CERTIFICATION

I, Kevin Kleaka, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the site located at 275 4th Avenue, Brooklyn NY. I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Qualified Environmental Professional	Date	Signature
--------------------------------------	------	-----------

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 275 4th Avenue in the Park Slope section of Brooklyn and is identified as Block 964 and Lot 1 on the New York City Tax Map. **Figure 1** shows the Site location. The Site is 10,000-square feet (0.23-acres) and is bounded by an auto repair shop to the north, a residential apartment building to the east, 1st Street to the south, and 4th Avenue to the west. A map of the site boundary is depicted in **Figure 2**. Currently, the Site is a 100-ft x 100-ft lot with one single-story, masonry building with an approximate footprint of 1,850 square feet utilized as a fast food restaurant. The surface area of the Site consists of asphalt parking areas, concrete walkways, and vegetative landscaping. The current zoning designation, as per Department of City Planning NYC zoning maps, is R8A with a C2-4 commercial overlay.

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of mixed-use residential and commercial retail, which is consistent with the existing zoning for the property. An 11-story 60,000 gross square foot mixed-use residential/commercial retail building will be constructed. One sub-grade basement level containing retail and tenant storage, recreational space, gymnasium and building utilities is proposed. The proposed development will include a 6,000 square-foot commercial retail space on the ground floor and approximately 75 dwelling units. The footprint of the proposed 11-story building and sub-grade basement will be 10,000 square-feet, fully encompassing the Site. There will not be any proposed open spaces or landscaped areas at the Site. The depth of the proposed basement and general excavation is approximately 12-feet below existing grade in the footprint of the proposed building (100-ft x 100-ft or 10,000 square-feet), which is estimated to yield approximately 4,444 bank (in-place) cubic yards of excavated soil/fill. The maximum depth of excavation will be to 20 feet below existing grade for the installation on an elevator pit. The groundwater table is located approximately 11-12 feet below grade at the Site; therefore, soil excavation is expected at or slightly below the groundwater table. Demolition

of the existing 1,850 square-foot one story building including removal surfaces, sub-grade utilities and drainage structures is proposed prior to redevelopment activities.

Layout of the proposed site development is presented in **Appendix A**. The current zoning designation, as per Department of City Planning NYC zoning maps, is R8A with a C2-4 commercial overlay as part of the Park Slope Rezoning Resolution. The proposed use is consistent with existing zoning for the property.

Summary of Past Uses of Site and Areas of Concern

The Site was formerly utilized as a gasoline filling and automobile service station. According to NYSDEC Petroleum Bulk Storage records and previous investigation reports, twelve 550-gallon underground gasoline storage tanks (USTs), one 550-gallon fuel oil UST and one 550-gallon waste oil UST were historically operated and maintained on the Site. These USTs were installed on the Site from November 1967 to January 1968 and removed in September 1990. A review of historic Sanborn maps revealed that the former gasoline storage tanks were located on the southwest corner of the Site (at the intersection of 1st Street and 4th Avenue). A summary of the investigated Sanborn maps is described in the table below.

Date	Description	Sources
1906	The Site appears to maintain one 1 single-story residential dwelling, one 2-story residential dwelling, and one single-story junk warehouse and yard.	Sanborn Map
1926	The Site appears to maintain one single-story store, one single-story rags manufacturer/warehouse, and one single-story stable.	Sanborn Map
1951	The Site appears to maintain one single-story filling station with three gasoline tanks, and one single-story stable with a one-story surrounding junk warehouse.	Sanborn Map
1965	The Site appears to maintain one single-story filling station with three gasoline tanks.	Sanborn Map
1979	The Site appears to maintain a larger single-story filling station. Fuel tank information illegible.	Sanborn Map

1980	The Site appears to maintain a single-story filling station. Fuel tank information illegible.	Sanborn Map
1982	The Site appears to maintain a single-story concrete or brick filling station.	Sanborn Map
1985	The Site appears to maintain a single-story concrete or brick filling station.	Sanborn Map
1987	The Site appears to maintain a single-story concrete or brick filling station.	Sanborn Map
1988	The Site appears to maintain a single-story concrete or brick filling station.	Sanborn Map

The AOCs identified for this site include:

1. Historic use of the Site as a gasoline filling and automobile service station with several gasoline, fuel oil and waste oil USTs.
2. Closed NYSDEC Spill (05-51768), reported due to observed petroleum contamination in groundwater and soil.
3. Historic fill material.

Summary of the Work Performed under the Remedial Investigation

Impact Environmental Closures, Inc. (Impact Environmental) on behalf of DJS Real Estate Development, LLC performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed 5 soil borings (B-1 through B-5) across the entire project Site, and collected 10 soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Collected 3 groundwater samples for chemical analysis to evaluate groundwater quality from 3 existing on-site groundwater monitoring wells (MW-2, MW-4 and MW-5);

4. Installed 4 soil vapor probes throughout the site (SV-1 through SV-4), and collected 3 samples for chemical analysis.
5. Prepared RIR based on investigation results.

Summary of Environmental Findings

1. The topographic elevation of the property is approximately 27 feet.
2. Depth to groundwater ranges from 11.23 to 12.67 feet at the Site.
3. According to USGS regional contour maps, groundwater flow direction in the area of the Site is toward the west-northwest toward the Gowanus Canal.
4. Bedrock was not encountered during this RI.
5. Subsurface soil at the Site consisted of historic fill, which was primarily comprised of concrete, brick, stone, gravel, and some coal and slag in a brown silty sand matrix. Historic fill was [encountered at a depth interval ranging from 0 to 12 feet below grade surface (bgs) at borings B-2 and B-5; 0 to 15 feet bgs at borings B-1, B-3 and B-4. Brown medium to fine silty sand was encountered at 12 to 15 feet bgs at borings B-2 and B-5. Bedrock was not encountered during this RI.
6. Soil sample results were compared to NYSDEC Unrestricted Use (Track 1) and Restricted Residential Use (Track 2) Soil Cleanup Objectives (SCOs) as presented in NYSDEC Part 375-6 and CP51. BTEX and other petroleum associated volatile organic compounds were detected in seven samples and benzene [maximum concentration (max.) of 340 ug/kg], ethyl benzene [max. of 3,500 ug/kg], xylenes [max. of 2,180 ug/kg], and 1,2,4-trimethylbenzene [max. of 12,000 ug/kg] were detected above Track 1 SCOs in two deep soil samples. PCE, TCE, TCA, vinyl chloride, carbon tetrachloride and other chlorinated VOCs were not detected in soil samples collected during this RI. Several SVOC polycyclic aromatic hydrocarbons (PAHs) including benzo(a)anthracene (max. of 6,200 ug/kg), benzo(a)pyrene (max. of 6,400 ug/kg), benzo(b)fluoranthene (max. of 7,500 ug/kg), Benzo(k)fluoranthene (max. of 2,900 ug/kg), chrysene (max. of 6,600 ug/kg), dibenzo(a,h)anthracene (max. of 920 ug/kg), and ideno(1,2,3-cd)pyrene (max. of 4,000 ug/kg) were detected above Restricted Residential SCOs within four shallow and one deep soil samples. Three pesticides (4,4-DDD, 4,4-DDE, 4,4-DDT) were detected above Track 1 SCOs in one shallow soil sample, B-2, at maximum concentrations of 6.96 ug/kg, 18.1 ug/kg, and 21.8 ug/kg. Metals including arsenic, trivalent chromium, copper,

lead, mercury, nickel, silver and zinc were detected above Track 1 Unrestricted Use SCOs. Of these metals, arsenic [max. of 21 mg/kg], copper [max. of 4,500 mg/kg], lead [max. of 1,900 mg/kg] and mercury [max. of 29 mg/kg]) were detected above Track 2 Restricted Residential SCOs in five shallow soil samples and three deep soil samples. The concentration of mercury in B-1 (0-2') at 29 mg/kg and copper in B-4 (12-14') at 4,500 mg/kg represents two hot spot areas. Polychlorinated biphenyls (PCBs) were detected at trace levels below Track 1 SCOs in three shallow soil samples. Overall, soil results are consistent with historic fill material at sites throughout NYC and with the previously closed petroleum spill on the Site.

7. Groundwater sample results were compared to NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS). Laboratory analysis of groundwater samples collected during the RI did not detect pesticides or PCBs in the groundwater samples. No PCE, TCE, TCA, carbon tetrachloride, vinyl chloride or other chlorinated VOCs were detected in the groundwater samples collected on the Site. Seven petroleum related VOCs (1,2,4-Trimethylbenzene [max. of 16 ug/L], Benzene [max. of 27 ug/L], MTBE [max. of 20 ug/L], n-Butylbenzene [max. of 16 ug/L], n-Propylbenzene [max. of 97 ug/L], sec-Butylbenzene [max. of 10 ug/L], and p,m Xylene [max. of 7.6]) were detected above their respective AWQS. Five SVOC PAHs (benzo-a-anthracene [max. of 0.72 ug/L], benzo-b-fluoranthene [max. of 1.2 ug/L], benzo-k-fluoranthene [max. of 0.65 ug/L], chrysene [max. of 0.96 ug/L], and indeno(1,2,3-cd)pyrene [max. of 0.91 ug/L]) were detected above their respective AWQS. Fifteen dissolved metals were detected in the groundwater samples at trace levels below AWQS. Separate phase product was not detected in any of the monitoring wells.
8. Soil vapor samples collected during the RI were compared to the compounds listed in Table 3.1 Air Guideline Values Derived by the NYSDOH located in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion. Laboratory analysis of soil vapor samples indicated several VOCs were detected at concentrations ranging from 1.11 ug/m³ (chloromethane) to 3,970 ug/m³ (2,2,4-trimethylpentane). The highest VOC concentrations were found in SV-3 (cyclohexane at 108 ug/m³, n-hexane at 309 ug/m³, and 2,2,4-trimethylpentane at 3,970 ug/m³). All other VOCs were detected at levels below 60 ug/m³, including trace to low level detections of several chlorinated VOCs. PCE, TCE, TCA, vinyl chloride and carbon tetrachloride were not detected in any of the soil vapor samples. All chlorinated compounds were below the guidance matrix for monitoring established by NYSDOH.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

DJS Real Estate Development, LLC has enrolled in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.23 acre (10,000-square foot) site located at 275 4th Avenue in the Park Slope neighborhood of Brooklyn, New York (the Site). Mixed commercial residential use is proposed for the property. The Remedial Investigation (RI) work was performed on February 4, 2014. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 275 4th Avenue in the Park Slope section of Brooklyn and is identified as Block 964 and Lot 1 on the New York City Tax Map. **Figure 1** shows the Site location. The Site is 10,000-square feet (0.23-acres) and is bound by an auto repair shop to the north, a residential apartment building to the east, 1st Street to the south, and 4th Avenue to the west. A map of the site boundary is depicted in **Figure 2**. Currently, the Site is a 100-ft x 100-ft lot with one single-story, masonry building with an approximate footprint of 1,850 square feet utilized as a fast food restaurant. The surface area of the Site consists of asphalt parking areas, concrete walkways, and vegetative landscaping. The current zoning designation, as per Department of City Planning NYC zoning maps, is R8A with a C2-4 commercial overlay.

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of mixed-use residential and commercial retail, which is consistent with the existing zoning for the property. An 11-story 60,000 gross square foot mixed-use residential/commercial retail building will be constructed. One sub-grade basement level containing retail and tenant storage, recreational space, gymnasium and building utilities is proposed. The proposed development will include a 6,000 square-foot commercial retail space on the ground floor and approximately 75 dwelling units. The footprint of the proposed 11-story building and sub-grade basement will be 10,000 square-feet, fully encompassing the Site. There will not be any proposed open spaces or landscaped areas at the Site. The depth of the proposed basement and general excavation is

approximately 12-feet below existing grade in the footprint of the proposed building (100-ft x 100-ft or 10,000 square-feet), which is estimated to yield approximately 4,444 bank (in-place) cubic yards of excavated soil/fill. The maximum depth of excavation will be to 20 feet below existing grade for the installation on an elevator pit. The groundwater table is located approximately 11-12 feet below grade at the Site; therefore, soil excavation is expected at or slightly below the groundwater table. Demolition of the existing 1,850 square-foot one story building including removal surfaces, sub-grade utilities and drainage structures is proposed prior to redevelopment activities.

Layout of the proposed site development is presented in **Appendix A**. The current zoning designation, as per Department of City Planning NYC zoning maps, is R8A with a C2-4 commercial overlay as part of the Park Slope Rezoning Resolution. The proposed use is consistent with existing zoning for the property.

1.3 Description of Surrounding Property

The site is located in the Park Slope neighborhood of Brooklyn. Park Slope is bounded by Flatbush Avenue to the north, Prospect Park West to the east, Prospect Expressway to the south and Fourth Avenue to the west. Historically, Park Slope has consisted of mostly residential brownstones and row houses with main commercial corridors along the main avenues running through Park Slope, such as Fifth and Seventh Avenue. The Park Slope Rezoning Resolution was issued in 2003 to preserve the historic scale of the brownstone neighborhoods, and provide increased opportunities for residential and commercial development on the underbuilt and underutilized single-story commercial sites along Fourth Avenue. A description of each of the adjoining properties is described in the table below.

Direction	Property Description
North Adjacent Property	<u>Block 964 Lot 6</u> (271 4 th Avenue) – A 1,647-SF lot that fronts 4 th Avenue. The lot is currently developed with a one-story masonry building and serves as an auto repair shop. The lot is currently zoned R8A with a C2-4 commercial overlay.
South Opposite Side of 1st Street	<u>Block 969 Lot 1</u> (283 4 th Avenue) – A 51,500-SF lot that fronts 4 th Avenue, 1 st Street and 2 nd Street. The lot is currently developed with five on-story masonry buildings which serve as warehouse space and manufacturing. The lot is currently zoned R8A, R6B with a C2-4 commercial overlay.
West Opposite	<u>Block 456 Lot 1</u> (27 Denton Place) – A 16,435-SF lot that fronts 4 th Avenue, 1 st Street and

Side of 4th Avenue	Denton Place. The lot is currently developed with a one-story building which serves as a car wash and vehicle service shop. The lot is currently zoned M1-2.
East Adjacent Property	<u>Block 964 Lot 7502 (255 1st Street)</u> – A 9,435-SF lot that fronts 1 st Street. The lot is currently developed with a recently constructed 12-story mixed residential and commercial building The lot is currently zoned R8A, R6B with a C2-4 commercial overlay.

There are no sensitive receptors such as schools, hospitals, or day care facilities within a 250-ft radius of the Site. One day care facility is located within a 500-ft radius of the Site; Alonzo A. Daughtry Memorial Dcc Inc. located at 333 2nd Street. There are no hospitals or schools located within a 500-ft radius of the Site. **Figure 3** shows the surrounding land usage.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

The Site was formerly utilized as a gasoline filling and automobile service station. According to NYSDEC Petroleum Bulk Storage records and previous investigation reports, eighteen 550-gallon and two 275-gallon underground gasoline storage tanks (USTs), one 550-gallon fuel oil UST and one 550-gallon waste oil UST were historically operated and maintained on the Site. These USTs were installed on the Site from November 1967 to January 1968 and removed in September 1990. A review of historic Sanborn maps revealed that the former gasoline storage tanks were located on the southwest corner of the Site (at the intersection of 1st Street and 4th Avenue). A summary of the investigated Sanborn maps is described in the table below.

Date	Description	Sources
1906	The Site appears to maintain one 1 single-story residential dwelling, one 2-story residential dwelling, and one single-story junk warehouse and yard.	Sanborn Map
1926	The Site appears to maintain one single-story store, one single-story rags manufacturer/warehouse, and one single-story stable.	Sanborn Map
1951	The Site appears to maintain one single-story filling station with three gasoline tanks, and one single-story stable with a one-story surrounding junk warehouse.	Sanborn Map
1965	The Site appears to maintain one single-story filling station with three gasoline tanks.	Sanborn Map
1979	The Site appears to maintain a larger single-story filling station. Fuel tank information illegible.	Sanborn Map
1980	The Site appears to maintain a single-story filling station. Fuel tank information illegible.	Sanborn Map

1982	The Site appears to maintain a single-story concrete or brick filling station.	Sanborn Map
1985	The Site appears to maintain a single-story concrete or brick filling station.	Sanborn Map
1987	The Site appears to maintain a single-story concrete or brick filling station.	Sanborn Map
1988	The Site appears to maintain a single-story concrete or brick filling station.	Sanborn Map

2.2 Previous Investigations

In June 2006, Impact Environmental performed a Subsurface Investigation on the Site. The investigation consisted of the sampling and analysis of subsurface soil and groundwater to define the extent of contamination associated with NYSDEC spill case number 05-51768. A total of six groundwater monitoring wells were installed on the Site. Laboratory analysis performed on the groundwater samples detected elevated concentrations of gasoline-related contaminants. In response, a Quarterly Monitoring Program was developed under the oversight of the NYSDEC utilizing a network of six on-Site and off-Site monitoring wells. In August 2010, NYSDEC agreed to reduce the Groundwater Monitoring Program frequency from a quarterly to semi-annual utilizing a network of four existing on-Site monitoring wells.

