A LOCAL LAW

To amend the administrative code of the city of New York, the New York city plumbing code, the New York city building code, the New York city mechanical code and the New York city fuel gas code in relation to bringing such codes and related provisions of law up to date with the 2015 editions of the international building, mechanical, fuel gas and plumbing codes, with differences that reflect the unique character of the city, clarifying and updating administration and enforcement of such codes and the 1968 code and repealing chapters 2 and 35, appendices K and M, section N102 of appendix N, appendices P and Q, and section R103.3 figures 1A and 1B of appendix R of the New York city building code, chapter 15 and appendix A of the New York city mechanical code and chapter 8 of the New York city fuel gas code in relation thereto

Be it enacted by the Council as follows:

Section 1. Legislative intent. This local law implements sections 28-601.1, 28-701.1, 28-801.1 and 28-901.1 of the administrative code, which require regular updates of the New York city plumbing code, the New York city building code, the New York city mechanical code and the New York city fuel gas code to reflect changes in the International Plumbing, Building, Mechanical and Fuel Gas Codes. These amendments will bring the New York city codes up to date with the 2015 editions of the International Plumbing, Building, Mechanical and Fuel Gas Codes published by the International Code Council, with differences to accommodate the unique nature of construction in the City. The local law is divided into parts A through E. Part A contains amendments to chapters 1 through 5 of title 28 of the administrative code in separately numbered sections within part A. Chapters 1 through 5 contain general provisions governing administration and enforcement of all such
codes and the 1968 code. Parts B, C, D and E contain amendments to chapters 6 through 9 of title 28 of the administrative code and to the codes within such chapters--chapter 6, containing the New York city plumbing code (part B); chapter 7, containing the New York city building code, (part C); chapter 8, containing the New York city mechanical code, (part D); and chapter 9, containing the New York city fuel gas code, (part E). Each part amends the relevant chapters and appendices of the relevant code in separately numbered sections within the part.

Part A (Chapters 1 through 5 of Title 28)

28-103.30.5 added by local law number 188 for the year 2017 and renumbered by local law number 233 for the year 2017, section 28-103.32 amended by local law number 80 for the year 2020, section 28-103.33 renumbered and amended by local law number 93 for the year 2019, section 28-103.35 added by local law number 59 for the year 2019, section 28-103.36 added by local law number 15 for the year 2020, section 28-104.2 amended by chapter 217 of the laws of 2018, sections 28-104.2.1.2, 28-104.2.1.3.2, 28-104.2.1.4 amended by local law number 108 for the year 2019, sections 28-104.7.16, 28-104.8 amended by local law number 106 for the year 2019, section 28-105.1.2, added by local law number 97 for the year 2017, sections 28-105.1.2 added by local law number 160 for the year 2017, section 28-105.1.3 added by local law number 104 for the year 1019, sections 28-105.1.4 and 28-105.1.5 added by local law number 114 for the year 2019, section 28-105.2, item 3 amended by local law number 1 for the year 2011, item 10 amended by local law number 195 for the year 2018, section 28-105.4 subdivisions 7 and 8 added and subdivision 9 amended by local law 195 for the year 2018, section 28-105.5 amended by chapter 217 of the laws of 2018, section 28-105.10.1 amended by local law number 62 for the year 2019, section 28-105.11 amended by local law number 158 for the year 2017, section 105.12.7.1 amended by chapter 217 of the laws of 2018, section 28-105.8 amended by local law number 81 for the year 2017, 28-105.12.9 added by local law number 196 for the year 2017, section 28-105.12.10 added by local law 106 of 219, section 28-105.12.11 added by local law number 111 for the year 2019, section 28-106.1 amended by local law 38 of 2015, section 28-106.2 added by local law 37 of 2009, sections 28-106.3 and 28-106.4 amended by local law 38 of 2015, section 28-109.1 amended by local law number 195 for the year 2018, table 112.2 amended by local law number 56 for the year 2016, section 28-112.10 added by local law number 4 for the year 2016, section 28-112.10.2 amended by local law number 51 for the year 2013, section 28-112.11 added by local law number 33 for the year 2014, section 28-112.12 added by local law number 196 for the year 2017, section 28-113.5 added by local law number 2 for the year 2012, section 116.2.1
amended by local law number 115 for the year 2019, sections 28-116.2.4 and 28-116.2.4.3 amended and added by local law number 151 for the year 2016, section 28-116.2.4.2 added by local law number 149 for the year 2017, section 28-116.7 added by local law number 97 for the year 2017, section 28-117.4.4 amended by local law number 80 for the year 2020, section 28-118.22 added by local law number 97 for the year 2017, section 28-119.4 added by local law number 154 for the year 2016, article 120 amended by local laws 118 for the year 2019, 106 for the year 2019, and 116 for the year 2019, sections 28-101.5, 28-118.4.2, 28-118.15, 28-118.17, 28-118.19 and table 28-112.8 amended by local law number 6 for the year 2021, is amended to read as follows:

CHAPTER 1

ADMINISTRATION

ARTICLE 101

GENERAL

§28-101.1 Title. The provisions of this chapter shall apply to the administration of the codes set forth in this title and the 1968 building code. This title shall be known and may be cited as the “New York city construction codes” and includes:

- The New York city plumbing code.
- The New York city building code.
- The New York city mechanical code.
- The New York city fuel gas code.
- The New York city energy conservation code.

§28-101.2 Intent. The purpose of the New York city construction codes is to provide reasonable minimum requirements and standards, based upon current scientific and engineering knowledge, experience and techniques, and the utilization of modern machinery, equipment, materials, and forms and methods of construction, for the regulation of building construction in the city of New York in the interest of public safety, health, welfare and the environment, and with due regard for building construction and maintenance costs.

§28-101.3 Codes. Any reference in this title to “this code” or “the code” shall be deemed to be a reference to this title and all of the codes comprising the New York city construction codes unless the context or subject matter requires otherwise. Whenever a section or subsection of this code is cited or referred to, subordinate consecutively numbered sections and subsections of the cited provision are deemed to be included in such reference unless the context or subject matter requires otherwise.
§28-101.3.1 Occupancy classifications in prior codes. With regard to prior code buildings, references to occupancy classifications in this code shall be deemed to refer to the equivalent occupancy classification under the 1968 or prior building codes.

§28-101.4 Effective date. Except as otherwise provided in sections 28-101.4.1, 28-101.4.2, 28-101.4.3,[and] 28-101.4.4,[and] 28-101.4.5, on and after July 1, 2008, all work shall be performed in accordance with the provisions of this code.

§28-101.4.1 Permit issued or work commenced prior to July 1, 2008. If a permit for work was issued prior to July 1, 2008 or, if no permit was necessary, work was commenced prior to July 1, 2008, all of the provisions of chapter 1 of title 27 of the administrative code as heretofore in effect shall apply to such work.

§28-101.4.2 Applications for construction document approval submitted prior to and within twelve months after July 1, 2008. Any work for which an application for construction document approval was submitted to the department prior to July 1, 2008 and not thereafter abandoned, or for which an application for construction document approval is submitted to the department within a period of twelve months after such date may, at the option of the owner, be performed in its entirety in accordance with the provisions of this code, or in accordance with the 1968 building code, provided that such work is commenced within twelve months after the date of issuance of a permit [therefor] and is diligently carried on to completion. The commissioner may, for good cause, extend the time period for commencement of the work beyond 12 months. Where the owner elects to perform the work in compliance with the 1968 building code, the following conditions shall apply:

1. Except as otherwise limited by the commissioner, administration and enforcement of the 1968 building code shall be in accordance with this code, including but not limited to approval of construction documents, issuance of permits and certificates of occupancy, tests and inspections, penalties and enforcement. Controlled inspections and semi-controlled inspections as referenced in the 1968 building code shall be deemed to be special inspections and shall comply with the provisions of this code relating to special inspections. Materials regulated in their use by the 1968 building code shall be subject to applicable provisions of this code.

2. Safety of public and property during construction operations including demolition shall be governed by chapter 33 of the New York city building code.

§28-101.4.3 Optional use of the 1968 building code for work on prior code buildings. At the option of the owner, and subject to applicable provisions of this code, work on prior code buildings may be performed in accordance with the requirements and standards set forth in the 1968 building code, or where the 1968 code so authorizes, the code in effect prior to December 6, 1968.

Exceptions:

1. Fuel gas, plumbing and mechanical work. The installation of and work on all appliances, equipment and systems regulated by the New York city fuel gas code, the New York city plumbing code and the New York city mechanical code shall be
governed by applicable provisions of those codes relating to new and existing installations.

2. **Fire protection systems.** Alterations of buildings and changes of use or occupancy shall be governed by chapter 9 of the New York city building code, subject to special provisions for prior code buildings as set forth therein.

3. **Elevators, conveyors and amusement rides.** The installation of and work on elevators, conveyors, and amusement rides shall be governed by chapter 30 and appendix K of the New York city building code and the rules of the department, subject to special provisions for prior code buildings as set forth therein.

4. **Safety during construction operations.** Safety of public and property during construction operations including demolition shall be governed by chapter 33 of the New York city building code.

5. **Accessibility.** Alterations, including minor alterations, of buildings and changes of use or occupancy, shall be governed by chapter 11 of the New York city building code, subject to special provisions for prior code buildings as set forth therein.

6. **Encroachments into the public right of way.** Encroachments onto the public right of way shall be governed by chapter 32 of the New York city building code.

7. **Administration and enforcement.** Except as otherwise limited by the commissioner, administration and enforcement of the 1968 building code shall be in accordance with this code, including but not limited to approval of construction documents, issuance of permits and certificates of occupancy, tests and inspections, penalties and enforcement.

8. **Special inspections.** Controlled inspections and semi-controlled inspections as referenced in the 1968 building code shall be deemed to be special inspections and shall be governed by the provisions of this code relating to special inspections.

9. **Materials.** Materials regulated in their use by the 1968 building code shall be subject to applicable provisions of this code.

10. **Security grilles.** The installation and replacement of security grilles shall comply with section [1008.1.4.5] 1010.1.4.4 of the New York city building code.

11. **Energy efficiency.** All work related to energy efficiency shall be regulated by the New York city energy conservation code.

12. **Roof recovering and replacements.**

   12.1. **Installation and materials.** Work involving the recovering or replacing of an existing roof covering shall be governed by sections [1540.4] 1511.1 through [1540.6] 1511.7 of the New York city building code;

   12.2. **Cool roofs.** Work involving the recovering or replacing of an existing roof covering shall comply with section 1504.9 of the New York city building code unless the area to be recovered or replaced is less than fifty percent of the roof area and less than 500 square feet (46 m²).

   12.3. **Green roofs.** Notwithstanding the applicant’s election to use the 1968 building code or prior code, work involving green roof systems and container gardens
shall be permitted to be performed pursuant to Chapter 15 of the New York city building code.

12.4. **Sustainable roofs.** Work involving the replacing of an entire existing roof deck or roof assembly shall comply with section [1511.2] 1512.2 of the New York city building code.

13. **Handrails.** Where the alteration of a building includes the addition or replacement of an entire stair enclosure including the stairs, handrails shall comply with section [1011.12] 1012.2 and section [1012] 1014 of the New York city building code. Where the alteration of a building includes the addition or replacement of ramps, handrails shall comply with section [1010.8] 1012.8 and section [1012] 1014 of such code.

14. **Guards.** Where the alteration or repair of a building involves the addition or replacement of guards, such guards shall comply with sections [1013] 1015 and [1607.7] 1607.8 of the New York city building code.

15. **Areas of special flood hazard areas.** Within [areas of special] flood hazard areas in accordance with section 28-104.9.4, all work for any activity regulated by Appendix G of the New York city building code shall be governed by such appendix.

16. **Structural.** The use of load resistance factor design (LRFD), calculation of live loads, and applicability of seismic and wind loads shall be governed by special provisions for prior code buildings as set forth in section 1601.2 of the New York city building code.

17. **Emergency and standby power systems.** The installation of and work on emergency and standby power systems shall comply with section 2702.1 of the New York city building code.

18. **Parking garages and open parking lots.** Where an alteration of a parking garage or an open parking lot includes an increase in the size of the electric service, such alteration shall include provisions for the installation of electric vehicle charging stations in accordance with section [406.2.11] 406.4.10 or [406.7.11] 406.9.8 of the New York city building code, as applicable.

19. **Mold protection.** Alterations shall comply with sections 2506 and 2509 of the New York city building code relating to areas subject to moisture or water damage.

**§28-101.4.4 Reductions of fire safety or structural safety of prior code buildings prohibited.** Notwithstanding any other provision of this code, where the alteration of any prior code building or structure in accordance with a provision of this code would result in a reduction of the fire safety or structural safety of such building, relevant provisions of the 1968 building code shall apply to such alteration unless there is full compliance with those provisions of this code that would mitigate or offset such reduction of fire protection or structural safety. Where the owner, having a choice to elect the 1968 building code or this code, chooses this code, the applicant shall submit a comparative analysis acceptable to the commissioner of the relevant fire safety and structural safety provisions under the 1968 building code and this code, demonstrating that the alteration does not result in a reduction to the fire and life safety of the building.

**Exception:** The use of automatic-closing by smoke detection for doors serving vertical exit enclosures in accordance with section [708.7] 713.7 of the New York city building code in a
prior code building shall not be deemed to result in a reduction of the fire safety or structural safety of such a building.

§28-101.4.5 Work that increases existing floor surface area of a prior code building by more than 110 percent. Notwithstanding sections 28-101.4.3 and 28-102.4.3 or any other provision of this code that would authorize alterations of prior code buildings in accordance with the 1968 building code or prior codes, where the proposed work at the completion of construction will increase the amount of floor surface area of a prior code building by more than 110 percent, over the amount of existing floor surface area, such entire building shall be made to comply with the provisions of this code as if it were a new building hereafter erected. See Section 28-105.2 for permits for such work.

Exceptions: When determining the amount of existing floor surface area for the purposes of section 28-101.4.5, the following shall be excluded from the measured square footage of floor surface area:

1. The square footage of floors removed during the course of the work when such floors are removed together with the supporting beams, joists, decking and slabs on grade.

2. The square footage of any floor that was installed together with the supporting beams, joists, decking and slabs on grade less than 12 months prior to submission of the application for construction document approval for the proposed work. For the purposes of this exception, floors installed pursuant to a work permit signed off less than 12 months before such submission shall not be counted as existing floor surface area.

§28-101.4.5.1 Changes in scope of work. In cases where changes in the scope of work during the course of construction would result in increasing the floor surface area at the completion of construction by more than 110 percent over the amount of existing floor surface area as determined pursuant to section 28-101.4.5, such entire building shall be made to comply with the provisions of this code as if hereafter erected and such work shall be refiled as a new building application in accordance with the provisions of section 28-105.2.

Exception: Work to the extent necessary to relieve an emergency condition may be performed prior to amending plans or obtaining a new permit pursuant to sections 28-105.4.1 and 28-105.12.2.

§28-101.4.5.2 Definitions. As used in Section 28-101.4.5, the following term shall have the following meaning unless the context or subject matter requires otherwise.

FLOOR SURFACE AREA. Floor surface area is the gross square foot area of all horizontal floor and roof surfaces, including roofs of bulkheads and superstructures, of a building or structure at any level, including cellar, attic and roof.

§28-101.4.5.3 Effect on zoning resolution. The provisions of section 28-101.4.5 shall not be construed to affect the status of any nonconforming use or non-complying bulk otherwise permitted to be retained pursuant to the New York city zoning resolution.

§28-101.5 Definitions. As used in this chapter and elsewhere in this title, the following terms shall have the following meanings unless the context or subject matter requires otherwise:
1968 BUILDING CODE. Chapter 1 of title 27 of the administrative code as hereafter in effect.

1968 OR PRIOR CODE BUILDINGS OR STRUCTURES (PRIOR CODE BUILDINGS). (i) A building or structure in existence prior to July 1, 2008 or one for which a lawful building permit was issued for the erection of such building or structure prior to July 1, 2008. (ii) A building or structure erected in accordance with the 1968 building code under a lawful building permit issued for the erection of such building or structure on or after July 1, 2008 in accordance with section 28-101.4.2 of this code.

ACCEPTANCE OR ACCEPTED. In reference to construction documents, the endorsement by the department of construction documents with less than full examination by the department based on the professional certification of a registered design professional in accordance with a program established by the commissioner.

ADDITION. An alteration of a building in existence that increases its exterior dimensions including, but not limited to, an extension or increase in floor area or height (including an increase in height or area resulting from the construction of a rooftop structure or rooftop mechanical equipment) of the building.

ADMINISTRATIVE CODE. The administrative code of the city of New York.

ALTERATION. Any construction, addition, change of use or occupancy, or renovation to a building or structure in existence.

APPROVAL OR APPROVED. In reference to construction documents, the determination by the department after full examination that submitted construction documents comply with this code and other applicable laws and rules. In reference to materials, the determination by the commissioner that material is acceptable for its intended use.

APPROVED AGENCY. An established and recognized agency [or other qualified person] that is regularly engaged in conducting tests or furnishing inspection services, when approved pursuant to department rules as qualified to perform or witness identified testing or inspection services.

APPROVED FABRICATOR. An established and qualified person, firm or corporation approved by the commissioner to custom manufacture or build products or assemblies regulated by this code, including the production of concrete.

APPROVED INSPECTION AGENCY. An approved agency that is approved by the department as qualified to perform one or more of the inspections required by this code.

APPROVED TESTING AGENCY. An approved agency that is approved by the department as qualified to test and evaluate the performance of one or more of the materials regulated in their use by this code. Such term shall include, when approved pursuant to department rules, a third party testing or certification agency, evaluation agency, testing laboratory, testing service, licensed concrete testing laboratory, or other entity concerned with product evaluation.

ARCHITECT. A person licensed and registered to practice the profession of architecture under the education law of the state of New York.
BUILDING. Any structure used or intended for supporting or sheltering any use or occupancy. The term shall be construed as if followed by the phrase “structure, premises, lot or part thereof” unless otherwise indicated by the text.

CHARTER. The New York city charter.

CERTIFICATE OF COMPLIANCE. A certificate stating that materials and products meet specified standards or that work was done in compliance with approved construction documents and other applicable provisions of law, or, with respect to specified service equipment, a certificate issued by the department authorizing the operation of such equipment.

CITY. The city of New York.

COMMISSIONER. The commissioner of buildings of the city of New York, or his or her duly authorized representative.

CONSTRUCTION DOCUMENTS. Plans and specifications and other written, graphic and pictorial documents, prepared or assembled for describing the design, location, physical characteristics, and other elements of the project necessary for obtaining a building permit.

DAY. A calendar day, computed in accordance with section 20 of the New York state general construction law, unless otherwise specified as a business day.

DEFERRED SUBMITTAL. Those portions of the design that are not submitted at the time of the application for construction document approval and that are to be submitted to the department within a specified period of time after the issuance of a permit.

DEMOLITION. Full or partial demolition.

DEMOLITION, FULL. The dismantling, razing, or removal of all of a building or structure, including all operations incidental thereto.

DEMOLITION, PARTIAL. The dismantling, razing, or removal of structural members, floors, interior bearing walls, and/or exterior walls or portions thereof, including all operations incidental thereto.

DEPARTMENT. The department of buildings of the city of New York.

ENGINEER. A person licensed and registered to practice the profession of engineering under the education law of the state of New York.

ENLARGEMENT. An addition.

ENVIRONMENTAL CONTROL BOARD or ECB. The environmental control board established pursuant to section 1049-a of the charter within the office of administrative trials and hearings.

EXISTING BUILDING OR STRUCTURE. A completed building or structure that is in existence at the time of an applicable reference in this code.
FABRICATED ITEM. Products and assemblies regulated by this code that are custom manufactured or built prior to their incorporation into the work at the construction site. Fabricated items shall not include listed, labeled or approved products or assemblies. Materials produced in accordance with standard specifications referenced by this code, such as rolled structural steel shapes, steel-reinforcing bars, masonry units, and wood structural panels, or in accordance with a referenced standard listed in this code, which provides requirements for quality control done under the supervision of a third-party quality control agency shall not be considered fabricated items.

FIRE PROTECTION PLAN. A report containing a narrative description of the life and fire safety systems and evacuation system for a structure.

HEREAFTER. On or after July 1, 2008.

HERETOFORE. Before July 1, 2008.

INSPECTION CERTIFICATE. Identification applied to a product by an approved agency containing the name of the manufacturer, the function and performance characteristics, and the name and identification of the approved agency that indicates that the product or material has been inspected and evaluated by such approved agency. An inspection certificate shall also mean a certificate issued by the department upon satisfactory completion of an inspection or test.

INTERIM CERTIFICATE OF OCCUPANCY. A type of temporary certificate of occupancy authorizing occupancy of one or more floors of a building prior to the completion of all work needed to obtain a certificate of occupancy for the building, and that remains in effect until the issuance of a certificate of occupancy for the building.

LABEL. An identification applied to a product by the manufacturer that contains the name of the manufacturer, the function and performance characteristics of the product or material, and the name and identification of an approved agency and that indicates that a representative sample of the product or material has been tested and evaluated by an approved agency for compliance with nationally recognized standards or tests to determine suitable usage in a specific manner.

LABELED. Material to which has been attached a label, symbol or other identifying mark of the manufacturer that contains the name of the manufacturer, the function and performance characteristics of the product or material, and the name and identification of an approved agency and that indicates that a representative sample of the material has been tested and evaluated by an approved agency for compliance with nationally recognized standards or tests to determine suitable usage in a specified manner.

LAND SURVEYOR. A person licensed and registered to practice the profession of land surveying under the education law of the state of New York.

LANDSCAPE ARCHITECT. A person licensed and registered to practice the profession of landscape architecture under the Education Law of the State of New York.
LETTER OF COMPLETION. A document issued by the department indicating that permitted work has been completed, including satisfactory final inspection in accordance with this code. A letter of completion is issued only in circumstances where a certificate of occupancy is not required upon completion of the permitted work.

LIMITED ALTERATION APPLICATION. Application for limited oil-burning appliance alterations, limited plumbing alterations, limited sprinkler alterations and limited standpipe alterations submitted pursuant to exception 1 of section 28-104.6. Such work shall not include any associated work that would otherwise require an alteration permit including, but not limited to, any construction of fire rated partitions and enclosures.

Category 1 work shall be limited to a new installation into an existing building or system. The utilization of this category shall be limited by an annual monetary cap.

Category 2 work shall include any existing system or component that is replaced, repaired or altered. This category shall not be limited by a monetary cap.

LIMITED OIL-BURNING [BOILER] APPLIANCE ALTERATIONS. An alteration, installation, replacement or repair to an [oil burner/boiler system] oil-burning appliance that is limited in scope, falling into one of the following categories [:]. Any construction or alteration to fire-rated partitions or enclosures, with the exception of through-penetrations that are firestopped, shall require a separate application filed with the department.

Category 1. An [alteration] addition to an [oil burner/boiler system] existing oil-burning appliance where the total cost of the proposed category 1 work in the building does not exceed [thirty-five] [fifty thousand dollars] $50,000 in any 12-month period and where the proposed work is limited to the [replacement] installation of:

1. oil equipment [or]
2. oil-fired appliances, located within the same enclosure or room as the existing oil-burning appliance,
3. unit heaters, or
4. oil piping including no more than two above-ground oil tanks each with a capacity of no more than 330 gallons (1250 L) [or less capacity provided the replacement] provided such oil tanks also comply with the capacity limits established in section 1305.11 of the New York city mechanical code. The newly installed tanks shall have a UL listing, [or labeling] be labeled or meet the alternative tank design and construction standards contained in section 1305.14 of the New York city mechanical code.

Category 2. An alteration [to] repair or replacement of an [oil burner/boiler system] existing oil-burning appliance that is not subject to cost or duration limitations and that is limited to the following:

1. Replacement of oil burners, oil-burning [boilers] appliances or water [heater with] heaters in which the heat input [of] per appliance does not exceed 3 million Btu/h (393 879 kW) [or less].

[2. Replacement of oil burners with heat input of 2.8 million Btu/h (821 kW) or less.]
2. Relocation of an oil burner or oil-burning boiler appliance or water heater within the same [unaltered fire-rated] enclosure or room.

3. Placement of a temporary department of buildings registered oil fired mobile boiler and corresponding fuel oil storage tank with associated piping at a site for emergency heating.

4. Placement of a temporary fuel oil storage tank with a capacity of 5,000 gallons (18 927 L) or less at a site for emergency use and connected to an existing oil-burning appliance.

5. Repair, replacement or relocation of oil equipment, appliances or oil piping including two above-ground oil tanks with 330 gallons (1250 L) provided such oil tanks also comply with the capacity limitations of section 1305.11 of the New York city mechanical code. The replacement tanks shall have a UL listing or labeling or meet the alternative tank design and construction standards contained in section 1305.14 of the New York city mechanical code. Any such relocation shall be only within the same enclosure or room.

LIMITED PLUMBING ALTERATIONS. An installation, replacement, repair or alteration to a plumbing or fuel gas piping system, including fixtures and appliances, that is limited in scope, falling into one of the following categories:

Category 1. An [alteration] addition to [a] an existing plumbing or fuel gas piping system or service where the total cost of the proposed Category 1 work in the building does not exceed [thirty-five] [thousand dollars] $50,000 in any 12-month period and where the proposed work is limited to the following:

1. The addition of not more than five plumbing fixtures or fixture connections in a building within any 12-month period, including any associated plumbing necessary to serve such additional fixtures or fixture connections;

2. The installation of new [plumbing or] fuel gas piping [excluding work in Category 2] in conjunction with the addition of not more than five gas appliances or six unit heaters, limited to residential gas barbecue, Category 1 vented hot water heater, gas infrared heater, gas light, gas oil burner pilot, gas pool heater in conjunction with an R-3 occupancy group, one commercial gas appliance and gas unit heater, including any associated fuel gas piping necessary to serve such additional appliances;

3. The installation of up to five new sprinkler heads off of an existing domestic water system within any 12-month period;

4. Rearrangement of not more than 20 sprinkler heads in areas classified in light hazard occupancy, as such term is defined in NFPA-13 as amended by appendix Q of the New York city building code, provided such areas are already sprinklered and such areas will remain in such occupancy, and provided further that all such sprinkler heads are off of a domestic water system;

5. Rearrangement of not more than 20 sprinkler heads in restaurant service areas classified in Group 1 ordinary hazard occupancy, as such term is defined by NFPA 13 as amended by appendix Q of the New York city building code, provided such areas are already sprinklered and such areas will remain in such occupancy, and provided further that all such sprinkler heads are off of a domestic water system;
[6. Rearrangement of not more than 20 sprinkler heads in mercantile areas classified in Group 2 ordinary hazard occupancy, as such term is defined by NFPA 13 as amended by appendix Q of the New York city building code, provided such areas are already sprinklered and such areas will remain in such occupancy, and provided further that all such sprinkler heads are off of a domestic water system;]

[7. In-kind replacement of piping and parts is required for the operation of a standpipe, provided that a sprinkler is not connected or is not now being connected to such system; and]

[8. Replacement of parts required for the operation of a standpipe system that is not a combined standpipe system;]

4. Installation of a new single domestic gas dryer that is vented directly through an exterior wall in buildings occupied exclusively as one- or two-family dwellings not more than three stories in height, as provided for in rules of the department.

Category 2. [An] The repair, replacement of or alteration to [a] an existing plumbing or fuel gas piping system that is not subject to cost or duration limitations and that is limited to the following:

1. The [rerouting] repair, replacement of or alteration of existing plumbing or fuel gas [branch] piping to serve the same number of fixtures and appliances;

2. The in-kind replacement of plumbing fixtures and gas appliances that do not provide heat or hot water when not constituting a minor alteration or ordinary repair under this code; This shall not preclude plumbing work that is a minor alteration or ordinary repair from being filed as a limited alteration application;

3. The relocation and [mounting] replacement of [new] plumbing fixtures [on existing roughing] , other than the mere replacement of existing fixtures constituting a minor alteration or ordinary repair under this code. This shall not preclude the relocation and replacement of plumbing fixtures that is a minor alteration or ordinary repair from being filed as a limited alteration application;

4. The installation or replacement of primary backflow preventers;

5. [Replacement] In-kind replacement of gas-fired [boilers] appliances with a combined heat input of [4] 2 million Btu/h ( [293] 879kW) or less;

6. Replacement of gas burners with heat input of [2.8] 3 million Btu/h ( [821] 879kW) or less;

7. Relocation of a gas burner/boiler within the same, unaltered fire-rated enclosure or room, with the exception of through-penetrations that are firestopped;

8. In-kind replacement with the following direct-vent appliances with heat input of 350,000 Btu/h (103 kW) or less that are vented directly through exterior walls serving buildings occupied exclusively as one- or two-family dwellings not more than four stories in height [as provided for in rules by the department, regarding gas-fired boilers, hot water heaters and furnaces;]

8.1. gas-fired boilers,

8.2. hot water heaters and
8.3. furnaces;

9. Installation of a new single domestic gas dryer that is vented directly through an exterior wall in buildings occupied exclusively as one- or two-family dwellings not more than four stories in height, as provided for in rules by the department. In-kind direct replacement of gas-fired boilers, hot water heaters and furnaces with heat input of 350,000 Btu/h (103 kW) or less; that are vented directly through exterior walls;

10. Placement of a registered gas fired temporary boiler with associated gas piping at a site for emergency heating and/or hot water; [and]

11. Replacement of up to thirty existing sprinkler heads providing that orifice sizes, type and deflector positions remain the same, and all such sprinkler heads are off of a domestic water system; [and]

12. Rearrangement of not more than 20 sprinkler heads in areas classified in light hazard occupancy, as such term is defined in NFPA 13 as amended by appendix Q of the New York city building code, provided such areas are already sprinklered and such areas will remain in such occupancy, and provided further that all such sprinkler heads were legally installed off of a domestic water system;

13. Rearrangement of not more than 20 sprinkler heads in restaurant service areas classified in Group 1 ordinary hazard occupancy, as such term is defined by NFPA 13 as amended by appendix Q of the New York city building code, provided such areas are already sprinklered and such areas will remain in such occupancy, and provided further that all such sprinkler heads were legally installed off of a domestic water system; and

14. Rearrangement of not more than 20 sprinkler heads in mercantile areas classified in Group 2 ordinary hazard occupancy, as such term is defined by NFPA 13 as amended by appendix Q of the New York city building code, provided such areas are already sprinklered and such areas will remain in such occupancy, and provided further that all such sprinkler heads were legally installed off of a domestic water system.

LIMITED SPRINKLER ALTERATIONS. An alteration, installation, replacement or repair to a sprinkler system that is limited in scope, falling into one of the following categories:

Category 1. An alteration to an existing sprinkler system where the total cost of the proposed Category 1 work in the building does not exceed [thirty-five] [fifty thousand dollars] $50,000 in any 12-month period, the fire rating of the area where the new sprinkler heads are being installed is not being altered and [where] the proposed work is limited to [the following:] the installation of up to five new sprinkler heads off of an existing sprinkler system,

[1. Replacement of parts required for the operation of a sprinkler system;]

[2. Changes that do not alter the type of sprinkler system;]

[3. Relocation of piping that does not affect the operation of the sprinkler system;]

[4. Rearrangement of not more than 20 sprinkler heads in areas classified in light hazard occupancy, as such term is defined in NFPA 13 as amended by appendix Q of the New York city building code, provided such areas area already sprinklered and such areas will remain in such occupancy;]
[5. Rearrangement of not more than 20 sprinkler heads in restaurant service areas classified in Group 1 ordinary hazard occupancy, as such term is defined in NFPA 13 as amended by appendix Q of the New York city building code, provided such areas are already sprinklered and such areas will remain in such occupancy;]

[6. Rearrangement of not more than 20 sprinkler heads in mercantile areas classified in Group 2 ordinary hazard occupancy, as such term is defined in NFPA 13 as amended by appendix Q of the New York city building code, provided such areas are already sprinklered and such areas will remain in such occupancy; and]

[7. The installation of up to five new sprinkler heads off of an existing sprinkler system.

Category 2. An alteration, repair or replacement of an existing sprinkler system or combined sprinkler standpipe system that is not subject to cost or duration limitations and that is limited to the replacement of sprinkler heads, provided that orifice sizes, type and deflector positions remain the same.]

1. The replacement of sprinkler heads, provided that orifice sizes, type and deflector positions remain the same;

2. Replacement of parts required for the operation of a sprinkler system or combined sprinkler standpipe system, provided that orifice sizes, type and deflector positions remain the same;

3. Changes that do not alter the type of sprinkler system;

4. Relocation of piping that does not affect the operation of the sprinkler system, provided that orifice sizes, type and deflector positions remain the same;

5. Rearrangement of not more than 30 sprinkler heads in areas classified in light hazard occupancy, as such term is defined in NFPA 13 as amended by appendix Q of the New York city building code, provided such areas are already sprinklered and such areas will remain in such occupancy;

6. Rearrangement of not more than 30 sprinkler heads in restaurant service areas classified in Group 1 ordinary hazard occupancy, as such term is defined in NFPA 13 as amended by appendix Q of the New York city building code, provided such areas are already sprinklered and such areas will remain in such occupancy;

7. Rearrangement of not more than 30 sprinkler heads in mercantile areas classified in Group 2 ordinary hazard occupancy, as such term is defined by NFPA 13 as amended by appendix Q of the New York city building code, provided such areas are already sprinklered and such areas will remain in such occupancy;

8. Rearrangement of sprinkler heads in a storage area under 200 square feet classified Group 1 ordinary hazard, as such term is defined by NFPA 13 as amended by appendix Q of the New York city building code, provided such areas are already sprinklered and such areas will remain in such occupancy;

9. Unlimited cut and cap of an existing sprinkler system associated with a permitted demolition or gut renovation; and

10. Relocation of a fire department connection as part of a combined system.
LIMITED STANDPIPE ALTERATIONS. **Category 2.** An alteration, replacement or repair to an existing standalone or combined standpipe system that is limited [in scope falling into the following category] to the following:

[Category 1. An alteration to an existing combined standpipe system where the total cost of the proposed work in the building does not exceed thirty five thousand dollars in any 12-month period and the proposed work is limited to one or more of the following:]

1. Replacement or relocation of parts required for the operation of a standalone or combined standpipe system; [and]
2. Relocation of standalone or combined standpipe auxiliary hose sources and cabinets within 10 feet (3048 mm) of their original location, provided that the existing covered area is not affected and provided that such relocation complies with this code for a new installation [ ]; and
3. Unlimited cut and cap of an existing standalone or combined standpipe system for a demolition or gut renovation.

**LISTED.** Material identified in a list published by an approved agency that maintains periodic inspection of production of listed material or periodic evaluation services whose listing states either that the material meets identified nationally recognized standards or has been tested and found suitable for a specified purpose when installed in accordance with the manufacturer’s installation instructions.

**MAIN USE OR DOMINANT OCCUPANCY (OF A BUILDING).** Refers to a single occupancy classification assigned to a structure by the department according to such structure’s main use or dominant occupancy.

**MANUFACTURER’S DESIGNATION.** Identification applied to material by the manufacturer indicating that the material complies with a specified standard or set of rules (see “label” and “mark”).

**MARK.** Identification applied to a product by the manufacturer indicating the name of the manufacturer and the function of a product or material (see “Label” and “Manufacturer’s Label and designation”).

**MATERIALS.** Materials, assemblies, appliances, equipment, devices, systems, products and methods of construction regulated in their use by this code or regulated in their use by the 1968 building code.

**OCCUPANCY.** The purpose or activity for which a building or space is used or is designed, arranged or intended to be used.

**OWNER.** Any person, agent, firm, partnership, corporation or other legal entity having a legal or equitable interest in, or control of the premises.

**PARTY WALL.** A fire division on an interior lot line common to two adjoining buildings.
PERMIT. An official document or certificate issued by the commissioner that authorizes performance of specified work or activity.

PERSON. An individual, partnership, corporation, or other legal entity.

PREMISES. Land, improvements thereon, or any part thereof.

PRIOR CODE BUILDING. See 1968 OR PRIOR CODE BUILDING OR STRUCTURE (PRIOR CODE BUILDING).

PROFESSIONAL CERTIFICATION. A personal verification of a registered design professional made under such professional’s signature and seal that accompanies construction documents and other related documents filed with the department and that attests that such documents do not contain false information and are in compliance with all applicable provisions of law.

PROGRESS INSPECTION. Inspection of permitted construction work in progress to verify compliance with the code and with approved construction documents.

PROJECT. A design and construction undertaking comprised of work related to one or more buildings or structures and the site improvements. A project is represented by one or more plan/work applications, including construction documents compiled in accordance with article 104 of this chapter, that relate either to the construction of new buildings or structures or to the demolition or alteration of existing buildings or structures. Applications for a project may have different registered design professionals and different application numbers, and may result in the issuance of one or more permits.

REGISTERED DESIGN PROFESSIONAL. An architect or engineer.

REGISTERED DESIGN PROFESSIONAL OF RECORD. The registered design professional who prepared or supervised the preparation of applicable construction documents filed with the department.

REQUIRED. Shall mean required by the provisions of this code.

RETAINING WALL. A wall designed to prevent the lateral displacement of soil or other materials.

SERVICE EQUIPMENT. Equipment or systems, and all components thereof, that provide sanitation, power, light, heat, ventilation, air conditioning, refuse disposal, fire-fighting, transportation or other facilities for buildings.

SIGN-OFF. The issuance by the department of a letter of completion or certificate of occupancy for permitted work indicating the satisfactory completion of all required inspections and receipt by the department of all required submittal documents.

SINGLE ROOM OCCUPANCY MULTIPLE DWELLING. See section 28-107.2.

SPECIAL INSPECTION. Inspection and testing of selected materials, equipment, installation, fabrication, erection or placement of components and connections, to ensure compliance with
approved construction documents and referenced standards as required by chapter 17 of the New York city building code or elsewhere in this code or its referenced standards.

**SPECIAL INSPECTION AGENCY.** An agency employing one or more persons who are special inspectors and that meets the requirements of department rules.

**SPECIAL INSPECTOR.** An individual employed by a special inspection agency having required qualifications and authorized by department rules to perform or witness particular special inspections required by this code or by the rules of the department, including but not limited to a qualified registered design professional so authorized.

**STRUCTURE.** That which is built or constructed, including among others: buildings, stadia, tents, reviewing stands, platforms, stagings, observation towers, radio towers, tanks, trestles, open sheds, shelters, fences, and display signs.

**SPECIAL INSPECTION AGENCY.** An agency employing one or more persons who are special inspectors and that meets the requirements of department rules.

**SPECIAL INSPECTOR.** An individual employed by a special inspection agency having required qualifications and authorized by department rules to perform or witness particular special inspections required by this code or by the rules of the department, including but not limited to a qualified registered design professional so authorized.

**STRUCTURE.** That which is built or constructed, including among others: buildings, stadia, tents, reviewing stands, platforms, stagings, observation towers, radio towers, tanks, trestles, open sheds, shelters, fences, and display signs.

**SPECIAL INSPECTION AGENCY.** An agency employing one or more persons who are special inspectors and that meets the requirements of department rules.

**SPECIAL INSPECTOR.** An individual employed by a special inspection agency having required qualifications and authorized by department rules to perform or witness particular special inspections required by this code or by the rules of the department, including but not limited to a qualified registered design professional so authorized.

**STRUCTURE.** That which is built or constructed, including among others: buildings, stadia, tents, reviewing stands, platforms, stagings, observation towers, radio towers, tanks, trestles, open sheds, shelters, fences, and display signs.

**SPECIAL INSPECTION AGENCY.** An agency employing one or more persons who are special inspectors and that meets the requirements of department rules.

**SPECIAL INSPECTOR.** An individual employed by a special inspection agency having required qualifications and authorized by department rules to perform or witness particular special inspections required by this code or by the rules of the department, including but not limited to a qualified registered design professional so authorized.

**STRUCTURE.** That which is built or constructed, including among others: buildings, stadia, tents, reviewing stands, platforms, stagings, observation towers, radio towers, tanks, trestles, open sheds, shelters, fences, and display signs.

**SPECIAL INSPECTION AGENCY.** An agency employing one or more persons who are special inspectors and that meets the requirements of department rules.

**SPECIAL INSPECTOR.** An individual employed by a special inspection agency having required qualifications and authorized by department rules to perform or witness particular special inspections required by this code or by the rules of the department, including but not limited to a qualified registered design professional so authorized.

**STRUCTURE.** That which is built or constructed, including among others: buildings, stadia, tents, reviewing stands, platforms, stagings, observation towers, radio towers, tanks, trestles, open sheds, shelters, fences, and display signs.
ARTICLE 102
APPLICABILITY

§28-102.1 General. Where, in any specific case, different sections of this code specify different materials, methods of construction or other requirements, the most restrictive shall govern. Where a general requirement conflicts with a specific requirement, the specific requirement shall govern. Where British and metric units of measurement conflict, the British units shall govern.

§28-102.2 Other laws. The provisions of this code do not presumptively provide for matters that are contained in the charter, the New York state labor law, the New York state multiple dwelling law, the zoning resolution, or the New York state general city law. Where there is conflict or inconsistency between the requirements of this code and other applicable laws and rules, unless otherwise required, such conflict shall be resolved in favor of the more restrictive requirement.

§28-102.3 Separability. If any clause, sentence, paragraph, section or part of this code shall be adjudged to be invalid, such judgment shall not affect, impair or invalidate the remainder thereof, but shall be confined in its operation to the clause, sentence, paragraph, or part thereof directly involved in the controversy in which such judgment shall have been rendered.

§28-102.4 Existing buildings. The lawful use or occupancy of any existing building or structure, including the use of any service equipment therein, may be continued unless a retroactive change is specifically required by the provisions of this code or other applicable laws or rules.

§28-102.4.1 Prior code buildings must comply with the applicable retroactive requirements of the 1968 building code. Prior code buildings must comply with the applicable retroactive requirements of the 1968 building code including those requiring the installation of fire safety and building safety systems and the filing of verifying reports with the department of such installations by the dates specified in section 27-228.5 of the administrative code or in other applicable provisions of such 1968 building code. A violation of such provisions shall be a violation of this code.

§28-102.4.2 Change in use or occupancy. Except as otherwise provided in sections 28-101.4.1, 28-101.4.2, 28-101.4.3 or 28-101.4.4 changes in the use or occupancy of any building or structure made after July 1, 2008 shall comply with the provisions of this code. Any changes made in the use or occupancy of a building or structure not in compliance with this code shall be prohibited and shall be a violation of this code. After a change in use or occupancy has been made in a building, the re-establishment of a prior use or occupancy that would not be lawful in a new building of the same construction class shall be prohibited unless and until all the applicable provisions of this code and other applicable laws and rules for such reestablished use or occupancy shall have been complied with. A change from a use prohibited by the provisions of this code, but which was permitted prior to July 1, 2008, to another use prohibited by the provisions of this code shall be deemed a violation of this code.

§28-102.4.3 Alteration of prior code buildings. Except as otherwise provided in sections 28-101.4.1, 28-101.4.2, 28-101.4.3 and 28-101.4.4, prior code buildings altered after July 1, 2008 shall comply with the provisions of this code. In accordance with subdivision eleven of section three of the New York state multiple dwelling law and article 4 of subchapter 1 of the 1968 building code, at the option of the owner, multiple dwellings erected prior to December 6, 1969
may be altered and buildings erected prior to December 6, 1969 may be converted to multiple dwellings in accordance with applicable provisions of the New York state multiple dwelling law and the building laws and regulations in effect prior to December 6, 1968, provided the general safety and public welfare are not thereby endangered. At a minimum, the application of sections 28-101.4.3, 28-101.4.4 and 28-101.4.5 to any such alteration shall be deemed necessary to protect the general safety and public welfare.

§28-102.4.4 Continuation of unlawful use or occupancy. The continuation of the unlawful use or occupancy of a building or structure contrary to the provisions of this code, or contrary to the provisions of prior codes or other applicable law or rule, shall be a violation of this code.

§28-102.4.5 Fire district maps. The boundaries of fire districts shall be in accordance with the maps set forth in Appendix D of the New York city building code.

§28-102.5 Regulation of lots. The regulation of lots, in conformity with the street on which they are situated, shall be calculated at curb level. Where a lot has more than one street frontage, and is so situated that the street frontages intersect, the curb of the longest street frontage shall be used. When the street frontages do not intersect, the curb along each frontage shall be used to one half the depth of the lot between street frontages. A lot as referred to in this section 28-102.5 shall mean a parcel of land twenty five feet by one hundred feet, or less, in one ownership whether adjacent land be in the same or other ownership; but, for this purpose, no land in the same ownership may be divided into lots smaller than twenty-five feet by one hundred feet. [Reserved.]

§28-102.6 Appendices. All enacted appendices are a part of the provisions of this code.

§28-102.7 References in other laws. References to provisions of the building code of the city of New York or to chapter 1 of title 27 of the administrative code in other laws shall be deemed to refer to equivalent provisions of the 1968 building code or the New York city construction codes as the context in which such references appear may require.

ARTICLE 103
DUTIES AND POWERS OF COMMISSIONER OF BUILDINGS

§28-103.1 Jurisdiction. This code shall be enforced by the commissioner of buildings, pursuant to the provisions of section six hundred forty-three of the New York city charter. However, the commissioner of small business services may also enforce all of the provisions of this code with respect to buildings under the jurisdiction of the department of small business services and the fire commissioner may also enforce all the provisions of this code relating to:

1. The approved number of persons in places of assembly (overcrowding);
2. Obstruction of aisles, corridors, and exits;
3. The posting and availability for inspection of certificates of occupancy or other authorization of lawful occupancy, certificates of compliance and place of assembly certificates of operation;
4. The maintenance of fire, smoke and carbon monoxide detection and alarm systems, fire extinguishing systems, refrigerating systems, storage tanks and auxiliary storage tanks for
oil-burning equipment, exit signs and path markings, and any fire or life safety system, equipment or device intended for use by fire fighting personnel or whose use or operation is subject to the New York city fire code or other law or rule enforced by the New York city fire department, and any related installation and signage;

5. The installation and testing of fire alarm systems, smoke-detecting and carbon monoxide detecting devices that are interconnected with a fire alarm system or monitored by a central station, alternative automatic fire extinguishing systems, including but not limited to fire extinguishing systems for commercial cooking equipment, and fire protection plans;

6. Fire fighting equipment, access to and within premises upon or in which construction and demolition work is being conducted, and the conduct of all construction or demolition work affecting fire prevention and fire fighting;

7. Any exhaust system designed or used for commercial cooking equipment, when such commercial cooking equipment is required to be protected by a fire extinguishing system; and

8. The installation and testing of natural gas distribution piping systems designed for or operated at a gas pressure of 15 psig (103 kPa gauge) or greater.

§28-103.1.1 Installation of equipment required by the New York city fire code. Where the installation of exit signs, emergency means of egress illumination, special mechanical ventilation, sprinkler systems, fire alarm systems and alternative automatic fire extinguishing systems is required by the New York city fire code, the fire commissioner shall require such installations to be in accordance with this code.

§28-103.1.2 Enforcement of New York city construction codes on property within the jurisdiction of the department of small business services. This code and the 1968 building code shall apply to property within the jurisdiction of the department of small business services pursuant to the New York city charter including, but not limited to, structures on waterfront property used in conjunction with and in furtherance of waterfront commerce and/or navigation. It shall be administered and enforced by the department of small business services in the same manner as property within the jurisdiction of the department.

§28-103.1.3 Innovation review board. There is hereby established within the department an innovation review board which shall include as members in addition to the commissioner, the commissioners of environmental protection, health and mental hygiene and design and construction and the chairperson of the city planning commission, or their respective designees. The commissioner shall also designate members from among the fire commissioner and the commissioners of transportation, parks and recreation, consumer affairs, emergency management, housing preservation and development and sanitation and the chairperson of the landmarks preservation commission, and non-governmental organizations and individuals, or their respective designees, with respect to specific matters being considered by the board where the commissioner determines it appropriate to do so.

§28-103.1.3.1 Meetings and recommendations. The commissioner shall convene the innovation review board at least quarterly, or more often as the commissioner may deem necessary to address issues in a timely manner to (i) review specific projects that propose to employ new technologies, design or construction techniques, materials or products, (ii)
review proposals for approval of and to initiate reviews of such new technologies, design or construction techniques, materials or products in order to determine their environmental and sustainability benefits, (iii) make recommendations as to under what conditions and for what purposes each may be appropriately employed in New York city, and (iv) streamline approvals of specific innovative projects. If the board recommends that a technology, design or construction technique, material or product may appropriately be employed, the commissioner shall consider such recommendation and may by rule or other method as the commissioner deems appropriate, authorize the use of such technology, design or construction technique, material or product and under what conditions and for what purposes each may be appropriately employed. The commissioner shall state in writing to the interagency green team established pursuant to subdivision i of section twenty of the charter what action the commissioner shall take with respect to each such recommendation and the reasons for the action taken.

§28-103.2 Interpretation. This code shall be liberally interpreted to secure the beneficial purposes thereof.

§28-103.3 Variations. The requirements and standards prescribed in this code shall be subject to variation in specific cases by the commissioner, or by the board of standards and appeals, under and pursuant to the provisions of paragraph two of subdivision (b) of section six hundred forty-five and section six hundred sixty-six of the New York city charter, as amended.

§28-103.4 Appeals. An appeal from any decision or interpretation of the commissioner may be taken to the board of standards and appeals pursuant to the procedures of the board, except as provided in section 25-204 of the administrative code or as otherwise provided in this code.

§28-103.5 Seal; judicial notice. The commissioner may design and adopt a seal for the department for use in the authentication of the orders and proceedings of the department, and for such other purposes as the commissioner may prescribe. The courts shall take judicial notice of such seal, and of the signature of the commissioner, the deputy commissioners, and the borough superintendents of the department.

§28-103.6 Proofs, affidavits and oaths. Proofs, affidavits and examinations as to any matter arising in connection with the performance of any of the duties of the department may be taken by or before the commissioner, or a deputy commissioner, or such other person as the commissioner may designate; and such commissioner, deputy or other person may administer oaths in connection therewith.

§28-103.7 Cooperation of other departments. Upon request of the commissioner, it shall be the duty of all departments to cooperate with the department of buildings at all times, and to furnish to such department such information, reports and assistance as the commissioner may require.

§28-103.7.1 Sharing results of buildings inspections. The commissioner, the fire commissioner and the commissioner of the department of environmental protection shall [establish a procedure, the implementation of which shall begin within six months of the effective date of this section, to] share information regarding violations issued as a result of inspections of buildings meeting agreed-upon criteria that are relevant to the responsibilities of each department.
§28-103.8 Matters not provided for. Any matter or requirement essential for fire or structural safety or essential for the safety or health of the occupants or users of a structure or the public, and which is not covered by the provisions of this code or other applicable laws and rules, shall be subject to determination and requirements by the commissioner in specific cases.

§28-103.9 Additional tests. Whenever there is insufficient evidence of compliance with the provisions of this code, or evidence that a material or method of construction does not conform to the requirements of this code, or in order to substantiate claims for alternative materials or methods, the commissioner shall have the authority to require tests as evidence of compliance to be made at no expense to the city. Test methods shall be as specified in this code, or by other recognized test standards approved by the commissioner. In the absence of recognized and accepted test methods, the commissioner shall approve the testing procedures. Tests shall be performed as directed by the commissioner. Reports of such tests shall be retained by the department for the period required for retention of public records.

§28-103.10 Supporting documentation for materials. Whenever this code or the rules of the department permits the use of material regulated in its use by this code or the 1968 building code without the prior approval of the commissioner, the commissioner may, in the interest of public safety, require the submittal of supporting documentation that any material used or proposed to be used complies with the applicable code standard for such use. Such supporting documentation may consist of but shall not be limited to certification documents of an approved agency, test reports, analysis, computations or other evidence of such compliance.

§28-103.11 Applications and permits. The department shall receive and review applications, construction documents, and other related documents and shall issue permits, in accordance with the provisions of this code. The department shall, on a weekly basis, send council members and community boards, by electronic mail, a copy of all completed applications for a new building or an alteration that will require a new certificate of occupancy for a building, received during the prior week, disaggregated by community board. In addition, the department shall post such information on its website on a weekly basis.

§28-103.12 Identification. Department personnel shall carry metal badges with suitable inscriptions thereon or other prescribed identification when inspecting structures or premises or otherwise in the performance of their duties under this code.

§28-103.13 Right of entry. The commissioner or his or her authorized representatives, in the discharge of their duties, shall have the right to enter upon and inspect, at all reasonable times, any buildings, enclosure, premises, or any part thereof, or any signs or service equipment contained therein or attached thereto for the purpose of determining compliance with the provisions of this code and other applicable building laws and rules. Officers and employees of the department shall identify themselves by exhibiting the official badge or other identification prescribed by the department; and other authorized representatives of the commissioner shall identify themselves by producing and exhibiting their authority in writing signed by the commissioner. If access is not obtained, the commissioner shall have recourse to remedies provided by law to secure entry.

§28-103.14 Department records. The department shall keep official records of applications received, permits and certificates issued, fees collected, reports of inspections, and notices and orders
issued. Such records shall be retained in the official records for the period required for retention of public records.

§28-103.14.1 List of permits for cellular antenna. The commissioner shall maintain a separate list of alteration permits issued for the erection or placement of antennae used to provide cellular telephone or similar service or any structure related to such service which shall, at a minimum, set forth the name, business address and business telephone number of the applicant, the date of the application, the date the permit was issued, the location for which the permit was issued, including the premises address and the zoning district, whether residential, commercial, or manufacturing, and the number of permits issued for such purpose at the same location. Such list shall be made available to the public upon request between regular business hours and shall be available to the public in electronic format on a 24-hour basis on the department’s website.

§28-103.15 Insurance. The commissioner may require applicants for permits to obtain and furnish proof of workers’ compensation, disability and general liability insurance in such amounts and in accordance with such specifications as shall be set forth in the rules of the department or as otherwise required by law.

§28-103.16 Inspections of existing buildings, structures, signs, service equipment and construction machinery and equipment. In addition to other required inspections, the commissioner may make or require inspections of existing buildings, structures, signs, service equipment installations and construction machinery and equipment to ascertain compliance with the provisions of this code and other laws that are enforced by the department. Such inspections may be made on behalf of the department by officers and employees of the department and other city departments and governmental agencies; and by approved agencies, special inspectors or other persons when the commissioner is satisfied as to their qualifications and reliability. The commissioner may accept inspection and test reports from persons authorized by this code or by the commissioner to perform such inspections. Such reports shall be filed with the department.

§28-103.17 Certain outside work, employment and financial interests of department employees prohibited. It shall be unlawful for any officer or employee of the department to be engaged in conducting or carrying on business as an architect, engineer, carpenter, plumber, iron worker, mason or builder, or any other profession or business concerned with the construction, alteration, sale, rental, development, or equipment of buildings. It shall also be unlawful for such employees to be engaged in the manufacture or sale of automatic sprinklers, fire extinguishing apparatus, fire protection devices, fire prevention devices, devices relating to the means or adequacy of exit from buildings, or articles entering into the construction or alteration of buildings, or to act as agent for any person engaged in the manufacture or sale of such articles, or own stock in any corporation engaged in the manufacture or sale of such articles.

§28-103.18 Investigation of complaints. The commissioner shall cause all complaints to be investigated. For purposes of investigating complaints of violations of law enforced by the department, the commissioner may by rule establish a program to classify structures based on their enforcement history and may create criteria for such classification and assign enforcement resources accordingly.

§28-103.18.1 Complaint records. The department shall keep records of complaints made by any person in reference to any building or other matter under the jurisdiction of the department.
Recorded complaints shall include the name and residence of the complainant, the name of the person complained of, the date of the entry of the complaint and any suggested remedies. Except for entries of names and residences of the complainants, such records shall be made available for public examination.

§28-103.19 Addition, modification, and deletion of referenced standards. The standards referenced in this code may be added to, deleted or modified pursuant to local law or by rule of the department. Every such rule adding, deleting or modifying a referenced standard shall indicate the promulgating agency of the standard, the standard identification, the effective date and title and the section or sections of this code to which such standard applies. The commissioner shall act in consultation with the fire commissioner on matters relating to fire safety.

[Exception: Referenced standards in the New York city plumbing code, other than referenced national standards contained in chapter 13 of such code, shall not be added to, deleted, or modified by rule.]

§28-103.20 Existing rules continued. Rules promulgated by the department in accordance with the law in effect [prior to July 1, 2008] when such rules were promulgated shall remain in effect for the matters covered to the extent that such rules are not inconsistent with this code unless [and], until and to the extent that such rules are amended or repealed by the department.

§28-103.21 Incident lists. The commissioner shall, [by January 2018 and] on a monthly basis [thereafter], post on the department’s website, in a machine-readable format, a list of every incident, reported to the department in accordance with section 28-103.21.1, that occurred on every construction site where construction work subject to permitting by the commissioner resulted in (i) a fatality to any individual, including a member of the general public or a construction worker, or (ii) an injury to any individual, including a member of the general public or a construction worker, that requires transport by emergency medical services or requires immediate emergency care at a hospital or offsite medical clinic, regardless of whether such incident involved a violation of this code or any other law or rule. Such list shall identify, at a minimum, the following information for each incident that the department is required to report on pursuant to this section:

1. The owner of the site where the incident occurred;
2. If the incident involved a construction worker, the name of the general contractor or the subcontractor who employed such worker at the time of the incident;
3. A detailed description of the incident, including the nature of the work being performed at the time of the incident;
4. Violations issued by the department as a result of the incident and to whom such violations were issued;
5. The number of persons injured and/or killed in the incident, and whether such persons were members of the public, construction workers or other persons;
6. If the incident involved an injury, a description of the type of injury;
7. Whether the incident involved a fatality;
8. The date and time of the incident;
9. The address where the incident occurred;
10. The total square footage of the site where the incident occurred;
11. The number of floors and height of the building involved where the incident occurred or, in the case of a new building, the proposed number of floors and proposed height;
12. A list of active permits issued by the department associated with the construction site where an incident occurred, disaggregated by type;
13. If the incident involved a construction worker, the length of time the injured or deceased worker had been employed by their employer at the time of the incident;
14. If the incident involved a construction worker, the number of hours the injured or deceased worker had been working when the incident occurred;
15. If the incident involved a construction worker, whether or not the injured or deceased worker was a union member; and
16. Whether or not the construction site where the incident occurred was a union site.

§28-103.21 Reporting. Where construction work subject to permitting by the commissioner that results in a fatality or injury to any individual, including a member of the general public or a construction worker, occurs on a construction site within the city, the owner or person otherwise in control of the site at which such incident occurred, or, if the incident involved a construction worker, the general contractor or subcontractor that employed such worker, shall report to the department, within three business days after the occurrence of such incident, the information required by section 28-103.21, with such reporting made via an electronic portal established by the department for the purpose of collecting the required information.

§28-103.22 Outreach on security grille visibility requirements. The commissioner shall, through or in cooperation with the department of small business services, the department of consumer affairs, and other city agencies deemed appropriate, develop an outreach program to manufacturers and installers of security grilles, business improvement districts, local development corporations, chambers of commerce and community boards to alert these groups and the businesses that utilize security grilles of the permit requirements and the requirements of this section, the penalties associated with violation thereof and the availability of any business loans, grants or tax subsidies related to the installation or use of such security grilles.

§28-103.23 Manual on flood construction and protection standards. The commissioner shall create and make publicly available, in print and on the department’s website, a manual explaining in detail the flood construction and protection requirements and standards applicable to the city. Such manual shall be made available in plain English and Spanish and in other languages as determined by the commissioner and shall be updated as necessary to reflect changes to applicable flood construction requirements and standards. Such manual shall include, but need not be limited to, a description and explanation of the following:

1. The materials requirements imposed by applicable flood construction requirements and standards, including the elements of structures subject to such material requirements;
2. The manner in which specific utilities and attendant equipment must be protected from flooding; and
3. The application of the flood construction and protection requirements and standards to existing structures.

§28-103.24 Electronic submissions. The commissioner shall have the discretion to require that any document or payment submitted to the department be submitted and/or signed electronically.

§28-103.25 Hotel development plans. Where the development receives applications for new construction of or conversions to transient hotels, as defined in the zoning resolution, the department shall provide written notice, or notice by electronic mail, of the proposed construction or conversion to:

1. The borough president of the borough in which such proposed construction is located:
2. The council member in whose district such proposed construction is located;
3. The community board of the community district in which such proposed construction is located; and
4. If such proposed construction involves land within two or more community districts in a borough, the borough board.

§28-103.26 Reporting to the federal occupational safety and health administration. As soon as practicable after the issuance of [(i)] an immediately hazardous or major violation of chapter 33 of the New York city building code [or (ii) a violation of section 3310.10.2 of the New York city building code], the commissioner shall report such violation to the federal occupational safety and health administration.

§28-103.27 Disclosure of building occupancy status for buildings subject to permit. For each building for which a permit for work has been issued, the commissioner shall post on the department’s website a statement of whether the construction documents relating to such permit indicate that one or more dwelling units within such building will be occupied during such work.

§28-103.28 Site safety training (SST) task force. The commissioner shall convene and provide staff for an SST task force in accordance with the following:

1. Such task force shall be composed as follows:
   1.1. The commissioner, or the designee of such commissioner, shall serve as the chairperson of such task force.
   1.2. The task force shall consist of 14 members, in addition to the chairperson. Seven of the additional members of such task force shall be appointed by the mayor or the mayor’s designee, and seven of the additional members of such task force shall be appointed by the speaker of the council. Such task force shall include members who represent (i) parts of the construction industry that are represented by labor unions or labor organizations, (ii) parts of such industry that are not represented by such unions or organizations, (iii) minority-owned business enterprises or women-owned business enterprises that are certified in accordance with section 1304 of the New York city charter and primarily engaged in construction work and (iv) day laborers.
   1.3. All members of the task force shall have significant experience (i) in a construction or demolition related field or (ii) developing or providing construction site safety
training, except that one of the members appointed by the mayor pursuant to Item 1.2 may be a municipal officer with experience related to the program to be established pursuant to section 22-509 of the code.

2. Such task force shall meet at least quarterly each year for the first two years of its existence and at least annually for three years thereafter.

3. Such task force shall from time to time on its own initiative or upon request of the commissioner provide the commissioner with recommendations relating to training required by section 3321 of the New York city building code.

4. Such task force shall establish a mechanism for receiving and reviewing recommendations from the public relating to training required by such section.

5. By no later than March 1, 2018, such task force shall provide the commissioner with recommendations relating to the amount of additional SST credits required for satisfying item 1.1 of the definition of limited SST card and the topics that such additional SST credits must cover. Such task force shall consider, but need not include in its recommendations, the following topics insofar as such topics relate to safeguarding the public from potential dangers posed by building sites:

5.1. Fall protection.
5.2. Personal protection equipment.
5.3. Safely working with machines.
5.4. Working with hazardous chemicals or other materials.
5.5. OSHA and its role in construction industry safety and health.
5.6. Handling heavy materials and proper lifting techniques.
5.7. Exit routes, emergency action plans, fire prevention and fire protection.
5.8. Confined space awareness.
5.9. Walking and working surfaces.
5.10. Electrical safety.
5.11. Hazard communication.
5.12. Concrete operations.
5.13. Demolition work.
5.14. Excavation work.
5.15. Construction and demolition work at major building sites.
5.16. Material handling.
5.17. Material hoisting.
5.18. Site perimeter protection.
5.19. Sidewalk sheds and fences.
5.20. Steel erection.
5.21. Tenant and occupant protection.
5.22. Ladders and stairs.
5.23. Drug and alcohol awareness.
5.25. Lead awareness.
5.26. First aid, including cardiopulmonary resuscitation (CPR) and automated external defibrillator (AED) use.

§28-103.29 Reporting regarding implementation of section 3321 of the New York city building code. No later than three months after the end of each fiscal year, the commissioner shall report to the mayor and the speaker of the council, and make publicly available online, a report on implementation of section 3321 of the New York city building code. In addition to any information the commissioner deems relevant, such report shall include:

1. The number of SST providers in existence at the end of such fiscal year. Such number shall also be disaggregated by which condition of item 1 of the definition of “site safety training (SST) provider” set forth in [section 3302.1] Chapter 2 of the New York city building code is satisfied by each such provider.
2. The number of SST cards issued in such fiscal year.
3. The number of temporary SST cards issued in such fiscal year.
4. The number of violations of such section issued in such fiscal year, disaggregated by violation type.
5. A list of building sites where violations of such section were issued and, for each such site, the following information disaggregated by violation type:
   5.1. The number of follow-up inspections conducted pursuant to section 28-204.1.1.
   5.2. The average frequency of such follow-up inspections.
   5.3. The number of violations of section 3321 of the New York city building code issued as a result of such inspections.
6. A description of the enforcement mechanisms used by the department to ensure the integrity of training provided by SST providers in connection with section 3321 of the New York city building code and that such training satisfies the requirements of such section and any rules or department requirements relating to such training.

§28-103.29.1 Audits of training provided in connection with section 3321 of the New York city building code. In addition to any other enforcement mechanisms, the department shall periodically audit SST providers and training provided in connection with section 3321 of the New York city building code by such providers in order to ensure the integrity of such training and compliance with such section and any rules or department requirements relating to such training.

§28-103.30 Real Time Enforcement Unit. There is hereby established within the department a real time enforcement unit. Such unit and an agency that is delegated authority by the commissioner shall be responsible for enforcing the construction codes with respect to:
1. occupied multiple dwellings with complaints related to work without a permit; and
2. occupied multiple dwellings with valid permits for (i) the alteration of 10 percent or more of the existing floor surface area of the building or (ii) an addition to the building.

§28-103.30.1 Tracking complaints related to work without a permit. The real time enforcement unit shall receive and track all complaints related to work without a permit in occupied multiple dwellings. The unit shall retain records of such complaints.

§28-103.30.2 Monitoring occupied multiple dwellings with permits for alteration or addition. The real time enforcement unit shall monitor all occupied multiple dwellings with valid permits for (i) the alteration of 10 percent or more of the existing floor surface area of the building or (ii) an addition to the building. Owners of such buildings shall notify the department in writing at least 72 hours prior to the commencement of any work pursuant to such permits.

§28-103.30.3 Inspections. For immediately hazardous complaints related to work without a permit in occupied multiple dwellings, the real time enforcement unit shall conduct inspections of such occupied multiple dwellings within 12 hours of the receipt of such complaints, except that complaints received after 8:00 p.m. shall be inspected by 10:00 a.m. on the following day. For all other complaints related to work without a permit in occupied multiple dwellings, such unit shall conduct inspections of such multiple dwelling within ten days of receipt of such complaints. The real time enforcement unit shall also conduct initial inspections of no fewer than five percent of occupied multiple dwellings with valid permits for alteration or addition as described in section [28-103.26.2] 28-103.30.2, within 20 days of commencement of work for such alterations or additions and shall conduct periodic unannounced inspections thereafter until such work is complete. The unit shall be available to conduct inspections seven days a week, between the hours of 8:30 a.m. and 10:00 p.m.

§28-103.30.4 Violations. The real time enforcement unit shall issue notices of violation or stop work orders as necessary.

§28-103.30.5 Report. The department shall publish online an annual report with the following information related to the effectiveness of the real time enforcement unit: (i) the number of complaints received disaggregated by building; (ii) the average time taken to respond to complaints; (iii) the number of monitored occupied multiple dwellings with valid permits for alteration or addition as described in section [28-103.26.2] 28-103.30.2; (iv) the number of initial and periodic inspections conducted disaggregated by building; and (v) the number and type of violations issued disaggregated by building.

§28-103.31 Report on site safety manager and coordinator certifications. [The] In October of each year, the commissioner shall [in October of 2018] electronically submit to the city council and post on the department’s website a report that includes the following information regarding site safety managers and site safety coordinators:

1. The (i) number of active site safety manager certificates and (ii) number of active site safety coordinator certificates;
2. The (i) number of active site safety manager certificates on the last day of the preceding year and (ii) number of active site safety coordinator certificates on the last day of the preceding year;

3. The (i) number of sites for which a site safety manager was required by this code during the preceding year and (ii) number of such sites for which a site safety manager was required by this code but for which a site safety coordinator may be designated in lieu of such manager pursuant to the exception to section 3310.5 of the New York city building code;

4. The (i) number of site safety manager certificates issued in the preceding year and (ii) number of site safety coordinator certificates issued in the preceding year;

5. The (i) number of applicants for site safety manager certificates who submitted applications during the preceding year and (ii) number of applicants for site safety coordinator certificates who submitted applications during the preceding year;

6. The (i) average length of time for an applicant who submitted an application for a site safety manager certificate during the preceding year to receive such certificate, measured from the date a completed application is submitted to the department and (ii) average length of time for an applicant who submitted an application for a site safety coordinator certificate during the preceding year to receive such certificate, measured from the date a completed application is submitted to the department; and

7. The (i) average length of time for an applicant who submitted an application for a site safety manager certificate during the preceding year to complete a background check, if any, for such certificate, measured from the date such applicant submitted all documentation necessary to complete such check, (ii) average length of time for an applicant who submitted an application for a site safety coordinator certificate during the preceding year to complete a background check, if any, for such certificate, measured from the date such applicant submitted all documentation necessary to complete such check (iii) the main three reasons for completions of background checks for applicants who submitted applications for site safety manager certificates during the preceding year exceeding the average length of time for completion of such background checks and (iv) the main three reasons for completions of background checks for applicants who submitted applications for site safety coordinator certificates during the preceding year exceeding the average length of time for completion of such background checks.

§28-103.32 Education and outreach regarding single-occupant toilet room requirements. The department, in conjunction with (i) the mayor’s office of immigrant affairs, (ii) the commission on human rights, (iii) the department of consumer affairs, (iv) the department of health and mental hygiene, (v) the department of small business services, (vi) the department of citywide administrative services and (vii) any other office or agency designated by the mayor, shall conduct education and outreach to increase awareness of sections 403.2.1 and 403.4 of the New York city plumbing code, regarding single-occupant toilet room requirements. Such education and outreach shall be tailored to business owners, and shall, at a minimum, include educational materials concerning such single-occupant toilet room requirements and the related posting and signage requirements, including samples of acceptable signage. Such materials and sample signage shall be available in the designated citywide languages as defined in section 23-1101. Information concerning such requirements shall also be made available on the department’s website.
§28-103.32.1 Reporting. [By no later than April 1, 2019, and annually thereafter] In April of each year until April 1, 2023, the commissioner of buildings shall submit to the mayor and the speaker of the council, and post on the department’s website, a report on:

1. The education and outreach conducted as required by section 28-103.32 including a description of how such outreach was conducted and the number of business owners reached through the outreach;
2. The number of complaints related to sections 403.2.1 and 403.4 of the New York city plumbing code reported to 311, disaggregated by online complaints and phone complaints;
3. The number of violations issued as a result of such complaints;
4. The total amount of penalties imposed as a result of such violations for the immediately preceding year; and
5. Whether subsequent inspections were conducted by the department to ensure future compliance with such sections of the New York city plumbing code. The reports required pursuant to this section shall remain permanently accessible on the department’s website.

§28-103.33 Office of alternative energy. There is hereby established within the department an office of alternative energy.

§28-103.33.1 Definitions. As used in this section, the following terms have the following meaning:

ALTERNATIVE ENERGY PROJECT. Construction work on a building that will result in such building having at least 50 kilowatts of alternative energy capacity installed onsite from:

1. A qualified energy resource, as such term is defined in section 45 of title 26 of the United States code; or
2. A source that is determined to be renewable by the commissioner or the head of another agency designated by the mayor.

GREEN ROOF SYSTEM. See [section 1502.1] chapter 2 of the New York city building code.

§28-103.33.2 Duties of the office of alternative energy. The duties of the office of alternative energy include, but need not be limited to:

1. Establishing a program to (i) assist with the technical review and approval of applications and other documents submitted to the department in connection with alternative energy projects, (ii) provide guidance to applicants in connection with such projects, (iii) support technical research for advancing energy legislation and policy within the city and (iv) receive and respond to comments, questions and complaints with respect to such program;
2. Coordinating with the office of long-term planning and sustainability, fire department, department of small business services, department of housing preservation and development, and other relevant agencies to ensure that policies are in place to
encourage the installation and maintenance of alternative energy projects, and seeking cooperation and assistance from the city university of New York with respect to such policies; and

3. Making recommendations to the commissioner and the heads of other agencies with respect to streamlining the process for obtaining the necessary approvals to install and maintain alternative energy projects.

§28-103.33.3 Reporting. The head of the office of the alternative energy shall submit an annual report to the commissioner and to the head of any other relevant agency providing (i) a description of the most commonly received comments, questions and complaints received with respect to such office, (ii) a description of actions undertaken by such office to coordinate with other agencies and the results of such coordination, (iii) recommendations made pursuant to section [28-103.31.2] 28-103.33.2 and (iv) recommendations with respect to expanding the definition of alternative energy project. By no later than three months after the end of each fiscal year, such office shall submit a report to the mayor and the speaker of the city council that includes a summary of the actions taken by any agency as a result of any comment, question, complaint or recommendation from or forwarded by such office.

§28-103.33.4 Posting of information. The office of alternative energy shall maintain a website and shall post on such website the contact information for such office and a statement indicating that any person may contact such office if such person has a comment, question or complaint with respect to such office.

§28-103.33.4.1 Information regarding installation of green roof systems. The office of alternative energy shall further post and maintain links on its website to information regarding the installation of green roof systems and other resources and materials regarding green roof systems.

§28-103.34 Electronic mail address. All applicants, licensees, permit holders, and any other person or entity that submits any report or certification or seeks or receives any approval or authorization from the department shall provide to the department an active electronic mail address for purposes of receiving communications from the department, except where another method of communication is authorized by the commissioner. It shall be the responsibility of the applicant, licensee, permit holder or other person or entity to monitor and maintain an electronic mail address and notify the department of any changes.

§28-103.34.1 Electronic notification. The commissioner may send written notices, documents or other correspondence to the electronic mail address provided pursuant to this section. Upon consent of such applicant, licensee, permit holder or other person or entity, the commissioner may serve an order to such electronic mail address.

§28-103.35 [E-mail] Electronic mail notice of construction project updates. The department shall provide, free of charge, a service allowing users to register to receive an automated e-mail notification each time a change in status is recorded with respect to one or more construction projects, selected by such user. Such e-mail electronic mail notifications shall include any update to work permits issued by the department for each such selected construction project, including issuance of any stop work order issued pursuant to section 28-207.2.
§28-103.36 Bird friendly design and construction requirements. The department shall issue, and update as necessary, bird friendly building design and construction requirements. No later than October 1, 2020, the department shall post on its website such requirements and information about compliance with section 1403.8 of the New York city building code.

ARTICLE 104
CONSTRUCTION DOCUMENTS

§28-104.1 General. The department shall not issue a permit pursuant to this code, or a place of assembly operation certificate pursuant to this code unless and until it approves all required construction documents for such work. The department shall not issue an electrical work permit pursuant to the New York city electrical code for fire and emergency alarm systems, solar panels and wind turbines unless and until it approves all required construction documents for such work. Such construction documents shall be prepared by or under the supervision of a registered design professional as required by this code. An application for an associated work permit shall not be submitted to the department until all required construction documents have been approved.

§28-104.1.1 Construction documents subject to the New York city fire code. Except as the New York city fire code may otherwise provide, the construction documents for facilities and systems for which the fire code provides design and installation requirements, including but not limited to fire alarm systems, flammable and combustible liquids, compressed gases, explosives and other hazardous materials; flammable spraying systems and facilities; automatic water sprinkler systems for hazardous material and combustible material storage, and non-water fire extinguishing systems, shall be subject to the review and approval of the fire commissioner in accordance with the New York city fire code. Approval by the department of construction documents for new or existing buildings containing such facilities and systems shall not be construed as approval of such systems and facilities.

§28-104.2 Application for approval of construction documents. The department shall assign an application number to and docket all applications for approval of construction documents and any amendments thereto filed with it. The department shall examine the construction documents promptly after their submission. The examination shall be made under the direction of the commissioner for compliance with the provisions of this code and other applicable laws and rules. The personnel employed for the examination of construction documents shall be qualified registered design professionals experienced in building construction and design or persons working under the supervision of such registered design professionals. The department shall provide written notification to owners of adjoining property at the time such application is submitted.

§28-104.2.1 Less than full examination of applications for construction and related document approval based on professional certification. The commissioner may, in the commissioner’s discretion, establish a program whereby construction and related documents may be accepted with less than full examination by the department based on the professional certification of an applicant who is a registered design professional. On a monthly basis, the commissioner shall audit no less than 25 percent of construction documents which are for multiple dwellings where 25 percent or more of the dwelling units are occupied and such multiple dwellings, in whole or in part, either (i) are subject to rent regulation, (ii) are being rehabilitated or maintained as affordable housing through a department of housing preservation and development program, (iii) are subject to a city regulatory agreement mandating the creation or
preservation of a certain number of affordable units, (iv) contain affordable housing units created, sponsored or preserved through other city programs or initiatives, or (v) where the department knows or has reason to know, are the subject of a rent overcharge application which is in the process of being investigated by the New York State division of housing and community renewal.

Exceptions:

1. Construction or related documents may not be subject to less than full examination if the building is listed on the department of housing preservation and development’s website pursuant to paragraph 6 of subdivision m of section 27-2115.

2. Where a penalty is imposed pursuant to article 213 of chapter 2 of this title for work that has been performed without a permit on a building (i) construction and related documents for work at such building shall not be accepted with less than full examination by the department for one year after such imposition or (ii) if such work without a permit was performed on only part of such building and the owner of such part is not the owner of such building, construction and related documents for work on such part shall not be accepted with less than full examination by the department for one year after such imposition or until the date such part of such building changes owners, whichever is sooner.

§28-104.2.1.1 Effect of acceptance. Except as otherwise specified in this code or in the rules of the department, for the purposes of this code, the acceptance of construction and related documents in accordance with such program shall have the same force and effect as the approval of construction and related documents after full examination by the department. Except as otherwise specified in this code or in the rules of the department, references in this code to approved construction and/or related documents or to the approval of construction and/or related documents shall also be deemed to refer to accepted construction and related documents or to the acceptance of construction and related documents, as applicable.

§28-104.2.1.2 Program requirements. The commissioner may establish qualifications and requirements for registered design professionals to participate in such program and may exclude, suspend or otherwise sanction participants for cause. The commissioner shall send an annual notification to registered design professionals who are currently participating in this program notifying them, in a manner to be determined by the commissioner, of the grounds upon which they may be excluded, suspended or otherwise sanctioned.

§28-104.2.1.3 Mandatory program requirements. Registered design professionals participating in such program shall be subject to sections 28-104.2.1.3.1 through 28-104.2.1.3.2.

§28-104.2.1.3.1 Probation. A registered design professional shall not be eligible to participate in the program during any period of probation imposed as a sanction by the board of regents pursuant to section 6511 of the New York state education law.

§28-104.2.1.3.2 Mandatory sanctions. The commissioner shall, after the opportunity for a hearing before the office of administrative trials and hearings in accordance with department rules, exclude, suspend or otherwise condition the participation of a registered design professional who (i) knowingly or negligently submits a professional certification of an application and/or construction and other related document that contains false
information or is not in compliance with all applicable provisions of law, (ii) submits two professionally certified applications for construction document approval within any 12-month period containing errors that result in revocation of an associated permit or that otherwise demonstrate incompetence or a lack of knowledge of applicable laws, or (iii) knowingly orders or directs another registered design professional to submit a professional certification of an application and/or construction and any other related document that contains false information or is not in compliance with all applicable provisions of law or that otherwise demonstrates incompetence or a lack of knowledge of applicable laws, or with knowledge of such specific conduct, ratifies or assents to such conduct or with knowledge of such specific conduct and while acting as a supervisor otherwise fails to prevent it."

The commissioner may, after the opportunity for a hearing before the office of administrative trials and hearings in accordance with department rules, exclude, suspend, or otherwise condition the participation of a registered design professional who submits two professionally certified applications for construction document approval within any 12-month period containing errors that result in a stop work order. The term “otherwise condition” shall mean limitations on such professional’s participation in the program, such as, but not limited to, audits and monitoring of the registered design professional’s applications and other submissions. For the purposes of this section, a professionally certified application shall include the professional certification of construction and other related documents and the satisfaction of objections issued at plan examination.

§28-104.2.1.3.2.1 Reinstatement. A registered design professional who is excluded from the program in accordance with section 28-104.2.1.3 may apply for reinstatement one year or more after such exclusion. An applicant who the commissioner finds is qualified to resume participation in the program shall be on probation for a period of not less than six months after reinstatement and during that time shall as a condition of such reinstatement attend one or more training or continuing education courses, approved by the department, related to compliance with the New York City building code and related laws and rules and the zoning resolution. The professional shall submit satisfactory proof of the successful completion of such training or continuing education courses to the department.

§28-104.2.1.3.2.2 Mandatory permanent revocation. The commissioner (i) shall permanently revoke, without the opportunity of restoration, the professional certification privileges of a registered design professional who, while on probation, professionally certifies an application, plans, construction or other related document that contains false information or is not in compliance with all applicable provisions of law or who otherwise demonstrates incompetence or a lack of knowledge of applicable laws and (ii) may permanently revoke the professional certification privileges of a registered design professional who knowingly orders or directs another registered design professional to, while on probation, professionally certify an application, plans, construction or other related document that contains false information or is not in compliance with all applicable provisions of law or that otherwise demonstrates incompetence or a lack of knowledge of applicable laws, or with knowledge of such specific conduct, ratifies or assents to, or with knowledge of such specific conduct and while acting as a supervisor otherwise fails to prevent it.
§28-104.2.1.3.2.3 Construction. Nothing herein shall be construed to limit the commissioner’s power, consistent with state and local law, to adopt rules that include additional grounds to limit the filing privileges of or otherwise sanction registered design professionals, after the opportunity for a hearing, who it determines, knowingly or negligently submit applications or other documents to the department that contain false information or are not in compliance with all applicable provisions of law or that otherwise demonstrate incompetence or a lack of knowledge of applicable law or standards.

§28-104.2.1.4 Database. The department shall create and maintain a database of all registered design professionals who have been excluded, suspended or otherwise sanctioned by the department, all current firms of employment or affiliation of such professionals, if known or readily ascertainable, and the firm that employed such professionals, or with which such professional was affiliated, at the time such professionals were sanctioned, and the status of such sanction or sanctions. Within [7] seven business days of the date a sanction is imposed, the department shall post on its website, in a non-proprietary machine-readable format that permits automated processing, and shall make available upon request, the name of the registered design professional, and the firm that employed such professionals, or with which such professionals were affiliated, at the time such professionals were sanctioned, and a description of the sanction, the initial date of the sanction, the reinstatement date, if applicable, the address of the premises for which the application associated with the sanction was submitted, and whether the sanction was imposed after a hearing or a settlement. The department shall provide requested information concerning the exclusion, suspension or other sanction of a specific registered design professional and the firm of employment of such professionals, or the firm with which such professionals were affiliated, when such professionals were sanctioned, within 30 days of such request.

§28-104.2.1.5 Applicant requirement. The program shall include a condition that the applicant remain with the project until it is signed off by the department and that if the applicant withdraws from or is unable to continue a project before the issuance of a letter of completion or certificate of occupancy, as applicable, all work shall stop and no permit, letter of completion or certificate of occupancy shall be issued until a successor registered design professional is designated as applicant of record and such person:

1. Completes a thorough review and evaluation of the previously filed and accepted construction and other related documents to determine that they conform to the applicable laws and rules in accordance with rules of the board or regents, 8 NYCRR 29.3(a)3;
2. Inspects any built work to confirm that the observable conditions are consistent with the previously filed and accepted construction documents; [and]
3. Performs or reviews the results of any tests or inspections required by this code to confirm that all required tests and inspections have been performed and that the results of such tests and inspections are consistent with the accepted or approved construction documents; and
4. Based on the result of the evaluation and inspections, secures department approval after examination of construction and other related documents submitted by and
under signature and seal of the successor. All deficiencies shall be addressed by the successor in such documents.

§28-104.2.1.6 Notice to the state department of education. The department shall provide written notice to the New York state department of education of any registered design professional who was the subject of any disciplinary proceeding where there has been an adverse determination or sanction by the department including any settlement agreement that is reached between the parties that resulted in a sanction of privileges being imposed by the department. Such notice shall be sent within ten business days after a determination is made in any such disciplinary proceeding or after a settlement of such proceeding has been reached, and shall include the name, and business firm name and address of such registered design professional, as well as any supporting documentation for the sanction imposed. The department shall also provide such notice to the state department of education of any registered design professional that has been the subject of any disciplinary proceeding where there has been an adverse determination or sanction by the department within the five calendar years immediately preceding the effective date of this section.

§28-104.2.2 Approval or acceptance to be indicated on construction documents. All construction documents, when approved, shall be stamped or endorsed “approved” under the official method of the department, followed by a notation of the date except that construction documents accepted with less than full examination by the department shall be stamped or endorsed “accepted” instead of “approved”. [One set of “approved” or “accepted” construction documents shall be retained by the department and another set shall be maintained at the project site until the work authorized by the permit is completed and signed off by the department.]

§28-104.2.3 Time limitation of application. An application for approval of construction documents shall be deemed to have been abandoned 12 months after the date of its submission, unless such application has been diligently prosecuted after rejection in whole or in part, or unless a permit shall have been issued pursuant to this code, except that the commissioner may upon application, for reasonable cause, grant extensions of time for additional 12-month periods, including for reasons such as the diligent prosecution of related applications at other agencies, including but not limited to, the board of standards and appeals, the city planning commission, the landmarks preservation commission and the department of environmental protection. Any such extension shall not serve to avoid compliance with section 28-104.2.4 with respect to any subsequent laws and rules in effect at the time of issuance of the associated work permit or place of assembly certificate of operation.

Exception: Where, subsequent to the filing of an application, the department determines that such application is incomplete and the department has notified the applicant that the application is incomplete, the commissioner may deem such application abandoned after 90 days from the date of such notification.

§28-104.2.4 Conditions of approval. All construction documents approved by the commissioner shall be conditioned upon and subject to compliance with the requirements of this code and other applicable laws and rules in effect at the time of issuance of the associated work permit or place of assembly certificate of operation, including, but not limited, to intervening amendments to this code or the zoning resolution, and designations by the landmarks preservation commission.
§28-104.2.5 Phased or partial approval. In the case of construction documents for the construction of new buildings or the alteration of buildings, the commissioner may grant partial approval of construction documents before the construction documents for the entire building or structure have been submitted. The approval of such partial applications will be subject to the submittal and approval of construction documents, filed together, comprising:

1. The lot diagram showing the exact location of the lot and dimensions to the nearest corner;
2. A complete zoning analysis showing compliance of the proposed work with the zoning resolution;
3. The foundation plans, as provided for in section 106.7.1 of the New York city building code, as well as a loading diagram and column schedule for the entire building or structure;
4. Earthwork plans, as provided for in section 107.8 of the New York city building code;
5. The floor and roof plans showing compliance with exit requirements, as provided for in this code. Structural calculations that justify the foundation design shall be made available to the department when requested by the department. Following the partial approval of such construction documents, the issuance of a foundation and earthwork permit shall be subject to submission of required submittal documents, including related support of excavation documents in accordance with section 28-105.2.1. The owner and the holder of such a foundation and earthwork permit shall proceed at their own risk with the construction operation and without assurance that a permit for the entire structure will be granted. In the event that the project does not proceed, any open excavation shall be filled and graded in accordance with chapter 33 of the New York city building code;
6. Other documents the department determines are necessary.

The issuance of such foundation and earthwork permit is subject to submission of required submittal documents. The owner and the holder of such foundation and earthwork permit shall proceed at their own risk with the construction operation and without assurance that a permit for the entire structure will be granted.

§28-104.2.6 Deferred submittal. With the prior approval of the department, the applicant may defer submittal of portions of the design until a specified period of time after the issuance of a permit. The applicant shall list the deferred submittal items on the initial application for construction document approval. The deferred submittal items shall not be constructed or installed until the design and submittal documents for the item have been approved by the department. The owner and permit holder shall proceed at their own risk with the construction operation and without assurance that a permit for the entire structure will be granted and the approval of all construction documents shall be conditioned upon and subject to compliance with the requirements of this code and other applicable laws and rules in effect at the time of issuance of the associated permit or place of assembly certificate of operation.

§28-104.2.7 Time period for review. Completed construction documents complying with the provisions of this code and other applicable laws and rules shall be approved by the
commissioner and written notice of approval shall be given the applicant promptly and no later than 40 calendar days after the submission of a complete application.

Exceptions:

1. On or before the fortieth day, the commissioner may, for good cause shown and upon notification to the applicant, extend such time for an additional 20 calendar days.

2. Such time period for review shall commence in accordance with article 107 for single room occupancy multiple dwellings.

§28-104.2.7.1 Notification of approval. The department shall, on a weekly basis, send council members and community boards, by electronic mail, and post on its website, a report of all applications sent to applicants that were approved during the prior week, disaggregated by community board, for:

1. A new building or an alteration that will require a new certificate of occupancy for a building; and

2. Work at a building or part thereof for which construction and related documents shall not be accepted with less than full examination by the department pursuant to the exception to section 28-104.2.1.

§28-104.2.8 Notification of rejection. Applications failing to comply with the provisions of this code and other applicable laws and rules shall be rejected and written notice of rejection, stating the grounds of rejection, shall be given the applicant promptly and not later than the date required in section 28-104.2.7. The department shall, on a weekly basis, send council members and community boards, by electronic mail, a report of all rejections of applications for a new building or an alteration that will require a new certificate of occupancy for a building, sent to applicants during the prior week, disaggregated by community board. In addition, the department shall post such information on its website on a weekly basis.

§28-104.2.9 Resubmission. Whenever an application has been rejected and is thereafter revised and resubmitted to meet the stated grounds of rejection, the revised application and construction documents shall be approved if they meet the stated grounds of rejection and otherwise comply with the provisions of this code and other applicable laws and rules or shall be rejected if they fail to meet the stated grounds of rejection or otherwise fail to so comply. Written notice of approval or written notice of rejection, stating the grounds of rejection, shall be given the applicant promptly and not later than 20 calendar days after the resubmission of such documents.

§28-104.2.10 Revocation of approval. The commissioner may, on notice to the applicant, revoke the approval of construction documents for failure to comply with the provisions of this code or other applicable laws or rules; or whenever there has been any false statement or any misrepresentation as to a material fact in the submittal documents upon the basis of which such approval was issued; or whenever an approval has been issued in error and conditions are such that approval should not have been issued. Such notice shall inform the applicant of the reasons for the proposed revocation and that the applicant has the right to present to the commissioner or his or her representative within 10 business days of personal service or electronic delivery or 15 business days of the posting of service by mail, information as to why the approval should not be revoked.
§28-104.2.10.1 Effect on work permit. The effect of revocation of approval of construction documents is the automatic revocation of all work permits that may have been issued based on such construction documents.

§28-104.3 Amended construction documents. Subject to the time limitations set forth in this code, amendments to approved construction documents shall be submitted, reviewed and approved before the work or equipment is completed; and such amendments when approved shall be deemed part of the original construction documents. The department may allow minor revisions of construction documents to be made and submitted to the department after the completion of work but prior to sign-off of the work [in accordance with department rules]. All other revisions of construction documents shall be submitted and approved prior to commencing the work effectuating such revisions.

§28-104.4 Place of filing. Except as otherwise provided by rule, applications for construction document approval shall be filed in the department office in the borough in which the work or equipment is located or at the discretion of the commissioner shall be submitted electronically.

§28-104.5 Fees. Filing fees shall be paid as required by article 112.

§28-104.6 Applicant. The applicant for approval of construction documents shall be the registered design professional who prepared or supervised the preparation of the construction documents on behalf of the owner.

Exception: The applicant may be other than a registered design professional for:

1. Limited [oil burner/boiler] oil-burning appliance alterations, limited plumbing alterations, limited sprinkler alterations, and limited standpipe alterations (limited alteration application) alteration applications, where the applicant is licensed to perform such work pursuant to this code;

2. Demolition applications other than those specified in section 3306.5 of the New York city building code, where the applicant is the demolition contractor performing such demolition. In such cases, the commissioner may require structural plans designed by a registered design professional to address any critical structural, sequencing or site safety items;

3. Elevator applications;

4. Applications for work falling within the practice of landscape architecture as defined by the New York state education law, including but not limited to landscaping and vegetation plans, tree protection plans, erosion and sedimentation plans, grading and drainage plans, curb cuts, pavement plans, and site plans for urban plazas and parking lots, where the applicant is a landscape architect. Landscape architects shall not file plans for stormwater management and plumbing systems;

5. Other categories of work consistent with rules promulgated by the commissioner.

§28-104.6.1 Verification of professional qualification required. The department shall not accept construction documents or other documents submitted in connection with applications for construction document approval or work permits under this code by any person representing that he or she is a registered design professional or landscape architect without verifying, by means
§28-104.7 Submittal of construction documents. All construction documents submitted to the department shall contain such information and shall be in such form as shall be set forth in [this] section 28-104.7 and the rules of the department. Construction documents shall also conform to standards as may be prescribed in the applicable sections of the construction codes.

§28-104.7.1 Scope. Construction documents shall be complete and of sufficient clarity to indicate the location and entire nature and extent of the work proposed, and shall show in detail that they conform to the provisions of this code and other applicable laws and rules; if there exist practical difficulties in the way of carrying out the strict letter of the code, laws or rules, the applicant shall set forth the nature of such difficulties.

§28-104.7.2 Forms. The applicant shall submit construction documents on or accompanied by forms provided by the department.

§28-104.7.3 Media. Construction documents shall be printed upon suitable material, or presented as electronic media documents as determined by the commissioner. Plans shall be drawn to suitable scale, resolution and file format as determined by the commissioner.

§28-104.7.4 Quantities. The applicant shall submit the number of copies of construction documents as the commissioner shall require.

§28-104.7.5 Citations to code sections required. In no case shall terms such as “code compliant”, “approved”, “legal” or similar terms be used in the construction documents as a substitute for specific reference to a particular code section, approval or standard in order to show compliance with code requirements or other applicable laws and rules.

§28-104.7.6 City datum. All elevations noted in the construction documents shall be referred to and clearly identified as the North American vertical datum of 1988 (["NAVD"] as established and maintained by National Geodetic Survey of the National Ocean Service, National Oceanic and Atmospheric Administration or successor agency, which is hereby established as the city datum. Neither the United States coast and geodetic survey mean sea level datum of 1929 (national geodetic vertical datum, (["NGVD"])) nor any of the five borough data as established by the former Board of Estimate and Apportionment shall be referred to in construction documents except as may be required for the purpose of demonstrating conversion to the NAVD. Conversions to NAVD shall be performed by registered design professionals or surveyors. Conversion to and from borough data, [and] NGVD and NAVD shall be performed using tables 104.7.6.1 through 104.7.6.5.

§28-104.7.7 Identification of special and progress inspections. Whenever work or materials are subject to special inspection, as provided in this code, such work or materials shall be listed on the title sheet of the construction documents, or the sheet immediately following, as subject to special or progress inspection.

§28-104.7.8 Identification of materials. Construction documents shall identify all materials proposed to be used, including identification of the test standard to which they conform, and where applicable, supporting information or test data from the manufacturer attesting to such conformance.
§28-104.7.9 Energy conservation code. The application shall contain all information required to demonstrate compliance with the New York city energy conservation code. This information shall include signed and sealed construction drawings, including electrical drawings, to the extent that they demonstrate such energy code compliance, as required by such energy code and rules.

§28-104.7.10 Preparer. Each plan or drawing shall contain the license number, seal, signature (or equivalent as approved by the commissioner) and address of the registered design professional or landscape architect who prepared or supervised the preparation of the plans.

§28-104.7.11 Additional information. In addition to the data and information specified in this code and the rules of the department, the commissioner is authorized to require the submission of additional plans, surveys, computations, analyses, test reports, photographs, special inspection and such other data and information as may be necessary to determine compliance with this code and other applicable laws and rules.

§28-104.7.12 Waiver of certain documents. The commissioner is authorized to waive the submission of any of the required construction documents and other data if review of such documents is not necessary to ascertain compliance with this code or not required for the phase of work for which a permit is sought.

§28-104.7.13 Identification of work involving raising or moving a building. Where the lowest above-grade floor or the lowest subgrade floor of a building is to be raised, lifted, elevated or moved, such work shall be listed on the title sheet of the construction documents as subject to special inspection.

§28-104.7.14 Identification of certain I-1 and I-2 occupancies and of certain adult homes, enriched housing, community residences and intermediate care facilities as exempt from temporary external generator connection requirements. The title sheet of construction documents for the following buildings shall list whether the building is exempt from the requirement to provide connections for temporary external generators pursuant to any exception contained in [Sections] sections G304.5.1 or G304.5.2 of appendix G of the New York city building code, as applicable:

1. A new or substantially improved building, as such term is defined in appendix G of the New York city building code, that contains space classified in occupancy group I-1 or I-2 or space that is an adult home, enriched housing, community residence or intermediate care facility classified as occupancy group R pursuant to an exception to section [308.2.1] 308.3.1 or [308.2.2] 308.3.2 of the New York city building code, and that is located in [an area of] a special flood hazard area, as such term is defined in appendix G of the New York city building code; and

2. A new or substantially improved building that contains space classified as an occupancy group I-2 hospital and that is located in a shaded X-Zone, as such terms are defined in appendix G of the New York city building code.

§28-104.7.15 Identification of certain hospitals as exempt from temporary external boiler or chiller connection requirements. The title sheet of construction documents for a new or substantially improved building, as such term is defined in appendix G of the New York city building code, that contains space classified as an occupancy group I-2 hospital and that is located
in [an area of special flood hazard or shaded X-Zone area, as such terms are defined in appendix G of the New York city building code, shall list whether the requirement to provide connections for temporary external boilers and chillers pursuant to [item] item 2 of section G304.5.2 is inapplicable as a result of such building having its boiler and chiller plants located at or above the applicable design flood elevation.}

§28-104.7.16 Tenant protection plan. The title sheet of construction documents shall contain a statement requiring a tenant protection plan be submitted in accordance with the requirements of article 120 prior to the issuance of a permit for alteration, construction or partial demolition work in a building containing one or more occupied dwelling units.

§28-104.7.17 Amended certificates of occupancy. For amended certificates of occupancy subject to section 28-118.16.2, the term construction documents, as used in section 28-116.2.4.1, means an accurate and complete final lot survey made by a land surveyor, and floor and roof plans showing, at a minimum, compliance with exit requirements in accordance with this code.

§28-104.7.18 Multiple tax lots on a zoning lot. For applications that will result in a new building or an enlargement to an existing building, construction documents shall, on forms provided by the department:

1. Identify whether the zoning lot consists of a single tax lot or multiple tax lots;
2. In the case of multiple tax lots on a zoning lot:
   2.1. state whether each tax lot does or does not have a current certificate of occupancy;
   2.2. for each tax lot that has a certificate of occupancy, state whether:
      2.2.1. the address of the building or open lot use on each such certificate of occupancy is consistent with the current lawful street address;
      2.2.2. the block and/or tax lot numbers on each such certificate of occupancy is consistent with the current tax maps as published by the Department of Finance;
      2.2.3. the certificate of occupancy indicates metes and bounds of a zoning lot and whether such metes and bounds are inconsistent with the metes and bounds of the zoning lot in the application; and
      2.2.4. there is an existing building or an open lot use without a certificate of occupancy.
   2.3. Following a change in the metes and bounds of a zoning lot, construction documents shall be filed by the owner of each tax lot with a certificate of occupancy that indicates inconsistent metes and bounds to reflect the change in metes and bounds of the zoning lot, in accordance with the requirements of section 28-118.3.2.1.
   2.4. Following a change in the metes and bounds of a zoning lot, construction documents shall be filed by the owner of each tax lot without a certificate of occupancy or where the certificate of occupancy does not indicate inconsistent metes and bounds, in accordance with the requirements of section 28-118.3.3.
§28-104.7.18.1 Obligations of owners of other tax lot. Within one year from the approval of construction documents for a new building or enlargement on a zoning lot consisting of multiple tax lots, the owners of all tax lots on the zoning lot shall comply with sections 28-118.3.2.1, 28-118.3.3 and 28-118.3.5.1 as applicable.

**Exception.** For the purpose of this section, condominium tax lots and air parcel tax lots shall not be deemed to be multiple tax lots.

§28-104.8 Applications. All applications shall comply with sections 28-104.8.1 through 28-104.8.3.

§28-104.8.1 Applicant statements. The application shall contain the following signed and sealed statements by the applicant:

1. A statement certifying that the applicant is authorized by the owner to make the application and certifying that, to the best of the applicant’s knowledge and belief, the construction documents comply with the provisions of this code or the 1968 building code, if applicable, and other applicable laws and rules; if there exist practical difficulties in the way of carrying out the strict letter of the code, laws or rules, the applicant shall set forth the nature of such difficulties in such signed statement;

2. A professional certification; and

3. A statement certifying compliance with the New York city energy conservation code.

§28-104.8.2 Owner statements. The application shall contain a signed statement by the owner, and, in the case of cooperative or condominium forms of ownership, the application shall also contain a statement by the cooperative or condominium board, affirming that the applicant is authorized to make the application and, if applicable, acknowledging that construction and related documents will be accepted with less than full examination by the department based on the professional certification of the applicant. Such statement shall list the owner’s full name and address, as well as the names of the principal officers, partners or other principals if a corporation, partnership or other entity. Principal officers of a corporation shall be deemed to include the president, vice presidents, secretary and treasurer. Where a current deed holder with a valid property interest or a court appointed entity or equivalent in charge of the property, or in the case of a cooperative or condominium unit, the cooperative or condominium board, notifies the department in writing that the applicant does not have authority to make the application, the department is authorized pursuant to section 28-104.2.10 to revoke approval of construction documents. In addition, the application shall contain the following:

1. A signed statement certifying whether the building to be altered, constructed or demolished contains one or more occupied dwelling units;

2. A signed statement indicating whether the building to be altered, constructed or demolished contains housing accommodations subject to rent control or rent stabilization under chapters 3 and 4 of title 26 of the administrative code or rent regulation under [Article] article 7-C of the [Multiple Dwelling Law] New York state multiple dwelling law; and

3. If the building to be altered, constructed or demolished contains occupied housing accommodations subject to rent control under chapter 3 of title 26 of the administrative code, the application shall contain a signed statement indicating that the owner has notified
the New York state division of homes and community renewal that the owner has complied with all requirements imposed by the regulations of such agency as preconditions for such filing; or that the owner has not notified such agency because the nature and scope of the work proposed, pursuant to such regulations, does not require notification; or, if the building is subject to [Article] article 7-C of the [Multiple Dwelling Law] New York state multiple dwelling law, the application shall contain a signed statement indicating that the owner will notify the [New York City Loft Board] loft board of the filing of the construction documents and will comply with all requirements imposed by [Multiple Dwelling Law Article] New York state multiple dwelling law article 7-C and the [Loft Board’s] loft board’s rules.

§28-104.8.3 Information of applicant, filing representative, and owner. The application shall set forth the full names, addresses, telephone numbers, and [where available:] [e-mail] electronic mail addresses of the following persons and where any of such persons are corporations, partnerships or other business entities, the names and addresses of the principal officers, partners or other principals of such entity:

1. The applicant;
2. The filing representative;
3. The owner, and, in the case of cooperative or condominium forms of ownership, cooperative owners’ corporation, or condominium owners’ association; and
4. Where a person other than the owner has engaged the applicant, such cooperative unit shareholder, condominium unit owner, lessee, or mortgagee.

§28-104.9 Coastal zones and water-sensitive inland zones. Construction documents shall comply with sections 28-104.9.1 through 28-104.9.6 relating to work in coastal zones and water-sensitive inland zones.

§28-104.9.1 Definitions. As used in section 28-104.9 the following terms shall have the following meanings:

COASTAL [AREAS OF] SPECIAL FLOOD HAZARD AREAS. Areas of land as identified on the flood insurance rate maps referenced in New York city building code section G402 of [appendix G] pursuant to article 36 of the New York state environmental conservation law.

COASTAL EROSION HAZARD AREAS. Areas of land as identified on the final map issued by the New York state department of environmental conservation in accordance with section 34-0104 of the New York state environmental conservation law.

COASTAL ZONES AND WATER-SENSITIVE INLAND ZONES. Areas of land comprising tidal wetlands, freshwater wetlands, coastal erosion hazard areas, coastal [areas of] special flood hazard areas or rivervine and other inland [areas of] special flood hazard areas.

FRESHWATER WETLANDS. Areas of land as identified on the final map issued by the New York state department of environmental conservation in accordance with section 24-0301 of the New York state environmental conservation law, as well as any adjacent areas as such term is defined in section 662.1 of title [six] 6 of the New York code of rules and regulations.
RIVERVINE AND OTHER INLAND [AREAS OF] SPECIAL FLOOD HAZARD AREAS.
Areas of land, including floodways, as identified on the flood insurance rate maps referenced in section G402 of the New York city building code pursuant to article 36 of the New York state environmental conservation law.

STRUCTURE. Any object constructed, installed or placed in, on or under land or water, including, but not limited to, a building, permanent shed, deck, in-ground or aboveground swimming pool, garage, mobile home, paving, road, public utility service distribution, transmission and collection system, storage tank, pier, dock, wharf, groin, jetty, seawall, revetment, bulkhead or breakwater.

TIDAL WETLANDS. Areas of land as identified on the tidal wetland inventory issued by the New York state department of environmental conservation in accordance with section 25-0201 of the New York state environmental conservation law, as well as any adjacent areas as such term is defined in section 661.4 of title [six] 6 of the New York code of rules and regulations.

§28-104.9.2 Statement and submission by applicant. It shall be the duty of an applicant for construction document approval to determine whether the proposed work is located within a coastal zone or a water-sensitive inland zone subject to section 28-104.9.3 and/or section 28-104.9. Applications for construction document approval shall include a statement by the applicant indicating whether the proposed work is located within a coastal zone or water-sensitive inland zone subject to such sections. The failure to disclose that proposed work is within a coastal zone or water-sensitive inland zone subject to such sections shall be a violation of this code.

§28-104.9.3 Coordination with department of environmental conservation and other agencies. The commissioner shall not approve construction documents for construction of a new structure, the horizontal enlargement of a structure or to excavate or fill any land, within a tidal wetland, a tidal wetland adjacent area, freshwater wetland, freshwater wetland adjacent area, or coastal erosion hazard area, without documentation satisfactory to the commissioner that the New York state department of environmental conservation, and such other governmental agencies as are applicable, have issued any applicable permits or other approvals for such construction, excavation or fill.

§28-104.9.4 Compliance with special flood hazard area requirements mandated within special flood hazard areas. Within coastal [areas of] special flood hazard areas and [areas of] special flood hazard areas, the commissioner shall not approve construction documents for construction or alteration of buildings or structures, including alterations pursuant to section 28-101.4.3 of this code, or for any other activity regulated by section G201 of appendix F of the New York city building code, unless the application complies with the requirements of [Appendix] appendix G of the New York city building code.

§28-104.9.5 False statement or omission. No person shall submit an application for construction document approval for any structure within a coastal zone or water-sensitive inland zone [which] that falsely avers or by omission causes the department to determine that the subject property is not located within such zone or that the New York state department of environmental conservation and other appropriate agencies have issued the appropriate permits or approvals when they did not.
§28-104.9.6 Revocation of approval of construction documents. Where the department determines that work is located within a coastal zone or water-sensitive inland zone after construction documents have been approved for such work and/or that the documentation required by sections 28-104.9.2 through 28-104.9.4 has not been submitted, the department shall revoke such approval and any associated work permits that may have been issued for such work in accordance with section 28-104.2.10.

§28-104.10 [Construction documents for sites near subways or tunnels.] Notification to the New York city transit authority, the Metropolitan Transportation Authority and the Port Authority of New York and New Jersey. Construction documents shall not be approved unless all applicable agency approvals [regarding nearby subways or tunnels] from the New York city transit authority, the Metropolitan Transportation Authority or the Port Authority of New York and New Jersey, as provided for in [sections 3304.3.3 and] section 3304.3.5 of the New York city building code have been submitted to the department.

§28-104.11 Construction documents for sites that are covered development projects as defined in section 24-541 of the administrative code. Construction documents for sites that are covered development projects as defined in section 24-541 of the administrative code shall comply with section 28-104.11.1 through 28-104.11.4.

§28-104.11.1 Definitions. As used in this code in connection with provisions relating to the jurisdiction of the department of environmental protection, the terms covered development project, development activity, post-construction stormwater management facility, stormwater construction permit, stormwater maintenance permit, and stormwater pollution prevention plan or SWPPP shall have the same definitions as such terms are defined in subchapter 1 of chapter 5-A of title 24 of the administrative code.

§28-104.11.2 Disclosure required. It shall be the duty of an applicant for construction document approval to determine whether the site of the proposed work is part of a covered development project and to disclose such information on construction documents. Failure to disclose such information on construction documents shall be a violation of this code.

§28-104.11.3 Required documentation. Applications for construction document approval shall include copies of any required stormwater construction permit issued by the department of environmental protection and the stormwater pollution prevention plan for the covered development project.

§28-104.11.4 Revocation of approval of construction documents. Where the department finds after the approval of construction documents that the applicant failed to disclose the information required by this section, the department may revoke such approval and any associated work permits in accordance with the provisions of sections 28-104.2.10 and 28-104.2.10.1.

§28-104.12 Retention of construction and submittal documents. An applicant shall retain one set of approved construction documents, submittal documents and any other documents required by department rule for a period of not less than six years from the date of completion of the permitted work.
§28-104.13 Construction documents for extension, alteration or relocation of an existing chimney or vent. Where an owner of a new or altered taller building is required by section 2113 of the New York city building code, section 801 of the New York city mechanical code or section 501 of the New York city fuel gas code to extend, alter or relocate an existing chimney or vent on an affected building, such work shall be filed under a separate application for the affected building.

ARTICLE 105
PERMITS

§28-105.1 General. It shall be unlawful to construct, enlarge, alter, repair, move, demolish, remove or change the use or occupancy of any building or structure in the city, to change the use or occupancy of an open lot or portion thereof, or to erect, install, alter, repair, or use or operate any sign or service equipment in or in connection therewith, or to erect, install, alter, repair, remove, convert or replace any gas, mechanical, plumbing, fire suppression or fire protection system in or in connection therewith or to cause any such work to be done unless and until a written permit therefor shall have been issued by the commissioner in accordance with the requirements of this code, subject to such exceptions and exemptions as may be provided in section 28-105.4.

§28-105.1.1 Notification to fire department. The commissioner, in consultation with the fire commissioner, shall establish a procedure for notifying the fire department of the issuance of any permit that will result in the issuance of a new or amended certificate of occupancy or other change in the use or occupancy of the premises. In no instance shall the required notice be given to the fire department more than one business day after the date of the issuance of the permit.

§28-105.1.2 Projects for which a stormwater construction permit is required. It shall be a violation of this code to engage in any development activity with respect to a covered development project without a stormwater construction permit issued by the department of environmental protection. The issuance of a permit pursuant to this code shall not be construed to be permission for any activity that requires a stormwater construction permit issued by the department of environmental protection pursuant to chapter 5-A of title 24 of the administrative code. The issuance of a stormwater construction permit by the department of environmental protection shall not be construed as permission for work that requires a permit from the department of buildings pursuant to this code.

[§28-105.1.2 Denial of permits for certain arrears. The commissioner shall not issue a permit for a new building, demolition, place of assembly or major alteration that will change the use, egress or occupancy for a property if $25,000 or more in covered arrears is owed to the city with respect to such property or if the owners of such property owe, in aggregate, $25,000 or more in covered arrears to the city, provided that, where a dwelling unit within a property is owned as a condominium or held by a shareholder of a cooperative corporation under a proprietary lease, covered arrears owed to the city for such unit shall not be considered covered arrears owed to the city for such property. For the purposes of this section, the term “covered arrears” may include any of the following, but shall not include any such items that are currently in the appeals process:]

[1. Unpaid fines, civil penalties or judgments entered by a court of competent jurisdiction or the environmental control board pursuant to chapter 2 of this title or chapter 2 of title 28 of the code; and]
[2. Unpaid and past due fees or other charges lawfully assessed by the commissioner.]

[Exceptions:]

1. The commissioner may issue a permit for a property if the applicant submits a certification from the department of finance that binding agreements are in force requiring payment of all covered arrears owed by the owners of such property, and such owners are in compliance with such agreement.

2. The commissioner may issue a permit for a property where the issuance of such permit is necessary to correct an outstanding violation of this code, the housing maintenance code or any other applicable provisions of law or rule or where the commissioner determines that issuance of such permit is necessary to perform work to protect public health and safety.

3. The commissioner may issue a permit for a portion of a property occupied by a tenant who is not an owner of such property or responsible for any covered arrears owed with respect to such property.

4. The commissioner may issue a permit, for a dwelling unit within a property that is owned by a condominium or held by a shareholder of a cooperative corporation under a proprietary lease, if the owners of record for such unit do not owe, in aggregate, $25,000 or more in covered arrears to the city.

5. The commissioner may issue a permit where a property was the subject of an in rem foreclosure judgment in favor of the city and was transferred by the city to a third party pursuant to section 11-412.1 of the code.

6. The commissioner may issue a permit where a property is the subject of a court order appointing an administrator pursuant to article 7-a of the real property actions and proceedings law in a case brought by the department of housing preservation and development.

7. The commissioner may issue a permit where a property is the subject of a loan provided by or through the department of housing preservation and development or the New York city housing development corporation for the purpose of rehabilitation that has closed within the five years preceding the application for such permit.

8. The commissioner may issue a permit for a property where the department of housing preservation and development or the New York city housing development corporation notifies the commissioner that the permit is required for participation in a program that involves rehabilitation of such property.

§28-105.1.3 Denial of permits for excessive violations. The commissioner shall, no less than once every six months, compile a list of multiple dwellings that includes: (i) all multiple dwellings containing fewer than 35 units that have a ratio of open hazardous or immediately hazardous New York city housing maintenance code violations or immediately hazardous or major construction code violations that equal in the aggregate three or more such violations for every dwelling unit in such multiple dwelling; and (ii) all multiple dwellings containing 35 units or more that have a ratio of open hazardous or immediately hazardous New York city housing maintenance code violations or immediately hazardous or major construction code violations that equal in the aggregate two or more such violations for every dwelling unit in such multiple dwelling. The commissioner shall not issue permits for multiple dwellings on such list. If the owner of a multiple
dwelling on such list corrects open hazardous or immediately hazardous New York city housing maintenance code violations or immediately hazardous or major construction code violations in such multiple dwelling so that the ratio of such violations to the number of dwelling units in such multiple dwelling falls below those outlined in this section, the commissioner shall remove such multiple dwelling from such list. Such denial shall not apply where a dwelling unit within such multiple dwelling is owned as a condominium or held by a shareholder of a cooperative corporation under a proprietary lease.

Exceptions:

1. Where the issuance of such permit is necessary to correct an outstanding violation of this code, the New York city housing maintenance code or any other applicable provisions of law or rule.
2. Where the issuance of such permit is necessary to perform work to protect public health and safety.
3. For a portion of a property occupied by a tenant who is not an owner of such property or responsible for any existing violations in such property.
4. Where a property was the subject of an in rem foreclosure judgment in favor of the city and was transferred by the city to a third party pursuant to section 11-412.1 of the administrative code.
5. Where a property is the subject of a court order appointing an administrator pursuant to article 7-a of the New York state real property actions and proceedings law in a case brought by the department of housing preservation and development.
6. Where a property is the subject of a loan provided by or through the department of housing preservation and development or the New York city housing development corporation for the purpose of rehabilitation that has closed within the five years preceding the application for such permit.
7. For a property where the department of housing preservation and development or the New York city housing development corporation notifies the commissioner that the permit is required in connection with the implementation of a program of such department or corporation.

§28-105.1.4 Denial of permits for false statements on applications for construction document approval. The commissioner shall not issue a permit for an occupied building for at least one year following the date of a determination by the commissioner that a false statement about the occupancy status of such building has been made in an application for construction document approval. Such denial shall not apply where a dwelling unit within such multiple dwelling is owned as a condominium or held by a shareholder of a cooperative corporation under a proprietary lease.

Exceptions:

1. Where the issuance of such permit is necessary to correct an outstanding violation of this code, the New York city housing maintenance code or any other applicable provisions of law or rule.
2. Where the issuance of such permit is necessary to perform work to protect public health and safety.

3. For a portion of a property occupied by a tenant who is not an owner of such property or responsible for any existing violations in such property.

4. Where a property was the subject of an in rem foreclosure judgment in favor of the city and was transferred by the city to a third party pursuant to section 11-412.1 of the administrative code.

5. Where a property is the subject of a court order appointing an administrator pursuant to article 7-a of the New York state real property actions and proceedings law in a case brought by the department of housing preservation and development.

6. Where a property was the subject of a loan provided by or through the department of housing preservation and development or the New York city housing development corporation for the purpose of rehabilitation that has closed within the five years preceding the application for such permit.

7. For a property where the department of housing preservation and development or the New York city housing development corporation notifies the commissioner that the permit is required in connection with the implementation of a program of such department or corporation.

§28-105.1.5 Denial of permits for work without permit on occupied building. The commissioner shall not issue a permit for a building for at least one year following the date of a determination by the commissioner that work has been performed without a permit in such building and such building was occupied at the time such work was being performed. Such denial shall not apply where a dwelling unit within such multiple dwelling is owned as a condominium or held by a shareholder of a cooperative corporation under a proprietary lease.

Exceptions:

1. Where the issuance of such permit is necessary to correct an outstanding violation of this code, the New York city housing maintenance code or any other applicable provisions of law or rule.

2. Where the issuance of such permit is necessary to perform work to protect public health and safety.

3. For a portion of a property occupied by a tenant who is not an owner of such property or responsible for any existing violations in such property.

4. Where a property was the subject of an in rem foreclosure judgment in favor of the city and was transferred by the city to a third party pursuant to section 11-412.1 of the administrative code.

5. Where a property is the subject of a court order appointing an administrator pursuant to article 7-a of the New York state real property actions and proceedings law in a case brought by the department of housing preservation and development.

6. Where a property is the subject of a loan provided by or through the department of housing preservation and development or the New York city housing development
corporation for the purpose of rehabilitation that has closed within the five years preceding the application for such permit.

7. For a property where the department of housing preservation and development or the New York city housing development corporation notifies the commissioner that the permit is required in connection with the implementation of a program of such department or corporation.

§28-105.16 Denial of permits for certain arrears. The commissioner shall not issue a permit for a new building, demolition, place of assembly or major alteration that will change the use, egress or occupancy for a property if $25,000 or more in covered arrears is owed to the city with respect to such property or if the owners of such property owe, in aggregate, $25,000 or more in covered arrears to the city, provided that, where a dwelling unit within a property is owned as a condominium or held by a shareholder of a cooperative corporation under a proprietary lease, covered arrears owed to the city for such unit shall not be considered covered arrears owed to the city for such property. For the purposes of this section, the term “covered arrears” may include any of the following, but shall not include any such items that are currently in the appeals process:

1. Unpaid fines, civil penalties or judgments entered by a court of competent jurisdiction or the environmental control board pursuant to chapter 2 of this title; and

2. Unpaid and past due fees or other charges lawfully assessed by the commissioner.

Exceptions:

1. The commissioner may issue a permit for a property if the applicant submits a certification from the department of finance that binding agreements are in force requiring payment of all covered arrears owed by the owners of such property, and such owners are in compliance with such agreement.

2. The commissioner may issue a permit for a property where the issuance of such permit is necessary to correct an outstanding violation of this code, the New York city housing maintenance code or any other applicable provisions of law or rule or where the commissioner determines that issuance of such permit is necessary to perform work to protect public health and safety.

3. The commissioner may issue a permit for a portion of a property occupied by a tenant who is not an owner of such property or responsible for any covered arrears owed with respect to such property.

4. The commissioner may issue a permit, for a dwelling unit within a property that is owned by a condominium or held by a shareholder of a cooperative corporation under a proprietary lease, if the owners of record for such unit do not owe, in aggregate, $25,000 or more in covered arrears to the city.

5. The commissioner may issue a permit where a property was the subject of an in rem foreclosure judgment in favor of the city and was transferred by the city to a third party pursuant to section 11-412.1 of the administrative code.

6. The commissioner may issue a permit where a property is the subject of a court order appointing an administrator pursuant to article 7-a of the New York state real property actions and proceedings law in a case brought by the department of housing preservation and development.
7. The commissioner may issue a permit where a property is the subject of a loan provided by or through the department of housing preservation and development or the New York city housing development corporation for the purpose of rehabilitation that has closed within the five years preceding the application for such permit.

8. The commissioner may issue a permit for a property where the department of housing preservation and development or the New York city housing development corporation notifies the commissioner that the permit is required for participation in a program that involves rehabilitation of such property.

§28-105.2 Classification of work permits. For the purposes of this code, work permits shall be classified as follows:

1. New building permits: for the construction of new buildings, including as provided for in section 28-101.4.5.

2. Alteration permits: for the alteration of buildings or structures, including new and existing sign structures and partial demolition in conjunction with such buildings or structures.

3. Foundation and earthwork permits: for the construction or alteration of foundations, including earthwork, excavation, fill, and foundation insulation.

4. Earthwork permits: for work solely involving earthwork, excavation, or fill operations.

5. Full demolition permits: for the full demolition and removal of buildings or structures.

6. Plumbing permits: for the installation or alteration of plumbing and plumbing systems, including gas piping. Such permits shall include permits for limited plumbing alterations.

7. Sign permits: for the erection, installation, display or alteration of signs.

8. Service equipment permits: for the installation or alteration of service equipment, including but not limited to air conditioning and ventilating systems, boilers, elevators, escalators, moving walkways, dumbwaiters, mobile boilers and mobile oil tanks. Such permits shall include permits for limited oil burner/boiler oil-burning appliance alterations.

9. Temporary construction [equipment] installation permits: for the erection, installation and use of temporary [structures] construction installations to facilitate construction and/or safety during construction, including but not limited to temporary fences, railings, catch platforms, over-the-sidewalk chutes, footbridges, sidewalk sheds, and scaffolds.

10. Fire protection and suppression system permits: for the installation and alteration of fire protection and suppression systems, including sprinkler systems and standpipe systems. Such permits shall include permits for limited sprinkler alterations and limited standpipe alterations.

11. Crane and derrick permits: for the use of power operated cranes and derricks during construction.

12. Temporary structure permits and temporary use authorizations: for temporary structures and uses, see article 111.

§28-105.2.1 Submittal documents required for foundations and earthwork. Prior to the issuance of any permit for work that includes foundations and/or earthwork, submittal documents clearly illustrating support of excavation design, including but not limited to stepping, sheeting,
sloping, shoring, and bracing, and any protective railings or equipment required by chapter 33 of the New York city building code shall be required.

§28-105.2.2 Submittal documents required for partial and full demolition. Prior to the issuance of any permit for work that includes full or partial demolition, submittal documents shall be required in accordance with chapter 33 of the New York city building code.

§28-105.3 Separate permits required. Separate work permits shall be required, as provided above, except that separate permits for foundations and earthwork, or for the installation or alteration of air conditioning systems, ventilation systems, and heating systems shall not be required whenever such work is included in and forms a part of the construction documents filed for the construction of a new building or the alteration of a building or structure.

§28-105.4 Work exempt from permit. Exemptions from permit requirements of this code shall not be deemed to grant authorization for any work to be done in any manner in violation of the provisions of this code, the zoning resolution or any other law or rules enforced by the department. Such exemptions shall not relieve any owner of the obligation to comply with the requirements of or file with other city agencies. Unless otherwise indicated, permits shall not be required for the following:

1. Emergency work, as set forth in section 28-105.4.1.
2. Minor alterations and ordinary repairs, as described in section 28-105.4.2.
3. Certain work performed by a public utility company or public utility corporation, as set forth in section 28-105.4.3.
4. Ordinary plumbing work, as set forth in section 28-105.4.4.
5. Permits for the installation of certain signs, as set forth in section 28-105.4.5.
6. Geotechnical investigations, as set forth in section 28-105.4.6.
7. The installation, alteration or removal of alternative automatic fire extinguishing systems, including but not limited to fire extinguishing systems for commercial cooking equipment, subject to the approval of the fire department in accordance with section 105 of the New York city fire code.
8. The installation, alteration or removal of fire alarm systems, emergency alarm systems and fire department in-building auxiliary radio communication systems, subject to the approval of the fire department in accordance with the requirements of this code. Such work shall be submitted in accordance with the rules and regulations of the fire department.
9. Other categories of work as described in department rules, consistent with public safety.

§28-105.4.1 Emergency work. Work that would otherwise require a permit may be performed without a permit to the extent necessary to relieve an emergency condition. An application for a permit shall be submitted within 2 business days after the commencement of the emergency work and shall include written description of the emergency condition and the measures undertaken to mitigate the hazard. Emergency work may include but shall not be limited to:

1. Erection of sidewalk sheds, fences, or other similar structures to protect the public from an unsafe condition.
2. Stabilization of unsafe structural conditions.

4. Repair or replacement of heating or hot water equipment servicing education or residential occupancies during the heating season, which is between October 1 and May 31, as established by the New York city housing maintenance code or education occupancies between November 1st and May 1st.

5. Replacement of parts required for the operation of a combined standpipe or sprinkler system.

§28-105.4.2 Minor alterations and ordinary repairs. A permit shall not be required for minor alterations and ordinary repairs.

§28-105.4.2.1 Definitions. The following words and terms shall, for the purposes of this section and as used elsewhere in this code, have the meanings shown herein.

MINOR ALTERATIONS. Minor changes or modifications in a building or any part thereof, excluding additions thereto, that do not in any way affect health or the fire or structural safety of the building or the safe use and operation of the service equipment therein. Minor alterations shall not include any of the work described as “work not constituting minor alterations or ordinary repairs.”

ORDINARY REPAIRS. Replacements or renewals of existing work in a building, or of parts of the service equipment therein, with the same or equivalent materials or equipment parts, that are made in the ordinary course of maintenance and that do not in any way affect health or the fire or structural safety of the building or the safe use and operation of the service equipment therein. Ordinary repairs shall include the repair or replacement of any plumbing fixture, piping or faucets from any exposed stop valve to the inlet side of a trap. Ordinary repairs shall not include any of the work described as “work not constituting minor alterations or ordinary repairs.”

WORK NOT CONSTITUTING MINOR ALTERATIONS OR ORDINARY REPAIRS. Minor alterations or ordinary repairs shall not include:

1. The removal or cutting away of any load bearing or required fire rated wall, fire door, floor, or roof construction, or any portion thereof;

2. The removal, cutting, or modification of any beams or structural supports;

3. The removal, change, or closing of any required exit;

4. The addition, rearrangement, relocation, removal or replacement of any parts of the building affecting loading or exit requirements, or light, heat, ventilation, or elevator requirements or accessibility requirements, or any fire suppression or fire protection system;

5. Additions to, alterations of, or rearrangement, relocation, replacement, repair or removal of any portion of a standpipe or sprinkler system, water distribution system, house sewer, private sewer, or drainage system, including leaders, or any soil, waste or vent pipe, or any gas distribution system;
6. Any plumbing work other than the repair or replacement of plumbing fixtures, piping or faucets from the exposed stop valve to the inlet side of a trap;  
7. The alteration or repair of a sign for which a permit is required; or  
8. Any other work affecting health or the fire or structural safety of the building or the safe use and operation of the service equipment therein.

§28-105.4.3 Public utility company or public utility corporation. A permit shall not be required for:  

1. The installation or alteration of gas service piping or gas meter piping including meters, valves, regulators, and related equipment, when such work is to be performed and serviced and maintained by utility corporations subject to the jurisdiction of the New York state public service commission.  
2. The emergency repair of gas distribution piping when such work is performed by licensed master plumbers or by utility corporations subject to the jurisdiction of the New York state public service commission, in order to alleviate hazardous conditions, provided that a written report describing the details of such repairs shall be filed with the commissioner upon completion of the work.

§28-105.4.4 Ordinary plumbing work. The following ordinary plumbing work may be performed without a permit, provided that the licensed plumber performing such work: (i) provides a monthly report listing completed work and work in progress during the preceding month, including the block, lot and address of each job, a description of the work performed or in progress at each address, and the location in each building where the work was performed or is in progress; (ii) pays the fees for such work in accordance with this code; and (iii) submits to the department a certification that the work was performed in accordance with this code and all applicable laws and rules. Ordinary plumbing work shall include:

1. The removal of a domestic plumbing system not connected to a fire suppression or fire protection system, or the removal of a portion of such system.  
2. The relocation of up to two plumbing fixtures within the same room to a maximum of 10 feet (3048 mm) distant from the original location, except in health care facilities.  
3. The installation, replacement or repair of a food waste grinder (food waste disposal) or secondary back flow preventer and the replacement or repair of a sump pump.  
4. The replacement of closet bends.  
5. In buildings in occupancy group R-2 occupied by fewer than six families or in buildings in occupancy group R3, the replacement of a gas water heater or a gas fired boiler with a capacity of 350,000 BTU (103 kW) or less where the existing appliance gas cock is not moved, provided that the plumber has inspected the chimney and found it to be in good operational condition.  
6. The repair or replacement of any non-gas, non-fire suppression piping not longer than 10 feet (3048 mm) inside a building, or connected piping previously repaired or replaced under this provision.
7. The repair or replacement of non-fire suppression branch piping after the riser shutoff valve, including the replacement of fixtures, limited to two bathrooms and one kitchen per building per monthly reporting period.

8. The replacement of flexible gas tubing no greater than 4 feet (1219 mm) in length located downstream of the existing gas cock to an appliance, provided such gas tubing does not penetrate a wall.

§28-105.4.5 Sign permits. A sign permit shall not be required where the sign is:

[1. Painted directly on the exterior wall surface of a building or on the surface of a fence;]

[2. 1. A wall sign of not more than six square feet (0.56 m²) in area;]

[3. 2. Erected by employees of a city agency, including traffic and other similar signs;]

[4. 3. A ground sign offering the sale or rental of the premises on which it is erected, provided the sign does not exceed 12 square feet (1.1 m²) in area, and is removed immediately upon such sale or rental;]

[5. 4. Temporary and erected during construction work [and related thereto] as required by chapter 33 of the New York city building code or other applicable law;]

[6. 5. Temporary for special decorative display use for holidays, public demonstrations, or the promotion of civic, welfare or charitable purposes, except that signs that utilize streets or cross streets shall be subject to the requirements of the department of transportation; or]

[7. 6. Temporary signs offering the sale or rental of real property when erected on the premises offered for sale or rent, and is removed immediately upon such sale or rental.]

§28-105.4.6 Geotechnical investigations. A permit shall not be required for excavation performed for a geotechnical investigation required by section [1802.4] 1803.4 of the New York city building code provided such excavation does not exceed 10 feet (3048 mm) in length, width, or diameter and is conducted under the supervision of a registered design professional. All excavation activity, including backfilling of excavations, shall comply with all relevant code provisions, including but not limited to sections 1803 and 3304 of the New York city building code.

§28-105.5 Application for permit. All applications for permits shall be submitted on forms furnished by the department. Applications shall include all information required by this code, other applicable law or the rules of the department. The applicant shall list any portions of the design that have been approved for deferred submittal in accordance with section 28-104.2.6. The application shall set forth an inspection program for the project. An application for a permit shall be submitted no later than 12 months after the approval of all required construction documents (other than those documents approved for deferred submittal). The department shall provide written notification to owners of adjoining property at the time such application is submitted.

§28-105.5.1 Applicant for permit. The applicant for a permit shall be the person who performs the work or who retains a subcontractor to do the work.

Exception: For permits issued for plumbing work, fire protection and suppression work, and [oil-burner/boiler] oil-burning appliance work, the applicant for such permits shall be the
licensed master plumber, licensed master fire suppression piping contractor, or licensed oil-burning equipment installer, respectively, who performs the work.

[§28-105.5.1] §28-105.5.2 Application for permit where a building is occupied. All applications for permits for work on a building having more than three dwelling units shall state (i) the total number of units in the building at the time the application is filed, and (ii) the number of units occupied at the time the application is filed, and (iii) the number of units to be occupied during the course of the work. The work permit application shall be amended prior to occupancy of any units that were not initially counted as being occupied during the course of the work.

[§28-105.5.2] §28-105.5.3 Owner statement. All applications for permits shall include a certification by the owner of the property for which the permit is sought stating the following:

1. A statement as to whether $25,000 or more in covered arrears, that are not currently in the appeals process, are owed to the city with respect to such property;
2. A statement as to whether the owners of the property owe, in aggregate, $25,000 or more in covered arrears to the city;
3. For each owner of the property:
   3.1. The person’s full name and business address;
   3.2. A list of properties in the city for which the person owes covered arrears to the city and, for each such property, the amount of such covered arrears owed; and
   3.3. A list of properties in the city for which the person is an owner;
4. If an exception to section [28-105.1.2] 28-105.1.6 of the code applies to such owner, a description of such exception.

[§28-105.5.2.1] §28-105.5.3.1 Audit. The commissioner shall each year, in consultation with the department of finance and each other appropriate city agency, audit at least 25 percent of the statements submitted under section [28-105.5.2] 28-105.5.3 of the code.

§28-105.6 Fees. Applications for permits shall be accompanied by the payment of appropriate fees as provided for in article 112.

