**NYC VCP Cleanup Plan
Remedial Activities to Begin**

The New York City Office of Environmental Remediation (OER) provides this Fact Sheet pursuant to New York City's Voluntary Cleanup Program (VCP). OER has approved the Remedial Action Work Plan (RAWP) submitted by 500 Waverly Property Owner LLC for the property located at 882 Fulton Street in the Clinton Hill section of Brooklyn, New York and identified as Block 2011 Lot 30. The remedial work in accordance with the approved RAWP will start in January 2015. Information for reviewing the RAWP online is provided in the box to the left.

Site Description

The Site is 11,927 square feet and is currently occupied by a vacant, asphalt paved parking lot. The proposed future use of the Site consists of an eight-story residential building with ground floor retail and cellar parking, storage, and mechanical/utility rooms.

Summary of the Remedy

The specific elements of the proposed remedial action include:

- Preparation of a Community Protection Statement and performance of all required NYC VCP citizen participation activities according to an approved Citizen Participation Plan;
- Performance of a Community Air Monitoring Program for particulates and volatile organic carbon compounds;
- Establishment of Unrestricted Use (Track 1) Soil Cleanup Objectives (SCOs);
- Excavation and removal of soil/fill exceeding Track 1 SCOs. The excavation depth of the new building will be approximately 23 feet below grade for the below grade parking area and approximately 10 feet below grade for the remainder of the Site;
- Collection and analysis of endpoint samples to determine if the remedy meets SCOs;
- Transportation and off-site disposal of all soil/fill material at permitted facilities in accordance with applicable laws and regulations for handling, transport and disposal of contaminated soil;
- Submission of a Remedial Action Report (RAR) that describes the remedial activities and certifies that the remedial requirements have been achieved and lists any changes from this RAWP;

If Track 1 SCOs are not achieved, the following construction elements implemented will constitute Engineering and Institutional controls:

- As part of new development, construction and maintenance of an engineered composite cover consisting of a 12" thick concrete building slab in the cellar parking area, 6" thick concrete building slab in the remainder of the cellar, and an 8" thick at-grade concrete building slab in a setback area at the north side of the Site to prevent human exposure to residual soil/fill remaining under the Site;
- As part of new development, installation of a vapor barrier below the concrete slab and behind the foundation walls of the proposed building; and
- Submission of an approved Site Management Plan (SMP) in the Remedial Action Report (RAR) for long-term management of residual fill, including certification of Engineering and Institutional Controls and reporting at a specified frequency.

Cleanup activities are scheduled to begin in January 2015 and are expected to take 3 months to complete.

Next Steps

After the enrollee completes the remedial work, an RAR will be prepared and submitted to OER. The RAR will describe the cleanup activities and certify that all cleanup requirements were achieved. Once the RAR is approved, OER will issue a Notice of Completion, a City liability release, and a New York City Green Property Certificate. OER will issue a fact sheet announcing the completion of the remedy and identify all engineering and institutional controls (if required) to be used at the Site.

If you have any questions or know of any neighbor that would like to be added to the site contact list, please contact the OER Project Manager listed on the front page of this Fact Sheet. We encourage you to share this Fact Sheet with neighbors and tenants, and/or post it in a prominent area of your building.
