CERTIFICATION

I, Chawinie Miller, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the Redevelopment Project located at 171-173 Bayard Street Brooklyn, NY, (NYC VCP Site No. 15CVCP024K , OER Project Number 14EHAZ332K). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 171-173 Bayard Street in the Greenpoint section of Brooklyn, New York, and is identified as Block 2720 and Lots 43 and 44 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 4,100-square feet and is bounded by Block 2720, Lot 16 and 15, residential buildings to the north, Bayard Street and Block 2726, Lots 12, and 13, residential buildings to the south, Block 2720, Lot 42 to the east, a residential building and Block 2720, Lot 45, a residential building to the west. A map of the site boundary is shown in Figure 2. Currently, the Site is developed with two single-story commercial buildings.

Summary of Proposed Redevelopment Plan

The development project consists of redeveloping the entire Site with a 4-story residential building and a full cellar. The proposed building encompasses approximately 70% of the site. The building includes a full 10 foot cellar, spanning the entire foot print of the building, which will be utilized for accessory use and storage space. The cellar will have stair access only. The upper floors will be equipped with residential units. The Site will be equipped with a 30 foot rear yard. The basement level and foundation will require excavation of the entire Site to a total depth of approximately 12 feet below grade. The water table is expected at approximately 9-12 feet below grade surface (bgs). The current zoning designation is residential; R6B. The proposed use is consistent with existing zoning for the property. Layout of the proposed site development is presented in Figure 3.

Summary of Past Uses of Site and Areas of Concern

A Phase I was completed by EBC in December 2013. A history dating back to 1928 was established. In 1887 the Site (171-173 Bayard Street) was developed with a small 1-story

building labeled carpenter. After 1887, the Site was separated into two tax parcels Lot 44 (171 Bayard Street) and Lot 43 (173 Bayard Street).

171 Bayard Street

From 1905 to approximately 1927, the Site was unoccupied and undeveloped. Around 1927, a portion of the Site, Lot 44, was developed with a 1-story building and used as a private garage. This building is consistent with the current building layout on 171 Bayard Street. The building was occupied by various tenants including a coal & oil company, wood workshop, syrup manufacturer/distributor, technology company, iron works, contracting company, window & door manufacturer, and most recently an art studio.

173 Bayard Street

Lot 43 was developed with a small 1-story garage sometime between 1916 and 1935. The garage was demolished and a larger 1-story garage was developed by 1951. Between 1951 and 1959 a new 1-story garage was developed that occupied the entire Lot. This building is consistent with the current building layout on 173 Bayard Street. The building was only noted as a warehouse in 2000 and a glass manufacturer/distributor (Dual Glass) in 2008.

Based upon reconnaissance of the subject site and surrounding properties, interviews and review of historical records and regulatory agency databases, EBC identified the following environmental concerns:

- According to a Certificate of Occupancy, Sanborn Maps, and city directory listings, the Site was occupied by a refrigerator manufacturer from 1959 to at most 1965. The name of the company is unknown due to a gap in the provided City Directory Listing, but a Certificate of Occupancy from 1959 notes the use of the property as a refrigerator manufacturer.
- According to a 1959 Certificate of Occupancy, the NYC Fire Department approved a permit for a gasoline storage tank in September of 1958. The tank is described to only be used for fueling of the owner's trucks. In addition, the site inspection identified the

presence of a vent on the roof of the building occupying the Site, indicative of a UST. As no information regarding the capacity of the suspect UST(s), their status, integrity and/or soil conditions in their vicinity was available for review, there is a potential for spills or releases from the USTs to have impacted the subsurface.

- The NYC “E” Designation for Underground Storage Tanks Testing protocol.

The AOCs identified for this Site include:

1. Historic fill layer is present at the Site from grade to depths as great as 4 feet below grade.
2. Historic use of the Site as a refrigerator manufacture
3. The suspect presence of a UST.

Summary of the Work Performed under the Remedial Investigation

EBC performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed five soil borings across the entire project Site, and collected ten soil samples and one duplicate soil sample for chemical analysis from the soil borings to evaluate soil quality;
3. Installed two groundwater monitoring wells throughout the Site and used one existing monitoring well to establish groundwater flow and collected six groundwater samples and one duplicate groundwater sample for chemical analysis to evaluate groundwater quality; and
4. Installed one sub-slab soil vapor probes and four soil vapor probes around Site perimeter and collected five samples for chemical analysis.

Summary of Environmental Findings

1. Elevation of the property ranges from 18 to 19 feet.
2. Depth to groundwater ranges from 9.35 to 12.85 feet at the Site.
3. Groundwater flow is generally to the northeast beneath the Site.

4. Depth to bedrock is at the Site is greater than 100 feet.
5. The stratigraphy of the Site, from the surface down, consists of 4 feet of historical fill underlain by tan medium to fine sand and silty clay.
6. Soil/fill samples results were compared to NYSDEC Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Soil Cleanup Objectives (RRSCO) as presented in 6NYCRR Part 375-6.8 and CP51. Soil/fill samples collected during the RI showed no PCBs or pesticides in any of the soil samples. Trace concentrations of several VOCs were noted in one soil samples (11 to 13 feet). One VOC, 1,2,4-Trimethylbenzene (max. of 5,000 ug/Kg) exceeded Unrestricted Use SCOs. Five SVOCs consisting of Polycyclic Aromatic Hydrocarbons (PAHs) were found within one shallow soil samples exceeding Unrestricted Use SCOs as well as Restricted Residential SCOs. Several SVOCs consisting of Polycyclic Aromatic Hydrocarbons (PAHs) including benz(a)anthracene (max. of 9,600 ug/Kg), benzo(a)pyrene (max. of 8,200 ug/Kg), benzo(b)fluoranthene (max. of 10,000 ug/Kg), chrysene (max. of 10,000 ug/Kg) and indeno(1,2,3-cd)pyrene (max. of 4,500 ug/Kg) exceeding Unrestricted Use SCOs as well as Restricted Residential SCOs within one shallow soil sample. Several metals including barium (max. of 747 mg/Kg), cadmium (max. of 3.54 mg/Kg), chromium (max. of 43.1 mg/Kg), copper (max. of 149 mg/Kg), lead (max. of 8,060 ug/Kg), mercury (max. of 2.96 ug/Kg) and zinc (max. of 503 ug/Kg) exceeded Unrestricted Use SCOs in three shallow soil samples. And, of these metals, lead, barium and mercury also exceeded Restricted Residential SCOs in two shallow soil samples. Findings of the RI were consistent with observations for historical fill sites in areas throughout NYC, with the exception of two soil sampling locations, B-4 for a VOC hotspot in deep soil and B-5 for a lead hotspot in shallow soil.
7. Groundwater samples results were compared to New York State 6NYCRR Part 703.5 Class GA groundwater quality standards (GQS). Groundwater samples collected during the investigations showed no PCBs or pesticides in any sample. One VOC, methyl t-butyl ether (MTBE) (max. of 30.0 ug/L) exceeded NYSDEC Part 703.5 Groundwater Quality Standards (GQS) within two samples and the duplicate sample. Trace concentrations of

several VOCs were also detected and none of these VOCs exceeded their GQS. Four SVOCs including benzo(a)anthracene (max. of 0.04 ug/L), benzo(b)fluoranthene (at 0.03 ug/L), benzo(k)fluoranthene (at 0.02 ug/L) and chrysene (at 0.04 ug/L) exceeded the GQS. Several metals were identified in groundwater but only manganese (max. of 3.4 mg/L) and sodium (max. of 181 mg/L) exceeded their respective GQS.

8. Soil vapor results collected during the RI were compared to the compounds listed in Table 3.1 Air Guideline Values Derived by the NYSDOH located in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion dated October 2006. Soil vapor samples collected during the RI showed high levels of petroleum related and high levels of chlorinated VOCs in all soil vapor samples. Total concentrations of petroleum-related VOCs (BTEX) ranged from 9.6 $\mu\text{g}/\text{m}^3$ to 117,000 $\mu\text{g}/\text{m}^3$. Overall the highest reported concentrations were for hexane (maximum of 137,000 $\mu\text{g}/\text{m}^3$). Chlorinated VOCs including tetrachloroethene (PCE) was detected in all soil vapor samples and ranged from 50 to 773 $\mu\text{g}/\text{m}^3$, carbon tetrachloride was detected in two samples at a maximum concentration of 0.5 $\mu\text{g}/\text{m}^3$. Trichloroethene (TCE) was detected in two soil vapor samples at a maximum concentration of 7.63 $\mu\text{g}/\text{m}^3$. Trichloroethane (TCA) was not detected in any sample. Concentrations for PCE and TCE were above the monitoring level ranges established within the State DOH soil vapor guidance matrix.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

Djam Land LLC has applied to enroll in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.094-acre Site located at 171-173 Bayard Street in the Greenpoint section of Brooklyn, New York. Residential use is proposed for the property. The RI work was performed between January 1, 2014, and April 22 2014. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 171-173 Bayard Street in the Greenpoint section of Brooklyn, New York, and is identified as Block 2720 and Lot 43 and 44 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 4,100-square feet and is bounded by Block 2720, Lot 16 and 15, residential buildings to the north, Bayard Street and Block 2726, Lots 12, and 13, residential buildings to the south, Block 2720, Lot 42 to the east, a residential building and Block 2720, Lot 45, a residential building to the west. A map of the site boundary is shown in Figure 2. Currently, the Site is developed with two single-story commercial buildings.

1.2 Proposed Redevelopment Plan

The development project consists of redeveloping the entire Site with a 4-story residential building and a full cellar. The proposed building encompasses approximately 70% of the site. The building includes a full 10 foot cellar, spanning the entire foot print of the building, which will be utilized for accessory use and storage space. The cellar will have stair access only. The Site will be equipped with a 50 x 30 foot rear yard. The basement level and foundation will require excavation of the entire Site to a total depth of approximately 12 feet below grade. The water table is expected at 9-12 feet below grade surface (bgs). The current zoning designation is residential; R6B. The proposed use is consistent with existing zoning for the property.

Demolition of the Site is planned for September 2014. Demolition is planned for September 2014. Layout of the proposed site development is presented in Figure 3.

1.3 Description of Surrounding Property

The area surrounding the Site consists of a mix of residential and industrial properties. Figure 4 shows the surrounding land usage of the adjacent properties listed below as well as additional properties located up to 500 feet away from the Site. No hospitals, daycare facilities or schools are located within a 250 ft radius of the Site. A middle school is located within 500-foot radius of the Site.

Surrounding Property Usage

Direction	Property Description
North – Adjacent property	Block 2720 Lot 16 and 15 (140-142 Newton Street) residential buildings.
South – Adjacent property	Bayard Street and Block 2726, Lots 12, and 13 (174-178 Bayard Street) residential buildings
East –	Block 2720 Lot 42 to the east (175 Bayard Street) a residential building
West – Adjacent property	Block 2720 Lot 45 (169 Bayard Street) a residential building

2.0 SITE HISTORY

2.1 Past Uses and Ownership

A Phase I was completed by EBC in December 2013. A history dating back to 1928 was established. In 1887 the Site (171-173 Bayard Street) was developed with a small 1-story building labeled carpenter. After 1887, the Site was separated into two tax parcels, Lot 44 (171 Bayard Street) and Lot 43 (173 Bayard Street).

171 Bayard Street

From 1905 to approximately 1927, the Site was unoccupied and undeveloped. Around 1927, a portion of the Site, Lot 44, was developed with a 1-story building and used as a private garage. This building is consistent with the current building layout on 171 Bayard Street. The building was occupied by various tenants including a coal & oil company, wood workshop, syrup manufacturer/distributor, technology company, iron works, contracting company, window & door manufacturer, and most recently an art studio.

173 Bayard Street

Lot 43 was developed with a small 1-story garage sometime between 1916 and 1935. The garage was demolished and a larger 1-story garage was developed by 1951. Between 1951 and 1959, a new 1-story garage was developed that occupied the entire Lot. This building is consistent with the current building layout on 173 Bayard Street. The building was only noted as a warehouse in 2000 and a glass manufacturer/distributor (Dual Glass) in 2008.

Based upon reconnaissance of the subject site and surrounding properties, interviews and review of historical records and regulatory agency databases, EBC identified the following environmental concerns:

- According to a Certificate of Occupancy, Sanborn Maps, and city directory listings, the Site was occupied by a refrigerator manufacturer from 1959 to at most 1965. The name of the company is unknown due to a gap in the provided City Directory Listing, but a

Certificate of Occupancy from 1959 notes the use of the property as a refrigerator manufacturer.

- According to a 1959 Certificate of Occupancy, the NYC Fire Department approved a permit for a gasoline storage tank in September of 1958. The tank is described to only be used for fueling of the owner's trucks. In addition, the site inspection identified the presence of a vent on the roof of the building occupying the Site, indicative of a UST. As no information regarding the capacity of the suspect UST(s), their status, integrity and/or soil conditions in their vicinity was available for review, there is a potential for spills or releases from the USTs to have impacted the subsurface.
- The NYC "E" Designation for Underground Storage Tanks Testing protocol.

2.2 Previous Investigations

EBC has not been made aware of any previous subsurface investigations conducted at the Site.

2.3 Site Inspection

Mr. Charles Sosik of EBC performed the site inspection on January 1, 2014, beginning at approximately 7:00 am. The reconnaissance included a visual inspection of the Site, the sidewalk immediately in front of the Site, and the exterior of adjacent properties. At the time of the inspection, the Site consisted of two single-story buildings.

2.4 Areas of Concern

The AOCs identified for this Site include:

1. Historic fill layer is present at the Site from grade to depths as great as 4 feet below grade.
2. Historic use of the Site as a refrigerator manufacture
3. The suspect presence of a UST.

A copy of the Phase 1 Report is presented in Attachment A.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Chawinie Miller.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

Djam Land LLC performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed five soil borings across the entire project Site, and collected ten soil samples and one duplicate soil sample for chemical analysis from the soil borings to evaluate soil quality;
3. Installed two groundwater monitoring wells throughout the Site and used one existing monitoring well to establish groundwater flow and collected six groundwater samples and one duplicate groundwater sample for chemical analysis to evaluate groundwater quality; and
4. Installed one sub-slab soil vapor probes and four soil vapor probes around Site perimeter and collected five samples for chemical analysis.

4.1 Geophysical Investigation

A geophysical investigation was not performed as a part of this assessment. A full excavation down to 10 feet below grade is planned for the Site.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

The five soil boring locations were chosen to gain representative soil and groundwater quality information across the Site. Soil samples were collected continuously from grade to a final depth of 13 feet below existing grade using a five-foot steel macro-core sampler with acetate liners and Geoprobe direct-push equipment. Soil recovered from each of the soil borings was field screened for the presence of VOCs with a photo-ionization detector (PID) and visually inspected for evidence of contamination. PID readings of 0 to 600 ppm and slight petroleum odor were noted within B-4 at the 10-16 foot range.

One soil sample was retained from each soil boring representing the interval 0 to 2 feet below grade and one soil sample was retained from each soil boring representing the interval 10 to 12 or 11-13 feet below grade.

Boring logs were prepared by a Qualified Environmental Professional and are attached in Attachment B. A map showing the location of soil borings and monitor wells is shown in Figure 5.

