DEC Memo:	Prior to Sept, 2004 data translation this spill Lead DEC Field was "SANGESLAND" On June 13, 2001, DEC Sigona received a tank closure report from AKRF, dated June 13, 2001. Spill was reassigned to Steve Sangesland on Feb 7, 2002 as per request.3/25/2002 - Sangesland reviewed the AKRF Closure Report dated June 2001. The report outlines the removal of a 550 tank and the excavation of contaminated soil down to a depth of 18 feet (ground water level). Four sidewall samples were taken. Allwere clean for VOC's, Three were clean for SVOC's. One side wall sample had SVOC levels over STARS, AKRF suggested that these levels were within "typical background fill" levels. The report was missing a scaled site plan showing the location ofthe former tank and the subject excavation. The report also did not identify if any groundwater sampling had been conducted. 3/28/2002 - Sangesland spoke with Arnold Fleming of AKRF (212- 696-0670) and requested a resubmittal with both a site plan and ground water VOC/SVOC test results. 4/10/2002 - Julie Foley of AKRF called to say more contaminated soil was found around two additional tanks on this site. A new spill number was called in (0110824) and assigned to Tim DeMeo. The siteis a huge excavation site now and the new building going up on

(Continued) **S104950706**

this site will be "500 West 56th St". **********Actions Taken********** 1) Sangesland changes the listed address for this spill to 500 West 56th Street. 2) Sangesland closedout the new spill number (0110824) and referenced that spill number back to this spill number. 3) Sangesland directed AKRF to write a single closure report for the property referencing the new address (500 W 56th)and including both tank/spill locations. 4) AKRF requested the DEC to return the copy of the June 2001 AKRF report sent in previously. ********** Notes rolled over from Spill #0110824 ******** 2/14/02 Plaza Construction and its subcontractors struck 2 abandoned UST's while excavating for a new building foundation at construction site. Tanks removed from site prior to DEC inspectin. Approximately 20 cu. yds. of contaminated soil was stockpiled on site for disposal. DEC Spills requested from AKRF Inc. (environmentalconsultant) copies of analytical data from stockpiled soils, disposal manifests and scaled site drawing depicting former tank locations. Ray Ranami - Plaza Construction 917-577-4656 **********7/2/2002 - Sangesland reviewed a "Closure Report" dated June 28, 2002 and submitted by AKRF (Sarah Lopas 646-459-3525). The report basically brings together the data for 3 seperate tank pulls from the property over a 1 year period. Two of the three locations had "End Point Soil Samples" which exceeded TAGM SVOC levels. AKRF states that this is common for background levels, but there is no "back up data" to prove the point. Sangesland spoke with Sarah Lopas at AKRF about the issue and she'll check it out and get back to the DEC soon. 7/15/2002 - Sangesland spoke with Andy Rudko of AKRF concerning the high SVOC levels at two of the tank pull areas. Andy said the SVOC levels were from historical fill, he also said that at this point the site has been over excavated to clear for the new building. Instead of putting together an exposure report based on historical fill all around the area, Sangesland requested a letter and photographs to document the fact that the area had been excavated further and that AKRF believes the contaminated soil is gone. 2/14/2003 - Sangesland reviewed an AKRF submittal dated January 16, 2003 which contains photographs of the site. These photos clearly show the over excavation of the sitedown to a "sub-basement" depth. Design drawings were also submitted which showed a deep basement area was to be dug out. Clearly the contaminated soil areas are gone from this site. Spill Closed

Remarks: caller removing old tank and found contamination.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL" 3/9/00 Left message for George at Miller to perform site assessment and submit report to my attention. 3/16/00 On site, met George and representatives from Gotham Construction. They demolished an old building that had two large bay areas, a total of 6 USTs - 4 gasoline in northeast corner of property and a fuel oil tanks in the northwest corner and in the southeast corner. There were also two floor drains that discharged directly in the ground. They are constructing a 6 story residential building. Miller performed preclass borings and contamination was encountered to a depth of 15 feet. Refusal was hit at 17'. '93 borings were performed by Soil Mechanics along 55th Street. Bedrock (schist) encountered at approximately 40 bg. Water was encountered above the bedrock at Miller will collect endpoint samples at the terminus of excavation. Miller will also submit the analytical from the borings andfrom the samples collected around the gas tanks for disposal.
Remarks:	during tank removal caller found contaminared soil

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead DEC Field was "VOUGHT" 12/2/2003 Transferred from Sangesland to Rommel 2/25/2004-Vought-Spill transferred from Rommel to Vought. File review by Vought: Supplemental Remedial Action Report (ATC Associates, David Winslow 212-353-8280). Clinton Association for a Renewed Environment authorized ATC to remove four (1000-gallon) gasoline USTs, six (550-gallon) gasoline USTs and one (275-gallon) waste oil UST, oversee the removal of historic fill and the installation of a vapor barrier membrane at 740-744 11th Avenue and 557-561 West 52nd Street. Contaminated soil found beneath four (1000-gallon) USTs resulting in filing of spill #0305881 which was closed after the removal of approximately 34 tons of contaminated soil. Additional contaminated soil was found and this spill number was opened and approximately 74 tons of contaminated soil was excavated and removed after excavation to bedrock. "A Singel Barrier Containment System was installed beneath the floor slab of the building..." "In addition ATC supervised the installation of a soil cap on Januar 5, 2004. The containment system consisted of a vegetative and protective layer, 18" of soil including 6" of top soil, ageotextile filter fabric, protective layer, 6" of compacted soil subgrade". Approximately 3777.5 tons of historic fill were also removed from the site. "The upper one foot of the weathered schist was removed to expose comptent bedrock". No groundwater was encountered abover bedrock at this site. No bottom samples were collected due to the presence of bedrock. Report request No Futher Action. Soil analyticals show no TAGM 4046 Soil Cleanup Objective exceedences. Spill closed by Vought dueto lack of exceedances, extraordinary amount of soil excavation (3777.5 tons) and competency of bedrock.
Remarks:	while doing further digging after a tank removal found contaminated soil

DEC Memo:	This spill has been consolidated under Spill No. 89-04939. See also Spill Nos. 90-09654, 94-00944, 95-05594, 00-07323, 04-03447, 04-05537, 04-13534, 04-13552, and 05-01922. 8/10/2003: Project transferred from Sigona to Harrington (central office) for management. (Sigona) 10/12/2004: Consent order and Corrective Action Plan were executed by the Regional Director. (Harrington) 3/29/2005: Building at 714 11th Avenue was evacuated by FDNY due to elevated levels of gasoline vapor inbasement (11 LEL). Vapor intrusion caused by air rotary drilling at Mobil site as part of station regrade activities. (Harrington) 3/31/2005: Site visit conducted. Met with representatives of Exxon Mobil, Salomone Brothers, Trammell Crow, and the Bull McCabe restaurant. Contacted Chief John Belnavus (FDNY Batallion 9) to discuss the stop work order issued. He lifted the order after our conversation, as Exxon Mobil had presented a satisfactory plan to avoid any further vapor issues in the adjacent building. (Harrington) 6/2/08- DEC Piper. SPill staff recieved notifaction that approx 5 gallons of gasoline was discovered in soil in an excavation adjacent to site. Spill 0802247. This spill has bee nclosed and referred to thisspill. 4/4/2005: Approved RAP amendment during on-site meeting. (Harrington) 4/7/2005: Approved RAP amendment #2 during on-site meeting. (Harrington) 4/19/2005: Approved RAP amendment #3 during on-site meeting. (Harrington) 5/2/2005: Approved CAMP amendment during on-site meeting. (Harrington) 5/6/2005: Security guard was murdered on-site. NYPD believes the motive was robbery. (Harrington) 9/19/2005: Upgrade activities are complete, and station is now operational.Sent letter to Exxon Mobil approving the monitoring well replacement work plan, as all on-site wells were destroyed during the station upgrade. SVE and GWPT systems are on-line. (Harrington) 10/31/2005: Received station upgrade activity report. Sent Exxon Mobil a letter closing spill nos. 04-13534 and 05-01922. (Harrington) 6/8/2006: Approved Well Replacement Report documenting installation of two new recovery wells and an additional SVE well. (Harrington) 6/13/2006: Approvedrequest to shutdown the groundwater recovery system in an e-mail to Exxon Mobil. Stipulated that the upgrade work to the electrical panel shall be completed so that the system can be re-started with minimal delay should the need arise. (Harrington) 8/17/2006: Sent an e-mail to Exxon Mobil approving the

MOBIL S/S (Continued) **S100167717**

hydraulic lift removal report. (Harrington) 8/29/2006: Sent an e-mail to Exxon Mobil approving the sensitive receptor survey report. (Harrington) 2/6/2007: Project transferred from Harrington to Smith (central office) for management. (Smith) 4/19/2007: Approved the installation of two additional remedial wells to expand the Soil Vapor Extraction system. Performed site visit on April 18, 2007. (Smith) 6/22/2007: Two additional wells installed to expand SVE system. (Smith) 7/24/2007: Project transferred from Smith to Harrington (central office) for management. (Harrington) 8/3/2007: PM visited the site with Kleinfelder Personnel (Mooney, Meyerhoefer). O & M of SVE system is on-going. Kleinfelder will soon be proposing the abandonment of several off-site monitoring wells. (Harrington) 2/18/2008: PM sent e-mail to Exxon Mobil regarding the SVE system expansion. Based on increased BTEX concentrations in groundwater (wells RW-2 and VP-MW-9), a revised groundwater remedial strategy shall be proposed by Exxon Mobil. (Harrington)

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead DEC Field was "HARRINGTON" Reassigned from DEC Sigona on August 4, 2003, as per Letter from P. David Smith, Bureau Director, Remedial Bureau B. This spill has been consolidated under spill No. 8904939 DEC Sigona performed field inspections on 10/22/2002 and 10/23/2002 and observed 4,000 gallon steel tank removal activities. There were low levels of petroleum contamination on the tank top and overburden. When the tank was removed at approximately 11:30 A.M. on 10/23/2002 there was petroleum contamination and free product sheen on the water table visible in the tank excvataion. The concrete pad was removed underneath the tank. The DEC Sigona requested that the excavation be backfilled with pea gravel to enhance the vapor recovery effort. The tank was located immediately adjacent to the foundation wall for the Bull McCabe Restaurant located downgradient of the site. GSC indicated that monitoring wells and pea gravelwill be installed at the former 4K tank location. AJS 10/24/2002.
Remarks:	Elevated Photo-ionization detector readings found in soil samples collected from tank pit following tank removal - The site has an active remediation case on-going

DEC Memo: 10/20/2004 Sangesland spoke to Mark at PTC. Cross ref prior spill #0105791 Sangesland requested PTC to perform a tank test on this tank. 12/19/05 Feroze. Spill is transferred from Ketani to Feroze. 12/21/05 Feroze. Talked with Mr. RobertTrebino, the property owner and sent him a letter to submit DEC Tank Test Result. 02/02/06. Feroze Called Mr. R. Trebino(212-284-3795) and left a message for him. PBS case of this site is # 2-112399. According to PBS documents they have one tankof 20000 gallons capacity and it is vaulted with access. 02/21/06. Feroze Called Mr. R. Trebino and left a message for him. 02/24/06. Feroze talked with Operator (212-362-1137) of that building. He told me that building Engr. will call me regarding the issue. Cross ref prior spill #0105791. Building Engr. told me to talk to Robert Trambino. 03/02/06 Feroze talked with Robert. He is requested to submit the documents that he has repaired the tank and the system. Fax no of MR. ROBERT 212-742-2626. 03/15/06. Spill is transferred from Feroze to Kumer Patel. 03/28/06-Hiralkumar Patel. Left message for Robert, property manager and for Mark at Petroleum. 03/29/06-Hiralkumar Patel. Spoke with Mark at Petroleum. he told me that hevisited site first in end of 2004. at that time he removed oil/water mix from tank room and he left. when he left site, it was required to wash that room. then Mark got call again from this site in January this year. when Mark visited site again inJan. 06, he found that room was flooded again with water having oil on top of it. Petroleum has sent out proposal for cleanup and the owner/manager was not agree with this proposal. Mark doesn't know after that. Spoke with Robert and he told me that the person handling environmental matter at this company is out for vacation and will be back on Mon Apr. 3. 03/30/06-Hiralkumar Patel. visited site at 10:00 AM. Met with Robert Trombino, manager of property and Miro Kormanik, super of building. super is working here for last five years. property has 20,000 gas tank in basement. tank is on legs and have access to bottom of tank. no significant oil on tank, means no leaks from tank. at the time of visit, little water was on floor. no signsof oil on remaining water. floor in in bad condition. one spot of concrete floor was popped up due to underground water pressure. as per super, water is coming into boiler room throughout the year through this open spot. the walls of tank room are in good condition except one location. tank room wall towards street side has approx. 10' long crack and this wall is closest side of building wall to the fill port. this crack is approx. 25' below street level. tank room ceiling is about 10' deep than street level. wall below crack has oil stain and it was shining at time of visit. but no odor in tank room. fill port is on 68th street about 8-10 ft away from building wall. when current super started working at this property, they had same situation of water and oil mix into tank room in 2001. at that time, DEP and fire department responded to site. DEP had took samples and found little oil floating on water. when they had problem in 2001, somebody tested tank system and found fill line was leaking. and they had replaced old fill line and put new line at different location approx. 5 ft away from old fill port. during replacement they have dug out some soil but didn't do any soil investigation. it looks like whatever oil they lost from old fill

(Continued) **S105135116**

line leak was coming into tank room through that crack in wall. super doesn't know who removed that oil/water mix from location & tested system and replaced line in 2001. asked super to call back with this information. as per super, water keep coming into tank room after cleanup. Spoke with Mark at Petroleum. as per Mark, they had removed 3700 gal of oil/water mix in end of 2004. when he visited site in Jan. 2006, he found approx. same amount of water/oil at location. the level ofoil/water mix was 6-8 inch. and as per property manager Mr. Trombino, nobody has contacted yet for cleanup of tank room after Jan. 2006. but when i visited site, it looks like somebody removed oil/water from location as no significant water level found in tank room. but when i entered into tank room, i found that tank room floor was wet and broken concrete on floor was soaked with water. Spoke with super and he told me that nobody cleaned room after Jan. and as per him there was no water upto6-8 inch in tank room ever. as per super, water level raise upto 4 inch in lowest part of tank room which is under the tank. no odor complaints in building. super doesn't have daily inventory of oil usage. they order about 6500 gal each time and delivery frequency is depends on whether. they are using #4 heating oil, but PBS record shows #2 heating oil. asked super to submit PBS registration form with necessary corrections. Discussed with DEC Austin. as per Austin, i asked Mr. Trombino tocall city DEP to find out source of water coming into tank room and to workout to correct any defective water line under/near property. as per Austin, this tank would consider as AST as you can look under and around tank. he suggest me to ask property manager for line tests to find out is any line leaking or not. Letter sent out to Mr. Trombino and faxed to Mr. Trombino and Mr. Kormanik asking for soil investigation at sidewalk on 68th street where fill port is and where fill pipe runs, tank test to confirm any leak and groundwater samples at sidewalk. letter faxed to manager and super. Robert Trombino (property manager) Cammeby's Management Co LLC 45 Broadway 25th Floor New York, NY 10006 Ph. (212) 509-9797 Ext.3795 FAX (212) 509-5229 Miro Kormanik (super) Cammeby's Management Co LLC Ph. (212) 362-1159 FAX (212) 362-1491 04/06/06-Hiralkumar Patel. Received call from Abraham from NYCity tank test company (718-731-7011). he did tank test and tank passed. he hasreplaced manhole gasket and petrometer. he will take required samples and will submit lab results to Department. Received fax from New York City Tank Testing Inc. showing tank passed in test. 04/21/06-Hiralkumar Patel. Received call from Abraham from NYCity Tank test company. he was suggesting to take groundwater sample from the inside of the building. and will take two soil samples from the location specified in letter. 05/16/06-Hiralkumar Patel. Spoke to Abraham at NYC Tank Test. they took samples on Mon. May 8, 2006 and waiting for lab results. will get lab results probably end of next week. will call once get lab results. 06/06/06-Hiralkumar Patel. Spoke to Abby. he doesn't get results yet. 06/12/06-Hiralkumar Patel. REceived fax from Abby, contains lab results. soil sample was taken next to the fill box at a depth of 3 ft. further penetration was not possible due to an underground vault. water sample was taken from under the tank room. water sample has napthalene exceeding TGAM limit, but becuase of little exceedence, DEC Austin suggest to close the case. Spoke to Abby at NYC Tank testing. as per him, there is water table at about 12-15 ft below street level. building wall close to street side has 10 ft crackand it is about 25 ft below street level and as per Abby's information, this crack must be below water level. at time of site visit, i have observed oil stain below this crack. Left message for Mr. Trombino to send final report. asked to clean all stains from wall and to seal all the cracks inside tank room. asked to send color photographs after cleaning and sealing of tank room. 06/16/06-Hiralkumar Patel. Received message from Mr. Trombino. Left message for Mr. Trombino. 07/10/06-Hiralkumar Patel. Left message for Mr. Trombino. 07/13/06-Hiralkumar Patel. received message from Berny (917-648-5551) from NYC Tank testing. spoke with Berny. they have

(Continued) **S105135116**

cleaned wall stains and sealed it. he will check about floor and once done will send final closure report. 08/10/06-Hiralkumar Patel. spoke with Berny. he will send final report in next week. 08/23/06-Hiralkumar Patel. spoke with Berny. he has got final disposal manifest and will send final report in couple of weeks. 08/30/06-Hiralkumar Patel. received letter report through fax from Mr. Bauer from NY City Tank Testing. abstract: - found manhole gasket defective. a new gasket was installed and system was retested and passeed - crack in the foundation wall was repaired by chipping 4-6 inches (in depth) of the wall then cemented and water proofed. found another open spill case at the same site for incident of water flood in 2001. spill # is 0105791. Qasim Abidi in remediation group is working on this old case.09/06/06-Hiralkumar Patel. received photographs from NYC Tank Testing. based on available information, case closed. refer old spill# 0105791. 09/12/06-Hiralkumar Patel. sent out NFA letter on owner's request. sent copy of letter to Bernie at NYCTank TEsting and to Qusim at DEC Remediation who was handling case #:0105791.

Remarks: about 25 gallons spilled.spill hasnt been cleaned up yet.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead DEC Field was "VOUGHT" 7/1/02 TJD Received work plan from Emteque (John Raguso). Expedited review at consultant's request. Unable to approve plan as report missing key information and sitenot complete deliniated. Consultant directed to provide a modified plan which includes installation of wells and contains missing report data. Missing data includes: boring logs, MTBE analysis, plume boundaries, scaled map which includes all tanksand relevant site features, groundwater flow direction etc.. 7/1/03 TJD Stu Bassel (LMS 845 735 8300) contacted DeMeo to inform DEC that LMS had taken over project. A work plan will be submitted to remove tanks, excavate accessible soils, usebio-remediation to treat groundwater contamination and soil vapor extraction to remediate the soil contamination. LMS was also directed to provide any recent sampling data & all relevant information regarding the proposed bio-remediation application. In addition LMS was informed hydraulic control would be required if bio remediation is approved for the site. 8/29/03 TJD Reassigned to Vought 9/18/03: Martin Motors submits Supplemental Conceptual Remedial Plan prepared by LMS. In cover letter, Martin Motors reports that approximatley 5 feet of product was found in well MW-2 on or around July 28. Manual bailing program initiated - approx. 20 gallons product recovered through 8/21/03. Product thickness in well dropped to approx2 feet as of 8/21. (JHO, 1/13/05) 1/6/05-Vought-Vought spoke David Rubin (Con Ed 718-204-4219) who is looking to install a substation at this site. Con Ed looking to resolve open spill issue and have BCP pre-application meeting. Con Ed will notify current owner of meeting. 1/10/05 Spill reassigned to O'Connell. Con Ed will be attending pre-app meting with DEC on 1/21/05. Con Ed apparently conducted preliminary off-site investigation, but no report was submitted to the Department. Will request copy at pre-app meeting. (JHO) 5/10/07: On-site cleanup was completed by Con Edison under a Brownfield Cleanup Agreement (site no. C231047, Astor Substation). There is still off-site gasoline contamiantion that remains beneath the sidewalk and street on 11th Avenue. This spill number is being transferred to the Petroleum Remediation group for follow up with the responsible party. (JHO) ---------- ----------8/28/08: Reassigned from Vadim Brevdo to Kartik Chanda.(Chanda)
Remarks:	site work found contaminated soil.

VCP:
Program Type: BCP
Site Code: 337122
Assessment: Public water is provided to the area, thereby preventing exposures to groundwater. The site is currently covered with buildings and pavement, preventing direct contact exposures.
Env Problems: Site investigations conducted prior and after implementation of the BCP agreement revealed that the presence of underground storage Tanks (USTs) that were associated with the former gas station or automobile repair facility; petroleum contaminationin the northwest corner of the site (both on-site and off-site) in soil and groundwater, including petroleum product on the groundwater surface(up to 5 feet of separate-phase product has been detected in an off-site well in the vicinity of the former gasoline filling station located in the north west portion of the site); soil and groundwater near the location of a former oil/water separator in the garage area which is located south east of the site had been impacted by the former site uses (automobile service garage); Soil Gas sampling indicates the presence of VOCs, including both gasoline related compounds and chlorinated solvents (PCE, and TCE) that are consistent with findings in soil, groundwater, and pass site use, The remedial investigation report also identify a NYSDEC spill site (spill # 8904939 petroleum origin) is located at the southeast corner of west 51st street and 11th avenue about one block north of Astor substation site, these off-site properties may be contributing to the soil vapor detections; Low level of PAHs and Metals were detected from on site soil; Sediment samples from the floor drain in the service garage indicated the presence of PCE, TCE and gasoline related compounds with concentration above the TAGM4046 recommended soil clean up objective. The applicant had implemented the approved Interim Remedial Measures (IRM) to recover petroleum product identify in the on and off site wells since September of 2005. The thickness of the petroleum product in groundwater monitoring wells show significant drop as the result of the IRM activities. The quality exposure assessment indicated the lack of exposure pathways at the site because of the current ground surface is covered with impervious surface. DEC has determined, in consultation with NYSDOH, that the conditions at this site do not pose a significant threat to human health or the environment. The RAWP dated December 2005 was approved March 31, 2006 has been implemented. The FERhas been approved and the COC issued in December 2007.
Site Desc: The Astor substation site was formerly called the Riverside Substation site. Con Edison, the project applicant, changed the project name to Astor Substation site in response to discussion with various community members in October 2005. The Astor substation site (0.6 acres in size) is located along the eastern side of 11th Avenue between west 49th and West 50th Street in the Clinton section of the borough of Manhattan, city of New York, at latitude 40 degree 45' 57.2" and longitude 73 degree 59' 40.9", and designated as tax

ASTOR SUBSTATION PROJECT SITE (Continued) **S106906504**

parcels Block 1078, Lots 1 and 5 on the Tax Map of the City of New York, New York County. The street address for the parcel is 700 11th Avenue (which also known as 549-551 and 553-557 West 49th Street), New York, NY 10019. During 1930 to 1940, the site had been used for gasoline filling station and automobile service garage. Prior to its acquisition by Con Edison on April 12, 2005, the site was owned and operated by Martin Motors Sales, Inc. (MMS) as a retail automobile sales and service facility. The area around the site is fully developed as commercial, residential and institutional uses to the east, north and south; with another Con Edison electrical substation located west of the site across 11th Avenue. The building on the site had been demolished in connection with Con Edison's redevelopment of the Site into an electrical substation that is needed to meet the increasing demand for power in midtown Manhattan. The site is currentlybeing redevelop and the electrical substation construction is anticipated to be completed sometime in 2008. Investigations completed at the site include a Limited Phase II Environmental Site Assessment (January, 2005) and Remedial Investigation Report (November 2005). The volunteer has submitted and the Department has approved a Remedial Action Work Plan(RAWP) which involves excavation of soil at the entire site and the nothern portion of 11th avenue sidewalk area along the western site property line down to top of bedrock surface. contaminated media will be removal and properly disposed off-site. Implementation of the approved RAWP start on 4/25/06. Remedial construction was completed on February 2007. Remedial Action Report(RAR) date March 2007 and RAR addendums dated April 2007 and November 2007 respectively, collectively equivalent to a Final Engineering Report. FER was approved on 12/21/2007 and a Certificate of Completion was issued on 12/21/2007.

DEC Memo: 2/11/05 MT/// 10,000 gal #6 FO tank sprung a leak, PTC responding with 2 vac trucks and a spills van to the scene. Plans to clean floor, empty leaking tank, install temporary tanks today. 10/26/2005 Sangesland received a letter from Petroleum Tank Cleaners stating that the initial spill was 30-50 gallons of #6 oil from the tank into the tank room floor. The area was cleaned and manifested. The tank was removed and eventually replaced. PTC tried to drill a hole through the cement floorof the tank room to determine if the soil underneath was impacted. After 14 inches of cement, the drilling was stopped. Spill Closed.
Remarks: TANK RUPTURED AT ABOVE LOCATION AND PETRO. TANK CLEANERS ENROUTE: IN BASEMENT

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 08/13/2008
Date Data Arrived at EDR: 08/27/2008
Date Made Active in Reports: 09/23/2008
Number of Days to Update: 27

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/30/2008
Date Data Arrived at EDR: 05/06/2008
Date Made Active in Reports: 06/09/2008
Number of Days to Update: 34

Next Scheduled EDR Contact: 10/27/2008
Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 08/14/2008

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994
Number of Days to Update: 56

Source: EPA
Telephone: 202-564-4267
Last EDR Contact: 08/18/2008
Next Scheduled EDR Contact: 11/17/2008
Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 07/09/2008
Date Data Arrived at EDR: 07/22/2008
Date Made Active in Reports: 08/25/2008

Source: EPA
Telephone: 703-412-9810
Last EDR Contact: 10/16/2008
Next Scheduled EDR Contact: 01/12/2009
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 12/03/2007
Date Data Arrived at EDR: 12/06/2007
Date Made Active in Reports: 02/20/2008

Last EDR Contact: 09/15/2008
Next Scheduled EDR Contact: 12/15/2008
Data Release Frequency: Quarterly

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 08/19/2008

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/10/2008
Date Data Arrived at EDR: 09/23/2008
Date Made Active in Reports: 10/16/2008
Number of Days to Update: 23

Data Release Frequency: Quarterly

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 09/10/2008
Date Data Arrived at EDR: 09/23/2008

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/10/2008
Date Data Arrived at EDR: 09/23/2008

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

STATE AND LOCAL RECORDS

NY VAPOR REOPENED: Vapor Intrustion Legacy Site List

"Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil.Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

NY HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NJ SHWS: Known Contaminated Sites in New Jersey

The Known Contaminated Sites in New Jersey includes sites under the purview of the Site Remediation Program which have contamination present at levels greater than the applicable cleanup criteria for soil and/or groundwater standards. The sites appearing in Known Contaminated Sites in New Jersey are classified as either active, where the site is assigned to a specific remedial program area, or pending, where the site is awaiting assignment to a specific remedial program area. Sites where no further action (NFA) designation has been given are not included in this report unless there are other areas of identified contamination which have not been remediated. This report includes sites being remediated under all of the various regulatory programs administered by the Site Remediation Program such as: Federal Superfund Program, Federal Resource Conservation and Recovery Act (RCRA), New Jersey's Industrial Site Recovery Act (ISRA), New Jersey's Underground Storage of Hazardous Substances Act, New Jersey's Spill Compensation and Control Act, New Jersey's Solid Waste Management Act, New Jersey's Water Pollution Control Act.

NJ LIENS: Environmental LIENS

A listing of properties with environmental liens. The listing includes sites from the Site Remediation & Waste Management Program Sites where the Department has placed either a 1st Priority or Regular Spill Fund Lien against. 1st Priority Type Lien - a lien placed against the property where the discharged occurred providing that the owners of the property have some responsibility towards the discharge. First Priority Lien is superior to other types of liens. Non-Priority (Regular) Type Lien - a lien placed against the Responsible Party & their revenues and all real and personal property, other than the real property comprising the location of the discharge.

NY VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

NJ ISRA: ISRA Database

The ISRA process begins with determining if the Act applies to your type of business and transaction. The provisions of ISRA only apply to industrial establishments. What is an industrial establishment? The term "industrial establishment" refers to the type of business operations and transactions that would subject a facility to review under ISRA. An industrial establishment must meet each of the following three criteria: The place of business or real property at which such business is conducted, having a North American Industry Classification System (NAICS) code listed in N.J.A.C. 7:26 B - Appendix C subject to the specified exceptions and limitations. The place of business must have been engaged in operations on or after December 31, 1983; and The place of business must involve the generation, manufacture, refining, transportation, treatment, storage, handling, or disposal of hazardous substances or hazardous wastes.

NY SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

NY E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

NY RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

NJ HWS RE-EVAL: Site Re-Evaluation Report

The locations were removed from the Known Contaminated Sites list for a variety of reasons. Some of the sites were taken off the list because they were inactive, some were not assigned a case worker and some were no longer contaminated. Inspectors from the DEP are now undertaking a full re-evaluation of each of the locations statewide. That includes visual and environmental tests to see whether contamination still exists.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers
Source: Department of Health
Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

West Map:	40074-G1 WEEHAWKEN, NJ
Most Recent Revision:	1995

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

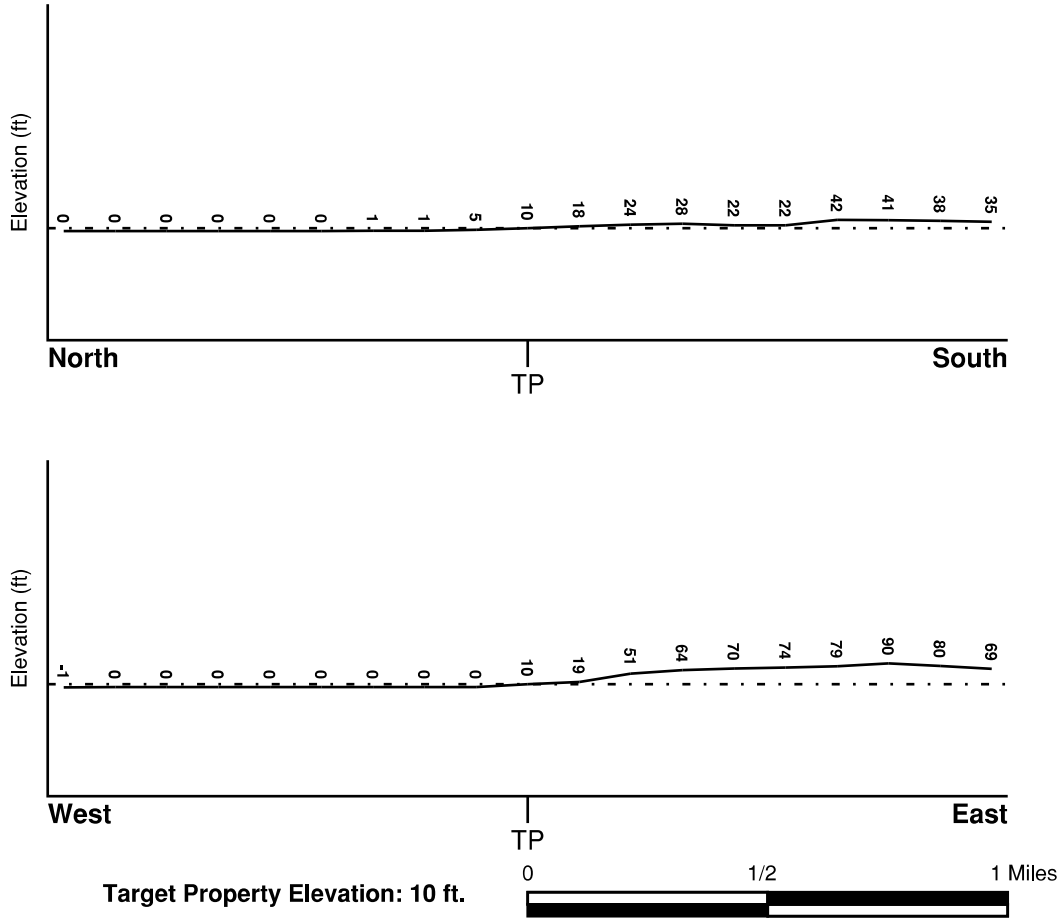
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 10 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
NEW YORK, NY	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property:	3604970031B
Additional Panels in search area:	3604970025B 3604970030B 3604970039B 3402290001B 3402200001B 3402280001B

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT **GEOLOGIC AGE IDENTIFICATION**

Era:	Paleozoic	Category:	Stratified Sequence
System:	Ordovicias		
Series:	Lower Ordovician and Cambrian carbonate rocks		
Code:	OC *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	URBAN LAND
Soil Surface Texture:	variable
Hydrologic Group:	Not reported
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	Not Reported
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands
Source: Department of Environmental Conservation
Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

New York Public Water Wells
Source: New York Department of Health
Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database
Department of Environmental Conservation
Telephone: 518-402-8056
These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon
Source: Department of Health
Telephone: 518-402-7556
Radon Test Results

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

DEC Memo: 5/31/05 mt/// Clean harbors drummed petroleum for disposal, GZA to submit closure report/documentation//// 6/2/05 MT////will be removing the contaminated drummed oil and transformer from vault Wed 6/8/05 report to follow including work description,manifests, end point samples, photos of cleaned area.../////////// 9/12/05 - Raphael Ketani. Got a call from the environmental company, GZA, that they are doing a leaking transformer removal at Presbyterian Hospital in upper Manhattan. They found that the PCB contaminated oil had leaked onto the ground. They did 5 borings and took end point samples. One end point sample came up with oil at 27 ppm PCB. I told the environmental person that they would have to clean up the soil at this boringuntil the end point sample is clean. He said that bedrock is close underneath. I asked how far. He said maybe 15 feet. I said that he may have to go to bedrock, but we must have all of the oily soil removed. He said he would do it. 10/18/05 - Raphael Ketani. I reviewed the PCB-Bearing Transformer Removal Activities report from GZA GeoEnvironmental dated Sept. 27, 2005. I determined that they had completely remediated the contaminated equipment (transformer) and the soil at the site. Therefore, I issued a "No Further Action" letter at their request to Mr. Michael Cabanlit at NY Columbia Presbyterian Hospital, West 165 Street, NY, 10032, and I closed the case.
Remarks: COMPANY COMING TO CLEAN UP. HAS BEEN CONTAINED.REMONING A TRANSFORMER.

