleanup. Con Ed number not available at time of

DEC Memo: 156665 referred to Selvin Southwell Transient fuel oil barges at pier 98 require station steam for product heating. per agreement with nysdec, piping arrangement in place to transfer resultant steam condensate by barge pump to basement sump for processing by the oily water separator system. the limiting ph (6-9) of wastewater discharge from station outfalls is satisfied by the dilution effect in the tunnel. the remote possibility of a barge coil leak contaminatingthe condensate before discovery and migrating to the tunnel/waterway is addressed by the ows. This year, on 01/23/04, incident#151867 was entered to document problems with the barge condensate discharge hose connections during frigid weather. a necessary overboard condition was reported then. discussons with the barge owners resulted in the placement of compressed air fittings at the pump discharge to keep the line clear. in spite of the fix, dbl2202 was not able to maintain a cleared lineand an initial overboarding procedure started at 08:00 this morning. steam heat was applied and could not be maintained in an efficient manner. continuous overboard was agreed to at 15:00 until the air temperature rises or another solution is at hand source- dbl2202 steam condensate return system amt-about 5gpm

Remarks: STEAM CONDINSATE. PH OF 5.8. POTENTIAL SPEEDY'S.GOING INTO THE HUDSON RIVER ABOUT A 120 DEGREES. PUTS IT OUTSIDE FOR THE ALLOWABLE REALM FOR THE SPEEDY'S DISCHARGE. FREEZING TEMPS FROZE THE LINES. GOING INTO AN AREA NO OIL JUST WATER. PH IS ACIDIC.SELVIN SOUTHWELL WAS CONTACTEDFROM THE DEC.ABOUT 5 GALLONS

59TH ST GENERATING STAT. (Continued) **S104501194**

Resource Affected: Soil
Oxygenate: False
DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL" Assigned to Rodriguez for follow-up. e2MIS Notes: While inspecting trench system and sumps in HP basement, discovered oily substance atop surface water in retired CWS Saltwater pump vertical intake pipes. Retired SW circulating intake pumps, that take river water suction from these pits, had recently been removed by vendor. Inspection by EI and station EHS revealed about a 2" thick floating coating in each of two vertical pipe inlets. These circulators have not been used in many years but do lead to teh 58th St intake tunnel. Estimate two gallons each pipe for a total of 4 gal. Samples taken for PCB analysis. Existing design drawings show that this pit is rectangular and drops vertically to take suction from the 58th St intake canal. This vertical section is separate from the large circulator pit, where the retired condenser sits. Feed to this pit from the intake is more than 20ft below basement level. Tidal action will raise and lower level in this pit no more than 6ft, effectively isolating the top layer from the river. Results received 6/6/00 <1ppm and characterized as similar to lube oil. Clean Harbors conducted cleanupfrom surface on 6/6 and 6/7. Cleaning of walls and slabs completed. Opening of intake permanently closed and sealed.
Remarks: ABOVE MATERIAL DISCOVERED AT ABOVE LOCATION IN THE SALT WATER INTAKE SYSTEM TO RETIRED HP PLANT. OIL CANNOT ENTER HUDSON RIVER CLEANUP VENDOR HAS BEEN CONTACTED AND SAMPLE HAS BEEN TAKEN. CON ED # 131729. NO CALL BACK REQUESTED.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "RODRIGUEZ" 8/25/95: 60-day letter from Con Ed to USEPA. States that 25 gallons of oil was found in abandoned intake tunnel on the 58th St side of the plant during an inspection ofthe tunnel. No oil entered the river, because it was blocked in the tunnel by a mud and silt dam at the mouth of the tunnel. A contractor was brought to the site to clean the tunnel. It was determined that the oil is old lube oil and dielectric fluid. Since the initial cleaning, oil has reappeared in the tunnel and was removed by a contractor. The mud and silt dam at the mouth of the tunnel effectively prevents any discharge into the river. The source of the oil has not yet been determined. (JHO, 3/12/03) SPILL REASSIGNED FROM O'CONNELL TO RODRIGUEZ. (JHO, 3/12/03) the following letter was sent on july 21, 2003 July 21, 2003 Nelayne Rios Environmental, Health, and Safety Manager, West 59th Street Generating Station Consolidated Edison, Inc. 850 12th Avenue New York, NY 10019 RE: Spill # 9505836. Intake Tunnel Investigation Request Dear Ms. Rios: This letter pertains to a 25-gallon petroleum spill found in the 59th Street Generating Station intake structureon August 11, 1995. Con Edison cleaned the spill according to a 60-day letter sent by Con Edison to the Environmental Protection Agency. The letter was dated August 25, 1995. Con Edison never identified the source of the spill. The Department hasdata from the vicinity of the station showing the presence of petroleum in the ground. Due to proximity to the station, the Department has reason to believe that oil is seeping into the intake structure. The Department requests that Con Edison inspect the intake tunnel to find if there is oil present. In the event that the presence of oil is confirmed in the intake structure, a more extensive investigation will be further warranted. Please notify the Department the inspection date so that we can observe it. If you have any questions, please contact me at 718-482-4007. Sincerely, /s/ Abraham E. Rodriguez Environmental Engineer 1 SPILL RE-ASSIGNED BACK TO O'CONNELL 5/11/06: e-mail to Dan Barry, Env. Manager for 59th St station, requesting update on status and schedule to inspect the tunnel if it has not been done yet. (JHO) 6/13/06: following inspections by Dan Barry's staff, cleanup was completed. See e-docs for closure documentation. (JHO)

DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL" CON ED E2MIS NOTES 4-21-99 4-12-99 00:30 Preparing Annex #114 Boiler for service, cut into valving to #4 Deaerator. Feed water regulator to #4 Deaerator leaked causing a high level condition. The overboard valve failed to open on automatic and Deaerator level continued to rise, the operation manually closed stop valves adn operated the overboard valve. During this time some water had gotten into the exhaust header of #115 Boiler Feed pumps turbine and flowed from the turbine seals and got into the lube oil reservoir flushing oil seperators. Approximately 20 gals. was spilled, none into the waterway. Oil spill cleaned up by Operations.
Remarks: EQUIPMENT FAILURE CAUSED SPILL ONTO CONCRETE FLOOR AND OIL SEPARATOR. CON SPILL NUMBER 124157. NO CALL BACK NEEDED.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead DEC Field was "ENGELHARDT" E2MIS 121983 On December 16, 1998, at 08:30 approximately 6 oz (177 ml) of oil was discovered on the Basement floor (el +4') just South of the former Generator 14, 11400 volt Reactors. The area was roped off and there was no

WEST 59TH STREET GENERATI (Continued) **S104506334**

possibility of oil entering waterway or sewers. The spill was treated as a PCB spill. At 21:00 oil spill cleanup completed by Clean Ventures. The Chem Lab analysis showed the oil PCB content to be less then 50 ppm. Generator 14 was retired in place late in 1993 and it's 11400 volt (15kV Class) 1/c 2000 mcm cable was cut and a portion was removed between the Generator and a point just before these leads entered a large terminationbox near Station coordinates "Y-52". Gravity induced oil leaching from the 1/c 2000 mcm lead covered, oil impregnated paper cable apparently caused the oil to drip onto the Basement Floor. The ends of the cables were wrapped with oil absorbing padscovered by a plastic bag to avoid an additional spill. CORRECTIVE ACTIONS Manhattan Customer Services was contacted and visited the Plant during the last week in December to determine the work scope to remove the remaining Generator 14 cable.Manhattan Customer Services has already removed the Generator 15 cables and will be removing the Generator 14 cables.

Remarks: IN BASEMENT NEAR OIL/WATER SEPERATOR. LEAK FROM A CABLE ENDS THAT HAD BEEN PREVIOUSLY CUT AND WRAPPED. 6 OUCNES ONTO CONCRETE FLOOR. SAMPLES TAKEN. BEING TREATED AS IF 50-499 PPM OF PBC'S. CONTRACTOR TO CLEAN UP. CON EDISON REFERENCE NUMBER 121983.

DEC Memo:	162205 substance-residual #6 fuel oil and grime source- pkg blr floor grime and micromotion meter cover residual # 6 fuel oil amt- 2 oz estimated. reason- water leaks on floor and meter. sewer/water-no private property - no basement surge tank #3 is partially surrounded by a small concrete moat with concrete floor/gravel underneath. tank overflow creates standing water within the moat. operations has performed housekeeping cleanup using spill pads around this area in the past. a very noticeable sheen was discovered this morning on the standing water surface. a cooling water leak associated with boiler 118 trunnion bearing and steam vent line leak @ deaerator #5 spilled onto a micromotion oil flow meter in the basement. sheen was caused by external meter residual oil and floor grime from above. the dripping water will be diverted away from the micromotion and spill pads will be used for this diaperable cleanup. basement floor configuration prevents water in this area from reaching the 58th street discharge tunnel and/or oily water separator trench system. jll/jb ert called at 17:00 and discussed that sheen had to be cleaned within two hours of incident start time to be categorized as nonreportable. cig pete mcguire was notified @ 17:19 jll Closed 2-23-06. see eDocs. GB
Remarks:	Amount 2 ounces. 162205

DEC Memo: 10/23/06 - See e-docs for Con Ed report detailing cleanup and closure. On 12/7/04 OMA M. Bland and T. Dancy found film of oil in #1 and #2 sumps. SS T. Benjamin was notified. #1 and #2 sump pumps were shut down. Pads were placed on top of the oil film. Upon further investigation it appears that there is an oil

59 TH GENERATING STATION (Continued) **S106735971**

film in the trenches around 115 ID Fan pedestal and in the #3 sump. SS. A. Rodney inspected the OWS and it appears that there might be a sheen of oil in one of the compartments. #3 sumppump and the OWS were shut down. Envr. Engr. J. Lamalfa was requested to investigate the OWS. Dock PIC C. Webster ispected the SPDES outfalls and there was no evidence of any sheen at any outfall. All-State PowerVac was called for a clean up response. It appears that the source of the oil is the 115 ID Fan lube oil system. Exact cause is unknown but it appears that residual oil leaked into the tranch system. J. Lamalfa reports that there is a sheen in the collection compartments but there isNO sheen or evidence of oil in the discharge compartment.

Remarks: NO TO 5 QUESTIONS: CONED # 156480

DEC Memo: e2mis no 158424 water pressure had just reached 225 psi at start of hydro test for station fuel oil pipe line. an oma heard unusal noise in tunnel prior to planned procedural walkdown. environmental engineer used flashlight to view about 50 feetdown the length prior to full entry. observed water flow from bottom of pipe insulation and requested immediate full entry procedural inspection. bike path trap door must be barricaded, manned and opened. after vapor clearout and adequate ventilation established, walkdown performed with operations. confirmed leak at bottom section of fuel oil line near closed drain valve. oily sheen in standing water noticed and one pint spill estimated then, with hydro water still leaking. this will turn toan oilier substance in time. cleanup vendor already on site and work scope being planned. connected basement sumps shutdown and steam supply to barge ceased to reduce station condensate buildup. spill contained in tunnel with no possibility of discharge tunnel contamination. plastic catch basin was placed under leaking valve while

59 TH GENERATING STATION (Continued) **S106970949**

vendor continuously vacuumed into tanker truck. oily water in tunnel was first vacuumed on 5/4 @ 18:00 so that floor remained clean. root cause was determined tobe failed weldolet endpoint discharge nipple. oil contaminated insulation was removed on 5/6 @ 17:00, official time of spill cleanup. mt/ut testing was performed along pipe and decision made to put larger weldolet with new atttached drain valve overleaking section. line passed hydro test on 5/7 @ 13:30. back in service ROOT CAUSE: Failed weldolet on drain nipple. CORRECTIVE ACTION: Pipe section was inspected by magnetic particle testing and ultrasonic testing. Welded larger weldolet and installed new drain valve. FO piping hydrostatically tested at 225 psi for 1 hour. No loss in pressure. Updated by J. Burke 03-JUN-2005 Closed. 7-11-05. George Breen

Remarks: Amount half gallon in unknown amount of water. in contained in a pipe tunnel. 158424.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead DEC Field was "FOLEY" Con Ed e2mis #149200: At 00:53 it was observed by operator L. Tucker that oil was pouring out of #1 and #2 fuel oil tanks which is located insideof a moat in the fuel oil tank room. At this time fuel was being transferred from a barge on pier 98. The fuel transfer was stopped immedietly. The approx. amount of the spill is estimated to be about 200 gallons. The spill is contained in the moatin the fuel oil room. Operations personnel placed spill pillows around the spill on the floor, and also covered it with spill pads. Notification was made to CIG,EHS Manager, and Operations Manager. It was noticed by Shift Supervisor A. Rodney that 3of the 4 tank level indicators in the control room were defective with a zero tank level indication, while the fourth tank (tank #4) was indicating 99.4 . Ops. Manager locating cleanup vendor to report to site to assist ops. personnel. Clean Harbors on site at 0530 to start setup for cleanup. All gross oil removed from top of tank; sides and floor of fuel oil room. Cleanup operations suspended for weekend. Cleanup of cosmetic residual oil to continue Monday, July 14th. Clean up completed 15-JUL-2003. Repairs to Magnetrol for High-High Alarm and Trip completed on 23-JUL-2003. Operation personnel conduct Trip testing of #6 fuel oil tanks and 500 valve. #1 tank was filled to 90 , the pump suction supply valve was closed ... the recirc valve to #1 tank open ... the recirc. valves to the other tank were closed. At 90 the Hi-level alarm went off. This practice was conducted on the remaining tanks, #2, #3 and #4. Below is the

850 12TH AVE/WEST 59TH ST (Continued) **S102145486**

sequence:- #1 tank -- Trips 500 vlv. at 96.1 #2 tank -- Trips 500 vlv. at 97.8 #3 tank -- Trips 500 vlv. at 96.5 #4 tank -- Trips 500 vlv. at 96.4 . Note:- The actual Trip Value is 95 , but the tanks level indication is about 1.5 higher on average.
Remarks: SPILL IS CONTAINED BY CON ED AT THIS TIME-CLEANUP TO CONTINUE.

DEC Memo:	e2mis no. 149-736: 10-Aug-2003 13:06 An unknown type of oil and quantity though undeterminable seems to be no more than 10 gallons, was discovered by Operator J. McGrath ID# 04509. The oil was found in a pit of area approx. 200 sq. ft. in the I.P. plant basement in an old storage room. The oil appears to be on the surface of water, again the exact quantities are undeterminable. Shift Supervisor A. Rodney ID# 00615 examined the pit and adjacent area and observed no trenches or any other means of release from the pit. A sample will be taken to determine hazardous properties, and cleanup will be conducted accordingly. Sample results from oil in water came back negative for PCB's. All State PowerVac in station to clean up. Oily water cleaned up on 8/12/03. About 2 feet of sludge in bottom of pit. APV removed and placed in drums. Clean up complete 8/13/03 at 14:00. Samples of sludge taken and sent to ChemLab for PCB analysis. Sludge results are negative for PCBs.
Remarks:	Above material discovered in pit in basement at above location. Sample has been taken and cleanup is pending results.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead DEC Field was "RODRIGUEZ" e2mis no. 143628: 115 Boiler feed pump turbine outboard bearing leaking lubricating oil. The oil apparently is leaking out of the bearing housing due to excessive pressure and dripping on the onto the turbine housing and vaporizing. No oil is going to the floor or the pedetal. Constant monitoring of the situation is being administered. On average thus far is approximatly 2 ounces of lube oil. ROOT CAUSE: Lubeoil pressure was set at 11 psi; outside proper operating range. CORRECTIVE ACTION: Lube oil pressure was reset to 8 psi (manufacturer's recommendation). Information was added to equipment history

59TH ST STATION (Continued) **S104653292**

file to prevent occurance in future.
Remarks: BOILER FEED PUMP MALFUNCTION BY BEARING LEAK. CON ED # 143628. VAPORIZING ALSO.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance

NYCDOS - 59TH STREET MARINE TRANSFER STA (Continued) **1005882780**

information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "KRIMGOLD" / / : PIN-4314. 09/25/95: PIN-4314 - ASSIGNED TO CHRIS FOR TRACKING PURPOSES. Spill No. 890637 05/06/2003 - Sigona assigned to DEC Rommel based on call fromJosh (917)601-2723 who is project manager from RP who has been sending quarterly reports to Jennifer Rommel. 5/20/2003-Vought-Received call from Josh (973-621-0777x134) requesting NFA. Vought returned call and spoke with Joshua. Josh claims thatfingerprinting data (lubricating/hydraulic Oil) shows that product may be from off-site source. Joshua will be sending in NFA request by 7/1/2003. 9/10/03-Vought-Received call from Josh who is submitting closure report and will be sending one copy to Rommel. 10/6/03 -

