

Outcome 2: Faster Permanency, Community District Comparative

This outcome provides a measure of the foster care system's success at moving children into permanent homes on a timely basis. The best measure for this outcome is the time in foster care for an annual admissions cohort¹. This report focuses on the status of children placed in the most recent annual admissions cohort. It compares measures for children who are from the specified community district (CD) for this report with the same measures for all children from the borough and the entire city. The first page of this report considers the overall performance of admissions cohorts; the second and third pages focus on adoption discharges.

The first section on this page presents the performance of 1st time admission cohorts. The second section considers 2nd or greater spell² admissions cohorts for the same calendar years. For each group the total number of placements into foster care is provided. The remaining indicators in these sections of the report examine the status of the admissions cohorts at a specified point in time during the calendar year following the admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also provided. The number still in care, broken down by Permanency Planning Goal (PPG)³ is shown. Next, the number discharged and to what destination is presented. Finally, a summary of how long those discharges stayed in care is included.

¹ Admission cohort refers to the group of children placed in foster care in a given year.

² A spell is the time between foster care entry and discharge. A child's 1st spell is his/her 1st episode in foster care. Subsequent episodes in foster care are second or greater spells.

³ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

⁴ Reunification is defined as discharge to parent, relative or primary resource person.

Outcome 2: Faster Permanency, Community District Comparative (continued)

This portion of the report focuses on those children discharged to adoption. This page describes 1st spell admission cohorts and the next page looks at 2nd or greater spell cohorts. The total number of children in each cohort is displayed on the first line of both pages. The remaining measures examine the status of the admission cohorts at a specific point in time during the calendar year three years following the admission year. The number still in care is broken down by PPG. For those with a goal of adoption the percent freed and the number freed during the current spell is shown. Next the number discharged and to what destination is presented. A summary of how long those discharged stayed in care is then shown. Finally, for those adopted the time in care before adoption and the time between being freed for adoption and being adopted are presented.

*The difference in the number freed during the current spell and the percent of children in care with a goal of adoption that are freed is due to children that were freed during a prior foster care spell.

Outcome 2: Faster Permanency, Community District Comparative

This outcome provides a measure of the foster care system's success at moving children into permanent homes on a timely basis. The best measure for this outcome is the time in foster care for an annual admissions cohort¹. This report focuses on the status of children placed in the most recent annual admissions cohort. It compares measures for children who are from the specified community district (CD) for this report with the same measures for all children from the borough and the entire city. The first page of this report considers the overall performance of admissions cohorts; the second and third pages focus on adoption discharges.

The first section on this page presents the performance of 1st time admission cohorts. The second section considers 2nd or greater spell² admissions cohorts for the same calendar years. For each group the total number of placements into foster care is provided. The remaining indicators in these sections of the report examine the status of the admissions cohorts at a specified point in time during the calendar year following the admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also provided. The number still in care, broken down by Permanency Planning Goal (PPG)³ is shown. Next, the number discharged and to what destination is presented. Finally, a summary of how long those discharges stayed in care is included.

**The difference in the number freed during the current spell and the percent of children in care with a goal of adoption that are freed is due to children that were freed during a prior foster care spell.*

Outcome 2: Faster Permanency, Community District Comparative

This outcome provides a measure of the foster care system's success at moving children into permanent homes on a timely basis. The best measure for this outcome is the time in foster care for an annual admissions cohort¹. This report focuses on the status of children placed in the most recent annual admissions cohort. It compares measures for children who are from the specified community district (CD) for this report with the same measures for all children from the borough and the entire city. The first page of this report considers the overall performance of admissions cohorts; the second and third pages focus on adoption discharges.

The first section on this page presents the performance of 1st time admission cohorts. The second section considers 2nd or greater spell² admissions cohorts for the same calendar years. For each group the total number of placements into foster care is provided. The remaining indicators in these sections of the report examine the status of the admissions cohorts at a specified point in time during the calendar year following the admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also provided. The number still in care, broken down by Permanency Planning Goal (PPG)³ is shown. Next, the number discharged and to what destination is presented. Finally, a summary of how long those discharges stayed in care is included.

¹ Admission cohort refers to the group of children placed in foster care in a given year.

² A spell is the time between foster care entry and discharge. A child's 1st spell is his/her 1st episode in foster care. Subsequent episodes in foster care are second or greater spells.

³ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

⁴ Reunification is defined as discharge to parent, relative or primary resource person.

Outcome 2: Faster Permanency, Community District Comparative (continued)

This portion of the report focuses on those children discharged to adoption. This page describes 1st spell admission cohorts and the next page looks at 2nd or greater spell cohorts. The total number of children in each cohort is displayed on the first line of both pages. The remaining measures examine the status of the admission cohorts at a specific point in time during the calendar year three years following the admission year. The number still in care is broken down by PPG. For those with a goal of adoption the percent freed and the number freed during the current spell is shown. Next the number discharged and to what destination is presented. A summary of how long those discharged stayed in care is then shown. Finally, for those adopted the time in care before adoption and the time between being freed for adoption and being adopted are presented.

**The difference in the number freed during the current spell and the percent of children in care with a goal of adoption that are freed is due to children that were freed during a prior foster care spell.*

Outcome 2: Faster Permanency, Community District Comparative

This outcome provides a measure of the foster care system's success at moving children into permanent homes on a timely basis. The best measure for this outcome is the time in foster care for an annual admissions cohort¹. This report focuses on the status of children placed in the most recent annual admissions cohort. It compares measures for children who are from the specified community district (CD) for this report with the same measures for all children from the borough and the entire city. The first page of this report considers the overall performance of admissions cohorts; the second and third pages focus on adoption discharges.

The first section on this page presents the performance of 1st time admission cohorts. The second section considers 2nd or greater spell² admissions cohorts for the same calendar years. For each group the total number of placements into foster care is provided. The remaining indicators in these sections of the report examine the status of the admissions cohorts at a specified point in time during the calendar year following the admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also provided. The number still in care, broken down by Permanency Planning Goal (PPG)³ is shown. Next, the number discharged and to what destination is presented. Finally, a summary of how long those discharges stayed in care is included.

¹ Admission cohort refers to the group of children placed in foster care in a given year.

² A spell is the time between foster care entry and discharge. A child's 1st spell is his/her 1st episode in foster care. Subsequent episodes in foster care are second or greater spells.

³ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

⁴ Reunification is defined as discharge to parent, relative or primary resource person.

Outcome 2: Faster Permanency, Community District Comparative (continued)

This portion of the report focuses on those children discharged to adoption. This page describes 1st spell admission cohorts and the next page looks at 2nd or greater spell cohorts. The total number of children in each cohort is displayed on the first line of both pages. The remaining measures examine the status of the admission cohorts at a specific point in time during the calendar year three years following the admission year. The number still in care is broken down by PPG. For those with a goal of adoption the percent freed and the number freed during the current spell is shown. Next the number discharged and to what destination is presented. A summary of how long those discharged stayed in care is then shown. Finally, for those adopted the time in care before adoption and the time between being freed for adoption and being adopted are presented.

**The difference in the number freed during the current spell and the percent of children in care with a goal of adoption that are freed is due to children that were freed during a prior foster care spell.*

Outcome 2: Faster Permanency, Community District Comparative

This outcome provides a measure of the foster care system's success at moving children into permanent homes on a timely basis. The best measure for this outcome is the time in foster care for an annual admissions cohort¹. This report focuses on the status of children placed in the most recent annual admissions cohort. It compares measures for children who are from the specified community district (CD) for this report with the same measures for all children from the borough and the entire city. The first page of this report considers the overall performance of admissions cohorts; the second and third pages focus on adoption discharges.

The first section on this page presents the performance of 1st time admission cohorts. The second section considers 2nd or greater spell² admissions cohorts for the same calendar years. For each group the total number of placements into foster care is provided. The remaining indicators in these sections of the report examine the status of the admissions cohorts at a specified point in time during the calendar year following the admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also provided. The number still in care, broken down by Permanency Planning Goal (PPG)³ is shown. Next, the number discharged and to what destination is presented. Finally, a summary of how long those discharges stayed in care is included.

¹ Admission cohort refers to the group of children placed in foster care in a given year.

² A spell is the time between foster care entry and discharge. A child's 1st spell is his/her 1st episode in foster care. Subsequent episodes in foster care are second or greater spells.

³ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

⁴ Reunification is defined as discharge to parent, relative or primary resource person.