As part of the petroleum spill remediation efforts, two Oxygen Releasing Compound (ORC) groundwater injection events were conducted at the Site on July 2007 and June 2009 by Impact Environmental to address the reported residual soil contamination associated with the former UST tank field. Subsequent quarterly monitoring indicated a significant reduction in contamination levels by September 2011.

In June 2013, Impact Environmental performed a Supplemental Subsurface Investigation on the Site and reported in the First Half 2013 Semi-Annual Monitoring Report, dated August 14, 2013. The investigation was conducted to verify the effectiveness of the spill remedial work performed as per the NYSDEC's recommendations pursuant towards closure of the NYSDEC Spill case number 05-51768. One soil boring was installed within the location of the former gasoline UST tank field. Laboratory analysis of the soil sample detected several VOCs at trace concentrations well below their respective NYSDEC Part 375

Unrestricted Use Soil Cleanup Objectives. As part of the aforementioned First Half 2013 Groundwater Monitoring event, 6 on-Site and off-Site monitoring wells were sampled. Laboratory analysis of the groundwater samples detected nominal concentrations of gasoline related target VOCs, marginally above the NYSDEC 6NYCRR Part 703 Class GA groundwater standards. Other target VOCs were not detected or detected at concentrations below their respective groundwater standards.

The results of the June 2013 Supplemental Subsurface Investigation and First Half 2013 Semi-Annual Monitoring event demonstrated that the gasoline-related contamination associated with NYSDEC spill case number 05-51768 was effectively mitigated to the extent practical. As a result the NYSDEC closed the spill case on October 7, 2013.

2.3 Site Inspection

Mr. Benjamin Hernandez Salazar of Impact Environmental performed a Site Inspection on January 23, 2014. The reconnaissance included a visual inspection of the Site, the adjacent sidewalks along 4th Avenue and 1st Street, the exterior of adjacent properties and a limited inspection of the existing Site building within the ordering and dining area of the restaurant. At the time of the inspection, the Site consisted of a one-story 1,500-square foot masonry building being utilized as a fast food restaurant with an asphalt-paved parking area and asphalt-paved drive through. Inspection of the interior sitting and dining area of the active fast food restaurant did not exhibit signs of chemical staining; access to the food preparation and management offices was not allowed. The inspection of the parking area and drive-through revealed evidence of motor oil staining, typical of areas with vehicular traffic. Several groundwater monitoring wells, associated with the closed NYSDEC spill case, were observed throughout the site. The monitoring wells were all properly capped and covered.

2.4 Areas of Concern

The AOCs identified for this site include:

1. Historic use of the Site as a gasoline filling and automobile service station with several gasoline, fuel oil and waste oil USTs.
2. Closed NYSDEC Spill (05-51768), reported due to observed petroleum contamination in groundwater and soil.
3. Historic fill material.

Historic Sanborn maps and a previous investigation report are presented in **Appendix B**.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Kevin Kleaka.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

Impact Environmental Closures, Inc. (Impact Environmental) on behalf of DJS Real Estate Development, LLC performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed 5 soil borings (B-1 through B-5) across the entire project Site, and collected 10 soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Collected 3 groundwater samples for chemical analysis to evaluate groundwater quality from 3 existing on-site groundwater monitoring wells (MW-2, MW-4 and MW-5);
4. Installed 4 soil vapor probes throughout the site (SV-1 through SV-4), and collected 3 samples for chemical analysis.
5. Prepared RIR based on investigation results.

4.1 Geophysical Investigation

A geophysical investigation was not performed as a part of this assessment. However, previous records document the removal of twelve 550-gallon gasoline USTs, one 550-gallon fuel oil UST and one 550-gallon waste oil UST were removed in September 1990; and six 550-gallon and two 275-gallon petroleum USTs were removed in May 1994 during site redevelopment.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

A total of five soil borings (B-1 through B-5) were installed on February 4, 2014 by Impact Environmental in the approximate locations depicted in **Figure 4**. The five soil boring locations were chosen to gain representative soil and groundwater quality information across the Site. All five soil boring were installed to a depth of 15 feet below existing grade (bgs).

For each of the five soil borings, soil samples were collected continuously from grade to their respective final depth below existing grade using a five-foot steel macro-core sampler with acetate liners and Geo-Probe direct-push equipment. Soil recovered from each of the soil borings was field screened for the presence of VOCs with a photo-ionization detector (PID) and visually inspected for evidence of contamination. A PID makes use of the principle of photoionization for the detection and qualitative

measurement of organic vapors. A PID does not respond to all compounds similarly, rather, each compound has its own response factor relative to its calibration. For this investigation, the PID was calibrated to the compound isobutylene, as published by the manufacturer. The PID has a minimum detection limit of 0.1 parts per million (ppm). This meter measures the hydrocarbon concentrations in isolated portions of the secured samples.

Headspace analyses were conducted on each soil sample by partially filling a zip-loc bag and sealing it, thereby creating a void. This void is referred to as the sample headspace. To facilitate the detection of any hydrocarbons contained within the headspace, the container was agitated for a period of 30 seconds. The probe of the PID was placed within the headspace to measure the organic vapors present. Elevated PID readings (as high as 1625 ppm) and visually stained soil that exhibited a petroleum odor was noted at a depth ranging from 11 to 15 feet below grade in all five soil borings.

From each soil boring, one soil grab sample was retained representing the interval 0 to 2 feet below grade and one soil grab sample was retained representing the bottom two foot interval of 12 to 14 feet below grade, representing the deepest proposed development excavation depth.

Subsurface soil at the Site consisted of historic fill, which was primarily comprised of concrete, brick, stone, gravel, coal and slag in a brown silty sand matrix. Historic fill was encountered at a depth interval ranging from 0 to 12 feet below grade surface (bgs) at borings B-2 and B-5; 0 to 15 feet bgs at borings B-1, B-3 and B-4. Brown medium to fine silty sand was encountered at 12 to 15 feet bgs at borings B-2 and B-5.

Boring logs were prepared by a QEP and are attached in **Appendix C**. A map depicting the location of soil borings and monitor wells is shown in **Figure 4**.

Groundwater Monitoring Well Construction

Installation records of the existing on-site monitoring wells indicate that they were constructed of 2-inch diameter, 15-foot schedule 40 PVC (0.020-inch) well screen interval and solid riser. The annulus around the well screen was filled with clean, appropriately sized silica sand and a 2-foot bentonite seal plug was installed around the riser above the filtration media, drill cutting media was placed above the bentonite seal to 6-inches below existing grade. Concrete was used to fill the remaining 6-inches of open well casing in conjunction with the installation of a cast iron manhole with an access cover. Each well was then redeveloped during the RI investigation to ensure proper functioning. Monitoring well locations are shown in **Figure 4**.

Survey

Soil borings, monitoring wells and soil vapor probes were located to the nearest 0.10 foot with respect to two or more permanent site features using a measuring wheel.

Water Level Measurement

Groundwater level measurements were collected using a Solinst oil/water interface meter. Groundwater depths were measured from the top of PVC riser. Product was not detected in any of the four groundwater monitoring wells. Water level data is included in **Table 4**.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted at each Area of Concern (AOCs) and was also biased to other areas based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. Media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Five soil borings (B-1 through B-5) were installed and ten soil samples were collected for chemical analysis during the remedial investigation. One shallow (0-2 ft bgs) and one deep (12-14 ft bgs), representing the deepest proposed excavation depth. Soil samples from each soil probe were collected utilizing a 5-foot long Macro Core sampler fitted with dedicated acetate liners. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in **Table 1**. **Figure 4** shows the location of samples collected in this investigation. Laboratories and analytical methods are shown below.

Each of the ten soil samples were collected in pre-cleaned, laboratory supplied glassware, appropriately labeled, stored in a cooler with ice and submitted for analysis under proper chain of custody procedures to Alpha Analytical Laboratories (Alpha) of Westborough, MA, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11148). Soil samples were analyzed for the presence of VOCs by EPA Method 8260, semi-volatile organic compounds (SVOCs-BN) by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082 and target analyte list (TAL) metals by EPA Method 6010.

Each piece of sampling or other down hole equipment was decontaminated by wiping clean, washing with Alconox solution, rinsing with deionized water and air drying prior to each use in order to ensure that cross-contamination between sampling locations did not occur. Decontamination procedures were performed in an area segregated from any sampling areas.

Groundwater Sampling

One groundwater sample was collected from each of the three existing monitoring wells (MW-2, MW-4, and MW-5) for chemical analysis during this RI. The Phase II Work Plan, dated January 7, 2014 indicated that groundwater samples were to be collected from existing groundwater monitoring wells MW-1, MW-3, and MW-5, however MW-1 and MW-3 were unable to be located therefore groundwater samples were collected from monitoring wells MW-2, MW-4 and MW-5. Groundwater sampling well locations are depicted in **Figure 4**. Each monitoring well was purged of 3 to 5 well volumes of groundwater. The water was allowed to recharge to the original level and a groundwater sample was then collected from each of the selected existing wells utilizing dedicated polyethylene bailers for VOCs, SVOCs, pesticides/PCBs and TAL metals samples. Laboratories and analytical methods are shown below.

Each groundwater sample was placed into the following laboratory supplied glassware: 3 clean HCL preserved 40 milliliter (mL) vials, 2 clean nitric acid preserved 500 mL plastic container, and 6 clean unpreserved 1,000 mL jars. Sample glassware was appropriately labeled, stored in a cooler with ice and submitted for analysis under proper chain of custody procedures to Alpha Analytical Laboratories for analysis of VOCs by EPA Method 8260, SVOCs by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082 and total TAL metals (filtered and unfiltered). One duplicate groundwater sample was collected from monitoring well MW-2 for VOC analysis. Groundwater sample collection data is reported in **Table 2**. Sampling logs with information on purging and sampling of groundwater monitoring wells are included in **Appendix D**.

Soil Vapor Sampling

Four soil vapor probes designated SV-1, SV-2, SV-3, and SV-4 were installed on February 4, 2014. The soil vapor probes were installed at a depth of 9 feet below grade. The soil vapor probes were installed utilizing similar technology as the soil probes in accordance with the NYSDOH Guidance of Evaluating Soil Vapor Intrusion, dated October 2006. Each soil vapor sampling point consisted of a stainless steel screen and was fitted with dedicated ¼ inch diameter polyethylene tubing. The soil vapor probe was installed in the subsurface soil. Washed #1 crushed stone was poured into each hole to fully encompass

the screen implant, and each hole was sealed with bentonite and dry-lock non-VOC quick set cement. A map depicting the locations of soil vapor probes is presented in **Figure 4**.

Following verification that the surface seal was tight, one to three volumes (i.e., the volume of the sample probe) of air was purged from the implant using a vacuum pump. After purging, a laboratory supplied pre-cleaned 2.7-liter Summa[®] canister, fitted with a 2-hour flow regulator, was attached to the surface tube of each of the six soil vapor implants. Prior to initiating sample collection, sample identification, canister number, date and start time were recorded on tags attached to each canister and in a field log. Sampling then proceeded by fully opening the flow control valve on each canister in turn. Immediately after opening the flow control valve on a canister, the initial vacuum (inches of mercury) was recorded in the field log and on the sample tag. When the vacuum level in the canister was between 5 and 8 inches of mercury (approx. 2 hours), the flow controller valve was closed, and the final vacuum recorded in the field notebook and on the sample tag.

The soil gas sample identification, date, start time, start vacuum, end time and end vacuum were recorded on tags attached to each canister, on a sample log sheet (**Appendix E**), and the laboratory chain of custody. Samples were submitted to Alpha Analytical for laboratory analysis of VOCs EPA Method TO-15. Soil vapor sampling locations are depicted in **Figure 4**. Soil vapor sample collection data is reported in **Table 3**. Methodologies used for soil vapor assessment conform to the NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Tom Tanico
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and were Alpha Analytical Laboratory (ELAP Certification No. 11148)
Chemical Analytical Methods	Soil analytical methods: <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007);

	<ul style="list-style-type: none">• VOCs by EPA Method 8260C (rev. 2006);• SVOCs by EPA Method 8270D (rev. 2007);• Pesticides by EPA Method 8081B (rev. 2000);• PCBs by EPA Method 8082A (rev. 2000); <p>Groundwater analytical methods:</p> <ul style="list-style-type: none">• TAL Metals by EPA Method 6010C (rev. 2007);• VOCs by EPA Method 8260C (rev. 2006);• SVOCs by EPA Method 8270D (rev. 2007);• Pesticides by EPA Method 8081B (rev. 2000);• PCBs by EPA Method 8082A (rev. 2000); <p>Soil vapor analytical methods:</p> <ul style="list-style-type: none">• VOCs by TO-15 VOC parameters.
--	--

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in **Table 1**, **Table 2**, **Table 3**, respectively. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in **Appendix F**.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

According to the surficial geologic map of New York, lower Hudson sheet (Caldwell, 1989), this area of New York is underlain by Pleistocene-glacial till, dominantly consisting of fine to coarse grain sand with interstitial lenses of gravel and silt, which are remnants of glacial deposition with bedrock located at 10-50 meters below grade. According to the United States Department of Agriculture soil survey classification and nomenclature system, this soil would likely be referred to as urban land, because the original composition and structure of the soil has been significantly altered by urbanization and development activities.

Stratigraphy

Subsurface soil at the Site consisted of historic fill, which was primarily comprised of concrete, brick, stone, gravel, and some coal and slag in a brown silty sand matrix. Historic fill was encountered at a depth interval ranging from 0 to 12 feet below grade surface (bgs) at borings B-2 and B-5; 0 to 15 feet bgs at borings B-1, B-3 and B-4. Brown medium to fine silty sand was encountered at 12 to 15 feet bgs at borings B-2 and B-5. Bedrock was not encountered during this RI.

Hydrogeology

A table of water level data for all monitoring wells is included in **Table 4**. The depth to groundwater ranges from 11.23 feet below grade to 12.67 feet below grade. According to published USGS regional contour maps, the groundwater flow direction in the area of the Site is toward the west-northwest towards the Gowanus Canal. Previous investigation reports for the Site reported significant gradients on the water table across the Site with varying and inconsistent groundwater flow directions. These anomalies suggest that the water table is being influenced due to localized intermittent groundwater pumping in the area, most likely related to the adjacent subway structure, which is altering the horizontal and vertical movement of groundwater. Based on these factors, a reliable flow direction could not be measured.

5.2 Soil Chemistry

Soil sample results were compared to NYSDEC Unrestricted Use (Track 1) and Restricted Residential Use (Track 2) Soil Cleanup Objectives (SCOs) as presented in NYSDEC Part 375-6 and CP51. BTEX and other petroleum associated volatile organic compounds were detected at low levels and below Track 2 SCOs in

seven samples. BTEX and petroleum associated volatile organic compounds (benzene [maximum concentration (max.) of 340 ug/kg], ethyl benzene [max. of 3,500 ug/kg], xylenes [max. of 2,180 ug/kg], and 1,2,4-trimethylbenzene [max. of 12,000 ug/kg]) were detected above Track 1 SCOs in two deep soil samples. PCE, TCE, TCA, vinyl chloride, carbon tetrachloride and other chlorinated VOCs were not detected in soil samples collected during this RI.

Several SVOC polycyclic aromatic hydrocarbons (PAHs) (benzo compounds, chrysene, dibenzo-a,h-anthracene and indeno(1,2,3-cd)pyrene) were detected above Track 2 SCOs within four shallow and one deep soil samples. Maximum concentrations for each of these compounds were found in the deep sample (12' – 14') collected at B-4: benzo(a)anthracene at 6,200 ug/kg, benzo(a)pyrene at 6,400 ug/kg, benzo(b)fluoranthene at 7,500 ug/kg, chrysene at 6,600 ug/kg, dibenzo(a,h)anthracene at 920 ug/kg, and ideno(1,2,3-cd)pyrene at 4,000 ug/kg. Benzo(k)fluoranthene exceeded Track 1 SCOs in this boring at 2,900 ug/kg.

Three pesticides (4,4-DDD, 4,4-DDE, 4,4-DDT) were detected above Track 1 SCOs in one shallow soil sample, B-2, at maximum concentrations of 6.96 ug/kg, 18.1 ug/kg, and 21.8 ug/kg. Other pesticides were detected at trace levels below Track 1 SCOs in two shallow soil samples. Polychlorinated biphenyls (PCBs) were detected at trace levels below Track 1 SCOs in three shallow soil samples.

Eight metals (arsenic, trivalent chromium, copper, lead, mercury, nickel, silver and zinc) were detected above Track 1 SCOs in five shallow soil samples and two deep samples. Four metals (arsenic [max. of 21 mg/kg], copper [max. of 4,500 mg/kg], lead [max. of 1,900 mg/kg] and mercury [max. of 29 mg/kg]) were detected above Track 2 SCOs in five shallow soil samples and three deep soil samples. The concentration of mercury in B-1 (0-2') at 29 mg/kg and copper in B-4 (12-14') at 4,500 mg/kg represents two hot spots.

Overall, soil results are consistent with historic fill material at sites throughout NYC and with the previously closed petroleum spill on the Site.

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in **Table 1**. A copy of the laboratory report is provided in **Appendix F**. **Figure 5** depicts the location and posts the values for soil/fill that exceed the Track 1 and Track 2 Soil Cleanup Objectives.