DEC Memo: 160745. On 8/26/05 at 21:31 P. Abel # 10966 Shift Manager Of substation operations called to report a spill of Dielectric fluid. He states that at 21:10 they discovered that feeder M-54 has been leaking at a rateof 13 gallons per hr. They know this from the flow meeter. 350 gallons was reported as of that time as per CIG P. Didonato # 01669. They do not know where the spill is as of yet they are in the process of looking for it. P. Abel states that the substance is non-pcb. At this time we do not know if any sewers or water ways were affected. Nor do we know if any private property was affected. No fire or smoke hes been reported to be involved with this spill. At this time no injuries were reportedto be involved with this spill. 8/26/05 21:41 CIG P. Didonato # 01669 was notified. 2 PFT vans sent out. TO crews sent out to check manholes. Allstate and Manetta notified to respond to East River S/S and standby. At 00:55 8/27/05 TO crews foundleak in Mh 61732 on 12th Ave & 38th St. Leak was on weld for 1" save-a-valve formerly used for thermo-probes. Allstate responded and cleaned out manhole and at 04:27 leak was contained using half drum under pipe. Allstate continued to power was manhole. At 08:29 Feeder M54 was removed from service and at 12:52 feeder was on reduced pressure. Safeway started excavating street to break out wall. 5' barrel installation started at 05:30 8/28/05 and at 10:30 8/28/05 welding was completed. Normal pressure was requested and at 17:55 Feeder was at normal. At 02:26 08/29/05 Feeder was returned to service. Allstate measured 2 tankers that were used to pump out manhole and reported that 5650 gallons of dielectric fluid was removed from the manhole. VS 78367 06:45 8/29/05. Sam, Below are soil sample results taken to verify the cleanup associated with the subject incident. In short, we discovered a leak in MH 61732 and in making repairs we broke out the manhole wall. We discovered that some dielectric fluid escaped through the manhole penetrations on the north end of the manhole. We estimated the amount as 5 gallons. Contaminated soils were removed and Jacques Whitford conducted sampling on the north end. The results are below.The report is also attached for your review. Please let me know if I can close this spill or if there are additional efforts we need to make. Thanks for your help. DEC Memo: 10/01/06-Vought-Off hours responder. Vought called Officer Zannis and spill amount was approximately 5-10 gallons and is being currently boomed and contained by USCG. Cause of spill was sunken crane and barge in relation to moving Intrepid. USCG contact is LT Mack (718-354-4119). As per NYPD Zannis DEC response not requested. Vought spoke to USCG Mack who confirmed size and containment of spill. As per Mack barge and crane contained 200 gallons of diesel, 100 gallons of hydraulic oil and 30gallons of engine oil (which were still contained in crain underwater). Miller Launch was deployed and is currently onsite along with USCG investigator (PO Carothers 917-439-5919). Vought called Carothers and left message with DEC contact info. Noresponse requested by USCG due to small size and containment of spill. Vought informed DEC Austin who confirmed that no response was needed however requested that salvage operations be monitored. 10/02/06-Vought called USCG for update on salvageoperations. Vought spoke to USCG and team is onsite and is awaiting salvage plan. Vought will perform site visit. Site visit by Vought. Vought spoke with Tony Rivara (917-715-9429 Pile Foundation) and owner of sunken crane. Divers checked crane and tanks are holding. Crane area contained with boom and sweep and Miller Launch constantly onsite. Rivara providing hourly

Site	Database(s)	EDR ID Number EPA ID Number
PIER (Continued)		S108294601

updates to USCG. Salvage plan was submitted to USCG but has not been approved of as of yet and hence no schedule has beenset for raising the crane. Some sheen however no free product in water. Vought spoke with DEC Austin who requested that Vought contact USCG for spill response provisions in salvage plans. Vought called USCG contact PO Winslow (718-354-4120) for response provisions and left message to return call to DEC. Vought spoke with Winslow and company to do work will be Glatsky Marine services and USCG is assisting in draft the salvage plan and ensured that spill response provisions will be included.Spill closed by Vought due to minor spill amount and supervision by USCG.

Remarks: private construction company with crane on top of barge. Barge sunk causing leak into Hudson River. Coast Guard is on scene attempting to contain spill.

DEC Memo:	Prior to Sept, 2004 data translation this spill Lead DEC Field was "FOLEY" Con Ed e2mis #136736: 4/30/01 14:30 hrs. Carl Bruce #89045, Emergency Supervisor #9, reported at 14:11 hrs. that B. Fergus #12602, Troubleshooter, reported at 14:00 hrs.that he found approx. 75 gallons of unknown oil in service box SB10817 located in front of 419 West 56 Street. According to Mr. Bruce, the oil is possibly home heating oil. #9 was responding to an outage at

Site	Database(s)	EDR ID Number EPA ID Number

SERVICE BOX #10817 (Continued) S105056993

419 W 56 Street when they discovered the oil. The service box was full to the top with oil. The source and cause of the spill is unknown but possibly due to a fuel oil delivery to 417 West 56 Street. Checked conduit plate #30-E-2 and verified no sewer connection. Only secondary cables in service box. Concrete sump not verified. Spill tag #22353 installed. Samples will be taken for PCB, Oil ID and Flash point. Chain of Custody AA21631 issued. No initial cleanup action taken other than placing pigs around service box to prevent migration. Cleanup pending flash point analysis. UPDATE @ 16:51 HRS. Lou First, EH&S Manager, reported at 16:22 hrs. that he is on location with ERT Bill Capune. They have reevaluated the condition of the structure and based on the dimensions of the service box and our discussion it was determined that there is approx. 1/4 inch of oil on top of approx. 500 gallons of water. This equates to approx. 3 gallons of oil. He stated that the fluid is at the top of the structure and that if the cover wereto be placed back on, the fluid would probably go onto the street. The crew will therefore remain on location until relieved by an underground crew. It was also reported that the courier arrived at approx. 16:35 hrs.. Samples will be brought to Astoria for analysis. A discussion of the cleanup then ensued. Environmental Desk will make arrangements for cleanup of this structure. UPDATE: @ 17:50 hrs. Environmental Desk called Clean Harbors at 17:10 hrs. to make arrangements for cleanup of this structure. Clean Harbors confirmed at 17:25 hrs. that they would be able to clean this structure on the 3 to 11 pm shift. Notified Carl Bruce, #9 Supervisor and Flush SOAX of status of cleanup. Note: Clean Harbors will pump service box and do cleanup but they need results of lab analysis before they leave location. Flush SOAX on midnight shift will provide information to Clean Harbors. 05/01/01 02:30 hrs Flash Point results: (214) Units: Deg. MDL: F 05/01/01 02:30 hrs lab seq #01-05300-001, PCB <1.0 PPM 5/1/01 21:06 Received lab results lab sequence # 01-05324-001 Analisis indicates the presence of a substance similar to a degraded light fuel oil. UPDATE: 5/09/01 @ 18:29 HRS. A Chem Lab technician called requesting information about a sample from this service box. The Tech. wanted to know what type of sample we wanted, PCB or Oil ID since he didn't have enough of a sample to do both tests. From our discussion I discovered that he was referring to a different Chain of Custody form. The Chain of Custody form issued was #AA05251, dated 5/09/01 and requested by Mike Melendez, UG North Supervisor. Apparently the manhole was re-sampled again on 5/09/01. I instructed the technician to do a PCB test. UPDATE: 6/27/01 Lab Sequence #01-05543-001 Oil Identification Analysis by NYSDOH 310-13 (Hydrocarbon Scan) Insufficient amount of sample extracted to perform oil identification. Lab Sequence #01-05542-001, Total PCB = < 1.0 ppm 6/28/01 13:47 J. Shin# 85201 Underground (cleanup) supervisor called to report that the cleanup was complete 100 at 13:30. The tanker had removed 550gallons of a water/oil mixture. There was no solid debris. The structure was double washed with slix. & spill tag # 18666 was removed.

Remarks: BELIEVED TO BE A THIRD PARTY SPILL-SAMPLE TAKEN CLEANUP PENDING RESULTS. CON ED #136736.

DEC Memo:	08/27/08 - See eDocs for Con Ed report detailing cleanup and closure. Prior to Sept, 2004 data translation this spill Lead DEC Field was "FOLEY" Cable fire occurred on 8/22/02 at 58th and Lexington Ave. There was no known environmental releaseat this time. However, Con Ed took wipe samples of the floor at the request of a contractor working on the network compartment floors. Wipe samples returned with high PCB results. 3/11/08: Spill submitted for closure by Con Ed. Request rejected,with comment: "Results of final wipe samples collected on 10/2/02 show two locations (middle room point #6 and #15) have results greater than 10.0 ug/100 cm 2, but e2mis report stated "All test points passed and met the criteria of < 10.0 ug/100 cm2". Those two points must be re-cleaned and re-sampled." (JHO)
Remarks:	FIRE WAS AT ABOVE LOCATION-SWIPE SAMPLES WERE TAKEN SHOWING HIGH CONCENTRATIONS OF OIL. CLEANUP TO BEGIN SHORTLY. CON ED #145383. THIS IS A HISTORICAL SPILL.

DEC Memo:	10/23/06 - See e-docs for Con Ed report detailing cleanup and closure. e2mis no. 156508: J.Rodriguez#82289, Sr. Field Operator, notified the control center on 12/09/04 at 01:30hrs. to report he found approx. 20 gallons of an unknown liquid and 30 gallons of water in V3921, which is located at 2 W. 58 ST (5 ave. is the cross street). J.Rodriguez#82289 was at this location to place a ground on feeder 11M41 when he found the spill, he was working, under account number #42224 at the time he found the spill. There was no sewers or waterways were affected. The source and the cause are unknown at this time. There was no private property affected. There is oil filled equipment in V3921, the transformer. The water is standing with no visble movement. A yellow environmental tag #41358 was hung in V3921. There were two samples taken from V3921, one for PCB's and one for oil ID. J.Rodriguez#82289 placed some oil absorbent pads in V3921. W.Capune#85485 of ERT notified the control centeron 12/9/04 at 02:00hrs. to report that after investigating V3921, he determined that there is approx. 2 gallons of unknown oil not 20 gallons of unknown liquid that was first reported. The cleanup is pending test results and I&A investigation. 12/9/04 13:37 received lab results, Lab Sequence Number: 04-10197-001 MATRIX: OIL GRAB PCBs <1.0 ppm 12/9/04 17:45 Received lab results, Lab Sequence Number: 04-10198-001 Analysis indicates the presence of a cooking oil. Update : Feb 03,2005 M.Reiter 27277,reports that a final clean up has been done @ 08:30 by flush and removed water and oil . No solids. Tag 41358 has been removed as well. V0392 was washed twice useing slix,and power washed with flush trk. Clean up persons M.Reiter 27277 R.Ciulla 88398
Remarks:	2 GALS UNKN OIL ON 20 GALS OF WATER IN VAULT. NO TO ALL 5 QUESTIONS. CLEAN UP PENDING.

Dear Mr. McMahon:

We hereby acknowledge receipt of your **Freedom of Information Law** request dated October 16, 2008.

Your request is important to us and will be handled as expeditiously as possible. You are advised, however, that because of the large increase in the volume of such requests, your response may be delayed.

If you have any questions, please call (718)595-3448, Records Access Officer. Please refer to ***FOIL log*** listed below well as any other pertinent information when you call.

Very truly yours,

Records Access Officer

59-17 Junction Boulevard
Flushing, New York 11373

Re: Request for Review of Information
10 Riverside Boulevard
New York, New York
Block 1171 Lots 155 & 165
Langan Project No. 1972201

Dear Ms. Lewis:

Langan Engineering and Environmental Services, Inc. (Langan) is currently conducting a Phase I Environmental Assessment of the above-referenced property. As part of the assessment, we are requesting a general records search for the above-reference property. Please consider this a formal Freedom of Information Law (FOIL) request for records regarding buildings, construction, chemical spills, underground storage tanks (USTs), monitoring wells, ground water sampling, asbestos abatement, radon, hazardous materials, and any other documents that your office may have regarding the above-referenced property. Please consider this request with special regard to possible site identification as a possible "E-designated" property.

The subject property, located at 10 Riverside Boulevard, is bounded by West Side Highway to the west, a parking area to the east, and West 59th Street to the south. The property, which includes portions of Block 1171, Lots 155 and 165, is currently occupied by a parking area and two parking garages (627 and 641 West 59th Street) in the Borough of Manhattan, New York.

If possible, please fax me a response to (201) 794-6913 and send a hard-copy response to my attention at the address listed below. Please contact me at (201) 398-4899 ext. 4434 if there are any questions regarding this request. Thank you in advance for your assistance.

Sincerely,
Langan Engineering and Environmental Services, Inc.

NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION

APPLICATION FOR ACCESS TO RECORDS

(See Instructions on Reverse Side)

NUMBER

APPLICANT

• **TO THE DEPARTMENT OF ENVIRONMENTAL CONSERVATION:**
I hereby apply to inspect the following records under the provisions of the Freedom of Information Law:

please see attached letter

After inspection, should I desire copies of all or part of the records inspected, I will identify the records to be copied and hereby offer to promptly pay the established fees. (Cost of reproduction or 25¢ per page as applicable). Contact me if cost will exceed $_____

Name (Print or type) Christopher McMahon Telephone No. 201-794-1e900

Attention of: Langan Engineering

Mailing Address 1e0 Rivedale Center1, Elmwood Park, NJ 07407

Signature _____ Date 10/16/2008

RECORDS CUSTODIAN

• **TO THE APPLICANT:**

–Records Provided

☐ The reproduction costs for the records provided are $ _____

☐ Records have been (partially, fully) provided. (If not fully provided, date when records are expected to be fully provided: _____)

–Records Not Available

☐ Records cannot be found after diligent search

☐ The Department is not the custodian for records indicated

–Records Denied

I hereby certify that access to the records–or part of the records–circled above has been denied to the applicant for the reason(s) checked below:

☐ Specifically exempt by other statute

☐ Unwarranted invasion of personal privacy

☐ Would impair present or imminent contract awards or collective bargaining negotiations

☐ Are examination questions or answers

☐ Are inter-agency or intra-agency materials that are not:
- statistical or factual tabulations or data
- instructions to staff that affect the public
- final agency policy or determinations; or
- external audits, including but not limited to audits performed by the comptroller and the federal government

☐ Are trade secrets

☐ Could endanger the life of any person

☐ Are compiled for law enforcement purposes and which, if disclosed would:
- interfere with law enforcement investigations or judicial proceedings
- deprive a person of the right to a fair trial or or impartial adjudication
- identify a confidential source or disclose confidential information relating to a criminal investigation, or
- reveal criminal investigative techniques or procedures, except routine techniques and procedures

☐ Would jeopardize an agency's capacity to guarantee the security of its information technology assets, such assets encompassing both electronic information systems and infrastructures

Identification of records withheld (attach listing if additional space is required) and/or explanation if appropriate:

Records Custodian Signature _____ Title _____ Date _____

INSTRUCTIONS

TO APPLICANT: (The completion of this form is voluntary, however, it will facilitate access to records you seek.)

1. Please identify the specific records you wish to inspect under the "applicant" portion of this form, sign in the appropriate place, and give or mail to the ENCON Records Access Officer, NYS Department of Environmental Conservation, 625 Broadway, Albany, New York 12233-1016 or the ENCON official who you know has custody of the records you seek. Please do not submit requests electronically.

2. If after inspection you should desire copies, identify to the Records Custodian the specific records to be copied. Make check or money order payable to the New York State Department of Environmental Conservation for copies reproduced by the Department.

3. If you are denied access to records or portions of records, you may submit a written appeal to the Office of Hearings and Mediation Services (OHMS), Department of Environmental Conservation, 625 Broadway, Albany, New York 12233-1550. Such appeal has to be made within 30 days after you receive the denial. For denials of access to records containing trade secrets, such appeal must be made within seven business days of receipt of written notice of the denial of access. Please attach a copy of this form showing the "Records Denied" portion completed when filing your appeal. The OHMS Appeals Officer will evaluate the appeal and respond in writing to you within ten (10) business days after receipt of the appeal.

TO ENCON RECORDS CUSTODIAN:

1. Conduct search for records:
   - 1a. If records requested for inspection are not in the custody of the Department–advise the applicant if possible as to the identity and location of the proper custodian agency.
   - 1b. If records are found–determine accessibility (see specifically Policies and Procedures Manual, Section 3364.21).

2. After determination of accessibility:
   - 2a. If accessible–make available to applicant for inspection.
   - 2b. If not accessible–complete "Records Denied" portion of this form, make and retain one copy of completed form, and give original to applicant fully explaining reason for denial.

3. If applicant desires copies–collect total cost from applicant, and make copies, (or arrange with applicant to have copies made with outside vendor and applicant pays vendor). Originals must be returned to Department Records Custodian(s).

4. If you are not able to respond to a request within five (5) business days, acknowledge receipt of the request in writing by the fifth business day and estimate when your final response will be made.

SPECIAL NOTE

See www.dec.state.ny.us/website/about/abtfoil3.html for answers to the most commonly asked questions about DEC and the Freedom of Information Law.

Re: Request for Review of Information
10 Riverside Boulevard
New York, New York
Block 1171 Lots 155 & 165
Langan Project No. 1972201

Dear Gloria:

Langan Engineering and Environmental Services, Inc. (Langan) is currently conducting a Phase I Environmental Assessment of the above-referenced property. As part of the assessment, we are requesting a general records search for the above-reference property. Attached is the NYSDEC freedom of information request form. Please consider this a formal Freedom of Information Law (FOIL) request for records regarding buildings, construction, chemical spills, underground storage tanks (USTs), monitoring wells, ground water sampling, asbestos abatement, radon, hazardous materials, and any other documents that your department may have regarding the above-referenced property.

The subject property, located at 10 Riverside Boulevard, is bounded by West Side Highway to the west, a parking area to the east, and West 59th Street to the south. The property, which includes portions of Block 1171, Lots 155 and 165, is currently occupied by a parking area and two parking garages (627 and 641 West 59th Street) in the Borough of Manhattan, New York.

If possible, please fax me a response to (201) 794-6913 and send a hard-copy response to my attention at the address listed below. Please contact me at (201) 398-4899 ext. 4434 if there are any questions regarding this request. Thank you in advance for your assistance.

Sincerely,

Langan Engineering and Environmental Services, Inc.

Re: Request for Review of Information
10 Riverside Boulevard
New York, New York
Block 1171 Lots 155 & 165
Langan Project No. 1972201

Dear Mr. Laws:

Langan Engineering and Environmental Services, Inc. (Langan) is currently conducting a Phase I Environmental Assessment of the above-referenced property. As part of the assessment, we are requesting a general records search for the above-reference property. Please consider this a formal Freedom of Information Law (FOIL) request for records regarding buildings, construction, chemical spills, hazardous materials, and any other documents that your department may have regarding the above-referenced property. In particular, we are interested in the results of a storage tank permit search for any records pertaining to the storage of fuel oil, motor oil, gasoline, or other hazardous or flammable liquids that your department may have. Please find the record search request form with the required search fee enclosed.

The subject property, located at 10 Riverside Boulevard, is bounded by West Side Highway to the west, a parking area to the east, and West 59th Street to the south. The property, which includes portions of Block 1171, Lots 155 and 165, is currently occupied by a parking area and two parking garages (627 and 641 West 59th Street) in the Borough of Manhattan, New York.

Please contact me at (201) 398-4899 ext. 4434 if there are any questions regarding this request. Thank you in advance for your assistance.

Sincerely,
Langan Engineering and Environmental Services, Inc.

Christopher McMahon
Senior Staff Geologist

YEARS WITH LANGAN: 1

SUMMARY QUALIFICATIONS

In his 7 years experience as a consulting Geologist, Mr. McMahon has worked on projects for commercial, residential, and public facilities in four states including Pennsylvania, New York, New Jersey, and Connecticut, under various EPA, USACOE, PADEP, NJDEP, and NYSDEC programs, as well as, varying client protocols.

These projects have included the completion of Phase I environmental site assessments and the design and oversight of Phase II investigations of soil, sediments, groundwater, surface water, soil gas, and air. These projects have required coordination of records acquisition and environmental sampling, construction/demolition activities, wetland permitting issues, and report submittals with site development plans. Mr. McMahon also has significant field experience including implementation and management of all phases of environmental projects involving soil, sediment, groundwater, surface water, and soil vapor contamination including Phase I inspections, Phase II site investigations, Remedial Investigations, and Remedial Actions.

Many of these projects have included his oversight of remedial actions to clean up or mitigate hazardous waste sites in rural, urban, and industrial settings. These remedial action designs have included in-situ soil remedial injections, contaminated soil removal/disposal management plans, and soil vapor intrusion mitigation systems including advanced vapor barriers and sub-slab depressurization systems.

RELEVANT EXPERIENCE

NYSDEC (Region 7) Site Remedial Investigation
Project Geologist at a former industrial facility in Hillcrest, New York. Responsibilities included installation and sampling of soil gas implants, indoor, and sub-slab air sampling according to NYSDEC and DOH standards. Coordinated and directed junior field staff for the field investigation, directed remedial investigation contractor coordination, and completed preliminary reports.

Former Manufactured Gas Plant Site Remedial Investigation
Project Geologist at a Former MGP site in Geneva, New York. Responsibilities included excavation of test pits, installation of bedrock and overburden monitoring wells, bedrock core logging, borehole geophysical surveys and hydraulic conductivity surveying. Sampling responsibilities included groundwater, soil, surface soil and water, sediment and indoor air. Also responsible for subcontractor coordination.

NYSDEC (Region 2) Superfund Site Remedial Investigation
Project Field Geologist at a former dry-cleaning supplies warehouse in Jamaica, Queens, New York. Responsibilities included supervising subcontractors, collecting soil, groundwater, and soil gas samples for laboratory analysis, coordinating hazardous waste disposal, and vendors, and monitoring air quality to conform with URS health and safety standards. The site was located on a busy commercial parking lot, which required daily coordination with client.

NYSDEC (Region 5) Superfund Site Remedial Investigation
Project Field Geologist at a former HAZMAT fire training area in Whitehall, New York. Responsibilities included supervising subcontractors, collecting environmental samples, conducting slug tests to estimate the hydraulic conductivity of various soil facies. The data collected was used in GIS to predict the rate of contaminant migration, which helped close the site. Coordination of field staff, vendors, and business owners at a neighboring site were essential to the successful completion of this project.

Former Manufactured Gas Plant Site Investigation/Confidential Client
Field Geologist for a bedrock investigation at a former MGP facility in Mechanicville, New York. Responsible for supervision of subcontractors, and collection of environmental samples.

Remedial Investigation of Industrial Facility/Confidential Client
Field Geologist responsible for soil gas survey at a former industrial facility in Batavia, New York. Responsibilities included supervision of junior field staff, set-up and operation of field monitoring equipment, and installation and collection of Gore-sorbers.

OGS Geotechnical Survey for Construction
Field Geologist responsible for conducting a geotechnical investigation at an active medium security prison in Rome, New York. Responsible for supervising subcontractor, coordinating with OGS and collecting geotechnical samples for a construction site.

Report Tabulation/Various Clients
Compile and organize historical soil, groundwater elevations, and groundwater analytical data using Microsoft excel, access, word, adobe acrobat and other software programs. Information is utilized for the construction of maps and cross-sections to evaluate the nature, extent and fate of soil and groundwater contamination. Also Bentley Microstation for the generation of engineering maps.

YEARS WITH LANGAN: 7

SUMMARY QUALIFICATIONS:

During his employment with Langan, Mr. King has worked on over 150 projects for commercial, residential, and public facilities in seven states including Pennsylvania, New York, New Jersey, Connecticut, Maryland, Virginia, and Florida under the oversight of various federal, state, and local environmental protection agencies including US EPA, PADEP, CTDEP, NJDEP, NYCDEP, and NYSDEC programs, as well as, varying client protocols.

These projects have included the completion of Phase I environmental site assessments and the design and oversight of Phase II investigations of soil, sediments, groundwater, surface water, soil gas, and air. These projects have required coordination of records acquisition and environmental sampling including asbestos, mold, and lead-based paint abatement, construction/demolition activities, wetland permitting issues, and report submittals with site development plans. Mr. King also has a significant field experience including implementation and management of all phases of environmental projects involving soil, sediment, groundwater, surface water, and soil vapor contamination including Phase I inspections, Phase II site investigations, and Remedial Actions.

Many of these projects have included his design and oversight of remedial actions to clean up or mitigate contaminated and hazardous waste sites in rural, urban, and industrial settings. These remedial action designs have included in-situ soil remedial injections, contaminated soil removal/disposal management plans, and soil vapor intrusion mitigation systems including advanced vapor barriers and sub-slab depressurization systems.

In addition, Mr. King is experienced designing and programming using geographic information system (GIS) software such as ESRI ArcGIS; database tools such as GCA's gINT, Earthsoft's EQuIS and Microsoft Access; and computer aided drawing and drafting programs including AutoCAD.

RELEVANT EXPERIENCE

Remedial Investigations, Consolidated Edison, Manhattan, Bronx, Queens, and Brooklyn, New York – Coordinate extensive underground street utility clearance operations, oversight of New York City Transit subway tunnel remediation projects, NYCDOT and MTA-NYCT permitting for investigation and removal of dielectric fluid and impacted soil associated with historical leaks from Con Edison feeder lines. Investigation work includes writing work plans and investigation reports, completion of soil borings, rock coring, and monitoring well installations, as well as soil and groundwater sampling and associated laboratory coordination. Remedial work includes the design and installation oversight of a dielectric fluid LNAPL recovery and treatment system at a power substation.

Phase I Investigations – Confidential Client – New York, New York – Conducted Phase I environmental site assessments of commercial/residential property comprising twelve city blocks on Manhattan's West Side.

Remedial Investigation, Former Penick Corporation Site, Montville, New Jersey (ISRA) – Involved with remedial investigation, site characterization, and contaminant migration modeling activities of a former pharmaceutical manufacturing facility. Tasks included collection of groundwater samples for environmental analysis for long-term groundwater monitoring program and participating in developing groundwater monitoring reports as well as management, conversion, and development of the site-wide geographic information system (using ArcGIS, EQuIS Chemistry and EQuIS Geology database systems) for all historical analytical and geological data and information.

Sky View Parc – Muss Development – Flushing Meadows, Queens, New York – Designed and oversaw the installation of a sub-slab depressurization system to mitigate potential soil vapor concerns at this NYSDEC Brownfields Redevelopment Project. The system covers the ±110,000-sf footprint of the project's main mixed-use commercial and residential structure.

Radon Mitigation System Design, New Jersey School Construction Program, Various Sites throughout New Jersey – Coordinated design and specifications of radon venting systems for new and existing school construction projects with architects, mechanical engineers, environmental professionals, geotechnical engineers, and foundation contractors.

GIS Mapping Database Design and Management - New Jersey Turnpike Authority – Guided the NJTA through the design of a cost-effective GIS to map and manage its stormwater outfalls to meet NJPDES stormwater management permit requirements for the entire lengths of the NJ Turnpike (113 miles) and Garden State Parkway (172 miles). Also modified the GIS design to map the remaining drainage structures for maintenance and repair activities. These drainage structures were then mapped against NJDEP wetland and threatened/endangered species habitat areas in order to obtain Freshwater Wetland General Permits, Waterfront Development Permits, and Coastal Wetlands Permits from NJDEP.

Underground Storage Tank Closures - New Jersey Turnpike Authority – Oversaw and documented the removal and closure of underground storage tanks and associated underground piping at three Garden State Parkway facilities. Coordinated the closure activities and the permitting process with the tank removal subcontractor, as well as with personnel and inspectors from the Parkway, New Jersey State Police, NJ Department of Community Affairs, and NJDEP.

EQuIS Geotechnical Database Management - Port Authority of New York and New Jersey– Designed data management guidelines and standard operating practices, electronic data deliverable preparation and data importation into Port Authority's organization-wide Geotechnical EQuIS and CAD databases. Data manipulation included creation of boring logs and fence diagrams for facilities

including Kennedy, Newark Liberty, LaGuardia, and Teterboro Airports, the George Washington Bridge, and the Lincoln and Holland Tunnels.

NYCDEP E-Designated Properties – Various Clients, New York, New York – Managed several sites through the New York City Department of Environmental Protection (NYCDEP) 'E'-Designated property permitting process from initial Phase I site assessments, Phase II Environmental Investigations, and Remedial Actions while also addressing construction worker and community health and safety air monitoring, air quality, and noise attenuation requirements and procuring release of NYC Building Department permits.

The Urban Glass House – New York, New York – *GNYCUC 2007 Outstanding Residential Project of the Year*. Managed the site through the New York City Department of Environmental Protection (NYCDEP) 'E'-Designated property permitting process from initial Phase I site assessment, Phase II Environmental Investigation, and Remedial Action while also addressing construction worker and community health and safety air monitoring, air quality, and noise attenuation requirements and procuring release of NYC Building Department permits.

Remedial Investigation and Action, Lowe's Home Center, Maple Shade, New Jersey – Investigation and removal of underground piping, hydraulic lifts, and underground storage tanks associated with a privately owned transmission shop prior to land development. Coordination of post-remedial groundwater investigation. No further action determination letter issued by NJDEP.

Remedial Investigation and Action, Lowe's Home Center, Staten Island, New York – Investigation and removal of contaminated soil associated with underground piping and underground storage tanks at a privately owned gas station prior to land development.

Remedial Investigation and Action, New Horizons Shopping Center, Bronx, New York – Investigation and removal of underground piping and contaminated soil associated with a large land development project that encountered contaminated historic fill material. No further action determination letter issued for site.

Deed Restriction Modification Oversight, The Watermark, North Bergen, New Jersey – Managed the excavation, characterization, and offsite disposal of approximately 30,000 tons of soil associated with a large residential land development project that encountered contaminated historic fill material in the mud flats along the Hudson River under a pre-existing Deed of Environmental Restriction (DER). Oversaw the implementation and maintenance of an onsite perimeter and work zone air monitoring network in order to use real-time data to control dust and odors resulting from construction activities. Upon completion of the development project, a revised Deed Restriction meeting the current NJDEP Tech Regulations was drafted and filed.

Soil Management Oversight, Former Crown Cork and Seal Factory, North Bergen, New Jersey – Managed the excavation, characterization, and offsite disposal of approximately 40,000 tons of soil and concrete associated with the construction of a large commercial development project on a former industrial site. Included addressing the presence of former industrial equipment including former boiler rooms, tanks, hydraulic lifts, floor drains, and associated contaminated material.

Remedial Investigation and Action, Riverfront Center, Elmwood Park, New Jersey – Coordinated subsurface injections of peroxide and persulfate solution to actively remediate gasoline contaminated soil as well as the associated groundwater sampling program used to monitor effectiveness.

Phase I Investigations for Costco Wholesale Corporation, Target Corporation, Lowe's Home Centers, Inc., & Giant-Eagle Grocery Company – Pennsylvania, New Jersey, New York, and Virginia – Conducted Phase I environmental site assessments in accordance with ASTM and special client-specified protocols.

Phase I Investigations, various clients, Connecticut, Pennsylvania, New Jersey and New York – Conducted over 40 Phase I environmental site assessments in accordance with ASTM and special client-specified protocols.

In-House Instructor – Design and teach courses in ArcGIS, AutoCAD, Health & Safety, Subsurface Utility Clearance, Field Investigation Techniques, Vapor Intrusion Mitigation, New Employee Orientation, First Aid, and CPR. In addition, responsible for training new employees in groundwater and soil sampling techniques, GPS data collection, general data management, and radon/soil vapor remediation design.

YEARS OF EXPERIENCE: 25

SUMMARY QUALIFICATIONS

Mr. Ciambruschini has over twenty-five years experience in hydrogeologic and environmental investigations including management of environmental and geotechnical investigations relating to petroleum and chlorinated solvent spill sites, underground storage tank sites, manufactured gas plant sites, landfills, wastewater treatment facilities and industrial/commercial sites. His experience includes managing environmental compliance audits, remedial investigation, pre-acquisition due diligence and permitting assessment, feasibility studies and design, construction and operation of complex innovative remediation systems to treat, contain and recover contaminated soil and groundwater. These projects are managed under various NJDEP, PADEP, NYDEC, NYCDEP and CTDEP programs. Mr. Ciambruschini provides consultation to a diverse group of clients including private developers, utilities, retail and industrial facilities and is expert in assessing funding options under various state and federal grant, loan and tax reimbursement programs including Brownfield programs.

RELEVANT EXPERIENCE

Con Edison Appendix B Spill Sites - This program includes investigation and remediation of spills of dielectric and fuel oil feeder lines throughout NYC. Detailed assessment using geophysical surveys, mapping, and drilling techniques to assess the location of utility corridors below heavily trafficked roadways and contaminant migration pathways is conducted and coordinated with various city agencies including MTA, DOL, and NYCDOB. Langan has designed, installed, maintained and operated oil recovery systems and coordinated cleanup of dielectric fluid spills into subsurface structures including subways within and below the most heavily traveled roadways in Manhattan. Under Langan's guidance, fifteen sites have been assessed, remediated and cases closed by NYSDEC. Numerous product recovery systems are currently being operated and continue to recover hundreds of gallons of oil impacted groundwater via cost efficient skimming and recovery methods.

Former Petroleum Refinery - Nassau County, New York (Brownfield) – Senior Project Manager for remediation of a former oil storage and distribution facility on a 15-acre site to allow for retail redevelopment. Remedial investigation including conventional soil and groundwater drilling and sampling programs to assess the extent of shallow petroleum and deep chlorinated volatile organic contamination, aquifer testing and assessment of tidal influence on groundwater flow and nutrient concentrations in groundwater, geophysical assessment of stratigraphic zones and contaminant pathways and pre-design assessment of physical and chemical soil properties. Remedial design and pilot testing for oil recovery from an upper aquifer zone included biosparging in conjunction with separate phase groundwater recovery and remediation for an underlying sand unit included chemical oxidation in conjunction with biosparging/biotreatment as a polishing stage. Design of a multi-layered sub-slab soil venting and monitoring system was also conducted to allow for future site reuse.

Unilever USA – New Jersey (State Hazardous Waste Sites, RCRA. ISRA) – Conducted and designed remedial investigations that included soil and groundwater sampling, geophysical surveys, CPT, aquifer testing and ecological risk assessment (sediment sampling and bioassay) to assess impacts to glacial lacustrine sediments and fractured bedrock (along the Ramapo Fault) in former UST, lagoon and manufacturing areas of former pharmaceutical and textile plants. Designed cost effective biosparging and nutrient recirculation systems to address the presence of petroleum and chlorinated solvent impact to soil, groundwater, surface water and onsite wetlands and coordinated wetland permitting to allow for excavation and mitigation of impacted wetland areas. Innovative technologies including thermal treatment and biosparging have been utilized or proposed to address deep, compact soils while conventional techniques including deep excavation using sheeting and dewatering have been conducted to address more accessible impacted areas. Data management tools including EQUIS, GIS and GINT are utilized to manage data generated from on going sampling of over 40 monitoring wells and operation and monitoring of various remediation systems.

Blue Back Square -West Hartford, CT (UST, Transfer Act) - Project manager responsible for environmental engineering for the urban redevelopment of downtown West Hartford at a former automobile repair garage. BBS is a million square foot mixed-use development consisting of residential, office, retail, municipal parking garages, public buildings and public spaces. In order to allow for site redevelopment, Langan was tasked with delineated the extent of impacted soil and groundwater in the area of underground storage tanks, hydraulic lifts, former repair and painting areas and floor drains and designing an implementing a soil management plan during construction to allow for reuse of geotechnically suitable soils below proposed building areas. In addition to coordination of health and safety and soil reuse requirements during site work, Langan provided required documentation of remediation (soil excavation, disposal and reuse) as the Licensed Environmental Professional for the project and designed and is currently implementing a groundwater monitoring program in conjunction with permitting for building sump designs for discharge in impacted groundwater and use of sub-slab venting systems to address volatilization of contaminants from groundwater into buildings to allow for continued use of the site.

Former MGP Site – Brooklyn, New York (VCP Site) – Project director responsible Site activities including installation of test borings and monitoring wells, excavation of petroleum impacted soils, pilot testing of vapor extraction and thermal remediation technologies were conducted to address

contamination at a former Brooklyn Union Gas site. Langan is currently assessing remediation options, vapor collection/treatment, and long-term ground water monitoring requirements in former gas-holder areas to allow for construction of retail buildings.

Brooklyn Law School – Brooklyn, New York (DEC Spill Response Site) – Conducted pre-construction Site/Remedial Investigation activities to assess the extent and impact of petroleum spills from past dumping and underground storage tank discharges. Investigation activities included completion of test pits, test borings and monitoring wells, and review of previous, existing, and proposed site topographic conditions to assess extent of contaminated fill materials, native soil and soil disposal/reuse options.

Greenwich Street Site – Manhattan, New York (DEC, DEP Spill Response Site) – Conducted Preliminary Assessment and Site/Remedial Investigation activities to assess the type and extent of petroleum and chlorinated solvent contamination resulting from past spills from former USTs, fuel oil feeder lines and dry wells at historical garage, industrial and residential facilities. Site Investigation and Remedial Investigation Workplans and Reports and a Health and Safety Plan for proposed site construction were prepared by Langan for submittal to NYSDEC – Division of Environmental Remediation, NYCDEP and the NYC Bureau of Standards and Appeals. A Remediation Plan including hot spot excavation, soil reuse and site capping was approved to these agencies based on a risk-based remedial alternatives analysis.

