Safety is the first priority for any transportation system. Our streets must be safe for all New Yorkers, of all ages. We will design, build, sign and signal roadways to safely move motorists, cyclists, transit passengers and pedestrians and ensure the safety of 65,000 daily passengers riding our ferries between Staten Island and Manhattan. And DOT closely monitors the conditions of the nearly 800 bridges under our jurisdiction.

Over the last ten years, DOT has helped reduce annual NYC traffic fatalities by 55% and serious injuries by 17.4%. Mayor Bloomberg is committed to improving traffic safety as a fundamental public health issue. Our transportation system is the safest of any large city in the country, but even one fatality is too many. We will reduce by half the number of traffic deaths by 2030. In order to do this, DOT must collect and analyze more data about the causes of traffic deaths and injuries and where they are happening. We will use this information to design better streets. Simultaneously, we need to expand our enforcement capabilities, to prevent dangerous speeding and red light-running. Finally, while we have some of the most comprehensive bridge and ferry safety procedures in the nation, investing further resources will ensure that we are prepared for any eventuality.
NYCDOT aims to build on recent gains in traffic safety. Although New York has the safest streets of any city in the United States, we are still behind a number of global competitors. We will use a data-driven combination

NYCDOT HAS WORKED TO IMPROVE SAFETY ON QUEENS BOULEVARD, BUT PEDESTRIAN FATALITIES HAVE DECLINED BY ONLY 2% SINCE OUR EFFORTS BEGAN.

NYCDOT has actively calmed traffic on Queens Boulevard for over a decade. In 1999 we accelerated our efforts. Pedestrian accidents peaked in 1995 at 154, and continued to decrease over the next six years to an all-time low of 63 pedestrian accidents in 2002. This reduction can be directly attributed to the aggressive safety measures DOT has installed.

NYCDOT is dedicated to improving traffic safety for all New Yorkers. We continually study and implement the best street designs and signaling strategies to maximize public safety. DOT introduced the Safe Routes to Schools initiative to focus safety improvements at city schools with the highest accident rates. The effort first examined accident histories around the city’s 1,471 elementary and middle schools and established a list of 1,958 priority schools to be considered for safety improvements. DOT conducted a thorough study that included outreach to principals, parents, and other interested parties, collection and analysis of data on traffic conditions and student travel patterns and development, and evaluation and approval of comprehensive short- and long-term pedestrian safety improvement measures. As of Spring 2008; 100% of short-term improvements, such as school crosswalks, new traffic signals and signal timing, and new speed reducers are complete at this first group of 135 schools.

Enhance bridge inspection capabilities

We will increase inspection to proactively maintain our bridges and prevent any unforeseen events.

Enhance construction zone safety

Continued growth and development throughout the city generates large numbers of new construction projects in addition to the hundreds already underway. NYCDOT will do more to protect quality of life and safety around these construction sites.

Implement truck-specific safety measures

Truck traffic is growing along with the economy of New York City, but it also poses significant safety and quality of life concerns for residents. We will do our part to minimize these impacts, while ensuring trucks can deliver the goods our city needs.

Increase safety of DOT employees

We will conduct assessments of our jobs and facilities and develop trainings and procedures to increase safety.

Enhance safety systems for the Staten Island Ferry

DOT has made huge strides in improving safety procedures on the Staten Island Ferry. We continue to ensure that training and sound management practices are extended and institutionalized.

Meet the highest standards of security

Our streets, bridges and ferries are valuable strategic assets. DOT will extend its work with NYPD and federal officials to ensure the safety and security of all of our facilities.

NYCDOT’s Staten Island Ferry has implemented a system for safety management and pollution prevention.

At the core of the management system is rigorous documentation of each safety, pollution prevention policy and practice. Employees are trained using this documentation and can refer to it to ensure that procedures are performed correctly and consistently. All employees are encouraged to play a role in the constant refinement of the safety management system, and those changes are reflected in the documentation. The commitment, competence, attitude, and motivation of all personnel is crucial to the success of the system.

DOT’s Ferry staff use an event tracking system, performance assessments, performance reviews and audits, as well as day-to-day meetings and newsletters to make the Staten Island Ferry the safest ferry system in the nation and to identify and address any minor issues before they become safety hazards.