5.3 Groundwater Chemistry

Groundwater sample results were compared to NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS). No pesticides or PCBs were detected in the groundwater samples. No PCE, TCE, TCA, carbon tetrachloride, vinyl chloride or other chlorinated VOCs were detected in the groundwater samples collected on the Site.

Seven petroleum related VOCs (1,2,4-Trimethylbenzene [max. of 16 ug/L], Benzene [max. of 27 ug/L], MTBE [max. of 20 ug/L], n-Butylbenzene [max. of 16 ug/L], n-Propylbenzene [max. of 97 ug/L], sec-Butylbenzene [max. of 10 ug/L], and p,m Xylene [max. of 7.6]) were detected above the AWQS in monitoring wells MW-2, MW-2 duplicate, and MW-5. Other VOCs were detected at trace levels below the AWQS in MW-2, MW-2 duplicate, and MW-5. VOCs were not detected in MW-4.

Five SVOC PAHs (benzo-a-anthracene [max. of 0.72 ug/L], benzo-b-fluoranthene [max. of 1.2 ug/L], benzo-k-fluoranthene [max. of 0.65 ug/L], chrysene [max. of 0.96 ug/L], and indeno(1,2,3-cd)pyrene [max. of 0.91 ug/L]) were detected above the AWQS in monitoring wells MW-2 and MW-4. Other SVOCs were detected at trace levels below the AWQS in MW-2, MW-4 and MW-5.

Fifteen dissolved metals were detected in the groundwater samples at trace levels below AWQS. Separate phase product was not detected in any of the monitoring wells.

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in **Table 2**. A copy of the laboratory report is provided in **Appendix F**. **Figure 6** depicts the location and posts the values for groundwater that exceed the NYSDEC Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS).

5.4 Soil Vapor Chemistry

Soil vapor samples collected during the RI were compared to the compounds listed in Table 3.1 Air Guideline Values Derived by the NYSDOH located in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion. Laboratory analysis of soil vapor samples indicated several VOCs were detected at concentrations ranging from 1.11 ug/m³ (chloromethane) to 3,970 ug/m³ (2,2,4-trimethylpentane). The highest VOC concentrations were found in SV-3 (cyclohexane at 108 ug/m³, n-hexane at 309 ug/m³, and 2,2,4-trimethylpentane at 3,970 ug/m³). All other VOCs were detected at levels below 60 ug/m³, including trace to low level detections of several chlorinated VOCs in

SV-2 and SV-4. PCE, TCE, TCA, vinyl chloride and carbon tetrachloride were not detected in any of the soil vapor samples. All chlorinated compounds were below the guidance matrix for monitoring established by NYSDOH. Soil vapor sample SV-1 was invalid due to water intrusion into the canister valve and was not analyzed by the laboratory.

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in **Table 3**. **Figure 7** depicts the location and posts the values for soil vapor samples with detected concentrations.

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

1.0 PURPOSE & SCOPE

This semi-annual monitoring report was prepared to summarize the corrective action procedures performed at the property located at 281 4th Avenue, Brooklyn, New York, herein identified as the Site. The activities consist of the groundwater semi-annual monitoring and analysis, and the concurrent supplementary subsurface investigation work, performed concurrent with the semi-annual monitoring event.

The protocols used for this report were based, in part, upon the following documents: 1) New York State Department of Environmental Conservation CP-51 Soil Cleanup Guidance document; 2) the New York State Department of Environmental Conservation, Technical Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards and Limitations; 3) the New York State Department of Environmental Conservation, Sampling Guidelines and Protocols, Technical Background and Quality Control Assurance for the New York State Department of Environmental Conservation Spill Response Program, dated September 1992; and 4) May 2010, New York State Department of Environmental Conservation DER-10 Technical Guidance for Site Investigation and Remediation document. The activities performed under the scope of this investigation have been summarized in this report in the following sections.

2.0 SITE DESCRIPTION

2.1 Topography

The areal extent of the Site is approximately 10,000 square feet. The Site contains one single-story, masonry building with an approximate footprint of 1,850 square feet. The surface area of the Site consists of asphalt parking areas, concrete walkways, and vegetative landscaping. The Site exhibits low topographic relief (less than three percent slopes). See **Plate 1**: Project Location Map, *Brooklyn, New York*.

2.2 Site History

The Site was formerly utilized as a gasoline filling and automobile service station. According to NYSDEC Petroleum Bulk Storage records, twelve (12) 550-gallon underground gasoline storage tanks (USTs), one (1) 550-gallon fuel oil UST and one (1) 550-gallon waste oil UST were historically operated and maintained on the Site. These USTs were installed on the Site from November 1967 to January 1968 and removed in September 1990. A review of historic Sanborn maps revealed that the former gasoline storage tanks were located on the southwest corner of the Site (at the intersection of 1st Street and 4th Avenue). Approximately 219 tons of petroleum impacted soil was excavated as a result of the tank abandonment work to remove residual soil contamination within the excavation(s). Three (3) onsite groundwater monitoring wells were installed in October 1990. Subsequent groundwater samples were reportedly collected between October 1990 and October 1993. Said sampling results indicated petroleum-related volatile organics reportedly detected above New York State drinking water standards.

During Site redevelopment work in May 1994, an additional six (6) 550-gallon and two (2) 275-gallon petroleum USTs were removed. Approximately 373 tons of petroleum impacted soil was excavated as a result of the tank abandonment work, due to residual soil contamination reportedly found within the UST excavation(s). A soil vapor extraction (SVE) remediation system was reportedly installed at the Site and was operable in January 1995. No other information in regards to operation duration and/or permanent shutdown of said system was available. Historic documentation in regards to the two UST removal events is provided in **Appendix A**.

The layout of the former gasoline station is depicted on a historic survey of the Site and was plotted into the base map on **Plate 2**. Review of NYSDEC spill logs identified that one active spill incident (NYSDEC Spill case number 0551768) is listed for the Site based on the data relied upon from a subsurface investigation conducted on the northern adjacent property (see Section 2.3).

2.3 Surrounding Land Use

Impact Environmental conducted a review of the Revised Subsurface Investigation Report, dated February 13, 2006 prepared by Hydro Tech Environmental Corp (HTC) with respect to the property identified as 269-271 4th Avenue, Brooklyn, New York, occupied by Alba Auto Repair (Alba Auto Site). The scope of work performed by HTC at the Alba Auto Site included the acquisition and analysis of soil and groundwater samples. The sampling activities were conducted in March 2005 and September 2005. The results of both sampling events were presented in the Report. The March 2005 sampling event included the installation of six soil probes to a depth of sixteen feet below grade. One sample was selected from each soil probe at a depth interval of fourteen to sixteen feet below grade for laboratory analysis. In addition, three groundwater temporary well points were installed in conjunction with three of the six soil probes (SP-1, SP-2 and SP-3). The analysis of these samples included volatile and semi-volatile organic analytes.

The November 2005 sampling event included the installation of six soil probes to a depth ranging from twelve to twenty-four feet below grade. One shallow sample and one deep sample were selected from each soil probe for laboratory analysis. In addition, six permanent groundwater monitoring wells were installed, developed and sampled in conjunction with the six soil probes. The analysis of these samples included volatile and semi-volatile organic analytes. The construction of the wells were specified in the report as having the screened interval set at a depth of twenty to thirty feet below grade. The depth to the water table measured at the Alba Auto Site was reported by HTC as ranging from 13.33 to 16.14 feet below grade. The monitoring wells installed on the site were surveyed by HTC to determine site-specific groundwater flow direction. Based on these field measurements, groundwater contour maps were generated and presented in the report that indicated that the site-specific groundwater flow direction was toward the northeast.

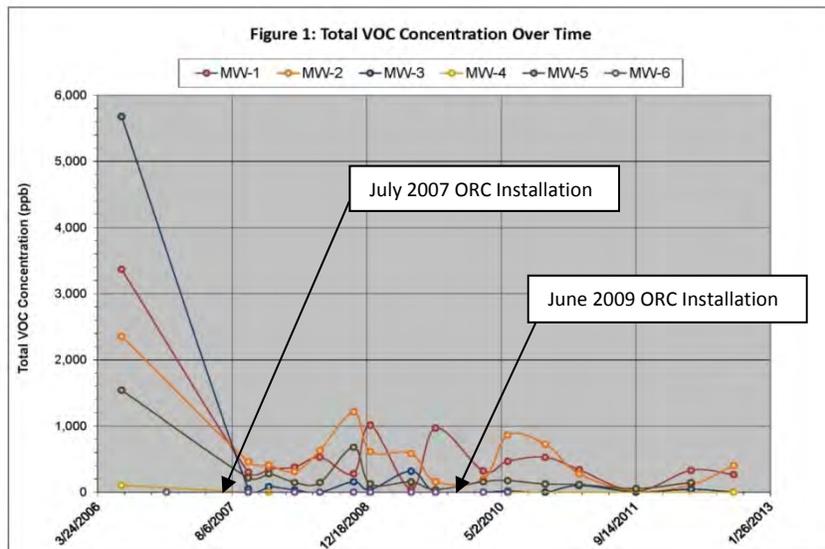

The results of the sampling activities performed by HTC indicated the presence of volatile and semi-volatile organic analytes in subsurface soil and groundwater above the applicable NYSDEC guidance criteria. HTC 's evaluation of results indicates that the contamination detected from their sampling activities is associated with gasoline; that site-specific groundwater flow is reported to move toward the northeast; that one possible source of the gasoline related contamination is the McDonalds (formerly utilized as a gasoline filling station); and that a source of gasoline related contamination was not identified on the Alba Auto Site. However, HTC failed to review any historic data regarding the Alba Auto Site; in particular building records and Sanborn maps. Impact Environmental conducted a review of these historic records and determined that five (5) different properties in the immediate area, including the Alba Auto Site, formerly maintained underground gasoline storage tanks between 1926 and 1988. The Alba Auto Site maintained at least one (1) underground gasoline storage tank from 1926 to at least 1951 in a portion of the existing building used for automotive repair. The sampling plan performed on the Alba Auto Site

by HTC failed to target any of the gasoline USTs, or target any specific sampling areas to determine the presence of a gasoline source. In addition, HTC failed to recognize or offer explanations for the anomalous groundwater measurements, which exhibited a gradient greater than 0.05 (3ft. elevation drop over distance of 50ft), secured from their groundwater monitoring wells. A gradient of such significance is incongruous, suggesting the presence of an "outside" influence. Therefore, groundwater flow interpretations or any statement with respect to the fate and transport of contaminants from the Site would be unreliable or speculative. Based on the data relied upon from the investigation conducted by HTC, the NYSDEC was contacted to report a spill suspected to have originated on the Site.

3.0 PREVIOUS INVESTIGATION AND REMEDIATION

In June 2006, Impact Environmental performed a Subsurface Investigation on the Site. The investigation consisted of the sampling and analysis of subsurface soil and groundwater to define the extent of contamination associated with NYSDEC spill case number 0551768. Laboratory analysis performed on the groundwater samples detected elevated concentrations of gasoline-related contaminants. A total of six monitoring wells, identified as MW-1 through MW-6, were installed on the Site. The tabulated soil and groundwater sampling data acquired and analyzed for the June 2006 Subsurface investigation are shown in **Table 1** and **Table 2**, respectively. A site plan depicting the soil boring locations and groundwater monitoring well locations is presented in Plate 3.

Between July 5, 2007 and July 31, 2007, Oxygen Releasing Compound (ORC) application was conducted on the Site for enhanced bio-remediation. A total of 11 injection points were installed on the Site. A total of 510 pounds of ORC mixed to seventy (70) percent slurry was injected at the Site. The July 2007 ORC injection point locations are presented in **Plate 2**. By June 2008, significant reduction in contamination level has been observed in groundwater. Levels of target gasoline related compounds were reduced by 73% (in MW-2) to 100% (MW-3 and MW-4). However, benzene was still detected in MW-1 and MW-5 at 133 ppb and 55 ppb respectively. Accordingly, the 2nd round ORC® injection was designed and performed. Between June 1, 2009 and June 2, 2009, a second ORC application was conducted on the Site. A total of 390 pounds of ORC was mixed to seventy (70) percent slurry and then injected at the Site. No hydraulic control was recommended due to the low injection rate. A total of 13 injection points were installed on the Site utilizing Geoprobe in conjunction with pressurized grout machine. The June 2009 ORC injection point locations are presented in **Plate 2**. By September 2011, a significant reduction in contamination level has been observed. The total VOC reduction rate ranges from 97% to 100%. As of the effectiveness of ORC application on the site is illustrated in **Figure 1**.

4.0 JUNE 2013 SUPPLEMENTAL SUBSURFACE INVESTIGATION

In June 2013, Impact Environmental performed a Supplemental Subsurface Investigation on the Site. The investigation consisted of the sampling and analysis of subsurface soil proximal to soil probe SP-1 (installed during the June 2006 Subsurface Investigation work) to verify the effectiveness of the remedial work performed and to ascertain current BTEX concentrations in soil, proximal to the abovementioned soil probe. Said Supplemental Subsurface Investigation work was performed pursuant to Departmental recommendations conveyed during a January 2013 teleconference in regards to the Site, pursuant towards closure of NYSDEC Spill case number 0551768. Said Departmental recommendations consisted of installing a soil boring proximal to soil boring SP-1, collect and field screen soil samples at and/or above the observed water table interface, and submit one (1) soil sample to an ELAP-accredited environmental laboratory for volatile organic compound (VOC) analyses. The Department also requested to conduct the semi-annual groundwater monitoring event, concurrent with the Supplemental Subsurface Investigation work. Said groundwater monitoring event is described in Sections 5.0 and 6.0 in this report.

4.1 Subsurface Soil Sampling

On June 20, 2013, Impact Environmental installed one (1) soil probe, identified as SB-01 as part of this investigation. The soil probe sampling location is shown on **Plate 3** and the soil probe boring log is presented in **Appendix B**.

4.1.1 Subsurface Probe Installation

Subsurface probe SB-01 was installed utilizing a hand auger system. Said hand auger system was used to expedite the Site investigation work, without incurring potential MTA easement permitting delays by utilizing other drilling methods and machinery to perform the work. Said work was performed in accordance with the McDonald's USA LLC health and safety protocols and procedures and was performed within the overburden subsurface material, to a terminal depth upon encountering the onsite water table.

Soil probe SB-01 was installed proximal to monitoring well MW-5 and soil boring SP-1, located within the footprint of the former gasoline UST tank field. Said probe was pre-cleared to approximately five (5) feet below grade utilizing an air knife and vacuum methodology and equipment.

4.1.2 Field Headspace Analysis

Headspace analyses were performed on each subsurface soil sample to provide precursory data regarding contamination. Results of the analysis were used to adjust the sample and analysis program to yield the most accurate and representative results. The headspace analyses data are cited in the soil boring logs, presented in **Appendix B**.

4.1.3 Headspace Analysis Procedure

Headspace analysis was performed on each of the acquired samples utilizing a portable photoionization detection (PID) meter, to measure what, if any, hydrocarbon concentrations were present in isolated portions of the secured samples. Headspace analysis was conducted by partially filling a wide-mouth glass container with sample aliquot and sealing the top with aluminum foil, thereby creating a void. This void is referred to as the sample headspace.

To facilitate the detection of any hydrocarbons contained within the head space, the container was agitated for a period of thirty (30) seconds. The probe of the vapor analyzer was then injected through the foil into the headspace to measure the hydrocarbon concentrations present. A Photovac Micro-Tip, photo ionization detection meter (PID) was the organic vapor analyzer selected for the head space analysis. A PID utilizes the principle of photo ionization for detection and measurement of hydrocarbon compounds. A PID does not respond to all compounds similarly; rather, each compound has its own response factor relative to its calibration. For this investigation, the PID was calibrated to isobutylene. Hydrocarbon relative response factors for a PID calibrated to isobutylene are published by the manufacturer.

4.1.4 Sample Characterization

A visual inspection of all samples recovered during the installation of each of the soil probe was conducted to identify any gross signs of chemical contamination and to classify the sample media. Gradation classifications were made in accordance with the Unified Soil Classification System. The field characterization results are shown in the Boring Logs presented in **Appendix B**.

In general, the subsurface soil encountered during this work was found to consist of light brown to reddish-brown, coarse to medium grained, poorly sorted sands and gravel, with trace silts (indicative of typical fill material) approximately between one (1) to six (6) feet below existing grade (BEG). Below this stratum, the subsurface soil was found to contain medium to fine grained well sorted silty sands to sandy silts with trace clays, between six (6) feet and ten (10) feet BEG. The substratum below the aforementioned section, between ten (10) and twelve (12) feet BEG, consisted of light gray to dark gray to greenish-gray medium to fine grained, poorly sorted sands with some silt and gravel. The soil boring terminal depth was reached at approximately twelve (12) feet BEG, with encountering the apparent water table at approximately 11.5 feet BEG.

4.1.5 Soil Sample Collection

Soil samples were collected utilizing the hand-auger system, previously described in Section 4.1.1 and utilizing headspace analyses and sample characterization techniques, previously described in Sections 4.1.2 and 4.1.2, respectively. Subsurface soil samples were secured from the soil boring SB-01 at the 5 to 6 foot, 6 to 7 foot, 7 to 8 foot, 8 to 9 foot, 9 to 10 foot, 10 to 11 foot and 11 to 12 foot depth intervals.

