

# Violence Statistics

NYC Board of Correction

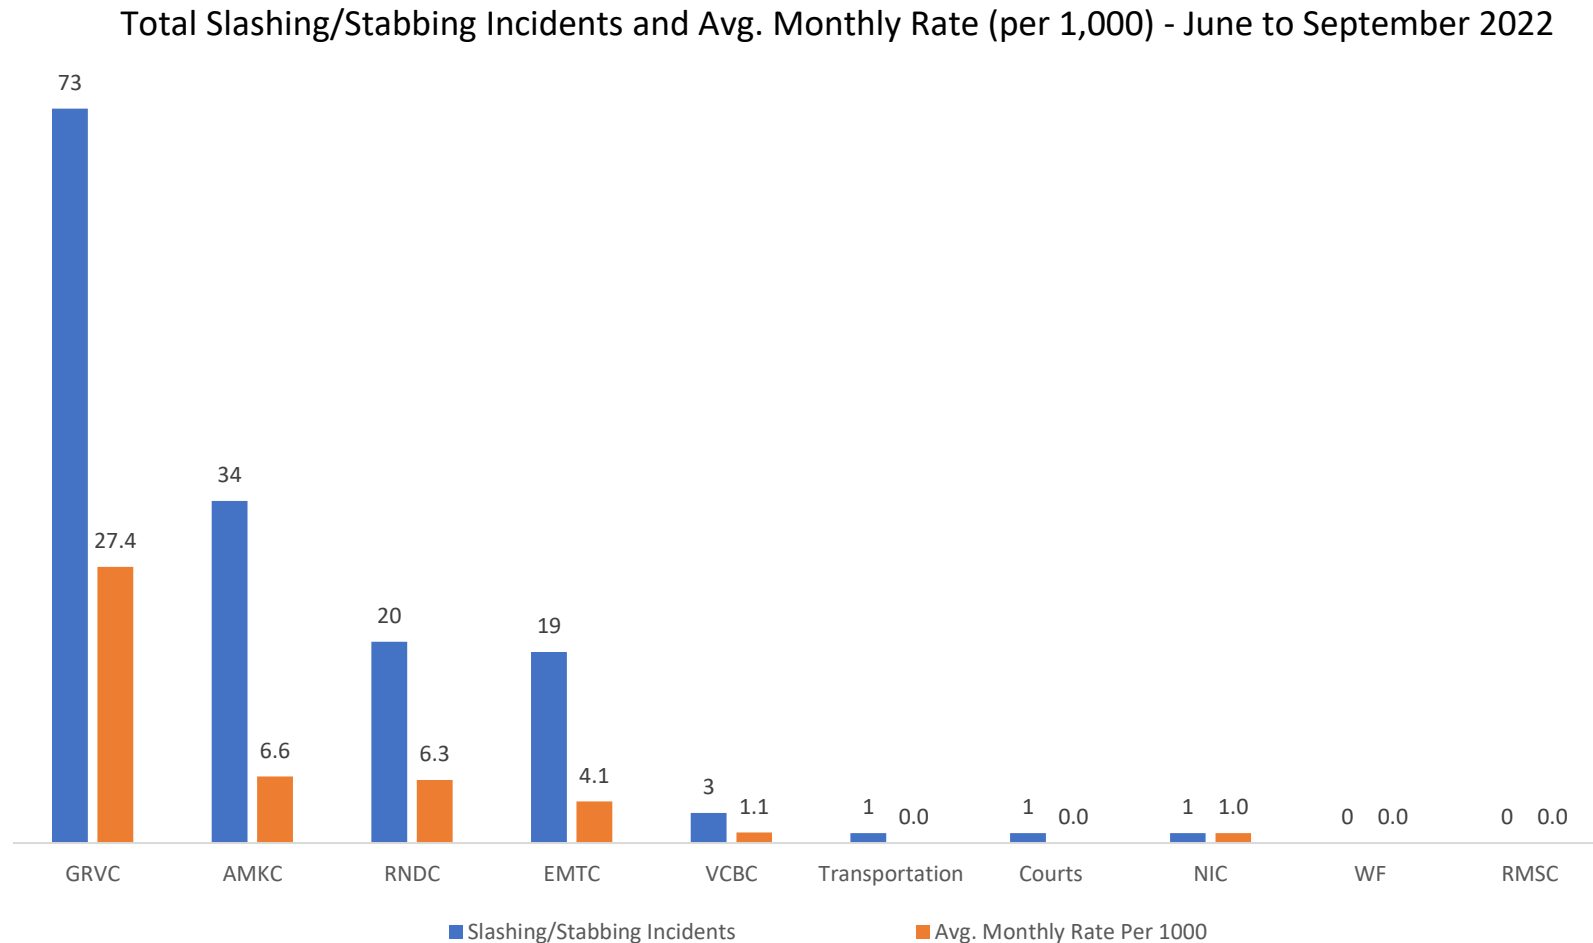

October 2022

There were 30 slashing/stabbing incidents in September 2022, 11 less than the YTD monthly average of 41.