Proposed Supermarket Sites – North White Plains and White Plains, New York (WCHD Lead Sites) – Conducted site investigations consisting of soil and groundwater sampling at former dry cleaners, auto dealership and repair shop sites to assess impacts of discharges of petroleum contamination from underground storage tanks and hydraulic lifts and feeder lines and of chlorinated solvents from dry cleaning and degreasing operations. Remedial activities included UST removals, and soil excavation and offsite disposal. No further action recommendations were approved by the Westchester County Health Department regarding petroleum releases. Ongoing ground water monitoring is currently being conducted as part of a Voluntary Cleanup Agreement with NYSDEC.

Dayton Plaza – Queens, New York (Inactive Hazardous Waste Site) – Completed Site and Remedial Investigation activities including a completion of test borings and monitoring wells, air sampling to assess contaminant volatilization issues, geoprobe sampling and a tidal elevation survey to assess the extent of chlorinated solvent contamination resulting from past discharges from a dry cleaners. Designed, installed and operated an air sparing/soil vapor extraction system to address elevated levels of tetrachloroethene and vinyl chloride in ground water. The site is currently listed as a Classification 2 Inactive Hazardous Waste Site. As operation of the SVE/AS system has resulted in decreasing contaminant concentrations in soil and ground water, a petition for reclassification has been filed.

Stop & Shop/Edwards Food Stores – Retail/Supermarket Development – Various projects in New Jersey, New York, Pennsylvania and Connecticut requiring completion of Phase I and Phase II Assessments prior to proposed site redevelopment. Coordination and oversight of Remedial Investigation and Remedial Action activities including underground storage tank removals, asbestos abatement, and lead-based paint abatement. Preparation/submittal and review of cleanup plans

and bid specifications for completion of investigation/abatement activities and for review by local/state/federal agencies under voluntary cleanup, Brownfields, Underground Storage Tank, Property Transfer Act, and Environmental Quality Act regulations.

Former Macy's Facility – Bloomfield, New Jersey (Voluntary Cleanup – Asbestos/Demolition) Managed/coordinated Remedial investigation and Remedial Action activities to address areas of concern including underground storage tanks and past discharges of chlorinated solvents. Prepared demolition/asbestos specifications for a 500,000 ft^2 building and managed air monitoring and demolition/construction activities relating to the former building and proposed retail building.

Stop & Shop/Edwards Food Stores – Retail/Supermarket Development – Various projects in New Jersey, New York, Pennsylvania and Connecticut requiring completion of Phase I and Phase II Assessments prior to proposed site redevelopment. Coordination and oversight of Remedial Investigation and Remedial Action activities including underground storage tank removals, asbestos abatement, and lead-based paint abatement. Preparation/submittal and review of cleanup plans and bid specifications for completion of investigation/abatement activities and for review by local/state/federal agencies under voluntary cleanup, Brownfields, Underground Storage Tank, Property Transfer Act, and Environmental Quality Act regulations.

Rubin Organization/Retail Facility, Warrington, Pennsylvania – (Pre-construction Surveys) – Conducted Phase I and Phase II investigations addressing issues including underground storage tanks, asbestos abatement and building demolition. Prepared Hydraulic Investigation regarding surface water drainage issues and impact to groundwater concerns regarding karstic terrain.

Westwood Linen Company, Westwood, New Jersey (Voluntary Cleanup – Demolition/Redevelopment) Completion of Phase I Assessment, Remedial Investigation and Remedial Action activities at a 70 year old laundry/dry cleaner facility. Remedial investigation activities included aquifer testing and delineation of chlorinated solvents in groundwater, delineation of pesticide contaminated soil and an assessment of impacts to onsite and offsite ecological receptors (wetlands). Remedial Action included excavation, offsite disposal and site restoration of a large area of pesticide contaminated soil. Coordination with site developer and lenders regarding asbestos abatement, tank removals and well abandonment for proposed site redevelopment.

Halby Chemical Sites, Delaware (CERCLA) - Field operations leader responsible for implementation of sampling operations and sampling QC. Preparation of Preliminary Assessment Report and review of Ecological Risk Assessment issues.

Scientific Chemical Processing, Carlstadt, New Jersey (CERCLA) - Onsite contractor coordination for site remediation associated with HDPE liner installation.

Norton-Chemplast, Wayne, New Jersey (ISRA, BUST, NJPDES) - Field investigation and preparation of remedial investigation reports for ISRA investigation of Teflon manufacturing facility. Soil remediation, UST removal, groundwater plume delineation of chlorinated solvents, and aquifer testing completed. Designed and implemented a seismic refraction survey to assess subsurface conditions relative to transport of chlorinated solvents in unconsolidated and bedrock aquifers.

NJ Transit, Lakewood Bus Garage (BUST) - Test borings and monitoring wells completed as part of a subsurface investigation of former underground storage tanks and past discharges from hydraulic lifts. Preparation of RI/RAW for soil and groundwater remediation which included an assessment of innovative technologies to address under-building contaminants. Provided information in RI/RAW for incorporation of petroleum contaminants detected onsite into a site wide Classification Exemption Area.

Norton-Chemplast, Wayne, New Jersey (ISRA) – Preliminary Site Assessment, field investigation and report preparation for a soil and groundwater ISRA investigation of the Nylon 6 casting facility. Design and Implementation of seismic refraction survey to assess bedrock topography and impact on migration of chlorinated solvents.

Wallace & Tiernan - Pennwalt, Belleville, New Jersey (ISRA and BUST) - Field investigation and report preparation for an ISRA investigation of a 70 year old chlorinator manufacturing facility. Areas of environmental concern include fourteen underground storage tanks, drum storage areas, and plating room blow-down. Tank removals and abandonment, asbestos surveys, soil and groundwater remediation completed under ISRA and UST regulations. Groundwater monitoring and assessment of remediation options is ongoing.

S.B. Thomas Depot, Metuchen, New Jersey (BUST) – Completion of a Remedial Investigation to assess the impact of petroleum product discharge from three underground storage tanks to soil and groundwater. Submitted a Remedial Action Work Plan which included a Natural Remediation Compliance Program and a Request for Classification Exemption Area.

County of Sussex, New Jersey (BUST, MOA) - Completion of Phase I Assessment, oversight and coordination of underground storage tank removals, soil investigation of chemical fire pits and debris piles, and waste classification and disposal activities. Investigations conducted under Memorandum of Agreement and NJDEP Landfill Disruption Permit.

Phase I Environmental Assessments - Approximately 100 projects throughout New Jersey, New York, Pennsylvania, Connecticut and Washington.

Branson Ultrasonics, Shelton, Connecticut - Evaluation and determination of local geologic and hydrogeologic conditions to assess pathways of groundwater contamination. Field investigations included installation of bedrock monitoring wells and collection of oriented core samples.

Pierson's Creek, Newark, New Jersey - Development and implementation of a sediment sampling plan designed to assess contaminant concentrations in Pierson's Creek, health and safety protocol and remediation options for sediment treatment/disposal.

ADDITIONAL TRAINING AND SHORT COURSES

Hazardous Waste Site Training, OSHA 29 CFR 1910.120(e) certification
Permitting Hazardous Waste Disposal Facilities: USEPA
Operation and Maintenance of Wastewater Treatment Facilities: Rutgers University
Groundwater Pollution and Hydrology: Rutgers University
Underground Storage Tank Remediation Technology and Regulation Seminars: USEPA/NJDEP
Diagnostic Inspection Workshop for Wastewater Treatment Facilities: USEPA
Remediation of NAPL Contaminated Sites: Stevens Institute of Technology
NJDEP Technical Regulations Seminar
Natural Attenuation of Chlorinated Solvents – LEP Required Course

Re: Phase I Environmental Site Assessment
Riverside Center Buildings 3 and 4 – New York, New York
AKRF Project Number 11798

Dear Mr. Lowenberg:

AKRF, Inc. is pleased to submit this Phase I Environmental Site Assessment Report for the above-referenced Property. This report includes the findings of a reconnaissance of the Property, an evaluation of readily available historical information and selected environmental databases and electronic records. AKRF, Inc. met the requirements of American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 unless noted otherwise in Section 8.0: "Limitations and Data Gaps."

We appreciate the opportunity to provide you with our services. If you have any questions, please do not hesitate to contact us.

Sincerely,
AKRF, Inc.

Michelle Lapin, P.E.
Senior Vice President

Asya Bychkov, P.E.
Environmental Engineer

Enc.

EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by GID Development Group to perform a Phase I Environmental Site Assessment of the properties known as Riverside Center Buildings 3 and 4 (the "Property"), located at 635-649 West 59th Street (also identified as Manhattan Tax Block 1171, portions of Lots 155 and 165). The Property consists of an approximately 1.3-acre asphalt-paved area currently used by construction trailers (Building 3 site) and an approximately 1.4-acre trailer and construction staging area with asphalt-paved and unpaved portions (Building 4 site).

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term "Recognized Environmental Condition" or REC means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC (HREC), Controlled REC (CREC), and *De Minimis* Condition. A *De Minimis* Condition is defined as an environmental concern that is not a threat to human health or the environment and would not be subject to enforcement action.

Prior to the current uses, the Property was occupied by: a warehouse (demolished between 1976 and 1988); a building used as a livestock house, a warehouse, a heater business, a handbag factory, a corrugated box factory, flooring and construction businesses, and auto-related uses including auto repair, sales and a parking garage (demolished in 2013); and surface parking lots.

At the time of AKRF's reconnaissance, the Property was occupied by trailer and construction staging areas. The trailers were reportedly installed in 2013. The Property was abutted by a trailer and construction staging area to the north, construction sites to the east and northeast, and the elevated Henry Hudson Parkway to the west, with Hudson River Park and the Hudson River beyond. The greater surrounding area was predominantly occupied by multistory residential buildings with some commercial uses. A Consolidated Edison (Con Ed) steam generating plant was located on the south-adjacent block.

The Property was historically identified as Parcel M and a portion of Parcel N of the Riverside South development.

This assessment revealed the following:

Recognized Environmental Conditions (RECs)

- The Property was created by landfilling in the late 1800s and was historically developed with two buildings, one of which had been used as a heater business, a handbag factory, a corrugated box factory, flooring and construction businesses, and auto-related uses including auto repair, sales and a parking garage. Both buildings have been demolished. Previous studies indicated that the Property was underlain by a layer of urban fill materials up to 35 feet thick, which was in turn underlain by native soil with some organic materials. The soil contained elevated concentrations of certain metals and semi-volatile organic compounds (SVOCs) typical of urban fill materials, and slightly elevated concentrations of acetone, which appeared to be associated with fill containing creosote-treated wood. One on-site 2009 groundwater sample contained an elevated concentration of the volatile organic compound (VOC) p-isopropyltoluene, which appeared to be associated with fill containing creosote-treated wood. No elevated PCB or pesticide concentrations were detected. No evidence of significant petroleum contamination was identified in previous investigations.

- The surrounding area historically included: a rail yard north of the Property; a rail spur west-adjacent to the Property; and automotive-related uses (filling stations and automobile repair). The regulatory database identified spills and petroleum bulk storage facilities with some potential to affect subsurface conditions beneath the Property. The Con Ed steam generating plant on the south-adjacent block was listed in the database with numerous active and closed-status spills, petroleum and chemical storage tanks, and a wastewater discharge registration. A northeast-adjacent construction site was identified in the regulatory database as a State Brownfield Cleanup Site with detections of VOCs associated with petroleum and solvents (including chlorinated solvents) in soil gas. Similar VOCs were detected in soil gas at a parcel east-adjacent to the Property. The reconnaissance noted a large soil stockpile (reportedly non-hazardous, non-petroleum contaminated soil excavated during the Riverside South development) on the north-adjacent parcel of the Property superblock, and a dry cleaner approximately 390 feet northeast of the Property.

De Minimis Condition

- Chemical storage on the Property included two locked flammable cabinets in the northern portion of the Building 4 site. No other chemical storage was noted.

Other On-site Environmental Concerns (items outside the scope of E1527-13, such as asbestos-containing materials (ACM), lead-based paint (LBP) and/or polychlorinated biphenyls (PCBs) in building materials or fill/debris)

- After undergoing City Environmental Quality Review (CEQR) in 1992 and 2010, the Property and adjacent parcels were entered into a Restrictive Declaration dated December 1992, with modifications in 1994, 1997, 1999, 2002 and 2011. The Restrictive Declarations specified that development of the Property is to be conducted in accordance with the measures specified under CEQR to minimize hazardous materials impacts. These measures include, among others: preparation of a NYC Mayor's Office of Environmental Remediation (OER)-approved Remedial Action Plan (RAP) and Construction Health and Safety Plan (CHASP) for implementation during construction; air monitoring and dust control during construction; and the installation of vapor controls (e.g., vapor barriers) beneath new building foundations and sidewalls.
- Suspect ACM observed during the reconnaissance included suspended ceiling tiles, carpet mastic, vinyl floor tiles and associated mastic, roofing materials, and window caulk and putty. The on-site trailers were reportedly installed in 2013, at which time few ACM were utilized in construction. However, if the trailers were constructed prior to 1990, they are more likely to contain ACM, and even recently installed materials (e.g., vermiculite-containing materials and some roofing products) may include ACM. The observed suspect ACM were noted to be in good condition.
- Exterior and interior painted surfaces were observed to be in good condition. During the reconnaissance, there was no observation of residential occupancy, child care facilities, or other facilities where the extended presence of children would be expected. Exterior painted surfaces and (if trailers were built prior to 1977) interior painted surfaces may contain lead-based paint.
- On-site office trailers and electrical switch gear trailer were reportedly installed in 2013, when polychlorinated biphenyls (PCBs) were not used. However, these trailers may have been constructed at an earlier date. If built prior to 1979, fluorescent lighting fixtures and electrical equipment may contain PCBs. No evidence of leaks or stains from the observed fluorescent lighting fixtures was noted.
- Two underground electrical transformer vaults were observed in the West 59th Street sidewalk south-adjacent to the Building 3 site. These vaults may contain PCB-containing electrical equipment.

- Based on area geologic mapping and previous testing conducted in the surrounding area, serpentinite bedrock containing chrysotile (a type of asbestos) is present in off-site areas east and southeast of the Property; this type of bedrock could be present beneath the Property.
- Previous studies identified methane in soil vapor samples on Riverside South parcels north of the Property, likely due to subsurface organic soil. No methane was detected during field-screening of Property soils during a 2009 subsurface investigation.

Potential for Vapor Migration

This Phase I assessment identified a potential for subsurface vapors and thus a potential for vapor migration onto the Property, based on the RECs previously noted.

RECOMMENDATIONS

- Prior to Property development, OER may require additional subsurface testing in addition to that previously conducted (such as soil vapor sampling). Any such sampling required by OER should be conducted in accordance with an OER-approved Remedial Investigation Work Plan (RIWP). Property redevelopment should be conducted in accordance with the Restrictive Declarations recorded for the Property and an OER-approved Remedial Action Plan (RAP) and Construction Health and Safety Plan (CHASP). At a minimum, the RAP should address requirements for items such as: soil stockpiling, disposal and transportation; dust control; contingency measures in the event that petroleum storage tanks or other contamination are unexpectedly encountered; and vapor control measures such as a vapor barrier beneath the proposed building. The CHASP should include measures for worker and community protection, including personal protective equipment, dust control, air monitoring, and emergency response procedures. The RAP should also contain measures for identifying potentially asbestos-containing serpentinite bedrock and conducting any disturbance of such rock in a manner protective of workers and the community.
- Any excavated soil should be handled and disposed of in accordance with all applicable federal, state and local regulations. If petroleum contamination is encountered during future Property redevelopment, NYSDEC spill reporting requirements would need to be followed.
- If dewatering is necessary for the proposed redevelopment, it should be conducted in accordance with NYCDEP regulations (for discharge to municipal sewers) or NYSDEC requirements (for discharge to any outfalls to the Hudson River).
- Unless there is labeling or test data indicating that electrical equipment does not contain PCBs, and that fluorescent lighting fixtures are not mercury- and/or PCB-containing, if disposal is required, it should be performed in accordance with applicable federal, state and local regulations and guidelines.
- Any chemicals requiring disposal should be properly disposed of in accordance with applicable requirements.

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by GID Development Group to perform a Phase I Environmental Site Assessment of the properties known as Riverside Center Buildings 3 and 4 (the "Property"), located at 635-649 West 59th Street (also identified as Manhattan Tax Block 1171, portions of Lots 155 and 165). The Property consists of an approximately 1.3-acre asphalt-paved area currently used by construction trailers (Building 3 site) and an approximately 1.4-acre trailer and construction staging area with asphalt-paved and unpaved portions (Building 4 site).

At the time of AKRF's reconnaissance, the Property was occupied by the trailer and construction staging areas. The trailers were reportedly installed in 2013. The Property was abutted by a trailer and construction staging area to the north, construction sites to the east and northeast, and the elevated Henry Hudson Parkway to the west, with Hudson River Park and the Hudson River beyond. The greater surrounding area was predominantly occupied by multistory residential buildings with some commercial uses. A Consolidated Edison (Con Ed) steam generating plant was located on the south-adjacent block.

The scope of services for this assessment was in conformance with ASTM Standard E1527-13 (*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice)*. Any exceptions to, or deletions from, this practice are described in Section 8.0. The scope included the following:

- Observations of the Property (reconnaissance) to identify potential sources or indications of hazardous substances, including: aboveground storage tanks (ASTs); underground storage tanks (USTs); tank vents and fill ports; transformers and other items that could contain polychlorinated biphenyls (PCBs), drums or areas where hazardous materials were used, stored, or disposed; stained surfaces and soils; stressed vegetation, leaks, odors. In addition, neighboring properties were viewed, but only from public rights-of-way, to identify similar concerns.
- Readily available geological and groundwater (hydrogeological) information was evaluated to assist in determining the potential for contamination migration (including in soil, soil vapor and/or groundwater) within, from and onto the Property.
- The reconnaissance of the Property included observation of any readily visible suspect asbestos-containing materials (ACMs) and potential lead-based paint. However, no samples were collected or analyzed and this reconnaissance provides neither definitive nor exhaustive information.
- A state database of county-level radon concentrations was used to determine typical indoor radon levels and compare them to United States Environmental Protection Agency (USEPA) guidelines.
- Historical land use maps and aerial photographs for the Property and nearby sites were reviewed to evaluate historical land uses.
- The following federal regulatory databases were reviewed to determine the regulatory status of the Property and other properties within the ASTM-defined radii: National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the Air Discharge Facilities Index (ADF) and the USEPA Civil Enforcement Docket. The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.

- The following state regulatory databases were reviewed to determine the regulatory status of the Property and other properties within predetermined radii: petroleum and hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Hazardous Substance Disposal Site Draft Study; Hazardous Waste Treatment, Storage or Disposal Facilities; Major Oil Storage Facilities (MOSF); Brownfield Cleanup Program (BCP); and Historic Utility Sites.
- Local agency reviews including NYC Fire Department records (obtained as part of the database search), online Buildings and Finance Departments records, and Environmental Quality Review (CEQR) E Designation Sites were conducted for the Property only.

2.0 PHYSICAL SITE DESCRIPTION

On February 17, 2014, Ms. Asya Bychkov of AKRF conducted a reconnaissance of the Property, accompanied by Mr. Shawn Kirk of Extell Development Company (the Property co-owner along with the Carlyle Group), who answered pertinent questions. Neighboring properties were also viewed, but only from public rights-of-way. The weather was sunny and approximately 25 °F, the visibility good, and the premises adequately illuminated. Exterior site areas were partially obscured by snow. Photographs from the reconnaissance are included in Appendix A.

2.1 General Site Conditions

The Property is part of a superblock bounded by West End Avenue to the east, the extension of West 61st Street to the north, West 59th Street to the south, and Twelfth Avenue/Henry Hudson Parkway to the west. The Property was historically identified as Parcel M and a portion of Parcel N of the Riverside South development, and is currently referred to as Riverside Center Buildings 3 and 4. The area immediately north of the Property was historically identified as Riverside South Parcel L. The Property address is 635-649 West 59th Street; historical Property addresses also include 314-344 West 60th Street and 860-874 Twelfth Avenue.

The western portion of the Property (the Building 3 site) was occupied by an asphalt-paved parking area and construction trailers, the majority of which were used as offices. Mr. Kirk indicated that a trailer in the southwestern corner of the Building 3 site contained electrical switch gear; this trailer was locked and inaccessible. A second locked and inaccessible trailer in the northwestern corner of the Building 3 site was used as a garage for small utility vehicles ("Gators"), but contained no petroleum storage, according to Mr. Kirk. The eastern portion of the Property (the Building 4 site) was occupied by construction trailers used as offices and a construction staging area with parked construction machinery and stored construction supplies. A small building model for an off-site Extell project was being constructed at the Building 4 site at the time of the reconnaissance. The majority of the Building 4 site was covered with snow, and the pavement was not visible. Two locked flammable cabinets were located in the northern portion of the Building 4 site. No other chemical storage was noted.

According to Mr. Kirk, the on-site trailers were installed in 2013 and were heated by electrically-powered heat pumps and no petroleum storage tanks or emergency generators were present. The interiors of two typical office trailers (the Extell trailer on the Building 3 site and the Tishman Speyer trailer on the Building 4 site) were inspected during the reconnaissance. Interior finishing materials included: plastic walls; plastic and 24-inch by 24-inch suspended tile ceilings; and 12-

inch by 12-inch vinyl tile and carpet flooring. The finishing materials were observed to be in good condition. The trailer roofs were not accessible for inspection.

Two underground electrical transformer vaults were observed in the West 59th Street sidewalk south-adjacent to the Building 3 site. A parking garage was historically located on the Building 4 site. According to Mr. Kirk, this building was demolished in approximately May 2013. Mr. Kirk was not aware of any past or present petroleum storage tanks associated with this former building.

2.2 Topography and Hydrogeology

Based on geotechnical and environmental investigations of the Riverside South area (which included the Property superblock and several blocks to the north), the Property is located at approximately Elevation +6 to +22 feet Manhattan Borough Datum (MBD), sloping down to the west. Soil at the Property consists of urban fill placed in the late 1800s (generally ranging in thickness from approximately 10 to 35 feet), underlain by native organic silty clay, increasing in thickness in a westerly direction (up to 40 feet thick in the western portion of the Property) and a thin layer of sand or till above bedrock (mainly mica and gneissic schist, granite and pegmatite) in portions of the Property. Bedrock was encountered at approximately -40 to -50 feet MBD. Based on area geologic mapping and previous testing conducted in the surrounding area, serpentinite bedrock containing chrysotile (a type of asbestos) is present in off-site areas east and southeast of the Property; this type of bedrock could be present beneath the Property.

Groundwater was encountered at approximately Elevation -0.5 to +0.5 feet MBD in previous studies. Investigations of a northeast-adjacent parcel (summarized in Section 7.0) indicated groundwater elevations of approximately 1.5 to 8.1 feet MBD. Groundwater is expected to flow in a westerly direction toward the Hudson River; however, the flow direction is tidally influenced and may be influenced in certain areas by other factors, including the operation of a below-grade pump house that dewaters the Amtrak rail line approximately 350 feet to the southeast. Groundwater in Manhattan is not used as a source of drinking water.

2.3 Storage Tanks

2.3.1 Underground Storage Tanks (USTs)

During the reconnaissance, no evidence, such as vent pipes, fill caps, or concrete patches, was observed that would indicate USTs are or were present. Mr. Kirk was not aware of any historical petroleum storage tanks in the former on-site building demolished in 2013. Regulatory databases and computerized NYC Fire Department and Buildings Department records did not reveal any records relating to USTs on the Property.

Off-site USTs are discussed in Section 5.2.2.

2.3.2 Aboveground Storage Tanks (ASTs)

During the reconnaissance, no evidence, such as tanks or vaults likely to contain tanks, vent pipes or fill caps was observed to indicate that ASTs are or were present. As previously noted, Mr. Kirk was not aware of any historical petroleum storage tanks in the former on-site building demolished in 2013. Regulatory databases and computerized NYC Fire Department and Buildings Department records did not reveal any records relating to ASTs on the Property.

Off-site ASTs are discussed in Section 5.2.2.

2.4 Polychlorinated Biphenyls (PCBs)

Until 1979, polychlorinated biphenyls (PCBs), which provided beneficial insulating properties, were used in a variety of products, in particular electrical equipment such as transformers, capacitors, fluorescent light fixtures, and voltage regulators, but also in hydraulic fluids and some other products such as caulking.

Office trailers and electrical switch gear trailer were reportedly installed in 2013. However, these trailers may have been constructed at an earlier date. If built prior to 1979, fluorescent lighting fixtures and electrical equipment may contain PCBs. No evidence of leaks or stains from the observed fluorescent lighting fixtures was noted.

Two underground electrical transformer vaults were observed in the West 59th Street sidewalk south-adjacent to the Building 3 site. These vaults may contain PCB-containing electrical equipment.

2.5 Lead-Based Paint

After 1977, the use of lead-based paint inside commercial structures was restricted and its use elsewhere became less common, but lead-based paint may still sometimes be used outdoors. Lead-based paint can present a hazard, particularly to children, especially when it is in poor condition.

Exterior and interior painted surfaces were observed to be in good condition. During the reconnaissance, there was no observation of residential occupancy, child care facilities, or other facilities where the extended presence of children would be expected.

Activities (such as renovation or demolition) with the potential to disturb lead-based paint are subject to a variety of requirements, including US Occupational Safety and Health Administration regulation 29 CFR 1926.62 (Lead Exposure in Construction).

2.6 Utilities

The Property was supplied with electricity. No storm drains were noted on the Property.

2.7 Waste Management and Chemical Handling

According to Mr. Kirk, commercial trash generated on the Property was stored in roll-off containers for disposal by a private contractor. Two locked flammable storage closets were observed in the northern portion of the Building 4 site. No other chemical storage was observed on the Property. No odors or staining were noted in the storage areas; however, the ground around the storage containers and flammable cabinets was covered with snow.

2.8 Radon

Radon is a colorless, odorless gas most commonly produced by the natural radioactive decay of certain rocks. According to a New York State Department of Health database the average level of radon found in basements in Manhattan is 2.08 picocuries/liter, below the USEPA recommended action level of 4.0 picocuries/liter.

3.0 ASBESTOS-CONTAINING MATERIALS (ACM)

Asbestos refers to a group of natural minerals that provide good fire resistance and insulation. Asbestos is also commonly found in vinyl flooring, plaster, sheetrock, joint compound, ceiling tiles, roofing materials, gaskets, mastics, caulks and other products. Materials containing more than one percent asbestos are considered asbestos-containing materials (ACM). ACM are classified as either friable (i.e., more readily release fibers, such as most spray-applied fireproofing) or non-friable (such as floor tiles).

The on-site trailers were reportedly installed in 2013, at which time few ACM were utilized in construction. Based on the time of installation, the suspect ACM observed during the reconnaissance (suspended ceiling tiles, carpet mastic, vinyl floor tiles and associated mastic, roofing materials, and window caulk and putty) are not likely to be ACM. However, if the trailers were constructed prior to 1990, they are more likely to contain ACM, and even recently installed materials (e.g., vermiculite-containing materials and some roofing products) may include ACM. The observed suspect ACM were noted to be in good condition.

Regulatory requirements for ACM (or suspect ACM until proven not to be ACM) include maintenance requirements and, prior to any renovation or demolition, inspection/sampling by a NYC-certified asbestos investigator to determine whether the project will disturb ACM. Any such ACM (and any other ACM subsequently identified) must be removed prior to the renovation or demolition.

4.0 ADJACENT LAND USE

The Property was abutted to the north by a trailer and construction staging area with a large soil stockpile. According to Mr. Kirk, the stockpile consisted of non-hazardous, non-petroleum-contaminated soil excavated during the ongoing Riverside South construction to the north. The stockpile was covered by snow, but was previously inspected by AKRF in August 2013 and appeared to consist of predominantly sand with some gravel and concrete (i.e., urban fill) with no visual evidence of contamination (odors or staining). Mr. Kirk indicated that no soil was added to or removed from the stockpile since August 2013.

The Property was bounded by construction sites to the east and northeast. A below-grade Amtrak rail line passed through the eastern portion of the superblock, approximately 350 feet east of the Property; a pump house for dewatering the rail bed was located in the southeastern corner of the superblock. A dry cleaner advertising “Natural Dry Cleaning” was located approximately 390 feet northeast at 33 West End Avenue. Based on historical aerial photographs (Section 5.1.2), the building in which the dry cleaner was located was constructed between 2004 and 2006. The elevated Henry Hudson Parkway was located to the west, with Hudson River Park and the Hudson River beyond. A Con Ed steam generating plant was located on the south-adjacent block. The greater surrounding area was predominantly occupied by multistory residential buildings with some commercial uses.

5.0 PROPERTY HISTORY AND RECORDS REVIEW

5.1 Prior Ownership and Usage

5.1.1 Historical Land Use Maps

Historical maps were reviewed for indications of uses (or other evidence) suggesting hazardous materials generation, usage or disposal on or near the Property. Specifically, Sanborn Fire Insurance Maps from 1892, 1907, 1926, 1951, 1976, 1988, and 2007 were reviewed.

1892

The western portion of the Property was occupied by a six-story warehouse at 860-874 Twelfth Avenue. The eastern portion of the Property was occupied by part of a three-story livestock house at 605-645 West 59th Street, with an alternate address of 310-344 West 60th Street. Both buildings consisted of several structures connected by internal doors.

A rail spur was shown west-adjacent to the Property. The Central and Hudson River Railroad rail yard and the Union Stock Yard and Market Company were located to the north across West 60th Street. The block to the south was occupied by a slaughterhouse. The blocks to the east were occupied by small unlabeled buildings. Hudson River was shown directly west of Twelfth Avenue. A manufactured gas holder was shown approximately 400 feet to the southeast.

1907

The Property buildings were shown to have basements, but were otherwise similar to the 1892 map.

A rail spur was no longer shown west of the Property. Cattle pens were shown in the Union Stock Yard to the north. The buildings to the east were labeled as stores and dwellings. An Interborough Rapid Transit Co. power house with boilers and generating engines was located on the south-adjacent block.

1926

The eastern Property building was shown as a warehouse with parking. No other significant changes from the 1907 map were shown on the Property.

The eastern portion of the Property block was occupied by a lumber yard and a filling station with seven gasoline underground storage tanks (USTs) at 3 West End Avenue. Additional livestock unloading platforms were shown north of the Property. An oil room, gasoline and kerosene USTs, and coal-fired boilers were shown at the power house on the south-adjacent block.

1951

The eastern Property building was labeled as a corrugated container factory and warehouse with parking. No further significant changes from the 1926 map were noted on the Property.

A filling station was no longer shown on the Property block. The land to the north was no longer labeled as a stockyard, and was occupied by railroad platforms (including a livestock unloading platform) and a one-story commercial and office

building. A filling station was located approximately 690 feet northeast of the Property at 59 West End Avenue (west of the intersection with West 62nd Street). No further significant changes from the 1926 map were noted in the surrounding area. The filling station at 59 West End Avenue is unlikely to have affected the Property based on its distance and the anticipated groundwater flow direction.

1976

The former on-site corrugated container factory was labeled as a warehouse. No further significant changes from the 1951 map were noted on the Property.

The rail yard to the north was labeled as the New York Central System Railroad freight yard, and included rail tracks (fewer than shown on the 1951 map) and freight sheds. The elevated Miller Highway Viaduct (Henry Hudson Parkway) was shown west-adjacent to the Property. A warehouse and a rail spur entering a tunnel were shown northeast of the Property across West 60th Street. The former filling station at 59 West End Avenue was shown as a motor freight station. A filling station was located approximately 620 feet north at 53 West End Avenue (between West 61st and 62nd Streets). The filling station at 53 West End Avenue is unlikely to have affected the Property based on its distance and the anticipated groundwater flow direction. The power plant on the south-adjacent block was labeled as a Con Ed electrical generating plant.

1988

The western Property building and the off-site portion of the eastern building had been demolished and replaced by parking areas. The remainder of the eastern Property building (635-643 West 59th Street/314-344 West 60th Street) was shown as a parking garage.

Buildings on off-site portions of the Property block had been demolished and replaced by parking areas. The area to the north was labeled as a paved driveway and was part of the Conrail Systems Railroad Freight Yard; however, railroad tracks were no longer shown. A motor freight station was located approximately 400 feet north of the Property near Miller Highway. The area to the east was had poor resolution, but appeared to be similar to the 1976 map.

2007

The Property block and the north-adjacent block were shown as a single superblock. No further significant changes from the 1988 map were noted for the Property.

The off-site portion of the superblock was shown as vacant land and parking lots. A multistory building and vacant land were located to the north. Apartment buildings, a warehouse, a public bath and unlabeled buildings were located to the east.

To summarize, the historical maps indicated that by 1892, the Property was developed with a warehouse on its western portion and part of a livestock house on its eastern portion. The livestock house was subsequently used as a warehouse with parking, a corrugated box factory, and most recently, as a parking garage. The western Property building and the off-site portion of the eastern building were demolished between 1976

and 1988 and replaced by parking lots. According to Mr. Kirk, the parking garage at 635-643 West 59th Street was demolished in 2013.

A rail spur was west-adjacent to the Property in 1892, but was no longer shown by 1907. The eastern portion of the Property block historically included a lumber yard and, in 1926, a filling station. A rail yard with livestock and/or freight delivery areas was located north of the Property from prior to 1892 through 1976. By 1988, rail tracks were no longer present and the area north of the Property was used as a paved driveway. The west-adjacent elevated highway was constructed between 1951 and 1976. In 1988, a motor freight station (which may have included auto repair) was shown approximately 400 feet north of the Property. By 2007, the Property block and the north-adjacent block were merged into a single superblock, with off-site portions of the superblock occupied by vacant land and parking. The 1892 map showed a manufactured gas holder approximately 400 feet to the southeast. A large power generating station (the current Con Ed facility) was built on the south-adjacent block between 1892 and 1907.

5.1.2 Historical Aerial Photographs

Historical aerial photographs were reviewed for indications of uses (or other evidence) suggesting hazardous materials generation, usage or disposal on or near the Property. Specifically, photographs from 1924, 1974, 1996, 2004, 2006, 2009, and 2011 were reviewed.

1924

The Property was occupied by two large buildings separated by a yard.

The eastern portion of the Property block contained several buildings and an apparent parking or storage area. Land to the north was occupied by a rail yard with apparent sheds or warehouses in its eastern portion. The Hudson River, piers, and apparent warehouses were noted west of the Property across Twelfth Avenue. A large building with chimneys (the generating plant identified on historical Sanborn maps) was located on the south-adjacent block. The blocks to the east were occupied by apparent residential or commercial buildings.

1974

The eastern Property building appeared to have been re-roofed since the 1924 photograph. No further significant changes from the 1924 photograph were noted.

Land to the north appeared to be part of a freight yard and was occupied by rail tracks and portions of long structures (possibly sheds over rail tracks). Trucks were parked adjacent to these structures. A below-grade rail spur was located northeast of the Property, entering a tunnel to the east near West 60th Street. An elevated highway was west-adjacent to the Property, with apparent parking/storage areas and the Hudson River beyond.

1996

The western Property building has been demolished and replaced by a surface parking lot apparently occupied by trailers. Structures east-adjacent to the eastern building (historically connected to this building based on Sanborn maps) were demolished and replaced by part of a large surface parking lot, which extended north of the Property.

The former rail yard to the north was also replaced by the surface parking lot. A long building was noted approximately 400 feet north of the Property; this building was identified on the 1988 Sanborn map as a motor freight station. The below-grade rail spur northeast of the Property remained similar to the 1974 photograph. An apparent auto-related facility was noted approximately 380 feet east across West End Avenue. The former parking/storage areas to the west beyond the highway were demolished and replaced by vacant, vegetated land.

2004

The apparent auto-related facility southeast of the Property was replaced by an apparent construction site. No further significant changes from the 1996 photograph were noted on the Property or in the surrounding area.