§28-105.7 Time limitation of applications. An application for a permit shall be deemed to have been abandoned 12 months after the date of its submission, unless such application has been diligently prosecuted after rejection in whole or in part, or a permit shall have been issued except that the commissioner may, for reasonable cause, and upon payment of all reinstatement fees as provided for in this code, grant extensions of time for additional 12-month periods.

§28-105.8 Validity of permit. The issuance or granting of a permit shall not be construed to be a permit for, or an approval of, any violation of any of the provisions of this code or of any other law or rule. Permits presuming to give authority to violate or cancel the provisions of this code or other law or rule shall not be valid. The issuance of a permit based on construction documents and other data shall not prevent the commissioner from requiring the correction of errors in the construction documents and other data. The commissioner is authorized to prevent any occupancy, use or work in violation of this code, the zoning resolution or other law or rule enforced by the department.
§28-105.8.1 Duration of permit. Permits may be issued for a period of up to two years unless otherwise limited by law.

§28-105.8.2 Signature of commissioner on permit. Every permit issued by the commissioner shall have his or her signature affixed thereto; but the commissioner may authorize any subordinate to affix such signature, including by the use of electronic means.

§28-105.9 Expiration. All permits issued by the commissioner shall expire by limitation and become invalid if the permitted work or use is not commenced within 12 months from the date of issuance of the permit. Subsequent to the 12-month period following the issuance of the initial permit, all permits shall expire if the permitted work is suspended or abandoned for a continuous period of 12 months unless such permits expire earlier pursuant to applicable provisions of this code. The permit shall automatically expire upon the expiration of required insurance or, if the applicant holds a license issued by the department upon the expiration or revocation of such license during the term of the permit or if the permit is not renewed.

Exception: All permits for work in an area of special flood hazard area shall expire in accordance with the timeframes established by section G104 of appendix G of the New York city building code.

§28-105.9.1 Reinstatement. The commissioner may at any time reinstate a work permit solely for the purpose of sign-off, including the correction of defects noted in a final inspection as provided in section 28-116.2.4 or reinstate a work permit within a period of two years from the date of issuance of the original permit. Except in the case of a permit reinstated solely for the purpose of sign-off, the work shall comply with all the requirements of this code and other applicable laws and rules in effect at the time application for reinstatement is made. The applicant for reinstatement shall pay all reinstatement fees as required by article 112.

§28-105.10 Suspension or revocation of permit. The commissioner is authorized to suspend or revoke a permit issued under the provisions of this code.

§28-105.10.1 Notice of proposed revocation. The commissioner may, on written notice to the permit holder, revoke any permit for failure to comply with the provisions of this code or other applicable laws or rules; or whenever there has been any false statement or any misrepresentation as to a material fact in the application or submittal documents upon the basis of which such approval was issued; or whenever a permit has been issued in error and conditions are such that the permit should not have been issued. Such notice may be accompanied by a stop work order pursuant to section 28-207.2 and shall inform the permit holder of the reasons for the proposed revocation and that the applicant has the right to present to the commissioner or his or her representative within 10 business days of delivery of the notice by hand or electronic delivery or 15 calendar business days of the posting of notice by mail, information as to why the permit should not be revoked.

§28-105.10.2 Immediate suspension in cases of imminent peril. The commissioner may immediately suspend any permit without prior notice to the permit holder when the commissioner has determined that an imminent peril to life or property exists. The commissioner shall forthwith notify the permit holder that the permit has been suspended and the reasons that it is proposed to be revoked, and that the permit holder has the right to present to the
commissioner or his or her representative within 10 business days of delivery of the notice by hand or electronic delivery or 15 [calendar] business days of the posting of notice by mail information as to why the permit should not be revoked.

§28-105.11 Posting of permit. The building permit or a copy thereof shall be posted in a conspicuous place at the work site, visible to the public for the duration of the work, or the use and operation of the equipment, or until the expiration of the permit. No such permit shall be posted or displayed at any location other than the location of the premises or equipment for which the permit was issued. Where the permit is exposed to the weather, it shall be laminated or encased in a plastic covering to protect it from the elements. The permit shall identify whether any dwelling unit within such building will be occupied during the work. If dwelling units within such building will be occupied during the work, the permit shall indicate the total number of dwelling units that will be occupied.

Exception: Where a project information panel is required by section 3301.9.1, of the New York city building code, the permit shall be posted in accordance with such section, and no other permits shall be posted in any location readily visible to the public, except as provided in section 3301.9.5 of the New York city building code.

§28-105.12 Conditions of permit. Permits shall be subject to the following conditions:

§28-105.12.1 Compliance with code. Permits shall be deemed to incorporate the provisions that the applicant, the owner, their agents, employees, and contractors shall carry out the permitted work in accordance with the provisions of this code and other applicable laws or rules, whether specified or not, except as variations have been legally permitted or authorized.

§28-105.12.2 Compliance with construction and submittal documents. All work shall conform to the approved construction and submittal documents, and any approved amendments thereto. Changes and revisions during the course of construction shall conform to the amendment requirements of this code.

§28-105.12.2.1 Construction documents maintained on site. One set of current “approved” or “accepted” construction documents shall be retained by the department and another set shall be maintained at the project site no later than the commencement of the work and until the work authorized by the permit is completed and signed off by the department.

Exception: Construction documents filed in connection with the issuance of a temporary construction installation permit shall be maintained at the site until such temporary construction installation is removed.

§28-105.12.3 Adherence to lot diagram. All work shall be strictly located in accordance with the lot diagram approved in accordance with this code and no lot or plot shall be changed, increased or diminished in area from that shown on the approved lot diagram, unless and until a revised diagram showing such changes, accompanied by the necessary statement of the owner or applicant, shall have been submitted to and approved by the commissioner.

§28-105.12.4 Compliance with safety requirements. All work shall be conducted in accordance with and subject to the safety requirements of this code and other applicable laws or rules, including any order or requirement of the commissioner that the building or structure under construction or alteration be vacated, in whole or in part, during the progress of the work and
until the issuance of a certificate of occupancy. Adjoining lots and properties shall be protected in accordance with this code.

§28-105.12.5 Compliance with noise control code required. All work shall be performed in compliance with the provisions of the New York city noise control code as set forth in chapter 2 of title 24 of the administrative code. Failure to comply with sections 24-222 and 24-223 of the administrative code shall be a violation of this code.

§28-105.12.6 Deferred submittals. Where permits are issued subject to deferred submittal of portions of the design as provided for in section 28-104.2.6, the deferred submittal items shall not be installed until the construction and submittal documents for such portions have been approved by the department and, where applicable, new or amended permits have been issued.

§28-105.12.7 Insurance. Where workers compensation, employee disability or liability insurance is required by law or department rule, the applicant for the work permit shall obtain and include proof of such insurance with the work permit application. The permit shall expire by operation of law if the insurance upon which the permit was conditioned lapses, expires or is cancelled, unless the permit holder files proof of alternate insurance before such event.

§28-105.12.7.1 Insurance coverage for adjacent properties. A person who obtains a permit for construction or demolition operations shall, at such person’s own expense, procure and maintain for the duration of the operations, insurance of a kind and in an amount specified by rule of the department, to insure any and all adjacent property owners and their lawful occupants fully for all risks of loss, damage to property or injury to or death of persons, arising out of or in connection with the performance of the proposed work. Such person shall submit proof of insurance to the department when applying for a permit for construction or demolition work. The department shall provide such proof of such insurance together with the permit to the owners of adjoining property thirty days prior to the commencement of the construction or demolition work, except in the event that emergency work is authorized as defined in section 28-105.4.1 of this code. If such emergency work is necessary, the permit and proof of insurance shall be provided to owners of adjoining property within a reasonable timeframe.

§28-105.12.8 Site safety plan. Where a site safety plan is required by this code or by the department, all work shall adhere to the site safety plan. Site safety plans shall require approval of the department where specified in this code or the New York city building code.

§28-105.12.9 Safety training required. No permit for construction or demolition work for which training is required by section 3321 of the New York city building code shall be issued or renewed until the applicant has certified that all workers who will be working under such permit will have the requisite training throughout the duration of such permit.

§28-105.12.10 Tenant protection plan required. Where a tenant protection plan is required by article 120, all work shall adhere to the tenant protection plan.

§28-105.12.11 Inspections. Upon issuance of a permit and at any time during such permit period, the commissioner or his or her authorized representatives, in the discharge of their duties, shall have the right to enter, in accordance with applicable law, upon any buildings, enclosures,
premises, or any part thereof, or attached thereto for the purposes of an inspection of work pursuant to such permit to ensure that such work is not occurring in an unsafe or dangerous manner, and that such work is being performed in compliance with applicable code provisions. If the commissioner or his or her authorized representative is unable to gain access to such property expeditiously for the purposes of an inspection of work pursuant to such permit and there is a reason to believe that the work is being done in violation of the law, the commissioner shall issue a stop work order. Such stop work order may be rescinded in accordance with section 28-207.2.3.

ARTICLE 106
ASBESTOS

§28-106.1 Asbestos certification required. The commissioner shall not issue a permit for the demolition or alteration of a building constructed pursuant to plans submitted for approval on or before April 1, 1987, unless the applicant submits such certification relating to asbestos as may be required by the rules of the New York city department of environmental protection or the commissioner of environmental protection has issued a variance.

§28-106.1.1 Full demolition permit. The commissioner shall not issue a full demolition permit unless the owner of the building provides certification in a form and manner to be provided in the rules of the department of environmental protection that (i) the building is free of asbestos containing material, or (ii) the commissioner of environmental protection, has issued a variance from this requirement in accordance with subdivision (m) of section 24-136 of the administrative code and the rules of the department of environmental protection, subject to the requirement that demolition work will be performed only in parts of the building that are certified free of asbestos containing material. The full demolition permit shall be subject to such additional conditions as the department of buildings may require of the permittee based on the size and complexity of the demolition work.

Exception: This section §28-106.1.1 shall not apply to full demolition performed as emergency work pursuant to article 215 of chapter 2 of this title where the emergency warrants immediate commencement of the work or full demolition with asbestos in place authorized pursuant to 12 NYCRR 56-11.5.

§28-106.1.2 Alteration permit for the removal of one or more stories. The commissioner shall not issue an alteration permit for the removal of one or more stories of a building unless the owner of the building provides certification in a form and manner to be provided in the rules of the department of environmental protection that (i) the stories to be removed are free of asbestos containing material and that no abatement activities will be performed anywhere in the building concurrently with the removal work authorized by such permit or (ii) the commissioner of environmental protection has issued a variance from these requirements in accordance with subdivision (m) of section 24-136 of the administrative code and the rules of the department of environmental protection, subject to the requirement that work authorized by the alteration permit will be performed only in parts of the building that are certified free of asbestos containing material. The alteration permit shall be subject to such additional conditions as the department of buildings may require of the permittee based on the size and complexity of the work.
Exception: Section 28-106.1.2 shall not apply to removal of one or more stories performed as emergency work pursuant to article 215 of chapter 2 of this title where the emergency warrants immediate commencement of the work.

§28-106.2 Construction and maintenance of asbestos containment structures and other temporary structures or work required for asbestos abatement activities. Notwithstanding any other provision of this code, the construction and maintenance of asbestos containment structures, decontamination system enclosures and other temporary structures or work performed in the course of and only for the purpose of asbestos abatement activities shall comply with this section and the rules of the New York city department of environmental protection relating to such temporary structures and work and with article 30 of the New York state labor law and rules adopted pursuant to such article.

§28-106.2.1 Materials. The rules of the New York city department of environmental protection relating to materials used in the construction of temporary structures for asbestos abatement activities shall contain a provision requiring such structures to be non-combustible or flame resistant in compliance with reference standard NFPA 255-06 or NFPA 701-99, as such standards may be modified by local law or by the department of buildings pursuant to applicable rules.

§28-106.3 Permit exemption. Except as otherwise provided by rule, work performed in the course of and only for the purpose of an asbestos project that is required to be permitted pursuant to section 24-138 of the administrative code shall be exempt from the permit requirements of this code.

§28-106.4 Definitions. For the purposes of this article, the terms "asbestos" and "asbestos project" shall have the meanings as are ascribed in section 24-136 of the administrative code.

ARTICLE 107
ALTERATION OR DEMOLITION OF SINGLE ROOM OCCUPANCY MULTIPLE DWELLINGS

§28-107.1 General. The commissioner shall not approve construction documents, nor issue an initial or reinstated permit in connection therewith, for the alteration or demolition of a single room occupancy multiple dwelling except as set forth in this article. Applications for post approval amendments to construction documents are subject to this article where the application proposes a change within a covered category of work as set forth in section 28-107.3.

§28-107.2 Definitions. The following words and terms shall, for the purposes of this article and elsewhere in the code, have the meanings shown herein.

CLASS A MULTIPLE DWELLING, CLASS B MULTIPLE DWELLING, FURNISHED ROOM HOUSE, ROOMING UNIT AND SINGLE ROOM OCCUPANCY. Shall have the meanings set forth in section 27-2004 of the New York city housing maintenance code.

SINGLE ROOM OCCUPANCY MULTIPLE DWELLING. A single room occupancy multiple dwelling means:
1. A “class A multiple dwelling” used in whole or part as a “rooming house” or “furnished room house,” or for “single room occupancy” pursuant to section 248 of the New York state multiple dwelling law;

2. A “class A multiple dwelling” containing “rooming units”; or

3. A “class B multiple dwelling.”

**Exception:** The term single room occupancy multiple dwelling shall not include:

1. College or school dormitories;

2. Clubhouses;

3. Luxury hotels, as such term is defined by the commissioner of housing preservation and development; or

4. Residences whose occupancy is restricted to an institutional use such as housing intended for use by the employees of a single company or institution;

5. City-owned multiple dwellings; or

6. Any multiple dwelling, other than a lodging house, containing fewer than nine sleeping rooms, rooming units, single room occupancy units, or hotel units unless the total number of such units is more than fifty percent of the total number of dwelling units in such multiple dwelling; or

7. Any multiple dwelling that:

   7.1. Is the subject of a program approved by the commissioner of housing preservation and development and related to the rehabilitation or preservation of a single room occupancy multiple dwelling or the provision of housing for persons of low or moderate income, other than a program consisting solely of real property tax abatement or tax exemption; and

   7.2. Has been exempted from the provisions of this article by the commissioner of housing preservation and development.

9. Any building lawfully altered pursuant to the provisions of this article after May 5, 1983, such that the building no longer meets the definition of single room occupancy multiple dwelling.

§28-107.3 **Covered categories of work.** Applications for the approval of construction documents for the following categories of work are covered by this article:

1. Demolition of a single room occupancy multiple dwelling;

2. Alteration of a single room occupancy multiple dwelling to a class A multiple dwelling to be used in whole or in part for other than single room occupancy purposes;

3. Alteration of a single room occupancy multiple dwelling resulting in the removal or addition of kitchen or bathroom facilities; and
4. Such other types of alteration work to a single room occupancy multiple dwelling as shall be prescribed by rule of the commissioner of housing preservation and development, in consultation with the commissioner.

Exceptions:

1. Work solely for the purpose of either (i) making the public areas of a multiple dwelling accessible to persons with disabilities without altering the configuration of any dwelling unit or rooming unit or (ii) making the interior or the entrance to a dwelling unit or a rooming unit accessible to persons with disabilities shall not be covered by this article.

2. Repairs, demolition or any other work performed by a city agency or by a contractor pursuant to a contract with a city agency shall not be covered by this article.

§28-107.4 Required submittal documents. The commissioner shall not approve any construction documents, nor issue an initial or reinstated permit in connection therewith, for a single room occupancy multiple dwelling for the covered categories of work unless the applicant provides:

1. A sworn affidavit by or on behalf of all the owners, as the term owner is defined in section 27-2004 of the New York city housing maintenance code, of such multiple dwelling that there will be no harassment of the lawful occupants of such multiple dwelling by or on behalf of such owners during the construction period;

2. A tenant protection plan as provided for in this code; and

3. One of the following documents from the commissioner of housing preservation and development:

   3.1. A current certification that there has been no harassment of the lawful occupants of such multiple dwelling within the 36 month period prior to submission of an application for such certification to the department of housing preservation and development, provided, however, that such certification shall except any portion of such 36 month period during which title was vested in the city; or

   3.2. A waiver of such certification.

§28-107.5 Filing process. Applications for a certification of no harassment shall be made pursuant to section 27-2093 of the New York city housing maintenance code.

§28-107.6 Time period for acceptance or rejection. The time period in which the commissioner is required to approve or reject an application for construction document approval or resubmission thereof pursuant to this code shall commence from the date that the commissioner receives either the certification or waiver pursuant to this article.

§28-107.7 Denial of certification. Where the commissioner of housing preservation and development denies the certification required by this article, the commissioner shall reject the application for construction document approval.

§28-107.8 Request for stop-work or rescission. The commissioner shall be empowered to issue a stop-work notice or order with respect to an alteration or demolition permit and/or to rescind approval of construction documents at the request of the commissioner of housing preservation and development pursuant to section 27-2093 of the New York city housing maintenance code.
§28-107.9 Effect of denial or rescission. Where the commissioner rejects or rescinds the approval of construction documents pursuant to this article, no further application for the covered categories of work shall be considered by the commissioner for a period of 36 months following the date of the denial of the certification of no harassment by the commissioner of housing preservation and development or the date of the rescission of such certification of no harassment by such commissioner.

ARTICLE 108
PAVEMENT PLAN

§28-108.1 General. The commissioner shall not issue a permit for the erection of a new building, use of an open lot or for alterations that will require the issuance of a new or amended certificate of occupancy without a statement that no certificate of occupancy shall be issued unless the sidewalk, curb and/or roadway in front of or abutting such building, including but not limited to the intersection quadrants for corner properties, shall have been paved, repaired or installed by the owner, at his or her own cost, in the manner, of the materials, and in accordance with the New York city building code, the New York city zoning resolution, and the standards prescribed by the New York city department of transportation pursuant to sections 19-113 and 19-115 of the administrative code.

Exceptions:

1. Application for the erection of an accessory building appurtenant to an existing one- or two-family dwelling.

2. Where the commissioner determines, in consultation with the commissioner of transportation, that a sidewalk is not required, provided that such determination shall not affect the obligations of the owner under subdivision a of section 19-152 of the administrative code, nor relieve the owner of any such obligations, nor impair or diminish the rights of the city or its agencies to enforce such obligations.

3. Where [the extent of the change in use or occupancy, or] the cost of the alteration, including enlargements, does not exceed a total cost of 30 percent of the building value [threshold established pursuant to rule of the commissioner].

§28-108.2 Pavement plan required. Construction documents shall include a pavement plan processed and approved under guidelines established by the department. The pavement plan shall include documentation sufficient to show compliance with the New York city building code, the New York city zoning resolution, and the standards [and specifications of] prescribed by the New York city department of transportation pursuant to sections 19-113 and 19-115 of the administrative code.

Exception: No pavement plan shall be required with respect to an alteration application for a building where the applicant certifies that there is a sidewalk in existence in front of or abutting such building, including but not limited to the intersection quadrants for corner properties, complying with the specifications of the New York city department of transportation, and that the nature of such alteration work will neither remove such existing sidewalk nor cause damage to such existing sidewalk such that the damage could not be corrected as minor repairs prior to issuance of the certificate of occupancy.
§28-108.3 Improvement of streets. The commissioner shall insure that streets are suitably improved in accordance with the standards and specifications of prescribed by the department of transportation as required by subdivision two of section thirty-six of the New York state general city law and shall otherwise carry out the provisions of such subdivision.

ARTICLE 109
FIRE PROTECTION PLAN

§28-109.1 Fire protection plan required for covered buildings. New building and alteration applications for covered buildings as set forth in section 28-109.2 shall include a fire protection plan prepared by or under the supervision of a registered design professional who shall professionally certify such plan. Such plan shall be submitted for review and approval by the fire department for compliance with this code prior to issuance of a certificate of occupancy, a temporary certificate of occupancy or a letter of completion, as applicable. The fire protection plan shall be submitted in accordance with the rules and regulations of the fire department.

Exception: No fire protection plan shall be required for an alteration that meets all three of the following requirements:

1. The alteration does not involve a change of use or occupancy;
2. The alteration does not exceed [one million dollars] $1,000,000; and
3. The alteration does not create an inconsistency with a previously approved fire protection plan.

§28-109.2 Covered buildings. Covered buildings include:

1. High-rise buildings as described in section 403 of the New York city building code.
2. Occupancy groups B, E, F, H, M[2] or S occupying two or more stories with over 20,000 gross square feet (1858 m²) of floor area per floor, or occupying two or more stories in a building with a total floor area exceeding 50,000 gross square feet (4645 m²).
3. Any building containing an assembly occupancy having an occupant load of 300 or more persons.
4. Occupancy group I or R-1 occupying two or more stories and containing sleeping accommodations for 30 or more persons.
5. Occupancy group R-2 occupancies containing 30 or more dwelling units in a building where over 10,000 gross square feet (929 m²) of floor area is occupied by occupancy group A, E, M[2] or I.
6. Covered mall buildings and open mall buildings designed pursuant to section 402 of the New York city building code.

§28-109.3 Scope. The plan shall include the following information, where applicable:

1. A description of the building including: address; block and lot numbers; number of stories; height in feet; occupancy group; construction classification; occupancy load and department of buildings application number;
2. All floors, exits, doors, corridors, and partitions serving as fire barriers, fire partitions, fire walls; locations and ratings of required enclosures and fire areas; stairs with pressurization; roof access; exit discharges; and locations of any required frontage space; and

3. In narrative form, a description of safety systems and features, including:
   3.1. Communications systems.
   3.2. Alarm systems.
   3.3. Smoke and carbon monoxide detection equipment.
   3.4. Location of fire command station.
   3.5. Elevator recall.
   3.6. Emergency lighting and power.
   3.7. Standpipes.
   3.8. Sprinklers.
   3.9. Emergency and standby power systems.
   3.10. Mechanical ventilation and air conditioning.
   3.11. Smoke control systems and equipment.
   3.15. Photoluminescent pathway markings.
   3.16. Other safety related systems, required and voluntary, to be installed.

ARTICLE 110
SITE SAFETY PLAN

[§28-110.1 Site safety plan. Where a site safety plan is required by chapter 33 of the New York city building code, such plan shall include the following:]

[1. Location of all construction fences around work site;]
[2. Location of all gates in construction fences;]
[3. Location of standard guardrails around excavations, when required;]
[4. Horizontal and vertical netting program, including details of the initial installation, schedule of horizontal jumps and vertical installations, and designated crane and derrick lifting areas where horizontal netting is omitted. The program shall include as an attachment any department approval obtained regarding required safety netting during construction or demolition operations; the revised site safety plan shall be approved;]
[5. Location of all sidewalk sheds, including appropriate department application numbers and department of transportation permit numbers and expiration dates;]
§28-110.1 Site safety plan. Where a site safety plan is required by chapter 33 of the New York city building code, such plan shall include the following, as applicable:

1. Site conditions and surrounding property, utilities and infrastructure;
2. Streets, sidewalks, pedestrian protection, fences, gates and pedestrian and traffic control;
3. Adjoining property protection, including but not limited to roof protection, yard protection and window protection;
4. Unenclosed perimeter protection, including but not limited to netting systems, cocoon systems and engineered enclosure systems;

5. Excavations, including but not limited to location of excavations, guardrails, protection of sides of excavations or underpinning, and ladders, ramps and other means of egress from the excavation;

6. Fire protection, including but not limited to location of hydrants, fire extinguishers, standpipes and fire department hose connections;

7. Temporary construction installations and equipment, including but not limited to scaffolds, runback structures, material hoists, personnel hoists, hoisting machines, cranes, derricks, mast climbers, excavators, earth movers, drill rigs, concrete pumpers, chutes, contractor sheds or offices and portable sanitation;

8. Means of egress from the jobsite, both permanent and temporary;

9. Location of security guard and watchperson stations;

10. Means of securing controlled access zones;

11. Debris and material storage areas/loading zones;

12. Material handling plan for crane operations if crane operations come into conflict with hoist operations;

13. In occupied buildings, means and methods employed to protect all tenants from the adverse effect of construction operations;

14. For work related to the alteration, maintenance, or repair of a façade, means and methods of getting material and debris to and from the work area. Means to separate debris and materials from occupants of the building must be indicated;

15. For work related to the alteration, maintenance, or repair of a façade, means and methods, including ladders, used by workers to access scaffolds, sidewalk sheds and the work area;

16. Features requiring special sequencing in order to maintain safe conditions, with a written description of those sequences;

17. A note indicating that prior to performing any work on the project all workers must successfully complete the training required by section 3321 of the New York city building code; and

18. A note indicating that all workers employed on the construction site must receive a site-specific orientation program as required by section 3301.11 of the New York city building code.

§28-110.2 Phased site safety plans. Multiple layouts of the site safety features enumerated in section 28-110.1 may be submitted at any time during construction operations to show phased site safety designs consistent with the phase of anticipated work.

ARTICLE 111
TEMPORARY STRUCTURES AND USES

§28-111.1 General. The erection of certain temporary structures and temporary uses may be authorized as set forth in sections 28-111.1.1 and 28-111.1.2.
§28-111.1.1 Permits for the erection and use of temporary structures. The commissioner is authorized to issue a permit for the erection of temporary structures including but not limited to tents, grandstands, platforms, reviewing stands, outdoor bandstands, stages and similar miscellaneous structures and equipment, and for the temporary use of such structures. Such permits shall be limited as to time of service or use, but in no event shall be permitted for more than 90 days. The commissioner may grant extensions for demonstrated cause.

Exception: No permit shall be required for:

1. The erection and use of temporary tents of less than 400 gross square feet (37 m²) for not more than 30 days.
2. The erection and use of temporary platforms, reviewing stands, outdoor bandstands and similar miscellaneous structures that cover an area less than 120 square feet (11.16 m²), including connecting areas or spaces with a common means of egress or entrance, for not more than 30 days.

§28-111.1.2 Letters authorizing temporary uses. The commissioner is authorized to issue a letter authorizing the temporary use of outdoor or indoor spaces provided the space shall be occupied in a manner that will not endanger public safety, health, or welfare. Such letters authorizing the temporary use shall be limited as to time of service or use, but shall not be permitted for more than 90 days. The commissioner may grant extensions for demonstrated cause.

§28-111.2 Conformance. Temporary structures and uses shall conform to the structural strength, fire safety, means of egress, accessibility, light, ventilation and sanitary requirements of this code as necessary to ensure the public health, safety and general welfare.

§28-111.3 Termination of approval. The commissioner is authorized to terminate such permit or letter of authorization and to order the temporary structure or use to be discontinued.

§28-111.4 Application processing. Application for such structures and uses shall be submitted to the department no later than 15 business days prior to the construction of the temporary structure or the commencement of the temporary use.

§28-111.5 Fees. Applications for such permits shall be accompanied by the applicable fees in accordance with article 112. Fees for subsequent requests for renewals shall be paid upon approval of such requests.

§28-111.6 Place of assembly. Notwithstanding any inconsistent provision of this article, the use of a temporary structure or the temporary use of space as a place of assembly shall require a temporary place of assembly certificate of operation issued pursuant to section 28-117.2.

ARTICLE 112
FEES

§28-112.1 Payment of fees. A permit, inspection, or other service or privilege as regulated in this code shall not be valid until the fees prescribed herein or in rules have been paid, nor shall a renewal of a permit or other service or privilege or an amendment to a permit be released until the fee has been paid. In addition, an approval required to be reissued due to a change in product name, company name and/or address, contact information or principals, shall not be reissued until a reissuance fee,
if any, has been paid. The department shall adopt such rules and shall prescribe such forms as may be necessary to carry out the provisions of this article.

Exceptions:

1. A permit, inspection or other service or privilege as regulated in this code shall not be subject to this provision if the current deed holder of the building or property affected is a corporation or association organized and operated exclusively for religious, charitable or educational purposes, or for one or more such purposes, no part of the earnings of which inures to the benefit of any private shareholder or individual, and provided that the property affected is to be used exclusively by such corporation or association for one or more of such purposes.

2. A permit, inspection or other service or privilege as regulated in this code shall not be subject to this provision if the work proposed is emergency work performed by a city agency or by a contractor pursuant to a contract with a city agency.

§28-112.2 Schedule of permit fees. Permits for new buildings, structures, mechanical, and plumbing systems or alterations requiring a permit shall be accompanied by a fee for each permit in accordance with the fee schedule of Table 28-112.2. Fifty percent of the total fee for the work permit, but not less than $100, or the total fee for the work permit where such fee is less than $100, shall be paid and shall accompany the first application for the approval of construction documents; and the whole or remainder of the total fee shall be paid before the work permit may be issued. The commissioner may require reasonable substantiation of any statement or other form that may be required by the department.

§28-112.3 **Building permit valuations.** An estimate of the cost of construction shall be provided at the time of application for construction document approval or, where no construction documents are required, at the time of application for a permit. Such costs shall include the total value of work
proposed, including but not limited to materials, equipment and labor, with reasonable allowances for profit and overhead. If, in the opinion of the department, the cost is underestimated, the application shall be denied, unless the applicant can show detailed estimates to meet the approval of the department. A final [affidavit] statement with the total actual cost of construction, as built or installed, shall be submitted prior to [sign-off] sign-off. The initial, amended and final building permit valuation shall be set by the department.

§28-112.4 Work commencing before permit issuance. Any person who commences any work before obtaining the necessary permits shall be subject to a penalty as specified in this code that shall be in addition to the required permit fees.

Exception: Emergency work performed pursuant to section 28-105.4.1.

§28-112.5 Related fees. The payment of the fee for the construction, alteration, removal or demolition for work done in connection or concurrently with the work authorized by a building permit shall not relieve the applicant or holder of the permit from the payment of other fees that are prescribed by law.

§28-112.6 Refunds and rebates. Upon application to the comptroller of the city of New York, and upon verification of claim by the commissioner, refunds or rebates of partial or full fees shall be provided as set forth in sections 28-112.6.1 through 28-112.6.3.

§28-112.6.1 Withdrawal of work permit applications. In the event that an owner withdraws an application, the owner may obtain a refund of all or a portion of the fee paid as follows:

1. If an application for construction document approval is withdrawn prior to the commencement of examination of the application all but [forty dollars] $40 of the deposit fee paid shall be refunded.

2. If an application for construction document approval is withdrawn during the progress of examination of the application, the comptroller shall retain a percentage of the deposit fee paid, which the department shall certify is the equivalent percentage of the examination completed, but not less than [one hundred dollars] $100. The remainder of the deposit fee shall be refunded to the owner.

3. If an application for construction document approval is withdrawn after examination of construction documents and/or construction document approval and before issuance of permit, there shall be refunded by the comptroller 50 percent of the total computed fee for the permit, except that not less than [one hundred dollars] $100 shall be retained by the comptroller.

§28-112.6.2 Withdrawal of cranes and derricks applications. If the applicant withdraws his or her application for a certificate of approval for a power-operated crane, derrick or cableway, such applicant may obtain a refund of a portion of the fees as follows:

1. If the application is withdrawn prior to the commencement of examination by the department, the entire fee shall be refunded except [one hundred dollars] $100.

2. If the application is withdrawn after the examination has commenced, the comptroller shall retain a percentage of the fee paid, which the department shall certify is the
equivalent percentage of the examination performed, but not less than [one hundred dollars] $100. The remainder of the fee shall be refunded to the applicant.

3. If the application is withdrawn after the department has performed its examination, whether or not the application has been approved no part of the fee shall be returned to the applicant.

§28-112.6.3 Incentive rebates. With respect to the rebates under [this] section 28-112.6, the commissioner may, at his or her discretion, issue a rebate of application fees as follows and as established by rule.

§28-112.6.3.1 Renewable energy rebates. Owners who demonstrate the production on a zoning lot of five percent or more of the annual energy consumption on the zoning lot through renewable energy sources may receive a fee rebate as established by rule.

§28-112.6.3.2 Rebate for energy use reduction. Owners who demonstrate a reduction in energy use from that allowed at the time of permit by the New York state energy conservation construction code as a result of the permitted work may receive a fee rebate as established by rule.

§28-112.6.3.3 Rebate for water conservation systems. Owners who demonstrate conservation of water taken from the city supply by providing evidence of achieving the water-recycling discount authorized by the New York city water board may receive a fee rebate as established by rule.

§28-112.6.3.4 Rebate for redevelopment, remediation and reuse of contaminated properties known as brownfields. Owners who demonstrate that their site was contaminated and has been certified as remediated by the United States environmental protection agency or the New York state department of environmental conservation, or has received a notice of satisfaction from the New York city department of environmental protection, may receive a fee rebate as established by rule.

§28-112.6.3.5 Rebate for recycling construction and demolition waste. Owners who demonstrate the recycling of construction and demolition waste may receive a fee rebate as established by rule.

§28-112.6.3.6 Rebate for bicycle storage facilities. Except for R-3 occupancy, owners who demonstrate that they have provided secure indoor bicycling facilities accessible to all building occupants may be rebated their fees as set out in rule. Such facilities shall be identified on approved plans and shall be noted on the certificate of occupancy with a statement that the bicycling accommodations dedicated to such facilities were provided in accordance with this section.

§28-112.6.3.7 Rebate for LEED or other environmental design certification. Owners who demonstrate certification of their project, which was signed off following the effective date of this code, by the United States Green Building Council based upon the Council’s Leadership in Energy and Environmental Design (LEED) rating system or as otherwise provided by rule, may be rebated their fees as set out in rule.

§28-112.6.3.8 Other rebates. The commissioner is authorized to promulgate rules to rebate fees following sign-off based upon the installation of energy-conserving systems.
§28-112.7 **Inspection and report filing fees.** Aside from the fees covered under permit fees above, the following inspection and report filing fees shall be paid according to requirements of this code and as promulgated in rules.

§28-112.7.1 **Fees for the testing, approval, inspection and use of power-operated cranes, derricks and cableways.** The owner of any crane or derrick shall renew the certificate of operation each year. See Table 28-112.7.1.

§28-112.9 Lien on premises for unpaid fee or other charge. Any unpaid fee or charge for an inspection, reinspection, examination or service performed by the department or other unpaid amount owed to the department, and all permits issued by the department, pursuant to law shall constitute a lien upon the land and buildings upon or in respect to which such inspection, reinspection, examination or service was performed or permit issued, as hereinafter provided.

§28-112.9.1 Filing of fees. The department shall maintain a record of all unpaid fees and other charges. Such records shall be kept on a building by building basis and shall be accessible to the public during business hours. An entry of an unpaid amount on the records of the department shall constitute notice to all parties.

§28-112.9.2 Lien. All such unpaid amounts shall constitute a lien upon the land and building upon, or in respect to which, such inspection, reinspection, examination or service was performed or permit issued when the amount thereof shall have been definitely computed as a statement of account by the department and the department shall file such statement with the department of finance for entry in the records of such department against the premises. Such lien shall have a priority over all other liens and encumbrances except for the lien of taxes and assessments. However, no lien created pursuant to [this] section 28-112.9 shall be enforced against a subsequent purchaser in good faith or mortgagee in good faith unless the requirements of section 28-112.9.1 are satisfied.

§28-112.9.3 Notice. A notice, stating the amount due and the nature of the charge, shall be mailed by the department of finance [.] to the last known address of the person whose name appears on the records in the office of the department of finance as being the owner or agent or as the person designated by the owner to receive tax bills or, where no name appears, to the premises [.] addressed to either the owner or the agent.

§28-112.9.4 Interest. If such charge is not paid within 30 days from the date of entry, it shall be the duty of the department of finance to receive interest thereon at the rate of 15 percent per annum, to be calculated to the date of payment from the date of entry.

§28-112.9.5 Tax lien. Such charge and the interest thereon shall continue to be, until paid, a lien on the premises. Such lien shall be deemed a tax lien within the meaning of sections 11-319 and 11-401 of the administrative code and may be sold, enforced or foreclosed in the manner provided in chapter [three] 3 or [four] 4 of title [eleven] 11 of such code or may be satisfied in accordance with the provisions of section [thirteen hundred fifty-four] 1354 of the New York state real property actions and proceedings law.
§28-112.9.6 Reference. The notice mailed by the department of finance pursuant to [this] section 28-112.9 shall have stamped or printed thereon a reference to [this] section 28-112.9.

§28-112.9.7 Validity not subject to challenge in enforcement proceeding. In any proceedings to enforce or discharge a lien created pursuant to [this] section 28-112.9., the validity of the lien shall not be subject to challenge based on:

1. The lawfulness of the inspection, reinspection, examination, service or permit; or
2. The propriety and accuracy of the fee for which a lien is claimed, except as provided in [this] section 28-112.9.

§28-112.9.8 Standing to challenge. No such challenge may be made except by (i) the owner of the property, or (ii) a mortgagee or lien or whose mortgage or lien would, but for the provisions of [this] section 28-112.9, have priority over the department’s lien.

§28-112.10 Waiver of application, permit and inspection fees for certain work arising out of the storm that occurred on October 29 and 30, 2012. The commissioner shall waive the fees that would otherwise be required to be paid by this code, the electrical code or the rules of the department for applications, permits and inspections for certain work arising out of the storm that occurred on October 29 and 30, 2012 as provided in [subsections] sections 28-112.10.1 and 28-112.10.2.

§28-112.10.1 Eligible buildings. For the purposes of this article, eligible buildings that, following the storm and pursuant to an inspection program established by the department under an emergency order of the Mayor, are designated by the department after inspection through a notation on the department’s records and/or by the posting of a red placard warning on the building or premises as seriously damaged and unsafe to enter or occupy or completely demolished and/or washed away. With respect to eligible buildings, fees associated with applications, permits and inspections shall be waived for alteration work, demolition work, construction of new buildings and associated work, including but not limited to associated electrical and plumbing work. The commissioner may request the applicant to submit additional information relating to the damage. Waiver of such fees pursuant to this section shall be applicable for jobs where the initial application for construction document approval or, if no construction documents are required, application for permit is submitted on or after October 30, 2012 and on or before October 31, 2014.

§28-112.10.2 Storm related damage to electrical and plumbing systems. In buildings other than eligible buildings, fees shall be waived only for applications, permits and inspections for work related to plumbing and electrical systems damaged by such storm. Applicants must submit certification by a licensed master electrician or a licensed master plumber or fire suppression piping contractor that the proposed work is related to such storm damage. The commissioner may request the applicant to submit additional information relating to the damage. Waiver of such fees pursuant to this section shall be applicable for jobs where the initial application for construction document approval or, if no construction documents are required, application for permit is submitted on or after October 30, 2012 and on or before December 31, 2013.

§28-112.11 Waiver of application, permit and inspection fees for work funded under the “Build It Back” program. The city has implemented a disaster recovery program known as the Build It Back program that uses federal Community Development Block Grant Disaster Recovery funds to
aid in the recovery of residential property damaged or destroyed in the severe storm known as Sandy that occurred on October 29 and 30, 2012. To assist in such recovery, the commissioner shall waive fees, which would otherwise be required to be paid to the department by this code, the electrical code or the rules of the department, in connection with applications, permits and inspections for work that is officially approved and funded under the Build It Back program. The waiver provided for in this section shall apply only to work performed on property that is classified as residential and to fees payable on or after July 1, 2014. With respect to work on a mixed use building, fees payable on or after such date may only be waived for work on the residential units of such building and portions of such building that serve the residential units.

§28-112.12 Reduction in fees or penalties for sponsoring site safety training. The commissioner shall establish by rule a program for reducing the amount of any fee to be imposed upon a person or any civil penalty to be imposed upon a person for a violation, other than an immediately hazardous violation, where one or more of the following conditions is satisfied:

1. Such person demonstrates, in a form and manner established by the commissioner, that such person has paid, either directly or indirectly, for the costs of one or more workers to obtain the training needed to comply with section 3321 of the New York city building code or has otherwise arranged for such workers to receive such training at no cost to such workers, provided that this shall not include any worker trained pursuant to an agreement that such person was required to enter into pursuant to section 28-204.1.1 or any worker trained under a program developed pursuant to section 22-509 of the administrative code.

2. The fee or penalty to be imposed upon such person relates to a building site for which the owner of such site, or a person acting on such owner’s behalf, demonstrates, in a form and manner established by the commissioner, that such owner or such person acting on such owner’s behalf has paid, either directly or indirectly, for the costs of one or more workers to obtain the training needed to comply with section 3321 of the New York city building code or has otherwise arranged for such workers to receive such training at no cost to such workers, provided that this shall not include any worker trained pursuant to an agreement such person was required to enter into pursuant to section 28-204.1.1 or any worker trained under a program developed pursuant to section 22-509 of the administrative code.

ARTICLE 113
MATERIALS

§28-113.1 General. Materials shall be used, tested and approved for use in accordance with the specific provisions of this code and department rules, except that the commissioner shall have the power to limit or prohibit the use of any material to protect public safety. Materials shall be identified or described on construction documents and other related documents.

§28-113.2 Use of materials. Except as set forth in sections 28-113.2.1 through [113.2.6] 28-113.2.6 materials specifically prescribed by this code or department rules may be used as prescribed without the prior approval of the commissioner.

§28-113.2.1 Approved material. Whenever this code or the rules of the department requires the use of an approved material, such material shall not be used without the prior approval of the commissioner for such use and may be used only to the extent set forth in such approval.
§28-113.2.2 Alternative materials. Except as otherwise specifically limited by this code, the provisions of this code are not intended to prevent the installation of any material or to prohibit any alternative engineered design or method of construction not specifically prescribed by this code, provided that the use of such alternative material has been previously approved by the commissioner and may be used only to the extent set forth in such approval. The use of an alternative material, design, method of construction or equipment shall be approved where the commissioner finds that the proposed design is satisfactory and complies with the intent of the provisions of this code, and that the material, method or work offered is, for the purpose intended, at least the equivalent of that prescribed in this code in quality, strength, effectiveness, fire resistance, durability and safety.

§28-113.2.3 Listed or labeled. Whenever this code or the rules of the department requires that material used be listed or labeled to a standard, material that is so listed or labeled may be used in accordance with such list or label without the prior approval of the commissioner. However, the commissioner reserves the right to require that information be submitted with regard to the testing and evaluation of any material so listed or labeled including but not limited to inspection certificates, test or evaluation reports, analysis, computations or other information used to determine that the material so listed or labeled complies with the applicable standard.

§28-113.2.4 Material not listed or labeled. Whenever this code or the rules of the department requires that material be listed or labeled to a standard and material proposed to be used is not so listed or labeled, the use of such material shall be subject to prior approval by the commissioner and such material shall be used only to the extent set forth in such approval.

§28-113.2.5 Reuse. The use of used material that meets the requirements of this code for new material is permitted unless otherwise provided in this code. Used equipment and devices shall not be reused without the prior approval of the commissioner and may be used only to the extent set forth in such approval.

§28-113.2.6 Previously issued approvals. Materials that were previously approved by the board of standards and appeals or by the department before July 1, 2008 may continue to be used to the extent that such approval is not inconsistent with the requirements or standards of this code, unless specifically amended or repealed by the commissioner.

§28-113.3 Approval procedure. Approval of materials pursuant to section 28-113.2 shall be in accordance with procedures set forth in this code and the rules of the department. The cost offsets, reports and investigations required under these provisions shall be paid by the applicant.

§28-113.3.1 Performance. When required by the commissioner, specific information consisting of test reports conducted by an approved testing agency in accordance with standards referenced in the construction codes or other such information as necessary, shall be provided for the commissioner to determine whether the material will perform for the use intended.

§28-113.3.2 Research and investigation. When required by the commissioner, sufficient technical data shall be submitted to the commissioner to substantiate the proposed use of any material. If it is determined that the evidence submitted is satisfactory proof of performance for the use intended, the commissioner shall approve the use of the material subject to the requirements of this code.
§28-113.3.3 Retesting of materials. All materials tested and accepted for use shall be subject to periodic retesting as determined by the commissioner; and any material that upon retesting is found not to comply with the code requirements or the requirements set forth in the approval of such material shall cease to be acceptable for the use intended. During the period for such retesting, the commissioner may require the use of such material to be restricted or discontinued if necessary to secure safety.

§28-113.3.4 New materials. New materials not provided for in this code, and any material of questioned suitability proposed for use in the construction of a building or structure, shall be subjected to the tests prescribed in this code or in the rules of the department to determine character, quality and limitations of use.

§28-113.3.5 Research reports. Supporting data, where necessary to assist in the approval of materials not specifically provided for in this code, shall consist of valid research reports from approved sources or other equivalent approved supporting documentation.

§28-113.3.6 Conflicting test results. Whenever there is evidence of conflicting results in the test of any material, the commissioner shall determine the acceptability of the material and/or the acceptable rating for such material.

§28-113.3.7 Amendment and repeal. The commissioner shall have the power to amend or repeal the approval of any material, including materials previously approved by the board of standards and appeals.

§28-113.3.8 Maintenance of records of approved material. For any material that has been approved, a record of such approval, including the conditions and limitations of the approval, shall be posted on the department’s website or shall be made available for public inspection at appropriate times.

§28-113.4 Labeling. Materials required to be labeled shall be labeled in accordance with the procedures set forth in this code or the recognized referenced standards.

§28-113.4.1 Testing. An approved agency shall test a representative sample of the material being labeled to the relevant standard or standards. The approved agency shall maintain a record of the tests performed. The record shall provide sufficient detail to verify compliance with the test standard.

§28-113.4.2 Inspection and identification. The approved agency shall at regular intervals perform surveillance inspections, which shall be in-plant if necessary, of the material that is to be labeled. The inspection shall verify that the labeled material is representative of the material tested.

§28-113.4.3 Label information. The label shall contain the manufacturer’s or distributor’s identification, model number, serial number or definitive information describing the material’s performance characteristics and the approved agency’s identification.

§28-113.4.4 Shipment and delivery certification of materials listed, labeled or approved. In the case of the shipment or delivery of material listed or labeled to a standard, such material shall
be appropriately labeled or accompanied by the inspection certificate of an approved agency that the material is the same as that which was tested and evaluated by such agency. In the case of the shipment or delivery of material previously approved by the commissioner, the material shall be identified by a tag or certificate indicating that the material is the same that was approved for its intended use by the commissioner or, if applicable, previously approved by the board of standards and appeals, and containing the applicable approval number or calendar number under which the material received such approval.

§28-113.5 Volatile organic compounds emissions in carpet and carpet cushion. On and after July 1, 2013 carpet and carpet cushion as defined in section 17-1401 of the administrative code shall comply with the limits on volatile organic compound emissions set forth in chapter 14 of title 17 of such code.

ARTICLE 114
APPROVED AGENCIES

§28-114.1 General. Approved agencies shall satisfy the provisions of this article and the rules of the department as to qualifications and operations. The commissioner may revoke or suspend the commissioner’s approval of or otherwise sanction an approved agency for cause.

§28-114.1.1 Independent. An approved agency shall perform its authorized duties objectively and competently. The agency shall disclose possible conflicts of interest so that objectivity can be confirmed.

§28-114.1.2 Testing equipment. An approved agency shall have adequate testing equipment to perform required tests. The equipment shall be periodically calibrated.

§28-114.1.3 Personnel. An approved agency shall employ experienced personnel qualified to conduct, supervise and evaluate the tests or inspections that it undertakes. Special inspections may be performed only by employees of such agency who are special inspectors qualified pursuant to department rules to perform or witness the particular test or inspection. The commissioner may require proof of the qualifications of employees.

§28-114.1.4 Background. The commissioner may require an approved agency to submit to an investigation of its background and of the background of its principals as a condition of approval.

§28-114.1.5 Insurance. An approved agency shall maintain liability insurance as required by department rules.

§28-114.2 Written evaluation by approved agency. An agency’s evaluation of material or report of an inspection shall be in writing after satisfactory completion of the required inspection or test.

§28-114.3 Records. The approved agency shall maintain records of inspection and test reports for at least six years or for such period as the commissioner shall determine and shall make such records available to the department upon request.

§28-114.4 Re-authorization of approved agencies. An approved agency shall have its approval re-authorized in accordance with rules of the department.
§28-114.5 Disqualification. The commissioner may disqualify an approved agency or inspector from performing inspections pursuant to this code for cause. The approved agency or inspector shall be given prior notice of the proposed disqualification and the opportunity to contest such action. A list of approved agencies and inspectors who have been disqualified from performing inspections shall be maintained and made available to the public on the department’s website.

ARTICLE 115
SPECIAL INSPECTION AGENCIES AND SPECIAL INSPECTORS

§28-115.1 General. Special inspection agencies are approved agencies and shall be subject to the provisions of article 114 of this chapter. Special inspection agencies and special inspectors shall satisfy the provisions of this article and the rules of the department as to qualifications in order to perform special inspections required by chapter 17 of the New York city building code or elsewhere in this code or department rules.

§28-115.2 Disqualification. The commissioner may disqualify a special inspection agency or a special inspector from performing special inspections pursuant to this code for cause. The special inspection agency or special inspector shall be given prior notice of the proposed disqualification and the opportunity to contest such action. A list of special inspection agencies and special inspectors who have been disqualified from performing special inspection shall be maintained and made available to the public upon request.

§28-115.3 Records. A special inspector shall maintain records of special inspections on a building by building basis for at least [6] six years or for such period as the commissioner shall determine and shall make such records available to the department upon request.

ARTICLE 116
INSPECTIONS AND SIGN-OFF OF COMPLETED WORK

§28-116.1 General. Construction or work for which a permit is required shall be subject to inspection in accordance with this code and such construction or work shall remain accessible and exposed for inspection purposes until the required inspection is completed. A satisfactory inspection by the department or the acceptance by the department of a satisfactory report of an inspection by an approved agency shall not be construed to be an approval by the department of a violation of the provisions of this code or of any other provision of law. It shall be the duty of the permit holder to cause the work to remain accessible and exposed for inspection purposes. The permit holder shall be liable for any expense entailed in the removal or replacement of any material required to allow inspection. The inspector shall supply a report of the results of each inspection.

§28-116.1.1 Defective work and discrepancies with approved construction documents. An approved agency conducting inspections shall report defective work and discrepancies with the approved construction documents to the contractor and, when applicable, to the superintendent of construction, for correction. The approved agency shall report uncorrected discrepancies and defective work to the registered design professional of record and the owner in writing.
§28-116.1.2 Hazardous conditions. The approved agency shall report all conditions noted as hazardous to life, safety or health that are not immediately corrected to the immediate attention of the commissioner.

§28-116.2 Types of inspections. The inspections set forth in sections 28-116.2.1 through 28-116.2.4 are required or authorized by this code.

§28-116.2.1 Preliminary inspection. Before approving construction documents, the commissioner is authorized to examine or cause to be examined structures or premises for which an application has been filed. The department shall conduct preliminary inspections of no less than 20 percent of buildings containing six or more units where (i) an application for construction documents is submitted to the department and (ii) the applicant has indicated that the building that is the subject of such application is unoccupied, in order to verify the occupancy status of such sites.

§28-116.2.1.1 Preliminary inspection reporting. By January 1, 2021 and no later than January 1 annually thereafter, the department of buildings shall submit to the mayor and the speaker of the council a report describing the findings of preliminary inspections performed pursuant to section 28-116.2.1 in the preceding year. Such report shall include, but not be limited to: (i) the total number of applications found to have falsely indicated that a building was unoccupied; and (ii) for each application found to have falsely indicated that a building was unoccupied, the location of the associated building and date of filing for such application.

§28-116.2.2 Compliance inspections. In addition to the inspections specified in this code, the commissioner is authorized to make or require other inspections of any construction work to ascertain compliance with the provisions of this code and other laws that are enforced by the department.

§28-116.2.3 Special inspections, progress inspections and other inspections required during the progress of work. After the issuance of a work permit, special inspections, progress inspections and other inspections required by this code to be made during the progress of the work shall be made at such times or at such stages of the work and in such manner as shall be provided by this code or as otherwise required by the commissioner. The permit application shall set forth an inspection program for the work. Such inspections may be made by approved agencies or by the department as provided in this code or in the rules of the department. Special inspections shall be performed only by individuals who are special inspectors. The commissioner may accept inspection and test reports from approved agencies and the work may, unless otherwise specifically provided by code provisions or directed by the commissioner, proceed without any verifying inspection or test by the department. The names and business addresses of special inspectors and approved agencies shall be set forth in the work permit application. All inspection reports shall be in writing and signed by the person or entity performing the inspection. A record of all inspections shall be kept by the person performing the inspection. The commissioner may require inspection reports to be filed with the department. Records of inspections made by approved agencies and special inspectors shall be maintained by such persons for a period of six years after sign-off of the work or for such other period of time as the commissioner may require and shall be made available to the department upon request.
§28-116.2.3.1 Special and progress inspection of fabricated items. Where fabrication of regulated products is performed on the premises of a fabricator’s shop, special [or] and progress [inspection] inspections of the fabricated items [is] are required as provided in this code. The approved agency shall verify that the fabricator maintains detailed fabrication and quality control procedures that provide a basis for inspection control of the workmanship and the fabricator’s ability to conform to approved construction documents and referenced standards. The approved agency shall review the procedures for completeness and adequacy relative to the code requirements for the fabricator’s scope of work.

Exceptions:

1. Work that is subject to progress inspections and performed on the fabricator’s premises shall not be subject to progress inspections where the fabricator is approved by the commissioner in accordance with section 28-116.6 of this code.

2. Work that is subject to special inspections and performed on the fabricator’s premises shall be inspected by the special inspection agency in accordance with Section 1704.2.2.3 of the New York city building code where the fabricator is approved by the commissioner in accordance with section 28-116.6 of this code.

§28-116.2.3.2 Special inspection of raising and moving of a building. Where the lowest above-grade floor or the lowest subgrade floor of a building is to be raised, lifted, elevated or moved, special inspection of such work is required. The permit holder shall notify the department in writing at least 48 hours before the commencement of such work.

§28-116.2.4 Final inspection. There shall be a final inspection of all permitted work. Final inspections shall comply with sections 28-116.2.4.1 through 28-116.2.4.3.

§28-116.2.4.1 Final inspection prior to certificate of occupancy. In all cases where the permitted work requires the issuance of a new or amended certificate of occupancy, the final inspection shall be performed by the department in the presence of the permit holder, the registered design professional of record or the superintendent of construction. Such inspection shall be performed after all work authorized by the building permit is completed and before the issuance of the certificate of occupancy. All failures to comply with the provisions of this code or approved construction documents shall be noted and the owner promptly notified thereof in writing. All defects noted in such inspection shall be corrected. Reports of such final inspections shall be maintained by the department. The final inspection report shall confirm that defects noted have been corrected, that the work is in substantial compliance with the approved construction documents and with this code and with other applicable laws and rules and that all required inspections were performed.

Exception: For amended certificates of occupancy subject to section 28-118.16.2, the term construction documents, as used in section 28-116.2.4.1, shall consist of an accurate and complete final lot survey made by a land surveyor, and floor and roof plans showing, at a minimum, compliance with exit requirements in accordance with this code.

§28-116.2.4.2 Final inspection prior to letter of completion. In all cases where the permitted work does not require the issuance of a certificate of occupancy, the final inspection shall be performed by [the department or at the option of the owner by] an approved agency on behalf of the owner or by the department as directed by the commissioner. Whenever the department performs a final inspection, the department shall
The applicant shall take all reasonable and necessary steps to ensure that the final inspection is performed within one year after the expiration of the last permit. The inspection shall be performed after all work authorized by the building permit is completed. The approved agency performing the inspection shall report defective work and discrepancies with the approved construction documents to the contractor and, when applicable, to the superintendent of construction, for correction. The approved agency shall report uncorrected discrepancies and defective work to the registered design professional of record and the owner in writing. The approved agency shall report all conditions noted or observed as hazardous to life, safety or health that are not immediately corrected to the immediate attention of the commissioner. All defects noted in such inspection shall be corrected. The final inspection report shall confirm that defects noted have been corrected, that the work is in substantial compliance with the approved construction documents and with this code and other applicable laws and rules and that all required inspections were performed. Final inspection reports shall be filed with and maintained by the department. Records of final inspections made by approved agencies shall be maintained by such persons for a period of six years after sign-off or for such other period as the commissioner shall require and shall be made available to the department upon request.

**Exception:** Final inspection shall be performed by the department for permitted work in R-2 occupancies if the building is listed on the department of housing preservation and development’s website pursuant to paragraph 6 of subdivision m of section 27-2115 of the administrative code. The department shall charge a fee for such inspection.

§28-116.2.4.3 Final inspection of gas piping systems. The final inspection of gas piping systems shall be performed by the department in the presence of the permit holder, the registered design professional of record or the superintendent of construction. Such inspection shall be performed after all work authorized by the building permit is completed. All failures to comply with the provisions of this code or approved construction documents shall be noted and the owner promptly notified thereof in writing. All defects noted in such inspection shall be corrected. Reports of such final inspections shall be maintained by the department. The final inspection report shall confirm that defects noted have been corrected, that the work is in substantial compliance with the approved construction documents and with this code and with other applicable laws and rules and that all required inspections were performed.

§28-116.3 Inspection requests. It shall be the duty of the permit holder to notify the department or the person or entity designated to perform the inspection when work requiring inspection is ready to be inspected. It shall be the duty of the permit holder to provide access to and means for inspection of such work for any inspections that are required by this code.

§28-116.3.1 Additional notifications for special inspections. The permit holder shall also notify the relevant special inspection agency in writing at least 72 hours prior to the commencement of any work requiring special inspection.

§28-116.4 Sign-off of completed work. Upon submission of a satisfactory report of final inspection and all required submittal documents, the department shall document the sign-off of the project and issue a letter of completion, or, if applicable, a certificate of occupancy for the work. The owner shall take all necessary steps required by the department for the issuance of such letter of completion or certificate of occupancy within [4] one year following the expiration of the last permit.
§28-116.4.1 Issuance of certificate of compliance. The following types of service equipment shall not be operated until the department issues a certificate of compliance after submission of a satisfactory report of inspection and testing of such equipment in accordance with this code and all required submittal documents:

1. Air-conditioning, ventilation and exhaust systems.
2. Elevators, escalators, moving walkways and dumbwaiters.
3. Fuel burning and fuel-oil storage equipment.
4. Refrigeration systems.
5. Heating systems.

Exception: A certificate of compliance shall not be required in connection with work specifically exempted from permit requirements in accordance with this code or department rules.

§28-116.5 Payment of outstanding penalties. The department may refuse to issue a letter of completion or certificate of occupancy pending payment of all outstanding fines or civil penalties imposed for violations of this code, the 1968 building code or other laws enforced by the department at the same building.

§28-116.6 Fabricator approval. Approval of fabricators by the department shall be based upon review of the fabricator’s written procedural and quality control manuals and periodic auditing of fabrication practices by an approved agency.

§28-116.6.1 Certificate of intent to fabricate. For all work where approval is sought based upon section 28-116.6, the approved fabricator shall submit a certificate of intent to fabricate such work to the department identifying the work to be performed as an approved fabricator, and that such work shall be performed in accordance with the approved construction documents, referenced standards and applicable provisions of law and for which site the work is being fabricated prior to fabricating any items for such project.

§28-116.6.2 Fabricator’s certificate of compliance. For all fabricated items, the approved fabricator shall submit a certificate of compliance to the department stating that the work was performed in accordance with the approved construction documents, referenced standards and applicable provisions of law.

§28-116.7 Post-construction stormwater management facilities. The department shall not issue a certificate of occupancy or letter of completion with respect to a building or premises that is part of a covered development project unless the applicant submits proof that the department of environmental protection has issued a stormwater maintenance permit for any post-construction stormwater management facilities serving such building or premises.

ARTICLE 117
PLACES OF ASSEMBLY

§28-117.1 Place of assembly certificate of operation. It shall be unlawful to use or occupy any building or space, including an outdoor space, as a place of assembly without a certificate of
operation issued by the commissioner. An application for a certificate of operation shall be made to
the department in such form and containing such information as the commissioner shall provide. The
department shall inspect every place of assembly space prior to the issuance of a certificate of
operation. The commissioner shall not issue a certificate of operation unless the department
determines that the space conforms substantially to the approved construction documents and to this
code or the 1968 building code as applicable and that the certificate of occupancy authorizes such
use. A certificate of operation shall not be issued to a place of assembly providing seating or other
moveable furnishings unless the commissioner approves a plan conforming to this code or the 1968
building code as applicable and the rules of the department. Seating and other moveable furnishings
shall be maintained at all times during occupancy in accordance with the approved plan. Any
amendment of such plan shall be subject to the prior approval of the commissioner.

§28-117.1.1 Contents of the place of assembly certificate of operation. The certificate of
operation shall contain the place of assembly certificate number, the number of persons who may
legally occupy the space and any other information that the commissioner may determine. Such
certificate of operation shall be framed and mounted in a location that is conspicuously visible
to a person entering the space. For the purposes of this article, a department issued place of
assembly permit or place of assembly certificate of operation shall be valid until its expiration,
at which time a new place of assembly certificate of operation shall be required in accordance
with the provisions of this article and with the filing requirements of the department.

§28-117.1.2 New certificate required. The following changes to a place of assembly shall
require a new place of assembly certificate of operation instead of an amendment filed in
accordance with section 28-117.1.3:

1. For a department issued place of assembly permit or place of assembly certificate of
operation that does not have a nine-digit job number, any change of zoning use group,
assembly occupancy group A-1 through A-5, or any of the changes set forth in section
28-117.1.3.

2. For all other department issued place of assembly permits or place of assembly
certificates of operation, any change of zoning use group or assembly occupancy group
A-1 through A-5.

§28-117.1.3 Amendments. No change shall be made to a place of assembly that is inconsistent
with the most recently issued place of assembly certificate of operation or renewal unless an
amendment to such certificate is filed with and approved or accepted by the department. Changes
that require an amendment include any of the following:

1. Any physical change requiring an alteration permit to be issued by the department.

2. Any amendment to the plan for seating and other moveable furnishing, in accordance
with section 28-117.1.

3. Any change to the name of the establishment.

§28-117.2 Temporary place of assembly certificate of operation. At the commissioner’s discretion,
a temporary certificate of operation may be issued for a place of assembly space upon request by the
applicant in accordance with this code provided that public safety is not jeopardized thereby. The
Applicant shall notify the fire department when a temporary place of assembly certificate of operation is issued.

**Exception.** Applications for temporary certificates of operation for place of assembly space in prior code buildings shall be permitted to comply with the 1968 building code provided that public safety is not jeopardized thereby.

§28-117.3 **Duration of certificate.** A place of assembly certificate of operation shall be issued by the department and shall be effective for one year after its issuance. Thereafter, such certificate shall be effective only for periods of time during which there is in effect an annual place of assembly permit issued by the fire department pursuant to section 105.6 of the New York city fire code.

§28-117.4 **Security guards.** In the case of a certificate holder that offers for sale food and/or beverages for on-premises consumption, but not including establishments operated by a not-for-profit corporation, and employs or uses the services of a security guard, as that term is defined in subdivision [six] 6 of section [eighty-nine] 89 of the New York state general business law, such certificate holder shall comply with the provisions of article 7-A of the general business law, shall obtain proof that such security guard is registered pursuant to article 7-A of the New York state general business law, shall maintain such proof in a readily available location, in accordance with rules promulgated by the commissioner during all hours in which such place of assembly is open to the public, shall maintain a roster of all security guards working at any given time when such place of assembly is open to the public, and shall require each security guard to maintain on his or her person proof of registration at all times when on the premises.

**§28-117.4.1 Presumption.** For purposes of this section, there shall be a rebuttable presumption that a person employed or whose services are retained at a place of assembly is a security guard if his or her job functions include:

1. The monitoring or guarding of the entrance or exit of such place of assembly to manage ingress and egress to such place of assembly for security purposes during the hours of operation of such establishment; and/or
2. Protection of such place of assembly from disorderly or other unlawful conduct by patrons of such place of assembly.

**§28-117.4.1.1 Presumption not applicable to owner.** The rebuttable presumption in section 28-117.4.1 shall not apply to an individual who is an owner of the establishment as described in section 28-117.4 that has received a place of assembly certificate of operation.

**§28-117.4.2 Responsibility for violations.** Notwithstanding any provision of this section, only the holder of a certificate of operation shall be liable for violations of this article that relate to such holder’s obligations regarding security guards.

**§28-117.4.3 Enforcement.** In addition to employees of the department, employees of the police department and the department of consumer affairs shall have the authority to enforce the provisions of this article regarding security guards.

**§28-117.4.4 State liquor authority reporting.** The enforcement agency shall report any violation of the provisions of this section relating to security guards to the state liquor authority.
if the holder of the certificate of operation holds a license pursuant to the alcoholic beverage control law.

§28-117.5 Outdoor places of assembly. The commissioner shall not issue a certificate of operation to an outdoor temporary or permanent place of assembly, including, but not limited to, tents, platforms, stages and outdoor assembly seating, unless the department determines that the space complies with the provisions of the code.

ARTICLE 118
CERTIFICATES OF OCCUPANCY

§28-118.1 General provisions. No building or open lot shall be used or occupied without a certificate of occupancy issued by the commissioner. Issuance of a certificate of occupancy shall not be construed as an approval of a violation of the provisions of this code or of other applicable laws and rules.

§28-118.2 New buildings or open lots. No building hereafter constructed or open lot shall be occupied or used, in whole or in part, unless and until a certificate of occupancy shall have been issued certifying that such building or open lot conforms substantially to the approved construction documents and the provisions of this code and other applicable laws and rules.

§28-118.3 Completed buildings or open lots. The provisions of sections 28-118.3.1 through 28-118.3.4 shall apply to completed buildings or open lots.

Exception: The provisions of sections 28-118.3.1 and 28-118.3.2 shall not be interpreted to require an issuance of a new or amended certificate of occupancy for a change from a mercantile establishment to a business establishment, or from a business establishment to a mercantile establishment, provided all the following criteria are met:

1. Such alteration is limited to a change within the same zoning use group;
2. The maximum occupant load for the individual establishment, both as existing and proposed, does not exceed 74 persons based on occupant load calculations in accordance with Table 6-2 of the 1968 building code or Table 1004.1.3 of the New York city building code, as applicable;
3. The establishment is located on the ground floor, accessed by the public directly from the exterior of the building;
4. The establishment undergoing alteration complies or is made to comply with any other requirements that would be applicable to the alteration, including but not limited to accessibility, and fire protection requirements pursuant to sections 901.9.2 and 1101.3.1 of the New York city building code;
5. Such alteration does not require a change in the required exits. Relocation of exit doors of the same size or larger shall not constitute a change in the required exits; and
6. Such alteration does not require a change in the live load from that stated on the existing certificate of occupancy.
§28-118.3.1 Change of occupancy or use. No building, open lot or portion thereof hereafter altered so as to change from one occupancy group to another, or from one zoning use group to another, either in whole or in part, shall be occupied or used unless and until the commissioner has issued a certificate of occupancy certifying that the alteration work for which the permit was issued has been completed substantially in accordance with the approved construction documents and the provisions of this code and other applicable laws and rules for the new occupancy or use.

§28-118.3.2 Changes inconsistent with existing certificate of occupancy. No change shall be made to a building, open lot or portion thereof inconsistent with the last issued certificate of occupancy or, where applicable, inconsistent with the last issued certificate of completion for such building or open lot or which would bring it under some special provision of this code or other applicable laws or rules, unless and until the commissioner has issued a new or amended certificate of occupancy.

§28-118.3.2.1 Changes in the address, block, lot, or zoning lot. When changes are made in the address of a building or open use, the block and/or lot numbers, or the metes and bounds of the zoning lot that are inconsistent with that indicated on a certificate of occupancy, the owner shall obtain a new or amended certificate of occupancy within one year of such change. For purposes of this section:

1. The date of change in the metes and bounds of the zoning lot shall be the date of the approval of construction documents for any new building or enlargement on the zoning lot, as per article 104 following the reporting required in section 28-104.7.18;

2. The date of the change of the address or the block and/or lot numbers shall be the date such change is made effective by the borough president or the department of finance.

§28-118.3.3 Zoning lot change not inconsistent with existing certificate of occupancy. Where metes and bounds of the zoning lot have been changed after the effective date of the local law that added this section and construction documents are approved for a new building or enlargement within such metes and bounds, an owner of a tax lot within such metes and bounds with a certificate of occupancy that does not indicate zoning lot metes and bounds shall file an application with the department notifying it of the amended metes and bounds, including the city registration file number (CRFN) numbers of the related zoning lot exhibits, and obtain approval and sign off within one year from the date of such change in metes and bounds. For purposes of this section, the date of change in the metes and bounds of the zoning lot shall be the date of the approval of construction documents for any new building or enlargement on the zoning lot, in accordance with article 104 following the reporting required in section 28-104.7.18.

§28-118.3.4 Changes to exits. No building hereafter altered so as to cause a major alteration to existing exits shall be occupied or used unless and until the commissioner has issued a certificate of occupancy certifying that the alteration work for which the permit was issued has been completed substantially in accordance with the approved construction documents and the provisions of this code and other applicable laws and rules.

§28-118.3.5 Existing buildings or open lots without certificates of occupancy. A building or open lot in existence prior to January 1, 1938 and heretofore legally used or occupied without a certificate of occupancy or, if applicable, a certificate of completion, and
subject to the provisions of section 28-102.4 (continuation of lawful existing use), may continue to be used or occupied without a certificate of occupancy or, if applicable, a certificate of completion, [pursuant to the requirements of section six hundred forty-five of the New York city charter, this code and other applicable laws and rules] provided such use or occupancy is not inconsistent with the records of the department relating to the lawful use of such building or open lot, and complies with applicable laws and rules, and provided there is no change in the existing use or occupancy classification of the building, open lot or portion thereof.

§28-118.3.5.1 Zoning lot change. Where metes and bounds of a zoning lot have been changed after the effective date of this code for a building or open lot in existence prior to January 1, 1938 and heretofore legally used or occupied without a certificate of occupancy, the owner shall file an application with the department notifying it of such change in metes and bounds, including the CRFN numbers of the related zoning lot exhibits, and obtain approval and sign off within one year from the date of the change in metes and bounds of the zoning lot. For purposes of this section, the date of change in the metes and bounds of the zoning lot, shall be the date of the approval of construction documents for any new building or enlargement on the zoning lot, as per article 104 following the reporting required in section 28-104.7.18.

§28-118.3.4.1 §28-118.3.5.2 Application for certificate of occupancy. Upon application by the owner of such a building or open lot in existence prior to January 1, 1938, the commissioner shall issue a certificate of occupancy for such building, provided that at the time of issuing such certificate, such existing building is in compliance with all retroactive requirements of the 1968 building code applicable to such building and no notices of violation or other notices or orders affecting the building as they relate to the provisions of this code or the 1968 building code are pending before the department, and provided further that it is established to the satisfaction of the commissioner, after inspection and investigation, that the alleged use and occupancy of the building has heretofore legally existed.

§28-118.3.4.2 §28-118.3.5.3 Partial certificates of occupancy. Partial certificates of occupancy may be issued pursuant to section §28-118.16 28-118.20.

§28-118.4 Applications for certificates of occupancy. All applications for certificates of occupancy shall be submitted on forms furnished by the department. Applications for new buildings or additions to buildings shall be accompanied by an accurate and complete final lot survey made by a land surveyor showing such information as prescribed by the commissioner. The commissioner may waive the requirement of such survey in the case of small sheds, stands, temporary structures, signs, and similar small structures.

§28-118.4.1 Applicant. The application for a certificate of occupancy shall be made by or on behalf of the owner of the building or open lot; and if made by a person other than the owner, the application shall be accompanied by a signed statement of the applicant stating that the applicant is authorized by the owner to make the application. The full names and addresses of the owner, and applicant, and of the principal officers thereof, if a corporation, shall be stated in the application.

§28-118.4.2 Statement of compliance. When a certificate of occupancy for a new or altered building is applied for, the application shall be accompanied by a signed statement of the registered design professional of record or [permit holder] permittee, stating that such person has
examined the approved construction documents and specifications of the building for which the certificate of occupancy is sought, and that, to the best of his or her knowledge and belief, the building has been erected or altered in accordance with the approved construction documents and specifications and, as erected or altered, complies with the provisions of this code and all other applicable laws and rules, except insofar as variations or variances therefrom have been legally permitted or authorized, specifying such variations or variances in such required statement.

28-118.4.3 Timeframe for application. The application for the certificate of occupancy must be submitted within six months of the final construction inspection. The department may refuse to issue a certificate of occupancy where the final inspection was completed more than six months prior to such application.

§28-118.5 Review of applications for certificates of occupancy. All applications for certificates of occupancy and accompanying submittal documents shall be examined promptly after their submission. If the building is entitled to the certificate of occupancy applied for, the application shall be approved and the certificate of occupancy issued by the commissioner within 10 calendar days after submission of a complete application. Otherwise, the application shall be rejected and written notice of rejection, stating the grounds of rejection, shall be given to the applicant within 10 calendar days of the submission of the application. Wherever an application has been rejected and proof is thereafter submitted establishing that the grounds of rejection have been met and that the building is entitled to the certificate of occupancy applied for, the application shall be approved and the certificate of occupancy issued within 10 calendar days after submission of such proof.

§28-118.6 Issuance of certificate of occupancy. After the commissioner inspects the building or open lot and determines that the building or open lot conforms substantially to the approved construction documents and to the provisions of this code and other applicable laws and rules, the commissioner shall issue a certificate of occupancy that shall contain information including, but not limited to:

1. The building permit number.
2. The address of the structure.
3. Block and lot numbers pertaining to the zoning lot as of the date of issuance, as defined in section 12-10 of the New York city zoning resolution.
4. The description of the structure for which the certificate is issued.
5. A statement that the described portion of the structure has been inspected for compliance with the requirements of this code.
6. The name and signature of the commissioner.
7. The code under which the permit was issued.
8. The use and occupancy, in accordance with this code and the zoning resolution.
9. The type of construction as defined in this code.
10. The design occupant load of floors and spaces, including roofs.
11. Types of major fire suppression or alarm systems.
12. Any special stipulations and conditions of the building permit.

13. The maximum permissible live loads on the [several floors of the building] building floors and roofs.

14. The number of parking spaces.

§28-118.7 Pavement plan. No certificate of occupancy shall be issued for any building or open lot requiring a pavement plan pursuant to article 108 unless and until an inspection has been made to show that all work necessary for compliance with the pavement plan has been completed.

§28-118.7.1 Certification. No certificate of occupancy shall be issued for any building or open lot requiring a certification pursuant to article 108 unless and until the applicant, after completion of construction work, inspects the sidewalk and certifies that the sidewalk is free from defects.

Exception: The commissioner may issue a certificate of occupancy if in lieu of such certification the owner furnishes to the department prior to the issuance of the certificate of occupancy security satisfactory to the department that the sidewalk will be installed and paved or repaired within the time specified by the department.

§28-118.8 Sanitary/storm water drainage. No certificate of occupancy shall be issued until the department confirms by inspection that all work relating to the installation of the part of the sanitary/storm water drainage system which lies outside of such property, if and as required by section 24-526 of the administrative code, has been satisfactorily completed.

§28-118.9 Fire protection plan. No certificate of occupancy shall be issued until a fire protection plan, if required pursuant to article 109, has been filed and accepted.

§28-118.10 Electrical work. No certificate of occupancy shall be issued unless compliance with the New York city electrical code is certified by the commissioner.

§28-118.11 Certificates of compliance. No certificate of occupancy shall be issued until certificates of compliance are issued for the following types of service equipment:

1. Air conditioning and ventilation systems.
2. Elevators, escalators, moving walkways and dumbwaiters.
3. Fuel burning and fuel oil storage equipment.
4. Refrigeration systems.
5. Heating systems.

§28-118.12 Place of assembly certificate of operation. The issuance of a certificate of occupancy shall not authorize the use of any space as a place of assembly unless and until the commissioner thereafter issues a place of assembly certificate of operation.

§28-118.13 Certificates of occupancy for air-inflated structures, air-supported structures, and tents. Certificates of occupancy for air-inflated structures, air-supported structures, and tents shall be issued for a period not exceeding one year. Such certificates may be renewed for one-year periods
upon demonstration that the structure complies with all laws and rules in effect at the time of the request for renewal.

§28-118.14 Payment of outstanding fees and penalties. The department may refuse to issue a certificate of occupancy for a building pending payment of all outstanding fees, fines or civil penalties imposed for violations of this code, the 1968 building code or other laws enforced by the department at the same building.

§28-118.15 Temporary certificates of occupancy. Upon application, the commissioner is authorized to issue a temporary certificate of occupancy before the completion of the entire work covered by the permit, provided that the subject portion or portions of the building may be occupied and maintained in a manner that will not endanger public safety, health, or welfare. The commissioner may refuse to issue a temporary certificate of occupancy for a building pending payment of all outstanding fees, fines or civil penalties imposed for violations of this code, the 1968 building code or other laws enforced by the department at the same building. The commissioner shall set a time period during which the temporary certificate of occupancy is valid. The provisions of section 28-118.15.1 apply only to interim certificates of occupancy. Nothing in section 28-118.15.1 is intended to affect, alter or amend the commissioner’s power to issue or to set time periods for the expiration of temporary certificates of occupancy that are not interim certificates of occupancy.

§ 28-118.15.1 Interim certificate of occupancy. An interim certificate of occupancy may be issued authorizing occupancy of a specific floor or floors of a building prior to the completion of the entire work covered by a permit in accordance with this section and rules of the department, subject to the following conditions:

1. The building is of noncombustible construction and protected with an automatic sprinkler system;

2. Adequate means of egress are provided;

3. There are no outstanding objections relating to or affecting the occupancy of such portion of the building; and

4. Upon inspection, the portion of the building is deemed safe for occupancy without reliance upon temporary measures.

Exceptions: Section 28-118.15.1 shall not apply to:

1. Residential buildings with fewer than eight stories or fewer than four dwelling units; or

2. Non-residential buildings with fewer than five stories; or

3. Mixed-use buildings with fewer than four dwelling units; or

4. Parking structures.

§ 28-118.15.1.1 Issuance, contents and posting of interim certificate of occupancy. An interim certificate of occupancy shall be issued after an inspection by the commissioner
determines that the floor or floors of the building conform substantially to the approved construction documents and to the provisions of this code and other applicable laws and rules. Such interim certificate of occupancy shall contain the same information as a certificate of occupancy issued pursuant to section 28-118.6 and shall be posted while it is in effect in accordance with section 28-118.19 and replaced when necessary in accordance with section 28-118.19.1.

§ 28-118.15.1.2 Effective period. An interim certificate of occupancy shall remain in effect until the issuance of a certificate of occupancy for the building in accordance with section 28-118.6.

§ 28-118.15.2 Revocation and suspension. The commissioner may revoke or suspend a temporary certificate of occupancy, including an interim certificate of occupancy, that was issued in error, or on the basis of incorrect information provided to the department, or based on discontinuance of a nonconforming use pursuant to [Article] article V of the New York city zoning resolution, in accordance with the procedures set forth in sections 28-105.10.1 and 28-105.10.2 for the suspension or revocation of a permit.

§28-118.16 Amended certificate of occupancy. The provisions of sections 28-118.16.1 through 28-118.16.2 shall apply to amended certificates of occupancy.

§28-118.16.1 Buildings exceeding three stories in height and change does not exceed 20 percent of total floor area. Where a building exceeds three stories in height and the change does not exceed 20 percent of the total floor area, an amendment to the existing certificate of occupancy for such new use shall be issued by the commissioner certifying that the proposed new occupancy and use conforms to the provisions of the laws governing building construction and that the proposed use will not be in conflict with any provisions of the New York state labor law, New York state multiple dwelling law or the zoning resolution.

§28-118.16.2 Change in address of the structure, block and lot numbers or metes and bounds of a zoning lot subsequent to the issuance of a certificate of occupancy. Where no change is made to a building, open lot or portion thereof inconsistent with the last issued certificate of occupancy, an amended certificate of occupancy may be issued to reflect a change in the address of the structure, block and lot numbers or the metes and bounds of the zoning lot. Notwithstanding any other provisions of law, removal of violations and payments of outstanding penalties are not required prior to issuance of an amended certificate of occupancy in accordance with [this] section 28-118.16.2.

§28-118.17 Revocation of certificates of occupancy. The commissioner is authorized to request, in writing, pursuant to section [six hundred forty five] 645 of the New York city charter that the board of standards and appeals or a court of competent jurisdiction revoke, vacate, or modify a certificate of occupancy issued under the provisions of this code whenever the certificate is issued in error, or on the basis of incorrect information provided to the department, or the nonconforming use reflected on the certificate of occupancy is no longer permitted pursuant to [Article] article V of the New York city zoning resolution. This section shall not be construed to apply to interim certificates of occupancy and other temporary certificates of occupancy.
§28-118.18 Record of certificates. A record of all certificates of occupancy shall be kept by the department; and copies thereof shall be furnished by the department upon request, and on the payment of the fee prescribed in article 112 of this chapter. The certificate of occupancy or a copy thereof shall be available for inspection at the building at all reasonable times.

§28-118.19 Posting of certificates of occupancy. The owner shall post a copy of the building’s certificate of occupancy, partial certificates of occupancy or temporary, including interim, certificates of occupancy in accordance with this section [28-118.19], except buildings occupied entirely by group R-3. [Buildings] Owners of buildings that are not required to have a certificate of occupancy shall [be posted by the owner with] post a sign or placard in a form prescribed by the commissioner. The certificate of occupancy or sign, as applicable, shall be permanently affixed to the structure in a conspicuous location in a public hall, corridor, management office of the building or as otherwise prescribed by the commissioner.

§28-118.19.1 Replacement of posted certificates of occupancy and signs. All posted certificates of occupancy, partial certificates of occupancy, temporary, including interim, certificates of occupancy or signs, as applicable, shall not be removed or defaced and, if lost, removed or defaced, shall be immediately replaced. The commissioner may inspect or cause to be inspected periodically all buildings for compliance with the provisions of this code in regard to posting; and the inspection reports shall specify any violation thereof.

§28-118.20 Partial certificate of occupancy. A partial certificate of occupancy may be issued to a specific floor or floors of an existing building erected prior to January 1, 1938 subject to the following conditions:

1. The building does not have and is not otherwise required to have a certificate of occupancy or certificate of completion, if applicable.
2. The floor or floors for which a certificate of occupancy is issued shall not constitute more than 50 percent of the gross floor area of the building.
3. The building is of noncombustible construction and protected with an automatic sprinkler system.
4. Adequate means of egress are provided from all floors.
5. Upon inspection, the building is deemed safe for occupancy.

§28-118.21 Live loads posted. Where the live loads for which each floor or portion thereof of a commercial or industrial building is or has been designed to exceed 50 psf (2.40 kN/m²), a certificate of occupancy required by this article shall not be issued until such design loads shall be conspicuously posted by the owner in that part of each story in which they apply, using durable signs. It shall be unlawful to remove or deface such signs.  

Exception: This section [28-118.21] shall not apply to prior code buildings.

§28-118.22 Post-construction stormwater management facilities. The department shall not issue a certificate of occupancy with respect to a building or premises that is part of a covered development project unless the applicant submits proof that the department of environmental protection has issued a stormwater maintenance permit for any post-construction stormwater management facilities serving such building or premises.
§28-118.23 Extension, alteration or relocation of chimneys and vents. No certificate of occupancy shall be issued until all chimneys and vents required to be extended, altered or relocated by section 2113 of the New York city building code, section 801 of the New York city mechanical code or section 501 of the New York city fuel gas code have been so modified.

Exceptions:

1. A certificate of occupancy may be issued to the new or altered taller building where access is granted and conditions are observed that result in a determination that chimney or vent alteration is not required and a revised chimney or vent plan is submitted pursuant to section 107.18 of the New York city building code.

2. A certificate of occupancy may be issued to the new or altered taller building where one or more of the chimneys or vents requiring alteration has not been altered or proven to comply with the applicable requirements of the New York city fuel gas code or New York city mechanical code as required when the following conditions have been met:

   2.1. The owners of the affected buildings have provided their refusal of consent in writing, or the owner of the affected buildings failed to grant consent after the owner of the new or altered taller building has made all the required notifications to the affected building owners; and

   2.2. The owner of the new or taller building demonstrates to the department in the form of a written statement from a registered design professional that there is no hazard to the occupancy in whole or in part of the new or altered building from the continued operation of the chimneys or vents in question.

ARTICLE 119
SERVICE UTILITIES

§28-119.1 Connection of service utilities. It shall be unlawful for any utility company or utility corporation to supply gas to a building, place or premises in which new meters other than replacement are required until a certificate of approval of gas installation from the department is filed with such utility company or utility corporation. When new gas service piping has been installed, it shall be locked-off by the utility company or utility corporation either by locking the gas service line valve or by installing a locking device on the outside gas service line valve. The lock shall not be removed until the gas meter piping (other than utility owned) and gas distribution piping have been inspected and certified as required by the department of buildings as being ready for service.

§28-119.1.1 Gas shut-off for alterations to gas piping systems. When alterations, extensions or repairs to existing gas meter piping or gas distribution piping require the shut-off of gas flow to a building, the utility company shall be notified by the owner or his or her authorized representative.

§28-119.2 Temporary connection. The commissioner shall have the authority to authorize the temporary connection of the building or system to the gas service utility.

§28-119.3 Authority to disconnect utility service. The commissioner may authorize disconnection of gas service to the building, structure or system regulated by this code and the codes referenced in
case of emergency where necessary to eliminate an immediate hazard to life or property. The department shall notify the local gas utility company, and wherever possible the owner and occupant of the building, structure or service system of the decision to disconnect prior to taking such action.

§28-119.4 Notification of gas shut-off or non-restoration after inspection. Within 24 hours after gas service to a building is shut off by a utility company or utility corporation because of a class A or class B condition, as described in part 261 of title 16 of the New York codes, rules and regulations, and within 24 hours after gas service is, after an inspection by such a company or corporation, not restored because of such a condition, such company or corporation and the owner of such building shall each provide notice to the department in a form and manner prescribed by the department.

ARTICLE 120
 TENANT PROTECTION PLAN

§28-120.1 Tenant protection plan. A tenant protection plan shall be prepared and submitted for the alteration, construction, or partial demolition of buildings in which any dwelling unit will be occupied during construction, including newly constructed buildings that are partially occupied where work is ongoing. The tenant protection plan shall be prepared by a registered design professional and filed with the department. The registered design professional preparing the tenant protection plan shall be retained by the general contractor performing the alteration, construction, or partial demolition work. No permit shall be issued for work that requires a tenant protection plan unless such plan is approved by the department. Such plan shall contain a statement signed by the owner and signed by the applicant affirming that the building contains dwelling units that will be occupied during construction and shall identify in sufficient detail the specific units that are or may be occupied during construction, the means and methods to be employed to safeguard the safety and health of the occupants throughout the construction, including, where applicable, details such as temporary fire-rated assemblies, opening protectives, or dust containment procedures. Such means and methods shall be described with particularity and in no case shall terms such as “code compliant,” “approved,” “legal,” “protected in accordance with law” or similar terms be used as a substitute for such description. The tenant protection plan must be site specific. The elements of the tenant protection plan may vary depending on the nature and scope of the work but at a minimum, must comply with all applicable laws and regulations, including the New York city construction codes, the New York city housing maintenance code, the New York city noise control code and the New York city health code, and shall make detailed and specific provisions for:

1. **Egress.** At all times in the course of construction, provision shall be made for adequate egress as required by this code and the tenant protection plan shall identify the egress that will be provided. Required egress shall not be obstructed at any time except where approved by the commissioner.

2. **Fire safety.** All necessary laws and controls, including those with respect to occupied dwellings, as well as additional safety measures necessitated by the construction shall be strictly observed.

3. **Health requirements.** Specification of means and methods to be used for control of dust, disposal of construction debris, pest control and maintenance of sanitary facilities shall be included.
3.1. There shall be included a statement of compliance with applicable provisions of law relating to lead and asbestos, and such statement shall describe with particularity what means and methods are being undertaken to meet such compliance.

4. **Compliance with housing standards.** The requirements of the New York city housing maintenance code, and, where applicable, the New York state multiple dwelling law shall be strictly observed.

5. **Structural safety.** No structural work shall be done that may endanger the occupants.

6. **Noise restrictions.** Specification of means and methods to be used for the limitation of noise to acceptable levels in accordance with the New York city noise control code shall be included. Where hours of the day or the days of the week in which construction work may be undertaken are limited pursuant to the New York city noise control code, such limitations shall be stated.

7. **Maintaining essential services.** Where heat, hot water, cold water, gas, electricity, or other utility services are provided in such building or in any dwelling unit located therein, the tenant protection plan shall specify the means and methods to be used for maintaining such services during such work in accordance with the requirements of the New York city housing maintenance code. If a disruption of any such service is anticipated during the work, then such plan shall specify the anticipated duration of such disruption and the means and methods to be employed to minimize such disruption, including the provision of sufficient alternatives for such service during such disruption. Notification of the disruption must be given to all affected occupants of occupied dwelling units.

**Exception:** In the following instances, the tenant protection plan may be prepared and filed by the registered design professional of record for the alteration, construction, or partial demolition work as part of the underlying application:

1. Work in occupied one- and two-family homes.

2. Work limited to the interior of a single dwelling unit of an occupied multiple dwelling with no disruption to the essential services of other units, where such dwelling is owner-occupied. For a dwelling unit within a property that is owned by a condominium or held by a shareholder of a cooperative corporation under a proprietary lease, the unit must be occupied by the owners of record for such unit.

§28-120.1.1 **Public availability of tenant protection plan.** Upon issuance of a permit for work containing a tenant protection plan, the department shall make the tenant protection plan publicly available on its website.

§28-120.1.2 **Provision of copy of tenant protection plan to occupants upon request.** The owner of a building undergoing work for which a tenant protection plan is required by section 28-120.1 shall, upon request from an occupant of a dwelling unit within such building, provide such occupant with a paper copy of the tenant protection plan approved by the department.

§28-120.1.3 **Notice to occupants.** Upon issuance of a permit for work containing a tenant protection plan, the owner shall (i) distribute a notice regarding such plan to each occupied dwelling unit and (ii) post a notice regarding such plan in a conspicuous manner in the building lobby, as well as on each floor within ten feet of the elevator, or in a building where there is
no elevator, within ten feet of or in the main stairwell on such floor. The notice shall be in a
form created or approved by the department and shall include:

1. A statement that occupants of the building may obtain a paper copy of such plan from
the owner and may access such plan on the department website;

2. The name and contact information for the site safety manager, site safety coordinator or
superintendent of construction required by section 3301.3 of the New York city building
code, as applicable, or, if there is no site safety manager, site safety coordinator or
superintendent of construction, the name and contact information of the owner of the
building or such owner’s designee; and

3. A statement that occupants of the building may call 311 to make complaints about the
work.

§28-120.2 Phased tenant protection plans. Multiple layouts of the tenant protection features
enumerated in section 28-120.1 may be submitted at any time during construction operations to
show phased tenant protection plan designs consistent with the phase of anticipated work. Layouts
submitted subsequent to a previously approved tenant protection plan shall constitute an
amendment to such plan. Such amended plan shall be approved by the department prior to the
commencement of the work requiring such amended plan.

§28-120.3 Contractor statement. The permit holder for the underlying alteration, construction,
or partial demolition shall sign a statement certifying that the tenant protection plan submitted
by the registered design professional coordinates with the scope of work intended.

Exception: This statement shall not be required for:

1. Work in occupied one- and two-family homes.

2. Work limited to the interior of a single dwelling unit of an occupied multiple dwelling
with no disruption to the essential services of other units, where such dwelling is owner
-occupied. For a dwelling unit within a property that is owned by a condominium or
held by a shareholder of a cooperative corporation under a proprietary lease, the unit
must be occupied by the owners of record for such unit.

§ 2. Chapter 2 of title 28 of the administrative code of the city of New York, as added
by local law number 33 for the year 2007, section 28-201.2.1 as amended by, and section 28-204.1.1
as added by, local law 196 for the year 2017, section 28-201.2.2 as amended by local law 33 for the
year 2018, section 28-201.2.3 as added by local law 47 for the year 2012, sections 28-201.3.1, 28-
204.3, 28-204.4, 28-204.6.3, 28-205.1.2.3, 28-207.4.2, 28-207.4.3, 28-207.5, 28-207.5.1, 28-211.1,
216.3.1, 28-216.4, 28-216.5, 28-216.6.1, 28-216.6.3, 28-216.6.4, 28-216.7.3, 28-216.8.3.1, 28-
216.8.3.3, 28-216.8.4, 28-216.9, 28-217.1, 28-217.1.1, 28-217.1.2, 28-217.1.3, 28-217.1.4, 28-
217.1.5, 28-217.1.6, 28-217.1.7, 28-218.1, 28-218.2, 28-218.3, 28-218.4, 28-218.5, 28-218.6, 28-
216.7 as amended by, and sections 28-207.2.5 and 28-207.4.4 as added by, local law 141 for the year
2013, section 28-202.1 as amended by, and sections 28-202.4 and 28-202.4.1 as added by, local law
70 for the year 2018, sections 28-202.3 and 28-202.3.1 as added by local law 205 for the year 2017,
section 28-203.1 as amended by local law 203 for the year 2017, sections 28-204.2 as amended by
local law 34 for the year 2008, section 28-204.6 as amended by local law 153 for the year 2017,
section 28-204.6.1 as added by local law 152 for the year 2017, section 28-207.2.6 as amended by local law 157 for the year 2017, sections 28-207.2.4, 28-207.2.4.1, and 28-211.1.2 as added by local law 8 for the year 2008, section 28-207.4 as amended by local law 150 for the year 2017, section 28-210.1.1 as added by local law 94 for the year 2017, section 28-210.2 as added by local law 37 for the year 2007, section 28-210.3 as added by local law 45 for the year 2012, section 28-210.3.1 as added by local law 87 for the year 2017, sections 28-213.1.1 and 28-213.1.2 as amended by local law 156 for the year 2017, sections 28-213.5, 28-213.5.1, 28-213.5.2, and 28-213.5.3 as added by local law 155 for the year 2017, sections 28-213.6 and 28-213.7 as added by local law 158 for the year 2017, sections 28-219.1, 28-219.2, 28-219.2.1, 28-219.2.2, and 28-219.3 as amended by local law 51 for the year 2014, and section 28-219.4 as added by local law 101 for the year 2015, is amended to read as follows:

CHAPTER 2
ENFORCEMENT
ARTICLE 201
GENERAL

§28-201.1 Unlawful acts. It shall be unlawful to erect, construct, alter, extend, repair, fail to maintain, move, remove, demolish, occupy, use or operate any building, structure, premises, or equipment, or to conduct any subject matter regulated by this code or by the zoning resolution, or to cause same to be done, in conflict with or in violation of any of the provisions of this code, the zoning resolution, or the rules of the department or, with regard to existing buildings, any applicable provision of the 1968 building code or any other law or rule enforced by the department. It shall be unlawful to fail to comply with an order of the commissioner or to violate any order of the commissioner issued pursuant to this code, the 1968 building code, the zoning resolution or any law or rule enforced by the department.

§28-201.2 Classification of violations. The commissioner shall promulgate rules classifying all violations of this code, the zoning resolution or, with regard to existing buildings, the 1968 building code or other laws or rules enforced by the department as immediately hazardous violations, major violations or lesser violations unless the classification of such violations is specifically directed by this code. Such classification shall be based on the effect of the violation on life, health, safety or the public interest or the necessity for economic disincentive.

§28-201.2.1 Specified immediately hazardous violations. The commissioner shall classify the following violations as immediately hazardous:

1. With respect to violations of article 210 of this chapter:

   1.1. A violation of section 28-210.1 in which a building legally approved for occupancy as a one-family or two-family dwelling (as set forth in the certificate of occupancy or if no certificate of occupancy is required, as evidenced by official records) is illegally converted to or maintained as a dwelling for occupancy by four or more families; or

   1.2. A violation of sections 28-210.1 and 28-210.2 in any building involving the illegal conversion, maintenance or occupancy of three or more dwelling units than are
legally authorized by the certificate of occupancy or if no certificate of occupancy is required as evidenced by official records.

2. Any violation of section 28-211.1 false statement;
3. Any violation of a stop work order or of a cease use order;
4. Any violation of a vacate order or order to seal, secure and close, or closure order;
5. Unlawful demolition;
6. Falsely impersonating an employee or authorized representative of the department;
7. Occupancy without a required certificate of occupancy;
8. Intentional disobedience or violation of any provision of a closure order;
9. Submittal of a materially false or misleading professional certification.
10. A violation of section 28-212.11.
12. A violation by a licensed rigger or person performing the functions and duties of a licensed rigger of the provisions of sections 28-404.1 or 28-401.9 of this code or such person’s failure to ensure that workers have certificates of fitness required pursuant to this code or applicable rule or any person’s violation of the provisions of [section] sections 3314.4.3.1 and 3314.4.3.4 of the New York city building code.
13. A violation of any provision of chapter 4 of this title for engaging in any business or occupation without a required license or other authorization or a violation of section 27-3017 for performing electrical work without a required license.

13.2 The minimum civil penalty that shall be imposed for a violation of section 27-3017 of this code and the minimum fine that shall be imposed for a violation of such section shall be $4,800. The maximum fine that shall be imposed for a violation of such section shall be $25,000. Such violation may also be punished, in addition to or instead of such fine, by imprisonment of not more than one year.

14. Any person who knowingly permits or causes a violation of [paragraph] section 3314.4.5 or [paragraph] section 3314.4.6 [of subdivision 3314.4 of section BC 3314] of the New York city building code.
15. A violation of sections 3303.4.5 and 3303.4.6 of the New York city building code.
16. A violation of section 28-210.3 that involves more than one dwelling unit or a second or subsequent violation of section 28-210.3 by the same person at the same dwelling unit or multiple dwelling.
17. A violation of sections 28-119.1 or 28-119.1.1.
19. A violation of sections 406.6.2, 406.6.2.1, 406.6.2.2, 406.6.2.3 or 406.6.3 of the New York city fuel gas code.
20. A second or subsequent violation of section 3321.1 of the New York city building code.

§28-201.2.2 Specified major violations. The commissioner shall classify the following violations as major violations:

1. A violation of section 28-210.1 or 28-210.2 other than a violation that is directed to be classified as immediately hazardous.

2. Failure to perform required façade, retaining wall, elevator and boiler inspections, or tests, structural inspections of buildings and structures that are potentially compromised as defined in section 28-217.1, and to file required reports within the applicable time period.

3. Failure to provide the notice required by section \[3314.1.4\] 3314.1.5 of the New York city building code.

4. A violation of the zoning resolution by any person for causing damage to or removing a tree within a Special Natural Area District, as defined in the zoning resolution.
   4.1. The fine or civil penalty for a violation described in item 4 shall be not less than \[seven hundred fifty dollars\] $750 for each tree damaged or removed.

5. Notwithstanding the provisions of section 28-204.2 of this code, a violation of item 3 or item 4 of section \[1008.1.3.5\] 1010.1.4 of the New York city building code except that no penalty for such violation shall be imposed if the respondent corrects the condition constituting the violation and files a certificate with the department that the condition has been corrected within \[ninety\] 90 days from the date set forth in the notice of violation. It shall be an affirmative defense that the nonconforming security grille was installed prior to July 1, 2011.
   5.1. The fine or civil penalty for a violation described in item 5 shall be not less than two hundred fifty dollars for the first offense and not less than \[one thousand dollars\] $1,000 for each subsequent offense.

6. A violation of a condition, restriction or requirement established pursuant to the zoning resolution, section 197-d of the charter or section 25-114, related to a privately owned public space as such term is defined in section 25-114.

§28-201.2.3 Specified lesser violations. The commissioner shall classify the following violations as lesser violations:

1. A violation of item 5 of section \[1110.1\] 1111.1, of section \[1110.2\] 1111.2, or of item 7 of section \[1110.3\] 1111.3 of the New York city building code, or a violation of section 28-313.1, 28-313.2 or 28-313.3 of the administrative code of the city of New York.

§28-201.3 Methods of enforcement. The commissioner may use any of the methods set forth in this code to enforce compliance with this code, the 1968 building code, the zoning resolution, other laws or rules enforced by the department and orders of the commissioner issued pursuant thereto including but not limited to:
1. Proceedings for the recovery of civil penalties for immediately hazardous, major and lesser violations before the environmental control board or other administrative tribunal.

2. Civil judicial proceedings for the recovery of civil penalties or injunctive relief or both for immediately hazardous, major and lesser violations.

3. Criminal judicial proceedings for the imposition of criminal fines or imprisonment or both for immediately hazardous, major and lesser violations.

4. The issuance and enforcement of peremptory orders for immediately hazardous, major and lesser violations.

5. The issuance of a commissioner’s request for correction of an unlawful use or condition or order to correct an unlawful use or condition.

6. Other special remedies as set forth in this code, the zoning resolution or other law or rule.

§28-201.3.1 Issuance. Officers and employees of the department and of other city agencies designated by the commissioner shall have the power to issue summonses, appearance tickets, orders and notices of violation based upon violations of this code, the 1968 building code, the zoning resolution or other laws or rules enforced by the department, orders, and requests for corrective action.

§28-201.4 Aggravating and mitigating factors. Civil penalties and criminal fines and imprisonment shall be imposed within the ranges set forth in this code or as otherwise specified in this code or other law, with due regard for mitigating and aggravating factors.

ARTICLE 202
CIVIL PENALTIES

§28-202.1 Civil penalties. Except as otherwise specified in this code or other law, violations of this code, the 1968 building code, the zoning resolution or other laws or rules enforced by the department shall be punishable by civil penalties within the ranges set forth below:

1. For immediately hazardous violations, a civil penalty of not less than $2,500 nor more than $25,000 may be imposed for each violation. In addition to such civil penalty, a separate additional penalty may be imposed of not more than $1,000 for each day that the violation is not corrected. The commissioner may by rule establish such specified daily penalties.

2. For major violations, a civil penalty of not less than $1,000 nor more than $10,000 may be imposed for each violation. In addition to such civil penalty, a separate additional penalty may be imposed of not more than $250 for each month that the violation is not corrected. The commissioner may by rule establish such specified monthly penalties.

3. For lesser violations, a civil penalty of not more than $500 may be imposed for each violation.

[Exceptions:] Exceptions:
1. The owner, lessee, occupant, manager or operator of a building affected by a natural or man-made disaster, as determined by the commissioner, shall not be subject to a civil penalty for a violation involving such building if (i) notice of such violation is issued by the department during the 90-day period immediately after such disaster or, in the case of a major natural or man-made disaster as determined by the commissioner, during the six-month period immediately after such disaster, and (ii) such violation is corrected on or before 40 days after such disaster period or such greater amount of time as determined by the commissioner for such violation. The notice of such violation shall state that such violation is subject to this exception and shall set forth the procedure and time period for correcting such violation without incurring a civil penalty. This exception shall not apply to immediately hazardous violations, violations charged as aggravated violations or violations without connection to such disaster, as determined by the department.

2. The owner, lessee, occupant, manager or operator of a building where a violation occurs shall not be subject to a civil penalty for such violation if (i) such violation was connected to a natural or man-made disaster, as determined by the commissioner, and (ii) such building is undergoing, or scheduled or under evaluation for, work or acquisition through a city-operated disaster recovery program responding to such disaster.

3. The owner, lessee, occupant, manager or operator of a building shall not be subject to a civil penalty for a violation resulting from work done by a city employee, or by a third party under contract with the city, in response to a natural or man-made disaster, provided that such violation is corrected on or before 60 days after the issuance of such violation, or such greater amount of time as determined by the commissioner for such violation. If such owner, lessee, occupant, manager or operator of a building can demonstrate to the satisfaction of the department that a city employee or third party under contract with the city has committed to correcting such violation then such violation shall be rescinded, without penalty. The notice of such violation shall state that such violation is subject to this exception and shall set forth the procedure and time period for correcting such violation without incurring a civil penalty. This exception shall not apply to immediately hazardous violations or violations charged as aggravated violations.

4. The minimum civil penalty for a violation of section 28-408.1 or section 28-410.1 of this code shall be $2,500 for a first violation and $5,000 for a second violation, in addition to any separate daily penalty imposed pursuant to item 1 of this section.

[4. The minimum civil penalty for a violation of section 28-408.1 or section 28-410.1 of this code shall be $2,500 for a first violation and $5,000 for a second violation, in addition to any separate daily penalty imposed pursuant to item 1 of this section.]

5. The minimum civil penalty for a violation of section 28-103.21.1 of this code shall be $2,500, in addition to any separate daily or monthly penalty imposed pursuant to item 1 or 2 of this section.
6. The minimum civil penalty for a violation of section 3321.1 of the New York city building code shall be $5,000. The department may by rule provide that, for a first violation of such section or a first set of such violations that occur substantially at the same time, the minimum penalty may be reduced to $2,500.

7. The minimum civil penalty for a violation of section 3321.2 of the New York city building code shall be $2,500.

8. A violation of a condition, restriction or requirement established pursuant to the zoning resolution, section 197-d of the charter or section 25-114, related to a privately owned public space as such term is defined in section 25-114, shall be subject to a civil penalty of not less than $4,000 for the first offense and not less than $10,000 for each subsequent offense, in addition to any separate monthly penalty imposed pursuant to item 2 of this section.

9. For a violation of section 28-210.1:

   9.1. Unless exception [5-2] 9.2 applies, the minimum civil penalty for a violation of section 28-210.1 in any building involving the illegal conversion, maintenance or occupancy of three or more dwelling units above the number of dwelling units that is legally authorized by the certificate of occupancy or if no certificate of occupancy is required as evidenced by official records shall be $15,000. Each dwelling unit above the number that is legally authorized by the certificate of occupancy or if no certificate of occupancy is required as evidenced by official records shall constitute a separate offense that shall be charged separately and shall be punishable by a separate civil penalty. Provided, however, that the penalties for multiple violations of this exception may be based on the same evidence; and

   9.2. The owner of a building shall not be subject to a civil penalty for a violation of section 28-210.1 in such building if such owner can show the following:

      9.2.1. Such violation was the first such violation issued for such building or was issued within 30 days after such first violation;

      9.2.2. At the time such violation was issued or, if such violation was issued within 30 days after such first violation was issued, the time such first violation was issued, a registration for such building has been properly filed with the department of housing preservation and development in accordance with article two of subchapter 4 of the New York city housing maintenance code; and

      9.2.3. At the time such violation was issued or, if such violation was issued within 30 days after such first violation was issued, the time such first violation was issued, such owner reasonably did not know of, or could not reasonably have known of such illegal conversion, the maintenance thereof or occupancy thereof and takes lawful immediate and diligent steps to cure said violation.
10. For violations of article 110 of this chapter or chapter 33 of the New York city building code:

10.1. The minimum civil penalty for an immediately hazardous violation of such article or chapter shall be $2,000, in addition to any separate daily penalty imposed pursuant to item 1 of this section; and

10.2. The minimum civil penalty for a major violation of such article or chapter shall be $1,000, in addition to any separate monthly penalty imposed pursuant to this section.

11. For (i) a violation of section 28-211.1 or (ii) where a tenant protection plan is required pursuant to section 28-120.1, but has not been submitted to the department, the minimum civil penalty for a first offense shall be no less than $10,000 and, for each subsequent offense, no less than $25,000.

12. The minimum civil penalty that shall be imposed for a violation of section 27-3017 of the New York City electrical code and the minimum fine that shall be imposed for a violation of such section shall be $4,800. The maximum fine that shall be imposed for a violation of such section shall be $25,000. Such violation may also be punished, in addition to or instead of such fine, by imprisonment of not more than one year.

§28-202.2 Continuing violations. Notwithstanding the assessment of daily penalties, each day that a violation continues shall be a separate and distinct offense.

§28-202.3 Increased civil penalties for construction sites with excessive violations. Subject to the limitations of section 28-202.1, for any violation of this code, the 1968 building code, the zoning resolution or other laws or rules enforced by the department issued to a person who has an existing immediately hazardous or major violation with respect to the construction site for which the violation is being issued, that occurs at a construction site with a violation ratio, at the time of the issuance of such violation, that exceeds the threshold violation ratio for such site, the civil penalty imposed shall be at least twice the civil penalty that would be imposed if such site were not subject to this section[28-202.3]. This section[28-202.3] shall have no effect on additional monthly or daily penalties imposed pursuant to section 28-202.1.

Exceptions:

1. Sites that are the subject of an in rem foreclosure judgment in favor of the city and were transferred by the city to a third party pursuant to section 11-412.1 of the Administrative code.

2. Sites that are the subject of a court order appointing an administrator pursuant to article 7-a of the New York state real property actions and proceedings law in a case brought by the department of housing preservation and development.

3. Sites that are the subject of a loan provided by or through the department of housing preservation and development or the New York city housing development corporation for the purpose of rehabilitation.
§28-202.3.1 Definitions. The following words and terms shall, for the purposes of section 28-202.3, have the meanings shown herein.

**THRESHOLD VIOLATION RATIO.** For a major building site, the ninetieth percentile of violation ratios for major building sites in the city as of December 31 of the immediately preceding calendar year. For a construction site that only involves work on a one-, two- or three-family building, the ninetieth percentile of violation ratios for construction sites that only involve work on a one-, two- or three-family building in the city as of December 31 of the immediately preceding calendar year. For a construction site that is not a major building site and that does not only involve work on a one-, two- or three-family building, the ninetieth percentile of violation ratios for construction sites that are not major building sites and that do not only involve work on a one-, two- or three-family building in the city as of December 31 of the immediately preceding calendar year.

**VIOLATION RATIO.** With respect to a construction site, (i) the number of immediately hazardous violations and major violations issued against such site in the preceding 12 months, excluding any violations that have been dismissed or that are currently in the appeals process, divided by the square footage of the footprint of such site or (ii) an alternative ratio established by department rule and that the department determines is appropriate for identifying construction sites with high rates of immediately hazardous violations, major violations or unsafe conditions for the purposes of [this] section 28-202.3, provided that such rule is promulgated on or after January 1, 2020.

§28-202.4 Maximum civil penalty for immediately hazardous violation of chapter 33 of the New York city building code that results in death or serious physical injury. Notwithstanding any inconsistent provision of this article, an immediately hazardous violation of a provision of chapter 33 of the New York city building code that results in death or serious physical injury, as such term is defined in article 10 of the New York state penal law, shall be punishable by a civil penalty of not more than $500,000, or not more than $150,000 if such violation is issued to an individual, which may be recovered in a civil action brought by the corporation counsel in the name of the city in any court of competent jurisdiction where:

1. There was a substantial probability that the violating condition would cause death or serious physical injury, as such term is defined in article 10 of the New York state penal law;

2. The defendant knew, or with reasonable diligence should have known, (i) of the existence of such violation and (ii) was in a position to remedy such violation or lessen the danger posed thereby; and

3. Such violation resulted in the death or serious physical injury, as such term is defined in article 10 of the New York state penal law, of a person.

§28-202.4.1 Determining the amount of the civil penalty to be imposed. In determining the amount of the civil penalty to be imposed the court shall consider:

1. The extent and severity of injury to persons and property;

2. The history of violations by the defendant of laws or rules enforced by the department;
3. The degree of willfulness, recklessness or negligence displayed by the defendant in committing the violation; and

4. The defendant’s financial resources.

ARTICLE 203
CRIMINAL PENALTIES

§28-203.1 Criminal fines and imprisonment. Except as otherwise specified in this code or other law, violations of this code, the 1968 building code, the zoning resolution or other laws or rules enforced by the department shall be punishable by criminal fines and imprisonment within the ranges set forth below:

1. Every person convicted of violating a provision of this code, the 1968 building code, the zoning resolution or other law or rule enforced by the department or an order of the commissioner issued pursuant thereto that is classified by the commissioner or the code as an immediately hazardous violation shall be guilty of a misdemeanor punishable by [(i)] a fine of not more than $25,000 or by imprisonment of not more than one year or by both such fine and imprisonment.

2. Every person convicted of violating a provision of this code, the 1968 building code, the zoning resolution or other law or rule enforced by the department or an order of the commissioner issued pursuant thereto that is classified by the commissioner or the code as a major violation shall be guilty of a violation punishable by a fine of not more than $10,000 or imprisonment for not more than 15 days or both such fine and imprisonment.

3. Every person convicted of violating a provision of this code, the zoning resolution or other law or rule enforced by the department or an order of the commissioner issued pursuant thereto that is classified by the commissioner or the code as a lesser violation shall be guilty of a violation punishable by a fine of not more than $500.

Exceptions:

1. The owner, lessee, occupant, manager or operator of a building affected by a natural or man-made disaster, as determined by the commissioner, shall not be subject to a criminal fine or imprisonment if notice of such violation was issued during the 90-day-period immediately after such disaster or, in the case of a major natural or man-made disaster as determined by the commissioner, during the six-month period immediately after such disaster. This exception shall not apply to immediately hazardous violations, violations charged as aggravated violations or violations without connection to such disaster.

2. The owner, lessee, occupant, manager or operator of a building where a violation occurs shall not be subject to a criminal fine or imprisonment for such violation if (i) such violation was connected to a natural or man-made disaster, as determined by the commissioner, and (ii) such building is undergoing, or scheduled or under evaluation for, work or acquisition through a city operated disaster recovery program responding to such disaster.
3. The owner, lessee, manager or operator of a building shall not be subject to criminal fines or imprisonment for a violation resulting from work done by a city employee or third party under contract with the city, in response to a natural or man-made disaster. This exception shall not apply to immediately hazardous violations or violations charged as aggravated violations.

4. The minimum fine for an immediately hazardous violation of article 110 of this chapter or chapter 33 of the New York city building code shall be $2,000.

5. The minimum fine for a major violation of article 110 of this chapter or chapter 33 of the New York city building code shall be $1,000.

6. For (i) a violation of section 28-211.1 or (ii) where a tenant protection plan is required pursuant to section 28-120.1, but has not been submitted to the department, the minimum fine shall be no less than $10,000 and, for each subsequent offense, no less than $25,000.

§28-203.2 Continuing violations. In the case of continuing violations each day’s continuance shall be a separate and distinct offense.

ARTICLE 204
ENVIRONMENTAL CONTROL BOARD

§28-204.1 General. Any person who shall violate or fail to comply with any of the provisions of this code, the 1968 building code, the zoning resolution or other laws or rules enforced by the department or with any order issued pursuant thereto shall be liable for a civil penalty that may be recovered in a proceeding before the environmental control board. Such proceeding shall be commenced by the service of a notice of violation returnable before the board. Such notice of violation may be issued by employees of the department or of other city agencies designated by the commissioner and may be served by such employees or by a licensed process server.

§28-204.1.1 Violations of section 3321 of the New York city building code. In addition to any other penalties or remedies provided by law or rule, the following items shall apply to violations of section 3321 of the New York city building code:

1. Upon determining that a worker at a building site is not in compliance with section 3321.1 of the New York city building code:

1.1. The commissioner shall issue a notice of violation to the owner of such site, each permit holder responsible for ensuring that such worker complies with such section at such site and the person who employed or otherwise engaged such worker at such site if such person can reasonably be identified. Each such worker shall constitute a separate violation that shall be noticed and charged separately and shall be punishable by a separate civil penalty. It shall be an affirmative defense to such a violation that such worker provided such owner, permit holder or the person who employed or otherwise engaged such worker at such site with an SST card, SST supervisor card, limited SST card, temporary SST card or documentation establishing training in compliance with such section, as appropriate, that reasonably appeared to be valid and applicable to such worker and such owner, permit holder or such person reasonably relied thereon.
1.2. In addition to the requirements of any other law or rule, such violation shall not be deemed corrected until the commissioner determines that, for each such worker, the recipient of such violation shows, in a form and manner established by the commissioner, that such owner, a person acting on behalf of such owner, a permit holder responsible for ensuring that such worker complies with such section at such site or the person who employed or otherwise engaged such worker at such site has entered into a binding agreement that satisfies each of the following conditions:

1.2.1. Pursuant to such agreement, such owner, a person acting on behalf of such owner or a permit holder responsible for ensuring that such worker complies with such section at such site or the person who employed or otherwise engaged such worker at such site shall pay, either directly or indirectly, for the costs of such worker to obtain the training required to comply with such section or will otherwise arrange for such worker to receive such training at no cost to such worker.

1.2.2. Pursuant to such agreement, and provided that such worker is diligently endeavoring to complete the training required by such section, such worker shall continue to be employed or otherwise engaged under the same terms and conditions that applied before such determination by the commissioner until (i) such worker successfully completes the training required to comply with such section, (ii) work for which such worker was employed or otherwise engaged at such site concludes or (iii) 60 days elapses after such determination, whichever occurs earlier, except that, during such period, such worker shall be paid as if such worker were working at such site 40 hours each week at the same hourly or effective hourly wage such worker was paid before such determination by the commissioner.

2. Upon determining that a permit holder at a building site has not maintained a daily log in compliance with section 3321.2 of the New York city building code, a notice of violation shall be issued to the owner of such site and such permit holder. Failure to maintain such a log establishes a rebuttable presumption that each worker for whom such permit holder is responsible for ensuring compliance with section 3321 of the New York city building code is not compliant with such section and shall result in the issuance of notices of violation under Item 1.

3. Upon a finding by the office of administrative trials and hearings, acting pursuant to section 1049-a of the [New York city] charter, or a court of competent jurisdiction that a second or subsequent violation of section 3321 of the New York city building code has occurred at a building site, the commissioner shall conduct at least one unannounced inspection of such site at least once every three months to determine compliance with such section. Such inspections shall continue until at least two consecutive inspections do not result in the issuance of a notice of violation of such section.

4. Upon a finding by the office of administrative trials and hearings, acting pursuant to section 1049-a of the [New York city] charter, or a court of competent jurisdiction that the owner of a building site, a permit holder at such site or a person employing or otherwise engaging workers at such site has violated section 3321 of the New York city building code and such violation is a second or subsequent violation of such section by such owner, permit holder or person, the commissioner shall conduct at least one
unannounced inspection of (i) each building site owned by such owner, if such violation is a second or subsequent violation by such owner, (ii) each building site where such permit holder works, if such violation is a second or subsequent violation by such permit holder and (iii) each building site where such person works, if such violation is a second or subsequent violation by such person.

§28-204.1.2 Notice of violating conditions outside of occupied dwelling units. An owner must post a copy of a notice of violation that relates to a violating condition outside of an occupied dwelling unit, including in a common area or affecting all residents, of such owner’s building in a conspicuous manner in the building’s lobby until such violation has been closed. In addition, such owner shall post a flyer or pamphlet, created by the department, with information about the adjudication process. Such notice of violation and flyer or pamphlet shall be posted as soon as practicable, but no later than five calendar days after it has been served.

§28-204.1.3 Notice to occupants of violating conditions in occupied dwelling units. An owner must distribute a copy of a notice of violation to the resident of an occupied dwelling unit where such violation relates to a violating condition that is present within such dwelling unit, and to residents of occupied dwelling units adjacent to such dwelling unit. In addition, such owner shall provide such residents with a flyer or pamphlet, created by the department, with information about the adjudication process. Such notice of violation and flyer or pamphlet shall be distributed to such occupied dwelling units as soon as practicable, but no later than five calendar days after it has been served.

§28-204.2 Order to certify correction. Each such notice of violation shall contain an order of the commissioner directing the respondent to correct the condition constituting the violation and to file with the department electronically or in such other manner as the department may authorize by rule a certification that the condition has been corrected. Unless otherwise provided by rule, such order shall require that violations classified as major or lesser be corrected within 30 days from the date of the order, that violations classified as immediately hazardous be corrected forthwith. Such order shall also require that certification of the correction of the violation shall be filed with the department in a manner and form and within such period of time as shall be established by the department. In any proceeding before the environmental control board, no civil penalty shall be imposed for a lesser violation if the respondent complies with the commissioner’s order to correct and to certify correction of the violation within the applicable time period. However, such violation may serve as a predicate for purposes of assessing aggravating factors attributable to multiple offenses.

§28-204.3 Failure of proof. In any proceeding before the environmental control board, if [the board finds] it is found that the commissioner has failed to prove the violation charged, the order requiring the respondent to correct the condition constituting the violation and to file a certification of correction shall be deemed dismissed.

§28-204.4 Failure to certify the correction of a violation. Failure to comply with an order of the commissioner issued pursuant to section 28-204.2 or pursuant to any provision of law or rule enforced by the department in effect at the time the order was issued to correct and to certify correction of a violation within the applicable time period shall be a violation of this code for which penalties may be imposed in addition to the penalties that may be or have been imposed for the violation referred to in such order. Upon application, for good cause, the commissioner may extend
the time for filing the certification of correction of a violation, but not for more than 30 days for each extension.

§28-204.5 False statements in certification of correction. For the purposes of this section [28-204.5], if the environmental control board finds that a certification of correction filed pursuant to section 28-204.2 contained material false statements relating to the correction of a violation, such certification of correction shall be null and void and the penalties set forth in this code for the violation may be imposed as if such false certification had not been filed with and accepted by the department. It shall be an affirmative defense that the respondent neither knew nor should have known that such statements were false.

§28-204.6 Enforcement of environmental control board judgments as a [Tax] tax lien. [Enforcement of] Notwithstanding any provision of law to the contrary, environmental control board judgments [against owners] for certain building code violations shall be entered against the owner and enforced as a tax lien against the property, as provided below. [Notwithstanding any provision of law to the contrary, an] An environmental control board judgment against an owner for a building code violation with respect to (i) a private dwelling, a wooden-framed single room occupancy multiple dwelling, or a dwelling with a legal occupancy of three or fewer dwelling units, (ii) a violation of section 28-210.1 involving the illegal conversion, maintenance or occupancy of three or more dwelling units than are legally authorized by the certificate of occupancy or if no certificate of occupancy is required as evidenced by official records, (iii) a building that contains twenty or more dwelling units, or that contains any space classified in an occupancy group other than occupancy group R, where the total value of all such judgments against such building is $60,000 or more, or (iv) a building that contains only space classified in occupancy group R and no fewer than six and no more than nineteen dwelling units, where the total value of all such judgments against such building is $30,000 or more, shall [constitute a tax lien on the] result in a tax lien being entered against the property named in the violation [with respect to] for which such judgment was rendered, as hereinafter provided. [Such liens shall be entered and enforced as provided in this section 28-204.6.]

Exception. Notwithstanding any provision of law to the contrary, an environmental control board judgment shall not constitute a tax lien on the property named in the violation with respect to which such judgment was rendered where:

1. Such property was the subject of an in rem foreclosures judgment in favor of the city and was transferred by the city to a third party pursuant to section 11-412.1 of the administrative code within five years of such judgment.

2. Such property is the subject of a court order appointing an administrator pursuant to article 7-A of the New York state real property actions and proceedings law in a case brought by the department of housing preservation and development.

3. Such property is the subject of a loan provided by or through the department of housing preservation and development or the New York city housing development corporation for the purpose of rehabilitation that had closed within five years before such judgment.

§28-204.6.1 Record of unpaid judgments. [There shall be filed in the office of the] The department of finance shall keep a record of all such unpaid judgments. Such records shall be
kept by tax lot and block number and shall be accessible to the public during business hours. An entry of a judgment on the records of the department shall constitute notice to all parties.

§28-204.6.1 Tax lien reporting. On December 31, 2018, the department of finance shall submit a report to the mayor and the council on tax lien activities as a result of environmental control board judgment debt. Such report shall include: (i) the number of buildings subject to tax liens for environmental control board judgment debts, disaggregated by whether the tax lien was a result of an illegal conversion, more than $60,000 in debt, or more than $30,000 in debt; (ii) the location of such buildings disaggregated by council district; (iii) the number of dwelling units in each building which is subject to a tax lien; and (iv) recommendations for whether a 25 percent lien to value ratio is an appropriate threshold for a property to be considered distressed and if it is not, such report shall contain recommendations for what an appropriate threshold would be.

§28-204.6.2 Lien. All such unpaid judgments shall constitute a lien upon the property named in the violation with respect to which such judgment was rendered when the amount shall have been definitely computed as a statement of account by the department, and the department shall file such statement with the department of finance for entry against the property. Such lien shall have a priority over all other liens and encumbrances except for the lien of taxes and assessments. However, no lien created pursuant to [this] section 28-204.6 shall be enforced against a subsequent purchaser in good faith or mortgagee in good faith unless the requirements of section 28-204.6.1 are satisfied.

§28-204.6.3 Notice. A notice, stating the amount due and the nature of the charge, shall be mailed by the department of finance to the last known address of the person whose name appears on the records of the department of finance as being the owner or agent of the property or as the person designated by the owner to receive tax bills or, where no name appears, to the property, addressed to either the “owner” or the “agent.”

§28-204.6.4 Mailing. Such notice mailed by the department of finance pursuant to this section [28-204.6.4] shall have stamped or printed thereon a reference to section [204.6] 28–204.6.

§28-204.6.5 Failure to pay charge. If such charge is not paid within 30 days from the date of entry, it shall be the duty of the department of finance to receive interest thereon at the same rate as unpaid real property taxes, to be calculated to the date of payment from the date of entry.

§28-204.6.6 Enforcement of lien. Such charge and the interest thereon shall continue to be, until paid, a lien on the property. Any remedy or procedure available for the enforcement of tax liens against such property, including, but not limited to, any sale of a tax lien or any foreclosure of a tax lien, shall be available with respect to such tax lien. In addition, such tax lien may be satisfied in accordance with the provisions of section 1354 of the New York state real property actions and proceedings law.

§28-204.6.7 Validity of lien. In any proceeding to enforce or discharge a lien created pursuant to [this] section 28-204.6, the validity of the lien shall not be subject to challenge based on the lawfulness of the judgment, except as provided in [this] section 28-204.6.
§28-204.6.8 Challenge. No such challenge may be made except by the owner of the property or a mortgagee or lienor whose mortgage or lien would, but for the provisions of [this] section 28-204.6, have priority over the department’s lien.

§28-204.6.9 Notice to mortgagees and lienors. Notwithstanding the foregoing provisions, no such judgment shall be entered and enforced as a tax lien against any property unless at the time of the issuance of the notice of violation a copy of such notice was also served on all mortgagees and lienors of record of such property by mail addressed to the recorded addresses of such mortgagees and lienors.

§28-204.6.10 Non-exclusive remedy. The procedures provided in [this] section 28-204.6 for the enforcement of environmental control board judgments against owners shall be in addition to any other methods provided under any other provision of law for the enforcement of such judgments.

§28-204.6.11 Tax lien reporting. On December 31, 2018, the department of finance shall submit a report to the mayor and the council on tax lien activities as a result of environmental control board judgment debt. Such report shall include: (i) the number of buildings subject to tax liens for environmental control board judgment debts, disaggregated by whether the tax lien was a result of an illegal conversion, more than $60,000 in debt, or more than $30,000 in debt; (ii) the location of such buildings disaggregated by council district; (iii) the number of dwelling units in each building which is subject to a tax lien; and (iv) recommendations for whether a 25 percent lien to value ratio is an appropriate threshold for a property to be considered distressed and if it is not, such report shall contain recommendations for what an appropriate threshold would be.

ARTICLE 205
CIVIL JUDICIAL PROCEEDINGS

§28-205.1 Civil judicial enforcement. The owner, lessee, person in charge, or occupant of any building, structure, premises, equipment or part thereof, where a violation of this code, the 1968 building code, the zoning resolution or of other laws or rules enforced by the department or any order issued by the commissioner shall exist or the agent, architect, builder, contractor, engineer, or any other person who commits or assists in any such violation or who maintains any building, structure, premises, equipment or part thereof where any such violation shall exist shall be subject to an action or proceeding to restrain, correct or abate such violation, or to compel compliance with such order. Upon request of the commissioner, the corporation counsel may institute judicial actions or proceedings seeking such relief. In addition to any other remedies, in any such action or proceeding the defendant or respondent shall be subject to the payment of civil penalties as provided in this code.

§28-205.1.1 Corporation counsel. Such actions and proceedings may be instituted by the corporation counsel in the name of the city in any court of competent jurisdiction in the city and shall be given preference over pending causes therein. In such actions or proceedings, the city may apply for restraining orders, preliminary injunctions or other provisional remedies, with or without notice; and no undertakings shall be required as a condition to the granting or issuing of any such order, injunction or remedy, or by reason thereof. No court shall lose jurisdiction of any action or proceeding hereunder by reason of a plea that the title to real estate is involved if
the object of the action is to recover a penalty for the violation of any of the provisions of this code.

§28-205.1.1 Naming the building as a defendant. The corporation counsel shall name as defendants the building, structure, or premises where the violation shall exist by describing it by block, lot number, and street address and at least one of the owners of some part of or interest in the building, structure, or premises.

§28-205.1.2 In rem jurisdiction over the building. In rem jurisdiction over the building, structure, or premises where the violation shall exist shall be complete by affixing the summons to the door of the building, structure, or premises and by mailing the summons by certified or registered mail, return receipt requested, to one of the owners of some part of or interest in the building, structure, or premises. Proof of service shall be filed within two days thereafter with the clerk of the court designated in the summons. Service shall be complete upon such filing.

§28-205.1.3 Service on other defendants. Defendants, other than the building, structure, or premises where the violation shall exist, shall be served with the summons as provided in the civil practice law and rules.

§28-205.2 Presumptive evidence. In any action or proceeding founded upon a claim by the commissioner that any law or rule enforceable by the department has been violated, or that a lawful order issued by such commissioner has not been complied with, the following presumptions shall apply:

§28-205.2.1 Presumption of commissioner certificate. A certificate in writing by the commissioner, or his or her authorized representative, shall be presumptive evidence of any matter stated therein.

§28-205.2.2 Presumption of ownership. The person in whose name the real estate affected by the action is recorded in the office of the city register or the county clerk, as applicable, shall be presumed to be the owner thereof.

§28-205.2.3 Presumption of employment or agency. Whenever there is evidence that a person was the manager, operator, or supervisor or, in any other way, in charge of the premises, at the time the violation occurred, such evidence shall be presumptive that he or she was an agent or employee of the owner and/or lessee of the building, structure, or premises.

§28-205.2.4 Presumption of electronic signature and electronic submission. Anyone who receives access to an account for electronic filing from the department shall be presumed to have personally submitted or authorized the submission of all documents submitted to the department from that account and to have personally electronically signed all documents required to be electronically signed from such account.

§28-205.3 Costs. In no case shall the department, or any officer or employee thereof, be liable for costs in any such action or proceeding; and officers and employees of the department, acting in good faith and without malice, shall be free from liability for acts done in any such action or proceeding.
§28-205.1.4 Lien. Any judgment rendered in any such action or proceeding shall be and become a lien upon the premises named in the complaint in such action or proceeding, if any, the lien to date from the time of filing a notice of pendency in the office of the clerk of the county in which the premises is located, and to have priority before any mortgage or other lien existing prior to such filing, except tax and assessment liens.

§28-205.1.5 Notice of pendency. The notice of pendency referred to in this section may be filed at the commencement of judicial proceedings; provided the commissioner may deem such action to be necessary. Any notice of pendency filed pursuant to the provisions of this code may be vacated and cancelled of record upon an order of a justice of the court in which such action or proceeding was instituted or is pending, or upon the consent in writing of the corporation counsel. The clerk of the county where the notice is filed is hereby directed and required to mark any such notice of pendency, and any record or docket thereof, as vacated and cancelled of record upon the presentation and filing of a certified copy of such order or consent.

ARTICLE 206
CRIMINAL JUDICIAL PROCEEDINGS

§28-206.1 Criminal judicial enforcement. The owner, lessee, person in charge, or occupant of any building, structure, premises, equipment or part thereof, where a violation of this code, the 1968 building code, the zoning resolution or of other laws or rules enforced by the department or any order issued by the commissioner shall exist or the agent, architect, builder, contractor, engineer, or any other person who commits or knowingly assists in any such violation or who maintains any building, structure, premises, equipment or part thereof where any such violation shall exist shall be guilty of a criminal offense punishable by a fine or imprisonment or both a fine and imprisonment in accordance with this code.

§28-206.1.1 Other penalties. The criminal penalties provided by this code shall be in addition to or alternative to any civil sanctions authorized to be imposed for an unlawful use or condition cited in this code.

ARTICLE 207
PEREMPTORY ORDERS

§28-207.1 Contents and service. Peremptory orders issued by the commissioner shall contain a description of the building, structure, premises, equipment or subject matter affected, and shall be designated by address where applicable. Such orders may be served personally or by posting at the premises followed by regular mail, by any officer or employee of the department, or by any person authorized by the commissioner.

§28-207.2 Stop work orders. Whenever the commissioner has issued a notice of proposed revocation pursuant to section 28-105.10.1 of this code or finds that any building work is being executed in violation of the provisions of this code, the 1968 building code, the zoning resolution or of any laws or rules enforced by the department, or in a dangerous or unsafe manner, the commissioner or his or her authorized representative may issue a stop work order.

§28-207.2.1 Issuance. Upon issuance of a stop work order by the commissioner, all work shall immediately stop unless otherwise specified. Such order may require all persons to forthwith
vacate the premises pursuant to the provisions of section 28-207.4 and may also require such work to be done as, in the opinion of the commissioner, may be necessary to remove any danger therefrom. The police department or other law enforcement agency or officer shall, upon the request of the commissioner, assist the department in the enforcement of this section 28-207.2. The stop work order may be given verbally or in writing to the owner, lessee or occupant of the property involved, or to the agent of any of them, or to the person or persons executing the work. A verbal order shall be followed promptly by a written order and shall include the reason for the issuance of the stop work order. All written orders issued pursuant to section 28-207.2 shall be posted upon the premises and made available to the public.

§28-207.2.2 Unlawful continuance. No person shall with knowledge or notice of a stop work order allow, authorize, promote, continue or cause to be continued any work covered by the stop work order, except such work that may be required by order of the commissioner.