FORD LINCOLN MERCURY (Continued) **S102142215**

Reassigned from Rommel to Sun. 01/21/2004-Sun-file review and update: Sun sent a letter to Joshua Ford of Golder Associates, Inc (Consultant to Ford Motor Corporation), dated 01/20/2004. The letter indicates that the Department has received and reviewed the request for No Further Action dated 9/12/2003 for the subject site, and based on the data of March 4, 2003 report, the request for closure has been denied. As shown on the 3/4/2003 report, 1.10 feet of lubricant or hydraulic oil was detected in Monitoring Well FN-2. In order to determine the extent of subsurface contamination, the Department requires by 3/19/2004 to perform the following: (1) Delineation of soil and groundwater contamination. The plumemust be delineated northeast of FN-2, east of FN-2 between FN-2 and 3" tunnel weep hole, southeast of FN-2, and northwest of FN-2 between FN-2 and former 2000-gallon fresh motor oil UST, (2) Replace the existing passive skimmer with a more aggressive free product recovery system, (3) A surrounding property sketch including property layout and usage must be submitted. 1/21/2004 Sun called Joshua Ford of Golder Associates to discuss the work required by the Department in the DEC's letter dated 1/20/2004. It was agreed that a conference call will be arranged between DEC (Joe Sun), Josh Ford (Golder Associates) and Ford Motor Representative early next week (week of 1/26/2004) to discuss the issues of this spill. A site visit by all three parties will be made after the conference call. 01/27/2004 Transferred from Sun to Krimgold. 03/16/04. J.Krimgold sent a letter to Golder Asoc. in response to their letter dated 2/24/04. He agrees to extend the deadline for completion of additional investigation. An additional investigation summary report with conclusions and recommendations, and if necessary a proposed amendment to the on-site remedial system should be submitted for the Departmental review no later than June 30, 2004. Furthermore, a proposed scope of work for an additional investigation should be submitted for Departmental review within one month from the date of this letter. However, operation, maintenance and monitoring of the existing remedial system should continue until the Department instructs otherwise. 4/20/04. Golder Assoc. submitted a letter dated April16, 2004 with proposed scope of additional investigation. Anticipated date of Phase 1 submitting of this investigation is June 30, 2004. YK. 11/29/2005: Spill file received from Dave Harrington. (Sadique) 02/01/2006: Reviewed the 5 quarterly reports (July 04 to Sep 05) sent by Golder Associates. They were monitoring groundwater leves in 5 MW's and product thickness in FN-2 well. Per report there were no product found in other wells. Product recovery skimmer is in place. Talked to Jacob Krimgold. He is going to send records to central office. (Sadique) 02/03/2006: Received a box of record from R2. (Sadique). 04/25/2006: Quarterly status report yet not received which was due on April' 06. Talked to Mr. Christopher D. Hemmingway of Golder Associates. He informed, report already prepared and now reviwing by the client and will be submitted to DEC very soon.There are 5 MW's in place out of which FN-2 always showing free product. Product recovery system is in place which are operated by Ford Motor Co. Since April 1997. (Sadique) 05/09/2006: 1st Quarter Site Status report (Jan, Feb and Mar) datedMay 04, 2006 received and reviewed. Monthly inspection and maintenance were done on free product recovery system. Measured water table depth and thickness of free product for 5 MW's. Free product found in FN-2 only as 0.12, 0.50 and 0.44 ft respectively. The skimmer recovery system operated throughout the 1st quarter. The recovered fluid was directed into an AST. Approximately 130 gal of product has been collected since Nov 21st, 2005. Same activities will continue for the 2nd quarter. (Sadique) 08/04/2006: 2nd Quarter Site Status report (Apr, May and Jun) dated July 28, 2006 received and reviewed. The free product thickness found in FN-2 as 0.18, 0.22 and 0.52 ft. The reason of increased thickness due to the timing of the measurment relative to the stage that the pumping cycle is in whin the measurement is collected. A sheen and a gasolene odor was noted in MW-2 during the

FORD LINCOLN MERCURY (Continued) **S102142215**

monitoring period. Per Golder Associates, Exxon's consultant indicates that a recovery system incorporating MW-2 is scheduled to be installed during 4th quarterof 2006. (Sadique) 10/30/2006: 3rd quarter status report dated Oct 27, 2006 received and reviewed. The skimmmer recovery system was operated without any problem. Approximately 190 gallons of product (26.5 inches) recovered during 3rd quarter. A sheen of free product observed in MW-1. Product thickness in FN-2 were 0.23, 0.26 and 0.21 respectively. (Sadique) 03/23/2007: 4th Quarter 2006 report received and reviewed. The skimmmer recovery system was operated without any problem. Approximately 172 gallons of product and water mixture (17 inches) recovered during 4th quarter. Thickness of free product in FN-2 and MW-1 was 0.09 ft and 0.04 ft respectively during December 2006. 1st quarter of 2007 report expecting by May 2007. (Sadique) 05/01/2007: First quarter 2007 status report dated April 27, 2007 reviewed. Monthly inspection of recovery system and MW's gauging are ongoing. The skimmer recovery system operatedthroughout this quarter. Only 3 inches of oil/water mixture has been collected in the AST. Still free products observed in FN-2 (0.19 ft) and MW-1 (0.09 ft). MW-2 is being used by the adjacent ExxonMobil spill remediation system. (Sadique) 7/30/2007: Second quarter 2007 status report dated July 20, 2007 reviewed. Monthly inspection and maintenance of the free product recovery system performed. A sheen of free product observed in MW-1. The skimmer recovery system was in operation throughout the 2nd quarter. Product thickness in the AST tank remained approxi. 3 and quarter inches, indicating little or no recovery. A viscous liquid was observed above the water table in FN-2. It is hypothesized that this liquid is emulsified LNAPL and has been reported in this well in historic events. Approx. 1.5 gallons of the emulsified liquid was removed from FN-2 during June. A gasoline odor was noted in MW-2. It was established before that the source was from former Exxon Mobil S/S and located at upgradient. The report is acceptable. (Sadique) 10/12/2007: 3rd Quarter status Report received and under review. (Sadique) 10/16/2007: Reviewed the October 11, 2007, 3rd Quarter 2007 Status Report. A sheen was observed in MW-1 (0.08to 0.12 feet thickness). The skimmer recovery system was operating throughout the 3rd quarter. The product thickness in the AST indicates a little or no recovery during 3rd quarter. A layer of viscous liquid was observed above the water table inFN-2 (0.60 to 2.00 feet thick). It was hypothesized that this liquid was emulsified LNAPL. Approximately 2 gallons of emulsified liquid were removed during this quarter. The planned activities for the 4th quarter period of 2007 include continuing the monthly inspections of the monitoring wells, product recovery system, and associated components. Based on the review, I find the report to be acceptable as written. Requested to incorporate the followings from next quarterly status report: 1)In the groundwater contour map, please show the location of the AST, pump, and system pipings associated with recovery system. 2)Please, send me an email at least a week prior to scheduled monthly field inspection. Approval of the 3rdQuarter status Report sent via email today. (Sadique) 11/26/2007: Jack Aversa and I visited the site on 11/13/2007. Met the consultants Mr. Christopher Hemingway and Tanya Sharko of Golder Associates. Free product was obsereved in FN-2 and MW-1and thickness was 0.19 ft and sheen (less than 0.1 ft) respectively. Checked the product. It was dense blakish product, smell like used oil. Skimmer pump was installed inside the FN-2 and was in running condition. Per last quarter report the recovered product depth in AST was unchanged, indicating no recovery. During monthly maintenance, product was bailing out from those wells. An upgradient Exxon Mobil spill # 90 09804 is located adjucent to the site. Chris Milack from BURB is the PM. A SVE remeial system is being installed at the site and will be in operation soon. Proposed to consider conducting an ERI (Electrical Resistence Imaging) survey or similar type of survey to identify the present subsurface condition and location ofthe plume. Based on the survey results, if needed,

FORD LINCOLN MERCURY (Continued) **S102142215**

location of the skimmer pump can be changed to enhance the remedy. (Sadique) 03/07/2008: Reviewed January 31, 2008, 4th Quarter 2007 Status Report. The skimmer recovery system was operatedthroughout the 4th quarter. Approximately 6 gallons of liquid has been collected during that quarter. The LNAPL thickness measured in FN-2 decreased from 0.44 to 0.06 feet. In MW-1, LNAPL thickness decreased from 0.19 to 0.06 feet. Gasoline like odor was noted in MW-2 which previously established that the source was former Exxon Mobil spill located adjacent to the southwest. Currently a high vacuum extraction system remediation system is operating at the adjacent Exxon Mobil site. The planned activities for the 1st quarter period of 2008 include continuing the monthly inspections of the monitoring wells, LNAPL recovery system, and associated components. Based on the review, I find the report to be acceptable as written. Approval email sent out today. (Sadique) 05/07/2008: Reviewed the April 30, 2008, 1st Quarter 2008 Status Report. The skimmer recovery system was operated throughout the 1st quarter of 2008. During monthly monitoring, LNAPL was detected in FN-2 and MW-1.The thickness of LNPL ranged from 0.04 to 0.09 feet. Also, the probe was felt warm, when measuring the depth of water in MW-3. The planned activities for the 2nd quarter include continuing the monthly inspections of monitoring wells, LNAPL recovery system, and its associated components. Based on the review, I find the report to be acceptable contingent upon the following: 1. In the Monthly Inspection Activities section it is mentioned that during 1st quarter, two gallons of liquid has been collected (an increase of approximately 1 inch of liquid in the AST). But in the Attachment A, total recovery was only 0.125 inches into the AST. 2. Attachment B, groundwater contour map, did not include the location of the AST, pump, and system piping associated with the recovery system. Requested to provide the correct information regarding liquid recovery during the 1st quarter of 2008 and also provide comments on the warm probe in MW-3 in the next quarterly report. Also requestedto include the location of the recovery system (AST and piping) on the groundwater contour maps. Approval email sent today. (Sadique) 07/29/2008: Reviewed the July 16, 2008, 2nd Quarter 2008 Status Report. The skimmer recovery system was operated in FN-2 throughout the 2nd quarter. Approximately one-half gallon of liquid was collected during that quarter. The LNAPL thickness measured in FN-2 and MW-1 varied from 0.39 to 0.47 feet and 0.11 to 0.09 feet respectively. During monthly inspection, the LNAPL recovery system was found to be working in good condition. MW-2 is no longer accessible because it is being utilized as part of the high vacuum extraction system installed by adjacent Exxon Mobil spill site. The planned activities for the 3rd quarter of 2008 include continuing the monthly inspections of the monitoring wells, LNAPL recovery system, and associated components. Based on the review, I find the report to be acceptable as written. Approval email sent today. (Sadique)

DEC Memo: H.Muniz#16825, Sr. Field Operator notified the control center on 11/20/04 at 01:05hrs. to report he found approx. 8 gallons of an unknown oil and no water in M60978, which is located on the North side of W.58 ST 100' w/o 11Ave. H.Muniz#16825 was inM60978 to ID and mark phases on feeder 22M62 when he discovered the spill. There was no fire or smoke involved and no sewers or waterways were affected. H.Muniz#16825 says there is some oil in the sump. There were no injuries related to this spilland the weather conditions did not contribute to the hazard of this spill. There was no private property affected. The source and cause of the spill is unknown. There is oil filled equipment in M60978, the primary feeder cables. There is no waterin M60978. There is a sump in M60978. There was a yellow environmental tag numbered #44969 hung in M60978. There were three samples taken from M60978, one for PCB's, one for oil ID and one for Flashpoint. The samples are marked priority E. The chain of custody form number is #DD20560. There was no initial cleanup action taken. The cleanup is pending crews and test results. 11/20/04 04:25 UPDATE : The feeder number was incorrectly given as 22M62, it is really 23M62. H.muniz#16825 notifiedthe control center to say that after taking samples he says that there is approx. 6 gallons of unknown oil and some water, not 8 gallons as he had earlier stated. A cleanup has been setup for 11/20/04 at 07:00hrs. Lab Sequence Number: 04-09657-001 - PCBs < 1 ppm Lab Sequence Number: 04-09657-002 - Flash Point, PMCC > 140 deg F Lab Sequence Number: 04-09660-001 - Analysis indicates the presence of a cable oil. 11/20/04 12:02 W. Dixon # 86121 Underground splicer/cleanup person called toreport that at 11:30 the cleanup was completed. The structure was double washed with slix. 1 bag of ppe was generated as a result of this spill. The flush truck removed all liquid. The spill tag # 44969 was removed.
Remarks: CLEAN UP PENDING TEST RESULTS. CON ED REF # 156323.

VAULT #3886 (Continued) **S106383436**

Material FA: Petroleum
Quantity: 3
Units: Gallons
Recovered: No
Resource Affected: Soil
Oxygenate: False
DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL" e2mis no. 152358: approx. 3 gallons of transformer oil had leaked onto concrete floor Of vault. (Bottom Leak) He also reports that upon arrival to this location that sump pump was found not running and he has unplugged same. Also trap was opened and no oil was found. Historic sample states less than 25 PPM. Sample for PCB has been taken. Lab Sequence Number: 04-01646-001: TOTAL PCB 67 ppm A. Prazan #88744,I&A Oper. Supervisor, reported at 14:00 hrs. on 3/6/04 that a partial cleanup was performed in this vault. Two drums of solid debris consisting of PPE & debris was generated and removed. 392 gallons of oil & water was removed from the vault & transformer by the tanker. Engineering controls were installed to contain the spill. The I&A crew performed a "drain & disconnect". They determined the source of the spill as the transformer and the cause is a bottom leak in the transformer. May 05-2004 @ 05:32hrs Employee Mr. J Morgan # 14490 reported at 05:32 the clean-up was completed 3 drum soild waste. 150 gals oil/water mixed removed by tanker double washed with slix. UPDATE: 5/6/2004 Supervisor Lou Guglimenti reported the defective transformer was removed and a new transformer installed.
Remarks: FAULTY TRANSFORMER: NO FIRE,SMOKE WATERWAYS OR PRIVATE PROPERTY: CLEAN UP IS PENDING: CON ED #152358

DEC Memo:	Need to confirm cleanup with Brian Gerdeau of Brookside Environmental 516-852-5022 Approx 1 gal of hydraulic oil sprayed out of a machine onto the soil. No puddles, but a mist went over an area of soil which will be dug out. 3/27 Sangesland spoke to Brian at Brookside. He said they dug up approx 4 drums of soil & will send in a manifest within 1 to 2 weeks. 4/25/2008 AKRF called to say they are mailing in a report with end point samples. 6/10/2008 Sangesland reviewed a report submitted by AKRF (see edocs). 12 tons of soil was removed. End point samples were clean for VOC's and minor hits for SVOC's consistant with fill. Spill Closed

DEC Memo: 02/03/06. Feroze, PBS of this site is # 2-603010. Talked to Mr. Prrek 212-479-5450. He informed that they will remove all contaminated soil. Previously it was a gas station. They already applied for registration renewal. Contamination soil letter issent to: Parek khouri Lincoln Engineering 360 West 31st Street 8th Floor New york, NY 10001 03/15/06. Spill is transferred from Feroze to Kumar Patel. 03/21/06-Vought-See closed spill #0514548 which is odor complaint from nearby school(The Beacon School) due to odors from excavation at the above site. Vought performed site visit and site currently being excavated for a 34 story residential building. Depth of excavation is approximately 30' with no groundwater visible. Vought noted gasoline contaminated soil under southwestern portion of site. Vought met with site construction manager(Kenneth Faulds-Plaza Construction 917-578-6620), environmental consultant(Ilkay Cam-Langan Engineering 212-479-5410, Eric Muller-Langan Engineering-646-285-4853), owner representative(Ramona Allegrini-Element West LLC 646-529-7982). As per Muller, site is an E-designated site and DEP approved workplan which include Community Air Monitoring Program (CAMP). At time of odor complaint, contaminated soil was being excavated and stockpiled onsite. Tarps were ordered to cover soil stockpile. Vought, Faulds, Muller and Allegrini visited the Heschel School located at 20 West End Avenue(Principal-Ahuva Halberstam 212-246-7717, super GinoBebinsta 917-843-3504) which was across street from site. Periodic odors were noted but no reports made due to low concern. Halberstam also noted that students were not allowed to leave the school during the day and windows were going to be kept closed as per DEC. Vought inspected basement of school and no visible leaks or source of odors noted. The Heschel school keeps all windows closed and is running on HVAC system (hence no odors in school). Vought provided contact information to school including contact information for site management so that if odors were noticed then managment could be contacted directly. Vought, Faulds, Muller and Allegrini visited the Beacon School located at 227 West 61st Street (Principal-Ruth Lacey 212-245-2807, super-Dimitri-347-865-0760) which was source of odor complaint. Odors were noted for past two weeks but were very strong yesterday afternoon (coinciding with excavation of contaminated soil). Lacey contacted Schools Chancellor who contacted Bd. of Ed, NYCDEP. NYCDEP (John Wilson 646-879-7329) performed site