2006

An apparent multistory residential building was shown on formerly vacant land approximately 390 feet northeast of the Property. Large construction sites were noted north and east of the Property. No further significant changes from the 2004 photograph were noted on the Property or in the surrounding area.

2009

The Property appeared similar to the 2006 photograph.

A large soil stockpile was noted approximately 160 feet north of the Property, with a construction access road west of the stockpile. Concrete patches, which coincided with former rail and rail yard building locations, were noted in the parking lot north of the Property. The former motor freight building north of the Property had been demolished. A construction site was located north of the Property beyond the stockpile. The former construction site to the southeast was occupied by an apparent multistory residential building. No further significant changes from the 2006 photograph were noted in the surrounding area.

2011

No significant changes from the 2009 photograph were noted on the Property or in the surrounding area.

To summarize, the historical aerial photographs were consistent with historical Sanborn maps and indicated that the Property was occupied by two large buildings prior to 1924. The western building was demolished and replaced by trailer parking by 1974, while the eastern building remained unchanged through 2011.

A rail yard with freight delivery areas was located north of the Property from prior to 1924 through 1974. By 1996, the rail tracks north of the Property had been replaced by a large surface parking lot. The 1996 through 2006 photographs showed a building northwest of the Property, which was identified on Sanborn maps as a motor freight station. By 2009, a large soil stockpile was noted north of the Property. The west-adjacent elevated highway was constructed between 1924 and 1974. By 1924, a large power generating station (the existing Con Ed facility) was shown on the south-adjacent block. An apparent auto-related facility was shown on the 1996 aerial photograph east of the Property across West End Avenue.

5.1.3 Property Tax Files and Zoning Records

Based on NYC Department of City Planning's Primary Land Use Tax Output (PLUTO) information provided by Toxics Targeting, Inc. of Ithaca, New York, the Property is zoned as C4-7 (mixed-use general commercial district) and classified as G6 (licensed parking lot). One building constructed at an unspecified date was noted on Lot 155, likely referring to the on-site building, which was demolished in 2013.

5.1.4 Recorded Land Title Records

No title records were provided for the Property by Extell Development Company or the Carlyle Group. A review of computerized New York City Automated City Register Information System (ACRIS) records was conducted and is summarized in Section 5.2.3.

5.1.5 Local Street Directories

City Directories prepared by Environmental Data Resource, Inc. were reviewed. The City Directories consisted of the names of businesses located on-site and in adjacent properties, compiled from city and telephone directories and listed at approximately five-year intervals starting with 1923. The directories identified the following at current and historical Property addresses: a handbag factory (1983-1993) and commercial uses (1983-2013) at 635 West 59th Street; International Heater Co. (1927), a warehouse (1927), a trucking business (1988-1993), a motor home business (1988-2013), auto service/repair (1993-1998), auto sales (1998-2008), public parking (1998-2008), office/commercial uses (1988-2008), a flooring business (2008), and a construction business (2008) at 641 West 59th Street; a warehouse (1927), industrial equipment service (1956), a freight business (1973-1998), and U.S. Packing and Shipping (1988) at 643 West 59th Street; and a warehouse at 645 West 59th Street in 1920 and 1927.

5.2 Regulatory Review

The regulatory database listings, shown in Appendix C, were obtained from Toxics Targeting, Inc. of Ithaca, New York. The introduction of Appendix C includes summaries of the databases searched, their radii around the Property and limitations of the data. The databases searched and associated radii were consistent with ASTM E1527-13.

5.2.1 Federal

Databases searched included the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the Air Discharge Facilities Index (ADF); and the USEPA Civil Enforcement Docket. Facilities subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) are discussed with State RCRA listings.

National Priority List (NPL)

The NPL is the USEPA's list of sites that probably require remedial action under the Superfund Program. Nearby NPL sites can sometimes pose a risk of stigmatizing surrounding properties and thus impacting property values.

One NPL site was identified within a one-mile radius of the Property. The Hudson River PCB Sediments site, associated with sediment contamination in the Hudson River,

approximately 230 feet west of the Property, was not anticipated to affect the Property based on listing details.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

CERCLIS is a compilation of sites which the USEPA has investigated, or plans to investigate, pursuant to the Superfund Act of 1980 (CERCLA). As such, some of these sites may ultimately present concerns and others may not (but could still pose a perceived concern).

One CERCLIS site was identified within a ½-mile radius of the Property. The Hudson River PCB Sediments site, associated with sediment contamination in the Hudson River, approximately 230 feet west of the Property, was not anticipated to affect the Property based on listing details.

Emergency Response Notification System (ERNS)

This federal database, compiled by the Emergency Response Notification System, records and stores information on certain reported releases of petroleum and other potentially hazardous substances.

The database identified seven ERNS listings as potentially located on-site. However, the listings indicated that the spills all occurred off-site. These spills included one 30-gallon No. 2 fuel oil release onto West 59th Street due to a traffic accident and six discharges to the Hudson River. Based on the listing details, these spills are not likely to have affected the Property.

Toxic Chemical Release Inventory System (TRIS)

The TRIS contains information reported by a variety of industries on their annual estimated releases of certain chemicals.

No TRIS sites were identified within a ⅛-mile radius of the Property.

Permit Compliance System of Toxic Wastewater Discharge (WWD)

This database includes certain sites which discharge wastewater containing potentially hazardous chemicals.

One WWD facility was reported within a ⅛-mile radius of the Property. The 59th Street Steam Station, located at 850 Twelfth Avenue, approximately 60 feet to the south, was listed as an active electrical services facility. Based on its proximity, this facility may have affected the Property.

United States Environmental Protection Agency Civil Enforcement Docket

This database tracks civil judiciary cases filed on behalf of the USEPA by the Department of Justice.

One facility was identified in the USEPA's Civil Enforcement Docket within a ⅛-mile radius of the Property. The NYC Department of Sanitation Marine Terminal, located at 59th Street and West Side Highway, approximately 230 feet to the west-northwest, was listed for a discharge of chlorofluorocarbons (CFCs) in violation of stratospheric ozone protection regulations. Based on its nature and location, this listing is unlikely to have affected the Property.

Air Discharge Facilities Index (ADF)

This federal database includes information on certain air emission sources.

Nine Air Discharge Facilities were identified within a ⅛-mile radius of the Property. The nearest listings were as follows:

- The Con Ed – West 59th Street facility, located at 850 Twelfth Avenue, approximately 60 feet south, which was listed three times for potential emissions of various pollutants including carbon monoxide, sulfur dioxide, nitrogen dioxide, visible emissions and asbestos. This facility was reportedly in regulatory compliance.
- Gaseteria Oil Corp., located at 2 West End Avenue, approximately 370 feet southeast of the Property, was listed twice for potential emissions of VOCs and was reportedly in regulatory compliance.

Potential discharges from these facilities may have affected subsurface conditions beneath the Property. Based on their distance and the anticipated groundwater flow direction, the remaining identified facilities are not likely to have affected the Property.

5.2.2 State

State databases included the listings of petroleum/hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); Brownfield Cleanup Program (BCP) Sites; and Historic Utility Sites.

New York SPILLS Database

This database includes releases reported to the NYSDEC, including tank test failures (for USTs only) and tank failures.

Seven hundred ninety-eight spills were reported within a ½-mile radius of the Property, including 45 active-status spills and 753 closed-status spills. The nearest spill listings with some potential to affect the Property due to their proximity and/or the anticipated groundwater flow direction are summarized as follows:

- In October 2013, a spill (Spill No. 1307113) was reported at the northeast-adjacent construction site at 17 West End Avenue. The listing indicated that contaminated soil was encountered near the site boundary in the vicinity of a large Con Ed spill. No further information was provided. The spill listing remains active.
- In October 2010, a spill was reported in an Amtrak tunnel at 15 West End Avenue, approximately 55 feet east of the Property. The listing indicated that hydraulic oil was repeatedly noted dripping from the tunnel ceiling onto the tracks. The leak was believed to originate from a car lift along the eastern edge of Parcel N (i.e., not on the Property), which was relocated in 2010. In March 2011, the spill listing was closed since no more oil was observed in the tunnel.
- The Con Ed 59th Street Station, located at 850 Twelfth Avenue, approximately 60 feet to the south, was listed with more than 150 spill listings, including ten active releases of dielectric fluid (Spill No. 8303208 in September 1983, Spill No. 9901524 in May 1999, Spill No. 0211840 in March 2003, Spill Nos. 0502880 and 0504880 in July 2005, Spill No. 1206754 in October 2012, Spill No. 1210302 in November

2012, Spill No. 1300557 in April 2013, Spill No. 1304867 in August 2013, and Spill No. 1310297 in January 2014). The largest of the active spills, No. 8303208, involved the release of approximately 25,000 gallons of dielectric fluid.

- Spill No. 8608088 was reported at the intersection of West End Avenue and West 61st Street, approximately 400 feet east of the Property, in December 1986. According to the listing, approximately 7,200 gallons of dielectric fluid were spilled by Con Ed. No further information was provided. The spill listing remains open.
- In March 2003, a tank test failure was reported at Gaseteria Oil Corp., located at 2-16 West End Avenue, approximately 400 feet east-southeast of the Property. According to the listing, a 4,000-gallon gasoline UST failed a tightness test, and gasoline-contaminated soil and groundwater were discovered. A second spill was reported at the same address in February 2005 when fuel oil-contaminated groundwater was identified in test pits. In 2004 and 2005, 22 USTs and contaminated soil were removed down to bedrock during the redevelopment of this site with a new building. Contaminated water was removed as part of dewatering activities. The spill listings were closed in December 2005 and May 2006.
- In January 2000, gasoline-contaminated soil was identified during gasoline UST closure at Potamkin Volkswagen, located at 30 West End Avenue, approximately 420 feet east of the Property. The spill was reportedly remediated; endpoint soil samples indicated no residual contamination and the spill listing was closed.
- In October 2009, a spill was reported at 246-252 West 61st Street, approximately 450 feet east-southeast of the Property. The listing indicated that several USTs and ASTs and gasoline-contaminated soil and groundwater were discovered. Contaminated soil was excavated during site redevelopment with the Heschel School (identified under alternate addresses of 20 and 30 West End Avenue in the Petroleum Bulk Storage database). Endpoint soil samples indicated no residual contamination, and the spill listing was closed in May 2012.

The remaining listings are unlikely to have affected the Property based on listing details, distance, and/or the anticipated groundwater flow direction. Details from all spills are included in Appendix C.

Resource Conservation and Recovery Act (RCRA) Notifiers Listings

This database lists sites which have filed notification forms regarding hazardous waste activity, including: treatment, storage and disposal facilities (TSDs); small-quantity (SQG) and large-quantity generators (LQG); and transporters regulated under RCRA. The discussion below includes any CORRACTS listings of facilities which are subject to corrective action under RCRA.

No TSD facilities were identified within a ½-mile radius of the Property. No CORRACTS sites were identified within a one-mile radius of the Property.

One RCRA Generator/Transporter listing identified at a Property address (649 West 59th Street) reported generation of lead waste at the Miller Highway in 1992 and 1995. This listing likely pertained to lead-based paint abatement at the off-site elevated highway, which is unlikely to have affected subsurface conditions beneath the Property.

Six RCRA Generator/Transporter listings identified at Property addresses (645-649 West 59th Street) reported generation of lead waste in Con Ed structures in 2009-2013. These

listings likely pertained to the off-site Con Ed transformer vaults adjacent to the Property. Generation of lead waste within utility vaults/manholes is typically associated with the removal of cable sheeting, which is unlikely to have affected subsurface conditions beneath the Property. No spills with the potential to affect the Property were reported for the transformer vaults; however, a number of spills that may have affected the Property have been reported for the Con Ed generating plant on the south-adjacent block.

In addition, 103 RCRA Generators/Transporters were reported within a ⅛-mile radius of the Property. Details of the nearest facilities with some potential to affect the Property, based on listing details and/or location, are as follows:

- One listings for Penn Yard Associates, located at the intersection of West 59th Street and Twelfth Avenue, may have pertained to the historical rail yard located north of the Property. No hazardous waste information was listed.
- Potamkin Volkswagen, located at 625 West 58th Street, approximately 190 feet to the south, was listed as a generator of ignitable solid waste, cadmium waste and tetrachloroethylene in 1992-1996.
- A Consolidated Edison Company facility (the steam generating station) at 850 12th Avenue, approximately 60 feet south, was listed as a Large Quantity Generator (LQG) of various waste including ignitable and corrosive solid waste, lead, chromium, cadmium and mercury waste, benzene, toluene, methyl ethyl ketone, 1,1,1-trichloroethane, tetrachloroethylene, spent halogenated and non-halogenated solvents, PCB-contaminated solids and liquids, and PCB-containing transformers in 1986-2013. Two RCRA violations related to general generator and land disposal requirements were noted in 1995, with a return to compliance within three months.
- Gaseteria, located at 2 West End Avenue, approximately 360 feet east-southeast of the Property, was listed with no hazardous waste information provided.

Based on the nature of the listings, distance and the anticipated groundwater flow direction, the remaining RCRA listings are not likely to have affected subsurface conditions beneath the Property.

Chemical Bulk Storage (CBS) Database

The New York CBS is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

One CBS facility was identified within a ⅛-mile radius of the Property. The 59th Street Generating Station, located at 850 Twelfth Avenue, approximately 60 feet to the south, was listed with 10 closed-in-place aboveground storage tanks (ASTs) containing sulfuric acid, sodium hydroxide or sodium hypochlorite. The size of the tanks ranged from 185 to 2,100 gallons. A second listing was identified for this facility with no CBS information provided. Based on its proximity, this facility may have affected the Property.

Solid Waste Facilities (SWF)

This database includes certain landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

One Solid Waste Facility was identified within a ½-mile radius of the Property. The NYC Department of Sanitation facility located at West 59th Street and West Side

Highway, approximately 230 feet west-northwest of the Property, was listed as a Large Transfer Station (over 50,000 cubic yards per year) of putrescible waste. Based on the listing nature and anticipated groundwater flow direction, this facility is not anticipated to have affected the Property.

Petroleum Bulk Storage (PBS) Database

This database lists facilities that registered having either aboveground or underground petroleum tanks with total storage exceeding 1,100 gallons. Facilities with more than 400,000 gallons appear on the Major Oil Storage Facilities (MOSF) database (see below).

The Property was not identified in the PBS database. Twenty-three PBS facilities were identified within a ⅛-mile radius of the Property. The nearest listings with some potential to affect the Property, based on proximity and/or location, are summarized in Table 1.

Table 1
Area Petroleum Bulk Storage Facility Data

Location	Capacity (gallons)	Product Stored	Status	Approx. Distance/Direction from Property
59th Street Generating Station 850 Twelfth Avenue	Ķ75 AST 275 AST 4 x 20,000 AST 2 x 20,000 AST 6 x 18,300 AST 3,400 AST 3,400 AST	Kerosene Diesel No. 5 or 6 Fuel Oil Kerosene Lube Oil Other	In Service Temp. Out of Service In Service Closed-Removed In Service Closed In Place Closed In Place	60 feet south
West End 2 West End Avenue	3 x 4,000 UST 550 UST 550 UST	Gasoline No.2 Fuel Oil Waste Oil	Closed-Removed	400 feet east-southeast
AJH 60 Corp. – Heschel School 20 West End Avenue	5,000 UST	No.6 Fuel Oil	Closed In Place	390 feet east
Abraham Joshua Heschel School 30 West End Avenue	275 AST 5 x 275 AST 6 x 550 UST 6 x 250 AST 250 AST 2 x 250 AST 1,080 UST 550 UST	Lube Oil Waste Oil Gasoline Hydraulic Oil Waste Oil No.4 Fuel Oil Gasoline Motor Oil	Closed-Removed	425 feet east

Notes: AST - aboveground storage tank
UST - underground storage tank

Active and closed-status spills were reported for these listed facilities. In addition, potential undetected releases may have affected the Property. Based on listing details, distance and/or the anticipated groundwater flow direction, the remaining PBS listings are not likely to have affected the Property. Details of the remaining PBS facilities located within ⅛ mile of the Property are included in Appendix C.

State Inactive Hazardous Waste Disposal Site Registry (SHWS)

This program (also known as State Superfund) lists information regarding a variety of sites likely requiring cleanup.

One State Inactive Hazardous Waste Disposal Site was reported within a one-mile radius of the Property. The Hudson River PCB Sediments site, associated with sediment contamination in the Hudson River, approximately 230 feet west of the Property, was not anticipated to affect the Property, based on listing details.

State Hazardous Substance Waste Disposal Site Study (SHSWDS)

This database tracks certain sites that were not listed on SHWS, but may still require investigation and/or cleanup.

No SHSWDSs were identified within a ½-mile radius of the Property.

Major Oil Storage Facilities (MOSF) Database

These facilities have petroleum storage of 400,000 gallons or more.

No Major Oil Storage Facilities were reported within a ⅛-mile radius of the Property.

Environmental Restoration Program

These sites (which are generally municipally-owned) are receiving New York State funding for site investigation and remediation. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

No ERP sites were identified within a ½-mile radius of the Property.

Voluntary Cleanup Program

The Voluntary Cleanup Program is a NYSDEC program for investigation and remediation of (generally) privately-owned sites. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

Two VCP sites were identified within a ½-mile radius of the Property. The Con Ed – West 58th Street Station, pertained to the former location of the manufactured gas holder noted approximately 400 feet southeast of the Property on the 1892 Sanborn map. The listing indicated that an investigation in 2004 identified no significant contamination associated with the manufactured gas storage. The second listing was more than 0.3 mile east-northeast of the Property. Based on their distance and/or listing details, these sites are not likely to have affected the Property.

Brownfield Cleanup Program

This NYSDEC program is the successor to the Voluntary Cleanup Program. Again, some sites have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

Eight BCP sites were identified within a ½-mile radius of the Property. The nearest listings are as follows:

- The Former NY Central Rail Yard Site (facility ID C231081) at 17-29 West End Avenue was located northeast-adjacent to the Property. The listing indicated that

this BCP site was historically part of a rail yard (in approximately 1892 through 1951) and a surface parking lot (through 2012), and was subsequently excavated to 10 to 15 feet below grade. This site was noted to be underlain by a 15 to 32-foot layer of urban fill materials, underlain by a 6 to 12-foot layer of native soil, with bedrock approximately 27 to 37 feet below grade. Groundwater was noted to be approximately 9 to 16 feet below grade, flowing in a westerly direction with a tidal influence. According to the listings, contaminants included: elevated soil concentrations of metals and semi-volatile organic compounds (SVOCs); the VOC isopropyl benzene in groundwater at concentrations exceeding the State drinking water standards; and VOCs associated with petroleum and solvents (including chlorinated solvents) in soil gas, although no exceedances of State Air Guidance Values (AGVs) were noted.

- Two BCP listings were identified two blocks to the south. The Mid-Block #57 Project at 615-649 West 57th Street (approximately 500 feet southwest) and the Off-Site Mid-Block #57 Project (approximately 420 feet southwest) were associated with historical auto-related and industrial uses, which resulted in contamination of soil, groundwater and soil vapor with petroleum and chlorinated solvents. Based on the locations of these sites and anticipated groundwater flow direction, they are not anticipated to affect subsurface conditions beneath the Property.

- Two BCP listings were identified for a single development site subdivided into the West 61st Street Site at 229-251 West 60th Street/218-240 West 61st Street (approximately 660 feet east-southeast of the Property) and the West 61st Street Tennis Court Site at 218 West 61st Street (approximately 820 feet east-southeast of the Property). A 2006 remedial investigation detected several gasoline-related VOCs below NYSDEC drinking water standards and slightly elevated concentrations of a pesticide (heptachlor epoxide) and metals in groundwater on the western edge of this site. While this site is located potentially upgradient of the Property, it is not anticipated to have significantly affected the Property, as it has been remediated and no contaminants were detected migrating from it in groundwater in follow-up sampling.

Based on their location over one-third mile away in an anticipated cross-gradient groundwater flow direction and/or listing details, the remaining listings are not anticipated to have affected the Property.

Historic Utility Sites

This is an inventory of certain power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites identified in various historic documents, maps and annual reports from 1898 to 1950.

One historical utility was identified within a ⅛-mile radius of the Property. An Equitable Gas Light Co. manufactured gas holder was reportedly located between West 58th and West 59th Streets, approximately 600 feet to the southeast in 1899. This may be the gas holder shown on the 1892 Sanborn map approximately 400 feet to the southeast. Based on distance and the anticipated groundwater flow direction, this facility may have affected the Property. However, as preciously noted, an investigation of this site in 2004 reportedly identified no significant contamination.

5.2.3 Local Agency File Review

Records available online from the New York City Fire, Buildings and Finance Departments were viewed for the Property. The Fire Department records were obtained by Toxics Targeting, Inc. as part of the regulatory database search. Since the records typically address a multitude of issues, the review focused on items likely to relate to the potential presence of hazardous materials, e.g., petroleum tank installation applications and permits, and records indicating prior uses. Copies of pertinent information are included in Appendices C (Fire Department Records), D (Buildings Department Records) and G (Finance Department Records).

Fire Department (FDNY)

The computerized FDNY Tanks database was searched regarding past or current motor vehicle fuel and heating oil tank listings within a ⅛-mile radius of the Property. The Property was not identified in the FDNY database. Computerized NYC Fire Department records identified five facilities within this radius. The nearest facilities are listed as follows:

- Con Edison Co. of NY, located at 600 West 59th Street, approximately 60 feet south of the Property, was listed with unspecified "bulk oil storage". This facility was also listed in the PBS database as 850 Twelfth Avenue with 16 tanks ranging in size from 275 to 20,000 gallons.
- Wolosoff Stern Assoc., located at 30 West End Avenue, approximately 425 feet east of the Property, was listed with a 2,000-gallon No. 2 fuel oil tank. This facility was also identified in the PBS database (Section 5.2.2) for 23 tanks ranging in size from 250 to 1,080 gallons, but not a 2,000-gallon tank.

A closed-status spill with some potential to affect the Property was reported for 30 West End Avenue. The remaining Fire Department listings are not likely to have affected the Property, based on their distance and/or the anticipated groundwater flow direction.

Buildings Department

Computerized Buildings Department records for the Property tax lots identified a Stop Work order on Lot 155, possibly related to a 2009 complaint indicating possible illegal occupancy of a vacant lot by parking with car lifts. The records also included two 2012 applications for building demolition and a 2013 application to create a construction trailer complex with parking. Other records for the Property tax lots appeared to pertain to off-site areas. Files pertaining to the Stop Work order were unavailable for review.

Land Title Records and Tax Records

A review of computerized New York City Automated City Register Information System (ACRIS) records, which included records of financial transactions involving the Property, identified records dating back to 1998, which included two modifications to the December 1992 Restrictive Declaration for the Riverside South development (dated September 1999 and March 2002) which pertained to zoning lot subdivisions and off-site parkland development. The ACRIS records also included a September 2011 modification to the Restrictive Declaration, which is summarized in Section 7.0. The original December 1992 Restrictive Declaration and two modifications dated October 1994 and January 1997 were referenced, but not included in the ACRIS records. The

ACRIS records included a December 2012 Declaration of Covenants, Conditions and Restrictions pertaining to the operation of the Property superblock in accordance with the Restrictive Declarations.

The 1992 and 2011 Restrictive Declarations and the December 2012 document are included in Appendix F.

5.2.4 Additional Environmental Record Sources

To enhance the search, ASTM requires that additional local records be reviewed (i.e., beyond those included as part of the standard database search or checked online) when, in judgment of the environmental professional, such records for the Property or any adjoining property would be reasonably ascertainable; useful, accurate and complete in light of the objective of the records review. These records may include:

- Local Brownfields Lists
- Local Lists of Landfill/solid waste disposal sites
- Local Lists of Hazardous Waste/Contaminated Sites
- Local Lists of Registered Tanks
- Local Land Records (for activity use limitations)
- Records of emergency release reports
- Records of contaminated public wells

Sources for these records include:

- Department of Health/Environmental Division
- Fire Department
- Building Permit/Inspection Department
- Local/Regional Pollution Control Agency
- Local/Regional Water Quality Agency
- Local Electric Utility (for PCB records)

On January 27, 2014, AKRF performed an electronic records search for 33 West End Avenue, the address of the nearby dry cleaner noted during the reconnaissance, to identify potential hazardous waste generation at this address. Although no RCRA hazardous waste generation was identified, the dry cleaner was identified as "dry cleaning plants, except rug cleaning."

In AKRF's judgment, no other additional local records meeting the ASTM criteria are pertinent for the Property or any adjoining properties, and a review of additional records would not likely add significant pertinent information or affect the conclusions of this report.

6.0 USER-PROVIDED INFORMATION

In preparing this Phase I ESA, AKRF requested that the Property owners (Extell/the Carlyle Group) provide any pertinent information regarding the Property, specifically:

- Whether any *environmental liens* or *activity and land use limitations (AULs)* are in place or filed or recorded against the Property?
- Whether they had any specialized knowledge or experience related to the Property or nearby properties (e.g., specialized knowledge of any chemicals used on-site)?
- Whether the (anticipated) purchase price reflects that the Property is or could be contaminated?
- Whether they were aware of commonly known or reasonably ascertainable information about environmental conditions of the Property?
- Whether they were aware of any obvious indicators of contamination at the Property?
- Whether they were aware of any pending, threatened, ongoing or past litigation/enforcement action/consent order/notice of violation related to hazardous substances or petroleum products?

According to GID Development Group, the Phase I ESA was performed to evaluate the Property prior to a proposed redevelopment. With the exception of a Restrictive Declaration summarized in Section 7.0, neither Mr. Kirk of Extell nor Mr. Jason Hart of the Carlyle Group were aware of any hazardous waste generation, environmental liens or other activity use limitations on the Property, Property value reduction due to environmental issues, any pending, threatened, ongoing or past litigation/enforcement action/consent order/notice of violation related to hazardous substances or petroleum products, or any obvious indicators of contamination on the Property. To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report.

7.0 PREVIOUS STUDIES

Environmental conditions resulting from previous and existing uses, both on-site and in the surrounding area, were assessed and documented in the following:

- Riverside South Final Environmental Impact Statement (FEIS), AKRF, October 1992;
- Riverside South Restrictive Declaration, December 17, 1992;
- Riverside South, New York, New York – Health and Safety Plan (HASP), AKRF, April 1996;
- Letter from the New York City Department of Environmental Protection (NYCDEP) to AKRF, Re: Riverside South HASP, dated July 23, 1996;
- West Side Site, Parcel L, 20 Riverside Boulevard, New York, New York – Phase I Environmental Site Assessment, Langan Engineering and Environmental Services, Inc. (Langan), June 2005;
- West Side Site, Parcel M, 10 Riverside Boulevard, New York, New York – Phase I Environmental Site Assessment, Langan, June 2005;
- West Side Site, Parcel N, 1-33 West End Avenue, New York, New York – Phase I and Phase II Environmental Site Assessment, Langan, July 2005;
- Environmental Site Assessment Updates (individual reports for Parcels L, M and N), Langan, December 4, 2008;

- Findings of an October 2007 topographic survey by Manhattan Surveying and November-January 2008 geotechnical borings by Testwell Labs, Inc., provided by Mueser Rutledge Consulting Engineers;
- Riverside Center, Parcels L, M and N – Sampling Protocol and HASP, AKRF, May 2009;
- Riverside Center – Subsurface (Phase II) Investigation, AKRF, October 2009;
- Riverside South Final Supplemental Environmental Impact Statement (FSEIS), AKRF, October 2010;
- Riverside South Restrictive Declaration Modification, September 1, 2011;
- Riverside Center – Parcel 2, Manhattan, New York, Application Fact Sheet, OER, August 2012;
- Remedial Investigation Report (RIR), Riverside Center – Parcel 2, 17-29 West End Avenue, Manhattan, New York, Langan, August 2012;
- Remedial Action Work Plan (RAWP), Riverside Center – Parcel 2, 17-29 West End Avenue, Manhattan, New York, Langan, August 2012; and
- Draft Subsurface sampling results for Parcel 5, 1-15 West End Avenue, Langan, April 2013.

Summary of 1992 FEIS Findings

The 1992 Riverside South FEIS analyzed the potential environmental impacts of developing an approximately 74.6-acre former rail yard adjacent to the Hudson River, which was divided into projected development parcels. The parcels corresponding to the Property (M and a portion of N) were on the southernmost superblock of the Riverside South project. The 1992 FEIS was based on: reviews of public agency databases; the findings of soil, groundwater and soil vapor testing programs; correspondence with NYCDEP; and a Construction Health and Safety Plan (CHASP) prepared by Dames & Moore in 1989.

The Property was created by landfilling in the late 1800s. The surrounding area was historically mixed-use and included many rail, auto-related and manufacturing uses. The New York Central & Hudson River Railroad freight yard was located north of the Property across West 60th Street and extended north of the Property through most of Riverside South.

The Property may have been affected by historical auto repair uses in the former on-site garage and historical train tracks to the north. A soil stockpile of unspecified origin was removed from off-site Parcel L in 1987. Train tracks and related activities can contaminate surrounding soil with creosote, a wood treatment containing semi-volatile organic compounds, and other oils.

Several areas on other parcels north of the Property with subsurface contamination due to historical rail yard uses, e.g., petroleum storage tanks and the like, were identified. Remediation of these areas was ongoing at the time of the 1992 FEIS. These areas were not expected to impact the Property due to their cross-gradient groundwater flow locations.

Subsequent to the 1992 FEIS, a December 1992 Restrictive Declaration for Riverside South included the requirement for mitigation of potential hazardous materials impacts, including groundwater contamination, in accordance with the 1992 FEIS. These measures included:

- Implementation of the NYCDEP-approved Construction Phase Health and Safety Plan;
- Proper implementation of remedial alternatives for contaminated soil in accordance with all applicable requirements;
- Air monitoring during soil disturbance in construction areas and active staging areas;

- Temporary gravel cover during construction of exposed soil in those portions of the site that would be used for construction staging, subject to truck traffic, or subject to other activities that might disturb soil;
- Fencing of undeveloped areas during project development;
- Testing and treatment, if necessary, of groundwater;
- Monitoring and soil aeration, if necessary, for methane gas; and
- Capping disturbed areas with impervious surfaces or clean fill.

Investigation Findings

Figure 2 shows the locations of sampling conducted during the various programs described below:

1987–1989

Soil testing was conducted throughout the Riverside South site in 1987-1989 by Fanning Phillips & Molnar (FP&M), Dames & Moore, and Hazardous Waste Engineering Consultants (HWEC). In 1987, FP&M tested the soil gas in the western and southern portions of the Riverside South site, including the off-site northern portion of the Property superblock, using an organic vapor analyzer (OVA) and a gas chromatograph calibrated to detect Priority Pollutant Volatile Organic Compounds (PP VOCs). FP&M detected concentrations of VOCs greater than 10 parts per million (ppm) at some testing locations, including six locations on the Property superblock. Soil and groundwater samples were collected from borings at four of these locations, the nearest of which was approximately 180 feet north of the Property. This soil sample was reported to contain the VOC methylene chloride above NYSDEC Technical and Administrative Guidance Memorandum (TAGM) #4046 guidelines (the guideline used at that time) and the NYSDEC Part 375 Unrestricted Use Standard (USCO) (the standard subsequently used by the regulatory agencies), but below the Part 375 Restricted Residential standard (RRSCO). The groundwater sample from this location contained VOCs below NYSDEC drinking water standards (Division of Water Technical and Operational Guidance Series [TOGS] No. 1.1.1 - Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations). Groundwater is not a potable source in Manhattan; however, these standards were used as a comparison.

Additional testing was conducted by Dames & Moore and FP&M in 1988-1989, including the collection of one soil sample approximately 200 feet northeast of the Property on Parcel N. This sample contained elevated concentrations of metals (above TAGM guidance values and Part 375 Unrestricted Use and Restricted Residential standards), and concentrations of SVOCs and VOCs below NYSDEC TAGM #4046 guidelines and Part 375 standards. Additional soil gas testing on the central and northern portions of the Riverside South site (north of the Property) was conducted using an OVA and a gas chromatograph calibrated to detect methane. The soil gas tests indicated that methane was present at concentrations greater than 10 parts per million (ppm) in several locations north of the Property.

2005–2008

Phase I ESAs were conducted for on-site Parcel M and north-adjacent Parcel L in June 2005 by Langan. A Phase I ESA and a Phase II Subsurface Investigation of Parcel N, part of which is on-site, were conducted in July 2005 by Langan. Subsequently, an updated site assessment of Parcels L, M and N was conducted by Langan in October 2008. The 2005 Phase I ESAs identified a historical filling station in the southeastern corner of Parcel N, at the intersection of West and Avenue and West 59th Street (in an area which was subsequently excavated during construction of the below-grade Amtrak tracks). Car lifts containing hydraulic fluid were reported to exist on the Property in the 2005 Phase I ESAs (the on-site hydraulic lifts were located within the garage). Fluid in hydraulic lifts installed prior to 1979 had the

potential to contain PCBs. No evidence of hydraulic fluid leaks was noted during the 2005 site visits. According to the 2008 update, and numerous new hydraulic car lifts supplied by 18 hydraulic oil reservoirs were added to Parcel N. Although the new lifts were not expected to use PCB-containing hydraulic oil, there have been frequent reported leaks onto the pavement from broken piping, and there was evidence of staining on pavement and on a rainwater sump pump, which indicated the potential for minor subsurface hydraulic oil contamination. The Subsurface (Phase II) Investigation of Parcel N included collection and laboratory analysis of five soil samples and one groundwater sample approximately 130 feet east to 200 feet northeast of the Property. The soil samples contained concentrations of metals and SVOCs above NYSDEC TAGM #4046 guidelines and Part 375 USCOs and RRSCOs, typical of urban fill. Elevated concentrations of metals, likely due to suspended sediment, were identified in the groundwater sample. No VOCs or PCBs were detected above TAGM guidelines or Part 375 standards in any of the samples. Since the 2005 Phase II investigation focused on the northeastern corner of Parcel N, a second Phase II investigation was conducted in 2009 (described below) to assess subsurface conditions on the remainder of Parcel N and Parcels L and M.

New York City Buildings Department records indicated the installation of a 550-gallon No. 2 fuel oil UST in a warehouse on Parcel N, northwest of West 60th Street and West End Avenue (possibly the warehouse shown northeast of the Property on historical Sanborn maps). A geophysical survey of Parcel N conducted in June 2005 by Naeva Geophysics, Inc. did not locate any USTs on the parcel.

The Con Ed steam generating plant located south of the Property across West 59th Street reported numerous active and closed spill listings, including an active listing for a 25,000-gallon spill of dielectric fluid in 1983.

2009

The Subsurface (Phase II) investigation conducted by AKRF in June 2009 (final report dated October 2009) was carried out in general accordance with a Work Plan and site-specific HASP dated May 2009. At the time of the Phase II study, the Property was occupied by surface parking lots and a parking garage (which has since been demolished). The remainder of the Property superblock was occupied by surface parking and the Amtrak railway with a pump house fronting West 59th Street. The Phase II report noted that a filling station may have been historically located in the northeastern corner of the Property superblock. However, based on a review of historical Sanborn maps, this filling station appeared to have been located in the eastern portion of the north-adjacent block.

The Phase II investigation involved the advancement of 13 soil borings with the collection of 26 soil samples and 7 groundwater samples. Four of the borings, eight of the soil samples and one of the groundwater samples were located on the Property. The investigation revealed:

- Concentrations of metals and SVOCs in exceedance of Part 375 USCOs and/or RRSCOs, but typical of urban fill, in soil samples.
- Concentrations of VOCs in soil were generally low, with only acetone exceeding its Part 375 USCO (but not RRSCO) in 6 of the 26 samples, including two samples collected on the Property. The detected soil VOC concentrations generally appeared to be associated with apparent creosote-treated wood or urban fill, and did not appear to indicate petroleum contamination. During site activities, soil was field-screened with a photoionization detector (PID), which measures relative concentrations of VOCs, and a landfill gas meter, which detects concentrations of methane. No methane was detected and only slightly elevated PID readings [up to 2.4 parts per million (ppm)] were recorded, which were attributed to urban fill materials.