After comparing the headspace analyses results with the observed field observations and historic subsurface investigation data, the sample from the 11 to 12 foot depth interval was containerized in laboratory-prepared glassware, preserved in an iced cooler and transported under proper chain-of-custody procedures to an ELAP-accredited commercial environmental laboratory for analyses. The containerized sample represents the unsaturated to moist soil collected from within the 11 to 12 foot depth interval. The abovementioned soil sample was labeled for identification purposes as SB-01.

5.0 GROUNDWATER MONITORING PLAN

A Quarterly Monitoring Program was developed to execute the sampling and analysis requirements of the NYSDEC. All sampling locations can be referenced with **Plate 5**.

The current monitoring well network consists of onsite monitoring wells MW-1, MW-2, MW-3 and MW-5. In an August 20, 2010 electronic correspondence, NYSDEC agreed to remove monitoring wells MW-4 and MW-6 from the monitoring well network. In a follow-up conversation with NYSDEC, it was also agreed upon to reduce the monitoring frequency from quarterly to semi-annual.

During this sampling event, groundwater samples were collected from monitoring well MW-4 and monitoring well MW-6, in addition to the abovementioned wells within the current monitoring network. Said samples were collected as communicated by the Department, during the January 2013 teleconference. Any future groundwater sampling events will consist of sample collection from the existing monitoring network (monitoring wells MW-1, MW-2, MW-3 and MW-5), unless directed otherwise by NYSDEC.

5.1 Semi-Annual Monitoring Well Sampling and Analysis

5.1.1 Monitoring Well Sampling Procedure

On June 24, 2013, monitoring wells MW-1, MW-2, MW-3, MW-4, MW-5 and MW-6 were gauged for the presence and thickness of free phase product and depth to water with an oil-water interface meter. No measurable free phase product was observed in any of the wells. Each well was developed by pumping out a minimum of three (3) static well volumes utilizing a peristaltic pump. A static well volume is defined as:

$$\text{Static well volume} = \text{height of water column} \times (\text{well radius})^2 \times \pi \times 7.48$$

where 7.48 is the conversion factor for cubic feet to gallons.

Subsequent to the well gauging and development procedures, one (1) water sample was collected from monitoring wells MW-1, MW-2, MW-3, MW-4, MW-5, and MW-6, utilizing a dedicated disposable bailer to prevent cross-contamination. Said groundwater samples were containerized in laboratory prepared and preserved glassware, preserved in an iced cooler and transported under proper chain-of-custody procedures to an ELAP-accredited commercial environmental laboratory for analyses.

5.2 Groundwater Elevation Survey

A groundwater elevation survey was performed on the Site to determine groundwater flow direction. The elevation of groundwater was gauged at each monitoring well and recorded. The elevations were used to graphically define the planimetric surface of the water table. The elevations of the top of the casings were represented with respect to each other and based on a benchmark elevation or approximate elevation above mean sea level. The groundwater elevations were based as a function of the depth to water and these elevations.

A groundwater elevation survey was performed on June 24, 2013, concurrent with the collection of groundwater samples. Utilizing the elevation data collected from monitoring wells MW-1, MW-2, MW-3, MW-4, MW-5, and MW-6, a polynomial regression water table model was produced. Based on the model contours, the average hydraulic gradient was approximated to be 0.007896 ft/ft. The calculated gradient indicated a relative uniform flow direction to the apparent north by northeast. The groundwater elevation survey results are represented in **Table 4** and graphically depicted on **Plate 4**.

5.3 Laboratory Sample Identification

The groundwater samples secured from the onsite monitoring wells described in Section 5.1, were labeled for identification purposes as MW-1, MW-2, MW-3, MW-4, MW-5, and MW-6, respectively.

6.0 LABORATORY ANALYSIS

6.1 Analytical Test Methods

The soil and groundwater samples were transported to Alpha Analytical, Inc., an ELAP-accredited commercial environmental laboratory located in Westborough, MA for analysis. Selection of the analytical test methods were based on the *September 1992, New York State Department of Environmental Conservation, Sampling Guidelines and Protocols, Technical Background and Quality Control Assurance for the New York State Department of Environmental Conservation Spill Response Program* guidance document, the *New York State Department of Environmental Conservation Technical Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Limitations* guidance document, the *New York State Department of Environmental Conservation CP-51 Soil Cleanup Guidance* document; and the *May 2010, New York State Department of Environmental Conservation DER-10 Technical Guidance for Site Investigation and Remediation* document.

The laboratory analyses performed on the soil sample consisted of the United States Environmental Protection Agency (USEPA) Method 8260 NYSDEC CP-51 list for target volatile organic compounds (VOCs). The tabulated laboratory results are presented in **Table 3** and the laboratory reports are presented in **Appendix D**.

The laboratory analysis performed on the groundwater samples collected from the existing monitoring wells consisted of the United States Environmental Protection Agency (USEPA) Method 8260 NYSDEC CP-51 list for target volatile organic compounds. The tabulated laboratory results are presented in **Table 5** and the laboratory reports are presented in **Appendix D**.

6.2 Laboratory Analytical Results

The laboratory analysis performed on the soil boring sample detected concentrations of target VOC analytes at concentrations below the applicable guidance criteria. The laboratory analysis performed on the groundwater samples detected concentrations of target VOC analytes at concentrations slightly the applicable guidance criteria. The following summary presents such sample detections.

6.2.1 Soil Boring Sampling Results

Several VOCs were detected in soil boring sample SB-01, but at concentrations below NYSDEC CP-51 Unrestricted SCO standards.

6.2.2 Groundwater Sampling Results

The following New York State regulatory exceedences were detected in groundwater samples collected from existing monitoring wells previously described in Section 5.1:

- **MW-2:** n-propylbenzene (5.7 µg/l)
- **MW-5:** benzene (2.1 µg/l)

Said reported exceedences were only marginally above the 6NYCRR Part 703 Class GA groundwater quality standards for benzene (1 µg/l) and n-propylbenzene (5 µg/l). Other target analyte VOCs were detected in groundwater samples collected from monitoring wells MW-2, MW-3, and MW-5, but at concentrations below NYSDEC Part 703 groundwater standards. VOCs were not detected in groundwater samples collected from monitoring wells MW-1, MW-4 and/or MW-6.

7.0 EVALUATION OF RESULTS

During the June 2006 Subsurface Investigation, soil probe SP-1 was installed within the reported footprint of a former gasoline UST tank field. Residual soil contamination from within said tank field was identified in soil samples collected from soil probe SP-1, just above the observed water table. Following the Department's recommendations, Impact Environmental installed soil probe SB-01 on June 20, 2013, proximal to soil probe SP-1. Soil samples were collected from said probe between five (5) feet BEG to the observed water table. An unsaturated soil sample, collected just above the observed water table, within the 11 ft. to 12 ft. interval, from said boring was analyzed for target VOCs at an ELAP-accredited laboratory. Laboratory results of said soil sample collected did not detect VOCs at concentrations above NYSDEC CP-51 Unrestricted Soil Cleanup Objective concentrations.

On June 24, 2013, a total of six (6) onsite and offsite groundwater monitoring wells were sampled as part of the semi-annual groundwater monitoring event. The wells that were sampled as part of this event consisted of onsite monitoring wells MW-1, MW-2, MW-3, MW-4 and MW-5, and offsite monitoring well MW-6. The laboratory analyses performed on said groundwater samples detected nominal concentrations of gasoline related target volatile organic analytes, marginally above the NYSDEC 6NYCRR Part 703 Class GA groundwater standards; from monitoring wells MW-2 (n-propylbenzene - 5.7 µg/l) and MW-5 (benzene - 2.1 µg/l). Other target analyte VOCs were detected in groundwater samples collected from monitoring wells MW-2, MW-3, and MW-5, but at concentrations below NYSDEC Part 703 groundwater standards. VOCs were not detected in groundwater samples collected from monitoring wells MW-1, MW-4 and/or MW-6. Post-ORC Injection groundwater monitoring events have demonstrated a significant reduction of gasoline related VOCs in onsite groundwater. The results from this semi-annual groundwater sampling event confirms that no remaining source exists, with only nominal concentrations of VOCs reported in monitoring wells MW-2 and MW-5.

It appears that onsite, gasoline-related contamination associated with NYSDEC spill case number 0551768 was effectively mitigated to the extent practical. Two (2) bioremediative agent (ORC) injection events were performed in July 2007 and June 2009, to address previously reported residual soil contamination associated with the former UST tank field. The results of the supplemental subsurface investigation indicate that said residual soil contamination was remediated to concentrations below NYSDEC CP-51 Unrestricted Soil Cleanup Objectives. VOCs in onsite groundwater either meet or are marginally above 6NYCRR Part 703 Class GA Groundwater Quality Standards.

Based on the soil and groundwater data presented in this report, it is requested that NYSDEC spill case number 0551768 be closed and no further actions in support of said spill case number be warranted.

DISCLAIMER FOR SUBSURFACE INVESTIGATIONS

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

In preparing this report, Impact Environmental Consulting, Inc. may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to Impact Environmental Consulting, Inc. at the time of the Site assessment. Although there may have been some degree of overlap in the information provided by these various sources, Impact Environmental Consulting, Inc. did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this Site assessment.

Observations were made of the Site and of structures on the Site as indicated within the report. Where access to portions of the Site or to structures on the Site was unavailable or limited, Impact Environmental Consulting, Inc. renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to non-hazardous or hazardous materials, in that portion of the Site or structure. In addition, Impact Environmental Consulting, Inc. renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floor, or ceiling of a structure on a Site was obstructed by objects or coverings on or over these surfaces.

The purpose of this report is to assess the physical characteristics of portions of the Site with respect to the presence in the environment of hazardous materials. No specific attempt was made to check on the compliance of present or past owners or operators of the Site with the federal, state, or local laws and regulations, environmental or otherwise.

The conclusions and recommendations contained in this report are based in part, where noted, upon the data obtained from a limited number of soil samples obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

Any water level readings made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the Site assessment. Where such analyses have been conducted by an outside laboratory, Impact Environmental Consulting, Inc. has relied upon the data provided, and has not conducted an independent evaluation of the reliability of the data.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Chemical analyses have been performed for specific constituents during the course of this Site assessment, as described in the text. However, it should be noted that additional chemical constituents not searched for during the current study might be present in soil and/or groundwater at the Site.

Attn: Mr. Hank Alpert

Re: Closed Service Station
281 4th Avenue
Brooklyn, New York

Dear Mr. Alpert:

Gasoline Tanks' Removal

On September 18, 1990, Tyree Brothers Environmental Services Inc. (TBES) began removing underground gasoline storage tanks at the above-referenced site. A hydrogeologist from Tyree Brothers Environmental Services was present on site to screen soil samples using headspace analysis with an HNU Model PI 101 photoionization detector, to supervise the stockpiling of contaminated soil, to obtain soil samples from the stockpile of contaminated soil and from the bottom of the gasoline tank excavation for analysis by a NYS certified laboratory, and to visually inspect and photograph the tanks.

The tank field was excavated, and twelve (12) 550 gallon steel tanks were removed. Except for slight rusting on gasoline storage tanks #2, #9, #10 and #11 (see Figure 1 - Site Map), none of the tanks were rusting or corroded, and all of the tanks appeared intact upon visual inspection. Sludge from the tanks was poured into six (6) fifty-five (55) gallon DOT drums for disposal. ✓

Organic vapor concentrations (OVA) were measured with an HNU meter using headspace analysis. It should be noted that the HNU meter is used to measure organic vapors as they evolve from the soil samples. The readings are not exact determinations of true volatile content of the samples, but instead provide qualitative indications of the degree of volatile organic contamination.

Soil from the excavation generally consisted of a brown, silty, fine to medium sand with pebbles to a tan, fine to medium sand. Soil samples from the gasoline tank excavation had OVA readings ranging from 22 ppm to 540 ppm (see Table 1) using headspace analysis. Except for the soil sample with the 22 ppm reading, all of the soil samples from the excavation had a gasoline odor. Soil samples from the sidewalls of the gasoline tank excavation had OVA readings ranging from 240 ppm to 460 ppm. All of the soil samples from the sidewalls had a gasoline odor.

Two (2) representative grab samples (see Figure 1, locations A and B) were taken from the bottom of the gasoline tank excavation for analysis by Environmental Testing Laboratories (ETL). These samples were analyzed for benzene, toluene, ethylbenzene, xylenes and dichlorobenzenes (BTEX) and total petroleum hydrocarbons (TPH).

Analytical results of the soil samples taken from locations A and B revealed total BTEX concentrations of 238,858 ppb and 131,718 ppb, respectively. Analytical results from locations A and B also revealed TPH concentrations of 1,545 ppm and 68 ppm, respectively.

A composite soil sample was taken from the stockpiled soil on September 19, 1990. The soil was stockpiled on and covered with reinforced polyethylene. The composite soil sample was analyzed for BTEX, TPH, EP Toxicity for Metals, corrosivity and reactivity for hazardous waste characterization and disposal (see Site Map - location G).

Analytical results of the soil sample from location G revealed a total BTEX concentration of 94 to 99 ppb and a TPH concentration of 6,868 ppm. Concentrations per the EP toxicity analysis, ignitability, corrosivity, and

reactivity analyses identified the stockpiled soil to be non-hazardous per EPA characteristics.

Fuel Oil Tank Removal

The fuel oil tank was excavated on September 19, 1990. A 550 gallon steel tank was removed. Upon visual inspection it was noted that the tank was rusted, corroded and pitted, but appeared intact.

A soil sample from the bottom of the fuel oil tank excavation had an OVA reading of 350 ppm when measured with the HNU photoionization detector using headspace analysis. No odors were observed in the soil sample from the bottom of this excavation.

One (1) soil sample (see Figure 1, location C) was taken from the bottom of the fuel oil tank excavation for analysis by ETL. This sample was analyzed for BTEX and TPH. Analysis of the soil sample from location C revealed a BTEX concentration of 255 ppb and a TPH concentration of 139 ppm.

Waste Oil Tank Removal

The waste oil tank was excavated on September 19, 1990. A 550 gallon steel tank was removed. Upon visual inspection it was noted that the tank was rusting, corroded and pitted, but no holes were found, and the tank appeared intact.

A soil sample from the bottom of the waste oil tank excavation had an OVA reading of 380 ppm when measured with the HNU photoionization detector using headspace analysis. A petroleum odor was observed in the soil sample from the bottom of this excavation.

One (1) soil sample (see Figure 1, location D) was taken from the bottom of the waste oil tank excavation for analysis by ETL. This sample was analyzed for BTEX, TPH, halogenated organics (EPA 601) and EP Toxicity for Metals.

Analysis of the soil sample from location D revealed a BTEX concentration of 109 to 114 ppb and a TPH concentration of 153 ppm. No halogenated organics were detected in the soil sample from location D. Analytical results of the soil sample revealed EP Toxicity for arsenic at .014 ppm, barium at .073 ppm, cadmium at less than 0.020 ppm, chromium at less than .050 ppm, lead at 1.0 ppm, mercury at .180 ppm, selenium at less than .008 ppm and silver at less than 0.32 ppm.

All metal concentrations are less than the maximum allowable concentrations established by the US Environmental Protection Agency. The soil from the bottom of the waste oil tank excavation did not exhibit hazardous waste characteristics. Analytical reports for all samples and photographs of the storage tanks are attached.

Pump Islands' Removal

The two (2) pump islands were removed on September 19, 1990. A soil sample was taken from under each of the two (2) pump island locations and brought to ETL for analysis (see Site Map, locations E and F). The two (2) soil samples were analyzed for BTEX and TPH.

Analysis of the soil sample from under pump island #1 (see Site Map, location E) revealed a total BTEX concentration of 1,210 ppb and a TPH concentration of 123 ppm. Analysis of the soil sample from under pump island #2 (see Site Map, location F) revealed a total BTEX concentration of 29,489 ppb and a TPH concentration of 1,129 ppm.

Groundwater Assessment

On October 13, 1990, Tyree Brothers Environmental Services, Inc. drilled three (3) soil borings at the subject site (see Site Map in the Appendix for soil boring

locations). Borings W-2 and W-3 were drilled to a depth of fifteen (15) feet; boring W-1 was drilled to a depth of twenty (20) feet. The borings and wells were completed using a Central Mining Equipment (CME-75) hollow stem auger drilling rig.

Soil conditions encountered during drilling included a gray clay to a black, medium sand. A gasoline odor was observed while drilling all three (3) borings. A detailed geological description is provided in the boring logs which are included in the Appendix.

A groundwater monitoring well was installed at each of the three (3) boring locations. Well W-2 was installed to a depth of eighteen and one-half (18.5) feet. Wells W-2 and W-3 were installed to a depth of fifteen (15) feet. The depth to water in wells W-1, W-2 and W-3 were 11.69 feet, 11.44 feet, and 11.17 feet, respectively. The groundwater flow in the area of the subject site is generally in a west-southwesterly direction as obtained from regional groundwater contour maps prepared by the US Geological Survey.

On October 22, 1990, the three (3) monitoring wells were air developed. On the following day, all three (3) monitoring wells were sampled with dedicated bailers in order to avoid outside contamination. Before the sample was taken, three (3) to five (5) well casing volumes were removed from each of the wells in accordance with EPA protocol. No floating product was present when the wells were sampled. The groundwater samples from wells W-1, W-2, and W-3 were brought to ETL for analysis by EPA method 602 (BTEX), EPA 418.1 (TPH) and EPA 601 (halogenated organics).