Groundwater Monitoring Well Construction

A temporary 1-inch diameter PVC monitoring well with 10 feet of 0.010 slot screen was installed at boring locations B1, B2 and B3 set to intersect the water table. Since groundwater was encountered at approximately 9.35 to 12.85 feet below grade, monitoring wells were installed to a depth of 15 to 22 feet. Monitoring well sampling details are provided in Table 1. Monitoring well locations are shown in Figure 5.

Survey

Soil borings and wells were located to the nearest 0.10 foot with respect to two or more permanent site features.

Water Level Measurement

Approximate groundwater level measurements were collected using a Solinst oil/water interface meter to ensure the surface of the water table was within the screened section of the monitoring well. No free product was observed within the two monitoring wells. Water level data is included in **Table 1**.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR, with the exception of deep samples for B-1 to B-3 for analysis of metals and samples B-1 to B-3 shallow and deep samples for pesticides and PCBs. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action

alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Ten soil samples with a duplicate were collected for chemical analysis during this RI. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Tables 2 through 5. Figure 5 shows the location of samples collected in this investigation. Laboratories and analytical methods are shown below.

The ten samples with a duplicate were collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice and submitted for analysis to Phoenix Environmental Laboratories (Phoenix) of 587 East Middle Turnpike, Manchester, CT 06040, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11301). All soil samples were analyzed for the presence of volatile organic compounds (VOCs) by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082 and target analyte list (TAL) metals.

Groundwater Sampling

Six groundwater samples with a duplicate were collected for chemical analysis during this RI. Groundwater samples were collected by installing a one-inch diameter PVC well, 5-feet below the water table interface (set at approximately 55 feet below grade). A groundwater sample was then collected from each temporary well utilizing dedicated polyethylene tubing and a peristaltic pump. Groundwater samples were collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice and submitted to Phoenix for analysis of VOCs by EPA Method 8260, SVOCs by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082 and TAL metals. Groundwater sample collection data is reported in Tables 6 through 10. Sampling logs with information on purging and sampling of groundwater monitor wells are included in Attachment C. Figure 5 shows the location of groundwater sampling. Laboratories and analytical methods are shown below.

Soil Vapor Sampling

One sub slab soil vapor probe and four soil vapor implants were installed and five soil vapor samples were collected for chemical analysis during this RI. Soil vapor sampling locations are shown in Figure 5. Soil vapor sample collection data is reported in Table 10. Soil vapor sampling logs are included in Attachment D. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

The one sub slab soil vapor implant and the four soil vapor implants were installed using Geoprobe™ equipment and tooling. The approximate location of each of the soil vapor implants is shown on Figure 5. The vapor implants that were installed were the Geoprobe™ Model AT86 series, which are constructed of a 6-inch length of double woven stainless steel wire. The implants were installed to a depth ranging from 9 to 11 feet below grade at all locations. Each implant was attached to ¼ inch polyethylene tubing which extended approximately 18 inches beyond that needed to reach the surface. The tubing was capped with a ¼ inch plastic end to prevent the infiltration of foreign particles into the tube. Coarse sand was placed around the vapor implant to a height of approximately 1 foot above the bottom of the implant. The remainder of the borehole was sealed with a bentonite slurry to the surface.

Soil vapor sampling for the implants installed on April 21, 2014, was conducted on April 22, 2014. Prior to sampling, each sampling location was tested to ensure a proper surface seal had been obtained. In accordance with NYSDOH guidance (NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, February 2005), a tracer gas (helium) was used as a quality assurance/quality control device to verify the integrity of the sampling point seal prior to collecting the samples. Prior to testing and collecting samples, the surface immediately surrounding the polyethylene tubing of the vapor implant was sealed using a 1 foot ft by 1 ft square sheet of 2 mil HDPE plastic firmly adhered to a wetted layer of granular bentonite. The seal was then tested by enriching the air space above the seal with a tracer gas (helium) while continuously monitoring air drawn from the implant with a helium detector (Dielectric Model MGD-2002, Multi-Gas Detector) for a minimum of 15 minutes. The tracer gas test procedure was employed at all six soil vapor sampling locations. No surface seal leaks were observed at any of the locations.

Following verification that the surface seal was tight, one to three volumes (i.e., the volume of the sample probe and tube) of air was purged from the implant using a calibrated vacuum pump. After purging, a 6-liter Summa® canister, fitted with a 2-hour flow regulator, was attached to the surface tube of each of the six vapor implants. Prior to initiating sample collection, sample identification, canister number, date and start time were recorded on tags attached to each canister and in a bound field note book. Sampling then proceeded by fully opening the flow control valve on each canister in turn. Immediately after opening the flow control valve on a canister, the initial vacuum (inches of mercury) was recorded in the field book and on the sample tag. When the vacuum level in the canister was between 5 and 8 inches of mercury (approx 2 hours), the flow controller valve was closed, and the final vacuum recorded in the field notebook and on the sample tag.

The soil gas Sample identification, date, start time, start vacuum, end time and end vacuum were recorded on tags attached to each canister and on a sample log sheet (Attachment E). Samples were submitted to Phoenix for laboratory analysis of VOCs EPA Method TO-15.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Phoenix Environmental Laboratories
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and was Phoenix Environmental Laboratories
Chemical Analytical Methods	Soil analytical methods: <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); Groundwater analytical methods:

	<ul style="list-style-type: none">• TAL Metals by EPA Method 6010C (rev. 2007);• VOCs by EPA Method 8260C (rev. 2006);• SVOCs by EPA Method 8270D (rev. 2007);• Pesticides by EPA Method 8081B (rev. 2000);• PCBs by EPA Method 8082A (rev. 2000); Soil vapor analytical methods: <ul style="list-style-type: none">• VOCs by TO-15 VOC parameters..

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 2 through 11, respectively. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Attachment E.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

Subsurface soil at the Site consisted of historic fill, which was primarily comprised of brick, concrete, wood and other debris in a light brown fine-sand matrix. The layer of historic fill extended to a depth ranging from ground surface to approximately 4 feet below grade. Native soil consisting of a tan fine sand and silty clay is present below the historic fill layer.

Hydrogeology

A table of water level data for all monitor wells is included in Table 1. The average depth to groundwater is 11.66 and the range in depth is 9.35 to 12.85. Groundwater flow is generally in a northeastern direction.

5.2 Soil Chemistry

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Tables 2 through 5. Results were compared to NYSDEC Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Restricted Residential Soil Cleanup Objectives (RRSCOs) as presented in 6NYCRR Part 375-6.8 and CP51. A copy of the laboratory report is provided in Attachment E. Figure 6 shows the location and posts the values for soil/fill that exceeds UUSCOs and RRSCOs.

Soil/fill samples collected during the RI showed no PCBs or pesticides in any of the soil samples. Trace concentrations of several VOCs were noted in one soil samples (11 to 13 feet). One VOC, 1,2,4-Trimethylbenzene (max. of 5,000 ug/Kg) exceeded Unrestricted Use SCOs. Five SVOCs consisting of Polycyclic Aromatic Hydrocarbons (PAHs) were found within one shallow soil samples exceeding Unrestricted Use SCOs as well as Restricted Residential SCOs. Several SVOCs consisting of Polycyclic Aromatic Hydrocarbons (PAHs) including benz(a)anthracene (max. of 9,600 ug/Kg), benzo(a)pyrene (max. of 8,200 ug/Kg), benzo(b)fluoranthene (max. of 10,000 ug/Kg), chrysene (max. of 10,000 ug/Kg) and indeno(1,2,3-cd)pyrene (max. of 4,500 ug/Kg) exceeding Unrestricted Use SCOs as well as

Restricted Residential SCOs within one shallow soil sample. Several metals including barium (max. of 747 mg/Kg), cadmium (max. of 3.54 mg/Kg), chromium (max. of 43.1 mg/Kg), copper (max. of 149 mg/Kg), lead (max. of 8,060 ug/Kg), mercury (max. of 2.96 ug/Kg) and zinc (max. of 503 ug/Kg) exceeded Unrestricted Use SCOs in three shallow soil samples. And, of these metals, lead, barium and mercury also exceeded Restricted Residential SCOs in two shallow soil samples. Findings of the RI were consistent with observations for historical fill sites in areas throughout NYC, with the exception of two soil sampling locations, B-4 for a VOC hotspot in deep soil and B-5 for a lead hotspot in shallow soil.

5.3 Groundwater Chemistry

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Tables 6 through 10. Figure 7 shows the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards.

Groundwater samples collected during the investigations showed no PCBs or pesticides in any sample. One VOC, methyl t-butyl ether (MTBE) (max. of 30.0 ug/L) exceeded NYSDEC Part 703.5 Groundwater Quality Standards (GQS) within two samples and the duplicate sample. Trace concentrations of several VOCs were also detected and none of these VOCs exceeded their GQS. Four SVOCs including benzo(a)anthracene (max. of 0.04 ug/L), benzo(b)fluoranthene (at 0.03 ug/L), benzo(k)fluoranthene (at 0.02 ug/L) and chrysene (at 0.04 ug/L) exceeded the GQS. Several metals were identified in groundwater but only manganese (max. of 3.4 mg/L) and sodium (max. of 181 mg/L) exceeded their respective GQS.

5.4 Soil Vapor Chemistry

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 11.

Soil vapor samples collected during the RI showed high levels of petroleum related and high levels of chlorinated VOCs in all soil vapor samples. Total concentrations of petroleum-related VOCs (BTEX) ranged from 9.6 $\mu\text{g}/\text{m}^3$ to 117,000 $\mu\text{g}/\text{m}^3$. Overall the highest reported concentrations were for hexane (maximum of 137,000 $\mu\text{g}/\text{m}^3$). Chlorinated VOCs including tetrachloroethene (PCE) was detected in all soil vapor samples and ranged from 50 to 773 $\mu\text{g}/\text{m}^3$, carbon tetrachloride was detected in two samples at a maximum concentration of 0.5 $\mu\text{g}/\text{m}^3$. Trichloroethene (TCE) was detected in two soil vapor samples at a maximum concentration of 7.63 $\mu\text{g}/\text{m}^3$. Trichloroethane (TCA) was not detected in any sample. Concentrations for PCE and TCE were above the monitoring level ranges established within the State DOH soil vapor guidance matrix.

Figure 8 shows the location and posts the values for soil vapor samples with detected concentrations.

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

EXECUTIVE SUMMARY

Environmental Business Consultants (EBC) prepared this Phase I Environmental Site Assessment (ESA) for the following property on behalf of the Mendel Gold Realty: 171-173 Bayard Street, Brooklyn, NY, 11222. The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions at the Site. Recognized environmental conditions are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-05 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and EBC's proposal for services.

The Site consists of two adjacent tax parcels located on the north side of Bayard Street, in the Greenpoint section of the Borough of Brooklyn, City of New York, Kings County, New York. The Site is identified by the street address of 171-173 Bayard Street, and as Block 2720 – Lot Nos. 43 and 44 on the New York City (NYC) tax map. Each lot is rectangular with 20.5 feet of frontage on Bayard Street and 100 feet deep for total area of 4,100 square feet (s.f.).

In 1887 the Site (171-173 Bayard Street) was developed with small building 1-story building labeled carpenter. After 1887 the Site was separated into two tax parcels Lot 44 (171 Bayard Street) and Lot 43 (173 Bayard Street).

171 Bayard Street

From 1905 to approximately 1927, the Site was unoccupied and undeveloped. Around 1927 a portion of the Site, Lot 44, was developed with a 1-story building and used as a private garage. This building is consistent with the current building layout on 171 Bayard Street. The building was occupied by various tenants including a coal & oil company, wood workshop, syrup manufacturer/distributor, technology company, iron works, contracting company, window & door manufacturer, and most recently an art studio.

173 Bayard Street

This lot was developed with a small 1-story garage sometime between 1916 and 1935. The garage was demolished and a larger 1-story garage was developed by 1951. Between 1951 and 1959 a new 1-story garage was developed that occupied the entire Lot. This building is consistent with the current building layout on 173 Bayard Street. The building was only noted as a warehouse in 2000 and a glass manufacturer/distributor (Dual Glass) in 2008.

RECOGNIZED ENVIRONMENTAL CONDITIONS

Based upon reconnaissance of the subject and surrounding properties, interviews and review of historical records and regulatory agency databases, this assessment has revealed two (2) recognized environmental condition in connection with the Site and is further discussed below:

- **The Historical Use of the Site as a refrigerator manufacturer.**

According to a Certificate of Occupancy, Sanborn Maps, and city directory listings, the Site was occupied by a refrigerator manufacturer from 1959 to at most 1965. The name of the company is unknown due to a gap in the provided City Directory Listing, but a Certificate of Occupancy from 1959 notes the use of the property as a refrigerator manufacturer. Based on these findings the use of the Site as a refrigerator manufacturer represents an REC.

Reason for inclusion: Refrigerator manufacturers, especially those in operation prior to the 1979's use PCB capacitors, mercury containing components (switches and relays), refrigerants, oils, and other volatile organic compounds as part of the manufacturing process.

- **Suspect Gasoline Underground Storage Tank from 1958 at the Site.**

According to a 1959 Certificate of Occupancy, the NYC Fire Department approved a permit for a gasoline storage tank in September of 1958. The tank is described to only be used for fueling of the owner's trucks. In addition, the site inspection identified the presence of a vent on the roof of the building occupying the Site, indicative of a UST. As no information regarding the capacity of the suspect UST(s), their status, integrity and/or soil conditions in their vicinity was available for review, there is a potential for spills or releases from the USTs to have impacted the subsurface.

Reason for inclusion: Underground storage tanks can leak at fittings, through internal or external corrosion and during refilling. An underground fuel oil tank poses a material threat of a petroleum release to subsurface soil and groundwater.

In addition, the property was assigned an E-designation for Hazmat during the Greenpoint-Williamsburg Rezoning action completed by the City in October 2005.

An E-designation does not interfere with the present use of the Site; however E-designations do prevent the release of building permits subject to a detailed environmental review and release by the NYC Office of Environmental Remediation. Such release may require a full subsurface investigation, remedial and health and safety planning, implementation of a remedial program and documentation that the remedial program was completed during redevelopment of the property. Additional information regarding “E” sites can be found on the New York City Office of Environmental Remediation website:

http://www.nyc.gov/html/oen/html/e_designation/e_designation.shtml.

1.0 INTRODUCTION

1.1 Purpose

Environmental Business Consultants (EBC) prepared this Phase I Environmental Site Assessment (ESA) for the following property on behalf of the Mendel Gold Realty: 171-173 Bayard Street, Brooklyn, NY, 11222 (**Figure 1**). The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions at the Site. Recognized environmental conditions are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

1.2 Scope of Services

The assessment consisted of a visual inspection of the site and surrounding areas, interviews, a review of historical information and maps, and a review of pertinent local, state, federal and facility records. Environmental Data Resources (EDR) of Southport, Connecticut, provided the following information: a computerized database search of environmental compliance records of sites within an ASTM standard radius of the property, a Sanborn fire insurance map search, and a historical telephone directory search.