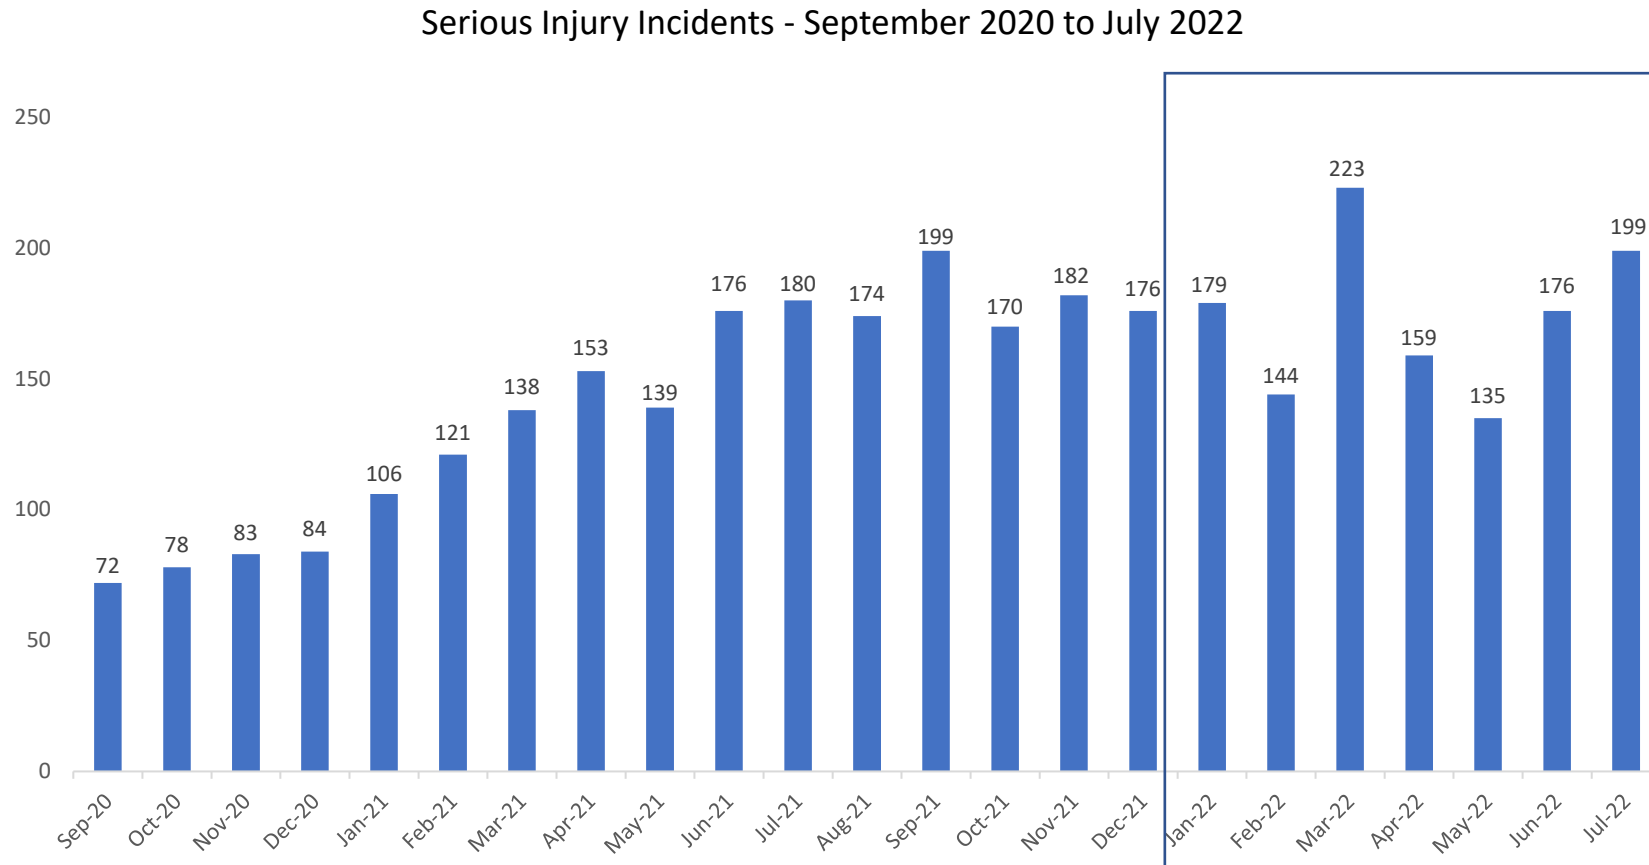

Source: DOC 24 Hour Reports, DOC Census Data

From June to September 2022, GRVC had a total of 73 slashing/stabbing incidents, approximately triple the rate of the next highest facility (AMKC)