VACANT LOT (Continued) **S107522646**

visit on 3/20/06. Partial evacuation of school occurred on 3/20/06 as per Board of Education ATC was hired by Board of Education and performed air monitoring at school on 3/21/06. Patel to require via phone: 1)submission of reports that were sent to DEP and all previous reports onsite(Patel to contact DEP, Langan(Ilkay Cam)and owner for reports 2)Contact address for site owner(Patel to contact Allegrini for information) 3)contact information for ATC(Patel to contact Dimitri for ATC contact) DEC to send Stipulation Agreement (as per DEC Austin) requiring: 1)collection of endpoint samples 2)delineation of soil and possible groundwater contamination 3)installation of vapor barrier and possibly passive ventilation system 4)submission of CAMP and addition of hourly monitoring of both schools to CAMP 5)submission of all previous reports onsite 6)covering of all contaminated soil stockpiles 7)excavation of contaminated soil to be performed during non-school hours. 03/21/06-Hiralkumar Patel. Spoke with Ramona Allergrini. she told me that there are four partners and somebody will call back with name and number whom going to get letter from the Department. she also told me that she received call from school principal complaining odor again in building. Spoke with Muller at Langan. he is at school right now. he hasn't found any odor in school building. little odor out side of building. all soil work is stopped at location. Spoke with Dimitri and he told me that he will call back, with ATC person's name and number, after some time. received call from Kenneth Faulds. he gave me following information about owner: Lee Samiul Brach RealtyElement West 11th Floor 400 Broome Street New York, NY 10013 and as this is an organization there are so many people involved. Kenneth will call back with owner's number. 03/22/06-Hiralkumar Patel. REceived message from Kenneth. he gave menumber for owner is (212) 775-1111, FAX: (212) 925-4412. Left message on this number. 03/22/06-Vought-Received call and spoke to Michael Kumrev (212-775-1111) who is partial owner of site. Vought explained requirements to Kumrev including requirements of Stipulation Agreement. ATC person who was on site for air monitoring: Michael Donovan Ph. (212) 353-8280 Tarek Khoury from Langan (212) 479-5450 03/22/06-Hiralkumar Patel. Spoke with Collista Nazire (ph. 718-595-4401) at DEP. she gave me name and number of project manager at DEP who is handling this site. project manager is Amy Ma (amyma@dep.nyc.gov ph. 718-595-6658, FAX: 718-595-4479). Spoke with Eric Muller (Fax: 212-479-5444) and asked him to send all the previous reports to DEC that he send to DEP and owner. Spoke with Mike (Ph. 212-353-8280, FAx: 212-353-8306) at ATC. they took air readings with instrument and found maximum of 1 ppm inside the school building. they measure for CO also but haven't found anything. Mike has submitted report to board of Education and denied my request to send copy of result report he has. but he gave me person's name and number in Board of Education who has this report and we can ask him. person's name is Mohamad Hemida (Office: 718-361-3807, Cell: 347-386-4417). Spoke with Mr. Hemida and as he was out of office, he asked me to call back tomorrow. ATC went on site again and Mr. Hemida will get result from second visit tomorrow. once he review that he will fax me thereports. 03/23/06-Hiralkumar Patel. Soil contamination letter with STIP sent out to Michael Kumrev at Brach Realty requesting delineation of soil and groundwater contamination, endpoint samples, installation of vapor barrier, Adherence to the New York State Department of Health Generic Community Air Monitoring Program and submission of all previous reports. also sent copy of CAMP. letter faxed to Amy Ma in DEP, Eric Muller at Langan, Ruth Lacey at Beacon School and Mr. Kumrev at Brach REalty. Received call from Mr. Muller. He told me that some other company did initial investigation and they had submitted report to DEP. Langan hasn't submit any report. they only submitted some letters. i have asked Mr. Muller to send copy of all thereports/letters they have sent to owner/DEP. he told me that he need permission from owner and will call me if he can send those documents to me or not. the previous consultant was RA Consultant. Muller doesn't have their phone

VACANT LOT (Continued) **S107522646**

number. Received copy of air monitoring results from Mr. Dimitris. reports shows 0-1 ppm PID readings inside and outside of building. 03/27/06-Vought-Received two messages from Principal Lacy that odors were persisting at school. DEC Rahman visited site and spoketo Lacy. No odors in school at time of Lacey visit. As per Rahman work was being performed onsite and as soon as PID indicating hits work stopped. Vought called Kumrev and left message to return call to DEC immediately. Vought called NYCDEP Ma and left message to return call regarding assistance with site and enforcement of Health and Safety Plan. Vought called Cabbagestalk and left message to return call to DEC. Vought called Parek Khoury and left message inform them of additional odor complaint and request copy of Health and Safety Plan. Vought called Ramona Allegrini and left message to return call. Vought called Kenneth Faulds and excavating and contaminated soil was excavated from and area that was not known to him as Langandid not tell him what areas will contaminated. Vought received call from Khoury and left message to return call. 03/27/06 Sharif Rahman- Performed a site visit after receiving odor complain from the school principla Ruth Lacey. I met Ruth Laceyat the school but could not detect smellable petroleum odor inside the school building.In front of the school entrance PID reading was 2.5- 2.7 ppm.The principal told me the odor comes on and off, and the time we were in the building the odor disappeared.I inspected the construction site at 599 W59th street and met site safety manager Timothy Searvant(347-723-6387) along with Supervisor Mr. Kenneth. I smelt strong petroleum odor inside the lot, and PID reading was fluctuating between 5.00 - 7.70 ppm. Timothy Searvant indicated that they were removing contaminated soil from north western side and as they noticed elevated PID readings, the excavation work was stopped. I suggested them to contact DEC case manager Jeff Vought before proceeding with further excavation work. 03/27/06-Vought-Teleconference with DEC Urda, DEC Patel, DEC Vought, Steve Russo (212-421-2150 fax: 212-421-2035). Agreed on minor change to CAP and discussed possible stop work order. Russo requested that he andLangan (Khoury) be sole contacts for further requirements. 03/28/06-Vought-Received message from NYCDEP Ma that she can call Langan for NYSDEC to get report. Vought called Ma and she will be sending DEC copies of all DEP letters and she will contact DEC Cabbagestalk regarding teleconference today regarding site. Vought called Principal Lacy and left message with Lacy to return call to DEC. Vought called Parek Khoury and per Khoury: previous Phase I was performed by Fleming Lee Shue. Site had 15-20 USTs on western portion and north of site. Soil and groundwater sampling with VOC exceedences around tank area. Groundwater data showed no impact but groundwater hard to reach. Soil will be removed to bedrock with installation of vaporbarrier. Approximately 1.5 months ago Langan was hired as new consultant. Bedrock has serpentine with possible asbestos (being handled as haz waste) and hence dust suppression. Soil will be excavated to bedrock. No bedrock remediation is requireddue to potential ACM. During excavation additional tanks were found and PBS forms were updated. Khoury will be willing to staff someone full time at school. Vought received via FedEx: Remedial Investigation Report(Langan), Remdial Action Plan (Langan). Vought had teleconference with DEC Austin, DEC Urda, DEC Nagi, DEP Cabbagestalk and DEP Ma. DEP will seek stop work order and will contact DEP Licata to stop work and return call to DEC. DEC Rahman performed site visit to Beacon School andno odors were detected and no work was going on eastern portion of site. As per DEC Rahman, he was told by Ilkay Langan they also detected 5-7ppm at side of excavation. Vought called Lacy and left message of progress and to inform DEC if any odors are detected. DEC requires: 1)submission of figures 1-3 of Remedial Investigation 2)full time staffing of someone at school 3)collection of endpoint samples 4)delineation of soil and possible groundwater contamination especially at former soil contamination locations 5)possibly passive ventilation system and submission of a letter

VACANT LOT (Continued) **S107522646**

certifying that the vapor barrier will be sufficient to withstand the concentrations of contamination present on the site after the installation is complete 6)addition of monitoring of both schools to CAMP 7)submission of all previous reports onsite 8)covering of all contaminated soil stockpiles 9)excavation of contaminated soil to be performed during non-school hours 10)notification to NYCDOH and NYSDOH 11)addition of residential construction letter to STIP cover letter 12)Updating of PBS registration to reflect removed status and not closed-in-place status 13)copies of previous reports)555 West 59th Street Phase II ESA, Impact Environmental(3/23/94), 555 West 59th Street Soil Screening and Tank Investigation Work, Tanks Closure Report, Don Carlo(11/4/03) for other spill numbers for site 14)Groundwater samples or vertical delineation in areas of highest soil contamination3/29/06-Vought-File Review by Vought: See also closed spill #0514548 for odor complaint at adjacent Beacon School, open spill #9803858(soil contamination, STIP sent on 6/4/04), open spill #0503781(discovery of old tanks), open spill #0503229(soilcontamination found during borings). PBS Registration #02603010. PBS registration up to date as per DEC Krimgold. Letter from Hasko Utilities (Kohart) to NYFD-4/10/89. "This is to inform you that we abandoned our gasoline storage tanks in ourbuilding at 555 West 59th Street in Manhattan. The tanks were in good order and without leaks but we no longer had use for them so they've been filled with concrete". Invoice from Alvin Petroleum-4/13/89. Invoice for tank abandonment. Letter from DEC Sangesland to Hasco Utilities-12/23/03. Letter sent for spill #9803858. Letter sent requiring delineation and submission of a remedial action plan. "This report is required to be submitted to DEC by February 25, 2004". Stipulation Agreement from DEC Rommel to Hasko (Kohart)-6/4/04. Stipulation Agreement sent and mailed certifed mail on 6/4/04. "If the signed Stipulation has not been received by June 25, 2004 the Department will hire a contractor to perform the work. No signed Stipulation in file. Letter from Casey & Hibner (John Hibner)-6/24/04. "Please be advised that I am the attorney for Hasko..." "Hasko Utilities Company transferred all its right title and interest to the subject premises on January 30, 2004 to 55559 West Realty, LLC. Their attorney is Arthur Israel, 800 Third Avenue, 30th Floor, New York, New York 10022 and his phone number is 212-355-5353. The property was taken subject to any and all existing environmental conditions. Please contact the new owners with respect to any of the requirements contained in your correspondence". Letter from Hasko(Kohart) to DEC Sangesland-1/16/04. "I am writing pursuant to our phone conversation". Enclosed is MTS EnviroSurv report. Soil Screening Study and Tank Investigation Work (MTS EnviroSurv)-5/6/98. Report for 555 West 59th Street. Former use of site was a taxi garage. NYCDOB records indicate gasoline tanks were installed onsite dating back to 1940's. Lab results showed elevated VOCs inthe soil. Groundwater not encountered in any of the borings. Remedial Investigation Report (Fleming Lee Shue) August 2005 submitted to NYCDEP and prepared for Sive, Paget and Riesel. Soil and groundwater sampling activities were approved by NYCDEP. Site will be redeveloped for 35-story residential tower with cellar and sub-cellar extending to a total depth of 28" below grade. Sub cellar will be used for parking and cellar will be used for athletic facilities, theatres and a social space etc. Previous reports include 555 West 59th Street Phase II ESA, Impact Environmental(3/23/94), 555 West 59th Street Soil Screening and Tank Investigation Work, MTS EnviroSurv(5/6/98), Tanks Closure Report, Don Carlo(11/4/03). For investigation, site was divided into three sections. SECTION 1 included addresses of 543, 545, 547 West 59th St and was formerly utilized as a junkyard until 1976. SECTION 2 included addresses of 549, 551, 553 and 555 West 59th St and 248, 250, 252, 254 West 60thStreet and was formerly utilized as a automobile repair shop and historic maps indicate three (550-gallon) gasoline USTs in the north central portion of the structures. Previous Phase II performed on section 2 by Impact

VACANT LOT (Continued) **S107522646**

Environmental. Soil analyticals from Phase II show TAGm 4046 VOC exceedences to a depth of 11'-14'bg. MTS EnviroSurv found 12 USTs in section 2 and performed seven borings inside building in 5/96. SECTION 3 included 238, 240, 242, 244 West 60th Street and was formerly utilized as tenemant housing and a wharehouse. Wharehouse had two USTs and one AST which were closed by Don Carlo (two 550-gallon) gasoline USTs and one 1080 fuel oil AST in basement. Five soil samples collected by Don Carlo during gasoline UST excavationand during fuel oil AST with no VOC detections. "there is a ridge of shallow bedrock running through the central portion of the section one from the northwest corner extending southwest into section two". Groundwater flow to the west generally. Remedial Investigation included installation of 32 soil borings. Two monitoring wells were installed and rest of borings performed via Geoprobe. Two other monitoring wells were discovered (on the eastern portion of section 2 and in the sidewalk atthe southwest corner of section 3. Soil analyticals from deep samples show: 5600ppb toluene(SB17 11-12'.bg), 22000ppb ethylbenzene(SB17 11-12'bg), 110000ppb xylene(SB17 11-12'bg), 21000ppb napthalene(SB17 11-12'bg), 7700ppb ethylbenzene(SB18 9-10'bg), 14000ppb xylene(SB18 9-10'bg), 23000ppb napthalene(SB18 9-10'bg), 60000ppb ethylbenzene(SB21 17-18'bg), 250000ppb xylene(SB21 17-18'bg), 31000ppb napthalene(SB21 17-18'bg), 22000ppb toluene(SB24 11-12'bg), 31000ppb ethylbenzene(SB24 11-12'bg), 158000ppb xylene(SB24 11-12'bg), 23000ppb napthalene(SB24 11-12'bg). Groundwater samples show no detections of VOCs (note that wells are not located in areas of soil contamination). Boring logs indicate: for SB17 at depth of 16'bg indicate "productin soil" and groundwater, for SB18 PID of 250ppm w/ gw at 14'bg and EOB at 14'bg, for SB22 PID of 1550ppm at 12'bg with EOB at 15' on bedrock, for SB21 1200ppb at 18'bg w/ gw at 17'bg and bedrock at 19'bg, for SB22 PID of 1550ppm at 12'bg and bedrock at 15'bg. Letter from NYCDEP Cabbagestalk to Steve Russo (Sive, Paget & Riesel)-6/2/05. DEP reviewqed the Remedial Investigation Workplan for construction of residential apartment building. Phase II acceptable to DEP pending inclusion of: 1)detailed survey of asbestos containing materials 2)dust control measures due to Pb based paint 3)survey for fluorescent ballasts and any other PCB lighting fixtures 4)soil disturbance not take place until aforementioned conditions/recommendations are incoporated into a final workplan 5)submission of how applicant plans to satisfy the noise E requirement. Remedial Action Workplan (Fleming Lee Shue)-September 2005 "The proposed building plan calls for the construction of a basement that willcover the entire property footprint. Soil in the area of the proposed basement will be excavated to the depth of 28 feet." Plan also includes UST removaland collection of endpoint samples. "During the soil excavation and removal, a Construction Health and Safety Plan (Construction HASP) will be implemented to protect workers from exposure to SVOCs, pesticides, and heavy metals. Dust suppression will be maintained by the contractor during excavation and grading activities as described in theconstruction HASP. A copy of the construction HASP is included in Appendix B". HASP section 23.3.2 calls for monitoring with a PID and "measurements will be taken prior to commencement of work and for at least 1 minute every 60 mintues during the work". Community Air Monitoring provides that "air quality will be continuously monitored at the downwind perimeter of the contaminated work area while soil disturbing activities are occurring." Action levels are as follows: <5ppm above background:continue work, 5<x<10ppm above background: implement vapor emission response plan, x>10ppm above background:stop work and perform downwind monitoring in accordance with vapor emission response plan. Vapor Emission Response Plan includes contact of local police authorities if levels measured within 20 feet of the nearest downwind residential or commercial structure exceed 10ppm above background or exceed 5ppm over background for a period greater than 30 minutes. "...pre-applied waterproofingmembranes that bond integrally to poured concrete will be installed under the basement slab and

VACANT LOT (Continued) **S107522646**

along the foundation wall. Dewatering activities will occur as basement will be below groundwater level and DEP discharge permit will be obtained. Remediation Action Workplan Addendum (Fleming Lee Shue) to DEP Ma-10/17/05. "Due to the exclusion of Lot 12 and the inclusion of Lot 51, the Development plans have been altered (see attachment A). The developement will still consist of a residentialtower that will occupy the entire site; however, the basement plan has been altered. The basement will be located underneath the entire development, while the sub-basement will be located on the western portion of the site, only. The basement willbe used for parking, mechanical space, staff areas, common space and retail space. The sub-basement will be used for common space, retail storage and mechanical areas." "The manufacturer will supply a letter certifying that the vapor barrier will be sufficient to withstand the concentrations of contamination present on the site after the installation is complete". Letter from NYCDEP Cabbagestalk to Russo-9/22/05. Review of Remedial Investigation and requirement of: 1)submission of a RAP toDEP for approval and "RAP shall delineate that all excavated soils an fill materials will be removed from the site 2)site should have a site specific health and safety plan 3)installation of a vapor barrier 4)coverage of all stockpiles with polyethylene sheeting 4)maintenance of dust suppression 5)coverage of all non concrete areas with 2' of clean fill 6)removal of ASTs in accordance with DEC regulations. "Note that the New York State Department of Environmental Conservation has regulatory authority for protection of groundwater, and may have further requirements". Letter from NYCDEP Cabbagestalk to Russo-11/29/05. NYCDEP reviewed Workplan Addendum. "We find the RAP, HASP and vapor barrier acceptable". NYCDEP has one requirement with respect to noise designation. Letter from NYCDEP Cabbagestalk to NYCDOB Osorio-12/7/05. "DEP has concluded that the applicant may proceed with the construction...". 03/31/06-Vought-File review continued by Vought: Mail to DEC Rahman from Fleming Lee Shue (DeCarlo) for spill #0503229-2/24/06. "Please find enclosed a CD with A PDF copy of the Remedial Investigation Report and Remedial Action Workplan approved by the New York City Department of Environmental Protection for the 60thStreet Site. This includes data for the 244 West 60th Street Spill." Contaminated Soil Letter from DEC Feroz to Lincoln Engineering-3/9/06. "...a letter report asserting a cause of release and sumamrizing cleanup activities.....must be submittedto this office no later than one month from the date of this letter..." Fax from Dimitrios Stefanopoulos(Beacon) to DEC Patel-3/23/06. Report from ATC Associates-3/22/06. Report of "limited indoor air quality assessment conducted on March 31, 2006 in the morning" at the Beacon School. "Later that same day in the late afternoon ATC was requested again to return and check for the diesel fuel odor". Survey performed using PID. "TVOCs were detected in the school and ranged from 0.0 to 0.6ppm inside and were 0.0 ppm outside the building. The highest readings were on the 2nd floor in the vicinity of the science rooms". Classrooms and corriders were again tested in the afternoon and "TVOCs were detected in the school and ranged from <.01 to 2.0ppm inside and were 0.0ppm outside. The highest readings were from the chemicals in the chemistry room and the storage room of chemicals. All other representative readings taken were <0.1ppm." "No odors were detected in the assessed locations at the time of ATC's visits". Report concludes that "Based on our observations and measurements of (TVOCs) and CO, ATC concludes that the assessed locations were suitable for occupancy at the time of ATC's assessment". Construction Safety and Health Guidelines (Plaza Construction), Site Specific Health And Safety Plan(HASP) and Mayrich Construction Project Safety Program including MSDS Information- 3/23/06. No mention of vapor monitoring or soil contamination. Stipulation Agreement from DEC Patel-3/23/06. Stipulation Agreement sent to Micheal Kumrev requiring delineation of soil contamination collection of endpoint samples, installation

