

Water Use Math Quiz

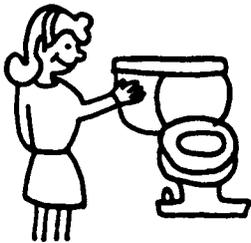

Activity: Using the information from your weekly water use report card on the other side, figure out how much water you use on average every day.

Multiply the number of showers you took ___ by the number of minutes per shower ___ by the amount of water your showerhead uses per minute (5.5 or 2.5 gallons) ___ = ___ gallons. Multiply the number of baths you took ___ by 36 gallons = ___ gallons. Add your shower and bath totals = ___ gallons. Divide by 7 and put your answer in the box at right.

Average daily bath/shower water use:

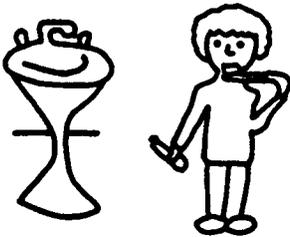

gallons

Multiply the number of times you flushed the toilet ___ by the amount of water your toilet uses with each flush (5 or 1.6 gallons) ___ = ___ gallons. Divide by 7 and put your answer in the box.

Average daily toilet water use:

gallons

Multiply the number of times you brushed your teeth ___ by the amount of water you used with each brushing (6 or .5 gallons) ___ = ___ gallons. Divide by 7 and put your answer in the box.

Average daily teeth-brushing water use:

gallons

Multiply the number of times you washed your hands or face ___ by the amount of water you used with each washing (3 or 2 gallons) ___ = ___ gallons. Divide by 7 and put your answer in the box.

Average daily hand and face-washing water use:

gallons

Multiply the number of times you did the dishes ___ by the amount of water you used (20 or 5 gallons) ___ = ___ gallons. Divide by 7 and put your answer in the box.

Average daily dishwashing water use:

gallons

Add the average daily totals to find out how much water you use every day at home.

What's your average daily water use? _____ gallons a day

Is it more or less than the New York City average of 125 gallons a day? _____

Is it more or less than the Canadian average of 50-60 gallons a day? _____