§28-207.2.3 Rescission. Upon application, the commissioner shall rescind the stop work order when the condition that gave rise to its issuance has been corrected and either all civil penalties or criminal fines assessed for any violation of such order have been paid or, where a violation is pending, security for the payment of such penalties or fines has been posted in accordance with department rules, or where the stop work order was issued in error or conditions are such that it should not have been issued. The commissioner may by rule require the payment of a fee in the amount of the expense of additional inspection and administrative expense related to such stop work order.

§28-207.2.4 Mandatory stop work orders. The commissioner shall issue stop work orders in the circumstances set forth below. Upon issuance of such stop work order, the work shall immediately stop and shall not resume until the stop work order is rescinded by the department. The stop work order shall not be rescinded less than two business days after the date of issuance of such order. Nothing in the following sections shall be construed to limit the commissioner’s power to issue stop work orders in other circumstances.

§28-207.2.4.1 Scaffold safety. A stop work order shall be issued if a permit holder or person directly in charge of any suspended scaffold supported by c-hooks or outrigger beams fails to notify the department prior to the installation or use of such equipment as required by section [3314.1.1] 3314.4.1.5 of the New York city [Building] building code and either:

1. The rigger does not hold a license required by this code, or
2. The workers lack certificates of fitness as required by this code or applicable rule, or
3. The rigger failed to file with the department satisfactory evidence of insurance required by this code.

§28-207.2.5 Tampering. It shall be unlawful to tamper with, remove or deface a written posted stop work order from the location where it was affixed unless and until such stop work order has been rescinded by the commissioner. The owner or other person in control of the location shall ensure that the stop work order remains posted until rescinded by the commissioner.

§28-207.2.6 Penalties. In addition to the penalties provided for in this chapter, any person who fails to comply with a stop work order shall be liable for a civil penalty in the amount of $6,000 for the initial violation and $12,000 for every subsequent violation, to be paid to the department
prior to the rescission of the stop work order; provided, however, this shall not apply to any work performed to remedy an unsafe or hazardous condition as authorized by order of the commissioner.

§28-207.3 Public nuisance. Whenever any building, structure, place or premises is or may be perilous to life or property by reason of the nature or condition of its contents, its use, the overcrowding of persons therein, defects in its construction, or deficiencies in fire alarm, fire extinguishing equipment or fire escape equipment, or by reason of any condition in violation of law or order of the commissioner, the commissioner may declare that the same, to the extent that the commissioner may specify, is a public nuisance and may order the same to be removed, sealed, abated, repaired, altered or otherwise improved.

§28-207.3.1 Rescission. Upon application, the commissioner shall rescind such order when the condition that gave rise to its issuance has been corrected or where the declaration was issued in error or conditions are such that it should not have been issued. The commissioner may by rule require the payment of a fee in the amount of the expense of additional inspection and administrative expense related to such order.

§28-207.4 Vacate order. [In case any order to remedy] Where there is a condition that is or may be imminently perilous, dangerous or detrimental to life, public safety or property, [issued by the commissioner is not] or where an order to remedy such condition has not been immediately complied with, or the commissioner determines that an emergency exists requiring such action, the commissioner may order and immediately cause any building, structure, place or premises to be vacated. The vacate order may be given verbally or in writing to the owner, lessee or occupant of the property involved, or to the agent of any of them, or to the person or persons executing the work. [A] Any verbal order to vacate shall be followed promptly by a written order and shall include the reason for the issuance of the vacate order. The written vacate order shall include the date by which the owner shall certify the correction of any and all violations giving rise to such vacate order.

§28-207.4.1 Basis for vacate. Conditions for which the commissioner may issue a vacate order shall include but shall not be limited to the following conditions that create a hazard to life, public safety, or property:

1. Danger of structural failure;
2. Danger of façade failure;
3. Inadequate fire protection, detection, or suppression;
4. Inadequate egress; [or]
5. Improper storage of hazardous materials, combustible or toxic materials; or
6. Defective or unlawful gas work.

§28-207.4.2 Enforcement of vacate order. All orders issued pursuant to [this] section 28-207.4 shall be posted upon the premises and made available to the public. Upon the posting of an order upon the premises, officers and employees of the police department, the department, and other authorized officers and employees of the city shall immediately act upon and enforce such order. The police department shall provide all reasonable assistance to the department and other authorized officers and employees necessary to carry out the provisions of [this] section 28-
207.4. A copy of the vacate order may be filed with the county clerk of the county in which the premises is located and shall be filed with the department and accessible to the public. Such filing shall be notice of the vacate order to any subsequent owner and such owner shall be subject to such order.

§28-207.3 Penalties. In addition to the penalties provided for in this chapter, the owner of a premises where the terms of a vacate order are violated shall be liable for a civil penalty in the amount of $6,000 for the initial violation and $12,000 for every subsequent violation, to be paid to the department prior to the rescission of the vacate order.

§28-207.4.3 Rescission. Upon application, the commissioner may rescind the vacate order when the condition that gave rise to its issuance has been corrected and either all civil penalties or criminal fines assessed for any violation of such order have been paid or, where a violation is pending, security for the payment of such penalties or fines has been posted in accordance with department rules, any civil penalty pursuant to section 28-207.4.3 has been paid, or where the vacate order was issued in error or conditions are such that it should not have been issued. The commissioner may by rule require the payment of a fee in the amount of the expense of additional inspection and administrative expense related to such vacate order.

§28-207.4.5 Tampering. It shall be unlawful to remove or deface a written posted vacate order from the location where it was affixed unless and until such vacate order has been rescinded by the commissioner. The owner or other person in control of the location shall ensure that the vacate order remains posted until rescinded by the commissioner.

§28-207.5 Unlawful continuance. No person shall with knowledge or notice of a vacate order allow, authorize, promote, continue or cause to be continued any occupancy or use covered by the vacate order.

§28-207.5.1 Rescission of cease use order. Upon application, the commissioner may rescind the cease use order when the condition that gave rise to its issuance has been corrected and either all civil penalties or criminal fines assessed for any violation of such order have been paid or, where a violation is pending, security for the payment of such penalties or fines has been posted in accordance with department rules or where the cease use order was issued in error or conditions are such that it should not have been issued. The commissioner may by rule require the payment of a fee in the amount of the expense of additional inspection and administrative expense related to such cease use order.
ARTICLE 208
COMMISSIONER’S REQUEST FOR CORRECTIVE ACTION

§28-208.1 Commissioner’s request for corrective action. As an alternative to the issuance of an order or notice of violation, the commissioner may issue a request for corrective action to any person responsible for any claimed unlawful use or condition in any premises. Each request for corrective action shall have the commissioner’s signature affixed thereto; but the commissioner may authorize any subordinate to affix such signature, including an electronic signature.

§28-208.1.1 Contents and delivery. The request for corrective action shall contain a description of the building, structure, premises, equipment or subject matter affected, shall be designated by address, where applicable, shall be sent by regular mail or upon consent by electronic means to the owner, lessee, person in charge, or occupant of the building, structure, premises, equipment or to any person responsible for the unlawful use or condition at the last known address for such person. Requests for corrective action may be sent to a managing agent or other person specifically designated by the owner to attend to such requests on behalf of the owner. Each such request shall describe the unlawful use or condition, call upon the person addressed to correct it and to inform the department of the action taken. A time for correction or response shall be specified. A request for corrective action may be given orally, followed within a reasonable time by a writing as described in this section [§28-208.1.1]. A request for corrective action shall provide notice that failure to respond to such a request may result in the imposition of a fee for any subsequent inspection that results in the issuance of a notice of violation for the condition.

§28-208.1.2 Public record. The department shall keep a record, available to the public, of requests for corrective action issued pursuant to this article. The record of a request for corrective action shall be reflected as withdrawn upon submission to the department of a statement in a form prescribed by rule indicating that the use or condition has been corrected or did not exist or following an inspection by the department that confirms correction. A request for corrective action may be issued in response to a complaint or inspection.

§28-208.1.3 Other remedies not precluded. Nothing in this article shall be construed to limit the power of the commissioner to take any other action authorized by this code with respect to any unlawful use or condition including, but not limited to, the commencement of an action or proceeding in a court or before the environmental control board or other administrative tribunal or the issuance of a peremptory order or to require that the commissioner issue a request for corrective action as a prerequisite to any other enforcement action.

ARTICLE 209
COMMISSIONER’S ORDER TO CORRECT UNLAWFUL USE OR CONDITION

§28-209.1 General. The commissioner may issue an order to the persons responsible for any unlawful use or condition in any premises directing such person to correct the unlawful use or condition. Each such order shall have the commissioner’s signature affixed thereto; but the commissioner may authorize any subordinate to affix such signature, including an electronic signature.

§28-209.2 Contents and service of order. All orders issued by the commissioner shall contain a description of the building, structure, premises, equipment or subject matter affected, and shall be
designated by address where applicable. All such orders shall be served by regular mail or, upon consent, electronically. Such orders may be served by any officer or employee of the department, or by any person authorized by the commissioner. An order may be given orally, followed within a reasonable time by a written order as described in this section [28-209.2]. Failure to comply with a commissioner’s order within the stated time period shall be a violation of this code punishable by civil penalties or criminal fines and imprisonment as set forth in this code. Proof of compliance with a commissioner’s order shall consist of certification as prescribed by the rules of the department.

ARTICLE 210
ILLEGAL CONVERSIONS

§28-210.1 Illegal residential conversions. It shall be unlawful, except in accordance with all requirements of this code, to convert any dwelling for occupancy by more than the legally authorized number of families or to assist, take part in, maintain or permit the maintenance of such conversion. Upon the finding of such violation and the imposition of punishment for such violation as set forth in this code the department or if applicable the environmental control board shall forward to the internal revenue service, the New York state department of taxation and finance and the New York city department of finance the name and address of the respondent or defendant, the address of the building or structure with respect to which the violation occurred and the time period during which the violation was found to have existed.

§28-210.1.1 Inspection; failure to gain access to premises. Upon receiving a complaint of a condition relating to a building or part thereof that would, if observed by the commissioner, be identified by the commissioner as a violation of section 28-210.1 involving the illegal conversion, maintenance or occupancy of three or more dwelling units than are legally authorized by the certificate of occupancy or if no certificate of occupancy is required as evidenced by official records, the commissioner shall attempt to enter and inspect such building or part thereof. After two unsuccessful attempts to gain access to such building or part thereof, the commissioner shall request the corporation counsel to make an application in any court of competent jurisdiction for an ex parte administrative warrant directing the entry and inspection of such premises or location and to issue violations found upon access to such premises or locations. In preparing such requests, priority may be given by the commissioner to requests based on the degree of hazard to safety or property that the commissioner believes present. Such counsel shall promptly consider such request, and where such counsel determines that there is appropriate basis to obtain such an order, shall seek such an order. The commissioner shall promptly execute any such order in accordance with its terms.

§28-210.2 Illegal industrial or manufacturing conversions. Except as otherwise provided by section 42-03 of the New York city zoning resolution and the multiple dwelling law, it shall be unlawful, except in accordance with all requirements of this code, to convert to residential use any space legally authorized for occupancy for industrial or manufacturing use or to assist, take part in, maintain or permit the maintenance of such conversion. Upon the finding of such violation and the imposition of punishment for such violation as set forth in this code the department, or, if applicable, the environmental control board shall forward to the internal revenue service, the New York state department of taxation and finance and the New York city department of finance the name and address of the respondent or defendant, the address of the building or structure with respect to which the violation occurred and the time period during which the violation was found to have existed.
§28-210.3 Illegal conversions of dwelling units from permanent residences. Except as otherwise provided in subdivision 16 of section 67 of the New York state multiple dwelling law and section 120 of the New York state multiple dwelling law, dwelling units within (i) a class A multiple dwelling as defined in section 27-2004 of the administrative code, (ii) occupancy group J-2 as described in section 27-265 of the administrative code or (iii) occupancy group R-2 as described in section [310.1.2] 310.4 of the New York city building code shall be used only for permanent residence purposes as required pursuant to subparagraph a of paragraph [eight] 8 of subdivision a of section 27-2004 of the administrative code. It shall be unlawful for any person or entity who owns or occupies a multiple dwelling or dwelling unit classified for permanent residence purposes to use or occupy, offer or permit the use or occupancy or to convert for use or occupancy such multiple dwelling or dwelling unit for other than permanent residence purposes. For the purposes of this section a conversion in use of a dwelling unit may occur irrespective of whether any physical changes have been made to such dwelling unit. The provisions of this section shall not be construed to prohibit lawful accessory uses permitted pursuant to the zoning resolution or the lawful conversion of dwellings in accordance with applicable law.

§28-210.3.1 Reporting on illegal conversions of dwelling units from permanent residences. By no later than September [4] first of each year, the department shall, with the cooperation of the mayor’s office of special enforcement and all other relevant city agencies, submit a report to the council including, but not limited to, the following information for the previous year, disaggregated by council district:

1. The number of complaints received by the department alleging the conversion of dwelling units for other than permanent residence purposes;
2. The number of inspections conducted by the city in response to suspected conversions of dwelling units for other than permanent residence purposes;
3. The number of notices of violation issued for conversions of dwelling units for other than permanent residence purposes;
4. The amount of civil penalties imposed for such violations and the amount of such penalties collected;
5. For each inspection resulting in the issuance of a notice of violation:
   5.1. The name of the owner and the address of the building to which such notice of violation was issued; and
   5.2. The number and type of violations issued, disaggregated by whether such violations are upheld, pending or dismissed;
6. For each inspection resulting in the issuance of a notice of violation pursuant to section 28-210.3:
   6.1. Whether each such notice of violation was classified as immediately hazardous pursuant to item 16 of section 28-201.2.1;
   6.2. For each such immediately hazardous violation, whether the notice of violation was for the illegal conversion of more than one dwelling unit or for a second or subsequent offense; and
6.3. The number of notices of violation issued pursuant to section 28-210.3 to the building in the five years preceding the submission date of the report.

§28-210.4 Unlawful advertisement for certain occupancies. It shall be unlawful to advertise occupancy or use of dwelling units in a class A multiple dwelling for occupancy that would violate subdivision eight of section four of the multiple dwelling law defining a "class A" multiple dwelling as a multiple dwelling that is occupied for permanent residence purposes.

§28-210.4.1 Enforcement. The provisions of section 28-210.4 shall be enforced by the mayor’s office of special enforcement. Any person found to have violated the provisions of section 28-210.4 shall be liable for a civil penalty of not more than $1,000 for the first violation, $5,000 for the second violation and $7,500 for the third and subsequent violations.

§28-210.4.2 Definition. For the purposes of this section, the term "advertise" shall mean any form of communication, promotion or solicitation, including but not limited to direct mail, newspapers, magazines, flyers, handbills, television commercials, radio, signage, electronic mail, websites, text messages or similar displays, intended or used to induce, encourage or persuade the public to enter into a contract for goods and/or services.

ARTICLE 211
FALSE STATEMENTS

§28-211.1 False statements in certificates, forms, written statements, applications, reports, or certificates of correction. It shall be unlawful for any person to knowingly or negligently make or allow to be made a material false statement in any certificate, professional certification, form, signed statement, application, report or certification of the correction of a violation that is either submitted directly to the department or that is generated with the intent that the department rely on its assertions.

§28-211.1.1 Rebuttable presumption. In any proceeding that relates to a false statement in a certification of correction of a violation filed in compliance with section 28-204.2 if an inspection made within six months after the filing of the certification finds a condition constituting a violation that is the same as the condition described in the notice of violation with respect to which such certification was filed, there shall be a rebuttable presumption that the condition described in such notice of violation continued and is the same condition found in the inspection.

§28-211.1.2 Additional penalty for false statements. In addition to any other penalty provided by law, the commissioner may refuse to accept an application or other document submitted pursuant to or in satisfaction of a requirement of this code or of a rule of any agency promulgated there under that bears the signature of a person who has been found, after a hearing at the office of administrative trials and hearings pursuant to the department’s rules, to have knowingly or negligently made a false statement or to have knowingly or negligently falsified or allowed to be falsified any certificate, form, signed statement, application, report or certification of the correction of a violation required under the provisions of this code or of a rule of any agency promulgated there under.

§28-211.1.3 Notification to other government agencies. Where the department makes a determination that a person has violated section 28-211.1, the department shall send written
notice to the council, the department of investigation, New York state division of housing and community renewal and the state tenant protection unit, and shall refer such finding to the district attorney of the county in which the property is located and the state attorney general.

§28-211.1.4 Reporting. By no later than January 30 of each year, the department shall submit a report to the mayor and to the speaker of the council that indicates the actions it took in every instance in which it made a determination that a person had violated section 28-211.1.

§28-211.2 Falsely impersonating a department officer, inspector, or employee. It shall be unlawful for any person to falsely represent himself or herself as an officer, inspector or employee of the department, or as acting under the authority of the department, or without authority to use, wear or display a shield or other insignia or emblem such as is worn by such officer, inspector or employee.

§28-211.3 Identifying unlawful statements. The department, in coordination with the department of finance, shall collect information from the department of finance regarding occupied and rent regulated buildings to identify violations of section 28-211.1. The department shall also request information from the New York state division of housing and community renewal regarding occupied and rent regulated buildings to identify violations of section 28-211.1.

§28-211.3.1 Required audits. If the department determines that a person has violated section 28-211.1, or that the person has performed work in violation 28-105.1 in a building that is occupied as a dwelling, the department shall conduct an audit of filings for all buildings owned by such person and located in the city to determine if other violations of 28-211.1 have occurred with respect to other buildings owned by such person. If more than five amendments to approved construction documents have been submitted to the department within a six month period for a single building, and where such amendments indicate (i) a change in occupancy, (ii) a change in whether the building contains occupied housing accommodations subject to rent control or rent stabilization under chapters 3 and 4 of title 26 of the administrative code or (iii) a change that would require the person to submit an application for a new permit to the department, the department shall conduct an audit of all properties owned by such person and located in the city to determine if any statements were made that are unlawful pursuant to section 28-211.1. At least once per year, the department shall audit no less than 25 percent of buildings placed on the watch list established by article 3 of subchapter 4 of chapter 2 of title 27 of the administrative code for compliance with building permit requirements, including whether section 28-211.1 has been violated.

ARTICLE 212
ABATEMENT OF PUBLIC NUISANCE CAUSED BY CERTAIN ILLEGAL OCCUPANCIES

§28-212.1 Abatement of public nuisances caused by illegal commercial or manufacturing occupancy in residence districts and certain other zoning districts. Any building or part thereof or vacant land that is located in a residence zoning district and that is occupied for a use not permitted in such district in violation of the zoning resolution, without a certificate of occupancy or other authorization of such use, is hereby declared to be a public nuisance. Any building or part thereof or vacant land that is located in a C-1 or C-2 commercial zoning district and that is occupied for a commercial or manufacturing use indicated under use group 16, 17, or 18 as described in
sections 32-25, 42-14, and 42-15 of the zoning resolution, in violation of the zoning resolution, without a certificate of occupancy authorizing such use is hereby declared to be a public nuisance.

§28-212.2 Order of closure. If a building or part thereof or vacant land in which such a nuisance occurs is not occupied primarily as a residence, the commissioner may, in addition to or as an alternative to any other remedy under any other provision of law, after notice and the opportunity for a hearing in accordance with this article, order the closing of such building or part thereof or such vacant land to the extent necessary to abate the nuisance.

§28-212.3 Notice of hearing. A notice of hearing with respect to an order of closure shall be served on the owner and mortgagee of record of such building or part thereof or such vacant land and on any person alleged to be occupying such building or part thereof or such vacant land at which the nuisance is located.

§28-212.4 Service of notice of hearing. Service may be made on the owner by delivering such notice to the owner or to an agent of the owner or to a person of suitable age and discretion at the residence or place of business of the owner or, if upon reasonable application such delivery cannot be completed, by affixing such notice in a conspicuous place at the owner’s place of business or residence or by placing it under the entrance door at either of such locations or by delivering such notice to a person employed by the owner to work at or to manage or maintain the premises at which the nuisance is located and, in all instances except personal delivery upon such owner by mailing the notice of hearing as follows:

§28-212.4.1 Mailing to owner’s registered address. To the person registered with the department of housing preservation and development as the owner or agent of the premises, at the address filed with such department in compliance with article [two] 2 of subchapter [four] 4 of chapter [two] 2 of title [twenty-seven] 27 of the administrative code;

§28-212.4.2 Mailing to billing address. To the person designated as owner of the building or designated to receive real property tax or water bills for the building at the address for such person contained in one of the files compiled by the department of finance for the purpose of the assessment or collection of real property taxes and water charges or in the file compiled by the department of finance from real property transfer forms filed with the city register upon the sale or transfer of real property; or

§28-212.4.3 Mailing to recorded address. To the person in whose name the real estate affected by the order of the commissioner is recorded in the office of the city register or the county clerk as the case may be at the address set forth on the recorded instrument.

§28-212.4.4 Service on corporate owner. Service may be made on an owner that is a corporation pursuant to section 306 of the business corporation law; however, service upon a corporation shall be deemed to have been completed 45 days following service upon the secretary of state.

§28-212.4.5 Service on mortgagees. Service may be made upon mortgagees of record by mailing such notice to the mortgagees at the address set forth on the recorded instrument.
§28-212.4.6 Service on occupants. Service may be made upon an occupant by delivering such notice to the occupant or to a person employed by the occupant to work at or to manage or maintain the premises at which the nuisance is located; or by affixing such notice to the premises at which the nuisance is located in a conspicuous place or by placing a copy under the entrance door of such premises and mailing a copy of such notice to the occupant at such premises; and in all instances except personal delivery upon such occupant, by mailing the notice of hearing to the occupant at the premises at which the nuisance is located.

§28-212.4.7 Proof of service. Proof of service pursuant to section 28-212.4.1 through 28-212.4.6 shall be filed with the commissioner.

§28-212.5 Conduct of hearing by office of administrative trials and hearings. The hearing shall be conducted by the office of administrative trials and hearings. The administrative law judge assigned to hear the matter shall submit his or her proposed findings of fact and recommended decision to the commissioner. If based on such recommended decision, proposed findings of fact, and the record of the hearing the commissioner determines that the building or part thereof or vacant land is a public nuisance, pursuant to this article, the commissioner may issue an order of closure. Such order shall not bar legally required ingress or egress for residential occupancy of parts of the building that are not subject to the order of closure.

§28-212.6 Lack of knowledge not a defense. At such hearing it shall not be a defense that the owner, occupant, lessor, lessee, mortgagee, or other person having an interest in the property lacked knowledge of or did not acquiesce or participate in the creation or continuation of the public nuisance.

§28-212.7 Closure not an act of possession. A closure ordered by the commissioner pursuant to this article shall not constitute an act of possession, ownership, or control by the city over the closed premises.

§28-212.8 Posting of order of closure. An order of closure shall be posted at the building or part thereof or vacant land that is the subject of such order, and shall be mailed to the record owner of such premises, and any record mortgagee at the address for such person set forth in the recorded instrument, and to the person designated as owner or agent of the building or designated to receive real property tax or water bills for the building at the address for such person contained in one of the files compiled by the department of finance for the purpose of the assessment or collection of real property taxes and water charges or in the file compiled by the department of finance from real property transfer forms filed with the city register upon the sale or transfer of real property. A copy shall also be filed with county clerk or register of the county in which such premises are located. Such filing shall be notice of the order to any subsequent owner and such owner shall be subject to such order.

§28-212.9 Enforcement of order of closure. On the tenth business day after the posting of such order and upon the written directive of the commissioner, police officers and authorized employees of the department shall act upon and enforce such order by sealing, padlocking, or otherwise preventing access to the premises in a manner that will not bar legally required ingress or egress for residential occupancy of parts of the building that are not subject to the closure order.
§28-212.10 Rescission of order of closure. If at any time after the issuance of such order, the owner, mortgagee, or other person having an interest in the property provides assurance, in a form satisfactory to the commissioner, that the illegal commercial or manufacturing use of the premises has been discontinued and will not reoccur, or such owner, mortgagee, or other person establishes that the premises may be lawfully occupied for such use, the commissioner shall rescind the closure order. If such order is rescinded, the commissioner shall, upon request of such owner, mortgagee, or other person, provide a copy of such rescission, which may be filed with the county clerk or register of the county in which such premises are located. No such re-occupancy shall be permitted without a certificate of occupancy or other department records authorizing such use.

§28-212.11 Violation of closure order. It shall be unlawful for any person to use or occupy or to permit any other person to use or occupy any building or part thereof or vacant land that has been sealed, padlocked, or otherwise closed pursuant to an order of the commissioner. It shall be unlawful to mutilate or remove a posted order of the commissioner. Intentional disobedience or violation of any provision of a closure order shall be punishable as an immediately hazardous violation.

ARTICLE 213
PENALTY FOR WORK WITHOUT A PERMIT

§28-213.1 Department penalty for work without a permit. In addition to any penalties otherwise authorized by law pursuant to article 202 and the rules of the department, whenever any work for which a permit is required pursuant to this code has been performed without a permit, a penalty shall be imposed by the department as provided in this article.

Exception: No such penalty shall be imposed for work performed without a permit to hang or attach upon or on the outside of any building a sign that is accessory to a use on the same zoning lot, as defined in section 12-10 of the New York city zoning resolution that does not exceed one hundred fifty square feet in area, measured on one face only, or exceed one thousand two hundred pounds in weight. All such outstanding penalties imposed on or after December 28, 2017 shall be waived.

§28-213.1.1 Penalty for work without permit on one- or two-family dwelling. Where work has been performed without a permit on a one-[family] or two-family dwelling the penalty shall equal six times the amount of the fee payable for the permit. Where only part of the work has been performed without a permit, the penalty shall be reduced proportionately according to the amount of work still to be performed at the time a permit is issued. Notwithstanding the foregoing, no such penalty shall be less than $600, nor more than $10,000.

§28-213.1.2 Penalty for work without permit on other than one- or two-family dwelling. The penalty for work without a permit on buildings other than one- or two-family dwellings shall be 21 times the amount of the fee payable for such permit. Where only part of the work has been performed without a permit, the penalty shall be reduced proportionately according to the amount of work still to be performed at the time a permit is issued. Notwithstanding the foregoing, no such penalty shall be less than $6,000, nor more than $15,000.

§28-213.2 Waiver. Such penalty and the permit fee shall be payable by the owner of the building on which the unpermitted work was performed. A waiver or reduction of such penalty shall be available to a subsequent bona fide purchaser of the premises pursuant to department rules.
§28-213.3 Payment of penalty required before issuance of permit. No permit shall be issued for work described in this article until the penalty assessed by the department pursuant to this article has been paid.

§28-213.4 Procedure. The department shall adopt a rule setting forth a procedure for assessment of penalties pursuant to this article.

§28-213.5 Watch list of contractors performing work without required permit. The department shall compile and maintain a watch list of contractors who have been found to have performed work without a required permit in the preceding two years.

§28-213.5.1 Increased oversight. At any site where a contractor that is included on the watch list created pursuant to section 28-213.5 performs work in an occupied building, the department shall perform one or more inspections in order to ensure compliance with applicable laws, rules, regulations and permitting requirements. The department may promulgate rules providing for additional oversight of such contractors where appropriate for the protection of the public.

§28-213.5.2 Exemption. Any work performed by a contractor that is wholly or partially exempt from a civil penalty for work performed without a permit pursuant to a rule of the department shall not be considered in determining whether the contractor is to be included on the watch list created pursuant to section 28-213.5.

§28-213.5.3 Removal from watch list. The department shall remove from the watch list created pursuant to section 28-213.5 any contractor who has not been found to have performed work without a permit in the two years after the latter of the following dates: (i) the date on which such contractor was originally placed on such watch list or (ii) the date on which such contractor most recently performed work without a required permit.

§28-213.6 Enhanced penalties for other violations. Where a penalty is imposed pursuant to this article for work that has been performed without a permit on a building (i) the civil penalty for each violation of this code issued for such building within one year after such imposition shall be two times the penalty that would otherwise apply for such violation or (ii) if such work without a permit was performed on only part of such building and the owner of such part is not the owner of such building, the civil penalty for each violation of this code issued for such part within one year after such imposition shall be two times the penalty that would otherwise apply for such violation.

§28-213.7 Inspection fees. Where a penalty is imposed pursuant to this article for work that has been performed without a permit on a building (i) the department may impose an inspection fee, in an amount to be established by rule, for each complaint-based inspection it conducts at such building within one year after imposition of such penalty where such inspection results in the issuance of a violation or (ii) if such work without a permit was performed on only part of such building and the owner of such part is not the owner of such building, the department may impose an inspection fee, in an amount to be established by rule, for each complaint-based inspection it conducts at only such part within one year after imposition of such penalty or until the date such part of such building changes.
ARTICLE 214
ORDER TO SEAL, SECURE AND CLOSE

§28-214.1 Order to seal, secure and close. If the commissioner determines such action is necessary to the preservation of life and safety the commissioner may order a building subject to a vacate order to be sealed, secured and closed.

§28-214.1.1 Definition. For the purpose of this article, “sealed” and “sealed, secured and closed” shall mean the use of any means available to render the building, structure or part thereof inaccessible, including but not limited to the use of a padlock or cinder blocks.

§28-214.1.2 Hearing. Such order to seal, secure and close shall contain notice of the opportunity for a hearing with respect to such order to determine if the order was properly issued in accordance with the provisions of this article. Such hearing shall be conducted by the commissioner, or in the commissioner’s discretion, by the office of administrative trials and hearings or the environmental control board. If the matter is referred to such office or board, the hearing officer shall submit his or her findings of fact and a recommended decision to the commissioner. The hearing shall be held within three business days after the receipt of the written request of an owner, lessor, lessee, or mortgagee for such hearing. The commissioner shall render a decision within three business days after such hearing is concluded or findings of fact and a recommendation are submitted.

§28-214.1.3 Service of seal, secure and close order. Such order issued pursuant to this article shall be served as follows: It shall be mailed to the record owner of such premises; any record mortgagee of such premises at the address for such person as set forth in the recorded instrument; and if reasonably ascertainable, the person designated as owner’s agent of the building or designated to receive real property tax or water bills for the building at the address for such person contained in one of the files compiled by the department of finance for the purpose of the assessment or collection of real property taxes and water charges or in the file compiled by the department of finance from real property transfer forms filed with the city register upon the sale or transfer of real property. A copy shall also be filed with the county clerk of the county in which such premises is located. Such filing shall be notice of the order to any subsequent owner and such owner shall be subject to such order.

§28-214.1.4 Rescission of seal, secure and close order. An order issued pursuant to this article shall not be rescinded unless the owner, lessor, lessee or mortgagee seeking such rescission provides assurance, in a form satisfactory to the commissioner, that the conditions that caused the issuance of such order have been corrected and will not reoccur. If such order is rescinded, upon the request of the owner, lessor, lessee or mortgagee, the commissioner shall provide a certified copy of such rescission, which may be filed with the county clerk of the county in which such premises is located.

§28-214.1.5 Expenses of enforcing seal, secure and close orders. The expenses attending the execution of any and all orders duly made by the department shall respectively be a several and joint personal charge against each of the owners or part owners, and each of the lessees and occupants of the building, structure, enclosure, place or premises to which such order relates, and in respect to which such expenses were incurred; and also against every person or body who was by law or contract bound to do that in regard to such building, structure, enclosure, place or
premises which such order requires. Such expenses shall also be a lien on all rent and compensation due, or to become due, for the use of any building, structure, place or premises, or any part thereof, to which such order relates, and in respect to which such expenses were incurred.

§28-214.1.6 Notice of seal, secure and close order to community. The commissioner shall give written notice of the closing of any building, structure, enclosure, place or premises pursuant to this article, and any subsequent actions taken with respect thereto, as soon as practicable, to the borough president of the borough within which the closing has occurred; the council member representing the district within which the closing has occurred; and the local community board. On January first of each year, the commissioner shall submit a report to the council, setting forth the number of closings made in the previous year, the locations of such closings, and the nature and use of the premises closed. The commissioner shall, in addition, as soon as practicable after a building, structure, enclosure, place or premises has been closed, make and publish a report of said closing in a manner calculated to quickly notify the local community in which such closing occurred. The commissioner shall also make and publish a report of any premises reopened pursuant to his or her permission under this article. Failure to comply with this section [28-214.1.6] shall not invalidate any action taken by the commissioner pursuant to this article.

§28-214.2 Access to sealed premises. The commissioner shall allow access to the premises sealed, secured and closed pursuant to this article to an owner, or a lessor, lessee or mortgagee upon the following conditions:

1. The submission of a written affirmation, satisfactory to the commissioner, that such person or persons will commence or cause to be commenced without delay all work necessary to correct the conditions stated in the vacate order or otherwise to make the premises meet all applicable laws and rules and will complete such work within a period of time and in a manner to be approved by the commissioner;

2. The submission of a written affirmation or other proof satisfactory to the commissioner describing the steps that have been taken and will be taken in the future to ensure that the premises will be used or operated in a lawful manner and specifying such lawful use;

3. If a license, permit, certificate of operation or certificate of occupancy is necessary for such lawful use, the submission of a written affirmation or other proof, satisfactory to the commissioner, describing the steps that have been taken and will be taken in the future to ensure that such premises will be used or operated in compliance with any law requiring such license, permit, certificate of operation or certificate of occupancy; and

4. If the premises are leased and the person making the affirmations described above in items 1, 2 and 3 is not such lessee, the commissioner may also require any authorized person seeking access to submit a written affirmation or other proof that proceedings to enable such person to take actions necessary to ensure compliance with the affirmations submitted by such authorized person pursuant to items 1, 2 and 3 have been commenced.

§28-214.3 Additional penalties for harm or injury from violation of order to seal, secure and close. Notwithstanding any other law, rule, or regulation, any person, corporation, partnership, association or any other legal entity who permits a building, structure, enclosure, place or premises, or any part thereof, to be unlawfully occupied or used in contravention of an order of the commissioner pursuant to this article, or who negligently fails to prevent or prohibit such unlawful
occupancy or use, shall be liable for a civil penalty of not more than [one million dollars] $1,000,000, if any other person suffers serious physical injury, as defined in section ten of the penal law, or death in the building, structure, place or premises or any part thereof subject to such order as a result of such unlawful occupancy or use. If more than one person suffers serious physical injury or death, such penalty shall be recoverable for each person suffering serious physical injury or death. Such penalty shall be recovered in a civil action brought by the corporation counsel in the name of the city in any court of competent jurisdiction. In determining the amount of the civil penalty to be imposed the court shall consider:

1. The extent and severity of injury to persons and property caused by the violation;
2. The history of violations by the defendant at such premises, or any other premises, of laws or rules enforced by the department;
3. The degree of willfulness, recklessness, or negligence displayed by the defendant in committing the subject violation;
4. The defendant’s financial resources; and
5. The defendant’s good faith efforts to cure the subject violation, including efforts to obtain entry to or possession of the premises in order to do so.

§28-214.3.1 Payment by city. In the event that the family of any person seriously injured or who has died as the result of any unlawful occupancy or use described in [this] section 28-214.3 is unable to collect a judgment recovered in a civil action for personal injury or wrongful death against a defendant who has violated [this] section 28-214.3 because of the insolvency of such defendant, the city may, in its discretion, pay to such injured person or the family of such deceased person an amount, as hereinafter provided, collected from such defendant in an action relating to the same injury or death commenced by the corporation counsel against such defendant pursuant to this section[28-214.3.1].

§28-214.3.2 Limitations. Payments pursuant to section 28-214.3.1 shall be made as a matter of grace and shall be in such amounts and in accordance with such standards and procedures as shall be established by the mayor, provided, however, that any payment made pursuant to section 28-214.3.1 shall be in an amount not exceeding out-of-pocket expenses, including indebtedness reasonably incurred for medical or other services necessary as a result of the injury upon which such action is based; loss of earnings or support resulting from such injury; burial expenses not exceeding [two thousand five hundred dollars] $2,500 of a person who died as a result of such unlawful occupancy or use described in [this] section 28-214.3; and the unreimbursed cost of repair or replacement of articles of essential personal property lost, damaged or destroyed as a direct result of such unlawful occupancy or use. In no event shall the payment made to any person exceed the amount of such person’s uncollected judgment for personal injury or wrongful death and in no event shall the total amount paid to any number of persons with such uncollected judgments against a single defendant exceed the actual amount collected by the city from such defendant in an action under this subdivision.
ARTICLE 215
EMERGENCY POWERS OF THE COMMISSIONER

§28-215.1 Emergency work. Notwithstanding any other provisions of law, if the commissioner determines that a structure or premises or any part thereof poses an imminent danger of serious physical injury or death to the public or is in imminent danger of collapse and the exigency of the situation is such that any delay may cause further danger to the public safety, then the commissioner may direct the commissioner of housing preservation and development or the department of citywide administrative services, or other authorized agency to perform or arrange the performance of the emergency work on, or demolition of, such structure or premises or part thereof or such other work as deemed by the commissioner to make it safe.

§28-215.1.1 Lien for emergency work. The expenses of the city in performing emergency work on any structure or part of such structure pursuant to this article shall constitute a debt recoverable from the owner and a lien upon the land and any part of such structure that was not demolished. Every such lien shall have priority over all other liens and encumbrances on the premises except for the lien of taxes and assessments. Except as otherwise provided by rule of the affected agency, the agency incurring such expense shall be governed by the procedures set forth in article [eight] 8 of subchapter [five] 5 of the New York city housing maintenance code with respect to the enforcement of such debt and lien against all types of structures, including those authorized to be occupied or otherwise occupied for residential, commercial, and manufacturing purposes.

§28-215.1.2 Interference prohibited. It shall be unlawful for any person to interfere, obstruct or hinder the commissioner or the commissioner of citywide administrative services, housing preservation and development, or other authorized agency, or any person who, acting under the authority conferred on such person by such commissioner, is performing the work authorized by section 28-215.1.

§28-215.1.3 Enforcement. The police commissioner shall enforce such orders or requirements when requested by the commissioner and shall likewise enforce same at the request of the commissioner of citywide administrative services, housing preservation and development, or other authorized agency, with respect to work performed by or under the direction of such commissioner pursuant to the provisions of section 28-215.1.

§28-215.2 Stopping work and securing structures. See section 28-207.2.

§28-215.3 Vacating structures. See section 28-207.4.

§28-215.4 Violations of protective measures during construction or demolition. During the construction or demolition of a structure, the commissioner shall notify the owner of the structure affected of any failure to comply with any of the provisions of this code that concern the protection of life, safety and property during construction or demolition. Unless the owner so notified proceeds immediately to comply with the orders of the commissioner, the commissioner shall have full power to correct the violation. All expenses incurred therefore shall become a lien on the property pursuant to section 28-112.9.

§28-215.5 Investigation of accidents or other emergency conditions. When necessary to conduct an investigation of any occurrence affecting building or construction safety, the commissioner may
seize or impound equipment, building material, and portions of the affected building or premises for examination and testing. The police department or other authorized law enforcement agency shall cooperate with the commissioner upon request and shall provide a suitable place for the deposit of such items.

§28-215.6 Closing streets temporarily. The commissioner may, when necessary for the public safety, temporarily close the sidewalks, streets, structures or places adjacent to a structure or part thereof, and the police commissioner or commissioner of the department of transportation, any of his or her subordinates shall enforce all orders or requirements made by the commissioner, when so requested by the commissioner.

§28-215.7 Recovery of bodies from wrecked structures. Where any persons are known or believed to be buried under the ruins of any fallen structure or part thereof in the city, the commissioner shall cause an examination of the premises to be made for the recovery of the injured and bodies of the dead. Whenever, in making such examination, it shall be necessary to remove any debris from the premises, other city agencies shall cooperate with the commissioner in carrying out the purposes of this section [28-215.7], and shall provide suitable and convenient places for the deposit of such debris.

§28-215.8 Non-compliance with orders; execution of work by department. Upon the failure to comply with any order of the commissioner within the time limited thereby, and subject to the provisions of article 216, any work required to be executed by such order may be executed by the commissioner through the officers, agents or contractors of the department or other authorized agency; and the city shall be reimbursed promptly for all costs and expenses of such work. Such costs and expenses shall become a lien upon the premises involved and named in the commissioner’s order, which may be enforced in accordance with the provisions of section 28-112.9[ of this code].

ARTICLE 216
UNSAFE BUILDINGS

§28-216.1 Conditions constituting an unsafe building or structure. Any building, structure or part thereof described in this article shall be deemed an unsafe building and shall be demolished or removed or made safe and secure as provided herein.

§28-216.1.1 Compromised structures. Any structure or premises or part of a structure or premises that from any cause may at any time become dangerous or unsafe, structurally or as a fire hazard, or dangerous or detrimental to human life, health or safety, shall be demolished and removed or made safe and secure.

§28-216.1.2 Vacant buildings. Any vacant building not continuously guarded or not sealed and kept secure against unauthorized entry shall have all openings sealed in a manner approved by the commissioner, and it shall be the duty of the owner thereof promptly to make any repairs that may be necessary for the purpose of keeping such building sealed and secure.

§28-216.2 Record and notice of unsafe building, structure or premises. The department shall cause a report to be filed on an unsafe building, structure or premises. The report shall describe the nature of the occupancy of the structure and the nature of the unsafe condition and be made a record of the department.
§28-216.3 Notice of survey and summons and order. The owner, executor, administrator, mortgagee, lessee or any other person who may have a recorded vested or recorded contingent interest in the unsafe building, structure or premises, shall be served with a notice of survey and summons containing a description of the unsafe building, structure or premises and an order requiring such building be sealed, secured, repaired, shored, or demolished and removed as may be deemed necessary by the commissioner.

§28-216.3.1 Content. Such notice of survey and summons shall require the person thus served immediately to certify to the commissioner his or her acceptance or rejection of the order. The notice of survey and summons shall further notify said person(s) that upon [his or her] their refusal or neglect to comply with any of the requirements of this provision, a survey of the building or premises named in such notice will be made at a time and place therein named. The notice of survey and summons shall also state that if, pursuant to the survey, it is found that the building, structure, or premises referred to therein is unsafe or dangerous by the surveyors, their report of survey will be placed before the supreme court for trial at a time and place named in such notice.

§28-216.4 Method of service. The notice of survey and summons and order shall be served in accordance with the New York state civil practice law and rules of the state of New York.

§28-216.5 Owner abatement of unsafe or dangerous conditions. If the person served with a notice and order pursuant to section 28-216.4 shall immediately certify his or her assent to the securing or removal of such unsafe building, structure or premises condition, such person shall be allowed a period of time as determined by the commissioner [or his or her designee] within which to commence and complete the abatement of the unsafe or dangerous condition. Such person shall employ sufficient labor and assistance to secure or remove such conditions as expeditiously as possible.

§28-216.6 Survey. A survey of the building or premises shall be conducted as follows:

§28-216.6.1 Identity of surveyors. The survey shall be made by three competent persons, of whom one shall be the commissioner [or his or her designee]; another shall be a registered design professional appointed by a recognized professional organization or by the commissioner; and the third shall be a registered design professional appointed by the person served with a notice pursuant to section 28-216.4. If the person served with such notice shall neglect or refuse to appoint such surveyor, the other two surveyors shall make the survey. In case they disagree, they shall appoint a third person to take part in such survey, who shall be a registered design professional of at least 10 years’ practice, whose decision shall be final.

§28-216.6.2 Posting report of survey. A copy of the report of the survey shall be posted on the structure that is the subject thereof by the persons holding the survey, immediately on their issuing such report.

§28-216.6.3 Compensation of surveyors. The registered design professional appointed by the respective professional organization or by the commissioner, as hereinbefore provided, who may act on any survey called in accordance with the provisions of [this] section 28-216.6, and the third surveyor who may have been called in the case of disagreement provided for in [this]
section 28-216.6, shall each be paid a sum to be determined by rule to be promulgated by the
department.

§28-216.6.4 Cost of survey. Any costs incurred by the city in connection with the survey shall
become money due and owing to the city as part of the return of precept and judgment provided
for in [sections 28-216.9, 28-216.10 and 28-216.11 of this code] or pursuant to lien
provided for in section 28-112.9 of this code.

§28-216.7 Court proceeding. Whenever the report of survey shall recite that the building, structure
or premises surveyed is unsafe or dangerous, the corporation counsel or his or her designee shall, at
the time specified in the notice, place such notice and report before a justice of the court named in
the notice. The report of survey shall be in writing and constitute the issues to be placed before the
court for trial. The purpose of the trial shall be to determine whether the unsafe building, structure,
or premises shall be vacated and sealed, secured, shored, or demolished and removed.

§28-216.7.1 Precedence of proceeding. The unsafe building proceeding shall have precedence
over every other business of such supreme court. The trial on the issues in the unsafe building
proceeding shall be held without delay, at the time specified in the notice, and shall be held by a
justice of the court or by a referee, whose decision or report in the matter shall be final.

§28-216.7.2 Precept to abate. If the justice or referee determines the building, structure or
premises that is the subject of the report of survey is unsafe or dangerous, such justice or referee
trying the case shall immediately issue a precept directed to the commissioner authorizing the
commissioner forthwith to vacate pursuant to section 28-207.4, if necessary, and to seal, secure,
shore, or demolish and remove the unsafe building, structure or premises named in such report.
The precept shall be effective for a period of three years from the date of issuance.

§28-216.7.3 Notice of pendency. A notice of pendency shall be filed in accordance with the
following procedure:

1. The notice of pendency shall be filed in accordance with the [Civil Practice Law and
Rules of the State of New York] New York state civil practice law and rules and shall be
filed in the office of the clerk of the county where the property affected by such action,
suit or proceeding is located. Such notice of pendency may be filed at any time after the
service of the notice described in section 28-216.3 of this code.

2. Any notice of pendency filed pursuant to the provisions of this section [28-216.7.3] that
has not expired may be vacated and cancelled of record upon an order of a justice of the
court in which such suit or proceeding was instituted or is pending, or upon the consent
in writing of the corporation counsel. The clerk of the county where the notice is filed is
hereby directed and required to mark any such notice of pendency, and any record or
docket thereof, as vacated and cancelled of record upon the presentation and filing of a
certified copy of such order or consent.

§28-216.8 Execution of precept. A precept issued pursuant to section 28-216.7.2 shall be executed
in accordance with the procedure set forth in sections 28-216.8.1 through 28-216.8.3.

§28-216.8.1 Work by the department. Upon receiving a precept under the provisions of
section 28-216.7.2, the commissioner shall execute such precept, as therein directed, and may
employ such labor and assistance and furnish such materials as may be necessary for that purpose. The commissioner [or his or her designee] shall direct the commissioner of citywide administrative services or the department of housing preservation and development or other authorized agency to perform work in accordance with the precept. Such work shall be performed by or under the direction of citywide administrative services in accordance with the provisions of section 4-204 of the administrative code, or the department of housing preservation and development, or such other authorized agency.

§28-216.8.2 Owner application to perform work. The owner of such unsafe building, structure, or premises, or any party interested therein, if such person applies to the commissioner immediately upon the issuing of such precept, shall be allowed to perform the requirements of such precept at his or her own cost and expense, if the performance shall be done immediately and in accordance with the requirements of such precept and other applicable laws and rules and such other requirements as the commissioner shall impose.

§28-216.8.3 Modification of precept. The commissioner [or his or her designee] shall have authority to modify the requirements of any precept when such commissioner [or designee] shall be satisfied that such change will secure the safety of such structure or premises equally well.

§28-216.8.3.1 Upon application. The commissioner shall also have authority to modify the requirements of any precept upon application to such commissioner in writing by the owner of the unsafe building, structure, or premises, or such owner’s authorized representative. In addition, upon application to modify the requirements of any precept to seal, shore or demolish the structure by the commissioner of housing preservation and development, citywide administrative services or such other authorized agency, the commissioner [or designee] shall have authority to modify such precept accordingly when the commissioner shall be satisfied that such change will secure the safety of such structure or premises equally well.

§28-216.8.3.2 Notice. After a determination to modify the precept is made by the commissioner, written notice of such determination shall be sent by regular mail to the owner and applicant for the modification if other than the owner, at his or her last known address.

§28-216.8.3.3 Failure of owner to perform work. If no action in accordance with the modified precept is undertaken by the owner or applicant for modification within the time period provided in the modification following the granting of such application, the commissioner may direct the department of housing preservation and development or the department of citywide administrative services or other authorized agency to execute the original precept, provided however that prior to such execution, notice shall be provided by regular mail to the owner of the unsafe building, structure or premises and applicant for the modification if other than the owner, at his or her last known address. The owner shall continue to have the right to request the commissioner to modify the requirements of the precept prior to the execution thereof.

§28-216.8.4 Interference prohibited. It shall be unlawful for any person to interfere, obstruct or hinder the commissioner or the commissioner of citywide administrative services, housing preservation and development, or other authorized agency, or any person who, acting under the authority conferred on such person by such commissioner, [in] is performing the work authorized by a precept issued out of any court or modified in accordance with section 28-216.8.3, or the
work ordered by the commissioner in accordance with such precept under the provisions of section 28-216.8.3.3.

§28-216.5 Enforcement. The police commissioner shall enforce such orders or requirements when requested by the commissioner and shall likewise enforce same at the request of the commissioner of citywide administrative services, the commissioner of housing preservation and development, or the commissioner of other authorized agency, with respect to work performed by or under the direction of such commissioner pursuant to the provisions of section 28-216.8.3.3.

§28-216.9 Return of precept and reimbursement of city. Upon compliance with any precept issued to the commissioner in a proceeding under this article, the commissioner may make return thereof, with an endorsement of the action there under and the costs and expenses thereby incurred, to the justice of the court from which such precept issued. Such justice shall then tax and adjust the amount endorsed upon such precept, and shall adjust and allow the disbursements of the proceeding, including but not limited to the preliminary expenses of searches, service of the notice of survey and summons on interested parties, surveys thereof, and costs of executing the precept, which shall be inserted in the judgment in such proceeding. Such justice shall then render judgment for such amount and for the sale of the premises named in such notice, together with all the right, title and interest that the person named in such notice had in the lot, ground or land upon which such structure was placed, at the time of the filing of a notice of pendency in such proceedings, or at the time of the entry of judgment therein, to satisfy such judgment in foreclosure of mortgages. Nothing in this article shall preclude the city from recovering such costs and expenses in any other lawful manner, including pursuant to sections 28-112.9, 28-216.10 and 28-216.11 of this code.

§28-216.10 Judgment lien. Any judgment rendered in an action or proceeding instituted under this article shall be and become a lien upon the premises named in such action or proceeding, such lien to date from the time of filing a notice of pendency in the office of the clerk of the county wherein the property affected by such action or proceeding, is located. Every such lien shall have priority before any mortgage or other lien as may exist prior to such filing except tax and assessment liens.

§28-216.11 Tax lien. Any costs and expenses incurred by any agency of the city pursuant to this article, including but not limited to the preliminary expenses of searches, service of the notice of survey and summons on interested parties, surveys thereof, and costs of executing the precept, shall be a debt recoverable from the owner of the premises and a lien upon the land and buildings upon or in respect to which such costs and expenses were incurred. Every such lien shall have priority over all other liens and encumbrances on the premises except for the lien of taxes and assessments. Except as otherwise provided by rule of the affected agency, the agency incurring such expense shall be governed by the procedures set forth in article eight of subchapter five of the New York city housing maintenance code with respect to the enforcement of such debt and lien.

ARTICLE 217
BUILDINGS AND STRUCTURES THAT ARE POTENTIALLY COMPROMISED

§28-217.1 Buildings and structures that are potentially structurally compromised. For purposes of this article, “potentially compromised” shall include a building or structure that: [has had an open roof for sixty days or longer, that has been shored and braced or otherwise temporarily safeguarded pursuant to an emergency declaration issued by the commissioner, that has been subject...
§28-217.1.1 Structural inspections of potentially compromised buildings or structures. When a building or structure has become potentially compromised, the owner shall cause a structural inspection to be performed. Such inspection shall be performed within 60 days of the opening of the roof, or within 60 days of the shoring and bracing or other temporary safeguards pursuant to an emergency declaration, or within 60 days of damage by fire or a determination by the commissioner that the building has suffered structural damage by other cause. A report of such inspection shall be filed with the department within 30 days thereafter in such form and detail and with provision for periodic monitoring of the building or structure as the commissioner may require.

§28-217.1.2 Structural inspections shall only be performed by a registered design professional in good standing with the New York state department of education.

§28-217.1.3 If a violation of any applicable statute, law, rule or regulation or any unsafe condition that poses a threat to the structural integrity of the building or to the public is found during the course of such inspection, the registered design professional performing the inspection shall immediately notify the department and the owner of such violation or unsafe condition by calling 311 and in writing.

§28-217.1.4 An inspection of the buildings and structures subject to the inspection and filing requirements of section 28-216.12 shall be performed every year or, for a specified building or structure, within such other period as determined by the commissioner but not longer than two years, and shall continue until such time as the registered design professional documents and certifies that the building or structure is no longer potentially compromised and such certification is accepted by the commissioner.

§28-217.1.5 The owner shall hire a registered design professional to perform a structural inspection of buildings and structures subject to section 28-217.1 prior to the issuance of a permit to alter, repair, demolish or enlarge such building or structure, except that the commissioner may waive such inspection if a structural inspection of the entire building or structure has been performed within the prior year.

§28-217.1.6 Any owner of a building or structure shall notify the department in writing that such building or structure has become potentially compromised immediately after
such owner knows or should have known of the condition. Such notice shall contain the name and business address of the owner of record of such building or structure and shall identify the building or structure by street address and tax block and lot. The notices required by this subdivision shall be in such form and manner as established by the commissioner by rule.

§28-217.1.7 If an owner subject to the inspection and filing requirements of this section fails to file such report, the owner shall be liable for a civil penalty in an amount not less than [two thousand dollars] $2,500. In such a case, the department may cause a structural inspection to be conducted and a report filed.

ARTICLE 218
SAFETY COMPLIANCE OFFICER

§28-218.1 Definition. For purposes of this article, the terms "Safety Compliance Officer" and "SCO" shall mean a person whose presence is required by the commissioner pursuant to section 28-218.2 and who satisfies the qualifications of section 28-218.4.

§28-218.2 Safety Compliance officer. In addition to any other remedies or penalties authorized by law, the commissioner in his or her discretion may require the presence of a SCO at any permitted site that has received immediately hazardous violations that the commissioner determines adversely affect public safety and require the presence of a SCO to protect public safety. In any circumstance where a SCO is required, the commissioner [or designee] shall state in writing the circumstances necessitating the SCO, and the duration of the compliance monitoring and/or conditions that must be satisfied prior to the termination of the compliance monitoring.

§28-218.3 Appointment of a safety compliance officer. The owner or contractor shall employ, at the owner’s or contractor’s expense, an SCO approved by the department.

§28-218.4 Qualifications. Safety compliance officers shall have experience in supervising the type of construction operations being monitored. They shall be an architect or engineer who has experience supervising construction projects in New York city, a licensed site safety manager or coordinator or other licensee of the department, or a special inspector as provided for in article 115 of this title. Safety compliance officers shall carry insurance as required by the department.

§28-218.3] §28-218.5 Compliance monitoring. The SCO shall monitor the operations related to the circumstances and conditions that the commissioner [or designee] has identified pursuant to section 28-218.2 until the areas of concern set forth by the commissioner [or designee] have been addressed as determined by the commissioner [or designee], but in no case shall any monitoring period exceed [ninety] 90 days. For such purpose, the SCO and his or her employees shall be designated as authorized representatives of the commissioner with authority pursuant to section 28-103.13 of this code to enter upon and examine and inspect at all reasonable times any site, building or structure. In the event that the conditions [set out] set out in the commissioner’s [or designee’s] determination, pursuant to section [28-217.2] 28-218.2, to require a SCO have not been satisfied within the prescribed monitoring period, the commissioner [or designee] may order the general contractor to appoint another SCO subject to the approval of the department, who shall be a different SCO than the initial SCO, to monitor operations for an additional period not to exceed [ninety] 90 days.
§28-218.5.1 Hazardous conditions. In addition to any other requirements specified by the commissioner, the SCO shall immediately report to the commissioner all conditions that are hazardous to life, safety or health.

§28-218.4 Qualifications. Safety Compliance Officers shall have experience in supervising the construction operations being monitored. They shall be an architect or engineer who has experience supervising construction projects in New York City, a licensed site safety manager or coordinator or other licensee of the department, or a special inspector as provided for in article 115 of this title. Safety Compliance Officers shall carry insurance as required by the department.

§28-218.5 §28-218.6 Cost of a Safety Compliance Officer. The owner of the site where the services of the SCO have been required shall reimburse the department for all direct costs and any related administrative expenses incurred by the department in the operation of the SCO program provided for in this article. Reimbursement shall be made at such times as the department shall require, but in any event, before a temporary or permanent certificate of occupancy is issued for the building or structure that is being monitored. No permit shall be issued for the job site at which a SCO has been assigned if reimbursements for the cost of the monitor are outstanding for more than [thirty] 30 days. The department shall adopt rules establishing a process for the resolution of disputes concerning the costs of the SCO.

§28-218.7 The SCO shall document with photographs or other means any violation of the code. The SCO shall submit [an interim report, to be submitted at the midpoint of the appointment period, and a final report] reports to the department in the frequency, manner and form prescribed by the commissioner [or designee]. The department will share the results of these reports with the general contractor and provide the general contractor an opportunity to comment.

§28-218.8 Records. The SCO shall keep and maintain records relating to the services performed on behalf of the department in such manner and for such period of time as shall be established by the commissioner [by rule or by direction of the commissioner].

ARTICLE 219

FAILURE TO CERTIFY CORRECTION OF CERTAIN IMMEDIATELY HAZARDOUS VIOLATIONS

§28-219.1 Department penalty for failure to certify correction. In addition to any penalties otherwise authorized by law pursuant to article 202 and the rules of the department, whenever any person fails to submit a certification of correction of an immediately hazardous violation that poses a threat of imminent danger to public safety or property, as required by an order issued pursuant to section 28-204.2, a penalty shall be paid to the department by the owner of the property in the amount of not less than [one thousand five hundred dollars] $1,500 or more than [five thousand dollars] $5,000. No permit or certificate of occupancy shall be issued and no stop work order may be rescinded at the property named in the order until such penalty is paid to the department. Failure to pay such penalty shall not prevent the issuance of a permit for work to be performed pursuant to articles 215 or 216[ of this chapter]. In addition, even if the immediately hazardous violation is subsequently corrected, no certificate of correction shall be accepted for the violation giving rise to this civil penalty until such penalty has been paid to the department.
§28-219.2 [Reinspection] Re-inspection. Where an immediately hazardous condition has been identified as posing a threat of imminent danger to public safety or property and a violation has been issued, the commissioner shall re-inspect the condition that gave rise to the violation within 60 days of the date of the notice of a violation, unless:

1. [A] An acceptable certification of the correction of the condition has been filed in the manner and form prescribed by the department;

2. The person to whom the violation has been directed has obtained an extension of time for filing the certificate of correction of the violation from the commissioner in accordance with section 28-204.4 and with any applicable rules of the department, and said extension of time to file has not yet expired; or

3. The condition has been corrected in the presence of the commissioner.

§28-219.2.1 Continued noncompliance. If, upon re-inspection, the commissioner determines the condition continues to pose a threat of imminent danger to public safety or property, and the person against whom the initial violation was directed is not in compliance with section 28-204.4, the commissioner shall issue an appropriate violation and shall issue a stop-work order, pursuant to section 28-207.2, where appropriate, or the commissioner shall, if the commissioner is unable to obtain access to the premises, request the corporation counsel to institute legal proceedings to compel correction of the violation and abate the condition or take such other action as is appropriate.

§28-219.2.2 Inspections by the commissioner. The commissioner shall continue to re-inspect any condition that has given rise to an immediately hazardous violation that poses a threat of imminent danger to public safety or property every 60 days, and shall follow the procedures described in items 1, 2 and 3 of section 28-219.2 until the condition has been found by inspection or certification to be corrected or abated.

§28-219.3 False certifications of correction. It shall be unlawful to prepare, file or offer for filing a certification of correction of an immediately hazardous condition, knowing that such certification contains a false statement or false information. Any person who prepares such a certificate shall be subject to prosecution under section 175.05 or 175.10 of the New York state penal law. Any person who files such a certificate or offers such a certificate for filing shall be subject to prosecution under section 175.30 or 175.35 of the New York state penal law. Nothing in this section shall be construed to limit, alter or affect the authority conferred by any other provision of this chapter or other law to bring criminal, civil or administrative actions or proceedings or other remedies for the preparation, filing or offering for filing of a certification of correction of an immediately hazardous condition containing a false statement or false information.

§28-219.4 Notice to the department of housing preservation and development for certain elevator-related violations. If, upon re-inspection of an immediately hazardous violation relating to an elevator that services one or more dwelling units in a multiple dwelling, the department determines that such owner has failed to correct the condition constituting such violation, then the commissioner shall refer such violation, within one week of such re-inspection, to the commissioner of housing preservation and development for a determination as to whether such violation is dangerous to human life and safety or detrimental to health pursuant to section 27-2125 of the New York city housing maintenance code. If the department knows or has
reason to believe that any such unit is not served by another operable elevator, the department shall include such information and any other relevant information in such referral. The department may continue enforcement action against the owner of the multiple dwelling after referral of such violation to the commissioner of housing preservation and development. Where the owner begins to take corrective action, the department shall notify the commissioner of housing preservation and development of such efforts. The department shall notify an owner of the referral of any such violation to the commissioner of housing preservation and development for action under this section.

**Exceptions:**

1. Elevators located in owner-occupied multiple dwellings that service only the owner-occupied dwelling unit \([\text{\_}]\) provided that such unit is not occupied by boarders, roomers, or lodgers.

2. Elevators located within convents and rectories that are not open to non-occupants on a regular basis.

§ 3. Chapter 3 of title 28 of the administrative code of the city of New York, as added by local law number 33 for the year 2007, the opening paragraph of section 28-302.2 as amended by local law number 38 for the year 2007, item 1 of section 28-302.5, Articles 303, 304 and 305 and section 28-306.1 as amended by, and sections 28-303.6, 28-303.8, 28-306.2, Article 314, sections 28-315.1, 28-315.2, 28-315.3, 28-315.4, 28-315.5, 28-315.6 and 28-315.7 as added by, local law number 141 for the year 2013, section 28-304.6.1 as amended by chapter 750 of the laws of 2019, Article 308 as added by local law number 87 for the year 2009, Article 309 as added by local law number 84 for the year 2010, sections 28-309.2, 28-309.8, 28-309.9 as amended by, and section 28-309.11 as added by, local law number 133 for the year 2016, section 28-309.12 as added by local law number 33 for the year 2018, section 28-309.13 as added by local law number 93 for the year 2020, sections 28-310.1, 28-311.1 and 28-311.4 as added by local law number 88 for the year 2009, sections 28-310.2, 28-310.3 and 28-315.3.1 as amended by local law number 134 for the year 2016, sections 28-311.2, 28-311.5 and 28-315.3.2 as amended by local law number 132 for the year 2016, sections 28-312.1, 28-312.2, 28-312.3, 28-312.4 and 28-312.5 as amended by, and sections 28-312.6, 28-312.7 and 28-315.2.4 as added by, local law number 157 for the year 2016, section 28-312.8 as added by local law number 113 for the year 2018, sections 28-313.1 and 28-313.2 as added by local law number 47 for the year 2012, sections 28-313.3 and 28-315.6.3 as added by local law number 122 for the year 2019, section 28-315.2.3 as added by local law number 78 for the year 2015, sections 28-315.8 and 28-315.8.1 as added by local law number 110 for the year 2013, sections 28-315.8.2 and 28-315.8.3 as added by local law number 108 for the year 2013, section 28-315.9 as added by local law number 79 for the year 2016, section 28-315.10 as added by local law number 111 for the year 2018, section 28-315.11 as added by local law number 191 for the year 2018, section 28-316.1 as added by local law number 12 for the year 2014, Article 317 as added by local law number 77 for the year 2015, section 28-317.5 as amended by local law number 76 for the year 2019, Article 318 as added by local law number 152 for the year 2016, Article 319 as added by local law number 105 for the year 2018, sections 28-320.1 and 28-321.1 as amended by, and section 28-320.3.10.1 as added by, local law number 116 for the year 2020, sections 28-320.2, 28-320.3.1.1, 28-320.3.2, 28-320.3.6, 28-320.3.6.1, 28-320.3.6.2, 28-320.3.6.3, 28-320.3.9, 28-320.6.1, 28-320.6.1, items 1 and 2 of section 28-320.7, 28-320.8 and 28-320.9 as amended by, and Article 322 as renumbered by, local law number 147 for the year 2019, sections 28-320.3, 28-320.4, 28-320.5, 28-320.6, 28-320.7, 28-320.10, 28-320.11 and Article 321 as added by local law number 97 for the year 2019, item 6 of section 28-320.3.1.1 and
section 28-320.3.2.1 as amended by local law number 95 for the year 2020, and section 28-320.3.7 as amended by and section 28-320.3.7.2 as added by local law number 117 for the year 2020, is amended to read as follows:

CHAPTER 3
MAINTENANCE OF BUILDINGS

ARTICLE 301
GENERAL

§28-301.1 Owner’s responsibilities. All buildings and all parts thereof and all other structures shall be maintained in a safe condition. All service equipment, means of egress, materials, devices, and safeguards that are required in a building by the provisions of this code, the 1968 building code or other applicable laws or rules, or that were required by law when the building was erected, altered, or repaired, shall be maintained in good working condition. Whenever persons engaged in building operations have reason to believe in the course of such operations that any building or other structure is dangerous or unsafe, such person shall forthwith report such belief in writing to the department. The owner shall be responsible at all times to maintain the building and its facilities and all other structures regulated by this code in a safe and code-compliant manner and shall comply with the inspection and maintenance requirements of this chapter.

§28-301.1.1 Parapets. A building’s parapet shall be maintained in a safe condition. A building owner must have an annual parapet observation performed as described in the rules of the department. This observation must be performed on all buildings, regardless of height.

Exception: The requirements of this section shall not apply to detached one- or two-family homes.

§28-301.2 Filing of reports in writing or electronically. Reports required to be filed under this chapter shall be filed in writing or electronically as the commissioner may require.

ARTICLE 302
MAINTENANCE OF EXTERIOR WALLS

§28-302.1 General. A building’s exterior walls and appurtenances thereof shall be maintained in a safe condition. All buildings greater than six stories shall comply with the maintenance requirement of this article.

Exception: The requirements imposed by this article shall not apply to any part of an exterior wall that is less than 12 inches (305 mm) from the exterior wall of an adjacent building.

§28-302.2 Inspection requirements. A critical examination of a building’s exterior walls and appurtenances thereof shall be conducted at periodic intervals as set forth by rule of the commissioner, but such examination shall be conducted at least once every five years. No later than January 1, 2009 the commissioner shall by rule establish staggered inspection cycles for buildings required to comply with this section during each five-year report filing cycle, as defined by rule of the department. The initial examination for a new building shall be conducted in the fifth year
following the erection or installation of any exterior wall and/or appurtenances as evidenced by the issuance date of a temporary or final certificate of occupancy or as otherwise prescribed by rule.

1. Such examination shall be conducted on behalf of the building owner by or under the direct supervision of a registered design professional with appropriate qualifications as prescribed by the department.

2. Such examination shall include a complete review of the most recently prepared report and an inspection.

3. Such examination shall be conducted in accordance with rules promulgated by the commissioner.

§28-302.3 Immediate notice of unsafe condition. Whenever a registered design professional learns of an unsafe condition through a critical examination of a building’s exterior walls and appurtenances thereof, such person shall notify the owner and the department immediately in writing of such condition.

§28-302.4 Report of critical examination. The registered design professional shall submit a written report to the commissioner within 60 days of completing the critical examination, but not more than five years following submission of the preceding report of critical examination at least once during each five-year report filing cycle, as defined by rule of the department certifying the results of such critical examination as either safe, unsafe or safe with a repair and maintenance program. The report shall clearly document the condition of the exterior walls and appurtenances thereof and shall include a record of all significant deterioration, unsafe conditions and movement observed as well as a statement concerning the watertightness of the exterior surfaces. Such report must be professionally certified signed and sealed by such registered design professional.

§28-302.5 Repair of exterior walls, unsafe condition. Upon the notification to the department of an unsafe condition, the owner, the owner’s agent or the person in charge shall immediately commence such repairs, reinforcements or other measures as may be required to secure public safety and to make the building’s exterior walls or appurtenances thereof conform to the provisions of this code.

1. All unsafe conditions shall be corrected within 90 days of filing the critical examination report.

2. The owner shall engage a registered design professional to reinspect the premises and file an amended report within two weeks after the repairs have been completed certifying that the unsafe conditions of the building have been corrected.

3. The commissioner may grant an extension of time of up to 90 days to complete the repairs required to correct an unsafe condition upon receipt and review of an initial extension application submitted by the registered design professional together with such additional documentation as may be prescribed by rule.

4. The commissioner may grant further extensions of time to complete the repairs required to remove an unsafe condition upon receipt and review of an application for a further extension submitted by the registered design professional together with such further documentation as may be prescribed by rule.
§28-302.6 **Safe condition with a repair and maintenance program.** The registered design professional shall not file a report of a safe condition with a repair and maintenance program for the same building for two consecutive filing periods unless the second such report is accompanied by his or her professional certification attesting to the correction of all conditions identified in the prior report as requiring repair.

**ARTICLE 303
PERIODIC BOILER INSPECTIONS**

§28-303.1 **General.** Periodic boiler inspections shall be performed in accordance with this article and the provisions of section 1011.3 of the New York city mechanical code.

§28-303.2 **Annual inspections.** Except as otherwise provided in this article, each owner of a boiler, as defined in section 204 of the New York state labor law, excepting those boilers listed in subdivision five of such section of such labor law, shall have such boiler inspected at least once a year in accordance with this article. All individuals who perform periodic inspections pursuant to this article shall be qualified under section 204 of the New York state labor law and the rules promulgated by the commissioner of labor or the commissioner of buildings.

§28-303.2.1 **Internal inspection required.** All high pressure boilers shall have an annual internal inspection performed in accordance with section 204 of New York state labor law and the rules of the department. Where construction of a low pressure boiler allows, an internal inspection shall be performed on a periodic schedule in accordance with section 204 of the New York state labor law and the rules of the department.

§28-303.2.2 **External inspection required.** All high and low pressure boilers shall have an annual external inspection performed in accordance with section 204 of New York state labor law and the rules of the department. Such inspection shall include chimney connectors.

§28-303.2.3 **Electric high pressure boilers.** Electric boilers operating at pressures or temperatures classified as high pressure boilers, as defined in the New York city mechanical code, shall be annually inspected as high pressure boilers in accordance with this article.

§28-303.3 **Qualifications of boiler inspectors.** All individuals who perform periodic inspections pursuant to this article shall have the qualifications set forth in the rules of the department and in section 28-303.3.1 or section 28-303.3.2 of this code, as applicable.

§28-303.3.1 **High-pressure boilers.** Inspections required by section 28-303.2 of this code of a high-pressure boiler must be performed, in accordance with the rules of the department, on behalf of the owner, by boiler inspectors in the employ of a duly authorized insurance company who are qualified in accordance with section 204 of the New York state labor law.

§28-303.3.2 **Low-pressure boilers.** Inspections required by [Section] section 28-303.2 of a low-pressure boiler must be performed, in accordance with the rules of the department, on behalf of the owner, by boiler inspectors who are qualified in accordance with section 204 of the New York state labor law.
§28-303.4 **Staggered inspection cycles.** The commissioner may by rule establish staggered inspection cycles for buildings required to comply with this article.

§28-303.5 **Repair of defects.** The owner of each boiler that is subject to periodic inspection shall correct any defects identified in the annual boiler inspection.

§28-303.6 **Reporting an unsafe or hazardous condition.** If an inspection reveals that any boiler is unsafe or hazardous to life and safety, the device is to be immediately taken out of service by the approved boiler inspection agency performing the inspection and the building owner shall be notified. Such agency shall notify the department of the unsafe or hazardous condition of the boiler within 24 hours after the condition is discovered. Notification to the department may be made by telephone, electronically or in writing.

§28-303.7 **Owner’s annual boiler inspection report.** The owner of each boiler that is subject to inspection pursuant to section 28-303.2 shall file a signed annual report with the commissioner in accordance with the rules of the department within [45] 14 days after the required annual inspection of the boiler has been performed. Extensions of time to file such report may be granted in accordance with the rules of the department. The report shall include, but shall not be limited to:

1. The location of the boiler.
2. The name and address of the inspector, the qualification of the inspector to perform the inspection, the date of inspection and if the inspector is a qualified boiler inspector in the employ of a duly authorized insurance company, the policy number covering the boiler.
3. A list of all defects found in the inspection for each device inspected.

§28-303.7.1 **Affirmation of correction.** All defects identified in the annual boiler inspection report shall be corrected within [420] 90 days after the date of filing of the report. The department may grant an extension of 45 days upon submission of an application by the owner demonstrating a practical difficulty in complying within the 90 day timeframe. In no case shall a single extension request be granted for more than 45 days, and no more than two such extensions be granted for a specific defect. An affirmation of correction shall be filed within 14 days of the date of correction.

§28-303.8 **Scope of inspection.** During required inspection and testing, in addition to any other requirements prescribed by this code or the rules of the department, all parts of the equipment shall be inspected to determine that they are in safe operating condition and that parts subject to wear have not worn to such an extent as to affect the safe and reliable operation of the boiler.

§28-303.9 **Removal or discontinuance notice.** The owner of a boiler that is removed or discontinued from use shall file a written notice of such removal or discontinuance with the commissioner within 30 days of the date of removal or discontinuance.

§28-303.10 **Additional inspections.** In addition to the inspections required by this article, the commissioner may make such additional inspections as required to enforce the provisions of this code.
§28-303.11 Fees. The owner of each boiler subject to periodic inspection pursuant to this article shall pay to the department an annual fee for each boiler in the amount prescribed by this code to cover the city’s administrative and supervisory costs. The fee shall be payable at the time of the filing of the owner’s annual boiler inspection report. No fee shall be charged for additional inspections made by the department pursuant to section 28-303.10.

ARTICLE 304
ELEVATORS AND CONVEYING SYSTEMS

§28-304.1 General. Elevators and conveying systems shall be maintained in a safe condition and in accordance with ASME A17.1, as modified by appendix K of the New York [City] city building code. Every new and existing elevator or conveying system shall be inspected and tested in accordance with this article.

§28-304.2 Elevators, escalators, moving walkways, material lifts, man lifts and dumbwaiters. Elevators, escalators, moving walkways, material lifts, man lifts and dumbwaiters shall be inspected and tested in accordance with section 28-304.6, chapter 30 of the New York city building code, and the schedule set forth in Table N1 of ASME [17.1] A17.1 as referenced in chapter 35 and as may be modified by chapter K1 of appendix K of the New York [City] city building code ("Table N1").

[Exception: Elevators located in one family, two family or multiple family dwellings that service only a single owner-occupied dwelling unit which is not occupied by boarders, roomers or lodgers, and elevators located within convents and rectories that are not open to non-occupants on a regular basis are not subject to periodic inspection requirement of such reference standard. Inspections and tests shall be performed in accordance with Table N1.]

§28-304.3 [Chair] Platform lifts, stairway chair lifts and vertical reciprocating conveyors (VRCs). [Chair] Platform lifts, stairway chair lifts and VRCs shall be inspected and tested at intervals not exceeding one year. Inspections and tests shall be performed in accordance with Table N1.

§28-304.4 Amusement devices. Amusement devices shall be inspected and tested in accordance with department rules.

§28-304.5 Frequency of inspection and testing. Elevators and other conveying systems may be subject to more frequent inspection and testing as the commissioner finds necessary to protect public safety.

§28-304.6 Inspection and testing process. All devices shall be inspected and tested in accordance with Table N1 of ASME A17.1 as modified by chapter K1 of appendix K of the New York city building code and, where applicable, department rules and with sections 28-304.6.1 through 28-304.6.6 of this code.

§28-304.6.1 Inspection and testing entities. [The required periodic inspections in Table N1 shall be made by the department.] The [other] required category tests and periodic inspections in Table N1 of ASME A17.1 as modified by chapter K1 of appendix K of the New York City building code shall be performed on behalf of the owner by an approved elevator agency in accordance
with this code and department rules. Where indicated in Table N1, tests [and inspections] shall be witnessed by an approved elevator agency not affiliated with the agency performing the test, and not affiliated with the agency performing the elevator work. Where indicated in Table N1, inspections shall be performed by an approved elevator agency not affiliated with the agency performing the maintenance. Not affiliated, as used in this section, shall mean the approved elevator agency owners, directors and inspectors shall be independent of all relative approved elevator agencies, maintenance firms or other entities providing any associated services to the device owner. Such other tests and inspections shall comply with the timeframes established as follows:

1. Category 1 [inspections and tests] shall be performed between January 1st and December 31st of each year at a minimal time interval of six months from the date of the previous Category 1 testing. Category 1 tests are required on new installations the calendar year following final acceptance test.

2. Category 3 [inspections and tests] for water hydraulics shall be performed every three years on or before the anniversary month of the last Category 3 testing.

3. Category 5 [inspections and tests] shall be performed every five years on or before the month of the final acceptance test for new elevators or the anniversary month of the last Category 5 testing.

4. Periodic inspections shall be performed between January 1 and December 31 of each year at a minimum of three months from the date of any Category 1 testing or previous periodic inspection. Initial periodic inspections on new installations shall be performed in the calendar year following the final acceptance test. For private residence elevators, the periodic inspection and category testing may be performed on the same date.

§28-304.6.1 Department notification. The department shall be notified by the [performing agency] agency performing the test at least [seven] five days prior to the Category 1 testing of escalators, Category 3 testing of water hydraulic elevators and Category 5 testing of elevators, pursuant to the rules of the department.

§28-304.6.2 Scope. During periodic inspection and category testing, in addition to any other requirements prescribed by this code, all parts of the equipment shall be inspected to determine that they are in safe operating condition and that parts subject to wear have not worn to such an extent as to affect the safe and reliable operation of the installation.

§28-304.6.3 Reporting an unsafe or hazardous condition. If [an] a periodic inspection or category test reveals that any elevator or other conveying system is unsafe or hazardous to life and safety, the device is to be taken out of service immediately by the agency performing the inspection or test and the building owner notified immediately. The performing agency shall notify the department by telephone, electronically or in writing within 24 hours.

§28-304.6.4 [Field] Periodic inspection and category testing reports and notations on the inspection certificate. [Field] Periodic inspection and category testing reports and notations on the inspection certificate shall comply with the requirements of sections 28-304.6.4.1 and 28-304.6.4.2.
§28-304.6.4.1 [When no witnessing agency is required] Periodic inspections. For the periodic inspections and tests under listed in Table N1 of ASME A17.1, as modified by chapter K1 of appendix K of the New York city building code, the performing inspector shall, on the day of each inspection and test: (i) complete the periodic inspection report, documenting all violating conditions, if any, and affix his or her signature; (ii) provide a copy of such report to the owner or owner’s representative; and (iii) affix the inspection date and his or her signature over a stamp identifying his or her approved elevator agency and his or her approval number on the inspection certificate issued by the department attesting to completion of items (i) and (ii). No witnessing agency is required to witness the periodic inspections.

§28-304.6.4.2 [When] Category testing when a witnessing agency is required. When a witnessing agency is required to witness inspections and category tests under listed in Table N1 of ASME A17.1, as modified by chapter K1 of appendix K of the New York city building code, the performing inspector shall, on the day of each inspection and test: (i) review and confirm the category test report and also affix his or her signature to it; (ii) provide confirm that a copy of such report was provided to the owner or owner’s representative; and (iii) affix the inspection date and his or her signature over a stamp identifying his or her approved elevator agency and his or her approval number on the inspection certificate issued by the department attesting to the completion of items (i) and (ii).

§28-304.6.4.3 Category testing when no witnessing agency is required. When no witnessing agency is required to witness the category tests listed in Table N1 of ASME A17.1, as modified by chapter K1 of appendix K of the New York city building code, the performing inspector shall, on the day of each test: (i) complete the category test report, documenting all violating conditions, if any, and affix his or her signature; (ii) provide a copy of such report to the owner or owner’s representative; and (iii) affix the inspection date and his or her signature over a stamp identifying his or her approved elevator agency and his or her approval number on the inspection certificate issued by the department attesting to completion of items (i) and (ii).

§28-304.6.5 [Inspection and] Periodic inspection or category test reports submission. Periodic inspection or category test reports shall be submitted to the department on such forms and in such manner as required by the commissioner. Such reports shall comply with the following and department rules:

§28-304.6.5.1 Periodic inspection reports. Reports of periodic inspections shall comply with the following:

1. The reports shall contain the signatures of (i) the performing agency director, and (ii) the building owner.

2. The reports, with all applicable signatures, shall be filed with the department within 14 days after the date of the inspection.

§28-304.6.5.2 Category test reports. Reports of category tests shall comply with the following:
1. The [inspection and test] reports shall contain signatures of (i) the performing agency inspector and director, (ii) the witnessing agency [inspector and] director, if required under Table N1 of ASME A17.1 as modified by chapter K1 of appendix K of the New York city building code, and (iii) the building owner.

2. The completed [inspection and test] reports, with all applicable signatures, shall be [delivered to the owner by the approved performing and/or witnessing agency within 30 days of the test listing all violating conditions for each device tested, and] filed with the department within [60] 21 days after the date of the test [by the owner or its authorized designee].

Exception: [Inspection and test reports] Reports are not required to be submitted to the department for private residence wheelchair lifts and private residence dumbwaiters devices. However, the owner shall maintain an inspection and test log to be available to the department upon request.

§28-304.6.6 [Repair.] Periodic inspection and category testing repair. All defects as found in periodic inspection and category testing reports shall be corrected in accordance with the requirements of sections 28-304.6.6.1 and 28-304.6.6.2 of this code, except that all hazardous conditions and defects related to firefighters’ Phase I emergency recall operations or Phase II emergency in-car operation as required by section 3003.2 of the New York city building code shall be corrected immediately.

§28-304.6.6.1 Category test repair. All defects as found in such category test report shall be corrected within 90 days after the date of inspection. The department may grant an extension of 45 days upon submission of an application by the owner demonstrating a practical difficulty in complying within the 90 day timeframe. In no case shall more than two such extensions be granted for a specific defect. An affirmation of correction shall be filed within 14 days after the date of correction.

§28-304.6.6.2 Periodic inspection repair. All defects as found in such [inspection and test reports] periodic inspection report shall be corrected within [120] 90 days after the date of [inspection and] test [except all hazardous conditions shall be corrected immediately]. An affirmation of correction shall be filed within [60] 14 days of the date of correction.

§28-304.7 Required contract. The owner of all new and existing passenger elevators, freight elevators, and escalators shall have a contract with an approved elevator agency to perform elevator and escalator maintenance, repair and replacement work as defined by ASME A17.1 as modified by chapter K1 of appendix K of the New York [City] city building code. The name, address and telephone number of such agency shall be maintained at each premises, on the mainline disconnect switch and in a location readily accessible to employees of the department and to maintenance and custodial staff at the premises.

§28-304.8 Fees. Every owner of elevators and other devices shall pay to the department [an inspection fee and] a report filing fee for each elevator or device in the amount prescribed by [this code] the department’s rules.

§28-304.9 Additional inspections. The commissioner may make such additional inspections as required to enforce the provisions of this code. No fee shall be charged for such additional inspections.
§28-304.10 Occupant notification for elevator work. In occupancy groups R-1 and R-2, when an elevator is to be out of service, a notice identifying the type of work to be performed and the expected start and end dates for such outage shall be provided in English, Spanish, and such other languages as the department may provide by rule, in accordance with sections 28-304.10.1 and 28-304.10.2.

§28-304.10.1 Occupant notification for alteration work. When an elevator is to be out of service for alteration work, notice shall be given to the residential occupants no fewer than 10 business days before the start of the work, except in case of emergency repairs. This notification requirement does not apply to minor alterations and ordinary repairs.

§28-304.10.2 Occupant notification for other elevator service outages. When all elevators servicing a building or any section of a building are expected to be out of service for two or more hours, notice shall be posted at least twenty-four hours before the start of the work. When all elevators servicing a building or any section of a building are expected to be out of service for less than two hours, or are out of service as the result of emergency work, notice is not required to be posted, except that where such outage lasts for two or more hours, notice shall be posted as soon as practicable after the commencement of such service outage.

ARTICLE 305
RETAINING WALLS, PARTITION FENCES AND OTHER SITE STRUCTURES

§28-305.1 Retaining walls, partition fences and other site structures. In addition to the requirements set forth in chapter 33 of the New York [City] city building code, the responsibility for maintaining and repairing retaining walls, partition fences and other site structures shall be in accordance with sections 28-305.1.1, 28-305.1.2, and 28-305.4 of this code.

§28-305.1.1 Structures located on the lot line of adjacent properties and partially on both properties. The owners of adjacent properties shall be responsible jointly for the proper maintenance and repair of retaining walls, partition fences and other site structures, or portions thereof, that are located along the common lot line and on both their properties; and each such owner shall be responsible for one-half of the costs of maintaining and repairing such fences, retaining walls and other site structures, or such portions thereof. Where an owner elects to remove temporarily a retaining wall or partition fence that is required to support a grade differential between the two properties, or for any other reason is required by this code, such owner shall protect the adjacent property, shall not impair its safe use, and shall replace the retaining wall or partition fence at his or her own cost. Refer to chapter 33 of the New York [City] city building code for additional requirements during construction and demolition operations.

§28-305.1.2 Structures located entirely on one property. Where such retaining walls, partition fences or other site structures, or portions thereof, are located entirely on one property, the owner of such property shall be wholly responsible for the proper maintenance and repair of the retaining wall, partition fence or other site structure. If, however, the proper maintenance and/or repair of such retaining wall, partition fence or other site structures requires access to the adjoining property, the owner of such adjoining property shall allow such access. Refer to chapter 33 of the New York [City] city building code for additional requirements during construction and demolition operations.
§28-305.2 Retaining walls required. Hereafter, when an owner elects to set his or her grade either higher or lower than the grade of an adjoining property at the property line, such owner shall erect, maintain and repair a retaining wall of sufficient height, structure and foundation to support such grade differential, and with proper drainage, in accordance with this code, such that the adjacent property is not impacted, and shall do so at the sole expense of such owner and entirely on the property of such owner without access to the adjoining property.

§28-305.3 Special agreement. Nothing in this article shall be construed to prevent the owners of adjacent properties from making or enforcing by private action special agreements with respect to maintenance or repair of retaining walls, partition fences and other site structures or access to adjoining property for such purpose.

§28-305.4 Maintenance, inspection and repair of retaining walls. Maintenance, inspection and repair of retaining walls shall comply with sections 28-305.4.1 through 28-305.4.8.

§28-305.4.1 Definition. As used in this article, the following term shall have the following meaning:

RETAINING WALL. A wall that resists lateral pressures and limits lateral displacement caused by soil, rock, water or other materials, except that basement and vault walls that are part of a building, underground structures, including but not limited to utility vault structures, tunnels, transit stations and swimming pools, shall not be considered retaining walls.

§28-305.4.2 Owner’s responsibility. Owners of retaining walls with a height of ten feet or more and fronting a public right-of-way shall comply with the requirements of this section. For the purposes of this section, the height of a retaining wall shall be the distance from the top of the ground in front of the wall to the top of the wall stem, or wall step for stepped walls, including any parapets or fencing capable of retaining material.

§28-305.4.3 Condition assessment requirements. A condition assessment of a retaining wall shall be conducted at periodic intervals as set forth by rule of the commissioner, but such assessment shall be conducted at least once every [§] five years. The commissioner may establish staggered assessment cycles for retaining walls required to comply with this section.

§28-305.4.3.1 Registered design professional. The condition assessment shall be conducted on behalf of the owner by or under the direct supervision of a registered design professional with appropriate qualifications as prescribed by the department.

§28-305.4.3.2 Department rules. The condition assessment shall be conducted in accordance with rules promulgated by the commissioner.

§28-305.4.4 Report of condition assessment. A report of condition assessment shall be submitted to the department in accordance with sections 28-305.4.4.1 and 28-305.4.4.2.

§28-305.4.4.1 Submission deadlines. Except as otherwise provided in section 28-305.4.6, the registered design professional shall submit a written report to the commissioner within 60 days of completing the assessment, but not more than [§] five years following submission of the preceding report of assessment, certifying the results of the assessment.
§28-305.4.2 Contents. The report shall certify the results of the assessment as either safe, safe with minor repair or safe with repair and/or engineering monitoring, as prescribed by rules of the department. The report shall clearly document the condition of the retaining wall and shall include a record of all significant deterioration, potentially unsafe conditions of the wall or affecting the wall, and movement observed. The report must be certified by the registered design professional.

§28-305.4.5 Fees. Every owner of a retaining wall shall pay to the department a report filing fee for each report of condition assessment in the amount prescribed by this code.

§28-305.4.6 Immediate notice of unsafe condition. Whenever the registered design professional under whose supervision the inspection is performed learns of an unsafe condition through a condition assessment of a retaining wall, such person shall notify the owner and the department of such condition immediately by calling 311 and by written notification to the department.

§28-305.4.7 Repair of unsafe condition. Upon the notification to the department of an unsafe condition, the owner or the owner’s agent shall immediately commence such repairs, reinforcements or other measures as may be required to secure public safety.

§28-305.4.7.1 Permit. The owner or the owner’s agent shall obtain a permit within the time set forth in the rules of the department in order to correct the unsafe condition, after securing public safety as provided above.

§28-305.4.7.2 Monitoring. The owner or the owner’s agent shall monitor the protection of public safety until the unsafe condition is remedied.

§28-305.4.7.3 Reinspection. The owner or the owner’s agent shall reinspect the retaining wall and file an amended report within two weeks after the repairs have been completed certifying that the unsafe conditions of the retaining wall have been corrected.

§28-305.4.7.4 Extension. The commissioner may grant an extension of time of up to 90 days from the date of the application for an extension to complete the repairs required to correct an unsafe condition upon receipt and review of an initial extension application submitted by the registered design professional together with such additional documentation as may be prescribed by rule.

§28-305.4.7.5 Further extension. The commissioner may grant further extensions of time to complete the repairs required to remove an unsafe condition upon receipt and review of an application for a further extension submitted by the registered design professional together with such further documentation as may be prescribed by rule.

§28-305.4.8 Safe with repair and/or engineering monitoring. A retaining wall or any part thereof that may pose a potential danger to persons or property, but does not require immediate action shall be rated safe with repair and/or engineering monitoring. This condition requires further investigation and timely remedial action to prevent its deterioration into an unsafe condition. A registered design professional shall be responsible for appropriately monitoring the wall until the repair is completed.

§28-305.4.8.1 Safe with repair and/or engineering monitoring for two cycles. The registered design professional shall not file a report of safe with repair and/or engineering monitoring for the same retaining wall for [2] two consecutive filing periods unless the
second such report is accompanied by his or her professional certification attesting to the correction of all conditions identified in the prior report as requiring repair.

§28-305.5 **Removal of retaining structures.** Any retaining structure, standing partly on the land of each owner, may be removed by either owner when the original reason for the erection of such retaining structure ceases to exist. Notification shall be provided to the adjoining property owner.

**ARTICLE 306
PARTY WALLS**

§28-306.1 **Responsibility for party walls.** Repair and maintenance of the construction, design and fire-resistance rating of party walls shall be the joint responsibility of the owners of the adjoining properties, and any change by either owner must maintain the weather protection, structural, vertical fire division and other requirements of this code for party walls.

§28-306.2 **Safeguards during construction or demolition.** Refer to section [BC] 3309 of the New York City building code for additional requirements for the maintenance of party walls during construction or demolition operations.

**ARTICLE 307
WORKPLACE EXITS**

§28-307.1 **Obstruction of workplace exits prohibited.** Except for the exemptions specified in subdivision j of section 27-371 of the New York City administrative code or chapter 10 of the New York City building code, as applicable, it shall be unlawful for an employer or the agent of an employer to lock the doors of a workplace or otherwise obstruct or prohibit exit from a workplace when such act may endanger the health or safety of any employee, independent contractor or other individual in such workplace in the event of a fire or other hazardous condition or event. The commissioner shall classify a violation of this section as an immediately hazardous violation. Notwithstanding any other provision of this code, upon criminal conviction or civil adjudication of liability for a violation of this section an additional fine or civil penalty of not less than five thousand dollars $5,000 nor more than twenty thousand dollars $20,000 shall be imposed for each employee, independent contractor or other individual endangered by a violation of this section.

§28-307.1.1 **Notice.** A sign shall be posted conspicuously at the workplace of a person convicted of or found liable for a violation of section 28-307.1. Such sign shall, in English, Spanish, Korean, Chinese or any other language directed by the fire commissioner, provide notice to employees of the acts prohibited by section 28-307.1 and of the remedies for employer retaliation as set forth in section 28-307.3. The sign shall be in a form and posted in a manner directed by the fire commissioner and may contain any other information deemed necessary by the fire commissioner or as recommended by the police commissioner or the commissioner. The fire commissioner may, in the interest of public safety, adopt a rule requiring the posting of such signs at other workplaces.

§28-307.2 **Unannounced inspections of workplaces by fire department.** In addition to any other inspections required by law or rule, the fire department shall conduct a minimum of fifty 50 unannounced workplace inspections annually to ensure the identification and abatement of any
hazardous conditions in violation of section 28-307.1. Such inspections shall include, but not be limited to, sites where there are known or suspected conditions affecting employee safety and health.

§28-307.3 Retaliation. It shall be unlawful for an employer or the agent of such employer to take a retaliatory action, as defined by section 740 of the New York state labor law, against an employee because of the lawful acts of such employee in furtherance of a civil or criminal enforcement proceeding arising out of the failure of such employer or agent to comply with section 28-307.1 of this code. An employee who is the victim of such retaliatory action may commence an action in any court of competent jurisdiction for the relief provided for in this section and shall be entitled to all relief necessary to make such employee whole. Lawful acts of an employee shall include, but not be limited to, assisting in the investigation and initiation of an enforcement proceeding alleging a violation of section 28-307.1 of this code, providing testimony in any such proceeding or providing other assistance in connection therewith. The relief to which such employee shall be entitled shall include, but not be limited to, (i) an injunction to restrain any adverse or retaliatory action, (ii) reinstatement to the position such officer or employee would have had but for such action, or to an equivalent position, (iii) reinstatement of full benefits and seniority rights including payment of any missed back pay, plus interest and (iv) compensation for any special damages sustained as a result of such action, including litigation costs and reasonable attorneys’ fees.

ARTICLE 308
ENERGY AUDITS AND RETRO-COMMISSIONING OF BASE BUILDING SYSTEMS

§28-308.1 Definitions. As used in this article, the following terms shall have the following meanings:

BASE BUILDING SYSTEMS. The systems or subsystems of a building that use energy and/or impact energy consumption including:

1. The building envelope.
2. The [HVAC] (heating ventilating and air conditioning) (HVAC) systems.
3. Conveying systems.
4. Domestic hot water systems.
5. Electrical and lighting systems.

Exception: The term "base building systems" shall not include:

1. Systems or subsystems owned by tenants (other than a net lessee for a term of 49 years or more, inclusive of renewal options), condominium unit owners or cooperative unit shareholders, or a system or subsystems for which a tenant bears full maintenance responsibility and that is within the tenant’s leased space and/or exclusively serves such leased space.
2. Industrial processes that occur within a covered building.

BUILDING MANAGEMENT SYSTEM. A computer-based system that monitors and controls a building’s mechanical and electrical equipment, such as HVAC, lighting, power, fire, and security systems, including, at a minimum, control of the heating equipment using interior temperature sensors.
**CITY BUILDING.** A covered building that is owned by the city and for which the city regularly pays all or part of the annual energy bills.

*Exception:* The term "city building" shall not include:

1. Any building that participates in the tenant interim lease apartment purchase program.
2. Any building that participates in a program administered by the department of housing preservation and development.
3. Any building managed by the New York City health and hospitals corporation.
4. Any senior college in the City University of New York system.
5. Any cultural institution that is in the Cultural Institutions Group as determined by the department of cultural affairs.

**COOPERATIVE CORPORATION.** A corporation governed by the requirements of the state cooperative corporation law or general business law that, among other things, grants persons the right to reside in a cooperative apartment, that right existing by such person’s ownership of certificates of stock, proprietary lease, or other evidence of ownership of an interest in such entity.

**COVERED BUILDING.** As it appears in the records of the department of finance: (i) a building that exceeds 50,000 gross square feet (4645 m²), (ii) two or more buildings on the same tax lot that together exceed 100,000 gross square feet (9290 m²), or (iii) two or more buildings held in the condominium form of ownership that are governed by the same board of managers and that together exceed 100,000 gross square feet (9290 m²).

*Exception:* The term "covered building" shall not include real property classified as class one pursuant to subdivision one of section eighteen hundred two of the real property tax law of the state of New York.

**CURRENT FACILITY REQUIREMENTS.** The owner’s current operational needs and requirements for a building, including temperature and humidity set points, operating hours, filtration, and any integrated requirements such as controls, warranty review, and service contract review.

**ENERGY AUDIT OR AUDIT.** A systematic process of identifying and developing modifications and improvements of the base building systems, including but not limited to alterations of such systems and the installation of new equipment, insulation or other generally recognized energy efficiency technologies to optimize energy performance of the building and achieve energy savings, provided that such process shall not be less stringent than the Level II Energy Survey and Engineering Analysis of the 2004 edition of Procedures for Commercial Building Energy Audits published by the American Society of Heating, Refrigerating and Air-conditioning Engineers Inc. (ASHRAE).

**ENERGY AUDITOR.** An approved agency authorized by the department to perform energy audits and to certify audit reports required by this article. Until such time as there is a national standard establishing qualifications for persons performing energy audits and such standard has been adopted by the department, an energy auditor shall be a registered design professional with such other certification or qualification as the department deems to be appropriate. After the establishment of
such a national standard, the department may adopt the qualifications of the national standard with such modifications as the department deems to be appropriate.

**ENERGY MANAGEMENT SYSTEM.** A system incorporating interior temperature sensors and a central processing unit and controls, which are used to monitor and control gas, steam and oil usage, as is applicable, based on the need for heating.

**ENERGY EFFICIENCY REPORT.** The report required to be filed pursuant to section 28-308.4.

**FINANCIAL HARDSHIP (OF A BUILDING).** A building shall be considered to be subject to financial hardship if the building:

1. Had arrears of property taxes or water or wastewater charges that resulted in the property’s inclusion, within two years prior to the due date of an energy efficiency report, on the department of finance’s annual New York City tax lien sale list;

2. Is exempt from real property taxes pursuant to sections 420-a, 420-b, 446 or 462 of the [New York state] real property tax law and applicable local law and the owner had negative revenue less expenses during the two tax years prior to the due date of an energy efficiency report as certified to the department by a certified public accountant;

3. Had outstanding balances under the department of housing preservation and development’s emergency repair program that resulted in the property’s inclusion, within two years prior to the due date of an energy efficiency report, on the department of finance’s annual New York City tax lien sale list; or

4. Has an active or effective commitment letter from a governmental agency that provides for the financing of the rehabilitation, within a period of [5] five years or less, of such building by such government agency for the purposes of affordable housing for low or moderate income families.

**OWNER.** The owner of record of a covered building, except that in the case of a net lease of an entire building for a term of 49 years or more, inclusive of renewal options, the term owner shall refer to the net lessee and in the case of a covered building held in cooperative or condominium form of ownership, the term owner shall refer to the board of managers in the case of a condominium and the board of directors in the case of a cooperative apartment corporation.

**RETRO-COMMISSIONING.** A systematic process for optimizing the energy efficiency of existing base building systems through the identification and correction of deficiencies in such systems, including but not limited to repairs of defects, cleaning, adjustments of valves, sensors, controls or programmed settings, and/or changes in operational practices.

**RETRO-COMMISSIONING AGENT.** An individual, who shall not be a certified refrigerating system operating engineer or a licensed high pressure boiler operating engineer on the staff of the building being retro-commissioned, authorized by the department to certify retro-commissioning reports required by this article. Until such time as there is a national standard establishing qualifications for persons who perform retro-commissioning and such standard has been adopted by the department, a retro-commissioning agent shall be a registered design professional, a certified refrigerating system operating engineer, or a licensed high pressure boiler operating engineer, with such other qualification or certification as determined by the department. After the establishment of
such a national standard, the department may adopt the qualifications of the national standard with such modifications as the department deems to be appropriate.

**SIMPLE BUILDING.** A covered building with neither a central chilled water system nor a central cooling system that covers more than 10 percent of the building’s gross area.

**SIMPLE PAYBACK.** The number of years for the projected annual energy savings to equal the amount invested in the energy conservation measure, as determined by dividing the investment by the annual energy savings.

**SPACE.** An area within a building enclosed by floor to ceiling walls, partitions, windows and doors.

**SYSTEM OR SUBSYSTEM.** Shall have the same definition as set forth in section two hundred two of the New York [City] energy conservation code.

§28-308.2 Energy audits required. The owner shall ensure that an energy audit is performed on the base building systems of a covered building prior to filing an energy efficiency report as required by this article. Except as otherwise provided in section 28-308.7, an energy audit shall be performed by or under the supervision of an energy auditor and shall be performed in accordance with rules promulgated by the department. The audit process shall cover the base building systems and shall identify at a minimum:

1. All reasonable measures, including capital improvements, that would, if implemented, reduce energy use and/or the cost of operating the building;
2. For each measure, the associated annual energy savings, the cost to implement, and the simple payback, calculated by a method determined by the department;
3. The building’s benchmarking output consistent with the United States Environmental Protection Agency Portfolio Manager tool or as otherwise established by the department;
4. A break-down of energy usage by system and predicted energy savings by system after implementation of the proposed measures; and
5. A general assessment of how the major energy consuming equipment and systems used within tenant spaces impact the energy consumption of the base building systems based on a representative sample of spaces.

**Exceptions:**

1. No energy audit is required if the building complies with one of the following as certified by a registered design professional:
   1.1. The covered building has received an EPA Energy Star label for at least two of the three years preceding the filing of the building’s energy efficiency report.
   1.2. There is no EPA Energy Star rating for the building type and a registered design professional submits documentation, as specified in the rules of the department, that the building’s energy performance is 25 or more points better than the performance of an average building of its type over a two-year period within the three-year period prior to the filing of an energy efficiency report consistent with the methodology of the LEED 2009 rating system for Existing Buildings published by the United States
Green Building Council or other rating system or methodology for existing buildings, as determined by the department.

1.3. The covered building has received certification under the LEED 2009 rating system for Existing Buildings published by the United States Green Building Council or other rating system for existing buildings, as determined by the department, within four years prior to the filing of the building’s energy efficiency report.

2. An energy audit shall not be required for the first energy efficiency report of a simple building that is in compliance with six out of seven of the following items as certified by a registered design professional:

2.1. Individual heating controls. (i) Each dwelling unit in the building has one or more thermostatic controls controlling all the heating units within the dwelling unit and any heated space not within a dwelling unit has one or more thermostatic controls controlling all the heating units within the space, or (ii) the building has a central heating system controlled by an energy management system or a building management system that incorporates temperature sensors located in at least 10 percent of the dwelling units and 10 percent of the heated spaces, except that the total number of sensors required within the building shall not be less than 10 nor more than 30.

2.2. Common area and exterior lighting. Common area (lighting outside of tenant spaces) and exterior lighting, at a minimum, are in compliance with the provisions of the New York [City] city energy conservation code as in effect for new systems installed on or after July 1, 2010.

2.3. Low flow faucets and shower heads. All faucets and showerheads within the building, at a minimum, meet the standards of Table 604.4 of the New York [City] city plumbing code as in effect for new systems installed on or after July 1, 2010.

2.4. Pipe insulation. All exposed pipes that are used to convey heat or hot water are insulated, at a minimum, in accordance with the standards of the New York [City] city energy conservation code as in effect for new systems installed on or after July 1, 2010.

2.5. Domestic hot water. All domestic hot water tanks that do not have built-in insulation are insulated with a minimum insulation value of R-8.

2.6. Washing machines. All common area clothes washing machines are front loading.

2.7. Cool roof. The roof complies with section 1504.8 of the New York [City] city building code as in effect for new buildings constructed on or after July 1, 2010.

§28-308.2.1 Contents of audit report. The energy auditor shall prepare and certify a report of the energy audit. Except as otherwise provided in section 28-308.7, the audit report shall include such information relating to the audit as shall be specified in the rules of the department, including but not limited to (i) the date that the audit was completed, and (ii) the information specified in section 28-308.2.
§28-308.2.1.1 Compliance with landmarks laws. The cost estimates for covered buildings that are regulated by any city, state or federal law regulating landmarks and historic buildings shall include all additional costs necessary for the proposed work to comply with such law.

§28-308.2.2 Timing of energy audit. Except as otherwise provided in section 28-308.7, the energy audit shall be completed no earlier than four years prior to the date on which a covered building’s energy efficiency report is filed with the department pursuant to this article.

§28-308.3 Retro-commissioning required. The owner shall ensure that retro-commissioning is performed on the base building systems of a covered building prior to filing an energy efficiency report as required by this article. Except as otherwise provided in section 28-308.7, retro-commissioning shall be performed by or under the supervision of a retro-commissioning agent in accordance with rules promulgated by the department. Such rules, at a minimum, shall ensure that sufficient analysis, corrections and testing have been done so that the base building systems meet the following criteria demonstrating efficient operation:

1. Operating protocols, calibration, and sequencing:
   1.1. HVAC temperature and humidity set points and setbacks are appropriate and operating schedules reflect major space occupancy patterns and the current facility requirements.
   1.2. HVAC sensors are properly calibrated.
   1.3. HVAC controls are functioning and control sequences are appropriate for the current facility requirements.
   1.4. Loads are distributed equally across equipment when appropriate (i.e. fans, boilers, pumps, etc. that run in parallel).
   1.5. Ventilation rates are appropriate for the current facility requirements.
   1.6. System automatic reset functions are functioning appropriately, if applicable.
   1.7. Adjustments have been made to compensate for oversized or undersized equipment so that it is functioning as efficiently as possible.
   1.8. Simultaneous heating and cooling does not occur unless intended.
   1.9. HVAC system economizer controls are properly functioning, if applicable.
   1.10. The HVAC distribution systems, both air and water side, are balanced.
   1.11. Light levels are appropriate to the task.
   1.12. Lighting sensors and controls are functioning properly according to occupancy, schedule, and/or available daylight, where applicable.
   1.13. Domestic hot water systems have been checked to ensure proper temperature settings.
   1.14. Water pumps are functioning as designed.
   1.15. System water leaks have been identified and repaired.

2. Cleaning and repair:
   2.1. HVAC equipment (vents, ducts, coils, valves, soot bin, etc.) is clean.
   2.2. Filters are clean and protocols are in place to replace, as appropriate.
2.3. Light fixtures are clean.
2.4. Motors, fans, and pumps, including components such as belts, pulleys, and bearings, are in good operating condition.
2.5. Steam traps have been replaced as required to maintain efficient operation, if applicable.
2.6. Manual overrides on existing equipment have been remediated.
2.7. Boilers have been tuned for optimal efficiency, if applicable.
2.8. Exposed hot and chilled water and steam pipes 3 inches (76 mm) or greater in diameter with associated control valves are insulated in accordance with the standards of the New York City energy conservation code as in effect for new systems installed on or after July 1, 2010.
2.9. In all easily accessible locations, sealants and weather stripping are installed where appropriate and are in good condition.

3. Training and documentation:
3.1. Permits for all HVAC, electrical and plumbing equipment are in order.
3.2. Critical operations and maintenance staff have received appropriate training, which may include labor/management training, on all major equipment and systems and general energy conservation techniques.
3.3. Operational and maintenance record keeping procedures (log books, computer maintenance records, etc.) have been implemented.
3.4. The following documentation is on site and accessible to the operators: the operations and maintenance manuals, if such manuals are still available from the manufacturer, the maintenance contracts, and the most recent retro-commissioning report.

Exception: No retro-commissioning is required if the covered building has received certification under the LEED 2009 rating system for Existing Buildings published by the United States Green Building Counsel or other rating system for existing buildings, as determined by the department, within two years prior to the filing of the building’s energy efficiency report and earned the LEED point for Existing Building Commissioning investigation and analysis and the LEED point for Existing Building Commissioning implementation.

§28-308.3.1 Contents of retro-commissioning report. The retro-commissioning agent shall prepare and certify a retro-commissioning report. The retro-commissioning report shall include such information relating to the retro-commissioning as shall be set forth in the rules of the department including, at a minimum:

1. Project and team information:
   1.1. Building address.
   1.2. Experience and certification of person performing retro-commissioning and any staff involved in the project.
1.3. Name, affiliation, and contact information for persons performing retro-commissioning and members of the retro-commissioning team, owner of building, and facility manager of building.

2. Building information:
   2.1. List of all HVAC, domestic hot water, electrical equipment, lighting, and conveyance equipment types in the base building systems.
   2.2. Benchmarking output.

3. Testing protocol:
   3.1. List of all equipment types tested.
   3.2. For each equipment type tested, a list of the sample rates (percent of each type of equipment tested), the testing methodology, including any diagnostic equipment used, and the test results.
   3.3. List of integrated system testing performed.

4. Master list of findings, including for each, the name of the retro-commissioning measure and its assigned number, a brief description of the measure, recommended corrections, the benefits attained, estimated annual savings (energy and cost), the estimated implementation cost, and the simple payback.

5. Deficiencies corrected:
   5.1. List of repairs completed during investigation.
   5.2. List of deficiencies corrected, including, for each deficiency, the date corrected, by whom the correction was made, the actual cost, and projected savings.

§28-308.3.2 Timing of retro-commissioning. Except as otherwise provided in section 28-308.7, the retro-commissioning shall be completed no earlier than four years prior to the date on which a covered building’s energy efficiency report is filed with the department pursuant to this article.

§28-308.3.3 Documentation of retro-commissioning. A copy of the latest up-to-date equipment manuals and the most recent retro-commissioning report shall be maintained at every covered building and shall be made available upon request for inspection by the department.

§28-308.4 Energy efficiency report required. Except as otherwise provided in section 28-308.7, the owner of a covered building shall file an energy efficiency report for such building between January first and December thirty-first of the calendar year in which such report is due pursuant to this section and between January first and December thirty-first of every tenth calendar year thereafter.

Exceptions:

1. An owner may apply for an extension of time to file an energy efficiency report if despite such owner’s good faith efforts, to be documented in such application, the owner is unable to complete the required energy audit and retro-commissioning prior to the scheduled due date for such report. The commissioner may grant no more than two such extensions of
no more than one year each. Extensions granted pursuant to this provision shall not extend the scheduled due dates for subsequent energy efficiency reports.

2. An owner may receive annual extensions of time to file an energy efficiency report based on financial hardship of the building.

§28-308.4.1 Due dates. The first energy efficiency reports for covered buildings [in existence on the effective date of this article] and for new buildings shall be due [beginning with calendar year 2013] in the calendar year with a final digit that is the same as the last digit of the building’s tax block number, as illustrated in the following chart:
Owners of covered buildings (i) that are less than 10 years old at the commencement of their first assigned calendar year or (ii) that have undergone substantial rehabilitation, as certified by a registered design professional, within the 10 year period prior to any calendar year in which an energy efficiency report is due, such that at the commencement of such calendar year all of the base building systems of such building are in compliance with the New York City energy conservation code as in effect for new buildings constructed on and after July 1, 2010, or as in effect on the date of such substantial rehabilitation, whichever is later, may defer submitting an energy efficiency report for such building until the tenth calendar year after such assigned calendar year.

Exceptions:

1. [The first due dates for city buildings shall be in accordance with a staggered schedule, commencing with calendar year 2013 and ending with calendar year 2022 for buildings in existence on the effective date of this article, to be submitted by the department of citywide administrative services to the department on or prior to December 31, 2011.] A city building constructed after [the effective date of this article] December 28, 2009 shall be added to such schedule within 10 years after the issuance of the first certificate of occupancy for such building. Copies of energy efficiency reports submitted to the department with respect to city buildings that are not submitted by the department of citywide administrative services shall also be submitted to the department of citywide administrative services.

2. A cooperative corporation that owns multiple covered buildings located on different tax block numbers, that is required to file an energy efficiency report for more than one covered building in different calendar years, may consolidate all such energy efficiency reports into one report, disaggregated by covered building, due no later than the year in which the last energy efficiency report would be due, which shall be accepted by the department in satisfaction of the requirements of this section for each covered building included in such consolidated report.

§28-308.4 Combined audit and retro-commissioning. Nothing in this article shall prevent an owner from performing the audit and the retro-commissioning in a combined process, provided that all the requirements of sections 28-308.2 and 28-308.3 are met.

§28-308.5 Content of energy efficiency report. Except as otherwise provided in section 28-308.7, the energy efficiency report shall include, in a format prescribed by the department, (i) the energy audit report or documentation substantiating that an exception as set forth in section 28-308.2 applies to such building, and (ii) the retro-commissioning report or documentation substantiating that an exception as set forth in section 28-308.3 applies to such building.
§28-308.6 Notification by the department of finance. The department of finance shall notify the owner of the requirements of this article three years prior to the calendar year in which the covered building’s energy efficiency report is due and in the calendar year prior to the calendar year in which such report is due.

[§28-308.7 Early compliance. Notwithstanding any other provision of this article, an owner may submit an energy efficiency report, including both an energy audit report pursuant to section 28-308.7.1 and a retro-commissioning report pursuant to section 28-308.7.2, in the calendar year commencing January 1, 2013 and ending December 31, 2013 in order to achieve early compliance with this section. An energy efficiency report submitted for early compliance shall be deemed to satisfy the first required energy efficiency report for the building as assigned pursuant to section 28-308.4.1. The next required energy efficiency report for such building shall be due in the tenth calendar year after the first assigned due date for such report.]

[§28-308.7.1 Early compliance energy audit report. An energy audit report for a covered building shall be acceptable for early compliance if it is completed after January 1, 2006 and it includes:

1. The address of the building, completion date of the audit, signature and credentials of the person performing or supervising the performance of the audit and of the audit team; and
2. The information required in items 1 through 5 of section 28-308.2.]

[§28-308.7.1.1 Early compliance audit completed after January 1, 2006 and prior to the effective date of this article. An early compliance audit completed after January 1, 2006 and prior to the effective date of this article shall have met the following additional criteria:]

1. The audit shall have met the requirements of the Level II Energy Survey and Analysis of the 2004 edition of Procedures for Commercial Building Energy Audits published by ASHRAE; or
2. The audit shall have been performed under a New York Power Authority or New York State Energy Research and Development Authority (NYSERDA) contract or by a NYSERDA Flex Tech contractor; and
3. The audit report shall be submitted along with certification by a registered design professional that the audit satisfies the criteria of this section;
4. A partial audit completed after January 1, 2006 and prior to the effective date of this article shall qualify for early compliance only if the base building systems that were not subject to such audit are audited, after the effective date of this article, in the manner set forth in section 28-308.7.1.2.]

[§28-308.7.1.2 Early compliance audit completed after the effective date of this article. An early compliance audit completed after the effective date of this article shall meet the following additional criteria:]

1. The audit shall be performed by or under the supervision of a registered design professional and shall meet the requirements of the Level II Energy Survey and Analysis of the 2004 edition of Procedures for Commercial Building Energy Audits published by ASHRAE;]
2. The auditing team shall include an individual who is one of the following:

2.1. A NYSERDA approved Flex Tech contractor;

2.2. A Certified Energy Manager (CEM) or Certified Energy Auditor (CEA), certified by the Association of Energy Engineers (AEE);

2.3. A High Performance Building Design Professional (HPBD) certified by ASHRAE; or

2.4. For audits of multifamily residential buildings only, a Multi family Building Analyst (MFBA), certified by the Building Performance Institute (BPI), or have such other qualification or certification as determined by the department;

3. An individual with at least three years of professional experience performing energy audits on buildings larger than 50,000 gross square feet (4645 m²) shall be a member of the auditing team;

4. The building’s operations and maintenance staff shall be consulted at the start of and during the audit process; and

5. The registered design professional performing or supervising the audit shall certify that the audit satisfies the criteria of this section.

§28-308.7.2 Early compliance retro-commissioning. A retro-commissioning shall be acceptable for early compliance if it is completed after the effective date of this article and meets the following criteria:

1. The retro-commissioning shall be performed under a NYSERDA contract for base building retro-commissioning or certified by an individual who is not on the staff of the building and is (i) a registered design professional, (ii) a certified refrigerating system operating engineer, or (iii) a licensed high pressure boiler operating engineer;

2. The retro-commissioning team shall include an individual who is a Certified Commissioning Professional (CCP) certified by the Building Commissioning Association (BCA), a Certified Building Commissioning Professional (CBCP) certified by the AEE, a Commissioning Process Management Professional (CPMP) certified by ASHRAE, or an Accredited Commissioning Process Authority Professional (ACPAP) approved by the University of Wisconsin, or has such other certification as determined by the department;

3. The retro-commissioning team shall include an individual with at least one year of professional experience performing retro-commissioning on the mechanical systems of buildings larger than 50,000 gross square feet (4645 m²);

4. The building’s operations and maintenance staff shall be consulted at the start of and during the retro-commissioning process; and

5. The retro-commissioning report shall contain a certification that sufficient analysis and testing has been done and corrections have been performed so that the base building systems meet the criteria of section 28-308.3 and shall include the information specified in section 28-308.3.1.
[6. Nothing in this section shall be construed to determine which individuals may perform the work to correct deficiencies identified during the retro-commissioning process, except as otherwise provided by applicable law.]

§28-308.8 Optional compliance for energy efficiency reports due in the calendar year commencing January 1, 2013. Notwithstanding any other provision of this article, audits and retro-commissioning for energy efficiency reports scheduled to be due in the calendar year commencing January 1, 2013 shall be performed, at the option of the owner, in accordance with the provisions for early compliance as set forth in section 28-308.7 or in accordance with procedures set forth in the rules of the department, if such procedures are promulgated within one year prior to the due date of such report. If such procedures are not promulgated within one year prior to the due date of such report, audit and retro-commissioning for energy efficiency reports due in the calendar year commencing January 1, 2013 shall comply with the audit and retro-commissioning procedures for early compliance.

§28-308.9 §28-308.7 Rules. The department shall promulgate such rules as are necessary to carry out the provisions of this article in a timely manner, which may include separate fees for filing and review of applications and reports filed pursuant to this article.

ARTICLE 309
BENCHMARKING ENERGY AND WATER USE
AND DISCLOSURE OF ENERGY EFFICIENCY SCORES AND GRADES

§28-309.1 General. The energy and water use of city buildings and covered buildings shall be benchmarked in accordance with this article.

§28-309.2 Definitions. As used in this article, the following terms shall have the following meanings:

BENCHMARK. To input and submit to the benchmarking tool the total use of energy and water for a building for the previous calendar year and other descriptive information for such building as required by the benchmarking tool.

BENCHMARKING TOOL. The internet-based database system developed by the United States environmental protection agency, and any complementary interface designated by the office of long-term planning and sustainability, to track and assess the energy and water use of certain buildings relative to similar buildings.

CITY BUILDING. A building that is more than 10,000 gross square feet (929 m²), as it appears in the records of the department of finance, that is owned by the city or for which the city regularly directly pays all of the annual energy bills, provided that two or more buildings on the same tax lot shall be deemed to be one building.

Exception: The term "city building" shall not include:

1. Any building owned by the city that participates in the tenant interim lease apartment purchase program; or
2. Any building owned by the city that (i) is 25,000 gross square feet (2323 m²) or less, as it appears in the records of the department of finance, and (ii) participates in a program administered by the department of housing preservation and development.

**COVERED BUILDING.** As it appears in the records of the department of finance: (i) a building that exceeds 25,000 gross square feet (2323 m²), (ii) two or more buildings on the same tax lot that together exceed 100,000 gross square feet (9290 m²), (iii) two or more buildings held in the condominium form of ownership that are governed by the same board of managers and that together exceed 100,000 gross square feet (9290 m²), or (iv) a city building.

**Exceptions:** The term "covered building" shall not include:

1. Any building owned by the city that participates in the tenant interim lease apartment purchase program.
2. Real property classified as class one pursuant to subdivision [one] 1 of section 1802 of the real property tax law.
3. Real property, not more than three stories, consisting of a series of attached, detached or semi-detached dwellings, for which ownership and the responsibility for maintenance of the HVAC systems and hot water heating systems is held by each individual dwelling unit owner, and with no HVAC system or hot water heating system in the series serving more than two dwelling units, as certified by a registered design professional to the department.

**DATA CENTER.** A room or rooms used primarily to house [high density] high-density computing equipment, such as server racks, used for data storage and processing.

**DWELLING UNIT.** A single unit consisting of one or more habitable rooms, occupied or arranged to be occupied as a unit separate from all other units within a building, and used primarily for residential purposes and not primarily for professional or commercial purposes.

**ENERGY.** Electricity, natural gas, fuel oil and steam.

**OWNER.** The owner of record, provided that "owner" shall be deemed to include: (i) the net lessee in the case of a building subject to a net lease with a term of at least [forty-nine] 49 years, inclusive of all renewal options, (ii) the board of managers in the case of a condominium, and (iii) the board of directors in the case of a cooperative apartment corporation.

**TENANT.** Any tenant, tenant-stockholder of a cooperative apartment corporation, condominium unit owner or other occupant.

§28-309.3 Benchmarking required for city buildings. [No later than May 1, 2010, and no] No later than every May first [thereafter] , any city building shall be benchmarked by the agency or entity primarily responsible for the management of such building, in coordination with the department of citywide administrative services with respect to energy use, and with the New York [City] city department of environmental protection with respect to water use. Benchmarking of water use shall not be required unless the building was equipped with automatic meter reading equipment by the New York [City] city department of environmental protection for the entirety of the previous
calendar year. The city shall maintain such documents as the department determines are necessary for the purpose of carrying out the provisions of this article.

§28-309.4 Benchmarking required for covered buildings other than city buildings. The owner of a covered building, other than a city building, shall annually benchmark such covered building [no later than May 1, 2011, and] no later than every May [thereafter] first. Benchmarking of water use shall not be required unless the building was equipped with automatic meter reading equipment by the New York City department of environmental protection for the entirety of the previous calendar year. The owner or the owner’s representative performing the benchmarking shall consult with the operating staff of the building, as appropriate. Information submitted to the benchmarking tool must be accurate and complete.

Exception: The first mandatory benchmarking for a covered building, other than a city building, that (i) does not exceed 50,000 gross square feet (4645 m²), (ii) is not one of two or more buildings on the same tax lot that together exceed 100,000 gross square feet (9290 m²) and (iii) is not one of two or more buildings held in the condominium form of ownership that are governed by the same board of managers and that together exceed 100,000 gross square feet (9290 m²), shall be completed on or before May [1] first of the first year that commences after the department determines and sets forth in a rule that the utility company providing energy to such buildings will, upon request of an owner, directly upload information necessary to benchmark such building.

§28-309.4.1 Obligation to report energy use for all utility accounts and addresses connected to the building. The owner shall submit information to the benchmarking tool for all utility accounts and addresses connected to the building, including those for separately metered tenant spaces. The owner shall obtain information for separately metered tenant spaces from the utility. If the utility does not have a program to provide such information, the owner shall make reasonable efforts to obtain such information from the tenant. Tenants shall have the obligation to provide such information.

§28-309.4.2 Preservation of documents, inspection, and audit. An owner of a covered building shall maintain such records as the department determines are necessary for carrying out the purposes of this article, including but not limited to energy and water bills and reports or forms received from utilities and tenants. Where energy use within separately metered tenant spaces is omitted, records shall be maintained documenting owner’s efforts to obtain such information. All records shall be preserved for a period of three years, provided that the commissioner may consent to their destruction within that period or may require that such records be preserved longer than such period. At the request of the department, such records shall be made available for inspection and audit by the department at the place of business of the owner or at the offices of the department during normal business hours.

§28-309.4.3 Violations. It shall be unlawful for the owner of a covered building to fail to benchmark pursuant to section 28-309.4. The commissioner shall classify such violation as a lesser violation. If, upon audit of a benchmarking report, the department finds that information submitted to the benchmarking tool was substantially inaccurate or incomplete, the department may reject the purported benchmarking and the owner shall be liable for a violation of section 28-309.4 as if no benchmarking had been performed.
**Exception:** Notwithstanding section 28-204.2, no civil penalty shall be imposed on the owner of a covered building for a violation of this section for such covered building if:

1. Such covered building (i) does not exceed 50,000 gross square feet \((4645 \text{ m}^2)\), (ii) is not two or more buildings on the same tax lot that together exceed 100,000 gross square feet \((9290 \text{ m}^2)\), (iii) is not two or more buildings held in the condominium form of ownership that are governed by the same board of managers and that together exceed 100,000 gross square feet \((9290 \text{ m}^2)\), and (iv) is not a city building;

2. Such owner requested, from the department or another agency designated pursuant to section 28-309.11, benchmarking assistance in connection with such building, and such request was made at least 60 days before the due date of the benchmarking report for which such violation was issued; and

3. Such owner corrects such violation within 60 days after the date of the notice of such violation.

§28-309.5 Direct upload. Information shall be directly uploaded to the benchmarking tool in accordance with the following:

§28-309.5.1 Direct upload by a utility company or other source. The office of long-term planning and sustainability shall encourage and facilitate any utility company or any other source authorized by the office of long-term planning and sustainability to upload directly to the benchmarking tool as soon as practicable, information necessary to benchmark a building.

§28-309.5.2 Direct upload by the [New York City] department of environmental protection. The [New York City] department of environmental protection shall upload directly to the benchmarking tool information on water use at all buildings that were equipped with automatic meter reading equipment by the [New York City] department of environmental protection for the entirety of the previous calendar year and that are subject to the benchmarking requirements of this article.

§28-309.6 Suspension. The director of the office of long-term planning and sustainability may suspend all or part of the requirement to benchmark pursuant to this article upon a written finding that a technological deficiency in the benchmarking tool precludes compliance with this article. The director of the office of long-term planning and sustainability may lift all or part of any such suspension upon a written finding that such deficiency has been corrected. The office of long-term planning and sustainability shall notify the speaker of the city council, the department, the department of citywide administrative services, the [New York City] department of environmental protection and the department of finance promptly upon issuing a suspension or lifting a suspension pursuant to this section.

§28-309.7 Notification and transmission of information. The department of finance shall:

1. Annually notify owners of covered buildings of their obligation to benchmark pursuant to section 28-309.4, provided that the failure of the department of finance to notify any such owner shall not affect the obligation of such owner to benchmark pursuant to such section.

2. Notify owners of covered buildings of any suspension or lifting of a suspension pursuant to section 28-309.6.

195
3. Make available to the department information regarding owners of covered buildings for which no benchmarking information was generated by the benchmarking tool.

§28-309.8 Disclosure. The department of finance shall make information generated by the benchmarking tool available to the public on the internet no later than September 1 of the year in which the covered buildings are benchmarked. Such information shall include, but need not be limited to: (i) the energy use intensity, (ii) the water use per gross square foot, (iii) where available, a rating or score that compares the energy and water use of the building to that of similar buildings, and (iv) a comparison of data across calendar years for any years such building was benchmarked. [Information generated by the benchmarking tool for the 2009 calendar year for city buildings, for the 2010 calendar year for covered buildings, and for the 2011 calendar year for covered buildings whose primary use is residential, as determined by the department of finance, shall not be disclosed.]

Exception: Ratings or scores generated by the benchmarking tool for a covered building that contains a data center, television studio, and/or trading floor that together exceed ten percent of the gross square footage of any such building shall not be disclosed until the office of long-term planning and sustainability determines that the benchmarking tool can make adequate adjustments for such facilities. When the office of long-term planning and sustainability determines that the benchmarking tool can make such adjustments, it shall report such determination to the mayor and the speaker of the city council. Until such determination is made, the office of long-term planning and sustainability shall report biennially to the mayor and the speaker of the city council that the benchmarking tool is unable to make such adjustments.

§28-309.9 Report. No later than December 31 of each year, the office of long-term planning and sustainability shall prepare, submit to the mayor and the speaker of the city council, and post on the internet a report reviewing and evaluating the administration and enforcement of this article and analyzing data obtained from the benchmarking tool. Such report shall contain information regarding: (i) the energy and water efficiency of buildings in the city, (ii) the accuracy of benchmarked data and whether there is a need to train and/or certify individuals who benchmark, (iii) compliance with the requirements of this article, (iv) any administrative and legislative recommendations for strengthening the administration and enforcement of this article, (v) the effectiveness of the benchmarking tool in accounting for New York City conditions, including, but not limited to, high density occupancies, use of steam, large building size, and specific high-energy uses such as data centers, television studios, and trading floors, and (vi) such other information and analyses as the office of long-term planning and sustainability deems appropriate.

§28-309.10 Rules. The department, the department of finance and the office of long-term planning and sustainability may promulgate such rules as deemed necessary to carry out the provisions of this article.

§28-309.11 Benchmarking assistance. The department or another agency designated by the mayor shall establish a system to receive and respond to requests from owners for assistance with respect to fulfilling the benchmarking requirements of this section. Such assistance may include, but need not be limited to, trainings, the provision of reference guides, and a publicized telephone number and [email] electronic mail address to receive direct questions. The annual notice required by section 28-309.7 shall notify covered building owners that such assistance is available and shall describe how such assistance can be obtained.
§28-309.12 Energy efficiency scores and energy efficiency grades. Energy efficiency scores and grades for buildings shall be obtained, assigned and disclosed in accordance with this section.

§28-309.12.1 Definitions. As used in section 28-309.12, the following terms shall have the following meanings:

ENERGY EFFICIENCY GRADE. The term “energy efficiency grade” means, for a covered building, a grade based on an energy efficiency score assigned through the benchmarking tool in accordance with this section as follows:

1. If such score is equal to or greater than 85, the energy efficiency grade shall be A;
2. If such score is equal to or greater than 70 but less than 85, the energy efficiency grade shall be B;
3. If such score is equal to or greater than 55 but less than 70, the energy efficiency grade shall be C;
4. If such score is less than 55, the energy efficiency grade shall be D;
5. If the owner of such building has not complied with section 28-309.12.2, and such owner has had an opportunity to be heard with respect to such non-compliance, the energy efficiency grade shall be F; and
6. If, in accordance with the rules of the department, it is not feasible to obtain an energy efficiency score for such building or if such building is subject to the exception in section 28-309.8, the energy efficiency grade shall be N.

ENERGY EFFICIENCY SCORE. The term "energy efficiency score" means, for a building, the Energy Star rating for such building or a score that assesses the energy use of such building relative to similar buildings that is assigned through the benchmarking tool.

ENERGY STAR RATING. The rating that a building earns using the United States Environmental Protection Agency ENERGY STAR portfolio manager to compare building energy performance to similar buildings in similar climates.

§28-309.12.2 Energy efficiency score and energy efficiency grade required. In 2020 and in each calendar year thereafter, an owner of a covered building shall use the benchmarking tool to provide an energy efficiency score for such building to the department in accordance with the rules of the department unless, in accordance with such rules, the building is a type of building for which it is not feasible to obtain an energy efficiency score. In each such year, the department shall issue an energy efficiency grade to the owner in accordance with such rules.

§28-309.12.3 Display of energy efficiency score and energy efficiency grade. Within 30 days after the owner of a covered building obtains an energy efficiency grade, such owner shall post such grade and the energy efficiency score upon which such grade was based in a conspicuous location near each public entrance to such building, in a form and manner established by the department.

Exception: This section §28-309.12.3 shall not apply to posting of the energy efficiency score of a building with an energy efficiency grade of N.
§28-309.12.4 Publication of energy efficiency grades and energy efficiency scores. For each building for which an energy efficiency grade or energy efficiency score is generated pursuant to this section, the department shall make information generated in connection with such grade and score publicly available online by no later than May 1 of the year following such generation.

   Exception: This section [28-309.12.4] shall not apply to information generated with respect to a building with an energy efficiency grade of N.

§28-309.12.5 Audits. The department shall, from time to time, audit information submitted for buildings in connection with energy efficiency grades and energy efficiency scores. Such audits shall occur at least annually and shall involve appropriate sample size of buildings, as determined by the department.

§28-309.13 Outreach to building owners regarding making energy efficiency improvements. Each year, the department shall provide information regarding energy efficiency improvements to owners of buildings of all sizes, including buildings connected to gas lines. Such information shall also be posted on the department’s website. The information shall include but not be limited to making energy efficiency improvements including the use of fossil fuel alternatives, the benefits of energy efficiency improvements, compliance with the New York city energy conservation code, and compliance with other laws aimed at reducing building energy use and carbon emissions.

ARTICLE 310
REQUIRED UPGRADE OF LIGHTING SYSTEMS

§28-310.1 General. Lighting systems in covered buildings shall be upgraded as provided for in this article.

§28-310.2 Definitions. As used in this article, the following terms shall have the following meanings:

COVERED BUILDING. As it appears in the records of the department of finance: (i) a building that exceeds 25,000 gross square feet (2323 m²), (ii) two or more buildings on the same tax lot that together exceed 100,000 gross square feet (9290 m²) or (iii) two or more buildings held in the condominium form of ownership that are governed by the same board of managers and that together exceed 100,000 gross square feet (9290 m²).

