

Outcome 6:

Increase Permanency For Adolescents, Community District Comparative

This outcome provides measures of the foster care system's success at moving adolescents (children 12 years and older) into permanent homes on a timely basis. This report compares these measures for adolescents who are from the community district of this report in the borough of this report with the same measures for all children from the borough and the entire city. This performance report focuses on three perspectives: 1) the status of adolescents placed in annual admissions cohorts;¹ 2) placements of adolescents; and 3) adolescents in care at a given point in time.

The first perspective, shown on this page and the second page of this report, looks at the status of adolescents placed in the most recent annual admissions cohorts. The best indicators of success at achieving increased permanency from this perspective are the percent discharged to reunification² and the percent discharged to adoption. This page provides information on adolescents admitted to their first spell³ in foster care and the next page considers adolescents admitted to their second or greater spells. The number of adolescents placed in foster care and their age group at time of admission is provided. The remaining indicators consider the status of these cohorts as of a set point in time following the end of each admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also shown. For those still in care, the most current Permanency Planning Goal⁴ (PPG) is provided. For adolescents that have been discharged, information on discharge destination and time in care are provided.

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The second perspective presents the number of most recent placements of adolescents who were 12-13, 14-15 and 16-17 years old when they entered foster care. It also provides the level of care of these placements and the percent that were second or greater spell. The best indicator of success from this perspective is the percent of adolescents placed in family settings (i.e. kinship and foster boarding homes).

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The third perspective presents the number of adolescents, 12-13, 14-15, 16-17 and greater than 17 years old in care at a specified point in time. This point in time corresponds with the last day of the month listed. The most recent Permanency Planning Goals (PPGs) for the adolescents in care are also provided in this section. The critical indicator from this perspective is the percent in care with adoption and reunification PPGs.

¹ Annual adolescent admission cohort refers to the group of adolescents, 12 years and older at the time of placement, placed in foster care in a given year.

² Reunification is defined as discharge to parent, relative or primary resource person.

³ A spell is the time between foster care entry and discharge. A child's 1st spell is her/his 1st episode in foster care. Subsequent episodes in foster care are 2nd or greater spells.

⁴ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

Outcome 6:

Increase Permanency For Adolescents, Community District Comparative

This outcome provides measures of the foster care system's success at moving adolescents (children 12 years and older) into permanent homes on a timely basis. This report compares these measures for adolescents who are from the community district of this report in the borough of this report with the same measures for all children from the borough and the entire city. This performance report focuses on three perspectives: 1) the status of adolescents placed in annual admissions cohorts;¹ 2) placements of adolescents; and 3) adolescents in care at a given point in time.

The first perspective, shown on this page and the second page of this report, looks at the status of adolescents placed in the most recent annual admissions cohorts. The best indicators of success at achieving increased permanency from this perspective are the percent discharged to reunification² and the percent discharged to adoption. This page provides information on adolescents admitted to their first spell³ in foster care and the next page considers adolescents admitted to their second or greater spells. The number of adolescents placed in foster care and their age group at time of admission is provided. The remaining indicators consider the status of these cohorts as of a set point in time following the end of each admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also shown. For those still in care, the most current Permanency Planning Goal⁴ (PPG) is provided. For adolescents that have been discharged, information on discharge destination and time in care are provided.

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The second perspective presents the number of most recent placements of adolescents who were 12-13, 14-15 and 16-17 years old when they entered foster care. It also provides the level of care of these placements and the percent that were second or greater spell. The best indicator of success from this perspective is the percent of adolescents placed in family settings (i.e. kinship and foster boarding homes).

* "CYTD" refers to running totals for the year 2009, through the end of MAR

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The third perspective presents the number of adolescents, 12-13, 14-15, 16-17 and greater than 17 years old in care at a specified point in time. This point in time corresponds with the last day of the month listed. The most recent Permanency Planning Goals (PPGs) for the adolescents in care are also provided in this section. The critical indicator from this perspective is the percent in care with adoption and reunification PPGs.

¹ Annual adolescent admission cohort refers to the group of adolescents, 12 years and older at the time of placement, placed in foster care in a given year.

² Reunification is defined as discharge to parent, relative or primary resource person.

³ A spell is the time between foster care entry and discharge. A child's 1st spell is her/his 1st episode in foster care. Subsequent episodes in foster care are 2nd or greater spells.

⁴ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

Outcome 6:

Increase Permanency For Adolescents, Community District Comparative

This outcome provides measures of the foster care system's success at moving adolescents (children 12 years and older) into permanent homes on a timely basis. This report compares these measures for adolescents who are from the community district of this report in the borough of this report with the same measures for all children from the borough and the entire city. This performance report focuses on three perspectives: 1) the status of adolescents placed in annual admissions cohorts;¹ 2) placements of adolescents; and 3) adolescents in care at a given point in time.