Analytical results of the groundwater sample from well W-1 revealed a total concentration of aromatic hydrocarbons (BTEX) of 28,262 ppb and a TPH concentration of 17 ppm. The halogenated organics, chlorobenzene and 1,1-dichloroethene, were also detected at 3.6 ppb and 17 ppb, respectively.

Analytical results of the groundwater sample from well W-2 revealed a total concentration of aromatic hydrocarbons of 18,713 ppb and a TPH concentration of 54 ppm. The halogenated organics, dibromochloromethane and 1,1-dichloroethene, were also detected at 3.1 ppb and 13 ppb, respectively.

Analytical results of the groundwater sample from well W-3 revealed a total concentration of aromatic hydrocarbons of 27,588.5 ppb and a TPH concentration of less than one (1) ppm. The halogenated organic, 1,1-dichloroethene, was also detected at 19 ppb.

The laboratory also detected a high concentration of MTBE in all three (3) wells during analysis of the groundwater samples.

The New York State Department of Environmental Conservation does not set petroleum standards of contamination for soil. New York State groundwater standards are as follows:

Benzene	Non-detectable
Toluene	5 ppb
Ethylbenzene	5 ppb
Chlorobenzene	5 ppb
Xylenes	5 ppb
Dichlorobenzenes	5 ppb
Total Hydrocarbons	100 ppb

The concentrations of contaminants in the groundwater samples from wells W-2 and W-3 exceeded the state's groundwater standards for benzene, toluene, ethyl/chlorobenzene, xylenes and for a total hydrocarbon concentration. The laboratory results for the three (3) water samples are summarized in Table 3. The analytical reports are also included in the Appendix.

Conclusions

1. Gasoline odors were detected in the soil during the excavation of tanks and during the drilling of three (3) wells.
2. The depth to groundwater ranged from 11.17 feet to 11.69 feet.

3. Groundwater flow was determined to be in a west-southwesterly direction.
4. Soil samples from the bottom of the gasoline, fuel oil, and waste oil tanks, and from under the two (2) pump islands all exceeded 100 ppm when analyzed for total aromatic hydrocarbons and/or total petroleum hydrocarbons. Analytical results identified the stockpiled soil to be non-hazardous per EPA characteristics.
5. The groundwater samples from all three (3) wells exceeded the New York State groundwater standards for benzene, toluene, ethyl/chlorobenzene, xylenes, and total hydrocarbons. A high concentration of MTBE was also detected by the laboratory during analysis.

If you have questions regarding any of the enclosed, please feel free to contact this office.

Sincerely,

John Greene

GENERATOR'S CERTIFICATION. This is to certify that the above named materials are properly classified, described, packaged, marked and labeled, and are in proper condition for transportation according to the applicable regulations of the Department of Transportation, U.S.E.P.A. and the Ohio D.E.R. THE WASTE DESCRIBED ABOVE WAS APPROVED FOR DISPOSAL AT A.H. LANDFILL, BASED ON THE AGREEMENT BETWEEN BOTH THE GENERATOR AND THE DISPOSAL FACILITY. I certify that the foregoing is true and correct to the best of my knowledge. If the waste shipment is not as stated I accept the RETURN of the COMPLETE LOAD to the generator's service location, at the generator's expense.

INSTRUCTIONS

GENERATOR'S COPY — Mailed from A.H., Inc. after disposal process, and with the monthly billing.

TRANSPORTER'S COPY — Given to the transporter driver when shipment is inspected and unloaded.

DISPOSAL FACILITY — Filed in customer - generator master file.

GENERATOR'S CERTIFICATION. This is to certify that the above named materials are properly classified, described, packaged, marked and labeled, and are in proper condition for transportation according to the applicable regulations of the Department of Transportation, U.S.E.P.A. and the Ohio D.E.R. THE WASTE DESCRIBED ABOVE WAS APPROVED FOR DISPOSAL AT A.H. LANDFILL, BASED ON THE AGREEMENT BETWEEN BOTH THE GENERATOR AND THE DISPOSAL FACILITY. I certify that the foregoing is true and correct to the best of my knowledge. If the waste shipment is not as stated I accept the RETURN of the COMPLETE LOAD to the generator's service location, at the generator's expense.

INSTRUCTIONS

GENERATOR'S COPY — Mailed from A.H., Inc. after disposal process, and with the monthly billing.

TRANSPORTER'S COPY — Given to the transporter driver when shipment is inspected and unloaded.

DISPOSAL FACILITY — Filed in customer - generator master file.

(2) Generator's Copy

(3) Transporter's Copy

ACKNOWLEDGEMENT OF NOTIFICATION
OF HAZARDOUS WASTE ACTIVITY

10/01/90

This is to acknowledge that you have filed a Notification of Hazardous Waste Activity for the installation located at the address shown in the box below to comply with Section 3010 of the Resource Conservation and Recovery Act (RCRA). Your EPA Identification Number for that installation appears in the box below. The EPA Identification Number must be included on all shipping manifests for transporting hazardous wastes; on all Annual Reports that generators of hazardous waste, and owners and operators of hazardous waste treatment, storage and disposal facilities must file with EPA; on all applications for a Federal Hazardous Waste Permit; and other hazardous waste management reports and documents required under Subtitle C of RCRA.

EPA I.D. NUMBER ->	NYD986914133

BROOKLYN N.Y.

Dear Ms. Thompson:

On 9/18/90 - 9/20/90 Larry E. Tyree Co., Inc: (License #61178273)
pumped all volatile liquids from 12-533 GAS ^{1-533 1/2} gallon (14 TOTAL)
tank(s) and purged the tank(s) and lines of explosive vapors
and subsequently removed same tank(s).

If you have any further questions concerning this matter,
feel free to contact this office.

Sincerely,

Larry E. Tyree Co., Inc.

Odessa Oil Corporation
1158 Broadway
Hewlett, New York 11558
Attn: Hank Alpert

Re: McDonald's Restaurant
281 4th Avenue
Brooklyn, New York

Dear Mr. Alpert:

As per your request, the following is an overview of environmental activities that have been performed at the above-referenced site. In September 1990, twelve 550-gallon gasoline tanks, one 550-gallon waste oil tank, and one 550-gallon fuel oil tank were excavated from the closed gasoline service station on site. Gasoline odors and petroleum contamination were noted in the soil of the excavations. Approximately 219 tons of contaminated soil were removed from the site. Three (3) groundwater monitoring wells were also installed at that time. Sampling indicated that groundwater was contaminated at levels that exceeded drinking water standards.

In October 1993, the wells were monitored and sampled. The property was operating as a Safelite Auto repair shop at that time. No free-floating product was noted. Sampling indicated that groundwater was still contaminated at levels exceeding standards.

During reconstruction of the property in May 1994, six additional 550-gallon tanks and two 275-gallon tanks were discovered and removed. Approximately 343 tons of petroleum contaminated soil were also removed and disposed of at that time. A Soil Vapor Extraction System (SVES) was installed during the reconstruction of the site in order to remediate the on-site

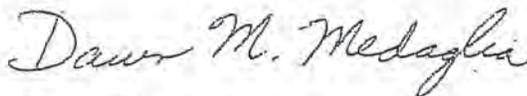

contamination. Horizontal slotted piping was installed in the southern and middle areas of the property. The cost of the SVES installation including permits and electric was \$22,785.

The SVES was put into operation in January 1995 after the Air 100 permit had been received from the NYSDEC and all construction had been completed. Air samples are currently obtained on a monthly basis in conformance with the effluent permit. Monthly maintenance is also performed on the system.

The soil is expected to be remediated within approximately three years. Operation and maintenance costs for the three year period are expected to be approximately \$21,000. It should be noted that all of the previously existing monitoring wells were destroyed during the reconstruction of the site. Therefore, at the time of closure, a Geoprobe survey will be performed to confirm that the site has been remediated to acceptable levels. The cost of the Geoprobe survey will be approximately \$4,750. The results of the Geoprobe survey will be reviewed to determine if any further work will be required.

If you have questions regarding any of the above information, please feel free to contact the undersigned.

Sincerely,

Dawn M. Medaglia
Hydrogeologist/Project Manager

Brooklyn, New York

Appendix C
Quality Assurance and Quality Control Procedures (QA/QC)

APPENDIX C:

Quality Assurance and Quality Control Procedures (QA/QC)

The following sampling QA/QC protocol is in accordance with the United States Environmental Protection Agency's (USEPA) accepted sampling procedures for hazardous waste streams [Municipal Research Laboratory, 1980, Sampling and Analysis Procedures for Hazardous Material Waste Streams, Office of Emergency and Remedial Response, Cincinnati, Ohio. EPA-600/280-018] and American Society of Testing and Material's (ASTM's) Sampling Procedures.

Sampling Personnel

The activities associated with the survey, sampling and analysis plan were performed by or under the auspices of a USEPA Office of Emergency and Remedial Response, Certified Sampler for Hazardous Materials. The sample staff (samplers) possessed a minimum of a B.A. Degree in the Earth, Space or Biological Sciences or a B.S. Degree in Engineering. Samplers had a minimum of one (1) year experience in environmental/geological field work. Additionally, all samplers had received mandatory forty-hour Occupational Safety and Health Administration (OSHA) training on working with potentially hazardous materials and appropriate Hazard Communication Program and "Right-To-Know" training.

Sampling Equipment

Separate QA/QC measures were implemented for each of the instruments used in the performance of the SAP.

Geoprobe

Prior to arrival on the Site and between sample locations, the probes were decontaminated by washing them with a detergent (Alconox) and potable water solution and rinsing them with distilled water.

Photo Ionization Detector

Calibration of the PID was conducted prior to sampling using a span gas of known concentration. The PID was a Photovac Micro-Tip, photo ionization detection meter.

Sample Vessels

All sample vessels were "level A" certified decontaminated containers supplied by a New York State Certified Commercial Laboratory. Samples analyzed for hydrocarbons were placed in containers with Teflon lined caps. All samples were preserved by cooling them to a temperature of approximately four degrees Celsius.

Sample Documentation

A sample represents physical evidence. An essential part of liability reduction is the proper control of gathered evidence. To establish proper control, the following sample identification and chain-of custody procedures were followed.

Sample Identification

Sample identification was executed by use of a sample tag, log book and chain-of-custody form. Said documentation provided the following information: 1) the project code; 2) the sample laboratory number; 3) the sample preservation; 4) instrument used for source sample grabs; 5) the composite medium used for source sample grabs; 6) the date the sample was secured from the source media; 7) the time the sample was secured from the source media; and 8) the person who secured the sample from the source media.

Chain-of-Custody Procedures

Due to the evidential nature of samples, possession was traceable from the time the samples were collected until they were received by the testing laboratory. A sample was considered under custody if it: was in a person's possession; it was in a person's view, after being in possession; if it was in a person's possession and they locked it up; or, it was in a designated secure area. When transferring custody, the individuals relinquishing and receiving the samples signed, dated and noted the time on the Chain-of-Custody Form.

Laboratory-Custody Procedures

A designated sample custodian accepted custody of the shipped samples and verified that the information on the sample tags matched that on the Chain-of-Custody Records. Pertinent information as to shipment, pick-up, courier, etc., were entered in the "remarks" section. The custodian entered the sample tag data into a bound logbook.

The laboratory custodian used the sample tag number, or assigned a unique laboratory number to each sample tag, and assured that all samples were transferred to the proper analyst or stored in the appropriate source area. The laboratory custodian distributed samples to the appropriate analysts. Laboratory personnel were responsible for the care and custody of samples, from the time they were received, until the sample was exhausted or returned to the sample custodian. All identifying data sheets and laboratory records were retained as part of the permanent documentation. Samples received by the laboratory were retained until after analysis and quality assurance checks were completed.

Report Date: 06/28/13

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples free of charge for 30 days from the date the project is completed. After 30 days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples.

Please contact Client Services at 800-624-9220 with any questions.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than five times (5x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The RPD between the results for the two columns exceeds the method-specified criteria; however, the lower value has been reported

Report Format: DU Report with "J" Qualifiers

Lab Number: L1311474
Report Date: 06/28/13

Data Qualifiers

due to obvious interference.

- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised June 17, 2013 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Connecticut Department of Public Health Certificate/Lab ID: PH-0574. NELAP Accredited Solid Waste/Soil.

Drinking Water (Inorganic Parameters: Color, pH, Turbidity, Conductivity, Alkalinity, Chloride, Free Residual Chlorine, Fluoride, Calcium Hardness, Sulfate, Nitrate, Nitrite, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Nickel, Silver, Sodium, Thallium, Zinc, Total Dissolved Solids, Total Organic Carbon, Total Cyanide, Perchlorate. Organic Parameters: Volatile Organics 524.2, Total Trihalomethanes 524.2, 1,2-Dibromo-3-chloropropane (DBCP) 504.1, Ethylene Dibromide (EDB) 504.1, 1,4-Dioxane (Mod 8270). Microbiology Parameters: Total Coliform-MF mEndo (SM9222B), Total Coliform – Colilert (SM9223, Enumeration and P/A), E. Coli. – Colilert (SM9223, Enumeration and P/A), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D), Fecal Coliform-EC Medium (SM 9221E).

Wastewater/Non-Potable Water (Inorganic Parameters: Color, pH, Conductivity, Acidity, Alkalinity, Chloride, Total Residual Chlorine, Fluoride, Total Hardness, Silica, Sulfate, Sulfide, Ammonia, Kjeldahl Nitrogen, Nitrate, Nitrite, O-Phosphate, Total Phosphorus, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Dissolved Solids, Total Suspended Solids (non-filterable), BOD, CBOD, COD, TOC, Total Cyanide, Phenolics, Foaming Agents (MBAS), Bromide, Oil and Grease. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Acid Extractables (Phenols), Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, Polynuclear Aromatic Hydrocarbons, Haloethers, Chlorinated Hydrocarbons, Volatile Organics, TPH (HEM/SGT), CT-Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH. Microbiology Parameters: Total Coliform – MF mEndo (SM9222B), Total Coliform – MTF (SM9221B), E. Coli – Colilert (SM9223 Enumeration), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D), Fecal Coliform – A-1 Broth (SM9221E), Enterococcus - Enterolert.

Solid Waste/Soil (Inorganic Parameters: pH, Sulfide, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Tin, Vanadium, Zinc, Total Cyanide, Ignitability, Phenolics, Corrosivity, TCLP Leach (1311), SPLP Leach (1312 metals only), Reactivity. Organic Parameters: PCBs, PCBs in Oil, Organochlorine Pesticides, Technical Chlordane, Toxaphene, CT-Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH, Dicamba, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Dalapon, Volatile Organics (SW 8260), Acid Extractables (Phenols) (SW 8270), Benzidines (SW 8270), Phthalates (SW 8270), Nitrosamines (SW 8270), Nitroaromatics & Cyclic Ketones (SW 8270), PAHs (SW 8270), Haloethers (SW 8270), Chlorinated Hydrocarbons (SW 8270).)

State of Illinois Certificate/Lab ID: 003155. NELAP Accredited.

Drinking Water (Inorganic Parameters: SM2120B, 2320B, 2510B, 2540C, SM4500CN-CE, 4500F-C, 4500H-B, 4500NO3-F, 5310C, EPA 200.7, 200.8, 245.1, 300.0. Organic Parameters: EPA 504.1, 524.2.)

Wastewater/Non-Potable Water (Inorganic Parameters: SM2120B, 2310B, 2320B, 2340B, 2510B, 2540B, 2540C, 2540D, SM4500CL-E, 4500CN-E, 4500F-C, 4500H-B, 4500NH3-H, 4500NO2-B, 4500NO3-F, 4500P-E, 4500S-D, 4500SO3-B, 5210B, 5220D, 5310C, 5540C, EPA 120.1, 1664A, 200.7, 200.8, 245.1, 300.0, 350.1, 351.1, 353.2, 410.4, 420.1. Organic Parameters: EPA 608, 624, 625.)

Hazardous and Solid Waste (Inorganic Parameters: EPA 1010A, 1030, 1311, 1312, 6010C, 6020A, 7196A, 7470A, 7471B, 9012B, 9014, 9038, 9040C, 9045D, 9050A, 9065, 9251. Organic Parameters: 8011 (NPW only), 8015C, 8081B, 8082A, 8151A, 8260C, 8270D, 8315A, 8330.)

Maine Department of Human Services Certificate/Lab ID: 2009024.

Drinking Water (Inorganic Parameters: SM9215B, 9222D, 9223B, EPA 180.1, 353.2, SM2120B, 2130B, 2320B, 2510C, 2540C, 4500CI-D, 4500CN-C, 4500CN-E, 4500F-C, 4500H+B, 4500NO3-F, 5310C, EPA 200.7, EPA 200.8, 245.1, EPA 300.0. Organic Parameters: 504.1, 524.2.)