Exceptions: The term "covered building" shall not include:

1. Real property classified as class one pursuant to subdivision [one] 1 of section [eighteen hundred two] 1802 of the New York state real property tax law; or

2. Real property, not more than three stories, consisting of a series of attached, detached or semi-detached dwellings, for which ownership and the responsibility for maintenance of the HVAC systems and hot water heating systems is held by each individual dwelling unit owner, and with no HVAC system or hot water heating system in the series serving more than two dwelling units, as certified by a registered design professional to the department.

§28-310.3 Upgrade of lighting systems of covered buildings required. No later than January 1, 2025, the lighting systems of covered buildings shall be in compliance with the standards for new systems set forth in the New York [City] city energy conservation code and/or applicable standards referenced in such energy code. The owner of a covered building shall ensure that the upgrade of the
lighting system of the entire covered building is completed on or prior to such date and shall file a report with the department, in accordance with the rules of the department, prepared by a registered design professional or a licensed master or special electrician certifying that such upgrade has been completed and that the work is in compliance with the technical standards of the New York (city) electrical code. The department may impose a fee for filing and review of such reports.

Exceptions:

1. An element of a lighting system that is in compliance with the standards of the New York city energy conservation code and/or applicable standards referenced in such code as in effect for new systems installed on or after July 1, 2010.

2. Lighting power densities in any space bounded by permanent floor-to-ceiling partitions and/or closable doors that are in compliance with the standards of the New York city energy conservation code and/or applicable standards referenced in such code as in effect for new systems installed on or after July 1, 2010.

[2] 3. The lighting system within dwelling units classified in occupancy group R-2 or R-3.

[3] 4. The lighting system within a space classified in occupancy group A-3 that is within a house of worship.

ARTICLE 311
INSTALLATION OF ELECTRICAL SUB-METERS IN TENANT SPACES

§28-311.1 General. Sub-meters shall be installed in covered buildings as provided in this article.

§28-311.2 Definitions. As used in this article, the following terms shall have the following meanings:

COVERED BUILDING. As it appears in the records of the department of finance: (i) a building that exceeds 25,000 gross square feet (2323 m²), (ii) two or more buildings on the same tax lot that together exceed 100,000 gross square feet (9290 m²), or (iii) two or more buildings held in the condominium form of ownership that are governed by the same board of managers and that together exceed 100,000 gross square feet (9290 m²).

Exceptions: The term "covered building" shall not include:

1. Real property classified as class one pursuant to subdivision one of section eighteen hundred two of the real property tax law; or

2. Real property, not more than three stories, consisting of a series of attached, detached or semi-detached dwellings, for which ownership and the responsibility for maintenance of the HVAC systems and hot water heating systems is held by each individual dwelling unit owner, and with no HVAC system or hot water heating system in the series serving more than two dwelling units, as certified by a registered design professional to the department.

COVERED TENANT SPACE. (i) A tenant space larger than 5,000 gross square feet (465 m²) on one or more floors of a covered building let or sublet to the same person, or (ii) a floor, of a covered building, larger than 5,000 gross square feet (465 m²) consisting of tenant spaces let or sublet to two or more different persons.
**Exception:** The term "covered tenant space" shall not include dwelling units classified in occupancy group R-2 or R-3.

**METER.** A device installed by an electrical utility company or corporation that measures the flow of electricity supplied to a building or to a defined space within a building and used by the utility to bill consumers for electrical service.

**SUB-METER.** A device meeting the standards of the department or, where applicable, the public service commission, installed within a building’s electrical distribution system that measures the flow of electricity within a defined space within the building and that may, but need not, be used for apportioning the cost of electricity among the building’s tenants or subtenants.

**TENANT SPACE.** Space within a covered building that is let or sublet to another person by the owner or a lessee of such space.

§28-311.3 **Sub-meters required for covered tenant spaces.** On and after January 1, 2025, the electrical consumption of each covered tenant space shall be measured by one or more sub-meters. Sub-meters shall be installed in existing covered tenant spaces by the owner or the lessor of such space on or before January 1, 2025 and thereafter as new covered tenant spaces are created within the building. If the covered tenant space is a floor with multiple tenancies, each tenancy that is 5,000 gross square feet (465 m²) or less shall (i) have a separate sub-meter, (ii) share a sub-meter with other tenant spaces on the floor, or (iii) share a sub-meter covering the entire floor.

**Exception:** Covered tenant space for which the electrical consumption within such space is measured by a meter dedicated exclusively to that space.

§28-311.4 **Monthly statements.** Each tenant or subtenant within a covered tenant space that has a sub-meter or sub-meters to measure electrical consumption shall be provided with a monthly statement showing the amount of electricity measured by the sub-meter for such tenant or subtenant during the month, and any amount charged to the tenant or subtenant for electricity. If the covered tenant space is a floor with multiple tenancies and the tenant’s sub-meter covers other tenant spaces, the statement for such tenant shall show the electrical consumption for the area covered by the sub-meter and the percentage of that area that is leased by the tenant.

§28-311.5 **Reports.** The owner of each covered building shall file a report in accordance with the rules of the department prepared by a registered design professional or a licensed master or special electrician certifying that sub-meters have been installed in all covered tenant spaces in such building as required by this article or that covered tenant spaces are subject to the exception set forth in section 28-311.3. The department may impose a fee for filing and processing such reports.

**ARTICLE 312**
**CARBON MONOXIDE AND SMOKE ALARMS**

§28-312.1 **General.** Required carbon monoxide and smoke alarms shall comply with the provisions of this article.

§28-312.2 **Periodic replacement of carbon monoxide alarms.** Carbon monoxide alarms required pursuant to section [908-7] 915.1 of the New York [City] city building code or sections 27-981.1,
27-981.2 and 27-981.3 of the 1968 building code shall be replaced when the time elapsed since the installation of such alarm exceeds the manufacturer’s suggested useful life of the alarm.

**Exception:** A carbon monoxide alarm installed [prior to the effective date of this article] before April 25, 2012 shall be replaced when the time elapsed since the installation of such alarm exceeds the manufacturer’s suggested useful life of the alarm [or within 6 months after the effective date of this article, whichever is later].

§28-312.3 **Audible notification of expiration of useful life of carbon monoxide alarms.** All carbon monoxide alarms installed after [the effective date of this article] April 25, 2012 shall comply with UL 2034 and be of a type that emits an audible notification at the expiration of the useful life of such alarm.

§28-312.4 **Periodic replacement of smoke alarms.** Smoke alarms required pursuant to section 907.2 of the New York [City] city building code or sections 27-978, 27-979, 27-980 and 27-981 of the 1968 building code shall be replaced when the time elapsed since the installation of such alarm exceeds the manufacturer’s suggested useful life of the alarm.

**Exception:** A smoke alarm installed [prior to the effective date of this section] before April 1, 2014 and whose end of useful life is not known shall be replaced with an alarm that complies with section 28-312.5 [within 7 years after the effective date of this section] by no later than April 1, 2021.

§28-312.5 **Audible notification of expiration of useful life of smoke alarms.** All smoke alarms installed after [the effective date of this section] April 1, 2014 shall comply with UL 217, shall employ a non-removable, non-replaceable battery that powers the alarm for a minimum of 10 years, and shall be of the type that emits an audible notification at the expiration of the useful life of the alarm.

§28-312.8 **Location of smoke alarms and smoke detectors.** On or after January 1, 2021, smoke alarms and smoke detectors installed or replaced in group R occupancies shall be installed in accordance with section [907.2.11.5] 907.2.11.6 of the New York city building code.

**ARTICLE 313**

**ACCESSIBILITY**

§28-313.1 **Retroactive requirement for directional signage at building entrances.** The provisions of section [1110.2] 1111.2 of the New York [City] city building code requiring directional signage to be posted at inaccessible building entrances indicating the route to the nearest accessible entrance shall apply retroactively to all buildings that have such accessible entrances. [Buildings in existence on the effective date of this section shall post such directional signage on or before August 1, 2013.] Such directional signage shall be maintained in good condition.

**Exception:** Directional signage posted at building entrances in compliance with the americans with disabilities act of 1990 shall be deemed to be in compliance with section [1110.2] 1111.2 of the New York [City] city building code.
§28-313.2 Retroactive requirement for accessible building entrances. The provisions of item [5] 4 of section [1110.1] 1111.1 of the New York City building code requiring signage to be posted at accessible entrances where an inaccessible building entrance exists shall apply retroactively to all buildings that have such accessible entrances. Buildings in existence on the effective date of this section shall post such signage on or before August 1, 2013. Such signage shall be maintained in good condition.

Exception: Accessible entrance signs that are posted at building entrances in compliance with the americans with disabilities act of 1990 shall be deemed to be in compliance with section [1110.1] 1111.1 of the New York City building code subject to the inclusion on or adjacent to such signage of a contact telephone number or instructions to gain access if an otherwise accessible building entrance is subject to locking.

§28-313.3 Retroactive requirement for signage and safety requirements for portable ramps at inaccessible building entrances where such ramps are permissible. The provisions of item 7 of section [1110.3] 1111.3 of the New York city building code requiring that signage stating a portable ramp is available, if provided by the building, and the phone number to request such ramp, be posted at inaccessible building entrances shall apply retroactively to all prior code buildings that have such portable ramps where use of such a ramp is permissible. The use of a portable ramp by any building must comply with all applicable laws, and must comply with Section 405 (Ramps) of ICC A117.1 except to the extent the commissioner has waived a requirement pursuant to section 28-313.3.1. All signage posted pursuant to this section shall comply with Section [1110] 1111 of the New York city building code and be maintained in good condition. Nothing in this section shall be construed to authorize the provision of a portable ramp where such provision would not otherwise be lawful.

§28-313.3.1 Waiver of requirements related to portable ramps at inaccessible building entrances where such ramps are permissible. The commissioner may waive the requirement of section 28-313.3 that all portable ramps used by prior code buildings must comply with Section 405 (Ramps) of ICC A117.1, provided, however, that such waiver would not significantly adversely affect safety and that equally safe and proper alternatives are prescribed and, further, that such waiver is based upon a specific finding by the commissioner that strict compliance with the requirement:

1. Would create an undue economic burden;
2. Would not achieve its intended objective;
3. Would be physically or legally impossible;
4. Would be unnecessary in light of alternatives which ensure the achievement of the intended objective or which, without a loss in the level of safety, achieve the intended objective more efficiently, effectively or economically; or
5. Would entail a change so slight as to produce a negligible additional benefit.

§28-313.3.2 Waiver application process. Each application for a waiver under section 28-313.3.1 shall be made to the commissioner in writing, setting forth each requirement of Section 405 (Ramps) of ICC A117.1 sought to be waived and the specific reason or reasons therefore. The commissioner shall determine, under all of the circumstances presented by such application, which of such requirements may appropriately be waived. The commissioner shall render such
determination in a writing, which shall set forth in detail the commissioner’s findings and conclusions with respect to each requirement sought to be waived. A copy of such written determination shall be forwarded to the applicant. Such written determination shall be filed with the department and shall be available for public inspection.

§28-313.3.3 Waiver recommendation. The mayor’s office for people with disabilities, or its successor agency shall be consulted by and shall advise the commissioner concerning each application for a waiver under section 28-313.3.1.

ARTICLE 314
[PERIODIC WASTEWATER RECYCLING SYSTEM INSPECTION AND TESTING]
RESERVED

§28-314.1 General. Wastewater recycling systems installed in accordance with section C102 of appendix C of the New York City plumbing code shall be periodically inspected and tested in accordance with this article. This article shall not apply to rainwater recycling systems installed in accordance with section C103 of appendix C of the New York City plumbing code.

§28-314.2 Frequency of inspection and testing. The owner shall test and inspect wastewater recycling systems on a monthly basis. The commissioner may require additional testing and inspections of wastewater recycling systems as necessary to protect public safety.

§28-314.3 Inspection and testing process. Wastewater recycling systems shall be inspected and tested in accordance with sections 28-314.3.1 through 28-314.3.6.

§28-314.3.1 Inspection and testing entities. Required tests performed on behalf of the owner shall be performed by an approved agency with qualifications as set forth in department rules.

§28-314.3.2 Scope. At each test and inspection, in addition to the requirements prescribed by this article, all wastewater treatment equipment provided for operation of wastewater recycling systems shall be inspected to determine that they are in safe operating condition and parts have not worn to such an extent as to affect the safe and reliable operation of the installation. At each test and inspection, treated effluent from the wastewater recycling system shall be sampled and tested, the results of which shall comply with section C102.1 of the New York City plumbing code.

§28-314.3.3 Notation of inspection or test. After each test and inspection, the inspector shall affix the inspection date and his or her signature over a stamp identifying his or her approved agency and his or her approval number on the inspection certificate issued by the department.

§28-314.3.4 Inspection and test reports submission. Inspection and test reports shall be submitted on forms in such manner as required by the commissioner. Each inspection and test report shall include a listing of all violations for each device inspected and tested associated with the wastewater recycling system. A copy of the report, signed by the inspector performing the inspection and tests shall be delivered to the owner within 30 days of the site visit. All reports shall be kept on file by the approved agency and the owner for a period of at least 6 years.
§28-314.3.5 Reporting an unsafe or hazardous condition. The operation of the system shall immediately cease if any test sample does not meet the minimum water quality standards of Table C102.1 of the New York City plumbing code. The wastewater recycling system shall be placed into start up mode and testing shall commence for at least five consecutive days demonstrating full compliance. If further inspection and testing reveals that the wastewater recycling system test samples do not meet the minimum water quality standards in table C102.1 of the New York City plumbing code, the system shall be taken out of service immediately by the agency performing the inspection. The building owner shall be notified immediately by the agency performing the inspection. The department shall be notified by the agency that the system has been taken out of service within 24 hours by telephone, electronically, in writing or as otherwise directed by the commissioner.

§28-314.3.6 Repair. All defects and violations identified during the inspection and testing process shall be corrected immediately prior to continuing the operation of the wastewater recycling system.

ARTICLE 315
RETROACTIVE REQUIREMENTS

§28-315.1 General. Buildings must be in compliance with the retroactive requirements of the provisions of this code. Such requirements are listed in this article along with the dates by which compliance must be achieved. The retroactive requirements of the 1968 building code continue in effect under this code in accordance with section 28-102.4.1 of this code. The dates for compliance with the retroactive requirements of the 1968 building code are as set forth in the applicable provisions of such 1968 building code. Failure to comply with a retroactive requirement of this code or of the 1968 building code by the date specified for such compliance is a violation of this code.

§28-315.2 Fire protection systems. The work specified in this section to enhance the fire protection systems of buildings shall be completed by the dates specified herein.

§28-315.2.1 Painting of certain exposed portions of sprinkler systems. The painting of exposed risers, cross connections and handles of valves of sprinkler systems in accordance with the retroactive requirements of section 903.6.3 of the New York City building code shall be completed by June 2, 2010 and certification of such painting shall be maintained in accordance with section 903.6.5 of such code.

§28-315.2.2 Painting of certain exposed portions of standpipe systems. The painting of exposed portions of standpipe systems and handles of valves serving such systems in accordance with the retroactive requirements of section 905.11.3 of the New York City building code shall be completed by June 2, 2010 and certification of such painting shall be maintained in accordance with section 905.11.6 of such code.

§28-315.2.3 Animal service facilities. By December 31, 2016, animal service facilities shall comply with the retroactive requirements of section 903.2.2.2 of the New York City building code and owners of such facilities shall file with the department a report certifying either that sprinklers have been installed or that the facility is in compliance with one of the exceptions set forth in such section.
§28-315.3 Sustainability. The work specified in this section to enhance the sustainability of buildings must be completed by the dates specified herein.

§28-315.3.1 Lighting systems. By January 1, 2025, the lighting systems of certain buildings shall be in compliance with article 310 of this chapter and the owners of such buildings shall file a report in accordance with the rules of the department, prepared by a registered design professional or a licensed master or special electrician, certifying compliance with such section and compliance with the technical standards of the New York city electrical code. The department may impose a fee for filing and reviewing such reports.

§28-315.3.2 Electrical sub-meters. By January 1, 2025, the installation of electrical sub-meters in tenant spaces in certain buildings in accordance with article 311 of this chapter shall be completed and the owners of such buildings shall file a report in accordance with the rules of the department, prepared by a registered design professional or a licensed master or special electrician, certifying compliance with such section. The department may impose a fee for filing and reviewing such reports.

§28-315.4 Elevator safety. The work specified in this section to improve the safety of existing elevators shall be completed by the dates specified herein.

§28-315.4.1 Compliance with ASME A17.3 of [2002] 2015. Existing elevators and escalators shall, at a minimum, comply with ASME A17.3 of [2002] 2015, as modified by chapter K3 of appendix K of the New York City building code. [All work to achieve compliance with such requirements shall be completed by December 14, 2009.]

Exceptions:

1. Spaces below hoistways. Spaces below hoistways shall be protected in accordance with section 2.5 of chapter K3 of such appendix by December 14, 2010.
2. Car doors and gates. Car doors and gates shall be in compliance with section 3.4.2 of chapter K3 of such appendix by December 14, 2012.
3. Car illumination. Car illumination shall be in compliance with section 3.4.5 of chapter K3 of such appendix by December 14, 2010.
4. Traction elevators. Traction elevators with single plunger brakes shall be in compliance with section 3.8.4.1 of chapter K3 of such appendix by January 1, 2027.
5. Electrical protective devices. Electrical protective devices shall be in compliance with section 3.10.4 of chapter K3 of such appendix by December 14, 2010.
7. Hydraulic elevators. Hydraulic elevators shall be in compliance with section 4.3.3 of chapter K3 of such appendix by December 14, 2014.
8. Escalator skirt obstruction devices. Escalator skirt obstruction devices shall be in compliance with Section 5.3.7 of Chapter K3 of such appendix by January 1, 2014.
§28-315.5 Fuel gas systems. The work specified in this section to enhance the safety of fuel gas systems shall be completed by the dates specified herein.

§28-315.5.1 Outside gas shut-off. Existing gas services shall be provided with an outside emergency shutoff device acceptable to the commissioner and the fire commissioner in accordance with the retroactive requirements of item 1 of section E6 of appendix E of the New York City fuel gas code. Installation of such a device shall be completed no later than January 1, 2010.

Exception: For R-3 occupancies, the installation of such a device shall be completed no later than January 1, 2020.

§28-315.6 Accessibility. The work specified in this section to enhance the accessibility of buildings shall be completed by the dates specified herein.

§28-315.6.1 Directional signage at inaccessible building entrances. The posting of directional signage at inaccessible building entrances in accordance with the retroactive requirements of section 28-313.1 of this code shall be completed on or before August 1, 2013.

§28-315.6.2 Signage at accessible building entrances. The posting of signage at accessible building entrances in accordance with the retroactive requirements of section 28-313.2 of this code shall be completed on or before August 1, 2013.

§28-315.6.3 Signage for portable ramps at inaccessible building entrances where such ramps are permissible. The posting of signage for portable ramps at inaccessible building entrances where such a ramp is permissible in accordance with the requirements of item 7 of 1110.3 of the New York City building code shall be completed on or before March 1, 2020.

§28-315.7 Building security. The work specified in this section to enhance building security shall be completed by the dates specified herein.

§28-315.7.1 Security grilles on buildings in occupancy groups B or M. Security grilles abutting sidewalks on buildings in occupancy groups B or M shall comply with the retroactive requirements of item 4 of section 1008.1.4.5 of the New York City building code. On and after July 1, 2026, such grilles when closed shall permit visibility from the sidewalk of at least 70 percent of the area covered by such grille.

§28-315.8 Resiliency. The work specified in this section to enhance building resiliency shall be completed by the dates specified herein.

§28-315.8.1 Emergency source of water for residential occupancies. As of December 31, 2022, existing buildings greater than five stories in occupancy groups I-1, R-1, R-2, and R-3 that supply potable water from the public water main to occupants with the assistance of pumps, other than pumps connected to an emergency or a standby power system that complies with the requirements of chapter 27 of the New York City building code, shall be equipped with additional fixtures capable of supplying potable water to occupants utilizing only the available pressure from the public water main in compliance with section 614 of the New York City plumbing code.
§28-315.8.2 Connections for temporary external generators. For the following buildings, the provision of connections for temporary external generators in accordance with the retroactive requirements of section [G311.2] G312.2 of appendix G of the New York [City] city building code shall be completed by January 1, 2033, and a report detailing compliance with such requirements shall be filed with the department in accordance with section [G311.2.2] G312.2.2 of such appendix by such date:

1. Buildings whose main use or dominant occupancy is group I-1 and that are located in [an area of] a special flood hazard [area], as such term is defined in appendix G of the New York [City] city building code;

2. Buildings whose main use or dominant occupancy is an adult home, enriched housing, community residence or intermediate care facility classified as occupancy group R pursuant to an exception to section [308.2.1] 308.3.1 or [308.2.2] 308.3.2 of the New York [City] city building code and that are located in [an area of] a special flood hazard [area], as such term is defined in appendix G of the New York [City] city building code;

3. Buildings whose main use or dominant occupancy is group I-2 hospital and that are located in [an area of] a special flood hazard [area] or shaded X-Zone, as such terms are defined in appendix G of the New York [City] city building code; and

4. Buildings whose main use or dominant occupancy is group I-2 nursing home and that are located in [an area of] a special flood hazard [area], as such term is defined in appendix G of the New York [City] city building code; and

5. Buildings whose main use or dominant occupancy is group I-2, other than hospitals and nursing homes, and that are located in [an area of] a special flood hazard [area], as such term is defined in appendix G of the New York [City] city building code.

§28-315.8.2.1 Modification to the [area of special] flood hazard [or shaded X-Zone] area. Where the [area of] special flood hazard [area] or shaded X-Zone, as established in appendix G of the New York [City] city building code, is modified on or after the effective date of this section, any building identified in section 28-315.8.2 of this code and newly identified as being within such modified [area of] special flood hazard [area] or shaded X-Zone shall, no later than 20 years following the adoption of such modification, comply with the retroactive requirements of section [G311.2] G312.2 of appendix G of the New York [City] city building code. The owner of such building shall, no later than 20 years following the adoption of such modification, file with the department a report detailing compliance with such requirements in accordance with section [G311.2.2] G312.2.2 of such appendix.

§28-315.8.3 Connections for temporary external boilers and chillers. For buildings whose main use or dominant occupancy is group I-2 hospital and that are located in [an area of special] a flood hazard [or shaded X-Zone] area, as such [terms are] term is defined in appendix G of the New York [City] city building code, the provision of connections for temporary external boilers and chillers in accordance with the retroactive requirements of section [G311.3] G312.3 of appendix G of the New York [City] city building code shall be completed by January 1, 2033, and a report detailing compliance with such requirements shall be filed with the department in accordance with section [G311.3.2] G312.3.2 of such appendix by such date.

§28-315.8.3.1 Modification to the [area of special] flood hazard [or shaded X-Zone] area. Where the [area of] special flood hazard [area] or shaded X-Zone, as established in appendix G
of the New York City building code, is modified on or after the effective date of this section, any building whose main use or dominant occupancy is group I-2 hospital and that is newly identified as being within such modified special flood hazard area or shaded X-Zone shall, no later than 20 years following the adoption of such modification, comply with the retroactive requirements of section [G311.3] G312.3 of appendix G of the New York City building code. The owner of such building shall, no later than 20 years following the adoption of such modification, file with the department a report detailing compliance with such requirements in accordance with section [G311.3.2] G312.3.2 of such appendix.

§28-315.9 Single-occupant toilet rooms. Notwithstanding any other provision of law or rule requiring separate facilities for each sex, on and after January 1, 2017, all single-occupant toilet rooms shall be made available for use by persons of any sex in accordance with section [403.2.1] 403.2.2 of the New York city plumbing code. Nothing in this section shall be construed to require physical alteration of a single-occupant toilet room except for the posting and maintenance of appropriate signage in accordance with section 403.4 of the New York city plumbing code.

§28-315.10 Self-closing doors. All doors providing access to interior corridors or stairs in occupancy groups R-1 and R-2 shall be self-closing or equipped with a device that will ensure closing after having been opened by July 31, 2021.

§28-315.11 Buildings that are equipped with a fire alarm system and that contain Group A-1, A-2, A-3, Group B or Group M occupancies. By [January] July 1, 2021, existing buildings equipped with a fire alarm system and that contain group A-1, A-2 or A-3, Group B or Group M occupancies shall comply with the retroactive requirements of section [908.7.3.1] 915.1.2.1 of the New York city building code.

ARTICLE 316
INSULATION OF CONCEALED PIPES EXPOSED DURING ALTERATION OR REPAIR

§28-316.1 Required insulation of certain concealed piping exposed during alteration or repair. Where concealed existing piping is exposed in the course of the alteration or repair of a building, the owner of the building shall provide for the insulation of the exposed piping. The exposed piping shall be insulated to the extent required by the New York City energy conservation code for newly installed pipe of the same specifications and serving the same function as the exposed pipe. The entire exposed length of the piping shall be insulated as well as any further length of concealed pipe that can be directly accessed through openings made in the course of such alteration or repair.

Exceptions:

1. Exposed pipe with 1 inch (25-mm) thick continuous coverage of existing insulation in good condition.

2. Where the length of concealed pipe which may be directly accessed through openings made in the course of such alteration or repair is less than three feet (914 mm).

3. Where there is not sufficient space to insulate pipes to the extent required by the New York City energy conservation code due to conflicts with existing construction, pipes shall be insulated to the extent that space allows.
ARTICLE 317
COOLING TOWERS

§28-317.1 General. All owners of cooling towers shall comply with this article and the rules of the department.

§28-317.2 Definitions. As used in this article, the following terms shall have the following meanings:

COOLING TOWER. The term "cooling tower" means a cooling tower, evaporative condenser or fluid cooler that is part of a recirculated water system incorporated into a building’s cooling, industrial process, refrigeration, or energy production system.

§28-317.3 Registration. All owners of cooling towers shall register such towers with the department prior to initial operation in a form and manner as required by the commissioner and shall include, at a minimum, the following information:

1. Address of the building at which the cooling tower is located;
2. Intended use of cooling tower;
3. Name, address, telephone number and [email] electronic mail address of owner;
4. Manufacturer of the cooling tower;
5. Model number of the cooling tower;
6. Specific unit serial number of the cooling tower;
7. Cooling capacity (tonnage) of the cooling tower;
8. Basin capacity of the cooling tower; and
9. Commissioning date of the cooling tower.

[Exception: Owners of existing cooling towers shall register such towers within 30 days after the effective date of this section.]

§28-317.3.1 Discontinued use. The owner or operator of a cooling tower shall notify the department within 30 days after removing or permanently discontinuing use of a cooling tower. Such notice shall include a statement that such cooling tower has been drained and sanitized in compliance with the requirements of the department of health and mental hygiene for discontinuance of a cooling tower.

§28-317.4 Inspecting, cleaning, disinfecting and testing. All cooling towers shall be inspected, tested, cleaned and disinfected in accordance with section 17-194.1 of the New York city administrative code and the rules of the department of health and mental hygiene.

§28-317.5 Annual certification. The owner or operator of a cooling tower shall file an annual certification that such cooling tower was inspected, tested, cleaned and disinfected in compliance with section 17-194.1 of the administrative code and the rules of the department of health and mental hygiene, and that a maintenance program and plan has been developed and implemented as required by such section. Such certification shall be submitted [by November 1, 2016 and] by November [4] first of each year [thereafter], or by a date otherwise specified in the rules of the department.
Consecutive annual certifications shall be submitted at least 90 days apart. The department of health and mental hygiene shall send an electronic reminder to each owner or operator of a cooling tower at least 30 days before such certification submission deadline. Such electronic reminder shall include a link to the website where such certification may be submitted.

§28-317.6 Fees. The department may charge filing fees for registration, discontinuing of use and annual certification as set forth in the rules of the department.

§28-317.7 Enforcement. Failure to register a cooling tower or submit a certification or statement required by this article shall be classified as a major violation.

ARTICLE 318
PERIODIC INSPECTION OF GAS PIPING SYSTEMS

§28-318.1 General. [Commencing January 1, 2019, building] Building gas piping systems, other than gas piping systems of buildings classified in occupancy group R-3, shall be periodically inspected in accordance with this article.

Exception: A building that contains no gas piping and for which the owner of such building has submitted to the commissioner, in a form and manner determined by the commissioner, a certificate of a registered design professional, or a person satisfying other qualifications that the commissioner may establish, that such building contains no gas piping.

§28-318.2 Frequency of inspection. An inspection of a building’s gas piping system shall be conducted at periodic intervals as set forth by rule of the commissioner, but such inspection shall be conducted at least once every five years.

Exceptions:

1. If the New York state public service commission adopts a rule or other requirement for periodic inspections of service lines, as defined in section 255.3 of title 16 of the New York codes, rules and regulations, with a frequency other than five years, the commissioner may, by rule, require that the periodic inspections required by this article be conducted with such frequency.

2. The initial inspection for a new building shall be conducted in the tenth year after the earlier of (i) the issuance by the department of a letter of completion or, if applicable, a temporary or final certificate of occupancy for such building or (ii) the date such building was completed as determined by department rule.

§28-318.3 Inspection process. Gas piping systems shall be inspected and tested in accordance with sections 28-318.3.1 through 28-318.3.4.

§28-318.3.1 Inspection entity. Inspections of gas piping systems shall be conducted on behalf of the building owner by a licensed master plumber or by an individual under the direct and continuing supervision of a licensed master plumber, with appropriate qualifications as prescribed by department rule.

§28-318.3.2 Scope. At each inspection, in addition to the requirements prescribed by this article or by the commissioner, all exposed gas lines from point of entry of gas piping into a building,
including building service meters, up to individual tenant spaces shall be inspected for evidence of excessive atmospheric corrosion or piping deterioration that has resulted in a dangerous condition, illegal connections, and non-code compliant installations. The inspection entity shall also test public spaces, hallways, corridors, and mechanical and boiler rooms with a portable combustible gas detector to determine if there is any gas leak, provided that such testing need only include public spaces, hallways and corridors on floors that contain gas piping or gas utilization equipment.

§28-318.3.3 Report and certificate of inspection. The inspection entity conducting an inspection of a building pursuant to this article and the owner of such building shall comply with the following requirements:

1. No later than 30 days after such inspection, such inspection entity shall submit to such owner (i) a report of such inspection, on a form and in a manner determined by the department, and (ii) a certification of the licensed master plumber who performed or exercised direct and continuing supervision over such inspection that an inspection pursuant to this article has been completed for such building. Such report shall be certified by such licensed master plumber and, where applicable, by any individual who performed such inspections under the direct and continuing supervision of such licensed master plumber, and shall include, for each gas piping system inspected, a list of conditions including instances where a part or parts of such system is worn to such an extent that the safe and reliable operation of such system may be affected, gas leaks, any observed non-code compliant installations or illegal connections, any conditions described in section 28-318.3.4 and any additional information required by the department.

2. No later than the due date for such inspection, in accordance with department rules, and no earlier than 60 days before such due date, such owner shall submit a certification from a licensed master plumber that an inspection pursuant to this article has been completed by such licensed master plumber for such building, provided that the department may by rule establish an alternative timeframe for such submissions.

3. No later than 90 days after the due date for such inspection, in accordance with department rules, such owner shall electronically submit, or cause to be submitted by such inspection entity, such report to the utility company providing gas service to such building. Such submission shall only be required if, before the date that such submission would be required, the department has determined and set forth in a rule that such utility company will accept such electronic submission at no cost to such owner.

4. No later than 120 days after the due date for such inspection, in accordance with department rules, such owner shall submit to the department, in a form and manner determined by the department, (i) a certification from a licensed master plumber that all conditions that were identified in the inspection report for which a certification was submitted pursuant to item 2 of this section have been corrected, except that such certification may note that correction of one or more conditions identified in such report, other than conditions referred to in section 28-318.3.4, will reasonably take additional time to complete and (ii) a certification from such owner that such owner is in compliance with item 3 of this section. If such certification notes that one or more conditions will take additional time to complete, such owner shall, no later than 180 days after the due date for such inspection, submit to the department, in a form and manner determined by the
department, a certification from a licensed master plumber that all conditions identified in such report have been corrected.

5. All reports and certifications required by this section shall be kept on file by the inspection entity and the building owner for at least eight years after the date of inspection and made available to the department at the department’s request.

§28-318.3.4 Reporting and correction of unsafe or hazardous condition. If an inspection reveals any of the following conditions, the inspection entity shall notify the building owner, the utility and the department immediately and the building owner shall immediately take action to correct such condition in compliance with the New York city construction codes:

1. A gas leak;
2. Evidence of illegal connections or non-code compliant installations; or
3. Any other condition which (i) if verified by a utility company or utility corporation, would constitute a class A condition as described in part 261 of title 16 of the New York codes, rules and regulations or (ii) constitutes an imminently dangerous condition.

§28-318.4 Fees. The department may charge filing fees for the certifications required by section 28-318.3.3, as set forth in the rules of the department.

§28-318.5 Enforcement. Failure to submit a certification required by this article shall be classified as a major violation.

ARTICLE 319
MAINTENANCE AND REMOVAL OF SMALL WIND TURBINES

§28-319.1 Maintenance. The owner of a small wind turbine or small wind turbine tower, as such terms are defined in [section 3113.2] chapter 2 of the New York city building code, shall maintain such turbine and tower in accordance with department rules.

§28-319.2 Removal. The owner of a small wind turbine, as such term is defined in [section 3113.2] chapter 2 of the New York city building code, shall remove such turbine when (i) the time elapsed since installation exceeds the manufacturer’s suggested useful life of such turbine or (ii) such turbine has been continuously inoperable for 12 months or more, whichever occurs sooner, provided that the commissioner shall by rule establish a timeframe for removing small wind turbines that do not have manufacturer’s suggested useful lives.

ARTICLE 320
BUILDING ENERGY AND EMISSIONS LIMITS

§28-320.1 Definitions. As used in this article, the following terms shall have the following meanings:

BUILDING EMISSIONS. The term “building emissions” means greenhouse gas emissions as expressed in metric tons of carbon dioxide equivalent emitted as a result of operating a covered building and calculated in accordance with rules promulgated by the department in consultation with the mayor’s office of long term planning and sustainability. The term “building emissions” shall not include greenhouse gas emissions emitted during a local state of emergency declared by the mayor.
pursuant to section 24 of the executive law or a state of emergency declared by the governor pursuant to sections 28 of the executive law, where such local or state emergency has an impact on building emissions.

BUILDING EMISSIONS INTENSITY. The term “building emissions intensity” means, for a covered building, the number obtained by dividing the building emissions by the gross floor area for such building, expressed in metric tons of carbon dioxide equivalent per square foot per year.

[Carbon dioxide equivalent] CARBON DIOXIDE EQUIVALENT. The term “carbon dioxide equivalent” means the metric used to compare the emissions of various greenhouse gases based upon their global warming potential as defined in the Intergovernmental Panel on Climate Change Fifth Assessment Report (2014).

CAPACITY RESOURCE. The term “capacity resource” means a facility that has the capability to generate and transmit electrical power and sell capacity (i) by bilateral contracts, (ii) in the wholesale capacity market, or (iii) by indirect sales of capacity in the wholesale market in accordance with the schedules of rates and charges of a utility in effect pursuant to section 66 of the New York state public service law.

CITY BUILDING. The term “city building” means a building that is owned by the city or for which the city regularly pays all of the annual energy bills, or a cultural institution that is in the Cultural Institutions Group as determined by the department of cultural affairs for which the city regularly pays all or part of the annual energy bills.

Exception: The term “city building” shall not include any senior college in the city university of New York system.

CLEAN DISTRIBUTED ENERGY RESOURCE. The term “clean distributed energy resource” means a distributed energy resource that (i) uses any of the following sources to generate electricity: hydropower, solar photovoltaics, geothermal wells or loops, tidal action, waves or water currents, or wind; or (ii) is designed and operated to store energy, including but not limited to batteries, thermal systems, mechanical systems, compressed air, and superconducting equipment.

COVERED BUILDING. The term “covered building” means, as it appears in the records of the department of finance, (i) a building that exceeds 25,000 gross square feet (2322.5 m²) or (ii) two or more buildings on the same tax lot that together exceed 50,000 gross square feet (4645 m²), or (iii) two or more buildings held in the condominium form of ownership that are governed by the same board of managers and that together exceed 50,000 gross square feet (4645 m²).

Exceptions:

1. An industrial facility primarily used for the generation of electric power or steam.

2. Real property, not more than three stories, consisting of a series of attached, detached or semi-detached dwellings, for which ownership and the responsibility for maintenance of the HVAC systems and hot water heating systems is held by each individual dwelling unit owner, and with no HVAC system or hot water heating system in the series serving more
than 25,000 gross square feet (2322.5 m²), as certified by a registered design professional to the department.

3. A city building.

4. A housing development or building on land owned by the New York city housing authority

5. A rent regulated accommodation.

6. A building whose main use or dominant occupancy is classified as occupancy group A-3 religious house of worship.

7. Real property owned by a housing development fund company organized pursuant to the business corporation law and article eleven of the private housing finance law.

8. A building that participates in a project-based federal housing program.

**DISTRIBUTED ENERGY RESOURCE.** The term “distributed energy resource” means a resource comprised of one or multiple units capable of generating or storing electricity, all at a single location that is directly or indirectly connected to an electric utility transmission and distribution system. The resource may serve all or part of the electric load of one or more customers at the same location, and it may simultaneously or alternatively transmit all or part of the electricity it generates or stores onto the electric transmission and distribution system for sale to or use by other customers at other locations.

**[Greenhouse-gas] GREENHOUSE GAS.** The term “greenhouse gas” means a unit of greenhouse gas, including carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulfur hexafluoride (SF₆), and nitrogen trifluoride (NF₃).

**GREENHOUSE GAS OFFSET.** The term “greenhouse gas offset” means a credit representing one metric ton of carbon dioxide equivalent emissions reduced, avoided, or sequestered by a project from a measured baseline of emissions and which has been verified by an independent, qualified third party in accordance with offset standards referenced by rules of the department.

**FINANCIAL HARDSHIP (OF A BUILDING).** The term “financial hardship (of a building)” means a building that for the combined two years prior to the application for an adjustment to annual building emissions limit pursuant to section 28-320.7:

1. Had arrears of property taxes or water or wastewater charges that resulted in the property’s inclusion on the department of finance’s annual New York city tax lien sale list;

2. Had been exempt from real property taxes pursuant to sections 420-a, 420-b, 446 or 462 of the real property tax law and applicable local law and the owner had negative revenue less expenses as certified to the department by a certified public accountant, or by affidavit under penalties of perjury; or

3. Had outstanding balances under the department of housing preservation and development’s emergency repair program that resulted in the property’s inclusion on the department of finance’s annual New York city tax lien sale list.
METRIC TONS OF CARBON DIOXIDE EQUIVALENT. The term “metric tons of carbon dioxide equivalent” means the global standard unit in carbon accounting to quantify greenhouse gas emissions, also expressed as tCO\textsubscript{2}e.

RENEWABLE ENERGY CREDIT. The term “renewable energy credit” means a certificate representing the environmental, social and other non-power attributes of one megawatt-hour of electricity generated from a renewable energy resource, which certificate is recognized and tradable or transferable within national renewable energy markets or the New York generation attribute tracking system. This term also means the environmental, social, and other non-power attributes of one megawatt-hour of electricity generated from a hydropower resource that does not trade or transfer renewable energy certificates for those hydropower resources in any renewable energy market or via the New York generation attribute tracking system, provided that the hydropower resource owner certifies the amount of energy produced in each reporting year and that it has not sold the non-power attributes equal to its energy production more than once.

RENT REGULATED ACCOMMODATION. The term “rent regulated accommodation” means a building in which more than 35\% of dwelling units are required by law or by an agreement with a governmental entity to be regulated in accordance with the New York state emergency tenant protection act of 1974, the New York city rent stabilization law of 1969, or the local emergency housing rent control act of 1962.

§28-320.2 Advisory board. There shall be an advisory board convened by the office of building energy and emissions performance upon the effective date of this article, in January of 2029 and in January of 2039, to provide advice and recommendations to the commissioner and to the mayor’s office of long term planning and sustainability relating to effectively reducing greenhouse gas emissions from buildings. Such recommendations shall include, but not be limited to:

1. A report and recommendations to be delivered to the mayor and the speaker of the city council no later than January 1, 2023 for additional or improved approaches to assessing building energy performance. Such report shall include, but not be limited to:
   
1.1. An approach for buildings to submit energy use or greenhouse gas emissions and other information for the purpose of assessing energy performance of covered buildings;

1.2. A methodology that includes the metric of measure, adjustments to the metric, the approach to comparing the output to a benchmark, alternative compliance paths, credit for beneficial electrification and distributed energy resources, and an approach for a trading mechanism as described in section 28-320.11;

1.3. Recommendations for addressing tenant-controlled energy usage;

1.4. Recommendations for amendments to the audit required under section 28-308.2[ of the administrative code], including consideration of whether such audit should be replaced by a capital plan;

1.5. Recommendations for reducing building emissions from rent regulated accommodations;
1.6. Recommendations for allowing additional time to comply with the emissions limits for buildings converting to a new occupancy group or use with lower emissions limits or some other change in status that would affect applicability of the provisions of this article;

1.7. An evaluation of the extent to which the mayor’s 80x50 energy infrastructure pathways study is incorporated and addressed within the recommendations made pursuant to items 1.1 through 1.6 of this section; and

1.8. A reference guide to delineate the responsibilities of the building designer and owners to comply with emissions limits.

2. A report to be delivered to the mayor and the speaker of the city council no later than January 1, 2023, providing an analysis of, and any recommendations for improving, energy and emissions performance requirements for covered buildings. Such recommendations shall be targeted to achieve at least a 40 percent reduction in aggregate greenhouse gas emissions from covered buildings by calendar year 2030 relative to such emissions for the calendar year 2005. Such report shall include, but not be limited to assessments of:

2.1. Incentives for reduction of peak energy demand;

2.2. Methods to allow for staggered reporting cycles for compliance with energy and emissions performance improvements;

2.3. Methods for calculating penalties for non-compliance;

2.4. Estimated emissions reductions associated with any recommended energy performance requirements;

2.5. The economic impact, including benefits, of achieving the energy and emissions performance requirements;

2.6. Methods for achieving earlier or larger reductions from city buildings;

2.7. Separate improvement targets for base building energy systems and tenant-controlled energy systems;

2.8. Methods for achieving emissions reductions from manufacturing and industrial processes; and

2.9. Methods for achieving emissions reductions from hospitals while maintaining critical care for human health and safety.

§28-320.2.1 Advisory board composition. Such advisory board shall be staffed with registered design professionals and be composed of 19 members as follows: the chairperson, the speaker of the council or the speaker’s designee, the mayor or the mayor’s designee, eight members appointed by the mayor, and eight members appointed by the speaker of the council. The mayor shall appoint one architect, one engineer, one building owner or manager, one public utility industry representative, one environmental justice representative, one business sector
representative, one residential tenant representative, and one environmental advocacy organization representative. The speaker shall appoint one architect, one stationary engineer, one construction trades representative, one green energy industry representative, one residential tenant representative, one environmental justice organization representative, one environmental advocacy representative and one not for profit organization representative. The director of such office, or the designee of such director, shall serve as chairperson of the advisory board. The advisory board may convene in working groups. Such working groups may include individuals not on such advisory board to address the recommendations required by this article. The mayor shall invite the appropriate federal, state and local agencies and authorities to participate, including but not limited to the New York state energy research and development authority. Such advisory board shall convene a working group on hospitals that shall be composed of engineers, architects, and hospital industry representatives.

§28-320.3 Building emissions limits. Except as otherwise provided in this article, or otherwise provided by rule, on and after January 1, 2024, a covered building shall not have annual building emissions higher than the annual building emissions limit for such building as determined in accordance with this section based on the occupancy group of the building.

§28-320.3.1 Annual building emissions limits 2024-2029. For calendar years 2024 through 2029, the annual building emissions limits for covered buildings shall be calculated pursuant to items 1 through 10 of this section. For the purposes of such calculation the department shall provide a method for converting categories of uses under the United States environmental protection agency Portfolio Manager tool to the equivalent uses and occupancy groups set forth in this section. For a covered building with spaces classified in more than one occupancy group, the annual building emissions limit shall be the sum of the calculated values from items 1 through 10 of this paragraph, as applicable for each space.

1. For spaces classified as occupancy group A: multiply the building emissions intensity limit of 0.01074 tCO₂e/sf by the corresponding gross floor area (sf);

2. For spaces classified as occupancy group B other than as described in item 6: multiply the building emissions intensity limit of 0.00846 tCO₂e/sf by the corresponding gross floor area (sf);

3. For spaces classified as occupancy groups E and I-4: multiply the building emissions intensity limit of 0.00758 tCO₂e/sf by the corresponding gross floor area (sf);

4. For spaces classified as occupancy group I-1: multiply the building emissions intensity limit of 0.01138 tCO₂e/sf by the corresponding gross floor area (sf);

5. For spaces classified as occupancy group F: multiply the building emissions intensity limit of 0.00574 tCO₂e/sf by the corresponding gross floor area (sf);

6. For spaces classified as occupancy groups B civic administrative facility for emergency response services, B non-production laboratory, Group B ambulatory health care facility, H, I-2 and I-3: multiply the building emissions intensity limit of 0.02381 tCO₂e/sf by the corresponding gross floor area (sf);
7. For spaces classified as occupancy group M: multiply the building emissions intensity limit of 0.01181 tCO$_2$e/sf by the corresponding gross floor area (sf);

8. For spaces classified as occupancy group R-1: multiply the building emissions intensity limit of 0.00987 tCO$_2$e/sf by the corresponding gross floor area (sf);

9. For spaces classified as occupancy group R-2: multiply the building emissions intensity limit of 0.00675 tCO$_2$e/sf by the corresponding gross floor area (sf);

10. For spaces classified as occupancy groups S and U: multiply the building emissions intensity limit of 0.00426 tCO$_2$e/sf by the corresponding gross floor area (sf).

§28-320.3.1.1 Greenhouse gas coefficient of energy consumption for calendar years 2024 through 2029. The annual building emissions of a covered building in accordance with this section, greenhouse gas emissions shall be calculated as follows for calendar years 2024 through 2029:

1. Utility electricity consumed on the premises of a covered building that is delivered to the building via the electric grid shall be calculated as generating 0.000288962 tCO$_2$e per kilowatt hour or, at the owner’s option, shall be calculated based on time of use in accordance with referenced emissions factors promulgated by rules of the department. The department, in consultation with the office of long term planning and sustainability, shall promulgate rules governing the calculation of greenhouse gas emissions for campus-style electric systems that share on-site generation but make use of the utility distribution system and for buildings that are not connected to the utility distribution system.

2. Natural gas combusted on the premises of a covered building shall be calculated as generating 0.00005311 tCO$_2$e per kbtu.

3. #2 fuel oil combusted on the premises of a covered building shall be calculated as generating 0.00007421 tCO$_2$e per kbtu.

4. #4 fuel oil combusted on the premises of a covered building shall be calculated as generating 0.00007529 tCO$_2$e per kbtu.

5. District steam consumed on the premises of a covered building shall be calculated as generating 0.00004493 tCO$_2$e per kbtu.

6. The amount of greenhouse gas emissions attributable to natural gas powered fuel cells shall be credited compared to the electricity grid marginal emissions factor that will be determined by the commissioner and promulgated into rules of the department.

Exception: Natural gas powered fuel cells that commence operation prior to the later of January 1, 2023 or the promulgation of such rules, shall be credited compared to the electricity grid marginal emissions factor published in the most recent New York state energy research and development authority renewable energy program impact evaluation and clean energy standard triennial review, or a successor to such report issued by the New York state energy research and development authority.
7. The amount of greenhouse gas emissions attributable to other energy sources, including but not limited to distributed energy resources, shall be determined by the commissioner and promulgated into rules of the department.

§28-320.3.2 Building emissions limits for calendar years 2030 through 2034. For calendar years 2030 through 2034, the annual building emissions limits for covered buildings shall be calculated pursuant to items 1 through 10 of this section. For the purposes of such calculation, the department shall provide a method for converting categories of uses under the United States environmental protection agency Portfolio Manager tool to the equivalent uses and occupancy groups set forth in this section. For a covered building with spaces classified in more than one occupancy group, the annual building emissions limit shall be the sum of the calculated values from items 1 through 10 of this paragraph, as applicable for each space. The department may establish different limits, including a different metric or method of calculation, set forth in the rules of the department, where the department determines that different limits are feasible and in the public interest. Where such limits are set by rule, the average emission limits for all covered buildings shall not be less restrictive than the average emissions impact of the building emissions limits outlined in items 1 through 10 of this section. The advisory board and the office of long term planning and sustainability shall provide advice and recommendation regarding such limits.

1. For spaces classified as occupancy group A: multiply the building emissions intensity limit of 0.00420 tCO\(_2\)/sf by the corresponding gross floor area (sf);

2. For spaces classified as occupancy group B other than as described in item 6: multiply the building emissions intensity limit of 0.00453 tCO\(_2\)/sf by the corresponding gross floor area (sf);

3. For spaces classified as occupancy groups E and I-4: multiply the building emissions intensity limit of 0.00344 tCO\(_2\)/sf by the corresponding gross floor area (sf);

4. For spaces classified as occupancy group I-1: multiply the building emissions intensity limit of 0.00598 tCO\(_2\)/sf by the corresponding gross floor area (sf);

5. For spaces classified as occupancy group F: multiply the building emissions intensity limit of 0.00167 tCO\(_2\)/sf by the corresponding gross floor area (sf);

6. For spaces classified as occupancy groups B civic administrative facility for emergency response services, B non-production laboratory, Group B ambulatory health care facility H, I-2 or I-3: multiply the building emissions intensity limit of 0.01330 tCO\(_2\)/sf by the corresponding gross floor area (sf);

7. For spaces classified as occupancy group M: multiply the building emissions intensity limit of 0.00403 tCO\(_2\)/sf by the corresponding gross floor area (sf);

8. For spaces classified as occupancy group R-1: multiply the building emissions intensity limit of 0.00526 tCO\(_2\)/sf by the corresponding gross floor area (sf);

9. For spaces classified as occupancy groups R-2: multiply the building emissions intensity limit of 0.00407 tCO\(_2\)/sf by the corresponding gross floor area (sf);
For spaces classified as occupancy groups S and U: multiply the building emissions intensity limit of 0.00110 tCO₂e/sf by the corresponding gross floor area (sf).

§28-320.3.2.1 Greenhouse gas coefficients of energy consumption for calendar years 2030 through 2034. For the purposes of calculating the annual building emissions of a covered building in accordance with this section, the amount of greenhouse gas emissions attributed to particular energy sources shall be determined by the commissioner and promulgated into rules of the department by no later than January 1, 2023. The commissioner shall consult with the advisory board required by this article to develop such greenhouse gas coefficients for utility electricity consumption. When developing such coefficients, the commissioner shall consider factors, including but not limited to the best available New York state energy research and development authority and State Energy Plan marginal forecasts for Zone J for the end of the compliance period and beneficial electrification.

§28-320.3.4 Building emissions limits for calendar years 2035 through 2050. No later than January 1, 2023, the commissioner shall establish by rule annual building emissions limits and building emissions intensity limits applicable for calendar years 2035 through 2039 and building emissions limits and building emissions intensity limits applicable for calendar years 2040 through 2049. Such limits shall be set to achieve an average building emissions intensity for all covered buildings of no more than 0.0014 tCO₂e /sf/yr by 2050.

§28-320.3.5 Building emissions limits on and after calendar year 2050. No later than January 1, 2023, the commissioner shall establish by rule annual building emissions limits and building emissions intensity limits applicable for calendar years commencing on and after January 1, 2050. Such limits shall achieve an average building emissions intensity for all covered buildings of no more than 0.0014 tCO₂e /sf/yr.

§28-320.3.6 Deductions from reported annual building emissions. The department may authorize a deduction from the annual building emissions required to be reported by an owner pursuant to section 28-320.3 where the owner demonstrates the purchase of greenhouse gas offsets or renewable energy credits, or the use of clean distributed energy resources, in accordance with this section. For such sections that limit the dates of applicability of such deductions, the department shall promulgate rules to extend such deductions for each future compliance date.

§28-320.3.6.1 Deductions from reported annual building emissions for renewable energy credits. A deduction from the reported annual building emissions shall be authorized equal to the number of renewable energy credits purchased by or on behalf of a building owner, provided (i) the renewable energy resource that is the source of the renewable energy credits is considered by the New York independent system operator to be a capacity resource located in, or whose output directly sinks into, the zone J load zone for the reporting calendar year; (ii) the renewable energy credits are solely owned and retired by, or on behalf of, the building owner; (iii) the renewable energy credits are from the same year as the reporting year; and (iv) the building that hosts the system producing the energy does not receive a deduction under section 28-320.3.6.3. Covered buildings claiming deductions for renewable energy credits under this section must provide the department with the geographic location of the renewable energy resource that created the renewable energy credits. The department, in consultation with the mayor’s office of long term planning and sustainability, shall promulgate rules to implement this deduction.
§28-320.3.6.2 Deductions from reported annual building emissions for purchased greenhouse gas offsets. For calendar years 2024 through 2029, a deduction shall be authorized for up to 10 percent of the annual building emissions limit. Such a deduction shall be authorized only where within the reporting calendar year, greenhouse gas offsets equivalent to the size of the deduction as measured in metric tons of carbon dioxide equivalent and generated within the reporting calendar year have been (i) purchased by or on behalf of the owner in accordance with an offset standard referenced by rules of the department, (ii) publicly registered in accordance with such offset standard, and (iii) retired or designated to the department for retirement. Such greenhouse gas offsets must exhibit environmental integrity principles, including additionality, in accordance with rules promulgated by the department in consultation with the office of long term planning and sustainability. For the purposes of this section, additionality means a requirement that an offset project is not already required by local, national or international regulations. Prior to the department promulgation of rules pursuant to this section, the department shall consult the advisory board on environmental justice as established by section 3-1006 of the administrative code.

§28-320.3.6.3 Deductions from reported annual building emissions for clean distributed energy resources. A deduction from the reported annual building emissions shall be authorized based upon the calculated output of a clean distributed energy resource located at the building subject to the report. The department shall promulgate rules to set forth how such deduction shall be calculated, in accordance with the following:

1. For a clean distributed energy resource that generates electricity, the department shall establish separate calculations for each type of commercially available clean distributed energy resource, which shall not be revised more frequently than once every three years.

2. For a clean distributed energy resource that stores electricity, the deduction shall be based on the size of the resource and its ability to reduce greenhouse gas emissions during designated peak periods.

§28-320.3.7 Reports required to be filed by owner. By May 1, 2025, and by May 1 first of every year thereafter, the owner of a covered building shall file with the department a report, certified by a registered design professional, prepared in a form and manner and containing such information as specified in rules of the department, that for the previous calendar year such building is either:

1. In compliance with the applicable building emissions limit established pursuant to section 28-320.3; or

2. Not in compliance with such applicable building emissions limit, along with the amount by which such building exceeds such limit.

For a report filed on or after May 1, 2026, where a report required to be submitted by May 1 in the prior year indicated that the covered building was not in compliance with the applicable building emissions limit established pursuant to section 28-320.3 in the calendar year covered by such report, but such building is in compliance for the calendar year covered by the report
required to be submitted by May 1 in the current year, such report shall describe the methods used to achieve compliance.

§28-320.3.7.1 Extension of time to file report. An owner may apply for an extension of time to file an annual report required by section 28-320.3.7 in accordance with this section and the rules of the department. An extension may be granted where the owner is unable to file the certified report by the scheduled due date despite such owner’s good faith efforts, as documented in such application. An extension granted pursuant to this section shall not modify the owner’s obligation to comply with the applicable emission limits for such calendar year.

§28-320.3.7.2 Reporting on compliance by the department. By January 1, 2026, and January 1 of every year thereafter, the office of building energy and emissions performance shall submit to the mayor and speaker of the council a report relating to compliance with this section. Such report shall include, but not be limited to:

1. Beginning with the report due January 1, 2027, the methods used by covered buildings to comply with the building emissions limits established pursuant to section 28-320.3 where such buildings were not in compliance for the report submitted in the previous year, including, as applicable, any retrofitting improvements and purchasing of clean energy, disaggregated by method and by number of buildings; and

2. The total number of buildings in each occupancy group, and the number of buildings in compliance with emissions limits, disaggregated by occupancy group.

§28-320.3.8 Continuing requirements. In 2055, the office of building energy and emissions performance shall prepare and submit to the mayor and the speaker of the council recommendations whether to repeal or amend any of the requirements of this article.

§28-320.3.9 Extension for certain income-restricted housing. This section is applicable to covered buildings:

1. That are owned by a limited-profit housing company organized under article 2 of the New York state private housing finance law, and

2. That contain one or more dwelling units for which occupancy or initial occupancy is restricted based upon the income of the occupant or prospective occupant thereof as a condition of a loan, grant, tax exemption, tax abatement, or conveyance of property from any state or local governmental agency or instrumentality pursuant to the private housing finance law, the general municipal law, or section 420-c of the New York state real property tax law.

Such covered buildings are exempted from the annual building emissions limits set forth in section 28-320.3.1 and 28-320.3.2 of this code and from any applicable reporting requirements. Commencing January 1, 2035, such covered buildings shall be subject to the annual building emissions limits established pursuant to sections 28-320.3.4 and 28-320.3.5 of this code and any applicable reporting requirements.
§28-320.3.10 Changes in building status. The department may establish by rule procedures for a building to apply for additional time to comply with the emissions limits when such building converts to a new occupancy group or use with lower emissions limits, or undergoes a change affecting the applicability of this article to such building.

§28-320.3.10.1 Additional time for certain covered buildings. A covered building where at least one dwelling unit is required by law or by an agreement with a governmental entity to be regulated in accordance with the emergency tenant protection act of 1974, the rent stabilization law of 1969, or the local emergency housing rent control act of 1962, but that is not a rent regulated accommodation pursuant to this article, may delay compliance with annual building emissions limits until January 1, 2026, and submission of the first report required by section 28-320.3.7 until May 1, 2027.

§28-320.4 Assistance. The office of building energy and emissions performance shall establish and maintain a program for assisting owners of covered buildings in complying with this article, as well as expand existing programs established to assist owners in making energy efficiency and renewable energy improvements. These programs shall be made available to assist building owners without adequate financial resources or technical expertise.

§28-320.5 Outreach and education. The office of building energy and emissions performance shall establish and engage in outreach and education efforts to inform building owners about building emissions limits, building emissions intensity limits and compliance with this article. The materials developed for such outreach and education shall be made available on the office’s website. Such outreach shall include a list of city, state, federal, private and utility incentive programs related to energy reduction or renewable energy for which buildings reasonably could be eligible. The office of building energy and emissions performance shall also provide outreach, education, and training opportunities for buildings’ maintenance and operations staff.

§28-320.5.1. Reporting on outreach and education. By June 1, 2021, and by June 1 in every year thereafter, the office of building energy and emissions performance shall submit a report to the mayor and the speaker of the council, detailing the outreach and education efforts made pursuant to section 28-320.5, including, but not limited to information provided about incentive programs and other sources of funding. Such report shall also include the number of staff members working at the office of building energy and emissions performance.

§28-320.6 Penalties. An owner of a covered building who has submitted a report pursuant to section 28-320.3.7 [which] that indicates that such building has exceeded its annual building emissions limit shall be liable for a civil penalty of not more than an amount equal to the difference between the building emissions limit for such year and the reported building emissions for such year, multiplied by $268.

§28-320.6.1 Determination of penalty. In considering the amount of the civil penalty to be imposed pursuant to this article, a court or administrative tribunal shall give due regard to aggravating or mitigating factors including:

1. The respondent’s good faith efforts to comply with the requirements of this article, including investments in energy efficiency and greenhouse gas emissions reductions before the effective date of this article;
2. The respondent’s history of compliance with this article;

3. The respondent’s compliance with the conditions of any adjustment to the applicable building emissions limit, issued by the department pursuant to section 28-320.7;

4. Whether the non-compliance was directly related to unexpected and unforeseeable events or conditions during the calendar year outside the control of the respondent;

5. The respondent’s access to financial resources, where the court or administrative tribunal may consider the financial hardship of a building owned by such respondent as evidence of such respondent’s access to such financial resources; and

6. Whether payment of such penalty would impact the operations of facilities critical to human life or safety.

§28-320.6.2 Civil penalty for failure to file report. It shall be unlawful for the owner of a covered building to fail to submit an annual report as required by section 28-320.3.7 on or before the applicable due date. An owner of a covered building subject to a violation for failure to file a report shall be liable for a penalty of not more than an amount equal to the gross floor area of such covered building, multiplied by $0.50, for each month that the violation is not corrected within the 12 months following the reporting deadline; provided, however, that an owner shall not be liable for a penalty for a report demonstrating compliance with the requirements of this article if such report is filed within 60 days of the date such report is due.

§28-320.6.3 False statement. It shall be unlawful to knowingly make a material false statement in a report or other submission filed with the department, pursuant to this article. A violation of this section shall be a misdemeanor and subject to a fine of not more than $500,000 or imprisonment of not more than 30 days or both such fine and imprisonment. A person who violates this section shall also be liable for a civil penalty of not more than $500,000.

§28-320.6.4 Penalty recovery. Civil penalties provided for by this article may be recovered in a proceeding before an administrative tribunal within the jurisdiction of the office of administrative trials and hearings. Administrative summonses returnable to such tribunal for violations of this article may be issued by the department or by an agency designated by the department. Civil penalties provided for by this article may also be recovered in an action by the corporation counsel in any court of competent jurisdiction.

§28-320.7. Adjustment to applicable annual building emissions limit. The department, in consultation with the mayor’s office of long term planning and sustainability or any other agency designated by the mayor, may grant an adjustment of the annual building emissions limit applicable to a covered building in existence on the effective date of this article or for which a permit for the construction of such building was issued prior to such effective date, provided that the owner is complying with the requirements of this article to the maximum extent practicable.

1. Such an adjustment may be granted upon a specific determination that all of the following conditions in items 1.1 through 1.3 are met:

1.1. Capital improvements are necessary for strict compliance with the limit set forth in section 28-320.3 and it is not reasonably possible to make such improvements due to (i) a constraint imposed by another provision of law, including but not limited to designation as a landmark, landmark site, interior landmark, or within a historic district
pursuant to chapter 3 of title 25 of the administrative code, or (ii) a physical condition of the building or building site including but not limited to lack of access to energy infrastructure, space constraints, or lack of access to a space within a building covered by a lease in existence on the effective date of this section;

1.2. The owner has made a good faith effort to purchase greenhouse gas offsets to comply with section 28-320.3 but a sufficient quantity is not available at a reasonable cost; and

1.3. The owner has availed itself of all available city, state, federal, private and utility incentive programs related to energy reduction or renewable energy for which it reasonably could participate.

2. Such an adjustment may be granted upon a specific determination that all of the following conditions in items 2.1 through 2.4 are met:

2.1. The cost of financing capital improvements necessary for strict compliance with the limit set forth in section 28-320.3 would prevent the owner of a building from earning a reasonable financial return on the use of such building or the building is subject to financial hardship as defined in this article. In evaluating the ability of an owner to earn a reasonable financial return, the department may consider future savings expected from such capital improvements;

2.2. The owner is not eligible for any program funded by the city or enabled by a local law that provides financing for the purpose of energy reduction or sustainability measures. Proof of ineligibility for financing must be demonstrated by rejection from any such program funded by the city or enabled by a local law or an affidavit explanation why such owner could not reasonably participate in such programs;

2.3. The owner has made a good faith effort to purchase greenhouse gas offsets or renewable energy credits to comply with section 28-320.3 but a sufficient quantity is not available at a reasonable cost; and

2.4. The owner has availed itself of all available city, state, federal, private and utility incentive programs related to energy reduction or renewable energy for which it reasonably could participate.

§28-320.7.1 Effective period. An adjustment granted pursuant to item 1 of section 28-320.7 may be effective for a period of not more than three calendar years. An adjustment granted pursuant to item 2 of such section may be effective for a period of not more than one calendar year.

§28-320.7.2 Application. An application for such an adjustment shall be made in the form and manner determined by the department and certified by a registered design professional.

§28-320.8 Adjustment to applicable annual building emissions limit for calendar years 2024-2029. The department may grant an adjustment of the annual building emissions limit for calendar years 2024 through 2029 applicable to a covered building in existence on the effective date of this article where such covered building emissions in calendar year 2018 exceeds the building emissions limit as prescribed by section 28-320.3.1 by more than 40 percent, as reported to the department by a registered design professional. The adjustment shall result in a required building emissions limit that is 70 percent of the calendar year 2018 building emissions for the covered building. Such adjustment may be granted where all of the following conditions in items 1 through 3 are met:
1. The owner of the covered building demonstrates that the building emissions in excess of the building emissions limit is attributable to special circumstances related to the use of the building, including but not limited to 24 hour operations, operations critical to human health and safety, high density occupancy, energy intensive communications technologies or operations, and energy-intensive industrial processes;

2. The owner of the covered building demonstrates that the energy performance of the covered building is equivalent to a building in compliance with the New York city energy conservation code in effect on January 1, 2015; and

3. The owner of the covered building has submitted a plan to the department setting forth a schedule of alterations to the covered building or changes to the operations and management of the covered building sufficient to ensure that the covered building will be in compliance with the annual building emissions limits for calendar years 2030 through 2034, as required by section 28-320.3.2.

§28-320.8.1 Effective period. An adjustment granted pursuant to section 28-320.8 may be effective for the reporting years 2025 through 2030, as prescribed by section 28-320.3.7, provided that the certificate of occupancy has not been amended after December 31, 2018.

§28-320.8.1.1 Extension of effective period. The commissioner may also grant an extension of the effective period of the adjustment to applicable annual building emissions limit for calendar years 2030-2035, as prescribed by section 28-320.3.8. Such extension may be granted upon submission of a schedule of alterations to the covered building or changes to the operations and management of the covered building in accordance with section 28-320.8 sufficient to ensure that by 2035 the covered building will comply with a required building emissions limit that is 50 percent of the reported 2018 building emissions for the covered building.

§28-320.8.2 Application. An application for an adjustment shall be submitted to the department before July 1, 2021 in the form and manner determined by the department and certified by a registered design professional.

§28-320.9 Adjustment to applicable annual building emissions limit for not-for-profit hospitals and healthcare facilities. The department shall grant an adjustment of the annual building emissions limits for calendar years 2024-2029 and 2030-34 where all of the following conditions in items 1 and 2 are met:

1. The building is classified as a not-for-profit hospital, not-for-profit health center, or not-for-profit HIP center, in existence on the effective date of this article; and

2. By no later than July 21, 2021, the owner of the covered building submits an application to the department for such adjustment in a form and manner prescribed by the department.

For calendar years 2024 through 2029, the adjustment shall result in the covered building being subject to an emissions limit that is 85 percent of the calendar 2018 building emissions for such covered building. For calendar years 2030 through 2034, the adjustment shall result in the covered building being subject to an emissions limit that is 70 percent of the calendar 2018 building emissions for such covered building.
§28-320.10 Fee schedule. The department may establish by rule a schedule of fees that shall be paid upon the filing of a report or an application for an adjustment to the applicable building emissions limit pursuant to this article. Such schedule may include a fee for the late filing of a report.

§28-320.11 Carbon trading study. The office of long term planning and sustainability shall conduct a study on the feasibility of a citywide trading scheme for greenhouse gas emissions from buildings and submit a report and implementation plan with the findings of such study to the mayor and the speaker of the council no later than January 1, 2021. Such study shall include methods to ensure equitable investment in environmental justice communities that preserve a minimum level of benefits for all covered buildings and do not result in any localized increases in pollution. Such study shall also include an approach to a marketplace for credit trading, pricing mechanisms, credit verification, and mechanisms for regular improvement of the scheme. Such study should also consider the reports and recommendations of the advisory board.

ARTICLE 321
ENERGY CONSERVATION MEASURE REQUIREMENTS FOR CERTAIN BUILDINGS

§28-321.1 Definitions. As used in this article, the following terms shall have the following meanings:

COVERED BUILDING. The term “covered building” means a building that is (i) a rent regulated accommodation, (ii) a building whose main use or dominant occupancy is classified as occupancy group A-3 religious house of worship, (iii) owned by a housing development fund company organized pursuant to the business corporation law and article 11 of the New York state private housing finance law, or (iv) a building that participates in a project-based federal housing program and, as it appears in the records of the department of finance, such building exceeds 25,000 (2322.5 m²) gross square feet, or (ii) is one of two or more buildings on the same tax lot that together exceed 50,000 gross square feet (4645 m²), or (iii) is one of two or more buildings held in the condominium form of ownership that are governed by the same board of managers and that together exceed 50,000 gross square feet (4645 m²).

Exceptions:

1. Real property, not more than three stories, consisting of a series of attached, detached or semi-detached dwellings, for which ownership and the responsibility for maintenance of the HVAC systems and hot water heating systems is held by each individual dwelling unit owner, and with no HVAC system or hot water heating system in the series serving more than 25,000 (2322.5 m²) gross square feet, as certified by a registered design professional to the department.

2. An industrial facility primarily used for the generation of electric power or steam.

RENT REGULATED ACCOMMODATION. The term “rent regulated accommodation” means a building in which more than 35% of dwelling units are required by law or by an agreement with a governmental entity to be regulated in accordance with the emergency tenant protection act of 1974, the rent stabilization law of 1969, or the local emergency housing rent control act of 1962.

§28-321.2 Required energy conservation measures for certain buildings. A covered building must comply with either section 28-321.2.1 or section 28-321.2.2.
§28-321.2.1 Energy compliant buildings. The owner of a covered building shall demonstrate that, for calendar year 2024, the annual building emissions of such covered building did not exceed what the applicable annual building emissions limit would be pursuant to section 28-320.3.2 if such building were a covered building as defined in article 320 of this chapter.

§28-321.2.2 Prescriptive energy conservation measures. By December 31, 2024, the owner of a covered building shall ensure that the following energy conservation measures have been implemented where applicable:

1. Adjusting temperature set points for heat and hot water to reflect appropriate space occupancy and facility requirements;
2. Repairing all heating system leaks;
3. Maintaining the heating system, including but not limited to ensuring that system component parts are clean and in good operating condition;
4. Installing individual temperature controls or insulated radiator enclosures with temperature controls on all radiators;
5. Insulating all pipes for heating and/or hot water;
6. Insulating the steam system condensate tank or water tank;
7. Installing indoor and outdoor heating system sensors and boiler controls to allow for proper set-points;
8. Replacing or repairing all steam traps such that all are in working order;
9. Installing or upgrading steam system master venting at the ends of mains, large horizontal pipes, and tops of risers, vertical pipes branching off a main;
10. Upgrading lighting to comply with the standards for new systems set forth in section 805 of the New York city energy conservation code and/or applicable standards referenced in such energy code on or prior to December 31, 2024. This provision is subject to exception 1 in section 28-310.3, provided that July 1, 2010 is replaced by January 1, 2020 for the purposes of this section;
11. Weatherizing and air sealing where appropriate, including windows and ductwork, with focus on whole-building insulation;
12. Installing timers on exhaust fans; and
13. Installing radiant barriers behind all radiators.

§28-321.3 Reports. By May 1, 2025, an owner of a covered building shall submit a report to the department to demonstrate compliance with this section in accordance with section 28-321.3.1 or section 28-321.3.2.

§28-321.3.1 Energy compliant buildings reports. The owner of a covered building shall file with the department a report, certified by a registered design professional, prepared in a form and manner and containing such information as specified in rules of the department, that for calendar year 2024 such building was in compliance with the applicable building emissions limit established pursuant to section 28-320.3.2.
§28-321.3.2 Prescriptive energy conservation measures reports. A retro-commissioning agent, as defined in article 308, shall prepare and certify a report in a form and manner determined by the department. The report shall include such information relating to the completion of the prescriptive energy conservation measures as shall be set forth in the rules of the department including, at a minimum:

1. Project and team information:
   1.1. Building address.
   1.2. Experience and certification of persons performing the prescriptive energy conservation measures and any staff involved in the project.
   1.3. Name, affiliation, and contact information for persons performing the prescriptive energy conservation measures, owner of building, and facility manager of building.

2. Building information:
   2.1. List of all HVAC, domestic hot water, electrical equipment, lighting, and conveyance equipment types serving the covered building.

ARTICLE 322
MAINTENANCE AND REMOVAL OF LARGE WIND TURBINES

§28-322.1 Maintenance. The owner of a large wind turbine or large wind turbine tower, as such terms are defined in section 3114.2 of the New York city building code, shall maintain such turbine and tower in accordance with department rules.

§28-322.2 Removal. The owner of a large wind turbine, as such term is defined in section 3114.2 of the New York city building code, shall remove such turbine when (i) the time elapsed since the installation of such turbine exceeds the manufacturer’s suggested useful life of such turbine or (ii) such turbine has been continuously inoperable for 12 months or more, whichever occurs sooner, provided that the commissioner shall by rule establish a timeframe for removing large wind turbines that do not have manufacturer’s suggested useful lives.

§28-322.3 Locking before hurricane or strong wind conditions. If a hurricane or strong wind conditions are expected, the commissioner may order that large turbines equipped with passive locks be stopped and locked.

§28-322.4 Lighting. A large wind turbine shall not be artificially lighted.

   Exception: Lighting that is required by this code or other applicable laws or rules, provided that such lighting is shielded in accordance with rules promulgated by the commissioner.

ARTICLE 323
PERIODIC INSPECTION OF PARKING STRUCTURES

§28-323.1 General. Parking structures shall be maintained in a safe condition. The owner shall be responsible for the proper inspection, repair, and maintenance of the parking structure in accordance with the requirements set forth in this article.

   Exceptions: The requirements imposed by this article shall not apply to:
1. Unenclosed, unattached outdoor parking lots.
2. Private garages serving one- and two-family homes as defined in chapter 2 of the New York city building code.

§28-323.2 Definitions. As used in this article, the following terms shall have the following meanings:

ANNUAL OBSERVATION CHECKLIST. A document developed by the approved agency during initial condition assessment containing baseline items to be inspected between condition assessments, annually or at more frequent intervals as prescribed by the approved agency, by or on behalf of the parking structure owner.

CONDITION ASSESSMENT. An on-site inspection and evaluation of a parking structure by an approved agency for evidence of deterioration of any structural element or building component of such parking structure, evidence of the existence of any unsafe structural condition in such parking structure, or evidence indicating that such parking structure is so damaged, decayed, dilapidated, or structurally unsafe, or is of such faulty construction or unstable foundation, that partial or complete collapse is possible.

INITIAL CONDITION ASSESSMENT. The first condition assessment conducted by an approved agency of a parking structure as outlined in the rules of the department.

PARKING STRUCTURE. A building or space used for the parking or storage of motor vehicles, other than an automotive service station, automotive repair shop, or private garage as defined in chapter 2 of the New York city building code.

§28-323.3 Condition assessment. A condition assessment of a parking structure shall be conducted at periodic intervals as set forth by rule of the commissioner, provided that such condition assessment shall be conducted at least once every six years and after each notification of an unsafe condition. All condition assessments shall be conducted on behalf of the building owner by an approved agency.

§28-323.3.1 Initial condition assessment. The initial condition assessment for a new parking structure shall be conducted in the second year following the completion of a parking structure or as otherwise prescribed by rule as evidenced by the issuance date of a temporary or final certificate of occupancy. Existing parking structures shall have an initial condition assessment performed by an approved agency as required herein and by rule. During the initial condition assessment, the approved agency shall develop and provide to the parking structure owner or owner’s authorized agent an annual observation checklist containing minimum requirements and elements to be inspected as part of the required annual observation.

§28-323.3.2 Subsequent condition assessments. Condition assessments shall be conducted at intervals specified in the rules of the department. Condition assessments shall include a complete review of the most recently prepared condition assessment report, owner’s annual inspection checklists since the last condition assessment, inspection of structural elements, and a structural assessment conducted in accordance with rules promulgated by the commissioner.

§28-323.4 Annual parking structure observation. An annual observation shall be performed by the parking structure owner or owner’s authorized agent at intervals specified in the annual observation checklist, but not less than once a year after the owner receives the most recent condition assessment.
The observation shall include, at a minimum, observation of the items included on the annual observation checklist provided or verified by the approved agency during the most recent condition assessment. Copies of all annual observation checklists completed since the last condition assessment shall be maintained at the parking structure.

§28-323.5 Report of condition assessment. A report shall be issued by the approved agency following each condition assessment in accordance with sections 28-323.5.1 and 28-323.5.2.

§28-323.5.1 Contents. The report shall indicate the results of the condition assessment as safe, safe with repair and/or engineering monitoring, or unsafe, as prescribed by the rules of the department. It shall include a record of all potentially unsafe conditions of the structure and the condition of structural framing members, any visible reinforcement, connections, and conditions of slabs and slab joints. The report must also contain the annual observation checklist to be used for subsequent annual parking structure observations. Such report must be signed and sealed by a professional engineer, who must file the report.

§28-323.5.2 Submission deadlines. Except as otherwise provided in section 28-323.7, the approved agency shall submit a written report to the commissioner within 60 days of completing the condition assessment, but not more than six years from the submission of the preceding report of condition assessment, certifying the results of the assessment as described in section 28-323.5.1.

§28-323.6 Fees. Every owner of a parking structure subject to condition assessments shall pay to the department a report filing fee for each report of condition assessment in the amount set forth in the rules of the department.

§28-323.7 Immediate notice of unsafe condition. The department must be notified of an unsafe condition immediately. A compliance report shall be filed after each unsafe notification.

1. Whenever a representative of an approved agency learns of an unsafe condition through a condition assessment of a parking structure, such representative shall notify the owner and the department immediately.

2. Whenever an owner or an owner’s authorized agent observes an unsafe condition during annual observations, or at any other time in between assessments, the owner shall notify the department immediately and undertake repairs in accordance with section 28-323.8.

§28-323.8 Repair of parking structure, unsafe condition. Upon the notification to the department of an unsafe condition, the owner or the owner’s authorized agent shall immediately secure public safety by removing the unsafe condition or safeguarding the area. The owner shall then engage an approved agency to conduct a condition assessment and file a compliance report.

1. The owner shall commence repairs, reinforcements or other measures to make the structural elements of the parking structure conform to the provisions of this code.

2. All unsafe conditions shall be corrected within 90 days of filing of the condition assessment report.
3. The approved agency shall reinspect the premises and file an amended report within two weeks after the repairs have been completed certifying that the unsafe conditions of the building have been corrected.

4. The commissioner may grant an extension of time of up to 90 days to complete the repairs required to correct an unsafe condition upon receipt and review of an initial extension application submitted by the approved agency together with such additional documentation as may be prescribed by rule.

5. The commissioner may grant further extensions of time to complete the repairs required to remove an unsafe condition upon receipt and review of an application for a further extension submitted by the approved agency together with such further documentation as may be prescribed by rule.

§28-323.9 Safe with repair and/or engineering monitoring. A parking structure or any part thereof that may pose a potential danger to persons or property, but does not require immediate action shall be rated safe with repair and/or engineering monitoring. This condition requires further investigation and timely remedial action to prevent its deterioration into an unsafe condition. A registered design professional shall be responsible for appropriately monitoring the structure until the repair is completed.

§28-323.9.1 Safe with repair and/or engineering monitoring assessment requirements. When the results of an initial assessment indicate a parking structure is safe with repair and/or engineering monitoring, the parking structure shall be subsequently assessed no more than three years from the date of the initial assessment and an amended report filed with the department.

§28-323.9.2 Safe with repair and/or engineering monitoring for two cycles. The approved agency shall not file a report of a safe condition with repair and/or engineering monitoring program for the same parking structure for two consecutive filing periods unless the second such report is accompanied by his or her professional certification attesting to the correction of all conditions identified in the prior report as requiring repair.

ARTICLE 324
PERIODIC INSPECTIONS OF DRY FLOODPROOFING

28-324.1 General. This article shall apply to covered buildings and structures as described in 28-324.1.1 of this code permitted on or after the effective date of the local law that added this article that are required to comply with the dry floodproofing requirements of appendix G of the New York city building code and that require human intervention to activate or implement the dry floodproofing systems prior to a flood event.

§28-324.1.1 Covered buildings and structures. Such buildings or structures include:

1. new construction;

2. substantial improvements;

3. such portions of buildings or structures that are horizontal enlargements.
§28-324.1.2 Covered dry floodproofing systems. Covered dry floodproofing systems include any dry floodproofing system where human intervention is required to implement any measure, including the installation of shields, equipment, temporary stairs and platforms, hardware, signage, fixed flood-resistant glazing systems or similar components necessary to activate and implement the dry floodproofing system.

§28-324.2 Annual inspection of covered dry floodproofing system. An annual inspection of the covered dry floodproofing system shall be conducted by a person designated by the building owner.

§28-324.2.1 Scope of annual inspection. The annual inspection shall include, at a minimum, visual confirmation that all covered systems are in their stored locations and ready for deployment, and that any gaskets do not appear damaged or brittle.

§28-324.2.2 Records. Such inspection shall be documented and such documentation shall be maintained on the premises and provided to the department upon request.

§28-324.3 Triennial full-scale deployment inspection. A full-scale deployment inspection initiated by the owner shall be conducted every three years in the presence of a special inspection agency that is qualified to perform flood zone compliance special inspections.

§28-324.3.1 Scope of inspection. The special inspector shall observe, inspect and document the components in their deployed state. Any defects shall be noted. The special inspector shall also review all annual inspection documentation for the preceding three years to confirm its completeness.

§28-324.3.2 Notification. Prior to the triennial full-scale deployment inspection, the owner shall notify the department and the fire department in accordance with procedures established by the department. Such notification shall not relieve the applicant, owner, engineer, architect or contractor of the obligation to comply with any notification or permitting requirement of the New York city department of transportation or the New York state department of transportation.

§28-324.3.3 Reports. The owner shall submit a written report prepared and certified by the special inspection agency that witnessed the deployment required by section 28-324.3 to the commissioner within 60 days of completing such deployment. The report shall clearly document the condition of the dry floodproofing system and related egress components and appurtenances thereof and shall include a record of all defects, including any significant deterioration, unsafe conditions and missing or defective components and outline any corrective action necessary to address such defects. Such report shall be submitted to the department on such forms and in such manner as required by the commissioner.

§28-324.3.4 Repair. All defects as found in such inspection shall be documented, noted in inspection reports, and corrected. Where missing or incomplete annual inspection records are the defect in question the owner shall provide a narrative of steps taken to ensure future records will be compliant. An affirmation of correction shall be filed by the owner within 60 days of the date of correction.
§28-324.3.5 Fees. A report filing fee shall be paid to the department in the amount prescribed by rule.

ARTICLE 325
ANNUAL INSPECTIONS TO PREVENT CONTAMINATION OF MECHANICAL SYSTEMS

§28-325.1 General. This article shall apply to buildings with exhaust ducts under positive pressure, chimneys, and vents that extend into or pass through ducts or plenums.

§28-325.1.1 Covered buildings and structures. Such buildings or structures include:

1. Buildings constructed after the effective date of this article;
2. Alterations to existing buildings performed after the effective date of this article resulting in a plenum penetration by a chimney or vent serving an appliance with a heat input not greater than 350,000 Btu/hr.

§28-325.2 Annual inspection of covered buildings. An annual inspection of the covered building mechanical systems shall be conducted to ensure no contamination exists. Such inspection shall be conducted by a person designated by the building owner who meets the qualifications established by the commissioner.

§28-325.2.1 Scope of annual inspection. The annual inspection shall include, at a minimum, visual confirmation that joints, seams and connections of covered mechanical systems are securely fastened and sealed with welds, gaskets, mastics (adhesives), mastic-plus-embedded-fabric systems, liquid sealants or tapes.

§28-325.2.2 Records. Such inspection shall be documented and such documentation shall be maintained on the premises for at least six years and provided to the department upon request.

§ 4. Chapter 4 of title 28 of the administrative code of the city of New York, as added by local law number 33 for the year 2007, articles 404, 405, 412, 413, 414, 415 and 416 as amended by and articles 421 and 422 as added by local law number 141 for the year 2013 and amended by chapter 750 for the year 2019; the definitions of “direct and continuing supervision” and “seal” in section 28-401.3 as amended by local law number 141 for the year 2013, the definition of “elevator agency” as added by chapter 750 for the year 2019, the definitions of “elevator agency helper” and “elevator work” as added by chapter 750 for the year 2019 and amended by subpart O of chapter 55 for the year 2020, the definition of “general contractor” in such section as added by local law number 8 for the year 2008 and the definition of “safety registration recipient” in such section as added by local law number 8 for the year 2009; section 28-401.4, 28-401.6, 28-401.7, 28-401.8 28-401.9, 28-401.13, 28-401.15, 28-401.17, 28-401.19, 28-402.2, 28-403.2, 28-406.3, 28-407.3, 28-408.3, 28-408.4, 28-408.6, 28-410.4, 28-410.5, 28-410.6, 28-410.8, 28-417.1, 28-418.2, as amended by and 28-401.22 as added by local law number 141 for the year 2013; section 28-418.4, 28-418.5 and articles 419 and 420 as added by local law number 8 for the year 2008, article 423 as added by local law number 150 for the year 2016, article 424 as added by local law number 14 for the year 2018, and article 425 as added by chapter 750 for the year 2019 and amended by subpart O of chapter 55 for the year 2020, article 426 as added by chapter 750 for the year 2019, and article 427 as added by chapter
750 for the year 2019 and amended by subpart O of chapter 55 for the year 2020, is amended to read as follows:

CHAPTER 4
LICENSING AND REGISTRATION OF BUSINESSES, TRADES AND OCCUPATIONS ENGAGED IN BUILDING WORK

ARTICLE 401
GENERAL

§28-401.1 Application. This chapter shall apply to the licensing and registration of businesses, trades and occupations engaged in building work regulated by this code.

§28-401.2 General requirements for all licenses. The provisions of this article shall apply to all licenses issued by the department pursuant to this chapter. All applicants and licensees shall comply with the provisions of this article as well as the specific requirements applicable to the particular license as set forth in other articles of this chapter and department rules.

§28-401.3 Definitions. As used in this chapter, the following terms shall have the following meanings unless the context or subject matter requires otherwise.

**BOILER, HIGH-PRESSURE.** An appliance for supplying steam or hot water that, for a steam boiler, operates at a pressure of more than 15 psig (103 kPa gauge), and for a hot water boiler, operates at a pressure exceeding 160 psig (1103 kPa gauge) or at a temperature exceeding 250°F (121°C).

**CERTIFICATE OF COMPETENCE.** A certificate issued by the department to an individual representing that such individual has completed all requirements for the master plumber or master fire suppression piping contractor license but has not obtained a seal [or plate] and that such certificate of competence has been renewed as required and is currently in effect. The certificate of competence shall bear the name of the holder and the certificate number. The holder of a certificate of competence is not a licensed master plumber or licensed master fire suppression piping contractor and may practice the trade for which the certificate is issued only under the direct and continuing supervision of a licensed master plumber or licensed master fire suppression piping contractor or, with respect to a city employee under the direct and continuing supervision of a supervising licensed master plumber or licensed master fire suppression piping contractor.

**CITY AGENCY.** A city, county, borough, or other office, position, administration, department, division, bureau, board or commission, or a corporation, institution or agency of government, the expenses of which are paid, in whole or in part, from the city treasury.

**COMBINED STANDPIPE SYSTEM.** A standpipe to which a sprinkler system is connected or is being connected.

**DIRECT AND CONTINUING SUPERVISION.** Responsible control exercised by a licensed individual, either personally or through one or more, but no more than three, levels of competent supervision over individuals performing the actual work of the [licensees] licensee’s trade who are
(i) in the direct employ of an individual who is a licensee, or (ii) in the direct employ of the city agency employing the licensee or (iii) in the direct employ of a business employing the licensee, as allowed by the department, or (iv) where the licensee uses his or her license on behalf of a business, in the direct employ of such business provided that such business is disclosed to the department pursuant to this chapter. Such control shall be evidenced by such licensee’s signature, and seal where applicable, upon any required statements, applications and/or permits and by demonstrating involvement of the licensee in the operations of the business, including hiring of employees, responsibility for financial matters, and oversight of work performance. Direct and continuing supervision includes field inspection, supervision of job sites, and the maintenance of records of such supervision and such other requirements as the commissioner may prescribe by rule for a particular license type.

DIRECT EMPLOY. An individual is in the direct employ of a licensee or business or a city agency when such individual is on the payroll of such licensee or business or city agency and under the usual common law rules applicable in determining the employer-employee relationship has the status of an employee. The work performed by such employee shall not exceed the class of license held by the licensee. Direct employment shall be evidenced by payroll records, such as social security payments, income tax withholding or the disbursement of other funds as required by law for the benefit of such employee, timekeeping records, such as time cards and sign-in sheets, work orders, and assignment or route logs.

DIRECT SUPERVISION. Responsible control exercised by a licensed individual over individuals performing the actual work of the licensee’s trade. Such control shall be evidenced by such licensee’s signature, and seal where applicable, upon any required statements, applications and/or permits. Direct supervision includes field inspection, supervision of job sites, and the maintenance of records of such supervision and such other requirements as the commissioner may prescribe by rule for a particular license type. All work shall be performed under the guidance and direction of the licensed individual, or, for gas work, a person who holds a gas work qualification pursuant to article 423, who shall be present at all times such trade work is conducted.

ELEVATOR AGENCY. An approved agency authorized by the commissioner to perform elevator work and to inspect and test elevators, escalators and other conveying equipment regulated by this code.

ELEVATOR AGENCY HELPER. An individual having required qualifications to perform elevator work, as defined in this chapter, under the direct and continuing supervision of an elevator agency director.

ELEVATOR WORK. Alteration, assembly, installation, maintenance, repair, replacement and modernization work, as defined by ASME A17.1 as modified by appendix K of the New York city building code, performed on conveyances regulated by this code or other applicable laws or rules. Elevator work does not include material hoists, platform lifts, stair chair lifts, or personnel hoists. Outfitting, removal, refinishing, or replacement of interior finishes, including wall panels, drop ceilings, handrails and flooring, removal or replacement of interior lighting, recladding of doors, transoms and front return panels, finishing or ornamental work on elevator car operating panels shall not be considered elevator work. Operation of an elevator by any person employed as an operator of such elevator, including operation of an elevator operating under a temporary
certificate of occupancy as issued by the department of buildings or such other issuing agency shall not be considered elevator work.

**FIRE SUPPRESSION PIPING SYSTEM.** Any system including any and all equipment and materials in connection therewith, [with the exception of any electrical components that must be installed by a licensed electrician pursuant to the New York city electrical code,] the purpose of which is to control, contain, suppress or extinguish fire and shall include:

1. The systems, materials and equipment described or referred to in this code [(with the exception of any electrical components that must be installed by a licensed electrician pursuant to the New York city electrical code) which systems, materials or equipment shall include any standpipe system to which a sprinkler system is or is now being connected; [provided, however, that such systems, materials or equipment shall not include any systems, materials or equipment constituting plumbing work, with the exception of up to thirty sprinkler heads off the domestic water in any one building;] or
2. Up to 30 sprinkler heads off the domestic water in any one building; or
3. Any dry, liquid or gaseous chemical fire containment, suppression, control or extinguishing system or any other device or means of control, suppression, containment or extinguishing of fire [(with the exception of any electrical components that must be installed by a licensed electrician pursuant to the New York city electrical code) but not including portable fire extinguishers].

Fire suppression piping systems shall not include:

1. Any electrical components that must be installed by a licensed electrician pursuant to the New York city electrical code; or
2. Portable fire extinguishers; or
3. Connection to domestic water being used for sprinklers.

**FIRE SUPPRESSION PIPING WORK.** The installation, maintenance, repair, modification, extension, or alteration or testing of a fire suppression piping system in any building in the city of New York. Fire suppression piping work shall not include plumbing work.

**GENERAL CONTRACTOR.** An individual, corporation, partnership or other business entity that applies for a permit pursuant to this code to construct a new residential structure containing no more than three dwelling units. The term “general contractor” shall not be construed to include an individual, corporation, partnership or other business entity that holds a license pursuant to this code or subchapter twenty-two of chapter two of title twenty of the administrative code, and enters into a contract to perform work exclusively within the scope of such license, nor shall it include an individual who constructs a residential structure containing no more than three dwelling units for his or her own occupancy, or any subcontractors working for the general contractor.

**GOVERNMENT AGENCY.** Any office, position, administration, department, division, bureau, board, commission, corporation, institution or agency under the control of any city, county, state or the federal government of the United States of America.
HIGH PRESSURE BOILER. A boiler that carries a pressure of more than fifteen pounds of steam per square inch and is rated in excess of ten horsepower, or that produces over a pressure of one hundred sixty pounds per square inch or at a temperature over 250°F (121°C).]

LICENSE. A license, registration, certification or other evidence, issued by the department pursuant to this chapter, representing that an individual, a sole proprietorship, partnership, corporation, business association or other person meets the qualifications and requirements as set out in this chapter and in the rules of the department and is authorized to engage in the particular trade, occupation or business as indicated on the license and representing that such license, with associated [plate and/or] seal, where applicable, has been renewed as required and is currently in effect. The license shall bear the holder’s full name, the type of license, the license class, where applicable, the license number and any restrictions relating to the use of such license. Such term shall not include a certificate of competence.

LICENSE BOARD OR BOARD. A panel of trade practitioners and others appointed by the commissioner as provided herein and in rules promulgated by the commissioner with the purpose of advising the commissioner regarding the character and fitness of applicants for a license or certificate of competence, allegations of illegal practices by persons licensed, or other matters as the commissioner may see fit.

LICENSED MASTER FIRE SUPPRESSION PIPING CONTRACTOR, MASTER FIRE SUPPRESSION PIPING CONTRACTOR. An individual who has satisfied the requirements of this chapter for the master fire suppression piping contractor license, who has been issued a license [−plate] and [−or] seal, and who is authorized under the provisions of this chapter to perform fire suppression piping work in the city of New York, according to the classification of license held. A master fire suppression piping contractor licensee shall practice his or her trade in association with a master fire suppression piping contractor business or as an employee of a city agency.

LICENSED MASTER PLUMBER, MASTER PLUMBER. An individual who has satisfied the requirements of this chapter for the master plumber license, who has been issued a license [−plate] and [−or] seal, and who is authorized under the provisions of this chapter to perform plumbing work in the city of New York. A master plumber licensee shall practice his or her trade in association with a master plumber business or as an employee of a city agency.

PLATE. A plaque issued by the department to a master plumber or a master fire suppression piping contractor setting forth the licensee’s name and number, the class of license and the master plumber business or master fire suppression piping contractor business operating pursuant to the plate, and displayed prominently and conspicuously on view to the public at the place of business registered with the department. The plate is the property of the department and is not transferable by the licensee.

PLUMBING WORK. The installation, maintenance, repair, modification, extension or alteration of plumbing, standpipe where a sprinkler is not connected or is not now being connected, domestic water, connections to the domestic water, combination domestic water and reserve standpipe supply tank up to and including the roof tank check valve, gas piping or any piping system referred to in the New York city plumbing code, and/or up to thirty sprinkler heads off the domestic water in any building in the city of New York.
[PRIVATE ELEVATOR INSPECTION AGENCY. An approved agency authorized by the commissioner to operate as an independent contractor for the purpose of inspecting and testing elevators, escalators and other conveying equipment regulated by this code and shall include but shall not be limited to an insurance company, elevator maintenance company, elevator manufacturer or elevator inspection company.]

SAFETY REGISTRATION RECIPIENT. An individual, corporation, partnership or other business entity that applies for a permit to perform or performs, or supervises any work that requires the filing under this code of an application for (i) a new building permit; (ii) an alteration permit for work that involves a vertical or horizontal enlargement in excess of twenty-five percent of the floor area of an existing building; (iii) an alteration permit for work that involves the addition of three or more stories to an existing building; (iv) an alteration permit for work that involves alteration or demolition of more than fifty percent of the floor area of an existing building; (v) an alteration permit where the work will result in the removal of one or more floors of an existing structure; (vi) a demolition permit; or (vii) an individual, corporation, partnership or other business entity that places concrete in a building or building site in connection with excavations, foundations or superstructures, including but not limited to the placement of concrete in steel structures, where the concrete portion of the project involves the pouring of a minimum of two thousand cubic yards of concrete or such other amount as determined by rule.

SEAL. Emblem issued by the department to a licensee that allows the licensee to stamp documents required by this code to be signed and sealed. The seal shall bear the full name of the licensee, the license type, the license class, where applicable, and the license number. The seal is the property of the department and is not transferable by the licensee. For applications and other documents submitted electronically, the digital signature and imprint of the seal may be submitted in a manner authorized by the commissioner.

SIGN. A sign as defined in section 12-10 of the New York city zoning resolution.

[TOTAL BOOM. A boom including jibs and other extensions.-]

§28-401.4 Requirement of license. It shall be unlawful for any person to engage in or carry on in the city any business, trade or occupation regulated by this chapter or to hold himself or herself out as authorized to engage in or carry on such activity, without having first obtained a license from the commissioner and, if applicable, the proper endorsement for such license in accordance with and subject to the provisions of this chapter and the rules of the department. A license issued by the department for any such business, trade or occupation prior to July 1, 2008 shall remain in full force and effect until the expiration or termination thereof in accordance with the terms thereof, unless sooner revoked or suspended for cause as hereinafter provided. Any renewal of such license shall be in accordance with the provisions of this code.

§28-401.5 Application and conditions. Every application for a license or certificate of competence shall be made in such form and shall be accompanied by such information as the commissioner may prescribe, and by the required fee. Failure to provide all requested documents in a timely manner will constitute an incomplete application and will result in denial of the license. It is a condition of the license or certificate of competence that information in the application be kept correct and current. Any change in required information shall be reported to the department within [fourteen] 14
days after any change prior to issuance of the license or certificate of competence or within [thirty] 30 days after any change following issuance.

§28-401.6 Qualifications of applicant. All applicants for a license or certificate of competence shall be at least 18 years of age, shall be able to read and write the English language, shall be of good moral character, shall be fit to perform work authorized by the particular license or certificate of competence, and shall meet additional qualifications that may be prescribed for the particular license or certificate of competence. The department may refuse to qualify an applicant if it has found that the applicant violated any law, rule, or regulation of the department resulting in the suspension [or] revocation or non-renewal of a department-issued license.

§28-401.7 Examination of applicant. Except as otherwise specified for the particular license type, applicants for a license shall be required to take an examination in accordance with the rules of the department. Every applicant shall commence the license application process with the department within one year of passing the examination for licensure and shall furnish to the department a completed license application within one year of submission of the first filing. Failure to provide all requested documents in a timely manner will constitute an incomplete application and will result in denial of the license.

§28-401.8 Investigation of applicant. Every applicant for a license or certificate of competence issued pursuant to this chapter shall submit to investigation as directed by a governmental entity in order to determine the applicant’s character and fitness and in accordance with the rules of the department. The applicant shall furnish the department with payment for the actual cost of conducting the background investigation. Failure to provide all requested and completed documents or any other information necessary for completion of the investigation in a timely fashion will constitute an incomplete application and will result in a denial of the license or certificate of competence.

§28-401.8.1 Fingerprinting. Applicants for licenses issued pursuant to this chapter shall be fingerprinted for the purpose of securing criminal history records from the state division of criminal justice services.

1. The applicant shall pay a processing fee as required and in a form and manner as prescribed by the state division of criminal justice services. Fingerprints shall be taken of the individual seeking licensure in the form and manner as prescribed by the division of criminal justice services; the owner, if the applicant is a sole proprietorship; the general partners, if the applicant is a partnership; and the officers, principals, directors, and stockholders owning more than 10 percent of the outstanding stock of the corporation, if the applicant is a corporation.

2. Any person required to be fingerprinted hereunder shall furnish to the department three current passport-sized photographs of such person.

3. Notwithstanding paragraph (1) above, an applicant may submit, in lieu of such fingerprints, copies of submissions to any federal, state or local regulatory entity containing information comparable to that required by the department, provided that the department may require fingerprinting and disclosure pursuant to such paragraph where it finds that it has not received sufficient information or information that is comparable to department requirements.
4. Any person authorized by the department to request a check of criminal history information shall comply with the provisions of article 23a of the New York state correction law and all other applicable laws. If an applicant has been convicted of a crime, any decision regarding such applicant’s fitness for a license or certificate of competence issued pursuant to this chapter must be made upon consideration of sections 701-703-b (article 23) and sections 751-753 (article 23-a) of the New York state correction law.

5. The department shall authorize the director of the licensing backgrounds unit and a licensing unit attorney to review the criminal history record information disseminated by the division.

§28-401.9 Insurance. Except as noted otherwise for a particular license, or exempted by the commissioner pursuant to rule, prior to the issuance of a license, or during the renewal thereof, the applicant shall file with the department satisfactory evidence of a commercial general liability insurance policy in the amount of [one million dollars] $1,000,000 or such other amount as the commissioner may require, together with satisfactory evidence of compliance with the workers’ compensation law and the disability benefits law. Required insurance shall be maintained for the duration of the license and any changes in coverage, insurance renewals, or policy status shall be provided to the department in accordance with department rules.

§28-401.10 Issuance of license [plate and/or] seal, where applicable, or certificate of competence. The commissioner shall issue a license or certificate of competence to each applicant who shall have submitted satisfactory evidence of his or her qualifications, and shall have satisfactorily passed all required examinations and investigations, provided that no license or certificate of competence shall be issued unless and until the applicant shall have paid the required fee and complied with such other and further requirements for the particular license or certificate of competence as may be set forth in this chapter and in rules promulgated by the department. All licenses or certificates of competence issued by the commissioner shall have his or her signature affixed thereto; but the commissioner may authorize any subordinate to affix such signature. For licenses that require [plate and/or] the application of a seal, the [plate and/or] seal shall be issued with the license except as provided otherwise in this chapter. The license [plate and] seal are the property of the department and are not transferable by the licensee. No licensee shall make or cause to be made duplicates of a department-issued license [plate or] seal. The loss or theft of a license [plate or] seal must be reported to the department within five calendar days.

§28-401.11 Term of license. Except as otherwise provided in this code or by rule, all licenses issued by the commissioner [for which an examination is required] shall expire three (3) years from the date of issuance thereof, and may be renewed every three (3) years thereafter without examination. The commissioner shall have authority to stagger the issuance of licenses for three-year terms. [All licenses not requiring examination shall expire one year from the date of issuance thereof, and may be renewed each year thereafter except as otherwise noted for a specific license.] The term of an elevator agency technician license issued in accordance with the provisions of article 425 of this chapter shall be two (2) years.

§28-401.12 Renewal of license or certificate of competence. Applications for renewal of a license or certificate of competence shall be accompanied by the renewal fee and such additional information as the commissioner may require, and shall be made at least 30 [calendar] days but not more than 60 [calendar] days prior to the expiration date of same. Applications for renewal of a license or certificate of competence submitted within 30 days prior to the license expiration date shall be
considered late and subject to applicable late renewal fees. Applicants shall provide evidence satisfactory to the department that he or she is fit to perform the work authorized by the particular license as provided by department rule. Applications for renewal are subject to investigation by the department. The failure of an individual to renew his or her license or certificate of competence shall have the effect of cancellation of the license or certificate of competence upon expiration, and the holder of a [plate and/or] seal issued by the department shall immediately surrender such [plate and/or] seal to the department. A person who fails to renew a license or certificate of competence within the time period set forth in this section [28-401.12] may apply for late renewal [or reinstatement] of such license pursuant to section 28-401.13. The department may, following notice and an opportunity to be heard, refuse to renew a license or certificate of competence on any grounds on the basis of which it could deny, suspend or revoke such license.

§28-401.13 Late renewal [and reinstatement]. If a license or certificate of competence expires, the individual may apply for late renewal of the license or certificate of competence [1] within one (1) year of the date of its expiration without examination but subject to applicable late renewal fee. [Thereafter, and up to five years after the date of expiration, the commissioner may reinstate the license or certificate of competence without examination upon the applicant’s demonstration to the commissioner’s satisfaction of continued competence in the respective trade and satisfaction of any applicable continuing education requirements but subject to applicable late renewal and reinstatement fees. Applicants for late renewal and reinstatement shall provide evidence satisfactory to the department that he or she is fit to perform the work authorized by the particular license as provided by department rule. A license or certificate of competence shall not be reinstated after five years from date of expiration. The department may refuse to reinstate a license or certificate of competence on any grounds on the basis of which it could deny, suspend or revoke such license.]

§28-401.14 Continuing education. The commissioner may promulgate rules to require applicants for the renewal of licenses or certificate of competence to complete a prescribed number of hours of continuing education courses approved by the department within the term preceding the application for renewal and to provide proof of same in a form acceptable to the department. Such proof, when required, shall be submitted with the application for renewal.

**§28-401.15.1 Additional fees.** Additional fees for licensing shall be set forth in the rules of the department. Additional fees include, but are not limited to, reissuance, deactivation, reactivation and late renewal.

**§28-401.16 Restrictions on use [of license].** No holder of a license issued under this chapter shall authorize, consent to or permit the use of his or her license by or on behalf of any other person, and no person who has not qualified and obtained or renewed a license or qualification under this chapter shall hold himself or herself out to the public as qualified, licensed, certified, registered or as the holder of a license issued under this chapter, either directly or indirectly, by means of signs, sign cards, [plates,] stationery, or in any other manner whatsoever.

**§28-401.17 Use on behalf of a business.** Except for such additional requirements as may be set forth for a particular license, nothing in this chapter shall be construed to prohibit the use of a license by the holder thereof for or on behalf of a partnership, corporation or other business association, provided that such business entity is disclosed to the department in a manner required by the department and where:

1. At least one member of the partnership or at least one officer of the corporation is licensed for the same business, trade or occupation, and that all work performed by such partnership or corporation is performed by or under the direct and continuing supervision of such license holder or holders; or

2. Such partnership, corporation or other business association is itself authorized to engage in such business as prescribed herein.

**§28-401.17.1 Use on behalf of a city agency.** Nothing in this chapter shall be construed to prohibit the holder of a license who is an employee of a city agency from using such license to practice the trade for which such license is issued for or on behalf of such city agency in the course of such employment except as otherwise limited pursuant to articles 408 and 410 of this chapter for licensed master plumber and licensed master fire suppression piping contractor licensees.

**§28-401.17.2 Change of business.** A license holder who is required to register his or her business or apply for permits with the department may change his or her registered business provided that such change is disclosed to the department in a manner required by the department and where:

1. All business documentation required by the department, including new insurance certificates, for the new business is submitted;
2. All open applications filed by the license holder under the previous business are closed or transferred; and

3. All fines, penalties or fees owed to the city or department related to the work performed by the previous registered business during the period the license holder was registered at that business are paid.

§28-401.18 New York city location required. Except as otherwise noted for a particular license, the holder of a license, other than an employee of a city agency, shall have or be employed by a business entity that has an established place of dedicated to the licensee’s business with an address within the city of New York at which such person can be contacted by the public and the department by mail, telephone, electronic mail or other modes of communication during usual business hours. A post office box or virtual office is not an acceptable address.

§28-401.18.1 Notification required. Licensees shall promptly notify the department in writing of any address, telephone number and/or electronic mail change within 30 days of the change. Licensees shall notify the department in writing of any criminal conviction within 10 days of the occurrence.

§28-401.18.2 Posting. Licensees with established places of business shall post a photocopy of such license in a conspicuous place near the entrance of the licensee’s place of business.

§28-401.19 Suspension or revocation of license or certificate of competence. The commissioner shall have the power to suspend or revoke a license or certificate of competence and/or to impose a fine not to exceed twenty-five thousand dollars $25,000 for each finding of violation, and/or to order any holder thereof to repair damage resulting from any act or omission as set forth in this chapter or in rules, for any of the following:

1. Fraud or deceit in obtaining or renewing a license or seal, certificate of competence, certification, registration, or permit;

2. The making of a material false or misleading statement on any form or report filed with the department or other governmental entity;

3. The failure to file a statement, report or form required by law to be filed;

4. Willfully impeding or obstructing the filing of a statement, report or form of another required by law to be filed;

5. Fraudulent dealings;

6. Negligence, incompetence, lack of knowledge or fitness, or disregard of this code and related laws and rules;

7. Failure to comply with this code or any order, rule, or requirement lawfully made by the commissioner including failure to cooperate with investigations related to the trade for which the individual is licensed conducted by the commissioner or other government entity;
8. Failure to comply with any order, rule, regulation or requirement lawfully made by the commissioner of environmental protection or commissioner of transportation pertaining to water services, house connections, street openings, street/lane closures or sidewalk closures that relate to requirements of this code;

9. A practice or pattern of failing timely to perform or complete contracts relating to home improvements as defined by section 20-386 of the administrative code or a practice of abandoning contracts on residential buildings containing four dwelling units or less;

10. Failure to provide documents, including payroll records, workers compensation or other insurance documents, employee timekeeping records and corporate tax returns, required by the commissioner;

11. Engaging or assisting in any act that endangers the public safety and welfare;

12. Conviction of a criminal offense where the underlying act arises out of the individual’s professional dealings with the city or any other governmental entity;

13. Poor moral character that adversely reflects on his or her fitness to conduct work regulated by this code; [or]

14. Failure to pay outstanding fines, penalties, or fees related to the individual’s professional dealings with the city or any other governmental entity [or]

15. The unauthorized removal of documents from the department;

16. Repeated failure to be prepared for or attend scheduled meetings with the department as provided by rule; or

17. Failure to notify the department in accordance with section 28-401.18.1.

[15.] 18. With respect to general contractor registration, upon a finding that the applicant or registrant or a business entity in which one of the applicant’s or registrant’s principals, officers or directors is a principal, officer or director has engaged in any of the acts set forth in items 1 through [14] 17 or any of the following:

[15.1.] 18.1. Fraud, misrepresentation or bribery in securing a sign-off of work or a temporary or permanent certificate of occupancy.

[15.2.] 18.2. A practice on the part of the registrant of failure to timely perform or complete its contracts for the construction of new residential structures containing no more than three dwelling units, or the manipulation of assets or accounts, or fraud or bad faith.

[15.3.] 18.3. Approval or knowledge on the part of the registrant of an act of omission, fraud, or misrepresentation committed by one or more agents or employees of the registrant, and failure to report such act to the department.

[15.4.] 18.4. The applicant or registrant, or any of its principals, officers or directors, or any of its stockholders owning more than ten percent of the outstanding stock of the
A corporation has been convicted of a crime which, in accordance with article twenty-three-a of the correction law, is determined to have a direct relationship to such person’s fitness or ability to perform any of the activities for which a registration is required under this article.

§28-401.19.1 Notice and hearing. The commissioner shall not revoke or suspend a license or certificate of competence for any cause or impose any other sanction on a licensee unless and until the holder has been given at least five calendar days prior written notice and an opportunity to be heard at the office of administrative trials and hearings (OATH) or its successor agency. However, when the public safety may be imminently jeopardized, the commissioner shall have the power, pending a hearing and determination of charges, to forthwith suspend any license for a period not exceeding 15 days.

§28-401.19.2 Resolution of proceedings. Resolution of proceedings shall comply with the following:

1. Surrender of [plate or] seal. Upon surrender, suspension or revocation of a license for which the department has also issued a [plate or] seal, the license and [such plate and/or] seal shall be immediately surrendered to the department.

2. Posting of resolution of proceedings. The names of all licensees whose licenses were suspended or revoked or upon whom penalties have been imposed after a hearing and a department determination [following an office of administrative trials and hearings (OATH), or its successor agency, as applicable, report and recommendation] shall be posted on the department’s website. The department shall post the names of the licensees who have entered into stipulations with the department, unless the stipulation agreed to by the parties provides otherwise.

§28-401.19.3 Reinstatement fees. The fees required for the reinstatement of a certificate of competence or license, plate or seal after suspension shall be the same as those required to obtain an original document. If reinstatement of the certificate of competence, license, plate or seal is not requested within 30 days of the lifting of the suspension, then late fees shall be imposed in accordance with article 119 of chapter 1 of this title.

§28-401.19.4 Mandatory suspension or revocation. The commissioner shall immediately suspend or revoke a license issued pursuant to this code as set forth below. Nothing in the following sections shall be construed to limit the commissioner’s power to revoke or suspend licenses in other circumstances.

§28-401.19.4.1 Rigger license. Any licensed rigger who has been found guilty after proceedings before the environmental control board or other adjudicative proceedings of violating section 28-404.1 or 28-401.9 of the administrative code or sections 3314.1.1 and 3314.4.3.1 of the New York city building code, or of failing to insure that workers have certificates of fitness required pursuant to this code or applicable rule three
times within any six-month period, shall be subject to immediate suspension of his or her license pending a hearing and determination in accordance with the provisions of this code.

**§28-401.19.4.2 General contractor registration.** Any registered general contractor who has defaulted at or been found liable after proceedings before the environmental control board or in an adjudication in criminal court of violations of any provisions of this code relating to a stop work order, public health or safety, structural integrity, building in compliance with approved construction documents or fire safety three times within any twenty-four 24-month period shall be subject to immediate suspension of his or her registration, pending a hearing and determination at office of administrative trials and hearings (OATH) or its successor agency, as applicable.

**§28-401.19.4 Restriction on disciplined licensees.** A person who previously held a license that was surrendered subsequent to commencement of a Department disciplinary action, or had their license revoked or was denied renewal, may be prohibited from serving as an officer, director, partner, manager, or licensed individual of a licensed business, whether or not the individual had knowledge of or participated in the prohibited acts or omissions for which the license was surrendered, revoked or denied renewal. The election or appointment of that person by another licensee shall constitute grounds for disciplinary action.

**§28-401.20 Cooperation required.** Any person, including any corporation, partnership, business or other entity, issued a license or certificate of competence by the department shall, pursuant to a request or order of the commissioner or any other city agency or office, cooperate fully and completely with respect to any department or city agency or office investigation. Evidence of cooperation shall include, but is not limited to, appearing before the department or other city agency or office, answering questions completely and accurately, and providing any and all requested documents. Failure to comply with such request or order may subject such person to disciplinary measures authorized by law, including but not limited to suspension or revocation of the license or certificate of competence.

**§28-401.20.1 Service of request or order.** Such request or order by the commissioner or other city agency or office shall be mailed by regular mail to the person named therein to his or her last known business or home address at least ten days before such appearance and shall contain the name of the person, date, time and place of such appearance and, if known or applicable, a description of any requested documents. If the appearance or information is required immediately, the request or order may be transmitted via facsimile or delivered to the person’s last known business or home address prior to the date and time specified therein.

**§28-401.21 Judicial review of determinations.** Notwithstanding any other provision of law to the contrary, decisions, orders and interpretations of the commissioner made pursuant to this chapter shall not be subject to review by the board of standards and appeals. Final decisions and orders of the commissioner made pursuant to this chapter shall be subject to review pursuant to article 78 of the civil practice law and rules.

**§28-401.22 Deactivation of license.** In the event that the holder of a license is no longer actively engaged as a licensee in a trade or business licensed by the department, the licensee may submit his or her license for deactivation pursuant to department rules. During the period of deactivation, the licensee must continue to pay the license renewal fee required under this chapter for each year of the
deactivation period. The holder of a deactivated license may not practice in the trade or business as a licensee or hold himself or herself out as a licensee during the period of deactivation. Application for reactivation of a deactivated license without reexamination shall be made within a time period prescribed by rule and subject to a demonstration of work experience in the trade satisfactory to the commissioner during the time that the license was deactivated.

ARTICLE 402
SITE SAFETY MANAGER CERTIFICATE

§28-402.1 Certificate required. It shall be unlawful to perform the duties and responsibilities of a site safety manager, as specified in chapter 33 of the New York city building code, unless such work is performed by a person certified as a site safety manager under the provisions of this article and department rules.

§28-402.2 Qualifications. All applicants for a site safety manager certificate shall submit satisfactory proof establishing that the applicant:

1. Is a registered design professional and has three years of experience supervising construction or demolition of major buildings as the term major building is defined in chapter 33 of the New York city building code, and within one year prior to application has satisfactorily completed a 40-hour course approved by the department; Has, within one (1) year prior to application, satisfactorily completed a course that is at least forty (40) hours in length and approved by the department in construction and demolition site safety;

2. Has a Certified Safety Professional ("CSP") designation from the Board of Certified Safety Professionals ("BCSP") and has three years of experience supervising construction or demolition of major buildings as the term major building is defined in chapter 33 of the New York city building code, and within one year prior to application has satisfactorily completed a 40-hour course approved by the department; Possesses a valid Site Safety Training (SST) Supervisor Card; and

3. Has eight years of construction supervision experience within the 10 years prior to application, including five years supervising construction or demolition of major buildings as the term major building is defined in chapter 33 of the New York city building code, and within one year prior to application has satisfactorily completed a 40-hour course approved by the department; Meets one of the following experience criteria:

3.1. Is a registered design professional and has at least three (3) years of field experience, within the five (5) years prior to application, either (i) serving in a supervisory role with responsibility over workers engaged in construction or demolition work subject to a site safety plan at major buildings in the city of New York, or (ii) providing site safety oversight during construction or demolition work subject to a site safety plan at major buildings in the city of New York, including but not limited to conducting site safety risk assessments, developing or implementing site safety hazard control measures, managing site safety operations, or performing inspections to verify compliance with requirements imposed by chapter 33 of the New York city building code and related rules;
3.2. Holds a Certified Safety Professional (CSP) certification from the Board of Certified Safety Professionals (BCSP) and has at least three (3) years of field experience, within the five (5) years prior to application, either (i) serving in a supervisory role with responsibility over workers engaged in construction or demolition work subject to a site safety plan at major buildings in the city of New York, or (ii) providing site safety oversight during construction or demolition work subject to a site safety plan at major buildings in the city of New York, including but not limited to conducting site safety risk assessments, developing or implementing site safety hazard control measures, managing site safety operations, or performing inspections to verify compliance with safety requirements imposed by law;

3.3. Is a New York city certified site safety coordinator and has at least three (3) years of experience, within the five (5) years prior to application, serving as a designated site safety coordinator during the construction or demolition of major buildings in New York city;

3.4. Is a New York city registered concrete safety manager and has at least four (4) years of experience, within the seven (7) years prior to application, serving as a designated concrete safety manager during the construction or demolition of major buildings in the city of New York;

3.5. Holds a Construction Health and Safety Technician (CHST) certification from the Board of Certified Safety Professionals (BCSP) and has at least four (4) years of field experience, within the eight (8) years prior to application, either (i) serving in a supervisory role with responsibility over workers engaged in construction or demolition work subject to a site safety plan at major buildings in the city of New York, or (ii) providing site safety oversight during construction or demolition work subject to a site safety plan at major buildings in the city of New York, including but not limited to conducting site safety risk assessments, developing or implementing site safety hazard control measures, managing site safety operations, or performing inspections to verify compliance with safety requirements imposed by law;

3.6. Has at least five (5) years of experience, within the eight (8) years prior to application, serving in a supervisory role with full-time responsibility over workers engaged in construction or demolition work subject to a site safety plan at major buildings in the city of New York;

3.7. Has eight (8) years of experience, within the ten (10) years prior to application, as a New York city buildings department enforcement official, as determined by the commissioner. At least four (4) years of the experience must have been in the inspection of major buildings under construction or demolition for compliance with the provisions of chapter 33 of the New York city building code and related rules;

3.8. Has completed an 18-month on-the-job site safety manager training program conducted under the direct supervision of a certified site safety manager during the construction or demolition of major buildings in the city of New York. Such on-the-job training program shall conform to rules promulgated by the department. During the on-the-job training program, the applicant shall only serve as a site safety manager in training, and shall
serve in such role on a full-time basis. The supervising site safety manager shall register
the trainee with the department prior to the commencement of the training program and
shall certify the trainee’s satisfactory completion of the training program at the
conclusion of the program; or

3.9. Has successfully completed a site safety manager apprenticeship program approved by
the New York State Department of Labor.

[4. Has completed an 18 month on-the-job training program working on major buildings as that
term is defined in chapter 33 under the direct and continuing supervision of a certified site
safety manager. Such on-the-job training program shall conform to rules promulgated by the
department. The supervising site safety manager shall certify the trainee’s satisfactory
completion of the training program. In addition, the applicant shall provide proof that, within
one year prior to the date of application, he or she has satisfactorily completed a 40 hour
course approved by the department;]

[5. Has equivalent education and construction experience as determined by the department and
within one year prior to application has satisfactorily completed a 40 hour course approved
by the department; or]

[6. Has three years of experience as a certified site safety coordinator and within one year prior
to application has satisfactorily completed a 40 hour course approved by the department.]

§28-402.3 Fitness to perform work. As a condition of certificate renewal, a certified site safety
manager shall provide evidence satisfactory to the department that he or she is fit to perform the
work.

ARTICLE 403
SITE SAFETY COORDINATOR CERTIFICATE

§28-403.1 Certificate required. It shall be unlawful to perform the duties and responsibilities of a
site safety coordinator, as specified in chapter 33 of the New York city building code, unless such
work is performed by a person certified as a site safety coordinator under the provisions of this article
and department rules.

§28-403.2 Qualifications. All applicants for a site safety coordinator certificate shall submit
satisfactory proof establishing that the applicant:

1. Is a registered design professional and has two years of experience supervising construction
or demolition of major buildings as the term major building is defined in chapter 33 of the
New York city building code, and within one year prior to application has satisfactorily
completed an 8-hour course approved by the department; Has, within one (1) year prior to
application, satisfactorily completed a course that is at least forty (40) hours in length and
approved by the department in construction and demolition site safety;

2. Has a Construction Health and Safety Technician ("CHST") designation from the Board of
Certified Safety Professionals ("BCSP") and has two years of experience supervising
construction or demolition of major buildings as the term major buildings is defined in

chapter 33 of the New York City building code, and within one year prior to application has satisfactorily completed an 8-hour course approved by the department;] Possesses a valid Site Safety Training (SST) Supervisor Card; and

3. [Has five years of construction supervision or construction safety experience within the 10 years prior to application, including three years supervising construction or demolition of major buildings as the term major building is defined in chapter 33 of the New York City building code, and within one year prior to application has satisfactorily completed an 8-hour course approved by the department; or] Meets one of the following experience criteria:

3.1. Is a registered design professional and has at least two (2) years of field experience, within the five (5) years prior to application, either (i) serving in a supervisory role with responsibility over workers engaged in construction or demolition work subject to a site safety plan at major buildings in the city of New York, or (ii) providing site safety oversight during construction or demolition work subject to a site safety plan at major buildings in the city of New York, including but not limited to conducting site safety risk assessments, developing or implementing site safety hazard control measures, managing site safety operations, or performing inspections to verify compliance with requirements imposed by chapter 33 of the New York City building code and related rules;

3.2. Holds a Certified Safety Professional (CSP) certification from the Board of Certified Safety Professionals (BCSP) and has at least two (2) years of field experience, within the five (5) years prior to application, either (i) serving in a supervisory role with responsibility over workers engaged in construction or demolition work subject to a site safety plan at major buildings in the city of New York, or (ii) providing site safety oversight during construction or demolition work subject to a site safety plan at major buildings in the city of New York, including but not limited to conducting site safety risk assessments, developing or implementing site safety hazard control measures, managing site safety operations, or performing inspections to verify compliance with safety requirements imposed by law;

3.3. Is a New York City registered concrete safety manager and has at least three (3) years of experience, within the seven (7) years prior to application, serving as a designated concrete safety manager during the construction or demolition of major buildings in the city of New York;

3.4. Holds a Construction Health and Safety Technician (CHST) certification from the Board of Certified Safety Professionals (BCSP) and has at least three (3) years of field experience, within the seven (7) years prior to application, either (i) serving in a supervisory role with responsibility over workers engaged in construction or demolition work subject to a site safety plan at major buildings in the city of New York, or (ii) providing site safety oversight during construction or demolition work subject to a site safety plan at major buildings in the city of New York, including but not limited to conducting site safety risk assessments, developing or implementing site safety hazard control measures, managing site safety operations,
or performing inspections to verify compliance with safety requirements imposed by law;

3.5. Has at least four (4) years of experience, within the seven (7) years prior to application, serving in a supervisory role with full-time responsibility over workers engaged in construction or demolition work subject to a site safety plan at major buildings in the city of New York; or

3.6. Has five (5) years of experience, within the eight (8) years prior to application, as a New York city buildings department enforcement official, as determined by the commissioner. At least two and a half (2.5) years of the experience must have been in the inspection of major buildings under construction or demolition for compliance with the provisions of chapter 33 of the New York city building code and related rules.

§28-403.3 Fitness to perform work. As a condition of certificate renewal, a certified site safety coordinator shall provide evidence satisfactory to the department that he or she is fit to perform the work.

ARTICLE 404
RIGGER LICENSE

§28-404.1 Rigger license required. It shall be unlawful to hoist or lower any suspended article, including but not limited to suspended scaffolds, on the outside of any building [in the city] unless such work is performed by or under the direct and continuing supervision of a person licensed as a rigger under the provisions of this article. The provisions of this article shall also apply to the erection or dismantling of a tower crane [or a climber crane on a building and to the use of a derrick in their removal, except that such erection or dismantling may be performed by or under the direct and continuing supervision of a licensed climber or tower crane rigger in accordance with rules promulgated by the department].

[Exception] Exceptions: The provisions of this article shall not apply to:

1. The hoisting or lowering of signs if the person so doing possesses a license as a sign hanger, as provided in this chapter;

2. The loading or unloading of a material delivery truck if the material loaded or unloaded is not raised more than 12 feet (3658 mm) above the bed of the truck during the loading or unloading process; [or]

3. The hoisting or lowering of suspended articles on the outside of a building [in the city] where chapter 33 of the New York city building code authorizes such articles to be hoisted or lowered by or under the supervision of a qualified and/or competent person [1]; or

4. The assembly or disassembly of a self-erecting tower crane, provided such operation is supervised by an assembly/disassembly director in accordance with rules promulgated by the commissioner.
§28-404.2 Classification. Rigger licenses shall be classified as follows:

1. **Master rigger license.** Authorizes the holder thereof to install or use a suspended scaffold, or to hoist or lower any suspended article [with a hoisting machine], irrespective of weight, on the outside of any building.

2. **Special rigger license.** Authorizes the holder thereof to:
   
   2.1. Install or use a suspended scaffold; and
   
   2.2. Hoist or lower any suspended article not exceeding 2,000 pounds (907 kg) in weight on the outside of any building with [a] hoisting [machine] equipment, provided the manufacturer rated capacity of such hoisting [machine] equipment does not exceed 2,000 pounds (907 kg).

3. **Climber or tower Tower crane rigger license.** Authorizes the holder thereof to assemble, jump or disassemble a tower crane [or a climber crane], or to supervise such work, and to install or use a derrick(s) in conjunction with such work and supervise such installation or use of the derrick.

§28-404.3 [Additional qualifications] Qualifications. [Applicants] All applicants for a rigger license shall [have the additional qualifications as set forth in sections 28-404.3.1 through 28-404.3.3] submit satisfactory proof establishing that the applicant meets the qualifications, as set forth below, for the type of license sought.

§28-404.3.1 Master rigger license qualifications. All applicants for a master rigger license shall submit satisfactory proof establishing that the applicant:

1. **Has at least five years of practical experience in the hoisting and rigging business within the seven years prior to application.** Possesses valid certifications for both rigging supervision and lift direction. The certifications must be acceptable to the commissioner and be issued by a rigging supervision and lift direction certification program that is accredited by the National Commission for Certifying Agencies (NCCA) or the American National Standards Institute (ANSI). The certifications shall cover areas including, but not limited to, the inspection and use of rigging hardware, rigging techniques, signaling, hazards associated with rigging, and calculations and problem solving with respect to rigging;

2. **Has knowledge of and is able to explain the risks incident to such business and precautions to be taken in connection therewith, safe loads and computation thereof, types of rigging, size and strength of ropes, cables, blocks, poles, derricks, shear legs and other tools used in connection with such business; and** Has, within the one (1) year prior to application, satisfactorily completed a department-approved training course for lift directing that is at least 32 hours in length and in accordance with the requirements of section 28-424.3 of this code;

3. **Has satisfactorily completed a department-approved training course of not less than thirty hours.** Any person who, within the three years prior to the date of the application, has successfully completed at least a thirty-hour training course need not take a second thirty-hour course, provided such person can provide to the department a dated certificate as set forth in this section. Such person shall, however, take a department-approved eight-hour
re-certification course within three years of the initial course and every three years thereafter. Successful completion of the training or re-certification course shall be evidenced by a dated certificate issued by the provider of the training or re-certification course. The certificate shall include such information as specified by the department by rule. The certificate, or a valid wallet card version thereof, shall be readily available to the commissioner upon request. Such training or re-certification course shall be conducted (i) pursuant to a registered New York state department of labor training program, or (ii) by a provider approved by the department. Has, within the one (1) year prior to application, satisfactorily completed a department-approved training course for rigging supervision that is at least 32 hours in length and in accordance with the requirements of section 3316.9.2 of the New York city building code; and

4. Meets one of the following experience criteria:
   4.1. Has at least five (5) years of experience, within the seven (7) years prior to application, working as a designated master rigging foreman in the city of New York under the direct and continuing supervision of a licensed master rigger;
   4.2. Is a licensed professional engineer and, within the five (5) years prior to application, has developed and provided onsite verification of the critical pick plan in accordance with section 3316.9.1 of the New York city building code for at least twenty-five (25) separate New York city certificates of on-site inspections; or
   4.3. Has at least five (5) years of experience, within the seven (7) years prior to application, working as a licensed lift director in the city of New York.

§28-404.3.2 Special rigger license qualifications. All applicants for a special rigger license shall submit satisfactory proof establishing that the applicant:

1. [Has at least one year of practical experience in the hoisting and rigging business within the three years prior to application] Has, within the one (1) year prior to application, satisfactorily completed a department-approved training course for special riggers that is at least 16 hours in length;

2. [Has knowledge of and is able to explain the risks incident to such business and precautions to be taken in connection therewith] Has, within the one (1) year prior to application, satisfactorily completed a department-approved training course for suspended scaffold supervision that is at least 32 hours in length and in accordance with the requirements of section 3314.4.5.3 of the New York city building code; and

3. [Has satisfactorily completed a department-approved training course of not less than thirty hours. Any person who, within the three years prior to the date of the application, has successfully completed at least a thirty-hour training course need not take a second thirty-hour course, provided such person can provide to the department a dated certificate as set forth in this section. Such person shall, however, take a department-approved eight-hour re-certification course within three years of the initial course and every three years thereafter. Successful completion of the training or re-certification course shall be evidenced by a dated certificate issued by the provider of the training or re-certification course. The certificate shall include such information as specified by the department by rule. The certificate, or valid wallet card version thereof, shall be readily available to the]
commissioner upon request. Such training or recertification course shall be conducted (i) pursuant to a registered New York state department of labor training program, or (ii) by a provider approved by the department.]

Meets one of the following experience criteria:

3.1. Has at least two (2) years of experience, within the three (3) years prior to application, working as a designated special rigging foreman in the city of New York under the direct and continuing supervision of a licensed special rigger; or

3.2. Has at least three (3) years of experience, within the five (5) years prior to application, supervising the installation or use of suspended scaffolds in the city of New York in accordance with section 3314.4 of the New York city building code.

§28-404.3.3 [Climber or tower] Tower crane rigger license qualifications. All applicants for a [climber or] tower crane rigger license shall submit satisfactory proof establishing that the applicant:

1. [Has at least five years of practical experience in the climber or tower crane rigging business within the seven years prior to application.] Has, within the one (1) year prior to application, satisfactorily completed a department-approved training course for tower crane rigging that is at least 30 hours in length and in accordance with the requirements of section 3319.10.1 of the New York city building code; and

2. [Has knowledge of and is able to explain the risks incident to such business and precautions to be taken in connection therewith, including connecting pins, cables, anchorage, platform or pad, plumb of mast, torque of bolts, supervision of rigging and hoisting of loads, placement of components, and coordination of sequencing; and] Has at least five (5) years of practical experience in the tower crane rigging business in the city of New York within the seven (7) years prior to application.

3. Has satisfactorily completed a department-approved training course of not less than thirty hours. Any person who, within the three years prior to the date of the application, has successfully completed at least a thirty-hour training course need not take a second thirty-hour course, provided such person can provide to the department a dated certificate as set forth in this section. Such person shall, however, take a department-approved eight-hour re-certification course within three years of the initial course and every three years thereafter. Successful completion of the training or re-certification course shall be evidenced by a dated certificate issued by the provider of the training or re-certification course. The certificate shall include such information as specified by the department by rule. The certificate, or a valid wallet card version thereof, shall be readily available to the commissioner upon request. Such training or recertification course shall be conducted (i) pursuant to a registered New York state department of labor training program, or (ii) by a provider approved by the department.]

§28-404.4 Additional requirements. The additional requirements set forth in sections 28-404.4.1 through 28-404.4.3 shall apply to licensed riggers:

§28-404.4.1 Danger warning. Every licensed [master and special] rigger shall, while rigging operations are in progress at a job site, place, conspicuously, at such job site two plates or signs not less than 18 inches (457 mm) by 24 inches (610 mm) in size (i) displaying the word “danger”
in letters not less than 6 inches (152 mm) high, and (ii) disclosing the rigger’s name, business address, type of rigger license and license number.

§28-404.4.2 Rigger place of business. Every licensed master and special rigger shall have a place of business located within the city and shall display prominently at such place of business a plate or sign marked with the words “master rigger” or “special rigger,” respectively, and his or her license number immediately [thereunder]. A master, special and tower [or climber] rigger shall be a sole proprietor, a partner in the partnership or an officer of the corporation and shall be allowed to associate his or her license with only one other rigger business. Such businesses shall be located at the same place of business.