EBC reviewed the environmental database report compiled by EDR as a part of the assessment. The purpose of the review was to identify reported listings for the Site or other properties in the site vicinity. Databases reviewed included federal and state lists of known or suspected contaminated sites, lists of known handlers or generators of hazardous waste, lists of known waste disposal facilities, and lists of aboveground and underground storage tanks (ASTs and USTs). EBC's review of the database has been incorporated into this report along with a copy of the EDR report.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-05 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and EBC's proposal for services.

1.3 Significant Assumptions

EBC has made the following assumptions in the preparation of this report:

1. Groundwater – The depth to groundwater at the Site is approximately 9 feet below grade surface (bgs). Groundwater is expected to flow to the northwest, consistent with the regional trend.
2. Regulatory Records Information – EBC assumes that all information provided by EDR regarding the regulatory status of facilities within the ASTM Standard approximate minimum search distance is complete, accurate and current.
3. Other - EBC assumes that all information provided through interviews is complete and unbiased.

1.4 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the site. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the site, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report.
2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work. The scope of work was defined by the request of the client.
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by EBC.
4. EBC's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, or

regulations, or policies of federal, state, or local government agencies. EBC does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document.

5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the site and should not be interpreted as such.
6. This report is based, in part, on information supplied to EBC by third-party sources. While efforts have been made to substantiate this third-party information, EBC cannot attest to the completeness or accuracy of information provided by others.

1.5 Special Terms and Conditions

Authorization to perform this assessment was given by a proposal for services between Mendel Gold Realty and EBC.

1.6 User Reliance

This report was prepared for the exclusive use of the Mendel Gold Realty; no other party may use the report without the written authority of EBC.

2.0 PROPERTY DESCRIPTION AND PHYSICAL SETTING

2.1 Location and Legal Description

The Site consists of two adjacent tax parcels located on the north side of Bayard Street, in the Greenpoint section of the Borough of Brooklyn, City of New York, Kings County, New York. The Site is identified by the street address of 171-173 Bayard Street, and as Block 2720 – Lot Nos. 43 and 44 on the New York City (NYC) tax map. Each lot is rectangular with 20.5 feet of frontage on Bayard Street and 100 feet deep for total area of 4,100 square feet (s.f.).

According to the most recent deeds, obtained from the New York City Registrar, and dated September 23, 2002, the current owner of the Site is Tracy Underweiser. A copy of the deed is attached in **Appendix B**.

2.2 Site Characteristics

The Site is currently developed with two 1-story masonry buildings. Site topography is generally level. Frontage of the buildings is along Bayard street and access is provided by two protective steel rollup gates and a standard door. Access was not provided to 171 Bayard Street, but 173 Bayard Street was renovated into an apartment.

Photographs taken during of the Site during the site inspection are attached in **Appendix A**.

2.2.1 Utilities

As the Site is currently developed, electric service for the building is provided by Con-Edison, potable water is supplied by the New York City Department of Environmental Protection (NYCDEP). Sanitary wastes for the building are discharged to the New York City municipal sewer system.

2.3 Physical Setting

The topography of the site and surrounding area was reviewed from the United States Geological Survey (USGS) 7.5-minute series topographic map for the Brooklyn, New York (NY) Quadrangle (Figure 3), which indicates that the Site has a topographic elevation of approximately 19 feet above mean sea level (amsl). The Site is relatively flat with no notable elevation changes.

2.3.1 Surface Water

The east river is located approximately 0.75 miles to the west and northwest, The English Kills is located approximately 0.75 miles to the southeast, and Newton Creek is located approximately 0.75 miles to the east and northeast from the Site.

2.3.2 Soils

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. Soil maps, based on the State Soil Geographic (STATSGO) Database, are compiled by generalizing more detailed Soil Survey Geographic (SSURGO) database maps.

According to the STATSGO data, the soil component in the vicinity of the Site is identified as Urban Land and is described as having a variable surface texture. The STATSGO database states that additional subordinant soil types may be present in the general vicinity of the Site. These soil types are described as mainly loamy sand and silt loam. Deeper soil types consist of very gravelly, loamy sand, unweathered bedrock and stratified sandy loam.

Additional information regarding the soil classification is also included in on Page A-4 of the Environmental Data Resources, Inc. (EDR) database report (Appendix E).

2.3.3 Groundwater

Estimated groundwater levels and flow directions may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or de-watering operations. Generally, groundwater flow typically mimics surface topography and will also tend to flow towards nearby bodies of water. Information contained in the EDR database report, the USGS Water-Table and Potentiometric-Surface Altitudes in the Upper Glacial, Magothy and Lloyd Aquifers Beneath Long Island, March-April 2006 (**Figure 5**), the USGS web site and topographic map were used to estimate groundwater depth and flow direction.

Based upon a surface elevation of 19 feet amsl, the depth to groundwater in the vicinity of the Site is approximately 9 feet below grade surface (bgs). Groundwater is expected to flow to the northwest consistent with the regional trend.

2.3.4 Radon Risk

Radon is a colorless, radioactive, inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate and pitchblende. The USEPA's Map of Radon Zones for New York State, September 1993, indicates that the Brooklyn area is not a radon risk area. The EDR report provides information from the New York State Department of Health (NYSDOH) radon survey which indicates that 51 radon tests have been conducted in Kings County. Test results indicate average radon concentrations of 0.750 pCi/L (first floor level) and 1.370 pCi/L (basements). Based on these data, radon does not likely represent an environmental concern.

3.0 PROPERTY USAGE

3.1 Current Property Usage

The Site is currently developed with two 1-story masonry buildings. Site topography is generally level. Frontage of the buildings is along Bayard Street and access is provided by two protective steel rollup gates and a standard door. Access was not provided to 171 Bayard Street, but 173 Bayard Street was renovated into an apartment. The last known tenant of 171 Bayard Street is Parnters & Others, a creative art studio.

A review of New York City Department of Buildings (NYCDOB) records and the NYC Department of City Planning Zoning map indicates that the Site is zoned R6B residential (**Figure 5**), and has been since at least 2005.

3.2 Current Usage of Adjoining/Surrounding Properties

A summary of the uses of the surrounding/adjacent properties is described below. Photos of the exterior of adjacent properties are attached in **Appendix A**.

Surrounding Property Usage

Direction	Property Description
North	Residential buildings
South	Residential building, Construction Site/New Residential Building
East	Residential Building
West	Residential Building

3.3 Historical Usage of Site and Surrounding Properties

Historical sources researched to determine past usage of the Site and surrounding properties are as follows:

Sanborn Fire Insurance Maps - Sanborn fire insurance maps for the Site and surrounding area were reviewed for the years 1887, 1905, 1916, 1942, 1951, 1965, 1978, 1979, 1980, 1981, 1982, 1983 1986, 1987, 1988, 1989, 1991, 1993, 1995, 1996, 2001, 2002, 2003, 2004, 2005, 2006 and 2007. The review is summarized in Section 3.3.1. Copies of Sanborn maps are included as **Appendix C**.

City Directory Abstract - A directory of historical telephone listings at the Site and surrounding properties were reviewed from approximately five year intervals for the years 1928 through 20012.

The review is summarized in Sections 3.3.2 below. A copy of the City Directory is included in **Appendix D**.

3.3.1 Sanborn Fire Insurance Maps - Site and Adjacent Properties

The historical usage of the Site and adjacent properties, identified through Sanborn map review, is summarized below:

1887

Subject Site:

The Site is depicted as one lot and developed with a small carpenter.

Adjacent properties:

The property adjacent to the North is vacant and undeveloped. Bayard Street borders the site to the south, beyond which is developed with 3-story residential buildings. The property adjacent to the east is developed with a 3-story dwelling and small stable in the rear yard. The property adjacent to the west is developed with a 3-story dwelling.

1905

Subject Site:

The Site has been divided into the two lots consistent with the current Site layout.

Adjacent properties:

The properties adjacent to the north were developed with 3-story dwellings. The property adjacent to the west changed to a mixed use building, commercial on the first floor and residential on the upper floors. The properties adjacent to the east and south remain consistent with the previous Sanborn Map.

1916

Subject Site:

The Site remains consistent with the 1905 Sanborn map.

Adjacent properties:

The property adjacent to the west is depicted as a residential building again. The adjacent properties to the north, south, and east are consistent with the previous Sanborn Map

. 1942

Subject Site:

A portion of the Site (171 Bayard Street) is developed with a 1-story building occupying the entire lot. The building is labeled as a private garage with an office at the front of the building. A small 1-story garage was developed on front of 173 Bayard Street.

Adjacent properties:

The properties adjacent to the Site remain consistent with the previous Sanborn map.

1951

Subject Site:

The previous 1-story garage at the front of 173 Bayard is no longer present, but a new larger 1-story garage is developed at the rear of the Lot.

Adjacent properties:

The properties adjacent to the Site remain consistent with the previous Sanborn map.

1965

Subject Site:

The building occupying 171 Bayard Street is labeled as manufacturing. A portion of the Site, 173 Bayard Street, is redeveloped with a 1-story garage occupying the entire Lot. The rear portion of the building is labeled as Storage.

Adjacent properties:

The properties adjacent to north and west remained consistent with the previous Sanborn map. A new street, McGuinness Boulevard, was developed to the east. The new street cut through the eastern portion of Block 2720 and the Block to the south, 2726. No changes were made to the adjacent property to the east, but some of the adjacent properties to the south are undeveloped and vacant.

1978-1980

Subject Site:

The Site remains consistent with the 1965 Sanborn map.

Adjacent properties:

The properties adjacent to the Site remain consistent with the previous Sanborn map.

1981-1982

The Sanborn Maps provided for the years 1981 and 1982 are illegible; therefore no usage or descriptions of properties could be determined.

1983-2007

Subject Site:

The Site remains consistent with the 1980 Sanborn map.

Adjacent properties:

The properties adjacent to the Site remain consistent with the 1980 Sanborn map.

3.3.2 City Directory Listings

EDR conducted a search and provided copies of available historical city directory listings for the subject and adjacent properties. The historical city directory listings (**Appendix D**) were reviewed, to identify information regarding past uses of the subject and surrounding properties to determine if historical usage represented a REC to the subject property.

Historical city directory information is summarized as follows:

Date	Property Information
1934	Subject Property: Address not listed in research source Adjacent Properties: Residential Listing (169,170,172,174,175,176,178)
1940	Subject Property: Benit Louis coal (171), Super Coal & Oil (171) Adjacent Properties: Residential Listing (175)
1945	Subject Property: Super Coal & Oil (171) Adjacent Properties: Address not listed in research source
1949	Subject Property: Oswald Anton wdwk (171) Adjacent Properties: Residential Listing (169,175)
1960	Subject Property: Subject Site not listed in research source Adjacent Properties: Residential Listing (169)
1965	Subject Property: Pure Maid Syrup Corp (171), Deutsch M flavrg extrcts (171) Adjacent Properties: Residential Listing (169)
1970	Subject Property: Commercial Syrup Inc (171), Pure Maid Syrup Corp (171) Adjacent Properties: Residential Listing (169)
1973	Subject Property: Commercial Syrup Inc (171), Pure Maid Syrup Corp (171), Deutsch M flavrg extrcts (171) Adjacent Properties: Residential Listing (169,172,175),
1976	Subject Property: Commercial Syrup Inc (171) Adjacent Properties: Residential Listing (169)
1985	Subject Property: Commercial Syrup Inc (171) Adjacent Properties: Residential Listing (169)
1992	Subject Property: Inova Technologies Inc (171) Adjacent Properties: Residential Listing (169)
1997	Subject Property: Trust Gale & Iron Works Inc (171) Adjacent Properties: Residential Listing (169,176), Super Fuel Div Corp (172), J Warehouse (175)
2000	Subject Property: Trust GT & Iron Inc (171), J Warehouse (173) Adjacent Properties: Residential Listing (169,174,176), Super Fuel Div Corp (172)
2005	Subject Property: Accurate Contracting Corp(171), Residential Listing (173) Adjacent Properties: Residential Listing (169,176)
2008	Subject Property: Dual tilt window & door MFG (171), Dual Glass (173) Adjacent Properties: Address not listed in research source
2013	Subject Property: Partners & Others (171), Adjacent Properties: Super Fuel Div Corp (172), Residential Listing (175)

Information regarding additional surrounding properties identified on the City Directory search is included with the search in **Appendix D**. The city directory indicated that the 171 Bayard Street was occupied by Benit Louis Coal/Super Coal and Oil from 1940 to 1945. By 1949, the building was listed as word workshop and changed to a syrup manufacturer by 1965. 171 Bayard remained a syrup manufacturer until an unknown technology company named Inova Technologies, Inc took over in 1992. A iron works company (Trust Gale & Iron Works, Inc) operated out of the 171 Bayard Street from at least 1997 to 2000. Since then a contracting company, window and door manufacturer, and creative art studio named “Partners & Others” have operated out of the Site. The only listings for 173

Bayard Street are a Warehouse in 2000, a residential listing in 2005, and another glass manufacturer (Dual Glass) in 2008.

3.3 Site History Summary

EBC was able to establish a history for the property dating back to 1887.

In 1887 the Site (171-173 Bayard Street) was developed with small building 1-story building labeled carpenter. After 1887 the Site was separated into two tax parcels Lot 44 (171 Bayard Street) and Lot 43 (173 Bayard Street).

171 Bayard Street

From 1905 to approximately 1927, the Site was unoccupied and undeveloped. Around 1927 a portion of the Site, Lot 44, was developed with a 1-story building and used as a private garage. This building is consistent with the current building layout on 171 Bayard Street. The building was occupied by various tenants including a coal & oil company, wood workshop, syrup manufacturer/distributor, technology company, iron works, contracting company, window & door manufacturer, and most recently an art studio.

173 Bayard Street

This lot was developed with a small 1-story garage sometime between 1916 and 1935. The garage was demolished and a larger 1-story garage was developed by 1951. Between 1951 and 1965 a new 1-story garage was developed that occupied the entire Lot. This building is consistent with the current building layout on 173 Bayard Street. The building was only noted as a warehouse in 2000 and a glass manufacturer/distributor (Dual Glass) in 2008.

4.0 USER PROVIDED INFORMATION

4.1 Title Records

As of the date of this report the user has not requested that EBC perform a title search.

4.2 Environmental Liens

An environmental lien is a charge, security or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws.

The user has not made EBC aware of any environmental liens against the Site and has not requested that EBC perform an environmental lien search for the Site.

4.3 Specialized Knowledge

The user has not made EBC aware of any specialized knowledge regarding the chemicals or processes formerly in use at the Site or surrounding property.

4.4 Commonly Known or Reasonably Ascertainable Information

The user has not made EBC aware of any commonly known or reasonably ascertainable information regarding the past uses of the Site, specific chemicals in use at the Site or any spills, chemical releases or environmental cleanups at the Site.

4.5 Valuation Reduction for Environmental Issues

The user has not made EBC aware of any valuation reduction regarding the sale price of the property.

4.6 Owner, Property Manager and Occupant Information

According to New York City Department of Finance records, the current owner of the site is identified as Tracy Underseiser.

4.7 Reason for Performing Phase I ESA

The Phase I ESA was performed to identify recognized environmental conditions at the Site as part of the due diligence to support the acquisition of the property by Mendel Gold Realty.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

Environmental Data Resources (EDR) of Southport, Connecticut was retained to provide a computerized database search of the project area within an ASTM-standard radius of the Site. A list of the databases searched and the search radius is shown on the summary table below. EBC reviewed the database output to determine if the property appears on any of the regulatory agency lists. Detailed information concerning each database list is provided in the EDR report (**Appendix E**). A summary of standard environmental record sources researched is as follows:

5.1.1 Federal Databases

The table below summarizes the Federal databases that were searched.