Outcome 2: Faster Permanency, Community District Comparative (continued)

This portion of the report focuses on those children discharged to adoption. This page describes 1st spell admission cohorts and the next page looks at 2nd or greater spell cohorts. The total number of children in each cohort is displayed on the first line of both pages. The remaining measures examine the status of the admission cohorts at a specific point in time during the calendar year three years following the admission year. The number still in care is broken down by PPG. For those with a goal of adoption the percent freed and the number freed during the current spell is shown. Next the number discharged and to what destination is presented. A summary of how long those discharged stayed in care is then shown. Finally, for those adopted the time in care before adoption and the time between being freed for adoption and being adopted are presented.

**The difference in the number freed during the current spell and the percent of children in care with a goal of adoption that are freed is due to children that were freed during a prior foster care spell.*

Outcome 2: Faster Permanency, Community District Comparative

This outcome provides a measure of the foster care system's success at moving children into permanent homes on a timely basis. The best measure for this outcome is the time in foster care for an annual admissions cohort¹. This report focuses on the status of children placed in the most recent annual admissions cohort. It compares measures for children who are from the specified community district (CD) for this report with the same measures for all children from the borough and the entire city. The first page of this report considers the overall performance of admissions cohorts; the second and third pages focus on adoption discharges.

The first section on this page presents the performance of 1st time admission cohorts. The second section considers 2nd or greater spell² admissions cohorts for the same calendar years. For each group the total number of placements into foster care is provided. The remaining indicators in these sections of the report examine the status of the admissions cohorts at a specified point in time during the calendar year following the admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also provided. The number still in care, broken down by Permanency Planning Goal (PPG)³ is shown. Next, the number discharged and to what destination is presented. Finally, a summary of how long those discharges stayed in care is included.

Next the number discharged and to what destination is presented. A summary of how long those discharged stayed in care is then shown. Finally, for those adopted the time in care before adoption and the time between being freed for adoption and being adopted are presented.

THERE IS NO 2ND+ SPELL ADMISSIONS DATA FOR 06 FOR COHORT YEAR 2006

Outcome 2: Faster Permanency, Community District Comparative

This outcome provides a measure of the foster care system's success at moving children into permanent homes on a timely basis. The best measure for this outcome is the time in foster care for an annual admissions cohort¹. This report focuses on the status of children placed in the most recent annual admissions cohort. It compares measures for children who are from the specified community district (CD) for this report with the same measures for all children from the borough and the entire city. The first page of this report considers the overall performance of admissions cohorts; the second and third pages focus on adoption discharges.

The first section on this page presents the performance of 1st time admission cohorts. The second section considers 2nd or greater spell² admissions cohorts for the same calendar years. For each group the total number of placements into foster care is provided. The remaining indicators in these sections of the report examine the status of the admissions cohorts at a specified point in time during the calendar year following the admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also provided. The number still in care, broken down by Permanency Planning Goal (PPG)³ is shown. Next, the number discharged and to what destination is presented. Finally, a summary of how long those discharges stayed in care is included.

¹ Admission cohort refers to the group of children placed in foster care in a given year.

² A spell is the time between foster care entry and discharge. A child's 1st spell is his/her 1st episode in foster care. Subsequent episodes in foster care are second or greater spells.

³ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

⁴ Reunification is defined as discharge to parent, relative or primary resource person.

Outcome 2: Faster Permanency, Community District Comparative (continued)

This portion of the report focuses on those children discharged to adoption. This page describes 1st spell admission cohorts and the next page looks at 2nd or greater spell cohorts. The total number of children in each cohort is displayed on the first line of both pages. The remaining measures examine the status of the admission cohorts at a specific point in time during the calendar year three years following the admission year. The number still in care is broken down by PPG. For those with a goal of adoption the percent freed and the number freed during the current spell is shown. Next the number discharged and to what destination is presented. A summary of how long those discharged stayed in care is then shown. Finally, for those adopted the time in care before adoption and the time between being freed for adoption and being adopted are presented.

*The difference in the number freed during the current spell and the percent of children in care with a goal of adoption that are freed is due to children that were freed during a prior foster care spell.

Outcome 2: Faster Permanency, Community District Comparative

This outcome provides a measure of the foster care system's success at moving children into permanent homes on a timely basis. The best measure for this outcome is the time in foster care for an annual admissions cohort¹. This report focuses on the status of children placed in the most recent annual admissions cohort. It compares measures for children who are from the specified community district (CD) for this report with the same measures for all children from the borough and the entire city. The first page of this report considers the overall performance of admissions cohorts; the second and third pages focus on adoption discharges.