The first perspective, shown on this page and the second page of this report, looks at the status of adolescents placed in the most recent annual admissions cohorts. The best indicators of success at achieving increased permanency from this perspective are the percent discharged to reunification² and the percent discharged to adoption. This page provides information on adolescents admitted to their first spell³ in foster care and the next page considers adolescents admitted to their second or greater spells. The number of adolescents placed in foster care and their age group at time of admission is provided. The remaining indicators consider the status of these cohorts as of a set point in time following the end of each admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also shown. For those still in care, the most current Permanency Planning Goal⁴ (PPG) is provided. For adolescents that have been discharged, information on discharge destination and time in care are provided.

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The third perspective presents the number of adolescents, 12-13, 14-15, 16-17 and greater than 17 years old in care at a specified point in time. This point in time corresponds with the last day of the month listed. The most recent Permanency Planning Goals (PPGs) for the adolescents in care are also provided in this section. The critical indicator from this perspective is the percent in care with adoption and reunification PPGs.

¹ Annual adolescent admission cohort refers to the group of adolescents, 12 years and older at the time of placement, placed in foster care in a given year.

² Reunification is defined as discharge to parent, relative or primary resource person.

³ A spell is the time between foster care entry and discharge. A child's 1st spell is her/his 1st episode in foster care. Subsequent episodes in foster care are 2nd or greater spells.

⁴ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

Outcome 6:

Increase Permanency For Adolescents, Community District Comparative

This outcome provides measures of the foster care system's success at moving adolescents (children 12 years and older) into permanent homes on a timely basis. This report compares these measures for adolescents who are from the community district of this report in the borough of this report with the same measures for all children from the borough and the entire city. This performance report focuses on three perspectives: 1) the status of adolescents placed in annual admissions cohorts;¹ 2) placements of adolescents; and 3) adolescents in care at a given point in time.

The first perspective, shown on this page and the second page of this report, looks at the status of adolescents placed in the most recent annual admissions cohorts. The best indicators of success at achieving increased permanency from this perspective are the percent discharged to reunification² and the percent discharged to adoption. This page provides information on adolescents admitted to their first spell³ in foster care and the next page considers adolescents admitted to their second or greater spells. The number of adolescents placed in foster care and their age group at time of admission is provided. The remaining indicators consider the status of these cohorts as of a set point in time following the end of each admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also shown. For those still in care, the most current Permanency Planning Goal⁴ (PPG) is provided. For adolescents that have been discharged, information on discharge destination and time in care are provided.

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The second perspective presents the number of most recent placements of adolescents who were 12-13, 14-15 and 16-17 years old when they entered foster care. It also provides the level of care of these placements and the percent that were second or greater spell. The best indicator of success from this perspective is the percent of adolescents placed in family settings (i.e. kinship and foster boarding homes).

¹ Annual adolescent admission cohort refers to the group of adolescents, 12 years and older at the time of placement, placed in foster care in a given year.

² Reunification is defined as discharge to parent, relative or primary resource person.

³ A spell is the time between foster care entry and discharge. A child's 1st spell is her/his 1st episode in foster care. Subsequent episodes in foster care are 2nd or greater spells.

⁴ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

Outcome 6:

Increase Permanency For Adolescents, Community District Comparative

This outcome provides measures of the foster care system's success at moving adolescents (children 12 years and older) into permanent homes on a timely basis. This report compares these measures for adolescents who are from the community district of this report in the borough of this report with the same measures for all children from the borough and the entire city. This performance report focuses on three perspectives: 1) the status of adolescents placed in annual admissions cohorts;¹ 2) placements of adolescents; and 3) adolescents in care at a given point in time.

The first perspective, shown on this page and the second page of this report, looks at the status of adolescents placed in the most recent annual admissions cohorts. The best indicators of success at achieving increased permanency from this perspective are the percent discharged to reunification² and the percent discharged to adoption. This page provides information on adolescents admitted to their first spell³ in foster care and the next page considers adolescents admitted to their second or greater spells. The number of adolescents placed in foster care and their age group at time of admission is provided. The remaining indicators consider the status of these cohorts as of a set point in time following the end of each admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also shown. For those still in care, the most current Permanency Planning Goal⁴ (PPG) is provided. For adolescents that have been discharged, information on discharge destination and time in care are provided.