VACANT LOT (Continued) **S107522646**

of vapor barrier, adherence to DER-10 CAMP, submission of all previous reports. CC to NYCDEP Ma, Langan Muller and Lacy(Beacon). CAMP attached to Stipulation. Phone call with DEC Urda, DEC Vought, DEC Patel, Tarek Khoury and Steve Russo-3/24/06. Russo requested following change to Stipulation CAP that "Respondent shall immediatelysubmit and Investigation Summary Report that was previously submitted to NYCDEP" be included in CAP language. Letter from Langan (Ilkay Cam-Spanos)-3/27/06. Attached are Remedial Action Workplan, Remedial Action Workplan Addendum and Remedial Investigation Report from Fleming Lee Shue. Email fron Langan (Khoury)-3/28/05. "Atttached are PID readings from last week and today as well. As you can tell the readings are within acceptable levels. The highest PID reading today was at 1:22 PM and was 4ppm. This reading is still minimal reading and does not trigger safety or health risk issues". Email from Langan Khoury-3/28/06. "In response to the odor complaint from the Beacon School and to efficiently and promptly respond to your concerns the following is being implemented immediately": 1)work at the impacted contaminated soil along 60th Street side of the project was halted for the day 2)"all commitment made to DEP in the RAP and CHSP are being followed to the letter" 3)PID readings will be taken all day along west 60th street and west 61st street by Beacon School. All PID readings were O on 3/28/06 4)The area with impacted material "is clearly defined and is covered with plastic sheeting" 5)Site visit to school was conducted with DEC and no complaints were noted 6)ASR will deploy foam suppressant at the site as of 7:30am tommorrow using L-10 bioenzyme product. Letter from NYCDEP Cabbagestalk to NYCDOB Osorio-3/28/06. "The New York City Department of Environmental Prorection, Bureau of Environmental Planning and Assessment(DEP) is rescinding its December 7, 2005 Notice to Proceed and requests that New York City Department of Buildings issue a notice of intent to revoke permits for work currently proceeding at 555 West 59th Street...". "Currrent work at the site must stop immediately until we are assured that remedial/construction activity will proceed in a manner protective to public health and the environment". Email from Steve Russo to NYCDEPand NYCDOB-3/28/06. "I am a little surprised that this action is being taken untilaterally without giving us an opportunity to address any concerns". "...we respectfully request that that DEP rescind its recission..." Request to meet onsite on 3/29/06. "There will be no disturbance in the affected area." Email also mentioned mitigation techniques. Later email from Russo that he was "advised that contaminated area was sprayed with foam.." and no work was going to occur in affected areas during the day. Russo and Khouri will be onsite at 1pm to observe conditions and requested for meeting with DEC and DEP. Meeting at Site with DEC Vought, DEC Urda, Ramonal Allegrini(Element West 646-529-7982), Eric Johnson(Plaza Construction 212-849-4800), Rich Connor(Plaza Construction 212-849-4800), James Furey(Mayrich 718-378-2600), Steven Muller(ASR 212-809-1110), John Rhodes(Naley & Aldrich 212-785-8200), Steven Russo (Sive Paget and Riesel 212-421-2150), Jane Gol(Element West 646-202-9674), Lee Samuels(Element West 973-477-6448), Mohammed Khaja-Moinuddin(NYCDEP 718-595-4445), Joel Laudes(Langan 212-479-5404), Erick Muller(Langan 646-285-4853), Richard Levato(ASR 212-809-1110)-3/30/06. DEC required and Element West agreed to staffing one Langan employee at school at all times. Mitigation measures include VOC and dust monitoring, placement of foam on excavation, immediate removal from site of contaminated soil, loading of trucks at bottom of excavation, application of L-10enzyme, use of vapor barrier. As per Plaza concrete scheduled to be poured in 5 days. DEC noted that vapor barrier had not been demonstrated as of yet to be compatible with petroleum contamination. NYCDEP discharge pertmit was applied for despite no groundwater in excavation. DEC requires: 1)collection of endpoint samples 2)soil investigation of contaminated area including collection of groundwater samples at highest areas of contamination. Vought received call from Khoury(Langan) later on3/30/06 that three bedrock wells were

VACANT LOT (Continued) **S107522646**

going to be installed and proposal will be submitted to DEC. Letter from Langan(Khoury) to NYCDEP Cabbagestalk-3/30/06. Langan commits to the following: 1)community dust, odor and Vapor Monitoring. Real timecontinuous monitoring being implemented. Additional commitments include excavation during non work hours, deploying of foam suppressant, application of L-10 bacteria, full time monitoring at Beacon School, "all petroleum impacted material will be excavated for offsite disposal", collection of endpoint samples, "the foundation slabs will not be poured until the remaining soil under the proposed slab is tested, the results transmitted to the NYCDEP and NYSDEC and approval by either or both agencies is granted", installation of three groundwater rock wells, designing a sub-slab depressurization system if soil and groundwater data show subsurface contamination, prepare a remedial workplan for NYSDEC and NYCDEP for review. Phone Conference with DEC Urda, DEC Austin, DEC Vought and DEP Cabbagestalk-3/31/06. NYCDEP Cabbagestalk will contact DOB for stop work order as RAP submitted to DEP was not accurate. NYCDEP also required submission of a workplan. Email from Ilkay Cam-Spanosto DEC, DEP and Khoury-3/31/06. "The following items have been implemented and on-going": 1)excavation being performed from 4:30-7:30am 2)continuous PID monitoring at the Beacon School and onsite 3)collection of two endpoint soil samples on 3/13/06and 15 endpoint soil samples on 3/31/06 4)installation of three bedrock wells.
4/1/06-Vought-Called Khoury for submission of boring location plan and left message to return call to DEC. Vought spoke to Khoury and endpoint samples will be collected and three were collected one month ago and ten samples were collected from site. Samples were collected from hand augres one foot below surface. Plan will show bedrock depth and contaminated soil. Six or seven samples will be collected from further excavation of contaminated soil.
Driller will install rock wells along 60th street level inside excavation and will be installed as temporary wells and will be closed once concrete is poured. Khoury will submit site plan and soil and groundwater data, designing vapor intursion system (which will not be used if soil results are clean). DEC required collection of endpoint samples at areas of highest historical contamination with no vertical delineation(SB17, SB18, SB21, SB22 and SB24) and collection of groundwater sample in center of all five borings. Khoury stated that temporary wells were also going to be installed at northwest corner of excavation and at former boring location SB8. No odors detected today at school. As per Khoury no workplan was going to be submitted as samples were already collected and submitted for analysis. 4/1/06-Vought-DEC requires: 1)immediate recovery of free phase product if present. 2)submission of all previous reports including reports for Spill Numbers #9803858, #0503781 and #0503229 3)Immediate implementation and submittal of a (CAMP) including continuous indoor and outdoor monitoring at the Beacon School while school is in session and contaminated soil and/or groundwater is exposed,vapor mitigation efforts used during construction including, but not limited to, covering all contaminated soil stockpiles, use of vapor supressant foam, immediate removal of contaminated soil from site and restriction of contaminated soil operations during non-school hours 4)Prior to pouring of concrete for the foundation, immediate submission of an (ISR)that completely delineates soil and groundwater contamination on-site.5)Within 60 days submission of an ISR Addendum that includes off-site delineation of soil and/or groundwater contamination 5) Prior to pouring of concrete for the foundation, submission of a RAP detailing the work proposed to remediate all contaminated media on-site. The RAP shall include endpoint sample analyticalsfrom the final depth of excavation to characterize soils directly underlying the building foundation. The RAP shall also detail vapor mitigation efforts used in the construction of the building including at a minimum, installation of a vapor barrier. The vapor barrier must also be demonstrated to be compatible with petroleum contamination. If contamination remains on-site in soil and/or groundwater, a sub-slab

VACANT LOT (Continued) **S107522646**

depressurization system will be installed. 6)Within 90 days submission of a RAP Addendum that includes off-site remediation of soil and/or groundwater contamination, if applicable. Vought drafted Stipulation and CAP with above requirements and submitted to DEC Urda and DEC Austin for review. 04/06/06-Vought-Recieved call from Langan (Khoury) and Steve Russo that they received stop work order from DOB and asking why order was given. Russo requested that DEC Vought contact NYCDEP Cabbagestalk to inform him that DEC was content with progress. Vought informed him that DEC had received no legally binding committment that development would not proceed, no data had been submitted to date to DEC and hence Vought could not make the requested call to NYCDEP. Vought informed him that Stipulation was being reviewed by DECAustin and since DEC Vought will be out on training from 4/10-4/14, DEC Austin should be contacted during that period. 04/07/06-Vought-Spoke to Rich Lavado and he had copy of file. Work at site included application of L-10 on contamination of sidewall and floor and hot zone by MW4. Area has strong odor possibly of petroleum. PID read up to 70ppm before application and 0 after. ASR not involved in soil sampling. Vought called Langan(Khoury) regarding hotzone excavation and delineation and left message that hotzone must be excavated and endpoint samples collected. Vought received second call from Lavado and they were also hired for soil and groundwater remediation. ASR will install bio-irrigation system of 4" manifolded PVC coveredwith bluestone topped by a vapor barrier. Lavado will submit RAP to DEC and NYCDEP. 04/07/06-Vought-Stipulation Agreement with above requirements from 4/1/06 sent after approval by DEC Austin and DEC Urda. Stipulation Deadline of May 7, 2006.04/17/06-Vought-Received call and spoke to Khoury. Endpoint samples were collected from site (approximately 27 samples) and data showed slight methyls and PAH exceedences. One VOC exceedence in sample. Data was submitted to DEC. Three groundwatersamples were collected and groundwater was 7-11' into bedrock. Some VOC exceedences in groundwater. 04/18/06-Vought-New file review by Vought: Letter from NYCDOB to Moshe Azougi (owner) of 555 West 59th Stree Holdings LLC-4/3/06. "The Department of Buildings (the Department) intends to revoke the approval(s) and permit(s) used in connection with the application referenced above". "The Department hereby intends to revoke the permit based upon DEP's recission of it's approval.." "In addition the conditions described above present and imminent peril to life or property at the premises. Thereby you are required to STOP ALL WORK IMMEDIATELY". Clean Backfill Material Report to DEP Cabbagestalk (Langan)-4/5/06. Documentation related to source of backfill material. "The material tested presented no TAGM 4046 exceedences and we request and approval for the use of 5,000-yard of this material as backfill at the 555 West 59th Street..." Enclosed is NYSS Beneficial Use Determination from NYSDEC dated 6/6/05, NYSS fill material laboratory test results for TAGM criteria and NYSS laboratory test results for chloride dated 11/4/05. Laboratory analyticals included show no TAGM exceedences in backfill material. Also included is letter from DEC Lynch to Nicolas Mann (Quay Consulting) dated 6/6/05 "The New York State Department of Environmental Conservation (NYSDEC) had reviewed your petition dated May5, 2005 for a benefical use determination (BUD) for sand dredged by Amboy Aggregates, Inc., of South Amboy, New Jersey from the Ambrose Channel as unrestricted-use aggregate in New York State". "The BUD No. 846-2-24 is granted to New York Sand and Stone LLC...". Vought called and spoke to Kathleen Prather (DEC) as shewas listed as contact on letter and she stated that material could be used as backfill (after Vought explained current issues on site). Remediation Work Progress Report-March 22 through April 5, 2006 (Langan)-4/6/06. COMMUNITY DUST AND VAPOR MONITORING: Monitoring in accordance with NYCDEP approved Remedial Action Workplan dated September 2005 including fixed monitoring points on the northeast and southeast corners of the site, applying water on haul road, wetting excavation faces and streets, tarping trucks, limiting of excavation during non-school hours,

VACANT LOT (Continued) **S107522646**

application of L-10 bioenzyme, ambient air monitoring including full time Langan staff at Beacon School. ENDPOINT SOIL SAMPLING: Collection of nineteen soil samples show exceedences for TAGM VOCs only is sample obtained from northwest corner of excavation below the West 60th Street sidewalk and slight exceedences of SVOCs. Additional endpoint sampling will be performed in areas once proposed excavation depth is reached. GROUNDWATER SAMPLING: Installation of four rock wells and collection of groundwater samples. Due to potential ACM in bedrock, a dust suppresion pla nwill be implimented. SOIL GAS MITIGATION: "A sub-slab depressurization system is being designed as aparallel effort...." "Based on the soil data and the field observations it appears that the exceedences in remaining soil at the site are minimal and are characteristics of historical fill and are not related to the petroleum or gasoline spill. Langan recommends no further action with respect to the subsurface conditions at the grids:A1, B1, A2, A3, B3, B4, A5, B5, C1, D2, E3, E4, E5, F5, G5 and G6. We respectfully request your approval and clearance so that the construction and foundation work can continue in these grids." Letter from Sive Paget and Riesel(Russo) to NYCDOB Osorio-4/11/06. "...we believe that there is no reason to revoke the work permits. Furthermore we request that following approval by the New York City Departmentof Environmental Protection of an amended Remedial Action Plan that will be submitted no later than April 19, 2006, that the Department revoke its stop work order." Letter summarizes remedial and vapor mitigation techniques. Letter also states that "owner committed in writing that the concrete slab for the building would not be constructed until DEP and DEC had reviewed all end point sampling and well sampling results and the parties had agreed that all required remedial meaures were implemented. 04/21/06-Vought-Continued file review by Vought: Remedial Work Progress Report Addendum -Bedrock Well Installation Sampling and Laboratory Results (Langan)-4/11/06. Installation of four rock wells (RW01 thru RW04). 04/25/06-Vought-Continued file review by Vought: Remedial Work Progress Report Addendum -Bedrock Well Installation Sampling and Laboratory Results (Langan)-4/11/06. Installation of four rock wells (RW01 thru RW04). Wells installed to a depth of approximately 16'below bottom of excavation. "Groundwater was encountered at dpeths 3-ft bgs, 14.5-ft bgs, and 0.5-ft bgs in wells RW01, RW02 and RW04 respectively." No groundwater encountered in RW03. "It is our opinion that the groundwater encountered at the Site is perched (unconfined) water. The exceedences in the groundwater samples are most likely characteristics of the groundwater encountered in this general area of Manhattan and are not specifically related to site conditions." "However, and in abundance of caution, mitigation measures will be implemented to address potential vapor generation from the groundwater." Mitigation measure to include installation of vapor barrier. Groundwater analyticals show: 33ppb benzene(RW01), 26ppb xylene(RW01), 20ppb 1,2,4-trimethylbenzene(RW01), 22ppb 1,3,5-trimethylbenzene(RW01), 28ppb benzene(RW02), 51ppb toluene(RW02), 29ppb ethylbenzene(RW02), 166ppb xylene(RW02), 30ppb napthalene(RW02). Endpoint Sample Results (Lagan)-4/13/06. Collection of endpoint samples (approximately 28 soil samples) from site. SVOC exceedences in PAHs (attributable to fill material) were found. "Based on the soil data and field observations it appears that the exceedences in remaining soil at the Site are minimaland are characteristic of historic fill, and are not related to petroleum or gasoline spill. Langan recommends no further action with respect to the subsurface conditions at the entire Site". Soil analyticals show: 71ppb benzene(C5), 67pp benzene(B5), 64ppb benzene(A6), 66ppb benzene(D5), 134ppb benzene(B6), 1347ppb xylene(B6), 92ppb benzene(Off site Pre-01), 1586ppb xylene(Off site Pre-01), 4170ppb n-propylbenzene(Off-site Pre-01). Community Air Monitoring Plan for Remedial Action (Langan)-4/13/06. "The proposed Remdial Action (RA) consists of mass excavation and off-site disposal of impacted soil within the boundary of the Site". CAMP developed in conformance with NYSDOH Generic Community Air