The first section on this page presents the performance of 1st time admission cohorts. The second section considers 2nd or greater spell² admissions cohorts for the same calendar years. For each group the total number of placements into foster care is provided. The remaining indicators in these sections of the report examine the status of the admissions cohorts at a specified point in time during the calendar year following the admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also provided. The number still in care, broken down by Permanency Planning Goal (PPG)³ is shown. Next, the number discharged and to what destination is presented. Finally, a summary of how long those discharges stayed in care is included.

¹ Admission cohort refers to the group of children placed in foster care in a given year.

² A spell is the time between foster care entry and discharge. A child's 1st spell is his/her 1st episode in foster care. Subsequent episodes in foster care are second or greater spells.

³ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

⁴ Reunification is defined as discharge to parent, relative or primary resource person.

Outcome 2: Faster Permanency, Community District Comparative (continued)

This portion of the report focuses on those children discharged to adoption. This page describes 1st spell admission cohorts and the next page looks at 2nd or greater spell cohorts. The total number of children in each cohort is displayed on the first line of both pages. The remaining measures examine the status of the admission cohorts at a specific point in time during the calendar year three years following the admission year. The number still in care is broken down by PPG. For those with a goal of adoption the percent freed and the number freed during the current spell is shown. Next the number discharged and to what destination is presented. A summary of how long those discharged stayed in care is then shown. Finally, for those adopted the time in care before adoption and the time between being freed for adoption and being adopted are presented.

**The difference in the number freed during the current spell and the percent of children in care with a goal of adoption that are freed is due to children that were freed during a prior foster care spell.*

Outcome 2: Faster Permanency, Community District Comparative

This outcome provides a measure of the foster care system's success at moving children into permanent homes on a timely basis. The best measure for this outcome is the time in foster care for an annual admissions cohort¹. This report focuses on the status of children placed in the most recent annual admissions cohort. It compares measures for children who are from the specified community district (CD) for this report with the same measures for all children from the borough and the entire city. The first page of this report considers the overall performance of admissions cohorts; the second and third pages focus on adoption discharges.

The first section on this page presents the performance of 1st time admission cohorts. The second section considers 2nd or greater spell² admissions cohorts for the same calendar years. For each group the total number of placements into foster care is provided. The remaining indicators in these sections of the report examine the status of the admissions cohorts at a specified point in time during the calendar year following the admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also provided. The number still in care, broken down by Permanency Planning Goal (PPG)³ is shown. Next, the number discharged and to what destination is presented. Finally, a summary of how long those discharges stayed in care is included.

¹ Admission cohort refers to the group of children placed in foster care in a given year.

² A spell is the time between foster care entry and discharge. A child's 1st spell is his/her 1st episode in foster care. Subsequent episodes in foster care are second or greater spells.

³ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

⁴ Reunification is defined as discharge to parent, relative or primary resource person.

Outcome 2: Faster Permanency, Community District Comparative (continued)

This portion of the report focuses on those children discharged to adoption. This page describes 1st spell admission cohorts and the next page looks at 2nd or greater spell cohorts. The total number of children in each cohort is displayed on the first line of both pages. The remaining measures examine the status of the admission cohorts at a specific point in time during the calendar year three years following the admission year. The number still in care is broken down by PPG. For those with a goal of adoption the percent freed and the number freed during the current spell is shown. Next the number discharged and to what destination is presented. A summary of how long those discharged stayed in care is then shown. Finally, for those adopted the time in care before adoption and the time between being freed for adoption and being adopted are presented.

*The difference in the number freed during the current spell and the percent of children in care with a goal of adoption that are freed is due to children that were freed during a prior foster care spell.

Outcome 2: Faster Permanency, Community District Comparative

This outcome provides a measure of the foster care system's success at moving children into permanent homes on a timely basis. The best measure for this outcome is the time in foster care for an annual admissions cohort¹. This report focuses on the status of children placed in the most recent annual admissions cohort. It compares measures for children who are from the specified community district (CD) for this report with the same measures for all children from the borough and the entire city. The first page of this report considers the overall performance of admissions cohorts; the second and third pages focus on adoption discharges.