Wastewater/Non-Potable Water (Inorganic Parameters: EPA 120.1, 1664A, 300.0, 350.1, 351.1, 353.2, 410.4, 420.1, 8315A, 9010C, SM2120B, 2310B, 2320B, 2510B, 2540B, 2540C, 2540D, 426C, 4500CI-E, 4500CN-C, 4500CN-E, 4500F-B, 4500F-C, 4500H+B, 4500Norg-C, 4500NH3-B, 4500NH3-H, 4500NO2-B, 4500NO3-F, 4500P-B, 4500P-E, 4500S2-D, 4500SO3-B, 5540C, 5210B, 5220D, 5310C, 9010B, 9030B, 9040C, 7470A, 7196A, 2340B, EPA 200.7, 6010C, 200.8, 6020A, 245.1, 1311, 1312, 3005A, Enterolert, 9223B, 9222D. Organic Parameters: 608, 624, 625, 8011, 8081B, 8082A, 8330, 8151A, 8260C, 8270D, 3510C, 3630C, 5030B, ME-DRO, ME-GRO, MA-EPH, MA-VPH.)

Solid Waste/Soil (Inorganic Parameters: 9010B, 9012A, 9014, 9040B, 9045C, 6010C, 6020A, 7471B, 7196A, 9050A, 1010, 1030, 9065, 1311, 1312, 3005A, 3050B, 9038, 9251. Organic Parameters: ME-DRO, ME-GRO, MA-EPH, MA-VPH, 8260C, 8270D, 8330, 8151A, 8081B, 8082A, 3540C, 3546, 3580A, 3620C, 3630C, 5030B, 5035.)

Massachusetts Department of Environmental Protection Certificate/Lab ID: M-MA086.

Drinking Water (Inorganic Parameters: (EPA 200.8 for: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl) (EPA 200.7 for: Ba,Be,Ca,Cd,Cr,Cu,Na,Ni) 245.1, (300.0 for: Nitrate-N, Fluoride, Sulfate); (EPA 353.2 for: Nitrate-N, Nitrite-N); (SM4500NO3-F for: Nitrate-N and Nitrite-N); 4500F-C, 4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, 2320B, SM2540C, SM4500H-B. Organic Parameters: (EPA 524.2 for: Trihalomethanes, Volatile Organics); (504.1 for: 1,2-Dibromoethane, 1,2-Dibromo-3-Chloropropane), EPA 332. Microbiology Parameters: SM9215B; ENZ. SUB. SM9223; ColilertQT SM9223B; MF-SM9222D.)

Non-Potable Water (Inorganic Parameters: (EPA 200.8 for: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn); (EPA 200.7 for: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn); 245.1, SM4500H,B, EPA 120.1, SM2510B, 2540C, 2340B, 2320B, 4500CL-E, 4500F-BC, 426C, SM4500NH3-BH, (EPA 350.1 for: Ammonia-N), LACHAT 10-107-06-1-B for Ammonia-N, SM4500NO3-F, 353.2 for Nitrate-N, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, 4500P-B,E, 5220D, EPA 410.4, SM 5210B, 5310C, 4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.

Organic Parameters: (EPA 624 for Volatile Halocarbons, Volatile Aromatics),(608 for: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT,Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs-Water), (EPA 625 for SVOC Acid Extractables and SVOC Base/Neutral Extractables), 600/4-81-045-PCB-Oil. Microbiology Parameters: (ColilertQT SM9223B; Enterolert-QT: SM9222D-MF.)

New Hampshire Department of Environmental Services Certificate/Lab ID: 200307. NELAP Accredited.

Drinking Water (Inorganic Parameters: SM 9222B, 9223B, 9215B, EPA 200.7, 200.8, 300.0, SM4500CN-E, 4500H+B, 4500NO3-F, 2320B, 2510B, 2540C, 4500F-C, 5310C, 2120B, EPA 332.0. Organic Parameters: 504.1, 524.2.)

Non-Potable Water (Inorganic Parameters: SM9222D, 9221B, 9222B, 9221E-EC, EPA 3005A, 200.7, 200.8, 245.1, SW-846 6010C, 6020A, 7196A, 7470A, SM3500-CR-D, EPA 120.1, 300.0, 350.1, 350.2, 351.1, 353.2, 410.4, 420.1, 426C, 1664A, SW-846 9010B, 9010C, 9030, 9040B, 9040C, SM2120B, 2310B, 2320B, 2340B, 2540B, 2540D, 4500H+B, 4500CL-E, 4500CN-E, 4500NH3-H, 4500NO3-F, 4500NO2-B, 4500P-E, 4500-S2-D, 4500SO3-B, 5210B, 5220D, 2510B, 2540C, 4500F-C, 5310C, 5540C, LACHAT 10-204-00-1-A, LACHAT 10-107-06-2-D, 3060A. Organic Parameters: SW-846 3510C, 3630C, 5030B, 8260C, 8270D, 8330, EPA 624, 625, 608, SW-846 8082A, 8081B, 8015C, 8151A, 8330, 8270D-SIM.)

Solid & Chemical Materials (Inorganic Parameters: SW-846 6010C, 6020A, 7196A, 7471B, 1010, 1010A, 1030, 9010C, 9012B, 9014, 9030B, 9040C, 9045C, 9045D, 9050, 9065, 9251, 1311, 1312, 3005A, 3050B, 3060A. Organic Parameters: SW-846 3540C, 3546, 3050B, 3580A, 3620D, 3630C, 5030B, 5035, 8260C, 8270D, 8270D-SIM, 8330, 8151A, 8015B, 8015C, 8082A, 8081B.)

New Jersey Department of Environmental Protection Certificate/Lab ID: MA935. NELAP Accredited.

Drinking Water (Inorganic Parameters: SM9222B, 9221E, 9223B, 9215B, 4500CN-CE, 4500NO3-F, 4500F-C, EPA 300.0, 200.7, 200.8, 245.1, 2540C, SM2120B, 2320B, 2510B, 5310C, SM4500H-B. Organic Parameters: EPA 332, 504.1, 524.2.)

Non-Potable Water (Inorganic Parameters: SM5210B, EPA 410.4, SM5220D, 4500CI-E, EPA 300.0, SM2120B, 2340B, SM4500F-BC, EPA 200.7, 200.8, 351.1, LACHAT 10-107-06-2-D, EPA 353.2, SM4500NO3-F, 4500NO2-B, EPA 1664A, SM5310B, C or D, 4500-PE, EPA 420.1, SM510ABC, SM4500P-B5+E, 2540B, 2540C, 2540D, EPA 120.1, SM2510B, SM15 426C, 9222D, 9221B, 9221C, 9221E, 9222B, 9215B, 2310B, 2320B, 4500NH3-H, 4500-S D, EPA 350.1, 350.2, SW-846 1312, 7470A, 5540C, SM4500H-B, 4500SO3-B, SM3500Cr-D, 4500CN-CE, EPA 245.1, SW-846 9040B, 9040C, 3005A, 3015, EPA 6010B, 6010C, 6020, 6020A, 7196A, 3060A, SW-846 9010C, 9030B. Organic Parameters: SW-846 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 3510C, EPA 608, 624, 625, SW-846 3630C, 5030B, 8011, 8015C, 8081A, 8081B, 8082, 8082A, 8151A, 8330, 1,4-Dioxane by NJ Modified 8270, 8015B, NJ EPH.)

Solid & Chemical Materials (Inorganic Parameters: SW-846, 6010B, 6010C, 6020, 6020A, 7196A, 3060A, 9030B, 1010, 1010A, 1030, 1311, 1312, 3005A, 3050B, 7471A, 7471B, 9010C, 9012B, 9014, 9038, 9040B, 9040C, 9045C, 9045D, 9050A, 9065, 9251. Organic Parameters: SW-846 8015B, 8015C, 8081A, 8081B, 8082, 8082A, 8151A, 8330, 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 3540C, 3546, 3580A, 3620C, 3630C, 5030B, 5035L, 5035H, NJ EPH.)

New York Department of Health Certificate/Lab ID: 11148. NELAP Accredited.

Drinking Water (Inorganic Parameters: SM9223B, 9222B, 9215B, EPA 200.8, 200.7, 245.1, SM5310C, EPA 332.0, SM2320B, EPA 300.0, SM2120B, 4500CN-E, 4500F-C, 4500NO3-F, 2540C, SM 2510B. Organic Parameters: EPA 524.2, 504.1.)

Non-Potable Water (Inorganic Parameters: SM9221E, 9222D, 9221B, 9222B, 9215B, 5210B, 5310C, EPA 410.4, SM5220D, 2310B, 2320B, EPA 200.7, 300.0, SM4500CL-E, 4500F-C, SM15 426C, EPA 350.1, SM4500NH3-BH, EPA 351.1, LACHAT 10-107-06-2, EPA 353.2, SM4500-NO3-F, 4500-NO2-B, 4500P-E, 2340B, 2540C, 2540B, 2540D, EPA 200.8, EPA 6010C, 6020A, EPA 7196A, SM3500Cr-D, EPA 245.1, 7470A, SM2120B, 4500CN-CE, EPA 1664A, EPA 420.1, SM14 510C, EPA 120.1, SM2510B, SM4500S-D, SM5540C, EPA 8315A, 3005A, 3015, 9010C, 9030B. Organic Parameters: EPA 624, 8260C, 8270D, 8270D-SIM, 625, 608, 8081B, 8151A, 8330, 8082A, EPA 3510C, 5030B, 8015C, 8011.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 1010A, 1030, EPA 6010C, 6020A, 7196A, 7471B, 8315A, 9012B, 9014, 9065, 9050A, 9038, 9251, EPA 1311, 1312, 3005A, 3050B, 9010C, 9030B, 9040C, 9045D. Organic Parameters: EPA 8260C, 8270D, 8270D-SIM, 8015C, 8081B, 8151A, 8330, 8082A, 3540C, 3546, 3580A, 5035A-H, 5035A-L.)

North Carolina Department of the Environment and Natural Resources Certificate/Lab ID : 666. (Inorganic Parameters: SM2310B, 2320B, 4500Cl-E, 4500Cn-E, 9012B, 9014, Lachat 10-204-00-1-X, 1010A, 1030, 4500NO3-F, 353.2, 4500P-E, 4500SO4-E, 300.0, 4500S-D, 5310B, 5310C, 6010C, 6020A, 200.7, 200.8, 3500Cr-B, 7196A, 245.1, 7470A, 7471B, 1311,1312. Organic Parameters: 608, 8081B, 8082A, 624, 8260B, 625, 8270D, 8151A, 8015C, 504.1, MA-EPH, MA-VPH.)

Drinking Water Program Certificate/Lab ID: 25700. (Inorganic Parameters: Chloride EPA 300.0. Organic Parameters: 524.2)

Pennsylvania Department of Environmental Protection Certificate/Lab ID : 68-03671. **NELAP Accredited.**

Drinking Water (Inorganic Parameters: 200.7, 200.8, 300.0, 332.0, 2120B, 2320B, 2510B, 2540C, 4500-CN-CE, 4500F-C, 4500H+-B, 4500NO3-F, 5310C. Organic Parameters: EPA 524.2, 504.1)

Non-Potable Water (Inorganic Parameters: EPA 120.1, 1312, 3005A,3015, 3060A, 200.7, 200.8, 410.4, 1664A, SM2540D, 5210B, 5220D, 4500-P,BE, 245.1, 300.0, 350.1, 350.2, 351.1, 353.2, 420.1, 6010C, 6020A, 7196A, 7470A, 9030B, 2120B, 2310B, 2320B, 2510B, 2540B, 2540C, 3500Cr-D, 426C, 4500CN-CE, 4500Cl-E, 4500F-B, 4500F-C, 4500H+-B, 4500NH3-H, 4500NO2-B, 4500NO3-F, 4500S-D, 4500SO3-B, 5310BCD, 5540C, 9010C, 9040C. Organic Parameters: EPA 3510C, 3630C, 5030B, 625, 624, 608, 8081B, 8082A, 8151A, 8260C, 8270D, 8270D-SIM, 8330, 8015C, NJ-EPH.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 350.1, 1010, 1030, 1311, 1312, 3005A, 3050B, 3060A, 6010C, 6020A, 7196A, 7471B, 9010C, 9012B, 9014, 9040B, 9045D, 9050A, 9065, SM 4500NH3-BH, 9030B, 9038, 9251. Organic Parameters: 3540C, 3546, 3580A, 3620C, 3630C, 5035, 8015C, 8081B, 8082A, 8151A, 8260C, 8270D, 8270D-SIM, 8330, NJ-EPH.)

Rhode Island Department of Health Certificate/Lab ID: LAO00065. **NELAP Accredited via NJ-DEP.**

Refer to MA-DEP Certificate for Potable and Non-Potable Water.

Refer to NJ-DEP Certificate for Potable and Non-Potable Water.

Texas Comission on Environmental Quality Certificate/Lab ID: T104704476. **NELAP Accredited.**

Non-Potable Water (Inorganic Parameters: EPA 120.1, 1664, 200.7, 200.8, 245.1, 245.2, 300.0, 350.1, 351.1, 353.2, 410.4, 420.1, 6010, 6020, 7196, 7470, 9040, SM 2120B, 2310B, 2320B, 2510B, 2540B, 2540C, 2540D, 426C, 4500CL-E, 4500CN-E, 4500F-C, 4500H+B, 4500NH3-H, 4500NO2B, 4500P-E, 4500 S²⁻ D, 510C, 5210B, 5220D, 5310C, 5540C. Organic Parameters: EPA 608, 624, 625, 8081, 8082, 8151, 8260, 8270, 8330.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 1311, 1312, 9012, 9014, 9040, 9045, 9050, 9065.)

Virginia Division of Consolidated Laboratory Services Certificate/Lab ID: 460195. **NELAP Accredited.**

Drinking Water (Inorganic Parameters: EPA 200.7, 200.8, 300.0, 2510B, 2120B, 2540C, 4500CN-CE, 245.1, 2320B, 4500F-C, 4500NO3-F, 4500H+B, 5310C. Organic Parameters: EPA 504.1, 524.2.)

Non-Potable Water (Inorganic Parameters: EPA 120.1, 1664A, 200.7, 200.8, 245.1, 300.0, 350.1, 351.1, 351.2, 3005A, 3015, 1312, 6010B, 6010C, 3060A, 353.2, 420.1, 2340B, 6020, 6020A, SM4500S-D, SM4500-CN-CE, Lachat 10-204-00-1-X, 7196A, 7470A, 2310B, 2320B, 2510B, 2540B, 2540C, 2540D, 3500Cr-D, 426C, 4500Cl-E, 4500F-B, 4500F-C, 4500NH3-H, 4500NO2-B, 4500NO3-F, 4500 SO3-B, 4500H-B, 4500PE, 510AC, 5210B, 5310B 5310C, 5540C, 9010Cm 9030B, 9040C. Organic Parameters: EPA 3510C, 3630C, 5030B, 8260B, 608, 624, 625, 8011, 8015C, 8081A, 8081B, 8082, 8082A, 8151A, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 8330,)

Solid & Hazardous Waste (Inorganic Parameters: EPA 1010A, 1030, 3060A, 3050B, 1311, 1312, 6010B, 6010C, 6020, , 7196A, 7471A, 7471B, 6020A, 9010C, 9012B, 9030B, 9014, 9038, 9040C, 9045D, 9251, 9050A, 9065. Organic Parameters: EPA 5030B, 5035, 3540C, 3546, 3550B, 3580A, 3620C, 3630C, 6020A, 8260B, 8260C, 8015B, 8015C, 8081A, 8081B, 8082, 8082A, 8151A, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 8330.)

Department of Defense, L-A-B Certificate/Lab ID: L2217.

Drinking Water (Inorganic Parameters: SM 4500H-B. Organic Parameters: EPA 524.2, 504.1.)

Non-Potable Water (Inorganic Parameters: EPA 200.7, 200.8, 6010B, 6010C, 6020, 6020A, 245.1, 245.2, 7470A, 9040B, 9010B, 180.1, 300.0, 332.0, 6860, 353.2, 410.4, 9060, 1664A, SM 4500CN-E, 4500H-B, 4500NO3-F, 4500CL-D, 5220D, 5310C, 2130B, 2320B, 2540C, 3005A, 3015, 9010B, 9056, 7196A, 3500-Cr-D. Organic Parameters: EPA 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 8330A, 8082, 8082A, 8081A, 8081B, 3510C, 5030B, MassDEP EPH, MassDEP VPH.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 200.7, 6010B, 6010C, 7471A, 6860, 1311, 1312, 3050B, 7196A, 9010B, 9012A, 9040B, 9045C, 3500-CR-D, 4500CN-CE, 2540G, Organic Parameters: EPA 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 8330A/B-prep, 8082, 8082A, 8081A, 8081B, 3540C, 3546, 3580A, 5035A, MassDEP EPH, MassDEP VPH.)

The following analytes are not included in our current NELAP/TNI Scope of Accreditation:

EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether, Ethyl tert-butyl ether, Tert-amyl methyl ether (TAME), Diisopropyl ether (DIPE). **EPA 8260B:** 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, 1,3,5-Trimethylbenzene. **EPA 8260 Non-potable water matrix:** Iodomethane (methyl iodide), Methyl methacrylate. **EPA 8260 Soil matrix:** Tert-amyl methyl ether (TAME), Diisopropyl ether (DIPE), Azobenzene. **EPA 8330A:** PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT. **EPA 8270C:** Methyl naphthalene, Dimethyl naphthalene, Total Methylnaphthalenes, Total Dimethylnaphthalenes, 1,4-Diphenylhydrazine. **EPA 625:** 4-Chloroaniline, 4-Methylphenol. **EPA 8015C:** TPH. Total Phosphorus in a soil matrix, TKN in a soil matrix, NO₂ in a soil matrix, NO₃ in a soil matrix. **EPA 9071:** Total Petroleum Hydrocarbons, Oil & Grease.