§28-404.4.3 Fitness to perform work. As a condition of license renewal [or reinstatement], a licensed master or special rigger shall provide evidence satisfactory to the department that he or she is fit to perform the work.

ARTICLE 405
HOISTING MACHINE OPERATOR LICENSE

§28-405.1 Hoisting machine operator license required. It shall be unlawful for any persons to take charge of or operate any power-operated hoisting machine used for hoisting purposes or cableways under the jurisdiction of the department, unless such person is licensed under the provisions of this article [or is a holder of a certificate of qualification as a hoisting machine operator issued prior to December 6, 1968 and not allowed to lapse].

Exceptions:

1. Operators of machinery that is exempted from the requirements of section 3319.1 of the New York city building code.

2. Operators of mobile cranes of a limited size and capacity, or operators of mobile cranes performing a limited use, and exempted from the requirements of this article [under chapter 33 of the New York city building code, or exempted] in accordance with rules promulgated by the commissioner.

[2.] 3. [Hoisting] Operators of hoisting machines with a manufacturer’s rated capacity of one ton or less.

5. Learners supervised in accordance with the rules of the department by a licensed hoisting machine operator.

§28-405.2 Classification. Hoisting machine operator licenses shall be classified as follows:

1. Class A license: [Basic license] License to operate cranes with a [total] boom [less than] 200 feet (60 960 mm) in length, derricks, and [cableways, excluding truck mounted tower cranes that exceed 200 feet (60 960 mm) in height] other hoisting machines. This license shall not authorize the operation of a truck-mounted tower crane or a self-erecting tower crane when such crane exceeds 200
feet (60 960 mm) in height. This license further shall not authorize the operation of a
cableway.

2. **Class B license**: [Endorsement on basic license to include the operation of] License to
operate any hoisting machinery, except that to operate hoisting machinery with a boom,
including jibs and other extensions, exceeding 300 feet (91 440 mm) in length, or a truck-
mounted or self-erecting tower crane that exceeds 300 feet (91 440 mm) in height, the
licensee must hold a rating, issued by the department, for the specific make and model of
hoisting machine.

3. **Class C license**: [Special hoisting machine operator license to operate a specified class of
hoisting machine of limited size and capacity as follows:]

[**Class C1**:] License to operate wheel mounted cranes with telescoping, hydraulic,
articulating, or folding booms, including jibs and any other extensions to the boom, not
exceeding 200 feet (60 960 mm) in length [60 960 mm] with a manufacturer’s rated
capacity of 50 tons ([54] 45.36 t) or less, as well as to operate any hoisting machine within
the scope of a limited license.

4. **Limited licenses**: Limited hoisting machine operator licenses shall be classified as follows:

4.1. **Limited license for articulating boom cranes**. Limited license to operate boom
trucks with an articulating boom, including jibs and any other extensions to the boom,
not exceeding 200 feet (60 960 mm) in length with a manufacturer’s rated capacity of
50 tons (45.36 t) or less.

4.2. **[Class C2: License] Limited license for boom trucks**. Limited license to operate
boom trucks with telescoping, hydraulic, articulating, or folding booms, including jibs
and any other extensions to the boom, not exceeding 200 feet (60 960 mm) in length
with a manufacturer’s rated capacity of 50 tons ([54] 45.36 t) or less. This license
shall also authorize the operation of any hoisting machine within the scope of a limited
license for mini cranes.

4.3. **Limited license for mini cranes**. Limited license to operate mobile cranes, other than
boom trucks, with a telescoping, hydraulic, articulating, or folding boom, including
jibs and any other extensions to the boom, not exceeding 50 feet (15 240 mm) in length
with a manufacturer’s rated capacity of 3 tons (2.72 t) or less.

4.4. **[Class C3: License] Limited license for sign hanging cranes**. Limited license to
operate boom trucks with telescoping, hydraulic, articulating, or folding booms,
including jibs and any other extensions to the boom, not exceeding 135 feet (41 148
mm) in length with a manufacturer’s rated capacity of [three] 3 tons (2.72 t) or less,
used exclusively for the erection, maintenance, or removal of signs.

4.5. **Additional limited licenses via rule**. The commissioner may, via rule, establish
additional limited hoisting machine operator licenses. Such additional licenses must be
limited as to the type, size, and capacity of hoisting machinery authorized to be operated
by a holder of the license.

§28-405.3 [Additional] **Experience qualifications**. Applicants for a hoisting machine operator
license shall [have] meet the following [additional] experience qualifications.
§28-405.3.1 Class A license. An applicant for a class A [basic] hoisting machine operator license shall have at least three (3) years of experience, within the five (5) years prior to application, operating hoisting machines in the city of New York in the presence of and under the direct [and continuing] supervision of a licensed class A or class B hoisting machine operator. Such experience shall have been obtained operating hoisting machines of a size, type, and capacity as specified in rules promulgated by the commissioner.

§28-405.3.2 Class B license. An applicant for a class B hoisting machine operator license shall have the following qualifications.

§28-405.3.2.1 Licensing [Endorsement] qualifications. An applicant for a class B hoisting machine operator license shall: (i) have a class A [basic] hoisting machine operator license [], and shall have at least two years of experience prior to application under the direct and continuing supervision of a class B licensed hoisting machine operator operating the equipment for which he or she is applying for endorsement and shall satisfactorily demonstrate by operation that he or she is competent to operate a crane with a boom, including jibs and other extensions, exceeding 200 feet (60 960 mm) in length or truck-mounted tower crane exceeding 200 feet (60 960 mm) in height, or as otherwise provided in rules of the department.] and have held such class A license for at least five (5) years prior to application; (ii) have at least three (3) years of experience, within the eight (8) years prior to application, operating, in the city of New York as a class A licensed hoisting machine operator, mobile cranes with a manufacturer’s rated capacity in excess of 50 tons (45.36 t) or tower cranes; and (iii) separately, while holding the class A license, have at least one (1) year of experience, within the five (5) years prior to application, operating cranes in the city of New York with a boom, including jibs and any other extensions to the boom, greater than 200 feet (60 960 mm) in length as a learner in the presence of and under the direct supervision of a licensed class B hoisting machine operator.

§28-405.3.2.2 Licensing ratings qualifications. An applicant for a class B hoisting machine operator licensing rating shall have a class B hoisting machine operator license and shall satisfactorily demonstrate that he or she is competent to operate a hoisting machine with a boom, including jibs and any other extensions to the boom, exceeding 300 feet (91 440 mm) in length or a truck-mounted tower crane exceeding 300 feet (91 440 mm) in height. Unless otherwise provided in rules of the department, such [competence] competency shall be demonstrated by operation, practical examination, or completion of simulator training and shall be specific to the make and model of the hoisting machine for which the rating [shall] is to be issued. In addition to holding a rating, such hoisting machine operator must complete any orientation required by the department.

§28-405.3.3 Class C license. An applicant for a class C [special] hoisting machine operator license shall have at least two (2) years of experience, within the three (3) years prior to application, operating hoisting machines in the presence of and under the direct [and continuing] supervision of a licensed hoisting machine operator [and have satisfactorily passed a practical examination in the operation of equipment for which such license is to be issued]. Such experience shall have been obtained operating hoisting machines of a size, type, and capacity as specified in rules promulgated by the commissioner.

§28-405.3.4 Limited licenses. An applicant for a limited hoisting machine operator license shall have at least two (2) years of experience, within the three (3) years prior to application, in the
presence of and under the direct supervision of a licensed hoisting machine operator. Such experience shall have been obtained operating hoisting machines of a size, type, and capacity as specified in rules promulgated by the commissioner.

**Exception:** The commissioner may, by rule, establish alternative pathways for individuals who, on or before the date that is two years after the effective date of this provision, apply for a limited license for articulating boom cranes or a limited license for mini cranes.

§28-405.4 Fitness to perform work. As a condition of license issuance and renewal, a licensed hoisting machine operator shall provide evidence satisfactory to the department that he or she is fit to perform the work.

§28-405.5 Insurance exemption. Unless otherwise required by rule, licensed hoisting machine operators are exempt from the insurance requirements of section 28-401.9.

§28-405.6 Certification required. The commissioner shall, by rule, require hoisting machine operators to possess one or more certifications for the operation of hoisting machinery. Such certifications shall be based on the passage of a written and a practical examination for the type of hoisting machinery authorized to be operated by the certification.

**ARTICLE 406**

**CONCRETE TESTING LABORATORY LICENSE**

§28-406.1 Concrete testing laboratory license required. Testing of concrete required by this code or other applicable laws or rules shall be conducted by a concrete testing laboratory licensed in accordance with this article.

§28-406.1.1 Term of license. The term of a concrete testing laboratory license shall be one (1) year and may be renewed every year thereafter.

§28-406.2 Qualifications. All applicants for a concrete testing laboratory license shall maintain a laboratory within 50 miles (80 467 m) of the city and shall submit satisfactory proof establishing that the business is conducted by qualified personnel in accordance with procedures, safety requirements and professional standards as set forth in rules of the department. The department shall inspect an applicant’s place of business and equipment and conduct an investigation of applicant’s personnel in a manner to be set forth in department rules prior to the issuance or renewal of a license.

§28-406.3 Additional requirements. The following additional requirements shall apply to concrete testing laboratories:

§28-406.3.1 Director. Each laboratory shall have in responsible charge a director who shall be a full-time employee of the laboratory and shall not serve as the director of more than one licensed laboratory at a time. The director shall be a registered design professional, comply with additional qualification requirements as set forth in department rules, and shall personally supervise all technical functions of the laboratory relating to testing of concrete and concrete materials as required in this code and in rules of the department.
§28-406.3.2 Certification of reports by director. The director shall certify the truth and accuracy of all reports filed by the laboratory under the provisions of this code or other applicable laws and rules.

§28-406.4 No examination required. An examination shall not be required for a concrete testing laboratory license.

ARTICLE 407
WELDER LICENSE

§28-407.1 Welder license required. It shall be unlawful to perform manual welding work on any structural member of any building [in the city] unless such work is performed by a person licensed as a welder under the provisions of this article.

§28-407.2 Qualifications. All applicants for a welder license shall submit satisfactory proof of the applicant’s fitness to make structural welds, including his or her ability to pass operator qualification tests as determined by the commissioner.

§28-407.3 Fitness to perform work. As a condition of license renewal [and reinstatement] , a licensed welder shall provide evidence satisfactory to the department that such licensee is fit to perform the work.

§28-407.4 Insurance exemption. Unless otherwise required by rule, licensed welders are exempt from the insurance requirements of section 28-401.9.

ARTICLE 408
MASTER PLUMBER LICENSE

§28-408.1 Master plumber license required. It shall be unlawful for any person:

1. To perform plumbing work unless such person is a licensed master plumber or working under the direct and continuing supervision of a licensed master plumber, except that a city employee who holds a master plumber license may only perform [replacement, maintenance and repair] plumbing work on existing buildings in the course of his or her employment.

2. To use the title licensed master plumber, master plumber or any other title in such manner as to convey the impression that such person is a licensed master plumber, unless such person is licensed as such in accordance with the provisions of this article.

§28-408.2 Seal. All documents that are required to be filed with any department or agency of the city of New York shall bear the stamp of the seal as well as the signature of the licensee. The licensed master plumber performing the work and services shall personally sign and seal all applications and other documents required to be filed pursuant to this code.

§28-408.3 Additional qualifications. Applicants for a master plumber license shall have the following additional qualifications:

§28-408.3.1 Experience. All applicants for a master plumber license shall submit satisfactory proof establishing that the applicant:
1. Has at least seven (7) years total experience, within the ten (10) years prior to application, in the installation of plumbing systems and the planning or design of plumbing systems under the direct and continuing supervision of a licensed master plumber in the United States, with at least two (2) years of such experience as a registered journeyman plumber in accordance with the provisions of article 409, except that during the three years immediately following July 1, 2008, there shall be no requirement for such registered journeyman plumber experience;

2. Has received a bachelor’s degree in mechanical engineering or appropriate engineering technology from an accredited college or university and has at least five (5) years total experience, within the seven (7) years prior to application, in the installation of plumbing systems and the planning or design of plumbing systems under the direct and continuing supervision of a licensed master plumber in the United States, where at least two (2) years of such experience were in New York city;

3. Is an architect or engineer with at least three (3) years of experience, within the five (5) years prior to application, in the installation of plumbing systems and the planning or design of plumbing systems. All required experience must be under the direct and continuing supervision of a licensed master plumber in the United States, where and at least one (1) year of such experience must be in New York city;

4. Has at least seven (7) years total experience, within the ten (10) years prior to application, with at least two (2) years of such experience working in the installation of plumbing systems and in the planning or design of plumbing systems under the direct and continuing supervision of a licensed master plumber in the United States. The balance of such required experience may be obtained by performing maintenance, replacement and repair plumbing work on existing buildings while in the employ of a city agency under the direct and continuing supervision of a licensed master plumber supervisor employed by the city agency. Three years after July 1, 2008, the two (2) years’ experience in the installation of plumbing systems and in the planning or design of plumbing systems set forth above may only be satisfied by working as a registered journeyman plumber; or

5. Has experience as an employee of a government agency, or a private inspection agency or other entity acceptable to the commissioner as specified in department rules, whose duties primarily involve the inspection of plumbing work for compliance with the New York city plumbing code and/or other laws relating to the installation, alteration or repair of plumbing systems which shall be credited for fifty percent (50%) of the number of years that he or she has been satisfactorily employed in such duties within the ten (10) years prior to application, which, however, in no event, shall exceed two and one-half (2.5) years credit of satisfactory experience. The balance of the required seven (7) years must have been obtained by working with installation of plumbing systems and in the planning or design of plumbing systems under the direct and continuing supervision of a licensed master plumber in the United States, except that the requirement of paragraph 1 of this section [28-408.3.4] that an applicant’s working experience must have been within the ten (10) year period prior to application shall not apply to such balance of the work experience required pursuant to this paragraph.
§28-408.3.2 Armed services. Applicants who were engaged in plumbing work as above provided prior to entering the armed services of the United States shall be permitted to credit their time in the service as experience in the plumbing business, as above provided; but such service credit shall not exceed one-third of the time required for experience.

§28-408.4 Certificate of competence, [and] license [plate] and [/or] seal. The commissioner shall issue a certificate of competence, license [plate] and [/or] seal, in accordance with the following:

§28-408.4.1 Certificate of competence. A certificate of competence shall be issued by the commissioner to an applicant who satisfactorily complies with the experience and examination requirements of this chapter for a license, upon payment of the fee. Such certificate shall contain the full name of the individual and a certificate number, the date of issuance, and shall be signed by the commissioner.

§28-408.4.2 Effect of issuance. The issuance of a certificate of competence shall constitute evidence that the person named therein is qualified, upon payment of applicable fees, to obtain a [plate and] seal while the certificate is valid [except that a city employee while in the employ of the city shall only be entitled to obtain a seal].

§28-408.4.3 [Plate and/or seal] Seal required. The holder of a certificate shall not be entitled to perform work or hold himself or herself out to perform work as a licensed master plumber until such [plate and/or] seal [have] has been obtained. Further, no holder of a certificate of competence shall enter into any contractual agreement to install or alter any plumbing, gas piping, or any piping system, other than an employment agreement with a master plumber business or a city agency.

§28-408.4.4 [Effect of failure] Failure to obtain [plate and/or] seal. If a holder of a certificate of competence has held the certificate for five (5) years without a [plate and/or] seal, then the commissioner may require said person to submit an affidavit and supporting documentation satisfactory to the department stating that over the five (5) year period the individual has been engaged in the installation of plumbing systems and the planning or the design [/and installation] of plumbing systems in the United States under the direct and continuing supervision of a licensed master plumber. If the holder’s qualifications are not satisfactory to the commissioner, the commissioner may require such person to submit to reexamination or to provide evidence of retained proficiency. [In addition, additional] Additional fees will be due as set forth in this chapter.

§28-408.4.5 Requirement for obtaining a license [/plate and [/or] seal. A holder of a certificate of competence or an applicant who has satisfied all requirements for a master plumber license shall obtain:

1. A license [/plate] and [/or] seal issued upon establishing a master plumbing business conforming to the requirements of this article and rules promulgated by the department; or

2. A license and seal issued upon demonstrating employment with a city agency. The license shall clearly state: “The bearer of this master plumber license is a government employee and as such is not authorized to engage in plumbing contract work outside of his/her
government employment and within such government employment shall only engage in maintenance, replacement and repair plumbing work on existing buildings.” [No plate shall be issued to a licensed master plumber employed by a city agency.]

§28-408.4.6 Issuance. A certificate of competence or a license [plate] and [or] seal as a master plumber shall be issued only to an individual.

§28-408.4.7 Duplication prohibited. Not more than one license [plate] and [or] seal shall be issued to an individual and no individual shall make or cause to be made a duplicate of such license [plate or] and seal.

§28-408.5 Surrender of license [plate] or seal. Upon the death or the retirement of a licensed master plumber, or upon the surrender, revocation or suspension of his or her license, his or her license, [plate] and [or] seal shall immediately be surrendered to the commissioner. Nothing contained herein shall be construed to prevent the legal representative of a deceased licensee, with the consent of the commissioner, from retaining such [plate and] seal for the purpose of completing all unfinished work of the deceased licensee for which plans have been approved and a permit issued, provided such work is performed by or under the direct and continuing supervision of a licensed master plumber and is completed within one (1) year from the date of the death of the original licensee. Retired licensees and the legal representatives of deceased licensees shall schedule for inspection, withdraw or have another licensee re-file any open application filed under such license in accordance with department procedures.

§28-408.6 Master plumber business required. No individual, corporation, partnership or other business association shall conduct a plumbing [contracting] contractor business in the city of New York, or employ the name “plumber” or “plumbing” in its business name unless such business is a master plumber business as follows:

1. No less than 51 percent of the control and voting capital stock of such plumbing [contracting] contractor business is owned by one or more individuals who are licensed master plumbers [who cannot be terminated from the public contracting business by any person or entity] , except as otherwise provided;

2. All plumbing or gas piping work performed by such entity is performed by or under the direct and continuing supervision of such licensed master plumber;

3. The person in charge of such work is such licensed master plumber; and

4. The persons actually performing such work are in the direct employ of such master plumber business as authorized by the code.

Exception: A company, corporation, partnership or other business association or its predecessor that was engaged in plumbing work prior to January 25, 1990 may continue to do so in any one or more of such business forms without complying with the foregoing, if (i) application was made to the department prior to July 25, 1990, and (ii) necessary evidence was furnished on or prior to January 25, 1991, that such company, corporation, partnership or other business association or its predecessor had employed an average of ten or more journeymen plumbers doing plumbing work for at least five days a week for a period of ten
(10) years or more out of the twenty (20) years preceding July 25, 1990, provided, that such plumbing business continues to have all plumbing work conducted under the management and direct and continuing supervision of a licensed master plumber in the direct employ of such plumbing business and that such licensed master plumber is not otherwise interested in, associated with or employed by any other plumbing business operating in this city except as a joint venture in which such master plumber’s employer is one of the joint venturers.

§28-408.6.1 Use. Nothing herein contained shall be construed to prohibit the use of a master plumber license by the holder thereof for or on behalf of a partnership, corporation or other business association, provided that such partnership, corporation or other business is a master plumber business.

§28-408.6.2 Identification. All business vehicles, advertising, websites and stationery used in connection with a master plumber business shall display prominently the full name of the licensee, the words “N.Y.C. licensed plumber,” the licensee’s number and the licensee’s business address. If the business is conducted under a trade name, or by a partnership or corporation, the trade name, partnership or corporate name shall be placed immediately above the full name or names of the licensed master plumber or licensed master plumbers [to whom the plates were issued]. Prior to using, the trade name, partnership or corporate name must have been disclosed to the department in a form and manner required by the department.

§28-408.6.3 Withdrawal of license. If a licensed master plumber withdraws from a master plumbing business operating pursuant to such individual’s license, the right of the business to perform plumbing work shall lapse if the provisions of this [section 28-408.6] article are no longer satisfied. If a licensed master plumber’s license is revoked or suspended, such licensee will be deemed withdrawn from such business.

§28-408.6.4 Ownership limitations. An individual who is a licensed master plumber whose interest or ownership in a master plumber business constitutes any portion of the 51 percent interest or control required by [this] section 28-408.6 shall be allowed to possess an interest or ownership in only one other master plumber business, where such interest or ownership would constitute any portion of the 51 percent interest or control required by [this] section 28-408.6. Both master plumber businesses in which the licensed master plumber has an interest shall be located at the same place of business. For the purposes of [this] section 28-408.6, where two or more individuals who are licensed master plumbers possess an interest or ownership in any master plumber business [which] that together represents more than 51 percent of the interest or control of such entity, all of such licensees shall be deemed to possess a portion of the 51 percent interest or control required by [this] section 28-408.6.

§28-408.6.5 Joint ventures. Nothing contained in [this] section 28-408.6 shall be construed to prevent a master plumber business from entering into a joint venture of limited duration for a particular project with another master plumber business. The terms of a joint venture must be in writing, and documentation of the joint venture must be submitted to the department for approval prior to the initiation of work under such venture.

§28-408.6.6 Supervision. The master plumber shall conduct his or her business to provide direct and continuing supervision in accordance with the provisions of this code.
Exception: The provisions of this section [28-408.6.6] shall not apply to minor alterations or ordinary repairs, as defined in this code, or to the installation or alteration of gas service piping and gas meter piping, including meters, valves, regulators or related equipment, when such work is to be performed, serviced and maintained by utility corporations subject to the jurisdiction of the New York state public service commission.

§28-408.7 Fitness to perform work. As a condition of license renewal, a licensed master plumber shall provide evidence satisfactory to the department that such licensee is fit to perform the work.

ARTICLE 409
JOURNEYMAN PLUMBER REGISTRATION

§28-409.1 Journeyman plumber registration [; additional] qualifications. [Upon satisfactory completion of a New York State recognized training program or affirmation of an applicant’s qualifications by an employer licensed master plumber or, in the case of a city agency, a supervising licensed master plumber and upon written stipulation of same by the applicant, the] The commissioner shall register an applicant as a journeyman plumber [;Such] who has qualifications [shall reflect] reflecting a progressive understanding, proficiency and competence in the plumbing trade, including:

1. A working familiarity with the plumbing code and technical standards and the ability to apply the code requirements correctly;
2. The application of basic plumbing theory and the utilization of trade skills on the job site;
3. A working knowledge of the tools of the trade and the ability to utilize them properly; and
4. An ability to draft simple diagrams and interpret from drawings for the purpose of the plumbing work in which the applicant is engaged.

§28-409.2 Experience. The applicant for journeyman plumber registration [shall have a] must demonstrate that he or she has a progressive understanding, proficiency and competence in the plumbing trade by having:

1. A minimum of five (5) years of full-time experience in the performance of plumbing work under the direct and continuing supervision of a licensed master plumber or equivalent, where at least one (1) year of such experience shall have been in New York city [;]; or
2. Satisfactorily completed a New York State recognized training program in plumbing.

§28-409.3 Registration need not be renewed. The registration for journeyman plumber shall have no expiration and shall not require renewal or [re-issuance] reissuance.

§28-409.4 Registration card. The registration card shall clearly state: “This registration is NOT A LICENSE, and the holder is NOT AUTHORIZED TO PERFORM PLUMBING WORK in New York city except under the direct and continuing supervision of a licensed master plumber.”
ARTICLE 410
MASTER FIRE SUPPRESSION PIPING
CONTRACTOR LICENSE

§28-410.1 Master fire suppression piping contractor license required. It shall be unlawful for any person:

1. To perform fire suppression piping work unless such person is a licensed master fire suppression piping contractor or working under the direct and continuing supervision of a licensed master fire suppression piping contractor, except that a city employee who holds a master fire suppression piping contractor license may only perform [replacement, maintenance and repair] fire suppression piping work on existing buildings in the course of his or her employment.

2. To use the title licensed master fire suppression piping contractor, master fire suppression piping contractor or any other title in such manner as to convey the impression that such person is a licensed master fire suppression piping contractor unless such person is licensed as such in accordance with the provisions of this article.

§28-410.2 Seal. All documents that are required to be filed with any department or agency of the city of New York shall bear the stamp of the seal as well as the signature of the licensee. The licensed master fire suppression piping contractor performing the work and services shall personally sign and seal all applications and other documents required to be filed pursuant to the code.

§28-410.3 Classification. There shall be three classes of licenses for master fire suppression piping contractor:

1. Class A. The holder of a class A master fire suppression piping contractor license is authorized to perform any work in connection with any and all fire suppression piping systems as set forth in paragraphs 1 [and 2 -3] of the definition of fire suppression piping system in section 28-401.3.

2. Class B. The holder of a class B master fire suppression piping contractor license is authorized to perform any work in connection with any and all fire suppression piping systems as set forth in paragraph 1 of the definition of fire suppression piping system in section 28-401.3.

3. Class C. The holder of a class C master fire suppression piping contractor license is authorized to perform any work in connection with any and all fire suppression piping systems as set forth in paragraph [2] (3) of the definition of fire suppression piping system in section 28-401.3.

§28-410.4 Additional qualifications. Applicants for a master fire suppression piping contractor license shall have the following additional qualifications:

§28-410.4.1 Experience. All applicants for a master fire suppression piping contractor license shall submit satisfactory proof establishing that the applicant:
1. Has at least seven (7) years total experience, within the ten (10) years prior to application, in the performance of fire suppression piping work, including the planning or design, and installation, of fire suppression piping systems under the direct and continuing supervision of a licensed master fire suppression piping contractor in the United States with the class of license for which application is made, with at least two (2) years of such experience as a registered journeyman fire suppression piping installer in accordance with the provisions of article 411 [except that during the three years immediately following July 1, 2008, there shall be no requirement for such registered journeyman fire suppression piping installer experience];

2. Has received a bachelor’s degree in mechanical engineering, fire protection engineering or appropriate engineering technology from an accredited college or university and has at least five (5) years total experience, within the seven (7) years prior to application, in the performance of fire suppression piping work, including the planning or design, and installation, of fire suppression piping systems under the direct and continuing supervision of a licensed master fire suppression piping contractor in the United States with the class of license for which application is made, at least two (2) of which were in New York city;

3. Is an architect or engineer with at least three (3) years of experience, within the five (5) years prior to application, in the performance of fire suppression piping work, including the planning or design, and installation, of fire suppression piping systems. All required experience must be under the direct and continuing supervision of a licensed master fire suppression piping contractor in the United States with the class of license for which application is made, where and at least one (1) year of such experience was must be in New York city;

4. Has at least seven (7) years total experience, within the ten (10) years prior to application, with at least two (2) years of such experience working in the performance of fire suppression piping work, including the planning or design, and installation, of fire suppression piping systems under the direct and continuing supervision of a licensed master fire suppression piping contractor in the United States with the class of license for which application is made. The balance of such required experience may be obtained by performing maintenance, replacement and repair of fire suppression piping work on existing buildings while in the employ of a city agency under the direct and continuing supervision of a licensed master fire suppression piping contractor supervisor employed by the city agency with the class of license for which application is made. Three years after the effective date of this article the two (2) years of experience in the planning or design, and installation, of fire suppression piping systems set forth above may only be satisfied by working as a registered journeyman fire suppression piping installer; or

5. Has experience as an employee of a government agency, or a private inspection agency or other entity, acceptable to the commissioner as specified in department rules, whose duties primarily involve the inspection of fire suppression systems for compliance with the New York city plumbing code and/or other laws relating to the installation, alteration or repair of fire suppression piping systems which shall be credited for fifty percent (50%) of the number of years that he or she has been satisfactorily employed in such duties within the ten (10) year period prior to application,
which, however, in no event, shall exceed two and one-half (2½) years credit of satisfactory experience. The balance of the required seven (7) years must have been obtained [by working] in the performance of fire suppression piping work and in the planning or design [-and installation,-] of fire suppression piping systems under the direct and continuing supervision of a licensed fire suppression piping contractor in the United States with the class of license for which application is made except that the requirement of paragraph 1 of this section [§28-410.4.1] that an applicant’s working experience must have been within the ten (10) year period prior to application shall not apply to such balance of the work experience required pursuant to this paragraph.

§28-410.4.1.1 Domestic water-supplied system experience. Work on 30 or fewer sprinkler heads off the domestic water shall be considered qualifying experience for a master fire suppression piping contractor license pursuant to this section. Such experience shall qualify when the applicant is working as a licensed master plumber, or an individual working under the direct and continuing supervision of either a licensed master plumber or a master fire suppression piping contractor. The balance of the experience required under all qualification bases must be in the performance of fire suppression piping work as defined in section 28-401.3 under the direct and continuing supervision of a licensed fire suppression piping contractor.

§28-410.4.1.1.1 Class A license. An applicant for a class A fire suppression piping contractor license may be permitted to use no more than eighteen (18) months of experience working on 30 or fewer sprinkler heads towards satisfying the experience requirements in section 28-410.4.1 items 1 and 2, and no more than six (6) months towards satisfying the experience requirements in section 28-410.1 items 4 and 5.

§28-410.4.1.1.2 Class B license. An applicant for a class B fire suppression piping contractor license may be permitted to use no more than three (3) years of experience working on 30 or fewer sprinkler heads towards satisfying the experience requirements in section 28-410.4.1 items 1 and 2, and no more than one (1) year towards satisfying the experience requirements in section 28-410.4.1 items 4 and 5.

§28-410.4.2 Armed services. Applicants who were engaged in fire suppression piping work prior to entering the armed services of the United States shall be permitted to credit their time in the service as experience in the fire suppression piping business, as above provided; but such service credit shall not exceed one-third of the time required for experience.

§28-410.5 Certificate of competence, and license [plate] and [or] seal. The commissioner shall issue a certificate of competence, license [plate] and [or] seal in accordance with the following:

§28-410.5.1 Certificate of competence. A certificate of competence shall be issued by the commissioner to an applicant who satisfactorily complies with the experience and examination requirements of this article for a license, upon payment of the fee. Such certificate shall contain the full name of the individual and a certificate number, and shall be signed by the commissioner.

§28-410.5.2 Effect of issuance. The issuance of a certificate of competence shall constitute evidence that the person named therein is qualified upon payment of applicable fees to obtain
a [plate and] seal while the certificate is valid [except that a city employee while in the employ of the city shall only be entitled to obtain a seal].

§28-410.5.3 [Plate and/or seal] Seal required. The holder of a certificate of competence shall not be entitled to perform work or hold himself or herself out to perform work as a licensed master fire suppression piping contractor until such [plate and/or] seal [have] has been obtained. Further, no holder of a certificate of competence shall enter into any contractual agreement to install or alter any fire suppression piping system other than an employment agreement with a master fire suppression piping business or a city agency.

§28-410.5.4 Failure to obtain [plate and/or] seal. If a holder of a certificate of competence has held the certificate for five (5) years without a [plate and/or] seal, then the commissioner may require said person to submit an affidavit and supporting documentation satisfactory to the department stating that over the five (5) year period the individual has been engaged in the performance of fire suppression piping work, including the planning or design [and installation,] of fire suppression piping systems in the United States under the direct and continuing supervision of a licensed master fire suppression piping contractor. If the holder’s qualifications are not satisfactory to the commissioner, the commissioner may require such person to submit to reexamination or to provide evidence of retained proficiency. [In addition, additional] Additional fees will be due, as set forth in this chapter.

§28-410.5.5 [License plate and/or seal] Requirement for obtaining a license and seal. A holder of a certificate of competence or an applicant who has satisfied all requirements for a master fire suppression piping contractor license shall obtain:

1. A license [and] seal issued upon establishing a fire suppression piping contracting business conforming to the requirements of this article and any rules promulgated by the department; or

2. A license and seal issued upon demonstrating employment with a city agency. The license shall clearly state: “The bearer of this master fire suppression piping contractor license is a government employee and as such is not authorized to engage in fire suppression piping contract work outside of his/her government employment and within such government employment shall only engage in [maintenance, replacement and repair] fire suppression piping work on existing buildings.” [No plate shall be issued to a licensed master fire suppression piping contractor employed by a city agency.]

§28-410.5.6 Issuance. A certificate of competence or a license [and] or seal as a master fire suppression piping contractor shall be issued only to an individual.

§28-410.5.7 Duplication prohibited. Not more than one license [and] or seal shall be issued to an individual, and no individual shall make or cause to be made a duplicate of such license [and] or seal.

[§28-410.6 Waiver of examinations. Any license issued without examination pursuant to an application filed prior to July 25, 1990 pursuant to the provisions of law in effect prior to July 1, 2008 that has not lapsed as of July 1, 2008, shall be renewable pursuant to the provisions of this code.]

271
§28-410.6 Surrender of license, plate and seal. Upon the death or the retirement of a licensed master fire suppression piping contractor, or upon the surrender, revocation or suspension of his or her license, his or her license, plate and seal shall immediately be surrendered to the commissioner. Nothing contained herein shall be construed to prevent the legal representative of a deceased licensee, with the consent of the commissioner, from retaining such plate and seal for the purpose of completing all unfinished work of such deceased licensee for which plans have been approved and a permit issued, provided such work is performed by or under the direct and continuing supervision of a licensed master fire suppression piping contractor and is completed within one (1) year from the date of the death of the original licensee. Retired licensees and the legal representatives of deceased licensees shall schedule for inspection, withdraw or have another licensee re-file any open application filed under such license in accordance with department procedures.

§28-410.7 Master fire suppression piping contractor business required. No individual, corporation, partnership or other business association shall conduct a fire suppression piping contractor business in the city of New York, or employ the name “fire suppression piping” in its business name, unless the business is a master fire suppression business as follows:

1. No less than 51 percent of the control and voting capital stock of such fire suppression piping contractor business is owned by one or more individuals who are licensed master fire suppression piping contractors, who cannot be terminated from the fire suppression piping contracting business by any person or entity, except as otherwise provided;

2. All fire suppression piping work performed by such entity is performed by or under the direct and continuing supervision of such licensed master fire suppression piping contractor;

3. The person in charge of such work is such licensed master fire suppression piping contractor; and

4. The persons actually performing such work are in the direct employ of such master fire suppression piping contractor business as authorized by the code.

Exception: A company, corporation, partnership or other business association or its predecessor that was engaged in fire suppression piping contractor work prior to January 25, 1990 may continue to do so in any one or more of such business forms without complying with the foregoing, if (i) application was made to the department prior to July 25, 1990, and (ii) necessary evidence was furnished on or prior to January 25, 1991, that such company, corporation, partnership or other business association or its predecessor had employed an average of 10 or more journeymen doing fire suppression piping contractor work for at least five days a week for a period of ten (10) years or more out of the twenty (20) years preceding July 25, 1990, provided, that such business continues to have all fire suppression piping contractor work conducted under the management and direct and continuing supervision of a licensed master fire suppression contractor in the direct employ of such business and that such licensed master fire suppression contractor is not otherwise interested in, associated with or employed by any other licensed master fire suppression contracting business.
operating in this city except as a joint venture in which such licensed master fire suppression contractor’s employer is one of the joint venturers.

§28-410.8.1 §28-410.7.1 Use. Nothing herein contained shall be construed to prohibit the use of a master fire suppression piping contractor license by the holder thereof for or on behalf of a partnership, corporation or other business association, provided that such partnership, corporation or other business is a master fire suppression piping contractor business.

§28-410.8.2 §28-410.7.2 Identification. All business vehicles, advertising, websites and stationery used in connection with a master fire suppression piping contractor business shall display prominently the full name of the licensee, the words “N.Y.C. licensed fire suppression piping contractor – class A, B or C,” the licensee’s number and the licensee’s business address. If the business is conducted under a trade name, or by a partnership or corporation, the trade name, partnership or corporate name shall be placed immediately above the full name or names of the licensed master fire suppression piping contractor or licensed master fire suppression piping contractors [to whom the plates were issued]. Prior to using, the trade name, partnership or corporate name must have been disclosed to the department in a manner required by the department.

§28-410.8.3 §28-410.7.3 Withdrawal of [licensee] license. If a licensed master fire suppression piping contractor withdraws from a master fire suppression piping contractor business operating pursuant to such individual’s license, the right of the business to perform fire suppression piping work shall lapse if the provisions of this article are no longer satisfied. If a licensed master fire suppression piping contractor’s license is revoked or suspended, such licensee will be deemed withdrawn from such business.

§28-410.8.4 §28-410.7.4 Ownership limitations. An individual who is a licensed master fire suppression piping contractor whose interest or ownership in a master fire suppression piping contractor business constitutes any portion of the 51 percent interest or control required by this section [28-410.8] 28-410.7 shall be allowed to possess an interest or ownership in only one other fire suppression piping contractor business where such interest or ownership would constitute any portion of the 51 percent interest or control required by this section [28-410.8] 28-410.7. Both fire suppression piping contractor businesses in which the licensed master fire suppression piping contractor has an interest shall be located at the same place of business. For the purposes of this section [28-410.8] 28-410.7, where two or more individuals who are licensed master fire suppression piping contractors possess an interest or ownership in any master fire suppression piping contractor business [which] that together represents more than 51 percent of the interest or control of such entity, all of such licensees shall be deemed to possess a portion of the 51 percent interest or control required by this section [28-410.8] 28-410.7.

§28-410.8.5 §28-410.7.5 Joint ventures. Nothing contained in this section [28-410.8] 28-410.7 shall be construed to prevent a master fire suppression piping contractor business from entering into a joint venture of limited duration for a particular project with another master fire suppression piping contractor business. The terms of a joint venture must be in writing, and documentation of the joint venture must be submitted to the department for approval prior to the initiation of work under such venture.
§28-410.8.6 Supervision. The master fire suppression piping contractor shall conduct his or her business to provide direct and continuing supervision in accordance with the provisions of this [article] code.

[Exception: The provisions of this section 28-410.8.6 shall not apply to minor alterations or ordinary repairs, as defined in this code, and/or to maintenance of a fire suppression piping system.]

§28-410.9 Fitness to perform work. As a condition of license renewal, a licensed master fire suppression piping contractor shall provide evidence satisfactory to the department that such licensee is fit to perform the work.

ARTICLE 411
JOURNEYMAN FIRE SUPPRESSION PIPING INSTALLER REGISTRATION

§28-411.1 Journeyman fire suppression piping installer registration [  ; additional] qualifications. [Upon satisfactory completion of a New York state recognized training program or affirmation of an applicant’s qualifications by an employer licensed master fire suppression piping contractor or, in the case of a city agency, a supervising licensed master fire suppression piping contractor and upon written stipulation of same by the applicant, the] The commissioner shall register an applicant as a journeyman fire suppression piping installer [  ; such] who has such qualifications [ shall reflect] reflecting a progressive understanding, proficiency and competence in the fire suppression piping trade, including:

1. A working familiarity with the code and technical standards with regard to fire suppression piping, and the ability to apply the code requirements correctly;

2. The application of basic fire suppression theory and the utilization of trade skills on the job site;

3. A working knowledge of the tools of the trade and the ability to utilize them properly; and

4. An ability to draft simple diagrams and interpret from drawings for the purpose of the fire suppression piping work in which the applicant is engaged.

§28-411.2 Experience. The applicant for journeyman fire suppression piping installer registration [ shall have a] must demonstrate that he or she has a progressive understanding, proficiency and competence in the fire suppression trade by having:

1. A minimum of five (5) years of full-time experience in the performance of fire suppression piping work under the direct and continuing supervision of a licensed master fire suppression piping contractor or equivalent, where at least one (1) year of such experience shall have been in the city of New York [  ]; or

2. Has satisfactorily completed a New York State recognized training program in fire suppression piping.
§28-411.3 [No required expiration, renewal or reissuance] Registration need not be renewed. The registration for journeyman fire suppression piping installer shall have no expiration and shall not require renewal or reissuance.

§28-411.4 [Required statement] Registration card. The registration shall clearly state: “This registration is NOT A LICENSE, and the holder is NOT AUTHORIZED TO PERFORM FIRE SUPPRESSION PIPING WORK in New York city except under the direct and continuing supervision of a Licensed Master Fire Suppression Piping Contractor.”

ARTICLE 412
OIL-BURNING EQUIPMENT INSTALLER LICENSE

§28-412.1 Oil-burning equipment installer license required. It shall be unlawful to install oil-burning equipment in the city unless such work is performed by or under the direct and continuing supervision of a person licensed as an oil-burning equipment installer under the provisions of this article.

§28-412.2 [Classifications, Oil-burning] Use. An oil-burning equipment installer license shall be classified as follows:

[1. Class A oil-burning equipment installer license. Licenses the holder thereof to install any type of oil-burning equipment as an independent contractor with full responsibility for the manner in which the work is done, for the material and equipment used, and for the control and direct and continuing supervision of the persons employed on the work. Such equipment shall include, but not be limited to, burners, boilers and generators.

[2. Class B oil-burning equipment installer license. Licenses the holder thereof to install oil-burning equipment for the use of domestic fuel oils from number one fuel oil to and including number four fuel oil, as an independent contractor with full responsibility for the manner in which the work is done, for the materials and equipment used, and for the control and direct and continuing supervision of the persons employed on the work.]

§28-412.3 Qualifications. Applicants for an oil-burning equipment installer license shall [have the qualifications set forth in sections 28-412.3.1 through 28-412.3.2.]

[§28-412.3.1 Experience for Class A license. All applicants for a class A oil-burning equipment installer license shall submit satisfactory proof establishing that the applicant has had at least four (4) years of practical experience within the seven (7) years prior to application in the installation of oil-burning equipment under the direct and continuing supervision of a [Class A - ] licensed oil-burning equipment installer in the city [including at least one year experience in the installation of oil-burning equipment for the use of number five and number six fuel oils].

[§28-412.3.2 Experience for Class B license. All applicants for a class B oil-burning equipment installer license shall submit satisfactory proof establishing that the applicant has had at least three years practical experience within the five years prior to application in the installation of oil-burning equipment under the direct and continuing supervision of a licensed oil-burning equipment installer in the city.]
§28-412.4 Fitness to perform work. As a condition of license renewal [and reinstatement], a licensed oil-burning equipment installer shall provide evidence satisfactory to the department that such licensee is fit to perform the work.

§28-412.5 Oil-burning equipment installer place of business. Every licensed oil-burning equipment installer shall have a place of business within the city. A licensed oil-burning equipment installer shall be a sole proprietor, a partner in the partnership or an officer of the corporation. A licensed oil-burning equipment installer shall be allowed to associate his or her license with only one other oil-burning business. Such businesses shall be located at the same place of business.

§28-412.6 Seal. At the time of issuance of an oil-burning equipment installer license and upon payment of the required fee, the commissioner shall issue to the licensee a seal containing the full name of the license holder and the words “licensed oil-burning equipment installer”. The license holder shall not be entitled to perform work or hold himself or herself out as a licensed oil-burning equipment installer until such seal has been obtained. The seal shall remain the property of the city of New York. Upon revocation of an oil-burning equipment installer’s license or death of the licensee or failure of a licensee to renew such license, the seal must be surrendered to the department. If the seal is lost or stolen, and an affidavit is submitted by the licensee establishing such fact, a new seal shall be issued upon application and payment of a fee.

§28-412.6.1 Use of seal. All documents that are required to be filed with any department or agency of the city of New York shall bear the stamp of the seal as well as the signature of the licensee. The licensed oil burner equipment installer performing the work and services shall personally sign and seal all applications and other documents required to be filed by the department.

ARTICLE 413
HIGH-PRESSURE BOILER OPERATING ENGINEER LICENSE

§28-413.1 High-pressure boiler operating engineer license required. It shall be unlawful to operate any high-pressure boiler for any purpose whatsoever, in the city of New York or in connection with any vessel on the waters in and around the city not subject to the jurisdiction of the United States, unless such boiler is operated by or under the direct and continuing supervision and in the presence of a person having a high-pressure boiler operating engineer license under the provisions of this article.

Exceptions: A licensed high-pressure boiler operating engineer is not required to operate a high-pressure boiler that meets all of the following conditions:

1. The boiler is a stand-alone boiler;

2. If the boiler is a steam boiler, the boiler has less than 100 square feet (9.3 m²) of heating surface;

3. If the boiler is a steam boiler, it is capable of generating less than 1750 pounds (794 kg) per hour of steam; or if the boiler is a hot water boiler, it is capable of generating less than 2 million btu/h of hot water;
4. The boiler has a safety relief valve setting of 200 psig (1379 kPa) or less;

5. The boiler room enclosure is in compliance with section 508 of the New York city building code; and

6. There is a carbon monoxide detector in the boiler room interlocked with the boiler.

§28-413.2 Qualifications. Applicants for a high-pressure boiler operating engineer license shall present satisfactory proof that:

1. Applicant has practical experience in the operation, maintenance, replacement, modification, assembly, or repair of high pressure boilers under the direct and continuing supervision of a licensed high-pressure boiler operating engineer in the city for a period of not less than five (5) years within the seven (7) year period preceding the date of the application; [however, in lieu of the experience requirement contained in this paragraph, an applicant for a high pressure boiler operating engineer license who is employed in a fossil fuel production plant located in the Rockaway Peninsula area of Queens county may submit satisfactory proof establishing that the applicant has obtained at least five years experience within the seven years preceding the date of the application which shall include at least two years of experience obtained during employment under the direct and continuing supervision of a licensed high pressure boiler operating engineer in a steam generating plant located outside of the city of New York but within the state of New York that is owned and operated by a licensed public utility company, and shall also include a separate period of at least three years of experience obtained comparable position as approved by the commissioner, in such steam generating plant;]

2. Applicant received a bachelor’s degree in mechanical engineering from an accredited school or college and had one (1) year of experience in the operation and maintenance of high-pressure boilers under the direct and continuing supervision of a licensed high-pressure boiler operating engineer [in the city] within the two (2) year period preceding the date of the application;

3. Applicant has held, for a minimum of four (4) years, either a certificate as an engineer issued by a board of examining engineers duly established and qualified pursuant to the laws of the United States or any state or territory thereof, or a certificate as a marine engineer issued by the United States Coast Guard [and a]. In addition, an applicant shall have a minimum of one (1) year of experience in the city in the operation and maintenance of stationary high-pressure boiler plants under the direct and continuing supervision of a licensed high-pressure boiler operating engineer within the seven (7) years preceding the date of the application [provided that the applicant shall have filed with such application a signed statement that the applicant is the person named in said certificate together with the supporting signed statements by three licensed high-pressure boiler operating engineers employed in the city of New York at the time of making of such signed statements];

4. Applicant exercised [direct and continuing] supervision, care, operation and maintenance over a steam generating plant of a governmental building [having boilers] for a minimum of five (5) years, within the seven (7) year period preceding the date of the application, with
each boiler having a minimum of 150 or more horsepower [for a minimum of five years and had a minimum of one]. One (1) year of such experience shall be on high-pressure boilers under the direct and continuing supervision of a licensed high-pressure boiler operating engineer in the city [within the seven year period preceding the date of the application];

5. Applicant successfully completed a New York state approved apprenticeship training program of at least two (2) years, and after the completion of such program had at least three (3) years’ experience within the seven (7) years preceding the date of the application, in the operation and maintenance of high-pressure boilers in the city under the direct and continuing supervision of a licensed high-pressure boiler operating engineer;

6. Applicant has held a Commission from the National Board of Boiler and Pressure Vessel Inspectors for a period of seven (7) years, and has a minimum of five (5) years of high pressure boiler operation, maintenance, and/or inspection experience under such commission within the seven (7) year period preceding the application; or

7. Applicant has held a Qualifications of High Capacity Fossil Fuel Operator (QFO) operator certification from ASME, and has a minimum of five years of high pressure boiler operation, maintenance, and/or inspection experience under such QFO certification within the seven year period preceding the application; or

8. Applicant has held a high pressure certification/high pressure license for a period of five (5) years from other jurisdictions acceptable to the commissioner, provided such jurisdiction follows the ASME Boiler and Pressure Vessel Code, and was employed under such certification and/or license for a period of not less than five (5) of the last seven (7) years in the operation, maintenance and/or inspection of high pressure boilers.

§28-413.3 Fitness to perform work. As a condition of license renewal [and reinstatement], a licensed high-pressure boiler operating engineer shall provide evidence satisfactory to the department that such licensee is fit to perform the work.

§28-413.4 Individuals holding portable high-pressure boiler operating engineer license on the effective date of this section. Notwithstanding section 28-413.2, upon application, individuals who hold a portable high-pressure boiler operating engineer license on the effective date of this section may be issued a high-pressure boiler operating engineer license without examination. Such application shall be deemed to be an application for renewal of a license pursuant to this chapter.

ARTICLE 415
SIGN HANGER LICENSE

§28-415.1 Sign hanger license required. It shall be unlawful to hoist or lower or to hang or attach any sign upon or on the outside of any building or structure in the city unless such work is performed by or under the direct and continuing supervision of a person licensed as a sign hanger under the provisions of this article.
§28-415.2 Exemptions. The provisions of this article shall not apply to the following:

1. Signs not exceeding 75 square feet (7 m²) in area, measured on one face only, nor exceeding 25 pounds (11 kg) in weight;

2. Signs supported directly on the ground; or

3. Directional signs; or

4. Temporary signs erected during the construction or alteration of a building and related to such work; or

5. The erection or placing of any signs by employees of the city, any city department or other city agency.

§28-415.3 Classification. Such licenses shall be classified as follows:

1. Master sign hanger license. Authorizes the holder thereof to hoist or lower or to hang or attach any sign, irrespective of weight, upon or on the outside of any building.

2. Special sign hanger license. Authorizes the holder thereof to hoist or lower or to hang or attach any sign not exceeding one hundred fifty square feet in area, measured on one face only, nor exceeding one thousand two hundred pounds in weight, upon or on the outside of any building.

§28-415.4 Additional qualifications. Applicants for a sign hanger license shall have the additional qualifications set forth in sections 28-415.4.1 through 28-415.4.2.

§28-415.4.1 Master sign hanger qualifications. All applicants for a master sign hanger license shall submit satisfactory proof establishing that the applicant has at least five (5) years of practical experience in sign hanging as a designated master sign hanging foreman within the seven (7) years preceding the date of the license application under the direct and continuing supervision of a licensed master sign hanger. The applicant shall also have knowledge of and ability to read plans and specifications relating to sign construction and erection, including supporting framework and other supports, and knowledge of the problems and practices of sign construction and hanging and be familiar with the equipment and tools used in sign hanging.

§28-415.4.2 Special sign hanger qualifications. All applicants for a special sign hanger license shall submit satisfactory proof establishing that the applicant has at least three (3) years of practical experience in sign hanging as a designated special sign hanging foreman within the five (5) years preceding the date of the license application under the direct and continuing supervision of a licensed sign hanger. The applicant shall also have knowledge and ability to read plans and specifications relating to sign construction and erection, including supporting framework and other supports, and knowledge of the problems and practices of sign construction and hanging and be familiar with the equipment and tools used in sign hanging.

§28-415.5 Additional requirements. The additional requirements set forth in sections 28-415.5.1 through 28-415.5.2 shall apply to sign hangers:
§28-415.5.1 Danger warning. Every licensed sign hanger shall, while sign hanging operations are in progress at a job site, place conspicuously at such job site two plates or signs not less than 18 inches (457 mm) by 24 inches (610 mm) in size (i) displaying the word “danger” in letters not less than 6 inches (152 mm) high, and (ii) disclosing the sign hanger’s name, business address, type of license and license number.

§28-415.5.2 Sign hanger place of business. Every licensed sign hanger shall have a place of business within the city and shall display prominently at such place of business a plate or sign marked with the words “sign hanger” and the license number immediately thereunder. A licensed sign hanger shall be a sole proprietor, a partner in the partnership or an officer of the corporation and shall be allowed to associate his or her license with only one other sign hanger business. Such businesses shall be located at the same place of business.

§28-415.6 Fitness to perform work. As a condition of license renewal [or reinstatement], a licensed sign hanger shall provide evidence satisfactory to the department that such licensee is fit to perform the work.

ARTICLE 416
FILING REPRESENTATIVE REGISTRATION

§28-416.1 Filing representative registration required. No person shall use the term “registered filing representative” or “filing representative” or any similar representation in such manner as to convey the impression that such person is a registered filing representative in accordance with the provisions of this article; nor shall any person present, submit, furnish or seek approval of applications or construction documents, or remove any documents from the possession of the department, without first having registered with the department such person’s name, address and company affiliation on a form to be furnished by the department.

§28-416.2 Exemptions. The following persons are exempt from the provisions of this article. Any person from whom the department may refuse to accept an application or other document pursuant to section 28-211.1 shall not be afforded this exemption.

1. The owners of the premises for which the building applications are filed including, in the case of partnerships or corporations, the general partners or the principal officers of the corporation, where the principal officers of a corporation shall include the president, vice presidents, secretary and treasurer;
2. The lessees of such premises authorized by the owner to file building applications;
3. Condominium unit owners authorized by the condominium board of managers to file building applications;
4. Cooperative shareholders authorized by the cooperative board of directors to file building applications;
5. Architects;
6. Engineers;
7. Attorneys admitted to practice in New York state;
8. Master plumbers licensed pursuant to this chapter;
9. Master fire suppression piping contractors licensed pursuant to this chapter; and
10. Master electricians licensed pursuant to subchapter one of chapter 3 of title 27 of the
administrative code.

§28-416.3 Rules. The commissioner shall promulgate rules for the proper and efficient
administration and enforcement of this article. Unless required by rule, a registered filing
representative shall not be required to take an examination or to complete continuing education
courses as a condition for renewal of the registration.

ARTICLE 417
[BOARDS] RESERVED

[§28-417.1 Plumbing and fire suppression piping contractor license board. The commissioner
shall appoint annually and may remove in his or her discretion each member of a plumbing and fire
suppression piping contractor license board that shall have as its purpose the following:]}

[1. To advise the commissioner regarding the character and fitness of applicants for certificates
of competence and licenses who have passed the required examination.]}

[2. To advise the commissioner regarding allegations of illegal practices on the part of licensed
master plumbers, licensed master fire suppression piping contractors, master plumber
businesses or master fire suppression piping businesses.]}

[3. To advise the commissioner regarding plumbing and fire suppression piping practices, code
applications, regulations and legislation.]}

[4. To perform such other responsibilities as may be requested by the commissioner and as set
forth in rules promulgated by the department.]}

[§28-417.1.1 Removal. The commissioner may remove any member of the license board and
shall fill any vacancy therein.]}

[§28-417.1.2 Membership. Membership of the board shall consist of:]}

[1. Two officers or employees of the department;]

[2. Five licensed master plumbers, three of whom shall be selected from nominees of the
New York city contracting plumbing association whose members perform the largest
dollar value of work within the city and one of whom shall be the holder of a class A or
class B master fire suppression piping contractor license. The two remaining licensed
master plumber board member positions shall be from the next largest plumbing
association in the city of New York.]}

[3. Two licensed master fire suppression piping contractors, both of whom shall hold a class
A license and shall be selected from nominees of the New York city sprinkler/fire
suppression piping contractors association whose members perform the largest dollar
value of work within the city;]

[4. A registered journeyman plumber from the organization representing the largest number
of registered journeyman plumbers;]
A registered journeyman fire suppression piping installer from the organization representing the largest number of registered journeyman fire suppression piping installers;

An engineer having at least five years experience in the planning or design, and installation, of plumbing systems;

An architect;

An engineer who is a full member of the society of fire protection engineers;

Two officers or employees of the fire department representing the fire commissioner; and

A real estate owner or manager or representative thereof.

§28-417.1.3 Organization of the board. A member of the board who is an officer or employee of the department representing the commissioner shall serve as chairperson and all members shall serve without compensation. Nine members including the chairperson, who shall be entitled to vote, shall constitute a quorum of the board for the transaction of business. In the absence of a member or in the event of a vacancy, an alternate member of the board, may vote in the place and stead of the member for whom he or she is the alternate or on account of whom the vacancy exists. Alternate members shall be appointed and removed at the commissioner’s discretion. All actions shall be conducted by majority vote except as otherwise provided, and the board shall keep minutes of its proceedings and records of its investigations. Except as otherwise determined by the chairperson, the board shall meet at least once a month.

§28-417.1.4 Advisory and support personnel. The board may request the commissioner to appoint duly authorized representatives to conduct investigations and other activities incidental to the functions of the license board. Such appointees shall be non-voting members of the committee to which they are appointed, and may include personnel who are not department employees who shall serve without compensation. In addition the commissioner may designate such employees of the department as the commissioner deems necessary to the service and support of the license board.

ARTICLE 418
GENERAL CONTRACTOR REGISTRATION

§28-418.1 Requirement of registration. On and after November 1, 2008, it shall be unlawful for a person to conduct business as a general contractor unless such person holds a general contractor registration in accordance with the provisions of this article.

§28-418.1.1 Expiration of registration. A general contractor registration shall expire on the third anniversary of such registration or such other date as determined by the commissioner by rule so as to distribute the expiration dates of the registrations evenly over the course of a year.

§28-418.2 Unlawful use of general contractor title. On and after November 1, 2008, it shall be unlawful to use or cause to be used the title registered general contractor or any other title in a manner as to convey the impression that an individual, corporation, partnership or other business entity, or any person it employs, is a registered general contractor, unless such individual, corporation, partnership or other business entity is registered in accordance with the provisions of this article.
§28-418.3 Application requirements. An application for a general contractor registration or renewal shall be made in writing to the commissioner on a form provided by the department and shall be accompanied by following:

1. If the applicant is an individual: the applicant’s full name, residence address, business address and business telephone number;
2. If the applicant is a corporation:
   2.1. The corporate name, address and telephone number of the applicant’s principal office or place of business;
   2.2. The date and state of incorporation;
   2.3. The name, residence address and residence telephone number of all corporate officers and registered agents and any person owning an interest of ten percent or more in the corporation;
   2.4. Proof that the corporation is in good standing under the laws of the state of New York;
3. If the applicant is a partnership:
   3.1. The name, address and telephone number of the applicant’s principal office or place of business;
   3.2. The name, residence address and residence telephone number of all partners;
4. The registration fee;
5. A verified statement that the applicant is financially solvent;
6. The name and address of the principal location from which the applicant has engaged in the business of general contracting at any time within the last five (5) years;
7. If the applicant is not a sole proprietor, proof that the applicant is authorized to do business in the state of New York;
8. Proof of insurance as required by section 28-401.9;
9. The name and address of the officer, principal or director of the applicant who is primarily responsible for the registrant’s compliance with the requirements of this code or any rule adopted thereunder;
10. Any other information that the commissioner may require.

§28-418.3.1 Financial solvency. For the purposes of this article, financial solvency shall mean that the applicant’s operating capital shall exceed [twenty-five thousand dollars] $25,000.

§28-418.4 Warranties. A warranty shall be provided to the buyer of a new one-, two- or three-family structure that accords with the provisions of article thirty-six-B 36-B of the New York state general business law, including the following:

1. One (1) year from and after the warranty date the home will be free from defects due to a failure to have been constructed in a skillful manner;
2. Two (2) years from and after the warranty date the plumbing, electrical, heating, cooling and ventilation systems of the home will be free from defects due to a failure by the builder to have installed such systems in a skillful manner; and

3. Six (6) years from and after the warranty date the home will be free from material defects, including, but not limited to, any construction that is not in compliance with the building code or the zoning resolution of the city of New York.

§28-418.4.1 Modification prohibited. Except as otherwise provided in section [seven hundred seventy-seven-b] 777-b of [such] article [thirty-six-B] 360-B of the New York state general business law, no such warranty shall be modified or excluded in any way.

§28-418.5 Duties and responsibilities. The general contractor shall comply with sections 28-418.5.1 through 28-418.5.3.

§28-418.5.1 Subcontractor information. The general contractor shall be responsible for providing information to the department about his or her subcontractors and the particular work they perform on jobs for which the department has issued permits to the general contractor. Such information shall be provided in a format and at the times specified in the rules of the department.

§28-418.5.2 Technical reports. The general contractor shall maintain at the work site such technical reports as specified in the rules of the department and shall make such reports available to department personnel on request.

§28-418.5.3 Notice of pending disciplinary actions. The general contractor shall notify all of its suppliers of any pending suspension or revocation actions against such general contractor and shall provide an affidavit to the department stating that this notification has been made.

ARTICLE 419
SEIZURE AND FORFEITURE

§28-419.1 General. [On and after November 1, 2008] The vehicles and tools used in connection with unlicensed or unregistered activity at the work site of a new residential structure containing no more than three dwelling units shall be subject to seizure and forfeiture.

§28-419.2 Definitions. For purposes of this article, the following terms shall have the following meanings.

1. The term “owner” as applied to vehicles shall mean an owner as defined in section one hundred twenty-eight and in subdivision three of section three hundred eighty-eight of the vehicle and traffic law.

2. The term “security interest” as applied to vehicles shall mean a security interest as defined in subdivision k of section two thousand one hundred one of the vehicle and traffic law.

3. The term “unlicensed activity” shall mean the conduct of any activity at a work site for the construction of a residential structure containing no more than three dwelling units without a license for which a license is required under any law, rule or regulation enforced by the commissioner of buildings, and the term “unregistered activity” shall mean the conduct of any activity at a work site for the construction of a residential structure containing no more
than three dwelling units without a registration for which a registration is required under any law or regulation enforced by the commissioner of buildings.

§28-419.3 **Seizure procedure.** The following provisions shall govern seizure of vehicles and tools pursuant to this article.

**§28-419.3.1 Seizure.** Any police officer or authorized officer or authorized employee of the department may seize any vehicle and any tools contained therein that such police officer or authorized officer or authorized employee has reasonable cause to believe is being used in connection with unlicensed or unregistered activity, upon service on the owner or operator of the vehicle of a notice of violation for engaging in such activity. Any vehicle and tools seized pursuant to this section shall be delivered into the custody of the department or other appropriate agency.

**§28-419.3.2 Written demand.** The owner or operator of the vehicle and/or tools may make a written demand for a hearing for the return of the seized property. Notice of the right to a hearing shall be provided to the operator at the time of seizure of the vehicle and/or tools, and a copy of such notice shall be sent by mail to the registered and/or title owner of the vehicle, if other than the operator, and to the owner of the tools if other than the owner or operator of the vehicle and if reasonably ascertainable, within five business days of the seizure. The department shall schedule the hearing at the office of administrative trials and hearings (OATH) or its successor agency, as applicable, for a date within ten business days after receipt of the demand and shall notify the operator and the owner(s) of the opportunity to participate in the hearing and the date thereof.

**§28-419.3.3 Claimant.** A claimant seeking release of the vehicle and tools at the hearing may be either the person from whom the vehicle and tools were seized, if that person was in lawful possession of the vehicle and tools, or the owner if different from such person.

**§28-419.3.4 Determination.** The OATH judge shall issue a determination within five business days after the conclusion of the hearing.

**§28-419.3.5 Return pending hearing.** The department shall establish a procedure whereby an owner or operator who wishes to have the vehicle and/or tools returned pending the hearing shall post a bond in an amount determined by the department, but in no event less than an amount sufficient to cover any applicable removal and storage fees as well as fines and penalties.

**§28-419.3.6 Return without hearing.** The department shall establish a procedure whereby an owner or operator may request the return of the vehicle and/or tools without a hearing if such owner or operator:

1. Establishes that the vehicle and/or tools were seized in error, or
2. Immediately applies for licensure or registration pursuant to the applicable provisions of this code and pays an amount not to exceed removal and storage fees and any fines or penalties that could have been imposed under the provisions of this code.

Where the owner or operator establishes that the vehicle and/or tools were seized in error, the department shall expeditiously return such vehicle and/or tools.
§28-419.4 Abandoned property. Any vehicle and/or tools for which a written demand for return of the vehicle and/or tools or for a hearing pursuant to section 28-419.3.2 has not been made within thirty days of service of the notice of violation on the operator of the vehicle and/or tools or within thirty days of service of the notice of violation on the owner of the vehicle and/or tools if the owner is not the operator of the vehicle and/or tools shall be deemed abandoned and shall be disposed of by the department pursuant to applicable law.

§28-419.5 Combined hearings. The department may choose to have the underlying violation adjudicated before the office of administrative trials and hearings in accordance with sections 28-419.5.1 through 28-419.5.3.

§28-419.5.1 Combined hearing and determination. Upon notice to the respondent, the department may choose to have the violation underlying the seizure returnable to and heard at OATH and may combine the hearing on the underlying violation with the hearing for the return of the seized property. At such combined hearing, the OATH judge shall make a determination as to both and may impose any penalty that could be imposed in a proceeding before the environmental control board for the underlying violation. The OATH judge shall issue a determination within five business days after the conclusion of the hearing.

§28-419.5.2 Release following finding of no violation. If the OATH judge finds that the vehicle and/or tools were not used in connection with unlicensed or unregistered activity, the department shall promptly release such vehicle and/or tools.

§28-419.5.3 Release following finding of violation. If the OATH judge finds that the vehicle and/or tools were used in connection with unlicensed or unregistered activity, the department may release such vehicle and/or tools upon payment of all applicable fines and civil penalties and all reasonable costs of removal and storage, or may commence a forfeiture action within twenty business days after the date of the judge’s determination.

§28-419.6 Separate hearings. In the event that the adjudication of the violation underlying the seizure is not held at OATH, and a determination is made that the vehicle and tools were not used in connection with unlicensed or unregistered activity, the department shall promptly release such vehicle and/or tools.

§28-419.7 Forfeiture procedure. The following provisions shall govern forfeiture of vehicles and tools pursuant to this article.

§28-419.7.1 Commencement of forfeiture. A forfeiture action pursuant to this article shall be commenced by the filing of a summons with a notice or a summons and complaint in accordance with the civil practice law and rules. Such summons with notice or a summons and complaint shall be served in accordance with the civil practice law and rules on the vehicle operator, the owner of the tools, if different from the vehicle operator, and owner of the vehicle, and on all owners of the subject vehicle listed in the records maintained by the department of motor vehicles, or for vehicles not registered in the state of New York, in the records maintained by the state of registration. Except as otherwise provided in this article, a vehicle and/or tools that are the subject of such action shall remain in the custody of the department or other appropriate agency pending the final determination of the forfeiture action.
§28-419.7.2 Notice of forfeiture. Notice of the institution of the forfeiture action shall be given by certified mail to all persons holding a security interest in such vehicle or tools, if known, if such security interest in the vehicle has been filed with the department of motor vehicles pursuant to the provisions of title ten of the vehicle and traffic law, at the address set forth in the records of such department, or, for vehicles not registered in the state of New York, all persons holding a security interest in such vehicle if such security interest has been filed with the state of registration and which persons are made known by such state to the department, at the address provided by such state of registration.

§28-419.7.3 Security interest. Any person with a security interest in such vehicle or tools who receives notice of the institution of the forfeiture action who claims an interest in such vehicle or tools subject to forfeiture may assert a claim in such action for satisfaction of such person’s security interest in such vehicle or tools.

§28-419.7.4 Forfeiture subject to security interest. Forfeiture shall be made subject to the interest of a person who claims an interest in the vehicle or tools, where such person establishes that:

1. The use of the vehicle or tools for the conduct that was the basis for the seizure of the vehicle and tools occurred without the knowledge of such person, or if such person had knowledge of such use, that such person did not consent to such use by doing all that could reasonably have been done to prevent such use, and that such person did not knowingly obtain such interest in the vehicle or tools in order to avoid the forfeiture of such vehicle or tools, or

2. The conduct that was the basis for such seizure was committed by any person other than such person claiming an interest in the vehicle or tools, while such property was unlawfully in the possession of a person who acquired possession thereof in violation of the criminal laws of the United States or any state.

§28-419.7.5 Disposition. The department or agency having custody of the vehicle and tools, after judicial determination of forfeiture, shall, at its discretion, either (i) retain such vehicle and tools for the official use of the city; or (ii) by public notice of at least five days, sell such forfeited vehicle and tools at public sale. The net proceeds of any such sale shall be paid into the general fund of the city.

§28-419.7.6 Amount of award. In any forfeiture action commenced pursuant to this article, where the court awards a sum of money to one or more persons in satisfaction of such person’s interest in the forfeited vehicle and tools, the total amount awarded to satisfy such interest or interests shall not exceed the amount of the net proceeds of the sale of the forfeited vehicle and tools after deduction of the lawful expenses incurred by the city, including reasonable costs of removal and storage of the vehicle and tools between the time of seizure and the date of sale.

ARTICLE 420
REQUIREMENT OF SAFETY REGISTRATION NUMBER

§28-420.1 Requirement of application for safety registration number. [On and after October 1, 2009, no] No safety registration recipient shall conduct business for the purposes that would qualify
the person as a safety registration recipient unless such person has received the required safety registration number from the department.

§28-420.2 Application requirements. An application for a safety registration number shall be made in writing to the commissioner on a form provided by the department and shall be accompanied by the following:

1. If the applicant is an individual: the applicant’s full name, residence address, business address, and business telephone number, and an [email] electronic mail address for the receipt of notifications;

2. If the applicant is a corporation:
   2.1. The corporate name, address, telephone number and [email] electronic mail address of the applicant’s principal office or place of business for the receipt of notifications;
   2.2. The date and state of incorporation;
   2.3. Proof that the corporation is in good standing under the laws of the state of New York;

3. If the applicant is a partnership:
   3.1. The name, address, telephone number and [email] electronic mail address of the applicant’s principal office or place of business for the receipt of notifications;
   3.2. The name and telephone number of all partners;

4. The name, telephone number and [email] electronic mail address of all corporate officers and registered agents and any person owning or controlling an interest of ten percent or more in the applicant’s business;

5. The name, address and telephone number of any entity in which the applicant is an employee, participates in the management of, or in which the applicant has a controlling interest and which files for permits with the department.

6. The name and address of the principal location from which the applicant has engaged in the business that would qualify it as a safety registration recipient at any time within the last five (5) years;

7. If the applicant is not a sole proprietor, proof that the applicant is authorized to do business in the state of New York;

8. Proof of insurance as required by Title 28 of this code and the rules of the department;

9. The name, address and [email] electronic mail address of the officer, principal or director of the applicant who is designated to receive official notices from the department;

10. The name, address and telephone number and [email] electronic mail address of the officer(s), principal(s) or director(s) of the applicant who should be contacted in the event of an emergency; and

11. The commissioner shall waive the requirements of items one through seven of section 28-420.2 for any applicant who has submitted a Vendex questionnaire to the [Mayor’s Office of Contract Services] mayor’s office of contract services within the previous three (3) years provided that the questionnaire contains the information required by this article and who
provides a copy of the Vendex questionnaire to the department with such proof of submission as the department may require.

§28-420.3 Duties and [Responsibilities] responsibilities. The recipient of a safety registration number shall comply with the following requirements:

1. Subcontractor information. The recipient of a safety registration number shall maintain at each work site the names, business addresses and contact information of the superintendent(s) of the subcontractors who hold subcontracts with the prime contractor, as well as the particular work they perform, and shall make such information available to department personnel upon request;

2. Special inspection reports. The recipient of a safety registration number shall maintain at the work site such special inspection reports as specified in the building code and shall make such reports available to department personnel on request.

§28-420.4 Submission of plan to reduce rate of immediately hazardous violations. The commissioner may require any safety registration recipient to provide the department with a plan to improve its rate of immediately hazardous violations. The plan must be approved by the [Department] department and may include such measures as employment of a safety compliance officer to ensure compliance with the approved plan.

§28-420.5 Submission of a report to the city council. Within six months of the date by which all safety registration recipients shall have been required by section 28-420.1 [of this article] to have a safety registration number, the commissioner shall, after consultation with representatives of affected industries, including but not limited to representatives and employers of building and construction industry labor organizations and real estate owners, submit to the mayor and the city council recommendations for the establishment of objective criteria on which the commissioner may base a determination to commence a proceeding to suspend, revoke, or refuse to renew a safety registration number as well as the data used in the analysis and formulation of such recommendations. Within three months of the submission, the council shall review and may amend this provision to incorporate standards for the revocation and non-renewal of a safety registration number.

§28-420.6 Expiration of safety registration number. A safety registration number shall expire on the third anniversary that such safety registration number was issued or such other date as determined by the commissioner by rule so as to evenly distribute the expiration dates of the safety registration numbers.

§28-420.7 Unlawful use of safety registration number. [On and after October 1, 2009, it] It shall be unlawful to represent or cause to be represented that a person who would qualify as a safety registration recipient has been issued a safety registration number by the department or to otherwise convey the impression that an individual, corporation, partnership or other business entity, or any person it employs, conducts business for the purposes that would qualify it as a safety registration recipient that has been issued a safety registration number, unless such individual, corporation, partnership or other business entity has received a safety registration number from the department in accordance with the provisions of this article.
ARTICLE 421
ELEVATOR AGENCY DIRECTOR LICENSE

§28-421.1 Elevator agency director license required. It shall be unlawful to perform elevator work as defined by this chapter or perform and/or witness inspections and tests or enter into contracts pursuant to article 304 of chapter 3 of this code unless licensed pursuant to this article. Each elevator agency shall designate one director in responsible charge who shall be licensed pursuant to this article. The designated director in responsible charge shall be in the direct employ of the agency and shall supervise all the operations of the agency. All elevator work shall be performed by individuals who are under the direct and continuing supervision of the elevator agency director as defined in section 28-401.3 of this [chapter] of this code. All elevator work performed by such agency pursuant to article 304 of chapter 3 of this code shall be performed by or under the direct and continuing supervision of the designated director in responsible charge.

§28-421.1.1 Additional directors. In addition to the designated director in responsible charge, the agency may have other individuals in its employ who may be issued elevator agency director licenses pursuant to this article.

§28-421.2 Qualifications. All applicants for an elevator agency director license shall submit satisfactory proof establishing that the applicant has satisfactorily completed, within two (2) years prior to the date of application, a course that is at least thirty (30) hours in length and approved by the United States department of labor and the occupational safety and health administration in general industry training; and also satisfies one of the following:

1. Has at least ten (10) years of practical experience in the supervision of the assembly, installation, maintenance, repair, design or inspection of elevators within the fifteen (15) years prior to application; or

2. Is an engineer or architect and has at least five (5) years of experience in the supervision of the assembly, installation, maintenance, repair, review and approval of design documents or inspection of elevators within the seven (7) years prior to application.

§28-421.3 Restriction. Each elevator agency director shall supervise and perform elevator work or inspections and tests pursuant to article 304 of chapter 3 of this code for only one (1) elevator agency, and shall not inspect and/or test elevators or perform elevator work on related devices as an inspector, director or elevator agency helper for any other elevator agency.

§28-421.4 Place of business. Every licensed elevator agency shall have a place of business within the city in conformance with department rules and regulations. A licensed private elevator inspection agency director shall be allowed to associate his or her license with only one other private elevator inspection agency. Such businesses shall be located at the same place of business.

ARTICLE 422
ELEVATOR AGENCY INSPECTOR LICENSE

§28-422.1 Elevator agency inspector license required. It shall be unlawful to witness and/or perform inspections and tests on behalf of an elevator agency pursuant to article 304 of chapter 3 of this code unless licensed pursuant to this article. Licensed inspectors shall perform such work under
§28-422.2 Qualifications. All applicants for an elevator agency inspector license shall submit satisfactory proof establishing that the applicant has satisfactorily completed, within two (2) years prior to the date of application, a course that is at least ten (10) hours in length and approved by the United States department of labor and the occupational safety and health administration in general industry standards; and also satisfies the following:

1. Has at least seven (7) years of practical experience in the inspection of elevators, or as an elevator mechanic within the ten (10) years prior to application.

§28-422.3 Restriction. Each elevator agency shall perform work pursuant to article 304 of chapter 3 of this code for only one elevator agency, and shall not witness and/or perform inspections and/or test elevators or related devices as an inspector, technician or director for any other elevator agency.

ARTICLE 423
QUALIFICATION FOR GAS WORK

§28-423.1 Qualification required. For the purposes of this article, “gas work” means work covered by section 101.2 of the New York city fuel gas code, where such work is required by this code to be performed under the direct and continuing supervision of a licensed master plumber, provided that the term “gas work” shall not include periodic inspections required pursuant to article 318 of chapter 3 of title 28 of the administrative code. On and after January 1, 2020, it shall be unlawful to perform gas work unless such work is performed by:

1. A licensed master plumber; or
2. A person working under the direct and continuing supervision of a licensed master plumber if such person:
   2.1. Holds a gas work qualification pursuant to this article; or
   2.2. Holds a limited gas work qualification pursuant to this article and is performing such work under the personal and immediate direct supervision of (i) a person who holds a gas work qualification pursuant to this article or (ii) a licensed master plumber.

Exception: The provisions of this article shall not apply to gas work performed, serviced and maintained by utility corporations and subject to the jurisdiction of the New York state public service commission.

§28-423.2 Applications for gas work qualification. [The commissioner shall issue gas work qualifications in accordance with sections 28-423.2.1 and 28-423.2.2.]

[§28-423.2.1 Applications for gas work qualification submitted before January 1, 2019. The commissioner shall issue a gas work qualification to a person who before January 1, 2019, submits satisfactory proof establishing that such person is a registered journeyman plumber pursuant to article 409 of this chapter.]
§28-423.2.2 Applications for gas work qualification submitted on or after January 1, 2019. The commissioner shall issue a gas work qualification to a person who [on or after January 1, 2019] submits satisfactory proof establishing that such person:

1. Has demonstrated an understanding of and proficiency and competency with gas work, including (i) a working familiarity with the fuel gas code and the ability to apply the requirements of such code correctly, (ii) the application of skills relating to gas work on the job site, (iii) a working knowledge of the tools for gas work and the ability to utilize such tools properly and (iv) an ability to draft simple diagrams and interpret from drawings for the purpose of performing gas work, by satisfying a requirement that the commissioner shall establish by rule; and

2. Satisfies one or more of the following:

   2.1. Such person is a registered journeyman plumber pursuant to article 409 of this chapter;

   2.2. Such person successfully completed an apprenticeship in plumbing through a program approved by the New York state department of labor and has at least one (1) year of full-time experience performing or supervising plumbing work under the direct and continuing supervision of a licensed master plumber; or

   2.3. Such person has at least five (5) years of full-time experience performing or supervising plumbing work under the direct and continuing supervision of a licensed master plumber, provided that at least one (1) year of such experience occurred in the city.

§28-423.2.3 Concurrent applications. The commissioner shall establish a procedure for concurrently applying for a journeyman plumber registration pursuant to article 409 of this chapter and a gas work qualification pursuant to this section. No application fee shall be charged to an applicant for a gas work qualification if such applicant (i) is, at the time such application is filed, a registered journeyman plumber pursuant to such article or (ii) is applying concurrently for a journeyman plumber registration pursuant to such article and a gas work qualification.

§28-423.3 Applications for limited gas work qualification. [The commissioner shall issue limited gas work qualifications in accordance with sections 28-423.3.1 and 28-423.3.2.]

[§28-423.3.1 Applications for limited gas work qualification submitted before January 1, 2019. The commissioner shall issue a limited gas work qualification to a person who before January 1, 2019, submits satisfactory proof that such person has at least six months of full-time experience performing plumbing work under the direct and continuing supervision of a licensed master plumber.]

[§28-423.3.2 Applications for limited gas work qualification submitted on or after January 1, 2019.] The commissioner shall issue a limited gas qualification to a person who [on or after January 1, 2019] submits satisfactory proof establishing that such person:

1. Has at least six months of full-time experience performing plumbing work under the direct and continuing supervision of a licensed master plumber; and
2. Satisfies one or more of the following:
   2.1. Such person has successfully completed a training program that (i) relates to gas work, (ii) is at least sixteen (16) hours and (iii) is approved by the commissioner;
   2.2. Such person is an apprentice in plumbing registered in an apprenticeship program approved by the New York state department of labor; or
   2.3. Such person satisfies such other requirement for demonstrating competence with gas work as the commissioner may establish by rule.

§28-423.4 Expiration. The gas work qualification shall have no expiration and need not be renewed or reissued. The limited gas work qualification shall expire five (5) years after issuance and may not be renewed.

ARTICLE 424
LIFT DIRECTOR REGISTRATION

§28-424.1 Lift director required. It shall be unlawful for a crane or derrick that requires or possesses a certificate of on-site inspection, or which, in accordance with rules promulgated by the commissioner, is subject to supervision by a licensed master rigger in lieu of a certificate of on-site inspection, to perform any of the following tasks unless a lift director is present at the site during all times when:

1. The crane or derrick is picking a load;
2. The crane is traveling at the site, including but not limited to being moved onto or off of cribbing or up or down a ramp;
3. The crane or derrick is being placed into a parked condition or otherwise being taken out of service;
4. The crane’s or derrick’s boom/jib is being laid down or jackknifed;
5. The crane’s or derrick’s boom/jib is being raised from a laid down or jackknifed position; or
6. Other special protective measures for wind are being installed or removed.

[Exception:] Exceptions: The requirement for a lift director does not apply to [the]:

1. The assembly or disassembly of a crane or derrick, nor to the use of an assist crane or derrick during assembly/disassembly, provided an assembly/disassembly director is supervising the assembly/disassembly operation in accordance with rules promulgated by the commissioner.
2. Dedicated pile drivers.

§28-424.2 Registration required. Eighteen months after the department has established the requirements for the department-approved training course for lift directors as set forth in item 1 of section 28-424.3, it shall be unlawful for any person to act as a lift director or to perform the duties of a lift director unless such person is registered as a lift director pursuant to this article, or is licensed as a master rigger pursuant to article 404 of this chapter, or is a master rigging foreman.
designated in accordance with rules promulgated by the commissioner and acting as a lift director under the direct and continuing supervision of the licensed master rigger.

§28-424.3 Qualifications. Applicants for a lift director registration shall submit satisfactory proof establishing that the applicant:

1. Has successfully completed a department-approved training course for lift directing that is at least 32 hours in length. Such lift directing training course shall cover topics relating to mobile cranes, tower cranes, and derricks, including but not limited to roles and responsibilities of site personnel, operational planning, weather warnings, conducting on-site meetings, and log and reporting requirements. Successful completion of a lift directing training course shall be based upon passage of a written exam, and evidenced by the issuance of a certificate card that is in accordance with the provisions of item 2.5 of section 3316.9.2 of the New York city building code; and

2. Meets one of the following:
   2.1. Possesses a valid certification as a lift director. The certification must be acceptable to the commissioner and be issued by a lift director certification program that is accredited by the National Commission for Certifying Agencies (NCCA) or the American National Standards Institute (ANSI);
   2.2. Has at least two (2) years’ experience, within the three (3) years prior to application, supervising rigging operations in New York city in accordance with section 3316.9.1 of the New York city building code;
   2.3. Has been licensed as a New York city class A, class B, or class C hoisting machine operator for at least three (3) years prior to application; or
   [2.4. Is a master rigging foreman designated in accordance with rules promulgated by the commissioner; or]
   [2.5. 2.4. Such applicant has at least one (1) year of experience as a lift director in New York city in accordance with rules promulgated by the commissioner, prior to the date that registration as a lift director is required pursuant to section 28-424.2.

ARTICLE 425
ELEVATOR AGENCY TECHNICIAN LICENSE

§28-425.1 Elevator agency technician license required. It shall be unlawful to perform elevator work as defined in this chapter, unless that work is performed by or under the direction of an elevator agency technician and under the supervision of a designated director of an elevator agency licensed pursuant to article 421 of this chapter.

§28-425.2 Restricted elevator agency technician license. A restricted class of lift mechanic license shall be known as "accessibility technician". Such class of license shall be restricted to performing work involving platform lifts including those installed in private residences which are covered by the provisions of ASME [American society of mechanical engineers] codes and standards] A18.1 [-2005]. An applicant for such restricted license shall complete an application approved by the board and shall have at least (3) three years of verified work experience in constructing, maintaining and repairing those lifts covered by ASME A18.1 [-2005] and shall provide to the commissioner a
certificate of completion of an accessibility training program for lifts under the scope of A18.1 [-2005] such as the certified accessibility training provided by the national association of elevator contractors, or an equivalent program as [deemed] determined by the department.

§28-425.3 Qualifications. An applicant for an elevator agency technician license or a restricted elevator agency technician license must possess a valid elevator mechanic’s license issued by the New York state department of labor in accordance with the provisions of article 33 of the New York state labor law. Such state license must remain valid during the term of the city license. The agency may, by rule, establish qualifications for elevator agency technicians, including, but not limited to, acceptable proof that an applicant has worked on elevator construction, maintenance or repair with direct and [immediate] continuing supervision in this state for a specified period of time prior to the effective date of this article; provided, however, that the provisions of this section and any rules adopted pursuant thereto shall not be inconsistent with the requirements for elevator mechanics contained in article [thirty-three] 33 of the New York state labor law and nothing herein shall prevent the enactment by local law, ordinance, or rule of additional requirements.

§28-425.4 Exemptions. No elevator agency technician license shall be required for the outfitting, removal, refinishing, or replacement of interior finishes, including wall panels, drop ceilings, handrails and flooring, removal or replacement of interior lighting, recladding of doors, transoms and front return panels, finishing or ornamental work on car operating panels.

§28-425.5 Term of license. The term of an elevator agency technician license and a restricted elevator agency technician license shall be two (2) years.

ARTICLE 426
ELEVATOR AGENCY HELPER

§28-426.1 Qualifications. The agency may, by rule, establish qualifications for elevator agency helpers.

ARTICLE 427
PERMITS

§28-427.1 Applications and permits. All applications/permits issued to elevator contractors shall appear on the department of buildings website within forty-eight (48) hours of issuance. The information required to be published must include, at a minimum, the date of issuance, the work covered by the permit, the elevator contractor or contractors involved and location and type of work to be performed. The department shall maintain and publish a registry of all licensed elevator agency helpers, technicians, and inspectors, which shall list and identify, all licensed elevator agency helpers, technicians, and inspectors, doing business in the city of New York. The department shall make the registry available on its website.

§28-427.2 Licensing and permitting exemptions. Whenever an emergency exists in this state due to a disaster or act of god, which imperils the health, safety or welfare of an individual or individuals and placing such individual or individuals in imminent danger of injury or death and the number of persons in the state holding licenses granted by the New York state elevator safety and standards advisory board established by section 956 of article 33 of the New York state labor law is insufficient to cope with such emergency, any person certified by a licensed elevator contractor to have an
acceptable combination of documented experience and education to perform elevator work without
direct and immediate supervision shall seek an emergency elevator mechanic’s license from the
commissioner within five (5) business days after commencing work requiring a license. The
commissioner shall issue emergency elevator mechanic’s licenses to address the emergency that
exists. The licensed elevator contractor shall furnish proof of competency as the commissioner may
require. Each such license shall recite that it is valid for a period of fifteen (15) days from the date
thereof and for such particular elevators or geographical areas as the commissioner may designate to
address the emergency and otherwise shall entitle the licensee to the rights and privileges of an
elevator mechanic’s license issued in this article. The commissioner shall renew an emergency
elevator mechanic’s license during the existence of an emergency as needed. No fee shall be charged
for any emergency elevator mechanic’s license or renewal thereof.

§28-427.3 License renewal. The renewal of all licenses granted under the provisions of this section
shall be conditioned upon the submission of a certificate of completion of a course designed to ensure
the continuing education of licensees on new and existing national, state, and local conveyances codes
and standards and on technology and technical education and workplace safety. Such course shall
consist of not less than eight (8) hours annually and shall be completed preceding any such license
renewal. The commissioner shall establish requirements for continuing education and training
programs, and shall approve such programs, as well as maintain a list of approved programs, which
shall be made available to license applicants, permit applicants, renewal applicants and other
interested parties upon request. The commissioner shall promulgate rules and regulations setting forth
the criteria for approval of such programs, the procedures to be followed in applying for such
approval, and other rules and regulations as the commissioner deems necessary and proper to
effectuate the purposes of this section. The renewal of all licenses granted under the provisions of this
section shall be conditioned upon the submission of a certificate of completion of a course designed
to ensure the continuing education of licensees on new and existing regulations of the department.
Such course shall consist of not less than eight (8) hours of instruction that shall be attended and
completed annually prior to any such license renewal. The courses shall be taught through continuing
education providers that may include, but shall not be limited to, association seminars, and labor
training programs or programs that deliver an approved apprenticeship and are registered with the
department or the New York state apprenticeship training council. The commissioner shall approve
the continuing education providers.

§28-427.4 Renewal fees. The commissioner shall assess a fee for each training program completion
certificate and for each refresher training program completion certificate, provided, however, that in
no event shall the cost of such certificates be assessed by the sponsor of such training program against
the participants.

§28-427.5 Recordkeeping. All instructors shall be exempt from the requirements of the preceding
section with regard to their application for license renewal provided that such applicant was qualified
as an instructor at any time during the one (1) year immediately preceding the scheduled date for such
renewal. Approved training providers shall keep uniform records, for a period of six (6) years, of
attendance of licensees following a format approved by the commissioner and such records shall be
available for inspection by the commissioner at his or her request. Approved training providers shall
be responsible for the security of all attendance records and certificates of completion; provided,
however, that falsifying or knowingly allowing another to falsify such attendance records or
certificates of completion shall constitute grounds for suspension or revocation of the approval required under this section.

**ARTICLE 428**

**CONSTRUCTION SUPERINTENDENT LICENSE**

§28-428.1 License required. It shall be unlawful to perform the duties and responsibilities of a construction superintendent, as specified in chapter 33 of the New York city building code, unless such work is performed by a person licensed as a construction superintendent under the provisions of this article and department rules.

§28-428.2 Qualifications. All applicants for a construction superintendent license shall submit satisfactory proof establishing that the applicant:

1. Has, within one (1) year prior to application, satisfactorily completed a course that is at least forty-hours (40) in length and approved by the department in construction and demolition site safety;

2. Possesses a valid Site Safety Training (SST) Supervisor Card; and

3. Either:

   3.1. Has at least three (3) years of experience, within the five (5) years prior to application, serving as a full-time project supervisor with on-site responsibility over the construction or demolition of buildings in the city of New York; or

   3.2. Has at least five (5) years of experience, within the eight (8) years prior to application, serving as a full-time project supervisor with on-site responsibility over the construction or demolition of buildings in the United States.

§28-428.3 Previous registrants. Individuals who, as of the effective date of this section, held a valid registration as a construction superintendent in accordance with rules promulgated by the commissioner shall be deemed to hold a license as a construction superintendent.

§28-428.4 Fitness to perform work. As a condition of license renewal, a licensed construction superintendent shall provide evidence satisfactory to the department that such licensee is fit to perform the work.

§ 5. Item 1 of section 28-502.4 of the administrative code of the city of New York, as added by local law number 33 for the year 2007, is amended to read as follows:

1. The list shall include all signs, sign structures and sign locations located (i) within a distance of 900 linear feet (274 m) from and within view of an arterial highway; or (ii) within a distance of 200 linear feet (60 960 mm) from and within view of a public park with an area of 1/2 acre [15000 m²] (2023 m²) or more.

§ 6. Section 28-504.1 of the administrative code of the city of New York, as amended by local law number 105 for the year 2016, is amended to read as follows:
§28-504.1 Bicycle access to certain office buildings. This section shall apply to buildings that satisfy each of the following conditions: (i) the main occupancy of such building is offices that are classified as occupancy group B, (ii) such building was in existence on December 11, 2009, or a permit for such building has been issued on or before such date but such building has not yet been completed, (iii) such building has a freight elevator that either complies with [ASME 17.1] ASME A17.1 with regard to the carrying of passengers on freight elevators, as referenced in chapter 35 of the New York city building code, or is operated by a freight elevator operator, and (iv) is not subject to the bicycle parking provisions of sections 25-80, 36-70 and 44-60 of the New York city zoning resolution. It shall be presumed that if a freight elevator is available for carrying freight, it is available for carrying bicycles.

§ 7. Section 28-504.1.1 of the administrative code of the city of New York, as renumbered and amended by local law number 105 for the year 2016, is amended to read as follows:

§28-504.1.1 Request for bicycle access. The tenant or subtenant of a building to which this section is applicable may request in writing, on a form provided by the department of transportation, that the owner of such building complete a bicycle access plan in accordance with section 28-504.1.2 and provide bicycle access in accordance with such plan. Such request shall include a certification by such tenant or subtenant that there is sufficient space within such tenant’s or subtenant’s premises to store the requested number of bicycles in a manner that does not violate the building or fire code or any other applicable law, rule or code, or which would impede ingress or egress to such premises or building. Such request shall be sent to such owner by certified mail, return receipt requested, and a copy of the request shall be filed with the department of transportation.

§ 8. Section 28-504.1.2 of the administrative code of the city of New York, as renumbered and amended by local law number 105 for the year 2016, is amended to read as follows:

§28-504.1.2 Bicycle access plan. Bicycle access plans shall comply with sections 28-504.1.2.1 through 28-504.1.2.4.

§ 9. Items 1.2, 1.3 and 2 of section 28-504.1.2.2 of the administrative code of the city of New York, as renumbered and amended by local law number 105 for the year 2016, are amended to read as follows:

1.2. Bicycles will be allowed to be transported to and from such elevator along each route that is used to transport freight to and from such elevator, to the extent practicable and where such routes do not present substantial safety risks; and

1.3. No escort by building personnel will be required for a person transporting a bicycle to or from such elevator if no such escort is required when a person is transporting freight to or from such elevator; and
2. Provisions allowing bicycles to be brought in or out of such building using one or more designated passenger elevators that the building owner may designate as temporary freight elevators at any time when no freight elevator satisfying the conditions of item [2.4] 1 is operational;

§ 10. Section 28-504.6 of the administrative code of the city of New York, as added by local law number 106 for the year 2016, is amended to read as follows:

§ 28-504.6 **Foldable bicycles on passenger elevators in residential buildings.** In any building classified in occupancy group R, it shall be unlawful for an owner to bar a tenant or subtenant from transporting a foldable bicycle on a passenger elevator provided that such bicycle is fully folded. For purposes of this section, the term “foldable bicycle” means a bicycle designed to fold into a compact assembly not exceeding 20 inches (508 mm) by 36 inches (914 mm) by 32 inches (813 mm).

§ 11. The definitions of “low income housing” and “owner” in section 28-505.2 of the administrative code of the city of New York, as added by local law number 1 for the year 2018, are amended to read as follows:

**LOW INCOME HOUSING.** The term “low income housing” has the same meaning as in section 27-2093.1 of the New York city housing maintenance code [1].

**OWNER.** The term “owner” has the same meaning as in section 27-2004 of the New York city housing maintenance code [1].

§ 12. Section 28-505.6 of the administrative code of the city of New York, as added by local law number 1 for the year 2018, is amended to read as follows:

§ 28-505.6 **Time period for approval or rejection of construction documents.** The time period in which the commissioner is required to approve or reject an application for construction document approval or resubmission thereof pursuant to this code shall commence from the date that the commissioner receives the documents required pursuant to item 3 of section 28-505.4.

§ 2. Chapter 1 of the New York city building code, as amended by local law number 141 for the year 2013, section 107.11 as amended by and section 107.11.3 as added by local law number 97 for the year 2017, section 110.3.7 as added by local law number 154 for the year 2017, and section 107.9.2 as amended by local law number 195 for the year 2018, is amended to read as follows:
CHAPTER 1
ADMINISTRATION

SECTION BC 101
GENERAL

101.1 Title. This code shall be known and may be cited as the “New York City Building Code,” “NYCBC” or “BC.” All section numbers in this code shall be deemed to be preceded by the designation “BC.”

101.2 Scope. The provisions of this code shall apply to the construction, alteration, movement, addition, replacement, repair, equipment, use and occupancy, location, maintenance, removal and demolition of every building or structure or any appurtenances connected or attached to such buildings or structures.

101.3 Intent. Refer to Chapter 1 of Title 28 of the Administrative Code.

101.4 Referenced codes. The other codes listed in Sections 101.4.1 through 101.4.6 and referenced elsewhere in this code shall be considered part of the requirements of this code to the prescribed extent of each such reference.

101.4.1 Electrical. The provisions of the New York City Electrical Code shall apply to the installation of electrical systems, including alterations, repairs, replacement, equipment, appliances, fixtures, fittings and appurtenances thereto.

101.4.2 Gas. The provisions of the New York City Fuel Gas Code shall apply to the installation of gas piping, gas appliances and related accessories as covered in this code. These requirements apply to gas piping systems extending to the inlet connections of appliances and the installation and operation of residential and commercial gas appliances and related accessories.

101.4.3 Mechanical. The provisions of the New York City Mechanical Code shall apply to the installation, alterations, repairs and replacement of mechanical systems, including equipment, appliances, fixtures, fittings and/or appurtenances, including ventilating, heating, cooling, air-conditioning and refrigeration systems, incinerators and other energy-related systems.

101.4.4 Plumbing. The provisions of the New York City Plumbing Code shall apply to the alteration, repair and replacement of plumbing systems, including equipment, appliances, fixtures, fittings and appurtenances, and where connected to a water or sewage system and all aspects of a medical gas system.

101.4.5 Fire prevention. The provisions of the New York City Fire Code shall apply to:

1. The manufacturing, storage, handling, use, sale and transportation of hazardous materials, except for the installation of storage tanks and auxiliary storage tanks for oil-burning equipment;

2. The design, installation, operation and maintenance of devices, equipment and systems designed to prevent, mitigate, control and extinguish fire, explosions or other life safety hazards;
3. Emergency preparedness and planning, including the orderly evacuation of occupants of a building, structure or premises in the event of fire, explosion, biological, chemical or hazardous material incident or release, natural disaster or other emergency, or the threat thereof;

4. The prevention, mitigation and control of hazards to firefighters and emergency responders during emergency operations; and

5. The operation and maintenance of any manual, automatic or other fire alarm or fire extinguishing device, equipment or system.

101.4.6 Energy. The provisions of the New York City Energy Conservation Code shall apply to all matters governing the design, construction and alteration of buildings for energy efficiency.

SECTION BC 102
APPLICABILITY

102.1 General. Where there is a conflict between a general requirement and a specific requirement, the specific requirement shall govern. Where, in any specific case, different sections of this code specify different materials, methods of construction or other requirements, the most restrictive shall govern.

102.2 Reserved.

102.3 Application of references. References to chapter or section numbers, or to provisions not specifically identified by number, shall be construed to refer to such chapter, section or provision of this code.

102.4 Referenced standards. The standards referenced in this code and in the rules of the department shall be considered part of the requirements of this code to the prescribed extent of each such reference. Where differences occur between provisions of this code and referenced standards, the provisions of this code shall apply. Refer to Article 103 of Chapter 1 of Title 28 of the Administrative Code for additional provisions relating to referenced standards.

102.4.1 Editions of referenced standards. References to standards in this code shall be to the editions of those standards provided for in Chapter 35 of this code, or as otherwise provided by rule.

102.5 Partial invalidity. In the event that any part or provision of this code is held to be illegal or void, this shall not have the effect of making void or illegal any of the other parts or provisions.

102.6 Existing structures. The legal occupancy of any structure lawfully in existence at the time of the adoption or a subsequent amendment of this code shall be permitted to continue without change, except as is otherwise specifically provided in this code or as is deemed necessary by the commissioner for the general safety and welfare of the occupants and the public. Refer to Chapter 1 of Title 28 of the Administrative Code for additional provisions relating to existing structures.
SECTION BC 103
DEPARTMENT OF BUILDINGS

103.1 General. Refer to the New York City Charter and Chapter 1 of Title 28 of the Administrative Code.

SECTION BC 104
DUTIES AND POWERS OF COMMISSIONER OF BUILDINGS

104.1 General. The commissioner shall have the authority to render interpretations of this code, adopt rules, establish policies and procedures in order to clarify and implement its provisions. Such interpretations, policies, procedures, and rules shall be in compliance with the intent and purpose of this code. See the New York City Charter and Chapter 1 of Title 28 of the Administrative Code for additional provisions relating to the authority of the Commissioner of Buildings.

SECTION BC 105
APPROVALS

105.1 Approvals. Refer to Chapter 1 of Title 28 of the Administrative Code.

SECTION BC [405] 106
PERMITS

[105.1] 106.1 General. Permits shall comply with this section, with Article 105 of Chapter 1 of Title 28 of the Administrative Code, and with requirements found elsewhere in this code.

[105.2] 106.2 Required. Any owner or authorized agent who intends to construct, add to, alter, repair, move, demolish, or change the occupancy of a building or structure, or to erect, install, add to, alter, repair, remove, convert or replace any gas, mechanical or plumbing system, the installation of which is regulated by this code, or to cause any such work to be done, shall first make application for construction document approval in accordance with Chapter 1 of Title 28 of the Administrative Code and this chapter and obtain the required permit.

[105.3] 106.3 Work exempt from permit. Exemptions from permit requirements of this code as authorized in Chapter 1 of Title 28 of the Administrative Code and the rules of the department shall not be deemed to grant authorization for any work to be done in any manner in violation of the provisions of this code or any other laws or rules.

[105.4] 106.4 Validity of permit. The issuance or granting of a permit shall not be construed to be a permit for, or an approval of, any violation of any of the provisions of this code or of any other law. Permits presuming to give authority to violate or cancel the provisions of this code or other law shall not be valid. The issuance of a permit based on construction documents and other data shall not prevent the commissioner from requiring the correction of errors in the construction documents and other data. The commissioner is also authorized to prevent occupancy or use of a structure where in violation of this code or of any other law.
Foundation and earthwork permits. In addition to the requirements of Chapter 1 of Title 28 of the Administrative Code and Chapter 33 of this code, applications for foundation and earthwork permits shall include:

1. **Notice to adjoining owners.** Proof of notice to adjoining owners as required by Section 3304.3.2.

2. **Liens.** Satisfactory evidence that the property is free from any lien for unpaid city taxes, assessments, water rates, bail bonds, or judgments obtained by the city, together with consent in writing of the mortgagee, if there is a mortgage upon the property, and the consent in writing of the surrogate’s court or supreme court, if the owner of the property is a minor or incompetent.

**Notice to department of commencement of foundation and earthwork.**

The foundation and earthwork permit shall be issued on the condition that the applicant will provide written notice to the department at least 24 but no more than 48 hours prior to the commencement of the foundation or earthwork as required by Section 3304.3.1.

Full demolition permits. In addition to the requirements of Chapter 1 of Title 28 of the Administrative Code and Chapter 33 of this code, applications for full demolition permits shall include:

1. **Utility certifications.** Certifications by the respective utility companies or governmental agencies having jurisdiction that all gas, electric, water, steam and other service lines to the building have been disconnected as required by Section 3303.2.5.

2. **Notice to adjoining owners.** Proof of notice to adjoining owners as required by Section 3306.3.2.

3. **Certification of rodent extermination.** Certification in accordance with department rules that the building has been treated effectively for rodent extermination as required by Section 3306.9.13.

**Notice to department of commencement of demolition work.** The full demolition permit shall be issued on the condition that the applicant will provide written notice to the department at least 48 hours prior to the commencement of demolition work.

Sign permits. In addition to the requirements of Chapter 1 of Title 28 of the Administrative Code, permits for the erection, alteration or installation of signs shall be subject to the special provisions set forth in Sections 105.7.1 through 105.7.5.

**Identification number.** Every sign permit shall have an identification number.

**Changing copy or structural change of sign or sign structure.** The changing of copy on a sign not permitted for changeable copy or any structural change of the sign or sign structure shall require a new permit pursuant to this code.

**Permit does not constitute authorization for illegal sign.** The issuance of a permit for the erection, alteration or installation of a sign or sign structure issued pursuant to this code shall not be deemed to constitute permission or authorization to maintain a sign that would otherwise be illegal without a maintenance permit for an outdoor sign if required pursuant to this
code and department rule or that is otherwise illegal pursuant to any other provision of law nor shall any permit issued hereunder constitute a defense in an action or proceeding with respect to such an unlawful sign.

[105.7.4] 106.7.4 Name and business address of licensed sign hanger. The application shall contain the name and business address of the licensed sign hanger who is to perform or supervise the proposed work.

[105.7.5] 106.7.5 Outdoor advertising company. If the sign or sign location is under the control of an outdoor advertising company, as defined in Chapter 5 of Title 28 of the Administrative Code, the application shall be accompanied by the name and, where provided by rule, the registration number of such outdoor advertising company.

[105.8] 106.8 Temporary construction [equipment] installation permits. In addition to the requirements of Chapter 1 of Title 28 of the Administrative Code, permits for the erection, installation and use of temporary construction [equipment] installations shall be subject to the special provisions set forth in Sections [105.8.1] 106.8.1 through [105.8.3] 106.8.3.

[105.8.1] 106.8.1 Application. The need for each specific item of temporary construction [equipment] installation shall be stated on the application.

[105.8.2] 106.8.2 Term of permit. Notwithstanding any other provision of this code, a temporary construction [equipment] installation permit shall expire 1 year from the date of issuance, or when the permit holder’s insurance or street obstruction bond expires, whichever is earlier. Such permit shall be renewable. Such permit must be in effect at all times during which the [equipment] temporary construction installation is at the work site.

[105.8.3] 106.8.3 Special provisions for renewal of permit for a sidewalk shed. An application for the renewal of a temporary construction [equipment] installation permit for a sidewalk shed used in connection with the alteration of a building shall be accompanied by a report, acceptable to the department, prepared by a registered design professional who has examined that part of the premises on which the work requiring the use of a sidewalk shed is being performed. Such report shall document the condition of the applicable part of the premises and the scope of work that has been performed thereon since the issuance of the permit and shall provide an estimate of the additional time needed to complete the work.

[105.9] 106.9 Mandatory sewer and catch basin work required by Section 24-526 of the Administrative Code. In addition to the requirements of Chapter 1 of Title 28, an applicant for a permit who is required pursuant to Section 24-526 of the Administrative Code to construct or repair defects in sewers or catch basins that lie outside the property shall submit certification from the Department of Environmental Protection that the applicant or owner has provided the Department of Environmental Protection with:

1. A performance bond or other security satisfactory to the Department of Environmental Protection and approved as to form by the Law Department for the full cost, as estimated by the Department of Environmental Protection, of constructing the part of the storm water drainage system for such property which shall lay outside the property line and repairing defects in such construction, if and as required by Section 24-526 of the Administrative Code;
2. Any license or other written instrument that the Department of Environmental Protection or the Law Department may reasonably request that gives the Department of Environmental Protection, its agents and contractors and the surety for a performance bond described in Item 1 above the legal right to enter private property to perform the work described in Item 1 above, pursuant to the terms of the performance bond or in accordance with the conditions of acceptance of other security described in Item 1 above, and the legal right to connect to, to extend or to discharge storm water into any private sewer authorized as a point of disposal pursuant to Section 24-526 of the Administrative Code, in the event that the owner of property fails to do so, if and as required pursuant to Section 24-526 of the Administrative Code;

3. Insurance of a kind and in an amount that the Department of Environmental Protection and the Law Department deem satisfactory to insure the city fully for all risks of loss, damage to property or injury to or death of persons to whomever occurring, arising out of or in connection with the performance of all work described in this section.

106.10 Permits with respect to limited alteration applications. For permits with respect to limited alteration applications, refer to Sections 28-101.5 and 28-104.6, Exception 1, of the Administrative Code.

[SECTION BC 106]
[RESERVED]

SECTION BC 107
CONSTRUCTION DOCUMENTS

107.1 General. Construction documents shall comply with Chapter 1 of Title 28 of the Administrative Code, this section and other applicable provisions of this code and its referenced standards.

107.2 Required construction documents. In addition to the requirements of [Chapter 4] Article 104 of Title 28 of the Administrative Code, the applicant shall submit any and all of the documents specified in Sections 107.3 through 107.16 as appropriate to the nature and extent of the work proposed.

107.2.1 Composite plans. Composite plans showing architectural, structural, and mechanical parts and related energy use systems of a building may be submitted provided that a clear understanding of each part and system is not impaired.

107.2.2 Multiple building developments. The same set of plans may be used for several buildings of the same construction, if such buildings are located on adjoining lots under the same ownership, and if applications for construction document approval for the lots are filed simultaneously.

107.3 Lot diagram. The lot diagram shall show compliance with the New York City Zoning Resolution, indicating the size, height, and location of the proposed construction including parking and curb cuts; all existing structures on the zoning lot and their distances from lot and street lines; the established grade and existing curb elevations; and the proposed final grade elevations of the site shown by contours or spot grades at reasonable intervals. The lot diagram shall be drawn in accordance with an accurate boundary survey to the city datum, made by a land surveyor, which
shall be attached to and form part of the application. A complete zoning analysis shall accompany the lot diagram with citation to the relevant sections of the *New York City Zoning Resolution*.

**107.4 Building classification statement.** The statement shall identify:

1. The occupancy group or groups that apply to parts of the building in accordance with Section 302;
2. The occupancy group of the main use or dominant occupancy of the building;
3. The construction [class] type of the building in accordance with Section 602;
4. The structural occupancy/risk category in accordance with Table 1604.5;
5. The height of the building as defined in Section 502.1;
6. The applicable measurements to the highest and lowest level of Fire Department access;
7. Whether the building is inside or outside of the fire districts; [and]
8. Whether the building is inside or outside a flood hazard area; and
9. For multiple dwellings, the multiple dwelling classification as established by the *New York State Multiple Dwelling Law*.

**107.5 Means of egress plans.** Floor and roof plans shall show compliance with the requirements of Chapter 10, with sufficient notations indicating egress features and complete egress analysis as required by this code.

**107.6 Architectural plans.** Construction documents for all buildings shall provide detailed drawings of all architectural elements of the building showing compliance with the code, including but not limited to doors, windows and interior finish schedules, details necessary to substantiate all required fire-protection characteristics, details demonstrating compliance with the *New York City Energy Conservation Code* and details demonstrating compliance with all accessibility requirements of this code. [Site safety features shall be shown where applicable.] Plans shall also provide details of the exterior wall envelope as required, including but not limited to flashing, insulation, vapor retarder, intersections with dissimilar materials, corners, end details, control joints, intersections at roof, eaves or parapets, means of drainage, water-resistive membrane and details around openings.

**Exception:** Where a curtain wall system is to be employed containing elements that are normally detailed on shop or working drawings, approval of construction documents shall be conditioned upon deferred submittal of such shop or working drawings showing the approval of the registered design professional who prepared the architectural construction documents, or of a signed statement by such registered design professional that such drawings were prepared to his or her satisfaction. In such cases, submittal of construction documents showing compliance with the *New York City Energy Conservation Code* related to such curtain wall may also be deferred. Such deferred submittal of construction documents must demonstrate that the estimated annual energy use for the envelope in the energy analysis submitted as part of the initial filing is not exceeded.
107.7 Structural plans. Structural plans shall include the data and information described in this section and in Chapter 16. Structural calculations shall be made available to the department upon request.

Exceptions:

1. Where structural elements are normally detailed on shop or working drawings, approval of construction documents shall be conditioned upon deferred submittal of such shop or working drawings showing the approval of the registered design professional who prepared the structural construction documents, or of a signed statement by such registered design professional that such drawings were prepared to his or her satisfaction.

2. In cases where the detailing of structural elements has been made on the basis of fire-resistance ratings, load tables, or similar data as given in manufacturer’s catalogues, approval of construction documents shall be conditional upon submission of a manufacturer’s designation attesting to the accuracy of the data and indicating that such data were derived in conformance with the provisions of this code. Where the detailing of structural elements has been made on the basis of data published in technical documents of recognized authority issued or accredited by the agency or association promulgating the applicable referenced standard, such manufacturer’s designation will not be required.

107.7.1 Foundation plans. Foundation plans shall show compliance with the requirements of Chapter 18 of this code regarding foundation design and shall show the plan locations, design loads, design elevations of the bottoms, and details as to sizes, reinforcements, and construction of all footings, piers, foundation walls, pile groups, and pile caps. The foundation systems shown on plans shall be of a type indicated in the geotechnical report required by Section 1803.6. The levels of footings of adjacent structures shall be indicated or, if the adjacent structures are pile supported, this shall be stated. Where applicable, the plans shall include underpinning details. In addition, there shall be a statement indicating the character and minimum class of the soil strata required for the support of the foundation; the allowable soil pressure used for the design of footings; and the character, class, and presumptive bearing capacity of the bearing stratum to which piling is required to penetrate. The types and design capacities of piling and the records of required borings or test pits shall also be shown. In addition, foundation plans shall include insulation details as required by the New York City Energy Conservation Code.

107.7.2 Floor plans. Floor plans and sections showing all structural requirements shall be provided for all levels.

107.7.3 Detailed drawings. Drawings shall show sizes, sections, and locations of members, and such other information as may be required to indicate clearly all structural elements and special structural engineering features.

107.7.4 Column schedules. Column schedules shall show the design load contributed by the framing at any level and the total accumulated design load at each level.
107.7.5 **Truss forces.** Where trusses are employed, a diagram or table shall indicate the loads or moments in the various members under the design loading conditions. The requirement for a diagram or table may be waived when the trusses consist of elements selected from load tables or similar data, subject to the requirements for verification described in this code.

107.7.6 **Prestressing forces.** Where pre-stressed members are employed, a schedule or table shall show the total prestressing forces and the method and sequence of application.

107.8 **Earthwork plans.** Where the application is sought solely for or includes earthwork, excavation or fill operations, including but not limited to site decontamination, soil remediation and grading, the applicant shall submit 1) a lot diagram showing the exact location of the lot and dimensions to the nearest corner; and 2) plans showing the exact location, extent, and depth or height of the proposed earthwork, excavation or fill operation and any existing utilities, foundations or other infrastructure potentially impacted by the earthwork, excavation or fill operation. For excavation operations, the plans shall also indicate the levels of footings of all adjacent structures or, if the adjacent structures are pile supported, this shall be stated. Where applicable, the plans shall also include underpinning details, soil information in accordance with Chapter 18, and a final grading plan representing the lot after all earthwork, excavation or fill operations have been completed.

107.9 **Fire protection system plans.** Construction documents for fire protection systems shall include a plot plan to scale indicating the location of the system in relation to the rest of the building and shall comply with Sections 107.9.1 through 107.9.4. Such plans shall not be required in connection with applications for limited standpipe alterations and limited sprinkler alterations.

107.9.1 **Sprinkler systems.** Sprinkler systems plans shall comply with Section 903.1.2.

107.9.2 **Alternative automatic fire-extinguishing systems.** Notwithstanding any other provision of this code, design and installation documents for the installation of alternative automatic fire-extinguishing systems shall be filed with and reviewed by the Fire Department for compliance with this code, the New York City Fire Code and other applicable laws and regulations in accordance with Section 105 of the New York City Fire Code.

107.9.3 **Standpipe systems.** Standpipe systems plans shall comply with Section 905.1.1.

107.9.4 **Fire alarm and detection systems.** Fire alarm and detection systems plans shall comply with Section 907.1.1.

107.10 **Sign installation plans.** Construction documents for sign applications shall comply with Section [H 105.2 in Appendix H] H105.2 of Appendix H.

107.11 **Discharge of sewage and discharge and/or management of stormwater runoff.** Applications for construction document approval shall comply with Sections 107.11.1, 107.11.2 and 107.11.3.

107.11.1 **Sewage.** Applications for construction document approval shall include submittal documents relating to the availability and feasibility of a public sanitary or public combined sewer and/or other approved discharge for sewage in accordance with Sections 107.11.1.1 and 107.11.1.2 for the following types of applications:
1. New buildings that include any fixtures that produce sewage;

2. Alterations that require an increase in size to an existing sanitary or combined sewer connection; and/or

3. Alterations requiring a new connection to a sanitary or combined sewer.

107.11.1.1 **Connection feasible and available.** Where a public sanitary or combined sewer is certified by the Department of Environmental Protection or certified by an applicant in accordance with rules of such department to be available and connection thereto feasible, the applicant shall submit:

1. **Department of Environmental Protection certification of availability and feasibility.** A sewer certification issued by the Department of Environmental Protection that a public sanitary or combined sewer is available and connection thereto is feasible. Applications for such certification shall be made to the Department of Environmental Protection on forms specified by such department (Department of Environmental Protection “house/site connection proposal application” or other form as specified in the rules of such department) and shall be reviewed and approved by such department in accordance with the rules of such department. Such certification may be conditioned by such department on part or all of the sewage to be disposed of with an on-site disposal system or with the use of an alternative disposal system; or

2. **Applicant certification of availability and feasibility.** A certification submitted by the applicant to the Department of Environmental Protection in accordance with the rules of such department that a public sanitary or combined sewer is available and connection thereto is feasible, in such cases where the availability and feasibility of connection to a public sanitary or combined sewer are allowed to be certified by the applicant pursuant to such rules. Such certification shall be on forms specified by such department (Department of Environmental Protection “house/site connection proposal application” or other form as specified in the rules of such department).

107.11.1.2 **Connection not feasible or not available.** Where a public sanitary or combined sewer is not available, or where connection thereto is not feasible, the applicant shall submit:

1. **Department of Environmental Protection or applicant certification of unavailability or non-feasibility.** (i) A certification issued by the Department of Environmental Protection that a public sanitary or combined sewer is not available or that connection to an available sewer is not feasible. Such certification shall be on forms specified by such department (Department of Environmental Protection “house/site connection proposal application” or other form as specified in the rules of such department) or (ii) A certification submitted by the applicant to the Department of Environmental Protection that a public sanitary or combined sewer is not available or that connection thereto is not feasible, in such cases where the availability and feasibility of connection to a public sanitary or combined sewer are
allowed to be certified by the applicant pursuant to the rules of such department. Such certification shall be on forms specified by such department (Department of Environmental Protection “house/site connection proposal application” or other form as specified in the rules of such department); and

2. **On-site disposal.** A proposal for the design and construction of a system for the on-site disposal of sewage conforming to the provisions of this code and other applicable laws and rules including but not limited to minimum required distances from lot lines or structures and subsoil conditions. Construction documents for such system shall be subject to the approval of the department.

**107.11.2 Stormwater.** Applications for construction document approval shall include submittal documents relating to the availability and feasibility of a public combined or storm sewer or other approved method for stormwater discharge in accordance with Sections 107.11.2.1 and 107.11.2.2 for the following types of applications:

1. New buildings;

2. Alterations of buildings proposing horizontal building enlargement; and/or

3. Alterations that increase impervious surfaces on the tax lot.

**Exceptions:**

1. Applications for construction document approval for the alteration of an existing one- or two-family dwelling need not include such submittal documents, where the [area] footprint of a proposed horizontal building enlargement and any proposed increase in impervious surfaces combined is less than or equal to 200 square feet (19 m²). **Construction documents shall include the amount of proposed increase in impervious area.**

   1.1 This exception shall not apply if the horizontal building enlargement and increase in impervious surface related to the current application for construction document approval and any other enlargement or increase in impervious surface made on the same tax lot after July 1, 2008 together exceed 200 square feet (19 m²).

2. Applications for construction document approval for the alteration of a building need not include such submittal documents, where the [area of a] increase in area of the footprint resulting from a proposed horizontal building enlargement and any proposed increase in impervious surfaces on a lot combined is less than or equal to 1,000 square feet (93 m²), and on-site disposal of stormwater conforming to the provisions of the applicable laws and rules as determined by the department is proposed for such enlargement and/or increase in impervious surface. **Construction documents shall include the amount of proposed increase in impervious area.**

   2.1 This exception shall not apply where on-site disposal cannot be designed to conform to the provisions of the applicable laws and rules including but not
2.1 This exception shall not apply if the horizontal building enlargement and increase in impervious surface related to the current application for construction document approval and all other enlargements or increases in impervious surface made on the same tax lot after July 1, 2008 together exceed 1000 square feet (93 m²).

107.11.2.1 Connection feasible and available. Where a public combined or storm sewer is certified by the Department of Environmental Protection or certified by an applicant in accordance with rules of such department to be available and connection thereto is feasible, applicants shall submit:

1 Department of Environmental Protection certification of availability and feasibility. A sewer certification issued by the Department of Environmental Protection that a public storm or combined sewer is available and connection thereto is feasible. Applications for such certification shall be made to the Department of Environmental Protection on forms specified by such department (Department of Environmental Protection “house/site connection proposal application” or other form as specified in the rules of such department) and shall be reviewed and approved by such department in accordance with the rules of such department. Such certification may be conditioned by such department on part or all of the stormwater runoff to be disposed of through an on-site detention or retention system, or by use of alternative disposal methods including but not limited to ditches, swales or watercourses; or

2 Applicant certification of availability and feasibility. A certification submitted by the applicant to the Department of Environmental Protection in accordance with the rules of such department that a public storm or combined sewer is available and connection thereto is feasible, in such cases where the availability and feasibility of connection to a public storm or combined sewer are allowed to be certified by the applicant pursuant to such rules. Such certification shall be on forms specified by such department (Department of Environmental Protection “house/site connection proposal application” or other form as specified in the rules of such department).

107.11.2.2 Connection not feasible or not available. Where a public combined or storm sewer is not available, or where connection thereto is not feasible, applicants shall submit:

1. Department of Environmental Protection or applicant certification of unavailability or non-feasibility. (i) Certification issued by the Department of Environmental Protection that a public storm or combined sewer is not available or that connection thereto is not feasible. Such certification shall be on forms specified by such department (Department of Environmental Protection “house/site connection proposal application” or other form as specified in the rules of such department); or (ii) Certification submitted by the applicant to the Department of Environmental Protection that a public storm or combined sewer is not available or that connection thereto is not feasible, in such cases where the availability and
feasibility of connection to a public storm or combined sewer are allowed to be certified by the applicant pursuant to rules of such department. Certification shall be on forms specified by such department (Department of Environmental Protection “house/site connection proposal application” or other form as specified in the rules of such department); and

2. **On-site disposal.** A proposal for the design and construction of a system for the on-site disposal of stormwater conforming to the provisions of this code and other applicable laws and rules including but not limited to minimum required distances from lot lines or structures and subsoil conditions. Construction documents for such system shall be subject to the approval of the department.

107.11.3 **Post-construction stormwater management facilities.** A post-construction stormwater management facility that is constructed as part of a covered development project shall comply with the rules of the Department of Environmental Protection and with this code.

107.12 **Predemolition photographs.** In addition to the requirements of Section 3306.3, construction documents for full demolition shall comply with the following requirements for archival photographs:

1. **Number required.** Applications shall contain two sets of photographs of the building or buildings to be demolished or removed. Both sets shall be received by the department on behalf of the New York City Landmarks Preservation Commission and the New York City Municipal Archives Division of the Department of Records and Information Services.

2. **Format.** The photographs shall conform to the standards and specifications established by rules promulgated by the commissioner upon the advice of the commissioner of the Department of Records and Information Services and the chairperson of the Landmarks Preservation Commission.

   **Exception:** Applications made on behalf of the New York City Department of Housing Preservation and Development or made pursuant to Article 215 of Chapter 2 of Title 28 of the Administrative Code are exempt from the requirements of this section.

107.13 **Energy efficiency plans.** Construction documents shall include compliance documentation as required by the New York City Energy Conservation Code.

107.14 **Mechanical and fuel gas plans.** Construction documents for gas piping, heating, ventilation, refrigeration and other mechanical work to be performed shall be submitted as per New York City Mechanical and Fuel Gas Codes.

107.15 **Plumbing plans.** Construction documents for plumbing work to be performed shall be submitted as per the New York City Plumbing Code.

107.16 **Flood zone compliance plans.** Flood zone compliance plans demonstrating compliance with Appendix G shall be submitted with applications for construction document approval for projects located within a flood hazard area, or where required by Appendix G.
107.17 **Retention of construction and submittal documents.** Refer to Section 28-104.12 of the *Administrative Code*.

107.18 **Construction documents for extension or relocation of an existing chimney or vent.** Where an owner of a new or altered taller building is required by Section 801 of the *New York City Mechanical Code*, Section 501 of the *New York City Fuel Gas Code*, or Section 2113 of this code, to extend, alter or relocate an existing chimney or vent on an affected building, the construction documents for the new or altered taller building shall comply with the requirements of Section 107.18.1 of this code.

107.18.1 **Chimney and vent plan.** At the time of initial filing for construction, a chimney and vent plan shall be included as part of the construction documents. Such chimney and vent plan shall include the following information for all chimneys and vents within 100 feet (30 480 mm) of construction:

1. A drawing identifying the location of each existing chimney and vent.

2. A chimney and vent schedule containing the following information for each chimney and vent:
   2.1. The cross-sectional area of the chimney or vent outlet.
   2.2. The horizontal distance measured from the adjacent construction to the outlet.
   2.3. The elevation of the outlet.
   2.4. The appliance, mechanical system, or fireplace to which the chimney or vent is attached, including the flue gas temperature, or a notation that this information is not yet known.
   2.5. If extension, alteration, or relocation is required and describing the expected work.

3. Calculations demonstrating which chimneys and vents require no alteration based on the termination requirements including but not limited to those found in Section 503.5.4 of the *New York City Fuel Gas Code* and Section 801.20 of the *New York City Mechanical Code*.

**SECTION BC 108**
**TEMPORARY STRUCTURES AND USES**

108.1 **General.** Refer to Chapter 1 of Title 28 of the *Administrative Code*.

**SECTION BC 109**
**FEES**

109.1 **Payment of fees.** Refer to Chapter 1 of Title 28 of the *Administrative Code*. 313
SECTION BC 110
INSPECTIONS

110.1 General. Except as otherwise specified, inspections required by this code or by the department during the progress of work may be performed on behalf of the owner by approved agencies or, if applicable, by special inspectors. However, in the interest of public safety, the commissioner may direct that any of such inspections be performed by the department. All inspections shall be performed at the sole cost and expense of the owner. Refer to Article 116 of Chapter 1 of Title 28 of the Administrative Code for additional provisions relating to inspections.

110.2 Preliminary inspection. Refer to Chapter 1 of Title 28 of the Administrative Code.

110.3 Required progress inspections. The inspections set forth in Sections 110.3.1 through [110.3.8] 110.3.7 shall be made during the progress of work to verify substantial compliance with the code and with approved construction documents.

110.3.1 Footing and foundation inspection. Footing and foundation inspections shall be made after excavations for footings are complete and any required reinforcing steel is in place. For concrete foundations, any required forms shall be in place prior to inspection. Materials for the foundation shall be on the job, except where concrete is ready mixed in accordance with ASTM C 94, the concrete need not be on the job.

110.3.2 Lowest floor elevation. In [areas of special] flood hazard areas, upon placement of the lowest floor, including the basement (for flood zone purposes), and prior to further vertical construction, the elevation inspection report required in Item 1 of Section [G105.3] G107.3 of Appendix G shall be submitted to the department.

110.3.3 Structural wood frame inspection. Inspections shall be performed for wood structural framing to determine compliance with the approved construction documents.

Exception: Prefabricated wood structural elements and assemblies subject to Section [1704.6.4] 1705.5.1 through [1704.6.3] 1705.5.3 shall not be subject to progress inspection.

110.3.4 Fire-resistance-rated construction inspection. Fire-resistance-rated construction shall be inspected to determine compliance with the approved construction documents, including inspection of the following work:

1. Fire-resistance-rated partitions, floors, ceilings, shafts; and
2. Fire shutters.

Exception: Where the scope of work affecting an existing fire-rated wall assembly is limited to through-penetration firestopping and, in the course of work, the cutting away or removal of any part of the existing fire-resistance-rated construction becomes necessary in the general area surrounding the penetration, not to exceed 4 square feet (0.37 m²) in any given area, the progress inspection for fire-resistance-rated construction shall not be required provided that the special inspection agency for the through-penetration firestopping special inspection verifies that the removed portion of fire-resistance-rated construction (i) is less than 4 square feet (0.37 m²), and (ii) has been restored to its original condition.
110.3.5 **Energy code compliance inspections.** Inspections shall be made to determine compliance with approved construction documents.

110.3.6 **Other inspections.** In addition to the inspections specified above, the commissioner is authorized to make or require other inspections of any construction work to ascertain compliance with the provisions of this code and other laws that are enforced by the department.

110.3.7 **Tenant protection plan compliance inspections.** For buildings undergoing work for which a tenant protection plan is required by Article 120 of Title 28 of the *Administrative Code*, inspections shall be made by the department to determine compliance with the tenant protection plan.

110.4 **Special inspections.** Special inspections required by this code or by the commissioner shall be performed by special inspection agencies.

110.5 **Final inspection.** Refer to Article 116 of Chapter 1 of Title 28 of the *Administrative Code*.

110.6 **Issuance of certificate of compliance.** Upon satisfactory inspection of service equipment and the satisfaction of all the requirements for sign-off, the department shall issue a certificate of compliance as applicable for the following service equipment:

1. Elevators;
2. Escalators;
3. Moving walkways;
4. Heating systems; and
5. Dumbwaiters.

110.7 **Approved inspection agencies.** Refer to Articles 114 and 115 of Chapter 1 of Title 28 of the *Administrative Code*.

110.8 **Inspection requests.** Refer to Chapter 1 of Title 28 of the *Administrative Code*.

110.9 **Satisfactory inspection report required.** Portions of work requiring inspection may be sequenced or phased to allow continuing progress of that work provided that work shall not be done beyond the point indicated in each successive required inspection for that phase. The inspector shall either indicate the portion of the construction that is satisfactory as completed, or notify the permit holder or the superintendent of construction wherein the same fails to comply with this code. Any portions that do not comply shall be corrected and such portion shall not be covered or concealed until corrected. The person performing the inspection shall complete a report of satisfactory inspection. Refer to Chapter 1 of Title 28 of the *Administrative Code*.

**SECTION BC 111**
**CERTIFICATE OF OCCUPANCY**

111.1 **General.** Refer to Chapter 1 of Title 28 of the *Administrative Code*. 315
SECTION BC 112
SERVICE UTILITIES

112.1 General. Refer to Chapter 1 of Title 28 of the Administrative Code.

SECTION BC 113
RESERVED

SECTION BC 114
VIOLATIONS

114.1 General. Refer to Chapter 2 of Title 28 of the Administrative Code.

SECTION BC 115
STOP WORK ORDER

SECTION BC 116
UNSAFE STRUCTURES AND EQUIPMENT

116.1 General. Refer to Chapters 2 and 3 of Title 28 of the Administrative Code.

§ 3. Chapter 2 of the New York city building code, is REPEALED and a new chapter
2 is added to read as follows:

CHAPTER 2
DEFINITIONS

SECTION BC 201
GENERAL

201.1 Scope. Unless otherwise expressly stated, the following words and terms shall, for the
purposes of this code, have the meanings shown in this chapter.

201.2 Interchangeability. Words used in the present tense include the future; words stated in the
masculine gender include the feminine and neuter; the singular number includes the plural and the
plural, the singular.

201.3 Terms defined in other codes. Where terms are not defined in this code and are defined
in the New York City Fuel Gas Code, New York City Fire Code, New York City Mechanical Code,
New York City Electrical Code, New York City Plumbing Code, or the New York City Energy
Conservation Code, such terms shall have the meanings ascribed to them as in those codes.

201.3.1 Terms defined in the general administrative provisions. The following terms are
defined in Section 28-101.5 of the Administrative Code:

1968 BUILDING CODE.
1968 OR PRIOR CODE BUILDINGS OR STRUCTURES (PRIOR CODE BUILDINGS).

ACCEPTANCE OR ACCEPTED.

ADDITION.

ADMINISTRATIVE CODE.

ALTERATION.

APPROVAL OR APPROVED.

WRITTEN NOTICE.

ZONING RESOLUTION.

201.4 Terms not defined. Where terms are not defined through the methods authorized by this section, such terms shall have ordinarily accepted meanings such as the context implies.

SECTION BC 202
DEFINITIONS

24-HOUR BASIS. The actual time that a person is an occupant within a facility for the purpose of receiving care. It shall not include a facility that is open for 24 hours and is capable of providing care to someone visiting the facility during any segment of the 24 hours.

100-HOUR TRAINING PROGRAM. A program that (i) includes 100 or more hours of training in technical subjects relating to a construction trade, including an apprenticeship program registered with the New York State Department of Labor, (ii) is approved by OSHA, the United States Department of Labor, the New York State Department of Education or the New York State Department of Labor and (iii) provides training that the department determines is equivalent to or exceeds the training required to comply with Section 3321.

500-YEAR FLOOD ELEVATION. The elevation of the flood having a 0.2-percent chance of being equaled or exceeded in any given year, as specified on FEMA FIRM 360497 or FEMA FIS 360497.

AAC MASONRY. Masonry made of autoclaved aerated concrete (AAC) units, manufactured without internal reinforcement and bonded together using thin- or thick-bed mortar.

ACCESSIBLE. A site, building, facility or portion thereof that complies with Chapter 11.

ACCESSIBLE MEANS OF EGRESS. A continuous and unobstructed way of egress travel from any accessible point in a building or facility to a public way. Such way of egress travel may include an assisted rescue path.

ACCESSIBLE ROUTE. A continuous, unobstructed path that complies with Chapter 11.

ACCESSIBLE UNIT. A dwelling unit or sleeping unit that complies with this code and the provisions for Accessible units in ICC A117.1.

ACCREDITATION BODY. An approved, third-party organization that is independent of the grading and inspection agencies, and the lumber mills, and that initially accredits and subsequently monitors, on a continuing basis, the competency and performance of a grading or inspection agency related to carrying out specific tasks.

ACTIVELY PROCTORED ONLINE TRAINING. Online training that satisfies each of the following conditions:
1. The person responsible for conducting such training confirms the identification of the person taking such training in a manner established by the department.

2. While such training is being conducted, the site of such training is actively observed by or on behalf of the person responsible for conducting such training.

3. Such training complies with any other requirements the department establishes by rule.

**ADHERED MASONRY VENEER.** Veneer secured and supported through the adhesion of an approved bonding material applied to an approved backing.

