eFiling System Expanded to Construction Job Applications

Building upon our success with our eFiling system for electrical permit filings, we're now expanding this service to construction job applications. Effective February 19, 2008 applicants will use our electronic interview-style process to prepare PW-1 Forms online for initial and subsequent filings.

New eFiling Benefits Include:

- **Web-based Interface:** Prepare an application anywhere, on any computer system with an Internet connection and compatible web browser. No new software is required!
- **Always Up-to-Date:** This system stays consistent with any future PW-1, Schedule A or B form updates. The eFiling will also use a real-time connection to the Building Information System (BIS) to retrieve and verify information.
- **Application Error-Checking and Validation:** eFiling provides automatic error checking and useful information to assist applicants.
- **Enhanced Features:** This system saves frequently-typed information and automatically enters information from BIS when possible to save time. A user-friendly navigation bar makes it easy to complete applications in any order.
- **21st Century Technology:** This system builds a foundation for future technological enhancements as we work to make it easier to do business with us.