Federal Databases Searched

Agency	Listing Name or Database Searched	Abbreviation	Search Distance
USEPA	National Priority List	NPL	1.0 mile
USEPA	National Priority List Deletions	Delisted NPL	1.0 mile
USEPA	Comprehensive Environmental Response Compensation and Liability Act Registry	CERCLIS	0.5 mile
USEPA	CERCLIS No Further Remedial Action Planned	CERCLIS-NFRAP	0.5 mile
USEPA	Resource Conservation and Recovery Act Corrective Action Activity	CORRACTS	1.0 mile
USEPA	Resource Conservation and Recovery Act Treatment/Storage/Disposal Facilities	RCRA TSD	0.5 mile
USEPA	Resource Conservation and Recovery Act Small/Large Quantity Hazardous Waste Generators	RCRA SQG/LQG	Site and Adjoining
USEPA	Federal Institutional/Engineering Control registries	US INST/ENG Controls	Site
USEPA	Emergency Response Notification System	ERNS	Site
USEPA	Superfund (CERCLA) Consent Decrees	CONSENT	1.0 mile
USEPA	Records of Decision	ROD	1.0 mile
USEPA	Mines Master Index	MINES	0.25 mile

Federal NPL List - The National Priority List (NPL) is the United States Environmental Protection Agency (USEPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the federal Superfund Program.

Findings: The Site is not listed as an NPL facility. No NPL sites were identified within a 1-mile radius of the Site.

Federal Delisted NPL List – NPL Delisted Sites are former NPL sites that have been remediated and removed from the USEPA’s priority list. Sites are deleted where the USEPA has determined that no further response is appropriate.

Findings: The Site is not identified as a Delisted NPL facility. There were no Delisted NPL sites identified within a one-mile radius of the Site.

Federal CERCLIS List - The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list is a compilation of sites that the USEPA has investigated or is currently investigating for a release or threatened release of hazardous substances.

Findings: The Site is not listed as a CERCLIS facility. No CERCLIS site within a half-mile radius of the Site.

Federal CERCLIS-NFRAP List – No Further Remedial Action Planned (NFRAP) sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of USEPA’s knowledge, assessment at a site has been completed and that USEPA has determined no further steps will be taken to list this site on the National Priorities List (NPL).

Findings: The Site is not listed as a CERCLIS-NFRAP facility. One (1) CERCLIS-NFRAP site was identified within a one mile radius of the Site. This site is located within 1/4 mile of the Site and is further discussed below:

- City Barrel & Drum Co Inc at 421 Meeker Avenue is located 394 feet to the south (hydraulically cross gradient) of the Site. According to the database, this is an archive site. This site was listed in the Eckhardt subcommittee report as a disposal site. After an investigation by NYSDEC Regional Offices it was found that this is an industrial operation to recycle, recover, and refurbish drums and that no apparent disposals of hazardous or toxic waste have occurred here. The property was declared as an archived site on

September 02, 1987. Based on the relative distance and current status (no apparent disposal), this property is not considered to be a significant environmental concern.

Federal RCRA CORRACTS List - The RCRA Corrective Actions (CORRACTS) database is the USEPA's list of hazardous waste treatment, storage or disposal facilities subject to corrective action under RCRA.

Findings: The Site is not listed as a RCRA CORRACTS facility. One (1) RCRA CORRACTS site was identified within a one mile radius of the Site.

- Review Avenue Development II at 37-80 Review Avenue in Long Island City is located 4,838 feet to the northeast of the Site. This site is also listed in the RCRA-SQG, FINDS, NY SHWS, NY MANIFEST, PA MANIFEST, NY BROWNFIELDS, NYMOSF, 2020 COR ACTION databases. Based on the relative distance (nearly one mile) and location on the opposite side of Newton Creek, this property is not considered to be a significant environmental concern.

Federal RCRA Treatment, Storage and Disposal Facilities - The USEPA Resource Conservation and Recovery Act (RCRA) program identifies reporting facilities that treat, store or dispose of hazardous waste.

Findings: The Site is not listed as a RCRA TSDF and no TSDFs were identified within a ½ mile radius of the Site.

Federal RCRA Generators - The RCRA Generators database is a compilation of reporting facilities that generate hazardous waste. A LQG is a site which generates more than 1,000 kilograms (kg) of hazardous waste during any one calendar month and can store waste on-site for up to 90 days. A SQG is a site which generates more than 100 and less than 1,000 kg of hazardous waste during any one calendar month and accumulates less than 6,000 kg of hazardous waste at any time; or a site which generates less than 100 kg of hazardous waste during any one calendar month and accumulates less than 1,000 kg of hazardous waste at any time. A CESQG is a site which generates less than 100 kg of hazardous waste or less than one kg of acutely hazardous waste during any one calendar month. A

NonGen site is a former registered/regulated generator which does not presently generate hazardous waste.

Findings: The Site is not listed as a RCRA-LQG, RCRA-SQG, RCRA-NonGen facility or RCRA-CESQG. Four (4) RCRA-LQG, five (5) RCRA-CESQG and ten (10) RCRA NonGen facilities were identified within a 1/4 mile radius of the Site. None of these sites are located adjacent to the Site. According to the EDR database, no violations are listed or corrective action has been taken for any of these sites. Based on this information, these sites are not expected to represent a significant environmental concern.

Federal Institutional/Engineering Controls – Federal Institutional/Engineering Controls databases list sites with institutional/engineering controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Findings: No Federal Institutional/Engineering Controls were listed for the Site and no sites were identified within a 1/2 mile radius of the Site.

Federal Emergency Response Notification System - The Emergency Response Notification System (ERNS) is national database used collect information on reported releases of oil or hazardous substances.

Findings: Neither Site nor the adjacent properties were identified in the ERNS databases.

Federal Superfund Consent Decrees - The Superfund Consent Decrees (CONSENT) list identifies major legal settlements that establish responsibility and standards for cleanup at NPL sites.

Findings: Neither the Site nor any property within one mile of the Site is identified in the CONSENT databases.

Federal Records of Decision - Record of Decision (ROD) documents mandate a permanent remedy at

an NPL site containing technical and health information to aid in the cleanup.

Findings: Neither the Site nor any property within one mile of the Site is identified a ROD site.

Federal Master Mines Index - The Master Mines Index (MINES) file contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

Findings: Neither the Site nor any property within ¼ mile of the Site is listed in the MINES database.

5.1.2 New York State Databases

The table below summarizes the State databases that were searched.

New York State Databases Searched

Agency	Listing Name or Database Searched	Abbreviation	Search Distance
NYSDEC	Inactive Hazardous Waste Disposal Sites in New York State	SHWS	1.0 mile
NYSDEC	Solid Waste Facility Register	SWF	0.5 mile
NYSDEC	Registered Recycling Facilities	SWRCY	0.5 mile
NYSDEC	Registered Waste Tire Storage Facilities	SWTIRE	0.5 mile
NYSDEC	Leaking Underground Storage Tank Sites	LTANKS	0.5 mile
NYSDEC	Petroleum Bulk Storage (PBS)	UST/AST	Site and Adjoining
NYSDEC	Chemical Bulk Storage (CBS)	CBS AST/UST	Site and Adjoining
NYSDEC	Institutional/Engineering Control registries	INST/ENG Controls	Site
NYSDEC	Voluntary Cleanup Agreements	VCP	0.5 mile
NYSDEC	Brownfield sites	Brownfields	0.5 mile
NYSDEC	Major Oil Storage Facilities	MOSF	0.5 mile
NYSDEC	New York State Spills	NYSPILLS	0.125 mile
NYSDEC	Dry Cleaner Site	Drycleaners	0.25 mile

NYS Inactive Hazardous Waste Disposal Sites - The New York State Department of Environmental Conservation (NYSDEC) maintains a state priority list of Inactive Hazardous Waste Disposal Sites (SHWS) considered to be actually or potentially contaminated and presenting a possible threat to human health and the environment. Referred to as the State Superfund Program, the Inactive

Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance/waste sites.

Findings: The Site is not listed as a SHWS site. Four (4) SHWS facilities were identified within a one mile radius of the Site. These sites are further discussed below:

- 95 Lombardy St/ ACME Arch. Prods., Inc at 95 Lombardy Street is located 2,422 feet to the east-northeast (hydraulically down-gradient) of the Site. According to the database, this site represents a significant threat to the public health or environment and action is required. The primary contaminant of concern at this site is trichloroethylene (TCE). TCE has been found in shallow groundwater at concentrations up to 66,000 ppb and in deep groundwater upto 70,000 ppb. Soil vapor sampling detected concentrations of TCE up to 4,100 $\mu\text{g}/\text{m}^3$. The site poses a significant environmental threat due to ongoing release of PCE from source areas into soil and groundwater Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses (including the Site) are supplied with public water and contaminants are below the ground surface. Based on this information, the relative distance and assumed direction of groundwater flow, this facility is not expected to represent a significant environmental concern.
- ACME Steel Partition Co Inc at 513 Porter Avenue is located 2,870 feet to the east-northeast (hydraulically down-gradient) of the Site. According to the database, this site represents a significant threat to the public health or environment and action is required. The primary contaminants of concern are PCE and TCE. PCE and TCE has been found in groundwater at concentrations up to 6,900 ppb and 12,000ppb, respectively. The site poses a significant environmental threat due to ongoing release of PCE from source areas into soil and groundwater Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses (including the Site) are supplied with public water and contaminants are below the ground surface. Based on this information, the relative distance and assumed direction of groundwater flow, this facility is not expected to represent a significant environmental concern.

- Review Avenue Development II has been described in the above section, RCRA CORRACTS and is not expected to represent a significant environmental concern.
- Nat Grid Green Point Facility at 287 Maspeth Avenue is located 3,773 feet to the east (hydraulically down-gradient) of the Site. According to the database, this site represents a significant threat to the public health or environment and action is required. The facility is located along Newton Creek. The primary contaminants of concern are petroleum based and MGP DNAPL was detected across the property in an early investigation. The site poses a significant environmental threat due to ongoing release of SVOCs and petroleum based VOCs from source areas into soil and groundwater Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses (including the Site) are supplied with public water and contaminants are below the ground surface. Based on this information, the relative distance and assumed direction of groundwater flow, this facility is not expected to represent a significant environmental concern.

NY Vapor Reopened – This is a database listing of previously dismissed/closed sites that are being re-evaluated with current knowledge of the potential for soil vapor intrusion.

Findings: The Site is not listed as a NY VAPOR REOPENED site. One (1) NY VAPOR REOPENED facilities was identified within a one mile radius of the Site. The facility is located 4,838 feet to northeast in Long Island City. Based on the distance and the location of the facility on the opposite side of Newton Creek, this facility is not expected to represent a significant environmental concern.

State Hazardous Waste Disposal Sites – This is a database listing of sites delisted from the registry of inactive hazardous waste disposal sites.

Findings: The Site is not listed as a DEL SHWS site. Four (4) DEL SHWS facilities were identified within a one mile radius of the Site. Three of these sites are located in excess of ½-mile from the Site, based on the relative distance these sites are not expected to represent a significant environmental concern. One of these sites, City Barrel Company, was located within 1/8-mile and is reviewed in the above section, CERCLIS-NFRAP.

Hazardous Substance Waste Disposal Sites - The Hazardous Substance Waste Disposal Sites (HSWDS) list includes any known or suspected hazardous substance waste disposal sites. Also included are sites de-listed from the Registry of Inactive Hazardous Waste Disposal Sites list and non-Registry sites that USEPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared.

Findings: The Site is not listed as on the HSWDS database. One HSWDS site was identified within a half-mile radius of the Site. City Barrel Company, was located within 1/8-mile and is reviewed in the above section, CERCLIS-NFRAP.

NYS Landfill - The NYSDEC Solid Waste Facility Register (NYSWF/LF) records contain an inventory of solid waste disposal facilities or landfills in New York State.

Findings: The Site is not listed as NY SWF/LF site. Two (2) NY SWF/LF facilities were identified within a half mile radius of the Site. Both facilities are listed as inactive and are located greater than 2,500 feet to the northeast (hydraulically down gradient from the site). Based on the relative distance and location of these inactive facilities, they are not expected to represent a significant environmental concern

NYS Registered Recycling Facilities - The Registered Recycling Facilities List (SWRCY) is a NYSDEC list of recycling facilities.

Findings: The Site is not listed as a SWRCY site. No SWRCY sites were identified within a ½ mile radius of the Site.

NYS Registered Waste Tire Storage Facilities - The Registered Recycling Facilities List (SWTIRE) is a NYSDEC list of Registered Waste Tire Storage & Facility List.

Findings: The Site is not listed as a SWTIRE site. There were no SWTIRE sites identified within a ½ mile radius of the Site.

NYS Leaking Underground Storage Tank Sites - The Leaking Underground Storage Tank Sites (LTANKS) database contains a NYSDEC inventory of reported leaking storage tank incidents. They

can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Findings: The Site is not identified as a LTANKS site. However, twenty-four (24) LTANK sites were identified within ½ mile of the Site. All of the LTANK sites have received closure from the NYSDEC. Based on this information, these LTANK sites are not expected to present a significant environmental concern to the Site.

NYS Petroleum Bulk Storage - The NYSDEC Petroleum Bulk Storage - Underground Tanks (UST) database lists facilities with a petroleum storage capacity of more than 1,100 gallons and less than 400,000 gallons. The NYSDEC Petroleum Bulk Storage - Aboveground Tanks (AST) database lists facilities with registered above ground storage tanks.

Findings: The Site is not listed as a UST or a Hist UST site. The Site is not listed as an AST or Hist AST site. Fourteen (14) UST sites, three (3) HIST UST sites, and fourteen (14) AST sites are registered within a ¼ mile radius of the Site. Properties with registered ASTs or USTs do not necessarily pose a hazard unless the tanks are leaking or a spill occurs. Most tanks in the area hold home heating oil for on-site boilers and furnaces. Sites with leaking tanks or spills are addressed in the appropriate section.

NYS Chemical Bulk Storage - The Chemical Bulk Storage (CBS) database is a NYSDEC list of facilities that store regulated hazardous substances in aboveground tanks (AST) with capacities of 185 gallons or greater or underground tanks (UST) of any size.

Findings: The Site is not identified as a CBS facility. Two (2) CBS facilities, no CBS-UST and two (2) CBS-AST sites were identified within a ¼ mile radius of the Site. None of the sites are located adjacent to the Site. Properties with registered ASTs or USTs do not necessarily pose a hazard unless the tanks are leaking or a spill occurs. Sites with leaking tanks or spills are addressed in the appropriate section.

NYS Institutional/Engineering Controls – NYSDEC list of Environmental Remediation sites with Institutional or Engineering Controls in place.

Findings: Neither the Site nor any site within a ½ mile of the Site was identified in the NYSDEC Institutional/Engineering Controls databases.

NYS Voluntary Cleanup Agreements - The NYSDEC Voluntary Cleanup Program (VCP) database identifies hazardous waste sites undergoing private sector cleanup as part of redevelopment.

Findings: The Site was not identified as a VCP site. No VCP sites were identified within a one-half mile radius of the subject property.

NYS Brownfields - A Brownfield is any real property where redevelopment or re-use may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant.

Findings: The Site was not identified as a Brownfield site. One Brownfield site was located within ½ mile of the Site.

- Former Driggs Plywood Corp. at 11 Jackson Street is located 2,385 feet to the southwest (hydrologically cross/down gradient) of the Site. According to information available in the database, the primary contaminants of concern for the site are PAHs and Metals above standards indicative of historic fill in the soil. This site is currently under review. Based on this information and the relative distance, this site is not expected to represent a significant environmental concern.

NYS Major Oil Storage Facilities - The NYSDEC Major Oil Storage Facilities (MOSF) database lists facilities or vessels with a petroleum storage capacity of more than 400,000 gallons.

Findings: The Site was not identified as an MOSF. No MOSF sites were identified within ½ mile of the Site.

NYS Spills - The New York State Spills Information Database (NY SPILLS) contains data collected on chemical and petroleum spill incidents reported to NYSDEC since April 1, 1986.

Findings: The Site is not listed within either the NY SPILLS or NY Hist SPILLS databases. However, Nineteen (19) spill sites were identified within 1/8 mile of the Site. None of these sites is

located adjacent to the Site. Each of the NYS SPILLS sites has received closure from the NYSDEC. Based on the status, these sites do not represent a significant environmental concern to the Site.

MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSDF.

Findings: The Site is not listed as a MANIFEST site. However, twenty-three (23) manifest sites were identified within a ¼ mile radius of the Site. These sites are not located adjacent to the Site and information provided within the EDR report indicates that there are no listed violations or that corrective action has been taken to address the violations listed for these sites. Therefore, it is unlikely that these facilities present a significant environmental risk to the Site, and they are not considered RECs.

Drycleaner Sites - The NYSDEC maintains a listing of all registered drycleaners. Drycleaner sites do not necessarily pose a hazard unless a spill occurs. Sites at which spills have been identified are addressed in the appropriate section.

Findings: The Site is not identified as drycleaner. Three (3) Drycleaner sites were identified within ¼ mile of the site. The nearest drycleaner is located 1,299 feet away from the site and the drycleaners detected have had no incidents of spills or releases noted. Therefore it is unlikely that this facility presents a significant environmental risk to the Site, and it is not considered an REC.

NYS Manufactured Gas Plants - Manufactured gas plants (MGP) were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar, sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Findings: The Site is not identified as an MGP site. Four (4) MGP sites were identified within a one-mile of the Site. These sites are located in excess of ½-mile from the Site. Based on the distance from the Site and assumed direction of groundwater flow these sites are not expected to represent a significant environmental concern.

E Designation - The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designation also includes a mandatory construction-related health and safety plan which must be approved by NYCDEP.

Findings: The Site is identified as an E Designation site. Thirty-nine (39) E Designation sites were identified within 1/8-mile of the Site. With the exception of two sites, these sites are not located adjacent to the Site and information provided within the EDR report indicates that there are no listed violations or that corrective action has been taken to address the violations listed for these sites. Therefore, it is unlikely that these facilities present a significant environmental risk to the Site, and they are not considered RECs. The Site and adjacent properties are further discussed in detail below:

- The Site (Lots 43 Block 2720 at 173 Bayard Street & Lot 44 Block 2720 at 171 Bayard Street) was identified as an E Designation site and is assigned the E number of E-138, with the description of “underground gasoline storage tank testing protocol”. This designation came into effect on May 11, 2005. Patrick & Rose Laccone was identified as the owner of the Site. No further information was available from the EDR database for review. This listing is further discussed in the following sections.
- The west adjacent property at 169 Bayard Street (hydraulically cross-gradient) was identified as an E Designation site and is assigned the E number of E-138, with the descriptions of “underground storage tank testing protocol”. This designation came into

effect on May 11, 2005. No other releases or violations in connection with this site were identified during the course of this investigation. Based on this information, this listing is not considered a REC.

EDR Historical Auto Stations - EDR has searched selected national collections of business directories and has collected listings of potential gas station/ filling station/ service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/ filling station/ service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station etc.

Findings: The Site was not identified as an EDR Historical Auto Station site. Eighteen (18) sites were identified within ¼ mile of the Site. These sites are not located adjacent to the Site and information provided within the EDR report indicates that there are no listed violations or that corrective action has been taken to address the violations listed for these sites. Therefore, it is unlikely that these facilities present a significant environmental risk to the Site, and they are not considered RECs.

EDR Historical Cleaners - EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash and dry etc.

Findings: The Site was not identified as a EDR Historical Cleaners site. Seven (7) sites were identified within ¼ mile of the Site. These sites are not located adjacent to the Site and information provided within the EDR report indicates that there are no listed violations or that corrective action has been taken to address the violations listed for these sites. Therefore, it is unlikely that these facilities present a significant environmental risk to the Site, and they are not considered RECs.

5.2 Additional Environmental Record Sources

5.2.1 Local Agency Review

Freedom of Information Act (FOIA) requests were sent to the New York City Department of Environmental Protection (NYCDEP), New York City Fire Department, New York City Department of Health (NYCDOH) and the New York City Fire Department (FDNY) for information regarding hazardous operations and or other environmental reports/investigations for the Site, including the registration of fuel storage tanks, past spills, or violations. As of the date of this report, a response had not been received for the FOIA request. Regulatory agencies usually take six to eight weeks to process FOIA requests. Any pertinent information received will be reviewed and forwarded upon receipt. Copies of FOIA requests and regulatory agency responses are included in **Appendix B**.

5.2.2 New York City Department of Finance

The following is a summary of pertinent information obtained from the New York City Department of Finance website:

Tax Lot: Block 2720 – Lot No. 43
Address: 173 Bayard Street Brooklyn NY
Owner: Underseiser, Tracy
Lot Size: 20.5 by 100 feet– rectangular
Building Class: O9 –Office Buildings
Zoning: R6B (residential)

Tax Lot: Block 2720 – Lot No. 44
Address: 171 Bayard Street Brooklyn NY
Owner: Underseiser, Tracy
Lot Size: 20.5 by 100 feet– rectangular
Building Class: F4 –Factory/Industrial
Zoning: R6B (residential)

5.2.3 New York City Department of Buildings

The Department of Buildings (DOB) computerized Property Profile Overviews (PPOs) were reviewed. Pertinent information regarding Site is summarized below:

173 Bayard Street (Lot 43):

According to the PPO, seven (7) actions are listed for the Site; alterations (1917), building notice in 1926, newbuilding in 1917, three (3) DOB violations all closed in 2011, an active ECB violation LIEN, and various DOB ECB violations and violations which not related to this investigation. Two (2) jobs are listed for this Site; a withdrawn job was dated in 2010 and is in reference to renovating the interior of a 2-story building from a factory to residential. The second job was filed in 2011 for the same renovation of changing the use from a factory to residential, but on a 1-story building. Two (2) complaints are listed for the site, one has been resolved or closed and one is listed as violation served for an illegal alteration. In addition the Site was identified as an E designation (Hazmat) site within the NYCDOB records.

171 Bayard Street (Lot 44):

According to the PPO, thirteen (13) actions are listed for Lot 44; five alterations were noted from 1903 to 1955, three certificates of occupancy (CO), three new buildings (1908,1909,1927), two DOB Violations dismissed, and a plumbing repair slip.

One (1) job is listed for this Site in reference to installing a new oven and exhaust on the first floor for a taco food products factory in 1991. Another ARA/LAA Job was filed in 2012 to furnish and install a new gas meter bar, gas riser, and a new modine PDP vented through the roof. In addition the Site was identified as an E designation (Hazmat) site within the NYCDOB records.

The COs listed are as follows:

- 1927 – 171 Bayard Street for use as a Private Garage of 5 trucks.
 - 1935 – 171 Bayard Street for use as storage.
 - 1959 – 171-173 Bayard Street for use as a factory and storage, manufacturing refrigerators.
- In addition, a fire department approval dated September 8, 1958 is noted for the installation of a gasoline tank used for refueling of the owner's trucks. *The historic use of the site as*

refrigerator manufacturer and the potential of a gasoline storage tank from 1958 are considered recognized environmental conditions.

5.2.4 Historic Zoning Map

A review of the NYC Department of City Planning Zoning Maps for the years 1961 through 2012 indicates that the Site has been zoned manufacturing and residential R6B from 2005 to 2012 with the special E-138 designation showing up in the 2009 zoning maps. From approximately 1961 to 2005 the Site was zoned as manufacturing M1-1 and R6(M1-1). A copy of the December 1961 zoning map is included as **Figure 5B**.

5.2.5 Activity and Use Limitations

A search was conducted for Activity and Use Limitations (AULs) associated with the subject properties, more specifically Institutional Controls (ICs) and/or Engineering Controls (ECs), which have been placed upon the property as a result of environmental issue identified at the property. In the City of New York, information on such AULs is maintained by the City of New York Department of City Planning (NYCDCP) and is commonly depicted on zoning maps with an “E” designation, as well as maintained within Chain of Title Records. For a site to be designated with an “E” restriction, several criteria must be met. First, a property must be included within a designated re-zoning area, then the property must be identified as a “Potential” or “Projected” re-development property, and finally, the site must be listed on one or more environmental regulatory databases as listed in the ASTM standard, be adjacent to such a site, and/or have historical usage associated with hazardous materials with the potential to impact human health and/or the environment should a release have occurred. Sites with an “E” designation require additional investigation and/or remediation be performed in order to determine if the historical use of a property, typically manufacturing or chemical usage, have impacted the site. No change of use or development requiring a building permit will be issued for an “E” designated site without approval from the NYCOER.

The search for environmental liens and AULs also included a review of information available from the New York City Department of Finance, New York City DOB, the EDR database report, City of New York Environmental Quality Review Requirement Declarations, City of New York Zoning maps, and the NYCDCP and NYCOER websites. The Site was identified as a Hazmat / designated site (E-138)

with the description of (Underground Gasoline Storage Tank Testing Protocol). Typical NYCOER Phase II investigation/sampling requirements for hazmat “E” sites are as follows:

- Collection and laboratory analysis of for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), target analyte list (TAL) metals, PCBs and pesticides.
- Collection and laboratory analysis of groundwater samples for VOCs, SVOCs, TAL metals (filtered and unfiltered), PCBs and pesticides.
- Collection and laboratory analysis of soil gas samples for laboratory analysis of VOCs via EPA Method TO-15.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

Mr. Kevin Waters of EBC performed the site inspection on October 9, 2013, beginning at approximately 9:30 am. The reconnaissance included a visual inspection of the Site, the sidewalk immediately in front of the Site, and the exterior of adjacent properties. The site reconnaissance was limited to 173 Bayard Street, no access to 171 Bayard Street was available.

Photographs taken during the inspection are attached (**Appendix A**).

6.2 Observations

The property is currently developed with two 1-story masonry buildings. The two buildings are accessed by a protective steel rollup gate and a standard door. Access was only provided to one of the two buildings (173 Bayard Street). The interior of the building was partially renovated to a residential apartment with small offices/rooms off a main hallway and a main kitchen area.

6.3 Aboveground and Underground Storage Tanks (ASTs/USTs)

EBC did not note any AST or UST(s) within the building during the site inspection, but a gasoline vent was noted protruding from the roof of the building. As no information regarding current status of the this gasoline storage tank(s) and/or soil quality in the vicinity of the suspect storage tank(s) was provided to EBC for review, spills or releases from the tanks may have impacted the subsurface. Therefore, the potential gasoline storage tank(s) represent a recognized environmental condition.

6.4 Hazardous and Non-Hazardous Chemical Storage and Disposal

EBC did not note hazardous or non hazardous chemical storage and or disposal during site inspection.

6.5 Underground Injection Control (UIC) Structures

Underground injection wells are regulated by the Underground Injection Control (UIC) Program under the authority of Part C of the Safe Drinking Water Act (SDWA) (42 U.S.C. 300h et seq.). The SDWA is designed to protect the quality of drinking water in the United States, and Part C specifically mandates the regulation of underground injection fluids through wells. The USEPA has promulgated a series of UIC regulations under this authority. Recent applicable revisions to UIC regulations were published in the State Implementation Guide - Revisions to the Underground Injection Control

Regulations for Class V Injection Wells, September 2000. This document specifically addresses Class V injection wells, which include on-site wastewater disposal features such as drywells, cesspools and in-situ drains. The USEPA issued a Notice of Final Determination for Class V wells; Final Rule on June 7, 2002. With the exception of motor vehicle waste disposal wells and large-capacity cesspools, Class V wells are “authorized by rule” (40 CFR 144.24) and may inject non-hazardous waste as long as the following criteria are met:

- The injection does not endanger underground sources of drinking water (40 CFR 144.12); and
- The well owners or operators submit basic inventory information (40 CFR 144.26).

The USEPA may, at its discretion, require the owner or operator of any well authorized by rule to submit information for review to determine if a well may be endangering an underground source of drinking water. In regard to motor vehicle waste disposal wells and large capacity cesspools (those that serve more than 20 persons per day), owners and/or operators of such wells in regulated areas must close the wells or obtain a permit. These requirements are being phased-in through 2008. Owners and operators of large-capacity cesspools must close the structures by April 5, 2005.

The building and area surrounding the property is serviced by the NYC municipal sewer system.

6.6 Polychlorinated Biphenyls (PCBs)

Polychlorinated biphenyls (PCBs) were used until 1978 and are a group of compounds formed by the chlorination of biphenyl. PCBs have extremely high physical and chemical stabilities which led to their being used in many applications, including heat transfer fluids, hydraulic fluids, and dielectrics. PCBs are often found in transformers, capacitors and hydraulic systems.

Electrical equipment containing PCBs are still in use and can pose a serious health hazard if fluids come in direct contact with humans, soil or groundwater. Fires involving electrical equipment containing PCBs can cause the material to be dispersed over a large area and potentially expose many people to a health risk. Because of the health hazard associated with PCBs, they are regulated under the Toxic Substances Control Act (TSCA).

No electrical transformers or other equipment suspected to contain PCBs were identified on or adjacent to the property at the time of the site inspection.

6.7 Asbestos

Asbestos is the name given to a group of fibrous silicate minerals, typically those of the serpentine group. The tensile strength, flexibility, and non-flammability of asbestos have led to many uses including structural materials, brake linings, insulation, and pipe manufacture. Asbestos is of concern as an air pollutant because when inhaled it may cause asbestosis, mesothelioma, and bronchogenic carcinoma. In 1989, the USEPA announced regulations that would phase out most uses of asbestos by 1996.

As part of the site inspection, a visual survey was conducted of accessible areas for the presence of suspect asbestos-containing materials (ACM). EBC did not note any suspect asbestos containing materials within 173 Bayard Street, but based on the age of the building ACM may be present at the Site.

6.8 Lead-Based Paint (LBP)

In 1978, the U.S. Product Safety Commission issued a ban on paints or surface coatings that contain greater than 0.06 percent lead. The interior paint of 173 Bayard Street was in good condition and there was no evidence of usage of Lead Based Paints. Based on the age of the building LBPs may have been used at the Site.