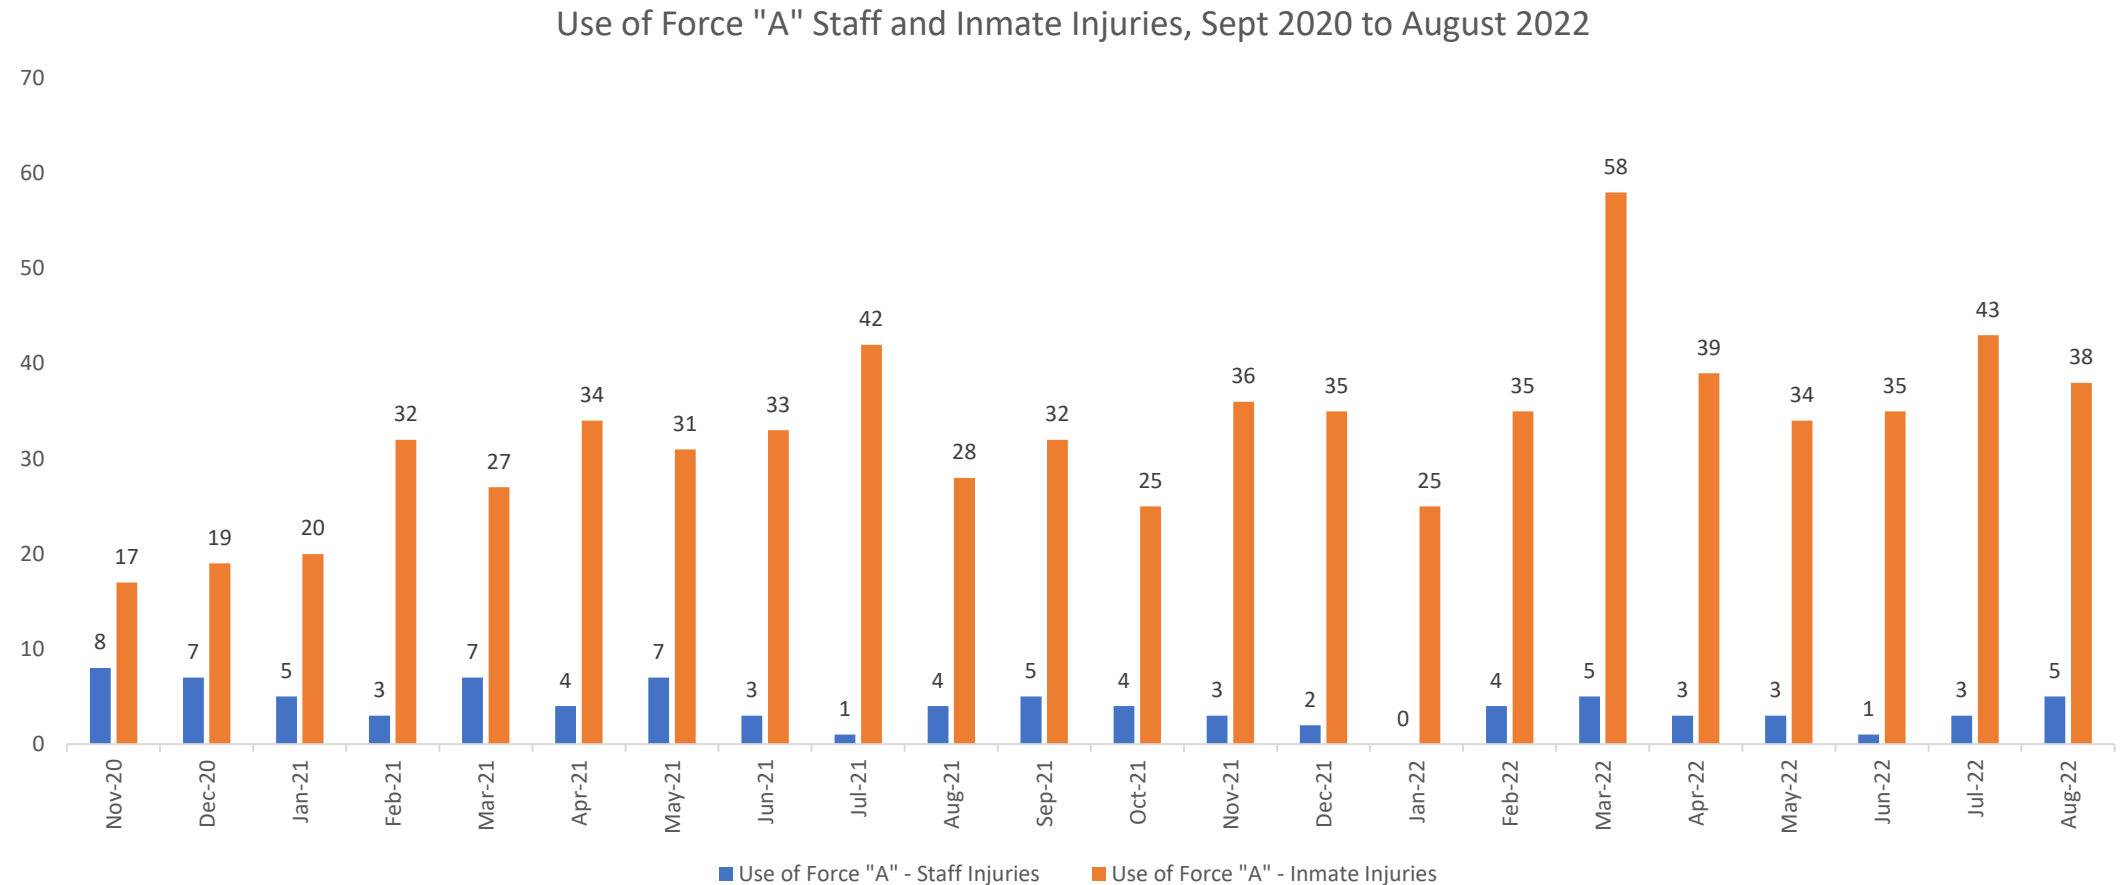

There were 199 serious injury incidents in the jails in July 2022, 25 higher than the YTD monthly average of 174.