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The second perspective presents the number of most recent placements of adolescents who were 12-13, 14-15 and 16-17 years old when they entered foster care. It also provides the level of care of these placements and the percent that were second or greater spell. The best indicator of success from this perspective is the percent of adolescents placed in family settings (i.e. kinship and foster boarding homes).

* "CYTD" refers to running totals for the year 2009, through the end of MAR

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The third perspective presents the number of adolescents, 12-13, 14-15, 16-17 and greater than 17 years old in care at a specified point in time. This point in time corresponds with the last day of the month listed. The most recent Permanency Planning Goals (PPGs) for the adolescents in care are also provided in this section. The critical indicator from this perspective is the percent in care with adoption and reunification PPGs.

¹ Annual adolescent admission cohort refers to the group of adolescents, 12 years and older at the time of placement, placed in foster care in a given year.

² Reunification is defined as discharge to parent, relative or primary resource person.

³ A spell is the time between foster care entry and discharge. A child's 1st spell is her/his 1st episode in foster care. Subsequent episodes in foster care are 2nd or greater spells.

⁴ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

Outcome 6:

Increase Permanency For Adolescents, Community District Comparative

This outcome provides measures of the foster care system's success at moving adolescents (children 12 years and older) into permanent homes on a timely basis. This report compares these measures for adolescents who are from the community district of this report in the borough of this report with the same measures for all children from the borough and the entire city. This performance report focuses on three perspectives: 1) the status of adolescents placed in annual admissions cohorts;¹ 2) placements of adolescents; and 3) adolescents in care at a given point in time.

The first perspective, shown on this page and the second page of this report, looks at the status of adolescents placed in the most recent annual admissions cohorts. The best indicators of success at achieving increased permanency from this perspective are the percent discharged to reunification² and the percent discharged to adoption. This page provides information on adolescents admitted to their first spell³ in foster care and the next page considers adolescents admitted to their second or greater spells. The number of adolescents placed in foster care and their age group at time of admission is provided. The remaining indicators consider the status of these cohorts as of a set point in time following the end of each admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also shown. For those still in care, the most current Permanency Planning Goal⁴ (PPG) is provided. For adolescents that have been discharged, information on discharge destination and time in care are provided.

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The second perspective presents the number of most recent placements of adolescents who were 12-13, 14-15 and 16-17 years old when they entered foster care. It also provides the level of care of these placements and the percent that were second or greater spell. The best indicator of success from this perspective is the percent of adolescents placed in family settings (i.e. kinship and foster boarding homes).

* "CYTD" refers to running totals for the year 2009, through the end of MAR

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The third perspective presents the number of adolescents, 12-13, 14-15, 16-17 and greater than 17 years old in care at a specified point in time. This point in time corresponds with the last day of the month listed. The most recent Permanency Planning Goals (PPGs) for the adolescents in care are also provided in this section. The critical indicator from this perspective is the percent in care with adoption and reunification PPGs.

¹ Annual adolescent admission cohort refers to the group of adolescents, 12 years and older at the time of placement, placed in foster care in a given year.

² Reunification is defined as discharge to parent, relative or primary resource person.

³ A spell is the time between foster care entry and discharge. A child's 1st spell is her/his 1st episode in foster care. Subsequent episodes in foster care are 2nd or greater spells.

⁴ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

Outcome 6:

Increase Permanency For Adolescents, Community District Comparative

This outcome provides measures of the foster care system's success at moving adolescents (children 12 years and older) into permanent homes on a timely basis. This report compares these measures for adolescents who are from the community district of this report in the borough of this report with the same measures for all children from the borough and the entire city. This performance report focuses on three perspectives: 1) the status of adolescents placed in annual admissions cohorts;¹ 2) placements of adolescents; and 3) adolescents in care at a given point in time.

The first perspective, shown on this page and the second page of this report, looks at the status of adolescents placed in the most recent annual admissions cohorts. The best indicators of success at achieving increased permanency from this perspective are the percent discharged to reunification² and the percent discharged to adoption. This page provides information on adolescents admitted to their first spell³ in foster care and the next page considers adolescents admitted to their second or greater spells. The number of adolescents placed in foster care and their age group at time of admission is provided. The remaining indicators consider the status of these cohorts as of a set point in time following the end of each admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also shown. For those still in care, the most current Permanency Planning Goal⁴ (PPG) is provided. For adolescents that have been discharged, information on discharge destination and time in care are provided.

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The second perspective presents the number of most recent placements of adolescents who were 12-13, 14-15 and 16-17 years old when they entered foster care. It also provides the level of care of these placements and the percent that were second or greater spell. The best indicator of success from this perspective is the percent of adolescents placed in family settings (i.e. kinship and foster boarding homes).