- PCBs were not detected in most soil samples. Total PCB concentrations in four off-site samples exceeded Part 375 Unrestricted Use standards (but not Restricted Residential standards), either due to historic urban fill or prior (e.g., rail yard) uses.
- Metals and SVOCs were present in unfiltered groundwater samples in exceedance of Class GA (drinking water) standards, likely due to suspended soil particles in the samples. Metal concentrations were lower in filtered groundwater samples, although some metals exceeded Class GA standards, likely due to the presence of these metals in surrounding fill and/or regional groundwater conditions (e.g., brackish groundwater). VOCs detected in groundwater were generally well below Class GA standards, with only two VOCs exceeding their respective Class GA standards, including p-isopropyltoluene in the on-site groundwater sample and acetone in one off-site groundwater sample. The elevated concentration of p-isopropyltoluene in the on-site sample may be due to the urban fill which included apparent creosote-treated wood in the soil boring where it was collected. The acetone exceedance, in a sample to the east of the Property, was likely due to an off-site source.

The 2005 site assessment report for Parcel N noted that the off-site Amtrak pump house, which was inaccessible, could contain PCB-containing hydraulic equipment or storage tanks. Subsequent to this study, access was obtained and the pump house was inspected, which revealed that no hydraulic equipment or storage tanks were present, though a sump and two electric pumps were observed. Amtrak personnel stated that no storage tanks had ever been associated with the pump house.

Riverside South HASP (AKRF, April 1996)

The Construction Health and Safety Plan (CHASP) developed for Riverside South by Dames & Moore in August 1989 was updated by AKRF in April 1996. The CHASP included measures for worker and community protection, including personal protective equipment, continuous air monitoring for VOCs and particulates during soil disturbance, and procedures for dealing with unexpectedly encountered tanks. The NYCDEP approved the updated HASP in a letter to AKRF dated July 23, 1996. Contractors and sub-contractors for the Riverside South site were required to either work in accordance with this HASP or create individual HASPs at least as preventive of hazardous materials exposure as this plan.

Summary of 2010 FSEIS Findings

The 2010 Riverside Center FSEIS re-analyzed the potential environmental impacts of developing the Property superblock due to some changes in the scope of the proposed development. The FSEIS summarized the findings of the studies previously discussed and recommended conducting the proposed new construction in accordance with the 1992 FEIS, 1992 Restrictive Declaration and the 1996 CHASP, as well as a new Remedial Action Plan (RAP) and CHASP, which would be submitted to the NYC Mayor's Office of Environmental Remediation (OER) for review and approval.

Subsequent to the 2010 FSEIS, a September 2011 Restrictive Declaration for the Property superblock (Parcels L, M and N) was recorded to modify the December 1992 Restrictive Declaration. The new Restrictive Declaration included the requirement for mitigation of potential hazardous materials impacts in accordance with the 2010 FSEIS. These measures included:

- Installation of vapor barriers below new building foundations and sidewalls.
- Air monitoring for VOCs, methane and particulates during construction.
- Field-screening excavated soil for evidence of contamination.
- Implementation of an OER-approved RAP and CHASP.
- Following the completion of the development proposed at the time, implementation of an OER-approved hazardous materials sampling protocol prior to any future projects involving change in

use or soil disturbance. If warranted based on the findings of the sampling, such projects were required to be conducted in accordance with an OER-approved RAP and CHASP.

- Dust control measures (e.g., construction procedures that minimize dust generation, wetting or covering soil stockpiles, truck washing, tarp covers on soil-transporting trucks, etc.).
- Preparation of a plan for conducting dewatering in accordance with NYCDEP and/or NYSDEC requirements, as applicable.

Copies of the 1992 and 2011 Restrictive Declarations and the 1996 HASP are included in Appendix F.

Draft Riverside Center RAP and CHASP (AKRF, October 2010)

A Remedial Action Plan (RAP) and Construction Health and Safety Plan (CHASP) for a proposed development of Parcels L, M and N was prepared based on the findings of the previous studies and submitted to the Property owner in anticipation of a proposed development. Since the project did not proceed, the RAP and CHASP were not submitted to NYCDEP or OER. The RAP included requirements for items such as: soil stockpiling, disposal and transportation; dust control; contingency measures in the event that petroleum storage tanks or other contamination are unexpectedly encountered; and specifications for vapor barriers beneath the proposed buildings. The CHASP include measures for worker and community protection, including personal protective equipment, dust control, air monitoring, and emergency response procedures. The RAP also contained measures for identifying potentially asbestos-containing serpentinite bedrock and conducting any disturbance of such rock in a manner protective of workers and the community.

Off-Site Investigations, 2012-2013

OER provided previous studies for the northeast-adjacent parcel (Parcel 2) and east-adjacent parcel (Parcel 5) on the Property superblock, which were historically identified as part of Parcel N.

A Remedial Investigation Report (RIR) prepared by Langan for the east-adjacent Parcel 2 indicated that soil beneath this parcel consisted of 32 feet of historic fill underlain by up to 12 feet of native sand, with bedrock beneath. The RIR identified the following potential concerns: a potential 550-gallon petroleum UST; staining and evidence of oil leaks adjacent to hydraulic car lifts that may have been related to leaking hydraulic oil supply lines and the usage of creosote for railroad track maintenance; contaminated historic urban fill; the former use of the parcel as a rail yard; and potential releases at adjoining and surrounding properties. Soil sampling results revealed SVOCs, pesticides, and metals above USCOs, with certain SVOCs and metals also exceeding RRSCOs. These detections were reported to be attributable to urban fill. One VOC, isopropylbenzene, was detected in one groundwater sample at a concentration exceeding its Class GA standard; reported to be likely due to an off-site source. Some metals exceeded Class GA standards in total and dissolved groundwater samples, reported to be likely due to the surrounding fill and/or regional groundwater conditions (e.g., brackish groundwater). VOCs associated with petroleum and solvents (including chlorinated solvents) were detected in soil vapor, although none exceeded State Air Guidance Values (AGVs).

A draft Remedial Action Work Plan (RAWP) prepared by Langan for Parcel 2 included, among other things, performance of a community air monitoring program for particulates and VOCs, establishment of site-specific soil cleanup objectives (SCOs), excavation and removal of soil in excess of SCOs and over-excavation in "hotspot" areas (five mercury and arsenic hot spot areas in the central portion of the parcel), transportation and off-site disposal of all soil/fill at permitted facilities, collection of endpoint samples, installation of a vapor barrier beneath the building slab and foundation sidewalls, preparation of a post-construction Site Management Plan, and recording of a Declaration of Covenants and Restrictions that includes a list of Engineering and Institutional Controls. The regulatory database and computerized NYSDEC files indicated that this site was accepted into the New York State Brownfield Cleanup

Program (BCP). A fact sheet published on the OER website indicated that this site also applied for acceptance into the NYC Voluntary Cleanup Program (VCP) in August 2012. No further information was provided on the OER website.

Soil, groundwater and soil vapor samples were collected at east-adjacent Parcel 5 by Langan in April 2013 for laboratory analysis. Soil samples contained concentrations of metals and SVOCs in exceedance of USCOs and/or RRSCOs, and some pesticides in exceedance of USCOs, but not RRSCOs. The VOC methylene chloride was detected in the groundwater samples and a field blank, and appeared to be a laboratory contaminant. The SVOC bis(2-ethylhexyl)phthalate was detected above Class GA standards in some groundwater samples, but may have been associated with plastics used during sampling procedures. Some metals exceeded Class GA standards in total and dissolved groundwater samples, likely due to the surrounding fill and/or regional groundwater conditions (e.g., brackish groundwater). VOCs associated with petroleum and tetrachloroethylene were detected in soil gas samples, although none were at concentrations exceeding State AGVs.

8.0 LIMITATIONS AND DATA GAPS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-13 at the time it was performed, with the following limitations:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- Outdoor Property areas were partially covered with snow, limiting the ability to inspect these areas for surface features, evidence of staining, etc. AKRF does not believe that this represents a significant data gap likely to result in additional or significantly changed recognized environmental conditions or conclusions.
- The reconnaissance included inspection of the interiors of two typical office trailers on the Building 3 and Building 4 sites.
- The electrical switch gear trailer and garage trailer on the Building 3 site, and the flammable storage cabinets on the Building 4 site, were locked and inaccessible.
- Interviews and user-provided information were limited to those discussed in Section 6.0. To the extent that interviews were not conducted with the list of interviewees cited in the ASTM Standard (past and present owners, operators, and occupants of the Property and local government officials), AKRF does not believe that this represents a significant data gap likely to result in additional or significantly changed recognized environmental conditions or conclusions.
- The Property area history was not conducted in five-year intervals. However, sufficient information about the history of the site and surrounding area could be obtained from the available historical Sanborn maps and aerial photographs, and this data gap is not likely to alter the conclusions of this report.
- Agency file reviews for the Property and adjacent properties consisted of a review of standard databases and electronic records maintained by pertinent departments and agencies (summarized in Section 5.2). AKRF believes that this file review was sufficient in determining the potential for recognized environmental conditions or other environmental concerns at the Property and additional reviews beyond this are not warranted and would not likely change the conclusions of this assessment.

9.0 FINDINGS

This assessment revealed the following Recognized Environmental Conditions (RECs), Controlled RECs (CRECs), Historic RECs (HRECs), *De Minimis* Conditions and/or Environmental Concerns:

Recognized Environmental Conditions (RECs)

- The Property was created by landfilling in the late 1800s and was historically developed with two buildings, one of which had been used as a heater business, a handbag factory, a corrugated box factory, flooring and construction businesses, and auto-related uses including auto repair, sales and a parking garage. Both buildings have been demolished. Previous studies indicated that the Property was underlain by a layer of urban fill materials up to 35 feet thick, which was in turn underlain by native soil with some organic materials. The soil contained elevated concentrations of certain metals and semi-volatile organic compounds (SVOCs) typical of urban fill materials, and slightly elevated concentrations of acetone, which appeared to be associated with fill containing creosote-treated wood. One on-site 2009 groundwater sample contained an elevated concentration of the volatile organic compound (VOC) p-isopropyltoluene, which appeared to be associated with fill containing creosote-treated wood. No elevated PCB or pesticide concentrations were detected. No evidence of significant petroleum contamination was identified in previous investigations.
- The surrounding area historically included: a rail yard north of the Property; a rail spur west-adjacent to the Property; and automotive-related uses (filling stations and automobile repair). The regulatory database identified spills and petroleum bulk storage facilities with some potential to affect subsurface conditions beneath the Property. The Con Ed steam generating plant on the south-adjacent block was listed in the database with numerous active and closed-status spills, petroleum and chemical storage tanks, and a wastewater discharge registration. A northeast-adjacent construction site was identified in the regulatory database as a State Brownfield Cleanup Site with detections of VOCs associated with petroleum and solvents (including chlorinated solvents) in soil gas. Similar VOCs were detected in soil gas at a parcel east-adjacent to the Property. The reconnaissance noted a large soil stockpile (reportedly non-hazardous, non-petroleum contaminated soil excavated during the Riverside South development) on the north-adjacent parcel of the Property superblock, and a dry cleaner approximately 390 feet northeast of the Property.

De Minimis Condition

- Chemical storage on the Property included two locked flammable cabinets in the northern portion of the Building 4 site. No other chemical storage was noted.

Other On-site Environmental Concerns (items outside the scope of E1527-13, such as asbestos-containing materials (ACM), lead-based paint (LBP) and/or polychlorinated biphenyls (PCBs) in building materials or fill/debris)

- After undergoing City Environmental Quality Review (CEQR) in 1992 and 2010, the Property and adjacent parcels were entered into a Restrictive Declaration dated December 1992, with modifications in 1994, 1997, 1999, 2002 and 2011. The Restrictive Declarations specified that development of the Property is to be conducted in accordance with the measures specified under CEQR to minimize hazardous materials impacts. These measures include, among others: preparation of a NYC Mayor's Office of Environmental Remediation (OER)-approved Remedial Action Plan (RAP) and Construction Health and Safety Plan (CHASP) for implementation during construction; air monitoring and dust control during construction; and the installation of vapor controls (e.g., vapor barriers) beneath new building foundations and sidewalls.

- Suspect ACM observed during the reconnaissance included suspended ceiling tiles, carpet mastic, vinyl floor tiles and associated mastic, roofing materials, and window caulk and putty. The on-site trailers were reportedly installed in 2013, at which time few ACM were utilized in construction. However, if the trailers were constructed prior to 1990, they are more likely to contain ACM, and even recently installed materials (e.g., vermiculite-containing materials and some roofing products) may include ACM. The observed suspect ACM were noted to be in good condition.
- Exterior and interior painted surfaces were observed to be in good condition. During the reconnaissance, there was no observation of residential occupancy, child care facilities, or other facilities where the extended presence of children would be expected. Exterior painted surfaces and (if trailers were built prior to 1977) interior painted surfaces may contain lead-based paint.
- On-site office trailers and electrical switch gear trailer were reportedly installed in 2013, when polychlorinated biphenyls (PCBs) were not used. However, these trailers may have been constructed at an earlier date. If built prior to 1979, fluorescent lighting fixtures and electrical equipment may contain PCBs. No evidence of leaks or stains from the observed fluorescent lighting fixtures was noted.
- Two underground electrical transformer vaults were observed in the West 59th Street sidewalk south-adjacent to the Building 3 site. These vaults may contain PCB-containing electrical equipment.
- Based on area geologic mapping and previous testing conducted in the surrounding area, serpentinite bedrock containing chrysotile (a type of asbestos) is present in off-site areas east and southeast of the Property; this type of bedrock could be present beneath the Property.
- Previous studies identified methane in soil vapor samples on Riverside South parcels north of the Property, likely due to subsurface organic soil. No methane was detected during field-screening of Property soils during a 2009 subsurface investigation.

Potential for Vapor Migration

This Phase I assessment identified a potential for subsurface vapors and thus a potential for vapor migration onto the Property, based on the RECs previously noted.

10.0 CONCLUSIONS AND RECOMMENDATIONS

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, the Standard are described in Section 8.0. The term "Recognized Environmental Condition" or REC means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The Standard also includes definitions of Historic REC (HREC), Controlled REC (CREC), and *De Minimis* Condition. A *De Minimis* Condition is defined as an environmental concern that is not a threat to human health or the environment and would not be subject to enforcement action.

Prior to the current uses, the Property was occupied by: a warehouse (demolished between 1976 and 1988); a building used as a livestock house, a warehouse, a heater business, a handbag factory, a corrugated box factory, flooring and construction businesses, and auto-related uses including auto repair, sales and a parking garage (demolished in 2013); and surface parking lots.

At the time of AKRF's reconnaissance, the Property was occupied by trailer and construction staging areas. The trailers were reportedly installed in 2013. The Property was abutted by a trailer and construction staging area to the north, construction sites to the east and northeast, and the elevated Henry Hudson Parkway to the west, with Hudson River Park and the Hudson River beyond. The greater surrounding area was predominantly occupied by multistory residential buildings with some commercial uses. A Consolidated Edison (Con Ed) steam generating plant was located on the south-adjacent block.

The Property was historically identified as Parcel L and a portion of Parcel N of the Riverside South development.

This assessment revealed the following:

- Prior to Property development, OER may require additional subsurface testing in addition to that previously conducted (such as soil vapor sampling). Any such sampling required by OER should be conducted in accordance with an OER-approved Remedial Investigation Work Plan (RIWP). Property redevelopment should be conducted in accordance with the Restrictive Declarations recorded for the Property and an OER-approved Remedial Action Plan (RAP) and Construction Health and Safety Plan (CHASP). At a minimum, the RAP should address requirements for items such as: soil stockpiling, disposal and transportation; dust control; contingency measures in the event that petroleum storage tanks or other contamination are unexpectedly encountered; and vapor control measures such as a vapor barrier beneath the proposed building. The CHASP should include measures for worker and community protection, including personal protective equipment, dust control, air monitoring, and emergency response procedures. The RAP should also contain measures for identifying potentially asbestos-containing serpentinite bedrock and conducting any disturbance of such rock in a manner protective of workers and the community.
- Any excavated soil should be handled and disposed of in accordance with all applicable federal, state and local regulations. If petroleum contamination is encountered during future Property redevelopment, NYSDEC spill reporting requirements would need to be followed.
- If dewatering is necessary for the proposed redevelopment, it should be conducted in accordance with NYCDEP regulations (for discharge to municipal sewers) or NYSDEC requirements (for discharge to any outfalls to the Hudson River).

- Unless there is labeling or test data indicating that electrical equipment does not contain PCBs, and that fluorescent lighting fixtures are not mercury- and/or PCB-containing, if disposal is required, it should be performed in accordance with applicable federal, state and local regulations and guidelines.
- Any chemicals requiring disposal should be properly disposed of in accordance with applicable requirements.

11.0 SIGNATURE PAGE

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property for which the assessment was performed. We have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.

Michelle Lapin, P.E.
Senior Vice President

Asya Bychkov, P.E.
Environmental Engineer

12.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the Property, and to identify existing and/or potential environmental issues associated with the Property including *Recognized Environmental Conditions* as defined in ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*.

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard, except as noted otherwise in Section 8.0. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the Property at the time of the reconnaissance, as it is based upon the review of readily available records relating to both the Property and the surrounding area, as well as a visual reconnaissance of current conditions.

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the Property and its surroundings. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and reconnaissance have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than GID Development Group and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or grossly negligent or willful acts or omissions.

1.0 INTRODUCTION

The project site is composed of three parcels, Parcel L, M and N, and is bounded by West End Avenue to the east, the extension of West 61st Street to the north, West 59th Street to the south, and Twelfth Avenue/Henry Hudson Parkway to the west, as shown on Figure 1. The western portion of the project site consists of Parcels L and M (approximately 50,000 square feet each). The eastern portion of the site comprises Parcel N (approximately 252,000 square feet). As shown on Figure 2, the site is currently occupied by a number of uses including: a construction staging area for ongoing Riverside South development on the northwestern portion of Parcel L, and a soil stockpile related to this development on the northeastern portion of Parcel L and the northwestern corner of Parcel N; a former warehouse building now being used as a parking garage in the southern portion of Parcels M and N; an active Amtrak pump house on the southeastern side of Parcel N (fronting 59th Street); three concrete platforms from the former rail yard and temporary construction trailers for the ongoing Riverside South development on the northern side of Parcel N; and surface parking lots with parking risers on the remainder of the site. A below-grade Amtrak rail line crosses the eastern edge of Parcel N, north to south (the southern portion of the rail line is within a tunnel).

The elevated Henry Hudson Parkway is located immediately west of the site, with 12th Avenue and Riverside South Park beyond that. An active construction site for the Riverside South development is located north of the site, and residential buildings are located beyond the construction site. Mixed use development (commercial and residential) is located across West End Avenue (11th Avenue) to the east. A Consolidated Edison steam generating plant is located immediately south of the site across West 59th Street.

Previous studies of the project site identified Recognized Environmental Conditions (RECs) for the site, including past and present train tracks on-site, past auto-related uses, and one or more potential buried petroleum storage tanks. The purpose of this investigation was to determine whether current or former on- or off-site activities have adversely affected the project site. The scope of this Subsurface (Phase II) Investigation was based on the findings of previous environmental investigations summarized in Section 2.0, and was conducted in general accordance with AKRF's Sampling Protocol and site-specific Health and Safety Plan (HASP) dated May 2009. The investigation was conducted on May 18-21, 2009, and included the collection of soil and groundwater samples for laboratory analysis. This report describes the methods and results of the Phase II investigation conducted by AKRF.

2.0 PREVIOUS ENVIRONMENTAL INVESTIGATIONS

Riverside South Final Environmental Impact Statement (FEIS); AKRF, Inc., October 1992

The 1992 Riverside South FEIS analyzed the potential environmental impacts of developing an approximately 74.6-acre former rail yard adjacent to the Hudson River, which was divided into projected development parcels. The parcels corresponding to the project site (L, M and N) are located on the southern side of "Riverside South". The FEIS was based on reviews of public agency databases; the findings of soil, groundwater and soil vapor testing programs; correspondence with the New York City Department of Environmental Protection (NYCDEP); and a Construction Health and Safety Plan prepared by Dames & Moore in 1989. The testing locations on Parcels L, M and N from these previous investigations are included on Figure 2, Sampling Location Map, which also includes the sample locations of this current investigation.

The following findings of the FEIS applied to the project site:

- In 1987, Fanning, Phillips & Molnar (FP&M) tested the soil gas in the western and southern portions of the Riverside South property, including portions of Parcel N. Using an organic vapor analyzer (OVA) and a gas chromatograph calibrated to detect Priority Pollutant Volatile Organic Compounds (VOCs), FP&M detected concentrations of VOCs greater than 10 parts per million (ppm) at some testing locations, including several locations on Parcel N. Soil and groundwater samples were collected from soil borings at four of these locations, including one location on Parcel N (shown as B-4 on Figure 2). Methylene chloride was detected in one of three soil samples collected from boring B-4 at a concentration above the New York State Department of Environmental Conservation (NYSDEC) Technical and Administrative Guidance Memorandum #4046 (TAGM) #4046 guideline (the guideline used at that time) and the NYSDEC Part 375 Unrestricted Use Standard (the standard subsequently used by the regulatory agencies), but below the Part 375 Restricted Residential standard. The groundwater sample from B-4 contained VOCs below NYSDEC drinking water standards [Division of Water Technical and Operational Guidance Series (TOGS) No. 1.1.1 - Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations]. Groundwater is not a potable source in Manhattan, however, these standards were used as a comparison.
- In 1987, after soil stockpiles of unspecified origin were removed from portions of Parcels L and N, Hazardous Waste Engineering Consultants (HWEC) tested shallow soil in the former stockpile locations. The analysis detected elevated concentrations of metals and semi volatile organic compounds (SVOCs), but no VOCs, polychlorinated biphenyls (PCBs) or pesticides.
- Groundwater sampling throughout the Riverside South area in 1987 and 1988 detected elevated concentrations of metals (likely due to suspended sediment) and phenols (types of SVOCs), which were reportedly due to decomposition of organic matter in soil beneath Riverside South.
- Additional testing conducted by Dames & Moore and FP&M in 1988 and1989 included the collection of one soil sample (shown as #30 on Figure 2) on Parcel N. This sample contained elevated concentrations of metals, and concentrations of SVOCs and VOCs below NYSDEC TAGM #4046 guidelines and Part 375 standards. Additional soil gas testing on the central and northern portions of the Riverside South property (north of the project site) was conducted using an OVA and a gas chromatograph calibrated to detect methane. The soil gas tests indicated that methane was present at concentrations greater than 10 parts per million (ppm) in several locations north of the project site.

Phase I Environmental Site Assessments (individual reports for Parcels L and M), June 2005; *Phase I and Phase II Environmental Site Assessment*, July 2005 (Parcel N); and *Phase I Environmental Site Assessment Updates*, December 2008 (individual reports for Parcels L, M and N); Langan Engineering and Environmental Services

Phase I Environmental Site Assessments (ESAs) were conducted for Parcels L and M in June 2005 by Langan Engineering and Environmental Services, Inc. (Langan). A Phase I ESA and a Phase II Subsurface Investigation of Parcel N were conducted by Langan in July 2005. Updated Phase I ESAs of the parcels comprising the project site were conducted by Langan in October 2008. A variety of information sources were reviewed to prepare the Phase I ESAs, including Sanborn fire insurance maps, City Directories (business and resident listings), environmental regulatory agency databases identifying state and federally listed sites, New York City databases and records from the Department of Buildings and Fire Department (FDNY). In addition, reconnaissance of the site and surrounding neighborhood was performed. The Subsurface (Phase II) Investigation of Parcel N included collection and laboratory analysis of five soil samples and one groundwater sample collected in the northeastern quadrant of the parcel.

The Phase I ESAs and Phase II identified the following:

- Hydraulic car lifts were noted on all three parcels during the 2005 and/or 2008 site assessments. It was noted that fluid in hydraulic lifts installed prior to 1979 has the potential to contain polychlorinated biphenyls (PCBs). Although new hydraulic car lifts added to Parcel N between 2005 and 2008 are not expected to use PCB-containing hydraulic oil, there have been reportedly frequent leaks onto the pavement from broken piping and evidence of staining was noted on pavement and on a rainwater sump pump, indicating the potential for subsurface hydraulic oil contamination.
- An Amtrak tunnel opening into a below-grade rail bed crossed the eastern portion of Parcel N and an Amtrak pump house was located west-adjacent to the railway, along 59th Street. The interior of the pump house was not accessible during the 2005 or 2008 site visits. The 2005 report for Parcel N concluded that the pump house may contain hydraulic equipment or storage tanks; however, access to the pump house was provided by an Amtrak representative during AKRF's May 2009 Phase II activities. No hydraulic equipment or storage tanks were noted in the pump house, which contained a sump and two electric pumps for dewatering the Amtrak tracks. In addition, Amtrak personnel stated that no storage tanks had ever been associated with the pump house.
- A filling station with several 550-gallon buried gasoline tanks was historically present in the southeastern corner of Parcel N. A second historical filling station was potentially located in the northeastern corner of Parcel N. These stations were apparently removed for the construction of the Amtrak rail corridor. As the rail corridor is below-grade, all gas station equipment and any associated contamination were likely removed.
- NYC Department of Buildings records indicated the installation in 1962 of a 550-gallon No. 2 fuel oil underground storage tank (UST) in a warehouse on Parcel N, northwest of West 60th Street and West End Avenue. The exact location of the warehouse could not be determined. As with the historical filling station, the warehouse and the tank may have been removed for the construction of the on-site Amtrak railway. A geophysical survey of Parcel N conducted by Naeva Geophysics, Inc. in June 2005 did not locate any underground storage tanks on the parcel.
- The Riverside South area was listed twice in the State Hazardous Waste Generator/Transporter database. One of the Hazardous Waste Generator listings, for Penn Yards at West 59th Street, may have referred to the project site; however, this could not be confirmed. No further information was provided, and no spills were associated with this listing.
- An operating Consolidated Edison steam generating plant is located south of the site across West 59th Street. Several active and closed spill listings were reported for this plant, including an active listing for a 25,000-gallon spill of dielectric fluid in 1983. Two spills reported in 2005 involved 50 gallons of dielectric fluid in a manhole and an unspecified amount of the fluid on groundwater in an excavation adjacent to the project site. Although the site assessments concluded that releases from the Consolidated Edison plant are not likely to affect the site due to its cross-gradient groundwater flow location and the low mobility of dielectric fluid, oil-contaminated soil could be encountered during off-site work for utility installation.
- Concentrations of metals and SVOCs in exceedance of NYSDEC TAGM #4046 guidelines and/or Part 375 Unrestricted Use and Restricted Residential standards, typical of urban fill, were detected in soil samples collected during the 2005 Phase II investigation of Parcel N; no VOCs or PCBs were detected above TAGM guidelines or Part 375 standards. A groundwater sample collected during the Phase II study did not contain PCBs, VOCs or SVOCs above NYSDEC TOGS drinking water standards. Elevated metal concentrations in the groundwater sample appeared to be due to suspended sediment. The 2005 Phase II investigation advanced five borings in the northeastern portion of Parcel

N, but did not investigate other areas of the project site, including Parcels L and M and the location of the historical filling station in the southeastern corner of Parcel N.

- Based on area geologic mapping and previous testing conducted in the surrounding area, serpentinite bedrock containing chrysotile (a type of asbestos) is present in off-site areas east and southeast of the site. This type of bedrock could be present beneath the site.

Riverside South, New York, New York—Health and Safety Plan; AKRF, Inc., April 1996

The Construction Health and Safety Plan (HASP) developed for Riverside South by Dames & Moore in August 1989 was updated by AKRF in April 1996. The HASP included measures for worker and community protection, including personal protective equipment, air monitoring and procedures for dealing with unexpectedly encountered tanks. The New York City Department of Environmental Protection approved the updated HASP in a letter to AKRF dated July 23, 1996. Contractors and sub-contractors for the Riverside South site were required to either work in accordance with this HASP or create individual HASPs at least as preventative of hazardous materials exposure as this plan.

3.0 PHYSICAL SETTING AND PROPOSED DEVELOPMENT

The surface topography of the subject site is highly variable, generally sloping down towards the northwest. Based on previous geotechnical and environmental investigations of the Riverside South area (which includes the project site and several blocks to the north), the project site is located at approximately Elevation +5 to +24 feet Manhattan Borough Datum (MBD). Groundwater is approximately at Elevation -2 to +4 and bedrock is located at approximately 0 to -50 feet MBD. Soil at the site consists of urban fill placed in the late 1800s (up to 35 feet thick), underlain by native organic silty clay, increasing in thickness in a westerly direction (up to 40 feet thick in the western portion of the site) and, in portions of the site, a thin layer of sand or till above bedrock (mainly mica and gneissic schist, granite and pegmatite). Based on area geologic mapping and previous testing conducted in the surrounding area, serpentinite bedrock containing chrysotile (a type of asbestos) is present in off-site areas east and southeast of the site; this type of bedrock could be present beneath the site.

Groundwater is expected to flow in a westerly direction toward the Hudson River; however, the flow direction is tidally influenced and may be additionally affected by the underground Amtrak rail line in the eastern portion of Parcel N and other factors beyond the scope of this study. A second, deeper confined aquifer in the sand-till layer is separated from shallow groundwater by the clay layer. Groundwater in Manhattan is not used as a source of drinking water.

Observations of subsurface conditions made during AKRF's subsurface investigation were generally consistent with these previous observations, and are summarized in Section 5.1.

The proposed project would entail the construction of five multistory mixed-use buildings with three basement levels (an auto showroom above two parking levels) and creation of a public open space. The proposed development would involve excavation to approximately 50 feet below existing grade over most of the site, except a small area east of the Amtrak tracks. Based on previous investigations and observations during this Phase II study, bedrock is most likely present less than 50 feet below grade over most of the site. The proposed excavation would, therefore, involve the removal of most of the on-site soil down to bedrock and some bedrock, especially on the eastern side of the site.

4.0 TECHNICAL OVERVIEW

This section summarizes the site investigation activities. Field activities were conducted on May 18-21, 2009 by AKRF personnel and Paragon Environmental Construction, Inc. (Paragon). The boring locations are shown on Figure 2, Sample Location Map. Four boring locations (SB-4, SB-5, SB-7 and SB-13) vary slightly from the proposed locations indicated on Figure 2 of the Sampling Protocol due to drill rig access limitations, a body of standing water in the northern portion of Parcel L and suspected buried utilities in portions of the site. However, all four of these boring locations were advanced within 50 feet of the proposed locations and do not impact the geographic coverage of this Phase II investigation. The rationale behind the soil boring/temporary monitor well locations is summarized in the following table:

Soil Boring Locations

Boring Number	Location	Rationale	Comments
SB-1/ GW-1	Upgradient (northeastern) corner of Parcel N	To assess effect on soil and groundwater from a potential historical filling station and off-site upgradient sources.	Advanced by truck-mounted Geoprobe.
SB-2/ GW-2	Upgradient (southeastern) corner of Parcel N	To assess effect on soil and groundwater from an historical on-site filling station and off-site upgradient sources.	Advanced by Geoprobe.
SB-4	South-central portion of Parcel N	To characterize soil conditions in the central portion of the site, within the parking lot.	Advanced by Hollow-Stem Auger rig due to shallow refusal on fill encountered by Geoprobe throughout the southern portion of the site.
SB-5/ GW-5	Center of Parcel N	To characterize soil conditions in the central portion of Parcel N.	Advanced by auger rig. Attempted boring to 50 feet below grade; refusal on bedrock approximately 16.5 feet below grade.
SB-6	Northwestern quadrant of Parcel N	To characterize soil conditions on the northern-central portion of the site.	Advanced by Geoprobe. Groundwater sample (proposed to characterize groundwater conditions in the north-central portion of the site) not collected, since water samples were collected for this purpose from monitoring well MW-N and boring SB-5 in the north-central portion of Parcel N.
SB-7	Northeastern quadrant of Parcel L, west of soil stockpile	To characterize soil conditions on-site.	Advanced by Geoprobe.
SB-8/ 8B	Northeastern corner of Parcel M (west-adjacent to parking garage)	To characterize soil conditions adjacent to the on-site warehouse (parking garage) building.	Advanced by Geoprobe. Two attempts made to advance the boring due to shallow refusal on fill, in an attempt to bypass obstruction.

Boring Number	Location	Rationale	Comments
SB-9/ 9B	Southeastern corner of Parcel M (west-adjacent to parking garage)	To characterize soil conditions at the southwestern corner of the on-site warehouse (parking garage) building.	Advanced by Geoprobe. Two attempts made to advance the boring due to shallow refusal on fill, in an attempt to bypass obstruction.
SB-10	Center of Parcel M	To characterize soil conditions in the center of Parcel M.	Advanced by auger rig due to shallow refusal on fill encountered by Geoprobe throughout the southern portion of the site.
SB-11	Center of Parcel L	To characterize soil conditions in the center of Parcel L.	Advanced by auger rig to approximately 50 feet below grade, since deep boring SB-15 could not be advanced, as noted below.
SB-12/ GW-12	Southwestern (downgradient) corner of Parcel M	To characterize soil and groundwater conditions in the southwestern (downgradient) portion of the site.	Advanced by auger rig to approximately 50 feet below grade.
SB-13/ GW-13	Southwestern (downgradient) corner of Parcel L.	To characterize soil and groundwater conditions in the downgradient portion of the site.	Advanced by Geoprobe.
SB-14/ GW-14	Western (downgradient) edge of Parcel L	To characterize soil and groundwater conditions in the western (downgradient) portion of the site.	Advanced by Geoprobe.

Two borings proposed in the Sampling Protocol were not advanced during the Phase II field activities as follows:

- Boring SB-3 was proposed adjacent to the Amtrak pump house on Parcel N to assess impact from potential hydraulic equipment or storage tanks in the pump house. The potential tanks were reported as a Recognized Environmental Condition (REC) in previous Phase I Environmental Site Assessments, as the pump house was inaccessible during these previous environmental investigations. The potential for the tanks was an assumption. However, access to the pump house was provided to AKRF by an Amtrak representative during field activities on May 19, 2009. A visual inspection of the pump house and interviews with Amtrak representatives indicated that no hydraulic equipment or storage tanks were present in the pump house, which utilized two electric pumps. Therefore, this location was no longer a REC and boring SB-3 was not advanced. In addition, the subgrade pump house structure is approximately twice the size of the above-grade building. The additional subgrade building space extends to the north, where SB-3 was proposed.
- Boring SB-15, proposed in the northwestern corner of Parcel L to assess soil conditions in the downgradient portion of the site, could not be advanced due to the presence of standing water in the northern portion of Parcel L.

4.1 Methodology

Soil samples were collected at each boring location by a truck-mounted Geoprobe direct push probe or a truck-mounted Hollow-Stem Auger (HSA) rig, as noted in Table 1. Since no utility blueprints were available for the site and no utility markouts were provided along the northern and western edges of the site, which are occupied by a construction staging area (utility companies generally mark out public sidewalks, but not private property), boring locations were

generally pre-cleared by hand auger to approximately five feet below grade unless resistance on fill was encountered. Following pre-clearing, the Geoprobe samples were collected using four-foot long, two-inch diameter, macrocore piston rod samplers fitted with dedicated acetate liners. The HSA samples were obtained with two-foot split-spoon samplers which were driven ahead of the hollow-stem auger to obtain an undisturbed soil sample. The soil sampling methodology is described in Section 4.2. The groundwater sampling methodology is described in Section 4.3.

For quality assurance/quality control (QA/QC) purposes, a trip blank (TB-1) was shipped to the lab with the collected soil and groundwater samples. The trip blank was analyzed for VOCs to check for contamination during transport and sampling procedures.