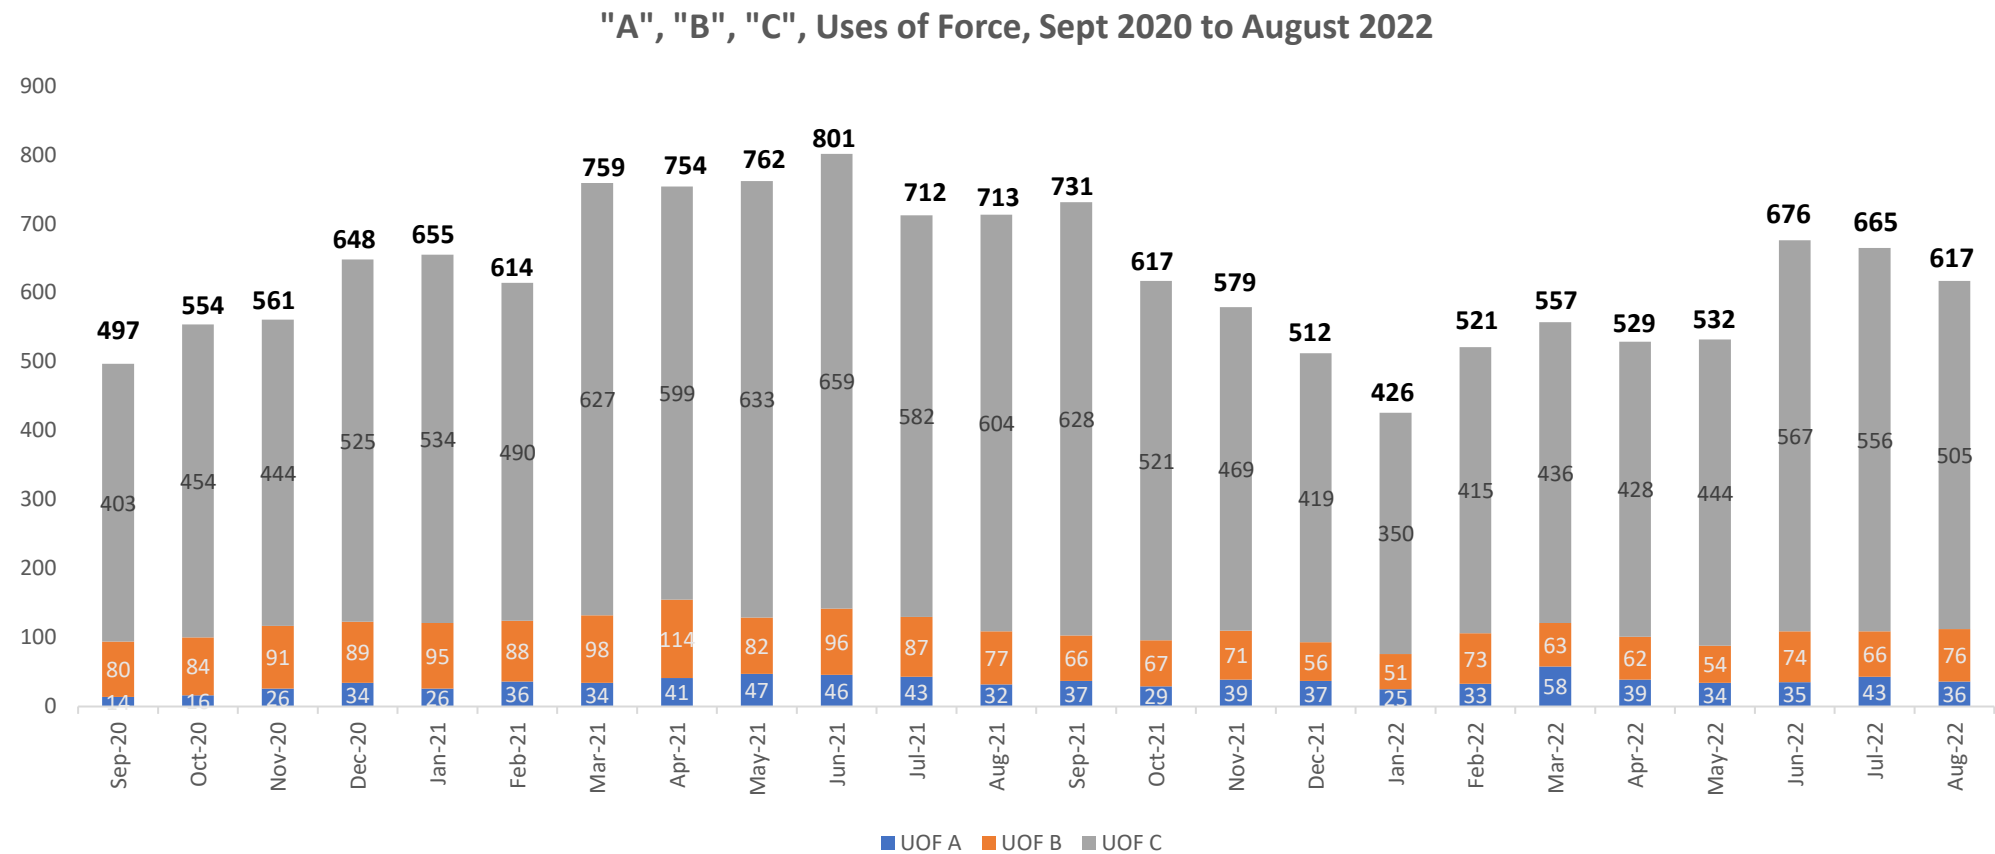

Source: CHS & DOC Joint Injury Report

**Class “A” UOF is the designation for UOF resulting in serious injuries. Over the first eight months of 2022, there were 307 Class “A” UOF incidents resulting in serious injury to people in custody and 24 resulting in serious injury to staff. Many Class “A” UOF injuries to people in custody are not actually the result of DOC UOF, but rather the result of a fight or an assault that DOC staff use force (typically chemical agent) to break up.**

