New York City’s commitment to improve street safety in every neighborhood and in every borough

NYCDOT Action: develop street designs and configurations that improve safety
Project Background

- Adams St is major downtown Brooklyn street to and from the Brooklyn Bridge
  - Bike lanes
  - Heavy pedestrian activity
  - High ridership bus routes on the service roads
- Vision Zero Priority Area
  - 7 bus crashes
  - 5 other severe injuries between Johnson St and Fulton Mall
- MTA Request to look at bus merge
Existing Conditions - Buses

- Buses have difficulty merging from service road across main roadway in both fast and slow moving traffic conditions
- **Southbound on service road:**
  - B25, B38 (LTD), B41 (LTD), B52, B103
- **Southbound left at Fulton Mall:**
  - B25, B38 (LTD), B52
- **Southbound left at Livingston St:**
  - B41 (LTD), B103
Buses merge across the crosswalk. When two buses line up to merge, they often block the crosswalk.
Both main roadway and service road get green at same time, requiring buses to weave through traffic to merge.
Service road is given 10 second queue jump signal (leading green), allowing buses to merge while main roadway traffic is held.
Project Benefits

1. Safer operations for B25, B38 (LTD), B52, B41 (LTD), and B103 (LTD) buses.
2. Buses less likely to block crosswalk and conflict with pedestrians
3. Safer merge for all southbound vehicles transitioning from the service road to the main roadway approaching Fulton Mall/Joralemon St.
