

NYCityMap of Green Infrastructure

Did you know that there is an [interactive map](#) of all green infrastructures in New York City?

In 2000, a geographic information systems (GIS) unit was established within the NYC Department of Information Technology and Telecommunications (DOITT) to host and maintain a new city basemap, called NYCityMap. [NYCityMap](#) provides a wealth of information on schools, daycare centers, senior centers, libraries, hospitals, and green infrastructure. Click [here](#) for an interactive map of NYC's green infrastructure.

This is a working map that allows users to submit new green infrastructure location points. Can you and your students find new points to add to the NYC DEP Green Infrastructure Map?