The first section on this page presents the performance of 1st time admission cohorts. The second section considers 2nd or greater spell² admissions cohorts for the same calendar years. For each group the total number of placements into foster care is provided. The remaining indicators in these sections of the report examine the status of the admissions cohorts at a specified point in time during the calendar year following the admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also provided. The number still in care, broken down by Permanency Planning Goal (PPG)³ is shown. Next, the number discharged and to what destination is presented. Finally, a summary of how long those discharges stayed in care is included.

¹ Admission cohort refers to the group of children placed in foster care in a given year.

² A spell is the time between foster care entry and discharge. A child's 1st spell is his/her 1st episode in foster care. Subsequent episodes in foster care are second or greater spells.

³ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

⁴ Reunification is defined as discharge to parent, relative or primary resource person.

Outcome 2: Faster Permanency, Community District Comparative (continued)

This portion of the report focuses on those children discharged to adoption. This page describes 1st spell admission cohorts and the next page looks at 2nd or greater spell cohorts. The total number of children in each cohort is displayed on the first line of both pages. The remaining measures examine the status of the admission cohorts at a specific point in time during the calendar year three years following the admission year. The number still in care is broken down by PPG. For those with a goal of adoption the percent freed and the number freed during the current spell is shown. Next the number discharged and to what destination is presented. A summary of how long those discharged stayed in care is then shown. Finally, for those adopted the time in care before adoption and the time between being freed for adoption and being adopted are presented.

**The difference in the number freed during the current spell and the percent of children in care with a goal of adoption that are freed is due to children that were freed during a prior foster care spell.*

Outcome 2: Faster Permanency, Community District Comparative

This outcome provides a measure of the foster care system's success at moving children into permanent homes on a timely basis. The best measure for this outcome is the time in foster care for an annual admissions cohort¹. This report focuses on the status of children placed in the most recent annual admissions cohort. It compares measures for children who are from the specified community district (CD) for this report with the same measures for all children from the borough and the entire city. The first page of this report considers the overall performance of admissions cohorts; the second and third pages focus on adoption discharges.

The first section on this page presents the performance of 1st time admission cohorts. The second section considers 2nd or greater spell² admissions cohorts for the same calendar years. For each group the total number of placements into foster care is provided. The remaining indicators in these sections of the report examine the status of the admissions cohorts at a specified point in time during the calendar year following the admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also provided. The number still in care, broken down by Permanency Planning Goal (PPG)³ is shown. Next, the number discharged and to what destination is presented. Finally, a summary of how long those discharges stayed in care is included.

¹ Admission cohort refers to the group of children placed in foster care in a given year.

² A spell is the time between foster care entry and discharge. A child's 1st spell is his/her 1st episode in foster care. Subsequent episodes in foster care are second or greater spells.

³ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

⁴ Reunification is defined as discharge to parent, relative or primary resource person.

Outcome 2: Faster Permanency, Community District Comparative (continued)

This portion of the report focuses on those children discharged to adoption. This page describes 1st spell admission cohorts and the next page looks at 2nd or greater spell cohorts. The total number of children in each cohort is displayed on the first line of both pages. The remaining measures examine the status of the admission cohorts at a specific point in time during the calendar year three years following the admission year. The number still in care is broken down by PPG. For those with a goal of adoption the percent freed and the number freed during the current spell is shown. Next the number discharged and to what destination is presented. A summary of how long those discharged stayed in care is then shown. Finally, for those adopted the time in care before adoption and the time between being freed for adoption and being adopted are presented.

Outcome 2: Faster Permanency, Community District Comparative

This outcome provides a measure of the foster care system's success at moving children into permanent homes on a timely basis. The best measure for this outcome is the time in foster care for an annual admissions cohort¹. This report focuses on the status of children placed in the most recent annual admissions cohort. It compares measures for children who are from the specified community district (CD) for this report with the same measures for all children from the borough and the entire city. The first page of this report considers the overall performance of admissions cohorts; the second and third pages focus on adoption discharges.

The first section on this page presents the performance of 1st time admission cohorts. The second section considers 2nd or greater spell² admissions cohorts for the same calendar years. For each group the total number of placements into foster care is provided. The remaining indicators in these sections of the report examine the status of the admissions cohorts at a specified point in time during the calendar year following the admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also provided. The number still in care, broken down by Permanency Planning Goal (PPG)³ is shown. Next, the number discharged and to what destination is presented. Finally, a summary of how long those discharges stayed in care is included.
