Chapter 13: Public Health

Public health involves the activities that society undertakes to create and maintain conditions in which people can be healthy. Many public health concerns are closely related to hazardous materials, water quality, air quality, and noise. The *City Environmental Quality Review (CEQR) Technical Manual* indicates that for most proposed projects, a public health analysis is not necessary. Where no significant unmitigated adverse impact is found in other CEQR analysis areas, no public health analysis is warranted. If, however, an unmitigated significant adverse impact is identified, the lead agency may determine that a public health assessment is warranted for that specific technical area. No unmitigated significant impacts have been identified in any of the technical areas applicable to public health (hazardous materials, water quality, air quality, or noise). As such, the proposed project would not result in significant adverse impacts to public health.