VACANT LOT (Continued) **S107522646**

Monitoring Plan. CAMP includes: monitoring at site since 2/6/02 and at Beacon School since since 3/31/06, monitoring via PID and dust monitor, continuous VOC monitoring during all remdial activities including excavation and soil and groundwater handling, continuous monitoring at BeaconSchool "while school is in session and while contamianted soil and/or groundwater are exposed.", ambient air monitoring, limiting of excavation to non-school hours, covering of stockpiles, use of foam suppressant, response actions for associated PIDreadings. Faxed Letter from Sive, Paget and Riesel (Russo) to DEC Urda-4/17/06. "As discussed I attach and execution stipulation and corrective action plan regarding the above referenced project...". Fax included copy of Stipulation signed by Steven Russo. Email from Langan (Khouri) to DEC Vought-4/18/06. "Attached is the NY Sand and Stone BUD and lab results for the material we intend to import to the site". Request to review and approve use of fill material. See notes above regarding Clean Backfill Material Report. Investigation Summary Report (Langan)-4/18/06. "Impacted soil was encountered in the vicinity of closed-in-place underground storage tanks (USTs)". Adjacent property use includes vacant land to the north, construction site to the west, and commercial properties to the south and east. Former uses of the property include residential, comissary, junkyard, automobile repair shops, warehouse, stables. Report includes information submitted previously including: waste characterization, soil management, UST removals, post excavation endpoint sampling, rockwell installation, groundwater sampling, air monitoring, dust supression, odor supression, clean fill material, vapor memebrane, sub-slab depressurization system. "A SSDS has been designed and will be implemented as part of remedial actions at the Site. The SSDS system will create a low vacuum zone beneath the building slab by extracting the sub-slab air using a vacuum blower mounted onto the building roof." Draft SSDS design included in Appendix E of report. Remedial Action Work Plan Addendum II (Langan)-4/18/06. Proposed construction includes parking garages on eastern portion of site and apartments in western portion of the site. Soil will be excavated to bedrock in areas of shallow bedrock. "Remaining areas of the Site will be excavated to the depth of the building basement and/or until all imapcted soil is removed". "Final excavations will be based on laboratory analysis of endpoint samples in the areas where bedrock is not encountered". RAP also included air monitoring, load out/tramsport and off-site disposal, importation of clean fill, installation of a vapor membrane, installation of SSDS. Addendum also included new Health and Safety Plan, CAMP and OM&M Plan. "Intermittent progress reports will be provide to the NYSDEC and NYDEP utnil the onsite remediation is completed". A final engineering report will also be submitted to the DEC and DEP. DEC Vought to: 1)approve use of backfill material as per DEC Prather 2)investigation of soil and groundwater under sidewalk of West 60th Street due to TAGM VOC exceedences (4/6/06 report) 3)Additional excavation of B6 (also agreed to by DEC Austin)"Final excavations will be based on laboratory analysis of endpoint samples in the areas where bedrock is not encountered". 04/27/06-Vought-Spoke to Langan (Khouri) and informed him of above requirements and drafted letter with above requirements. Vought received email from Langan(Cam-Spanos) that B6 grid area was excavated to bedrock and after endpoint samples were collected. Letter was sent summarizing excavation. Further Excavation and Additional Endpoint Sampling Request at B6 (Langan Cam-Spanos)-4/26/06. "As discussed during the phone conversation you had requested further excavation and additional end-point sampling at Grid B-6. Langan's and the contractors records indicate that due to a change in the construction plans, this area was excavated to bedrock after the initial end-point sampling and the entire grid was backfilled with clean gravel". "We respectfully request your approval on this matter and contact with the NYCDEP so that the construction and foundation work may continue...". Vought sent letter approving of ISR and RAP Addendum II, approve use of backfill material

VACANT LOT (Continued) **S107522646**

as per DEC Prather and requiring: 1)investigation of soil and groundwater under sidewalk of West 60th Street due to TAGM VOC exceedences (4/6/06 report). Vought called DEP Cabbagestalk to discuss letter and left message to check fax machine. New file review by Vought: Notice to Proceed (NYCDEP Cabbagestalk)-4/27/06. "Based on our review of the aforementioned documentation, DEP hadconcluded that the applicant may proceed with construction, provided that a closure report concerning the hazardous materials "E" related activities....ares submitted by the applicant to DEP for review and approval at the conclusion of the construction related activities". 05/17/06-Vought-Spill transferred from DEC Vought to DEC Piper as per DEC Austin. 05/30/06-Vought-Received message from Ilkay Cam (Langan 917-822-3637) that sidewalk well will be installed tomorrow and confirming thatwell will be bedrock well. Vought returned call and informed her of new project manager and left message confirming DEC requirements of installation of rock well. 06/01/06-Vought-Received message from Ilkay and returned call and spoke to Cam. Extension requested for another 30 days. Extension granted by Vought for another 30 days till report is due for sidewalk well installation as per CAP. July 17th. 8/29/06- DEC Piper reviewed ISR Addendum dated 6/14/06- AS per report, during installation of gw well on W. 60th St., contaminated soil w. bewnzene exceedances was discovered 71 ppb at 10-12' in RW-05. and n-Propylbenzene 6420 ppb in same location. GW exceedances are as follows, 27.2 ppb 1,2,4 Trimethylbenzene, 7.4 ppb- 1,3,5 Trimethylbenzene, 114 ppb- benzene, 16.2 Ethyl benzene, 28 ppb Isopropylbenzene, 31.4 MtBE, 20.1 n-Propylbenzene. DEC Piper spoke w/ DEC Vought and DEC austin regarding exceedances. Though source area was removed, DEC instructed Langan to purge well of approx 200 gallons and resample. 12/6/06- DEC Piper received addendum report. The well has been resampled and results show slight exceedances of Benzene 16ppb, Isopropyl benzene 16.5ppb and n-propylbenzene 8.3 ppb. This is a significant decrease. Source area has been remediated through excavation, vapor barrier installed and active SSDS is ongoing. This case is closed as well as 0514548, 9803858, 0503781, 0503229. See E-docs if warranted.

Remarks: This is a historical spill. No tanks were found in the ground but soil samples show contamination. Excavation has already begun to clean up the contaminated soil.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL" 12/23/2003 Sangesland sent a "Do Work" letter to: Compliance Officer, Hasco Utilities Co, Inc. 110 Swalm Street, Westbury, NY 11590. DEC has given a deadline of Feb25, 2004 to submit a delineation, remediation plan for the soil contamination found at this building. 1/5/2004 First letter came back with a "non deliverable" note Called the contact number and found a new address in Suffolk County. New letter sent to: David Kohart, Hasko Utilities Co, Inc. 14 Industrial Blvd, Medford, NY 11763. New Deadline of March 15, 2004 1/12/2004 Sangesland spoke with David Kohart regarding this property. He explained the following history on the building. 1977 Hasko buys the building from a Taxi Garage company 1982 Closes tanks by NYCFD Standards - Slag fill tanks. 1998 Hasko Mortagages building, Bank requires Phase I & II report to be done. "Trace" contamination found, spill report filed. To comply with Bank, Tanks were opened, refilled with cement and a Tank Closure Report submitted (to who?). Sangesland requested copy of Phase I & II and Tank Closure Report. Hopefully this is enough info to show the contamination

OLD CAB GARAGE (Continued) **S103572304**

levelsare low and the spill can be closed out. 1/20/2004 Sangesland received a report from David Kohart, VP Hasko Utilities Co Inc. 14 Industrial Blvd, Medford NY 11763 (631-924-6900 / 631-765-6924) 6/1/2004 Based on submitted report, siteis primarily a gasoline site (12 - 550 gal tanks) abandoned in 1996. Contaminated soil found on site. Project transferred from Sangesland to Rommel. 6/4/04 Stip mailed to David Kohart with deadline of 6/25/04. Rommel 7/11/05 Case has been transferred to Albany Remediation Group - Attn: Mike Komoroske 8/2/05- temperary transferred lead to Woodward -review of file revealed that a Christopher DiCarlo (212-675-3225)from Fleming Shea called 7/20/05 requesting to combine investigation of this spill with Spill #0503781. A second call from him said he wished to combine this site with spill #0503229 not the one previously mentioned. Returned call and left message to call me back to discuss issue. 11/21/05 Never recieved a return call to my messages. Still need to contact Mr. Dicarlo.
3/29/06-Vought-Called Valerie Woodward and spill transferred to Vought. Valerie will scan file and email to Vought ASAP. For further information on spill see spill #512733 at same location. 05/17/06-Vought-Spill transferred from DEC Vought to DEC Piper as per DEC Austin. 12/7/06- DEC Piper received addendum report. The well has been resampled and results show slight exceedances of Benzene 16ppb, Isopropyl benzene 16.5ppb and n-propylbenzene 8.3 ppb. This is a significant decrease. Source area has been remediated through excavation, vapor barrier installed and active SSDS is ongoing. This case is closed as well as 0514548, 9803858, 0503781, 0503229. See E-docs if warranted. For further information on spill see spill #512733 at same location.

Remarks: caller told by local region to call spill in of found chemicals in soil under bld from 20 years ago.

DEC Memo:	Tracking of site remediation has been consolidated under spill no. 90-09804. See also spill nos. 91-05201, 91-08084, 91-08497, 95-01523, and 04-03370. 7/28/1997: A stipulation agreement was executed between Mobil Oil Corporation and the Department. (Harrington) 8/4/2003: This spill site has been transferred from Sigona to Harrington (central office) for management. (Sigona) 7/8/2005: Sent a letter to Exxon Mobil approving the interim RAP.

842 11TH AVE/MOBIL #17511 (Continued) **S100168138**

The interim RAP calls for the evaluation of high-vacuum dual-phase extraction. Also sent them the necessary NYCDOT road-opening permit letter for test well installation along the east side of 11th Avenue. (Harrington) 2/2/2006: Sent an e-mail to Exxon Mobil approving the supplemental SI report. The high vacuum dual-phase extraction (HVDPE) feasibility study has been initiated. The FS report is due in the Spring of '06. (Harrington) 4/5/2006: Sent an e-mail to Exxon Mobil approving the final RAP. The RAP calls for theinstallation of a HVDPE system, which is scheduled to be in place by late summer. (Harrington) 6/5/2006: Approved modification to the IRMs being conducted on-site (EFR events reduced from monthly to quarterly @ wells MO-2, MO-3, MW-12, and MW-14; EFRs can be eliminated @ MW-12 if an absorbent sock is installed to recover free product). Approval sent to Exxon Mobil via e-mail. (Harrington) 2/14/2007: Transferred from Harrington to Milack. (Milack) 5/24/2007: Remedial system is in place but still has not received necessary electrical inspection and discharge permits. (Milack) 12/07: System began operating and Kleinfelder will be submitting a startup report.

Remarks: LINE TEST ONLY, FAILED PETRO TITE, WITH A LEAK RATE OF -.26GPH, TYREE WILL EXCAVATE, ISOLATE & RETEST.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Assessment: Volatile and semi-volatile compounds are present in soils at this site. Exposure to groundwater is not likely since the area is served by public water. The site is paved and is currently used as a parking lot, therefore exposure to contaminated soils is unlikely. Soils will be removed and excavated to bedrock, therefore soil vapor intrusion into the proposed building will be unlikely. A soil vapor survey was conducted at the perimeter of the site to evaluate the potential for off-site receptors to be effected. Low levels of volatile organic compounds were detected, but does not pose a health concern.

Env Problems: June 2003 Phase I Environmental Assessment Report identified environmental conditions for the site and indicated evidence of up to 16 storage tanks (UST/ASTs) were present. These tanks were used for storing gasoline, fuel oils, lubricants, waste oils and other materials. These operations have resulted in environmental contamination. Remedial Investigation commenced in late summer of 2005 and was completed by November. January 2006. The Remedial Investigation Report (RIR) indicated the presence of seven on-site areas of concern. These areas include (1) three locations where underground storage tanks were discovered, (2) one location of elevated lead in the soil (Lot 43), (3) one location where acetone-contaminated soil (Lot 5) was detected, (4) one location of a suspected vaulted tank in a former basement, and (5) one location of petroleum-contaminated soil and groundwater. Groundwater contained benzene, two pesticides and several metals above groundwater standards. An InterimRemedial Measure (IRM) work plan was prepared in February 2006 to investigate and remove some of the areas of concerns identified in RI report. The primary contaminants and impacted media at the site include an area of petroleum-contaminated soil;historical fill containing atypical concentrations of contaminants (e.g. metals and SVOCs); and limited VOCs, pesticides and metals in groundwater. Exceedances of standards, criteria and guidance primarily include total VOCs (max: 8,900 ug/ kg), total SVOCs (max: 243,260 ug/ kg) and some metals (including lead (max: 2980 mg/kg), chromium (max: 278 mg/Kg), mercury (max: 2.5 mg/kg) and arsenic (max: 16.8 mg/ kg)) for soil and VOC's in groundwater (benzene at 20 ppb; toluene at 5.8 ppb, ethylbenzene at 8.3 ppb and xylene at 33 ppb) and one SVOC (naphthalene at 13 ppb), low levels of metals and low levels of two pesticides (4,4"-DDD and heptachlor epoxide). A Remedial Action Work Plan (RAWP) was prepared in April 2005 to address all contamination from this property including underground tanks and associated contaminated soils, petroleum-contaminated soils, historic fill and C & D debris. The report recommends that contaminants identified in the areas of concern, detected in concentrations above applicable cleanup standards, be removed from the Site, and transported to an appropriate beneficial use or disposal facility. The site does not present a significant threat to the environment.

Site Desc: This site is a part of bigger site known as West 61st Street Site (C231043)which is approximately 62,500 square feet (1.44 acres)comprises of 9 parcels. The West 61st Street site consists of two distinct areas; the Eastern Area (Parking Lot Portionof Lot 43), located on West 60th Street in the northeastern corner of the Site, and the Main Area, situated between West 60th and West 61st Streets. The Tennis Court Area (Eastern Area) consists of an approximately 100 by 150 foot area, slopinggently from east to west and bounded by West 61st Street to the north, a public school to the east, an apartment building to the south, and the Main Area (C231043)of the Site to the west.

WEST 61ST STREET TENNIS COURT AREA SITE (Continued) **S108524792**

Three schools and a NYC Parks Department pool and a community center are present in the surrounding neighborhood. Past uses of this area included automobile repair, gasoline stations, an iron works factory, a metal works factory, a movie studio and residences. The Phase I Site Assessment identified that Lot 43 operated as a gasoline station and contained underground storage tanks (USTs). However, during remediation activities, eight (8) 550-gallon USTs with associated piping were located near the former parking lot attendant guard house in the northeastern corner of Lot 43 (Grid #20) and one (1) 1,500-gallon UST was located in the southwestern corner of the parking lot portion of Lot 43 (Grid #25). These two areas were remediated through excavation, tank removal, and post-removal soil analysis. A third area containging cPAHS (SVOCs) and metals was also excavated and removed. After remediation, the eastern portion of the site will be covered with a base material, and asphalt or a similar material will cap the tennis court. Any landscaped areas will consist of 18 inches of clean soil and six inches of topsoil. The removal of an average of six feet of fill material along the eastern property boundary will be excavated down to bedrock. The proposed development comprises active recreation, including an open tennis court. To accomplish this, five to seven feet of material, from west to east, respectively, will be removed from the existing parking lot. Excavation in the eastern section of this area, from the property line westward 30 to 35 feet, will be down to bedrock. The bedrock is located approximately seven feet below grade on the eastern boundary and slopes towards the west, increasing in depth to approximately 15 to 20 feet below grade along the western border of the area. A Track IV cleanup is achievable with one minimal institutional control to ensure that the integrity of the tennis court pavement, the concrete walkway pavers, and the soil in the landscaped section is maintained to prevent exposure.

VCP:

Program Type:	BCP
Site Code:	332564
Assessment:	Volatile and semi-volatile compounds are present in soils at this site. Exposure to groundwater is not likely since the area is served by public water. The site is paved and is currently used as a parking lot, therefore current exposure to contaminated soils is unlikely. Soils will be removed and excavated to bedrock thereby removing all site-related contamiantion. Soil vapor intrusion into the proposed building will be unlikely since all contamination is being removed as part of the remedy.A soil vapor survey was conducted at the perimeter of the site to evaluate the potential for off-site receptors to be effected. Low levels of volatile organic compounds were detected, but the concentrations do not pose a health concern.
Env Problems:	June 2003 Phase I Environmental Assessment Report identified environmental conditions for the site and indicated evidence of up to 16 storage tanks (UST/ASTs) were present. These tanks were used for storing gasoline, fuel oils, lubricants, waste oils and other materials. These operations have resulted in environmental contamination. Remedial Investigation commenced in late summer of 2005 and was completed by January 2006. The Remedial Investigation Report (RIR) indicated the presence of seven on-site areas of concern. These areas include (1) three locations where underground storage tanks were discovered, (2) one location of elevated lead in the soil (Lot 43), (3) one location where acetone-contaminated soil (Lot 5) was detected, (4)one location of a suspected vaulted tank in a former basement, and (5) one location of petroleum-contaminated soil and groundwater. Groundwater contained benzene, two pesticides and several metals above groundwater standards. The primary contaminants and impacted media at the site include an area of petroleum-contaminated soil; historical fill containing atypical concentrations of contaminants (e.g. metals and SVOCs); and limited VOCs, pesticides and metals in groundwater. An Interim Remedial Measure (IRM) work plan was prepared in February 2006 to investigate and remove some of the areas of concerns identified in RI report. Exceedances of standards, criteria and guidance primarily include total VOCs (max: 8,900 ug/ kg), total SVOCs (max: 243,260 ug/ kg) and some metals (including lead (max: 2980 mg/kg), chromium (max: 278 mg/Kg), mercury (max: 2.5 mg/kg) and arsenic (max: 16.8 mg/ kg)) for soil and VOC's in groundwater (benzene at 20 ppb; toluene at 5.8 ppb, ethylbenzeneat 8.3 ppb and xylene at 33 ppb) and one SVOC (naphthalene at 13 ppb), low levels of metals and low levels of two pesticides (4,4"-DDD and heptachlor epoxide). A Remedial Action Work Plan (RAWP) was prepared in April 2005 to address all contamination from this property including underground tanks and associated contaminated soils, petroleum-contaminated soils, historic fill and C & D debris. Remediation proceeded for Track 1

WEST 61ST STREET SITE (Continued) **S106704107**

Cleanup standards for unrestricted usage. A total of 36,617 tons of petroleum-contaminated soil, 77 tons of characteristic hazardous waste (lead) soil, 43,961 tons of soil containing low-level contaminants, and 1,892 tons of soil containing rock and/or concrete pieces greater than 8 inches were excavated and disposed of off-site. Twenty-six (26) tanks, including ASTs and USTs, were encountered during demolition, excavation, and remediation activities on the Site. All 26 tanks were removed for off-site disposal/ recycling. Approximately 533,490 gallons of groundwater were pumped through the filter system and approximately 888,897 gallons were transported via tanker trucks for off-site disposal. All on-site sources of groundwater contamination were removed during remedial activities. The sub-grade slabs and foundation walls are waterproofed with a barrier and seal system, which also functions as a vapor barrier. All remediation is completed and a Final Engineering Report was approved on December 21, 2007. The site does not present a significant threat to the environment.