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The third perspective presents the number of adolescents, 12-13, 14-15, 16-17 and greater than 17 years old in care at a specified point in time. This point in time corresponds with the last day of the month listed. The most recent Permanency Planning Goals (PPGs) for the adolescents in care are also provided in this section. The critical indicator from this perspective is the percent in care with adoption and reunification PPGs.

¹ Annual adolescent admission cohort refers to the group of adolescents, 12 years and older at the time of placement, placed in foster care in a given year.

² Reunification is defined as discharge to parent, relative or primary resource person.

³ A spell is the time between foster care entry and discharge. A child's 1st spell is her/his 1st episode in foster care. Subsequent episodes in foster care are 2nd or greater spells.

⁴ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

Outcome 6:

Increase Permanency For Adolescents, Community District Comparative

This outcome provides measures of the foster care system's success at moving adolescents (children 12 years and older) into permanent homes on a timely basis. This report compares these measures for adolescents who are from the community district of this report in the borough of this report with the same measures for all children from the borough and the entire city. This performance report focuses on three perspectives: 1) the status of adolescents placed in annual admissions cohorts;¹ 2) placements of adolescents; and 3) adolescents in care at a given point in time.

The first perspective, shown on this page and the second page of this report, looks at the status of adolescents placed in the most recent annual admissions cohorts. The best indicators of success at achieving increased permanency from this perspective are the percent discharged to reunification² and the percent discharged to adoption. This page provides information on adolescents admitted to their first spell³ in foster care and the next page considers adolescents admitted to their second or greater spells. The number of adolescents placed in foster care and their age group at time of admission is provided. The remaining indicators consider the status of these cohorts as of a set point in time following the end of each admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also shown. For those still in care, the most current Permanency Planning Goal⁴ (PPG) is provided. For adolescents that have been discharged, information on discharge destination and time in care are provided.

¹ Annual adolescent admission cohort refers to the group of adolescents, 12 years and older at the time of placement, placed in foster care in a given year.

² Reunification is defined as discharge to parent, relative or primary resource person.

³ A spell is the time between foster care entry and discharge. A child's 1st spell is her/his 1st episode in foster care. Subsequent episodes in foster care are 2nd or greater spells.

⁴ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

Outcome 6:

Increase Permanency For Adolescents, Community District Comparative

This outcome provides measures of the foster care system's success at moving adolescents (children 12 years and older) into permanent homes on a timely basis. This report compares these measures for adolescents who are from the community district of this report in the borough of this report with the same measures for all children from the borough and the entire city. This performance report focuses on three perspectives: 1) the status of adolescents placed in annual admissions cohorts;¹ 2) placements of adolescents; and 3) adolescents in care at a given point in time.

The first perspective, shown on this page and the second page of this report, looks at the status of adolescents placed in the most recent annual admissions cohorts. The best indicators of success at achieving increased permanency from this perspective are the percent discharged to reunification² and the percent discharged to adoption. This page provides information on adolescents admitted to their first spell³ in foster care and the next page considers adolescents admitted to their second or greater spells. The number of adolescents placed in foster care and their age group at time of admission is provided. The remaining indicators consider the status of these cohorts as of a set point in time following the end of each admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also shown. For those still in care, the most current Permanency Planning Goal⁴ (PPG) is provided. For adolescents that have been discharged, information on discharge destination and time in care are provided.

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The second perspective presents the number of most recent placements of adolescents who were 12-13, 14-15 and 16-17 years old when they entered foster care. It also provides the level of care of these placements and the percent that were second or greater spell. The best indicator of success from this perspective is the percent of adolescents placed in family settings (i.e. kinship and foster boarding homes).

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The third perspective presents the number of adolescents, 12-13, 14-15, 16-17 and greater than 17 years old in care at a specified point in time. This point in time corresponds with the last day of the month listed. The most recent Permanency Planning Goals (PPGs) for the adolescents in care are also provided in this section. The critical indicator from this perspective is the percent in care with adoption and reunification PPGs.

¹ Annual adolescent admission cohort refers to the group of adolescents, 12 years and older at the time of placement, placed in foster care in a given year.

² Reunification is defined as discharge to parent, relative or primary resource person.

³ A spell is the time between foster care entry and discharge. A child's 1st spell is her/his 1st episode in foster care. Subsequent episodes in foster care are 2nd or greater spells.

⁴ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

Outcome 6:

Increase Permanency For Adolescents, Community District Comparative

This outcome provides measures of the foster care system's success at moving adolescents (children 12 years and older) into permanent homes on a timely basis. This report compares these measures for adolescents who are from the community district of this report in the borough of this report with the same measures for all children from the borough and the entire city. This performance report focuses on three perspectives: 1) the status of adolescents placed in annual admissions cohorts;¹ 2) placements of adolescents; and 3) adolescents in care at a given point in time.