6.9 Mold

Concern about indoor exposure to mold has been increasing as the public becomes aware that exposure to mold can cause a variety of health effects and symptoms, including allergic reactions. Molds can be found almost anywhere; they can grow on virtually any organic substance, as long as moisture and oxygen are present. There are molds that can grow on wood, paper, carpet, foods, sheetrock, plaster and insulation. When excessive moisture accumulates in buildings or on building materials, mold growth will often occur, particularly if the moisture problem remains undiscovered or unaddressed.

As part of this assessment, a visual inspection was conducted for the presence of water damage and odors, indicative of the potential for mold growth. No visual or olfactory evidence of mold was identified at 173 Bayard Street during the site inspection.

6.10 Wetlands

A review of the NYSDEC Freshwater Wetland Map, Brooklyn Quadrangle, indicates that no NYS freshwater wetlands are located within a one mile radius of the Site. ECB also reviewed NYSDEC Tidal Wetlands Maps available online at <http://twi.ligis.org>. The tidal wetlands map indicates that there are no NYS tidal wetlands located within a one-mile radius of the Site.

Potential federal wetlands were identified from the U.S. Fish and Wildlife Service (FWS) Wetlands Mapper software, which indicate that no potential federal wetlands are located within a one mile radius of the Site. Additional information obtained from the FWS website is included in **Appendix B**.

Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) were reviewed to determine if the Site is located within the 100-year or 500-year flood zones. The FIRM showing the property (No. 3604970202F) indicates that the entire property is located within the 500-year flood zones. This indicates that there is a moderate risk of flooding at the Site. A copy of the FEMA FIRM is included in **Appendix B**.

7.0 INTERVIEWS

7.1 Owner

EBC did not interview the owner of the Site.

7.2 Occupants

At the time of the site reconnaissance there were no occupants at the Site.

7.3 Local Government Officials

Freedom of Information Act (FOIA) requests were sent to the NYCDEP, NYCDOH and FDNY York City Department of Health (NYCDOH) for information regarding hazardous operations and or other environmental reports/investigations for the Site, including the registration of fuel storage tanks, past spills, or violations. As of the date of this report, a response had not been received for the FOIA request. Regulatory agencies usually take six to eight weeks to process FOIA requests. Any pertinent information received will be reviewed and forwarded upon receipt. Copies of FOIA requests and regulatory agency responses are included in **Appendix B**.

8.0 FINDINGS AND OPINIONS

Based upon reconnaissance of the Site and surrounding properties, interviews and review of historical records and regulatory agency databases, one (1) recognized environmental condition was identified in connection with the Site.

Recognized Environmental Conditions (RECs):

- **The Historical Use of the Site as a refrigerator manufacturer.**

According to a Certificate of Occupancy, Sanborn Maps, and city directory listings, the Site was occupied by a refrigerator manufacturer from 1959 to at most 1965. The name of the company is unknown due to a gap in the provided City Directory Listing, but a Certificate of Occupancy from 1959 notes the use of the property as a refrigerator manufacturer. Based on these findings the use of the Site as a refrigerator manufacturer represents an REC.

Reason for inclusion: Refrigerator manufacturers, especially those in operation prior to the 1979's use PCB capacitors, mercury containing components (switches and relays), refrigerants, oils, and other volatile organic compounds as part of the manufacturing process.

- **Suspect Gasoline Underground Storage Tank from 1958 at the Site.**

According to a 1959 Certificate of Occupancy, the NYC Fire Department approved a permit for a gasoline storage tank in September of 1958. The tank is described to only be used for fueling of the owner's trucks. In addition, the site inspection identified the presence of a vent on the roof of the building occupying the Site, indicative of a UST. As no information regarding the capacity of the suspect UST(s), their status, integrity and/or soil conditions in their vicinity was available for review, there is a potential for spills or releases from the USTs to have impacted the subsurface.

Reason for inclusion: Underground storage tanks can leak at fittings, through internal or external corrosion and during refilling. An underground fuel oil tank poses a material threat of a petroleum release to subsurface soil and groundwater.

8.1 Additional Environmental Issues

The property was assigned an E-designation for Hazmat during the Greenpoint-Williamsburg Rezoning action completed by the City in October 2005.

An E-designation does not interfere with the present use of the Site; however E-designations do prevent the release of building permits subject to a detailed environmental review and release by the NYC Office of Environmental Remediation. Such release may require a full subsurface investigation, remedial and health and safety planning, implementation of a remedial program and documentation that the remedial program was completed during redevelopment of the property. Additional information regarding “E” sites can be found on the New York City Office of Environmental Remediation website:

http://www.nyc.gov/html/oer/html/e_designation/e_designation.shtml.

9.0 CONCLUSIONS AND RECOMMENDATIONS

EBC performed a Phase I Environmental Site Assessment in conformance with the scope and limitations as described under ASTM Practice E1527-05 for the commercial property identified by the street addresses of 171-173 Bayard Street, Block 2720 Lot Nos. 43 and 44 in Brooklyn, New York. Any exceptions to, or deletions from, this practice are described in **Section 1.4** of this report. Based upon reconnaissance of the subject and surrounding properties, interviews and review of historical records and regulatory agency databases, this assessment has revealed two (2) recognized environmental conditions in connection with the Site.

- **The Historical Use of the Site as a refrigerator manufacturer from 1959 to at most 1965.**

Recommendation: The subsurface investigation required by the NYCOER to release the “E” designation for this Site requires sampling of soil, groundwater, and soil vapor for VOCs, PCBs, and heavy metals (including mercury).

- **Suspect Gasoline Underground Storage Tank from 1958 at the Site.**

Recommendation: A geophysical survey (e.g., magnetometer and/or ground penetrating radar surveys) of the Site should be conducted to evaluate the presence of the historic UST and/or sanitary structures and the vicinity of the suspected USTs within the site buildings, as well as the configurations of existing underground utilities in advance of a soil boring program.

If a UST(s) is identified, the UST(s) should be removed and/or abandoned-in-place in accordance with New York State Department of Environmental Conservation (NYSDEC) and New York City Fire Department (FDNY) regulations. Any identified geophysical anomalies should be further investigated through soil samples collected for laboratory analysis as warranted.

To evaluate potential groundwater and soil impacts related to suspect UST(s), a subsurface investigation should be performed. At a minimum, the investigation should include the installation of soil borings with the collection of representative groundwater and/or soil samples for laboratory analysis to document subsurface conditions and determine the nature and extent of contamination (if present).

In addition, the property was assigned an E-designation for Hazmat during the Greenpoint-Williamsburg Rezoning action completed by the City in October 2005.

The Site is listed with a Hazmat “E” restriction (E-138) with the descriptions of “underground gasoline storage tank testing protocol”. This designation came into effect on May 11, 2005. An E-designation does not interfere with the present use of the Site; however E-designation do prevent the release of building permits subject to a detailed environmental review and release by the NYC Office of Environmental Remediation. It should be noted that nearly any development scenario for the Site is subject to the E-designation Environmental Review Program administered by the NYCOER due to the hazardous materials “E” designation assigned to the Site. Typical NYCOER Phase II investigation/sampling requirements for hazmat “E” sites are as follows:

- Collection and laboratory analysis of for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), target analyte list (TAL) metals, PCBs and pesticides.
- Collection and laboratory analysis of groundwater samples for VOCs, SVOCs, TAL metals (filtered and unfiltered), PCBs and pesticides.
- Collection and laboratory analysis of soil gas samples for laboratory analysis of VOCs via EPA Method TO-15.

10.0 DEVIATIONS

This Phase I ESA was conducted in accordance with the scope and limitations of the American Society for Testing and Materials (ASTM) Standard E 1527-05 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process) and 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule). Excluding additional services outlined in Section 11.0, there were no deviations or deletions from this practice.

11.0 ADDITIONAL SERVICES

EBC has included, in addition to those items outlined by ASTM E 1527-05, a general evaluation of the following is a list of non-scope considerations, which may be addressed, in a limited capacity within this Phase I Environmental Site Assessment:

- Radon;
- Lead-based Paint;
- Asbestos-containing Materials; and
- Wetlands.

13.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the Site. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

PROFILE

Mr. Sosik has 25 years of experience in environmental consulting. He specializes in advising clients on managing environmental compliance with federal, state, and municipal agencies and has successfully directed numerous investigation and remediation projects involving petroleum, pesticides, chlorinated solvents, heavy metals and radiologically activated media. His work included extensive three-dimensional investigations on MTBE, which have been used effectively to help shape public policy. He also has experience in applying models to groundwater related problems and has completed several large-scale projects to determine fate and transport of contaminants, establish spill scenarios, and closure criteria. His experience and expertise in the area of contaminant hydrogeology has resulted in requests from environmental attorneys, property owners and New York State to serve as an expert witness and technical advisor on a variety of legal disputes.

For the past 10 years Mr. Sosik has been primarily engaged in providing environmental consulting to developers responding to the extensive rezoning of former industrial and commercial properties, which is currently taking place throughout New York City. These services include everything from pre-purchase evaluations and contract negotiations to gaining acceptance in and moving projects through the NYS Brownfields Program. Mr. Sosik has taken a pro-active role in the continued development of the NYS Brownfields Program and related policy, by attending numerous working seminars, active participation in work groups and task forces and by providing commentary to draft versions of new guidance documents. Throughout his professional career, Mr. Sosik has remained committed to developing innovative cost-efficient solutions to environmental issues, specifically tailored to the needs of his clients.

SELECTED PROJECTS

Scavenger Waste Treatment Facility (SWTF), Suffolk County, NY

Water Treatment Plant EIS - Focused EIS - In response to requests from the Suffolk County Council on Environmental Quality and the Brookhaven Conservation Advisory Council, Mr. Sosik prepared a focused EIS to evaluate the potential impacts to an important surface water resource from the proposed facility including cumulative and synergistic effects with established contaminant plumes in the area.

Advanced Residential Communities, Rockville Centre, NY

Brownfield Project – As the senior project manager on this large scale, high profile redevelopment project, Mr. Sosik was asked to develop a plan to accelerate the regulatory process in the face of general community opposition. Through numerous discussions with the BCP management team, He was able to condense the schedule and review period, through the submission of supporting documents (Investigation Report, Remedial Work Plan) with the BCP application package. Community opposition, which focused on the environmental condition of the site as a means to block the project, was used to advantage in expediting approval of the aggressive interim remedial

plan. This will allow the developer to begin remedial work approximately 5 months ahead of schedule.

Former Temco Uniform site, West Haverstraw, NY

Brownfield Project – Mr. Sosik took over management of this project from another consultant following transition of this VCP site to the BCP. Mr. Sosik used the opportunity to renegotiate and revise the scope of work to allow a more cost effective and focused investigation plan without re-writing or resubmitting the RIWP. During the NYSDEC's review of the transition package, he met with and coordinated changes with the NYSDEC Project Manager to gain approval. The result saved the client a significant amount of money, but perhaps more importantly in this case, did so without loss of time.

Grovick Properties, Jackson Heights, NY

Brownfield Project – This Brownfield property is somewhat unique in that it had been investigated and partially remediated by the NYSDEC through the petroleum spill fund. The client was interested in purchasing the property and redeveloping it as office and retail space. Mr. Sosik reviewed the NYSDEC investigation and developed a

Charles B. Sosik, PG, PHG, Principal

supplemental plan to meet the requirements of an RI under the BCP program. By performing this limited amount of field work "up-front" he was able to complete an RI Report and Remedial Plan and submit both with the BCP application package. The NYSDEC and NYSDOH approved the RI Report and the Remedial Plan with minor changes. This cut 120 days from the review process and allowed the client to arrange financing and move his project forward knowing what the clean-up costs would be at the outset.

Metro Management, Bronx, NY

Brownfield Project – The site of a former gas station, the developer had planned to construct a 12-story affordable housing apartment complex with first floor retail space. Since the site was located in an Environmental zone, potential tax credits of 22% for site development, remediation and tangible property could be realized under the BCP. In a pre-application meeting with the NYSDEC, Mr. Sosik realized that the department did not believe the site was eligible for the BCP, since it had been previously investigated and closed under the spills program.

Mr. Sosik assisted the developer in securing financing, and due to the demands of an aggressive construction schedule developed an Interim Remedial Measure (IRM), based on chemical oxidation treatment. Working closely with the clients environmental counsel, Mr. Sosik was able to get the IRM approved without a public comment period. Implementation of the IRM is currently underway.

The project was awarded the 2009 NYC Brownfield Award for Innovation.

Brandt Airflex, NY

Technical Consulting Services - Mr. Sosik provided senior level technical advice and strategic planning in developing an off-site RI/FS for the site, in negotiating a tax reduction for the property due to the environmental condition and in preparing a cost to cure estimate for settlement between business partners. After achieving a favorable tax consideration and settlement agreement for his client

Allied Aviation Services, Dallas, Fort Worth, Airport, Dallas, TX

Jet Fuel Investigation - Mr. Sosik developed and managed an investigative plan to quickly identify the extent and source of jet fuel which was discharging from the Airport's storm drain system to a creek a mile away. Through the use of a refined conceptual model, accelerated investigative techniques and a flexible work plan, he was able to identify the source of the fuel and the migration route within a single week. He then identified remedial options and successfully negotiated a risk based plan with the Texas regulatory agency that had issued a notice of enforcement action against the facility.

KeySpan – Former LILCO Facilities, Various NY Locations

Pesticide Impact Evaluation - Mr. Sosik developed, negotiated and implemented a site screening procedure to evaluate impact to public health and the environment as the result of past herbicide use at 211 utility sites. Using an unsaturated zone leaching model (PRZM) on a small subset of the sites, he was able to establish mass loading schedules for the remaining sites. This was combined with public well data in a GIS environment to perform queries with respect to mass loading, time transport and proximity to vulnerable public supply wells.

Using this approach Mr. Sosik was able to show that there were no concerns for future impact. This effort satisfied the public health and resource concerns of the state environmental agency and county health department in a reasonable amount of time and at a fraction of the cost of a full scale investigation.

Former Computer Circuits (Superfund) Site, Hauppauge, NY

CERCLA RI/FS - As Senior Project Manager for the site, he played a major role in regaining control of the investigation activities for the PRP. This action prevented the USEPA from initiating an extensive investigation at the site using a RAC II contractor allowing the client to perform a more efficient investigation. He was involved in all negotiations with EPA and was the project lead in developing a revised site characterization plan (work plan, field sampling plan, quality assurance plan, etc.). By carefully managing all phases of the investigation and continued interaction with each of the three regulatory agencies involved, Mr. Sosik was able to keep the project focused and incrementally reinforce the clients position. The estimated cost of the revised investigation is expected to save the client 1.5 to 2 million dollars.

Sun Oil, Seaford, NY

Remediation Consulting Services & Project Management - Under an atmosphere of regulatory distrust, political pressure and mounting public hostility toward the client, Mr. Sosik conducted an off-site 3-D investigation to define the extent of contamination and the potential impact on public health. By designing and implementing an aggressive source area remediation program and personal interaction with the public and regulatory agencies, he was able to successfully negotiate a limited off-site remediation favorable to the client. Source area remediation was completed within 6 months and the project successfully closed without damage to the client's public image or working relationship with the regulatory agencies.