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples free of charge for 30 days from the date the project is completed. After 30 days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples.

Please contact Client Services at 800-624-9220 with any questions.

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than five times (5x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The RPD between the results for the two columns exceeds the method-specified criteria; however, the lower value has been reported

Report Format: DU Report with "J" Qualifiers

Project Name: 06-028
Project Number: 06-028

Lab Number: L1311750
Report Date: 07/02/13

Data Qualifiers

due to obvious interference.

- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certificate/Approval Program Summary

Last revised June 17, 2013 - Westboro Facility

The following list includes only those analytes/methods for which certification/approval is currently held.
For a complete listing of analytes for the referenced methods, please contact your Alpha Customer Service Representative.

Connecticut Department of Public Health Certificate/Lab ID: PH-0574. **NELAP Accredited Solid Waste/Soil.**

Drinking Water (Inorganic Parameters: Color, pH, Turbidity, Conductivity, Alkalinity, Chloride, Free Residual Chlorine, Fluoride, Calcium Hardness, Sulfate, Nitrate, Nitrite, Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Nickel, Silver, Sodium, Thallium, Zinc, Total Dissolved Solids, Total Organic Carbon, Total Cyanide, Perchlorate. Organic Parameters: Volatile Organics 524.2, Total Trihalomethanes 524.2, 1,2-Dibromo-3-chloropropane (DBCP) 504.1, Ethylene Dibromide (EDB) 504.1, 1,4-Dioxane (Mod 8270). Microbiology Parameters: Total Coliform-MF mEndo (SM9222B), Total Coliform – Colilert (SM9223, Enumeration and P/A), E. Coli. – Colilert (SM9223, Enumeration and P/A), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D), Fecal Coliform-EC Medium (SM 9221E).

Wastewater/Non-Potable Water (Inorganic Parameters: Color, pH, Conductivity, Acidity, Alkalinity, Chloride, Total Residual Chlorine, Fluoride, Total Hardness, Silica, Sulfate, Sulfide, Ammonia, Kjeldahl Nitrogen, Nitrate, Nitrite, O-Phosphate, Total Phosphorus, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Strontium, Thallium, Tin, Titanium, Vanadium, Zinc, Total Residue (Solids), Total Dissolved Solids, Total Suspended Solids (non-filterable), BOD, CBOD, COD, TOC, Total Cyanide, Phenolics, Foaming Agents (MBAS), Bromide, Oil and Grease. Organic Parameters: PCBs, Organochlorine Pesticides, Technical Chlordane, Toxaphene, Acid Extractables (Phenols), Benzidines, Phthalate Esters, Nitrosamines, Nitroaromatics & Isophorone, Polynuclear Aromatic Hydrocarbons, Haloethers, Chlorinated Hydrocarbons, Volatile Organics, TPH (HEM/SGT), CT-Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH. Microbiology Parameters: Total Coliform – MF mEndo (SM9222B), Total Coliform – MTF (SM9221B), E. Coli – Colilert (SM9223 Enumeration), HPC – Pour Plate (SM9215B), Fecal Coliform – MF m-FC (SM9222D), Fecal Coliform – A-1 Broth (SM9221E), Enterococcus - Enterolert.

Solid Waste/Soil (Inorganic Parameters: pH, Sulfide, Aluminum, Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chromium, Hexavalent Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Tin, Vanadium, Zinc, Total Cyanide, Ignitability, Phenolics, Corrosivity, TCLP Leach (1311), SPLP Leach (1312 metals only), Reactivity. Organic Parameters: PCBs, PCBs in Oil, Organochlorine Pesticides, Technical Chlordane, Toxaphene, CT-Extractable Petroleum Hydrocarbons (ETPH), MA-EPH, MA-VPH, Dicamba, 2,4-D, 2,4,5-T, 2,4,5-TP(Silvex), Dalapon, Volatile Organics (SW 8260), Acid Extractables (Phenols) (SW 8270), Benzidines (SW 8270), Phthalates (SW 8270), Nitrosamines (SW 8270), Nitroaromatics & Cyclic Ketones (SW 8270), PAHs (SW 8270), Haloethers (SW 8270), Chlorinated Hydrocarbons (SW 8270).)

State of Illinois Certificate/Lab ID: 003155. **NELAP Accredited.**

Drinking Water (Inorganic Parameters: SM2120B, 2320B, 2510B, 2540C, SM4500CN-CE, 4500F-C, 4500H-B, 4500NO3-F, 5310C, EPA 200.7, 200.8, 245.1, 300.0. Organic Parameters: EPA 504.1, 524.2.)

Wastewater/Non-Potable Water (Inorganic Parameters: SM2120B, 2310B, 2320B, 2340B, 2510B, 2540B, 2540C, 2540D, SM4500CL-E, 4500CN-E, 4500F-C, 4500H-B, 4500NH3-H, 4500NO2-B, 4500NO3-F, 4500P-E, 4500S-D, 4500SO3-B, 5210B, 5220D, 5310C, 5540C, EPA 120.1, 1664A, 200.7, 200.8, 245.1, 300.0, 350.1, 351.1, 353.2, 410.4, 420.1. Organic Parameters: EPA 608, 624, 625.)

Hazardous and Solid Waste (Inorganic Parameters: EPA 1010A, 1030, 1311, 1312, 6010C, 6020A, 7196A, 7470A, 7471B, 9012B, 9014, 9038, 9040C, 9045D, 9050A, 9065, 9251. Organic Parameters: 8011 (NPW only), 8015C, 8081B, 8082A, 8151A, 8260C, 8270D, 8315A, 8330.)

Maine Department of Human Services Certificate/Lab ID: 2009024.

Drinking Water (Inorganic Parameters: SM9215B, 9222D, 9223B, EPA 180.1, 353.2, SM2120B, 2130B, 2320B, 2510C, 2540C, 4500CI-D, 4500CN-C, 4500CN-E, 4500F-C, 4500H+B, 4500NO3-F, 5310C, EPA 200.7, EPA 200.8, 245.1, EPA 300.0. Organic Parameters: 504.1, 524.2.)

Wastewater/Non-Potable Water (Inorganic Parameters: EPA 120.1, 1664A, 300.0, 350.1, 351.1, 353.2, 410.4, 420.1, 8315A, 9010C, SM2120B, 2310B, 2320B, 2510B, 2540B, 2540C, 2540D, 426C, 4500CI-E, 4500CN-C, 4500CN-E, 4500F-B, 4500F-C, 4500H+B, 4500Norg-C, 4500NH3-B, 4500NH3-H, 4500NO2-B, 4500NO3-F, 4500P-B, 4500P-E, 4500S2-D, 4500SO3-B, 5540C, 5210B, 5220D, 5310C, 9010B, 9030B, 9040C, 7470A, 7196A, 2340B, EPA 200.7, 6010C, 200.8, 6020A, 245.1, 1311, 1312, 3005A, Enterolert, 9223B, 9222D. Organic Parameters: 608, 624, 625, 8011, 8081B, 8082A, 8330, 8151A, 8260C, 8270D, 3510C, 3630C, 5030B, ME-DRO, ME-GRO, MA-EPH, MA-VPH.)

Solid Waste/Soil (Inorganic Parameters: 9010B, 9012A, 9014, 9040B, 9045C, 6010C, 6020A, 7471B, 7196A, 9050A, 1010, 1030, 9065, 1311, 1312, 3005A, 3050B, 9038, 9251. Organic Parameters: ME-DRO, ME-GRO, MA-EPH, MA-VPH, 8260C, 8270D, 8330, 8151A, 8081B, 8082A, 3540C, 3546, 3580A, 3620C, 3630C, 5030B, 5035.)

Massachusetts Department of Environmental Protection Certificate/Lab ID: M-MA086.

Drinking Water (Inorganic Parameters: (EPA 200.8 for: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl) (EPA 200.7 for: Ba,Be,Ca,Cd,Cr,Cu,Na,Ni) 245.1, (300.0 for: Nitrate-N, Fluoride, Sulfate); (EPA 353.2 for: Nitrate-N, Nitrite-N); (SM4500NO3-F for: Nitrate-N and Nitrite-N); 4500F-C, 4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, 2320B, SM2540C, SM4500H-B. Organic Parameters: (EPA 524.2 for: Trihalomethanes, Volatile Organics); (504.1 for: 1,2-Dibromoethane, 1,2-Dibromo-3-Chloropropane), EPA 332. Microbiology Parameters: SM9215B; ENZ. SUB. SM9223; ColilertQT SM9223B; MF-SM9222D.)

Non-Potable Water (Inorganic Parameters: (EPA 200.8 for: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn); (EPA 200.7 for: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn); 245.1, SM4500H,B, EPA 120.1, SM2510B, 2540C, 2340B, 2320B, 4500CL-E, 4500F-BC, 426C, SM4500NH3-BH, (EPA 350.1 for: Ammonia-N), LACHAT 10-107-06-1-B for Ammonia-N, SM4500NO3-F, 353.2 for Nitrate-N, SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, 4500P-B,E, 5220D, EPA 410.4, SM 5210B, 5310C, 4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.

Organic Parameters: (EPA 624 for Volatile Halocarbons, Volatile Aromatics),(608 for: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT,Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs-Water), (EPA 625 for SVOC Acid Extractables and SVOC Base/Neutral Extractables), 600/4-81-045-PCB-Oil. Microbiology Parameters: (ColilertQT SM9223B; Enterolert-QT: SM9222D-MF.)

New Hampshire Department of Environmental Services Certificate/Lab ID: 200307. NELAP Accredited.

Drinking Water (Inorganic Parameters: SM 9222B, 9223B, 9215B, EPA 200.7, 200.8, 300.0, SM4500CN-E, 4500H+B, 4500NO3-F, 2320B, 2510B, 2540C, 4500F-C, 5310C, 2120B, EPA 332.0. Organic Parameters: 504.1, 524.2.)

Non-Potable Water (Inorganic Parameters: SM9222D, 9221B, 9222B, 9221E-EC, EPA 3005A, 200.7, 200.8, 245.1, SW-846 6010C, 6020A, 7196A, 7470A, SM3500-CR-D, EPA 120.1, 300.0, 350.1, 350.2, 351.1, 353.2, 410.4, 420.1, 426C, 1664A, SW-846 9010B, 9010C, 9030, 9040B, 9040C, SM2120B, 2310B, 2320B, 2340B, 2540B, 2540D, 4500H+B, 4500CL-E, 4500CN-E, 4500NH3-H, 4500NO3-F, 4500NO2-B, 4500P-E, 4500-S2-D, 4500SO3-B, 5210B, 5220D, 2510B, 2540C, 4500F-C, 5310C, 5540C, LACHAT 10-204-00-1-A, LACHAT 10-107-06-2-D, 3060A. Organic Parameters: SW-846 3510C, 3630C, 5030B, 8260C, 8270D, 8330, EPA 624, 625, 608, SW-846 8082A, 8081B, 8015C, 8151A, 8330, 8270D-SIM.)

Solid & Chemical Materials (Inorganic Parameters: SW-846 6010C, 6020A, 7196A, 7471B, 1010, 1010A, 1030, 9010C, 9012B, 9014, 9030B, 9040C, 9045C, 9045D, 9050, 9065, 9251, 1311, 1312, 3005A, 3050B, 3060A. Organic Parameters: SW-846 3540C, 3546, 3050B, 3580A, 3620D, 3630C, 5030B, 5035, 8260C, 8270D, 8270D-SIM, 8330, 8151A, 8015B, 8015C, 8082A, 8081B.)

New Jersey Department of Environmental Protection Certificate/Lab ID: MA935. NELAP Accredited.

Drinking Water (Inorganic Parameters: SM9222B, 9221E, 9223B, 9215B, 4500CN-CE, 4500NO3-F, 4500F-C, EPA 300.0, 200.7, 200.8, 245.1, 2540C, SM2120B, 2320B, 2510B, 5310C, SM4500H-B. Organic Parameters: EPA 332, 504.1, 524.2.)

Non-Potable Water (Inorganic Parameters: SM5210B, EPA 410.4, SM5220D, 4500CI-E, EPA 300.0, SM2120B, 2340B, SM4500F-BC, EPA 200.7, 200.8, 351.1, LACHAT 10-107-06-2-D, EPA 353.2, SM4500NO3-F, 4500NO2-B, EPA 1664A, SM5310B, C or D, 4500-PE, EPA 420.1, SM510ABC, SM4500P-B5+E, 2540B, 2540C, 2540D, EPA 120.1, SM2510B, SM15 426C, 9222D, 9221B, 9221C, 9221E, 9222B, 9215B, 2310B, 2320B, 4500NH3-H, 4500-S D, EPA 350.1, 350.2, SW-846 1312, 7470A, 5540C, SM4500H-B, 4500SO3-B, SM3500Cr-D, 4500CN-CE, EPA 245.1, SW-846 9040B, 9040C, 3005A, 3015, EPA 6010B, 6010C, 6020, 6020A, 7196A, 3060A, SW-846 9010C, 9030B. Organic Parameters: SW-846 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 3510C, EPA 608, 624, 625, SW-846 3630C, 5030B, 8011, 8015C, 8081A, 8081B, 8082, 8082A, 8151A, 8330, 1,4-Dioxane by NJ Modified 8270, 8015B, NJ EPH.)

Solid & Chemical Materials (Inorganic Parameters: SW-846, 6010B, 6010C, 6020, 6020A, 7196A, 3060A, 9030B, 1010, 1010A, 1030, 1311, 1312, 3005A, 3050B, 7471A, 7471B, 9010C, 9012B, 9014, 9038, 9040B, 9040C, 9045C, 9045D, 9050A, 9065, 9251. Organic Parameters: SW-846 8015B, 8015C, 8081A, 8081B, 8082, 8082A, 8151A, 8330, 8260B, 8260C, 8270C, 8270D, 8270C-SIM, 8270D-SIM, 3540C, 3546, 3580A, 3620C, 3630C, 5030B, 5035L, 5035H, NJ EPH.)

New York Department of Health Certificate/Lab ID: 11148. NELAP Accredited.

Drinking Water (Inorganic Parameters: SM9223B, 9222B, 9215B, EPA 200.8, 200.7, 245.1, SM5310C, EPA 332.0, SM2320B, EPA 300.0, SM2120B, 4500CN-E, 4500F-C, 4500NO3-F, 2540C, SM 2510B. Organic Parameters: EPA 524.2, 504.1.)

Non-Potable Water (Inorganic Parameters: SM9221E, 9222D, 9221B, 9222B, 9215B, 5210B, 5310C, EPA 410.4, SM5220D, 2310B, 2320B, EPA 200.7, 300.0, SM4500CL-E, 4500F-C, SM15 426C, EPA 350.1, SM4500NH3-BH, EPA 351.1, LACHAT 10-107-06-2, EPA 353.2, SM4500-NO3-F, 4500-NO2-B, 4500P-E, 2340B, 2540C, 2540B, 2540D, EPA 200.8, EPA 6010C, 6020A, EPA 7196A, SM3500Cr-D, EPA 245.1, 7470A, SM2120B, 4500CN-CE, EPA 1664A, EPA 420.1, SM14 510C, EPA 120.1, SM2510B, SM4500S-D, SM5540C, EPA 8315A, 3005A, 3015, 9010C, 9030B. Organic Parameters: EPA 624, 8260C, 8270D, 8270D-SIM, 625, 608, 8081B, 8151A, 8330, 8082A, EPA 3510C, 5030B, 8015C, 8011.)

Solid & Hazardous Waste (Inorganic Parameters: EPA 1010A, 1030, EPA 6010C, 6020A, 7196A, 7471B, 8315A, 9012B, 9014, 9065, 9050A, 9038, 9251, EPA 1311, 1312, 3005A, 3050B, 9010C, 9030B, 9040C, 9045D. Organic Parameters: EPA 8260C, 8270D, 8270D-SIM, 8015C, 8081B, 8151A, 8330, 8082A, 3540C, 3546, 3580A, 5035A-H, 5035A-L.)

North Carolina Department of the Environment and Natural Resources Certificate/Lab ID : 666. Soil Vapor Logs

Air/Soil Gas Sampling Form

Project #: 5981-01-04-4002

Date: February 4, 2014

Project Name: 275 4th Avenue

Investigator: B. Hernandez Salazar

Type of Sample:

Soil Gas

Sample Location:

SV-2

Canister Record:

Canister ID: 233
Flow regulator ID: 0576
Sample duration: 2-Hours
Sampling rate: 17.7 L/min

Sample ID: SV-2
Date/Time start: 2/4/14, 9:11 PM
Date/Time end: 2/4/14, 11:12 PM

Regulator: 2-HR
Start pressure: -30.12 in.Hg
End pressure: -5.17 in.Hg

Air temperature (°F): 32
Barometric pressure: 30.35 in.
PID reading (ppm): 0.9 ppm

PID Meter: MiniRae 3000
Vacuum/Air pump: Low flow sample pump
Type/ft. tubing used: ¼ in polyethylene

Noticeable odor: None
Floor slab depth (ft.): 0.50 ft
Ground surface type: Asphalt
Room: Parking area
Story/level: Outdoor grade level
Intake depth below floor (ft.): 9 ft

Analytical method required: EPA Method TO-15
Laboratory used: Alpha Analytical

Comments: Vapor point purged 3 Volumes.