Site Desc: The Site is situated on an approximately 1.09-acre area bounded by West 61st Street to the north, West 60th Street to the south, the Track 4 area, a school, and a residential building to the east, and residential buildings, a school, and a commercial automobile parking garage to the west. The Site is located in the County of New York, New York and is identified as Block 1152 and former Lots 5, 8, 10, 11, 12, 13, part of 43, 52, 53, and 55 (current Lot 8 and part of Lot 13) on the New York City Tax Map. The street address of this Site is 229-251 West 60th Street and 218-240 West 61st Street, New York, NY 10023. The results of the remedial investigation, conducted at the Site during 2005, indicated several areas of concern within the Site, associated with past on-site uses. Former Site uses included a gasoline station, an automobile repair shop, an iron works, and automobile parking areas. Several aboveground storage tanks (ASTs) and the likelihood of several USTs were noted during the Phase I ESA. A commercial-industrial facility located east of former Lot 13, which produced buttons and fabric, was noted in the report. Records indicated that the facility utilized two petroleum storage tanks during its operation from 1926to 2003. Three schools and a NYC Parks Department pool and a community center are present in the surrounding neighborhood. The proposed development on the Site includes the construction of a mixed-use residential and office complex with a parkinggarage. The proposed project will contain a total of 384,000 gross square feet of residential space (buildings would be a 27 story tower with two lower and mid-rise components of 9 and 14 stories), totaling approximately 505 units; 31,000 gross square feet of medical office space; court yard area with tennis court and an underground garage for 282 parking spaces. The remedial program was conducted in accordance with the March 2006 Remedial Work Plan and included excavation, removal of allsoil within the Site boundary to the bedrock (8-22 feet deep) and transportation and disposal at off-site approved facilities. A total of twenty-six (26) tanks, including ASTs and USTs, were encountered during demolition, excavation, and remediation activities on the Site. All twenty-six tanks encountered on-site were removed for off-site disposal/recycling. Contaminated groundwater was removed for off-site disposal. A waterproofing layer has been installed beneath the new construction.The Remedial construction was completed in November 2007. A Final Engineering Report was approved on December 21, 2007 for a Track 1 cleanup for unrestricted Site usage. Redevelopment of the Site is on-going. A Certification of Completion was issued on December 21, 2007.

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

56TH STREET INCINERATOR (Continued) **1000264432**

Contact email: JPAWLOWSKI@PACE.EDU
EPA Region: 02
Land type: Municipal
Classification: Conditionally Exempt Small Quantity Generator
Description: Handler: generates 100 kg or less of hazardous waste per calendar month, and accumulates 1000 kg or less of hazardous waste at any time; or generates 1 kg or less of acutely hazardous waste per calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste

Owner/Operator Summary:
Owner/operator name: CITY OF NEW YORK
Owner/operator address: NOT REQUIRED
NOT REQUIRED, WY 99999
Owner/operator country: US
Owner/operator telephone: (212) 555-1212
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Owner/operator name: CITY OF NY DEPARTMENT OF SANITATION
Owner/operator address: BEAVER ST
NEW YORK, NY 10004
Owner/operator country: US
Owner/operator telephone: Not reported
Legal status: Municipal
Owner/Operator Type: Operator
Owner/Op start date: 12/31/1979
Owner/Op end date: Not reported

Handler accessibilty indicator: Transferred to the program or state equivalent.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: Unknown
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No

56TH STREET INCINERATOR (Continued) **1000264432**

Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Universal Waste Summary:
Waste type: Batteries
Accumulated waste on-site: Unknown
Generated waste on-site: Unknown

Waste type: Lamps
Accumulated waste on-site: Unknown
Generated waste on-site: Unknown

Waste type: Pesticides
Accumulated waste on-site: Unknown
Generated waste on-site: Unknown

Waste type: Thermostats
Accumulated waste on-site: Unknown
Generated waste on-site: Unknown

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

VCP:
Program Type: BCP
Site Code: 390497
Assessment: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.
Env Problems: Information submitted with the BCP application regarding the environmental conditions at the site are currently under review and will be revised as additional information becomes available.
Site Desc: This is a new BCP application and pertains to the Mid Block School #57 Project located at 615-649 West 57th Street, New York, New York. This site is approximately 1.36 acres in size. Currently the site is vacant and the future use is planned for residential and commerical uses. Known contaminants at this site are petroleum, chlorinated solvents, other VOCs, SVOCs and metals. They are impacting the soil and groundwater. Soil vapor is also of concern. This BCP application is currently under review and the Department of Environmental Conservation will determine the application's approval and eligibility.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL" Con Ed e2mis no. 141-408 notes: On 02/18/02 at app. 01:26 R. Allen emp.# 10800 reported to m. Gallagher that upon entering vault at app. 01:00 to place field grounds on the transformer that he found app. 3 to 6 oz. Of an unknown oil that ran across the roof of the vault and partially down the ladder which is bolted to the roof. There was no oil on the floor of the vault. this spill looks to be a third party spill awaiting lab results to confirm same. Update: Mon 2/18/2002 1:13 PM Lab Sequence Number: 02-01398-001 < 1.0 ppm PBC. Analysis indicates the presence of a substance similar to a lubricating oil. On 02/18/02 at 18:18 P. Renzulli # 94786 reportedto M. Gallagher that at app. 18:00 the cleanup was complete was complete. Vault was washed with citrus clean. Cleaned ceiling and ladder with citrus clean app. 10 gallons was removed by tanker and washed by flush truck. This vault is on the first floor in front of a Nissan dealership and the motor oil is leaking into vault from their waste oil system. P. Renzulli stated that the oil is coming in thru a crack in the roof of the vault and he believes that this is going to be a recurring problemuntil the dealership has their waste oil system repaired, employee spoke to a employee named Mark at the dealership who told him he would inform his general manger of the problem. 4/2/02: Referred to Rommel for follow up. (JHO) 03/03/03-closespill.
Remarks: believed to leaking from the waste oil at a nissan dealership - sample results indicated lube oil - non pcb - spill called in at req of dec - ref # 14108

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Vivek Nattanmai. December 29, 2005 Reviewed the spill report, identified the property owner and sent a letter dated 12/28/05 to the property owner requesting for information. January 9, 2006 The letter was undelivered because of 'insufficent address'. The report is closed because this is above ground tank and there are no testing requirements for above ground tanks. In addition to this, no spillage occurred. SPILLS CLOSED ON JANUARY 9, 2006. VIVEK NATTANMAI.
Remarks:	Caller reporting a tank test failure it was an above ground tank and a pressure test was used no spillage

DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL" This spill site has been consolidated under Spill No. 9810172. NO SPILL. NO FREE PRODUCTS, NOT A NEW SPILL. THEY FOUND GAS SMELL IN SOILS AND SAMPLED IT. THE SITE WAS TAXI STATION BEFORE. DEC Sigona was assigned this case from DEC Mulqueen. This spill is part of Durst Organization development 601-657 West 57th Street project being managed by Dave Winslow at ATC Environmental (212)253-8280. Also, see spill nos. 9403727 and 9607862 for further information. 10/28/05 - Spoke to Peter Kolodner. Informed him that case manager is Sue Lasdin. Will send report to sue today. - KST 7/11/06 - GZA GeoEnvironmental submitted a GW monitoring report. Based on the monitoring report, only low level VOCs (17 ppb) in GW. Called Dave Winslow of GZA to request a site diagram indicating the location of the previously removed USTs and contaminated soil. He called back and inform DEC that there is still a large volume of gasoline contaminated soil on the site. Site owner is planning to develop the property and excavate the contaminated soil. Asked Mr. Winslow to send a copy of an updated site map indicating the location and approximate size of contaminated soil area. Also, asked him to send in a PDF version of the last GW Monitoring Report. - KST 03/27/2007: This spill case was transferred to A. Doronova. - AD. 04/17/2007: Spoke by phone with David Winslow of GZA regarding submittal of updated site map and any information about excavation of contaminated soil at the site. He promised to send via email all necessary information. AD 04/19/2007: Received an email from David Winslow of GZA. He wrote, that GZA submitted some proposal to the site owner, and as soon as they get approval, GZA will send us all updated information for this site. AD 05/04/2007: Received an email from D. Winslow. He asked if Stipulation Agreement was ever executed for this site.I did not find any information regarding it in the file. I sent a email to Koon Tang (previous case manager) but did not receive any answer. Because this site does not employ any remedial system with discharges to the environment which require DEC permit, probably Stipulation Agreement was not necessary for this site. I wrote email to D. Winslow with such explanation. AD 06/08/2007: Spoke to Dave Winslow of GZA regarding an update of the site status. He said that the owner still deciding what to do at the site. AD Called few times and spoke to both D. Winslow of GZA and Louis Esposito of Durst Organization, Inc. No any following response. AD 09/18/2007: Sent a letter to L. Esposito (owner) with a request to perform groundwatermonitoring round to characterize current situation at the site. Based on the findings, conduct and submit to DEC a summary report with conclusions and recommendations. AD 10/17/2007: Received an email from the vice-president - Alexander Durst. They did monitoring round and currently in a process of report preparation. They changed a consultant. Roux company is their new consultant now. AD 11/29/2007: Received a quarterly groundwater monitoring report prepared by Roux and dated October 31, 2007. Will review. AD 12/17:2007: Reviewed the report. Roux sampled five monitoring wells on August 15-16, 2007 (MW-2, MW-3, MW-5A, MW-6 and MW-7). Slightly elevated VOCs were detected in wells: MW-3(167.5ppb), MW-5A(37.9ppb) and MW-6(16.7ppb).Low concentrations of SVOCs were detected only in well MW-3. The concentrations of VOCs were consistently lower in comparison to previous GW monitoring rounds. In addition, Roux applied for Brownfield Cleanup Program (BCP) for this site. Roux performed additional site investigation including soil, groundwater and soil vapor investigation to aid in the development of a BCP application for this site. Results of this investigation will be provided in the monitoring report for forth quarter of 2007. Spoke with Josh Levine of Roux regarding BCP application. He told me that while there is no significant

631-49 WEST 57TH STREET (Continued) **S104506089**

groundwater contamination at the site, high levels of soil contamination still present according to the results of additional investigation.Roux will continue quarterly GW monitoring and will wait for results of BCP application. AD 02/25/2008: Spoke with J. Levine. He said that they unsure about BCP application approval, so they are now in a process of RAP preparation, which will propose remedial excavation of the contaminated soil at the site. Excavation work is planned to start sometime in April 2008. Work plan will be submitted in mid March. AD 03/17/2008: Received an e-copy of RAP. Will review. AD 03/18/2008: Reviewed the RAP. Roux proposes to excavate central portion of the site for new construction (5-story building). On the east of the planned excavation area there is Heleha apartments and mini storage building. On the west - vacant area, which will be fenced. Based on analytical results, the contaminated soil is located at depth ranging from 4 till 18 feet bls. The remedial excavation will remove all soils from the central area of the site from the surface to the water table (appr 16 feet bls). Inaddition soils below the water table will be excavated to the practical limits of the site development (appr 20 feet bls). The volume of the soil to be excavated and removed offsite estimated at appr. 44,000 cubic yards. Dewatering will be requiredduring soil excavation to facilitate work below the water table. Extracted groundwater will be disposed offsite or treated to meet DEC requirements and discharged to the sewer system. Excavation will be followed by collection of end-point samples. Roux proposes to sample every 50 liner feet. Work plan includes vapor, odor and dust control plan, Health and Safety and Community Air Monitoring plans. The western portion of the site, which consist of area of former parking lot and former one story building (Airborne Express) and existing two story building (Aircraft Strauss company) is not included in current re-development plans. It will be isolated. 03/19/2008: Spoke with J. Levine of Roux. Asked him to submit the site plan with locations of the former USTs and soil analytical data for the western portion of the site, where no excavation is planned. Told him that frequency of the soil sampling in the excavation pit should be changed from proposed 50 linear feet to 25. AD 03/24/2008: Received site plan with former USTs locations and site plan with location of soil and groundwater samples. Analytical data indicate medium levels of SVOCs in soil and low levels of SVOCs in groundwater on the western portion of the site. No VOCs were detected above required standards in this area. Asked J. Levine of Roux to submit UST closure report in PDF format (2003). Also told him that groundwater grab sample should be collected from the area of former 3,000-gallon UST (AirborneExpress lot) and that few monitoring wells should be installed into the sidewalk along West 58th Street and into the sidewalk along West 57th Street to investigate GW in the area of most contaminated borings (SB-12, SB-22 and SB-27) and to monitor effectiveness of remediation. AD 03/26/2008: Received UTS closure report (PDF) downloaded in eDocs. According to the report, soil and GW data for western portion of the site did not exhibit significant levels of SVOCs. VOC concentrations were detected below required standards levels. No GW data for the area of the former 3,000-gallon UST (Airborne Express lot). AD 03/27/2008: Issued an approval letter with the following modifications: Groundwater in the areas of the most contaminatedborings (SB-12, SB-27 and SB-22) should be investigated by installation of at least four additional monitoring wells. Two wells should be located in the sidewalk along West 58th Street and two wells in the sidewalk along West 57th street. A brief work plan showing proposed locations for these wells should be submitted for our review; One groundwater grab sample should be collected from the area of the former 3,000-gallon UST, which is located on the former Airborne Express lot; End-pointsoil samples should be collected from excavation sidewalls every 25 linear feet, and from the excavation bottom on the grid with 25-foot spacings. (cc: J. Kolleeny-DEC; J. Levine-Roux; file). AD 04/25/2008: Spoke with Josh Levine of Roux. Hesaid that they

631-49 WEST 57TH STREET (Continued) **S104506089**

excavated three USTs. Two of them were registered before and were closed in place. They also found one additional 1000-gallon waste oil UST and removed it. They applied for PBS registration for newly found waste oil UST and changed registration for two former closed in place USTs. End-point soil samples were collected. USTs closure reports will be submitted together with 2nd quarter monitoring report. Mr. Levine said that work plan for additional wells installation was sent to the owner for review. General excavation was postponed till the end of this year. AD 05/15/2008: Received a pdf copy of Monitoring Report for the first quarter of 2008. Downloaded it to eDocs. Will review. AD 05/19/2008: Received a hard copy ofQMP for the first quarter of 2008. AD 05/22/2008: Reviewed the report. Four monitoring wells were gauged and sampled during January-March 2008 period. Free product was not observed in the wells. Elevated levels of VOCs were detected in wells: MW-3 (639ppb) and MW-6(141ppb). AD 05/29/2008: Received the requested brief work plan for additional investigation, which proposed installation of four permanent monitoring wells and one temporary well point. AD 06/04/2008: Sent a letter with approval of the work plan with a comment to also sample soil during the wells installation. AD 06/13/2008: Received a phone call from Rory Levy of DCAS. They also involved with this site. He asked what kind of actions we had required from the site's owner in order to cleanup the site. I answered his questions and forwarded a copy of an approval letter for additional investigation. AD 07/09/3008: Received a phone call from Daniel Cole of DEP regarding the approved RAP for the site. He was asking about RAP implementation, on what phase is it now. DEP involved with this site due to re-zoning issues. AD 07/15/2008: Spoke with Josh Levine of Roux. He updated us on AIWP implementation. They will start monitoring wells installation along West 58th Street tomorrow. Some problems were encountered while screening West 57th Street; electric and gas lines were detected in the close vicinity of the proposed wells location at this street. Postponed installation of the wells on West 57th Street. Asked Josh Levine to send an email explaining these issues. AD 07/17/2008: Received email from J. Levine saying: Ainura- This e-mail serves to confirm that monitoring wells MW-8 and MW-9 were installed yesterday, July 16, 2008 inaccordance with the Spill Closure Work Plan Update, dated March 29, 2008 for the subject site. In addition, soil samples were collected during the well installation and a groundwater sample was collected from the vicinity of the former 3,000 gallon underground storage tank on-Site as requested in your approval letters. Groundwater from the two monitoring wells will be sampled and the analytical results will be submitted to NYSDEC in the 3rd Quarter 2008 Monitoring Report. As discussed in our phone conversation on July 15, 2008, proposed monitoring wells MW-10 and MW-11 were not installed due to the presence of a subsurface electric line and gas main in the proposed drill locations in the 57th Street north parking lane. MW-11was originally scheduled for installation in the 57th Street sidewalk, but this well was relocated for proposed installation in the 57th Street north parking lane after identifying that a subsurface parking garage extends beneath the sidewalk. Once the electric and gas lines were identified per the one-call utility field markouts, Roux Associates decided to abandon installation of these wells due to the proximity of the drill locations to the subsurface utilities and the required safetyenvelope (2 feet for electric and 3 feet for gas on both sides of the field markout centerline). This effectively removed the entire parking lane since the electric line was identified parallel with and 1 foot offset from the curb and the gas line was identified 3 to 4 feet beyond the electric line markout. See attached photos which show the 57th Street north parking lane with the red electric and yellow gas field markouts. We can revisit the need for these two wells on 57th Streetafter field construction which is currently scheduled for January 2009. Please feel free to contact me if you have any questions. Sincerely-

631-49 WEST 57TH STREET (Continued) **S104506089**

Joshua B. Levine, P.E. Senior Engineer Roux Associates, Inc. 209 Shafter Street Islandia, NY 11749" 08/15/2008: Received an email from J. Levine saying: "Ainura - Attached herein is an electronic copy of the Second Quarter 2008 Groundwater Monitoring Report for the West 57th Street Project. You will receive a hard copy via FedEx onMonday. A summary of the recent UST closure is included in the attached Second Quarter 2008 report. Please let me know if you have any questions. Sincerely- Joshua B. Levine, P.E. Senior Engineer Roux Associates, Inc. 209 Shafter StreetIslandia, NY 11749 jlevine@rouxinc.com (631) 232-2600 (p) (631) 232-9898 (f) http://www.rouxinc.com" 08/18/2008: Received a QMR for April-June 2008 period. Will review. AD

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRA-NonGen:

Date form received by agency:	01/01/2007
Facility name:	POTAMKIN TOYOTA

POTAMKIN TOYOTA (Continued) **1000149843**

Facility address:	601 W 57TH ST NEW YORK, NY 10019
EPA ID:	NYD981481823
Mailing address:	W 57TH ST NEW YORK, NY 10019
Contact:	Not reported
Contact address:	W 57TH ST NEW YORK, NY 10019
Contact country:	US
Contact telephone:	Not reported
Contact email:	Not reported
EPA Region:	02
Land type:	Facility is not located on Indian land. Additional information is not known.
Classification:	Non-Generator
Description:	Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name:	JAMES BOTSACOS
Owner/operator address:	NOT REQUIRED NOT REQUIRED, WY 99999
Owner/operator country:	US
Owner/operator telephone:	(212) 555-1212
Legal status:	Private
Owner/Operator Type:	Owner
Owner/Op start date:	Not reported
Owner/Op end date:	Not reported

Owner/operator name:	JAMES BOTSACOS
Owner/operator address:	NOT REQUIRED NOT REQUIRED, WY 99999
Owner/operator country:	US
Owner/operator telephone:	(212) 555-1212
Legal status:	Private
Owner/Operator Type:	Operator
Owner/Op start date:	Not reported
Owner/Op end date:	Not reported

Handler accessibilty indicator: Transferred to the program or state equivalent.