**ADJUSTMENT (SCAFFOLD).** The calibration or modification of a scaffold, including any part or component, that does not meet the definition of installation, removal, repair, maintenance, or use, and does not constitute normal use or operation of the scaffold.

**AEROSOL.** A product that is dispensed from an aerosol container by a propellant, classified as follows:

- **Level 1.** Aerosol products with a total chemical heat of combustion that is greater than 0 and less than or equal to 8,600 British thermal units per pound (Btu/lb) (20 kJ/g).

- **Level 2.** Aerosol products with a total chemical heat of combustion that is greater than 8,600 Btu/lb (20 kJ/g), but less than or equal to 13,000 Btu/lb (30 kJ/g).

- **Level 3.** Aerosol products with a total chemical heat combustion that is greater than 13,000 Btu/lb (30 kJ/g).

**AGGREGATE.** In roofing, crushed stone, crushed slag or water-worn gravel used for surfacing for roof coverings.

**AGRICULTURAL, BUILDING.** A structure designed and constructed to house farm implements, hay, grain, poultry, livestock or other horticultural products. This structure shall not be a place of human habitation or a place of employment where agricultural products are processed, treated or packaged, nor shall it be a place used by the public.

**AIR-INFLATED STRUCTURE.** A structure that uses air-pressurized membrane beams, arches or other elements to enclose space. Occupants of such a structure do not occupy the pressurized area used to support the structure.

**AIR-SUPPORTED STRUCTURE.** A building wherein the shape of the structure is attained and maintained by elevated air pressure and occupants of the structure are within the elevated pressure area. Air-supported structures are of two basic types:

- **Double skin.** Similar to a single skin, but with an attached liner that is separated from the outer skin and provides an airspace which serves for insulation, acoustic, aesthetic or similar purposes.
Single skin. Where there is only the single outer skin and the air pressure is directly against that skin.

Aisle. An unenclosed exit access component that defines and provides a path of egress travel.

Aisle Accessway. That portion of an exit that leads to an aisle.

Alarm Notification Appliance. A fire alarm system component such as a bell, horn, speaker, light or text display that provides audible, tactile or visible outputs, or any combination thereof.

Alarm Signal. A signal indicating an emergency requiring immediate action, such as a signal indicative of fire.

Alarm Verification Feature. A feature of automatic fire detection and alarm systems to reduce unwanted alarms wherein smoke detectors report alarm conditions for a minimum period of time, or confirm alarm conditions within a given time period, after being automatically reset, in order to be accepted as a valid alarm-initiation signal.

Allowable Stress Design. A method of proportioning structural members, such that elastically computed stresses produced in the members by nominal loads do not exceed specified allowable stresses (also called "working stress design").

Alternate Load Path. A secondary or redundant load path capable of transferring the load from one structural element to other structural elements.

Alternate Load Path Method. A design approach that accounts for an extreme event by providing alternate load paths for elements that are no longer able to carry load. In an alternate load path design, key elements are considered notionally removed, one at a time, and the structure is designed to transfer the loads from the removed element to other structural elements, as required by Section 1617.

Alternating Tread Device. A device that has a series of steps between 50 and 70 degrees (0.87 and 1.22 rad) from horizontal, usually attached to a center support rail in an alternating manner so that the user does not have both feet on the same level at the same time.

Ambulatory Care Facility. Buildings or portions thereof used to provide medical, surgical, psychiatric, nursing or similar care on a less than 24-hour basis to individuals who are rendered incapable of self-preservation by the services provided.

Anchor Building. An exterior perimeter building of a group other than H having direct access to a covered mall building but having required means of egress independent of the mall.

Anchored Masonry Veneer. Veneer secured and supported through the adhesion of an approved bonding material applied to an approved backing.

Animal Service Facility. The following facilities where animals are sheltered on a 24-hour basis: animal hospitals, kennels, pounds, veterinary clinics and pet shops.
ANNULAR SPACE. The opening around the penetrating item.

ANNUNCIATOR. A unit containing one or more indicator lamps, alphanumeric displays or other equivalent means in which each indication provides status information about a circuit, condition or location.

APARTMENT. A dwelling unit providing permanent provisions for both sanitation and kitchen facilities, occupied or arranged to be occupied by not more than one family maintaining a common household.

APARTMENT, STUDENT. An apartment occupied or arranged to be occupied by students enrolled at a single accredited college or university and maintaining a common household pursuant to a lease, sublease, or occupancy agreement directly with such college or university.

ARCHITECTURAL TERRA COTTA. Plain or ornamental hard-burned modified clay units, larger in size than brick, with glazed or unglazed ceramic finish.

AREA (Masonry).

Gross cross-sectional. The area delineated by the out-to-out specified dimensions of masonry in the plane under consideration.

Net cross-sectional. The area of masonry units, grout and mortar crossed by the plane under consideration based on out-to-out specified dimensions.

AREA, BUILDING. The area included within surrounding exterior walls (or exterior walls and firewalls) exclusive of vent shafts and courts. Areas of the building not provided with surrounding walls shall be included in the building area if such areas are included within the horizontal projection of the roof or floor above.

AREA OF RESCUE ASSISTANCE. An area where persons unable to use stairways can remain temporarily to await instructions or assistance during emergency evacuation.

AREA OF SPORT ACTIVITY. That portion of an indoor or outdoor space where the play or practice of a sport occurs.

AREAWAY. A space below grade adjacent to a building open to the outer air and enclosed by walls.

ARTICULATING BOOM CRANE. A crane whose boom consists of a series of folding, pin connected structural members, typically manipulated to extend or retract by power from hydraulic cylinders.

ASPECT RATIO. The height of any portion of a building divided by its least dimension at the elevation from which the height is being measured.

ASPHALT. A dark brown to black bitumen pitch that melts readily and which appears in nature in asphalt beds or is produced as a by-product of the petroleum industry.
ASPHALT CONCRETE or ASPHALT PAVING. A mixture of liquid asphalt and graded aggregate used as a paving material.

ASSEMBLY SPACE. Any part of a place of assembly, exclusive of the stage, that is occupied by numbers of persons during the major period of occupancy. Every tier of seating shall be considered a separate assembly space.

ASSISTED RESCUE PATH. A portion of the accessible means of egress which begins at the area of rescue assistance and terminates at the public way.

ATRIUM. An opening connecting two or more stories other than enclosed stairways, elevators, hoistways, escalators, plumbing, electrical, air-conditioning or any other vertical openings that are not required to be enclosed by other provisions of this code, which is closed at the top and not defined as a mall. Stories, as used in this definition, do not include balconies within assembly groups or mezzanines that comply with Section 505.

ATTIC. The space between the ceiling beams of the top story and the roof rafters.

AUDIBLE ALARM NOTIFICATION APPLIANCE. A notification appliance that alerts by the sense of hearing.

AUGERED-CAST-IN-PLACE PILES. Augered-cast-in-place piles are constructed by pumping grout into an augered hole during the withdrawal of the auger. The pile is reinforced with a single reinforcing bar, a reinforcing steel cage or a structural steel section.

AUTOCLAVED AERATED CONCRETE (AAC). Low-density cementitious product of calcium silicate hydrates, whose material specifications are defined in ASTM C 1386.

AUTOMATIC. As applied to fire protection devices, a device or system providing an emergency function without the necessity for human intervention and activated as a result of a predetermined temperature rise, rate of temperature rise and/or the presence of combustion products.

AUTOMATIC FIRE-EXTINGUISHING SYSTEM. An approved system of devices and equipment that automatically detects a fire and discharges an approved fire-extinguishing agent onto or in the area of a fire.

AUTOMATIC SMOKE DETECTION SYSTEM. A fire alarm system that has initiation devices that utilize smoke detectors for protection of an area such as a room or space with detectors to provide early warning of fire.

AUTOMATIC SPRINKLER SYSTEM. A fire suppression or control device that operates automatically when its heat-activated element is heated to its thermal rating or above, allowing water to discharge over a specified area.

AUTOMATIC WATER MIST SYSTEM. A system consisting of a water supply, a pressure source, and a distribution piping system with attached nozzles, which, at or above a minimum operating pressure defined by its listing, discharges water in fine droplets meeting the requirements of NFPA 750 for the purpose of the control, suppression or extinguishment of a fire. Such systems include wet-
pipe, dry-pipe and pre-action types. The systems are designed as engineered, pre-engineered, local-application or total flooding systems.

**AVERAGE AMBIENT SOUND LEVEL.** The root mean square, A-weighted sound pressure level measured over a 24-hour period, or the time any person is present, whichever time period is less.

**AWNING.** An architectural projection that provides weather protection, identity or decoration and is wholly supported by the building to which it is attached. An awning is comprised of a lightweight frame structure over which a covering is attached.

**AXIS OF ROTATION.** The vertical axis around which the crane superstructure rotates.

**AXLE.** The shaft or spindle with which or about which a wheel rotates. On truck and wheel mounted cranes, it refers to a type of axle assembly including housing, gearing, differential, bearings, and mounting appurtenances.

**A-ZONE.** An area of special flood hazard without high-velocity wave action. When not shown on the FIRMs, the water surface elevation may be determined from available data by the registered design professional of record in accordance with Section G103.3. See also “Area of special flood hazard.”

**BACKING.** The wall or surface to which the veneer is secured.

**BALCONY, EXTERIOR.** An exterior floor projecting from and supported by a structure without additional independent supports.

**BALED COTTON.** A natural seed fiber wrapped in and secured with industry accepted materials, typically consisting of burlap, woven polypropylene, polyethylene or cotton or sheet polyethylene, secured with wire or bands. The term baled cotton includes lint removed from the cottonseed (linters) and residual materials from the ginning process (motes).

**BALED COTTON, DENSELY PACKED.** Baled cotton with a packing density of not less than 22 pounds per cubic foot (360 kg/m³). A bale of densely packed baled cotton typically measures 55 inches (1397 mm) in length, 21 inches (533.4 mm) in width, and 27.6 to 35.4 inches (701 to 899 mm) in height.

**BALLAST.** In roofing, ballast comes in the form of large stones or paver systems or light-weight interlocking paver systems and is used to provide uplift resistance to components of the roof assembly systems that are not adhered or mechanically attached to the roof deck.

**BARRICADE (EXPLOSIVE).** A structure or other artificial or natural barrier constructed in connection with the storage, handling and use of explosives that is designed to withstand the rapid release of energy in an explosion and provides a shield from the impact of such explosion. A straight line from the top of any sidewall of a building containing explosives to the eaveline of any magazine or other building or to a point 12 feet (3658 mm) above the center of a railway shall pass through such barrier.

Artificial barricade. An artificial mound or revetment, including a barrier constructed of sandbags, with a minimum thickness of 3 feet (914 mm).
**Natural barricade.** Terrain or other natural features of the ground.

**BARRIER, TEMPORARY.** An approved temporary fence, permanent fence, the wall of a permanent structure, any other structure, or any combination thereof that prevents access to the swimming pool by any person not engaged in the installation or construction of the swimming pool during its installation or construction.

**BASE FLOOD.** The flood having a 1-percent chance of being equaled or exceeded in any given year.

**BASE FLOOD ELEVATION.** The elevation of the base flood, including wave height, as specified on FEMA FIRMs 360497 or as determined in accordance with Section G103.3. In areas designated as ZONE AO, the base flood elevation shall be the elevation of the highest existing grade of the building’s perimeter plus the depth number (in feet) specified on the flood hazard map.

**BASE (MOUNTING).** The traveling base on which the rotating superstructure of a crawler crane is mounted.

**BASEMENT.** A story partly below the grade plane and having less than one-half its clear height (measured from finished floor to finished ceiling) below the grade plan (see "Story" and "Story above grade plane"). A basement shall be considered a story above grade plane.

**BASEMENT (FOR FLOOD ZONE PURPOSES).** The portion of a building having its floor subgrade (below ground level) on all sides. This definition of “Basement” is limited in application to the provisions of Appendix G.

**Bearer (Putlog).** A horizontal transverse scaffold member (which may be supported by legs or runners) upon which the scaffold platform rests and joins scaffold uprights, posts, poles, and similar members.

**Bed Joint.** The horizontal layer of mortar on which a masonry unit is laid.

**Bird Hazard Installations.** Monolithic glazing installations that provide a clear line of sight on the exterior of buildings, including, but not limited to, glass awnings, glass handrails and guards, glass wind break panels, or glass acoustic barriers.

**Bleachers.** Tiered seating supported on a dedicated structural system and two or more rows high and is not a building element (see "Grandstand").

**Boarder (Roomer, Lodger).** A person who pays a consideration for living within the household and does not occupy such space as an incident of employment.

**Boiling Point.** The temperature at which the vapor pressure of a liquid equals the atmospheric pressure of 14.7 pounds per square inch (psia) (101 kPa) or 760 mm of mercury. Where an accurate boiling point is unavailable for the material in question, or for mixtures which do not have a constant boiling point, for the purposes of this classification, the 20-percent evaporated point of a distillation performed in accordance with ASTM D 86 shall be used as the boiling point of the liquid.
**BOOM (CRANE OR DERRICK).** A section or strut, of which the heel (lower end) is affixed to a base, carriage, or support, and whose upper end supports a cable and sheaves where the load is lifted by means of rope and a hook.

**BOOM POINT.** The outer extremity of the crane boom, containing the hoist sheave assembly.

**BRACED WALL LINE.** A straight line through the building plan that represents a location of the lateral resistance provided by wall bracing.

**BRACED WALL PANEL.** A full-height section of wall constructed to resist in-plane shear loads through interaction of framing members, sheathing material and anchors. The panel’s length meets the requirements of its particular bracing method and contributes toward the total amount of bracing required along its braced wall line.

**BRAKE.** A device used for retarding or stopping motion.

**BREAKAWAY WALL.** An open lattice wall subject to flooding that is not required to provide structural support to a building or other structure and that is designed and constructed such that, under base flood or lesser flood conditions, it will collapse under specific lateral-loading forces in such a way that (i) it allows the free passage of floodwaters, and (ii) it does not damage the structure or the supporting foundation system.

**BREAKOUT.** For revolving doors, a process whereby wings or door panels can be pushed open manually for means of egress travel.

**BRICK.**

- **Calcium silicate (sand lime brick).** A pressed and subsequently autoclaved unit that consists of sand and lime, with or without the inclusion of other materials.

- **Clay or shale.** A solid or hollow masonry unit made of clay or shale, usually formed into a rectangular prism, then burned or fired in a kiln; brick is a ceramic product.

- **Concrete.** A concrete masonry unit made from portland cement, water, and suitable aggregates, with or without the inclusion of other materials.

**BUCKET HOIST.** A power or manually operated bucket that (i) is temporarily installed at a construction or demolition site, (ii) moves vertically on guide members to raise or lower material, and (iii) is controlled from a point outside the conveyance.

**BUILDING ELEMENT.** A fundamental component of building construction, listed in Table 601, which may or may not be of fire-resistance-rated construction and is constructed of materials based on the building type of construction.

**BUILDING, ENCLOSED.** A building that does not comply with the requirements for open or partially enclosed buildings.

**BUILDING LINE.** The line established by law, beyond which a building shall not extend, except as specifically provided by law.
**BUILDING, LOW-RISE.** Enclosed or partially enclosed buildings that comply with the following conditions:

1. Mean roof height, \( h \), less than or equal to 60 feet (18 288 mm).

2. Mean roof height, \( h \), does not exceed least horizontal dimension.

**BUILDING, OPEN.** A building having each wall at least 80 percent open. This condition is expressed for each wall by the equation:

\[
A_o \geq 0.8A_g \quad \text{(Equation 2-1)}
\]

where:

- \( A_o \) = Total area of openings in a wall that receives positive external pressure, in square feet (m²).
- \( A_g \) = The gross area of that wall in which \( A_o \) is identified, in square feet (m²).

**BUILDING, PARTIALLY ENCLOSED.** A building that complies with both of the following conditions:

1. The total area of openings in a wall that receives positive external pressure exceeds the sum of the areas of openings in the balance of the building envelope (walls and roof) by more than 10 percent; and

2. The total area of openings in a wall that receives positive external pressure exceeds 4 square feet (0.37 m²) or 1 percent of the area of that wall, whichever is smaller, and the percentage of openings in the balance of the building envelope does not exceed 20 percent. These conditions are expressed by the following equations:

\[
A_o > 1.10A_{oi} \quad \text{(Equation 2-2)}
\]

\[
A_o > 4 \text{ square feet (0.37m}^2\text{)} \text{ or } > 0.01A_g, \text{ whichever is smaller, and } A_{oi}/A_{gi} < 0.20 \quad \text{(Equation 2-3)}
\]
where:

\( A_o, A_g \) are as defined for an open building.

\[ A_{oi} = \text{The sum of the areas of openings in the building envelope (walls and roof) not including } A_o \text{, in square feet (m}^2\text{).} \]

\[ A_{gi} = \text{The sum of the gross surface areas of the building envelope (walls and roof) not including } A_g \text{, in square feet (m}^2\text{).} \]

**BUILDING, SIMPLE DIAPHRAGM.** A building in which wind loads are transmitted through floor and roof diaphragms to the vertical lateral-force-resisting systems.

**BUILDING-INTEGRATED PHOTOVOLTAIC (BIPV) PRODUCT.** A building product that incorporates photovoltaic modules and functions as a component of the building envelope.

**BUILDINGS AND OTHER STRUCTURES, FLEXIBLE.** Buildings and other structures that have a fundamental natural frequency less than 1 Hz.

**BUILT-UP ROOF COVERING.** Two or more layers of felt cemented together and surfaced with a cap sheet, mineral aggregate, smooth coating or similar surfacing material.

**BULKHEAD.** An enclosed rooftop structure enclosing a shaft, stairway, tank or service equipment, or other space not designed or used for human occupancy.

**CABARET.** Any room, place or space in which any musical entertainment, singing, dancing or other similar amusement is permitted in connection with an eating and drinking establishment.

**CABLE-RESTRAINED, AIR-SUPPORTED STRUCTURE.** A structure in which the uplift is resisted by cables or webbings that are anchored to either foundations or dead men. Reinforcing cable or webbing is attached by various methods to the membrane or is an integral part of the membrane. This is not a cable-supported structure.

**CABLEWAY.** A device used for hoisting, lowering, and transporting loads within a prescribed path, longitudinally and laterally. The load block (upper) travels on a rope catenary system having span ends that are supported on fixed or movable towers (masts) or other elevated supports.

**CAISSON PILES.** Steel cased piles constructed by advancing a steel shell seated into rock and drilling of an uncased socket within the rock. The shell and socket are filled with a steel core section or steel reinforcing, and concrete or grout.

**CANOPY.** A permanent structure or architectural projection of rigid construction over which a covering is attached that provides weather protection, identity or decoration, which shall be structurally independent or supported by attachment to a building on one end and by not fewer than one stanchion at the outer end.

**CARBON DIOXIDE EXTINGUISHING SYSTEMS.** A system supplying carbon dioxide (CO\(_2\)) from a pressurized vessel through fixed pipes and nozzles. The system includes a manual- or automatic-actuating mechanism.
CARBON MONOXIDE ALARM. A listed single- or multiple-station alarm responsive to carbon monoxide.

CARBON MONOXIDE DETECTOR. A listed device that senses carbon monoxide.

CARBON MONOXIDE-PRODUCING EQUIPMENT. Any furnace, boiler, water heater, fireplace, cooking appliance, gas clothes dryer, apparatus, appliance or device that burns coal, kerosene, oil, wood, fuel gases and other petroleum products including, but not limited to, methane, natural gas, liquefied natural gas and manufactured fuel gases.

CARE SUITE. In Group I-2 occupancies, a group of treatment rooms, care recipient sleeping rooms and the support rooms or spaces and circulation space within the suite where staff are in attendance for supervision of all care recipients within the suite, and the suite is in compliance with the requirements of Section 407.4.4.

CARPORT. A structure or portion of a structure, accessory to a Group R-2 or R-3 occupancy, open on at least two sides and unenclosed for at least 50 percent of perimeter, used for the parking or storage of passenger motor vehicles. Such facility shall not exceed 650 square feet (60.45 m²) in area and one story in height.

CAST STONE. A building stone manufactured from portland cement concrete precast and used as a trim, veneer or facing on or in buildings or structures.

CEILING LIMIT. The maximum concentration of an airborne contaminant to which one may be exposed. The ceiling limits utilized are those published in DOL 29 CFR Part 1910.1000. The ceiling Recommended Exposure Limit (REL-C) concentrations published by the U.S. National Institute for Occupational Safety and Health (NIOSH), Threshold Limit Value – Ceiling (TLV-C) concentrations published by the American Conference of Governmental Industrial Hygienists (ACGIH), Ceiling Workplace Environmental Exposure Level (WEEL-Ceiling) Guides published by the American Industrial Hygiene Association (AIHA), and other approved, consistent measures are allowed as surrogates for hazardous substances not listed in DOL 29 CFR Part 1910.1000.

CEILING RADATION DAMPER. See Dampers, Types of.

CELL. See Section 408.1.1.

CELL. As used in Chapter 21, a void space having a gross cross-sectional area greater than 1 1/2 square inches (967 mm²).

CELL TIER. See Section 408.1.1.

CELLAR. That portion of a building that is partly or wholly underground, and having one-half or more of its clear height (measured from finished floor to finished ceiling) below the grade plane. Cellars shall not be counted as stories in measuring the height of the buildings.

CEMENT BOARD. A fiber reinforced cementitious panel most commonly used under flooring or as a tile backing board. Cement board shall include discrete nonasbestos fiber-cement interior substrate sheets or nonasbestos fiber-mat reinforced cement substrate sheets.
CEMENT PLASTER. A mixture of portland or blended cement, portland cement or blended cement and hydrated lime, masonry cement or plastic cement and aggregate and other approved materials as specified in this code.

CEMENTED SOIL. Soil in which the particles are held together by a chemical agent, such as calcium carbonate, such that a hand-size sample cannot be crushed into powder or individual soil particles by finger pressure.

CERAMIC FIBER BLANKET. A high-temperature mineral wool insulation material made of alumina-silica ceramic or calcium magnesium silicate soluble fibers and weighing 4 to 10 pounds per square cubic foot (pcf) (64 to 160 kg/m³).

CERTIFICATE OF APPROVAL. A certificate issued by the department upon review and approval of the engineering and testing of a specific make and model of hoisting equipment to ensure compliance with the applicable provisions of this code.

CERTIFICATE OF OPERATION. A certificate issued by the department upon satisfactory inspection of a specific piece of hoisting equipment to ensure that the equipment is in compliance with this code.

CERTIFICATE OF ON-SITE INSPECTION. A certificate issued by the department based on a site-specific inspection of the placement and founding of hoisting equipment.

CHILD CARE FACILITIES. See Section 308.2.1.

CHIMNEY. A primarily vertical structure containing one or more flues used to remove hot gases from burning fuel, refuse, or from industrial processes to the outdoor atmosphere.

Factory-built chimney. A listed and labeled chimney composed of factory-made components, assembled in the field in accordance with manufacturer’s instructions and the conditions of the listing.

Masonry chimney. A field-constructed chimney composed of solid masonry units, bricks, stones, or concrete.

Metal chimney. A field-constructed chimney of metal.

CHIMNEY TYPES.

High-heat appliance type. An approved chimney for removing the products of combustion from fuel-burning, high-heat appliances producing combustion gases in excess of 2,000°F (1093°C) measured at the appliance flue outlet (see Section 2113.11.3).

Low-heat appliance type. An approved chimney for removing the products of combustion from fuel-burning, low-heat appliances producing combustion gases not in excess of 1,000°F (538°C) under normal operating conditions, but capable of producing combustion gases of 1,400°F (760°C) during intermittent forces firing for periods up to 1 hour. Temperatures shall be measured at the appliance flue outlet.
Medium-heat appliance type. An approved chimney for removing the products of combustion from fuel-burning, medium-heat appliances producing combustion gases between 1,000°F (538°C) and 2,000°F (1093°C) measured at the appliance flue outlet (see Section 2113.11.2).

CIRCULATION PATH. An exterior or interior way of passage from one place to another for pedestrian travel, including that within accessible spaces.

CLAMSHELL. A shovel bucket with two jaws that clamp together by their own weight when it is lifted by a closing line.

CLEAN AGENT. Electrically nonconducting, volatile or gaseous fire extinguishant that does not leave a residue upon evaporation.

CLIMBER CRANE. A tower crane that can be raised to a new working height, either by adding tower sections to the top of the crane (top climbing), or by a system in which the entire crane is raised inside the structure (inside climbing).

CLINIC, OUTPATIENT. Buildings or portions thereof used to provide medical care on less than a 24-hour basis to persons who are not rendered incapable of self-preservation by the services provided.

CLOSED SYSTEM. The use of any compressed gas and the use of a solid or liquid hazardous material in equipment or a vessel or system that remains closed during normal operations, such that vapors emitted during the operation of such equipment, vessel or system are not liberated outside of the equipment, vessel or system and the gas or hazardous material is not exposed to the atmosphere during such operation. Examples of closed systems include hazardous materials conveyed through a piping system into closed equipment of a closed vessel or system.

CLOSED-CIRCUIT TELEPHONE. A telephone with a dedicated line such as a house phone, courtesy phone or phone that must be used to gain entrance to a facility.

COASTAL A-ZONE. An area within a special flood hazard area, shown on FEMA FIRMs 360497 as an area bounded by a “Limit of Moderate Wave Action,” landward of a V-Zone or landward of an open coast without mapped V-Zones. In a Coastal A-Zone, the principal source of flooding must be astronomical tides, storm surges, seiches, or tsunamis, and not riverine flooding. During the base flood conditions, the potential for breaking wave heights must be greater than or equal to 1 foot, 6 inches (457 mm). In no case shall an area of special flood hazard be deemed a coastal A-Zone unless and until it has been identified as such on the adopted FEMA FIRMs 360497.

COASTAL HIGH HAZARD AREA. Area within the area of special flood hazard extending from offshore to the inland limit of a primary dune along an open coast and any other area that is subject to high-velocity wave action from storms and shown on FEMA FIRMs 360497 as velocity Zone V, VO, VE or V1-30.

COHESIVE SOIL. Clay (fine grained soil), or soil with a high clay content, which has cohesive strength. Cohesive soil does not crumble, can be excavated with vertical side slopes, and is plastic when moist. Cohesive soil is hard to break up when dry, and exhibits significant cohesion when submerged. Cohesive soils include clayey silt, sandy clay, silty clay, clay and organic clay.
COLLAPSE (STRUCTURAL). Failure of a structural element to the extent that it can no longer support any load.

COLLAR JOINT. Vertical longitudinal space between wythes of masonry or between masonry wythe and backup construction that is permitted to be filled with mortar or grout.

COLLECTING SAFE AREA. See Section 1002.1.2.

COLLECTOR. A horizontal diaphragm element parallel and in line with the applied force that collects and transfers diaphragm shear forces to the vertical elements of the lateral-force-resisting system or distributes forces within the diaphragm or both.

COMBINATION FIRE/SMOKE DAMPER. See Dampers, Types of.

COMBINATION SIGN. A sign incorporating any combination of the features of pole, projecting and roof signs.

COMBINED HEAT AND POWER SYSTEMS. Equipment that simultaneously produces electricity and heat from a single fuel source.

COMBUSTIBLE DUST. Finely divided solid material that is 420 microns or less in diameter, will pass through a U.S. standard No. 40 sieve and, when dispersed in air in sufficient concentrations, can be ignited by a flame, spark or other source of ignition.

COMBUSTIBLE FIBERS. Readily ignitable and free-burning materials in fibrous or shredded form, such as cocoa fiber, cotton, excelsior, hay, hemp, henequen, istle, jute, kapok, oakum, sisal, Spanish moss, straw, tow, wastepaper or other natural or synthetic fibers that possess similar qualities, but excluding densely packed baled cotton.

Exception: Moss used for medicinal purposes.

COMBUSTIBLE LIQUID. For the purposes of transportation, a combustible liquid as defined in the regulations of the United States of Transportation, as set forth in 49 CFR 173.120. For all other purposes, a liquid, other than a compressed gas or cryogenic fluid, having a closed cup flash point at or above 100°F (38°C) classified as follows:

Class II. Liquids having a closed cup flash point at or above 100°F (38°C) and below 140°F (60°C).

Class IIIA. Liquids having a closed cup flash point at or above 140°F (60°C) and below 200°F (93°C).

Class IIIB. Liquids having a closed cup flash point at or above 200°F (93°C).

COMMERCIAL COOKING SYSTEM. A system consisting of commercial cooking equipment, exhaust hood, filters, exhaust duct system, fire suppression system and other related appurtenances designed to capture grease-laden cooking vapors and exhaust them safely to the outdoors.
COMMERCIAL MOTOR VEHICLE. A motor vehicle used to transport passengers or goods where the motor vehicle:

1. Has a gross vehicle weight rating of 10,000 pounds (4540 kg) or more; or

2. Is designed to transport 16 or more passengers, including the driver.

COMMERCIAL TRUCK MOUNTED CRANE (BOOM TRUCK). A mobile crane consisting of a rotating superstructure (center post or turntable), boom, operating machinery, and one or more operator’s stations mounted on a frame attached to a commercial truck chassis.

COMMON PATH OF EGRESS TRAVEL. That portion of exit access that the occupants are required to traverse before two separate and distinct paths of egress travel to two exits are available. Paths that merge are common paths of travel. Common paths of egress travel shall be included within the permitted travel distance.

COMMON USE. Interior or exterior circulation paths, rooms, spaces or elements that are made available for the shared use of two or more people but are not for public use.

COMPACTED CONCRETE PILES. Compacted concrete piles are constructed by filling a driven casing with low-strength concrete and compacting the concrete as the casing is withdrawn.

COMPETENT PERSON. One who is capable of identifying existing and predictable hazards in the surroundings or conditions that are unsanitary, hazardous or dangerous, and who has authorization to take prompt corrective measures to eliminate such hazards.

COMPLETED STEEL FLOOR. Any floor, in a building whose primary structural system consists of structural steel, where the structural floor system, including the final walkable structural surface, has been installed and has achieved its required strength for construction loading.

COMPONENTS AND CLADDING. Elements of the building envelope that do not qualify as part of the main wind force-resisting system.

COMPOSITE PILES. Composite piles consist of two or more approved pile types joined together.

COMPRESSED GAS. A material, or mixture of materials that:

1. Is a gas at 68°F (20°C) or less at 14.7 psia (101 kPa) of pressure; and

2. Has a boiling point of 68°F (20°C) or less at 14.7 psia (101 kPa) that is either liquefied, nonliquefied or in solution at that temperature and pressure, except those gases which have no other health- or physical-hazard properties are not considered to be compressed until the pressure in the packaging exceeds 41 psia (282 kPa) at 68°F (20°C).

The states of compressed gases are categorized as follows:

Nonliquefied compressed gases. Gases, other than those in solution, which are in packaging under the charged pressure and are entirely gaseous at a temperature of 68°F (20°C).
Liquefied compressed gases. Gases that, in a packaging under the charged pressure, are partially liquid at a temperature of 68°F (20°C).

Compressed gases in solution. Nonliquefied gases that are dissolved in a solvent.

Compressed gas mixtures. A mixture of two or more compressed gases contained in a single packaging, the hazard properties of which are represented by the properties of the mixture as a whole.

CONCEALED SPACES. Enclosed spaces within partitions, walls, floors, roofs, stairs, furring, pipe chases and column enclosures and other similar spaces.

CONCRETE.

Carbonate aggregate. Concrete made with aggregates consisting mainly of calcium or magnesium carbonate, such as limestone or dolomite, and containing 40 percent or less quartz, chert, or flint.

Cellular. A lightweight insulating concrete made by mixing a preformed foam with portland cement slurry and having a dry unit weight of approximately 30 pcf (480 kg/m³).

Lightweight aggregate. Concrete made with aggregates of expanded clay, shale, slag or slate or sintered fly ash or any natural lightweight aggregate meeting ASTM C 330 and possessing equivalent fire-resistance properties and weighing 85 to 115 pcf (1360 to 1840 kg/m³).

Perlite. A lightweight insulating concrete having a dry unit weight of approximately 30 pcf (480 kg/m³) made with perlite concrete aggregate. Perlite aggregate is produced from a volcanic rock that, when heated, expands to form a glass-like material of cellular structure.

Sand-lightweight. Concrete made with a combination of expanded clay, shale, slag, slate, sintered fly ash, or any natural lightweight aggregate meeting ASTM C 330 and possessing equivalent fire-resistance properties and natural sand. Its unit weight is generally between 105 and 120 pcf (1680 and 1920 kg/m³).

Siliceous aggregate. Concrete made with normal-weight aggregates consisting mainly of silica or compounds other than calcium or magnesium carbonate, which contains more than 40-percent quartz, chert, or flint.

Vermiculite. A lightweight insulating concrete made with vermiculite concrete aggregate that is laminated micaceous material produced by expanding the ore at high temperatures. When added to a portland cement slurry the resulting concrete has a dry unit weight of approximately 30 pcf (480 kg/m³).

CONCRETE-FILLED STEEL PIPE AND TUBE PILES. Concrete-filled steel pipe and tube piles are constructed by driving a steel pipe or tube section into the soil and filling the pipe or tube section with concrete. The steel pipe or tube section is left in place during and after the deposition of the concrete. For the purposes of this code, these piles shall be considered driven piles.
CONCRETE WASHOUT WATER. Wastewater from the rinsing of equipment used to mix, transport, convey, and/or place concrete. Such equipment shall include, but not be limited to, concrete buckets, concrete hose lines and pumps, boots, shovels, finishing tools, wheelbarrows, motorized concrete carts, concrete pour funnels and the chute of concrete mixer trucks.

Exceptions:

1. This term shall not include wastewater from the rinsing of equipment involved in the preparation, conveyance or application of concrete that is:
   
   1.1. mixed on site if the total quantity of concrete is less than or equal to one and one half cubic yards (1.146 m³), or
   
   1.2. from bagged ready mix if the total quantity of concrete is less than or equal to sixty (60) eighty pound (36.287 kg) bags, or eighty (80) sixty pound (27.215 kg) bags, or the equivalent.

2. This term shall not include wastewater from the rinsing of the wheels, undercarriage or chassis of concrete mixer trucks.

CONGREGATE LIVING UNIT. A dwelling unit, comprised of one or more habitable rooms separated by nonrated partitions, occupied or arranged to be occupied by more than one family or by persons who are not maintaining a common household. Creation of or conversion to such unit shall be subject to Section 27-2077 of the New York City Housing Maintenance Code.

CONSTANTLY ATTENDED LOCATION. A designated location at a facility staffed by trained personnel on a continuous basis where alarm or supervisory signals are monitored and facilities are provided for notification of the Fire Department of other emergency services.

CONSTRUCTION. The excavation, erection, alteration, and repair of buildings or any component parts, including all operations incidental thereto.

CONTAINER GARDEN. A plant or plants maintained in a pot or planters located on a roof, terrace, or other horizontal exterior area.

CONTINUOUS GAS DETECTION SYSTEM. A gas detection system where the analytical instrument is maintained in continuous operation and sampling is performed without interruption. Analysis is allowed to be performed on a cyclical basis at intervals not to exceed 30 minutes.

CONTROL AREA. Spaces within a building where quantities of hazardous materials not exceeding the maximum allowable quantities per control area are stored, handled, or used, including any dispensing. See also definition of "Outdoor control area" in the New York City Fire Code.

CONTROLLED LOW-STRENGTH MATERIAL. A self-compacted, cementitious material used primarily as a backfill in place of compacted fill.

CONVENTIONAL LIGHT-FRAME CONSTRUCTION. A type of construction whose primary structural elements are formed by a system of repetitive wood-framing members. See Section 2308 for conventional light-frame construction provisions.
CORNER SCAFFOLD (ANGLE SCAFFOLD). A suspended scaffold consisting of an assembly of two or more platforms connected nonlinearly and designed and manufactured to fit around a corner or a projecting part of a building.

CORRIDOR. An enclosed exit access component that defines and provides a path of egress travel to an exit. Corridors shall be either interior or public.

- **Corridor, interior.** A corridor that serves only one tenant. In Group E occupancies, corridors serving only one institution shall be deemed as serving a single tenant.

- **Corridor, public.** A corridor that serves more than one tenant.

CORROSIVE MATERIAL. A material that causes full thickness destruction of human skin at the site of contact within a specified period of time when tested by methods set forth in DOTn regulations 49 CFR 173.136 and 173.137, or a liquid that has a severe corrosion rate on steel or aluminum based on the criteria set forth in DOTn regulations 49 CFR 173.173(c)(2).

CORROSION RESISTANCE. The ability of a material to withstand deterioration of its surface or its properties when exposed to its environment.

COUNTERWEIGHT. Weight used to supplement the weight of the machine in order to provide stability for lifting loads.

COURT. An open, uncovered space, unobstructed to the sky, bounded on three or more sides by exterior building walls or other enclosing devices.

COVERED DEVELOPMENT PROJECT. See Section 28-104.11.1 of the Administrative Code.

COVERED MALL BUILDING. A single building enclosing a number of tenants and occupants such as retail stores, drinking and dining establishments, entertainment and amusement facilities, passenger transportation terminals, offices, and other similar uses wherein two or more tenants have a main entrance into one or more malls. For the purposes of this chapter, anchor buildings shall not be considered as part of the covered mall building. The term "Covered Mall Building" shall include open mall buildings as defined below.

- **Mall.** A roofed or covered common pedestrian area within a covered mall building that serves as access for two or more tenants and not to exceed three levels that are open to each other. The term "mall" shall include open malls as defined below.

- **Open mall.** An unroofed common pedestrian way serving a number of tenants not exceeding three levels. Circulation at levels above grade shall be permitted to include open exterior balconies leading to exits discharging at grade.

- **Open mall building.** Several structures housing a number of tenants, such as retail stores, drinking and dining establishments, entertainment and amusement facilities, offices and other similar uses, wherein two or more tenants have a main entrance into one or more open malls. For the purposes of Chapter 4, anchor buildings are not considered as part of the open mall building.

CRANE. A power operated machine that can (i) hoist, lower, and horizontally move a suspended load, or (ii) lift, lower, and horizontally swing a load utilizing a boom, jib, arm, or similar member, regardless
of whether it is fixed, folds, telescopes, or articulates. The definition of crane includes, but is not limited to, an articulating boom crane, mobile crane, tower crane, dedicated pile driver, and rotating telehandler. The definition of crane shall not include a derrick or cableway.

**CRAWLER CRANE.** A mobile crane consisting of a rotating superstructure with a power plant, operating machinery, and boom, mounted on a base and equipped with crawler treads for travel.

**CRIPPLE WALL.** A framed stud wall extending from the top of the foundation to the underside of floor framing for the lowest occupied floor level.

**CRITICAL PICK.** The attachment and detachment of loads from the hook of hoisting equipment used to hoist or lower loads on the outside of a building that involves one or more of the following:

1. An article that is at or above 95 percent of approved rated capacity of the hoisting equipment or rigging equipment;
2. An article that is asymmetrical and is not provided with lifting connections by the manufacturer or fabricator;
3. An article that has a wind sail area exceeding 500 square feet (46 m²);
4. A pick that may present an added risk because of clearance, drift, or other interference;
5. An article that is fragile or of thin shell construction and is not provided with standard rigging ears;
6. A pick that requires multiple power-operated hoisting equipment (tandem pick); or
7. A pick that require out of the ordinary rigging equipment, methods, or setup.

**CROSS AISLE.** An unenclosed exit access component in a place of assembly usually parallel to rows of seats, connecting aisles or connecting an aisle and an exit. For the purposes of Chapter 10, a cross aisle is not an aisle.

**CROSS-LAMINATED TIMBER (CLT).** A prefabricated engineered wood product made of at least three orthogonal layers of graded sawn lumber or structural composite lumber (SCL) that are laminated by gluing with structural adhesives.

**CRYOGENIC FLUID.** A liquid having a boiling point lower than -130°F (-89.9°C) at 14.7 pounds per square inch absolute (psia) (an absolute pressure of 101.3 kPa).

**CURB LEVEL.** As defined in the *New York City Zoning Resolution*.

**CURB LINE.** The line coincident with the face of the street curb adjacent to the roadway.

**CURTAIN WALL.** A curtain wall or panel wall system is a nonload-bearing building wall, in skeleton frame construction, attached and supported to the structure at every floor or other periodic locations. Assemblies may include glass, metal, precast concrete or masonry elements arranged so as
not to exert common action under load and to move independently of each other and the supporting structure.

**CUSTODIAL CARE FACILITY.** A building or part thereof occupied by persons, on less than a 24-hour basis and not overnight, who because of age, disability or other reasons, receive personal care services by individuals other than parents or guardians, relatives by blood, marriage, domestic partnership, or adoption, in a place other than the home of the person cared for.

**DALLE GLASS.** A decorative composite glazing material made of individual pieces of glass that are embedded in a cast matrix of concrete or epoxy.

**DAMPERS, TYPES OF.**

- **Ceiling radiation damper.** A listed device, installed in a ceiling membrane of a fire-resistance-rated floor/ceiling or roof/ceiling assembly to limit automatically the radiative heat transfer through an air inlet/outlet opening. Ceiling radiation dampers include air terminal units, ceiling dampers and ceiling air diffusers.

- **Combination fire/smoke damper.** A listed device, installed in ducts and air transfer openings designed to close automatically upon the detection of heat and resist the passage of flame and smoke. The device is installed to operate automatically controlled by a smoke detection system, and where required, is capable of being positioned from a fire command center.

- **Fire damper.** A listed device, installed in ducts and air transfer openings designed to close automatically upon detection of heat and restrict the passage of flame. Fire dampers are classified for use in either static systems that will automatically shut down in the event of a fire, or in dynamic systems that continues to operate during a fire. A dynamic fire damper is tested and rated for closure under elevated temperature airflow.

- **Smoke damper.** A listed device, installed in ducts and air transfer openings designed to resist the passage of air and smoke. The device is installed to operate automatically, controlled by a smoke detection system, and where required, is capable of being positioned from a fire command center.

**DAMPROOFING.** Dampproofing is a protective measure applied to building foundation walls and slabs to prevent moisture from passing into interior spaces.

**DAY BOX.** A portable magazine designed to hold explosive materials constructed in accordance with the requirements for a Type 3 magazine as defined and classified in the *New York City Fire Code*.

**DEAD END.** A portion of a corridor in which the travel to an exit is in one direction only.

**DEAD LOAD.** The weight of materials of construction incorporated into the building, including but not limited to walls, floors, roofs, ceilings, stairways, built-in partitions, finishes, cladding and other similarly incorporated architectural and structural items, and the weight of fixed service equipment, such as cranes, plumbing stacks and risers, electrical feeders, heating, ventilating and air-conditioning systems and automatic sprinkler systems.
DEBRIS. Rubbish, waste, discarded material, or the remains of something broken down, demolished, or destroyed.

DEBRIS NET or NETTING. A netting of a fine mesh of a size and strength sufficient to catch debris, such as falling tools and materials.

DECK. An exterior floor supported on at least two opposing sides by an adjacent structure and/or posts, piers, or other independent supports.

DECORATIVE GLASS. A carved, leaded or Dalle glass or glazing material whose purpose is decorative or artistic, not functional; whose coloring, texture or other design qualities or components cannot be removed without destroying the glazing material and whose surface, or assembly into which it is incorporated, is divided into segments.

DECORATIVE MATERIALS. All materials applied over the building interior finish for decorative, acoustical or other effect (such as curtains, draperies, fabrics, streamers and surface coverings), and all other materials utilized for decorative effect (such as batting, cloth, cotton, hay, stalks, straw, vines, leaves, trees, moss and similar items), including foam plastics and materials containing foam plastics. Decorative materials do not include floor coverings, ordinary window shades, interior finish and materials 0.025 inch (0.64 mm) or less in thickness applied directly to and adhering tightly to a substrate.

DECORATIVE SHROUD. A listed partial combustible enclosure for aesthetic purposes that is installed at the termination of a venting system that surrounds or conceals the chimney or vent cap.

DEDICATED PILE DRIVER. A power operated machine that is designed primarily to drive, hammer, press, or vibrate piles into the earth (“pile drive”). These machines typically have the ability to both hoist the material that will be pile driven and to pile drive that material.

DEEP FOUNDATIONS. Deep foundations are comprised of concrete, grout, wood or steel structural elements either driven, drilled or jacked into the ground or cast in place. Deep foundations are relatively slender in comparison to their length, with lengths exceeding 12 times the least horizontal dimension. Deep foundations derive their load-carrying capacity through skin friction, end bearing, or a combination thereof.

DEFLAGRATION. An exothermic reaction, such as the extremely rapid oxidation of a flammable dust or vapor in air, in which the reaction progresses through the unburned material at a rate less than the velocity of sound. A deflagration can have an explosive effect.

DELUGE SPRINKLER SYSTEM. A sprinkler system employing open sprinklers attached to a piping system connected to a water supply through a valve that is opened by the operation of a detection system installed in the same areas as the sprinklers. When this valve opens, water flows into the piping system and discharges from all sprinklers attached thereto.

DEMOLITION. Full or partial demolition.

Full demolition. The dismantling, razing, or removal of all of a building or structure, including all operations incidental thereto.
**Partial demolition.** The dismantling, razing, or removal of structural members, floors, interior bearing walls, and/or exterior walls or portions thereof, including all operations incidental thereto.

**DERRICK.** An apparatus consisting of a mast or equivalent member held at the end by guys or braces, with or without a boom, for use with a hoisting mechanism and operating ropes, for lifting or lowering a load and moving it horizontally.

**DESIGN EARTHQUAKE GROUND MOTION.** The earthquake ground motion that buildings and structures are specifically proportioned to resist in Section 1613.

**DESIGN FLOOD ELEVATION.** The applicable elevation specified in ASCE 24, Tables 2-1, 4-1, 5-1, 6-1, or 7-1, depending on the flood design class designated in ASCE 24, Table 1-1.

**DESIGN STRENGTH.** The product of the nominal strength and a resistance factor (or strength reduction factor).

**DETACHED BUILDING.** A separate single-story building, without a basement or crawl space, used for the storage, handling or use of hazardous materials and located an approved distance from other buildings and structures.

**DETECTABLE WARNING.** A standardized surface feature built in or applied to walking surfaces or other elements to warn a person who is blind or has low vision of hazards on a circulation path.

**DETECTOR, HEAT.** A fire detector that senses heat – either abnormally high temperature or rate of rise, or both.

**DETONATION.** An exothermic reaction with explosive effect that utilizes shock compression as the principal heating mechanism and generates a shock wave in the material that establishes and maintains a reaction that progresses through the material at a rate greater than the velocity of sound.

**DETOXIFICATION FACILITIES.** See Section 308.2.1.

**DEVELOPMENT.** See Section G201.2.

**DEWATERING.** The removal of surface or ground water from a site by pumping or evaporation.

**DIAPHRAGM.** A horizontal or sloped system acting to transmit lateral forces to vertical elements of the lateral force-resisting system. When the term "diaphragm" is used, it shall include horizontal bracing systems.

  **Diaphragm, blocked.** In light-frame construction, a diaphragm in which all sheathing edges not occurring on a framing member are supported on and fastened to blocking.

  **Diaphragm boundary.** In light-frame construction, a location where shear is transferred into or out of the diaphragm sheathing. Transfer is either to a boundary element or to another force-resisting element.

  **Diaphragm chord.** A diaphragm boundary element perpendicular to the applied load that is assumed to take axial stresses due to the diaphragm moment.
**Diaphragm, unblocked.** A diaphragm that has edge nailing at supporting members only. Blocking between supporting structural members at panel edges is not included. Diaphragm panels are field nailed to supporting members.

**DIMENSIONS.**

**Nominal.** The specified dimension plus an allowance for the joints with which the units are to be laid. Nominal dimensions are usually stated in whole numbers. Thickness is given first, followed by height and then length.

**Specified.** Dimensions specified for the manufacture or construction of a unit, joint or element.

**DIRECT AND CONTINUING SUPERVISION.** See Section 28-401.3 of the Administrative Code.

**DIRECT EMPLOY.** See Section 28-401.3 of the Administrative Code.

**DISMANTLING.** The final process of taking apart, piece by piece, in a specific sequence, the components of a tower crane. Dismantling shall include jumping.

**DISPENSING.** The pouring or transferring by other means of any material from a container, tank or similar vessel, which would release dusts, fumes, mists, vapors, or gases to the atmosphere, unless such release is prevented by a device, equipment or system designed for that purpose.

**DISPLAY SIGN.** The area made available by the sign structure for the purpose of displaying the advertising message.

**DOOR, BALANCED.** A door equipped with double-pivoted hardware so designed as to cause a semicounterbalanced swing action when opening.

**DRAFT STOP.** A material, device or construction installed to resist the movement of air within open spaces of concealed areas of building components such as crawl spaces, floor/ceiling assemblies, roof/ceiling assemblies and attics.

**DRAG STRUT.** See "Collector."

**DRILLED DISPLACEMENT PILES.** Rotary displacement piles installed by rotating a helical auger segment into the ground with both a vertical force and a torque. The soil is displaced laterally within the ground (with minimum spoil generated) and the void created is filled with grout or concrete.

**DRIVEN UNCASED PILES.** Driven uncased piles are constructed by driving a steel shell into the soil to shore an unexcavated hole that is later filled with concrete. The steel casing is lifted out of the hole during the deposition of the concrete. Driven uncased piles are not permitted under the provisions of this code.

**DRUM.** The cylindrical member around which a rope is wound for raising and lowering the load or boom.
DRY-CHEMICAL EXTINGUISHING AGENT. A powder composed of small particles, usually of sodium bicarbonate, potassium bicarbonate, urea-potassium-based bicarbonate, potassium chloride or monoammonium phosphate, with added particulate material supplemented by special treatment to provide resistance to packing, resistance to moisture absorption (caking) and the proper flow capabilities.

DRY (SOIL). Soil that does not exhibit visible signs of moisture content.

DWELLING. A building or structure that is occupied in whole or in part as the home, residence or sleeping place of one or more families.

DWELLING, MULTIPLE. A dwelling that is either rented, leased, let or hired out, to be occupied, or is occupied, as the residence or home of three or more families living independently of each other. A multiple dwelling does not include a building used for occupancies in Groups I-2, I-3 or I-4.

DWELLING, ONE-FAMILY. Any building or structure designed and occupied exclusively for residence purposes on a long-term basis for more than a month at a time by not more than one family. One-family dwelling shall also be deemed to include a dwelling located in a series of one-family dwellings each of which faces or is accessible to a legal street or public thoroughfare, provided that each such dwelling unit is equipped as a separate dwelling unit with all essential services, and also provided that each such unit is arranged so that it may be approved as a legal one-family dwelling.

DWELLING, TWO-FAMILY. Any building or structure designed and occupied exclusively for residence purposes on a long-term basis for more than a month at a time by not more than two families. Two-family dwellings shall also be deemed to include a dwelling located in a series of two-family dwellings each of which faces or is accessible to a legal street or public thoroughfare, provided that each such dwelling is equipped as a separate dwelling with all essential services, and also provided that each such dwelling is arranged so that it may be approved as a legal two-family dwelling.

DWELLING UNIT. A single unit consisting of one or more habitable rooms and occupied or arranged to be occupied as a unit separate from all other units within a dwelling.

DWELLING UNIT (ACCESSIBILITY). As used in Chapter 11 and Appendix E, a single unit providing complete, independent living facilities for one or more persons, including permanent provisions for living, sleeping, eating, cooking and sanitation.

DWELLING UNIT OR SLEEPING UNIT, MULTISTORY. See "Multistory unit".

DWELLING UNIT OR SLEEPING UNIT, TYPE B. See "Type B unit".

EAVE HEIGHT, $h$. The distance from the ground surface adjacent to the building to the roof eave line at the particular wall. If the distance of the eave varies along the wall, the average distance shall be used.

EFFECTIVE WIND AREA. See ASCE 7.

EGRESS, COURT. A court or yard that provides access to a public right of way for one or more exits.
**ELECTRIC SIGN.** A sign containing electrical wiring, but not including signs illuminated by an exterior light source.

**ELECTRICAL CIRCUIT PROTECTIVE SYSTEM.** A specific listed construction of devices, materials, or coatings installed as a fire-resistive barrier system applied to electrical system components, such as cable trays, conduits and other raceways, open run cables and conductors, cables, and conductors in accordance with UL 2196.

**ELEMENT (STRUCTURAL).** A structural member or structural assembly.

**ELEVATOR LANDING.** That portion of a floor, balcony, or platform used to receive and discharge passengers or freight adjacent to an elevator hoistway.

**EMERGENCY ALARM SYSTEM.** A system to provide indication and warning of an emergency condition involving a release of hazardous material or other hazardous material incident.

**EMERGENCY CONTROL STATION.** An approved location on the premises of a semiconductor fabrication facility staffed by trained personnel that monitor the operation of equipment and systems including alert and alarm signals.

**EMERGENCY ESCAPE AND RESCUE OPENING.** An operable window, door or other similar device that provides for a means of escape and access for rescue in the event of an emergency.

**EMERGENCY VOICE/ALARM COMMUNICATIONS.** Dedicated manual or automatic facilities for originating and distributing voice instructions, as well as alert and evacuation signals pertaining to a fire or other emergency, to the occupants of a building.

**EMPLOYEE WORK AREA.** All or any portion of a space used only by employees and only for work. Corridors, toilet rooms, kitchenettes and break rooms are not employee work areas.

**ENGINEERED WOOD RIM BOARD.** A full-depth structural composite lumber, wood structural panel, structural glued laminated timber or prefabricated wood I-joint member designed to transfer horizontal (shear) and vertical (compression) loads, provide attachment for diaphragm sheathing, siding and exterior deck ledgers, and provide lateral support at the ends of floor or roof joists or rafters.

**ENLARGED BASE PILES.** Enlarged base piles are cast-in-place concrete piles constructed with a base that is larger than the diameter of the remainder of the pile. The enlarged base is designed to increase the load-bearing area of the pile in end bearing. Enlarged base piles include piles installed by driving a precast concrete tip or by compacting concrete into the base of the pile to form an enlarged base.

**EQUIPMENT.** Tools, machinery, or other implements used to facilitate construction or demolition work.

**EQUIPMENT PLATFORM.** An unoccupied, elevated platform used exclusively for mechanical systems or industrial process equipment, including the associated elevated walkways, stairways, alternating tread devices and ladders necessary to access the platform (see Section 505.3).
ERECION. The assembly and placement of tower crane sections and components into place, including all operations incidental thereto. Erection shall include jumping.

ESSENTIAL FACILITIES. Buildings and other structures that are intended to remain operational in the event of extreme environmental loading from flood, wind, snow or earthquakes.

EXCAVATION. The removal of earth from its natural position; except for any incidental removal that occurs during the course of auguring, drilling, vibrating, or driving.

EXHAUSTED ENCLOSURE. A device, typically consisting of a hood equipped with a fan, that serves to capture and exhaust fumes, mist, vapors and gases generated at a workstation or other local environment. An exhausted enclosure does not include a room provided with general ventilation.

EXISTING CONSTRUCTION (FOR FLOOD ZONE PURPOSES). See Section G201.1.2.

EXISTING STRUCTURE (FOR FLOOD ZONE PURPOSES). See Section G201.1.2.

EXIT. That portion of a means of egress system, which is separated from other interior spaces of a building or structure by fire-resistance-rated construction and opening protective as required to provide a protected path of egress travel between the exit access and the exit discharge. Exits include exterior exit doors at the level of exit discharge, interior exit stairways and ramps, exit passageways, exterior exit stairways, exterior exit ramps and horizontal exits, but do not include access stairs, aisles, exit access doors opening to corridors, or corridors.

EXIT ACCESS. That portion of a means of egress system that leads from any occupied portion of a building or structure to an exit.

EXIT ACCESS DOORWAY. A door or access point along the path of egress travel from an occupied room, area or space where the path of egress enters an intervening room, corridor, unenclosed exit access stair or unenclosed exit access ramp.

EXIT ACCESS RAMP. A ramp within the exit access portion of the means of egress system.

EXIT ACCESS STAIRWAY. A stairway within the exit access portion of the means of egress system.

EXIT DISCHARGE. That portion of a means of egress system between the termination of an exit and a public way.

EXIT DISCHARGE, LEVEL OF. The story at the point at which an exit terminates and an exit discharge begins.

EXIT, HORIZONTAL. An exit that provides a path of egress travel from one building to an area in another building on approximately the same level, or a path of egress travel through or around a wall or partition to an area on approximately the same level in the same building, or a bridge or tunnel between two buildings, which affords safety from fire and smoke from the area of incidence and areas communicating therewith.
EXIT PASSAGEWAY. An exit component that is separated from other interior spaces of a building or structure by fire-resistance-rated construction and opening protectives, and provides for a protected path of egress travel in a horizontal direction to an exit component or to the exit discharge.

EXPANDED VINYL WALL COVERING. Wall covering consisting of a woven textile backing, an expanded vinyl base coat layer and a non-expanded vinyl skin coat. The expanded base coat layer is a homogenous vinyl layer that contains a blowing agent. During processing, the blowing agent decomposes, causing this layer to expand by forming closed cells. The total thickness of the wall covering is approximately 0.055 inch to 0.070 inch (1.4 mm to 1.8 mm).

EXPLOSION. An effect produced by the sudden violent expansion of gases, whether or not accompanied by a shock wave or disruption, of enclosing materials, including the effects of the following sources of explosion:

1. Chemical changes such as rapid oxidation, deflagration or detonation, decomposition of molecules and runaway polymerization (usually detonations).

2. Physical changes such as pressure tank ruptures.

3. Atomic changes (nuclear fission or fusion).

EXPLOSIVE. A chemical compound, mixture or device, the primary or common purpose of which is to function by explosion. The term includes, but is not limited to, dynamite, black powder, pellet powder, initiating explosives, detonators, safety fuses, squibs, detonating cord, igniter cord and igniters.

The term "explosive" includes any material determined to be within the scope of Chapter 40 of Title 18 of the United States Codes, and any material classified as an explosive by the hazardous materials regulations of the United States Department of Transportation, as set forth in 49 CFR Section 173.52, except fireworks. Explosives are classified in accordance with the following United States Department of Transportation classification and other terms in common usage:

UN/DOTn Class 1 explosives.

Division 1.1. Explosives that present a mass explosion hazard.

Division 1.2. Explosives that present a projection hazard but not a mass explosion hazard.

Division 1.3. Explosives that present a fire hazard and either a minor blast hazard or a minor projection hazard, or both, but not a mass explosion hazard.

Division 1.4. Explosives that present a minor explosion hazard. The explosive effects are largely confined to the package and no projection of fragments of appreciable size or range is to be expected. Such explosives are not subject to mass explosion when exposed to fire.

Division 1.5. Explosives that present a mass explosion hazard but which are so insensitive that there is very little probability of initiation or of transition from burning to detonation under normal conditions of transport.

Division 1.6. Explosives consisting of extremely insensitive articles that do not present a mass explosion hazard, and present a negligible probability of accidental initiation or propagation.
**High explosive.** Explosives, including dynamite, that, when detonated, are characterized by a high rate of reaction, high pressure development, and the presence of a detonation wave, and that can be caused to detonate by means of a No. 8 test blasting cap, when unconfined.

**Low explosive.** Explosives that will burn or deflagrate when ignited, and which are characterized by a rate of reaction that is less than the speed of sound, and low pressure development. Examples of low explosives include black powder, igniter cords, igniters, safety fuses, small arms ammunition and primers, and propellants, 1.3C.

**Mass-detonating explosives.** Division 1.1, 1.2 and 1.5 explosives that, whether individually or in combination, or loaded into ammunition or containers, explode virtually instantaneously when a small portion is subjected to fire, concussion, impact, the impulse of an initiating agent, or the effect of a considerable discharge of energy from without, with severe explosive effect, including the potential for structural damage to adjacent objects, and explosive propagation to other explosives stored in proximity, such that two or more quantities in proximity must be considered as one for quantity-distance purposes.

**EXTERIOR EXIT RAMP.** An exit component that serves to meet one or more means of egress design requirements, such as required number of exits or exit access travel distance, and is open to yards, courts or public ways.

**EXTERIOR EXIT STAIRWAY.** A stairway that is open on at least one side, except for required structural columns, beams, handrails and guards. The adjoining open areas shall be either yards, courts or public ways. The other sides of the exterior exit stairway need not be open.

**EXTERIOR INSULATION AND FINISH SYSTEMS (EIFS).** EIFS are nonstructural, nonload-bearing, exterior wall cladding systems that consist of an insulation board attached either adhesively or mechanically, or both, to the substrate, an integrally reinforced base coat and a textured protective finish coat.

**EXTERIOR INSULATION AND FINISH SYSTEMS (EIFS) WITH DRAINAGE.** An EIFS that incorporates a means of drainage applied over a water-resistive barrier.

**EXTERIOR SURFACES.** Weather-exposed surfaces.

**EXTERIOR WALL.** A wall, bearing or nonbearing, that is used as an enclosing wall for a building, other than a fire wall, and that has a slope of 60 degrees (1.05 rad) or greater with the horizontal plane.

**EXTERIOR WALL COVERING.** A material or assembly of materials applied on the exterior side of exterior walls for the purpose of providing a weather-resisting barrier, insulation or for aesthetics, including but not limited to, veneers, siding, exterior insulation and finish systems, architectural trim and embellishments such as cornices, soffits, facias, gutters and leaders.

**EXTERIOR WALL ENVELOPE.** A system or assembly of exterior wall components, including exterior wall finish materials, that provides protection of the building structural members, including framing and sheathing materials, and conditioned interior space, from the detrimental effects of the exterior environment.
F RATING. The time period that the through-penetration firestop system limits the spread of fire through the penetration when tested in accordance with ASTM E 814 or UL 1479.

FABRIC PARTITION. A partition consisting of a finished surface made of fabric, without a continuous rigid backing, that is directly attached to a framing system in which the vertical framing members are spaced greater than 4 feet (1219 mm) on center.

FABRICATION AREA. An area within a semiconductor fabrication facility in which processes using hazardous production materials are conducted.

FACILITY. All or any portion of buildings, structure, site improvements, elements and pedestrian or vehicular routes located on a site.

FACTORED LOAD. The product of a nominal load and a load factor.

FAMILY.

1. A single person occupying a dwelling unit and maintaining a common household with not more than two boarders, roomers or lodgers;

2. Two or more persons related by blood, adoption, legal guardianship, marriage or domestic partnership; occupying a dwelling unit and maintaining a common household with not more than two boarders, roomers or lodgers;

3. Not more than three unrelated persons occupying a dwelling unit and maintaining a common household;

4. Not more than three unrelated persons occupying a dwelling unit in a congregate housing or shared living arrangement and maintaining a common household;

5. Members of a group home;

6. Foster children placed in accordance with provisions of the New York State Social Services Law, their foster parent(s), and other persons related to the foster parents by blood, marriage or domestic partnership; where all residents occupy and maintain a common household with not more than two boarders, roomers or lodgers; or

7. Up to seven unrelated students enrolled at a single accredited college or university occupying a student apartment and maintaining a common household pursuant to a lease, sublease, or occupancy agreement directly with such college or university, provided that:

7.1. The entire structure in which the dwelling unit is located is fully sprinklered in accordance with Chapter 9 of this code;

7.2. Such occupancy does not exceed the maximums contained in Section 27-2075(a) of the New York City Housing Maintenance Code;

7.3. Prior to commencement of such occupancy, and on an annual basis thereafter such college or university has submitted a fire safety plan containing fire safety and
evacuation procedures for such dwelling unit that is acceptable to the Fire Commissioner and in compliance with any rules promulgated by the Fire Commissioner; and

7.4. The dwelling unit complies with additional occupancy and construction requirements as may be established by rule by the Housing Preservation and Development Commissioner.

A common household is deemed to exist if all household members have access to all parts of the dwelling unit. Lack of access to all parts of the dwelling unit establishes a rebuttable presumption that no common household exists.

FENESTRATION. Skylights, roof windows, vertical windows (fixed or moveable), opaque doors, glazed doors, glazed block and combination opaque/glazed doors. Fenestration includes products with glass and nonglass glazing materials.

FIBERBOARD. A fibrous, homogeneous panel made from lignocellulosic fibers (usually wood or cane) and having a density of less than 31 pounds per cubic foot (pcf) (497 kg/m³) but more than 10 pcf (160 kg/m³).

FIBER REINFORCED POLYMER. A polymeric composite material consisting of reinforcement fibers, such as glass, impregnated with a fiber-bonding polymer which is then molded and hardened. Fiber-reinforced polymers are permitted to contain cores laminated between fiber-reinforced polymer facings.

FIBER-CEMENT SIDING. A manufactured, fiber-reinforcing product made with an inorganic hydraulic or calcium silicate binder formed by chemical reaction and reinforced with discrete organic or inorganic nonasbestos fibers, or both. Additives that enhance manufacturing or product performance are permitted. Fiber cement siding products have either smooth or textured faces and are intended for exterior wall and related applications.

FIBERGLASS REINFORCED POLYMER. A polymeric composite material consisting of glass reinforcement fibers impregnated with a fiber-binding polymer which is then molded and hardened.

FILM SIGN. A flat section of a material that is extremely thin in comparison to its length and breadth and has a nominal maximum thickness of 0.01 inch (0.25 mm).

FIRE ALARM BOX, MANUAL. See "Manual Fire Alarm Box."

FIRE ALARM CONTROL UNIT. A system component that receives inputs from automatic and manual fire alarm devices and may be capable of supplying power to detection devices and transponders or off-premises transmitters. The control unit may be capable of providing a transfer of power to the notification appliances and transfer of condition to relays or devices.

FIRE ALARM SIGNAL. A signal initiated by a fire alarm-initiating device such as a manual fire alarm box, automatic fire detector, workflow switch, or other device whose activation is indicative of the presence of a fire or fire signature.
**FIRE ALARM SYSTEM.** A system or portion of a combination system consisting of components and circuits arranged to monitor and annunciate the status of fire alarm or supervisory signal-initiating devices and to initiate the appropriate response to those signals.

**FIRE AREA.** The aggregate floor area enclosed and bounded by fire walls, fire barriers, exterior walls and/or horizontal assemblies of a building. Areas of the building not provided with surrounding walls shall be included in the fire area if such areas are included within the horizontal projection of the roof or floor next above.

**FIRE BARRIER.** A fire-resistance-rated wall assembly of materials complying with Section 707 designed to restrict the spread of fire in which continuity of the fire-resistance rating is maintained.

**FIRE COMMAND CENTER.** The principal attended or unattended location where the status of detection, alarm communications and control systems is displayed, and from which the systems can be manually controlled.

**FIRE DAMPER.** See Dampers, Types of.

**FIRE DETECTOR, AUTOMATIC.** A device designed to detect the presence of a fire signature and to initiate action.

**FIRE DOOR.** The door component of a fire door assembly.

**FIRE DOOR ASSEMBLY.** Any combination of a fire door, frame, hardware, and other accessories that together, as an opening protective, provide a specific degree of fire protection to the opening.

**FIRE DOOR ASSEMBLY, FLOOR.** See "Floor fire door assembly."

**FIRE EXIT HARDWARE.** Panic hardware that is listed for use on fire door assemblies.

**FIRE LANE.** A public or private road, roadway lane, parking lot lane or other surface designed to allow vehicular access, that has been specifically designated by means of signs or roadway markings as a priority thoroughfare for fire apparatus.

**FIRE PARTITION.** A vertical assembly of materials complying with Section 708, designed to restrict the spread of fire in which openings are protected.

**FIRE PROTECTION RATING.** The period of time that an opening protective assembly will maintain the ability to confine a fire as determined by tests prescribed in Section 716. Ratings are stated in hours or minutes.

**FIRE PROTECTION SYSTEM.** Approved devices, equipment and systems or combinations of systems used to detect a fire, activate an alarm, extinguish or control a fire, control or manage smoke and products of a fire or any combination thereof.

**FIRE PUMP.** A pump exclusively used to boost water supply pressures in a fire protection system.

**FIRE PUMP, AUTOMATIC STANDPIPE.** A fire pump located at or below street level or as required, at the design flood elevation, that supplies the lower 300 feet (91.4 m) of an automatic
standpipe system or a combined standpipe and sprinkler system. This does not apply to manual wet standpipe systems which are combined with sprinkler systems.

**FIRE PUMP, FOAM.** A fire pump used to boost water supply pressures in a fire protection system where such system uses firefighting foam as an additive.

**FIRE PUMP, LIMITED SERVICE.** A fire pump with a motor rating not exceeding 30 hp and utilizing a limited service fire pump controller.

**FIRE PUMP, SPECIAL SERVICE.** A fire pump that is located above street level, and above flood level, and that receives its water supply from a gravity tank or suction tank.

**FIRE PUMP, SPRINKLER BOOSTER PUMP.** A fire pump that supplies sprinkler systems only.

**FIRE PUMP, WATER MIST SYSTEM.** A fire pump used to boost water supply pressures in a fire protection system where such system utilizes water misting technology.

**FIRE RESISTANCE.** That property of materials or their assemblies that prevents or retards the passage of excessive heat, hot gases or flames under conditions of use.

**FIRE SAFETY FUNCTIONS.** Building and fire control functions that are intended to increase the level of life safety for occupants or to control the spread of harmful effects of fire.

**FIRE SEPARATION DISTANCE.** The distance measured from the building face to one of the following:

1. The closest interior tax lot line;
2. To the centerline of a street, an alley or public space; or
3. To an imaginary line between two buildings on the same tax lot.

The distance shall be measured at right angles from the face of the wall.

**FIRE WALL.** A fire-resistance-rated smoke-tight wall having protected openings, which restricts the spread of fire and extends continuously from the foundation to or through the roof, with sufficient structural stability under fire conditions to allow collapse of construction on either side without collapse of the wall.

**FIRE WINDOW ASSEMBLY.** A window, as an opening protective, constructed and glazed to give protection against the passage of fire, smoke and hot gases.

**FIREBLOCKING.** A building material or materials approved for use as fireblocking to resist the free passage of flame or hot gases to other areas of the building through concealed spaces.

**FIRECUT.** A sloping cut on the ends of wood beams, joists and rafters resting on masonry or concrete walls.
FIREPLACE. A hearth and fire chamber or similar prepared place in which a fire may be made and that is built in conjunction with a chimney.

FIREPLACE THROAT. The opening between the top of the firebox and the smoke chamber.

FIRE-RATED GLAZING. Glazing with either a fire protection rating or a fire-resistance rating.

FIRE-RESISTANCE RATING. The period of time a building element, component or assembly maintains the ability to withstand fire exposure, continues to perform a given structural function, or both, as determined by the tests, or the methods based on tests, prescribed in Section 703.

FIRE-RESISTANT JOINT SYSTEM. An assemblage of specific materials or products that are designed, tested, and fire-resistance rated in accordance with either ASTM E 1966 or UL 2079 to resist for a prescribed period of time the passage of fire through joints made in or between fire-resistance-rated assemblies.

FIRESTOPPING. A through-penetration firestop or a membrane penetration firestop.

FIREWORKS. Any article or device that does not present a mass explosion hazard, that is manufactured or used to produce a visible or audible effect for entertainment or other display purposes by combustion, deflagration or detonation that meets the definition of 1.4G fireworks or 1.3G fireworks as set forth herein.

Fireworks, 1.3G. Large firework devices, classified as UN0335 by the United States Department of Transportation regulations, intended for use in fireworks displays and designed to produce audible or visible effects by combustion, deflagration or detonation including firecrackers containing more than 130 milligrams (2 grains) of explosive composition, aerial shells containing more than 40 grams of pyrotechnic material, and other display pieces which exceeds the limits for classification as 1.4G fireworks.

Fireworks, 1.4G. Small firework devices, classified as UN 0336 by United States Department of Transportation regulations, containing restricted amounts of pyrotechnic materials designed primarily to produce visible or audible effects by combustion.

FISSURED (SOIL). A soil material that has a tendency to break along definite planes of fracture with little resistance, or a material that exhibits open cracks, such as tension cracks, in an exposed surface.

FIXED BASE OPERATOR (FBO). A commercial business granted the right by the airport sponsor to operate on an airport and provide aeronautical services, such as fueling, hangaring, tie-down and parking, aircraft rental, aircraft maintenance and flight instruction.

FIXED HEADED PILE (DEEP FOUNDATION). A pile connected to a pile cap in a manner that prevents rotation of the pile head.

FIXED SEATING. Furniture or fixture designed and installed for the use of sitting and secured in place including bench-type seats and seats with or without backs or arm rests.

FLAME SPREAD. The propagation of flame over a surface.
**FLAME SPREAD INDEX.** A comparative measure, expressed as a dimensionless number, derived from visual measurements of the spread of flame versus time for a material tested in accordance with ASTM E 84 or UL 723.

**FLAMMABLE GAS.** A material which has a boiling point and becomes a gas at 68°F (20°C) or less at 14.7 pounds per square inch absolute (psia) (101 kPa) of pressure which:

1. Is ignitable at 14.7 psia (101 kPa) when in a mixture of 13 percent or less by volume with air, in accordance with testing procedures set forth in ASTM E 681; or
2. Has a flammable range at 14.7 psia (101 kPa) with air of at least 12 percent, regardless of the lower explosive limit, in accordance with testing procedures set forth in ASTM E 681.

The limits specified shall be determined at 14.7 psia (101 kPa) of pressure and a temperature of 68°F (20°C) in accordance with ASTM E 681.

**FLAMMABLE LIQUEFIED GAS.** A liquefied gas that, under a charged pressure, is partially liquid at a temperature of 68°F (20°C) and which is flammable.

**FLAMMABLE LIQUID.** For the purposes of transportation, a flammable liquid as defined in the regulations of the United States Department of Transportation, as set forth in 49 CFR 173.120. For all other purposes, a liquid, other than a compressed gas or cryogenic fluid, having a closed cup flash point below 100°F (38°C) classified as follows:

- **Class IA.** Liquids having a flash point below 73°F (23°C) and a boiling point below 100°F (38°C).
- **Class IB.** Liquids having a flash point below 73°F (23°C) and a boiling point at or above 100°F (38°C).
- **Class IC.** Liquids having a flash point at or above 73°F (23°C) and below 100°F (38°C).

**FLAMMABLE MATERIAL.** A material capable of being readily ignited from common sources of heat or at a temperature of 600°F (316°C) or less.

**FLAMMABLE SOLID.** A solid, other than a blasting agent or other explosive, whether in elemental or alloy form, that is capable of causing fire through friction, absorption or moisture, spontaneous chemical change, or heat retained from manufacturing or processing, or which has an ignition temperature below 212°F (100°C) or which burns so vigorously and persistently when ignited as to create a serious hazard. A chemical shall be considered a flammable solid if upon testing using the method prescribed in CPSC regulations, as set forth in 16 CFR 1500.44, if it ignites and burns with a self-sustained flame at a rate greater than 0.1 inch (2.5 mm) per second along its major axis.

**FLAMMABLE VAPORS OR FUMES.** The concentration of flammable constituents in air that exceed 25 percent of their lower flammable limit (LFL).

**FLASH POINT.** The minimum temperature in degrees Fahrenheit at which a liquid will give off sufficient vapors to form an ignitable mixture with air near the surface or in the container, but will not sustain combustion. The flash point of a liquid shall be determined by appropriate test procedure and apparatus as specified in ASTM D 56, ASTM D 93 or ASTM D 3278.
FLIGHT. A continuous run of rectangular treads, winders or combination thereof from one landing to another.

FLOOD or FLOODING. A general and temporary condition of partial or complete inundation of normally dry land from:

1. The overflow of inland or tidal waters.
2. The unusual and rapid accumulation or runoff of surface waters from any source.

FLOOD DESIGN CLASS. See Section G201.1.2.

FLOOD HAZARD AREA. The following two areas:

1. The area within a flood plain subject to a 1-percent or greater chance of flooding in any year. Also defined as the “special flood hazard area”.
2. Where buildings are classified as Flood Design Class 4, the area within a flood plain delineated as shaded X-Zones.

FLOOD INSURANCE RATE MAP (FIRM). An official map of a community on which the Federal Emergency Management Agency (FEMA) has delineated both the special flood hazard areas and the risk premium zones applicable to the community.

FLOOD INSURANCE STUDY (FIS). The official report provided by the Federal Emergency Management Agency (FEMA) containing the Flood Insurance Rate Map (FIRM), the water surface elevation of the base flood and supporting technical data.

FLOOD-DAMAGE-RESISTANT MATERIALS. Any construction material, including finishes, capable of withstanding direct and prolonged contact with floodwaters without sustaining any damage that requires more than cosmetic repair.

FLOODPROOFING, DRY. For buildings and structures that are nonresidential (for flood zone purposes), a combination of design modifications that results in the building’s or structure’s being water tight to the design flood elevation, including the attendant utility and sanitary facilities, with walls substantially impermeable to the passage of water and with structural components having the capacity to resist loads as identified in ASCE 7.

FLOODPROOFING, WET. A floodproofing method designed to permit parts of the structure below the design flood elevation that are used for parking, storage, building access, or crawl space to intentionally flood, by equalizing hydrostatic pressures and by relying on the use of flood damage-resistant materials and construction techniques.

FLOODWAY. The channel of the river, creek or other watercourse and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation more than a designated height. Floodways are mapped only in the Boroughs of the Bronx and Staten Island.

FLOOR AREA, GROSS. The floor area within the inside perimeter of the exterior walls of the building under consideration, exclusive of courts, without deduction for corridors, stairways, closets,
the thickness of interior walls, columns or other features. The floor area of a building, or portion thereof, not provided with surrounded exterior walls shall be the usable area under the horizontal projection of the roof or floor above. The gross floor area shall not include interior courts.

**FLOOR AREA, NET.** The actual occupied area not including the thickness of walls, partitions, columns, furred-in spaces, fixed cabinets, equipment, and unoccupied accessory areas such as corridors, stairways, toilet rooms, mechanical rooms and closets.

**FLOOR FIRE DOOR ASSEMBLY.** A combination of a fire door, a frame, hardware and other accessories installed, as an opening protective, in a horizontal plane, which together provide a specific degree of fire protection to a through opening in a fire-resistance-rated floor (see Section 712.1.13.1).

**FLOOR SURFACE AREA.** See Section 28-101.4.5.2 of the Administrative Code.

**FLUE.** A passageway within a chimney or vent through which gaseous combustion products pass.

**FLUE APPLIANCE.** The passage(s) within an appliance through which combustion products pass from the combustion chamber of the appliance to the draft hood inlet opening on an appliance equipped with a draft hood or to the outlet of the appliance on an appliance not equipped with a draft hood.

**FLUE GASES.** Products of combustion and excess air.

**FLUE LINER (LINING).** A system or material used to form the inside surface of a flue in a chimney vent, for the purpose of protecting the surrounding structure from the effects of combustion products and for conveying combustion products without leakage into the atmosphere.

**FLY GALLERY.** A raised floor area above a stage from which the movement of scenery and operation of other stage effects are controlled.

**FLY-THROUGH CONDITIONS.** One or more panels of glass that provide a clear line of sight through such elements creating the illusion of a void leading to the other side, including parallel glass elements, at a distance of 17 feet (5182 mm) or less, or a convergence of glass sides creating a perpendicular, acute or obtuse corner.

**FOAM PLASTIC INSULATION.** A plastic that is intentionally expanded by the use of a foaming agent to produce a reduced-density plastic containing voids consisting of open or closed cells distributed throughout the plastic for thermal insulating or acoustical purposes and that has a density less than 20 pounds per cubic foot (pcf) (320 kg/m³).

**FOAM-EXTinguISHING SYSTEM.** A special system discharging a foam made from concentrates mechanically over the area to be protected.

**FOLDING AND TELESCOPIC SEATING.** Tiered seating having an overall shape and size that is capable of being reduced for purposes of moving or storing and is not a building element.

**FOOD COURT.** See Section 402.2.
FOOTING. A foundation element consisting of an enlargement of a foundation pier or foundation wall, wherein the soil materials along the side of and underlying the element may be visually inspected prior to and during its construction.

FOUNDATION PIER. An isolated vertical foundation member whose horizontal dimension measured at right angles to its thickness does not exceed three times its thickness and whose height is equal to or less than four times its thickness.

FREE HEADED PILE. A pile with a head that is free to rotate.

FRONTAGE SPACE. A street or an open space adjoining a building not less than 30 feet (9144 mm) in any dimension. Such open space shall be accessible from a street by a driveway, lane, private road or alley at least 20 feet (6096 mm) in width. Such open space including accessways shall be permanently maintained free of all obstructions that might interfere with its use by the Fire Department.

FUNCTIONALLY DEPENDENT FACILITY. See Section G201.1.2.

GABLE. The triangular portion of a wall beneath the end of a dual-slope, pitched, or mono-slope roof or portion thereof and above the top plates of the story or level of the ceiling below.

GAS CABINET. A fully enclosed, noncombustible enclosure used to provide an isolated environment for compressed gas containers in storage or use, including any doors and access ports for exchanging containers and accessing pressure-regulating controls.

GAS ROOM. A separately ventilated, fully enclosed room in which only compressed gases and associated equipment and supplies are stored or used.

GEOTECHNICAL CAPACITY OF DEEP FOUNDATIONS. The load that can be supported by the soil or rock surrounding deep foundation as determined using a recognized method of analysis or as established by load tests. The geotechnical capacity can be developed through skin friction, end bearing, or a combination thereof.

GLASS FIBERBOARD. Fibrous glass roof insulation consisting of inorganic glass fibers formed into rigid boards using a binder. The board has a top surface faced with asphalt and kraft reinforced with glass fiber.

GRADE (LUMBER). The classification of lumber in regard to strength and utility in accordance with American Softwood Lumber Standard DOC PS 20 and the grading rules of an approved lumber rules-writing agency.

GRADE PLANE. A reference plane representing the level of the curb as established by the city engineer in the Borough President’s office, measured at the center of the front of a building. Where a building faces on more than one street, the grade plane shall be the average of the levels of the curbs at the center of each front.

Exception: The grade plan shall not be referenced to the level of the curb, but shall be considered the average elevation of the final grade adjoining all exterior walls of a building, calculated from
final grade elevations taken at intervals of 10 feet (3048 mm) around the perimeter of the building where:

1. No curb elevation has been legally established on the city map; or

2. Every part of the building is setback more than 25 feet (7620 mm) from a street line.

**GRANDSTAND.** Tiered seating supported on a dedicated structural system and two or more rows high and is not a building element (see "Bleachers").

**GRANULAR SOIL.** Gravel, sand, or silt (coarse grained soil) with little or no clay content. Granular soil has no cohesive strength. Some moist granular soils exhibit apparent cohesion. Granular soil cannot be molded when moist and crumbles easily when dry.

**GREEN ROOF SYSTEM.** See definition for “VEGETATIVE ROOF.”

**GRIDIRON.** The structural framing over a stage supporting equipment for hanging or flying scenery and other stage effects.

**GROSS LEASABLE AREA.** See Section 402.2.

**GROUND SIGN.** A billboard or similar type of sign that is supported by one or more uprights, poles or braces in or upon the ground other than a combination sign or pole sign, as defined by this code.

**GROUP HOME.** A facility for the care and maintenance of not fewer than seven nor more than 12 children, supervised by the New York State Board of Social Welfare, and operated pursuant to and meeting any additional construction requirements of Section 374-C of the New York State Social Services Law and applicable regulations of the New York State Department of Social Services. Such a facility occupied by more than 12 children shall be classified as Group I-1.

**GROUT.** A plastic mixture of cementitious materials, aggregates, and water, with or without admixtures, initially produced to pouring consistency without segregation of the constituents during placement, or the equivalent of such mixtures, conforming to ASTM C 476.

**GUARD.** A building component or a system of building components located at or near the open sides of elevated walking surfaces that minimizes the possibility of a fall from the walking surface to a lower level.

**GUARDRAIL SYSTEM (SCAFFOLD).** A vertical barrier as described in Section 3314.8 consisting of, but not limited to, top rails, mid rails and posts, erected to prevent falling from a scaffold platform or walkway to lower levels.

**GUARD.** A building component or a system of building components located at or near the open sides of elevated walking surfaces that minimizes the possibility of a fall from the walking surface to a lower level.

**GUARDRAIL SYSTEM (SCAFFOLD).** A vertical barrier as described in Section 3314.8 consisting of, but not limited to, top rails, mid rails and posts, erected to prevent falling from a scaffold platform or walkway to lower levels.

**GYPSUM BOARD.** Gypsum wallboard, gypsum sheathing, gypsum base for gypsum veneer plaster, exterior gypsum soffit board, predecorated gypsum board or water-resistant gypsum backing board complying with the standards listed in Tables 2506.2, 2507.2 and Chapter 35.
GYPSUM PANEL PRODUCTS. The general name for a family of sheet products consisting essentially of gypsum.

GYPSUM PLASTER. A mixture of calcined gypsum or calcined gypsum and lime and aggregate and other approved materials as specific in this code.

GYPSUM VENEER PLASTER. Gypsum plaster applied to an approved base in one or more coats normally not exceeding 1/4 inch (6.4 mm) in total thickness.

HABITABLE SPACE. All rooms and spaces within a dwelling unit in Group R or I-1, including bedrooms, living rooms, studies, recreation rooms, kitchens, dining rooms and other similar spaces.

Exception: The following spaces within a dwelling unit shall not be considered habitable space:

1. A dining space 55 square feet (5.1 m²) or less located off a living room, foyer or kitchen;
2. A kitchenette;
3. A bathroom or toilet room;
4. A laundry room; and
5. A corridor, passageway, or private hall; and a foyer used as an entrance hall in a dwelling unit: not exceeding 10 percent of the total floor area of the dwelling unit; or not exceeding 20 percent of the floor area of the dwelling unit where every habitable room is at least 20 percent larger than the required minimum room sizes established by the New York City Housing Maintenance Code.

HALL CALL CONSOLE. A collection of features arranged in close proximity to one another, the purpose of which is to call a destination-oriented elevator car to an elevator landing on which the console is provided. Such features can be provided as a single assembly or as individual elements functioning together.

HALOGENATED EXTINGUISHING SYSTEM. A fire-extinguishing system using one or more atoms of an element from the halogen chemical series; fluorine, chlorine, bromine and iodine.

HANDHELD DEVICE (DEMOLITION). Equipment, mechanical or non-mechanical, utilized to physically demolish a building or structure, or elements of a building or structure, that is held, lifted, moved, and operated by a single person. A handheld device shall also include any item accessory to such equipment, including but not limited to a compressor, regardless of if such accessory item is held, lifted, moved, and operated by a single person. A handheld device does not include remote controlled equipment.

HANDLING (HAZARDOUS MATERIAL). The movement of a material in its container, the removal of the material from its container, or any other action or process that may affect the material, other than its storage or use.

HANDRAIL. A horizontal or sloping rail intended for grasping by the hand for guidance or support.
**HARDBOARD.** A fibrous-felted, homogeneous panel made from lignocellulosic fibers consolidated under heat and pressure in a hot press to a density not less than 31 pcf (497 kg/m$^3$).

**HAZARDOUS MATERIALS.** Those chemicals or substances that are physical hazards or health hazards as defined and classified in the *New York City Fire Code* and this code, whether the materials are in usable or waste condition.

**HAZARDOUS PRODUCTION MATERIAL (HPM).** A solid, liquid or gas associated with semiconductor manufacturing that has a degree-of-hazard rating in health, flammability or instability of Class 3 or 4 as defined in NFPA 704 and that is used directly in research, laboratory or production processes that have as their end product materials that are not hazardous.

**HEAD JOINT.** Vertical mortar joint placed between masonry units within the wythe at the time the masonry units are laid.

**HEALTH HAZARD.** A classification of a chemical for which there is statistically significant evidence that acute or chronic health effects are capable of occurring in exposed persons. The term "health hazard" includes chemicals that are toxic or highly toxic, and corrosive.

**HEAVY DUTY SCAFFOLD.** A supported scaffold capable of supporting loads of up to 75 pounds per square foot (366.15 kg/m$^2$), and not more than those imposed by workers and heavy material, including but not limited to stone.

**HEAVY DUTY SIDEWALK SHED.** A sidewalk shed designed to carry a live load of at least 300 pounds per square foot (1465 kg/m$^2$).

**HEIGHT, BUILDING.** The vertical distance from the grade plane to the average height of the highest roof surfaces.

**HELICAL PILES.** Helical piles are manufactured deep foundation steel elements consisting of a shaft and one or more helical bearing plates (helices) screwed into the ground by application of torque on the shaft. The various products marketed as screw piles, torque anchors, and helical piles are considered helical piles.

**HELIPAD.** A structural surface that is used for the landing, taking off, taxiing and parking of helicopters.

**HELIPORT.** An area of land or water or a structural surface that is used, or intended for the use, for the landing and taking off of helicopters, and any appurtenant areas that are used, or intended for use, for heliport buildings or other heliport facilities.

**HELISTOP.** The same as "heliport," except that no fueling, defueling, maintenance, repairs or storage of helicopters is permitted.

**HIGHLY TOXIC MATERIAL.** A chemical that is lethal at the following doses or concentrations:

1. A chemical that has a median lethal dose (LD$_{50}$) of 50 milligrams or less per kilogram of body weight when administered orally to albino rats weighing between 200 and 300 grams each;
2. A chemical that has a median lethal dose (LD₅₀) of 200 milligrams or less per kilogram of body weight when administered by continuous contact for 24 hours (or less if death occurs within 24 hours) with the bare skin of albino rabbits weighing between 2 and 3 kilograms each; or

3. A chemical that has a median lethal concentration (LC₅₀) in air of 200 parts per million by volume or less of gas or vapor, or 2 milligrams per liter or less of mist, fume or dust, when administered by continuous inhalation for 1 hour (or less if death occurs within 1 hour) to albino rats weighing between 200 and 300 grams each.

**HIGH-PRESSURE BOILER.** See Section 28-401.3 of the *Administrative Code.*

**HIGH-PRESSURE DECORATIVE EXTERIOR-GRADE COMPACT LAMINATE (HPL).** An exterior wall covering fabricated using HPL in a specific assembly including joints, seams, attachments, substrate, framing and other details as appropriate to a particular design.

**HIGH-RISE BUILDING.** A building with an occupied floor located more than 75 feet (22 860 mm) above the lowest level of fire department vehicle access.

**HISTORIC STRUCTURE.** A building or structure which is a designated New York City landmark or interior landmark, is located within a designated New York City historic district, or is listed on the New York State or National Register of Historic Places.

**HISTORIC STRUCTURE (FLOOD-RESISTANT CONSTRUCTION).** See Section G201.1.2.

**HOISTING EQUIPMENT.** Power or manually operated equipment that raises or lowers a suspended load. The definition of hoisting equipment shall also include a hoisting machine, bucket hoist, material hoist, personnel hoist, or industrial rope access equipment. The definition of hoisting equipment shall not include an elevator, mast climber, or scaffold.

**HOISTING MACHINE.** A power operated machine that lifts or lowers a suspended load utilizing a drum and a rope. The definition of hoisting machine shall also include a crane, derrick, cableway, or telehandler. The definition of hoisting machine shall not include an elevator, mast climber, or scaffold.

**HOISTING MECHANISM.** A hoist drum and rope reeving system used for lifting and lowering loads.

**HOISTWAY.** The hoistway is the opening through a building or structure for the travel of elevators, dumbwaiters, or material lifts, extending from the pit floor to the roof or floor above.

**HOLD-DOWN.** See “TIE-DOWN”.

**HORIZONTAL ASSEMBLY.** A fire-resistance-rated floor or roof assembly of materials designed to restrict the spread of fire in which continuity of the fire-resistance rating is maintained.

**HOSPITALS AND PSYCHIATRIC CENTERS.** See Section 308.2.

**HOUSING UNIT.** See Section 408.1.1.
**H-PILES.** Steel H-piles are constructed by driving a steel H-shaped section into the ground.

**HPM FLAMMABLE LIQUID.** An HPM liquid that is defined as either a Class I flammable liquid or a Class II or Class IIIA combustible liquid.

**HPM ROOM.** A room used in conjunction with or serving a Group H-5 occupancy, where HPM is stored or used and that is classified as a Group H-2, H-3 or H-4 occupancy.

**HURRICANE-PRONE REGIONS.** New York City is within the hurricane-prone region for Risk Category II, III, and IV buildings.

**HYDROGEN FUEL GAS ROOM.** A separately ventilated, fully enclosed room designed to exclusively house the generation of gaseous hydrogen for immediate on-premises use in indoor fuel cells or other energy production process, and incidental indoor storage of gaseous hydrogen. A hydrogen fuel gas room is not intended to house the production or dispensing of hydrogen motor fuel.

**I-4 MIX.** A type of heavy duty asphaltic concrete mix containing 0.75 inch (19 mm) nominal maximum size aggregate with 25 percent to 50 percent of the aggregate capable of passing through a No. 8 sieve and in which all sand contained in the mix is crushed.

**ICE-SENSITIVE STRUCTURE.** A structure for which the effect of an atmospheric ice load governs the design of a structure or portion thereof. This includes, but is not limited to, lattice structures, guyed masts, overhead lines, light suspension and cable-stayed bridges, aerial cable systems (e.g., for ski lifts or logging operations), amusement rides, open catwalks and platforms, flagpoles and signs.

**IMMEDIATELY DANGEROUS TO LIFE AND HEALTH (IDLH).** The concentration of airborne contaminants that poses a threat of death, immediate or delayed permanent adverse health effects, or effects that could prevent escape from such an environment as established by the National Institute of Occupational Safety and Health (NIOSH) based on both toxicity and flammability. It generally is expressed in parts per million by volume (ppm v/v) or milligrams per cubic meter (mg/m³). If adequate data do not exist for precise establishment of IDLH concentrations, an independent certified industrial hygienist, industrial toxicologist, appropriate regulatory agency or other source approved by the Fire Commissioner shall make such determination.

**IMPACT LOAD.** The load resulting from moving machinery, elevators, craneways, vehicles and other similar forces and kinetic loads, pressure and possible surcharge from fixed or moving loads.

**IMPORTANCE FACTOR, I.** A factor that accounts for the degree of hazard to human life and damage to property.

**INCAPABLE OF SELF-PRESERVATION.** Persons who, because of age, physical limitations, mental limitations, chemical dependency or medical treatment, cannot respond as an individual to an emergency situation.

**INCIDENT.** An occurrence directly caused by construction or demolition activity or site conditions that result in one or more of the following:
1. A fatality to a member of the public;
2. Any type of injury to a member of the public;
3. A fatality to a worker;
4. An injury to a worker that requires transport by emergency medical services or requires immediate emergency care at a hospital or offsite medical clinic;
5. Any complete or partial structural collapse or material failure;
6. Any complete or partial collapse or failure of pedestrian protection, scaffolding, hoisting equipment, or material handling equipment; or
7. Any material fall exterior to the building or structure.

**INCOMPATIBLE MATERIALS.** Materials that, if mixed or combined, could explode, generate heat, gases or other byproducts, or react in such a way that are hazardous to life or property.

**INDUSTRIAL ROPE ACCESS.** The use of rope access equipment in which a person descends or ascends on a rope, or traverses along a rope, and in which the ropes are used as the primary means of support and positioning. Industrial rope access does not include window washing.

**INERT GAS.** A gas that is capable of reacting with other materials only under abnormal conditions such as high temperatures, pressures and similar extrinsic physical forces. Within the context of the code, inert gases do not exhibit either physical or health properties as defined (other than acting as a simple asphyxiant) or hazard properties other than those of a compressed gas. Some of the more common inert gases include argon, helium, krypton, neon, nitrogen and xenon.

**INITIATING DEVICE.** A system component that originates transmission of a change-of-state condition, such as in a smoke detector, manual fire alarm box or supervisory switch.

**INSTALLING/INSTALLATION/INSTALL (SCAFFOLD).** The initial installation or reinstallation of a scaffold at a site.

*Initial installation (scaffold).* The initial assembly, set-up, or placement of a scaffold at a site.

*Reinstallation (scaffold).* The addition, relocation, or removal of any part, component, or attachment to a scaffold at a site, including but not limited to counterweights, tie-backs, anchorages, or connections to the building or structure, that occurs subsequent to the initial installation, and which does not otherwise occur in an automated, automatic fashion, as part of the normal use of the scaffold.

**INTENDED TO BE OCCUPIED AS A RESIDENCE.** This refers to a dwelling unit or sleeping unit that can or will be used all or part of the time as the occupant’s place of abode.

**INTERIOR EXIT RAMP.** An exit component that serves to meet one or more means of egress design requirements, such as required number of exits or exit access travel distance, and provides for a protected path of egress travel to the exit discharge or public way.
INTERIOR EXIT STAIRWAY. A stairway not meeting the definition of an exterior exit stairway.

INTERIOR FINISH. Interior finish includes interior wall and ceiling finish and interior floor finish.

INTERIOR FLOOR FINISH. The exposed floor surfaces of buildings including coverings applied over a finished floor or stair, including risers.

INTERIOR FLOOR-WALL BASE. Interior floor finish trim used to provide a functional or decorative border at the intersection of walls and floors.

INTERIOR SURFACES. Surfaces other than weather-exposed surfaces.

INTERIOR WALL AND CEILING FINISH. The exposed interior surfaces of buildings including, but not limited to: fixed or movable walls and partitions; toilet room privacy partitions; columns; ceilings; and interior wainscoting, paneling or other finish applied structurally or for decoration, acoustical correction, surface insulation, structural fire resistance or similar purposes, but not including trim.

INTERLAYMENT. A layer of felt or nonbituminous saturated felt not less than 18 inches (457 mm) wide, shingled between each course of a wood-shake roof covering.

INTUMESCENT FIRE-RESISTANT COATINGS. Thin film liquid mixture applied to substrates which expands into a protective foamed layer to provide fire-resistant protection of the substrates when exposed to flame or intense heat.

JIB. An extension attached to the boom point to provide added boom length for lifting specified loads. The jib may be in line with the boom or offset to various angles in the vertical plane of the boom.

JOINT. The opening in or between adjacent assemblies that is created due to building tolerances, or is designed to allow independent movement of the building in any plane caused by thermal, seismic, wind or any other loading.

JUMP (JUMPING or CLIMBING). The raising or lowering of a tower crane to a new working height. This can include, but is not limited to, the process of adding or removing mast or tower sections to equipment that has already been erected.

KEY ELEMENT. An element of the structural system, including its connections, that meets one or more of the following criteria:

1. An element which when lost, results in more than local collapse.

2. An element that braces a key element, the failure of which results in failure of the key element (further secondary elements need not be considered key elements).

3. An element whose tributary area exceeds 3,000 square feet (279 m²) on a single level.

KITCHEN. A room with 80 square feet (7.4 m²) or more of floor area that is intended, arranged, designed or used for cooking or warming of food.
**KITCHENETTE.** A space with less than 80 square feet (7.4 m²) of floor area that is intended, arranged, designed or used for cooking or warming of food.

**L RATING.** The air leakage rating of a through-penetration firestop system or a fire-resistant joint system when tested in accordance with UL 1479 or UL 2079, respectively.

**LABORATORY BUILDING.** See Section 427.4.

**LABORATORY CHEMICAL.** See Section 427.4.

**LABORATORY, NONPRODUCTION.** See Section 427.4.

**LABORATORY UNIT.** See Section 427.4.

**LAYERED (SOIL).** Two or more distinctly different soil or rock types arranged in layers. Micaceous seams or weakened planes in rock or shale are considered layered.

**LETTER OF MAP AMENDMENT (LOMA).** See Section G201.1.2.

**LETTER OF MAP REVISION BASED ON FILL (LOMR-F).** See Section G201.1.2.

**LETTER OF MAP REVISION (LOMR).** See Section G201.1.2.

**LIGHT DUTY SCAFFOLD.** A supported scaffold capable of supporting loads of up to 25 pounds per square foot (122.05 kg/m²), and not more than those imposed by workers and lightweight material, including but not limited to wood or paint.

**LIGHT DUTY SIDEWALK SHED.** A sidewalk shed designed to carry a live load of at least 150 pounds per square foot (732.3 kg/m²).

**LIGHT-DIFFUSING SYSTEM.** Construction consisting in whole or in part of lenses, panels, grids or baffles made with light-transmitting plastics positioned below independently mounted electrical light sources, skylights or light-transmitting plastic roof panels. Lenses, panels, grids and baffles that are part of an electrical fixture shall not be considered as a light-diffusing system.

**LIGHT-FRAME CONSTRUCTION.** A type of construction whose vertical and horizontal structural elements are primarily formed by a system of repetitive wood or cold-formed steel framing members.

**LIGHT-TRANSMITTING PLASTIC ROOF PANELS.** Structural plastic panels other than skylights that are fastened to structural members, or panels or sheathing, and that are used as light-transmitting media in the plane of the roof.

**LIGHT-TRANSMITTING PLASTIC WALL PANELS.** Plastic materials that are fastened to structural members, or to structural panels or sheathing, and that are used as light-transmitting media in exterior walls.

**LIMIT STATE.** A condition beyond which a structure or member becomes unfit for service and is judged to be no longer useful for its intended function (serviceability limit state) or to be unsafe (strength limit state).
LIMITED AREA SPRINKLER SYSTEM. An automatic sprinkler system serving fewer than 6 sprinkler heads on any single connection.

LIMITED SITE SAFETY TRAINING (SST) CARD. A card that is issued before the SST full compliance date, in a form and manner established by the department and that satisfies each of the following conditions:

1. Such card is issued by an SST provider to a person who submits an application to such provider demonstrating, in a form and manner established by the department, that such applicant satisfies the requirements of Item 1.1, 1.2 or 1.3:

   1.1. Such applicant has successfully completed (i) an OSHA 10-hour class and (ii) 20 additional SST credits specified by the department, including eight SST credits relating to safeguarding against the dangers posed by falling workers and objects.

   1.2. Such applicant has successfully completed an OSHA 30-hour class.

   1.3. Such applicant has successfully completed a 100-hour training program.

2. If such applicant completed the training to comply with Item 1.1, 1.2 or 1.3 but did not complete such training within the five years preceding submission of such application, such applicant has, in the one-year period preceding submission of such application, completed at least eight SST credits specified by the department.

3. Such card is issued by an SST provider who does not require applicants to submit any information except for (i) the information necessary to establish that the requirements in Item 1 have been satisfied, as specified by the department, (ii) a photograph of the applicant and (iii) such additional information as the department may allow by rule.

4. Such card expires on the day before the SST full compliance date and is not renewable.

LIQUEFACTION. For granular soils, liquefaction is defined as the loss of shear strength in soils resulting from increased pore-water pressure and reduced effective stress that may develop as a result of cyclic loading during earthquakes. For cohesive soils with a plasticity index of less than 20, liquefaction is defined as any transient softening and increased cyclic shear strains that may occur during earthquakes.

LIQUID. A material that has a melting point that is equal to or less than 68°F (20°C) and a boiling point that is greater than 68°F (20°C) at 14.7 pounds per square inch absolute (psia) (101 kPa). When not otherwise identified, the term "liquid" includes both flammable and combustible liquids.

LIQUID STORAGE ROOM. A room classified as Group H-3 occupancy used for the storage of flammable or combustible liquids in an unopened condition.

LIQUID USE, DISPENSING AND MIXING ROOM. A room in which Class I, II and IIIA flammable or combustible liquids are used, dispensed or mixed in open containers.
**LIVE LOAD.** A load produced by the use and occupancy of the building or other structure and do not include construction or environmental loads such as wind load, snow load, rain load, earthquake load, flood load or dead load.

**LIVE LOAD (ROOF).** A load on a roof produced:

1. During maintenance by workers, equipment and materials;
2. During the life of the structure by movable objects such as planters or other small decorative appurtenances that are not occupancy related; or
3. By the use and occupancy of the roof such as for roof gardens or assembly areas.

**LOAD AND RESISTANCE FACTOR DESIGN (LRFD).** A method of proportioning structural members and their connections using load and resistance factors such that no applicable limit state is reached when the structure is subjected to appropriate load combinations. The term "LRFD" is used in the design of steel and wood structures.

**LOAD BLOCK, LOWER.** The assembly of hook or shackle, swivel, sheaves, pins, and frame suspended by the hoisting ropes.

**LOAD BLOCK, UPPER.** The assembly of shackle, swivel, sheaves, pins, and frame suspended from the boom point.

**LOAD EFFECTS.** Forces and deformations produced in structural members by the applied loads.

**LOAD FACTOR.** A factor that accounts for deviations of the actual load from the nominal load; for uncertainties in the analysis that transforms the load into a load effect, and for the probability that more than one extreme load will occur simultaneously.

**LOAD RATING CHART.** A full and complete range of manufacturer’s load ratings at all stated operating radii, boom angles, work areas, boom lengths and configurations, jib lengths and angles (or offset), as well as alternative ratings for use and nonuse of optional equipment, such as outriggers and extra counterweights, that affect ratings.

**LOAD RATINGS.** Crane and derrick ratings in pounds (kilograms) established by the manufacturer in accordance with standards set forth in rules promulgated by the commissioner.

**LOAD (WORKING).** The external load, in pounds (kilograms), applied to the crane or derrick, including the weight or auxiliary load attaching equipment, such as lower load blocks, shackles, and slings.

**LOADS.** Forces or other actions that result from the weight of building materials, occupants and their possessions, environmental effects, differential movement and restrained dimensional changes. Permanent loads are those loads in which variations over time are rare or of small magnitude, such as dead loads. All other loads are variable loads (see also "Nominal loads").

**LOCAL COLLAPSE.** Failure of a structural element that results in the collapse of areas being directly supported by that element and not extending vertically more than three stories.
LOT. A portion or parcel of land considered as a unit.

LOT. A portion or parcel of land considered as a unit.

LOT LINE. A line dividing one lot from another, or from a street or any public place.

LOT, TAX. A portion or parcel of land classified as such by the department of finance. Where a tax lot line shifts in a vertical plane, the commissioner shall determine the manner in which provisions of this code apply with respect to measurements to or from such tax lot lines, in order to protect public safety.

LOW ENERGY POWER-OPERATED DOOR. Swinging door that opens automatically upon an action by a pedestrian such as pressing a push plate or waving a hand in front of a sensor. The door closes automatically, and operates with decreased forces and decreased speeds (See "Power-assisted door" and "Power-operated door").

LOWER FLAMMABLE LIMIT (LFL). The minimum concentration of vapor in air at which propagation of flame will occur in the presence of an ignition source. The LFL is sometimes referred to as "LEL" or "lower explosive limit."

LOWEST FLOOR. The lowest floor of the lowest enclosed area, including crawl spaces and basements (for flood zone purposes). The lowest floor shall not include any wet floodproofed spaces usable solely for vehicle parking, building access, storage or crawl space, provided that such enclosure is not built so as to render the structure in violation of Appendix G, including that:

1. Such enclosure shall allow for the automatic entry and exit of floodwaters;
2. Such enclosure shall be constructed solely of flood-resistant materials and finishes;
3. Such enclosure shall have a floor elevation equal to or higher than the outside adjacent grade on at least one side; and
4. Such outside adjacent grade shall slope down, towards the source of flooding, providing positive drainage by gravity, thus preventing accumulations of water under or in the structure after the floodwaters recede without the use of pumps, pipes or drains.

MAILBOXES. Receptacles for the receipt of documents, packages or other deliverable matter. Mailboxes include, but are not limited to, post office boxes and receptacles provided by commercial mail-receiving agencies, apartment houses and schools.

MAIN WIND FORCE-RESISTING SYSTEM. An assemblage of structural elements assigned to provide support and stability for the overall structure. The system generally receives wind loading from more than one surface.

MAINTENANCE (SCAFFOLD). Regular or periodic upkeep as specified by the manufacturer to keep the scaffold, including all parts or components, in like new condition and safe working order, and that does not otherwise meet the definition of an installation, removal, or repair.

MAJOR BUILDING. An existing or proposed building 10 or more stories or 125 feet (38 100 mm) or more in height, or an existing or proposed building with a building footprint of 100,000 square feet.
(30 480 m²) or more regardless of height, or an existing or proposed building so designated by the commissioner due to unique hazards associated with the construction or demolition of the structure.

**MANUAL FIRE ALARM BOX.** A manually operated device used to initiate an alarm signal.

**MANUFACTURE DATE (Crane).** For a particular crane, the earlier of the following dates:

1. The date the crane was originally manufactured for its intended purpose.
2. The date that the oldest major component of the crane was originally manufactured.

**MANUFACTURED HOME.** See Section G201.1.2.

**MANUFACTURED HOME PARK OR SUBDIVISION.** See Section G201.1.2.

**MARKET VALUE OF STRUCTURE.** See Section G201.1.2.

**MARQUEE.** A permanent roofed structure attached to and supported by the building and that projects into the public right-of-way.

**MASONRY.** A built-up construction or combination of building units or materials of clay, shale, concrete, glass, gypsum, stone or other approved units bonded together with or without mortar or grout or other accepted methods of joining.

- **Glass unit masonry.** Masonry composed of glass units bonded by mortar.
- **Plain masonry.** Masonry in which the tensile resistance of the masonry is taken into consideration and the effects of stresses in reinforcement are neglected.
- **Reinforced masonry.** Masonry construction in which reinforcement acting in conjunction with the masonry is used to resist forces.
- **Solid masonry.** Masonry consisting of solid masonry units laid contiguously with the joints between the units filled with mortar.
- **Unreinforced (plain) masonry.** Masonry in which the tensile resistance of masonry is taken into consideration and the resistance of the reinforcing steel, if present, is neglected.

**MASONRY UNIT.** Brick, tile, stone, glass block or concrete block conforming to the requirements specified in Section 2103.

- **Hollow.** A masonry unit whose net cross-sectional area in any plane parallel to the load-bearing surface is less than 75 percent of its gross cross-sectional area measured in the same plane.
- **Solid.** A masonry unit whose net cross-sectional area in every plane parallel to the load-bearing surface is 75 percent of more of its gross cross-sectional area measured in the same plane.

**MASS CONCRETE.** Any volume of concrete with dimensions large enough to require that measures be taken to cope with generation of heat from hydration of the cement and attendant volume change to minimize cracking, reduction of compressive strength, and/or delayed ettringite formation.
MAST CLIMBER. A powered device consisting of an elevating platform mounted on a base or chassis and mast, that when erected is capable of supporting personnel, material, equipment and tools on a deck or platform that is capable of traveling vertically in infinitely adjustable increments to reach the desired work level.

MASTIC FIRE-RESISTANT COATINGS. Liquid mixture applied to a substrate by brush, roller, spray or trowel that provides fire-resistant protection of a substrate when exposed to flame or intense heat.

MATERIAL HANDLING EQUIPMENT. Power or manually operated equipment that moves or transports material or personnel during the construction or demolition of a building or structure. Material handling equipment shall not include an elevator, hoisting equipment, mast climber, or scaffold.

MATERIAL HOIST (MATERIAL HOISTING EQUIPMENT). A power or manually operated platform, car, or cage, that (i) is temporarily installed at a construction or demolition site, (ii) moves vertically on guide members to raise or lower material, and (iii) is controlled from a point outside the conveyance.

MAXIMUM CONSIDERED EARTHQUAKE GEOMETRIC MEAN (MCE\textsubscript{G}) PEAK GROUND ACCELERATION. The most severe earthquake effects considered by this standard determined for geometric mean peak ground acceleration and without adjustment for targeted risk. The MCE\textsubscript{G} peak ground acceleration adjusted for site effects (PGA\textsubscript{M}) is used in this standard for evaluation of liquefaction, lateral spreading, seismic settlements, and other soil-related issues. The PGA\textsubscript{M} values adjusted for site effects are provided in Table 1816.2.1 or can be derived from the site-specific procedures provided in Section 21.5 of ASCE 7.

MAXIMUM CONSIDERED EARTHQUAKE (MCE) GROUND MOTION. The most severe earthquake effects considered by this code more specifically defined in the terms, maximum considered earthquake geometric mean (MCE\textsubscript{G}) peak ground acceleration and risk-targeted maximum considered earthquake (MCE\textsubscript{R}) ground motion response acceleration.

MEAN ROOF HEIGHT. The average of the roof eave height and the height to the highest point on the roof surface, except that eave height shall be used for roof angle of less than or equal to 10 degrees (0.1745 rad).

MEANS OF EGRESS. A continuous and unobstructed path of vertical and horizontal egress travel from any occupied portion of a building or structure to a public way. A means of egress consists of three separate and distinct parts: the exit access, the exit and the exit discharge.

MECHANICAL-ACCESS OPEN PARKING GARAGE. Open parking garages employing parking machines, lifts, elevators or other mechanical devise for vehicles moving from and to street level and in which public occupancy is prohibited above the street level.

MECHANICAL DEMOLITION EQUIPMENT. Mechanically driven or powered equipment that is utilized to physically demolish a building or structure, or elements of a building or structure, either within or exterior to the building or structure, or that is utilized to move debris or material within the
building or structure. Mechanical demolition equipment shall not include mechanically driven or powered equipment that is utilized to move debris or material outside of the building or structure.

**MECHANICAL EQUIPMENT SCREEN.** A partially enclosed rooftop structure used to aesthetically conceal heating, ventilating and air conditioning (HVAC) electrical or mechanical equipment from view.

**MECHANICAL SYSTEMS (STRUCTURAL).** For the purposes of determining seismic loads in this code, mechanical systems shall also include fire protection, plumbing and fuel gas systems as specified therein.

**MEDIUM DUTY SCAFFOLD.** A supported scaffold capable of supporting loads of up to 50 pounds per square foot (244.1 kg/m²), and not more than those imposed by workers and moderate material, including but not limited to brick and pipe.

**MEMBRANE PENETRATION.** A breach in one side of a floor-ceiling, roof-ceiling or wall assembly to accommodate an item installed into or passing through the breach.

**MEMBRANE-COVERED CABLE STRUCTURE.** A nonpressurized structure in which a mast and cable system provides support and tension to the membrane weather barrier and the membrane imparts stability to the structure.

**MEMBRANE-COVERED FRAME STRUCTURE.** A nonpressurized building wherein the structure is composed of a rigid framework to support a tensioned membrane that provides the weather barrier.

**MEMBRANE-PENETRATION FIRESTOP.** A material, device, or assemblage of specific materials or products that is designed, tested and fire-resistance rated to resist for a prescribed time period the passage of flame and heat through openings in a protective membrane in order to accommodate cables, cable trays, conduit, tubing, piping or similar items.

**MEMBRANE-PENETRATION FIRESTOP SYSTEM.** An assemblage consisting of a fire-resistance-rated floor-ceiling, roof-ceiling or wall assembly, one or more penetrating items installed into or passing through the breach in one side of the assembly and the materials or devices, or both, installed to resist the spread of fire into the assembly for a prescribed period of time.

**MERCHANDISE PAD.** A merchandise pad is an area for display of merchandise surrounded by aisles, permanent fixtures or walls. Merchandise pads contain elements such as nonfixed and moveable fixtures, cases, racks, counters and partitions from which customers browse or shop.

**METAL COMPOSITE MATERIAL (MCM).** A factory-manufactured panel consisting of metal skins bonded to both faces of a plastic core.

**METAL COMPOSITE MATERIAL (MCM) SYSTEM.** An exterior wall covering fabricated using MCM in a specific assembly including joints, seams, attachments, substrate, framing and other details as appropriate to a particular design.

**METAL ROOF PANEL.** An interlocking metal sheet having a minimum installed weather exposure of 3 square feet (.279 m²) per sheet.
METAL ROOF SHINGLE. An interlocking metal sheet having an installed weather exposure less than 3 square feet (.279 m²) per sheet.

MEZZANINE. An intermediate level or levels between the floor and ceiling of any story in accordance with Section 505.

MICROPILE. A micropile is a drilled and grouted deep foundation element with a diameter that measures 5 inches (127 mm) to 14 inches (356 mm) that develops its load-carrying capacity by means of a bond zone in soil (also commonly known as a minipile).

MINERAL BOARD. A rigid felted thermal insulation board consisting of either felted mineral fiber or cellular beads of expanded aggregate formed into flat rectangular units.

MINERAL FIBER. Insulation composed principally of fibers manufactured from rock, slag or glass, with to without binders.

MINERAL WOOL. Synthetic vitreous fiber insulation made by melting predominantly igneous rock or furnace slag, and other inorganic materials, and then physically forming the melt into fibers.

MINOR ALTERATIONS. See Section 105.4.2 of the Administrative Code.

MOBILE CRANE. A crane equipped with rubber-tired wheels or crawler treads for travel. The definition of mobile crane shall include, but is not limited, to a commercial truck mounted crane, crawler crane, wheel mounted crane (multiple control stations) or wheel mounted crane (single control station). The definition of mobile crane shall not include a truck mounted crane or a self-erecting tower crane.

MOBILE SCAFFOLD. A powered or unpowered, portable, caster, track or wheel-mounted supported scaffold.

MODIFIED BITUMEN ROOF COVERING. One or more layers of polymer-modified asphalt sheets. The sheet materials shall be fully adhered or mechanically attached to the substrate or held in place with an approved ballast layer.

MOIST (SOIL). A condition in which a soil looks and feels damp. Moist cohesive soil can easily be shaped into a ball and rolled into small diameter threads before crumbling. Moist granular soil that contains some cohesive material will exhibit signs of cohesion between particles.

MONOPOLE SIGN. A ground sign wholly supported by a single pole structure.

MORTAR. A mixture consisting of cementitious materials, fine aggregates, water, with or without admixtures, that is used to construct unit masonry assemblies.

MORTAR, SURFACE-BONDING. A mixture to bond concrete masonry units that contains hydraulic cement, glass fiber reinforcement with or without inorganic fillers or organic modifiers and water.

MULTILEVEL ASSEMBLY SEATING. Seating that is arranged in distinct levels where each level is comprised of either multiple rows, or single row of box seats accessed from a separate level.
MULTIPLE-STATION ALARM DEVICE. Two or more single-station alarm devices that can be interconnected such that actuation of one causes all integral or separate audible alarms to operate. A multiple-station alarm device can consist of one single-station alarm device having connections to other detectors or to a manual fire alarm box.

MULTIPLE-STATION SMOKE ALARM. Two or more single-station alarm devices that are capable of interconnection such that actuation of one causes the appropriate alarm signal to operate in all interconnected alarms and not connected to a fire alarm system.

MULTIPOINT ADJUSTABLE SUSPENDED SCAFFOLD. A suspended scaffold consisting of a platform(s) that is suspended by more than two ropes from overhead supports and equipped with a means to raise and lower the platform to the desired work levels.

MULTISTORY UNIT. A dwelling unit or sleeping unit with habitable space located on more than one story.

NAILING, BOUNDARY. A special nailing pattern required by design at the boundaries of diaphragms.

NAILING, EDGE. A special nailing pattern required by design at the edges of each panel within the assembly of a diaphragm or shear wall.

NAILING, FIELD. Nailing required between the sheathing panels and framing members at locations other than boundary nailing and edge nailing.

NATIONAL GEODETIC VERTICAL DATUM (NGVD). The national vertical datum standard established in 1929; used as a reference for establishing elevations within a floodplain.

NATURALLY DURABLE WOOD. The heartwood of the following species except for the occasional piece with corner sapwood, provided 90 percent or more of the width of each side on which it occurs is heartwood:

  - **Decay resistant.** Redwood, cedar, black locust and black walnut.
  - **Termite resistant.** Redwood, Alaska yellow cedar, Eastern red cedar and Western red cedar.

NEW CONSTRUCTION. See Section G201.1.2.

NOMINAL LOADS. The magnitudes of the loads specified in Chapter 16 (dead, live, soil, wind, snow, rain, flood and earthquake).

NOMINAL SIZE (LUMBER). The commercial size designation of width and depth, in standard sawn lumber and glued-laminated lumber grades; somewhat larger than the standard net size of dressed lumber, in accordance with DOC PS 20 for sawn lumber and with the ANSI/AWC NDS for glued-laminated lumber.

NONCOMBUSTIBLE MEMBRANE STRUCTURE. A membrane structure in which the membrane and all component parts of the structure are noncombustible.
NONRESIDENTIAL (FOR FLOOD ZONE PURPOSES). A building or structure that either:

1. Contains no space classified in Group I-1, R-1, R-2 or R-3, and contains no space that is accessory, as such term is defined in the New York City Zoning Resolution, to any Group I-1, R-1, R-2 or R-3 occupancy; or

2. Contains such space(s), but also contains space at or below the DFE that is not accessory, as such term is defined in the New York City Zoning Resolution, to a Group I-1, R-1, R-2 or R-3 occupancy.

NORMAL TEMPERATURE AND PRESSURE (NTP). A temperature of 70°F (21°C) and a pressure of 1 atmosphere (14.7 psia (101 kPa)).

NORTH AMERICAN VERTICAL DATUM (NAVD). The national vertical datum standard established in 1988, used as a reference for establishing elevations within a floodplain.

NOSING. The leading edge of treads of stairs and of landings at the top of stairway flights.

NOTATIONS. For Chapter 16, see Section 1602.1.

NOTATIONS. For Chapter 21, see Section 2102.1.

NOTIFICATION ZONE. See "Zone, notification."

NURSING HOMES. See Section 308.2.2.

OCCUPANT LOAD. The number of persons for which the means of egress of a building or portion thereof is designed.

OCCUPANT SENSOR. A device that detects the presence or absence of people within an area and causes lighting, equipment, or appliances to be regulated accordingly.

OCCUPIABLE SPACE. A room or enclosed space, other than a habitable space, designed for human occupancy or use in which individuals may remain for a period of time for rest, amusement, treatment, education, dining, shopping, employment, labor or other similar purposes.

OPEN-ENDED CORRIDOR. An interior corridor that is open on each end and connects to an exterior stairway or ramp at each end with no intervening doors or separation from the corridor.

OPEN EXTERIOR SPACE. See Section 1002.1.2.

OPEN PARKING GARAGE. A structure or portion of a structure with the openings as described in Section 406.5.2 that is used for the parking or storage of private motor vehicles as described in Section 406.5.3.

OPEN PARKING LOT. An exterior space with surfacing at grade used for the storage or sale of more than four motor vehicles, including but not limited to parking lots, motor vehicles sales lots, and accessory open parking spaces.
OPEN SYSTEM. The use of a solid or liquid hazardous material in equipment or a vessel or system that remains open during normal operation such that vapors are emitted during the operation of such equipment, vessel or system and the material is exposed to the atmosphere during such operation. Examples of open systems for solids and liquids include dispensing from or into open beakers or containers, dip tank and plating tank operations.

ORDINARY REPAIRS. See Section 105.4.2 of the Administrative Code.

ORGANIC PEROXIDE. An organic compound having a double oxygen or peroxy (-O-O-) in its chemical structure. Organic peroxides can present an explosion hazard (detonation or deflagration), can be shock sensitive, or can be susceptible to decomposition into various unstable compounds over an extended period of time and are classified as follows based upon their hazardous properties:

   Class I. Organic peroxides that are capable of deflagration but not detonation.
   Class II. Organic peroxides that burn very rapidly and that pose a moderate reactivity hazard.
   Class III. Organic peroxides that burn rapidly and that pose a moderate reactivity hazard.
   Class IV. Organic peroxides that burn in the same manner as ordinary combustibles and that pose a minimal reactivity hazard.
   Class V. Organic peroxides that burn with less intensity than ordinary combustibles or do not sustain combustion and that pose no reactivity hazard.

   Unclassified detonable. Organic peroxides that are capable of detonation and pose an extremely high explosion hazard through rapid explosive decomposition.

ORTHOGONAL. To be in two horizontal directions, at 90 degrees (1.57 rad) to each other.

OSHA. The United States Department of Labor Occupational Safety and Health Administration.

OSHA 10-HOUR CLASS. A class that includes 10 or more hours in construction industry safety and health that is intended for workers and satisfies the following conditions:

   1. Such class is (i) approved by OSHA and conducted in accordance with the OSHA outreach training program or (ii) an equivalent 10 or more hour class approved by the department.
   2. Such class consists of in-person training, actively proctored online training or, if such training is conducted before the effective date of the local law that added this definition, online training.

OSHA 30-HOUR CLASS. A class that includes 30 or more hours in construction industry safety and health that is intended for supervisors and satisfies the following conditions:

   1. Such class is (i) approved by OSHA and conducted in accordance with the OSHA outreach training program or (ii) an equivalent 30 or more hour class approved by the department.
2. Such class consists of in-person training, actively proctored online training or, if such training is conducted before the effective date of the local law that added this definition, online training.

OTHER STRUCTURES. Structures, other than buildings, for which loads are specified in Chapter 16.

OUTRIGGER (CRANE). Extendable or fixed members attached to the mounting base that rest on supports at the outer ends used to support the crane.

OUTRIGGER (SAFFOLD). The structural member of a supported scaffold used to increase the base width of a scaffold in order to provide support for and increased stability of the scaffold.

OUTRIGGER BEAM (THRUSTOUT). The structural member of a suspended scaffold or outrigger scaffold that provides support for the scaffold by extending the scaffold point of attachment to a point out and away from the structure or building.

OUTRIGGER SCAFFOLD. A supported scaffold consisting of a platform resting on outrigger beams (thrustouts) projecting beyond the wall or face of the building or structure, the inboard ends of which are secured inside the building or structure.

OXIDIZER. A material that readily yields oxygen or other oxidizing gas or that readily reacts to promote or initiate combustion of combustible materials, and if heated or contaminated can result in vigorous self-sustained decomposition, classified as follows:

Class 4. An oxidizer that can undergo an explosive reaction due to contamination or exposure to thermal or physical shock and causes a severe increase in the burning rate of combustible materials with which it comes into contact.

Class 3. An oxidizer that causes a severe increase in the burning rate of combustible materials with which it comes in contact.

Class 2. An oxidizer that causes a moderate increase in the burning rate of combustible materials with which it comes in contact.

Class 1. An oxidizer that causes a readily measurable increase in the burning rate of combustible materials with which it comes in contact, but less than a moderate increase.

OXIDIZING GAS. A gas that can support and accelerate combustion of other materials more than air does.

PANEL (PART OF A STRUCTURE). The selection of a floor, wall or roof comprised between the supporting frame of two adjacent rows of columns and girders or column bands of floor or roof construction.

PANIC HARDWARE. A door-latching assembly incorporating a device that releases the latch upon the application of a force in the direction of egress travel.

PARKING GARAGE. A structure or portion of a structure, other than a private garage or carport,
used for the parking or storage of motor vehicles.

**PARTICLEBOARD.** A generic term for a panel primarily composed of cellulosic materials (usually wood), generally in the form of discrete pieces or particles, as distinguished from fibers. The cellulosic material is combined with synthetic resin or other suitable bonding system by a process in which the interparticle bond is created by the bonding system under heat and pressure.

**PATIENT CARE AREA (FOR FLOOD ZONE PURPOSES).** Any space meeting the following conditions:

1. The space is located within a building or structure, or portion thereof, that is classified in Group I-2; and
2. The space is primarily used for the provision of medical services to persons, including, but not limited to, consultation, evaluation, monitoring and treatment services.

**Exceptions:** The following spaces shall not be considered patient care areas (for flood zone purposes):

1. “Emergency rooms or departments” as defined in 10 NYCRR 700.2(a)(2) and
2. Spaces primarily used for the provision of medical services identified in 10 NYCRR 703.6(c)(2)(i).

**PENETRATION FIRESTOP.** A through-penetration firestop or a membrane-penetration firestop.

**PENTHOUSE.** An enclosed rooftop structure that is designed or used for human occupancy.

**PERFORMANCE CATEGORY.** A designation of wood structural panels as related to the panel performance used in Chapter 23.

**PERMANENT PRESTRESSED ROCK AND SOIL ANCHORS.** Corrosion-protected tendons consisting of bars or strands installed in drilled and grouted holes in soil or rock that are stressed.

**PERSONAL CARE SERVICE.** The care of residents who do not require chronic or convalescent medical or nursing care. Personal care involves responsibility for the safety of the resident while inside the building.

**PERSONNEL HOIST.** A mechanism and its hoistway that is (i) temporarily installed at a construction or demolition site, and (ii) is equipped with a car that moves vertically on guide members to raise or lower workers or workers and materials.

**PHOTOSENSOR.** A device that detects the presence of visible light.

**PHOTOLUMINESCENT.** Having the property of emitting light that continues for a length of time after excitation by visible or invisible light has been removed.

**PHOTOVOLTAIC MODULE.** A complete, environmentally protected unit consisting of solar cells, optics and other components, exclusive of tracker, designed to generate DC power when exposed to sunlight.
PHOTOVOLTAIC PANEL. A collection of modules mechanically fastened together, wired and designed to provide a field-installable unit.

PHOTOVOLTAIC PANEL SYSTEM. A system that incorporates discrete photovoltaic panels that converts solar radiation into electricity, including rack support systems.

PHOTOVOLTAIC SHINGLES. A roof covering resembling shingles that incorporates photovoltaic modules.

PHYSICAL HAZARD. A chemical for which there is evidence that it is a combustible liquid, compressed gas, cryogenic explosive, flammable gas, flammable liquid, flammable solid, organic peroxide, oxidizer, pyrophoric or unstable (reactive) or water-reactive material.

PHYSIOLOGICAL WARNING THRESHOLD LEVEL. A concentration of air-borne contaminants, normally expressed in parts per million (ppm) or milligrams per cubic meter (mg/m³), that represents the concentration at which persons can sense the presence of the contaminant due to odor, irritation or other quick-acting physiological response. When used in conjunction with the permissible exposure limit (PEL), the physiological warning threshold levels are those consistent with the classification system used to establish the PEL. See the definition of "Permissible exposure limit (PEL)" in the New York City Fire Code.

PIER FOUNDATION. A pier foundation is a shallow foundation element of masonry or cast-in-place concrete construction. Piers are relatively short in comparison to their width, with lengths less than or equal to 12 times the least horizontal dimension of the pier. Piers derive their load-carrying capacity from end bearing on soil or rock.

PILE DRIVER. Equipment that is configured to drive, hammer, press, or vibrate piles into the earth ("pile drive").

PINRAIL. A rail on or above a stage through which belaying pins are inserted and to which lines are fastened.

PLACE OF ASSEMBLY. A building, structure, or portion thereof, excluding a dwelling unit, but including outdoor spaces, used or intended to be used for the gathering of a group of persons for purposes such as civic, social, or religious functions, recreation, food or drink consumption, educational or instructional purposes, awaiting transportation, or similar group activities when such use requires a place of assembly Certificate of Operation pursuant to Section 303.7.

PLASTIC, APPROVED. Any thermoplastic, thermosetting or reinforced thermosetting plastic material that conforms to combustibility classifications specified in the section applicable to the application and plastic type.

PLASTIC, COMPOSITE. A generic designation that refers to wood/plastic composites and plastic lumber.

PLASTIC GLAZING. Plastic materials that are glazed or set in frame or sash and not held by mechanical fasteners that pass through the glazing material.
PLASTIC LUMBER. A manufactured product made primarily of plastic materials (filled or unfilled) that is generally rectangular in cross section.

PLASTIC (SOIL). A property of a soil that allows the soil to be deformed or molded without cracking, or appreciable volume change.

PLATFORM (SPECIAL USE). See Section 410.2.2.

PLATFORM. A work surface elevated above lower levels. Platforms can be constructed using individual wood planks, fabricated planks or fabricated decks.

POLE SIGN. A sign wholly supported by a sign structure in the ground.

POLYPROPYLENE SIDING. A shaped material, made principally from polypropylene homopolymer or copolymer, which in some cases contains fillers or reinforcements, that is used to clad exterior walls of buildings.

PORCELAIN TILE. Tile that conforms to the requirements of ANSI 137.1.3 for ceramic tile having an absorption of 0.5 percent or less in accordance with ANSI 137.4.1-Class Table and ANSI 137.1.6.1 Allowable Properties by Tile Type-Table 10.

POSITIVE ROOF DRAINAGE. The drainage condition in which consideration has been made for all loading deflections of the roof deck, including ponding instability, and additional slope has been provided to ensure drainage of the roof within 48 hours of precipitation.

POST-CONSTRUCTION STORMWATER MANAGEMENT FACILITY. See Section 28-104.11.1 of the Administrative Code.

POST-FIRE SMOKE PURGE SYSTEM. A mechanical or natural ventilation system intended to move smoke from the smoke zone to the exterior of the building. Such systems are intended for the timely restoration of operations and overhaul activities once a fire is extinguished. Post-fire smoke purge systems are not intended or designed to be life safety systems.

POST-FIRM DEVELOPMENT. See Section G201.1.2.

POST-FIRM STRUCTURE. See Section G201.1.2.

POWER BUGGIES. An automotive vehicle designed or used for the transportation of materials on or about construction or demolition sites. It shall not include automobiles, motor trucks, general purpose tractors, or excavating or similar material handling machinery.

POWER-ASSISTED DOOR. Swinging door that opens by reduced pushing or pulling force on the door-operating hardware. The door closes automatically after the pushing or pulling force is released and functions with decreased forces. See “Low-energy power-operated door” and “Power-operated door”.

POWER-OPERATED DOOR. Swinging, sliding, or folding door that opens automatically when approached by a pedestrian or opens automatically upon an action by a pedestrian. The door closes
automatically and includes provisions such as presence sensors to prevent entrapment. See “Low-energy power-operated door” and “Power-assisted door”.

**PRE-FIRM DEVELOPMENT.** See Section G201.1.2.

**PRE-FIRM STRUCTURE.** See Section G201.1.2.

**PREFABRICATED WOOD I-JOIST.** Structural member manufactured using sawn or structural composite lumber flanges and wood structural panel webs bonded together with exterior exposure adhesives, which forms an "I" cross-sectional shape.

