

Developing Clinical Sequencing Assays for Genetic Testing

Date: May 2nd
Time: Noon
Location: Building 1
Conference Room 4N

Albert Einstein College of Medicine, Division of Translational Genetics is leading a genome initiative, which focuses on the development of clinical sequencing assays to aid diagnosis and support therapy decision. In efforts to increase knowledge about personalized medicine tools and expand their program, they are enthusiastic in joining forces with their neighboring hospitals.

They will be presenting the initiative along with their *novel* results for a Jacobi Hospital patient affected by breast cancer. This presentation will convey the value and importance of genetic testing, as well as provide the foundation of the importance of collaborative efforts between Einstein and Jacobi.