Con Edison, Various Locations, NY

Hydrogeologic Consulting Services - Under a general consulting contract, Mr. Sosik conducted detailed subsurface hydrogeologic investigations at five locations to assist in the development of groundwater contingency planning. He also developed and implemented work plans to investigate and remediate existing petroleum, cable fluid, and PCB releases at many of the generating facilities and substations. An important aspect of his role was in assisting the client in strategic planning and negotiations with the regulatory agency.

Keyspan - Tuthill Substation, Aqueboque, NY

Accelerated Site Characterization - Using accelerated site characterization techniques, Mr. Sosik presented the project as a case study in establishing the transport of an herbicide and its metabolites applied at utility sites in the 1980's. The results were then used to establish a screening method for evaluating 211 similar sites controlled by the client in a reasonable and efficient manner.

NYSDEC Spill, East Moriches, NY

Spill Release Analysis - With recognized expertise in the area of gasoline plume development on Long Island, Mr. Sosik was asked by the State to establish the release date (and principal responsible party) of an extensive petroleum spill, which impacted a residential

Charles B. Sosik, PG, PHG, Principal

neighborhood. He used multiple lines of evidence, and a new EPA model (HSSM), which he has helped to refine, to reconstruct the release scenario and spill date, in support of the State Attorney General's cost recovery effort from the PRP.

Minmilt Realty, Farmingdale, NY

Fate & Transport Modeling - He completed an RI/FS at this location for a PCE plume that had been in transit for over 30 years. Mr. Sosik applied a conservative model to evaluate time/concentration impacts under a variety of transport scenarios to a municipal wellfield located 13,000 feet away. Through the use of the model and careful interpretation of an extensive data set compiled from several sources, Mr. Sosik was able to propose a plan which was both acceptable to the regulator and favorable to the client.

Sebonack Golf Course Project, Town of Southampton, NY

IPM Pesticide Study - Provided professional hydrogeologic services in support of the EIS prepared for the development of the site. The proposed development included an 18-hole golf course, clubhouse, dormitory facility, cottages, associated structures, and a 6,000 square foot research station for Southampton College. Mr. Sosik performed an extensive evaluation (using a pesticide-leaching model) on the effects of pesticide and nitrogen loading to groundwater as part of the projects commitment to an Integrated Pest Management (IPM) approach.

NYSDEC, Spills Division, Regions 1 – 4

Petroleum Spills Investigation & Remediation - As a prime contractor/consultant for the NYSDEC in Regions 1-4, Mr. Sosik has managed the investigation and remediation of numerous petroleum spills throughout the State. Many of these projects required the development of innovative investigation and remediation techniques to achieve project goals. He was also involved in many pilot projects and research studies to evaluate innovative investigation techniques such as accelerated site characterization, and alternative approaches to remediation such as monitored natural attenuation and risk based corrective action.

Sun Oil, E. Meadow, NY

Exposure Assessment - Performed to seek closure of the spill file, despite the presence of contaminants above standards, Mr. Sosik determined after the extended assessment that the level of remaining contamination would not pose a future threat to human health or the environment. He used multiple lines of evidence, and a fate and transport model to show that degradation processes would achieve standards within a reasonable time.

PREVIOUS EXPERIENCE

P.W. Grosser Consulting, Bohemia, NY

Senior Project Manager, 1999-2006

Environmental Assessment & Remediation, Patchogue, NY

Senior Project Manager, 1994-1999

Sand & Gravel Mine, NY

Property Development - As part of the development of a sand and gravel mine, Mr. Sosik provided environmental consulting services to assist in obtaining a mining permit, which would result in the construction of a 150-acre lake. Specifically, Mr. Sosik investigated if the proposed lake would reduce groundwater quantity to domestic and public well fields, and/or accelerate the migration of potential surface contaminants to the lower part of the aquifer. After assuming the lead role in negotiations with the regulatory agency, Mr. Sosik was able to obtain a permit for the client by adequately addressing water quality and quantity issues, and by preparing a monitoring plan and spill response plan, acceptable to all parties.

NYSDEC, Mamaroneck, NY

Site Characterization / Source Identification - In a complex hydrogeologic setting consisting of contaminant transport through fractured metamorphic bedrock and variable overburden materials, Mr. Sosik was able to develop and implement a sub-surface investigation to differentiate and separate the impact associated with each of two sources. The results of this investigation were successful in encouraging the spiller to accept responsibility for the release.

Riverhead Municipal Water District, NY

Site Characterization / Remedial Planning - Using accelerated characterization techniques, he implemented a 3-D site investigation to identify two service stations 4,000 ft. away as the source of contamination impacting a municipal wellfield. In accordance with the strict time table imposed by the need to return the wellfield to production by early spring, he designed and implemented a multi-point (9 RW, 6 IW) recovery and injection well system using a 3-d numerical flow model, and completed the project on time. Using a contaminant transport model, Mr. Sosik developed clean-up goals which were achieved in 9 months of operation, well below the projected 3 to 5 year project duration.

Montauk Fire Department, NY

Site Assessment - Mr. Sosik performed a limited investigation and used a 2-D flow model to demonstrate that the property could not have been the source of contamination which had impacted an adjacent wellfield as per the results of a previous investigation. This small focused effort successfully reversed a \$500,000, and rising, claim against the department by the water district and the NYSDEC.

Miller Environmental Group, Calverton, NY

Project Manager, 1989-1994

DuPont Biosystems, Aston, PA

Hydrogeologist, 1988-1989

Charles B. Sosik, PG, PHG, Principal

EXPERT WITNESS TESTIMONY AND DEPOSITIONS

Fact Witness -Testimony on relative age of petroleum spill based on nature and extent of residual and dissolved components at the Delta Service Station in Uniondale, NY Fall/1999

Expert Witness / Expert Report for defendant in cost recovery case by NYS Attorney General regarding a Class II Inactive Hazardous Waste (State Superfund) project by the NYSDEC (October 2004 – present, Report: March 2005, Deposition: April 2005)

Expert Witness / Fact Witness for plaintiff seeking compensation for partial expenses incurred during the investigation and remediation of a USEPA CERCLA site due to the release and migration of contaminants from an "upgradient" industrial property. (Deposition May 2005, case settled April 2007).

Expert Witness / Fact Witness for NYS Attorney General with respect to cost recovery for a NYSDEC petroleum spill site in Holtzville, NY (Deposition April 2005 - case settled).

Expert Witness – Statement of opinion and expert testimony at trial for plaintiff seeking damages from a major oil corporation for contamination under a prior leasing agreement in Rego Park, NY. Case decided in favor of plaintiff. Trial July 2007, in favor of Plaintiff. Qualified as Expert Witness.

Expert Witness / Fact Witness for NYS Attorney General with respect to cost recovery for a NYSDEC petroleum spill site in Lindenhurst, NY (Trial date December 2009, in favor of plaintiff. Qualified as Expert Witness.

Expert Witness - for plaintiff (municipal water supply purveyor) seeking damages from Dow Chemical for PCE impact at various locations in Suffolk County, NY. Affidavit submitted 2011.

Expert Witness - for NYS Attorney General regarding NYSDEC cost recovery for a petroleum spill site at Riverhead, NY. Case settled July 2008.

Expert Witness / Fact Witness for defendant with respect to cost recovery and third party responsibility for a NYSDEC petroleum spill site in Lindenhurst, NY (Expert Statement of Fact – October 2005).

Expert Witness for plaintiff seeking damages related to a petroleum spill from the previous owner/operator of a gas station in College Point, NY. Case settled 2009.

Expert Witness for plaintiff (municipal water supply purveyor) seeking damages from major oil companies and manufacturer of MTBE at various locations in Suffolk County, NY. Expert reports July 2007, August 2007 and October 2007, Case settled August, 2008.

Expert Witness - Deposition for NYS Attorney General regarding NYSDEC cost recovery for a petroleum spill site at Sag Harbor, NY. August 2002

Expert Witness for defendant responding to a claim from adjacent commercial property owner on the origin of chlorinated solvents on plaintiff's property located in Cedarhurst, NY. Expert opinion submitted to lead counsel on March 6, 2009, case settled April 2009.

Expert Report - for Attorney General on modeling performed to determine the spill release scenario at a NYSDEC petroleum spill site in East Moriches, NY. June 2000.

Expert Witness - for plaintiff in case regarding impact to private wells from a spill at adjacent Town and County properties with open gasoline spill files in Goshen, NY. Expert report submitted August 2013.

Expert Witness for defendant with respect to cost recovery from Sunoco for a NYSDEC petroleum spill site. (Declaration – January 2013).

Expert Witness for plaintiffs in class action case with respect to damages from chlorinated plume impact to residences in Dayton, Oh. (Draft Report – May 2013).

CITY OF NEW YORK

No. 76253

OFFICE OF THE PRESIDENT OF THE BOROUGH OF BROOKLYN

DEPARTMENT OF BUILDINGS

DATE

July 2, 1935

CERTIFICATE OF OCCUPANCY

Standard form adopted by the Board of Standards and Appeals July 22, 1932, and issued pursuant to Section 2204 of the Greater New York Charter, and Chapter 2, Building Code Code of Ordinances, City of New York.

This certificate supersedes all previously issued certificates.

The owner or owners of the building or premises:

THIS CERTIFIES that the ~~NEW~~ **ALTERED** — **BUILDING** — **PREMISES**

located at 174' 8" of Garden

Block 2720, Lot 44, conforms substantially to the approved plans and specifications, and to the requirements of the building code and all other laws and ordinances, and of the rules and regulations of the Board of Standards and Appeals, applicable to a building of its class and kind at the time the permit was issued; and CERTIFIES FURTHER that any provisions of law relating to standpipe and sprinkler equipment have been complied with as certified by a report of the Fire Commissioner to the Commissioner of Buildings.

THIS CERTIFICATE IS ISSUED SUBJECT TO THE LIMITATIONS HEREINAFTER SPECIFIED AND TO THE FOLLOWING RESOLUTIONS OF THE BOARD OF STANDARDS AND APPEALS:
(Calendar numbers to be inserted here)

PERMISSIBLE USE AND OCCUPANCY

STORY	LIVE LOADS LBS. PER SQ. FT.	PERSONS ACCOMMODATED			USE

Permit No. 3675 Type of Construction James P. ...
Height 1 stories Date of completion, construction 8/2/35
located in Business zone at time of issuance of permit

NO CHANGE OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL BE MADE UNLESS FIRST APPROVED BY THE COMMISSIONER OF BUILDINGS.

Unless an approval for the same has been obtained from the Commissioner of Building change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by tending on any side or by increasing in height shall be made; nor shall the building be moved one location or position to another; nor shall there be any reduction or diminution of the area of the lot or plot on which the building is located.

The building or any part thereof shall not be used for any purpose other than that which it is certified.

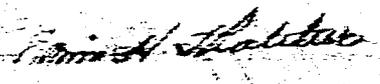

The superimposed, uniformly distributed loads, or concentrated loads producing the stresses in the construction in any story shall not exceed the live loads specified above; the number of persons of either sex in any story shall not exceed that specified when sex is indicated; shall the aggregate number of persons in any story exceed the specified total, and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners or any other persons in possession or control of the building, or any part thereof, from obtaining such permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the installation and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the tenement house commissioner unless it is also approved and endorsed by him; and it must be replaced by a full certificate at the date of its expiration.

Examined by

Per

Commissioner of Buildings.
Borough of Brooklyn.

Additional copies of this certificate will be issued, upon written request, to persons having an interest in the building or premises.

DEPARTMENT OF BUILDINGS

BOROUGH OF ~~MANHATTAN~~, THE CITY OF NEW YORK

Borough Superintendent

CERTIFICATE WILL BE NULL AND VOID IF ALTERED IN ANY MANNER OR ADDITIONS ARE MADE THERETO.

**NO CHANGES OF USE OR OCCUPANCY NOT CONSISTENT WITH THIS CERTIFICATE SHALL
BE MADE UNLESS FIRST APPROVED BY THE BOROUGH SUPERINTENDENT**

Unless an approval for the same has been obtained from the Borough Superintendent, no change or rearrangement in the structural parts of the building, or affecting the light and ventilation of any part thereof, or in the exit facilities, shall be made; no enlargement, whether by extending on any side or by increasing in height shall be made; nor shall the building be moved from one location or position to another; nor shall there be any reduction or diminution of the area of the lot or place in which the building is located.

The building or any part thereof shall not be used for any purpose other than that for which it is certified.

The superimposed, uniformly distributed loads, or concentrated loads producing the same stresses in the construction in any story shall not exceed the live loads specified on reverse side; the number of persons of either sex in any story shall not exceed that specified when sex is indicated, nor shall the aggregate number of persons in any story exceed the specified total; and the use to which any story may be put shall be restricted to that fixed by this certificate except as specifically stated.

This certificate does not in any way relieve the owner or owners of any other person or persons in possession or control of the building, or any part thereof from obtaining such other permits, licenses or approvals as may be prescribed by law for the uses or purposes for which the building is designed or intended; nor from obtaining the special certificates required for the use and operation of elevators; nor from the installation of fire alarm systems where required by law; nor from complying with any lawful order for additional fire extinguishing appliances under the discretionary powers of the fire commissioner; nor from complying with any lawful order issued with the object of maintaining the building in a safe or lawful condition; nor from complying with any authorized direction to remove encroachments into a public highway or other public place, whether attached to or part of the building or not.

If this certificate is marked "Temporary", it is applicable only to those parts of the building indicated on its face, and certifies to the legal use and occupancy of only such parts of the building; it is subject to all the provisions and conditions applying to a final or permanent certificate; it is not applicable to any building under the jurisdiction of the Housing Division unless it is also approved and endorsed by them, and it must be replaced by a full certificate at the date of expiration.

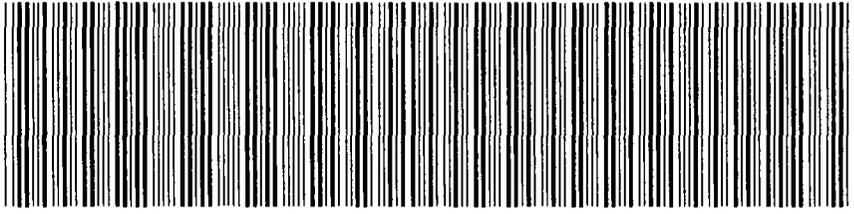

If this certificate is for an existing building, erected prior to March 14, 1916, it has been duly inspected and it has been found to have been occupied or arranged to be occupied prior to March 14, 1916, as noted on the reverse side, and that on information and belief, since that date there has been no alteration or conversion to a use that changed its classification as defined in the Building Code, or that would necessitate compliance with some special requirement or with the State Labor Law or any other law or ordinance; that there are no notices of violations or orders pending in the Department of Buildings at this time; that Section 646F of the New York City Charter has been complied with as certified by a report of the Fire Commissioner to the Borough Superintendent, and that, so long as the building is not altered, except by permission of the Borough Superintendent, the existing use and occupancy may be continued.