**PRESIGNAL SYSTEM.** A fire alarm system having a feature that allows initial fire alarm signals to sound in a constantly attended central location and for which a human action is subsequently required to achieve a general alarm, or a feature that allows the control equipment to delay the general alarm by more than 1 minute after the start of the alarm processing.

**PRESSURIZATION.** Creation and maintenance of pressure levels in zones of a building, including elevator shafts and stairwells, that are higher than the pressure level at the smoke source, such pressure levels being produced by positive pressures of a supply of uncontaminated air; by exhausting air and smoke at the smoke source; or by a combination of these methods.

**PRESTRESSED MASONRY.** Masonry in which internal stresses have been introduced to counteract potential tensile stresses in masonry resulting from applied loads.

**PRIMARY FUNCTION AREAS.** An area of a building or facility containing a major activity for which the building or facility is intended is a primary function area.

**PRIMARY STRUCTURAL FRAME.** The primary structural frame shall include all of the following structural members:

1. The columns;
2. Structural members having direct connections to the columns, including girders, beams, trusses and spandrels;
3. Members of the floor construction and roof construction having direct connections to the columns; and
4. Bracing members that are essential to the vertical stability of the primary structural frame under gravity loading, shall be considered part of the primary structural frame whether or not the bracing member carries gravity loads.

**PRIVATE GARAGE.** An enclosed structure or portion of a structure, accessory to a Group R-2 or R-3 occupancy, used for the parking or storage of passenger motor vehicles. Such facility shall not exceed 650 square feet (60 m²) in area and one story in height.

**PROJECTING SIGN.** A sign other than a wall sign that projects from and is supported by a wall of a building or structure.

**PROSCENIUM WALL.** The wall that separates the stage from the auditorium or assembly seating area.
PUBLIC ENTRANCE. An entrance that is not a service entrance.

PUBLIC WAY. A street, alley or other parcel of land open to the outside air leading to a street that has been deeded, dedicated or otherwise permanently appropriated to the public for public use and which has a clear width and height of not less than 10 feet (3048 mm).

PUBLIC-USE AREAS. Interior or exterior rooms or spaces that are made available to the general public.

PYROPHORIC MATERIAL. A material with an auto-ignition temperature in air, at or below a temperature of 130°F (54°C).

PYROTECHNIC MATERIAL. A chemical mixture consisting predominantly of solids that, upon ignition, are capable of producing a controlled, self-sustaining, and self-contained exothermic reaction, that functions without external oxygen, resulting in a visible or audible effect by combustion, deflagration, or detonation.

QUALIFIED PERSON. A person who, by possession of a recognized degree, certificate, or professional standing, or who by extensive knowledge, training, and experience, has successfully demonstrated his or her ability to solve or resolve problems related to the subject matter, the work, or the project.

RADIANT BARRIER. A material having a low-emittance surface of 0.1 or less installed in building assemblies.

RAMP. A walking surface that has a running slope steeper than one unit vertical in 20 units horizontal (5-percent slope).

RAMP-ACCESS OPEN PARKING GARAGE. Open parking garages employing a series of continuously rising floors or a series of interconnecting ramps between floors permitting the movement of vehicles under their own power from and to the street level.

RECLAIMED ASPHALT PAVEMENT. Asphalt pavement that has been processed for reuse in asphaltic concrete.

RECORD DRAWINGS. Drawings ("as built") that document the location of all devices, appliances, wiring sequences, wiring methods and connections of the components of a fire alarm system as installed.

RECREATIONAL VEHICLE. See Section G201.1.2.

REFLECTIVE PLASTIC CORE FOIL INSULATION. An insulation material packaged in rolls, that is less than $\frac{1}{2}$ inch (12.7 mm) thick, with at least one exterior low emittance surface (0.1 or less) and a core material containing voids or cells.

REFUGEE AREA. A floor area to which egress is made through a horizontal exit.

RELIGIOUS WORSHIP, PLACE OF. A building or portion thereof intended for the performance of religious services.
REMOVING/REMOVAL/REMOVE (SCAFFOLD). The final process of taking apart a scaffold in a specific sequence and removing it from the site.

REPAIR (SCAFFOLD). Work performed to restore a scaffold, or any part or component, to like new condition and safe working order following decay, wear, or damage. The definition of repair shall also include the replacement of a part or component.

 REPLACEMENT (SCAFFOLD). A repair involving the exchange or substitution of one part or component with another identical or similar part or component in order to restore a scaffold, or any part or component, to like new condition and safe working order following decay, wear, or damage.

REROOFING. The process of recovering or replacing an existing roof covering. See "Roof recover" and "Roof replacement".

RESIDENTIAL AIRCRAFT HANGAR. An accessory building less than 2,000 square feet (186 m²) and 20 feet (6096 mm) in building height constructed on a one- or two-family property where aircraft are stored. Such use will be considered as a residential accessory use incidental to the dwelling.

RESIDENTIAL CARE/ASSISTED LIVING FACILITIES. A building or part thereof housing persons, on a 24-hour basis, who because of age, mental disability or other reasons, live in a supervised residential environment that provides personal care services. The occupants are capable of self-preservation and are capable of responding to an emergency situation without physical assistance from staff. This classification shall include, but not limited to, the following: residential board and care facilities, assisted living facilities, halfway houses, congregate care facilities, social rehabilitation facilities, alcohol and drug abuse rehabilitation centers and convalescent facilities.

RESIDENTIAL (FOR FLOOD ZONE PURPOSES). A building or structure containing any space that is either:

1. Classified in Group I-1, R-1, R-2, or R-3; or
2. Accessory, as such term is defined in the New York City Zoning Resolution, to any Group I-1, R-1, R-2, or R-3 occupancy.

Exception: Such a building or structure shall be considered nonresidential (for flood zone purposes) when also containing space at or below the DFE that is not accessory, as such term is defined in the New York City Zoning Resolution, to a Group I-1, R-1, R-2, or R-3 occupancy.

RESISTANCE FACTOR. A factor that accounts for deviations of the actual strength from the nominal strength and the manner of consequences of failure (also called "strength reduction factor").

RESPONSE RATIO. The ratio of an ultimate response quantity (e.g., deflection) to its value at yield.

RESTRICTED ENTRANCE. An entrance that is made available for public use but on a controlled basis, and that is not a service entrance.

RETAINING WALL. A wall that resists lateral or other forces caused by soil, rock, water or other materials, thereby limiting lateral displacement and the movement of the supported materials. Basement walls and vault walls that are parts of buildings and underground structures, including but
not limited to utility vault structures, tunnels, transit stations, and swimming pools, are not considered retaining walls.

**RETRACTABLE AWNING.** A retractable awning is a cover with a frame that retracts against a building or other structure to which it is entirely supported.

**RIM BOARD.** In light-frame construction, a full depth structural member designed to transfer horizontal (shear) and vertical (compression) loads, provide attachment for diaphragm sheathing, siding and exterior deck ledgers, and provide lateral support at the ends of floor or roof joists or rafters.

**RISK CATEGORY.** A categorization of buildings and other structures for determination of flood, wind, snow, ice and earthquake loads based on the risk associated with unacceptable performance.

**RISK-TARGETED MAXIMUM CONSIDERED EARTHQUAKE (MCEg) GROUND MOTION RESPONSE ACCELERATIONS.** The most severe earthquake effects considered by this standard determined for the orientation that results in the largest maximum response for horizontal ground motions and with adjustment for targeted risk. The MCEg Ground Motion values can be determined from general procedure in Section 1613.3.3 of this code or can be derived from the site specific procedures provided in Sections 21.1 and 21.2 of ASCE 7.

**ROPE.** A continuous line of material comprised of a number of twisted or braided strands of fiber (natural or synthetic) or metal wire.

**ROOF ASSEMBLY.** A system designed to provide weather protection and resistance to design loads. The system consists of a roof covering and roof deck or a single component serving as both the roof covering and the roof deck. A roof assembly includes the roof deck, vapor retarder, substrate or thermal barrier, insulation and roof covering.

**ROOF COVERING.** The covering applied to the roof deck for weather resistance, fire classification or appearance.

**ROOF COVERING SYSTEM.** See "Roof assembly."

**ROOF DECK.** The flat or sloped surface constructed on top of the exterior walls of a building or other supports for the purpose of enclosing the story below, or sheltering an area, to protect it from the elements, not including its supporting members or vertical supports.

**ROOF RECOVER.** The process of installing an additional roof covering over a prepared existing roof covering without removing the existing roof covering.

**ROOF REPAIR.** Reconstruction or renewal of any part of an existing roof for the purposes of its maintenance.

**ROOF REPLACEMENT.** The process of removing the existing roof covering, repairing any damaged substrate and installing a new roof covering.

**ROOF SIGN.** A sign erected on or above a roof or parapet of a building or structure.
ROOF VENTILATION. The natural or mechanical process of supplying conditioned or unconditioned air to, or removing such air from, attics, cathedral ceilings or other enclosed spaces over which a roof assembly is installed.

ROOFTOP STRUCTURE. An enclosed or unenclosed structure on or above the roof of any part of a building.

ROOMING HOUSE. A dwelling (i) which was originally erected as single- or two-family private dwelling pursuant to the New York City Building Code in effect prior to December 6, 1968, (ii) which is a "Class B converted dwelling" as such term is defined in the New York City Housing Maintenance Code, and (iii) which has more than half of its habitable rooms as sleeping units. The creation of or conversion to a rooming house shall be limited by Section 27-2077 of the New York City Housing Maintenance Code.

ROTATING TELEHANDLER. A telehandler whose boom is mounted on a rotating or slewing superstructure.

ROTATION. The angle, measured at the ends of a member, whose tangent is equal to the deflection of the member at midspan divided by half the length of the member.

RUNBACK STRUCTURE. A temporary system of hoistway landing runways, vertical supports and horizontal diaphragms designed to bridge between the hoistway and the parent structure and to transmit both vertical and horizontal loads to the supporting structure and/or foundation.

RUNNING BOND. The placement of masonry units such that head joints in successive courses are horizontally offset at least one-quarter the unit length.

SAFE AREA. See Section 1002.1.2.

SAFETY NETTING SYSTEM (SAFETY NETTING). Debris or structural nets, installed vertically or horizontally, along with all supports, components, and connections.

- **Horizontal safety netting.** A safety netting system, installed horizontally, consisting of structural netting lined with debris netting.

- **Vertical safety netting.** A safety netting system, installed vertically, consisting of debris netting.

SALLYPORT. See Section 408.1.1.

SAND DUNES. Naturally occurring accumulations of sand in ridges or mounds landward of a beach.

SCAFFOLD. Any temporary elevated platform and its supporting structure (including points of anchorage) used for supporting workers or workers and material, including but not limited to supported scaffolds, suspended scaffolds, and mobile scaffolds.

SCAFFOLD CONTROLLING ENTITY. The contractor or other entity that exercises responsibility for the site where the scaffold is located.
SCISSOR STAIRWAY. Two interlocking stairways providing two separate paths of egress located within one stairwell enclosure.

SCUPPER. An opening in a wall or parapet that allows water to drain from a roof.

SEATING SECTION. See Section 1002.1.2.

SECONDARY MEMBERS. The following structural members shall be considered secondary members and not part of the primary structural frame:
1. Structural members not having direct connections to the columns;
2. Members of the floor construction not having direct connections to the columns; and
3. Bracing members other than those that are part of the primary structural frame.

SEISMIC DESIGN CATEGORY. A classification assigned to a structure based on its risk category and the severity of the design earthquake ground motion at the site.

SEISMIC FORCE-RESISTING SYSTEM. The part of the structural system that has been considered in the design to provide the required resistance to the prescribed seismic forces.

SELF-CLOSING. As applied to a fire door or other opening, means equipped with a listed and approved device that will ensure closing after having been opened.

SELF-ERECTING TOWER CRANE. A tower crane that adjusts its operating radius by means of a trolley traversing a jib and that; (i) possesses a vertical or nearly vertical tower or mast that is bottom slewing and mounted on fixed, traveling, or mobile bases; and (ii) is capable of folding and unfolding to facilitate transit from site to site with minimal assembly.

SELF-LUMINOUS. Illuminated by a self-contained power source, other than batteries, and operated independently of external power sources.

SELF-SERVICE STORAGE FACILITY. Real property designed and used for the purpose of renting or leasing individual storage spaces to customers for the purpose of storing and removing personal property on a self-service basis.

SERVICE CORRIDOR. A fully enclosed passage other than one designated as a required means of egress, through which HPM can be moved during handling.

SERVICE ENTRANCE. An entrance solely for delivery of goods or services.

SERVICES. Includes, but is not limited to, toilet rooms, drinking fountains, public telephones and food.

SHADED X-ZONE. The land in the floodplain delineated as subject to a 0.2-percent or greater chance of flooding, but less than one percent chance of flooding, in any given year. Such areas are designated on the Flood Insurance Rate Map (FIRM) as shaded X-Zones.
SHAFT. An enclosed space extending through one or more stories of a building, connecting vertical openings in successive floors, or floors and roof.

SHAFT ENCLOSURE. The walls or construction forming the boundaries of a shaft.

SHALLOW FOUNDATION. A shallow foundation is an individual or strip footing, a mat foundation, a slab-on-grade foundation or a similar foundation element.

SHEAR WALL. A wall designed to resist lateral forces parallel to the plane of a wall.

Shear wall, perforated. A wood structural panel sheathed wall with openings, that has not been specifically designed and detailed for force transfer around openings.

Shear wall segment, perforated. A section of shear wall with full-height sheathing that meets the height-to-width ratio limits of Section 4.3.4 of AWC SDPWS.

SHORE, MULTI-STAGE. Formwork assemblies on a single level comprised of discontinuous vertical post elements stacked on top of each other.

SIDELITES. Fixed transparent panels that form part of or are immediately adjacent to and within 6 feet (1829 mm) horizontally of the vertical edge of an opening in which transparent doors are located. A sidelite shall consist of transparent material in which the transparent area above a reference line 18 inches (457 mm) above the adjacent ground, floor or equivalent surface is 80 percent or more of the remaining area of the panel above such reference line.

SIGN. Any letter, figure, character, mark, plane, point, marquee sign, design, poster, pictorial, picture, stroke, stripe, line, trademark, reading matter or illuminated service, which shall be constructed, placed, attached, painted, erected, fastened or manufactured in any manner whatsoever, so that the same shall be used for the attraction of the public to anyplace, subject, person, firm, corporation, public performance, article, machine or merchandise, whatsoever, which is displayed in any manner outdoors. Every sign shall be classified and conform to the requirements of that classification as set forth in this code.

SIGN STRUCTURE. Any structure that supports or is capable of supporting a sign as defined in this code.

SINGLE-PLY MEMBRANE. A roofing membrane that is field applied using one layer of membrane material (either homogeneous or composite) rather than multiple layers.

SINGLE-POINT ADJUSTABLE SUSPENDED SCAFFOLD. A suspended scaffold consisting of a platform suspended by one rope from an overhead support and equipped with means to permit the movement of the platform to desired work levels.

SINGLE-STATION SMOKE ALARM. An assembly incorporating the detector, the control equipment and the alarm-sounding device in one unit, operated from a power supply either in the unit or obtained at the point of installation.

SITE. A parcel of land bounded by a lot line or a designated portion of a public right-of-way.
SITE CLASS. A classification assigned to a site based on the types of soils present and their engineering properties as defined in Section 1613.3.2.

SITE COEFFICIENTS. The values of, $F_a$, and, $F_v$, indicated in Tables 1613.3.3(1) and 1613.3.3(2), respectively.

SITE-FABRICATED STRETCH SYSTEM. A system, fabricated on site and intended for acoustical, tackable or aesthetic purposes, that is comprised of three elements: (a) a frame (constructed of plastic, wood, metal or other material) used to hold fabric in place, (b) a core material (infill, with the correct properties for the application), and (c) an outside layer, comprised of a textile, fabric or vinyl, that is stretched taut and held in place by tension or mechanical fasteners via the frame.

SITE SAFETY TRAINING (SST) CARD. A card that is issued in a form and manner established by the department and that satisfies each of the following conditions:

1. Such card is issued by an SST provider to a person who submits an application to such provider demonstrating, in a form and manner established by the department, that such applicant satisfies the requirements of Item 1.1, 1.2 or 1.3:

   1.1. Such applicant has successfully completed (i) an OSHA 10-hour class and (ii) 30-45 additional SST credits specified by the department, including eight SST credits relating to safeguarding against the dangers posed by falling workers and objects.

   1.2. Such applicant has successfully completed (i) an OSHA 30-hour class and (ii) 10-25 additional SST credits specified by the department, including eight SST credits relating to safeguarding against the dangers posed by falling workers and objects.

   1.3. Such applicant has successfully completed a 100-hour training program.

2. If such applicant completed the training to comply with Item 1.1, 1.2 or 1.3 but did not complete such training within the five years preceding submission of such application, such applicant has, in the one-year period preceding submission of such application, completed at least eight SST credits specified by the department.

3. Such card is issued by an SST provider who does not require applicants to submit any information except for (i) the information necessary to establish that the requirements in Item 1 have been satisfied, as specified by the department, (ii) a photograph of the applicant and (iii) such additional information as the department may allow by rule.

4. Such card expires five years after issuance and is renewable upon a showing by the applicant that such applicant has, in the one-year period preceding submission of such renewal application, successfully completed eight SST credits specified by the department.

SITE SAFETY TRAINING (SST) CREDIT. One hour of training that satisfies each of the requirements of Item 1, 2 and 3:

1. Such training relates to a topic identified by department rule.
2. If such training is conducted on or after the effective date of the local law that added this definition, such training is in-person training or actively proctored online training.

3. If such training is conducted on or after March 1, 2018, such training is conducted by an SST provider.

SITE SAFETY TRAINING (SST) FULL COMPLIANCE DATE. March 1, 2021.

SITE SAFETY TRAINING (SST) PROVIDER. An entity that satisfies the requirements of Items 1 and 2:

1. Such entity satisfies the conditions of Item 1.1, 1.2, 1.3 or 1.4:

1.1. Such entity is a not-for-profit organization with a history of at least three years of experience in providing construction-related workforce development, construction-related education or site safety training, which may be demonstrated by submitting training logs to the department or in a form and manner otherwise determined by the department, and training offered by such entity is offered by a person who has (i) successfully completed all applicable OSHA or department requirements for conducting OSHA 10-hour classes and OSHA 30-hour classes and is authorized to conduct such classes and (ii) if such person is conducting training for SST credits other than training that is part of an OSHA 10-hour class or OSHA 30-hour class, such person demonstrates sufficient knowledge of this chapter in a form and manner established by the department. Such entity shall not be required to demonstrate any professional standing, approval, licensure, accreditation or certification, including approval, licensure, accreditation or certification pursuant to paragraph (2) of subdivision d of section 105-03 of subchapter E of chapter 100 of title 1 of the rules of the city of New York, as in effect on January 1, 2018, beyond showing that such entity and a person offering training on behalf of such entity satisfy the requirements set forth in the preceding sentence. Where the department provides content, developed in accordance with department-approved course requirements, for the delivery of SST credits, such entity shall deliver SST credits in accordance with such content. Where the department does not provide content for the delivery of SST credits, such entity shall be responsible for the development of content in accordance with department-approved course requirements. Such content and the delivery of such content may be subject to approval or audit by the department.

1.2. Such entity is providing training through a 100-hour training program.

1.3. Such entity has been approved by the department to conduct a 40-hour course approved by the department pursuant to Article 402 of Chapter 4 of Title 28 of the Administrative Code.

1.4. The department may establish by rule additional ways for an entity to satisfy the requirements of this Item 1. If the department elects to promulgate such rules, an entity shall be deemed to satisfy this Item 1 if such entity satisfies the requirements set forth in such rules or if such entity satisfies the requirements set forth in Item 1.1, 1.2 or 1.3.
2. On and after the SST full compliance date, such entity has certified to the department that such entity satisfies at least one of the following conditions:

2.1. Such entity has a language access plan for training that relates to SST credits such entity offers and such plan complies with requirements established by an agency or office designated by the mayor.

2.2. Such entity satisfies each of the following conditions:

2.2.1. Such entity is able to provide instruction in a language that students understand.

2.2.2. If a student’s vocabulary is limited, such entity will accommodate that limitation.

2.2.3. A person offering training on behalf of such entity is fluent in the training language or will use translators or interpreters and any such translators or interpreters will have a background in occupational safety and health.

SITE SAFETY TRAINING (SST) SECOND COMPLIANCE DATE. December 1, 2019, or, if the department publishes a finding by September 1, 2019, that there is insufficient capacity to provide the training required by Section 3321 of this code to the workers who would need such training, a later date established by the department, provided that such date is not later than June 1, 2020.

SITE SAFETY TRAINING (SST) SUPERVISOR CARD. A card that satisfies each of the following conditions:

1. Such card is issued in a form and manner established by the department to a person who demonstrates that such person has an SST card and has successfully completed an OSHA 30-hour class.

2. Such card expires five years after issuance and is renewable upon a showing by the applicant that such applicant has, in the one-year period preceding such submission of such renewal application, successfully completed 16 SST credits specified by the department.

SITE SAFETY TRAINING (SST) TASK FORCE. The task force established pursuant to Section 28-103.28 of the Administrative Code.

SKYLIGHT, UNIT. A factory-assembled, glazed fenestration unit, containing one panel of glazing material that allows for natural lighting through an opening in the roof assembly while preserving the weather-resistant barrier of the roof.

SKYLIGHTS AND SLOPED GLAZING. Glass or other transparent or translucent glazing material installed at a slope of 15 degrees (0.26 rad) or more from vertical. Glazing material in skylights, including unit skylights, solariums, sunrooms, roofs and sloped walls, are included in this definition.

SLEEPING UNIT. A dwelling unit, which may contain either toilet or kitchen facilities but not both. Any sleeping unit housing more than one family shall also be classified as a congregate living unit.
The creation of or conversion to sleeping units shall be limited by Section 27-2077 of the New York City Housing Maintenance Code.

**SLEEPING UNIT (ACCESSIBILITY).** As used in Chapter 11 and Appendix E, a room or space in which people sleep, which can also include permanent provisions for living, eating, and either sanitation or kitchen facilities but not both. Such rooms and spaces that are also part of a dwelling unit are not sleeping units.

**SMALL WIND TURBINE.** A turbine with a swept area smaller than 200 m² that generates a voltage below 1000 V (AC) or 1500 V (DC).

**SMALL WIND TURBINE TOWER.** A structure that supports a small wind turbine.

**SMOKE.** Air-borne solid and liquid particulates and gases evolved when a material undergoes pyrolysis or combustion, including the quality of air that is entrained or otherwise mixed into the mass.

**SMOKE ALARM.** A single- or multiple-station alarm responsive to smoke and not connected to a fire alarm system. See "Multiple-station smoke alarm" and "Single-station smoke alarm."

**SMOKE BARRIER.** A continuous membrane, either vertical or horizontal, such as a wall, floor, or ceiling assembly, that is designed and constructed in accordance with Section 709 to restrict the movement of smoke.

**SMOKE COMPARTMENT.** A space within a building enclosed by smoke barriers on all sides, including the top and bottom.

**SMOKE CONTROL MODE.** A predefined operational configuration of a system or device for the purpose of smoke control.

**SMOKE CONTROL SYSTEM, MECHANICAL.** An engineered system that includes all methods that can be used singly or in combination to modify smoke movement.

**SMOKE CONTROL SYSTEM, PASSIVE.** A system of smoke barriers arranged to limit the migration of smoke.

**SMOKE CONTROL ZONE.** A space within a building enclosed by smoke barriers that is part of a smoke control system.

**SMOKE DAMPER.** See Dampers, Types of.

**SMOKE DETECTOR.** A listed device that senses visible or invisible particles of combustion or smoke.

**SMOKE PARTITION.** A continuous vertical assembly that is designed and constructed to restrict the movement of smoke and is not generally required to have a fire-resistance rating in accordance with Section 710.
SMOKE-DEVELOPED INDEX. A comparative measure, expressed as a dimensionless number, derived from measurements of smoke obscuration versus time for a material tested in accordance with ASTM E 84.

SMOKEPROOF ENCLOSURE. An exit stairway, ramp or passageway designed and constructed so that the movement of the products of combustion produced by a fire occurring in any part of the building into the enclosure is limited.

SMOKE-PROTECTED ASSEMBLY SEATING. Seating served by means of egress that is not subject to smoke accumulation within or under a structure.

SOIL AND FOUNDATION WORK (SOIL OR FOUNDATION WORK). Excavation, fill, grading, augering, boring, or drilling, whether in soil or rock; or the installation or removal of foundations, piles, underpinning, sheeting, shoring, or supports of excavation.

SOLID. A material that has a melting point, decomposes or sublimates at a temperature greater than 68°F (20°C).

SPECIAL AMUSEMENT BUILDING. A special amusement building is any temporary or permanent building or portion thereof that is occupied for amusement, entertainment or educational purposes and that contains a device or system that conveys passengers or provides a walkway along, around or over a course in any direction so arranged that the means of egress path is not readily apparent due to visual or audio distractions or is intentionally confounded or is not readily available because of the nature of the attraction or more of conveyance through the building or structure.

SPECIAL FLOOD HAZARD AREA. Land in the floodplain subject to a 1% or greater chance of flooding in any given year; area delineated on the Flood Insurance Rate Map as Zone A, AE, A1-30, A99, AR, AO, AH, V, VO, VE, or V1-30. Such areas include A-Zones, Coastal A-Zones, and V-Zones.

SPECIAL INSPECTION, CONTINUOUS. The observation of work requiring special inspection by a special inspector who is continuously present in the area where the work is being performed while the work is being performed.

SPECIAL INSPECTION, PERIODIC. The intermittent observation of work requiring special inspection by a special inspector who is present in the area where the work has been or is being performed and at the completion of the work. All work requiring special inspection shall remain accessible and exposed until approved by the special inspector.

SPECIFIC LOCAL LOAD. A load applied to a structural element or structural system as specified in Section 1617.6.

SPECIFIC LOCAL RESISTANCE METHOD. A design approach that accounts for extreme event loads by providing sufficient strength for elements that may fail. In a specific local resistance design, key elements are designed for specific local loads as required by Section 1617.

SPECIFIED COMpressive STRENGTH OF MASONRY, f' m. Minimum compressive strength, expressed as force per unit of net cross-sectional area, required of the masonry used in
construction by the approved construction documents, and upon which the project design is based. Whenever the quantity \( f'_{cm} \) is under the radical sign, the square root of numerical value only is intended and the result has units of pounds per square inch (psi) (Mpa).

**SPLICE.** The result of a factory and/or field method of joining or connecting two or more lengths of a fire-resistant joint system into a continuous entity.

**SPRAYED FIRE-RESISTANT MATERIALS.** Cementitious or fibrous materials that are sprayed to provide fire-resistant protection of the substrates.

**STABLE (ROCK).** A condition in which natural solid mineral matter (rock) can be excavated with vertical sides and remain intact while exposed.

**STACK EFFECT.** The vertical airflow within buildings caused by the temperature-created density differences between the building interior and exterior or between two interior spaces.

**STAGE.** A space within a building utilized for entertainment or presentations, which includes overhead hanging curtains, drops, scenery or stage effects other than lighting and sound.

**STAIR.** A change in elevation, consisting of two or more risers.

**STAIR TOWER (SCAFFOLD STAIRWAY/TOWER).** A tower comprised of scaffold components and that contains internal stairway units and rest platforms. These towers are used to provide access to scaffold platforms and other elevated points such as floors and roofs.

**STAIRWAY.** One or more flights of stairs, either exterior or interior, with the necessary landings and platforms connecting them, to form a continuous and uninterrupted passage from one level to another.

**STAIRWAY, SPIRAL.** A stairway having a closed circular form in its plan view with uniform section-shaped treads attached to and radiating from a minimum-diameter-supporting column.

**STANDARD CUBIC FEET (SCF).** Cubic feet of gas at normal temperature and pressure (NTP).

**STANDARD GUARDRAIL SYSTEM (SCAFFOLD).** See “Guardrail system (scaffold).”

**STAND-OFF BRACKET (SUSPENDED SCAFFOLD).** A rigid member that attaches to a cornice hook (c-hook) in order to provide additional outreach from the face of the parapet or wall.

**STANDPIPE SYSTEM.** Piping, installed in a building or structure, that serves to supply water to hose connections at one or more locations in a building or structure, for firefighting purposes.

**STANDPIPE SYSTEM, CLASSES OF.** Standpipe classes are as follows:

**Class I system.** A system providing 2\( \frac{1}{2} \)-inch (64 mm) hose connections to supply water for use by the Fire Department and those trained in handling heavy fire streams.

**Class II system.** A system providing 1\( \frac{1}{2} \)-inch (38 mm) hose stations to supply water for use primarily by the building occupants or by the Fire Department during initial response.
**Class III system.** A system providing 1\(\frac{1}{2}\)-inch (38 mm) hose stations to supply water for use by building occupants and 2\(\frac{1}{2}\)-inch (64 mm) hose connections to supply a larger volume of water for use by the Fire Department and those trained in handling heavy fire streams.

**STANDPIPE SYSTEM, TYPES OF.** Standpipe system types are as follows:

**Automatic dry.** A dry standpipe system, normally filled with pressurized air, that is arranged through the use of a device, such as dry pipe valve, to admit water into the system piping automatically upon the opening of a hose valve. The water supply for an automatic dry standpipe system shall be capable of supplying the system demand.

**Automatic wet.** A wet standpipe system that has a water supply that is capable of supplying the system demand automatically.

**Manual dry.** A dry standpipe system that does not have a permanent water supply attached to the system. Manual dry standpipe systems require water from a Fire Department pumper to be pumped into the system through the Fire Department connection in order to meet the system demand.

**Manual wet.** A wet standpipe system connected to a water supply for the purpose of maintaining water within the system but that does not have a water supply capable of delivering the system demand attached to the system. Manual-wet standpipe systems require water from a Fire Department pumper to be pumped into the system in order to meet the system demand.

**Semiautomatic dry.** A dry standpipe system that is arranged through the use of a device, such as a deluge valve, to admit water into the system piping upon activation of a remote control device location at a hose connection. A remote control activation device shall be provided at each hose connection. The water supply for a semiautomatic dry standpipe system shall be capable of supplying the system demand.

**START OF CONSTRUCTION.** See Section G201.1.2.

**STEEL CONSTRUCTION, COLD-FORMED.** That type of construction made up entirely or in part of steel structural members cold formed to shape from sheet or strip steel such as roof deck, floor and wall panels, studs, floor joists, roof joists and other structural elements.

**STEEL ELEMENT, STRUCTURAL.** Any steel structural member of a building or structure consisting of rolled shapes, pipe, hollow structural sections, plates, bars, sheets, rods or steel castings other than cold-formed steel, or steel joist members.

**STEEL JOIST.** Any steel structural member of a building or structure made of hot-rolled or cold-formed solid or open-web sections, or riveted or welded bars, strip or sheet steel members, or slotted and expanded, or otherwise deformed rolled sections.

**STEEP SLOPE.** A roof slope greater than two units vertical in 12 units horizontal (17-percent slope).

**STONE MASONRY.** Masonry composed of field, quarried or cast stone units bonded by mortar.
STORAGE CABINET. See Section 427.4.

STORAGE, HAZARDOUS MATERIALS. The keeping, retention or leaving of hazardous materials in closed containers, tanks, cylinders, or similar vessels; or vessels supplying operations through closed connections to the vessel.

STORAGE ROOM. See Section 427.4.

STORM SHELTER. See Section 423.2.

Community storm shelter. See Section 423.2.

Residential storm shelter. See Section 423.2.

STORMWATER CONSTRUCTION PERMIT. See Section 28-104.11.1 of the Administrative Code.

STORY. That portion of a building included between the upper surface of a floor and the upper surface of the floor or roof next above (also see "Basement" and "Mezzanine"). It is measured as the vertical distance from top to top of two successive tiers of beams or finished floor surfaces and, for the topmost story, from the top of the floor finish to the top of the ceiling joists or, where there is not a ceiling, to the top of the roof rafters.

STORY ABOVE GRADE PLANE. Any story having its finished floor surface entirely above grade plane, except that a basement shall also be considered a story above grade plane (see "Story" and "Basement").

STREET. A thoroughfare, including sidewalks and roadways, dedicated or devoted to public use by legal mapping or other lawful means, or a public way.

STREET FLOOR. A floor, usually the principal entrance floor, that is not more than one-half story above or below grade at the location from which egress is provided to the street.

STREET LINE. A lot line separating a street from other land.

STRENGTH DESIGN. A method of proportioning structural members such that the computed forces produced in the members by factored loads do not exceed the member design strength (also called “load and resistance factor design” (LRFD)). The term "strength design" is used in the design of concrete and masonry structural elements.

STRENGTH.

Design strength. Nominal strength multiplied by a strength reduction factor.

Nominal strength. Strength of a member or cross-section calculated in accordance with these provisions before application of any strength-reduction factors.

Required strength. Strength of a member or cross-section required to resist factored loads.
**STRENGTH, NOMINAL.** The capacity of a structure or member to resist the effects of loads, as determined by computations using specified material strengths and dimensions and equations derived from accepted principles of structural mechanics or by field tests or laboratory tests of scaled models, allowing for modelling effects and differences between laboratory and field conditions.

**STRENGTH, REQUIRED.** Strength of a member, cross section or connection required to resist factored loads or related internal moments and forces in such combinations as stipulated by these provisions.

**STRIPPING OPERATIONS.** Removal on the floor of any parts of the concrete formwork including shoring, bracing and other supports.

**STRUCTURAL COMPOSITE LUMBER.** Structural member manufactured using wood elements bonded together with exterior adhesives. Examples of structural composite lumber are:

- **Laminated strand lumber (LSL).** A composite of wood strand elements with wood fibers primarily oriented along the length of the member, where the least dimension of the wood strand elements is 0.10 inch (2.54 mm) or less and their average lengths not less than 150 times the least dimension of the wood strand elements.

- **Laminated veneer lumber (LVL).** A composite of wood veneer sheet elements with wood fibers primarily oriented along the length of the member, where the veneer element thicknesses are 0.25 inches (6.4 mm) or less.

- **Oriented strand lumber (OSL).** A composite of wood strand elements with wood fibers primarily oriented along the length of the member, where the least dimension of the wood strand elements is 0.10 inch (2.54 mm) or less and their average lengths not less than 75 times and less than 150 times the least dimension of the strand elements.

- **Parallel strand lumber (PSL).** A composite of wood strand elements with wood fibers primarily oriented along the length of the member where the least dimension of the wood strand elements is 0.25 inches (6.4 mm) or less and their average lengths not less than 300 times the least dimension of the wood strand elements.

**STRUCTURAL GLUED-LAMINATED TIMBER.** An engineered, stress-rated product of a timber laminating plant, comprised of assemblies of specially selected and prepared wood laminations in which the grain of all laminations is approximately parallel longitudinally and the laminations are bonded with adhesives.

**STRUCTURAL NET (STRUCTURAL NETTING).** A system of nets capable of complying with the prototype test described in ANSI A10.11.

**SUBMERGED SOIL.** Soil which is underwater or is free seeping.

**SUBSTANTIAL DAMAGE.** Damage of any origin sustained by a structure whereby the cost of restoring the structure to its before-damaged condition would equal or exceed 50 percent of the market value of the structure before the damage occurred.
SUBSTANTIAL IMPROVEMENT. Any repair, reconstruction, rehabilitation, addition or improvement of a building or structure, the cost of which equals or exceeds 50 percent of the market value of the structure before the improvement or repair is started. If the structure has sustained substantial damage, any repairs are considered substantial improvement regardless of the actual repair work performed. The term does not, however, include either:

1. Any project for improvement of a building required to correct pre-FIRM health, sanitary or safety code violations identified by the commissioner, the Fire Commissioner, the Commissioner of Housing Preservation and Development, or the Commissioner of Health and Mental Hygiene, and that are the minimum necessary to assure safe living conditions; or

2. Any alteration of a historic structure provided that the alteration will not preclude the structure’s continued designation as a historic structure.

SUN CONTROL DEVICE. An architectural projection that provides protection against solar radiation entering a building through glazed areas and is supported by the building to which it is attached. Sun control device includes, but is not limited to, a fixed, retractable or rotating sun control device. A fixed sun control device has no moving parts and is typically composed of horizontal overhangs or vertical fins. A retractable sun control device extends or retracts, and in the extended position casts a shadow on designated portions of the building. A rotating sun control device may be of fixed or adjustable length and pivots at its base. Sun control device shall not include awnings and canopies.

SUNROOM. A one-story structure attached to a building with a glazing area in excess of 40 percent of the gross area of the structure’s exterior walls and roof.

SUPERINTENDENT OF CONSTRUCTION. See Chapter 1 of Title 28 of the Administrative Code.

SUPERSTRUCTURE. The rotating upper frame structure of the machine and the operating machinery mounted thereon.

SUPERVISING STATION. A facility that receives signals from protected premises’ fire alarm systems and at which personnel are in attendance at all times to respond to these signals.

Supervising station, central. A supervising station that is listed and approved by the Fire Department for central station service.

Supervising station, proprietary. A supervising station under the same ownership as the protected premises’ fire alarm system(s) that it supervises (monitors) and to which alarm, supervisory, or trouble signals are received and where personnel are in attendance at all times to supervise operation and investigate signals.

Supervising station, remote. A supervising station to which alarm, supervisory, or trouble signals or any combination of those signals emanating from protected premises’ fire alarm systems are received and where personnel are in attendance at all times to respond.

SUPERVISORY SERVICE. The service required to monitor performance of guard tours and the operative condition of fixed suppression systems or other systems for the protection of life and property.
SUPERVISORY SIGNAL. A signal indicating the need for action in connection with the supervision of guard tours, fire suppression systems or equipment, fire alarm systems, or the maintenance features of related systems.

SUPERVISORY SIGNAL-INITIATING DEVICE. An initiation device, such as a valve supervisory switch, water-level indicator or low-air pressure switch on a dry-pipe sprinkler system, whose change of state signals an off-normal condition and its restoration to normal of a fire protection or life safety system, or a need for action in connection with the supervision of guard tours, fire suppression systems or equipment, fire alarm systems, or the maintenance features of related systems.

SUPPORTED SCAFFOLD. One or more platforms supported by outrigger beams, brackets, poles, legs, uprights, posts, frames, including prefabricated frames that are mechanized but not motorized, or any similar rigid support, including back structures connecting hoistways to buildings, and including structures where sidewalk protection is constructed as an integral part of the apparatus.

SUSCEPTIBLE BAY. A roof or portion thereof with:

1. A slope less than ¼-inch per 1 foot (0.0208 rad); or
2. On which water is impounded, in whole or in part, and the secondary drainage system is functional but the primary drainage system is blocked.

A roof surface with a slope of ¼-inch per 1 foot (0.0208 rad) or greater towards points of free drainage is not a susceptible bay.

SUSPENDED SCAFFOLD. One or more platforms suspended by ropes or other means from an overhead structure.

SUSPENDED SCAFFOLD FOREMAN. An individual, male or female, designated by and working under the direct and continuing supervision of a licensed master or special rigger, or a licensed master or special sign hanger, in accordance with the rules of the department.

SUSTAINABLE ROOFING ZONE. Areas of a roof assembly where a solar photovoltaic electricity generating system, a green roof system, or a combination thereof, is installed.

SWIMMING POOL. Any indoor or outdoor swimming, wading, spa, or special-purpose pool.
Exceptions:

1. Portable, freestanding wading pools containing water less than 24 inches (610 mm) in depth.
2. Float tanks or relaxation tanks sized for use by one person at a time.
3. Pools used for religious purposes.
4. Spa pools used for prescribed medical therapy or rehabilitation and under medical supervision.

SWIMMING POOL, PRIVATE. A swimming pool that is accessory to a one- or two-family dwelling, or to a single-dwelling unit of a multiple dwelling, and that is solely for the use of the occupants for noncommercial purposes.

SWIMMING POOL, PUBLIC. A swimming pool that is not a private swimming pool. Public swimming pools include swimming pools that are accessory to bathing establishments as such term is defined in the New York City Health Code, whether owned or operated by city agencies, or commercial interests or private entities, including, but not limited to, public or private schools, corporations, hotels, motels, camps, apartment houses, condominiums, country clubs, gymnasiums and health establishments.

SWING. Rotation of the superstructure for movement of loads in a horizontal direction about the axis of rotation.

T RATING. The time period that the penetration firestop system, including the penetrating item, limits the maximum temperature rise to 325°F (163°C) above its initial temperature through the penetration on the nonfire side when tested in accordance with ASTM E 814 or UL 1479.

TECHNICAL PRODUCTION AREA. Open elevated areas or spaces intended for entertainment technicians to walk on and occupy for servicing and operating entertainment technology systems and equipment. Galleries, including fly and lighting galleries, gridirons, catwalks, and similar areas are designed for these purposes.

TELEHANDLER. A machine that consists of a powered chassis onto which is mounted an extendable boom. The outer end of the boom can be fitted with various lifting or manipulative devices, including but not limited to pallet forks.

TEMPORARY CONSTRUCTION INSTALLATIONS. Installations that are not part of the permanent structure and that are installed to facilitate construction or demolition work, and are intended to be taken apart or removed after a limited period following their installation. Such installations include, but are not limited to, scaffolds, sidewalk sheds, fences, tower cranes, run back structures, and similar construction and demolition related installations.

TEMPORARY SIGN. A sign, with display area 500 square feet (46.5 m²) or less, erected for a period of 30 days or less.

TEMPORARY SITE SAFETY TRAINING (SST) CARD. A card that is issued in a form and manner established by the department and that satisfies each of the following conditions:
1. Such card is issued by an SST provider to a person who demonstrates that such person has successfully completed an OSHA 10-hour class and who is a new entrant to the construction or demolition work force as determined by such provider pursuant to department rules.

2. Such card expires six months after issuance and is not renewable.

**TEMPORARY STRUCTURES.** Tents, grandstands, platforms, reviewing stands, outdoor bandstands, stages, sculptures, and similar miscellaneous structures erected for a limited period.

**TENABLE ENVIRONMENT.** An environment in which the concentration and location of smoke is limited or otherwise restricted to allow for ready evaluation through the space.

**TENSILE MEMBRANE STRUCTURE.** A membrane structure having a shape that is determined by tension in the membrane and in the geometry of the support structure. Typically, the structure consists of both flexible elements (e.g. membrane and cables), non-flexible elements (e.g. struts, masts beams and arches), and the anchorage (e.g. supports and foundations). This includes frame supported tensile membrane structures.

**TENT.** A nonpressurized membrane structure of a fabric weather barrier supported by poles and guys, in which the fabric weather barrier does not impart stability to the structure. Tents need not be fully enclosed on the sides.

**THERMAL ISOLATION.** Physical and space conditioning separation from conditioned space(s). The conditioned space(s) shall be controlled as separate zones for heating and cooling or conditioned by separate equipment.

**THERMOPLASTIC MATERIAL.** A plastic material that is capable of being repeatedly softened by increase of temperature and hardened by decrease of temperature.

**THERMOSETTING MATERIAL.** A plastic material that is capable of being changed into a substantially nonreformable product when cured.

**THROUGH-PENETRATION.** A breach in both sides of a floor, floor-ceiling or wall assembly to accommodate an item passing through the breaches.

**THROUGH-PENETRATION FIRESTOP SYSTEM.** An assemblage consisting of a fire-resistance-rated floor, floor-ceiling, or wall assembly, one or more penetrating items passing through the breaches in both sides of the assembly and the materials or devices, or both, installed to resist the spread of fire through the assembly for a prescribed period of time.

**TIE-DOWN (HOLD-DOWN).** A device used to resist uplift of the chords of shear walls.

**TIE, WALL.** Metal connector that connects wythes of masonry walls together.

**TILE, STRUCTURAL CLAY.** A hollow masonry unit composed of burned clay, shale, fire clay or mixture thereof, and having parallel cells.

**TIRES, BULK STORAGE OF.** Storage of tires where the area available for storage exceeds 20,000 cubic feet (566 m³).
TOOL. See “Equipment.”

TOWER CRANE. A crane that utilizes a vertical mast or tower to support a working boom (jib) in an elevated position. Loads are suspended from the working boom. While the working boom may be of the fixed type (horizontal or angled) or have luffing capability, it can always rotate to swing loads, either by rotating on the top of the tower (top slewing) or by the rotation of the tower (bottom slewing). The tower base may be fixed in one location or ballasted and moveable between locations. The definition of a tower crane shall include a climber crane. The definition of a tower crane shall not include mobile cranes that are configured with luffing jib and/or tower attachments.

TOWNHOUSE. A single-family dwelling constructed in a group of three or more attached units in which each unit extends from the foundation to roof and with open space on at least two sides.

TOXIC MATERIAL. A chemical that is lethal at the following doses or concentrations:

1. A chemical that has a median lethal dose (LD$_{50}$) of more than 50 milligrams per 1 kilogram, but not more than 500 milligrams per kilogram of body weight when administered orally to albino rats weighing between 200 and 300 grams each; or

2. A chemical that has a median lethal dose (LD$_{50}$) of more than 200 milligrams per 1 kilogram but not more than 1,000 milligrams per kilogram of body weight when administered by continuous contact for 24 hours (or less if death occurs within 24 hours) with the bare skin of albino rabbits weighing between 2 and 3 kilograms each; or

3. A chemical that has a median lethal concentration (LC$_{50}$) in air of more than 200 parts per million but not more than 2,000 parts per million by volume of gas or vapor, or more than 2 milligrams per liter but not more than 20 milligrams per liter of mist, fume or dust, when administered by continuous inhalation for 1 hour (or less if death occurs within 1 hour) to albino rats weighing between 200 and 300 grams each.

Exception: For purposes of this code, chlorine shall be classified as a highly toxic material.

TRANSIENT. Occupancy of a dwelling unit or sleeping unit for not more than 30 days.

TRANSIENT AIRCRAFT. Aircraft based at another location and that is at the transient location for not more than 90 days.

TRANSIENT LODGING. A building, facility or portion thereof, excluding inpatient medical care facilities and long-term care facilities, that contains one or more dwelling units or sleeping units. Examples of transient lodging include, but are not limited to, resorts, group homes, hotels, motels, dormitories, homeless shelters, halfway houses and social service lodging.

TRANSIT. The moving or transporting of a crane from one jobsite to another.

TRANSPARENT. The property of a material which is not opaque and through which objects lying beyond are clearly visible.
TRANSPARENT DOOR. A door, manually or power actuated, fabricated of transparent material, in which the transparent area above a reference line 18 inches (457 mm) above the bottom edge of the door is 80 percent or more of the remaining area of the door above such reference line.

TRANSPARENT SAFETY GLAZING MATERIALS. Materials which will clearly transmit light and also minimize the possibility of cutting or piercing injuries resulting from breakage of the material. Materials covered by this definition include laminated glass, heat-toughened glass, case-hardened glass or chemically tempered glass), wired glass, and plastic glazing.

TRAVEL. The function of the machine moving under its own power from one location to another on a jobsite.

TREATED WOOD. Wood products that are conditioned to enhance fire-retardant or preservative properties.

Fire-retardant-treated wood. Wood products that, when impregnated with chemicals by a pressure process or other means during manufacture, exhibit reduced surface-burning characteristics and resist propagation of fire.

Preservative-treated wood. Wood products that, conditioned with chemicals by a pressure process or other means, exhibit reduced susceptibility to damage by moisture, mold, fungi, insects or marine borers.

TRENCH. A narrow excavation (in relation to its length) made below the surface of the ground. In general, the depth is greater than the width, but the width of a trench (measured at the bottom) is not greater than 15 feet (4572 mm). If forms or other structures are installed or constructed in an excavation so as to reduce the dimension measured from the forms or structure to the side of the excavation to 15 feet (4572 mm) or less (measured at the bottom of the excavation), the excavation is also considered to be a trench.

TRIM. Picture molds, chair rails, baseboards, handrails, door and window frames and similar decorative or protective materials used in fixed applications.

TROUBLE SIGNAL. A signal initiated by the fire alarm system or device indicative of a fault in a monitored circuit or component.

TWO-POINT SUSPENDED SCAFFOLD (SWING STAGE). A suspended scaffold consisting of a platform supported by hangers (stirrups) suspended by two ropes from overhead supports and equipped with means to permit the raising and lowering of the platform to desired working levels.

TYPE A SOIL. Cohesive soils with an unconfined compressive strength of 1.5 ton per square foot (tsf) (144 kPa) or greater. Examples of cohesive soils are: clay, silty clay, sandy clay, clay loam and, in some cases, silty clay loam and sandy clay loam. Cemented soils such as caliche and hardpan are also considered Type A. However, no soil is Type A if:

(i) The soil is fissured;

(ii) The soil is subject to vibration from heavy traffic, pile driving, or similar effects;
(iii) The soil has been previously disturbed;
(iv) The soil is part of a sloped, layered system where the layers dip into the excavation on a slope of four horizontal to one vertical (4H:1V) or greater; or
(v) The material is subject to other factors that would require it to be classified as a less stable material.

**TYPE B SOIL.** Soils that meet one of the following:

(i) Cohesive soil with an unconfined compressive strength greater than 0.5 tsf (48 kPa) but less than 1.5 tsf (144 kPa);
(ii) Granular cohesionless soils including: angular gravel (similar to crushed rock), silt, silt loam, sandy loam and, in some cases, silty clay loam and sandy clay loam;
(iii) Previously disturbed soils except those which would otherwise be classed as Type C soil;
(iv) Soil that meets the unconfined compressive strength or cementation requirements for Type A, but is fissured or subject to vibration;
(v) Dry rock that is not stable; or
(vi) Material that is part of a sloped, layered system where the layers dip into the excavation on a slope less steep than four horizontal to one vertical (4H:1V), but only if the material would otherwise be classified as Type B.

**TYPE B UNIT.** A dwelling unit or sleeping unit designed and constructed for accessibility in accordance with this code and the provisions for Type B units in ICC A117.1, consistent with the design and construction requirements of the federal Fair Housing Act.

**TYPE B+NYC UNIT.** A dwelling unit or sleeping unit designed and constructed for accessibility in accordance with this code and Section 1004 (Type B Units) of ICC A117.1, except as modified by Sections 1107.2.1 through 1107.2.8 of this code.

**TYPE C SOIL.** Soils that meet one of the following:

(i) Cohesive soil with an unconfined compressive strength of 0.5 tsf (48kPa) or less;
(ii) Granular soils including gravel, sand, and loamy sand;
(iii) Submerged soil or soil from which water is freely seeping;
(iv) Submerged rock that is not stable, or
(v) Material in a sloped, layered system where the layers dip into the excavation or a slope of four horizontal to one vertical (4H:1V) or steeper.
UNCONFINED COMPRESSION STRENGTH (SOIL). The load per unit area at which a soil will fail in compression. It can be determined by laboratory testing, or estimated in the field using a pocket penetrometer, by thumb penetration tests, and other methods.

UNDERLAYMENT. One or more layers of approved material over which a roof covering is applied.

UNDERPINNING. The alteration of an existing foundation to transfer loads to a lower bearing stratum using new piers, piles, or other structural support elements installed below the existing foundation.

UNENCLOSED PERIMETER. Any exterior portion of a building that is not solidly enclosed with the permanent façade, including the windows; or any exterior edge of a roof that is not enclosed with its permanent parapet or guardrail.

UNSTABLE (REACTIVE) MATERIAL. A material, other than an explosive, which in the pure state or as commercially produced, will vigorously polymerize, decompose, condense or become self-reactive and undergo other violent chemical changes, including explosion, when exposed to heat, friction or shock, or in the absence of an inhibitor, or in the presence of contaminants, or in contact with incompatible materials. Unstable (reactive) materials shall be classified as follows:

Class 4. Materials that in themselves are readily capable of detonation or explosive decomposition or explosive reaction at normal temperatures and pressures. This class includes materials that are sensitive to mechanical or localized thermal shock at normal temperatures and pressures.

Class 3. Materials that in themselves are capable of detonation or of explosive decomposition or explosive reaction but which require a strong initiating source or which must be heated under confinement before initiation. This class includes materials that are sensitive to thermal or mechanical shock at elevated temperatures and pressures.

Class 2. Materials that in themselves are normally unstable and readily undergo violent chemical change but do not detonate. This class includes materials that can undergo chemical change with rapid release of energy at normal temperatures and pressures, and that can undergo violent chemical change at elevated temperatures and pressures.

Class 1. Materials that in themselves are normally stable but which can become unstable at elevated temperatures and pressure.

USE (MATERIAL). Placing a material into action, including solids, liquids and gases.

USE/USING (SCAFFOLD). Any work or activity performed on or from the scaffold. In addition, for a suspended scaffold, the use of the scaffold shall include the operation of the scaffold at the site, provided during such operation any vertical or horizontal relocation of the scaffold does not require a modification to the counterweight, or does not require the placement, relocation, or removal of any anchorage, attachment, outrigger beam, tie-back, or connection to the building or structure.

VALUE (OF ALTERATIONS, TO DETERMINE REQUIRED ACCESSIBILITY). The value of alterations shall be determined by adding the estimated cost of the proposed alteration, including
minor alterations but excluding ordinary repairs, computed as of the time of submitting the application for construction document approval, or, where no permit is required, computed at the time of the work, to the actual cost of any and all alterations and minor alterations made in the preceding 12-month period. Where the alteration includes an enlargement, the value of the alteration shall include the cost of the enlargement.

**VALUE (OF ALTERATIONS, TO DETERMINE REQUIRED FIRE PROTECTION).** The value of alterations shall be determined by adding the estimated cost of the proposed alteration, excluding minor alterations and ordinary repairs computed as of the time of submitting the application for construction document approval, to the actual cost of any and all alterations made in the preceding 12-month period. Where the proposed alteration includes an enlargement, the value of such alteration shall also include the cost of the enlargement.

**VALUE (OF EXISTING BUILDING OR SPACE).** The value of an existing building shall be determined at the option of the applicant on the basis of one and one-quarter times the current assessed valuation of the building, as adjusted by the current State equalization rate, or on the basis of the current replacement cost of the building. The value of an existing space shall be determined on the basis of the current replacement cost of the space. Satisfactory evidence of current replacement cost shall be submitted to the commissioner. Where the alteration includes an enlargement, the value of the existing building shall be determined without including the value of the enlargement.

**VAPOR-PERMEABLE MEMBRANE.** A material or covering having a permeance rating of 5 perms (52.9 10⁻¹⁰ kg/Pa.s. m²) or greater, when tested in accordance with the desiccant method using Procedure A of ASTM E 96. A vapor-permeable material or covering permits the passage of moisture vapor.

**VAPOR RETARDER CLASS.** A measure of a material or assembly’s ability to limit the amount of moisture that passes through that material or assembly. Vapor retarder class shall be defined using the desiccant method of ASTM E 96 as follows:

- Class I: 0.1 perm or less.
- Class II: 0.1 < perm < 1.0 perm.
- Class III: 1.0 < perm < 10 perm.

**VARIANCE.** See Section G201.1.2.

**VAULT.** Any space below the surface of a street that is covered over, except those openings that are used exclusively as places for descending, by means of steps to the cellar or basement of any building.

**VEGETATIVE ROOF.** A system constructed in-situ consisting of either a roof assembly and additional landscape material components, including growing media, engineered soils, filter fabric, integral drainage systems and roof surface to facilitate the growth of vegetation or a pre-vegetated tray or trays no more than 6 inches (152 mm) high and assembled on top of a roof covering.

**VEHICLE BARRIER.** A component or a system of components near open sides or walls of garage floors or ramps that acts as a restraint for vehicles.

**VEHICULAR GATE.** A gate that is intended for use at a vehicular entrance or exit and that is not intended for use by pedestrian traffic.
VEENEER. A facing attached to a wall for the purpose of providing ornamentation, protection or insulation, but not counted as adding strength to the wall. Veneers are nonstructural in that they do not carry any load other than their own weight.

VENTILATION. The natural or mechanical process of supplying conditioned or unconditioned air to, or removing such air from, any space.

VINYL SIDING. A shaped material, made principally from rigid polyvinyl chloride (PVC) that is used as an exterior wall covering.

VISIBLE ALARM NOTIFICATION APPLIANCE. A notification appliance that alerts by the sense of sight.

V-ZONE. Velocity Zones V, VO, VE, or V1-30 (See Coastal High Hazard Area).

WALKABLE FLOOR (CONCRETE CONSTRUCTION). A floor where the concrete slab has been poured and the formwork stripped.

WALKABLE FLOOR (PRECAST CONCRETE CONSTRUCTION). A floor where the frame is erected and the precast concrete floor is fixed in place.

WALKABLE FLOOR (STEEL CONSTRUCTION). A floor where the frame is erected and the deck is tack welded or fixed in place.

WALKWAY, PEDESTRIAN. A walkway used exclusively as a pedestrian trafficway.

WALL. A vertical element with a horizontal length-to-thickness ratio greater than three, used to enclose space.

Cavity wall. A wall built of masonry units or of concrete, or a combination of these materials, arranged to provide an airspace within the wall, and in which the inner and outer parts of the wall are tied together with metal ties.

Dry-stacked, surface-bonded walls. A wall built of concrete masonry units where the units are stacked dry, without mortar on the bed or head joints, and where both sides of the wall are coated with a surface-bonding mortar.

Parapet wall. The part of any wall entirely above the roof line.

WALL, LOAD-BEARING. Any wall meeting either of the following classifications:

1. Any metal or wood stud wall that supports more than 100 pounds per linear foot (1459 N/m) of vertical load in addition to its own weight.
2. Any masonry or concrete wall that supports more than 200 pounds per linear foot (2919 N/m) of vertical load in addition to its own weight.

WALL, NONLOAD-BEARING. Any wall that is not a load-bearing wall.

WALL SIGN. Any sign attached to or erected against the wall of a building or structure, projecting no more than 15 inches (381 mm) from the face of the wall, with the exposed face of the sign in a plane parallel to the plane of said wall.

404
WATERPROOFING. Waterproofing is a protective measure applied to building foundation walls and slabs to prevent moistures and liquid water from passing into interior spaces.

WATER-REACTIVE MATERIAL. A material that explodes; violently reacts; produces flammable, toxic or other hazardous gases; or generates enough heat to cause auto-ignition or ignition of combustible materials upon exposure to water or moisture. Water-reactive materials are classified as follows:

**Class 3.** Materials that react explosively with water without requiring heat or confinement.

**Class 2.** Materials that react violently with water or cause water to boil upon contact; produce flammable, toxic or other hazardous gases upon contact with water; or upon contact with water generate sufficient heat to cause auto-ignition of adjoining combustible materials.

**Class 1.** Materials that may react with water with some release of energy, but not violently.

WATER-RESISTIVE BARRIER. A material behind an exterior wall covering that is intended to resist liquid water that has penetrated behind the exterior wall covering from further intruding into the exterior wall assembly.

WEATHER-EXPOSED SURFACES. Surfaces of walls, ceilings, floors, roofs, soffits and similar surfaces exposed to the weather except the following:

1. Ceilings and roof soffits enclosed by walls, fascia, bulkheads or beams that extend a minimum of 12 inches (305 mm) below such ceiling or roof soffits.

2. Walls or portions of walls beneath an unenclosed roof area, where located a horizontal distance form an open exterior opening equal to at least twice the height of the opening.

3. Ceiling and roof soffits located a minimum horizontal distance of 10 feet (3048 mm) from the outer edges of the ceiling or roof soffits.

WET-CHEMICAL EXTINGUISHING SYSTEM. A solution of water and potassium-carbonate-based chemical, potassium-acetate-based chemical or a combination thereof, forming a fire-extinguishing agent.

WHEEL MOUNTED CRANE (MULTIPLE CONTROL STATIONS). A mobile crane consisting of a rotating superstructure, operating machinery, and operator’s station and boom, mounted on a crane carrier equipped with axles and rubber-tired wheels for travel, a power source(s), and having separate stations for driving and operating.

WHEEL MOUNTED CRANE (SINGLE CONTROL STATION). A mobile crane consisting of a rotating superstructure, operating machinery, and boom, mounted on a crane carrier equipped with axles and rubber-tired wheels for travel, a power source, and having a single control station for driving and operating.

WHEELCHAIR SPACE. A space for a single wheelchair and its occupant.

WIND SPEED, V (BASIC). Basic design wind speeds.
WIND SPEED, $V_{asd}$. (ALLOWABLE STRESS DESIGN). Allowable stress design wind speeds.

WIND-BORNE DEBRIS REGION. Areas within hurricane-prone regions located:

1. Within 1 mile (1.61 km) of the coastal mean high water line where the basic design wind speed, $V$, is 130 mph (58 m/s) or greater.

For Risk Category IV buildings and structures, and Risk Category III health care facilities, the wind-borne debris region shall be based on the basic design wind speed for Risk Category IV on Table 1609.3.

WINDER. A stair tread with nonparallel edges.

WIRE BACKING. Horizontal strands of tautened wire attached to surfaces of vertical supports that, when covered with the building paper, provide a backing for cement plaster.

WIRELESS PROTECTION SYSTEM. A system or a part of a system that can transmit and receive signals without the aid of wire.

WOOD SHEAR PANEL. A wood floor, roof or wall component sheathed to act as a shear wall or diaphragm.

WOOD STRUCTURAL PANEL. A panel manufactured from veneers, wood strands or wafers or a combination of veneer and wood strands or wafers bonded together with waterproof synthetic resins or other suitable bonding systems. Examples of wood structural panels are:

- **Composite panels.** A wood structural panel that is comprised of wood veneer and reconstituted wood-based material and bonded together with waterproof adhesive;

- **Oriented strand board (OSB).** A mat-formed wood structural panel comprised of thin rectangular wood strands arranged in cross-aligned layers with surface layers normally arranged in the long panel direction and bonded with waterproof adhesive; or

- **Plywood.** A wood structural panel comprised of plies of wood veneer arranged in cross-aligned layers. The plies are bonded with waterproof adhesive that cures on application of heat and pressure.

WOOD/PLASTIC COMPOSITE. A composite material made primarily from wood or cellulose-based materials and plastic.

WORKING DECK (CONCRETE CONSTRUCTION). The level where the floor is being formed.

WORKING DECK (DEMOLITION). The level where the floor is being broken up.

WORKING DECK (PRECAST CONCRETE CONSTRUCTION). The level where the floor is being placed.

WORKING DECK (STEEL CONSTRUCTION). The floor where the metal decking and steel components are being placed before concrete is poured.
WORKSTATION. A defined space within a fabrication area in which a specific function, laboratory procedure or research activity relating to semiconductor manufacture is conducted. A workstation may include equipment using HPM, hazardous materials storage cabinets, flammable liquid storage cabinets or gas cabinets, ventilation equipment, fire protection devices, detection devices, and electrical devices.

WYTHE. Each continuous, vertical section of a wall, one masonry unit in thickness.

YARD. An open space, other than a court, unobstructed from the ground to the sky, except where specifically provided by this code, on the lot on which a building is situated.

ZERO CLEARANCE VESTIBULE. A limited space on the elevator lobby between the exterior of the hoistway door and the security door attached to the elevator hoistway.

ZONE. A defined area within the protected premises. A zone can define an area from which a signal can be received, an area to which a signal can be sent or an area in which a form of control can be executed.

ZONE, NOTIFICATION. An area within a building or facility covered by notification appliances that are activated simultaneously.

§ 4. Chapter 3 of the New York city building code, as added by local law number 33 for the year 2007, sections 302.1, 303.1, 306.1, 306.2, 306.3, 306.4, 307.1, 307.2, 307.3, 307.4, 307.5, 307.6, 307.7, 308.2, 308.2.2, 308.3, 308.4, 308.5, 309.1, 309.2, 310, 310.1.1, 310.1.2, 310.2, 311.2, and 311.3, and tables 307.1(1) and 307.1(2), and the title of section 308 as amended by, and sections 304.1.1, 307.1.1, and 308.3.1 as added by local law number 141 for the year 2013, and section 304.1 as amended by local law number 78 for the year 2015, is amended to read as follows:

CHAPTER 3
USE AND OCCUPANCY CLASSIFICATION

SECTION BC 301
GENERAL

301.1 Scope. The provisions of this chapter shall control the classification of all buildings and structures, and spaces therein, as to use and occupancy.

SECTION BC 302
CLASSIFICATION

302.1 General. Structures or portions of structures shall be classified with respect to occupancy in one or more of the groups listed below. A room or space that is intended to be occupied at different times for different purposes shall comply with all of the requirements that are applicable to each of the purposes for which the room or space will be occupied. Structures with multiple occupancies or
uses shall comply with Section 508. Where a structure, or portion thereof, is proposed for a purpose [which] that is not specifically provided for in this code, such structure, or portion thereof, shall be classified in the group [which] that the occupancy most nearly resembles, according to the fire safety and relative hazard involved, and as approved by the commissioner.

2. Business (see Section 304): Group B.

3. Educational (see Section 305): Group E.

7. Mercantile (see Section 309): Group M.

8. Residential (see Section 310): Groups R-1, R-2 and R-3.

10. Utility and Miscellaneous (see Section 312): Group U.

For a listing of occupancy group classifications that corresponds with uses listed in the New York City Zoning Resolution, refer to department rules.

SECTION BC 303
ASSEMBLY GROUP A

303.1 Assembly Group A. Assembly Group A occupancy includes, among others, the use of a building or structure or a portion thereof, excluding a dwelling unit, for the gathering of any number of persons for purposes such as civic, social or religious functions, recreation, food or drink consumption, awaiting transportation, or similar group activities; or when occupied by 75 persons or more for educational or instructional purposes.

[Exceptions:]

303.1.1 Definitions. The following term is defined in Chapter 2:

PLACE OF ASSEMBLY.

303.1.2 Buildings and nonaccessory tenant spaces. [+] A building or nonaccessory tenant space used for assembly purposes with an occupant load of fewer than 75 persons shall be classified as a Group B occupancy, except that the number of plumbing fixtures for such a building or space is permitted to be calculated in accordance with the requirements for assembly occupancies.
303.1.3 Accessory assembly spaces. [2-] A room or space used for assembly purposes with an occupant load of fewer than 75 persons and accessory to another occupancy shall be classified as a Group B occupancy or as part of that occupancy, except that the number of plumbing fixtures for such a room or space is permitted to be calculated in accordance with the requirements for assembly occupancies.

[Assembly occupancies shall include the following:] [A-1] 303.2 Assembly Group A-1. Group A-1 occupancy includes assembly uses, usually with fixed seating, intended for the production and viewing of the performing arts or motion pictures including, but not limited to:

- Motion picture theaters
- Symphony and concert halls
- Television and radio studios admitting an audience
- Theaters

[A-2] 303.3 Assembly Group A-2. Group A-2 occupancy includes assembly uses intended for food and/or drink consumption including, but not limited to:

- Banquet halls
- Cabarets
- [Cafeterias, except as provided for in A-3]
- [Dance halls]
- [Night clubs]
- Casinos (gaming areas)
- Nightclubs, including dance halls
- Restaurants, cafeterias (except as provided for in A-3), and similar dining facilities
- Taverns and bars

[A-3] 303.4 Assembly Group A-3. Group A-3 occupancy includes assembly uses intended for worship, recreation or amusement and other assembly uses not classified elsewhere in Group A including, but not limited to:

- Amusement arcades
- Art galleries
- Bowling alleys
- Cafeterias for children up to and including the 12th grade
Classrooms and instructional rooms with 75 persons or more; such rooms with fewer than 75 persons shall be classified as Group B or E

Community halls

Courtrooms

Custodial care facilities with 75 or more persons, providing care to persons over the age of 2, where no more than four occupants are incapable of responding to an emergency situation without physical assistance from staff

Dance studio or instruction (not including food or drink consumption)

Exhibition halls

Funeral parlors

Gymnasiums (without spectator seating)

[Religious houses of worship]

Indoor swimming pools (without spectator seating)

Indoor tennis courts (without spectator seating)

Lecture halls

Museums

Places of religious worship (Houses of worship)

[Waiting areas in transportation terminals]

Pool and billiard parlors

School auditoriums

Waiting areas in transportation terminals

[A-4] **303.5 Assembly Group A-4.** Group A-4 occupancy includes assembly uses intended for viewing of indoor sporting events and activities with spectator seating including, but not limited to:

- Arenas
- Skating rinks
- Swimming pools
- Tennis courts

[A-5] **303.6 Assembly Group A-5.** Group A-5 occupancy includes assembly uses intended for participation in or viewing outdoor activities including, but not limited to:

- Amusement park structures
- Bleachers
- Grandstands
- Stadiums
Certificate of Operation. A Certificate of Operation shall be required, as per Section 28-117.1, for the following places of assembly occupancies:

1. Indoor assembly occupancies used or intended for use by 75 persons or more, including open spaces at 20 feet (6096 mm) or more above or below grade plane, such as roofs or roof terraces.

2. Outdoor assembly occupancies used and intended for use by 200 persons or more.

SECTION BC 304
BUSINESS GROUP B

304.1 Business Group B. Business Group B occupancy includes, among others, the use of a building or structure, or a portion thereof, for office, professional, service-type transactions, or for conducting public or civic services, including the incidental storage of records and accounts and the incidental storage of limited quantities of stocks of goods for office use or purposes. Business Group B occupancies shall include, but not be limited to, the following:

- Airport traffic control towers
- Ambulatory care facilities
- Animal hospitals, kennels and pounds, veterinary clinics and pet shops
- Banks
- Barber and beauty shops
- Civic administration offices
- Clinic outpatient, including group medical centers, and neighborhood family care centers
- Custodial care facilities with fewer than 75 persons, providing care to persons over the age of 2, where no more than four occupants are incapable of responding to an emergency situation without physical assistance from staff
- Dry cleaning and laundries; pick-up and delivery stations and self-service
- Educational occupancies for students above the 12th grade, where not classified in Group A. Such occupancy may be used occasionally for educational purposes offered to children through the 12th grade
- Electronic data processing
- Laboratories; nonproduction testing and research, as per Section 424
- Libraries when not classified in Group E
- Motor vehicle showrooms
- Offices
- Post offices
- Photocopying and printing shops using electronic printing equipment
- Professional services (architects, attorneys, dentists, physicians, engineers, etc.)
- Radio and television stations not admitting an audience
Telephone exchanges

Training and skill development not [within] in a school or academic program (this shall include, but not be limited to, tutoring centers, martial arts studios, gymnastics and similar uses regardless of the ages served, and where not classified as a Group A occupancy)

[304.1.1] 304.2 Definitions. The following [words and] terms [shall, for the purposes of this section and as used elsewhere in this code, have the meanings shown herein.] are defined in Chapter 2:

AMBULATORY CARE FACILITY.

CLINIC, OUTPATIENT.[Buildings or portions thereof used to provide medical care on less than a 24-hour basis to individuals who are not rendered incapable of self-preservation by the services provided.]

SECTION BC 305
EDUCATIONAL GROUP E

305.1 Educational Group E. Educational Group E occupancy includes, among others, the use of a building or structure, or a portion thereof, by five or more persons at any one time for educational purposes offered to children through the 12th grade and where no more than two children are under the age of 2, including but not limited to the following:

Academies

Day care facilities where no more than two children are under the age of 2

Libraries accessory to Group E occupancies

Schools

Exceptions:

1. Classrooms and instructional rooms with 75 or more persons shall be classified as Group A-3.

2. Day care services provided within a dwelling unit as described in Section 310.

3. Custodial care facilities with up to 30 children under the age of 2 are permitted to be classified as Group E when the rooms where such children are cared for are located on the level of exit discharge and each of these child care rooms has an exit door directly to the exterior.

305.2 Reserved.

SECTION BC 306
FACTORY GROUP F

306.1 Factory Industrial Group F. Factory Industrial Group F occupancy includes, among others, the use of a building or structure, or a portion thereof, for assembling, disassembling, fabricating, finishing, manufacturing, packaging, repair, cleaning, laundering or processing operations that are not classified as a Group H hazardous occupancy. Factory Industrial Group F occupancy also includes certain mechanical and/or electrical equipment rooms in accordance with Section 306.3.

Factory industrial uses [which] that are not classified as Factory Industrial F-2 Low Hazard shall be classified as F-1 Moderate Hazard and shall include, but not be limited to, the following:

- Aircraft (manufacturing, not to include repair)
- Aircraft repairs
- Automobiles and other motor vehicles, manufacturing
- Automobiles and other motor vehicles, repairs
- Bakeries
- Beverages; over [16 percent] 16-percent alcohol content
- Boats
- Boat repairs
- Brooms or brushes
- Canvas or similar fabric
- Carpets and rugs
- Carpets and rugs, cleaning, using or storing solvents having a flash point between 100°F (38°C) and 138.2°F (59°C) (Tag closed cup)
- Clothing
- Disinfectants
- Dry cleaning and dyeing using or storing solvents having a flash point between 100°F (38°C) and 138.2°F (59°C) (Tag closed cup)
- Electric generation plants
- Electrical substations
- Engines (including rebuilding)
- Food processing, except meat slaughtering or preparation of fish for packing
- Food processing establishments and commercial kitchens not adjoining a restaurant, cafeteria or similar dining facilities
- Furniture
- Hemp products
- Jute products
- Laboratories; for production (moderate-hazard), that may involve the synthesis or storage of materials that constitute a physical or health hazard in quantities below those found in Tables 307.1(1) and 307.1(2)
- Leather products
Metals; finishing, plating, grinding, sharpening, polishing, cleaning, rustproofing, heat treatment or similar processes
Millwork (sash and door)
Motion pictures filming (without spectators)
Musical instruments
Optical goods
Paper mills or products
Photographic film
Plastic products
Printing or publishing
Recreational vehicles
Refuse incineration
Shoes
Soaps and detergents
Textiles
Tobacco
Trailers
Upholstering
Wood; distillation
Woodworking (cabinet) using no more than 2 quarts (1.9 L) per day or storing no more than 20 gallons (75.7 L) of paint, varnish, lacquer or shellac

306.3 [Factory Industrial F-2] Low-hazard [Occupancy] factory industrial, Group F-2. Factory industrial uses that involve the cleaning, laundering, fabrication or manufacturing of noncombustible materials [which] during finishing, packing or processing do not involve a significant fire hazard shall be classified as F-2 occupancies and shall include, but not be limited to, the following:

Appliances
Athletic equipment
Automobile laundries
Automobile wrecking establishments
Beverages; up to and including [16 percent] 16-percent alcohol content; bottling works
Beverages; nonalcoholic
Bicycles
Brick and masonry
Business machines
Cameras and photo equipment
Carpets and rugs, cleaning, using or storing solvents having a flash point above 138.2°F (59°C) (Tag closed cup)
Ceramic products
Commercial kitchens adjoining restaurants, cafeterias (including those classified in Group A-3), or similar dining facilities
Construction and agricultural machinery
Dry cleaning and dyeing using or storing solvents having a flash point above 138.2°F (59°C) (Tag closed cup)
Electronics
Food processing; meat slaughtering or preparation of fish for packing
Foundries
Glass products
Gypsum
Ice
Laboratories; for production (low-hazard), that may involve the synthesis or storage of materials that constitute a physical or health hazard in quantities below those found in Tables 307.1(1) and 307.1(2)
Laundries
Machinery
Mechanical and/or electrical equipment rooms that are neither identified as incidental uses in Table 509 nor classified as the occupancy within which they are located per Section 508.1
Metal products (fabrication and assembly), not including flammable metals and alloys listed in Section 307
Plastic products; nonflammable
Printing; incidental to primary use, area not exceeding 2,000 square feet (185.8 m²)
Television filming (without spectators)

306.4 Location restrictions. Locations of spaces classified in Factory Group F may be restricted within a building containing a Group R occupancy pursuant to Section 510.8.

SECTION BC 307
HIGH-HAZARD GROUP H

307.1 [High-Hazard] High-hazard Group H. [High-Hazard] High-hazard Group H occupancy includes, among others, the use of a building or structure, or a portion thereof, that involves the manufacturing, processing, generation or storage of materials that constitute a physical or health hazard in quantities in excess of those allowed in control areas complying with Section 414, based on the maximum allowable quantity limits for control areas set forth in Tables 307.1(1) and 307.1(2).
Hazardous occupancies are classified in Groups H-1, H-2, H-3, H-4 and H-5 and shall be in accordance with this section, the requirements of Section 415 and the *New York City Fire Code*.

*Exceptions: The following shall not be classified as Group H, but shall be classified as the occupancy that they most nearly resemble.*

### 307.1.1 Uses other than Group H. An occupancy that stores, uses or handles hazardous materials as described in one or more of the following items shall not be classified as Group H, but shall be classified as the occupancy that it most nearly resembles.

1. Buildings and structures occupied for the application of flammable finishes, provided that such buildings or areas conform to the requirements of [Section 416 and] the *New York City Fire Code* and Section 416 of this code.

2. Wholesale and retail sales and storage of flammable and combustible liquids in mercantile occupancies conforming to the *New York City Fire Code*.

3. Closed piping system containing flammable or combustible liquids or gases utilized for the operation of machinery or equipment.

4. Cleaning establishments that utilize combustible liquid solvents having a flash point of 140°F (60°C) or higher in closed systems employing equipment listed by an approved testing agency, provided that this occupancy is separated from all other areas of the building by 1-hour fire barriers constructed in accordance with Section 707 or 1-hour horizontal assemblies constructed in accordance with Section 711, or both.

5. Cleaning establishments that utilize a liquid solvent having a flash point at or above 200°F (93°C).

7. Refrigeration systems.

8. The storage or utilization of materials for agricultural purposes on the premises.

9. Stationary batteries utilized for facility emergency or standby power, [uninterrupted] uninterruptable power supply or telecommunication facilities, provided that the batteries are provided with safety venting caps and ventilation is provided in accordance with the *New York City Mechanical Code*.

10. [Corrosives shall not include personal or household products in their original packaging used in retail display or commonly used building materials.] Corrosive personal or household products in their original packaging used in retail display.

11. Commonly used corrosive building materials.

[44.] 12. Buildings and structures occupied for aerosol storage shall be classified as Group S-1, provided that such buildings conform to the requirements of the *New York City Fire Code*. 

416
[42-] 13. Display and storage of nonflammable solid and nonflammable or noncombustible liquid hazardous materials in quantities not exceeding the maximum allowable quantity per control area in Group M or S occupancies complying with Section 414.2.5.

[43-] 14. The storage of black powder, smokeless propellant and small arms primers in Groups M and R-3 and special industrial explosive devices in Groups B, F, M and S, provided such storage conforms to the quantity limits and requirements prescribed in the New York City Fire Code.

[44-] 15. Laboratories for nonproduction testing, research, experimental, instructional or educational purposes, in compliance with Section [424] 427.

[307.1.1 Hazardous materials. Hazardous materials in any quantity shall conform to the requirements of this code, including Section 414, and the New York City Fire Code.]

</tbody>
</table>

For SI: 1 cubic foot = 0.028 m³, 1 pound = 0.454 kg, 1 gallon = 3.785 L.

a. For use of control areas, see [Section 2703.3.1 of the New York City Fire Code] and Section 414.2 of this code.

b. The aggregate quantity in storage, handling and use shall not exceed the quantity listed for storage.

c. The quantities of alcoholic beverages in retail and wholesale sales occupancies shall not be limited providing the liquids are packaged in individual containers not exceeding 1.3 gallons. In retail and wholesale sales occupancies, the quantities of medicines, foodstuffs, consumer or industrial products, and cosmetics containing not more than 50 percent by volume of water-miscible liquids with the remainder of the solutions not being flammable shall not be limited, provided that such materials are packaged in individual containers not exceeding 1.3 gallons.

d. Maximum allowable quantities, except for liquefied petroleum gas and flammable liquid motor fuel, shall be increased 100 percent in buildings protected throughout by a sprinkler system. Where Note e also applies, this increase for both notes shall be applied accumulatively.

e. Maximum allowable quantities, except for liquefied petroleum gas and flammable liquid motor fuel, shall be increased 100 percent when stored in approved storage cabinets, gas cabinets, exhausted enclosures or listed safety cans. Listed safety cans shall be in accordance with [Section 2703.1.12(e) of the New York City Fire Code]. Where Note d also applies, the increase for both notes shall be applied accumulatively.

f. Quantities shall not be limited in a building protected throughout by a sprinkler system.

For systems protected by a sprinkler system, the maximum allowable quantity per each system shall not exceed the quantity listed for storage.

h. The aggregate quantity in storage, handling and use shall not exceed the quantity listed for storage.

i. Quantities shall not be limited in a building protected throughout by a sprinkler system.

j. Quantities shall not be limited in a building protected throughout by a sprinkler system.

k. The aggregate quantity in storage, handling and use shall not exceed the quantity listed for storage.

l. For purposes of this table, gasoline and other flammable liquid motor fuels are classified as a Class IA flammable liquid.

m. For storage of liquids, divide the amount in pounds by 10 in accordance with [Section 307.1.2.2 of the New York City Fire Code].

n. For storage and display quantities in Group M and storage quantities in Group S occupancies complying with [the requirements of Section 2703.11 of the New York City Fire Code].

o. For purposes of this table, gasoline and other flammable liquid motor fuels are classified as a Class IA flammable liquid.

p. Unclassified detonable organic peroxides [see Chapter 10 of the New York City Fire Code], detonable pyrophoric materials [see Chapter 11 of the New York City Fire Code] and detonable water-reactive materials [see Chapter 21 of the New York City Fire Code] shall be treated as explosives for purposes of storage, handling, and use [see Chapter 13 of the New York City Fire Code] in accordance with the New York City Fire Code.

</table>

For SI: 1 cubic foot = 0.028 m\textsuperscript{3}, 1 pound = 0.454 kg, 1 gallon = 3.785 L.

a. For use of control areas, see the New York City Fire Code and Section 414.2 of this code.
b. In retail and wholesale sales occupancies, the quantities of medicines, foodstuffs, consumer or industrial products, and cosmetics, containing not more than 50 percent by volume of water-miscible liquids and with the remainder of the solutions not being flammable, shall not be limited, provided that such materials are packaged in individual containers not exceeding 1.3 gallons.
c. For storage and display quantities in Group M and storage quantities in Group S occupancies complying with the New York City Fire Code.
d. The aggregate quantity in storage, handling and use shall not exceed the quantity listed for storage.
e. Maximum allowable quantities shall be increased 100 percent in buildings equipped throughout with an approved automatic sprinkler system in accordance with Section 903.3.1.1. Where Note f also applies, the increase for both notes shall be applied accumulatively.
f. Maximum allowable quantities may be increased 100 percent when stored in approved storage cabinets, gas cabinets or exhausted enclosures as specified in the New York City Fire Code, where Note e also applies, the increase for both notes shall be applied accumulatively.
g. Allowed only when stored in approved exhausted gas cabinets or exhausted enclosures as specified in the New York City Fire Code.
h. Quantities shown in the table in parenthesis indicate quantities have the units shown in parenthesis at the head of each column.
i. For gallons of liquids, divide the amount in pounds by 10 in accordance with the New York City Fire Code.
j. The maximum allowable quantities shall be limited by Section [424] 427 for chemical laboratories classified as Occupancy Group B and operating as nonproduction facilities for testing, research, experimental, instructional or educational purposes.

307.1.2 Hazardous materials. Hazardous materials in any quantity shall conform to the requirements of this code, including Section 414 of this code, and the New York City Fire Code.

307.2 Definitions. The following [words and] terms [shall, for the purposes of this section and as used elsewhere in this code, have the meanings shown herein.] are defined in Chapter 2:

[A product that is dispensed from an aerosol container by a propellant, classified as follows:]

Level 1. [Aerosol products with a total chemical heat of combustion that is greater than 0 and less than or equal to 8,600 British thermal units per pound (Btu/lb) (20 kJ/g).]

Level 2. [Aerosol products with a total chemical heat of combustion that is greater than 8,600 Btu/lb (20 kJ/g), but less than or equal to 13,000 Btu/lb (30 kJ/g).]

Level 3. [Aerosol products with a total chemical heat combustion that is greater than 13,000 Btu/lb (30 kJ/g).]

BALED COTTON. [A natural seed fiber wrapped in and secured with industry accepted materials, typically consisting of burlap, woven polypropylene, polyethylene or cotton or sheet polyethylene, secured with wire or bands. The term baled cotton includes lint removed from the cottonseed (linters) and residual materials from the ginning process (motes).]
BALED COTTON, DENSELY PACKED. [Baled cotton with a packing density of at least 22 pounds per cubic foot (360 kg/m³). A bale of densely-packed baled cotton typically measures 55 inches (1397 mm) in length, 21 inches (533.4 mm) in width, and 27.6 to 35.4 inches (701 to 899 mm) in height.]

BARRICADE. [A structure or other artificial or natural barrier constructed in connection with the storage, handling and use of explosives that is designed to withstand the rapid release of energy in an explosion and provides a shield from the impact of such explosion. A straight line from the top of any sidewall of a building containing explosives to the eaveline of any magazine or other building or to a point 12 feet (3658 mm) above the center of a railway or highway shall pass through such barrier.]

Artificial barricade. [An artificial mound or revetment, including a barrier constructed of sandbags, with a minimum thickness of 3 feet (914 mm).]

Natural barricade. [Terrain or other natural features of the ground.]

BOILING POINT. [The temperature at which the vapor pressure of a liquid equals the atmospheric pressure of 14.7 pounds per square inch (psi) (101 kPa) gage or 760 mm of mercury. Where an accurate boiling point is unavailable for the material in question, or for mixtures which do not have a constant boiling point, for the purposes of this classification, the 20 percent evaporated point of a distillation performed in accordance with ASTM D 86 shall be used as the boiling point of the liquid.]

CLOSED SYSTEM. [The use of any compressed gas and the use of a solid or liquid hazardous material in equipment or a vessel or system that remains closed during normal operations, such that vapors emitted during the operation of such equipment, vessel or system are not liberated outside of the equipment, vessel or system and the gas or hazardous material is not exposed to the atmosphere during such operation. Examples of closed systems include hazardous materials conveyed through a piping system into closed equipment or a closed vessel or system.]

COMBUSTIBLE DUST. [Finely divided solid material that is 420 microns or less in diameter, will pass through a U.S. standard No. 40 sieve and, when dispersed in air in insufficient concentrations, can be ignited by a flame, spark or other source of ignition.]

COMBUSTIBLE FIBERS. [Readily-ignitable and free-burning materials in fibrous or shredded form, such as cocoa fiber, cotton, excelsior, hay, hemp, henequen, istle, jute, kapok, oakum, sisal, Spanish moss, straw, tow, wastepaper or other natural or synthetic fibers that possess similar qualities, but excluding densely-packed baled cotton.]

[Exception: Moss used for medicinal purposes.]

COMBUSTIBLE LIQUID. [For the purposes of transportation, a combustible liquid as defined in the regulations of the United States Department of Transportation, as set forth in 49 CFR 173.120. For all other purposes, a liquid, other than a compressed gas or cryogenic fluid, having a closed cup flash point at or above 100°F (38°C) classified as follows:]

Class II. [Liquids having a closed cup flash point at or above 100°F (38°C) and below 140°F (60°C).]
Class IIIA. [Liquids having a closed cup flash point at or above 140°F (60°C) and below 200°F (93°C).]

Class IIIB. [Liquids having a closed cup flash point at or above 200°F (93°C).]

COMPRESSED GAS. [A material, or mixture of materials which]

[1. Is a gas at 68°F (20°C) or less at 14.7 psia (101 kPa) of pressure; and]

[2. Has a boiling point of 68°F (20°C) or less at 14.7 psia (101 kPa) that is either liquefied, nonliquefied or in solution at that temperature and pressure, except those gases which have no other health- or physical-hazard properties are not considered to be compressed until the pressure in the packaging exceeds 41 psia (28 kPa) at 68°F (20°C).]

The states of compressed gases are categorized as follows:

[Nonliquefied compressed gases. Gases, other than those in solution, which are in a packaging under the charged pressure and are entirely gaseous at a temperature of 68°F (20°C).]

[Liquefied compressed gases. Gases that, in a packaging under the charged pressure, are partially liquid at a temperature of 68°F (20°C).]

[Compressed gases in solution. Nonliquefied gases that are dissolved in a solvent.]

[Compressed gas mixtures. A mixture of two or more compressed gases contained in a single packaging, the hazard properties of which are represented by the properties of the mixture as a whole.]

CONTROL AREA. [Spaces within a building where quantities of hazardous materials not exceeding the maximum allowable quantities per control area are stored, handled, or used, including any dispensing. See also definition of “Outdoor control area” in the New York City Fire Code.]

CORROSIVE MATERIAL. [A material that causes full thickness destruction of human skin at the site of contact within a specified period of time when tested by methods set forth in DOTn regulations 49 CFR 173.136 and 173.137, or a liquid that has a severe corrosion rate on steel or aluminum based on the criteria set forth in DOTn regulations 49 CFR 173.173(c)(2).]

CRYOGENIC FLUID. [A liquid having a boiling point lower than −130°F (−89.9°C) at 14.7 pounds per square inch absolute (psia) (an absolute pressure of 101.3 kPa).]

DAY BOX. [A portable magazine designed to hold explosive materials constructed in accordance with the requirements for a Type 3 magazine as defined and classified in Chapter 33 of the New York City Fire Code.]

DEFLAGRATION. [An exothermic reaction, such as the extremely rapid oxidation of a flammable dust or vapor in air, in which the reaction progresses through the unburned material at a rate less than the velocity of sound. A deflagration can have an explosive effect.]
DETONATION. [An exothermic reaction with explosive effect that utilizes shock compression as the principal heating mechanism and generates a shock wave in the material that establishes and maintains a reaction that progresses through the material at a rate greater than the velocity of sound.]

DISPENSING. [The pouring or transferring by other means of any material from a container, tank or similar vessel, which would release dusts, fumes, mists, vapors, or gases to the atmosphere, unless such release is prevented by a device, equipment or system designed for that purpose.]

EXPLOSION. [An effect produced by the sudden violent expansion of gases, whether or not accompanied by a shock wave or disruption, of enclosing materials, including the effects of the following sources of explosion:]

1. Chemical changes such as rapid oxidation, deflagration or detonation, decomposition of molecules and runaway polymerization (usually detonations).

2. Physical changes such as pressure tank ruptures.

3. Atomic changes (nuclear fission or fusion).

EXPLOSIVE. [Any chemical compound, mixture or device, the primary or common purpose of which is to function by explosion. The term includes, but is not limited to, dynamite, black powder, pellet powder, initiating explosives, detonators, safety fuses, squibs, detonating cord, igniter cord, and igniters.]

The term “explosive” includes any material determined to be within the scope of Chapter 40 of Title 18 of the United States Code and any material classified as an explosive by the hazardous materials regulations of the United States Department of Transportation, as set forth in 49 CFR 173.52, except fireworks. Explosives are classified in accordance with the following United States Department of Transportation classification and other terms in common usage.]

High explosive.

Low explosive.

Mass-detonating explosives.

UN/DOTn Class 1 explosives.

Division 1.1. [Explosives that have a mass explosion hazard.]

Division 1.2. [Explosives that have a projection hazard but not a mass explosion hazard.]

Division 1.3. [Explosives that have a fire hazard and either a minor blast hazard or a minor projection hazard or both, but not a mass explosion hazard.]

Division 1.4. [Explosives that pose a minor explosion hazard. The explosive effects are largely confined to the package and no projection of fragments of appreciable size or range is to be expected. Such explosives are not subject to mass explosion when exposed to fire.]
Division 1.5. [Explosives that present a mass explosion hazard, but which are so insensitive that there is very little probability of initiation or of transition from burning to detonation under normal conditions of transport.]

Division 1.6. [Explosives consisting of extremely insensitive articles that do not present a mass explosion hazard, and present a negligible probability of accidental initiation or propagation.]

[High explosive. Explosives, including dynamite, that, when detonated, are characterized by a high rate of reaction, high pressure development, and the presence of a detonation wave, and that can be caused to detonate by means of a No. 8 test blasting cap, when unconfined.]

[Low explosive. Explosives that will burn or deflagrate when ignited, and which are characterized by a rate of reaction that is less than the speed of sound, and low pressure development. Examples of low explosives include black powder, igniter cords, igniters, safety fuses, small arms ammunition and primers, and propellants, 1.3C.]

[Mass-detonating explosives. Division 1.1, 1.2 and 1.5 explosives that, whether individually or in combination, or loaded into ammunition or containers, explode virtually instantaneously when a small portion is subjected to fire, concussion, impact, the impulse of an initiating agent, or the effect of a considerable discharge of energy from without, with severe explosive effect, including the potential for structural damage to adjacent objects, and explosive propagation to other explosives stored in proximity, such that two or more quantities in proximity must be considered as one for quantity-distance purposes.]

FIREWORKS. [Any article or device that does not present a mass explosion hazard, that is manufactured or used to produce a visible or audible effect for entertainment or other display purposes by combustion, deflagration or detonation that meets the definition of 1.4G fireworks or 1.3G fireworks as set forth herein.]

Fireworks, 1.3G. [Large fireworks devices, classified as UN0335 by the United States Department of Transportation regulations, intended for use in fireworks displays and designed to produce audible or visible effects by combustion, deflagration or detonation including firecrackers containing more than 130 milligrams (2 grains) of explosive composition, aerial shells containing more than 40 grams of pyrotechnic material, and other display pieces which exceed the limits for classification as 1.4G fireworks.]

Fireworks, 1.4G. [Small fireworks devices, classified as UN 0336 by United States Department of Transportation regulations, containing restricted amounts of pyrotechnic materials designed primarily to produce visible or audible effects by combustion.]

FLAMMABLE GAS. [A material which has a boiling point and becomes a gas at 68°F (20°C) or less at 14.7 pounds per square inch absolute (psia) (101 kPa) of pressure, which:]

[1. Is ignitable at 14.7 psia (101 kPa) when in a mixture of 13 percent or less by volume with air, in accordance with testing procedures set forth in ASTM E-681; or]
[2. Has a flammable range at 14.7 psia (101 kPa) with air of at least 12 percent, regardless of the lower explosive limit, in accordance with testing procedures set forth in ASTM E 681.]

[The limits specified shall be determined at 14.7 psia (101 kPa) of pressure and a temperature of 68°F (20°C) in accordance with ASTM E 681.]

FLAMMABLE LIQUEFIED GAS. [A liquefied compressed gas which, under a charged pressure, is partially liquid at a temperature of 68°F (20°C) and which is flammable.]

FLAMMABLE LIQUID. [For the purposes of transportation, a flammable liquid as defined in the regulations of the United States Department of Transportation, as set forth in 49 CFR 173.120. For all other purposes, a liquid, other than a compressed gas or cryogenic fluid, having a closed cup flash point below 100°F (38°C) classified as follows:]

Class IA. [Liquids having a flash point below 73°F (23°C) and a boiling point below 100°F (38°C).]

Class IB. [Liquids having a flash point below 73°F (23°C) and a boiling point at or above 100°F (38°C).]

Class IC. [Liquids having a flash point at or above 73°F (23°C) and below 100°F (38°C)]

FLAMMABLE MATERIAL. [A material capable of being readily ignited from common sources of heat or at a temperature of 600°F (316°C) or less.]

FLAMMABLE SOLID. [A solid, other than a blasting agent or other explosive, whether in elemental or alloy form, that is capable of causing fire through friction, absorption or moisture, spontaneous chemical change, or heat retained from manufacturing or processing, or which has an ignition temperature below 212°F (100°C) or which burns so vigorously and persistently when ignited as to create a serious hazard. A chemical shall be considered a flammable solid if upon testing using the method prescribed in CPSC regulations, as set forth in 16 CFR 1500.44, if it ignites and burns with a self-sustained flame at a rate greater than 0.1 inch (2.5 mm) per second along its major axis.]

FLASH POINT. [The minimum temperature in degrees Fahrenheit at which a liquid will give off sufficient vapors to form an ignitable mixture with air near the surface or in the container, but will not sustain combustion. The flash point of a liquid shall be determined by appropriate test procedure and apparatus as specified in ASTM D 56, ASTM D 93 or ASTM D 3278.]

HANDLING. [The movement of a material in its container, the removal of the material from its container, or any other action or process that may affect the material, other than its storage or use.]

HAZARDOUS MATERIALS. [Those chemicals or substances that are physical hazards or health hazards as defined and classified in this section and the New York City Fire Code, whether the materials are in usable or waste condition.]

HEALTH HAZARD. [A classification of a chemical for which there is statistically significant evidence that acute or chronic health effects are capable of occurring in exposed persons. The term "health hazard" includes chemicals that are toxic or highly toxic, and corrosive.]
HIGHLY TOXIC MATERIAL. [A chemical that is lethal at the following doses or concentrations:]

1. A chemical that has a median lethal dose (LD₅₀) of 50 milligrams or less per kilogram of body weight when administered orally to albino rats weighing between 200 and 300 grams each; or

2. A chemical that has a median lethal dose (LD₅₀) of 200 milligrams or less per kilogram of body weight when administered by continuous contact for 24 hours (or less if death occurs within 24 hours) with the bare skin of albino rabbits weighing between 2 and 3 kilograms each; or

3. A chemical that has a median lethal concentration (LC₅₀) in air of 200 parts per million by volume or less of gas or vapor, or 2 milligrams per liter or less of mist, fume or dust, when administered by continuous inhalation for 1 hour (or less if death occurs within 1 hour) to albino rats weighing between 200 and 300 grams each.

INCOMPATIBLE MATERIALS. [Materials that, if mixed or combined, could explode, generate heat, gases or other byproducts, or react in such a way hazardous to life or property.]

INERT GAS. [A gas that is capable of reacting with other materials only under abnormal conditions such as high temperatures, pressures and similar extrinsic physical forces. Within the context of the code, inert gases do not exhibit either physical or health properties as defined (other than acting as a simple asphyxiant) or hazard properties other than those of a compressed gas. Some of the more common inert gases include argon, helium, krypton, neon, nitrogen and xenon.]

OPEN SYSTEM. [The use of a solid or liquid hazardous material in equipment or a vessel or system that remains open during normal operation such that vapors are emitted during the operation of such equipment, vessel or system and the material is exposed to the atmosphere during such operation. Examples of open systems for solids and liquids include dispensing from or into open beakers or containers, dip tank and plating tank operations.]

ORGANIC PEROXIDE. [An organic compound having a double oxygen or peroxy (\(\text{O} - \text{O}\)) in its chemical structure. Organic peroxides can present an explosion hazard (detonation or deflagration), can be shock sensitive, or can be susceptible to decomposition into various unstable compounds over an extended period of time and are classified as follows based upon their hazardous properties:]

Class I. [Organic peroxides that are capable of deflagration but not detonation.]

Class II. [Organic peroxides that burn very rapidly and that pose a moderate reactivity hazard.]

Class III. [Organic peroxides that burn rapidly and that pose a moderate reactivity hazard.]

Class IV. [Organic peroxides that burn in the same manner as ordinary combustibles and that pose a minimal reactivity hazard.]

Class V. [Organic peroxides that burn with less intensity than ordinary combustibles or do not sustain combustion and that pose no reactivity hazard.]
Unclassified detonable.[Organic peroxides that are capable of detonation and pose an extremely high-explosion hazard through rapid explosive decomposition.]

OXIDIZER. [A material that readily yields oxygen or other oxidizing gas or that readily reacts to promote or initiate combustion of combustible materials, and if heated or contaminated can result in vigorous self-sustained decomposition, classified as follows:]

[Class 1. An oxidizer that causes a readily measurable increase in the burning rate of combustible materials with which it comes in contact, but less than a moderate increase.]

[Class 2. An oxidizer that causes a moderate increase in the burning rate of combustible materials with which it comes in contact.]

[Class 3. An oxidizer that causes a severe increase in the burning rate of combustible materials with which it comes in contact.]

[Class 4. An oxidizer that can undergo an explosive reaction due to contamination or exposure to thermal or physical shock and causes a severe increase in the burning rate of combustible materials with which it comes into contact.]

Class 4.

Class 3.

Class 2.

Class 1.

OXIDIZING GAS. [A gas that can support and accelerate combustion of other materials more than air does.]

PHYSICAL HAZARD. [A chemical for which there is evidence that it is a combustible liquid, compressed gas, cryogenic, explosive, flammable gas, flammable liquid, flammable solid, organic peroxide, oxidizer, pyrophoric or unstable (reactive) or water-reactive material.]

PYROPHORIC MATERIAL. [A material with an autoignition temperature in air, at or below a temperature of 130°F (54°C).]

PYROTECHNIC MATERIAL. [A chemical mixture consisting predominantly of solids that, upon ignition, are capable of producing a controlled, self-sustaining, and self-contained exothermic reaction, that functions without external oxygen, resulting in a visible or audible effect by combustion, deflagration, or detonation.]

STANDARD CUBIC FEET (SCF). [Cubic feet of gas at normal temperature and pressure (NTP).]

TOXIC MATERIAL. [A chemical that is lethal at the following doses or concentrations:]
[1. A chemical that has a median lethal dose (LD$_{50}$) of more than 50 milligrams per kilogram, but not more than 500 milligrams per kilogram of body weight when administered orally to albino rats weighing between 200 and 300 grams each; or]

[2. A chemical that has a median lethal dose (LD$_{50}$) of more than 200 milligrams per kilogram but not more than 1,000 milligrams per kilogram of body weight when administered by continuous contact for 24 hours (or less if death occurs within 24 hours) with the bare skin of albino rabbits weighing between 2 and 3 kilograms each; or]

[3. A chemical that has a median lethal concentration (LC$_{50}$) in air of more than 200 parts per million but not more than 2,000 parts per million by volume of gas or vapor, or more than 2 milligrams per liter but not more than 20 milligrams per liter of mist, fume or dust, when administered by continuous inhalation for 1 hour (or less if death occurs within 1 hour) to albino rats weighing between 200 and 300 grams each.]

[Exception: For purposes of this code, chlorine shall be classified as a highly toxic material.]

UNSTABLE (REACTIVE) MATERIAL. [A material, other than an explosive, which in the pure state or as commercially produced, will vigorously polymerize, decompose, condense or become self-reactive and undergo other violent chemical changes, including explosion, when exposed to heat, friction or shock, or in the absence of an inhibitor, or in the presence of contaminants, or in contact with incompatible materials. Unstable (reactive) materials are shall be classified as follows:]

[Class 1. Materials that in themselves are normally stable but which can become unstable at elevated temperatures and pressure.]

[Class 2. Materials that in themselves are normally unstable and readily undergo violent chemical change but do not detonate. This class includes materials that can undergo chemical change with rapid release of energy at normal temperatures and pressures, and that can undergo violent chemical change at elevated temperatures and pressures.]

[Class 3. Materials that in themselves are capable of detonation or of explosive decomposition or explosive reaction but which require a strong initiating source or which must be heated under confinement before initiation. This class includes materials that are sensitive to thermal or mechanical shock at elevated temperatures and pressures.]

[Class 4. Materials that in themselves are readily capable of detonation or explosive decomposition or explosive reaction at normal temperatures and pressures. This class includes materials that are sensitive to mechanical or localized thermal shock at normal temperatures and pressures.]

Class 4.

Class 3.

Class 2.

Class 1.
WATER-REACTIVE MATERIAL. [A material that explodes; violently reacts; produces flammable, toxic or other hazardous gases; or generates enough heat to cause auto-ignition or ignition of combustible materials upon exposure to water or moisture. Water-reactive materials are classified as follows:]

[Class 1. Materials that may react with water with some release of energy, but not violently.]

[Class 2. Materials that react violently with water or cause water to boil upon contact; produce flammable, toxic or other hazardous gases upon contact with water; or upon contact with water generate sufficient heat to cause auto-ignition of adjoining combustible materials.]

[Class 3. Materials that react explosively with water without requiring heat or confinement.]

Class 3.

Class 2.

Class 1.

307.3 [High-Hazard] High-hazard Group H-1. Buildings and structures containing materials that pose a detonation hazard shall be classified as Group H-1. Such materials shall include, but not be limited to, the following:

Detonable pyrophoric materials

Explosives:

Division 1.1
Division 1.2
Division 1.3
Division 1.4
Division 1.5
Division 1.6

Organic peroxides, unclassified detonable

Oxidizers, Class 4

Unstable (reactive) materials, Class 3 detonable and Class 4

[Exception: Materials]

307.3.1 Occupancies containing explosives not classified as H-1. The following occupancies containing explosive materials shall be classified as follows:

1. Division 1.3 explosive materials that are used and maintained in a form where either confinement or configuration will not elevate the hazard from a mass fire to mass explosion hazard shall be allowed in H-2 occupancies.
Exception:

2. Articles, including articles packaged for shipment, that are not regulated as an Division 1.4 explosive under Bureau of Alcohol, Tobacco, Firearms and Explosives regulations, or unpackaged articles used in process operations that do not propagate a detonation or deflagration between articles shall be allowed in H-3 occupancies.

Division 1.5

Division 1.6

Organic peroxides, unclassified detonable

Oxidizers, Class 4

Unstable (reactive) materials, Class 3 detonable and Class 4

Pyrophoric materials, detonable

Water-reactive materials, Class 2 and 3, detonable

No part of this section shall be construed to authorize the manufacture, storage, sale or use of explosives, including fireworks, if otherwise prohibited by the New York City Fire Code and unless in compliance with the requirements of the New York City Fire Code.

307.4 [High-Hazard] High-hazard Group H-2. Buildings and structures containing materials that present a deflagration hazard or a hazard from accelerated burning shall be classified as Group H-2. Such materials shall include, but not be limited to, the following:

Class I, II or IIIA flammable or combustible liquids which are used or stored in normally open containers or systems, or in closed containers or systems pressurized at more than 15 [psi (103.4 kPa) gage] pounds per square inch gauge (103.4 kPa)

Combustible dusts where manufactured, generated or used in such a manner that the concentration and conditions create a fire or explosion hazard based on information prepared in accordance with Section 414.1.3

Cryogenic fluids, flammable

Flammable gases

Organic peroxides, Class I

Oxidizers, Class 3, that are used or stored in normally open containers or systems, or in closed containers or systems pressurized at more than 15 [psi (103.3 kPa) gage] pounds per square inch gauge (103 kPa)

Pyrophoric liquids, solids and gases, nondetonable

Unstable (reactive) materials, Class 3, nondetonable
Water-reactive materials, Class 3, nondetonable

No part of this section shall be construed to authorize an LPG-distribution facility if otherwise prohibited by the New York City Fire Code.

307.5 [High-Hazard] High-hazard Group H-3. Buildings and structures containing materials that readily support combustion or [present] that pose a physical hazard shall be classified as Group H-3. Such materials shall include, but not be limited to, the following:

- Class I, II or IIIA flammable or combustible liquids [which] that are used or stored in normally closed containers or systems pressurized at [less than 15 psi (103.3 kPa) gage,] 15 pounds per square inch gauge (103 kPa) or less

- Combustible fibers, other than densely packed baled cotton, where manufactured, generated or used in such a manner that the concentration and conditions create a fire or explosion hazard based on information prepared in accordance with Section 414.1.3

Cryogenic fluids, oxidizing

Flammable solids

Organic peroxides, [Classes] Class II and III

Oxidizers, [Classes] Class 1 and 2

Oxidizing gases

Unstable (reactive) materials, Class 2

Water-reactive materials, Class 2, nondetonable

307.6 [High-Hazard] High-hazard Group H-4. Buildings and structures containing materials that are health hazards shall be classified as Group H-4. Such materials shall include, but not be limited to, the following:

- Corrosives

- Highly toxic materials

- Toxic materials

307.7 High-hazard Group H-5[structures]. Semiconductor fabrication facilities and comparable research and development areas in which hazardous production materials (HPM) are used and the aggregate quantity of materials is in excess of those listed in Tables 307.1(1) and 307.1(2) shall be classified as Group H-5. Such facilities and areas shall be designed and constructed in accordance with Section [415.8] 415.11.

307.8 Multiple hazards. Buildings and structures containing a material or materials representing hazards that are classified in one or more of Groups H-1, H-2, H-3 and H-4 shall conform to the code requirements for each of the occupancies so classified.
308.1 Institutional Group I. Institutional Group I occupancy includes, among others, the use of a building or structure, or a portion thereof, in which people are cared for or live in a supervised environment, having physical limitations because of health or age are harbored for medical treatment or other care or treatment, care or supervision is provided to persons who are or are not capable of self-preservation without physical assistance or in which people persons are detained for penal or correctional purposes or in which the liberty of the occupants is restricted. Institutional occupancies shall be classified as Group I-1, I-2, I-3 or I-4.

308.2 Definitions. For definitions of terms related to Group I occupancy classification, see Section 310.2. This section contains provisions for definitions of terms defined elsewhere in this code as well as the terms with definitions specific to this section.

308.2.1 Terms defined elsewhere in this code. The following terms are defined in Chapter 2:

24-HOUR BASIS.

CARE SUITE.

INCAPABLE OF SELF-PRESERVATION.

308.2.2 Definitions specific to this section. The following words and terms shall, for the purposes of this section, have the meanings shown herein:

CHILD CARE FACILITIES. Facilities that provide care on a 24-hour basis to more than 5 children, under the age of 2.

DETOXIFICATION FACILITIES. Facilities that serve patients who are provided treatment for substance abuse on a 24-hour basis and who are incapable of self-preservation or who are harmful to themselves or others.

HOSPITALS AND PSYCHIATRIC CENTERS. Buildings or portions thereof used on a 24-hour basis for the medical, psychiatric, obstetrical or surgical treatment of inpatients who are incapable of self-preservation.

NURSING HOMES. Nursing homes are long-term care facilities on a 24-hour basis, including both intermediate care facilities and skilled nursing facilities, serving more than five persons and any of the persons are incapable of self-preservation.

308.3 Institutional Group I-1. This Institutional Group I-1 occupancy shall include buildings, structures or parts thereof housing persons, on a 24-hour basis, who because of age, mental disability or other reasons, live in a supervised residential environment that provides personal care services. The occupants are capable of self-preservation and capable of responding to an emergency situation without physical assistance from staff. Such occupancy shall be subject to the New York State Multiple Dwelling Law. This group shall include, but not be limited to, the following:

Adult homes, where occupants are capable of self-preservation (see Section 308.2.1 308.3.1)
Alcohol and drug abuse rehabilitation centers

Assisted living facilities

Community residences or intermediate-care facilities (see Section 308.2.2 308.3.2)

Congregate care facilities

Convalescent facilities

Enriched housing, where occupants are capable of self-preservation (see Section 308.2.1 308.3.1)

Halfway houses

Overnight facilities for children where all supervised occupants are under the age of 18, with no more than two children under the age of 2

Residential care facilities

Social rehabilitation facilities

308.2.1 Adult homes and enriched housing. Adult homes and enriched housing facilities operated pursuant to and meeting the additional construction requirements of Section 460 of the New York State Social Services Law and regulations of the New York State Department of Health offering care on a 24-hour basis to persons capable of self-preservation, in the same building, shall be classified as Group I-1.

Exception: Such a facility offering supervised care on a 24-hour basis for no more than 16 occupants capable of self-preservation, in the same building, may be classified in Group R in accordance with Section 310.

308.2.2 Community residences or intermediate-care facilities. Community residences or intermediate-care facilities, operated pursuant to and meeting the additional construction requirements of the New York State Mental Hygiene Law and applicable regulations of the New York State Office of Mental Health and Office for People with Developmental Disabilities shall be classified as Group I-1.

Exceptions: Such facilities limited to 14 residents capable of self-preservation and three staff members per dwelling unit shall be classified as:

1. Group R-1, where such facility does not occupy more than two dwelling units in a residential building classified as R-1 of Type I or II construction, or one dwelling unit in any other type of construction, and occupied on a transient basis; or

2. Group R-2 where such facility does not occupy more than two dwelling units in a residential building classified R-2 of Type I or II construction, or one dwelling unit in any other type of construction, and occupied on a long-term basis; or
3. Group R-3 where the number of dwelling units in the building does not exceed two.

[308.3] **308.4 Institutional Group I-2.** [This occupancy] Institutional Group I-2 shall include buildings and structures used for medical, surgical, psychiatric, nursing or personal care on a 24-hour basis or overnight of more than two children under the age of 2, or more than three persons who are not capable of self-preservation and not capable of responding to an emergency situation without physical assistance from staff. This group shall include, but not be limited to, the following:

Adult homes, where occupants are not capable of self-preservation[, operated pursuant to and meeting the additional construction requirements of Section 460 of the New York State Social Services Law and regulations of the New York State Department of Health] (see Section 308.4.1)

Child care facilities

Community residences or intermediate-care facilities, where occupants are not capable of self-preservation, operated pursuant to and meeting the additional construction requirements of the New York State Mental Hygiene Law and applicable regulations of the New York State Office of Mental Health and Office for People with Developmental Disabilities

Detoxification facilities

**Exception:** Such a facility offering care on a 24-hour basis for three or fewer persons who are not capable of self-preservation may occupy not more than one dwelling unit in a Group R occupancy.

Enriched Housing, where occupants are not capable of self-preservation[, operated pursuant to and meeting the additional construction requirements of Section 460 of the New York State Social Services Law and regulations of the New York State Department of Health] (see Section 308.4.1)

Hospitals

Nursing homes

[Mental hospitals] Psychiatric centers where patients are not under restraint

[Detoxification facilities]

**Exception:** Such a facility offering care on a 24-hour basis for three or fewer persons who are not capable of self-preservation may occupy not more than one dwelling unit in a Group R occupancy.

**308.4.1 Adult homes and enriched housing.** Adult homes and enriched housing facilities operated pursuant to and meeting the additional construction requirements of Section 460 of the New York State Social Services Law and regulations of the New York State Department of Health offering care on a 24-hour basis to persons not capable of self-preservation, in the same building, shall be classified as Group I-2.
308.3.1 Definitions. The following words and terms shall, for the purposes of this section and as used elsewhere in this code, have the meanings shown herein:

[CHILD CARE FACILITIES. Facilities that provide care on a 24-hour basis to more than five children, under the age of 2.]

[DETOXIFICATION FACILITIES. Facilities that serve patients who are provided treatment for substance abuse on a 24-hour basis and who are incapable of self-preservation or who are harmful to themselves or others.]

[HOSPITALS AND MENTAL HOSPITALS. Buildings or portions thereof used on a 24-hour basis for the medical, psychiatric, obstetrical or surgical treatment of inpatients who are incapable of self-preservation.]

[NURSING HOMES. Nursing homes are long-term care facilities on a 24-hour basis, including both intermediate care facilities and skilled nursing facilities, serving more than five persons and any of the persons are incapable of self-preservation.]

308.4 Institutional Group I-3. This Institutional Group I-3 occupancy shall include buildings and structures that are inhabited by more than five persons who are under restraint or security. A Group I-3 facility is occupied by persons who are generally incapable of self-preservation due to security measures not under the occupants’ control. This group shall include, but not be limited to, the following:

Correctional centers
Detention centers
Jails

Psychiatric centers where patients are under restraint
Prerelease centers
Prisons
Reformatories

Buildings of Group I-3 shall be classified as one of the occupancy conditions [specified in Section 408.1] Sections 308.5.1 through 308.5.5.

308.5.1 Condition 1. This occupancy condition shall include buildings in which free movement is allowed from sleeping areas, and other spaces where access or occupancy is permitted, to the exterior via means of egress without restraint. A Condition 1 facility is permitted to be constructed as Group R.

308.5.2 Condition 2. This occupancy condition shall include buildings in which free movement is allowed from sleeping areas and any other occupied smoke compartment to one or more other smoke compartments. Egress to the exterior is impeded by locked exits.
308.5.3 **Condition 3.** This occupancy condition shall include buildings in which free movement is allowed within individual smoke compartments, such as within a residential unit comprised of individual sleeping units and group activity spaces, where egress is impeded by remote controlled release of means of egress from such a smoke compartment to another smoke compartment.

308.5.4 **Condition 4.** This occupancy condition shall include buildings in which free movement is restricted from an occupied space. Remote-controlled release is provided to permit movement from sleeping units, activity spaces and other occupied areas within the smoke compartment to other smoke compartments.

308.5.5 **Condition 5.** This occupancy condition shall include buildings in which free movement is restricted from an occupied space. Staff-controlled manual release is provided to permit movement from sleeping units, activity spaces and other occupied areas within the smoke compartment to other smoke compartments.

[308.5] **308.6 Institutional Group I-4.** This group Institutional Group I-4 occupancy shall include custodial care facilities providing care to more than two children under the age of 2, or to more than four persons over the age of 2 who are not capable of responding to an emergency situation without physical assistance from the staff. Such occupancy shall include, but not be limited to, adult custodial care facilities and day nurseries.

**Exceptions:**

1. Custodial care facility as described in Section 303.
2. Custodial care facility as described in Section 304.
3. Custodial care facility as described in Exception 3 of Section 305.1.
4. Such facility providing care within a dwelling unit as described in Section 310.
5. Such facility providing care to children under the age of 2 in religious houses of worship during religious functions.

**SECTION BC 309**

**MERCANTILE GROUP M**

309.1 **Mercantile Group M.** Mercantile Group M occupancy includes, among others, the use of a building or structure or a portion thereof for the display and sale of merchandise, and involves stocks of goods, wares or merchandise incidental to such purposes and accessible to the public. Mercantile occupancies shall include, but not be limited to, the following:

- Department stores
- Drug stores
- Markets
- Motor fuel-dispensing facilities
Retail or wholesale stores

Sales rooms

309.2 Quantity of hazardous materials. The aggregate quantity of nonflammable solid and nonflammable or noncombustible liquid hazardous materials stored or displayed in a single control area of a Group M occupancy shall not exceed the quantities in Table 414.2.5(1).

SECTION BC 310
RESIDENTIAL GROUP R

310.1 Residential Group R. Residential Group R includes, among others, the use of a building or structure, or a portion thereof, for dwelling or sleeping purposes when not classified as an Institutional Group I. Buildings containing three or more dwelling units shall be subject to the New York State Multiple Dwelling Law. Residential occupancies shall be classified as Group R-1, R-2, or R-3.

[310.1.1 Group R-1. This occupancy shall include:

1. Residential buildings or spaces occupied, as a rule, transiently, for a period less than one month, as the more or less temporary abode of individuals or families who are lodged with or without meals, including, but not limited to, the following:

[Class B multiple dwellings as defined in Section 27-2004 of the New York City Housing Maintenance Code and Section 4 of the New York State Multiple Dwelling Law, where not classified in Group I-1.]

[Club houses]

[Hotels (transient)]

[Motels (transient)]

[Rooming houses (boarding houses—transient)]

[Settlement houses]

[Vacation timeshares]

2. College or school student dormitories, except for student apartments classified as an R-2 occupancy

3. Congregate living units owned and operated by a government agency or not-for-profit organization, where the number of occupants in the dwelling unit exceeds the limitations of a family as defined, including, but not limited to, the following:

[Adult homes or enriched housing with 16 or fewer occupants requiring supervised care within the same building on a 24-hour basis]

[Fraternity and sorority houses]
[Homeless shelters]

[310.1.2 Group R-2. This occupancy shall include buildings or portions thereof containing sleeping units or more than two dwelling units that are occupied for permanent resident purposes as defined in subparagraph (a) of paragraph eight of subdivision a of Section 27-2004 of the New York City Housing Maintenance Code. Such occupancy shall be subject to the New York State Multiple-Dwelling Law. This group shall include, but not be limited to, the following:]

[Adult homes or enriched housing with 16 or fewer occupants requiring supervised care on a 24-hour basis in the same building, provided that the number of occupants per dwelling unit does not exceed the definition of a family]

[Apartments]

[Apartments (nontransient)]

[Class A multiple dwellings as defined in Section 27-2004 of the New York City Housing Maintenance Code and Section 4 of the New York State Multiple Dwelling Law, where not classified in Group I-1:]

[1. Dwelling units where the resident of the unit provides custodial care to no more than four persons on less than a 24-hour basis and not overnight, where not classified in Group I-1.]

[2. Dwelling units where the resident of the unit provides child custodial care as a family daycare home registered with the New York City Department of Health and Mental Hygiene in accordance with the New York State Social Services Law with no more than six children between the ages of 2 and 13, or with no more than five children if any are under the age of 2, receiving supervised care on less than a 24-hour basis and not overnight, where not classified in Group I-1.]

[Convents and monasteries with more than 20 occupants in the building]

[Student apartments]

[310.1.3 Group R-3. This occupancy shall include buildings or portions thereof containing no more than 2 dwelling units, occupied, as a rule, for shelter and sleeping accommodation on a long-term basis for a month or more at a time, and are not classified in Group R-1, R-2 or I. This group shall include, but not be limited to, the following:]

[Convents and monasteries with fewer than 20 occupants in the building]

[Group homes]

[One- and two-family dwellings, including the following:]

[1. Dwelling units where the resident of the unit provides custodial care to no more than four persons on less than a 24-hour basis and not overnight.]
2. Dwelling units where the resident of the unit provides child custodial care as a family day care home registered with the New York City Department of Health and Mental Hygiene in accordance with the New York State Social Services Law with no more than six children between the ages of 2 and 13, or with no more than five children if any are under the age of 2, receiving supervised care on less than a 24-hour basis and not overnight.

310.2 Definitions. The following words and terms shall, for the purposes of this section and as used elsewhere in this code, have the meanings shown herein:

APARTMENT. [A dwelling unit providing permanent provisions for both sanitation and kitchen facilities, occupied or arranged to be occupied by not more than one family maintaining a common household.]

APARTMENT, STUDENT. [An apartment occupied or arranged to be occupied by students enrolled at a single accredited college or university and maintaining a common household pursuant to a lease, sublease, or occupancy agreement directly with such college or university.]

BOARDER (ROOMER, LODGER). [A person who pays a consideration for living within the household and does not occupy such space as an incident of employment.]

CONGREGATE LIVING UNIT. [A dwelling unit, comprised of one or more habitable rooms separated by nonrated partitions, occupied or arranged to be occupied by more than one family or by persons who are not maintaining a common household. Creation of or conversion to such unit shall be subject to Section 27-2077 of the New York City Housing Maintenance Code.]

CUSTODIAL CARE FACILITY. [A building or part thereof occupied by persons, on less than a 24-hour basis and not overnight, who because of age, disability or other reasons, receive personal care services by individuals other than parents or guardians, relatives by blood, marriage, domestic partnership, or adoption, in a place other than the home of the person cared for.]

DWELLING. [A building or structure which is occupied in whole or in part as the home, residence or sleeping place of one or more families.]

DWELLING, MULTIPLE. [A dwelling which is either rented, leased, let or hired out, to be occupied, or is occupied, as the residence or home of three or more families living independently of each other. A multiple dwelling does not include a building used for occupancies in Groups I-2, I-3 or I-4.]

DWELLING, ONE-FAMILY. [Any building or structure designed and occupied exclusively for residence purposes on a long-term basis for more than a month at a time by not more than one family. One-family dwellings shall also be deemed to include a dwelling located in a series of one-family dwellings each of which faces or is accessible to a legal street or public thoroughfare, provided that each such dwelling unit is equipped as a separate dwelling unit with all essential services, and also provided that each such unit is arranged so that it may be approved as a legal one-family dwelling.]

DWELLING, TWO-FAMILY. [Any building or structure designed and occupied exclusively for residence purposes on a long-term basis for more than a month at a time by not more than two
families. Two-family dwellings shall also be deemed to include a dwelling located in a series of two-family dwellings each of which faces or is accessible to a legal street or public thoroughfare, provided that each such dwelling is equipped as a separate dwelling with all essential services, and also provided that each such dwelling is arranged so that it may be approved as a legal two-family dwelling.

**DWELLING UNIT.** [A single unit consisting of one or more habitable rooms and occupied or arranged to be occupied as a unit separate from all other units within a dwelling.]

**FAMILY.**

1. A single person occupying a dwelling unit and maintaining a common household with not more than two boarders, roomers or lodgers; or

2. Two or more persons related by blood, adoption, legal guardianship, marriage or domestic partnership; occupying a dwelling unit and maintaining a common household with not more than two boarders, roomers or lodgers; or

3. Not more than three unrelated persons occupying a dwelling unit and maintaining a common household; or

4. Not more than three unrelated persons occupying a dwelling unit in a congregate housing or shared living arrangement and maintaining a common household; or

5. Members of a group home; or

6. Foster children placed in accordance with provisions of the *New York State Social Services Law*, their foster parent(s), and other persons related to the foster parents by blood, marriage or domestic partnership; where all residents occupy and maintain a common household with not more than two boarders, roomers or lodgers; or

7. Up to seven unrelated students enrolled at a single accredited college or university occupying a student apartment and maintaining a common household pursuant to a lease, sublease, or occupancy agreement directly with such college or university, provided that:

   7.1. The entire structure in which the dwelling unit is located is fully sprinklered in accordance with Chapter 9; and

   7.2. Such occupancy does not exceed the maximums contained in Section 27-2075(a) of the *New York City Housing Maintenance Code*; and

   7.3. Prior to commencement of such occupancy, and on an annual basis thereafter such college or university has submitted a fire safety plan containing fire safety and evacuation procedures for such dwelling unit that is acceptable to the fire commissioner and in compliance with any rules promulgated by the Fire Commissioner; and

   7.4. The dwelling unit complies with additional occupancy and construction requirements as may be established by rule by the Housing Preservation and Development Commissioner.]
A common household is deemed to exist if all household members have access to all parts of the dwelling unit. Lack of access to all parts of the dwelling unit establishes a rebuttable presumption that no common household exists.

GROUP HOME. [A facility for the care and maintenance of not fewer than seven nor more than 12 children, supervised by the New York State Board of Social Welfare, and operated pursuant to and meeting any additional construction requirements of Section 374-C of the New York State Social Services Law and applicable regulations of the New York State Department of Social Services. Such a facility occupied by more than 12 children shall be classified as Group I-1.]

PERSONAL CARE SERVICE. [The care of residents who do not require chronic or convalescent medical or nursing care. Personal care involves responsibility for the safety of the resident while inside the building.]

RESIDENTIAL CARE/ASSISTED LIVING FACILITIES. [A building or part thereof housing persons, on a 24-hour basis, who because of age, mental disability or other reasons, live in a supervised residential environment which provides personal care services. The occupants are capable of self-preservation and are capable of responding to an emergency situation without physical assistance from staff. This classification shall include, but not be limited to, the following: residential board and care facilities, assisted living facilities, halfway houses, congregate care facilities, social rehabilitation facilities, alcohol and drug abuse rehabilitation centers and convalescent facilities.]

ROOMING HOUSE. [A dwelling (i) which was originally erected as a single- or two-family private dwelling pursuant to the New York City Building Code in effect prior to December 6, 1968, (ii) which is a “Class B converted dwelling” as such term is defined in the New York City Housing Maintenance Code, and (iii) which has more than half of its habitable rooms as sleeping units. The creation of or conversion to a rooming house shall be limited by Section 27-2077 of the New York City Housing Maintenance Code.]

SLEEPING UNIT. [A dwelling unit, which may contain either toilet or kitchen facilities but not both. Any sleeping unit housing more than one family shall also be classified as a congregate living unit. The creation of or conversion to sleeping units shall be limited by Section 27-2077 of the New York City Housing Maintenance Code.]

TRANSIENT. [Occupancy of a dwelling unit or sleeping unit for not more than 30 days.]

310.3 Residential Group R-1. Residential Group R-1 occupancies shall include:

1. Residential buildings or spaces occupied, as a rule, transiently, for a period less than one month, as the more or less temporary abode of individuals or families who are lodged with or without meals, including, but not limited to, the following:

   Class B multiple dwellings as defined in Section 27-2004 of the New York City Housing Maintenance Code and Section 4 of the New York State Multiple Dwelling Law, where not classified in Group I-1.

   Club houses
Hotels (transient)
Motels (transient)
Rooming houses (boarding houses—transient)
Settlement houses
Vacation timeshares

2. College or school student dormitories, except for student apartments classified as an R-2 occupancy

3. Congregate living units owned and operated by a government agency or not-for-profit organization, where the number of occupants in the dwelling unit exceeds the limitations of a family as defined, including, but not limited to, the following:

   Adult homes or enriched housing with 16 or fewer occupants requiring supervised care within the same building on a 24-hour basis

   Fraternity and sorority houses

   Homeless shelters

310.4 Residential Group R-2. Residential Group R-2 occupancies shall include buildings or portions thereof containing sleeping units or more than two dwelling units that are occupied for permanent resident purposes as defined in subparagraph (a) of paragraph 8 of subdivision a of Section 27-2004 of the New York City Housing Maintenance Code. Such occupancy shall be subject to the New York State Multiple Dwelling Law. This group shall include, but not be limited to, the following:

   Adult homes or enriched housing with 16 or fewer occupants requiring supervised care on a 24-hour basis in the same building, provided that the number of occupants per dwelling unit does not exceed the definition of a family

   Apartment houses

   Apartment hotels (nontransient)

   Class A multiple dwellings as defined in Section 27-2004 of the New York City Housing Maintenance Code and Section 4 of the New York State Multiple Dwelling Law, where not classified in Group I, including the following:

   1. Dwelling units where the resident of the unit provides custodial care to no more than four persons on less than a 24-hour basis and not overnight, where not classified in Group I.

   2. Dwelling units where the resident of the unit provides child custodial care as a family day care home registered with the New York City Department of Health and Mental Hygiene in accordance with the New York State Social Services Law, with no more than six children between the ages of 2 and 13, or with no more than five children if any are under
the age of 2, receiving supervised care on less than a 24-hour basis and not overnight, where not classified in Group I.

Convents and monasteries with more than 20 occupants in the building

Student apartments

310.5 Residential Group R-3. Residential Group R-3 occupancies shall include buildings or portions thereof containing no more than 2 dwelling units, occupied, as a rule, for shelter and sleeping accommodation on a long-term basis for a month or more at a time, and are not classified in Group R-1, R-2 or I. This group shall include, but not be limited to, the following:

Convents and monasteries with 20 or fewer occupants in the building

Group homes

One- and two-family dwellings, including the following:

1. Dwelling units where the resident of the unit provides custodial care to no more than four persons on less than a 24-hour basis and not overnight.

2. Dwelling units where the resident of the unit provides child custodial care as a family day care home registered with the New York City Department of Health and Mental Hygiene in accordance with the New York State Social Services Law for three to six children for more than three hours per day per child but less than 24 hours per day. A family day care provider may, however, care for seven or eight children at any one time if no more than six of the children are less than school age and such children receive services only during the periods set forth in the New York State Social Services Law.

3. Dwelling units where the resident of the unit provides child custodial care as a group family day care home registered with the New York City Department of Health and Mental Hygiene in accordance with the New York State Social Services Law for seven to 12 children of all ages for more than three hours a day per child but less than 24 hours per day. There may be an additional four children if such children are of school age and such children receive services only during the periods set forth in the New York State Social Services Law.

311.1 Storage Group S. Storage Group S occupancy includes, among others, the use of a building or structure, or a portion thereof, for storage, such as for warehouses, storage rooms, freight depots and distribution centers, when not classified as a hazardous occupancy.

311.1.1 Accessory storage spaces. A room or space used for storage purposes that is less than 100 square feet (9.3 m²) in area and accessory to another occupancy shall be classified as part of that occupancy. The aggregate area of such rooms or spaces shall not exceed the allowable area limits of Section 508.2.3.

311.2 Moderate-hazard storage, Group S-1. Storage Group S-1 occupancies are buildings occupied for storing any flammable or combustible materials that are likely to permit the
development and production of fire with moderate rapidity including, but not limited to, storage of the following:

- Aerosols, Levels 2 and 3
- Aircraft hangar (storage and repair)
- Bags; cloth, burlap and paper
- Bamboos and rattan
- Baskets
- Belting; canvas and leather
- Books and paper in rolls or packs
- Boots and shoes
- Buttons, including cloth covered, pearl or bone
- Cardboard and cardboard boxes
- Clothing, woolen wearing apparel
- Cordage
- Dry boat storage (indoor, not accessory to Group R)
- Furniture
- Furs
- Glues, mucilage, pastes and size
- Grains
- Horns and combs, other than celluloid
- Leather
- Linoleum
- Lumber
- Photo engravings
- Resilient flooring
- Silks
- Soaps
- Sugar
- Tires, bulk storage of
- Tobacco, cigars, cigarettes and snuff
- Upholstery and mattresses
- Wax candles
311.3 Low-hazard storage, Group S-2. [Includes] Storage Group S-2 occupancies include, among others, buildings used for the storage of noncombustible materials such as products on wood pallets or in paper cartons with or without single thickness divisions; or in paper wrappings. Such products are permitted to have a negligible amount of plastic trim, such as knobs, handles or film wrapping. Group S-2 storage uses shall include, but not be limited to, storage of the following:

- Asbestos
- Beverages up to and including 16-percent alcohol in metal, glass or ceramic containers
- Cement in bags
- Chalk and crayons
- Dairy products in nonwaxed coated paper containers
- Dry cell batteries
- Electrical coils
- Electrical motors
- Empty cans
- Food products
- Foods in noncombustible containers
- Fresh fruits and vegetables in nonplastic trays or containers
- Frozen foods
- Glass
- Glass bottles, empty or filled with noncombustible liquids
- Gypsum board
- Inert pigments
- Ivory
- Meats
- Metal cabinets
- Metal desks with plastic tops and trim
- Metal parts
- Metals
- Mirrors
- Oil-filled and other types of distribution transformers
- Parking garages, open or enclosed
- Porcelain and pottery
- Stoves
Talc and soapstones
Washers and dryers

SECTION BC 312
UTILITY AND MISCELLANEOUS GROUP U

312.1 General. Buildings and structures of an accessory character and miscellaneous structures not classified in any specific occupancy shall be constructed, equipped and maintained to conform to the requirements of this code commensurate with the fire and life hazard incidental to their occupancy. Group U shall include, but not be limited to, the following:

Carports

Fences more than 6 feet (1829 mm) [high] in height

Private garages as per Section 406.1

Retaining walls

Sheds or greenhouses accessory to Group R-3 occupancies, that are freestanding, less than 120 square feet (11.15 m²) in area, not permanently affixed to the ground, and used for household goods or items associated with the garden or lawn. Any other shed shall be classified as either S-1 or S-2.