NYCDOT’s Safe Streets for Seniors program focuses on areas with a high proportion of older New Yorkers. Accident histories investigated by the Department identified 25 ‘senior pedestrian focus areas.’ We will study each area and produce a plan to improve pedestrian safety. New pedestrian signal timing will be installed at all 25 locations, and longer-term capital improvements will be completed at the first five pilot locations by 2009.

100 150 200 250 300 350 400 450 500 550

NYCDOT’s Safe Streets for Seniors effort first examined accident histories with the highest accident rates. The program focuses on areas with a high concentration of older New Yorkers. Accident histories investigated by the Department identified 25 ‘senior pedestrian focus areas.’ We will study each area and produce a plan to improve pedestrian safety. Design Safe Streets
- Implement Safe Routes to Schools plans.
- Launch Safe Streets for Seniors at first 25 locations.
- Make traffic safety measures a major focus of neighborhood transportation studies.
- Work with the NYC Department of Design and Construction to streamline traffic-calming project planning and implementation.
- Analyze and evaluate current signal timing strategies.
- Provide more crossing time for pedestrians in Senior Districts.
- Double the number of Leading Pedestrian Intervals over 2007 levels at intersections by 2014 and add 9 seconds of crossing time to existing LPIs citywide.
- Finalize safety improvements at 42 bus stops under elevated train stations citywide.

Expand safety enforcement programs
- Obtain legislative approval for expansion of red light camera program and introduction of speed-camera enforcement. Deploy cameras as legislation permits.
- Work to provide funding for additional NYPD traffic enforcement staff, traffic enforcement equipment (i.e., new digital speed guns), and truck boots.
- Establish strong, explicit pedestrian safety measures as a condition of DOT construction permits.
- Launch enhanced safety monitoring unit for construction sites with high pedestrian volumes.
- Complete comprehensive study of traffic crashes involving pedestrians.
- Complete comprehensive study of efficacy of a wide range of traffic calming techniques.
- Improve the pace and flow of detailed crash information between NYCDOT, State DOT, State DMV and NYPD for future monitoring and analysis.

Enhance bridge inspection
- Adopt state-of-the-art bridge cable monitoring beginning with Manhattan Bridge.
- Inspect bridge components more frequently.
- Use marketing campaigns to change public behavior
- Expand LARMI campaign to include pedestrian and motorist themes.
- Create additional public safety campaigns targeting specific problems—e.g. speeding.
- Revise and expand Safety City education programs and explore potential partnerships with Department of Education.
- Participate in work zone safety awareness week.

Improve traffic safety data collection and use data to target safety resources
- Complete comprehensive study of traffic crashes involving pedestrians.
- Complete comprehensive study of efficacy of a wide range of traffic calming techniques.
- Improve the pace and flow of detailed crash information between NYCDOT, State DOT, State DMV and NYPD for future monitoring and analysis.

Traffic injuries and fatalities are at an all-time low; but we will not rest on past accomplishments. NYCDOT will use a combination of engineering, enforcement and education to make our streets safer for all.

SAFETY ACTIONS

Improve safety of DOT employees
- Implement enhanced work zone safety measures agency wide.
- Urge the State legislature to criminalize work zone safety violations.
- Work with NYPD to establish a greater police presence at construction sites involving roadway closures.
- Conduct ongoing hazard assessments for DOT job functions and facilities.
- Develop training programs based on these assessments.

Increase truck-related safety measures
- Distribute truck route maps and summary of truck access rules to all NYPD precincts.
- Work with the NYPD to step up truck weight and size enforcement.
- Expand oversight for newly created overweight truck permitting unit.
- Urge the State legislature to mandate requirement for all trucks to install cross over mirrors.
- Complete installation of improved truck route signage.

Continue Staten Island Ferry safety improvements
- Document all safety practices as the foundation of the Ferry Safety Management System.
- Train all employees in these safety practices and ensure trainings are kept up-to-date.
- Encourage employees to suggest changes to procedures as needed to increase safety and effectiveness.
- Monitor progress of program and use results to refine practices.

Design Safe Streets