Air/Soil Gas Sampling Form

Project #: 5981-01-04-4002

Date: February 4, 2014

Project Name: 275 4th Avenue

Investigator: B. Hernandez Salazar

Type of Sample:

Soil Gas

Sample Location:

Canister Record:

SV-3

Canister ID: 370
Flow regulator ID: 0146
Sample duration: 2-Hours
Sampling rate: 18.0 L/min

Sample ID: SV-3
Date/Time start: 2/4/14, 11:28 PM
Date/Time end: 2/5/14, 1:30 AM

Regulator: 2-HR
Start pressure: -30.13 in.Hg
End pressure: -2.40 in.Hg

Air temperature (°F): 32
Barometric pressure: 30.35 in.
PID reading (ppm): 4.1 ppm

PID Meter: MiniRae 3000
Vacuum/Air pump: Low flow sample pump
Type/ft. tubing used: ¼ in polyethylene

Noticeable odor: None
Floor slab depth (ft.): 0.50 ft
Ground surface type: Asphalt
Room: Drive-Through Area
Story/level: Outdoor grade level
Intake depth below floor (ft.): 9 ft

Analytical method required: EPA Method TO-15
Laboratory used: Alpha Analytical

Comments: Vapor point purged 3 Volumes.

Lab Number: L1402992
Report Date: 02/13/14

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Report Date: 02/13/14

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Volatile Organics

Any reported concentrations that are below 200 ug/kg may be biased low due to the sample not being collected according to 5035-L/5035A-L low-level specifications.

L1402992-06 and -10 have elevated detection limits due to the dilutions required by the elevated concentrations of non-target compounds in the samples.

Semivolatile Organics

L1402992-01 and -03 have elevated detection limits due to the dilutions required by the sample matrices.

L1402992-07 and -09 have elevated detection limits due to the dilutions required by the matrix interferences encountered during the concentration of the samples and the analytical dilutions required by the sample matrices.

Pesticides

L1402992-07 and -09 have elevated detection limits due to the dilutions required by the sample matrices.

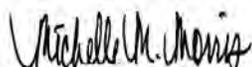

The surrogate recoveries for L1402992-07 and -09 are below the acceptance criteria for 2,4,5,6-tetrachloro-m-xylene and decachlorobiphenyl (all at 0%) due to the dilutions required to quantitate the samples. Re-extraction was not required; therefore, the results of the original analysis are reported.

Total Metals

L1402992-01 through -10 have elevated detection limits for all elements, with the exception of mercury, due to the dilutions required by matrix interferences encountered during analysis.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.

Report Format: DU Report with 'J' Qualifiers

Project Name: 275 4TH AVENUE
Project Number: 5981-01-04-4001

Lab Number: L1402992
Report Date: 02/13/14

Data Qualifiers

- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised December 11, 2013

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility

EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.

EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.

EPA 8330A/B: PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT.

EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 625: 4-Chloroaniline, 4-Methylphenol.

SM4500: Soil: Total Phosphorus, TKN, NO₂, NO₃.

EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility

EPA 8270D: Biphenyl.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water

EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7:** Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;

EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**

EPA 332: Perchlorate.

Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water

EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;

EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;

EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, EPA 350.1: Ammonia-N, **LACHAT 10-107-06-1-B:** Ammonia-N, **SM4500NO3-F, EPA 353.2:** Nitrate-N, **SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**

EPA 624: Volatile Halocarbons & Aromatics,

EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF.**

For a complete listing of analytes and methods, please contact your Alpha Project Manager.

Report Date: 02/14/14

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Project Name: 275 4TH AVENUE
Project Number: 5981-01-04-4001

Lab Number: L1402995
Report Date: 02/14/14

Case Narrative (continued)

Report Submission

All non-detect (ND) or estimated concentrations (J-qualified) have been quantitated to the limit noted in the MDL column.

Sample Receipt

L1402995-01, -03 and -04 were field filtered for Dissolved Metals.

A Trip Blank was noted on the Chain of Custody, but not received in the laboratory.

Semivolatile Organics - SIM

L1402995-03 has elevated detection limits due to the dilution required by the sample matrix.

Total Metals

L1402995-01 and -03 have elevated detection limits for all elements, with the exception of mercury, due to the dilutions required by matrix interferences encountered during analysis.

L1402995-01: The dissolved result is greater than the total result for sodium. The sample containers were verified as being labeled correctly by the laboratory, and aliquots were analyzed from each bottle, confirming the original results.

The WG669131-3 Laboratory Duplicate RPD, performed on L1402995-01, is outside the acceptance criteria for mercury (59%). The elevated RPD has been attributed to the non-homogeneous nature of the sample utilized for the laboratory duplicate.

Dissolved Metals

The WG669741-4 MS recovery for calcium (127%), performed on L1402995-01, does not apply because the sample concentration is greater than four times the spike amount added.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.

Report Format: DU Report with 'J' Qualifiers

Project Name: 275 4TH AVENUE
Project Number: 5981-01-04-4001

Lab Number: L1402995
Report Date: 02/14/14

Data Qualifiers

- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. The Target analyte concentration is below the quantitation limit (RL), but above the Method Detection Limit (MDL) or Estimated Detection Limit (EDL) for SPME-related analyses. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the method detection limit (MDL) for the sample, or estimated detection limit (EDL) for SPME-related analyses.

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised December 11, 2013

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility

EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.

EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.

EPA 8330A/B: PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT.

EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 625: 4-Chloroaniline, 4-Methylphenol.

SM4500: Soil: Total Phosphorus, TKN, NO₂, NO₃.

EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility

EPA 8270D: Biphenyl.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water

EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7:** Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;

EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**

EPA 332: Perchlorate.

Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water

EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;

EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;

EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, EPA 350.1: Ammonia-N, **LACHAT 10-107-06-1-B:** Ammonia-N, **SM4500NO3-F, EPA 353.2:** Nitrate-N, **SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**

EPA 624: Volatile Halocarbons & Aromatics,

EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF.**

For a complete listing of analytes and methods, please contact your Alpha Project Manager.

Report Date: 02/13/14

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Performance criteria for CAM and RCP methods allow for some LCS compound failures to occur and still be within method compliance. In these instances, the specific failures are not narrated but are noted in the associated QC table. This information is also incorporated in the Data Usability format for our Data Merger tool where it can be reviewed along with any associated usability implications. Soil/sediments, solids and tissues are reported on a dry weight basis unless otherwise noted. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

In reference to questions H (CAM) or 4 (RCP) when "NO" is checked, the performance criteria for CAM and RCP methods allow for some quality control failures to occur and still be within method compliance. In these instances the specific failure is not narrated but noted in the associated QC table. The information is also incorporated in the Data Usability format of our Data Merger tool where it can be reviewed along with any associated usability implications.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

HOLD POLICY

For samples submitted on hold, Alpha's policy is to hold samples (with the exception of Air canisters) free of charge for 21 calendar days from the date the project is completed. After 21 calendar days, we will dispose of all samples submitted including those put on hold unless you have contacted your Client Service Representative and made arrangements for Alpha to continue to hold the samples. Air canisters will be disposed after 3 business days from the date the project is completed.

Please contact Client Services at 800-624-9220 with any questions.

Report Date: 02/13/14

Case Narrative (continued)

Volatile Organics in Air

Canisters were released from the laboratory on February 4, 2014. The canister certification results are provided as an addendum.

The sample designated SV-1 (L1402926-01) had a RPD for the pre- and post-flow controller calibration check (196% RPD) that was outside of the control limit (20% RPD). The initial flow rate for the flow controller was 18.6 mL/minute; the final flow rate was 0.2 mL/minute. The final pressure recorded by the laboratory of the associated canister was -27.5 inches of mercury. The flow controller had water present in it. The client was contacted and the analysis of this sample was cancelled.

The WG669615-3 LCS recovery for vinyl acetate(158%) is above the upper 130% acceptance limit. None of the samples associated with this LCS have reportable amounts of these analytes.

The WG669615-8 LCS recoveries for Vinyl Acetate (176%), 1,1,2,2-Tetrachloroethane (132%) are above the upper 130% acceptance limit. None of the samples associated with this LCS have reportable amounts of these analytes.

Sample L1402926-03 has elevated detection limits due to the dilution required by the elevated concentrations of target compounds in the sample.

Sample L1402926-03 The presence of Acetone could not be determined in this sample due to a non-target compound interfering with the identification and quantification of this compound.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

GLOSSARY

Acronyms

EDL	- Estimated Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The EDL includes any adjustments from dilutions, concentrations or moisture content, where applicable. The use of EDLs is specific to the analysis of PAHs using Solid-Phase Microextraction (SPME).
EPA	- Environmental Protection Agency.
LCS	- Laboratory Control Sample: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
LCSD	- Laboratory Control Sample Duplicate: Refer to LCS.
LFB	- Laboratory Fortified Blank: A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes or a material containing known and verified amounts of analytes.
MDL	- Method Detection Limit: This value represents the level to which target analyte concentrations are reported as estimated values, when those target analyte concentrations are quantified below the reporting limit (RL). The MDL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
MS	- Matrix Spike Sample: A sample prepared by adding a known mass of target analyte to a specified amount of matrix sample for which an independent estimate of target analyte concentration is available.
MSD	- Matrix Spike Sample Duplicate: Refer to MS.
NA	- Not Applicable.
NC	- Not Calculated: Term is utilized when one or more of the results utilized in the calculation are non-detect at the parameter's reporting unit.
NI	- Not Ignitable.
RL	- Reporting Limit: The value at which an instrument can accurately measure an analyte at a specific concentration. The RL includes any adjustments from dilutions, concentrations or moisture content, where applicable.
RPD	- Relative Percent Difference: The results from matrix and/or matrix spike duplicates are primarily designed to assess the precision of analytical results in a given matrix and are expressed as relative percent difference (RPD). Values which are less than five times the reporting limit for any individual parameter are evaluated by utilizing the absolute difference between the values; although the RPD value will be provided in the report.
SRM	- Standard Reference Material: A reference sample of a known or certified value that is of the same or similar matrix as the associated field samples.

Footnotes

- 1 - The reference for this analyte should be considered modified since this analyte is absent from the target analyte list of the original method.

Terms

Analytical Method: Both the document from which the method originates and the analytical reference method. (Example: EPA 8260B is shown as 1,8260B.) The codes for the reference method documents are provided in the References section of the Addendum.

Data Qualifiers

- A** - Spectra identified as "Aldol Condensation Product".
- B** - The analyte was detected above the reporting limit in the associated method blank. Flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For MCP-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank. For DOD-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte at less than ten times (10x) the concentration found in the blank AND the analyte was detected above one-half the reporting limit (or above the reporting limit for common lab contaminants) in the associated method blank. For NJ-Air-related projects, flag only applies to associated field samples that have detectable concentrations of the analyte above the reporting limit.
- C** - Co-elution: The target analyte co-elutes with a known lab standard (i.e. surrogate, internal standards, etc.) for co-extracted analyses.
- D** - Concentration of analyte was quantified from diluted analysis. Flag only applies to field samples that have detectable concentrations of the analyte.
- E** - Concentration of analyte exceeds the range of the calibration curve and/or linear range of the instrument.
- G** - The concentration may be biased high due to matrix interferences (i.e. co-elution) with non-target compound(s). The result should be considered estimated.
- H** - The analysis of pH was performed beyond the regulatory-required holding time of 15 minutes from the time of sample collection.
- I** - The lower value for the two columns has been reported due to obvious interference.

Report Format: Data Usability Report

Project Name: 275 4TH AVE
Project Number: 598101-04-4001

Lab Number: L1402926
Report Date: 02/13/14

Data Qualifiers

- M** - Reporting Limit (RL) exceeds the MCP CAM Reporting Limit for this analyte.
- NJ** - Presumptive evidence of compound. This represents an estimated concentration for Tentatively Identified Compounds (TICs), where the identification is based on a mass spectral library search.
- P** - The RPD between the results for the two columns exceeds the method-specified criteria.
- Q** - The quality control sample exceeds the associated acceptance criteria. For DOD-related projects, LCS and/or Continuing Calibration Standard exceedences are also qualified on all associated sample results. Note: This flag is not applicable for matrix spike recoveries when the sample concentration is greater than 4x the spike added or for batch duplicate RPD when the sample concentrations are less than 5x the RL. (Metals only.)
- R** - Analytical results are from sample re-analysis.
- RE** - Analytical results are from sample re-extraction.
- S** - Analytical results are from modified screening analysis.
- J** - Estimated value. This represents an estimated concentration for Tentatively Identified Compounds (TICs).
- ND** - Not detected at the reporting limit (RL) for the sample.

Project Name: 275 4TH AVE
Project Number: 598101-04-4001

Lab Number: L1402926

LIMITATION OF LIABILITIES

Alpha Analytical performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical shall be to re-perform the work at it's own expense. In no event shall Alpha Analytical be held liable for any incidental, consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding time and splitting of samples in the field.

Certification Information

Last revised December 11, 2013

The following analytes are not included in our NELAP Scope of Accreditation:

Westborough Facility

EPA 524.2: Acetone, 2-Butanone (Methyl ethyl ketone (MEK)), Tert-butyl alcohol, 2-Hexanone, Tetrahydrofuran, 1,3,5-Trichlorobenzene, 4-Methyl-2-pentanone (MIBK), Carbon disulfide, Diethyl ether.

EPA 8260C: 1,2,4,5-Tetramethylbenzene, 4-Ethyltoluene, Iodomethane (methyl iodide), Methyl methacrylate, Azobenzene.

EPA 8330A/B: PETN, Picric Acid, Nitroglycerine, 2,6-DANT, 2,4-DANT.

EPA 8270D: 1-Methylnaphthalene, Dimethylnaphthalene, 1,4-Diphenylhydrazine.

EPA 625: 4-Chloroaniline, 4-Methylphenol.

SM4500: Soil: Total Phosphorus, TKN, NO₂, NO₃.

EPA 9071: Total Petroleum Hydrocarbons, Oil & Grease.

Mansfield Facility

EPA 8270D: Biphenyl.

EPA TO-15: Halothane, 2,4,4-Trimethyl-2-pentene, 2,4,4-Trimethyl-1-pentene, Thiophene, 2-Methylthiophene, 3-Methylthiophene, 2-Ethylthiophene, 1,2,3-Trimethylbenzene, Indan, Indene, 1,2,4,5-Tetramethylbenzene, Benzothiophene, 1-Methylnaphthalene.

The following analytes are included in our Massachusetts DEP Scope of Accreditation, Westborough Facility:

Drinking Water

EPA 200.8: Sb,As,Ba,Be,Cd,Cr,Cu,Pb,Ni,Se,Tl; **EPA 200.7:** Ba,Be,Ca,Cd,Cr,Cu,Na; **EPA 245.1:** Mercury;

EPA 300.0: Nitrate-N, Fluoride, Sulfate; **EPA 353.2:** Nitrate-N, Nitrite-N; **SM4500NO3-F:** Nitrate-N, Nitrite-N; **SM4500F-C, SM4500CN-CE, EPA 180.1, SM2130B, SM4500CI-D, SM2320B, SM2540C, SM4500H-B**

EPA 332: Perchlorate.

Microbiology: **SM9215B; SM9223-P/A, SM9223B-Colilert-QT, Enterolert-QT.**

Non-Potable Water

EPA 200.8: Al,Sb,As,Be,Cd,Cr,Cu,Pb,Mn,Ni,Se,Ag,Tl,Zn;

EPA 200.7: Al,Sb,As,Be,Cd,Ca,Cr,Co,Cu,Fe,Pb,Mg,Mn,Mo,Ni,K,Se,Ag,Na,Sr,Ti,Tl,V,Zn;

EPA 245.1, SM4500H,B, EPA 120.1, SM2510B, SM2540C, SM2340B, SM2320B, SM4500CL-E, SM4500F-BC, SM426C, SM4500NH3-BH, EPA 350.1: Ammonia-N, **LACHAT 10-107-06-1-B:** Ammonia-N, **SM4500NO3-F, EPA 353.2:** Nitrate-N, **SM4500NH3-BC-NES, EPA 351.1, SM4500P-E, SM4500P-B, E, SM5220D, EPA 410.4, SM5210B, SM5310C, SM4500CL-D, EPA 1664, SM14 510AC, EPA 420.1, SM4500-CN-CE, SM2540D.**

EPA 624: Volatile Halocarbons & Aromatics,

EPA 608: Chlordane, Toxaphene, Aldrin, alpha-BHC, beta-BHC, gamma-BHC, delta-BHC, Dieldrin, DDD, DDE, DDT, Endosulfan I, Endosulfan II, Endosulfan sulfate, Endrin, Endrin Aldehyde, Heptachlor, Heptachlor Epoxide, PCBs

EPA 625: SVOC (Acid/Base/Neutral Extractables), **EPA 600/4-81-045:** PCB-Oil.

Microbiology: **SM9223B-Colilert-QT; Enterolert-QT, SM9222D-MF.**
