

2011-12 Pediatric Follow-up Survey Response Rates

Preliminary Results as of 08/01/2012

Note: Enrollees under 18 years of age as of 9/1/2011 were sent children surveys and those who aged into adulthood were sent adult surveys. Children and their parents were sent separate surveys because only parents could provide a child's medical history. The response rate is based on surveys returned by both.