Handler Activities Summary:

U.S. importer of hazardous waste:	Unknown
Mixed waste (haz. and radioactive):	Unknown
Recycler of hazardous waste:	No
Transporter of hazardous waste:	Unknown
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	Unknown
Furnace exemption:	Unknown
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No
Off-site waste receiver:	Commercial status unknown

DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "ZHAO/SIGONA" 06/06/01 4:30pm: Zhao talked to Marcus Simons: The owner is Hudson River Park Trust (the State or City agency). Its address is 267-295 Greenwich Street, Manhattan, NY10017. Tel# is (212)791-2530. There is no more drilling for the site. The project AKRF works on is Rt 9A DOT project. Vadim Brevdo, DEC HAZ Waste Section, worked on this project a few years ago with AKRF. AKRF geussed that the pollution came out from adjacent Con Edision Power Plant. Report will be sent to the Department. 06/06/2001 Reference to spill number 0102942 (closed due to duplicate calls)which reported on the same day. 11/21/05 Spoke to Marcus Simons of AKRF (646)388-9527.He said nothing has been done in this area since the contamination was discovered. He doesn't see anything happening here for quite awhile. - Rutland 9/7/06 - Austin - Assigned from Albany to Region 2 staff (Ketani) for review and closure - end 9/28/06 - Raphael Ketani. An engineering firm was doing a geotechnical boring and discovered oil in the boring. They drummed the soil and cleaned up the oil. The oil was at 4' to 6' below grade. Nothing has happened since. I tried calling Mr. Simons of AKRF (646) 388-9527, but could only leave a voice mail. His e-mail is msimons@akrf.com. I

HUDSON RIVER PARK (Continued) **S105057911**

tried calling Mark Gallagher of Langan Engineering at (212) 479-5400, but could only leave a voice mail. I contactedthe Hudson River Park Trust at (212) 627-2020 and spoke to Laurie Silberfeld, Chief Counsel for the park. Ms. Silberfeld said that there is a former Con Ed manufactured gas plant (MGP) site nearby. She said that someone from Albany DER was handling the case, but she didn't know who off-hand. She said to talk to Jane O'Connell, EG2 at Region 2 of DER. I talked to Ms. O'Connell. She said that the MGP site is being handled by Albany DER, but 57th Street and 12th Avenue is 2 blocks south. She doesn't believe the oil there made its way from the MGP site. She said there is a facility that stored #6 oil at this location. I received the following e-mail from Mr. Simons: This northernmost part of Hudson River Park has not yet been built so nothing has happened yet in the vicinity of 57th St. There is a "permanent" Con Ed fuel oil barge with a bulkhead underground/aboveground pumping facility (connected to the power plant on the other side of the highway). It would be my strong suspicion that this is the source of the oil release. Some subsurface disturbance in the vicinity of this pumping facility will eventually be required, but that will be 2007 at the earliest. AKRF is still involved in the project and will work with the Hudson River Park Trust once the design details are finalized to make sure construction in the vicinity addresses this release. Feel free to call me if you have additional questions. Marcus Marcus Simons Senior Vice President AKRF, Inc. 440 Park Avenue South, 7th Floor New York, NY 10016 (P) 646 388-9527 (F) 212 726-0942 9/29/06 - Raphael Ketani. I spoke to Mr. Simons. He said that AKRF is still involved, but the Hudson River Park Trust hasn't finished its designs for this part of the park and so no progress has been made on investigating the area further. However, he said there is a large fuel barge permanently moored at the pier at 57th Street. He said it serves as a large floating tank and pipes go from there through the ground to a Con Ed power plant. He said that the power plant serves the subway system. Mr. Simons added that many investigations and borings have been done at the site. He said that nothing will happen until,maybe, sometime in 2007. I asked him for a report concerning the borings that found oil and any other data he can give me. He said he will put something together. Mr. Gallagher called me back and said that his company is not involved in the project. 1/11/07 - Raphael Ketani. I spoke to Mr. Simons. He said he had forgotten that I had requested documentation regarding the site. He said that nothing is happening and that things are still in the planning stage. He said that he will send medocumentation in the next several days. 6/22/07 - Raphael Ketani. I tried to call Mr. Simons, but could only leave a message. Axel Schwendt, assistant to Mr. Simons, called me back. He said that he didn't know what DEC was looking for in a report. He said that nothing is happening at the site as the Hudson River Park is still work on finishing park property that is south of the site. I told him to have Mr. Simons keep me posted as regards events at the site. He said he will. 10/23/07 - Raphael Ketani. I tried to contact Mr. Simons, but could only leave a voice message requesting an update regarding investigative activity at the site. Mr. Schwendt returned my call. He said that nothing has happened at the site. He added thatthere are no plans to do construction at the site and dig up the area for at least 2 years. I told him that DEC is not going to wait even 1 year for the investigation to begin. I added that something has to start very soon. I told him to talk to Ms.Silberfeld and tell her that an investigation plan has to be submitted to DEC now. He said that he will talk to her. 10/24/07 - Raphael Ketani. I tried to contact Ms. Silberfeld, but could only leave a message. Ms. Silberfeld called me. She said that the site is a Con Ed facility. She said that Con Ed has a barge and fueling facility at Pier 98 at 57th Street. She added that DOS stores its trucks at Pier 97, which is just south. She said that Pier 98 is about 6 blocks south of the MGP site, not 2 blocks. Ms. Silberfeld

HUDSON RIVER PARK (Continued) **S105057911**

mentioned that once DOS moves its trucks to the other side of 12th Avenue during the coming spring and Hudson River Park is ready to construct, then both piers 97 and 98 will be demolished. Hudson River Park has a lease with Con Ed that expires in 2009 and the ending of the lease and the need to investigate the spill and construct the park will serve as leverage against Con Ed. The top 2 feet of the soil along 12th Avenue will be removed and the contaminationinvestigation will take place in sync. with the park construction. 10/29/07 - Raphael Ketani. I made an unannounced site visit. I took pictures of pier 97 and pier 98 (pictures are in E-docs). Pier 97 is a parking and maintenance facility for DOS garbage trucks. Pier 98 is a pumping facility for Con Ed. Beyond this is another pier which is possibly pier 99. It is a DEP facility. Beyond this pier is a construction site. 8/18/08 - Raphael Ketani. The case is being prepared for transferdue to a case realignment within the unit. As no work is scheduled until 2009, the case manager should simply call the responsible party and see when this work is scheduled to take place.

Remarks: PETROLEUM DISCOVERED DURING GEO TECHNICAL BORING NEAR BULK HEAD AT DEPTHS OF 4-6 FEET. WILL DRUM THE WASTE MATERIAL AND CONTINUE CLEANUP.

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This

NYC DEPT OF SANITATION - J SCHIAVONE (Continued) **1000141017**

information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: Con Ed was on site digging and found gasoline contaminated soil. Cross Ref Spill #9403727 relating to NYC Sanitation site at 650 West 57th St. 10/05/05 I notified LiRo (S. Frank) about the spill.AZ ConEd says via e2mis report # 161308 of 9/30: THIRD PARTY SPILL FOUND ON NON CON EDISON COMPANY PROPERTY. LOCATION F/O # 650 W.57 ST E/O 12 AVE .N.Y.N.Y. TIME:04:40 A.M. FELIX ASSOCIATES CONTRACTORS WORKING FOR CON EDISON WAS EXCAVATING AND FOUND A STRONG ODOR OF GASOLINE IN THE EXCAVATION. ALL WORK IS STOPPED AND EXCAVATION IS BARRICADED. NO FIRE, NO SMOKE, NO INJURIES, NO IMPACT TO PRIVATE PROPERTY, NO SEWERS, NO WATERWAYS. M.CAMPANELLI #13447-09/30/2005 THIRD PARTY SPILL. OPERATION REVIEW :09/30?2005--06:45 A.M. SPOKE WITHSUPERVISOR TIM LANGAN ABOUT THIS TASK,AND FOUND SITUATION AS STATED ABOVE.TIM CALLED CHEM-LAB AND SET UP THE APPOINTMENT FOR SOIL TESTING. CHEM-LAB WILL BE ON LOCATIO ON SATURDAY MORNING 10/1/2005 TO TAKE SOIL SAMPLES. THE SITUATION WILL BE ADDRESSED WHEN THE RESULTS COME BACK. THE JOB IS NOW IDLE AND PENDIND SAMPLE RESULTS. GARY SOSO 52484-09/30/2005 THIRD PARTY SPILL UPDATE. Operational update Oct 4th 2005 1:20 p.m. Reported the spill to CIG, Mr.Mc quire and ERT Mr. Duke, because I was under the impression that the third party spill was not reported to CIG. Informed them of third party spill as indicated on 9/30/2005. Interviewed Troubleshooter dispatcher Micheal Campanelli and he informed me that he did report the third party spill to CiG on 9/30/2005 at 5:15 a.m. Chem-Lab results received oil identification-analysis indicates the presence of a substance similar to a light fuel oil received PCB-analysis by EPA 608/8082. aroclor 1242-< 1.0 ppm aroclor 1254 < 1.0 ppmaroclor 1248 < 1.0 ppm aroclor 1260 < 1.0 ppm I Spoke to trouble dispatcher Micheal Campanelli and he informed me that he did report the spill to CIG Mr Mark Schlagel when this report was filed at 05:15 A.M. on September the 30th Gary Soso 52484.Above entered by Geo Breen.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "ZHITOMIRSKY" 10/10/95: This is additional information about material spilled from the translation of the old spill file: CONTAM. SOIL & G/W. TRANSFERRED FROM Y.KRIMGOLD. 10/05/05 The facility was demolished and will undergo reconstruction. Sanitation will excavate for the basement and underground parking to about 20 feet depth. New spill was called in by Con Ed. They discovered soil heaily contaminated with gasolinein front of the facility. I notified S. Frank (LiRo). See also spill #0508045 AZ 1/17/2006 Excavation is pending. New consultants should submit their plan and timetable. AZ 4/11/2006 I contacted Jane Staten (URS). The site was last time sampled in 2002. Groundwater contamination was found but not delineated. Free phase and dissolved phase up to 16, 000 ppb . Excavation is still pending. AZ 9/26/2006 I contacted Jane Staten (URS). They demolished the existing facility, removed the tanks. Closure reports were never submitted by demolition contractors (EPM -environmental consultants), although heavy contamination was encountered. Jane Staten requested tank closure report from EPM. AZ 1/24/2007 At the meeting with DDC/URS on January 10, 2007, the site was

650 WEST 57TH ST (Continued) **S102148380**

discussed. The facility construction is near completion. The tanks were removed. No end point samples were taken. No tank closure reports were issued. Bovis is the construction CM. URS will arrange a site visit with DOS. AZ 9/25/2007 Received e-mail from Jane Staten (URS). There is no information about the area which was excavated for the construction purposes. The construction is still ongoing. I called Jane Staten. She notified me that no post-excavation samples were reported. The area is currently unaccessible. I requested that URS/DDC notify DEC when the construction ends. Excavation and end point sampling should be coordinated with NYC DOS. When the area is accessible URS should submit a sampling Plan based on the previous investigation. AZ

Remarks: WHILE INSTALLING MONITORING WELLS, CONTAMINATED SOIL & G/W WERE DISCOVERED. WILL EXCAVATE CONTAMINATED SOIL- CONTINUE INVESTIGATION FOR SOURCE.

Resource Affected:	Soil
Oxygenate:	False

DEC Memo: 4/4/03-Sigona sent contaminated soil letter. 4/9/2003-Vought: Received message from Joel Landes (212-479-5404). Vought returned call and left message to return call to NYSDEC. Vought again received message and returned call and spoke with Joel.Groundwater not encountered in borings due to refusal on bedrock. Only soil samples were collected. NYSDEC will require groundwater samples if contaminated soil is in contact with bedrock. New school with basement will be built on top of locationof former button factory. Two closed UST's on site (fuel oil). All excavation will be performed beyond present bedrock surface. All unconsolidated material will be removed. Geotechnical borings will be performed including water sampling. NYSDECrequires disposal manifest, site plan, work description and analyticals. Nine borings performed. Joel will register AST with PBS Unit. 4/21/2003-Vought: 4/28/2003-Received letter with copy of PBS registration sent to PBS Unit (Sigona). 5/5/2003-Vought: Received letter from Langan Engineering summarizing phone conversation on 4/7/2003. Touro College will be the new owner of property. Phase I performed by Langan consisted of coring through basement, first floor

TOURO COLLEGE (Continued) **S106012855**

slabs and sidewalkfor soil samples. Refusal on bedrock encountered within several feet of floor. Samples analyzed for STARS 8021/8270. Ethylbenzene, xylenes and napthalene found at concentrations exceeding TAGM 4046 RSCO's. Planned construction will include a basement to a depth of 25'. At completion of excavation Langan will screen rock surface with an organinc vapor monitor. Vought called Landes and reiterated requirement of a water sample if impacted soil is found to be in contact with bedrock surface inaddition to disposal manifests, site plan, work description and soil analyticals. 1/7/04-Vought: Spill transferred from Vought to Austin. 01/27/04-Sawyer: Spill transferred from Austin to Sawyer. November 15, 2005-Durnin: Based on the Remedial Action Report by Langan Engineering, dated February 2005, all contaminated soil was removed to bedrock. Groundwater quality meets standards. Sidewall samples acceptable. This spill is closed.

Remarks: at the above date the site was owned by emsig mfg corp. they no longer own it - caller states they have evidence of low concentrations of petro.

Other Pertinent Environmental Activity Identified at Site

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Sangesland left a voice message with Mark Godick AKRF, asking for additional information on the spill. - DEC Ketani was assigned the case. 10/29/07 - Raphael Ketani. I spoke with Mark Godick of AKRF (914) 922-2356. He said a phase I and a phase II were already done. He said that his company is putting together the phase II right now for his client, Avalon Bay Communities, Inc. They are a long term leesee and are presently negotiating the lease. They have the intent to build residential andcommercial space. The property will be rezoned and so the DEP will get involved and issue a restrictive declaration. Right now, there is a LEXUS Dealership on site. Soil borings were done next to an abandoned AST. Elevated vapor levels were foundin the soil. Contaminated soil was sampled and the lab results indicated elevated levels of VOCs and SVOCs. Mr. Godick wants to do a groundwater investigation before doing soil removal. He said that the plan is to do a deep foundation and dig out all of the soil down to 15 feet, anyway. However, his client wants to remove the soil when they are ready to construct the foundation. I asked Mr. Godick when this would be. He said in two years. I told him DEC will not wait anywhere near that long for the spill to be investigated and remediated. He said that the basement is tight to work in and you can't get the large equipment down there to scoop out the soil efficiently. He said that it would be much easier to remove the soil with the building down and gone. I told Mr. Godick that I understood the matter, but that the investigation and remediation has to take place. We then agreed to a deadline of 30 days to have AKRF submit the groundwater investigation work plan and another deadline of January 7, 2008 for the groundwater investigation to take place. 10/30/07 - Raphael Ketani. I sent out a CSL to the current owners of the property, Four Plus Corporation, with "c-c's" to Avalon Bay and AKRF. I checked the PBS database. Ididn't find a registration for the site. 11/15/07 - Raphael Ketani. I received a letter dated 11/12/07 from Mr. Godick of AKRF stating that the Phase II report will be submitted 11/20/07, the groundwater investigation work plan will be submitted11/29/07, and that the groundwater investigation will start 1/7/08.