Hollow stem augers and drilling rods were decontaminated between boring locations by steam cleaning. Decontamination was conducted on plastic sheeting that was bermed to prevent discharge to the ground. All drill cuttings, decontamination water and used plastic sheeting were containerized in DOT-approved 55-gallon steel drums, which were sealed, labeled and stored in the construction staging area on Parcel L pending disposal in accordance with applicable regulations.

4.2 Soil Sample Collection

Soil samples were collected at each boring location by a truck-mounted hollow-stem auger rig with a two-foot split-spoon sampler, or by a truck-mounted Geoprobe rig. Continuous sampling was proposed to the depth of excavation (50 feet below grade) or to refusal for borings SB-5, SB-12 and SB-14 (deep borings), and to a depth of 20 feet below grade (or a sufficient depth to collect a groundwater sample in the borings where groundwater samples were proposed) for refusal for the remainder of the borings (shallow borings). Although it was proposed to advance SB-5, SB-12 and SB-14 to a depth of 50 feet, due to refusal on apparent bedrock, SB-5 was only able to be advanced to 16.5 feet below grade and SB-11 and SB-12 met refusal on apparent bedrock at 48 feet and 46 feet below grade, respectively. Some of the remainder of the borings slated as "shallow" borings also met shallow refusal on apparent bedrock, wood or concrete, as detailed in the following table.

Soil Sample/Boring Depths

Boring Number	Sample Number	Depth of Sample (feet)	Final Depth of Boring/Refusal
SB-1	SB-1 (2')	2	Refusal at 24' on apparent Bedrock
	SB-1 (16')	16	
SB-2	SB-2 (2-3')	2-3	Refusal at 24' on apparent Bedrock
	SB-2 (7-8')	7-8	
SB-4	SB-4 (2-4')	2-4	Refusal at 14' on Wood
	SB-4 (13-14')	13-14	
SB-5	SB-5 (2-4')	2-4	Refusal at 16.5' on apparent Bedrock
	SB-5 (15-16')	15-16	
SB-6	SB-6 (2-4')	2-4	20'
	SB-6 (10-12')	10-12

	SB-14 (6-7')	6-7	

Soil samples were field-screened with a photoionization detector (PID) for VOCs, and with a landfill gas meter for methane. At each boring location, the two samples with the highest organic vapor reading were selected for laboratory analysis. If no significant above-background organic vapors were detected and no staining or odors were noted, one sample was collected from the top four feet below grade and one sample was collected from just above the water table (for the shallow borings) or the bottom of the boring (for the deep borings). Twenty-six soil samples were collected, as indicated in the following table. The organic vapor readings, description of soil, and groundwater depths are noted in the boring logs located in Appendix A.

All soil samples were analyzed for volatile organic compounds (VOCs), semi volatile organic compounds (SVOCs), Target Analyte List (TAL) metals, pesticides and polychlorinated biphenyls (PCBs).

The soil samples were containerized, cooled by ice and stored in accordance with EPA protocols. Sample dates, times, analyses, matrix, and custody signatures were recorded on the chains of custody located in Appendix D. The samples were analyzed by Alpha Analytical Laboratory, a New York State-certified laboratory, for volatile organic compounds (VOCs) by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, Target Analyte List (TAL) Metals, and Pesticides and PCBs by EPA Methods 8081/8082, respectively.

4.3 Groundwater and Monitoring Well Sampling

Temporary one-inch monitoring wells were installed in six borings at the locations shown on Figure 2. The wells were installed with five to ten feet of PVC screen as noted in the boring logs. In addition, one groundwater sample was collected from an existing two-inch PVC monitoring well (shown as "MW" on Figure 2) located in the north-central portion of Parcel N. The origin of this monitor well is not known (the well did not appear on any reviewed previous reports), but was measured to be 17.3 feet deep and appeared to be viable. It was proposed to analyze all groundwater samples for (VOCs) by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, Target Analyte List (TAL) Metals (total and dissolved), and Pesticides and PCBs by EPA Methods 8081/8082, respectively. However due to poor recovery in the temporary well at SB/GW-2, only VOCs could be analyzed in groundwater from this location.

Groundwater samples were collected with disposable Teflon bailers, containerized, cooled by ice, and stored in accordance with EPA protocols. Sample dates, times, analyses, matrix, and custody signatures were recorded on the chains of custody located in Appendix C.

The samples were analyzed by Alpha Analytical Laboratory, a New York State-certified laboratory. Each sample was analyzed for volatile organic compounds (VOCs) by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, Priority Pollutant Metals (dissolved and total), and Pesticides and PCBs by EPA Methods 8081/8082 respectively, except for groundwater sample GW-2, which was analyzed only for VOCs due to poor groundwater recovery from the temporary monitoring well installed in boring SB-2.

5.0 FINDINGS

5.1 Field Observations

Soil descriptions, observations, photoionization detector (PID) readings and landfill gas meter readings were recorded on the soil boring logs provided in Appendix B. A groundwater monitoring well sampling log for the existing monitoring well installed for an unknown previous investigation (shown as "MW" on Figure 2 and "MW-N" in the laboratory data sheets) is provided in Appendix B. Soil and groundwater sample laboratory analytical data sheets are provided in Appendix C.

During AKRF's subsurface investigation, uncontrolled fill (including brick, asphalt, slag, wood, coal, ash, concrete, sand, gravel, silt and miscellaneous building materials) was observed approximately from the surface to 4 to 28 feet below grade. The fill was underlain by organic silty clay with traces of gravel, wood, sand and shells. Apparent bedrock was encountered at depths ranging from 24 feet below grade in the eastern portion of the site (SB-1 and SB-2), 16.5 feet beneath the central portion of the site (SB-5), and 46-48 feet below grade in the western portion of the site (SB-11 and SB-12). Refusal due to apparent fill or historical structures (wood or concrete) was encountered in borings SB-4, SB-8/8B and SB-9/9B, in the southwestern portion of Parcel N and the eastern portion of Parcel M, at depths ranging between 7.8 and 14 feet below grade. The wood encountered in the bottom of boring SB-4 is likely from the historical building at this location; the wood encountered in the bottom of borings SB-8 and SB-9B could be old piers.

Groundwater was encountered in the borings at depths of approximately 7 to 23 feet below grade throughout the site. Based on these observations and apparent bedrock depths, is likely that the groundwater generally flows along the topographical/bedrock gradient in a westerly direction towards the Hudson River. However, groundwater flow in the eastern portion of Parcel N may be affected by dewatering at the adjacent Amtrak rail bed.

During site activities, soil was field-screened with a photoionization detector (PID), which measures relative concentrations of volatile organic compounds (VOCs) in the soil, and a landfill gas meter utilized to detect methane in the soil. In addition, ambient air was monitored with the PID and landfill gas meter during site activities. No methane was detected in soil samples or ambient air. Slightly elevated PID readings (up to 2.4 ppm) were noted in portions of soil borings SB-2, SB-6 and SB-11; however, no staining indicating contamination was noted in these borings. A chemical or pine-like odor, apparently due to old treated wood, was noted in the upper 5-6 feet of borings SB-5 and SB-12, where large amounts of wood were noted. Organic odors were noted in many of the borings both in the fill materials and in the underlying naturally

deposited silts and clays. In addition, shells were noted in the organic clay in boring SB-11, located on the northern portion of Parcel L, which had been underwater prior to filling.

5.2 Soil Analysis Results

All laboratory analyses were performed by Alpha Analytical Laboratories of Westborough, Massachusetts, a New York State Department of Health (NYSDOH)-ELAP certified laboratory. Laboratory analysis results are summarized in Tables 1-4. The complete laboratory analytical data sheets are located in Appendix C.

Laboratory results were compared to New York State Department of Environmental Conservation (NYSDEC) Part 375 Unrestricted and Restricted Residential Soil Cleanup Objectives (SCOs). The Part 375 SCOs are based on the anticipated use of a site, with Unrestricted Use SCOs developed for a site with no use restrictions, and Restricted Residential SCOs developed for residential uses with certain limitations, including restrictions on single-family housing and recreational uses with a potential for soil contact. In addition, results of the soil metals analyses were compared to Eastern United States background levels published in NYSDEC Technical and Administrative Guidance Memorandum (TAGM) No. 4046.

Volatile Organic Compounds

Five VOCs were detected in the soil samples. Acetone was detected in 9 of the 26 samples at concentrations of up to 0.34 parts per million (ppm), exceeding the Unrestricted Use SCO of 0.05 ppm, but not the Restricted Residential SCO of 100 ppm, in samples SB-4 (2-4'), SB-5 (2-4'), SB-5 (15-16'), SB-6 (10-12'), SB-10 (7-8') and SB-12 (2-4'). Organic odors and/or wood were noted in borings where acetone was detected. No other VOCs were detected in exceedance of their respective SCOs.

N-propylbenzene was detected in samples SB-5 (15-16') and SB-8 (2-3') at concentrations of 0.037 and 0.016 ppm, respectively, well below its Unrestricted Use SCO of 3.9 ppm and Restricted Residential SCO of 100 ppm. Low concentrations of p-chlorotoluene, ranging from 0.014 ppm to 2.1 ppm, were detected in three samples [SB-4 (13-14'), SB-5 (2-4') and SB-5 (15-16')]; no SCO has been determined for this compound. P-isopropyltoluene was detected in sample SB-10 (2-4') at a concentration of 36 ppm, and in SB-12 (2-4') at 0.71 ppm; no SCO has been determined for this compound. No evidence of petroleum contamination was noted in these samples. However, significant quantities of apparent treated wood, some of which exhibited a chemical or pine-like odor, were noted in borings SB-5, SB-10 and SB-12, and a smaller amount of wood was noted in other borings, including SB-4 and SB-8. Based on field observations and the distribution of VOCs in the soil samples, the concentrations of VOCs detected in the soil borings may be attributable to treated wood, and do not appear to indicate petroleum contamination. Soil analytical results for VOCs are presented in Table 1.

Semi-Volatile Organic Compounds

SVOCs were detected in all soil samples analyzed. The majority of the semivolatile organic compounds detected within the soil samples were polycyclic aromatic hydrocarbons (PAHs), a class of compounds found in some petroleum products, in coal tar and coal ash, and other combustion products that are commonly found in urban fill. It is not unusual to detect 100 parts per million (ppm) of PAHs in urban fill material. Remediation for PAHs is usually required only if they are associated with petroleum contamination, if they occur in conjunction with other contaminants, or if levels of individual PAHs exceed 50 parts per million and/or levels of total PAHs exceed 500 parts per million Eleven of the 26 soil samples contained PAHs [benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene,

dibenzo(a,h)anthracene and/or indeno(1,2,3-cd)pyrene] at concentrations exceeding their respective Restricted Residential SCOs and/or Unrestricted Use SCOs. In most cases, the exceedances were slight and were within the same order of magnitude. The highest individual PAH concentrations were noted in soil sample SB-8 (2-3'), and ranged up to 27 ppm for an individual PAH, fluoranthene (the Part 375 SCOs for fluoranthene is 100 ppm). Total detected PAH concentration ranged from 0.048 ppm in SB-9 (5-7') TO 154.2 PPM in SB-8 (2-3'), well below the Technical and Administrative Guidance Memorandum (TAGM) #4046 guideline of 500 ppm. There were no naphthalene exceedances in any of the soil samples analyzed. Based on the distribution of the detected SVOC concentrations and the metals detections discussed below, these exceedances are most likely attributable to the urban fill observed throughout the site, which included coal, ash, concrete, etc., as noted on the boring logs. Soil analytical results for SVOCs are presented in Table 2.

Metals

Concentrations of metals exceeding Unrestricted Use SCOs were noted in 18 of the 26 soil samples analyzed. Metals exceeding SCOs included chromium (in one soil sample), arsenic (in two samples), and copper, lead, mercury and zinc exceeded Unrestricted Use SCOs in some samples. Concentrations of arsenic, lead and mercury in five soil samples also exceeded Restricted Residential SCOs. Beryllium, lead and nickel exceeded their Eastern United States background levels in one sample each. Arsenic and cadmium exceeded their respective background levels in two samples, and calcium, copper, magnesium, mercury and zinc exceeded their background levels in five or more samples. Based on the distribution of metals detected in the samples and the SVOC detections discussed above, these exceedances are most likely attributable to urban fill beneath the site, which was observed to include coal, ash, concrete, etc. Although the detected concentrations of metals exceeded SCOs, based on the data, they are not likely to exceed toxic characteristics levels for classification as a hazardous waste. However, urban fill often contains highly variable concentrations of metals, and areas with higher metals concentrations may be present beneath portions of the site not tested in this investigation. Soil analytical results for metals are presented in Table 3.

Pesticides and PCBs

PCBs were detected in two soil borings, SB-4 (in both samples collected from 2-4 feet below grade and 13-14 feet below grade) and SB-7 (in both samples collected from 2-5 feet below grade and 7-9 feet below grade), at concentrations ranging from 0.106-0.5071, exceeding of the Unrestricted Use SCO of 0.1 ppm, but below the Restricted Residential SCO of 1 ppm. No PCBs were detected in any of the other soil samples analyzed. The detected concentrations of PCBs are likely attributable to the fill materials and do not appear to indicate a spill or leak. No pesticides were detected above the reported detection limits (RDLs) in the soil samples. Soil analytical results for pesticides and PCBs are presented in Table 4.

5.3 Groundwater Analysis Results

Laboratory analyses were performed by Alpha Analytical Laboratories of Westborough, Massachusetts, a New York State Department of Health (NYSDOH)-ELAP certified laboratory. Laboratory analysis results are summarized in Tables 5-8. The complete laboratory analytical data sheets are located in Appendix C. Laboratory results were compared to NYSDEC Class GA Ambient Water Quality Standards (drinking water standards), although groundwater is not used as a source of potable water in Manhattan. In addition, due to the tidal nature of the Hudson

River and the site's proximity to the river, groundwater and brackish river water are mixed in this area, which will alter the chemical makeup of the groundwater beneath the site.

Volatile Organic Compounds

Five VOCs were detected in the groundwater samples analyzed. Acetone was detected in five of the seven samples analyzed. The highest concentration, 88 parts per billion (ppb), in exceedance of the Class GA standard of 50 ppb, was detected in temporary monitor well GW-1, which is located in the northeastern corner of the site, in an anticipated upgradient groundwater flow direction. No acetone was detected in the soil at this location and there were no known potential sources of acetone in this location reported in previous studies, therefore, the acetone appears to be coming on-site from an off-site source. A lower concentration of acetone (12 ppb) was detected in temporary monitor well GW-2, at the southeastern corner of the site, which is also an anticipated upgradient groundwater flow location (acetone was not detected in the soil from this location, either). The remaining acetone detections were in temporary monitor wells GW-12, GW-13 and GW-14, at concentrations ranging from 6.8 to 17 ppb (acetone was detected in the soil from SB-12 and SB-14, but not SB-13). These three locations are along the western edge of the site, downgradient of GW-1 and GW-2. No acetone was detected in groundwater collected from the center of the site (GW-5and MW-N).

2-Butanone was present in upgradient temporary monitor well GW-1 at a concentration of 5.8 ppb, well below the Class GA standard of 50 parts per billion (ppb). Benzene was detected in upgradient temporary monitor well GW-2 at a concentration of 0.58 ppb, below the Class GA standard of 1 ppb. Methyl tert butyl ether (MTBE), a gasoline additive, was identified in GW-14, within the Riverside South construction staging area, at a concentration of 1.2 ppb, below the Class GA standard of 10 ppb. P-isopropyltoluene was present in GW-5 in the center of the site at a concentration of 1.6 ppb and in GW-12 in the southwestern corner of the site at 36 ppb, above the Class GA standard of 5 ppb. These VOCs, with the exception of p-isopropyltoluene, were not detected in the soil analyzed from these locations, therefore, the low levels of contamination do not appear to emanate from an on-site source. P-isopropyltoluene, detected in groundwater samples GW-5 and GW-12, was also detected in soil samples from these borings. Based on the concentrations and distribution of VOCs in soil borings and field observations, the presence of VOCs in groundwater does not appear to be a widespread environmental concern. Groundwater analytical results for VOCs are summarized in Table 5.

Semi-Volatile Organic Compounds

Seventeen SVOCs were detected in the groundwater samples analyzed. Eleven polycyclic aromatic hydrocarbons (PAHs), a type of SVOC commonly found in urban fill, were present at concentrations below their respective Class GA standards (or had no Class GA standards). Six PAHs [benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene and indeno(1,2,3-cd)pyrene] were detected in two to four groundwater samples at concentrations ranging between 0.21 and 2.6 ppb, exceeding the respective Class GA standards. The SVOC bis(2-ethylhexyl)phthalate was detected in samples GW-1 (at 10 ppb) and GW-13 (at 31 ppb), exceeding the Class GA standard of 5 ppb. This compound is commonly found in plastics and polyvinyl chloride (PVC) and is a potential field equipment-related contaminant (the temporary monitor wells consisted of PVC).

Sample GW-2 was not analyzed for SVOCs due to insufficient groundwater recovery from the temporary monitoring well. With the exception of bis(2-ethylhexyl)phthalate, the SVOCs detected in the groundwater samples were also detected in the soil samples analyzed. The presence of these compounds in the groundwater results likely reflects the entrainment of soil

particles into the groundwater sample, and may not reflect actual groundwater quality. Groundwater analytical results for SVOCs are presented in Table 6.

Metals

Metals were detected in all unfiltered groundwater samples, with concentrations of 15 metals (arsenic, barium, beryllium, cadmium, chromium, copper, iron, lead, magnesium, manganese, mercury, nickel, selenium, sodium, and/or zinc) exceeding their respective Class GA standards in each of the 6 unfiltered groundwater samples. Concentrations of metals in the filtered groundwater samples were significantly lower, with only iron, magnesium, manganese and sodium detected in exceedance of their respective Class GA standards in most samples, and arsenic and barium slightly exceeding their Class GA standards in one sample each. Some metals detected in the unfiltered samples, such as beryllium, cadmium, chromium, copper, lead, mercury and selenium, were not detected in the filtered samples. The analytical results suggest that the higher metals concentrations in the unfiltered samples are primarily due to suspended sediments in the groundwater samples collected while the lower metals concentrations in filtered samples generally reflect metals naturally occurring in brackish water from the tidal influence of the Hudson River.

Sample GW-2 was not analyzed for metals due to insufficient groundwater recovery from the temporary monitoring well. Groundwater analytical results for metals are presented in Table 7.

Pesticides and PCBs

No pesticides or PCBs were detected in the six groundwater samples analyzed. Sample GW-2 was not analyzed for pesticides or PCBs due to insufficient groundwater recovery from the temporary monitoring well. Groundwater analytical results for PCBs and pesticides are summarized in Table 8.

6.0 CONCLUSIONS

A total of 26 soil samples and 7 groundwater samples were collected and analyzed for volatile organic compounds (VOCs) by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, Target Analyte List (TAL) Metals (total and dissolved analysis for groundwater samples), and pesticides and PCBs by EPA Methods 8081/8082, respectively.

In general, the field observations and laboratory data showed no indications of petroleum contamination in on-site soil. Low levels of petroleum-related compounds [benzene, MTBE and a breakdown product of toluene (p-isopropyltoluene)] detected in groundwater generally did not appear to emanate from an on-site source. These compounds and others detected in the groundwater appear to be attributable to off-site sources. Acetone was the only VOC to exceeded Unrestricted SCOs in the soil; no VOCs exceeded any Restricted SCO. The SVOCs detected in the soil and groundwater samples are typical of urban fill and groundwater in an urban area and did not appear to indicate an on-site spill. The PCBs detected in soil samples were below the SCO and are also attributable to the fill materials and do not appear to indicate a spill or leak. No pesticides were detected in any soil or groundwater samples. The investigation yielded the following specific data:

- The investigation detected acetone at concentrations ranging from 0.035- 0.34 parts per million (ppm) in 9 of the 26 soil samples. Acetone exceeded its NYSDEC Part 375 Unrestricted Use Soil Cleanup Objective (SCO) of 0.05 ppm (but not the Restricted Residential SCO of 100 ppm) in six of the soil samples. Acetone was also detected at concentrations ranging between 6.8 and 88 parts per billion (ppb) in 5 of the 7 groundwater samples, exceeding its NYSDEC Class GA Ambient Water Quality Standard (drinking water standard) of 50 ppb in one sample (GW-1 in the northeastern corner of the site, in an anticipated upgradient groundwater flow direction). Since the two upgradient locations contained acetone in groundwater samples, but not soil samples, it can be concluded that the presence of acetone in these locations are from off-site source(s).

- The VOCs n-propylbenzene, p-chlorotoluene and/or p-isopropyltoluene were detected in soil samples SB-4 (13-14'), SB-5 (2-4'), SB-5 (15-16'), SB-8 (2-3'), SB-10 (2-4') and SB-12 (2-4'). The detected concentrations of n-propylbenzene were well below (two to three orders of magnitude) the Unrestricted Use SCO of 3.9 ppm and Restricted Residential SCO of 100 ppm. There are no SCOs for p-chlorotoluene and p-isopropyltoluene. P-isopropyltoluene was also detected in groundwater samples GW-5 at a concentration of 1.6 ppb and GW-12 at a concentration of 36 ppb, exceeding its Class GA standard of 5 ppb at GW-12. No evidence of petroleum contamination was noted in any soil or groundwater samples. However, significant quantities of apparently treated (presumably creosote) wood, some of which exhibited a chemical or pine-like odor, were noted in borings SB-5, SB-10 and SB-12, and a smaller amount of wood was noted in borings SB-4 and SB-8. Based on the distribution of VOCs in the soil samples and field observations, the concentrations of VOCs detected in soil and groundwater in these borings may be attributable to creosote-treated wood and other fill materials, and do not appear to indicate petroleum contamination.

- Three more VOCs were identified in groundwater samples GW-1, GW-2 and GW-14. 2-butanone was present in sample GW-1 at a concentration of 5.8 ppb, well below its Class GA standard of 50 ppb. Benzene was detected in GW-2 at 0.58 ppb, below its Class GA standard of 1 ppb and methyl tert butyl ether (MTBE), a gasoline additive, was identified in GW-14 at a concentration of 1.2 ppb, below its Class GA standard of 10 ppb. No VOCs were detected in soil samples collected from borings SB-1, SB-2 and SB-14 [except acetone, as discussed above in soil sample SB-14 (6-7')]. Based on field observations and soil sample analysis, the low concentrations of VOCs detected in groundwater samples from these borings may be attributable off-site sources, and do not appear to indicate on-site petroleum contamination.

- Concentrations of SVOCs and metals exceeding Unrestricted Use and/or Restricted Residential SCOs were noted in soil samples throughout the site. Based on the detected concentrations and field observations, these exceedances are most likely attributable to the urban fill present beneath the site, and do not indicate a spill or release. Concentrations of SVOCs and metals above Class GA standards were also detected in unfiltered groundwater samples, likely due to soil particles entrained in the groundwater during sample collection. Groundwater samples filtered prior to analysis for metals exhibited significantly lower concentrations of metals, which are likely due to the intrusion of brackish water from the tidal movements of the Hudson River.
- PCBs were detected in two soil borings, SB-4 and SB-7, at concentrations ranging from 0.106-0.5071, exceeding of the Unrestricted Use SCO of 0.1 ppm, but below the Restricted Residential SCO of 1 ppm. The detected concentrations of PCBs are likely attributable to the fill materials and do not appear to indicate a spill or leak. No pesticides were detected above the reported detection limits (RDLs) in any of the soil samples analyzed.

7.0 REMEDIAL RECOMMENDATIONS

The proposed project would entail the construction of five multistory mixed-use buildings with three basement levels (an auto showroom above two parking levels) and creation of a public open space. The proposed development would involve excavation to approximately 50 feet below existing grade over most of the site, except a small area east of the Amtrak tracks. Based on previous investigations and observations during this Phase II study, bedrock is most likely present less than 50 feet below grade over most of the site. The proposed excavation would, therefore, involve the removal of most of the on-site soil down to bedrock and some bedrock, especially on the eastern side of the site. The general remedial steps would include:

- Soil at the subject property comprises urban fill exhibiting elevated levels of organic compounds and metals. Soil excavated as part of any future site development activities would be regulated, should not be assumed to be clean fill, and must be managed in accordance with all applicable requirements. As noted in Section 9.0, soil intended for off-site disposal should be tested in accordance with the requirements of the intended receiving facility. Transportation of material leaving the site for off-site disposal must be in accordance with federal, state and local requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc.
- Volatile organic compounds were detected in soil and groundwater during the subsurface investigations. The detected concentrations were generally low and did not appear to emanate from an on-site source. Excavation for the new buildings would entail removal of soil down to bedrock over most of the site, along with some bedrock in the central and eastern portions of the site. In addition, the building foundation will extend below the water table, and the new foundations would require waterproofing, which would also act as a vapor barrier to prevent exposure to any residual VOCs possibly coming on-site from off-site source(s).
- Site development would be conducted in accordance with a NYCDEP-approved Remedial Action Plan and Construction Health and Safety Plan (RAP and CHASP). The RAP would address requirements for: installation of a vapor barrier/waterproofing beneath the future building foundations; soil stockpiling, soil disposal and transportation; dust control; quality assurance; and contingency measures should petroleum tanks, asbestos-containing serpentinite bedrock or other unexpected contamination be encountered. The CHASP would include measures for worker and community protection, including personal protective equipment, air monitoring, and procedures for dealing with unexpectedly encountered tanks or contamination.
- Although no underground storage tanks were located during any of the environmental investigations to date, based on the site history, it is possible that unknown tanks are located on-site. Previous investigations noted the presence of an historical filling station on the southeastern corner of the site, a potential historical filling station on the northeastern corner of the site, and a historical warehouse with an underground fuel oil storage tank on Parcel N. However, no evidence of underground storage tanks was noted on-site during previous investigations, and a geophysical survey of Parcel N conducted in June 2005 did not locate any underground storage tanks. Underground petroleum storage tanks associated with historical facilities on the eastern side of the site were likely removed for the construction of the below-grade Amtrak train tracks. However, if any petroleum storage tanks are encountered during site development, these tanks would be registered with NYCDEC and the Fire Department of New York, if required, and closed and removed in accordance with all applicable requirements. The requirements and remediation of tanks and any affected soil, if found, would be outlined in the RAP.

- Levels of total metals in groundwater exceeded NYSDEC water quality standards. Although these levels of metals were generally below the NYCDEP limitations for effluent to sanitary or combined sewers, concentrations of lead, mercury and zinc in one unfiltered groundwater sample (GW-5) exceeded the effluent limitations. Therefore, prior to discharge of groundwater to city sewers, additional groundwater testing, and possibly pre-treatment (dependant upon the testing results), may be necessary to comply with New York City Department of Environmental Protection (NYCDEP) requirements for obtaining a sewer discharge permit.

8.0 LIMITATIONS

The findings set forth in this report are strictly limited in scope and time to the date of the evaluation described herein. The conclusions and recommendations presented in the report are based solely on the services and any limitations described in this report.

This report may contain conclusions that are based on the analysis of data collected at the time and locations noted in the report through intrusive or non-intrusive sampling. However, further investigation might reveal additional data or variations of the current data, which may differ from our understanding of the conditions presented in this report and require the enclosed recommendations to be reevaluated or modified.

Chemical analyses may have been performed for specific parameters during the course of this investigation, as summarized in the text and tables. It should be noted that additional chemical constituents, not searched for during this investigation, may be present at the site. Due to the nature of the investigation and the limited data available, no warranty, expressed or implied, shall be construed with respect to undiscovered liabilities. The presence of biological hazards, radioactive materials, lead-based paint and asbestos-containing materials was not investigated, unless specified in the report.

Interpretations of the data, including comparison to regulatory standards, guidelines or background values, are not opinions that these comparisons are legally applicable. Furthermore, any conclusions or recommendations should not be construed as legal advice. For such advice, the client is recommended to seek appropriate legal counsel. Disturbance, handling, transportation, storage and disposal of known or potentially contaminated materials is subject to all applicable laws, which may or may not be fully described as part of this report.

The analytical data, conclusions, and/or recommendations provided in this report should not be construed in any way as a classification of waste that may be generated during future disturbance of the project site. Waste(s) generated at the site including excess fill may be considered regulated solid waste and potentially hazardous waste. Requirements for intended disposal facilities should be determined beforehand as the data provided in this report may be insufficient and could vary following additional sampling.

This report may be based solely or partially on data collected, conducted, and provided by, AKRF and/or others. No warranty is expressed or implied by usage of such data. Such data may be included in other investigation reports or documentation. In addition, these reports may have been based upon available previous reports, historical records, documentation from federal, state and local government agencies, personal interviews, and geological mapping. This report is subject, at a minimum, to the limitations of the previous reports, historical documents, availability and accuracy of collected documentation, and personal recollection of those persons interviewed. In certain instances, AKRF has been required to assume that the information provided is accurate with limited or no corroboratory evidence.

This report is intended for the use solely by Extell Development Company. Reliance by third parties on the information and opinions contained herein is strictly prohibited and requires the written consent of AKRF. AKRF accepts no responsibility for damages incurred by third parties for any decisions or actions taken based on this report. This report must be used, interpreted, and presented in its entirety.

9.0 SOIL DISPOSAL ISSUES

In addition to the discussions in the Conclusions, Recommendations, and Limitations Sections (Sections 6.0, 7.0, and 8.0), the issue of appropriate management of off-site disposal of soil warrants careful consideration. Any material being disposed of off-site is a regulated waste, and disposal must be in accordance with:

- Requirements of the specific receiving facility;
- Requirements of any agencies overseeing the cleanup/excavation; and
- Federal and state requirements (sometimes in both the state where the soil is generated and where disposal will occur).

For hazardous wastes and petroleum-contaminated soil (and other 'clearly contaminated' materials), the requirements are usually fairly well defined. It is in the situation where contamination is not readily apparent (e.g., so called "historic or urban fill" or "construction and demolition debris" or material that may have been formerly identified as "clean fill") that present the greatest potential for problems and cost overruns. Even on sites where no contamination requiring remediation is identified, it is common that most of the excavated material is considered "contaminated" for purposes of waste disposal. Concentrations of the various contaminants in historic fill can be highly variable, and upon further testing, the material could contain higher contaminant concentrations than outlined in this investigation. Portions of this material could be classified as hazardous waste.

It is important that the intended disposal facility (or facilities) be identified in advance of off-site disposal. Agency approval is sometimes required for disposal, and the facility will frequently require additional testing prior to (and sometimes at the time of) accepting material. Material must conform to a lengthy list of requirements based on both chemical composition and sometimes numerous other parameters (related to size, percentage of liquids, presence of odors, etc.) for acceptance at the facility. Assuming (or allowing a contractor to assume) that all, or even most, of the soil from a site can be disposed of at minimal cost may result in unanticipated and expensive change orders.

For these reasons, we recommend that professional advice be sought prior to preparing bid documents and contracts incorporating soil disposal.

AKRF Project Number : 10725

Boring No. SB-1

Sheet 1 of 1

Drilling Method:	Truck-Mounted Geoprobe
Sampling Method:	4-Foot Macrocore
Driller :	Paragon
Weather:	50° F and overcast
Sampler:	AKRF/GB

Drilling	
Start	**Finish**
Time: 08:15	**Time: 08:45**
Date: 5/18/09	**Date:** 5/18/09

Depth (feet)	Recovery (Inches)	Surface Condition: Soil	Soil Head Space PID Reading (ppm)	Landfill Gas Meter Methane Reading (% LEL)	Odor	Moisture	Soil Samples Collected for Lab Analyses
1 2 3 4	36	Top 0-11": Dark brown SILT, some fine gray Gravel (FILL). Middle 11-25": Brown to light brown SAND, trace Silt (FILL). Bottom 25-36": Dark brown to brown SILT, trace fine Gravel, Brick (FILL).	ND	ND	None	None	SB-1 (2')
5 6 7 8	38	Dark brown to light brown SILT, some fine Gravel, trace Brick (FILL).	ND	ND	None	None	
9 10 11 12	40	Top 0-20": Dark brown to light brown SILT, some fine Gravel, trace Brick (FILL). Bottom 20-40": Light brown to red sandy SILT.	ND	ND	None	None	
13 14 15 16	42	Light brown to red sandy SILT.	ND	ND	None	None	
17 18 19 20	48	Top 0-36": Light brown to red sandy SILT. Middle 36-46": Light brown to gray silty CLAY. Bottom 46-48": Dark brown to gray silty CLAY.	ND	ND	None	Wet	SB-1 (16')
21 22 23 24		Advanced boring an additional four feet to set groundwater well.					
25 26 27 28 29 30 31 32		**Refusal on apparent bedrock at 24 feet below grade.**					

Notes: **PID - Photoionization detector**

Groundwater encountered approximately 17 feet below grade. Boring encountered refusal on apparent bedrock approximately 24 feet below grade. Installed temporary one-inch well screen at 14'-24' below surface. Soil and groundwater samples analyzed for VOCs, SVOCs, pesticides, PCBs, and TAL metals.

Weather:	80° F and clear
Sampler:	AKRF/AK

Drilling	
Start	**Finish**
Time: 11:00	**Time: 14:30**
Date: 5/20/09	**Date:** 5/20/09

Depth (feet)	Recovery (Inches)	Surface Condition: Asphalt	Soil Head Space PID Reading (ppm)	Landfill Gas Meter Methane Reading (% LEL)	Odor	Moisture	Soil Samples Collected for Lab Analyses
1-5	60	Pre-cleared with hand auger to 5 feet below grade. Top 0-1": ASPHALT pavement. Middle 1-24": Dark brown SAND, some fine Gravel, crushed Brick, Slag, trace Ash (FILL). Bottom 24-60": Yellow SAND, trace fine Gravel, Slag, Ash (FILL).	1.7	ND	Slight tar-like odor	None	SB-2 (2-3')
6-8	30	Top 0-6": Brown fine SAND, trace Silt, Coal (FILL). Bottom 6-30": Brown fine SAND, trace Silt.	ND	ND	Slight tar-like odor	0-24" Dry 24-30" Wet	SB-2 (7-8')
9-12	6	Top 0-5": Brown fine SAND, trace Silt. Bottom 5-6": Fine GRAVEL.	ND	ND	Slight tar-like odor	Wet	
13-16	30	Top 0-8": Brown SAND and fine GRAVEL. Bottom 8-30": Brown SAND, trace Coal, Silt, fine Gravel, Brick, Clay (FILL).	ND	ND	Slight organic odor	Moist	
17	18	Brown SAND, little fine Gravel, trace Silt (some slough); resistance at 17 ft on rock fragments - see note *	ND	ND	None	Moist	
18-20	18	Brown SAND, trace fine Gravel, trace Silt.	ND	ND	Slight tar-like/organic odor	0-2" Moist 2-18" Dry	
21-24	36	Brown SAND and fine GRAVEL, trace Silt.	ND	ND	Slight tar-like odor	Wet	
25-32		**Refusal on apparent bedrock at 24 feet below grade.**					

Notes: **PID - Photoionization detector**

Sample SB-2 (2'-3') collected with hand auger. Drilled through rock (a cobble or boulder) approximately 8.4 to 8.5 feet below grade. * Resistance at 17 feet - stopped boring to assess cause; weathered rock fragments noted in probe tip - continuing boring. Groundwater encountered approximately 23.2 feet below grade. Boring encountered refusal on apparent bedrock at approximately 24 feet. Installed temporary one-inch well screen at 14'-24' below surface. Soil samples analyzed for VOCs, SVOCs, pesticides, PCBs, and TAL metals. Groundwater sample analyzed for VOCs only due to poor well recovery.

17		**Refusal on apparent bedrock at 16.5 feet below grade.**					

Notes: **PID - Photoionization detector**

Sample SB-5 (2'-4') collected with hand auger. Groundwater encountered approximately 11 feet below grade. Drilled through a boulder approximately 5 to 9 feet below grade. Boring encountered refusal on apparent bedrock approximately 16.5 feet below grade. Installed temporary one-inch well screen at 11'-16' below surface. Soil and groundwater samples analyzed for VOCs, SVOCs, pesticides, PCBs, and TAL metals.