The first perspective, shown on this page and the second page of this report, looks at the status of adolescents placed in the most recent annual admissions cohorts. The best indicators of success at achieving increased permanency from this perspective are the percent discharged to reunification² and the percent discharged to adoption. This page provides information on adolescents admitted to their first spell³ in foster care and the next page considers adolescents admitted to their second or greater spells. The number of adolescents placed in foster care and their age group at time of admission is provided. The remaining indicators consider the status of these cohorts as of a set point in time following the end of each admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also shown. For those still in care, the most current Permanency Planning Goal⁴ (PPG) is provided. For adolescents that have been discharged, information on discharge destination and time in care are provided.

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The second perspective presents the number of most recent placements of adolescents who were 12-13, 14-15 and 16-17 years old when they entered foster care. It also provides the level of care of these placements and the percent that were second or greater spell. The best indicator of success from this perspective is the percent of adolescents placed in family settings (i.e. kinship and foster boarding homes).

* "CYTD" refers to running totals for the year 2009, through the end of MAR

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The third perspective presents the number of adolescents, 12-13, 14-15, 16-17 and greater than 17 years old in care at a specified point in time. This point in time corresponds with the last day of the month listed. The most recent Permanency Planning Goals (PPGs) for the adolescents in care are also provided in this section. The critical indicator from this perspective is the percent in care with adoption and reunification PPGs.

¹ Annual adolescent admission cohort refers to the group of adolescents, 12 years and older at the time of placement, placed in foster care in a given year.

² Reunification is defined as discharge to parent, relative or primary resource person.

³ A spell is the time between foster care entry and discharge. A child's 1st spell is her/his 1st episode in foster care. Subsequent episodes in foster care are 2nd or greater spells.

⁴ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

Outcome 6:

Increase Permanency For Adolescents, Community District Comparative

This outcome provides measures of the foster care system's success at moving adolescents (children 12 years and older) into permanent homes on a timely basis. This report compares these measures for adolescents who are from the community district of this report in the borough of this report with the same measures for all children from the borough and the entire city. This performance report focuses on three perspectives: 1) the status of adolescents placed in annual admissions cohorts;¹ 2) placements of adolescents; and 3) adolescents in care at a given point in time.

The first perspective, shown on this page and the second page of this report, looks at the status of adolescents placed in the most recent annual admissions cohorts. The best indicators of success at achieving increased permanency from this perspective are the percent discharged to reunification² and the percent discharged to adoption. This page provides information on adolescents admitted to their first spell³ in foster care and the next page considers adolescents admitted to their second or greater spells. The number of adolescents placed in foster care and their age group at time of admission is provided. The remaining indicators consider the status of these cohorts as of a set point in time following the end of each admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also shown. For those still in care, the most current Permanency Planning Goal⁴ (PPG) is provided. For adolescents that have been discharged, information on discharge destination and time in care are provided.

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The second perspective presents the number of most recent placements of adolescents who were 12-13, 14-15 and 16-17 years old when they entered foster care. It also provides the level of care of these placements and the percent that were second or greater spell. The best indicator of success from this perspective is the percent of adolescents placed in family settings (i.e. kinship and foster boarding homes).

* "CYTD" refers to running totals for the year 2009, through the end of MAR

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The third perspective presents the number of adolescents, 12-13, 14-15, 16-17 and greater than 17 years old in care at a specified point in time. This point in time corresponds with the last day of the month listed. The most recent Permanency Planning Goals (PPGs) for the adolescents in care are also provided in this section. The critical indicator from this perspective is the percent in care with adoption and reunification PPGs.

¹ Annual adolescent admission cohort refers to the group of adolescents, 12 years and older at the time of placement, placed in foster care in a given year.

² Reunification is defined as discharge to parent, relative or primary resource person.

³ A spell is the time between foster care entry and discharge. A child's 1st spell is her/his 1st episode in foster care. Subsequent episodes in foster care are 2nd or greater spells.

⁴ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

Outcome 6:

Increase Permanency For Adolescents, Community District Comparative

This outcome provides measures of the foster care system's success at moving adolescents (children 12 years and older) into permanent homes on a timely basis. This report compares these measures for adolescents who are from the community district of this report in the borough of this report with the same measures for all children from the borough and the entire city. This performance report focuses on three perspectives: 1) the status of adolescents placed in annual admissions cohorts;¹ 2) placements of adolescents; and 3) adolescents in care at a given point in time.