LEXUS DEALERSHIP (Continued) **S108956127**

11/21/07 - Raphael Ketani. Today I received the 11/20/07 dated Phase II report from AKRF. Seven (7) soil borings were performed at the site. These were B-11 to B-13 and B-16 to B-19. Of all the borings, B-11 and B-12 were the only ones done in the basement. Boring B-11 had 233 to 236 ppm of total volatiles via the PID meter at 4' to 7.5' below the basement. Boring B-19 had 8.9 ppm of total volatiles via the PID meter at 19'to 20' below grade. For the soil analyticals, there was one exceedence of VOCs (9400 ppb total xylenes) for B-11 from the 4' to 6' sample. For the SVOCs, there was one exceedence from a soil sample from 1' to 3' from B-12. For soil samples from 1' to 4' down for borings B-13, and B-16 to B-18, there were several low level SVOC exceedences of the same analytes. These analytes were benzo series analytes and their associated combustion products. Other borings had low levels of benzo series SVOCs.The only issues are that the following tanks are not registered: motor oil AST abandoned brick encased AST I sent a letter to Mr. Godick approving the Subsurface (Phase II) Investigation report dated 11/20/07. However, there is no PBS registration for the site. So I also wrote that the tanks have to be registered and enclosed a registration form. 12/3/07 - Raphael Ketani. Today I received the 11/30/07 Groundwater Investigation Work Plan. I reviewed the plan and found it to be acceptable. My only question was the placement of the proposed monitoring wells in the vicinity of borings #11, #12, #18, and #19, and not in the vicinity of borings #13, #16, and #17. 12/4/07 - Raphael Ketani. I spoke to Mr. Godick (914) 922-2356 regarding the Work Plan. He said that the positions of the proposed wells was in regard to the location of the known contamination. Borings #11 and #19 were the ones with contamination. 1/9/08 - Raphael Ketani. I tried to reach Mr. Godick regarding the start of the groundwater investigation, but could only leave a voice mail. Mr. Godick called me back. He said that they have already installed 4 groundwater wells and are scheduled to install the fifth one today. After this, they will develop the wells. He said that DEC should get a report sometime in February. Mr. Godick called back. He said that they had a hard time installing the first well. They hit refusal many times. With the second well, they kept hitting refusal and finally hadto give up. Part of the problem is that they have utilities nearby and can't get close to them. However, he said they will keep on going with their 6" O.D. augers. 2/4/08 - Raphael Ketani. I spoke to Mr. Godick today. He said that they did a round of groundwater sampling. A well to the west had benzene at 12 ppb, toluene at 14 ppb, and naphthalene at 100 ppb, with other low hits. He said he will submit the raw data for the wells in an e-mail, along with some language that he would like toput in a cover letter or letter report to DEC. I asked him about the tank registrations. He said that he spoke to the PBS person here in Region 2 and he told him that only the waste oil tanks needed to be registered. So, he is working on gettingthem registered. 2/7/08 - Raphael Ketani. Mr. Godick (914) 922-2356 e-mailed me the soil and groundwater analytical results for borings B-101 to B-104 and wells MW-1 to MW-4. While there were low soil and groundwater hits in a number of instances, the only hit of concern was the 1100 ppb of naphthalene in the groundwater at MW-2, which is near suspected underground lifts. Previously, from the 11/20/07 Phase II report, there were only two hits of concern. These were from a soil sample that was taken at 4' to 6' down at boring B-11. They were 9400 ppb of total xylenes, and 18000 ppb of naphthalene. B-11 is next to a supposedly abandoned AST. I tried to contact Mr. Godick to discuss the contamination, but could only leave a message. 2/11/08 - Raphael Ketani. I spoke to Mr. Godick about contaminated groundwater at MW-2 and the contaminated soil at B-11. We discussed what the options for remediation were, soil treatment as opposed to digging it out. He mentioned that construction wouldn't start for at least 2 years. I told him that work of some kind has to start much sooner. He mentioned that the site is an active dealership with a narrow stairway leading down to the basement where the tank is. He said he didn't

LEXUS DEALERSHIP (Continued) **S108956127**

knowhow they could remove the tank or get equipment down there to do soil removal. We discussed soil solution injections. He said that was a possiblity. Mr. Godick added that he will broach the subject with his client. 2/14/08 - Raphael Ketani. Mr. Godick (914) 922-2356 called. He said that his client is "on board" with the idea of soil treatment for the contamination at B-11. However, Mr. Godick said he needed another week to get the report to DEC. This would be 3/5/08. I told him that will befine. 4/9/08 - Raphael Ketani. I spoke to Mr. Godick and asked him where the investigation report was. He said he was surprised that I didn't get it, but he will make sure I receive it very soon. 4/11/08 - Raphael Ketani. I received the March2008 Groundwater Investigation Report from AKRF on 4/10/08. I reviewed the report. In the Recommendations section, it is stated that they will remove the abandoned AST, and remediate the soil and groundwater with treatment solutions. I had no comments regarding the report, except that they compared the analytical results to Part 375 standards. Spills still uses TAGM 4046. 4/30/08 - Raphael Ketani. I spoke to Mr. Godick today (cell (917) 991-4030). He said that the tank pull has been delayedand is now scheduled to start on 5/6/08. I told him that was fine. 5/15/08 - Raphael Ketani. I received the following e-mail today from Mr. Godick: Finally, after much delay, the contractor has received the permit from New York City Department of Transportation necessary to remove the tank. The work will start on this upcoming Monday (5/19) and is anticipated to take 2 to 3 days. The post-removal soil borings will be completed on the following Tuesday, 5/27. I will reach out to you if there are any unforeseen conditions encountered during these activities. 7/22/08 - Raphael Ketani. Today I received the 7/18/08 tank removal and soil sampling report from AKRF. 7/23/08 - Raphael Ketani. I began my review of the tank removal and soil sampling report. The site is block and lot 1104 and 31. The fuel oil AST next to 11th Avenue was investigated. It was half full with #2 oil. The oil was vacuumed out. A 1/4" hole was found at the east end of the tank. They installed borings B-110 to B-114 in the vicinity of the former tank location. Samples from borings B-111 (west end of tank location) and B-113 had many high hits of VOCs up to 160,000 ppb of naphthalene and 130,000 ppb of 1,2,4-trimethylbenzene. Boring B-111 was higher than B-113, which is to the south. B-111 and B-113 had high hits of SVOCs up to 55,000 ppb of naphthalene. The other borings were largely non-detect. There was no mention of registering the waste oil AST. I checked the PBS and thetank is still not registered. The also didn't mention what they are going to do with the contaminated groundwater at MW-2. They will have 9 treatment solution injection sites in and around the former tank location, but this may not be enough. They should better define the limit of the heavy contamination by doing borings and then add injection points. I sent Mr. Godick a report review response letter stating that they need to define the limit of the heavy contamination, propose how they aregoing to deal with the contaminated groundwater at MW-2, and submit the PBS registration form for the waste oil AST. 7/30/08 - Raphael Ketani. Mr. Godick called me today in response to the 7/23/08 letter I had sent requesting that they do more borings to better define the extent of the contamination. Mr. Godick spoke to his client about the request from the DEC and his client retorted that it was unfair to request so much additional work when the whole site will be dug up in a couple of years. I told Mr. Godick that a well to the south had very high hits of VOCs and it was next to another property. I told him that meant that the contamination probably extended under the neighboring property. I added that the DEC was concerned. Mr.Godick stated that he would like to take another approach to this problem. I suggested seeing whether the product and contaminated groundwater can be collected through pumping. He said that he would like to try installing collection wells and see how much they collect. Mr. Godick added that if the first well collects a lot of oil and contaminated water, then he will install more collection wells and

LEXUS DEALERSHIP (Continued) **S108956127**

remediate the site this way. However, he said, if collection is not practical, then they will do the soil treatment as formerly proposed. I told him that sounded like a reasonable plan. Mr. Godick said that he will send a letter to DEC memorializing the new plan. 8/20/08 - Raphael Ketani. I spoke to Mr. Godick (914) 922-2356. He said that they are in the process of ordering the ORC and RegenOX from Regensis. He said that he plans to install the collection well first and see whether they can recover oil. They will inject the treatment solutions to treat both groundwater and soil. Hesaid that the PBS registration is being worked on. Hopefully, he said, they will begin work in the next week or two. Mr. Godick e-mailed me the 8/8/08 letter regarding the plan to install a recovery well,treat the contaminated soil and groundwater with ORC and RegenOx, and monitor the environmental conditions.

Remarks: LEAK IN STORAGE TANK , PHASE TWO

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

AUTOTECH COLLISION (Continued) **1001968773**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Waste code: D009
Waste name: MERCURY

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS

Test Method: 00
Leak Rate: 0
Gross Fail: Not reported
Modified By: Spills
Last Modified: 20041001
Test Method: Unknown
DEC Memo: 02/03/06: This spill transferred from J.Kolleeny to S.Kraszewski. - SK
9/22/06: Spill transferred from Kraszewski to Kann. 1/25/07 - 1/25/07 - J.Kann - monitoring report submitted on 11/14. Some product remains in two wells. Will prepare a generic letter comenting on report format. A work plan is due end of January 2007. 7/31/07 - Work Plan was approved on 4/13/07. Field work was performed and a investigative report is due by August 15. 12/27/07: J.Kann - Report submitted on 11/8/07. Of the 14 wells on site, two contain free product. These two wells are located in teh former tank area. One well contained approximately 4 inches of product. An accurate reading for the second well could not be obtained because the product was too viscous. A fingerprint analysis indicates teh product in the wells is weathered number 6 fuel oil. Consultant recommends sampling of all wells to determine if dissolved phase contamination exists, and to continue running remedial systemon site(consultant claims it has contained the plume).
Remarks: 30K TANK FAILED AES BROCKMAN #2 WITH A LEAK RATE OF -.87GPH, SOME OIL COMING THROUGH BASEMENT WALL, WILL PUMP OUT & INSPECT TANK. REQUEST THE INSTALLATION OF AT LEAST (4) GROUNDWATER MONITORING WELL

Material FA: Other
Quantity: 0
Units: Gallons
Recovered: No
Resource Affected: Soil
Oxygenate: False
DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL" e2mis no. 151566: at 10:50, 'ei' discovered 1 pint of oily substance on 7th floor retired gallery roof access area in hp. there are retired 25 cycle reactors immediately south of spill area that do not seem to be invloved. the potential source after roof inspection was agreed to be leeching roof insulation tar substance carried by rain water along the storm drain. area was roped off pending sample results. cleanup will follow. further discussion on source and testing lead to decision to reclassify incident type to oil-unknown type. cleanup could not start until initial test results for potential roof tar acm came back. cig and ert (pontecorvo) were consulted/notified. @ 11:45 when the final decision to reclassify was made. agency notification was made @ 13:45 Spill cleaned up on 12/31/03 as presumed ACM and presumed PCB. Waste and PPE stored in asbestos locker. Samples were taken. Asbestos bulk samples came back as non-ACM. PCB Results pending. Waste moved to Hazardous Waste Storage Area and labeled as "Waste Pending Analysis" Total PCB <1 PPM Waste drum was removed from Haz Waste Storage Area and was relabeled and disposedof as Non-Hazardous Waste - Oily solid waste.
Remarks: ROOF TAR FROM RAIN WASHED UNTO CONCRETE FLOOR. NO FIRES, SEWERS, WATERWAYS OR SMOKE. ALL ROPED OFF AND CLEAN UP WILL FOLLOW TEST RESULTS.

Oxygenate: False
DEC Memo: Prior to Sept, 2004 data translation this spill Lead DEC Field was "O'CONNELL"
e2mis notes: Vendor transient barge E15 was within boom at pier with steam supply attached for fuel oil heating. Station fuel transfer hose was not attached yet. Bargecaptain requested steam line hook up at 0230 hrs since the oil temp was 130 deg. While making his rounds an hour after steam was flowing through the heater coils he discovered oil in the steam condensate discharge from #2 starboard tank. The discharge pipe for this tank discharges outside the deck spill plate directly overboard to the river. Plant was notified to cut steam supply to E15. Quick check found all spill contained within boom. Made notifications to USCG, NRC and Clean Harbors. USCG arrived at 0545 hrs. Clean up began at 0420 hrs by S&D and Clean Harbors arrived at 0452 hrs for joint clean up. At 0635 the USCG approved the clean up of the scene and authorized pumping of #6 oil from the E15 to the CE3 captive barge. Estimated volume of spill into water is 2 gallons.
Remarks: E15 BARGE. LEAK FROM COIL ON A STEAM LINE. SPILLED INTO THE HUDSON RIVER. BOOMS PUT IN PLACE. NRG CONTACTED FOR CLEAN UP. CON EDISON REFERENCE NUMBER NOT AVAILABLE AT THIS TIME.

Last Date: 19940728
DEC Remarks: e2mis notes: Vendor transient barge E15 was within boom at pier with steam supply attached for fuel oil heating. Station fuel transfer hose was not attached yet. Barge captain requested steam line hook up at 0230 hrs since the

59TH STREET GENERATING STATION (Continued) **S102239974**

oil temp was 130 deg. While making his rounds an hour after steam was flowing through the heater coils he discovered oil in the steam condensate discharge from 2 starboard tank. The discharge pipe for this tank discharges outside the deck spill plate directly overboard to the river. Plant was notified to cut steam supply to E15. Quick check found all spill contained within boom. Made notifications to USCG, NRC and Clean Harbors. USCG arrived at 0545 hrs. Clean up began at 0420 hrs by S D and Clean Harbors arrived at 0452 hrs for joint clean up. At 0635 the USCG approved the clean up of the scene and authori ed pumping of 6 oil from the E15 to the CE3 captive barge. Estimated volume of spill into water is 2 gallons.

Remark: E15 BARGE. LEAK FROM COIL ON A STEAM LINE. SPILLED INTO THE HUDSON RIVER. BOOMS PUT IN PLACE. NRG CONTACTED FOR CLEAN UP. CON EDISON REFERENCE NUMBER NOT AVAILABLE AT THIS TIME.

DEC Remarks: 7/19/95: Lou Terri - On corner of 59th St 12th Ave. Heavy rain - sewer plugged. Water flooded building, basement and West Side Highway tunnel. Sump pumps in tunnel were not working. mechanic fixed pumps - pumped water to settling tanks beforeoil/water separator - could not handle flow and sludge overflowed. About 2 feet of water in the basement - some of sludge went into discharge tunnel - 10 gallons. Had hard boom outside, and deployed two more. MEG cleaned sludge out from insode boom. Sampled water inside boom - 2.5 ppm oil grease. Building was cleaned, and o/w separator was put back in service. To clean the sludge tank. Must check capacity of tunnel pumps vs. capacity of oil water separator.
Remark: OILY WATER SEPARATOR COULD HANDLE FLOW.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

EPA Region:	02
Classification:	Non-Generator
Description:	Handler: Non-Generators do not presently generate hazardous waste

Handler accessibilty indicator: Transferred to the program or state equivalent.

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	Unknown
Transporter of hazardous waste:	Unknown
Treater, storer or disposer of HW:	No
Underground injection activity:	Unknown
On-site burner exemption:	Unknown
Furnace exemption:	Unknown
Used oil fuel burner:	Unknown
Used oil processor:	Unknown
User oil refiner:	Unknown
Used oil fuel marketer to burner:	Unknown
Used oil Specification marketer:	Unknown

CON EDISION - EXCAVATION (Continued) **1007207838**

Used oil transfer facility: Unknown
Used oil transporter: Unknown
Off-site waste receiver: Commercial status unknown

Historical Generators:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

POTAMKIN CADILLAC (Continued) **1000382743**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead DEC Field was "KOLLEENY" 11/07/05: This spill transferred from J.Kolleeny to S.Kraszewski. 11/30/05: Reviewed Post-Excavation Site Assessment Report prepared by Emipre Environmental Services, submitted December 2002. 650 tons of contaminated soil was removed and disposed of by Allied Waste. Six end point samples were taken from excavation area and analyzed. Two samples show 5 SVOCs above RSCO

HARBORVIEW HOUSES -NYCHA (Continued) **S105996735**

standards. Only one sample had a PIDreading: 0.4ppm. No VOCs were detected. However, depth of the soil borings are not given for any samples taken. Nor is it mentioned if GW was encountered during borings or during tank excavation. Also, no fill port labeled on the diagram and nosample taken at fill port. Must call about fill port and samples. - SK 01/04/06: Only contact number available is for Derek Martin, Heating Coordinator for NYCHA. Several unsucessful attempts to contact him thus far. Will continue to try and reach him. - SK 01/09/06: Frank Inoa from NYCHA called with additional information about the assessment report. The report contains information about the piping: the vent and fill lines were capped and the suction and return lines were removed. Soilexcavated during removal of these lines was also disposed of properly. It is not likely that GW was encountered during the excavation. Frank called the consultant for more information and is waiting for their call. - SK 01/13/06: Frank Inoa fromNYCHA called with additional information for the site assessment. Soil along the fill lines and near the fill port was removed but samples were not taken. Talked with Jon about this situation and we decided that the site assessment was incomplete without the sampling of the fill port area and along the fill lines. I will email Frank a notification of remaining work to be done at the site: Sampling of the fill port area Sampling of the vent, fill, suction and return line area for every 20 feet of piping A Work Action Plan for review by the Department - SK 03/17/06: Sent out Email to Chris Sawyer mentioning additional soil borings along the fuel lines and next to the fill port. - SK 11/28/06 - JKann - report submitted on 11/14. DEC lead transferred from S.Kraszewski to J. Kann.

Remarks: TANK REMOVAL FROM LOCATION AND GROUND CONTAMINATION FOUND. SOIL IS STOCKPILED AWAITING TEST RESULTS.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler accessibilty indicator: Transferred to the program or state equivalent.

Handler Activities Summary:
U.S. importer of hazardous waste: Unknown
Mixed waste (haz. and radioactive): Unknown
Recycler of hazardous waste: No
Transporter of hazardous waste: Unknown
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: Unknown
Furnace exemption: Unknown
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown
