DEP will provide a brief presentation at 6:30pm.

When there are heavy rains and the sewer system has reached its capacity, a diluted mixture of rain water and sewage, also known as combined sewage, may overflow into local waterways as a combined sewer overflow (CSO). The New York City Department of Environmental Protection (DEP) is developing CSO Long Term Control Plans (LTCP) to identify and evaluate alternatives to reduce the impact of CSOs in Coney Island Creek.

Join us as we seek your input in developing this plan.