The first perspective, shown on this page and the second page of this report, looks at the status of adolescents placed in the most recent annual admissions cohorts. The best indicators of success at achieving increased permanency from this perspective are the percent discharged to reunification² and the percent discharged to adoption. This page provides information on adolescents admitted to their first spell³ in foster care and the next page considers adolescents admitted to their second or greater spells. The number of adolescents placed in foster care and their age group at time of admission is provided. The remaining indicators consider the status of these cohorts as of a set point in time following the end of each admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also shown. For those still in care, the most current Permanency Planning Goal⁴ (PPG) is provided. For adolescents that have been discharged, information on discharge destination and time in care are provided.

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The second perspective presents the number of most recent placements of adolescents who were 12-13, 14-15 and 16-17 years old when they entered foster care. It also provides the level of care of these placements and the percent that were second or greater spell. The best indicator of success from this perspective is the percent of adolescents placed in family settings (i.e. kinship and foster boarding homes).

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The third perspective presents the number of adolescents, 12-13, 14-15, 16-17 and greater than 17 years old in care at a specified point in time. This point in time corresponds with the last day of the month listed. The most recent Permanency Planning Goals (PPGs) for the adolescents in care are also provided in this section. The critical indicator from this perspective is the percent in care with adoption and reunification PPGs.

¹ Annual adolescent admission cohort refers to the group of adolescents, 12 years and older at the time of placement, placed in foster care in a given year.

² Reunification is defined as discharge to parent, relative or primary resource person.

³ A spell is the time between foster care entry and discharge. A child's 1st spell is her/his 1st episode in foster care. Subsequent episodes in foster care are 2nd or greater spells.

⁴ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

Outcome 6:

Increase Permanency For Adolescents, Community District Comparative

This outcome provides measures of the foster care system's success at moving adolescents (children 12 years and older) into permanent homes on a timely basis. This report compares these measures for adolescents who are from the community district of this report in the borough of this report with the same measures for all children from the borough and the entire city. This performance report focuses on three perspectives: 1) the status of adolescents placed in annual admissions cohorts;¹ 2) placements of adolescents; and 3) adolescents in care at a given point in time.

The first perspective, shown on this page and the second page of this report, looks at the status of adolescents placed in the most recent annual admissions cohorts. The best indicators of success at achieving increased permanency from this perspective are the percent discharged to reunification² and the percent discharged to adoption. This page provides information on adolescents admitted to their first spell³ in foster care and the next page considers adolescents admitted to their second or greater spells. The number of adolescents placed in foster care and their age group at time of admission is provided. The remaining indicators consider the status of these cohorts as of a set point in time following the end of each admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also shown. For those still in care, the most current Permanency Planning Goal⁴ (PPG) is provided. For adolescents that have been discharged, information on discharge destination and time in care are provided.

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The second perspective presents the number of most recent placements of adolescents who were 12-13, 14-15 and 16-17 years old when they entered foster care. It also provides the level of care of these placements and the percent that were second or greater spell. The best indicator of success from this perspective is the percent of adolescents placed in family settings (i.e. kinship and foster boarding homes).

¹ Annual adolescent admission cohort refers to the group of adolescents, 12 years and older at the time of placement, placed in foster care in a given year.

² Reunification is defined as discharge to parent, relative or primary resource person.

³ A spell is the time between foster care entry and discharge. A child's 1st spell is her/his 1st episode in foster care. Subsequent episodes in foster care are 2nd or greater spells.

⁴ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

Outcome 6:

Increase Permanency For Adolescents, Community District Comparative

This outcome provides measures of the foster care system's success at moving adolescents (children 12 years and older) into permanent homes on a timely basis. This report compares these measures for adolescents who are from the community district of this report in the borough of this report with the same measures for all children from the borough and the entire city. This performance report focuses on three perspectives: 1) the status of adolescents placed in annual admissions cohorts;¹ 2) placements of adolescents; and 3) adolescents in care at a given point in time.

The first perspective, shown on this page and the second page of this report, looks at the status of adolescents placed in the most recent annual admissions cohorts. The best indicators of success at achieving increased permanency from this perspective are the percent discharged to reunification² and the percent discharged to adoption. This page provides information on adolescents admitted to their first spell³ in foster care and the next page considers adolescents admitted to their second or greater spells. The number of adolescents placed in foster care and their age group at time of admission is provided. The remaining indicators consider the status of these cohorts as of a set point in time following the end of each admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also shown. For those still in care, the most current Permanency Planning Goal⁴ (PPG) is provided. For adolescents that have been discharged, information on discharge destination and time in care are provided.