Project Number:	10725	**Report Date:**	06/03/09

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

For additional information, please contact Client Services at 800-624-9220.

Report Submission

This report replaces the report issued on May 29, 2009. The Hexachloroethane result has been removed from the full scan Semivolatile Organics analysis on all samples.

Semivolatile Organics

The surrogate recovery for L0906348-01 is outside the individual acceptance criteria for 2,4,6-Tribromophenol (10%), but within the overall method allowances. The results of the original analysis are reported.
L0906348-04 and -06 has elevated detection limits due to the dilution required by matrix interferences encountered during the concentration of the sample.

Project Name:	RIVERSIDE S.-PARC L/M/N	**Lab Number:**	L0906348
Project Number:	10725	**Report Date:**	06/03/09

Case Narrative (continued)

L0906348-07 has elevated detection limits due to the dilution required by matrix interferences encountered during the concentration of the sample.
The surrogate recovery for L0906348-13RE is outside the individual acceptance criteria for 2-Fluorophenol(17%), but within the overall method allowances. The results of the original analysis are reported.
The WG363131-2/-3 LCS/LCSD recoveries associated with L0906348-03, -10 and -13 were above the acceptance criteria for 2,4-Dinitrotoluene (101%/98%); however, the associated samples were non-detect for this target compound. In addition, the % recovery for 2,4-Dinitrophenol (14%/16%) was below the acceptance criteria. Samples L0906348-03 and -13 were re-extracted; however the re-extracted LCS/LCSD also had compounds outside the acceptance criteria (Phenol 24%, 1,4-Dichlorobenzene 8%, 1,2-Dichlorobenzene 12%/37%, 1,2,4-Trichlorobenzene 37% and 2-Fluorophenol 16%). Re-extraction of sample L0906348-10 could not be performed due to lack of additional sample. The results of the both analyses for L0906348-03 and -13 are reported.
The WG362988-2 LCS recovery associated with L0906348-02, -04, -05, -08, -09, -11, and -12 was above the acceptance criteria for 2,4-Dinitrotoluene (90%); however, the associated samples were non-detect for this target compound. The results of the original analysis are reported.

Semivolatile Organics by SIM
The surrogate recovery for L0906348-01 is outside the individual acceptance criteria for 2,4,6-Tribromophenol(15%), but within the overall method allowances. The results of the original analysis are reported.
L0906348-04, -06, and -07 has elevated detection limits due to the dilution required by the matrix interferences encountered during the concentration of the sample and the dilution required by the sample matrix.
L0906348-05 has an elevated detection limit due to the dilution required by the sample matrix.
The surrogate recoveries for L0906348-04 and -06are below the acceptance criteria for 2-Fluorophenol, Phenol-d6, Nitrobenzene-d5, 2-Fluorobiphenyl, 2,4,6-Tribromophenol, 4-Terphenyl-d14 (All ND) due to the dilutions required to quantitate the sample. Re-extraction is not required; therefore, the results of the original analysis are reported.

Project Name:	RIVERSIDE S.-PARC L/M/N	**Lab Number:**	L0906348
Project Number:	10725	**Report Date:**	06/03/09

Case Narrative (continued)

The surrogate recoveries for L0906348-07 are outside the individual acceptance criteria for 2,4,6-Tribromophenol(141%) and 4-Terphenyl-d14(139%), but within the overall method allowances. The results of the original analysis are reported.
The surrogate recovery for L0906348-10 is outside the individual acceptance criteria for 2,4,6-Tribromophenol(122%), but within the overall method allowances. The results of the original analysis are reported.

PCB
L0906348-04: The result for Aroclor 1254 was based on fewer than the three peaks required by the method. It was quantitated with two peaks due to multiple aroclors present in the sample. The use of fewer than three peaks was done to prevent excess quantitation.
L0906348-06 has elevated detection limits due to the dilution required by matrix interferences encountered during the concentration of the sample.

Pesticides
L0906348-04, -05, and -06 have elevated detection limits due to the dilutions required by the elevated concentrations of non-target compounds in the samples.
Total Metals
L0906348-03 and -10 have elevated detection limits for Sodium due to the dilutions required to quantitate the results within the calibration range.
L0906348-04, -05, and -12 have elevated detection limits for Calcium due to the dilutions required to quantitate the results within the calibration range.
L0906348-12 has an elevated detection limit for Silver due to the dilution required by matrix interferences encountered during analysis.
The WG363042-1 Method Blank, associated with L0906348-01, -02, -04 through -09, -11, and -12 has a concentration above the reporting limit for Calcium. Since the associated sample concentrations are greater than 10x the blank concentration for this analyte, no corrective action is required. The results of the original analyses are reported.

Project Name:	RIVERSIDE S.-PARC L/M/N	**Lab Number:**	L0906348
Project Number:	10725	**Report Date:**	06/03/09

Case Narrative (continued)

The WG363008-4 MS recoveries for Aluminum (500%), Iron (1000%), and Manganese (140%), associated with L0906348-03, are invalid because the sample concentrations are greater than four times the spike amount added. The MS recoveries are below the acceptance criteria for Antimony (64%) and Thallium (74%). Post digestion spikes were performed with acceptable recoveries of 105% and 84%, respectively.

The WG363042-4 MS recoveries for Aluminum (3220%), Calcium (193%), Copper (0%), Iron (0%), Magnesium (365%), Manganese (129%), Potassium (172%), and Zinc (0%), associated with L0906348-12, are invalid because the sample concentrations are greater than four times the spike amount added. The MS recoveries are outside the acceptance criteria for Antimony (29%), Arsenic (72%), Barium (129%), Cobalt (60%), Lead (0%), Nickel (43%), Thallium (34%), and Vanadium (64%). Post digestion spikes were performed with acceptable recoveries of Antimony at 94%, Arsenic at 107%, Barium at 86%, Cobalt at 86%, Lead at 84%, Nickel at 82%, and Vanadium at 94%. A post digestion spike for Thallium was performed with an unacceptable recovery of 61%. This has been attributed to sample matrix.

The WG363042-3 Laboratory Duplicate RPD associated with L0906348-12 is above the acceptance criteria for Barium (41%); however, the sample and duplicate results are less than five times the reporting limit. Therefore, the RPD is valid.

The WG363042-3 Laboratory Duplicate RPD associated with L0906348-12 is outside the acceptance criteria for Calcium (38%). The elevated RPD has been attributed to the non-homogenous nature of the sample utilized for the laboratory duplicate.

Dissolved Metals

L0906348-03, -10 and -13 have elevated detection limits for Sodium due to the dilutions required to quantitate the results within the calibration range.

The WG363007-4 MS recovery for Calcium (0%), associated with L0906348-03, is invalid because the sample concentration is greater than four times the spike amount added.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EPA · Environmental Protection Agency.

LCS · Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD · Laboratory Control Sample Duplicate: Refer to LCS.

MS · Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD · Matrix Spike Sample Duplicate: Refer to MS.

NA · Not Applicable.

NC · Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

ND · Not detected at the reported detection limit for the sample.

NI · Not Ignitable.

RDL · Reported Detection Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD · Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

***** - The batch duplicate RPD exceeds the acceptance criteria. This flag is not applicable when the sample concentrations are less than 5x the RDL. (Metals only.)

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

N - The matrix spike recovery exceeds the acceptance criteria. This flag is not applicable when the sample concentration is greater than 4x the spike added. (Metals only.)

P - The RPD between the results for the two columns exceeds the method-specified criteria.

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Woods Hole Labs shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Woods Hole Labs.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised February 18, 2009 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Connecticut Department of Public Health Certificate/Lab ID: PH-0574.

Drinking Water (Inorganic Parameters: Color, pH, Turbidity, Conductivity, Alkalinity, Chloride, Free Residual Chlorine, Fluoride, Calcium Hardness, Sulfate, Nitrate, Nitrite, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, Zinc, Total Dissolved Solids, Total Organic Carbon, Total Cyanide, Perchlorate. Organic Parameters: Haloacetic Acids, Volatile Organics 524.2, Total Trihalomethanes 524.2, 1,2-Dibromo-3-chloropropane (DBCP), Ethylene Dibromide (EDB).)
Wastewater/Non-Potable Water (Inorganic Parameters: Color, pH, Conductivity, Acidity, Alkalinity, Chloride, Total Residual Chlorine, Fluoride, Total Hardness, Calcium Hardness, Silica, Sulfate, Sulfide, Ammonia, Kjeldahl Nitrogen, Nitrate, Nitrite, O-Phosphate, Total Phosphorus, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Dissolved Solids, Total Suspended Solids (non-filterable), BOD, CBOD, COD, TOC, Total Cyanide, Phenolics, Foaming Agents (MBAS), Bromide, Oil and Grease. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Acid Extractables (Phenols), Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, Polynuclear Aromatic Hydrocarbons, Haloethers, Chlorinated Hydrocarbons, Volatile Organics.)
Solid Waste/Soil (Inorganic Parameters: Lead in Paint, pH, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Tin, Vanadium, Zinc, Total Cyanide, Ignitability, Phenolics, Corrosivity, TCLP Leach (1311), Reactivity. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Extractable Petroleum Hydrocarbons (ETPH), Dicamba, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Volatile Organics, Acid Extractables (Phenols), 3.3'-Dichlorobenzidine, Phthalates, Nitrosamines, Nitroaromatics & Cyclic Ketones, PAHs, Haloethers, Chlorinated Hydrocarbons.)

Maine Department of Human Services Certificate/Lab ID: MA0086.
Drinking Water (Inorganic Parameters: SM9215B, 9221E, 9222B, 9222D, 9223B, EPA 150.1, 180.1, 300.0, 353.2, SM2130B, 2320B, 4500Cl-D, 4500CN-C, 4500CN-E, 4500F-C, 4500H+B,4500NO3-F, EPA 200.7, EPA 200.8, 245.1. Organic Parameters: 504.1, 524.2, SM 6251B.)
Wastewater/Non-Potable Water (Inorganic Parameters: EPA 120.1, 1664A, 350.1, 351.1, 353.2, 410.4, 420.1, Lachat 10-107-06-1-B, SM2320B, 2340B, 2510B, 2540C, 2540D, 426C, 4500Cl-D, 4500Cl-E, 4500CN-C, 4500CN-E, 4500F-B, 4500F-C, 4500H+B, 4500Norg-B, 4500Norg-C, 4500NH3-B, 4500NH3-G, 4500NH3-H, 4500NO3-F, 4500P-B.5, 4500P-E, 5210B, 5220D, 5310C, EPA 200.7, 200.8, 245.1. Organic Parameters: 608, 624.)

Massachusetts Department of Environmental Protection Certificate/Lab ID: M-MA086.
Drinking Water
Inorganic Parameters: (EPA 200.8 for: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl)
(EPA 200.7 for: Ba,Be,Ca,Cd,Cr,Cu,Na,Ni) 245.1, (300.0 for: Nitrate-N, Nitrite-N, Fluoride, Sulfate)
353.2 for: Nitrate-N, Nitrite-N; SM4500NO3-F, 4500F-C, 4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, 2320B, SM2540C, EPA 150.1, SM4500H-B.
Organic Parameters: (EPA 524.2 for: Trihalomethanes, Volatile Organics)
(504.1 for: 1,2-Dibromoethane, 1,2-Dibromo-3-Chloropropane), SM6251B, 314.0.

Non-Potable Water
Inorganic Parameters:, (EPA 200.8 for: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn)
(EPA 200.7 for: Al,Sb,As,Be,Cd,Cr,Co,Cu,Fe,Pb,Mn,Mo,Ni,Se,Ag,Sr,Tl,Ti,V,Zn,Ca,Mg,Na,K)
245.1, SM4500H,B, EPA 120.1, SM2510B, 2540C, 2540B, 2320B, 4500CL-E, 4500F-BC, 426C, SM4500NH3-BH, (EPA 350.1 for: Ammonia-N), LACHAT 10-107-06-1-B for Nitrate-N, SM4500NO3-F, 353.2 for Nitrate-N, SM4500NH3-B,C-Titr, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, 4500P-B,E, 5220D, EPA 410.4, SM 5210B, 5310C, 4500CN-CE, 2540D, 4500CL-D, EPA 1664, SM14 510AC, EPA 420.1
Organic Parameters: (EPA 624 for Volatile Halocarbons, Volatile Aromatics)
(608 for: Chlordane, Aldrin, Dieldrin, DDD, DDE, DDT, Heptachlor, Heptachlor Epoxide, PCB-Water)
600/4-81-045-PCB-Oil

Massachusetts Department of Environmental Protection Certificate/Lab ID: M-MA086.
Drinking Water
Microbiology Parameters: SM9215B; MF-SM9222B; ENZ. SUB. SM9223; EC-SM9221E; MF-SM9222D; ENZ. SUB. SM9223;

New Hampshire Department of Environmental Services Certificate/Lab ID: 200307.
Drinking Water (Inorganic Parameters: SM6215B, 9222B, 9223B Colilert, EPA 200.7, 200.8, 245.2, 110.2, 120.1, 150.1, 300.0, 325.2, 314.0, SM4500CN-E, 4500H+B, 4500NO3-F, 2320B, 2510B, 2540C, 4500F-C, 5310C, 2120B, EPA 331.0. Organic Parameters: 504.1, 524.2, SM6251B.)
Non-Potable Water (Inorganic Parameters: SM9222D, 9221B, 9222B, 9221E-EC, EPA 200.7, 200.8, 245.1, 245.2, SW-846 6010B, 6020, 7196A, 7470A, SM3500-CR-D, EPA 120.1, 150.1, 300.0, 305.1, 310.1, 325.2, 340.2, 350.1, 350.2, 351.1, 353.2, 354.1, 365.2, 375.4, 376.2, 405.1, 415.1, 420.1, 425.1, 1664A, SW-846 9010, 9030, 9040B, EPA 160.1, 160.2, 160.3, SM426C, SM2310B, 2540B, 2540D, 4500H+B, 4500NH3-H, 4500NH3-E, 4500NO2-B, 4500P-E, 4500-S2-D, 5210B, 2320B, 2540C, 4500F-C, 5310C, 5540C, LACHAT 10-117-07-1-B, LACHAT 10-107-06-1-B, LACHAT 10-107-04-1-C, LACHAT 10-107-04-1-J, LACHAT 10-117-07-1-A, SM4500CL-E, LACHAT 10-204-00-1-A, LACHAT 10-107-06-2-D. Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

For additional information, please contact Client Services at 800-624-9220.

Report Submission

This report replaces the report issued on May 31, 2009. The Pentachlorophenol result has been removed from the full scan Semivolatile Organics analysis on L0906416-02.

Sample Receipt

Sample 'SB-8 (2-3)' was received in a broken container for the Volatile Organics analysis. An aliquot was taken from an unpreserved container and preserved appropriately at the client's request.

Project Name:	RIVERSIDE S-PARCEL L/M/N	**Lab Number:**	L0906416
Project Number:	10725	**Report Date:**	06/02/09

Case Narrative (continued)

Volatile Organics

L0906416-01 was re-analyzed on dilution in order to quantitate the sample within the calibration range. The result should be considered estimated, and is qualified with an E flag, for any compound that exceeded the calibration on the initial analysis. The re-analysis was performed only for the compound that exceeded the calibration range.

The surrogate recovery for L0906416-01 is outside the acceptance criteria for 4-bromofluorobenzene (198%); due to coelution with obvious interferences. A copy of the chromatogram is included as an attachment to this report. The results are not considered to be biased.

The surrogate recovery for L0906416-01R is outside the acceptance criteria for 4-bromofluorobenzene (135%); due to coelution with obvious interferences. A copy of the chromatogram is included as an attachment to this report. The results are not considered to be biased.

Semivolatile Organics

L0906416-01, -02, -04, -09 and -10 have elevated detection limits due to the dilutions required by the samples matrices.

The WG363135-2 LCS recovery associated with L0906416-03 was above the acceptance criteria for 2,4-Dinitrotoluene (98%); however, the associated sample was non-detect for this target compound. The results of the original analysis are reported.

The WG363156-2 LCS recoveries associated with L0906416-01, -04, -09 and -10 were above the acceptance criteria for 2,4-Dinitrotoluene (94%) and Phenol (93%); however, the associated samples were non-detect for these target compounds, the results of the original analysis are reported.

Semivolatile Organics - SIM

L0906416-01, -04, -09 and -10 have elevated detection limits due to the dilutions required by the elevated concentrations of target compounds in the samples.

L0906416-06 has an elevated detection limit due to the dilution required by the sample matrix.

The surrogate recoveries for L0906416-06 are below the acceptance criteria for 2-Fluorophenol (0%), Phenol-d6 (0%), Nitrobenzene-d5 (0%), 2-Fluorobiphenyl (0%), 2,4,6-Tribromophenol (0%) and 4-Terphenyl-d14

Project Name:	RIVERSIDE S-PARCEL L/M/N	**Lab Number:**	L0906416
Project Number:	10725	**Report Date:**	06/02/09

Case Narrative (continued)

(0%) due to the dilution required to quantitate the sample. Re-extraction is not required; therefore, the results of the original analysis are reported.

PCBs

L0906416-01 has elevated detection limits due to the dilution required by matrix interferences encountered during the concentration of the sample.

Pesticides

L0906416-01 through -04 and -09 have elevated detection limits due to the dilutions required by the elevated concentrations of non-target compounds in the samples.

The WG363557-2/-3 LCS/LCSD RPDs associated with L0906416-07, -09 and -10 are above the acceptance criteria for Delta-BHC (36%), Lindane (32%), Alpha-BHC (34%),Beta-BHC (33%), Heptachlor (33%), Aldrin (37%), Heptachlor epoxide (32%), Endrin (35%), Endrin ketone (34%), Dieldrin (31%), 4,4'-DDE (39%), 4,4'-DDD (39%), 4,4'-DDT (32%), Endosulfan I (37%), Endosulfan II (35%), Endosulfan sulfate (38%) and trans-Chlordane (37%); however, the individual LCS/LCSD recoveries are within method limits. The results of the associated samples are reported.

Mercury

L0906416-02 has an elevated detection limit for Mercury due to the analytical dilution required to quantitate the result within the calibration range.

L0906416-03 has an elevated detection limit due to the dilution required by the sample matrix.

Total Metals

L0906416-03 has elevated detection limits for Iron and Sodium due to the dilution required to quantitate the results within the calibration range.

L0906416-04 has an elevated detection limit for Zinc due to the dilution required to quantitate the result within the calibration range.

L0906416-06 and -07 have elevated detection limits for Calcium due to the dilutions required to quantitate the

Project Name:	RIVERSIDE S-PARCEL L/M/N	**Lab Number:**	L0906416
Project Number:	10725	**Report Date:**	06/02/09

Case Narrative (continued)

result within the calibration range.
L0906416-07 has an elevated detection limit for Selenium due to the dilution required by matrix interferences encountered during analysis. The requested reporting limit for Selenium could not be achieved.
The WG363304-1 Method Blank, associated with L0906416-01, -02, -04 through -07, -09 and -10, has a concentration above the reporting limit for Calcium. Since the associated samples concentrations are greater than 10x the blank concentration for this analyte, no corrective action is required. The results of the original analyses are reported.
The WG363304-4 MS recoveries associated with L0906416-01are outside the acceptance criteria for Antimony (44%), Selenium (73%) and Thallium (69%). A post digestion spike was performed with acceptable recoveries of Antimony 109%, Selenium 89% and Thallium 88%.
The WG363304-4 MS recoveries for Aluminum (438%), Calcium (701%), Iron (2190%), Magnesium (175%) and Manganese (131%) associated with L0906416-01, are invalid because the sample concentrations are greater than four times the spike amount added.
The WG363907-4 MS recoveries for Iron (0%) and Sodium (0%), associated with L0906416-03, are invalid because the sample concentrations are greater than four times the spike amount added.
The WG363907-4 MS recovery associated with L0906416-03 is below the acceptance criteria for Antimony (42%). A post digestion spike was performed with an acceptable recovery of Antimony 109%.
The WG363907-4 MS recoveries for Calcium (0%), Aluminum (500%), Lead (53%) and Sodium (0%), associated with L0906416-03, are invalid because the sample concentrations are greater than four times the spike amount added.

Dissolved Metals
L0906416-03 has an elevated detection limit for Sodium due to the dilution required to quantitate the result within the calibration range.
The WG363214-1 Method Blank, associated with L0906416-03 and -08, have concentrations above the reporting limit for Calcium and Magnesium. Since the associated samples concentrations are greater than 10x the blank concentration for these analytes, no corrective action is required. The results of the original analyses are reported.

Project Name: RIVERSIDE S-PARCEL L/M/N **Lab Number:** L0906416
Project Number: 10725 **Report Date:** 06/02/09

Case Narrative (continued)

The WG363214-4 MS recovery for Iron (40%), associated with L0906416-03, is invalid because the sample concentration is greater than four times the spike amount added.
The WG363908-4 MS recovery for Sodium (130%) associated with L0906416-08 is invalid because the sample concentration is greater than four times the spike amount added.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EPA · Environmental Protection Agency.

LCS · Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD · Laboratory Control Sample Duplicate: Refer to LCS.

MS · Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD · Matrix Spike Sample Duplicate: Refer to MS.

NA · Not Applicable.

NC · Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

ND · Not detected at the reported detection limit for the sample.

NI · Not Ignitable.

RDL · Reported Detection Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD · Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

***** - The batch duplicate RPD exceeds the acceptance criteria. This flag is not applicable when the sample concentrations are less than 5x the RDL. (Metals only.)

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

N - The matrix spike recovery exceeds the acceptance criteria. This flag is not applicable when the sample concentration is greater than 4x the spike added. (Metals only.)

P - The RPD between the results for the two columns exceeds the method-specified criteria.

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Woods Hole Labs shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Woods Hole Labs.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised February 18, 2009 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Connecticut Department of Public Health Certificate/Lab ID: PH-0574.

Drinking Water (Inorganic Parameters: Color, pH, Turbidity, Conductivity, Alkalinity, Chloride, Free Residual Chlorine, Fluoride, Calcium Hardness, Sulfate, Nitrate, Nitrite, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, Zinc, Total Dissolved Solids, Total Organic Carbon, Total Cyanide, Perchlorate. Organic Parameters: Haloacetic Acids, Volatile Organics 524.2, Total Trihalomethanes 524.2, 1,2-Dibromo-3-chloropropane (DBCP), Ethylene Dibromide (EDB).)
Wastewater/Non-Potable Water (Inorganic Parameters: Color, pH, Conductivity, Acidity, Alkalinity, Chloride, Total Residual Chlorine, Fluoride, Total Hardness, Calcium Hardness, Silica, Sulfate, Sulfide, Ammonia, Kjeldahl Nitrogen, Nitrate, Nitrite, O-Phosphate, Total Phosphorus, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Dissolved Solids, Total Suspended Solids (non-filterable), BOD, CBOD, COD, TOC, Total Cyanide, Phenolics, Foaming Agents (MBAS), Bromide, Oil and Grease. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Acid Extractables (Phenols), Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, Polynuclear Aromatic Hydrocarbons, Haloethers, Chlorinated Hydrocarbons, Volatile Organics.)
Solid Waste/Soil (Inorganic Parameters: Lead in Paint, pH, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Tin, Vanadium, Zinc, Total Cyanide, Ignitability, Phenolics, Corrosivity, TCLP Leach (1311), Reactivity. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Extractable Petroleum Hydrocarbons (ETPH), Dicamba, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Volatile Organics, Acid Extractables (Phenols), 3.3'-Dichlorobenzidine, Phthalates, Nitrosamines, Nitroaromatics & Cyclic Ketones, PAHs, Haloethers, Chlorinated Hydrocarbons.)

Maine Department of Human Services Certificate/Lab ID: MA0086.
Drinking Water (Inorganic Parameters: SM9215B, 9221E, 9222B, 9222D, 9223B, EPA 150.1, 180.1, 300.0, 353.2, SM2130B, 2320B, 4500Cl-D, 4500CN-C, 4500CN-E, 4500F-C, 4500H+B,4500NO3-F, EPA 200.7, EPA 200.8, 245.1. Organic Parameters: 504.1, 524.2, SM 6251B.)
Wastewater/Non-Potable Water (Inorganic Parameters: EPA 120.1, 1664A, 350.1, 351.1, 353.2, 410.4, 420.1, Lachat 10-107-06-1-B, SM2320B, 2340B, 2510B, 2540C, 2540D, 426C, 4500Cl-D, 4500Cl-E, 4500CN-C, 4500CN-E, 4500F-B, 4500F-C, 4500H+B, 4500Norg-B, 4500Norg-C, 4500NH3-B, 4500NH3-G, 4500NH3-H, 4500NO3-F, 4500P-B.5, 4500P-E, 5210B, 5220D, 5310C, EPA 200.7, 200.8, 245.1. Organic Parameters: 608, 624.)

Massachusetts Department of Environmental Protection Certificate/Lab ID: M-MA086.
Drinking Water
Inorganic Parameters: (EPA 200.8 for: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl)
(EPA 200.7 for: Ba,Be,Ca,Cd,Cr,Cu,Na,Ni) 245.1, (300.0 for: Nitrate-N, Nitrite-N, Fluoride, Sulfate)
353.2 for: Nitrate-N, Nitrite-N; SM4500NO3-F, 4500F-C, 4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, 2320B, SM2540C, EPA 150.1, SM4500H-B.
Organic Parameters: (EPA 524.2 for: Trihalomethanes, Volatile Organics)
(504.1 for: 1,2-Dibromoethane, 1,2-Dibromo-3-Chloropropane), SM6251B, 314.0.

Non-Potable Water
Inorganic Parameters:, (EPA 200.8 for: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn)
(EPA 200.7 for: Al,Sb,As,Be,Cd,Cr,Co,Cu,Fe,Pb,Mn,Mo,Ni,Se,Ag,Sr,Tl,Ti,V,Zn,Ca,Mg,Na,K)
245.1, SM4500H,B, EPA 120.1, SM2510B, 2540C, 2540B, 2320B, 4500CL-E, 4500F-BC, 426C, SM4500NH3-BH, (EPA 350.1 for: Ammonia-N), LACHAT 10-107-06-1-B for Nitrate-N, SM4500NO3-F, 353.2 for Nitrate-N, SM4500NH3-B,C-Titr, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, 4500P-B,E, 5220D, EPA 410.4, SM 5210B, 5310C, 4500CN-CE, 2540D, 4500CL-D, EPA 1664, SM14 510AC, EPA 420.1
Organic Parameters: (EPA 624 for Volatile Halocarbons, Volatile Aromatics)

Project Number: 10725 **Report Date:** 05/31/09

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

For additional information, please contact Client Services at 800-624-9220.

Sample Receipt

The Dissolved Metals and Volatile Organics containers for sample "MW-N" were received on May 19, 2009. Those results were issued under separate cover.

Volatile Organics

L0906512-07 was re-analyzed on dilution in order to quantitate the sample within the calibration range. The result is qualified with an E flag for any compound that exceeded the calibration on the initial analysis. The re-analysis was performed only for the compound that exceeded the calibration range.

Project Name: RIVERSIDE S. PARC L/M/N **Lab Number:** L0906512
Project Number: 10725 **Report Date:** 05/31/09

Case Narrative (continued)

The surrogate recovery for L0906512-07 and -07R is above the acceptance criteria for 4-Bromofluorobenzene (131% and 134%) due to coelution with obvious interferences. Copies of the chromatograms are included as an attachment to this report.

Semivolatile Organics by GC/MS-SIM

L0906512-02, -03, -04 and -07 have elevated detection limits due to the dilutions required by the sample matrices.

L0906512-09 has elevated detection limits due to limited sample volume available for analysis and the analytical dilution required by the sample matrix.

Semivolatile Organics

The WG363580-2/-3 LCS/LCSD RPD associated with L0906512-01 and -09 is above the acceptance criteria for 4-Nitrophenol (34%); however, the individual LCS/LCSD recoveries are within method limits. The results of the associated samples are reported.

The WG363974-3 LCSD recovery associated with L0906512-02 through -05, -07 and -08 was above the acceptance criteria for 2,4-Dinitrotoluene (91%); however, the associated samples were non-detect for this target compound. The results of the original analysis are reported.

The WG363974-2/-3 LCS/LCSD RPD associated with L0906512-02 through -05, -07 and -08 is above the acceptance criteria for 2,4-Dinitrophenol (113%); however, the individual LCS/LCSD recoveries are within method limits. The results of the associated sample are reported.

PCB

L0906512-02 and -04 have elevated detection limits due to the dilutions required by matrix interferences encountered during the concentration of the samples.

Pesticides

L0906512-03 has elevated detection limits due to the dilution required by the elevated concentrations of non-

Project Name:	RIVERSIDE S. PARC L/M/N	**Lab Number:**	L0906512
Project Number:	10725	**Report Date:**	05/31/09

Case Narrative (continued)

target compounds in the sample.
The WG363557-2/-3 LCS/LCSD RPDs associated with L0906512-02 through -05, -07 and -08 are above the acceptance criteria for Delta-BHC (36%), Lindane (32%), Alpha-BHC (34%), Beta-BHC (33%), Heptachlor (33%), Aldrin (37%), Heptachlor epoxide (32%), Endrin (35%), Endrin ketone (34%), Dieldrin (31%), 4,4'-DDE (39%), 4,4'-DDD (39%), 4,4'-DDT (32%), Endosulfan I (37%), Endosulfan II (35%), Endosulfan sulfate (38%) and trans-Chlordane (37%); however, the individual LCS/LCSD recoveries are within method limits. The results of the associated samples are reported.

Total Metals
L0906512-02 through -05 have elevated detection limits for Iron due to the dilutions required to quantitate the results within the calibration range.
The WG363709-4 MS recoveries for Aluminum (500%), Calcium (200%), Iron (0%) and Sodium (200%), associated with L0906512-09, are invalid because the sample concentrations are greater than four times the spike amount added. The MS recoveries are below the acceptance criteria for Antimony (30%) and Thallium (62%). Post digestion spikes were performed with acceptable recoveries of 115% and 97%, respectively.
The WG363963-4 MS recoveries for Aluminum (1130%), Iron (5350%) and Manganese (247%), associated with L0906512-08, are invalid because the sample concentrations are greater than four times the spike amount added. The MS recoveries are outside the acceptance criteria for Antimony (45%) and Magnesium (144%). Post digestion spikes were performed with acceptable recoveries of 98% and 92%, respectively.
The WG363963-3 Laboratory Duplicate RPDs associated with L0906512-08 are outside the acceptance criteria for Calcium (67%) and Lead (55%). The elevated RPDs have been attributed to the non-homogenous nature of the sample utilized for the laboratory duplicate.

Dissolved Metals
The WG363441-1 Method Blank associated with L0906512-09 has a concentration above the reporting limit for Calcium. Since the associated sample concentration is greater than 10x the blank concentration for this analyte, no corrective action is required. The results of the original analyses are reported.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. GLOSSARY

Acronyms

EPA · Environmental Protection Agency.

LCS · Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD · Laboratory Control Sample Duplicate: Refer to LCS.

MS · Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD · Matrix Spike Sample Duplicate: Refer to MS.

NA · Not Applicable.

NC · Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

ND · Not detected at the reported detection limit for the sample.

NI · Not Ignitable.

RDL · Reported Detection Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD · Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

***** - The batch duplicate RPD exceeds the acceptance criteria. This flag is not applicable when the sample concentrations are less than 5x the RDL. (Metals only.)

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

N - The matrix spike recovery exceeds the acceptance criteria. This flag is not applicable when the sample concentration is greater than 4x the spike added. (Metals only.)

P - The RPD between the results for the two columns exceeds the method-specified criteria.

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

Report Format: Data Usability Report

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Woods Hole Labs shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Woods Hole Labs.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised February 18, 2009 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Connecticut Department of Public Health Certificate/Lab ID: PH-0574.

Drinking Water (Inorganic Parameters: Color, pH, Turbidity, Conductivity, Alkalinity, Chloride, Free Residual Chlorine, Fluoride, Calcium Hardness, Sulfate, Nitrate, Nitrite, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, Zinc, Total Dissolved Solids, Total Organic Carbon, Total Cyanide, Perchlorate. Organic Parameters: Haloacetic Acids, Volatile Organics 524.2, Total Trihalomethanes 524.2, 1,2-Dibromo-3-chloropropane (DBCP), Ethylene Dibromide (EDB).)
Wastewater/Non-Potable Water (Inorganic Parameters: Color, pH, Conductivity, Acidity, Alkalinity, Chloride, Total Residual Chlorine, Fluoride, Total Hardness, Calcium Hardness, Silica, Sulfate, Sulfide, Ammonia, Kjeldahl Nitrogen, Nitrate, Nitrite, O-Phosphate, Total Phosphorus, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Dissolved Solids, Total Suspended Solids (non-filterable), BOD, CBOD, COD, TOC, Total Cyanide, Phenolics, Foaming Agents (MBAS), Bromide, Oil and Grease. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Acid Extractables (Phenols), Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, Polynuclear Aromatic Hydrocarbons, Haloethers, Chlorinated Hydrocarbons, Volatile Organics.)
Solid Waste/Soil (Inorganic Parameters: Lead in Paint, pH, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Tin, Vanadium, Zinc, Total Cyanide, Ignitability, Phenolics, Corrosivity, TCLP Leach (1311), Reactivity. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Extractable Petroleum Hydrocarbons (ETPH), Dicamba, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Volatile Organics, Acid Extractables (Phenols), 3.3'-Dichlorobenzidine, Phthalates, Nitrosamines, Nitroaromatics & Cyclic Ketones, PAHs, Haloethers, Chlorinated Hydrocarbons.)

Maine Department of Human Services Certificate/Lab ID: MA0086.
Drinking Water (Inorganic Parameters: SM9215B, 9221E, 9222B, 9222D, 9223B, EPA 150.1, 180.1, 300.0, 353.2, SM2130B, 2320B, 4500Cl-D, 4500CN-C, 4500CN-E, 4500F-C, 4500H+B,4500NO3-F, EPA 200.7, EPA 200.8, 245.1. Organic Parameters: 504.1, 524.2, SM 6251B.)
Wastewater/Non-Potable Water (Inorganic Parameters: EPA 120.1, 1664A, 350.1, 351.1, 353.2, 410.4, 420.1, Lachat 10-107-06-1-B, SM2320B, 2340B, 2510B, 2540C, 2540D, 426C, 4500Cl-D, 4500Cl-E, 4500CN-C, 4500CN-E, 4500F-B, 4500F-C, 4500H+B, 4500Norg-B, 4500Norg-C, 4500NH3-B, 4500NH3-G, 4500NH3-H, 4500NO3-F, 4500P-B.5, 4500P-E, 5210B, 5220D, 5310C, EPA 200.7, 200.8, 245.1. Organic Parameters: 608, 624.)

Massachusetts Department of Environmental Protection Certificate/Lab ID: M-MA086.
Drinking Water
Inorganic Parameters: (EPA 200.8 for: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl)
(EPA 200.7 for: Ba,Be,Ca,Cd,Cr,Cu,Na,Ni) 245.1, (300.0 for: Nitrate-N, Nitrite-N, Fluoride, Sulfate)
353.2 for: Nitrate-N, Nitrite-N; SM4500NO3-F, 4500F-C, 4500CN-CE, EPA 180.1, SM2130B, SM4500Cl-D, 2320B, SM2540C, EPA 150.1, SM4500H-B.
Organic Parameters: (EPA 524.2 for: Trihalomethanes, Volatile Organics)
(504.1 for: 1,2-Dibromoethane, 1,2-Dibromo-3-Chloropropane), SM6251B, 314.0.

Non-Potable Water
Inorganic Parameters:, (EPA 200.8 for: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn)
(EPA 200.7 for: Al,Sb,As,Be,Cd,Cr,Co,Cu,Fe,Pb,Mn,Mo,Ni,Se,Ag,Sr,Tl,Ti,V,Zn,Ca,Mg,Na,K)
245.1, SM4500H,B, EPA 120.1, SM2510B, 2540C, 2540B, 2320B, 4500CL-E, 4500F-BC, 426C, SM4500NH3-BH, (EPA 350.1 for: Ammonia-N), LACHAT 10-107-06-1-B for Nitrate-N, SM4500NO3-F, 353.2 for Nitrate-N, SM4500NH3-B,C-Titr, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, 4500P-B,E, 5220D, EPA 410.4, SM 5210B, 5310C, 4500CN-CE, 2540D, 4500CL-D, EPA 1664, SM14 510AC, EPA 420.1
Organic Parameters: (EPA 624 for Volatile Halocarbons, Volatile Aromatics)
(608 for: Chlordane, Aldrin, Dieldrin, DDD, DDE, DDT, Heptachlor, Heptachlor Epoxide, PCB-Water)
600/4-81-045-PCB-Oil

Massachusetts Department of Environmental Protection Certificate/Lab ID: M-MA086.
Drinking Water
Microbiology Parameters: SM9215B; MF-SM9222B; ENZ. SUB. SM9223; EC-SM9221E; MF-SM9222D; ENZ. SUB. SM9223;

New Hampshire Department of Environmental Services Certificate/Lab ID: 200307.
Drinking Water (Inorganic Parameters: SM6215B, 9222B, 9223B Colilert, EPA 200.7, 200.8, 245.2, 110.2, 120.1, 150.1, 300.0, 325.2, 314.0, SM4500CN-E, 4500H+B, 4500NO3-F, 2320B, 2510B, 2540C, 4500F-C, 5310C, 2120B, EPA 331.0. Organic Parameters: 504.1, 524.2, SM6251B.)
Non-Potable Water (Inorganic Parameters: SM9222D, 9221B, 9222B, 9221E-EC, EPA 200.7, 200.8, 245.1, 245.2, SW-846 6010B, 6020, 7196A, 7470A, SM3500-CR-D, EPA 120.1, 150.1, 300.0, 305.1, 310.1, 325.2, 340.2, 350.1, 350.2, 351.1, 353.2, 354.1, 365.2, 375.4, 376.2, 405.1, 415.1, 420.1, 425.1, 1664A, SW-846 9010, 9030, 9040B, EPA 160.1, 160.2, 160.3, SM426C, SM2310B, 2540B, 2540D, 4500H+B, 4500NH3-H, 4500NH3-E, 4500NO2-B, 4500P-E, 4500-S2-D, 5210B, 2320B, 2540C, 4500F-C, 5310C, 5540C, LACHAT 10-117-07-1-B, LACHAT 10-107-06-1-B, LACHAT 10-107-04-1-C, LACHAT 10-107-04-1-J, LACHAT 10-117-07-1-A, SM4500CL-E, LACHAT 10-204-00-1-A, LACHAT 10-107-06-2-D. Organic Parameters: SW-846 3005A, 3015A, 3510C, 5030B, 8021B, 8260B, 8270C, 8330, EPA 624, 625, 608, SW-846 8082, 8081A.)
Solid & Chemical Materials (Inorganic Parameters: SW-846 6010B, 7196A, 7471A, 7.3.3.2, 7.3.4.2, 1010, 1030, 9010, 9012A, 9014, 9030B, 9040, 9045C, 9050C, 1311, 3005A, 3050B, 3051A. Organic Parameters: SW-846 3540C, 3545, 3580A, 5030B, 5035, 8021B, 8260B, 8270C, 8330, 8151A, 8082, 8081A.)

New Jersey Department of Environmental Protection Certificate/Lab ID: MA935.
Drinking Water (Inorganic Parameters: SM9222B, 9221E, 9223B, 9215B, 4500NO3-F, 4500F-C, EPA 300.0, 200.7, 2540C, 2320B, 314.0, 331.0, 110.2, SM2120B, 2510B, 5310C, EPA 150.1, SM4500H-B, EPA 200.8, 245.2. Organic Parameters: 504.1, SM6251B, 524.2.)
Non-Potable Water (Inorganic Parameters: SM5210B, EPA 410.1, SM5220D, 4500Cl-D, EPA 300.0, SM2120B, SM4500F-BC, EPA 200.7, 351.1, LACHAT 10-107-06-2-D, EPA 353.2, SM4500NO3-F, 4500NO2-B, EPA 1664A, SM5310B, C or D, 4500-PE, EPA 420.1, SM4500P-B5+E, 2540B, 2540C, 2540D, EPA 120.1, SM2510B, SM15 426C, SM9221CE, 9222D, 9221B, 9222B, 9215B, 2310B, 2320B, 4500NH3-H, EPA 350.2/.1, SM5210B, SW-846 3015, 6020, 7470A, 5540C, 4500H-B, EPA 200.8, SM3500Cr-D, EPA 245.1, 245.2, SW-846 9040B, 3005A, EPA 6010B, 7196A, SW-846 9010B, 9030B. Organic Parameters: SW-846 8260B, 8270C, 3510C, EPA 608, 624, 625, SW-846 5030B, 8021B, 8081A, 8082, 8151A, 8330.)

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

For additional information, please contact Client Services at 800-624-9220.

Volatile Organics

L0906597-01 has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

Semivolatile Organics

L0906597-01 has elevated detection limits due to the dilution required by the sample matrix.

The WG363974-3 LCSD recovery associated with L0906597-01 and -02 was above the acceptance criteria for 2,4-Dinitrotoluene (91%); however, the associated samples were non-detect for this target compound. The results of the original analysis are reported.

Project Name:	RIVERSIDE S-PARC L/M/N	**Lab Number:**	L0906597
Project Number:	10725	**Report Date:**	05/31/09

Case Narrative (continued)

The WG363974-2/-3 LCS/LCSD RPD associated with L0906597-01 and -02 is above the acceptance criteria for 2,4-Dinitrophenol (113%); however, the individual LCS/LCSD recoveries are within method limits. The results of the associated samples are reported.

Semivolatile Organics-SIM

L0906597-01 has elevated detection limits due to the dilution required by the sample matrix.

The surrogate recoveries for L0906597-01 are below the acceptance criteria for 2-Fluorophenol, Phenol-d6, Nitrobenzene-d5, 2-Fluorobiphenyl, 2,4,6-Tribromophenol and 4-Terphenyl-d14 (all 0%) due to the dilution required to quantitate the sample. Re-extraction is not required; therefore, the results of the original analysis are reported.

Pesticides

L0906597-01 has elevated detection limits due to the dilution required by the elevated concentrations of non-target compounds in the sample.

The WG363557-2/-3 LCS/LCSD RPDs associated with L0906597-01 and -02 are above the acceptance criteria for Delta-BHC (36%), Lindane (32%), Alpha-BHC (34%), Beta-BHC (33%), Heptachlor (33%), Aldrin (37%), Heptachlor epoxide (32%), Endrin (35%), Endrin ketone (34%), Dieldrin (31%), 4,4'-DDE (39%), 4,4'-DDD (39%), 4,4'-DDT (32%), Endosulfan I (37%), Endosulfan II (35%), Endosulfan sulfate (38%) and trans-Chlordane (37%); however, the individual LCS/LCSD recoveries are within method limits. The results of the associated samples are reported.

Metals

L0906597-01 and -02 have elevated detection limits for Calcium due to the dilutions required to quantitate the results within the calibration range.

L0906597-02 has an elevated detection limit for Selenium due to the dilution required by matrix interferences encountered during analysis. The requested reporting limit could not be achieved.

Project Name:	RIVERSIDE S-PARC L/M/N	**Lab Number:**	L0906597
Project Number:	10725	**Report Date:**	05/31/09

Case Narrative (continued)

The WG363599-1 Method Blank associated with L0906597-01 and -02 has a concentration above the reporting limit for Iron. Since the associated sample concentrations are greater than 10x the blank concentration for this analyte, no corrective action is required. The results of the original analyses are reported.
The WG363599-4 MS recoveries for Aluminum (0%), Calcium (0%), Iron (0%), Magnesium (0%), Manganese (0%) and Zinc (44%), associated with L0906597-01, are invalid because the sample concentrations are greater than four times the spike amount added. The MS recoveries are below the acceptance criteria for Antimony (36%), Cadmium (69%), Copper (0%), Lead (0%) and Nickel (57%). Post digestion spikes were performed with acceptable recoveries of 108%, 110%, 108%, 88% and 104%, respectively.
The WG363599-3 Laboratory Duplicate RPDs associated with L0906597-01 are outside the acceptance criteria for Copper (38%) and Magnesium (44%). The elevated RPDs have been attributed to the non-homogenous nature of the sample utilized for the laboratory duplicate.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. GLOSSARY

Acronyms

EPA · Environmental Protection Agency.

LCS · Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.

LCSD · Laboratory Control Sample Duplicate: Refer to LCS.

MS · Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.

MSD · Matrix Spike Sample Duplicate: Refer to MS.

NA · Not Applicable.

NC · Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.

ND · Not detected at the reported detection limit for the sample.

NI · Not Ignitable.

RDL · Reported Detection Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.

RPD · Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

***** - The batch duplicate RPD exceeds the acceptance criteria. This flag is not applicable when the sample concentrations are less than 5x the RDL. (Metals only.)

A - Spectra identified as "Aldol Condensation Product".

B - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte.

D - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.

E - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.

H - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.

N - The matrix spike recovery exceeds the acceptance criteria. This flag is not applicable when the sample concentration is greater than 4x the spike added. (Metals only.)

P - The RPD between the results for the two columns exceeds the method-specified criteria.

R - Analytical results are from sample re-analysis.

RE - Analytical results are from sample re-extraction.

J - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Woods Hole Labs shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Woods Hole Labs.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised February 18, 2009 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Connecticut Department of Public Health Certificate/Lab ID: PH-0574.

Drinking Water (Inorganic Parameters: Color, pH, Turbidity, Conductivity, Alkalinity, Chloride, Free Residual Chlorine, Fluoride, Calcium Hardness, Sulfate, Nitrate, Nitrite, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, Zinc, Total Dissolved Solids, Total Organic Carbon, Total Cyanide, Perchlorate. Organic Parameters: Haloacetic Acids, Volatile Organics 524.2, Total Trihalomethanes 524.2, 1,2-Dibromo-3-chloropropane (DBCP), Ethylene Dibromide (EDB).)
Wastewater/Non-Potable Water (Inorganic Parameters: Color, pH, Conductivity, Acidity, Alkalinity, Chloride, Total Residual Chlorine, Fluoride, Total Hardness, Calcium Hardness, Silica, Sulfate, Sulfide, Ammonia, Kjeldahl Nitrogen, Nitrate, Nitrite, O-Phosphate, Total Phosphorus, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Dissolved Solids, Total Suspended Solids (non-filterable), BOD, CBOD, COD, TOC, Total Cyanide, Phenolics, Foaming Agents (MBAS), Bromide, Oil and Grease. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Acid Extractables (Phenols), Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, Polynuclear Aromatic Hydrocarbons, Haloethers, Chlorinated Hydrocarbons, Volatile Organics.)
Solid Waste/Soil (Inorganic Parameters: Lead in Paint, pH, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Tin, Vanadium, Zinc, Total Cyanide, Ignitability, Phenolics, Corrosivity, TCLP Leach (1311), Reactivity. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Extractable Petroleum Hydrocarbons (ETPH), Dicamba, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Volatile Organics, Acid Extractables (Phenols), 3.3'-Dichlorobenzidine, Phthalates, Nitrosamines, Nitroaromatics & Cyclic Ketones, PAHs, Haloethers, Chlorinated Hydrocarbons.)

Re: Geophysical Engineering Survey (GES) Report
Commercial Property
West End Avenue and W 61st Street
New York, New York 10023

Dear Mr. Diggins:

Nova Geophysical Services (NOVA) is pleased to provide findings of the geophysical engineering survey (GES) at the above referenced project site: Commercial Property, West End Avenue and W 61st Street, Brooklyn, New York (the "Site"). Please see attached Site Location and Geophysical Survey maps for more details.

INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY (GES)

NOVA performed a Geophysical engineering surveys (GES) consisting of a Ground Penetrating Radar (GPR) survey at the site. The purpose of this survey is to locate and identify USTs, anomalies, utilities and other substructures and to clear and mark proposed environmental boring areas on December 12, 2014 and January 6 2015.

The equipment selected for this investigation was Noggin's 250 MHz ground penetrating radar (GPR) shielded antenna.

A GPR system consists of a radar control unit, control cable and a transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250 MHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronics amplify the trigger pulses into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

GEOPHYSICAL METHODS

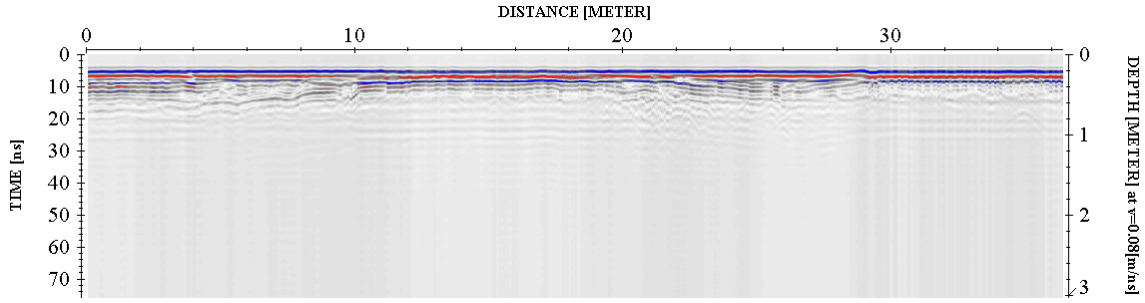
The project site was screened using the GPR to search the entire area and inspected for reflections, which could be indicative of major anomalies and substructures.

GPR data profiles were collected for the areas of the Site specified by the client. The surveyed areas consisted of concrete, asphalt, gravel and dirt surfaces.

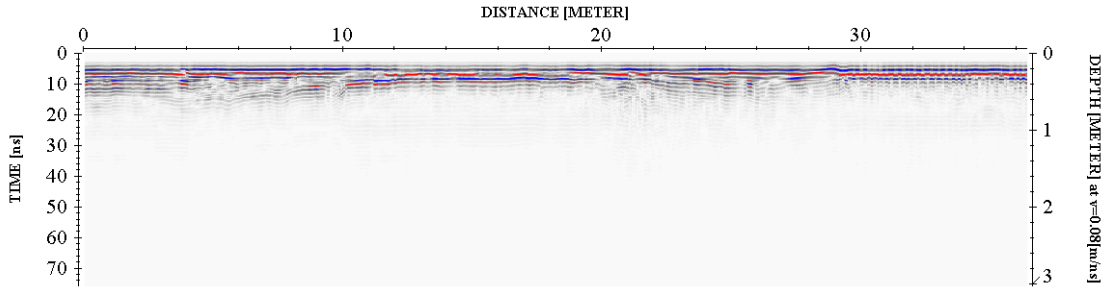
DATA PROCESSING

In order to improve the quality of the results and to better identify subsurface anomalies NOVA processed the collected data. The processes flow is briefly described at this section.

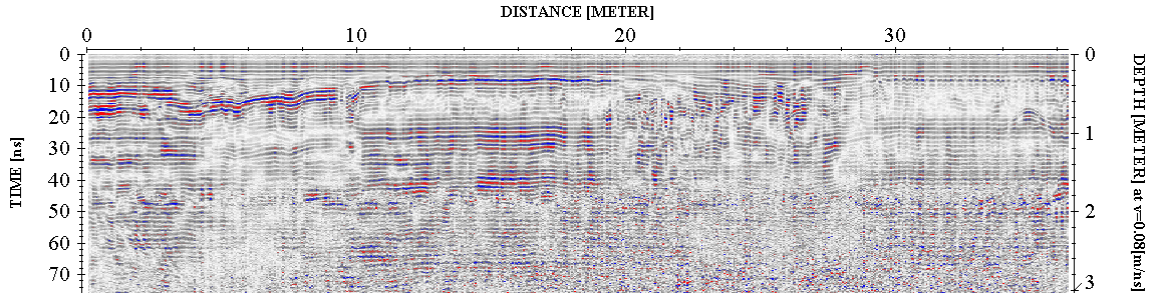
Step 1. Import raw RAMAC data to standard processing format



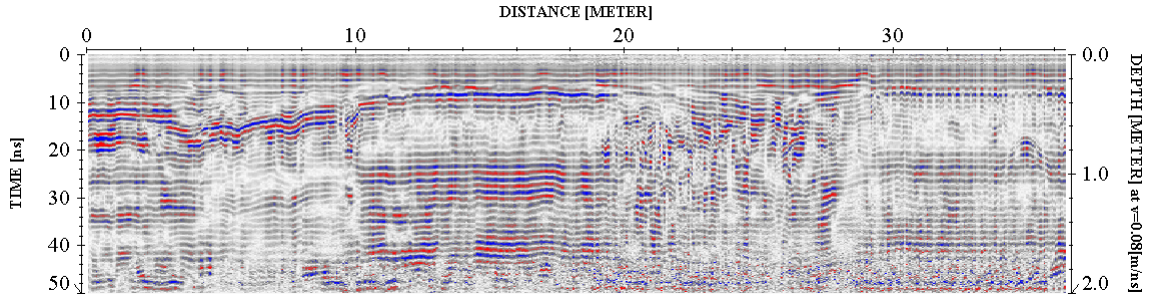
Step 2. Remove instrument noise *(dewow)*



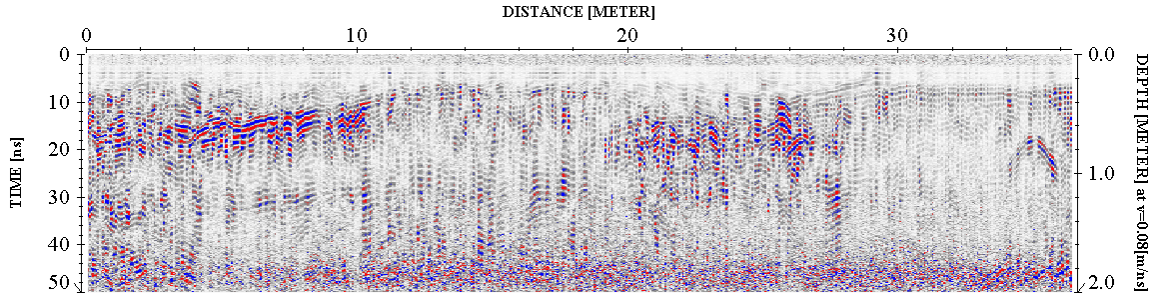
Step 3. Correct for attenuation losses *(energy decay function)*



Step 4. Remove static from bottom of profile *(time cut)*



Step 5. Mute horizontal ringing/noise *(subtracting average)*



The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and describes the subsurface anomalies more accurately.

PHYSICAL SETTINGS

Nova observed following physical conditions at the time of the survey:

The weather: Sunny

Temp: 40 Degrees (F).

Surface: Paved (concrete-asphalt), gravel and dirt surfaces

Geophysical Noise Level (GNL): Geophysical Noise Level (GNL) was medium to high at the site. The noise was a direct result of the survey site being an active, heavily excavated construction in an urban environment.

RESULTS

The results of the geophysical engineering survey (GES) identified following at the project Site:

- GES survey identified scattered anomalies located throughout the project site. Based on their rates and proximity, these anomalies were inconsistent with any USTs. These areas were indicated on the on-site markout.
- The utilities were marked out both at the site and on the survey map.
- A large anomaly, consistent with a UST, was located. However, this feature may be located outside of the survey area indicated by the client. This was marked out on the site and is indicated on the survey map.
- Geophysical Survey Plan portrays the areas investigated during the geophysical survey.

If you have any questions please do not hesitate to contact the undersigned.
Sincerely,

NOVA Geophysical Services

Levent Eskicakit, P.G., E.P.
Project Engineer

Re: Geophysical Engineering Survey (GES) Report
Commercial Property- Riverside Center Parcel - 4
West End Avenue and W 61st Street
New York, New York 10023

Dear Mr. Diggins:

Nova Geophysical Services (NOVA) is pleased to provide findings of the geophysical engineering survey (GES) at the above referenced project site: Riverside Center- Parcel 4: West End Avenue and W 61st Street, Brooklyn, New York (the "Site"). Please see attached Site Location and Geophysical Survey maps for more details.

INTRODUCTION TO GEOPHYSICAL ENGINEERING SURVEY (GES)

NOVA performed a Geophysical engineering surveys (GES) consisting of a Ground Penetrating Radar (GPR) survey and a survey with the Ditch-Witch Utility Locator at the site. The purpose of this survey is to locate and identify USTs, anomalies, utilities and other substructures and to clear and mark proposed environmental boring areas on January 12, 2015.

The equipment selected for this investigation was Noggin's 250 MHz ground penetrating radar (GPR) shielded antenna and a Ditch-Witch Utility Locator.

A GPR system consists of a radar control unit, control cable and a transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250 MHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronics amplify the trigger pulses into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

GEOPHYSICAL METHODS

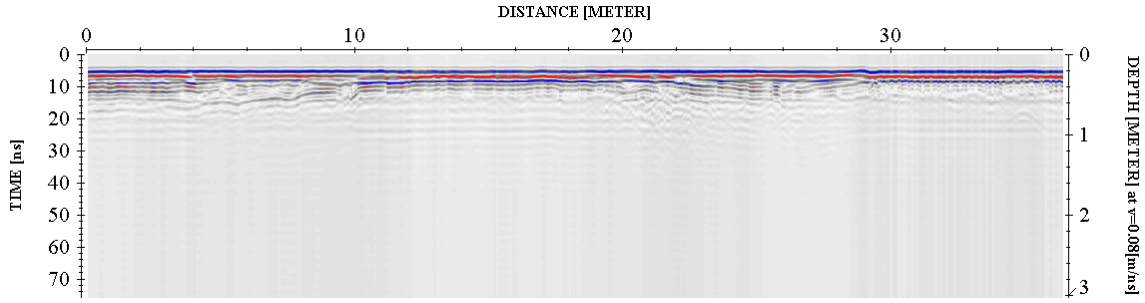
The project site was screened using the GPR to search the entire area and inspected for reflections, which could be indicative of major anomalies and substructures. The locations of electrical lines were then confirmed with the Ditch-Witch Utility Wizard.

GPR data profiles were collected for the areas of the Site specified by the client (Parcel 4). The surveyed areas consisted of asphalt, gravel and dirt surfaces.

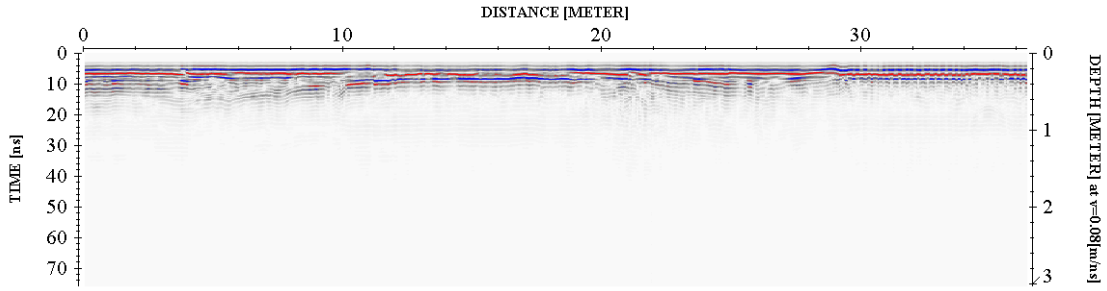
DATA PROCESSING

In order to improve the quality of the results and to better identify subsurface anomalies NOVA processed the collected data. The processes flow is briefly described at this section.

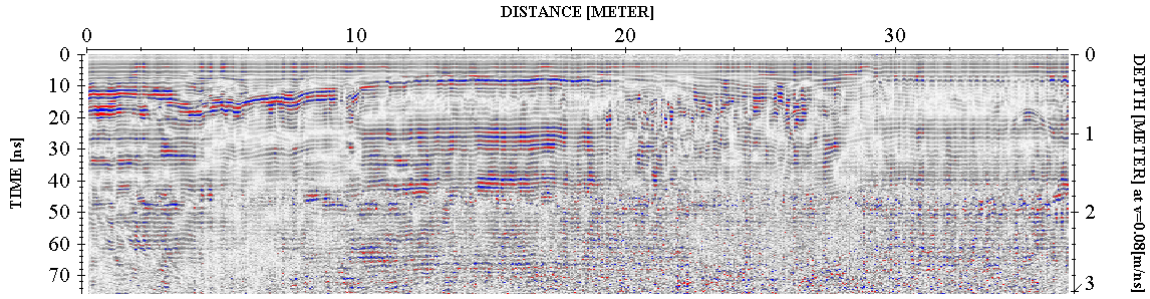
Step 1. Import raw RAMAC data to standard processing format



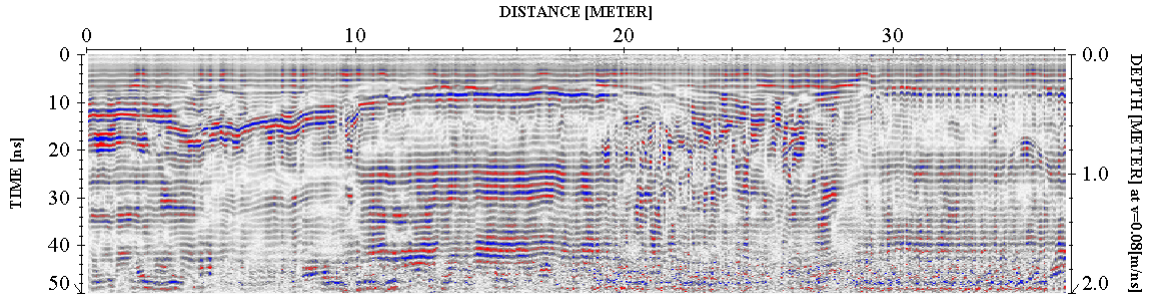
Step 2. Remove instrument noise *(dewow)*



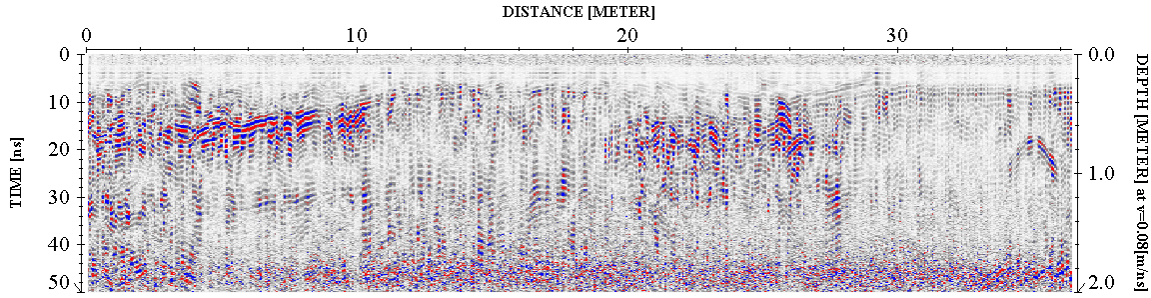
Step 3. Correct for attenuation losses *(energy decay function)*



Step 4. Remove static from bottom of profile *(time cut)*



Step 5. Mute horizontal ringing/noise *(subtracting average)*



The above example shows the significance of data processing. The last image (step 5) has higher resolution than the starting image (raw data – step 1) and describes the subsurface anomalies more accurately.

PHYSICAL SETTINGS

Nova observed following physical conditions at the time of the survey:

The weather: Overcast and snowy

Temp: 35 Degrees (F).

Surface: Asphalt, gravel and dirt surfaces

Geophysical Noise Level (GNL): Geophysical Noise Level (GNL) was high at the site. The noise was a direct result of the survey site being an active, heavily excavated construction in an urban environment as well as water/air trapped under the ice.

RESULTS

The results of the geophysical engineering survey (GES) identified following at the project Site:

- GES survey identified scattered anomalies located throughout the project site. Based on their rates and proximity, these anomalies were inconsistent with any USTs. These areas were indicated on the on-site markout.
- Electrical lines were located on the site. These utilities were marked out both at the site and on the survey map.
- Geophysical Survey Plan portrays the areas investigated during the geophysical survey.

If you have any questions please do not hesitate to contact the undersigned.
Sincerely,

NOVA Geophysical Services

Levent Eskicakit, P.G., E.P.
Project Engineer

WELL CONSTRUCTION SUMMARY

Well No. MW63

PROJECT Riverside Parcel 3	**PROJECT NO.** 170275403
LOCATION New York, New York	**ELEVATION AND DATUM** 8.22 feet (NAVD88)
DRILLING AGENCY ADT	**DATE STARTED** 1/6/2015 **DATE FINISHED** 1/6/2014
DRILLING EQUIPMENT Geoprobe 6620DT	**DRILLER** Chris Iodicie
SIZE AND TYPE OF BIT Macro-Core®	**INSPECTOR** David Hannam

METHOD OF INSTALLATION

Geoprobe 6620DT with an auger attachment was used to advance to 13 feet . A two-inch PVC monitoring well was installed. The well were finished with a flush mounted road box and concrete pad.

METHOD OF WELL DEVELOPMENT

Monsoon pump for 1 hour.

TYPE OF CASING PVC **DIAMETER** 2 inch	**TYPE OF BACKFILL MATERIAL** No. 2 Sand and clean drill cuttings
TYPE OF SCREEN 0.02-inch slotted **DIAMETER** 2 inch	**TYPE OF SEAL MATERIAL** Bentonite
BOREHOLE DIAMETER 4.5 inch	**TYPE OF FILTER MATERIAL** No. 2 Sand

TOP OF CASING **ELEVATION**	**DEPTH (ft)**	0.54
TOP OF SEAL **ELEVATION**	**DEPTH (ft)**	1
TOP OF FILTER **ELEVATION**	**DEPTH (ft)**	2.5

WELL CONSTRUCTION SUMMARY

Well No. MW89

PROJECT Riverside Parcel 3	**PROJECT NO.** 170275403
LOCATION New York, New York	**ELEVATION AND DATUM** 8.47 feet (NAVD88)
DRILLING AGENCY ADT	**DATE STARTED** 1/6/2015 **DATE FINISHED** 1/6/2015
DRILLING EQUIPMENT Geoprobe 6620DT	**DRILLER** Chris Iodicie
SIZE AND TYPE OF BIT Macro-Core®	**INSPECTOR** David Hannam

METHOD OF INSTALLATION

Geoprobe 6620DT with auger attachment was used to advance to 13 feet. A two-inch PVC monitoring well was installed. The well was finished with a flush mounted road box and concrete pad.

METHOD OF WELL DEVELOPMENT

Whale pump for 1 hour.

TYPE OF CASING PVC **DIAMETER** 2 inch	**TYPE OF BACKFILL MATERIAL** No. 2 Sand and clean drill cuttings
TYPE OF SCREEN 0.02-inch slotted **DIAMETER** 2 inch	**TYPE OF SEAL MATERIAL** Bentonite
BOREHOLE DIAMETER 4.5 inch	**TYPE OF FILTER MATERIAL** No. 2 Sand

SOIL VAPOR SAMPLING LOG SHEET

Sample Number: SV63_010915

PROJECT: Riverside Parcel 3	**PROJECT NO.:** 170275403
LOCATION: New York, New York	**SURFACE ELEVATION AND DATUM:** 8.62 feet (NAVD88)
DRILLING FIRM OR LANGAN INSTALLER: ADT	**INSTALLATION DATE STARTED:** 12/31/2014 **DATE FINISHED:** 12/31/2014
INSTALLATION FOREMAN: Chris Iodice	**SAMPLE DATE STARTED:** 1/9/2015 **DATE FINISHED:** 1/9/2015
INSTALLATION EQUIPMENT: Geoprobe 6620 DT	**TYPE OF SAMPLING DEVICE:** 6L Summa Canister
INSPECTOR: David Hannam	**SAMPLER:** David Hannam
POTENTIAL SAMPLE INTERFERENCES:	**WEATHER CONDITIONS (PRECIP., TEMP., PRESS., WIND SPEED AND DIR.):** Cold, 20s/30s°F, low westerly wind, 1024mb

METHOD OF INSTALLATION AND PURGING:

Advance with Geoprobe 6620DT using a 4-ft long 2-inch diameter Macro-Core® to 17 ft. Hole collapses, backfill to 6ft and install vapor point. Backfill with sand and seal with a minimum of 1 ft of bentonite at surface. Purge with MultiRae 4+.

TUBING TYPE/DIAMETER: Polyurethane 3/8 inch	**TYPE OF MATERIAL ABOVE SEAL:** Bentonite 1 foot, then sand to 0.5
IMPLANT SCREEN TYPE/LENGTH/DIAMETER: steel implant	**SEAL MATERIAL (Bentonite, Beeswax, Modeling Clay, etc.):** Bentonite
BOREHOLE DIAMETER: 2 inch	**FILTER PACK MATERIAL (Sand or Glass Beads):** Sand

PURGE VOLUME (L):	
PURGE FLOW RATE (ML/MIN):	200ml/min
PID AFTER PURGE (PPM):	0.0
HELIUM TEST IN BUCKET(%):	Before Sample:14.2% After Sample: 14.6
HELIUM TEST IN TUBE (PPM):	Before Sample: 0.0% After Sample: 0.0%
SAMPLE START DATE/TIME:	1/9/2015 9:05
SAMPLE STOP DATE/TIME:	1/9/2015 11:05

Technical Report

prepared for:

Langan Engineering & Environmental Services (NYC)
21 Penn Plaza, 360 West 31st Street
New York NY, 10001
Attention: Patrick Diggins

Report Date: 01/07/2015
Client Project ID: 170275401
York Project (SDG) No.: 14L1098

Report Date: 01/07/2015
Client Project ID: 170275401
York Project (SDG) No.: 14L1098

Langan Engineering & Environmental Services (NYC)
21 Penn Plaza, 360 West 31st Street
New York NY, 10001
Attention: Patrick Diggins

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on December 31, 2014 and listed below. The project was identified as your project: **170275401**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
14L1098-01	EB63_0-2	Soil	12/31/2014	12/31/2014
14L1098-02	EB63_6-8	Soil	12/31/2014	12/31/2014

General Notes for York Project (SDG) No.: 14L1098

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Approved By:

Date: 01/07/2015

Benjamin Gulizia
Laboratory Director

14L1098-02	EB63_6-8	Encore Sampler

Notes and Definitions

S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
QL-03	This LCS analyte recovered outside of acceptance limits. The LCS contains approximately 70 compounds, a limited number of which may be outside acceptance windows.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-MISpk	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The SRM was within acceptance limits, therefore data are acceptable.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
IS-LO	The internal std associated with this target compound did not meet acceptance criteria (area <50% CCV) at the stated dilution due to matrix effects. Sample was rerun to confirm matrix effects.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).

---

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two.
For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

Technical Report

prepared for:

Langan Engineering & Environmental Services (NYC)
21 Penn Plaza, 360 West 31st Street
New York NY, 10001
Attention: Patrick Diggins

Report Date: 01/09/2015
Client Project ID: 170275401
York Project (SDG) No.: 15A0017

Report Date: 01/09/2015
Client Project ID: 170275401
York Project (SDG) No.: 15A0017

Langan Engineering & Environmental Services (NYC)
21 Penn Plaza, 360 West 31st Street
New York NY, 10001
Attention: Patrick Diggins

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on January 02, 2015 and listed below. The project was identified as your project: **170275401**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

York Sample ID	Client Sample ID	Matrix	Date Collected	Date Received
15A0017-01	EB78_0-2	Soil	01/02/2015	01/02/2015
15A0017-02	EB78_8-10	Soil	01/02/2015	01/02/2015
15A0017-03	TB01_1215	Water	01/02/2015	01/02/2015

General Notes for York Project (SDG) No.: 15A0017

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

QL-03	This LCS analyte recovered outside of acceptance limits. The LCS contains approximately 70 compounds, a limited number of which may be outside acceptance windows.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <10x the blank value as artifact.

---

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