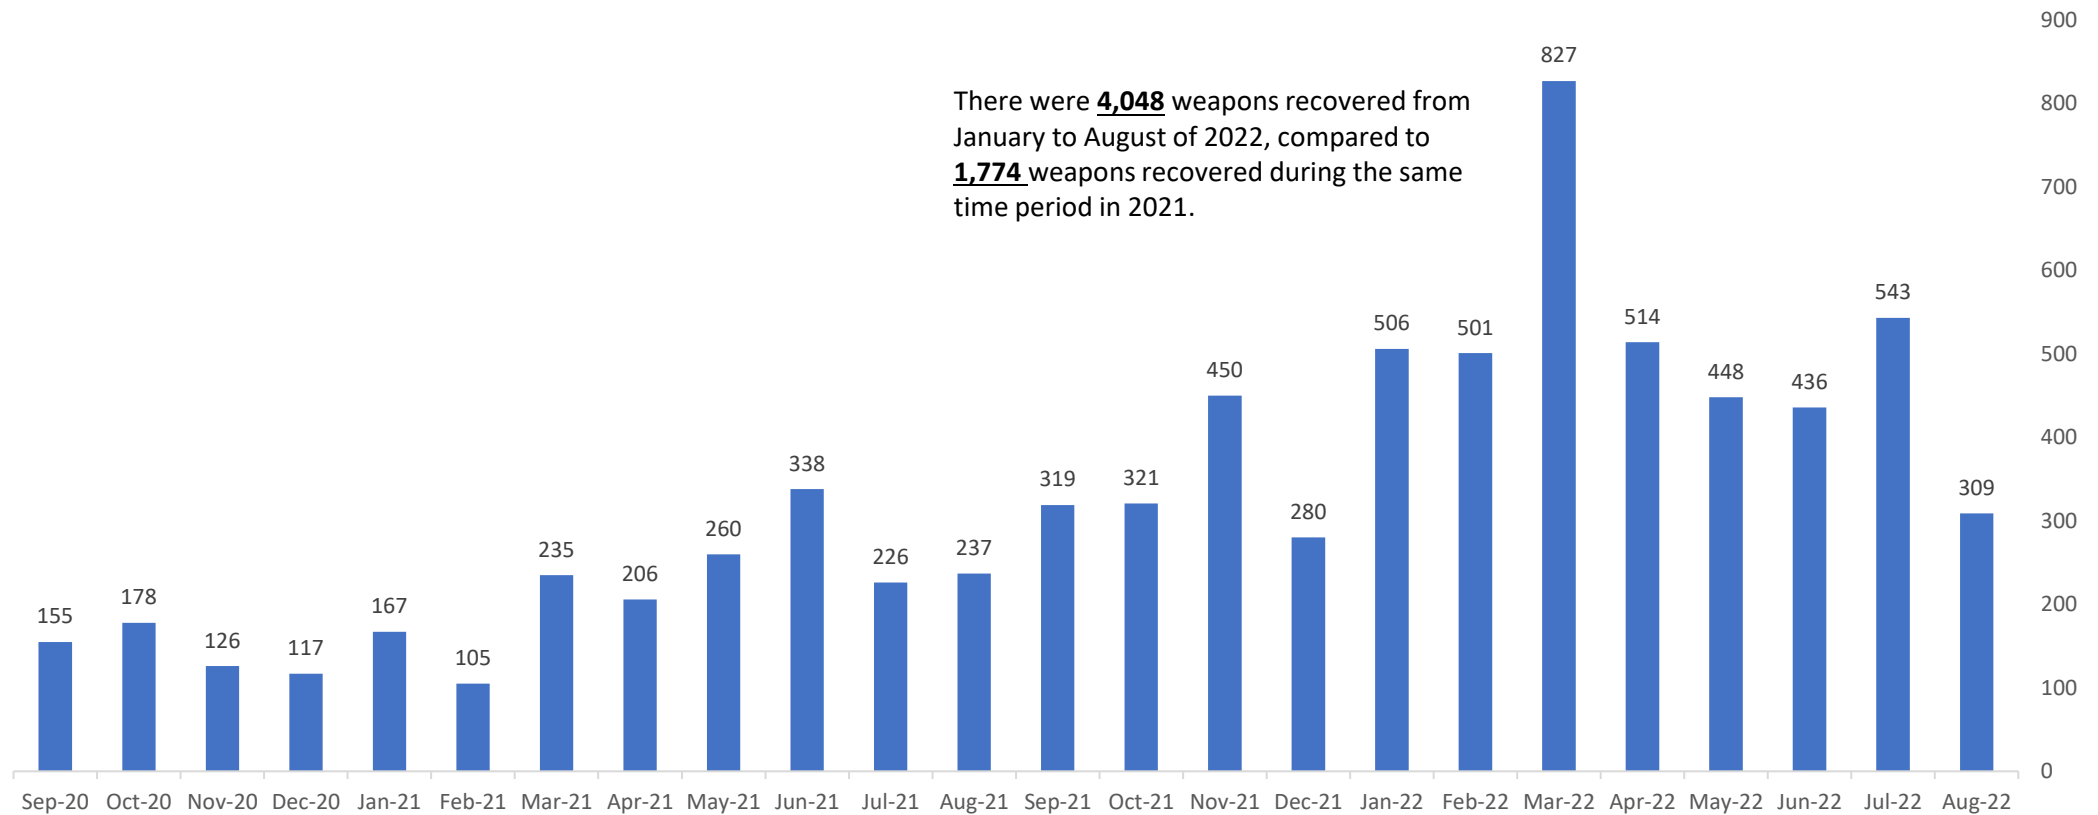

The majority of UOF do not result in serious injuries: Class “C” UOF (incidents resulting in no injury to staff members or people in custody and including the use of chemical agent spray) consistently comprise at least two-thirds of all monthly UOF, and 82% of the total in August 2022. In August 2022, Class “A” UOF (which includes incidents that require medical treatment beyond the prescription of over-the-counter analgesics or the administration of minor first aid) represented only 6% of all UOF.

Source: DOC Masterbook (v.9.21.22) Note: this data is subject to further refinement/updating by the Department

The total number of weapons recovered in the first 8 months of 2022 was 4,048, that's 128% more than the total number of weapons recovered in 2021 during the same time period.

Monthly Total Weapon Discoveries Departmentwide  
Sept 2020 to August 2022

The total number of inmate-on-inmate of monthly fights increased 9% from 395 in January 2022 to 430 in August of 2022. There has been a 22.3% YTD decrease in fights from 2021 to 2022. Note: Unstaffed housing areas result in an underreporting of fights, which effects the accuracy of this data.