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The second perspective presents the number of most recent placements of adolescents who were 12-13, 14-15 and 16-17 years old when they entered foster care. It also provides the level of care of these placements and the percent that were second or greater spell. The best indicator of success from this perspective is the percent of adolescents placed in family settings (i.e. kinship and foster boarding homes).

* "CYTD" refers to running totals for the year 2009, through the end of MAR

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The third perspective presents the number of adolescents, 12-13, 14-15, 16-17 and greater than 17 years old in care at a specified point in time. This point in time corresponds with the last day of the month listed. The most recent Permanency Planning Goals (PPGs) for the adolescents in care are also provided in this section. The critical indicator from this perspective is the percent in care with adoption and reunification PPGs.

¹ Annual adolescent admission cohort refers to the group of adolescents, 12 years and older at the time of placement, placed in foster care in a given year.

² Reunification is defined as discharge to parent, relative or primary resource person.

³ A spell is the time between foster care entry and discharge. A child's 1st spell is her/his 1st episode in foster care. Subsequent episodes in foster care are 2nd or greater spells.

⁴ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

Outcome 6:

Increase Permanency For Adolescents, Community District Comparative

This outcome provides measures of the foster care system's success at moving adolescents (children 12 years and older) into permanent homes on a timely basis. This report compares these measures for adolescents who are from the community district of this report in the borough of this report with the same measures for all children from the borough and the entire city. This performance report focuses on three perspectives: 1) the status of adolescents placed in annual admissions cohorts;¹ 2) placements of adolescents; and 3) adolescents in care at a given point in time.

The first perspective, shown on this page and the second page of this report, looks at the status of adolescents placed in the most recent annual admissions cohorts. The best indicators of success at achieving increased permanency from this perspective are the percent discharged to reunification² and the percent discharged to adoption. This page provides information on adolescents admitted to their first spell³ in foster care and the next page considers adolescents admitted to their second or greater spells. The number of adolescents placed in foster care and their age group at time of admission is provided. The remaining indicators consider the status of these cohorts as of a set point in time following the end of each admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also shown. For those still in care, the most current Permanency Planning Goal⁴ (PPG) is provided. For adolescents that have been discharged, information on discharge destination and time in care are provided.

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The second perspective presents the number of most recent placements of adolescents who were 12-13, 14-15 and 16-17 years old when they entered foster care. It also provides the level of care of these placements and the percent that were second or greater spell. The best indicator of success from this perspective is the percent of adolescents placed in family settings (i.e. kinship and foster boarding homes).

* "CYTD" refers to running totals for the year 2009, through the end of MAR

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The third perspective presents the number of adolescents, 12-13, 14-15, 16-17 and greater than 17 years old in care at a specified point in time. This point in time corresponds with the last day of the month listed. The most recent Permanency Planning Goals (PPGs) for the adolescents in care are also provided in this section. The critical indicator from this perspective is the percent in care with adoption and reunification PPGs.

¹ Annual adolescent admission cohort refers to the group of adolescents, 12 years and older at the time of placement, placed in foster care in a given year.

² Reunification is defined as discharge to parent, relative or primary resource person.

³ A spell is the time between foster care entry and discharge. A child's 1st spell is her/his 1st episode in foster care. Subsequent episodes in foster care are 2nd or greater spells.

⁴ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

Outcome 6:

Increase Permanency For Adolescents, Community District Comparative

This outcome provides measures of the foster care system's success at moving adolescents (children 12 years and older) into permanent homes on a timely basis. This report compares these measures for adolescents who are from the community district of this report in the borough of this report with the same measures for all children from the borough and the entire city. This performance report focuses on three perspectives: 1) the status of adolescents placed in annual admissions cohorts;¹ 2) placements of adolescents; and 3) adolescents in care at a given point in time.

The first perspective, shown on this page and the second page of this report, looks at the status of adolescents placed in the most recent annual admissions cohorts. The best indicators of success at achieving increased permanency from this perspective are the percent discharged to reunification² and the percent discharged to adoption. This page provides information on adolescents admitted to their first spell³ in foster care and the next page considers adolescents admitted to their second or greater spells. The number of adolescents placed in foster care and their age group at time of admission is provided. The remaining indicators consider the status of these cohorts as of a set point in time following the end of each admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also shown. For those still in care, the most current Permanency Planning Goal⁴ (PPG) is provided. For adolescents that have been discharged, information on discharge destination and time in care are provided.

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The third perspective presents the number of adolescents, 12-13, 14-15, 16-17 and greater than 17 years old in care at a specified point in time. This point in time corresponds with the last day of the month listed. The most recent Permanency Planning Goals (PPGs) for the adolescents in care are also provided in this section. The critical indicator from this perspective is the percent in care with adoption and reunification PPGs.