§ 646 F. No certificate of occupancy shall be issued for any building, structure, enclosure, place or premises wherein containers for combustibles, chemicals, explosives, inflammables and other dangerous substances, articles, compounds or mixtures are stored, or wherein automatic or other fire alarm systems or fire extinguishing equipment are required by law to be or are installed, until the fire commissioner has tested and inspected and has certified his approval in writing of the installation of such containers, systems or equipment to the Borough Superintendent of the borough in which the installation has been made. Such approval shall be recorded on the certificate of occupancy."

Additional copies of this certificate will be furnished to persons having an interest in the building or premises, upon payment of a fee of fifty cents per copy.

CONSULT YOUR LAWYER BEFORE SIGNING THIS INSTRUMENT -- THIS INSTRUMENT SHOULD BE USED BY LAWYERS ONLY

THIS INDENTURE, made the 23rd day of September, in the year 2002
BETWEEN TRACEY UNDERWEISER, 160-71 Willets Point Boulevard #E-2, Whitestone,
New York, and MARC ENDELSON, 14 Edwards Street #C2, Roslyn Heights, New York

as Co- executors (~~executors~~) of the last will and testament of,
NEIL ENDELSON, late of
QUEENS COUNTY, NEW YORK, deceased,
party of the first part, and TRACEY UNDERWEISER, 160-71 Willets Point Boulevard #E-2,
Whitestone, New York, and JAY ENDELSON, 160-71 Willets Point Boulevard #E-1,
Whitestone, New York, as CO-TRUSTEES OF THE NEL ENDELSON TRUST u/w f/b/o
TRACEY UNDERWEISER, JAY ENDELSON, MARC ENDELSON and STEPHANIE ENDELSON

party of the second part,
WITNESSETH, that the party of the first part, by virtue of the power and authority given in and by said last will and
testament, and in consideration of \$50,000.00
dollars,
paid by the party of the second part, does hereby grant
and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and
being in the Borough of Brooklyn, County of Kings, City and State of New York, bounded
and described as follows:

District
Section 9
Block 2720
Lot(s) 43,
44

BEGINNING at a point on the northerly side of Bayard Street distant 174 feet easterly
from the corner formed by the intersection of the northerly side of Bayard Street with
the easterly side of Graham Avenue; running thence northerly at right angles to Bayard
Street, 100 feet; thence easterly parallel with the northerly side of Bayard Street,
41 feet 1-5/7 inches; thence southerly at right angles to Bayard Street, 100 feet to
the northerly side of Bayard Street; thence westerly along the northerly side of
Bayard Street, 41 feet 1-5/7 inches to the point or place of BEGINNING.

SAID PREMISES being known as and by No. 171-173 Bayard Street, Brooklyn, New York,
as shown on the Kings County Land and Tax Map as Section 9, Block 2720, Lots
43 and 44.

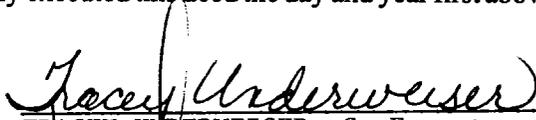

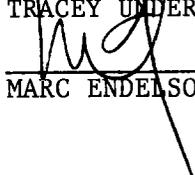

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads
abutting the above described premises to the center lines thereof; **TOGETHER** with the appurtenances, and also all
the estate which the said decedent had at the time of decedent's death in said premises, and also the estate therein,
which the party of the first part has or has power to convey or dispose of, whether individually, or by virtue of said
will or otherwise; **TO HAVE AND TO HOLD** the premises herein granted unto the party of the second part, the
heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the
said premises have been incumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first
part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust
fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the
payment of the cost of the improvement before using any part of the total of the same for any other purpose.
The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

IN PRESENCE OF:

TRACEY UNDERWEISER, Co-Executor

MARC ENDELSON, Co-Executor

**Re: Freedom of Information Request
171-173 Bayard Street
Block 2720, Lot Nos. 43 and 44
Brooklyn, New York 11222**

Dear Ms. Bryant:

Our firm has been retained to prepare an Environmental Assessment for the above-referenced properties.

We are respectfully requesting information regarding any flammable storage permits, chemical or petroleum storage, spills, registered above or underground storage tanks, air discharge permits, investigations of environmental concern (e.g. asbestos, lead paint), etc. for the facility.

We agree with the department's decision to omit any health or personal identification in records provided.

If you require additional information to respond to this request or if there are costs associated with same, please do not hesitate to contact me. Thank you for your cooperation.

Sincerely,

Environmental Business Consultants

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following records. For more information on this property see page 8 of the attached EDR Radius Map report:

<u>Site</u>	<u>Database(s)</u>	<u>EPA ID</u>
LOT 44,TAXBLOCK 2720 171 BAYARD STREET BROOKLYN, NY 11222	NY E DESIGNATION	N/A

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: A review of the CERC-NFRAP list, as provided by EDR, and dated 04/26/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

171 BAYARD STREET
171 BAYARD STREET
BROOKLYN, NY 11222

TARGET PROPERTY COORDINATES

Latitude (North):	40.7207 - 40° 43' 14.52"
Longitude (West):	73.9456 - 73° 56' 44.16"
Universal Tranverse Mercator:	Zone 18
UTM X (Meters):	589053.1
UTM Y (Meters):	4508076.0
Elevation:	19 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	40073-F8 BROOKLYN, NY
Most Recent Revision:	1995

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

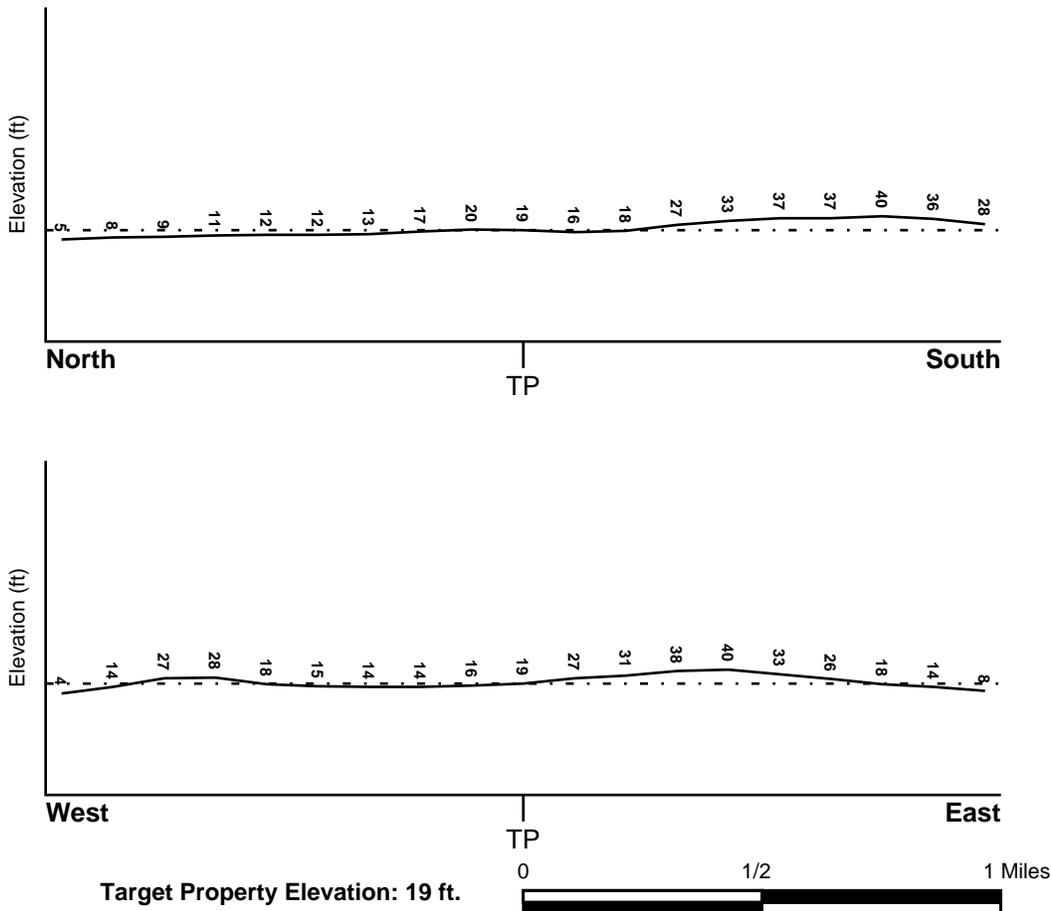

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County
KINGS, NY

FEMA Flood
Electronic Data

3604970056B - FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property
BROOKLYN

NWI Electronic
Data Coverage
YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION</u> <u>FROM TP</u>	<u>GENERAL DIRECTION</u> <u>GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Mesozoic
System: Cretaceous
Series: Upper Cretaceous
Code: uK (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

New York Public Water Wells

Source: New York Department of Health

Telephone: 518-458-6731

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database

Department of Environmental Conservation

Telephone: 518-402-8072

These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon

Source: Department of Health

Telephone: 518-402-7556

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

LABORATORY REPORTS

Tuesday, January 14, 2014

Attn: Mr. Charles B. Sosik, P.G.
Environmental Business Consultants
1808 Middle Country Rd
Ridge NY 11961-2406

Project ID: 171 BAYARD STREET
Sample ID#s: BF94882 - BF94892

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

SDG Comments

January 14, 2014

SDG I.D.: GBF94882

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

8270 Semivolatile Organics:

Full Scan Report:

Phenol, 2-Chlorophenol, Hexachlorobutadiene, and nitrobenzene were reported from the SIM analysis.

Bis(2-chloroethyl)ether, 2-Methylphenol (o-cresol), 2-Nitrophenol, 2,4-Dimethylphenol, 2,4-Dichlorophenol, 4-Chloro-3-methylphenol, 2,4,6-Trichlorophenol, 2,4,5-Trichlorophenol, 2,4-Dinitrophenol, 4-Nitrophenol, 4,6-Dinitro-2-methylphenol and 2,3,4,6-tetrachlorophenol were evaluated below the lowest calibration in order to achieve the requested reporting criteria.

SIM Analysis:

The lowest possible reporting limit under SIM conditions is 0.02 ug/L. The NY TOGS GA criteria for some PAHs is 0.002 ug/L. This level can not be achieved.

8260 Volatile Organics:

1,2-Dibromoethane, 1,2,3 Trichloropropane, and 1,2-Dibromo-3-chloropropane do not meet NY TOGS GA criteria, these compounds are analyzed by GC/FID method 504 or 8011 to achieve this criteria.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
10 = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level

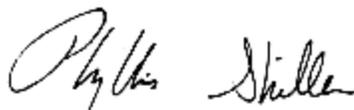

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
10 = This parameter is not certified by NY NELAC for this matrix.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level

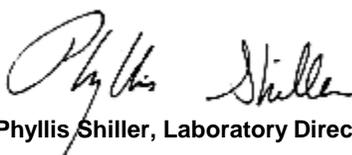

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

 BRL=Below Reporting Level

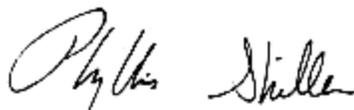

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
10 = This parameter is not certified by NY NELAC for this matrix.

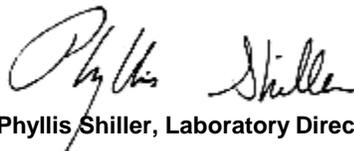

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

BRL=Below Reporting Level

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Parameter	Result	RL/ PQL	Units	Date/Time	By	Reference
-----------	--------	------------	-------	-----------	----	-----------

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.
3 = This parameter exceeds laboratory specified limits.

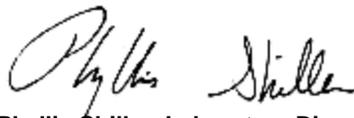

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

* Poor surrogate recovery was observed for semivolatiles and there was insufficient sample for re-extraction. The other surrogates associated with this sample were within QA/QC criteria.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

100% Solid Assumed

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
 BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
 BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
 BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
 BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Sample Criteria Exceedences Report

GBG35536 - EBC

SampNo	Acode	Phoenix Analyte	Criteria	Result	RL	Criteria	RL Criteria	Analysis Units
--------	-------	-----------------	----------	--------	----	----------	----------------	-------------------

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Project ID: 171-173 BAYARD ST BROOKLYN
Sample ID#s: BG36137 - BG36141

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink, appearing to read "Phyllis Shiller".

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

SDG Comments

January 10, 2014

SDG I.D.: GBF94893

8270 Semivolatile Organics:

Full Scan Report:

Phenol, 2-Chlorophenol, Hexachlorobutadiene, and nitrobenzene were reported from the SIM analysis.

Bis(2-chloroethyl)ether, 2-Methylphenol (o-cresol), 2-Nitrophenol, 2,4-Dimethylphenol, 2,4-Dichlorophenol, 4-Chloro-3-methylphenol, 2,4,6-Trichlorophenol, 2,4,5-Trichlorophenol, 2,4-Dinitrophenol, 4-Nitrophenol, 4,6-Dinitro-2-methylphenol and 2,3,4,6-tetrachlorophenol were evaluated below the lowest calibration in order to achieve the requested reporting criteria.

SIM Analysis:

The lowest possible reporting limit under SIM conditions is 0.02 ug/L. The NY TOGS GA criteria for some PAHs is 0.002 ug/L. This level can not be achieved.

8260 Volatile Organics:

1,2-Dibromoethane, 1,2,3 Trichloropropane, and 1,2-Dibromo-3-chloropropane do not meet NY TOGS GA criteria, these compounds are analyzed by GC/FID method to achieve this criteria.

BRL=Below Reporting Level

Comments:

TRIP BLANK INCLUDED. %SOLIDS ASSUMED 100%

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Comment:

A blank MS/MSD was analyzed with this batch.

Additional 8260 criteria: 10% of compounds can be outside of acceptance criteria as long as recovery is 40-200%.

I = This parameter is outside laboratory lcs/lcsd specified recovery limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

SDG Comments

April 14, 2014

SDG I.D.: GBG27169

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

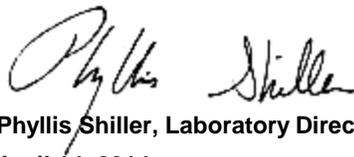

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

Semi-Volatile Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semivolatile analysis.

Volatile Comment:

Elevated reporting limits for volatiles due to the presence of target and/or non-target compounds.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

Semi-Volatile Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semivolatile analysis.

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the pesticide analysis.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Comments:

TRIP BLANK INCLUDED. %SOLIDS ASSUMED 100%

This sample was not collected in accordance with EPA method 5035. NELAC requires the laboratory to qualify the volatile soil data as biased low.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Comments:

TRIP BLANK INCLUDED. %SOLIDS ASSUMED 100%

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

Comment:

Additional 8260 criteria: 10% of LCS/LCSD compounds can be outside of acceptance criteria as long as recovery is 40-160%.

l = This parameter is outside laboratory lcs/lcsd specified recovery limits.

m = This parameter is outside laboratory ms/msd specified recovery limits.

r = This parameter is outside laboratory rpd specified recovery limits.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

RPD - Relative Percent Difference

LCS - Laboratory Control Sample

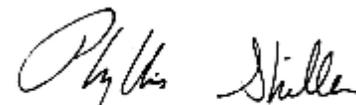

LCSD - Laboratory Control Sample Duplicate

MS - Matrix Spike

MS Dup - Matrix Spike Duplicate

NC - No Criteria

Intf - Interference

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.