¹ Annual adolescent admission cohort refers to the group of adolescents, 12 years and older at the time of placement, placed in foster care in a given year.

² Reunification is defined as discharge to parent, relative or primary resource person.

³ A spell is the time between foster care entry and discharge. A child's 1st spell is her/his 1st episode in foster care. Subsequent episodes in foster care are 2nd or greater spells.

⁴ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

Outcome 6:

Increase Permanency For Adolescents, Community District Comparative

This outcome provides measures of the foster care system's success at moving adolescents (children 12 years and older) into permanent homes on a timely basis. This report compares these measures for adolescents who are from the community district of this report in the borough of this report with the same measures for all children from the borough and the entire city. This performance report focuses on three perspectives: 1) the status of adolescents placed in annual admissions cohorts;¹ 2) placements of adolescents; and 3) adolescents in care at a given point in time.

The first perspective, shown on this page and the second page of this report, looks at the status of adolescents placed in the most recent annual admissions cohorts. The best indicators of success at achieving increased permanency from this perspective are the percent discharged to reunification² and the percent discharged to adoption. This page provides information on adolescents admitted to their first spell³ in foster care and the next page considers adolescents admitted to their second or greater spells. The number of adolescents placed in foster care and their age group at time of admission is provided. The remaining indicators consider the status of these cohorts as of a set point in time following the end of each admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also shown. For those still in care, the most current Permanency Planning Goal⁴ (PPG) is provided. For adolescents that have been discharged, information on discharge destination and time in care are provided.

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The second perspective presents the number of most recent placements of adolescents who were 12-13, 14-15 and 16-17 years old when they entered foster care. It also provides the level of care of these placements and the percent that were second or greater spell. The best indicator of success from this perspective is the percent of adolescents placed in family settings (i.e. kinship and foster boarding homes).

¹ Annual adolescent admission cohort refers to the group of adolescents, 12 years and older at the time of placement, placed in foster care in a given year.

² Reunification is defined as discharge to parent, relative or primary resource person.

³ A spell is the time between foster care entry and discharge. A child's 1st spell is her/his 1st episode in foster care. Subsequent episodes in foster care are 2nd or greater spells.

⁴ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.

Outcome 6:

Increase Permanency For Adolescents, Community District Comparative

This outcome provides measures of the foster care system's success at moving adolescents (children 12 years and older) into permanent homes on a timely basis. This report compares these measures for adolescents who are from the community district of this report in the borough of this report with the same measures for all children from the borough and the entire city. This performance report focuses on three perspectives: 1) the status of adolescents placed in annual admissions cohorts;¹ 2) placements of adolescents; and 3) adolescents in care at a given point in time.

The first perspective, shown on this page and the second page of this report, looks at the status of adolescents placed in the most recent annual admissions cohorts. The best indicators of success at achieving increased permanency from this perspective are the percent discharged to reunification² and the percent discharged to adoption. This page provides information on adolescents admitted to their first spell³ in foster care and the next page considers adolescents admitted to their second or greater spells. The number of adolescents placed in foster care and their age group at time of admission is provided. The remaining indicators consider the status of these cohorts as of a set point in time following the end of each admission year. The percent change from the previous year's cohort, as measured at the same point in time following the end of that admission year is also shown. For those still in care, the most current Permanency Planning Goal⁴ (PPG) is provided. For adolescents that have been discharged, information on discharge destination and time in care are provided.

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The second perspective presents the number of most recent placements of adolescents who were 12-13, 14-15 and 16-17 years old when they entered foster care. It also provides the level of care of these placements and the percent that were second or greater spell. The best indicator of success from this perspective is the percent of adolescents placed in family settings (i.e. kinship and foster boarding homes).

* "CYTD" refers to running totals for the year 2009, through the end of MAR

Outcome 6: Increase Permanency For Adolescents, Community District Comparative (continued)

The third perspective presents the number of adolescents, 12-13, 14-15, 16-17 and greater than 17 years old in care at a specified point in time. This point in time corresponds with the last day of the month listed. The most recent Permanency Planning Goals (PPGs) for the adolescents in care are also provided in this section. The critical indicator from this perspective is the percent in care with adoption and reunification PPGs.

¹ Annual adolescent admission cohort refers to the group of adolescents, 12 years and older at the time of placement, placed in foster care in a given year.

² Reunification is defined as discharge to parent, relative or primary resource person.

³ A spell is the time between foster care entry and discharge. A child's 1st spell is her/his 1st episode in foster care. Subsequent episodes in foster care are 2nd or greater spells.

⁴ Permanency Planning Goal (PPG) refers to a goal that must be specified for every child in foster care at all times.