Tanks

Towers

§ 5. Chapter 4 of the New York city building code, as added by local law number 33 of 2007, sections 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418 as amended by, sections 419, 420, 421, 422, 423 as added by, local law number 141 for the year 2013, section 402.3 as amended by local law 195 for the year 2018, section 403.4.8.2 as amended by local law number 51 for the year 2014, is amended to read as follows:

CHAPTER 4
SPECIAL DETAILED REQUIREMENTS BASED ON USE AND OCCUPANCY

SECTION BC 401
SCOPE

401.1 Detailed use and occupancy requirements. In addition to the occupancy and construction requirements in this code, the provisions of this chapter apply to the special uses and occupancies described herein.
SECTION BC 402
COVERED MALL AND OPEN MALL BUILDINGS

402.1 [Scope] Applicability. The provisions of this section shall apply to buildings or structures defined herein as covered or open mall buildings not exceeding three floor levels at any point nor more than three stories above grade plane. Except as specifically required by this section, covered and open mall buildings shall meet applicable provisions of this code.

Exceptions:

1. Foyers and lobbies of Groups B, R-1 and R-2 are not required to comply with this section.

2. Buildings need not comply with the provisions of this section where they fully comply with other applicable provisions of this code.

402.1.1 Occupancy classification. A mall in compliance with the provisions of this section shall be classified as occupancy [group] Group M.

402.1.2 Open space. A covered mall building and attached anchor buildings and parking garages shall be surrounded on all sides by a permanent open space of not less than 60 feet (18 288 mm). An open mall building and anchor buildings and parking garages adjoining the perimeter line shall be surrounded on all sides by a permanent open space of not less than 60 feet (18 288 mm).

Exception: The permanent open space of 60 feet (18 288 mm) shall be permitted to be reduced to not less than 40 feet (12 192 mm), provided the following requirements are met:

1. The reduced open space shall not be allowed for more than 75 percent of the perimeter of the covered mall building and anchor buildings or of the perimeter line of the open mall building and anchor buildings;

2. The exterior wall facing the reduced open space shall have a fire-resistance rating of not less than three hours;

3. Openings in the exterior wall facing the reduced open space shall have opening protectives with a fire protection rating of not less than three hours; and

4. Group E, H, I or R occupancies are not located within the covered or open mall building or anchor buildings.

402.1.3 Open mall building perimeter line. For the purpose of this code, a perimeter line shall be established. The perimeter line shall encircle all buildings and structures that comprise the open mall building and shall encompass any open-air interior walkways, open-air courtyards or similar open-air spaces. The perimeter line shall define the extent of the open mall building. Anchor buildings and parking structures shall be outside of the perimeter line and are not considered as part of the open mall building.

402.2 Definitions. [The following words and terms shall, for the purposes of this chapter and as used elsewhere in this code, have the meanings shown herein.] This section contains terms defined elsewhere in this code, and terms with definitions that are specific to this section.
402.2.1 Terms defined elsewhere in this code. The following terms are defined in Chapter 2:

ANCHOR BUILDING. [An exterior perimeter building of a group other than H having direct access to a covered mall building but having required means of egress independent of the mall.]

COVERED MALL BUILDING. [A single building enclosing a number of tenants and occupants such as retail stores, drinking and dining establishments, entertainment and amusement facilities, passenger transportation terminals, offices, and other similar uses wherein two or more tenants have a main entrance into one or more malls. For the purpose of this chapter, anchor buildings shall not be considered as a part of the covered mall building. The term “covered mall building” shall include open mall buildings as defined below.]

Mall. [A roofed or covered common pedestrian area within a covered mall building that serves as access for two or more tenants and not to exceed three levels that are open to each other. The term “mall” shall include open malls as defined below.]

Open mall. [An unroofed common pedestrian way serving a number of tenants not exceeding three levels. Circulation at levels above grade shall be permitted to include open exterior balconies leading to exits discharging at grade.]

Open mall building. [Several structures housing a number of tenants, such as retail stores, drinking and dining establishments, entertainment and amusement facilities, offices, and other similar uses, wherein two or more tenants have a main entrance into one or more open malls. For the purpose of Chapter 4, anchor buildings are not considered as a part of the open mall building.]

402.2.2 Definitions specific to this section. The following terms shall, for the purposes of this section, have the meanings shown herein:

FOOD COURT. A public seating area located in the mall that serves adjacent food preparation tenant spaces.

GROSS LEASABLE AREA. The total floor area designed for tenant occupancy and exclusive use. The area of tenant occupancy is measured from the centerlines of joint partitions to the outside of the tenant walls. All tenant areas, including areas used for storage, shall be included in calculating gross leasable area.

402.3 Fire protection plan. A fire protection plan shall be provided to the Fire Department pursuant to Article 109 of Title 28.

[402.4 Means of egress. The covered mall building shall be provided with means of egress as required by this code. Where there is a conflict between the requirements of this code and the requirements of this section, the requirements of this section shall apply.]

[402.4.1 Occupant load. The calculated occupant load used to determine the required number of means of egress shall be in accordance with this section.]

[402.4.1.1 Occupant load of tenant spaces. The occupant load permitted in any individual tenant space in a covered mall building shall be determined in accordance with Chapter 10.
Means of egress requirements for individual tenant spaces shall be based on the occupant load thus determined.

[402.4.1.2 Occupant load of mall. In determining required means of egress of the mall, the total occupant load in the mall shall include the occupant load attributed to the mall as determined by Section 402.4.1.2.1, plus the occupant load of the food court as determined by Section 402.4.1.2.3, if any.]

[402.4.1.2.1 Occupant load formula. To determine the occupant load attributed to the mall, the gross leasable area (square feet), excluding any food court and anchor buildings, shall be divided by the occupant load factor (OLF) value determined by Equation 4-1.]

\[
OLF = (0.00007)(GLA) + 25
\]

[(Equation 4-1)]

[where:]

\[
OLF = \text{The occupant load factor (square feet per person).}
\]

\[
GLA = \text{The gross leasable area (square feet).}
\]

[Exception: Tenant spaces attached to a covered mall building but with a means of egress system that is totally independent of the covered mall building shall not be considered as gross leasable area for determining the required means of egress for the covered mall building.]

[402.4.1.2.2 OLF range. The occupant load factor (OLF) is not required to be less than 30 and shall not exceed 50.]

[402.4.1.2.3 Food courts. The occupant load of a food court shall be determined in accordance with Section 1004 and shall be added to the occupant load of the mall.]

[402.4.1.3 Anchor buildings. The occupant load of anchor buildings opening into the mall shall not be included in computing the total number of occupants for the covered mall building.]

[402.4.2 Number of means of egress. The required number of means of egress shall be determined in accordance with this section.]

[402.4.2.1 Number of means of egress within tenant spaces. Wherever the distance of travel to the mall from any location within a tenant space used by persons other than employees exceeds 75 feet (22 860 mm) or the tenant space exceeds an occupant load of 50, no fewer than two means of egress shall be provided.]

[402.4.2.2 Number of means of egress from the mall. The number of means of egress from the mall shall be determined in accordance with Chapter 10 and shall be based upon an occupant load calculated in accordance with Section 402.4.1.2.]

[402.4.3 Arrangements of means of egress. Means of egress shall be arranged in accordance with this section.]
402.4.3.1 Anchor building means of egress. Required means of egress for anchor buildings shall be provided independently from the mall means of egress system. The occupant load of anchor buildings opening into the mall shall not be included in determining means of egress requirements for the mall. The path of egress travel of malls shall not exit through anchor buildings. Malls terminating at an anchor building where no other means of egress has been provided shall be considered as a dead-end mall.

402.4.3.2 Tenant spaces requiring more than one means of egress. Where more than one means of egress is required from an individual tenant space as determined by Chapter 10, not more than 50 percent of the occupant load shall discharge into the mall.

402.4.3.3 Large assembly occupancy. Assembly occupancies with an occupant load of 500 or more shall be so located in the covered mall building such that their entrance will be immediately adjacent to a principal entrance to the mall and shall have not less than one-half of their required means of egress opening directly to the exterior of the covered mall building.

402.4.4 Distance to exits. The maximum permitted travel distance to exits in covered mall buildings shall be in accordance with this section.

402.4.4.1 Distance to exits within tenant spaces. The maximum travel distance from any point within an individual tenant space to its entrance to the mall or to an exit shall not exceed 200 feet (60,960 mm).

402.4.4.2 Distance to exits within the mall. The maximum distance of travel from any point within a mall to an exit shall not exceed 200 feet (60,960 mm).

402.4.5 Access to exits. Where more than one exit is required, they shall be so arranged that it is possible to travel in either direction from any point in a mall to separate exits. However, in dead ends not exceeding a length equal to twice the width of the mall measured at the narrowest location within the dead end portion of the mall, one direction of travel shall be permitted. The minimum width of an exit passageway or corridor from a mall shall be 66 inches (1,676 mm).

402.4.5.1 Exit passageway enclosures. Where exit passageway enclosures provide a secondary means of egress from a tenant space, doors to the exit passageway enclosures shall be minimum 1-hour fire doors with panic hardware. Such doors shall be self-closing and be so maintained or shall be automatic-closing by smoke detection.

402.4.6 Service areas fronting on exit passageways. Mechanical rooms, electrical rooms, building service areas and service elevators are permitted to open directly into exit passageways provided that the exit passageway is separated from such rooms by fire barriers providing the same fire resistance rating as required for the exit passageway. Door swings from these rooms shall not project into the minimum width of such exit passageways.

402.5 Mall width. For the purpose of providing required egress, malls are permitted to be considered as corridors but need not comply with the requirements of Section 1005.1 of this code where the width of the mall is as specified in this section.
[402.5.1 Minimum width. The minimum width of the mall shall be 20 feet (6096 mm). The mall width shall be sufficient to accommodate the occupant load served. There shall be a minimum of 10 feet (3048 mm) clear width to a height of 8 feet (2438 mm) between any projection of a tenant space bordering the mall and the nearest kiosk, vending machine, bench, display opening, food court or other obstruction to means of egress travel.]

[402.5.2 Minimum width open mall. The minimum floor and roof opening width above grade shall be 20 feet (6096 mm) in open malls.]

[402.6 Types of construction. Covered mall buildings, including anchor buildings, shall be only of Type I, II, and IV construction. Their areas shall not be limited provided that the covered mall building and attached anchor buildings and parking garages are surrounded on all sides by a permanent open space of not less than 60 feet (18 288 mm) and the anchor buildings do not exceed three stories in height. The height of covered mall buildings, including anchor buildings, of Type IIB construction shall be limited to one story. The allowable height and area of anchor buildings greater than three stories in height shall comply with Section 503, as modified by Sections 504 and 506. The construction type of open parking garages and enclosed parking garages shall comply with Sections 406.3 and 406.4, respectively.]

[402.6.1 Reduced open space. The permanent open space of 60 feet (18 288 mm) shall be permitted to be reduced to not less than 40 feet (12 192 mm), provided the following requirements are met:]

[1. The reduced open space shall not be allowed for more than 75 percent of the perimeter of the covered mall building and anchor buildings.]

[2. The exterior wall facing the reduced open space shall have a minimum fire resistance rating of 3 hours.]

[3. Openings in the exterior wall facing the reduced open space shall have opening protectives with a minimum fire protection rating of 3 hours.]

[4. Group E, H, I or R occupancies are not within the covered mall building or anchor stores.]

402.4 Construction. The construction of covered and open mall buildings, anchor buildings and parking garages associated with a mall building shall comply with Sections 402.4.1 through 402.4.3.

402.4.1 Area and types of construction. The building area and type of construction of covered mall or open mall buildings, anchor buildings and parking garages shall comply with this section.

402.4.1.1 Covered and open mall buildings. Covered and open mall buildings shall be of Type I, II or IV construction. The height of covered mall buildings of Type IIB construction shall be limited to one story. The areas of covered mall buildings or open mall buildings shall not be limited provided that the covered mall building or open mall building and attached anchor buildings and parking garages are surrounded on all sides by a permanent open space in accordance with Section 402.1.2.
402.4.1.2 Anchor buildings. Anchor buildings shall be of Type I, II or IV construction. The height of anchor buildings, of Type IIB construction, shall be limited to one story. The allowable height and area of anchor buildings greater than three stories in height shall comply with Section 503, as modified by Sections 504 and 506.

402.4.1.3 Parking garage. The building area and building height of any parking garage, open or enclosed, shall be based on the type of construction as required by Sections 406.5 and 406.6, respectively.

402.4.2 Fire-resistance-rated separation. Fire-resistance-rated separation is not required between tenant spaces and the mall. Fire-resistance-rated separation is not required between a food court and adjacent tenant spaces or the mall.

402.4.2.1 Tenant separations. Each tenant space shall be separated from other tenant spaces by a fire partition complying with Section 708. A tenant separation wall is not required between any tenant space and the mall.

402.4.2.2 Anchor building separation. An anchor building shall be separated from the covered or open mall building by fire walls complying with Section 706.

Exceptions:

1. Anchor buildings of not more than three stories above grade that have an occupancy classification of the same uses permitted as tenants of the covered mall building shall be separated by 2-hour fire-resistance-rated fire barriers complying with Section 707. Openings between such buildings and the mall need not be protected.

2. The exterior walls of anchor buildings separated from an open mall building by an open mall shall comply with Table 602.

402.4.2.3 [Attached garage] Parking garages. An attached [parking] garage for the storage of passenger vehicles having a capacity of not more than nine persons and open parking garages shall be considered as a separate building where it is separated from the covered or open mall building or anchor building by not less than 2-hour fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 711, or both.

[Exception: Where an] Parking garages, open [parking garage] or enclosed [parking garage is], which are separated from [the] covered mall [building] buildings, open mall buildings or anchor [building by a distance greater than 10 feet (3048 mm), the] buildings, shall comply with the provisions of Table 602 [shall apply].

Pedestrian walkways and tunnels that [attach the open parking garage or enclosed parking garage] connect garages to the [covered] mall [building] buildings or anchor [building] buildings shall be constructed in accordance with Section 3104.
[402.7.2 Tenant separations. Each tenant space shall be separated from other tenant spaces by a fire partition complying with Section 709. A tenant separation wall is not required between any tenant space and the mall.]

402.4.3 Open mall construction. Floor assemblies in, and roof assemblies over, the open mall of an open mall building shall be open to the atmosphere for not less than 20 feet (9096 mm), measured perpendicular from the face of the tenant spaces on the lowest level, from edge of balcony to edge of balcony on upper floors and from edge of roof line to edge of roof line. The openings within, or the unroofed area of, an open mall shall extend from the lowest/grade level of the open mall through the entire roof assembly. Balconies on upper levels of the mall shall not project into the required width of the opening.

402.4.3.1 Pedestrian walkways. Pedestrian walkways connecting balconies in an open mall shall be located not less than 20 feet (9096 mm) from any other pedestrian walkway.

[402.7.3 Anchor building separation. An anchor building shall be separated from the covered mall building by fire walls complying with Section 706.]

[Exception: Anchor buildings of not more than three stories above grade that have an occupancy classification of the same uses permitted as tenants of the covered mall building shall be separated by 2-hour fire resistive fire barriers complying with Section 707. Openings between such buildings and the mall need not be protected.]

402.8 Interior finish. Interior wall and ceiling finishes within the mall and exits shall have a minimum flame spread index and smoke-developed index of Class B in accordance with Chapter 8. Interior floor finishes shall meet the requirements of Section 804.

402.9 Automatic sprinkler system. [The covered] Covered and open mall building and buildings connected shall be [provided] equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1, [that] which shall comply with all of the following:

1. The automatic sprinkler system shall be complete and operative throughout occupied space in the [covered] mall building prior to occupancy of any of the tenant spaces. Unoccupied tenant spaces shall be similarly protected unless provided with approved [alternate] alternative protection.

2. Sprinkler protection for the mall of a covered mall building shall be controlled independently [independent] from that provided for tenant spaces or [anchors] anchor buildings.

3. Sprinkler protection for the tenant spaces of an open mall building shall be controlled independently from that provided for anchor buildings.

4. Sprinkler protection shall be provided beneath exterior circulation balconies located adjacent to an open mall.

5. Where tenant spaces are supplied by the same system, they shall be independently controlled.
**Exception:** An automatic sprinkler system shall not be required in spaces or areas of open parking garages separated from the covered or open mall building in accordance with Section 402.4.2.3 and constructed in accordance with Section 406.2.

[402.9.1 Standpipe system. The covered mall building shall be equipped with a standpipe system as required by Section 905.3.3.]

402.6 Interior finishes and features. Interior finishes within the mall and installations within the mall shall comply with Sections 402.6.1 through 402.6.4.

402.6.1 Interior finish. Interior wall and ceiling finishes within the mall of a covered mall building and within the exits of covered or open mall buildings shall have a minimum flame spread index and smoke-developed index of Class B in accordance with Chapter 8. Interior floor finishes shall meet the requirements of Section 804.

[402.10 Smoke control. A smoke control system shall be provided in accordance with Section 909 for malls greater than one story in height.]

[Exception: A smoke control system is not required in an open mall.]

[402.11 402.6.2 Kiosks. Kiosks and similar structures (temporary or permanent) located within the mall of a covered mall building or within the perimeter line of an open mall building shall meet the following requirements:

1. Combustible kiosks or other similar structures shall not be located within the covered or open mall unless constructed of any of the following materials:

   1.1. Fire-retardant-treated wood complying with Section 2303.2.

   1.2. Foam plastics having a maximum heat release rate not greater than 100 kW (105 BTU/h) when tested in accordance with the exhibit booth protocol in UL 1975 or when tested in accordance with NFPA 289 using the 20 kW ignition source.

   1.3. Aluminum composite material (ACM) having a flame spread index of not more than 25 and a smoke-developed index of not more than 450 when tested as an assembly in the maximum thickness intended for use in accordance with ASTM E 84 or UL 723.

2. Covered kiosks or similar covered structures located within the covered mall building shall be provided with an approved automatic sprinkler system and detection devices where required by the New York City Fire Code and Section 903.3.3 of this code.

3. The minimum horizontal separation between kiosks or groupings thereof and other similar structures within the mall shall be not less than 20 feet (6096 mm).

4. Each kiosk or similar structure or groupings thereof shall have an area of not greater than 300 square feet (28 m²).
402.12.3 Children’s [playground] play structures. [Structures intended as children’s playgrounds that exceed 10 feet (3048 mm) in height and 150 square feet (14 m²) in area shall comply with Sections 402.12.1 through 402.12.4.] Children’s play structures located within the mall of a covered mall building or within the perimeter line of an open mall building shall comply with Section 424. The horizontal separation between children’s play structures, kiosks and similar structures within the mall shall be not less than 20 feet (6096 mm).

402.12.1 Materials. Children’s playground structures shall be constructed of noncombustible materials or of combustible materials that comply with the following:

1. Fire-retardant-treated wood.
2. Light-transmitting plastics complying with Section 2606.
3. Foam plastics (including the pipe foam used in soft-contained play equipment structures) having a maximum heat release rate not greater than 100 kilowatts when tested in accordance with UL 1975.
4. Aluminum composite material (ACM) meeting the requirements of Class A interior finish in accordance with Chapter 8 when tested as an assembly in the maximum thickness intended for use.
5. Textiles and films complying with the flame propagation performance criteria contained in NFPA 701.
6. Plastic materials used to construct rigid components of soft-contained play equipment structures (such as tubes, windows, panels, junction boxes, pipes, slides and decks) exhibiting a peak rate of heat release not exceeding 400 kW/m² when tested in accordance with ASTM E 1354 at an incident heat flux of 50 kW/m² in the horizontal orientation at a thickness of 6 mm.
7. Ball pool balls, used in soft-contained play equipment structures, having a maximum heat release rate not greater than 100 kilowatts when tested in accordance with UL 1975. The minimum specimen test size shall be 36 inches by 36 inches (914 mm by 914 mm) by an average of 21 inches (533 mm) deep, and the balls shall be held in a box constructed of galvanized steel poultry netting wire mesh.
8. Foam plastics shall be covered by a fabric, coating or film meeting the flame propagation performance criteria of NFPA 701.
9. The floor covering placed under the children’s playground structure shall exhibit a Class I interior floor finish classification, as described in Section 804, when tested in accordance with NFPA 253.

402.12.2 Fire protection. Children’s playground structures located within the mall shall be provided with the same level of approved fire suppression and detection devices required for kiosks and similar structures.
[402.12.3 Separation. Children’s playground structures shall have a minimum horizontal separation from other structures within the mall of 20 feet (6090 mm).]

[402.12.4 Area limits. Children’s playground structures shall not exceed 300 square feet (28 m²) in area.]

[402.13 Security grilles and doors. Horizontal sliding or vertical security grilles or doors that are a part of a required means of egress shall conform to the following:]

[1. They shall remain in the full open position during the period of occupancy by the general public.]

[2. Doors or grilles shall not be brought to the closed position when there are 10 or more persons occupying spaces served by a single exit or 50 or more persons occupying spaces served by more than one exit.]

[3. The doors or grilles shall be openable from within without the use of any special knowledge or effort where the space is occupied.]

[4. Where two or more exits are required, not more than one-half of the exits shall be permitted to include either a horizontal sliding or vertical rolling grille or doors.]

[402.14 Standby power. Covered mall buildings exceeding 50,000 square feet (4645 m²) shall be provided with standby power systems that are capable of operating the emergency voice/alarm communication system.]

[402.15 Emergency voice/alarm communication system. Covered mall buildings exceeding 50,000 square feet (4645 m²) in total floor area shall be provided with an emergency voice/alarm communication system. Emergency voice/alarm communication systems serving a mall, required or otherwise, shall be accessible to the Fire Department. The system shall be provided in accordance with Section 907.2.12.2.]

[402.16 402.6.4 Plastic signs. Plastic signs affixed to the storefront of any tenant space facing a mall or open mall shall be limited as specified in Sections [402.16.1] 402.6.4.1 through [402.16.5] 402.6.4.5.]

[402.16.1 402.6.4.1 Area. Plastic signs shall be not [exceed] more than 20 percent of the wall area facing the mall.]

[402.16.2 402.6.4.2 Height and width. Plastic signs shall be not [exceed a height of] greater than 36 inches (914 mm) in height, except [if] that where the sign is vertical, the height shall be not [exceed] greater than 96 inches (2438 mm) and the width shall be not [exceed] greater than 36 inches (914 mm).]

[402.16.3 402.6.4.3 Location. Plastic signs shall be located a minimum distance of not less than 18 inches (457 mm) from adjacent tenants.]

[402.16.4 402.6.4.4 Plastics other than foam plastics. Plastics other than foam plastics used in signs shall be [light-transmitting] lighttransmitting plastics complying with Section 2606.4]
or shall have a self-ignition temperature of 650°F (343°C) or greater when tested in accordance with ASTM D 1929, and a flame spread index not greater than 75 and smoke-developed index not greater than 450 when tested in the manner intended for use in accordance with ASTM E 84 or UL 723 or meet the acceptance criteria of Section 803.2.1 when tested in accordance with NFPA 286.

[402.16.4.1] 402.6.4.4.1 Encasement. Edges and backs of plastic signs in the mall shall be fully encased in metal.

[402.16.5] 402.6.4.5 Foam plastics. Foam plastics used in signs shall have flame-retardant characteristics such that the sign has a maximum heat-release rate of 150 kilowatts when tested in accordance with UL 1975 or when tested in accordance with NFPA 289 using the 20 kW ignition source, and the foam plastics shall have the physical characteristics specified in this section. Foam plastics used in signs installed in accordance with Section 402.14 shall not be required to comply with the flame spread and smoke-developed indexes specified in Section 2603.3.

[402.16.5.1] 402.6.4.5.1 Density. The [minimum] density of foam plastics used in signs shall be [not be] less than 20 pounds per cubic foot (pcf) (320 kg/m³).

[402.16.5.2] 402.6.4.5.2 Thickness. The thickness of foam plastic signs shall [be] not [be] greater than 1/2 inch (12.7 mm).

402.7 Emergency systems. Covered and open mall buildings, anchor buildings and associated parking garages shall be provided with emergency systems complying with Sections 402.7.1 through 402.7.5.

402.7.1 Standpipe system. Covered and open mall buildings shall be equipped throughout with a standpipe system as required by Section 905.3.3.

402.7.2 Smoke control. Where a covered mall building contains an atrium, a smoke control system shall be provided in accordance with Section 404.5.

402.7.3 Emergency power. Covered mall buildings greater than 50,000 square feet (4645 m²) in area and open mall buildings greater than 50,000 square feet (4645 m²) within the established perimeter line shall be provided with emergency power that is capable of operating the emergency voice/alarm communication system in accordance with Section 2702.

402.7.4 Emergency voice/alarm communication system. Where the total floor area is greater than 50,000 square feet (4645 m²) within either a covered mall building or within the perimeter line of an open mall building, an emergency voice/alarm communication system shall be provided.

Emergency voice/alarm communication systems serving a mall, required or otherwise, shall be accessible to the fire department. The systems shall be provided in accordance with Section 907.5.2.2.
402.7.5 Fire Department access to equipment. Rooms or areas containing controls for air-conditioning systems, automatic fire-extinguishing systems, automatic sprinkler systems or other detection, suppression or control elements shall be identified for use by the Fire Department.

402.8 Means of egress. Covered mall buildings, open mall buildings and each tenant space within a mall building shall be provided with means of egress as required by this section and this code. Where there is a conflict between the requirements of this code and the requirements of Sections 402.8.1 through 402.8.8, the requirements of Sections 402.8.1 through 402.8.8 shall apply.

402.8.1 Mall width. For the purpose of providing required egress, malls are permitted to be considered as corridors but need not comply with the requirements of Section 1005.1 of this code where the width of the mall is as specified in this section.

402.8.1.1 Minimum width. The aggregate clear egress width of the mall in either a covered or open mall building shall be not less than 20 feet (6096 mm). The mall width shall be sufficient to accommodate the occupant load served. No portion of the minimum required aggregate egress width shall be less than 10 feet (3048 mm) measured to a height of 8 feet (2438 mm) between any projection of a tenant space bordering the mall and the nearest kiosk, vending machine, bench, display opening, food court or other obstruction to means of egress travel.

402.8.2 Occupant load. The calculated occupant load used to determine the required number of means of egress shall be in accordance with this section.

402.8.2.1 Occupant load of tenant spaces. The occupant load permitted in any individual tenant space in a covered mall building shall be determined in accordance with Chapter 10. Means of egress requirements for individual tenant spaces shall be based on the occupant load thus determined.

402.8.2.2 Occupant load of mall. In determining required means of egress of the mall, the total occupant load in the mall shall include the occupant load attributed to the mall as determined by Section 402.8.2.3, plus the occupant load of the food court as determined by Section 402.8.2.5, if any.

402.8.2.3 Occupant load formula. To determine the occupant load attributed to the mall, the gross leasable area (square feet), excluding any food court and anchor buildings, shall be divided by the occupant load factor (OLF) value determined by Equation 4-1.

\[
OLF = (0.00007)(GLA) + 25 \quad \text{(Equation 4-1)}
\]

where:

\(OLF\) = The occupant load factor (square feet per person).

\(GLA\) = The gross leasable area (square feet).

Exception: Tenant spaces attached to a covered mall building but with a means of egress system that is totally independent of the covered mall building shall not be considered as gross leasable area for determining the required means of egress for the covered mall building.
402.8.2.4 **OLF range.** The occupant load factor (OLF) is not required to be less than 30 and shall not exceed 50.

402.8.2.5 **Food courts.** The occupant load of a food court shall be determined in accordance with Section 1004 and shall be added to the occupant load of the mall.

402.8.2.6 **Anchor buildings.** The occupant load of anchor buildings opening into the mall shall not be included in computing the total number of occupants for the covered mall building.

402.8.3 **Number of means of egress.** The required number of means of egress shall be determined in accordance with this section.

402.8.3.1 **Number of means of egress within tenant spaces.** Wherever the distance of travel to the mall from any location within a tenant space used by persons other than employees exceeds 75 feet (22 860 mm) or the tenant space exceeds an occupant load of 74, no fewer than two means of egress shall be provided.

402.8.3.2 **Number of means of egress from the mall.** The number of means of egress from the mall shall be determined in accordance with Chapter 10 and shall be based upon an occupant load calculated in accordance with Section 402.8.2.

402.8.4 **Arrangements of means of egress.** Means of egress shall be arranged in accordance with this section.

402.8.4.1 **Anchor building means of egress.** Required means of egress for anchor buildings shall be provided independently from the mall means of egress system. The occupant load of anchor buildings opening into the mall shall not be included in determining means of egress requirements for the mall. The path of egress travel of malls shall not exit through anchor buildings. Malls terminating at an anchor building where no other means of egress has been provided shall be considered as a dead-end mall.

402.8.4.2 **Tenant spaces requiring more than one means of egress.** Where more than one means of egress is required from an individual tenant space as determined by Chapter 10, not more than 50 percent of the occupant load shall discharge into the mall.

402.8.4.3 **Large assembly occupancy.** Assembly occupancies with an occupant load of 500 or more shall be so located in the covered mall building such that their entrance will be immediately adjacent to a principal entrance to the mall and shall have not less than one-half of their required means of egress opening directly to the exterior of the covered mall building.

402.8.5 **Distance to exits.** Within each individual tenant space in a covered or open mall building, the distance of travel from any point to an exit or entrance to the mall shall be not greater than 200 feet (60 960 mm).

The distance of travel from any point within a mall of a covered mall building to an exit shall be not greater than 200 feet (60 960 mm). The maximum distance of travel from any point within an open mall to the perimeter line of the open mall building shall be not greater than 200 feet (60 960 mm).
402.8.6 Access to exits. Where more than one exit is required, they shall be so arranged that it is possible to travel in either direction from any point in a mall of a covered mall building to separate exits or from any point in an open mall of an open mall building to two separate locations on the perimeter line, provided neither location is an exterior wall of an anchor building or parking garage. The width of an exit passageway or corridor from a mall shall be not less than 66 inches (1676 mm).

**Exception:** Access to exits is permitted by way of a dead-end mall that does not exceed a length equal to twice the width of the mall measured at the narrowest location within the dead-end portion of the mall.

402.8.6.1 Exit passageway enclosures. Where exit passageway enclosures provide a secondary means of egress from a tenant space, doors to the exit passageway enclosures shall be minimum 1-hour fire doors with panic hardware. Such doors shall be self-closing and be so maintained or shall be automatic closing by smoke detection.

402.8.7 Service areas fronting on exit passageways. Mechanical rooms, electrical rooms, building service areas and service elevators are permitted to open directly into exit passageways provided that the exit passageway is separated from such rooms by fire barriers providing the same fire-resistance rating as required for the exit passageway. Door swings from these rooms shall not project into the minimum width of such exit passageways.

402.8.8 Security grilles and doors. Horizontal sliding or vertical security grilles or doors that are a part of a required means of egress shall conform to the following:

1. Doors and grilles shall remain in the full open position during the period of occupancy by the general public.

2. Doors or grilles shall not be brought to the closed position when there are 10 or more persons occupying spaces served by a single exit or 50 or more persons occupying spaces served by more than one exit.

3. The doors or grilles shall be openable from within without the use of any special knowledge or effort where the space is occupied.

4. Where two or more exits are required, not more than one-half of the exits shall be permitted to include either a horizontal sliding or vertical rolling grille or door.

SECTION BC 403
HIGH-RISE BUILDINGS

403.1 Applicability. High-rise buildings shall comply with Sections 403.2 through 403.8.

**Exception:** The provisions of [this section] Sections 403.2 through 403.8 shall not apply to the following buildings and structures:

1. Air traffic control towers in accordance with Section 412.3.

3. Open parking garages in accordance with Section 403.2.1 through 403.2.4.

4. Buildings with an occupancy in accordance with Section 406.3.406.5.

5. Buildings with an occupancy in accordance with Section 303.1 through 303.6.

6. Buildings with an occupancy in accordance with Section 503.1.1.

6.1. A Group H-1([]) occupancy;

6.2. A Group H-2 [or H-3] occupancy in accordance with Section 415.8, 415.9.2, 415.9.3 or 426.1; or

6.3. A Group H-3 occupancy in accordance with Section 415.8.

403.2 Construction. The construction of high-rise buildings shall comply with the provisions of Sections 403.2.1 through 403.2.4.

403.2.1 Types of construction. The following modifications to the minimum fire-resistance rating of the building elements in Table 601 shall be as follows:

1. High rise buildings 420 feet (128 m) or greater in building height shall be constructed of Type IA construction.

2. For high rise buildings not greater than 420 feet (128 m) in building height, and constructed to meet the fire-resistance rating requirements of Type IB or IIA construction, the required fire-resistance rating of columns supporting floors shall be constructed to meet Type IA construction.

403.2.2 Seismic considerations. For seismic considerations, see Chapter 16.

403.2.3 Structural integrity of interior exit [enclosures] stairways and elevator hoistway enclosures. For all high-rise buildings, exit enclosures for interior exit stairways and elevator hoistway enclosures shall comply with Sections 403.2.3.1 through 403.2.3.4.

Exception: Where fire-resistance rating is not required by this code for the enclosure or portions thereof.

403.2.3.1 Wall assembly. The wall assemblies making up the [exit] enclosures for interior exit stairways and elevator hoistway enclosures shall meet or exceed Soft Body Impact Classification Level 2 as measured by the test method described in ASTM C 1629/C 1629M.

403.2.3.2 Wall assembly materials. The face of the wall assemblies making up the [exit] enclosures for interior exit stairways and elevator hoistway enclosures that are not exposed to the interior of the enclosures for interior exit [enclosure] stairways or elevator hoistway enclosure shall be constructed in accordance with one of the following methods:
1. The wall assembly shall incorporate [not less] no fewer than two layers of impact-resistant construction board each of which meets or exceeds Hard Body Impact Classification Level 2 as measured by the test method described in ASTM C 1629/C 1629M.

2. The wall assembly shall incorporate [not less] no fewer than one layer of impact-resistant construction material that meets or exceeds Hard Body Impact Classification Level 3 as measured by the test method described in ASTM C 1629/C 1629M.

3. The wall assembly incorporates multiple layers of any material, tested in tandem, that [meet] meets or [exceed] exceeds Hard Body Impact Classification Level 3 as measured by the test method described in ASTM C 1629/C 1629M.

403.2.3.3 Concrete and masonry walls. Concrete or masonry walls shall be deemed to satisfy the requirements of Sections 403.2.3.1 and 403.2.3.2.

403.2.3.4 Other wall assemblies. Any other wall assembly that provides impact resistance equivalent to that required by Sections 403.2.3.1 and 403.2.3.2 for Hard Body Impact Classification Level 3, as measured by the test method described in ASTM C 1629/C 1629M, shall be permitted.

403.2.4 Sprayed fire-resistant materials (SFRM). The bond strength of the SFRM installed throughout the building shall be in accordance with Table 403.2.4.

<table>
<thead>
<tr>
<th>HEIGHT OF BUILDING</th>
<th>SFRM MINIMUM BOND STRENGTH</th>
</tr>
</thead>
<tbody>
<tr>
<td>Up to 420 feet</td>
<td>430 psf</td>
</tr>
<tr>
<td>Greater than 420 feet</td>
<td>1,000 psf</td>
</tr>
</tbody>
</table>

For SI: 1 foot = 304.8 mm, 1 pound per square foot (psf) = 0.0479 kW/m².

# 403.3 Automatic sprinkler system.

Buildings and structures shall be equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1[A] and a secondary water supply [shall be provided] where required by Section [903.3.5.2] 403.3.

403.3.1 Number of sprinkler risers and system design. Each sprinkler system zone in buildings that are more than 300 feet [(9144 m)] (91 440 mm) in building height shall be supplied by [a minimum of] no fewer than two risers. Each riser shall supply sprinklers on alternate floors. If more than two risers are provided for a zone, sprinklers on adjacent floors shall not be supplied from the same riser.

403.3.1.1 Riser location. [Each sprinkler riser] Sprinkler risers shall be placed in interior exit [enclosures], stairways and ramps that are remotely located in accordance with Section [1015.2] 1007.1.

403.3.2 Water supply to required fire pumps. Required fire pumps shall be provided with water supplies in accordance with Section 905.2 and NFPA 14 as modified by Appendix Q of this code.
403.3.3 Secondary on-site water supply. A secondary on-site water supply equal to the hydraulically calculated sprinkler demand, including the hose stream requirement, shall be provided for high-rise buildings in Seismic Design Category C or D as determined by this code, and in any high-rise building with occupied floors located more than 500 feet (152 m) above the lowest level of fire department vehicle access. The secondary on-site water supply shall have a duration of not less than 30 minutes as determined by the occupancy hazard classification in accordance with NFPA 13 as modified by Appendix Q of this code.

403.3.4 Fire pump room. Fire pumps shall be located in rooms protected in accordance with Section 913.2.1.

403.4 Emergency systems. The detection, alarm and emergency systems of high-rise buildings shall comply with Sections 403.4.1 through 403.4.8.

403.4.1 Smoke detection. Smoke detection shall be provided in accordance with Section 907.2.13.1.

403.4.2 Fire [alarms systems] alarm system. A fire alarm system shall be provided in accordance with Section 907.2.13.

403.4.3 Standpipe system. A high-rise building shall be equipped with a standpipe system as required by Section 905.3.

403.4.4 Emergency voice/alarm communication [systems] system. An emergency voice/alarm communication system shall be provided in accordance with Section 907.5.2.2.

403.4.5 Emergency responder radio coverage. Emergency responder radio coverage shall be provided in accordance with the New York City Fire Code and Section 907.2.13.2 of this code.

403.4.6 Fire command. A fire command center complying with Section 911 shall be provided in a location approved by the Fire Department.

403.4.7 Post-fire smoke purge. A post-fire smoke purge system shall be installed in accordance with Section [916] 917.

403.4.8 Standby and emergency power. A standby power system complying with Section 2702 and Section 3003 shall be provided for the standby power loads specified in Section 403.4.7.2 and Section 403.4.7.3. An emergency power system complying with Section 2702 shall be provided for the emergency power loads specified in Section 403.4.8.4.

403.4.8.1 Equipment room. If the standby or emergency power system [is] includes a generator set inside a building, the system shall be located in a separate room enclosed with 2-hour fire-resistance-rated fire barrier assemblies. System supervision with manual start and transfer features shall be provided at the fire command center in accordance with Section 2702.1.2.2.

403.4.8.2 Fuel line piping protection. Fuel lines supplying a generator set inside a building shall comply with Section 1305.9 of the New York City Mechanical Code.
403.4.8.3 Standby power systems. A standby power system complying with Section 2702 shall be provided for standby power loads specified in Sections 403.4.8.3.1 and 403.4.8.3.2. Fuel sources for generators shall be in accordance with Section 2702.1.1.

[403.4.7.2] 403.4.8.3.1 Standby power loads in occupancies other than Group R-2. In buildings of any occupancy group other than Group R-2, the following are classified as standby power loads:

1. Power and lighting for fire command center required by Section [403.4.5] 403.4.6;
2. Ventilation and automatic fire detection equipment for smokeproof enclosures;
3. Elevators, in accordance with Section 3003; and
4. Stair pressurization systems when provided.

[403.4.7.3] 403.4.8.3.2 Standby power loads in Group R-2 occupancies. Group R-2 occupancies in buildings greater than 125 feet (38 100 mm) in height shall be required to provide a standby power system to support the following loads:

1. Power and lighting for fire command center required by Section [403.4.5] 403.4.6;
2. Ventilation and automatic fire detection equipment for smokeproof enclosures;
3. At least one elevator serving all floors, or one elevator per bank where different banks serve different portions of the building; and
4. Stair pressurization systems when provided.

[403.4.8] 403.4.8.4 Emergency power systems. An emergency power system complying with Section 2702 shall be provided for emergency power loads specified in Sections [403.4.8.1] 403.4.8.1 and [403.4.8.2] 403.4.8.4.3. Fuel sources for generators shall be in accordance with Section 2702.1.1.

[403.4.8.1] 403.4.8.4.1 Emergency power loads in occupancies other than Group R-2. In buildings of any occupancy group other than Group R-2, the following are classified as emergency power loads:

1. Exit signs and means of egress illumination required by Chapter 10;
2. Elevator car lighting;
3. Emergency voice/alarm communications systems, including Fire Department in-building Auxiliary Radio Communication systems (ARCs);
4. Automatic fire detection systems;
5. Fire alarm systems; and

464
6. Electrically powered fire pumps, including manual fire pumps, automatic fire pumps, and sprinkler booster pumps.

[403.4.8.2] 403.4.8.4.2 Emergency power loads in Group R-2 occupancies. Group R-2 occupancies in buildings greater than 125 feet (38 100 mm) in height shall be required to provide an emergency power system to support the following loads:

1. Exit signs and means of egress illumination required by Chapter 10;

2. Emergency voice communications systems, including Fire Department in-building Auxiliary Radio Communication systems (ARCs); and

3. Electrically powered fire pumps, unless electrical power to the motor is taken ahead of the main from the street side of the house service switch.

403.4.8.4.3 Emergency power loads in Group R-2 occupancies 125 feet or less in height. Group R-2 occupancies in buildings 125 feet (38 100 mm) or less in height shall be required to provide an emergency power system to support the following loads:

1. Emergency voice communications systems in buildings containing Group R-2 occupancies in accordance with Section 907.5.2.2 of this code, or where otherwise provided. Batteries in accordance with the New York City Electrical Code are permitted to serve as the secondary power supply for such systems.

2. Fire Department in-building Auxiliary Radio Communication systems (ARCs) in buildings containing Group R-2 occupancies in accordance with Section 916.3 of this code, or where otherwise provided. Batteries in accordance with the New York City Electrical Code are permitted to serve as the secondary power supply for such systems.

403.5 Means of egress and evacuation. The means of egress in high-rise buildings shall comply with Sections 403.5.1 through 403.5.6.

403.5.1 Remoteness of interior exit [stairway enclosures] stairways. The required [stairway enclosures] stairways shall be separated by a distance not less than 30 feet (9144 mm) or not less than ¼ [one-fourth] of the length of the maximum overall diagonal dimension of the building or area to be served, whichever is less. The distance shall be measured in a straight line between the nearest points of the enclosure surrounding the interior exit [stairway enclosures] stairways. In buildings with three or more interior exit [stairway enclosures, at least] stairways, no fewer than two of the interior exit [stairway enclosures] stairways shall comply with this section. Stairs sharing any common wall, floors, ceilings, scissor stair assemblies, or other enclosures shall be counted as one interior exit stairway.

Exception: Group R-2 occupancies.

403.5.2 Additional exit stairway. For buildings other than Group R-2 that are more than 420 feet (128 m) in building height, one additional exit stairway meeting the requirements of Sections 1011 and 1023 shall be provided in addition to the minimum number of exits
required by Section [4021-4] 1006.3. The total width of any combination of remaining exit stairways with one exit stairway removed shall not be less than the total width required by Section 1005.1. Stairs sharing any common wall, floors, ceilings, scissor stair assemblies, or other enclosures shall not be considered the additional exit stairway required by this section.

**Exceptions:** An additional exit stairway shall not be required to be installed in any of the following instances:

1. In buildings where all passenger elevators for general public use and all other elevators used for occupant self-evacuation comply with Sections 3008.1 through 3008.11;

2. In buildings where all of the following conditions are met:

   2.1. The commissioner has approved a timed egress analysis establishing the egress time it would take for a full building evacuation, utilizing the stairs required by Section [4021-4] 1006 and the additional stair that would have been required pursuant to Section 403.5.2;

   2.2. The commissioner has approved a timed egress analysis establishing the egress time it would take for a full building evacuation, utilizing the combination of the stairs required by Section [4021-4] 1006 and elevators used for occupant self-evacuation as follows:

      2.2.1. Such analysis need only utilize a number of designated elevators designed for occupant self-evacuation necessary to demonstrate an evacuation time that is less than the time established in Exception 2.1; and

      2.2.2. Every bank of passenger elevators for general public use shall be served by at least one such designated elevator;

2.3. All elevators in the building that either are passenger elevators for general public use or are used for occupant self-evacuation shall comply with Sections 3008.1 through 3008.11. However, the standby power generating equipment required by Section 3008.9 need only be sized to satisfy the loads required to simultaneously operate those elevators identified in the timed egress analysis described in Exception 2.2.

The minimum number of exits required by Section [4021-4] 1006 are all at least 25 percent wider than the exit width required by Chapter 10. The increase in the stair width shall not be utilized in the timed egress analyses required by Exceptions 2.1 and 2.2.

[3. Where the application for construction document approval is submitted within 18 months after the date of enactment of the local law that added this section.]

**403.5.3 Stairway door operation.** Doors opening into interior stair enclosures shall not be locked from either side. However, a door locked from the stair side may be permitted provided that such
door is equipped with an automatic fail safe system for opening in the event of the activation of any automatic fire detection system, or when any elevator recall is activated, or when any signal is received from the fire command center. Such door shall be deemed as openable from the stair side. Stair reentry signs shall be posted throughout the stairway indicating that reentry is provided only during fire emergencies. Such signs shall be in accordance with Section [1030.4.2] 1031.4.2.

**Exception:** In schools classified as Group E occupancies that require “lockdown drills” as per Section 807 of the New York State Education Law, stairway egress doors from occupied spaces are permitted to be locked from the side opposite the egress side for the duration of the lockdown drill, provided they are openable from the occupied side for egress and are unlocked upon directions from the school administrative personnel following the completion of the lockdown drill.

**403.5.3.1 Stairway communication system.** A telephone or other two-way communications system connected to an approved constantly attended station shall be provided at not less than every fifth floor in each stairway where the doors to the stairway are locked in accordance with Section 403.5.3.

**403.5.4 Smokeproof [exit] enclosures.** Every required interior exit stairway serving floors more than 75 feet (22 860 mm) above the lowest level of fire department vehicle access shall comply with Sections 909.20 and [4022.9] 1023.11.

**Exception [for R-2 occupancies]:** Smokeproof enclosures are not required in occupancy Group R-2 unless provided pursuant to Exception 2 of Section [916.4] 917.1.

**403.5.5 Luminous egress path markings.** Luminous egress path markings shall be provided in accordance with Section [4024] 1025 and Appendix S.

**Exception:** Egress paths serving Group R-2.

**403.5.6 Emergency escape and rescue.** Emergency escape and rescue openings [required by] specified in Section [4029] 1030 are not required.

**403.6 Elevators.** Elevator [operation and] installation and operation in high-rise buildings shall [be in accordance] comply with Chapter 30 and Sections 403.6.1 and 403.6.2.

**403.6.1 Fire service access elevator.** In buildings with an occupied floor more than 120 feet (36 576 mm) above the lowest level of fire department vehicle access, a minimum of one fire service access elevator shall be provided in accordance with Section 3007.

**403.6.2 Occupant evacuation elevators.** Where installed in accordance with Section 3008, passenger elevators for general public use shall be permitted to be used for occupant self-evacuation.

**403.6.3 Elevator lobbies.** Elevator lobbies shall be provided in accordance with Sections [708.14.1 and 708.14.2] 3006.1.1 and 3006.1.2.
403.7 Outdoor air intakes. For high-rise buildings, outdoor air intakes serving spaces above the second story and serving spaces greater than 10,000 square feet (929 m²) of floor area shall be located in accordance with Section 401.5 of the New York City Mechanical Code.

Exception: Group R-2 occupancy.

403.8 Open web steel joists. The use of open web steel joists shall be prohibited in high-rise buildings until the commissioner promulgates rules establishing minimum acceptable fireproofing methods.

SECTION BC 404
ATRIUMS

404.1 General. In other than Group H occupancies, and where permitted by [Exception 5 in] Section [708.2] 712.1.7, the provisions of [this section] Sections 404.1 through 404.10 shall apply to buildings or structures containing vertical openings defined [herein] as [atriums] “atriums.”

404.1.1 [Definition] Definitions. The following [word and] term [shall, for the purposes of this chapter and as used elsewhere in this code, have the meaning shown herein.] is defined in Chapter 2:

ATRIUM. [An opening connecting three or more stories other than enclosed stairways, elevators, hoistways, escalators, plumbing, electrical, air conditioning or any other vertical openings that are not required to be enclosed by other provisions of this code, which is closed at the top and not defined as a mall. Stories, as used in this definition, do not include balconies within assembly groups or mezzanines that comply with Section 505.]

404.2 Use. The floor of the atrium shall not be used for other than low fire hazard uses[7] and only approved materials and decorations in accordance with the New York City Fire Code shall be used in the atrium space.

Exception: The atrium floor area is permitted to be used for any approved use where the individual space is provided with an automatic sprinkler system in accordance with Section 903.3.1.1.

404.3 Automatic sprinkler protection. An approved automatic sprinkler system shall be installed throughout the entire building.

Exceptions:

1. That area of a building adjacent to or above the atrium need not be sprinklered provided that portion of the building is separated from the atrium portion by not less than 2-hour fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section [742] 711, or both.

2. Where the ceiling of the atrium is more than 55 feet (16 764 mm) above the floor, sprinkler protection at the ceiling of the atrium is not required.

404.4 Fire alarm system. A fire alarm system shall be provided in accordance with Section 907.2.14.
404.5 Smoke control. A smoke control system shall be installed in accordance with Section 909.

Exception: In other than Groups I-1 and I-2, and covered mall buildings containing an atrium pursuant to Section 402.7.2, smoke control is not required for atriums that connect only two stories.

404.6 Enclosure of atriums. Atrium spaces shall be separated from adjacent spaces by a 1-hour fire barrier constructed in accordance with Section 707 or a horizontal assembly constructed in accordance with Section 712, or both.

Exceptions:

1. A fire barrier is not required where a glass or glass-block wall forming a smoke partition [where automatic] is provided. The glass or glass-block wall shall comply with all of the following:

   1.1. Automatic sprinklers are [spaced 6 feet (1829 mm) or less] provided along both sides of the separation wall and doors, or on the room side only if there is not a walkway on the atrium side[...]. The sprinklers shall be located between 4 inches and 12 inches (102 mm and 305 mm) away from the glass and [so] at intervals along the glass not greater than 6 feet (1829 mm). The sprinkler system shall be designed so that the entire surface of the glass is wet upon activation of the sprinkler system without obstruction[...]. The glass shall be installed in a gasketed frame so that the framing system deflects without breaking (loading) the glass before the sprinkler system operates.;

   1.2. The glass wall shall be installed in a gasketed frame in a manner that the framing system deflects without breaking (loading) the glass before the sprinkler system operates; and

   1.3. Where glass doors are provided in the glass wall, they shall be either self-closing or automatic-closing.

2. The adjacent spaces of any three floors of the atrium shall not be required to be separated from the atrium where such spaces are accounted for in the design of the smoke control system.

404.7 Standby power. Equipment required to provide smoke control shall be [connected to a] provided with standby power [system] in accordance with Section 909.11.

404.8 Interior finish. The interior finish of walls and ceilings of the atrium shall be not [be] less than Class B with no reduction in class for sprinkler protection.

404.9 [Travel distance. In other than the lowest level of the atrium, where the required means of egress is through the atrium space, the portion of exit access travel distance within the atrium space shall not exceed 200 feet (60,960 mm). The travel distance requirements for areas of buildings open to the atrium and where access to the exits is not through the atrium, shall comply with the]
Exit access travel distance. Exit access travel distance for areas open to an atrium shall comply with the requirements of this section.

404.9.1 **Egress not through the atrium.** Where required access to the exits is not through the atrium, exit access travel distance shall comply with Section 1017.

404.9.2 **Exit access travel distance at the level of exit discharge.** Where the path of egress travel is through an atrium space, exit access travel distance at the level of exit discharge shall be determined in accordance with Section 1017.

404.9.3 **Exit access travel distance at other than the level of exit discharge.** Where the path of egress travel is not at the level of exit discharge from the atrium, that portion of the total permitted exit access travel distance that occurs within the atrium shall be not greater than 200 feet (60 960 mm).

404.10 **Interior exit stairways.** A maximum of 50 percent of interior exit stairways are permitted to egress through an atrium on the level of exit discharge in accordance with Section 1028.

SECTION BC 405
UNDERGROUND BUILDINGS AND SPACES

405.1 **General.** The provisions of Sections 405.2 through 405.9 apply to building spaces having a floor level used for human occupancy more than 30 feet (9144 mm) below the finished floor of the lowest level of exit discharge.

**Exceptions:** The provisions of Section 405 are not applicable to the following buildings or portions of buildings:

1. One- and two-family dwellings, sprinklered in accordance with Section 903.3.1.3.
2. Parking garages provided with automatic sprinkler systems in compliance with Section 405.3.
3. Fixed guideway transit systems.
4. Grandstands, bleachers, stadiums, arenas and similar facilities.
5. Where the lowest story is the only story that would qualify the building as an underground building and has an area not exceeding greater than 1,500 square feet (139 m²) and has an occupant load less than 10.
6. Pumping stations and other similar mechanical spaces intended only for limited periodic use by service or maintenance personnel.

405.2 **Construction requirements.** The underground portion of the building shall be of Type I construction.

405.3 **Automatic sprinkler system.** The highest level of exit discharge serving the underground portions of the building and all levels below shall be equipped with an automatic sprinkler system.
installed in accordance with Section 903.3.1.1. Water-flow switches and control valves shall be supervised in accordance with Section 903.4.

405.4 Compartmentation. Compartmentation shall be in accordance with Sections 405.4.1 through 405.4.3.

405.4.1 Number of compartments. A building having a floor level more than 60 feet (18 288 mm) below the finished floor of the lowest level of exit discharge shall be divided into [a minimum of] no fewer than two compartments of approximately equal size. Such compartmentation shall extend through the highest level of exit discharge serving the underground portions of the building and all levels below.

Exception: The lowest story need not be compartmented where the area [does is not] exceed greater than 1,500 square feet (139 m²) and has an occupant load of less than 10.

405.4.2 Compartment separation. The separation between the two compartments shall be of minimum 2-hour fire barrier wall construction that shall extend from floor slab to floor deck above. Penetrations between the two compartments shall be limited to plumbing and electrical piping and conduit that are firestopped in accordance with Section [713] 714. Doorways shall be protected by fire door assemblies that are automatic-closing by smoke detection in accordance with Section [715.4.8.3] 716.5.9.3 and are installed in accordance with NFPA 105 and Section [715.4.3] 716.5.3 of this code. Where provided, each compartment shall have an air supply and an exhaust system independent of the other compartments.

405.4.3 Elevators. Where elevators are provided, each compartment shall have direct access to an elevator. Where an elevator serves more than one compartment, an elevator lobby shall be provided and shall be separated from each compartment by a 2-hour fire barrier. Doors shall be gasketed, have a drop sill, and be automatic-closing by smoke detection [installed] in accordance with Section [715.4.8.3] 716.5.9.3.

405.5 Smoke control system. A smoke control system shall be provided in accordance with Sections 405.5.1 and 405.5.2.

405.5.1 Control system. A smoke control system is required to control the migration of products of combustion in accordance with Section 909 and the provisions of this section. Smoke control shall restrict movement of smoke to the general area of fire origin and maintain means of egress in a usable condition.

405.5.2 Compartment smoke control system. Where compartmentation is required, each compartment shall have an independent smoke control system. The system shall be automatically activated and capable of manual operation in accordance with Sections 907.2.18 and 907.2.19.

405.6 Fire alarm systems. A fire alarm system shall be provided where required by Sections 907.2.18 and 907.2.19.

405.7 Means of egress. Means of egress shall be in accordance with Sections 405.7.1 and 405.7.2.
405.7.1 Number of exits. Each floor level shall be provided with [a minimum of] no fewer than two exits. Where compartmentation is required by Section 405.4, each compartment shall have [a minimum of] no fewer than one exit and shall also have [an] no fewer than one exit access doorway into the adjoining compartment.

405.7.2 Smokeproof enclosure. Every required stairway serving floor levels more than 30 feet (9144 mm) below its level of exit discharge shall comply with the requirements for a smokeproof enclosure as provided in Section 1022.9 1023.11.

405.8 Standby and emergency power. A standby power system complying with Section 2702 shall be provided for the standby power loads specified in Section 405.8.1. An emergency power system complying with Section 2702 shall be provided for the emergency power loads specified in Section 405.8.2.

405.8.1 Standby power loads. The following loads are classified as standby power loads:

1. Smoke control systems;
2. Ventilation and automatic fire detection equipment for smokeproof enclosures;
3. Fire pumps;
4. Elevators, as required in accordance with Section 3003; and
5. Stair pressurization systems when provided.

405.9 Emergency power. An emergency power system complying with Section 2702 shall be provided for emergency power loads specified in Section 405.9.1.

405.9.1 Emergency power loads. The following loads are classified as emergency power loads:

1. Emergency voice/alarm communications systems, including Fire Department in-building Auxiliary Radio Communication systems (ARCs) provided where required or installed voluntarily in accordance with Section 917 916;
2. Fire alarm systems;
3. Automatic fire detection systems;
4. Elevator car lighting; and
5. Means of egress and exit sign illumination as required by Chapter 10.

405.10 Standpipe system. The underground building shall be [provided] equipped throughout with a standpipe system in accordance with Section 905.
SECTION BC 406
MOTOR-VEHICLE-RELATED OCCUPANCIES

406.2 Definitions. The following terms are defined in Chapter 2:

CARPORT.

MECHANICAL-ACCESS OPEN PARKING GARAGE.

OPEN PARKING GARAGE.

PRIVATE GARAGE.

RAMP-ACCESS OPEN PARKING GARAGE.

406.3 Private garages and carports. Private garages and carports shall comply with Sections 406.3.1 through 406.3.5.

[406.1.1] 406.3.1 Classification. Private garages and carports, as defined by this section, shall be classified as Group U occupancy.

[406.1.2] 406.3.2 Clear height. In private garages and carports, the clear height in vehicle and pedestrian traffic areas shall be not less than 7 feet (2134 mm). Vehicle and pedestrian areas accommodating van-accessible parking shall comply with Section 1106.5.

[406.1.3] 406.3.3 Floor construction. Private garage and carport floors shall be of concrete or equivalent noncombustible material that will not absorb flammable liquids. The area of floor used for parking of vehicles shall be sloped to facilitate the movement of liquids to a drain. The sills of all door openings connecting a dwelling unit to a private garage shall be raised at least 4 inches (102 mm) above the floor level of the garage.

Exception: Asphalt surfaces shall be permitted at ground level in carports.
[406.1.3.4] **406.3.1 Ramps.** Ramps shall have a gradient not exceeding one in seven, with nonslip surfaces, and shall be located entirely within the property line. However, upon application to the commissioner, steeper gradients may be accepted, but in no event greater than one in three.

[406.1.4] **406.3.4 Separation.** Separations shall comply with the following:

1. The private garage shall be separated from the dwelling unit and its attic area by means of a minimum 1-hour fire-rated construction. Garages beneath habitable rooms shall be separated from all habitable rooms above by not less than 1-hour fire-rated construction. Openings from a private garage directly into a room used for sleeping purposes shall not be permitted.

2. No air used for heating, cooling or ventilation shall be circulated through private garages to dwelling areas.

3. A separation is not required between a Group R-3 occupancy and a carport, provided the carport does not have any enclosed areas above.

4. For free standing private garages where the fire separation distance from the nearest exterior wall is less than 5 feet (1524 mm), such exterior walls shall have a fire-resistance rating not less than one hour.

[406.1.5] **406.3.5 Automatic garage door openers.** Automatic garage door openers, where provided, shall be listed in accordance with UL 325.

[406.2] **Parking garages, open or enclosed**

[406.2.1] **Classification.** Parking garages, other than private parking garages, shall be classified as public parking garages and shall comply with the provisions of Sections 406.4.2 through 406.4.10 and shall be classified as either an open parking garage [as per Section 406.3.] or an enclosed [as per Section 406.4] parking garage. Open parking garages shall also comply with Section 406.5. Enclosed parking garages shall also comply with Section 406.6. [Parking garages shall also comply with the special provisions of] See Section 510 for special provisions for parking garages.

[406.2.2] **406.4.1 Clear height.** The clear height of each floor level in vehicle and pedestrian traffic areas shall be not less than 7 feet (2134 mm). Vehicle and pedestrian areas accommodating van-accessible parking [required by Section 1106.5] shall [conform to ICC A117.1] comply with Section 1106.5.

[406.2.3] **406.4.2 Guards.** Guards shall be provided in accordance with Section [1013] 1015. Guards serving as vehicle barrier systems shall comply with Sections [406.2.4] 406.4.3 and [1013] 1015.

[406.2.4] **406.4.3 Vehicle barrier systems.** Vehicle [barrier systems] barriers not less than 2 feet 9 inches (835 mm) [high] in height shall be placed [at the end of drive lanes and at the end of parking spaces] where the vertical distance from the floor of a drive lane or parking space to the
ground or surface directly below is greater than 1 foot (305 mm). Vehicle barriers shall comply with the loading requirements of Section 1607.7.3 1607.9.

Exception: Vehicle barriers are not required in vehicle storage compartments in a mechanical access parking garage.

[406.2.5] 406.4.4 Ramps. Ramps shall have a gradient not exceeding one in seven, with nonslip surfaces. A level landing having a minimum dimension of 20 feet (6096 mm) shall be provided at the discharge point of all ramps at the street level, within the property line. Ramps used for the movement of motor vehicles need not be enclosed when serving tiers above grade. Vehicle ramps may serve as part of a means of egress provided that such ramp complies with the requirements of Sections 1018.1.1 and 1018.1.2 in accordance with Section 1006.4.

[406.2.6] 406.4.5 Floor surface. Parking surfaces shall be of concrete or similar noncombustible and nonabsorbent materials.

The area of floor used for parking of vehicles shall be sloped to facilitate the movement of liquids to a drain.

Exceptions:

1. Asphalt parking surfaces are permitted at ground level.

2. Floors of Group S-2 parking garages shall not be required to have a sloped surface.

[406.2.7] 406.4.6 Separation. Parking garages shall be separated from other occupancies in accordance with Section 508.1.

[406.2.8] 406.4.7 Special hazards. Connection of a parking garage with any room in which there is a fuel-fired appliance shall be by means of a vestibule providing a two-doorway separation. Such vestibule and doorway shall be minimum 1-hour rated construction.

Exception: A single door, in compliance with Table 715.4, shall be allowed provided the sources of ignition in the appliance are not less than 18 inches (457 mm) above the floor.

[406.2.9] 406.4.8 Attached to rooms. Openings from a parking garage directly into a room used for sleeping purposes shall not be permitted.

[406.2.10] 406.4.9 Fire-fighter aisles. In any parking garage or lot, one or more aisles, at least 24 inches (610 mm) in width, shall be provided to permit access by fire-fighting personnel to all parts of the garage or lot. There shall not be more than three rows of parked motor vehicles between aisles.

[406.2.11] 406.4.10 Electric vehicle charging stations. Parking garages shall be capable of supporting electrical vehicle charging stations in accordance with this section. Electrical raceway to the electrical supply panel serving the garage shall be capable of providing a minimum of 3.1 kW of electrical capacity to at least 20 percent of the parking spaces of the garage. The electrical
room supplying the garage must have the physical space for an electrical supply panel sufficient to provide 3.1kW of electrical capacity to at least 20 percent of the parking spaces of the garage. Such raceway and all components and work appurtenant thereto shall be in accordance with the New York City Electrical Code.

Exceptions:

1. The provisions of this section shall not apply to parking garages for buildings of Occupancy Group M (Mercantile).

2. The commissioner may waive compliance with this section if the commissioner determines that the parking garage is a temporary facility that will be in service no longer than [3] three years.

3. The provisions of this section shall not apply to parking garages for buildings in which not less than [fifty] 50 percent of the residential units are for households earning up to [sixty] 60 percent of the area median income as determined by the United States Department of Housing and Urban Development.

[406.3] 406.5 Open parking garages. Open parking garages shall comply with Sections 406.5.1 through 406.5.11.

[406.3.1] Scope. Except where specific provisions are made in Sections 406.3.2 through 406.3.13, other requirements of this code shall apply.

[406.3.2] Definitions. The following words and terms shall, for the purposes of this chapter and as used elsewhere in this code, have the meanings shown herein.

[MECHANICAL-ACCESS OPEN PARKING GARAGES. Open parking garages employing parking machines, lifts, elevators or other mechanical devices for vehicles moving from and to street level and in which public occupancy is prohibited above the street level.]

[OPEN PARKING GARAGE. A structure or portion of a structure with the openings as described in Section 406.3.3.1 that is used for the parking or storage of private motor vehicles as described in Section 406.3.4.]

[RAMP-ACCESS OPEN PARKING GARAGES. Open parking garages employing a series of continuously rising floors or a series of interconnecting ramps between floors permitting the movement of vehicles under their own power from and to the street level.]

[406.3.3] 406.5.1 Construction. Open parking garages shall be of Type I, II or IV construction. Open parking garages shall meet the design requirements of Chapter 16. For vehicle [barrier systems] barriers, see Section [406.2.4] 406.4.3.

[406.3.1] 406.5.2 Openings. For natural ventilation purposes, the exterior side of the structure shall have uniformly distributed openings on two or more sides. The area of such openings in exterior walls on a tier [must] shall be [at least] not less than 20 percent of the total perimeter wall area of each tier. The aggregate length of the openings considered to be providing natural ventilation shall be not less than 20 percent of the total perimeter wall area of each tier.
ventilation shall constitute a minimum of be not less than 40 percent of the perimeter of the tier. Interior walls shall be not less than 20 percent open with uniformly distributed openings.

**Exception:** Openings are not required to be distributed over 40 percent of the building perimeter where the required openings are uniformly distributed over two opposing sides of the building.

**406.5.2.1 Openings below grade.** Where openings below grade provide required natural ventilation, the outside horizontal clear space shall be 1 ½ times the depth of the opening. The width of the horizontal clear space shall be maintained from grade down to the bottom of the lowest required opening.

**406.3.4** **406.5.3 Uses.** Mixed uses shall be allowed in the same building as an open parking garage subject to the provisions of Sections [402.7.4], [402.4.2.3], [406.3.13] 406.5.11, 508.1, 510.3, 510.4[1] and 510.7.

**406.3.5** **406.5.4 Area and height.** Area and height of open parking garages shall be limited as set forth in Chapter 5 for Group S-2 occupancies.

For SI: 1 square foot = 0.0929 m².

**406.3.5.1** **406.5.4.1 Single use.** Where the open parking garage is used exclusively for the parking or storage of private motor vehicles, with no other uses in the building, the area and height shall be permitted to comply with Table [406.3.5] 406.5.4.

**Exception:** The grade-level tier is permitted to contain an office, waiting and toilet rooms having a total combined area of not more than 1,000 square feet (93 m²). Such area need not be separated from the open parking garage.

In open parking garages having a spiral or sloping floor, the horizontal projection of the structure at any cross section shall not exceed the allowable area per parking tier. In the case of an open parking garage having a continuous spiral floor, each 9 feet 6 inches (2896 mm) of height, or portion thereof, shall be considered a tier.

The clear height of a parking tier shall be not less than 7 feet (2134 mm), except that a lower clear height is permitted in mechanical-access open parking garages where approved by the commissioner.
[406.3.6] 406.5.5 Area and height increases. The allowable area and height of open parking garages shall be increased in accordance with the provisions of this section. Garages with sides open on three-fourths of the building’s perimeter are permitted to be increased by 25 percent in area and one tier in height. Garages with sides open around the entire building’s perimeter are permitted to be increased by 50 percent in area and one tier in height. For a side to be considered open under the above provisions, the total area of openings along the side shall not be less than 50 percent of the interior area of the side at each tier and such openings shall be equally distributed along the length of the tier. For purposes of calculating the interior area of the side, the height shall not exceed 7 feet (2134 mm).

Allowable tier areas in Table [406.3.5] 406.5.4 shall be increased for open parking garages constructed to heights less than the table maximum. The gross tier area of the garage shall not exceed that permitted for the higher structure. At least No fewer than three sides of each such larger tier shall have continuous horizontal openings not less than 30 inches (762 mm) in clear height extending for at least not less than 80 percent of the length of the sides and no part of such larger tier shall be more than 200 feet (60 960 mm) horizontally from such an opening. In addition, each such opening shall face a street or yard accessible to a street with a width of at least not less than 30 feet (9144 mm) for the full length of the opening, and standpipes shall be provided in each such tier.

Open parking garages of Type II construction, with all sides open, shall be unlimited in allowable area where the building height does not exceed 75 feet (22 860 mm). For a side to be considered open, the total area of openings along the side shall be not less than 50 percent of the interior area of the side at each tier and such openings shall be equally distributed along the length of the tier. For purposes of calculating the interior area of the side, the height shall not exceed 7 feet (2134 mm). All portions of tiers shall be within 200 feet (60 960 mm) horizontally from such openings or other natural ventilation openings as defined in Section 905. These openings shall be permitted to be provided in courts with a minimum dimension of 20 feet (6096 mm) for the full width of the openings.

[406.3.7] 406.5.6 Fire separation distance. Exterior walls and openings in exterior walls shall comply with Tables 601 and 602. The distance from an adjacent property line shall be determined in accordance with Table 602 and Section 705.

[406.3.8] 406.5.7 Means of egress. Open parking garages shall meet the means of egress requirements of Chapter 10. However, where no persons other than parking attendants are permitted, required exit stairways shall not be less than 36 inches (914 mm) wide.

[406.3.9] 406.5.8 Standpipes. Standpipes shall be installed where required by the provisions of Section 905.

[406.3.10] Sprinkler systems. Automatic sprinkler systems and standpipes shall be installed in accordance with the provisions of Section 903. An automatic dry sprinkler system may be installed in unheated garages.]

[406.3.11] 406.5.9 Enclosure of vertical openings. Enclosure shall not be required for vertical openings.
[406.3.12] **406.5.10 Ventilation.** Openings specified in Section [406.3.3.1] 406.5.2 shall satisfy natural ventilation requirements. Additional mechanical ventilation shall not be required.

[406.3.13] **406.5.11 Prohibitions.** The following uses and alterations are not permitted:

1. Vehicle repair work.
2. Parking of commercial vehicles, buses, trucks and similar vehicles.
3. Partial or complete closing of required openings in exterior walls by tarpaulins or any other means.
4. Dispensing of fuel.

[406.4] **406.6 Enclosed parking garages.** Parking garages and portions thereof that do not meet the definition of “Open parking garages” shall be classified as an enclosed parking garage and shall meet the requirements of this section.

[406.4.1] **406.6.1 Heights and areas.** Enclosed parking garages shall be limited to the allowable heights and areas specified in [Table 503 as modified by Sections 504, 506, and 507] Chapter 5. Permitted roof parking shall not be considered as a separate story.

[406.4.2] **406.6.2 Ventilation.** A mechanical ventilation system shall be provided in accordance with the New York City Mechanical Code.

**406.6.3 Automatic sprinkler system.** Automatic sprinkler systems and standpipes shall be installed in accordance with the provisions of Section 903. An automatic dry sprinkler system may be installed in unheated garages.

**406.6.4 Means of egress.** Enclosed parking garages shall meet the means of egress requirements of Chapter 10.

[406.5] **406.7 Motor fuel-dispensing facilities.**

[406.5.1 Construction.] Motor fuel-dispensing facilities shall be designed and constructed in accordance with the New York City Fire Code and Sections [406.5.1] 406.7.1 through [406.5.3] 406.7.3 of this code.

[406.5.2] **406.7.1 Vehicle fueling pad.** The vehicle shall be fueled on noncoated concrete or other approved paving material having a resistance not exceeding 1 megohm as determined by the methodology in [EN] CEN 1081.

[406.5.3] **406.7.2 Canopies.** Canopies under which fuels are dispensed shall have a clear, unobstructed height of not less than 14 feet (4267 mm) to the lowest projecting element in the vehicle drive-through area. Canopies and their supports over pumps shall be of noncombustible materials. However, panels constructed of light-transmitting plastic materials shall be permitted to be installed in canopies erected over motor vehicle fuel-dispensing station fuel dispensers, provided the panels are located [at least] not less than 10 feet (3048 mm) from any building on the same property and face yards or streets not less than 40 feet (12 192 mm) in width on the other
sides. The aggregate areas of plastics shall be not greater than 1,000 square feet (93 m²). The maximum area of any individual panel shall be not greater than 100 square feet (9.3 m²).

[406.5.3.4] 406.7.2.1 Canopies used to support gaseous hydrogen systems. Where flammable compressed gases are permitted by the New York City Fire Code to be located on the roof of a canopy that is used to shelter dispensing operations, such canopy shall be in accordance with the following:

1. The canopy shall meet or exceed Type I construction requirements.

2. Operations located under canopies shall be limited to refueling only.

3. The canopy shall be constructed in a manner that prevents the accumulation of hydrogen gas.

[406.5.4] 406.7.3 Storage tanks. Motor fuel storage tanks shall be installed below ground, except as authorized by the rules of the Fire Department. The installation and venting of storage tanks shall be in accordance with the rules of the Fire Department and the requirements of the New York City Fire Code. Storage tanks installed below ground shall comply with the following:

1. The top of the storage tanks shall be at least 24 inches (610 mm) below finished grade and at least 24 inches (610 mm) below the level of any cellar or basement floor within 10 feet (3048 mm) of the tanks.

2. Storage tanks shall be located so that the forces from any building foundation and support loads are not transmitted to the tanks. The distance from any part of a storage tank to the nearest wall of any basement, pit or cellar, or from any property line that may be built upon, shall not be less than 36 inches (914 mm).

3. Storage tanks shall be covered with a structurally supported reinforced concrete slab at least 8 inches (203 mm) thick, extending at least 12 inches (305 mm) beyond the horizontal outlines of the storage tanks, and placed over a cover of suitable clean backfill material. Such slab shall be designed and reinforced in accordance with ACI 318. All concrete shall have a minimum compressive strength of 4,000 pounds per square inch (27 580 kPa) at 28 days.

4. Storage tanks shall be placed on a 12-inch (305 mm) thick concrete base slab or installed in such other manner, secured against flotation, and approved by the department.

[406.6] 406.8 Repair garages.

[406.6.1 General] Repair garages shall be constructed in accordance with the New York City Fire Code and Sections [406.6.1] 406.8.1 through [406.6.6] 406.8.6 of this code. This occupancy shall not include motor fuel-dispensing facilities, as regulated in Section [406.5] 406.7.

[406.6.2] 406.8.1 Mixed uses. Mixed uses shall be allowed in the same building as a repair garage subject to the provisions of Section 508.1.
[406.6.3] **406.8.2 Ventilation.** Repair garages shall be mechanically ventilated in accordance with the New York City Mechanical Code. The ventilation system shall be controlled at the entrance to the garage.

[406.6.4] **406.8.3 Floor surface.** Repair garage floors shall be of concrete or similar noncombustible and nonabsorbent materials.

   **Exception:** Slip-resistant, nonabsorbent, interior floor finishes having a critical radiant flux not more than 0.45 W/cm², as determined by NFPA 253, shall be permitted.

[406.6.5] **406.8.4 Heating equipment.** Heating equipment shall be installed in accordance with the New York City Mechanical Code.

[406.6.6] **406.8.5 Gas detection system.** Repair garages used for the repair of vehicles fueled by CNG, LNG, or hydrogen, shall be provided with an approved flammable gas-detection system.

   [406.6.6.1] **406.8.5.1 System design.** The flammable gas-detection system shall be listed or approved and shall be calibrated to the types of fuels or gases used by vehicles to be repaired. The gas detection system shall be designed to activate when the level of flammable gas exceeds 25 percent of the lower explosive flammable limit (LFL). Gas detection shall also be provided in lubrication or chassis service pits of repair garages used for repairing nonodorized LNG-fueled vehicles.

   **406.8.5.1.1 Gas detection system components.** Gas detection system control units shall be listed and labeled in accordance with UL 864 or UL 2017. Gas detectors shall be listed and labeled in accordance with UL 2075 for use with the gases and vapors being detected.

[406.6.6.2] **406.8.5.2 Operation.** Activation of the gas detection system shall result in all of the following:

   1. Initiation of distinct audible and visual alarm signals in the repair garage.

   2. Deactivation of all heating systems located in the repair garage.

   3. Activation of the mechanical ventilation and exhaust system, where the system is interlocked with gas detection.

[406.6.6.3] **406.8.5.3 Failure of the gas detection system.** Failure of the gas detection system shall result in the deactivation of the heating system, activation of the mechanical ventilation system [when] where the system is [inter locked] interlocked with the gas detection system and cause a trouble signal to sound in an approved location.

[406.6.6.6] **406.8.6 Automatic sprinkler system.** A repair garage shall be equipped with an automatic sprinkler system in accordance with Section 903.2.4.2.

[406.7] **406.9 Open parking lots.**

   [406.7.1 General.] The provisions of this section shall govern the construction of open parking lots and to all such existing premises hereafter enlarged or changed in location.
[406.7.2] **406.9.1 Definitions.** The following words and terms shall, for the purposes of this chapter and as used elsewhere in this code, have the meanings shown herein:

term is defined in Chapter 2:

**OPEN PARKING LOT.** [An exterior space with surfacing at grade used for the storage or sale of more than four motor vehicles, including but not limited to parking lots, motor vehicles sales lots, and accessory open parking spaces.]

[406.7.3] **406.9.2 Permit required.** Any premise intended to be occupied for the storage or sale of motor vehicles on an open parking lot shall require an application to be filed with the department in order to obtain a Certificate of Occupancy. Such Certificate of Occupancy shall indicate the maximum number of vehicles to be accommodated and the type of vehicle, whether private passenger or commercial, to be stored. An application for or including an open parking lot shall be accompanied by a plan exhibiting the following:

1. Dimensions of the lot and its location in relation to adjoining streets; [and]
2. Any structure(s) existing or to be erected on the plot; [and]
3. The relative elevations of the parking area, curbs and adjoining yards or courts; [and]
4. Structures, retaining walls, and open spaces on adjoining premises; [and]
5. Retaining walls to be built; [and]
6. Location and dimensions of curb cuts, driveways, and enclosures; [and]
7. Drainage diagram; [and]
8. Specification of surfacing material; [and]
9. Parking stall layout with dimensions; [and]
10. Analysis exhibiting compliance with the New York City Zoning Resolution; and
11. Other information as may be requested by the commissioner.

A copy of the plan or diagram approved by the department shall be kept on the premises. Certified, reduced size, legible copies may be used for this purpose. When an attendant’s shelter is provided on the parking lot, the Certificate of Occupancy issued shall be posted and maintained under glass in the shelter.

[406.7.4] **406.9.3 Locations prohibited.** All vehicular activities associated with the operation of open parking lots shall be entirely within the property lines of the premises. Vehicles shall not be permitted to encroach upon the sidewalks. No motor vehicle may be stored or parked in any location where it would obstruct a required window or required exit of any adjacent building.
406.7.5 406.9.4 Surfacing. All driveways, parking stalls, and open spaces used for the parking or storage of motor vehicles shall be surfaced with concrete asphalt, or equivalent durable, dustless material.

406.7.5.1 406.9.4.1 Drainage. Open parking lots shall be graded and maintained such that no drainage will flow onto abutting sidewalks and adjoining properties.

406.7.5.2 406.9.4.2 Nonporous surfaces. Where the surface paving of an open parking lot is nonporous, such lot shall be drained as required by the New York City Plumbing Code.

406.7.5.3 406.9.4.3 Resurfacing. Resurfacing of existing open parking lots shall comply with this section.

406.7.6 Curb cuts. For the purpose of this section, a curb cut shall include all splays when determining the total length of cut curb. Unless otherwise required by the New York City Zoning Resolution, all curb cuts shall comply with the following requirements:

1. The aggregate length of curb cuts shall not exceed 60 percent of any street frontage 100 feet (30 480 mm) or less in length. No single curb cut shall exceed 30 feet (9144 mm) in length, and there shall not be more than two curb cuts on any street frontage 100 feet (30 480 mm) or less in length. The minimum distance between two curb cuts shall be 5 feet (1524 mm).

2. For each 50 feet (15 240 mm) of street frontage length over 100 feet (30 480 mm), an additional curb cut no greater than 30 feet (9144 mm) in length may be permitted.

3. No curb cut shall commence within 8 feet (2438 mm) of a side lot line, except that on corner lots and lots with street frontage length of 50 feet (15 240 mm) or less, the curb cut may commence 30 inches (762 mm) from the side lot line.

4. No curb cut, including splays, shall be less than 10 feet (3048 mm) in length.

406.7.7 Driveways. Driveways serving passenger vehicles shall be a minimum of 8 feet (2438 mm) in width and shall not exceed the length of the curb cut, not including the lengths of the splays. For all other motor vehicles, the minimum width of driveways shall be 10 feet (3048 mm). Portions of the driveway located between the curb line and the lot line shall be paved in accordance with the requirements of the Department of Transportation for the construction of sidewalks.

406.7.8 406.9.5 Curbs and bumpers. Open parking lots shall be completely separated from adjoining premises and public sidewalks by curbs or bumpers of concrete, masonry, steel, heavy timber, or other similar and equally substantial materials, and shall be securely anchored so as to stop motor vehicles. Curbs and bumpers shall be at least 8 inches (203 mm) high and 8 inches (203 mm) wide.

406.7.8.1 406.9.5.1 Openings. Openings in required perimeter curbs and bumpers shall be permitted only for drainage, for motor vehicle entrances and exits, and for pedestrian entrances and exits. The width of an opening for motor vehicle access shall not exceed the
length of the curb cut, not including the lengths of the splays. When an opening for pedestrian access is adjacent to a motor vehicle access opening, the two openings shall be separated by a permanent and substantial post. In no case shall any pedestrian entrance or exit exceed 5 feet (1524 mm) in width.

[406.7.9] 406.9.6 Accessory uses and occupancies. Parking lot offices, attendant shelters, storage facilities, and similar structures used in conjunction with open parking lots may be provided as an accessory use and shall comply with the applicable code provisions. Such accessory structures may be constructed of combustible materials subject to the limitations of Section D105.1 of Appendix D.

[406.7.9.1] 406.9.6.1 Motor fuel-dispensing facilities. Motor fuel-dispensing facilities, accessory to open parking lots, shall comply with the requirements of the New York City Fire Code and Section [406.5] 406.8 of this code. Motor fuel pumps shall be located at least 30 feet (9144 mm) from any parking space or interior lot line.

[406.7.10] 406.9.7 Special provisions applicable to large open parking lots. Open parking lots storing 10 or more motor vehicles shall also be subject to the special provisions of this section.

[406.7.10.1] 406.9.7.1 Curbs and bumpers. Bumpers shall be situated not less than 1 foot (305 mm) from the perimeter edge of the open parking lot where vehicles are parked parallel to such perimeter edge, and not less than 4 feet (1219 mm) from the perimeter edge where vehicles are parked perpendicular to such perimeter edge. Openings shall be limited as provided for in Section [406.7.8.1] 406.9.5.1.

Exception: A steel guardrail or other substantial barrier designed in accordance with the provisions of Section [1607.7.3] 1607.9, that will prevent any part of a vehicle from extending across a property line, may be accepted in lieu of bumpers.

[406.7.10.2] 406.9.7.2 Screen enclosures. Open parking lots shall provide a perimeter screen enclosure as per this section unless otherwise required by the New York City Zoning Resolution. Such screen enclosure may be constructed as a masonry wall, woven wire fence, iron picket fence, or uniformly painted fence of fire-resistant material at least 4 feet (1219 mm) high, but not more than 8 feet (2438 mm) above finished grade, subject to the limitations of Section 3111. Such enclosures shall completely separate the lot from adjoining premises and public sidewalks. Openings shall be limited as provided for in Section [406.7.8.1] 406.9.5.1.

Exception: Screening shall not be required for any portion of the lot adjacent to an existing wall located at the lot line.

[406.7.10.3] 406.9.7.3 Illumination. Open parking lots operating between 6 p.m. and 6 a.m. shall be adequately illuminated to a minimum of 1 [foot-candle] footcandle (10.8 lux) measured at grade level, distributed over the entire area. Illumination provided with reflectors or floodlights shall be arranged such that the illumination is directed downward and away from adjacent premises.
406.7.4 Fire-fighter aisles. In any open parking lot, one or more aisles, at least 24 inches (610 mm) in width, shall be provided to permit access by fire-fighting personnel to all parts of the garage or lot. There shall not be more than three rows of parked motor vehicles between aisles.

406.9.8 Electric vehicle charging stations. Open parking lots shall be capable of supporting electric vehicle charging stations in accordance with this section. A minimum of 20 percent of the parking spaces in an open parking lot shall be equipped with electrical raceway capable of providing a minimum supply of 11.5 kVA to an EVSE from an electrical supply panel. The raceway shall be no smaller than 1 inch (25 mm). The electrical supply panel serving such parking spaces must have at least 3.1 kW of available capacity for each stall connected to it with raceway. Such raceway and all components and work appurtenant thereto shall be in accordance with the New York City Electrical Code.

Exceptions:

1. The provisions of this section shall not apply to open parking lots for buildings of Occupancy Group M (Mercantile).

2. The commissioner may waive compliance with this section if the commissioner determines that the open parking lot is a temporary facility that will be in service no longer than 3 years.

3. The provisions of this section shall not apply to open parking lots for buildings in which not less than fifty percent of the residential units are for households earning up to sixty percent of the area median income as determined by the United States Department of Housing and Urban Development.

406.10 Curb cuts and driveways. Except where specifically provided for in the New York City Zoning Resolution, all curb cuts and driveways shall be constructed in accordance with Sections 406.10.1 and 406.10.2. All sidewalks and driveways or portions thereof that are structurally supported shall be designed for loads prescribed in Chapter 16.

406.10.1 Curb cuts. For the purpose of this section, a curb cut shall include all splays when determining the total length of cut curb. All curb cuts shall comply with the following requirements:

1. The aggregate length of curb cuts shall not exceed 60 percent of any street frontage 100 feet (30 480 mm) or less in length. No single curb cut shall exceed 30 feet (9144 mm) in length, and there shall not be more than two curb cuts on any street frontage 100 feet (30 480 mm) or less in length. The minimum distance between two curb cuts shall be 5 feet (1524 mm).

2. For each 50 feet (15 240 mm) of street frontage length over 100 feet (30 480 mm), an additional curb cut no greater than 30 feet (9144 mm) in length may be permitted.

3. No curb cut shall commence within 8 feet (2438 mm) of a side lot line.
Exceptions:

1. For open parking lots on corner lots and on lots with street frontage length of 50 feet (15 240 mm) or less, the curb cut may commence no less than 30 inches (762 mm) from the side lot line.

2. In open or enclosed parking garages where a level landing having a minimum dimension of 20 feet (6096 mm) is provided at the discharge point of all ramps at the street level within the property line, the curb cut may commence no less than 30 inches (762 mm) from a side lot line.

4. No curb cut, including splays, shall be less than 10 feet (3048 mm) in length.

406.10.2 Driveways. Driveways serving passenger vehicles shall be a minimum of 8 feet (2438 mm) in width and shall not exceed the length of the curb cut, not including the lengths of the splays. For all other motor vehicles, the minimum width of driveways shall be 10 feet (3048 mm). Portions of the driveway located between the curb line and the lot line shall be paved in accordance with the requirements of the Department of Transportation for the construction of sidewalks.

406.11 Battery-powered industrial trucks, equipment and mobility devices. Buildings or portions thereof that contain or store battery-powered industrial trucks, equipment and mobility devices shall be designed and constructed in accordance with Section 309.3 of the New York City Fire Code.

SECTION BC 407
GROUP I-2

407.1 General. Occupancies in Group I-2 shall comply with the provisions of Sections 407.1 through 407.9 407.10 and other applicable provisions of this code.

407.2 Corridors continuity and separation. Corridors in occupancies in Group I-2 shall be continuous to the exits and shall be separated from other areas in accordance with Section 407.3 except spaces conforming to Sections 407.2.1 through 407.2.6.

407.2.1 Waiting and similar areas. Waiting areas and similar spaces constructed as required for corridors shall be permitted to be open to a corridor, only where all of the following criteria are met:

1. The spaces are not occupied as care recipient’s sleeping units, treatment rooms, hazardous or incidental accessory uses in accordance with Section 508.2, 509, or hazardous uses.

2. The open space is protected by an automatic fire detection system installed in accordance with Section 907.
3. The corridors onto which the spaces open, in the same smoke compartment, are protected by an automatic fire detection system installed in accordance with Section 907, or the smoke compartment in which the spaces are located is equipped throughout with quick-response sprinklers in accordance with Section 903.3.2.

4. The space is arranged so as not to obstruct access to the required exits.

407.2.2 [Nurses’] Care providers’ stations. Spaces for care providers’, supervisory staff, doctors’ and nurses’ charting, communications and related clerical areas shall be permitted to be open to the corridor, when such spaces are constructed as required for corridors.

407.2.3 [Mental health] Psychiatric treatment areas. Areas wherein psychiatric care recipients who are not capable of self-preservation are housed, or group meeting or multipurpose therapeutic spaces other than incidental uses in accordance with Section 509, under continuous supervision by facility staff, shall be permitted to be open to the corridor, where the following criteria are met:

1. Each area does not exceed 1,500 square feet (140 m²).
2. The area is located to permit supervision by the facility staff.
3. The area is arranged so as not to obstruct any access to the required exits.
4. The area is equipped with an automatic fire detection system installed in accordance with Section 907.2.
5. Not more than one such space is permitted in any one smoke compartment.
6. The walls and ceilings of the space are constructed as required for corridors.

407.2.4 Gift shops. Gift shops and associated storage that are less than 500 square feet (46 m²) in area shall be permitted to be open to the corridor, provided the gift shop and storage areas are fully sprinklered and storage areas are protected in accordance with Section 508.2, where such spaces are constructed as required for corridors.

407.2.5 Nursing home housing units. In Group I-2 occupancies, in areas where nursing home residents are housed, shared living spaces, group meeting or multipurpose therapeutic spaces shall be permitted to be open to the corridor, where all of the following criteria are met:

1. The walls and ceilings of the space are constructed as required for corridors.
2. The spaces are not occupied as resident sleeping rooms, treatment rooms, incidental uses in accordance with Section 509, or hazardous uses.
3. The open space is protected by an automatic fire detection system installed in accordance with Section 907.
4. The corridors onto which the spaces open, in the same smoke compartment, are protected by an automatic fire detection system installed in accordance with Section 907, or the
smoke compartment in which the spaces are located is equipped throughout with quick-response sprinklers in accordance with Section 903.3.2.

5. The space is arranged so as not to obstruct access to the required exits.

407.2.6 Nursing home cooking facilities. In Group I-2 occupancies, rooms or spaces that contain a cooking facility with domestic cooking appliances shall be permitted to be open to the corridor where all of the following criteria are met:

1. The number of care recipients housed in the smoke compartment is not greater than 30.

2. The number of care recipients served by the cooking facility is not greater than 30.

3. Only one cooking facility area is permitted in a smoke compartment.

4. The types of domestic cooking appliances permitted are limited to ovens, cooktops, ranges, warmers and microwaves.

5. The corridor is a clearly identified space delineated by construction or floor pattern, material or color.

6. The space containing the domestic cooking facility shall be arranged so as not to obstruct access to the required exit.

7. A domestic cooking hood installed and constructed in accordance with Section 505 of the New York City Mechanical Code is provided over the cooktop or range.

8. The domestic cooking hood provided over the cooktop or range shall be equipped with an automatic fire-extinguishing system of a type recognized for protection of domestic cooking equipment. Preengineered automatic extinguishing systems shall be tested in accordance with UL 300A and listed and labeled for the intended application. The system shall be installed in accordance with this code, its listing and the manufacturer’s instructions.

9. A manual actuation device for the hood suppression system shall be installed in accordance with Sections 904.12.1 and 904.12.2.

10. An interlock device shall be provided such that upon activation of the hood suppression system, the power or fuel supply to the cooktop or range will be turned off.

11. A shut-off for the fuel and electrical power supply to the cooking equipment shall be provided in a location that is accessible only to staff.

12. A timer shall be provided that automatically deactivates the cooking appliances within a period of not more than 120 minutes.

13. A portable fire extinguisher shall be installed in accordance with Section 906 of the New York City Fire Code.
407.3 **Corridor [walls]** wall construction. Corridor walls shall be constructed as smoke partitions in accordance with Section [711] 7.10.

407.3.1 **Corridor doors.** Corridor doors, other than those in a wall required to be rated by Section 509.4 or for the enclosure of a vertical opening or an exit, shall not have a required fire protection rating and shall not be required to be equipped with self-closing or automatic-closing devices, but shall provide an effective barrier to limit the transfer of smoke and shall be equipped with positive latching. Roller latches are not permitted. Other doors shall conform to Section [715.4] 7.16.5.

407.4 **Means of egress.** Group I-2 occupancies shall be provided with means of egress complying with Chapter 10 and Sections 407.4.1 through 407.4.4. The fire and emergency preparedness plans provided in accordance with Section 1001.4 of this code shall identify the building components necessary to support a defend-in-place emergency response in accordance with the New York City Fire Code.

407.4.1 **Direct access to a corridor.** Habitable rooms in Group I-2 occupancies shall have an exit access door leading directly to a corridor.

**Exceptions:**
1. Rooms with exit doors opening directly to the outside at ground level.
2. Rooms arranged as care suites complying with Section 407.4.4.

[407.3.2] 407.4.1.1 **Locking devices.** Locking devices that restrict access to [the patient] a care recipient’s room from the corridor[,] and that are operable only by staff from the corridor side[,] shall not restrict the means of egress from the [patient] care recipient’s room [except for patient rooms in mental health facilities].

**Exceptions:**
1. This section shall not apply to rooms in psychiatric treatment and similar care areas.
2. Locking arrangements in accordance with Section 1010.1.9.6.

407.4.2 **Distance of travel.** The distance of travel between any point in a Group I-2 occupancy sleeping room, not located in a care suite, and an exit access door in that room shall be not greater than 50 feet (15 240 mm).

407.4.3 **Projections in nursing home corridors.** In nursing homes of Group I-2 occupancies, where the corridor width is a minimum of 96 inches (2440 mm), projections shall be permitted for furniture where all of the following criteria are met:

1. The furniture is attached to the floor or to the wall.
2. The furniture does not reduce the clear width of the corridor to less than 72 inches (1830 mm) except where other encroachments are permitted in accordance with Section 1005.7.
3. The furniture is positioned on only one side of the corridor.

4. Each arrangement of furniture is 50 square feet (4.6 m²) maximum in area.

5. Furniture arrangements are separated by 10 feet (3048 mm) minimum.

6. Placement of furniture is considered as part of the fire and emergency preparedness plans in accordance with Section 1001.4.

407.4.4 Group I-2 care suites. Care suites in Group I-2 shall comply with Sections 407.4.4.1 through 407.4.4.4 and either Section 407.4.4.5 or 407.4.4.6.

407.4.4.1 Exit access through care suites. Exit access from all other portions of a building not classified as a care suite shall not pass through a care suite. In a care suite required to have more than one exit, one exit access is permitted to pass through an adjacent care suite provided all of the other requirements of Sections 407.4 and 1016.2 are satisfied.

407.4.4.2 Separation. Care suites shall be separated from other portions of the building, including other care suites, by a smoke partition complying with Section 710.

407.4.4.3 Access to corridor. Movement from habitable rooms shall not require passage through more than three doors and 100 feet (30 480 mm) distance of travel within the suite.

   Exception: The distance of travel shall be permitted to be increased to 125 feet (38 100 mm) where an automatic smoke detection system is provided throughout the care suite and installed in accordance with NFPA 72 as modified by Appendix Q of this code.

407.4.4.4 Doors within care suites. Doors in care suites serving habitable rooms shall be permitted to comply with one of the following:

1. Manually operated horizontal sliding doors permitted in accordance with Exception 9 to Section 1010.1.2.1.

2. Power-operated doors permitted in accordance with Exception 7 to Section 1010.1.2.1.

3. Means of egress doors complying with Section 1010.

407.4.4.5 Care suites containing sleeping room areas. Sleeping rooms shall be permitted to be grouped into care suites where one of the following criteria is met:

1. The care suite is not used as an exit access for more than eight care recipient beds.

2. The arrangement of the care suite allows for direct and constant visual supervision into the sleeping rooms by care providers.

3. An automatic smoke detection system is provided in the sleeping rooms and installed in accordance with NFPA 72 as modified by Appendix Q of this code.
407.4.4.5.1 Area. Care suites containing sleeping rooms shall be not greater than 7,500 square feet (696 m²) in area.

Exception: Care suites containing sleeping rooms shall be permitted to be not greater than 10,000 square feet (929 m²) in area where an automatic smoke detection system is provided throughout the care suite and installed in accordance with NFPA 72 as modified by Appendix Q of this code.

407.4.4.5.2 Exit access. Any sleeping room, or any care suite that contains sleeping rooms, of more than 1,000 square feet (93 m²) shall have no fewer than two exit access doors from the care suite located in accordance with Section 1007.

407.4.4.6 Care suites not containing sleeping rooms. Areas not containing sleeping rooms, but only treatment areas and the associated rooms, spaces or circulation space, shall be permitted to be grouped into care suites and shall conform to the limitations in Sections 407.4.4.6.1 and 407.4.4.6.2.

407.4.4.6.1 Area. Care suites of rooms, other than sleeping rooms, shall have an area not greater than 12,500 square feet (1161 m²).

Exception: Care suites not containing sleeping rooms shall be permitted to be not greater than 15,000 square feet (1394 m²) in area where an automatic smoke detection system is provided throughout the care suite in accordance with Section 907.

407.4.4.6.2 Exit access. Care suites, other than sleeping rooms, with an area of more than 2,500 square feet (232 m²) shall have no fewer than two exit access doors from the care suite located in accordance with Section 1007.

407.5 Smoke barriers. Smoke barriers shall be provided to subdivide every story used by patients for sleeping or persons receiving care, treatment or sleeping and to divide other stories with an occupant load of 50 or more persons, into [at least] no fewer than two smoke compartments. Such stories shall be divided into smoke compartments with an area of not more than 22,500 square feet (2090 m²) in nursing homes in Group I-2, and not more than 40,000 square feet (3716 m²) in detoxification facilities, hospitals and psychiatric centers in Group I-2, and the distance of travel from any point in a smoke compartment to a smoke barrier door shall be not [exceed] greater than 200 feet (60 960 mm). The smoke barrier shall be in accordance with Section 710.

407.5.1 Refuge area. At least 30 net square feet (2.8 m²) per patient shall be provided within the aggregate area of corridors, patient rooms, treatment rooms, lounge or dining areas and other low-hazard areas on each side of each smoke barrier. On floors not housing patients confined to a bed or litter, at least 6 net square feet (0.56 m²) per occupant shall be provided on each side of each smoke barrier for the total number of occupants in adjoining smoke compartments. Refuge areas shall be provided within each smoke compartment. The size of the refuge area shall accommodate the occupants and care recipients from the adjoining smoke compartment. Where a smoke compartment is adjoined by two or more smoke compartments, the minimum area of the refuge area shall accommodate the largest occupant load of the adjoining compartments. The size of the refuge area shall provide the following:
1. Not less than 30 net square feet (2.8 m²) for each care recipient confined to bed or stretcher.

2. Not less than 6 square feet (0.56 m²) for each ambulatory care recipient not confined to bed or stretcher and for other occupants.

Areas or spaces permitted to be included in the calculation of refuge area are corridors, sleeping areas, treatment rooms, lounge or dining areas and other low-hazard areas.

[407.4.2] **407.5.2 Independent egress.** A means of egress shall be provided from each smoke compartment created by smoke barriers without having to return through the smoke compartment from which means of egress originated.

[407.4.3] **407.5.3 Horizontal assemblies.** Horizontal assemblies supporting smoke barriers required by this section shall be designed to resist the movement of smoke and shall comply with Section 712.9. Elevator lobbies shall be in accordance with Section 3006.1.

[407.5] **407.6 Automatic sprinkler system.** Smoke compartments containing patient sleeping units shall be equipped throughout with an automatic fire sprinkler system in accordance with Section 903.3.1.1 and 903.3.2. The smoke compartments shall be equipped with approved quick-response or residential sprinklers in accordance with Section 903.3.2.

**407.7 Fire alarm system.** A fire alarm system shall be provided in accordance with Section 907.2.6.

[407.7] **407.8 Automatic fire detection.** Corridors in nursing homes (both intermediate-care and skilled nursing facilities) and spaces permitted to be open to the corridors by Section 407.2 shall be equipped with an automatic fire detection system installed in accordance with Section 907. Hospitals, detoxification facilities, hospitals and psychiatric centers shall be equipped with smoke detection as required in Section 407.2.

**Exceptions:**

1. Corridor smoke detection is not required where patient sleeping units are provided with smoke detectors that comply with UL 268. Such detectors shall provide a visual display on the corridor side of each patient sleeping unit and an audible and visual alarm at the nursing care provider's station attending each unit.

2. Corridor smoke detection is not required where patient sleeping unit doors are equipped with automatic door-closing devices with integral smoke detectors on the unit sides installed in accordance with their listing, provided that the integral detectors perform the required alerting function.

[407.8] **407.9 Secured yards.** Grounds are permitted to be fenced and gates therein are permitted to be equipped with locks, provided that safe dispersal areas having 30 net square feet (2.8 m²) for bed and litter patients, stretcher care recipients and 6 net square feet (0.56 m²) for ambulatory patients ambulatory care recipients and other occupants are located between the building and the fence. Such provided safe dispersal areas shall not be located not less than 50 feet (15 240 mm) from the building they serve.
407.9 Hyperbaric facilities. Hyperbaric facilities in Group I-2 occupancies shall meet the requirements contained in Chapter 20 of NFPA 99.

407.10 Electrical systems. In Group I-2 occupancies, the essential electrical system for electrical components, equipment and systems shall be designed and constructed in accordance with the provisions of NFPA 99 and Chapter 27 of this code.

SECTION BC 408
GROUP I-3

408.1 General. Occupancies in Group I-3 shall comply with the provisions of Sections 408.1 through 408.10 and other applicable provisions of this code (see Section [308.4] 308.5).

408.1.1 [Definition] Definitions specific to this section. The following [words and] terms shall, for the purposes of this [chapter and as used elsewhere in this code] section, have the meanings shown herein: [ ]:

CELL. A room within a housing unit in a detention or correctional facility used to confine inmates or prisoners.

CELL TIER. Levels of cells vertically stacked above one another within a housing unit.

HOUSING UNIT. A dormitory or a group of cells with a common dayroom in Group I-3.

SALLYPORT. A security vestibule with two or more doors or gates where the intended purpose is to prevent continuous and unobstructed passage by allowing the release of only one door or gate at a time.

408.1.2 Occupancy conditions. Buildings of Group I-3 shall be classified as one of the occupancy conditions indicated in Sections 408.1.2.1 through 408.1.2.5:

408.1.2.1 Condition 1. This occupancy condition shall include buildings in which free movement is allowed from sleeping areas, and other spaces where access or occupancy is permitted, to the exterior via means of egress without restraint. A Condition 1 facility is permitted to be constructed as Group R.

408.1.2.2 Condition 2. This occupancy condition shall include buildings in which free movement is allowed from sleeping areas and any other occupied smoke compartment to one or more other smoke compartments. Egress to the exterior is impeded by locked exits and exit is not under an occupant’s control.

408.1.2.3 Condition 3. This occupancy condition shall include buildings in which free movement is allowed within individual smoke compartments, such as within a residential unit comprised of individual sleeping unit(s) and/or group activity spaces, where egress is impeded by remote-controlled door release, leading by means of egress from such a smoke compartment to another smoke compartment.

408.1.2.4 Condition 4. This occupancy condition shall include buildings in which free movement is restricted from an occupied space. Remote-controlled release is provided to permit movement from sleeping units, activity spaces and other occupied areas within the
smoke compartment to other smoke compartments and egress to the outside is impeded by locked exit and remote door release.)

[408.1.2.5 Condition 5. This occupancy condition shall include buildings in which free movement is restricted from an occupied space. Staff controlled manual release is provided to permit movement from sleeping units, activity spaces and other occupied areas within the smoke compartment to other smoke compartments.]

408.2 Other occupancies. Buildings or portions of buildings in Group I-3 occupancies where security operations necessitate the locking of required means of egress shall be permitted to be classified as a different occupancy. Occupancies classified as other than Group I-3 shall meet the applicable requirements of this code for that occupancy [provided where provisions [shall be] are made for the release of occupants at all times.

Means of egress from detention and correctional occupancies that traverse other use areas shall, as a minimum, conform to requirements for detention and correctional occupancies.

**Exception:** It is permissible to exit through a horizontal exit into other contiguous occupancies that do not conform to detention and correctional occupancy egress provisions but that do comply with requirements set forth in the appropriate occupancy, as long as the occupancy is not a Group H use.

408.3 Means of egress. Except as modified or as provided for in this section, the means of egress provisions of Chapter 10 shall apply.

408.3.1 Door width. Doors to resident sleeping units shall have a clear width of not less than 28 inches (711 mm).

408.3.2 Sliding doors. Where doors in a means of egress are of the horizontal-sliding type, the force to slide the door to its fully open position shall be not [exceed greater than 50 pounds (220 N) with a perpendicular force against the door of 50 pounds (220 N).

408.3.3 Guard tower doors. A hatch or trap door not less than 16 square feet [(610 m²)] (1.49 m²) in area through the floor and having [minimum] dimensions of not less than 2 feet (610 mm) in any direction shall be permitted to be used as a portion of the means of egress from guard towers.

408.3.4 Spiral stairways. Spiral stairways that conform to the requirements of Section [1009.9] 1011.10 are permitted for access to and between staff locations.

408.3.5 Ship ladders. Ship ladders shall be permitted for egress from control rooms or elevated facility observation rooms in accordance with Section [1009.14] 1011.15.

408.3.6 Exit discharge. Exits are permitted to discharge into a fenced or walled courtyard. Enclosed yards or courts shall be of a size to accommodate all occupants, [a minimum of] be located not less than 50 feet (15 240 mm) from the building [with a net] and have an area of not less than 15 square feet (1.4 m²) per person.
408.3.7 **Sallyports.** A sallyport shall be permitted in a means of egress where there are provisions for continuous and unobstructed passage through the sallyport during an emergency egress condition.

408.3.8 **[Exit enclosures. One of the required exit enclosures] Interior exit stairway and ramp construction.** One interior exit stairway or ramp in each building shall be permitted to have glazing installed in doors and interior walls at each landing level providing access to the [enclosure] interior exit stairway or ramp, provided that the following conditions are met:

1. The [vertical] interior exit [enclosure] stairway or ramp shall not serve more than four floor levels.

3. The total area of glazing at each floor level shall not exceed 5,000 square inches (3.2 m$^2$) and individual panels of glazing shall not exceed 1,296 square inches (0.84 m$^2$).

4. The glazing shall be protected on both sides by an automatic sprinkler system. The sprinkler system shall be designed to wet completely the entire surface of any glazing affected by fire when actuated.

5. The glazing shall be in a gasketed frame and installed in such a manner that the framing system will deflect without breaking (loading) the glass before the sprinkler system operates.

6. Obstructions, such as curtain rods, drapery traverse rods, curtains, drapes or similar materials shall not be installed between the automatic sprinklers and the glazing.

408.4 **Locks.** Egress doors are permitted to be locked in accordance with the applicable use condition. Doors from a refuge area to the [exterior] outside are permitted to be locked with a key in lieu of locking methods described in Section 408.4.1. The keys to unlock the exterior doors shall be available at all times and the locks shall be operable from both sides of the door.

408.4.1 **Remote release.** Remote release of locks on doors in a means of egress shall be provided with reliable means of operation, remote from the resident living areas, to release locks on all required doors. In Occupancy [Conditions] Condition 3 or 4, the arrangement, accessibility and security of the release [mechanism(s)] mechanisms required for egress shall be such that with the minimum available staff at any time, the lock mechanisms are capable of being released within 2 minutes.

**Exception:** Provisions for remote locking and unlocking of occupied rooms in Occupancy Condition 4 are not required provided that not more than 10 locks are necessary to be unlocked in order to move occupants from one smoke compartment to a refuge area within 3 minutes. The opening of necessary locks shall be accomplished with not more than two separate keys.

408.4.2 **Power-operated doors and locks.** Power-operated sliding doors or power-operated locks for swinging doors shall be operable by a manual release mechanism at the door[sa] and either
Emergency power [or a remote mechanical operating release] shall be provided for the doors and locks in accordance with Section 2702.

**[Exception] Exceptions:**

1. Emergency power is not required in facilities with 10 or fewer locks [or less] complying with the exception to Section 408.4.1.

2. Emergency power is not required where remote mechanical operating releases are provided.

**408.4.3 Redundant operation.** Remote release, mechanically operated sliding doors or remote release, mechanically operated locks shall be provided with a mechanically operated release mechanism at each door, or shall be provided with a redundant remote release control.

**408.4.4 Relock capability.** Doors remotely unlocked under emergency conditions shall not automatically relock when closed unless specific action is taken at the remote location to enable doors to relock.

**408.5 Protection of vertical openings.** Any vertical opening shall be protected by a shaft enclosure in accordance with Section [708] 713, or shall be in accordance with Sections 408.5.1 and 408.5.2.

**408.5.1 Floor openings.** Openings in floors within a housing unit are permitted without a shaft enclosure, provided all of the following conditions are met:

1. The entire normally occupied areas so interconnected are open and unobstructed so as to enable observation of the areas by supervisory personnel;

2. Means of egress capacity is sufficient for all occupants from all interconnected cell tiers and areas;

3. The height difference between the floor levels of the highest and lowest cell tiers shall not exceed 23 feet (7010 mm); and

4. Egress from any portion of the cell tier to an exit or exit access door shall not require travel on more than one additional floor level within the housing unit.

**408.5.2 Shaft openings in communicating floor levels.** Where a floor opening is permitted between communicating floor levels of a housing unit in accordance with Section 408.5.1, plumbing chases serving vertically stacked individual cells contained within the housing unit shall be permitted without a shaft enclosure.

**408.6 Smoke barrier.** Occupancies in Group I-3 shall have smoke barriers complying with Sections 408.8 and [749] 709 to divide every story occupied by residents for sleeping, or any other story having an occupant load of 50 or more persons, into [at least] no fewer than two smoke compartments.

**Exception:** Spaces having a direct exit to one of the following, provided that the locking arrangement of the doors involved complies with the requirements for doors at the smoke barrier for the use condition involved:
1. A public way.

2. A building separated from the resident housing area by a 2-hour fire-resistance-rated assembly or 50 feet (15 240 mm) of open space.

3. A secured yard or court having a holding space 50 feet (15 240 mm) from the housing area that provides 6 square feet (0.56 m²) or more of refuge area per occupant, including residents, staff and visitors.

408.6.1 Smoke compartments. The [maximum] number of residents in any smoke compartment shall be not more than 200. The [travel] distance of travel to a door in a smoke barrier from any room door required as exit access shall be not [exceed] greater than 150 feet (45 720 mm). The [travel] distance of travel to a door in a smoke barrier from any point in a room shall be not [exceed] greater than 200 feet (60 960 mm).

408.6.2 Refuge area. [At least] Not less than 6 net square feet (0.56 m²) per occupant shall be provided on each side of each smoke barrier for the total number of occupants in adjoining smoke compartments. This space shall be readily available wherever the occupants are moved across the smoke barrier in a fire emergency.

408.6.3 Independent egress. A means of egress shall be provided from each smoke compartment created by smoke barriers without having to return through the smoke compartment from which means of egress originates.

408.7 Security glazing. In occupancies in Group I-3, windows and doors in 1-hour fire barriers constructed in accordance with Section 707, fire partitions constructed in accordance with Section 709 and smoke barriers constructed in accordance with Section 708 shall be permitted to have security glazing installed provided that the following conditions are met. Such glazing shall be subject to the requirements in Chapter 24.

1. Individual panels of glazing shall not exceed 1,296 square inches (0.84 m²).

2. The glazing shall be protected on both sides by an automatic sprinkler system. The sprinkler system shall be designed to, when actuated, wet completely the entire surface of any glazing affected by fire.

3. The glazing shall be in a gasketed frame and installed in such a manner that the framing system will deflect without breaking (loading) the glass before the sprinkler system operates.

4. Obstructions, such as curtain rods, drapery traverse rods, curtains, drapes or similar materials shall not be installed between the automatic sprinklers and the glazing.

408.8 Subdivision of resident housing areas. Sleeping areas and any contiguous day room, group activity space or other common spaces where residents are housed shall be separated from other spaces in accordance with Sections 408.8.1 through 408.8.4.

408.8.1 Occupancy Conditions 3 and 4. Each sleeping area in Occupancy Conditions 3 and 4 shall be separated from the adjacent common spaces by a smoke-tight partition where the [travel]
distance of travel from the sleeping area through the common space to the corridor exceeds 50 feet (15 240 mm).

408.8.2 Occupancy Condition 5. Each sleeping area in Occupancy Condition 5 shall be separated from adjacent sleeping areas, corridors and common spaces by a smoke-tight partition. Additionally, common spaces shall be separated from the corridor by a smoke-tight partition.

408.8.3 Openings in room face. The aggregate area of openings in a solid sleeping room face in Occupancy Conditions 2, 3, 4 and 5 shall not exceed 120 square inches \((77449 \text{ mm}^2)\) \((0.077 \text{ m}^2)\). The aggregate area shall include all openings including door undercuts, food passes and grilles. Openings shall be not more than 36 inches (914 mm) above the floor. In Occupancy Condition 5, the openings shall be closeable from the room side.

408.8.4 Smoke-tight doors. Doors in openings in partitions required to be smoke tight by Section 408.8 shall be substantial doors, of construction that will resist the passage of smoke. Latches and door closures are not required on cell doors.

408.9 Windowless buildings. For the purposes of this section, a windowless building or portion of a building is one with nonopenable windows, windows not readily breakable or without windows. Windowless buildings shall be provided with an engineered smoke control system to provide a tenable environment for exiting from the smoke compartment in the area of fire origin in accordance with Section 909 for each windowless smoke compartment.

408.10 Fire alarm system. A fire alarm system shall be provided in accordance with Section 907.2.6.3.

408.11 Automatic sprinkler system. Group I-3 occupancies shall be equipped throughout with an automatic sprinkler system in accordance with Section 903.2.6.

SECTION BC 409

MOTION PICTURE PROJECTION ROOMS

409.1 General. The provisions of Sections 409.1 through 409.5 of this code shall apply to rooms in which ribbon-type cellulose acetate or other safety film is utilized in conjunction with electric arc, xenon or other light-source projection equipment that develops hazardous gases, dust or radiation. The projection, use or storage of film having a nitrocellulose base (commonly known as nitrate film) shall not be permitted except under conditions specified in special permits when issued by the Fire Department. Safety film meeting the specification and test standards of NFPA 40 may be projected, used or stored.

409.1.1 Projection room required. Every motion picture machine projecting film as mentioned within the scope of this section shall be enclosed in a projection room. Appurtenant electrical equipment, such as rheostats, transformers and generators, shall be within the projection room or in an adjacent room of equivalent construction.

409.2 Construction of projection rooms. Every projection room shall be of permanent construction consistent with the construction requirements for the type of building in which the projection room is located. Openings are not required to be protected.
The room shall have a floor area of not less than 80 square feet (7.44 m$^2$) for a single machine and at least not less than 40 square feet (3.7 m$^2$) for each additional machine. Each motion picture projector, floodlight, spotlight or similar piece of equipment shall have a clear working space of not less than 30 inches by 30 inches (762 mm by 762 mm) on each side and at the rear thereof, but only one such space shall be required between two adjacent projectors. The projection room and the rooms appurtenant thereto shall have a ceiling height of not less than 7 feet 6 inches (2286 mm). The aggregate of openings for projection equipment shall not exceed 25 percent of the area of the wall between the projection room and the auditorium. Openings shall be provided with glass or other approved material, so as to close completely the opening.

409.3 Projection room and equipment ventilation. Ventilation shall be provided in accordance with the New York City Mechanical Code.

409.3.1 Supply air. Each projection room shall be provided with adequate air supply inlets so arranged as to provide well-distributed air throughout the room. Air inlet ducts shall provide an amount of air equivalent to the amount of air being exhausted by projection equipment. Air is permitted to be taken from the outside; from adjacent spaces within the building, provided the volume and infiltration rate is sufficient; or from the building air-conditioning system, provided it is so arranged as to provide sufficient air when other systems are not in operation.

409.3.2 Exhaust air. Projection rooms are permitted to be exhausted through the lamp exhaust system. The lamp exhaust system shall be positively interconnected with the lamp so that the lamp will not operate unless there is the required airflow. Exhaust air ducts shall terminate at the exterior of the building in such a location that the exhaust air cannot be readily recirculated into any air supply system. The projection room ventilation system is permitted to also serve appurtenant rooms, such as the generator and rewind rooms.

409.3.3 Projection machines. Each projection machine shall be provided with an exhaust duct that will draw air from each lamp and exhaust it directly to the outside of the building. The lamp exhaust is permitted to serve to exhaust air from the projection room to provide room air circulation. Such ducts shall be of rigid materials, except for a flexible connector approved for the purpose. The projection lamp or projection room exhaust system, or both, is permitted to be combined but shall not be interconnected with any other exhaust or return system, or both, within the building.

409.4 Lighting control. Provisions shall be made for control of the auditorium lighting and the means of egress lighting systems of theaters from inside the projection room and from at least not less than one other convenient point in the building.

409.5 Miscellaneous equipment. Each projection room shall be provided with rewind and film storage facilities.

SECTION BC 410
STAGES[AND], PLATFORMS AND TECHNICAL PRODUCTION AREAS

410.1 Applicability. The provisions of Sections 410.1 through 410.11 shall apply to all parts of buildings and structures that contain stages or platforms and similar appurtenances as herein defined.
410.2 Definitions. [The following words and terms shall, for the purposes of this section and as used elsewhere in this code, have the meanings shown herein.] This section contains terms defined elsewhere in the code, and terms with definitions that are specific to this section.

410.2.1 Terms defined elsewhere in the code. The following terms are defined in Chapter 2:

FLY GALLERY. [A raised floor area above a stage from which the movement of scenery and operation of other stage effects are controlled.]

GRIDIRON. [The structural framing over a stage supporting equipment for hanging or flying scenery and other stage effects.]

PINRAIL. [A rail on or above a stage through which belaying pins are inserted and to which lines are fastened.]

PLATFORM. [A raised area within a building used for worship, the presentation of music, plays or other entertainment; the head table for special guests; the raised area for lecturers and speakers; boxing and wrestling rings; theater-in-the-round stages; and similar purposes wherein there are no overhead hanging curtains, drops, scenery or stage effects other than lighting and sound. A temporary platform is one installed for not more than 30 days.]

PROSCENIUM WALL. [The wall that separates the stage from the auditorium or assembly seating area.]

STAGE. [A space within a building utilized for entertainment or presentations, which includes overhead hanging curtains, drops, scenery or stage effects other than lighting and sound.]

TECHNICAL PRODUCTION AREA.

410.2.2 Definitions specific to this section. The following term shall, for the purposes of this section, have the meaning shown herein:

PLATFORM. A raised area within a building used for worship, the presentation of music, plays or other entertainment; the head table for special guests; the raised area for lecturers and speakers; boxing and wrestling rings; theater-in-the-round stages; and similar purposes wherein there are no horizontal sliding curtains, there are no overhead hanging curtains, drops, scenery or stage effects other than lighting and sound. A temporary platform is one installed for not more than 30 days.

410.3 Stages. Stage construction shall comply with Sections 410.3.1 through 410.3.7.

410.3.1 Stage construction. Stage floors shall be constructed of materials as required for floors for the type of construction of the building in which such stages are located. Where areas below the stage are used for other occupancies, such stage floor shall be constructed in accordance with the requirements for separated occupancies as per Chapter 5.

Exceptions:
1. Stages of Type IIB or IV construction with a nominal 2-inch (51 mm) wood deck, provided that the stage is separated from other areas in accordance with Section 410.3.4.

2. In all types of construction, the finished floor shall be constructed of wood or approved noncombustible materials. Openings through stage floors shall be equipped with tight-fitting, solid wood trap doors with approved safety locks. The room or space below the stage into which the traps or lifts open shall be completely enclosed by construction having at least the fire-resistance rating required for the stage floor, and such room or space shall not be used as a workshop or storage area. Storage shall not be deemed to include the location in this area of scenery or scenic elements used during a performance. However, no combustible material that has a flame spread rating greater than 25 or that has not been rendered flameproof in accordance with the rules of the Fire Commissioner may be stored in this location at any time.

**410.3.1.1 Stage height and area.** Stage areas shall be measured to include the entire performance area and adjacent backstage and support areas not separated from the performance area by fire-resistance-rated construction. Stage height shall be measured from the lowest point on the stage floor to the highest point of the roof or floor deck above the stage.

**410.3.2 [Galleries] Technical production areas: galleries, gridirons, catwalks and pinrails.** Beams designed only for the attachment of portable or fixed theater equipment, gridirons, galleri es and catwalks shall be constructed of noncombustible materials. Floors of fly galleries and catwalks shall be constructed of noncombustible material. These areas shall not be considered to be floors, stories, mezzanines or levels in applying this code.

**410.3.3 Exterior stage doors.** Where protection of openings is required, exterior exit doors shall be protected with fire door assemblies that comply with Section 715. Exterior openings that are located on the stage for means of egress or loading and unloading purposes, and that are likely to be open during occupancy of the theater, shall be constructed with vestibules to prevent air drafts into the auditorium.

**410.3.4 Proscenium wall.** Where the stage height is greater than 40 feet (12 192 mm), all portions of the stage shall be completely separated from the seating area by a proscenium wall with not less than a 2-hour fire-resistance rating extending continuously from the foundation to the roof.

**410.3.5 Proscenium curtain.** Where a proscenium wall is required to have a fire-resistance rating, the stage opening shall be provided with one of the following:

1. A fire curtain complying with NFPA 80; or

2. An approved stage water curtain and sprinklers complying with Section 410.7 and Section 903.3.1.1 of this code, and the following:

   2.1. A deluge valve actuated by a “rate of rise system” and “fixed temperature system” shall control the water curtain system;
2.2. The heat actuating devices shall be located on not more than 10-foot (3048 mm) centers around the perimeter of the sprinklered area stage or as otherwise required for the type of device used to assure operation of the system;

2.3. In addition to the automatic controls, manual-operating devices shall be located at the voice/alarm communication system required by Section 410.8 and adjacent to at least one exit from the stage. Such exit shall be remote from the voice/alarm communication system;

2.4. The operation of the deluge valve shall activate the emergency ventilating equipment required in Section 410.3.7 and the deluge valve shall be provided with central station supervision in addition to a local alarm. All valves controlling deluge and sprinkler supplies on stages where the stage height is greater than 40 feet (12 192 mm) shall be provided with tamper switches wired to an annunciator panel located at the voice/alarm communication system required by Section 410.9;

2.5. The operation of any section of the sprinkler system on stages where the stage height is greater than 40 feet (12 192 mm) or the operation of the deluge system shall activate the emergency ventilating equipment required in Section 410.3.7 and shall be provided with central station supervision in addition to the required local alarm; and

2.6. The water flow alarm, tamper switches, the sprinkler system on stages where the stage height is greater than 40 feet (12 192 mm), and deluge system equipment shall be provided with central station supervision in addition to the required local alarm.

410.3.6 Scenery. All scenery or scenic elements shall be of noncombustible materials, or of materials having a flame-spread rating not exceeding 25, or of materials that have been rendered flameproof in compliance with the rules of the Fire Commissioner. Scenery and scenic elements not complying with the above requirements may be used only when expressly permitted by the Fire Department.

410.3.7 Stage ventilation. Emergency ventilation shall be provided for stages larger than 1,000 square feet (93 m²) in floor area, or with a stage height greater than 40 feet (12 192 mm). Such ventilation shall comply with Section 410.3.7.1 or 410.3.7.2.

410.3.7.1 Roof vents. Two or more vents constructed to open automatically by approved heat-activated devices and with an aggregate clear opening area of not less than 5 percent of the area of the stage shall be located near the center and above the highest part of the stage area. Supplemental means shall be provided for manual operation of the ventilator. Curbs shall be provided as required for skylights in Section 2610.2. Vents shall be labeled.

410.3.7.2 Smoke control. Smoke control in accordance with Section 909 shall be provided to maintain the smoke layer interface not less than 6 feet (1829 mm) above the highest level of the assembly seating or above the top of the proscenium opening where a proscenium wall is provided in compliance with Section 410.3.4.
410.4 Platform construction. Permanent platforms shall be constructed of materials as required for the type of construction of the building in which the permanent platform is located. Permanent platforms are permitted to be constructed in accordance with the following:

1. The area below the platform shall be enclosed on all sides with solid construction.

2. Platforms constructed of untreated wood shall not exceed an area of 400 square feet (37 m²). Platforms constructed of fire-retardant-treated wood shall not exceed an area of 1,200 square feet (111 m²). Platforms constructed of noncombustible materials shall not be limited in area.

3. Where wood is used, the floor of the platform shall be at least 1-inch (25 mm) nominal thickness. Such floor shall be laid on a solid, noncombustible backing, or shall have all spaces between supporting members fireblocked with noncombustible material.

Where the space beneath the permanent platform is used for storage or any other purpose other than equipment, wiring or plumbing, the floor construction shall not be less than 1-hour fire-resistant-rated construction. Where the space beneath the permanent platform is used only for equipment, wiring or plumbing, the underside of the permanent platform need not be protected.

410.4.1 Temporary platforms. Platforms installed for a period of not more than 30 days are permitted to be constructed of any materials permitted by [the] this code. The space between the floor and the platform above shall only be used for plumbing and electrical wiring to platform equipment.

410.5 Dressing and appurtenant rooms. Dressing and appurtenant rooms shall comply with Sections 410.5.1 [through] and [410.5.4] 410.5.2.

410.5.1 Separation from stage. The stage shall be separated from dressing rooms, scene docks, property rooms, workshops, storerooms and compartments appurtenant to the stage and other parts of the building by fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section [742] 711, or both. The [minimum] fire-resistance rating shall be not less than 2 hours for stage heights greater than 50 feet (15 240 mm) and not less than 1 hour for stage heights of 50 feet (15 240 mm) or less.

410.5.2 Separation from each other. Dressing rooms, scene docks, property rooms, workshops, storerooms and compartments appurtenant to the stage shall be separated from each other by not less than 1-hour fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section [742] 711, or both.

410.6 Means of egress. Except as modified or as provided for in this section, the provisions of Chapter 10 shall apply.

[410.5.3 Stage exits. At least one approved means of egress shall be provided from each side of the stage, and from each side of the space under the stage. At least one means of escape shall be provided from each fly gallery and from the gridiron. A steel ladder, alternating tread device or spiral stairway is permitted to be provided from the gridiron to a scuttle in the stage roof.] 410.6.1 Stage exits. No fewer than one exit or exit access doorway shall be provided from each side of
the stage and from each side of the space under the stage. Technical production areas shall comply
with Section 410.6.3.

410.6.2 Stairway and ramp enclosure. Exit access stairways and ramps serving a stage or
platform are not required to be enclosed. Exit access stairways and ramps serving technical
production areas are not required to be enclosed.

410.6.3 Technical production areas. Technical production areas shall be provided with means
of egress and means of escape in accordance with Sections 410.6.3.1 through 410.6.3.5.

410.6.3.1 Number of means of egress. No fewer than one means of egress shall be provided
from technical production areas.

410.6.3.2 Exit access travel distance. The exit access travel distance shall be not greater than
300 feet (91 440 mm) for buildings without a sprinkler system and 400 feet (121 900 mm) for
buildings equipped throughout with an automatic sprinkler system in accordance with Section
903.3.1.1.

410.6.3.3 Two means of egress. Where two means of egress are required, the common path
of travel shall be not greater than 100 feet (30 480 mm).

Exception: A means of escape to a roof in place of a second means of egress is permitted.

410.6.3.4 Path of egress travel. The following exit access components are permitted where
serving technical production areas:

1. Stairways.
2. Ramps.
3. Spiral stairways.
5. Alternating tread devices.
6. Permanent ladders.

410.6.3.5 Width. The path of egress travel within and from technical support areas shall be
not less than 22 inches (559 mm) in width.

410.7 Automatic sprinkler system. [Stages shall be equipped with an automatic fire-
extinguishing system in accordance with Chapter 9. Sprinklers shall be installed under the roof and
gridiron, and under all catwalks and galleries over the stage. Sprinklers shall be installed in dressing
rooms, performer lounges, workshops and storerooms accessory to such stages:]

[1. Automatic sprinklers shall be placed above all rigging lofts; and above all stage areas, other
than those portions of stage areas specifically designated on approved plans as performing
areas that do not have rigging lofts above and that are not at any time used for storage]
purposes. Sprinklers above rigging lofts shall be located so that no gridiron or other obstruction intervenes between the sprinkler heads and the scenery or scenic elements.

[2. When openings are provided in the stage floor for stage lifts, trap doors or stairs, sprinklers spaced 5 feet (1524 mm) on centers shall be provided around the opening at the ceiling below the stage, and baffles at least 12 inches (305 mm) in depth shall be installed around the perimeter of the opening.]

[3. All valves controlling sprinkler supplies shall be provided with tamper switches wired to an annunciator panel located at the voice/alarm communication system required by Section 410.8.]

[4. The operation of any section of the sprinkler system and the deluge system shall activate the emergency ventilating equipment required in Section 410.3.7 and shall be provided with central station supervision in addition to the required local alarm.]

[5. The water flow alarm, tamper switches and deluge system equipment shall be provided with central station supervision in addition to the required local alarm.]

An automatic sprinkler system in accordance with Section 903.3.1.1 shall be provided in the following areas when located within a place of assembly:

1. Stages including those with stage height greater than 40 feet (12 192 mm);

2. Technical production areas over the stage including under the roof, above and below the gridiron, catwalks and galleries;

3. Dressing rooms, performer lounges, shops and storerrooms accessory to stages or platforms, with live entertainment;

4. Platforms with live entertainment;

5. Cabarets; or

6. When openings are provided in the stage floor for stage lifts, trap doors or stairs, sprinklers spaced 5 feet (1524 mm) on centers shall be provided around the opening at the ceiling below the stage, and baffles at least 12 inches (305 mm) in depth shall be installed around the perimeter of the opening.

Exceptions:

1. Sprinklers are not required under [stage areas] stages or platforms less than 4 feet (1219 mm) in clear height [utilized] that are utilized exclusively for storage of tables and chairs, provided the concealed space is separated from the adjacent spaces by [not less than 5/8 inch (15.9 mm)] Type X gypsum board not less than 5/8 inch (15.9 mm) in thickness.

2. Sprinklers are not required within portable orchestra enclosures on stages.

[410.7] 410.8 Standpipes. Standpipe systems shall be provided in accordance with Section 905.

505
[410.8] 410.9 Voice/Alarm communication system. Stages shall be provided with a voice/alarm communication system in accordance with Section 907.2.1.1.

[410.9] 410.10 Construction in seating areas. Construction in seating areas shall be in accordance with Sections 410.10.1 and 410.10.2.

[410.9.1] 410.10.1 Scenery and scenic elements in seating areas. Scenery or scenic elements may be placed in seating sections if such elements:

1. Are noncombustible, or of materials that have been rendered flameproof in accordance with the rules of the Fire Commissioner, or have a flame spread rating of 25 or less.

2. Are adequately braced or secured.

3. Do not obstruct the required visibility of, or paths of travel to, exit openings.

[410.9.2] 410.10.2 Platforms or runways in seating areas. Platforms or runways for performances, to accommodate the operation of cameras, electronic equipment, or motion picture projection machines not using carbon-arc or other light source that emits a gaseous discharge may be constructed in seating sections, provided such platforms or runways comply with the requirements of Section 410.4, except Item 1, and Section [410.8] 410.9.

[410.10] 410.11 Stage lighting. Stage lights shall be placed such that they will not develop temperatures on the surface of any material that will cause that material to ignite, or smoke, or cause its flameproofing to deteriorate.

SECTION BC 411
SPECIAL AMUSEMENT BUILDINGS

411.1 General. Special amusement buildings having an occupant load of 75 or more shall comply with the requirements for the appropriate Group A occupancy and Sections 411.1 through 411.8. Special amusement buildings having an occupant load of less than 75 shall comply with the requirements for a Group B occupancy and Sections 411.1 through 411.8.

Exception: Special amusement buildings or portions thereof that are without walls or a roof and constructed to prevent the accumulation of smoke. All decorative material shall be noncombustible or composed of flame-retardant fabric.

411.2 [Definition] Definitions. The following word and term shall, for the purpose of this section and as used elsewhere, be defined in this code, have the meaning shown herein: Chapter 2:

SPECIAL AMUSEMENT BUILDING. A special amusement building is any temporary or permanent building or portion thereof that is occupied for amusement, entertainment or educational purposes and that contains a device or system that conveys passengers or provides a walkway along, around or over a course in any direction so arranged that the means of egress path is not readily apparent due to visual or audio distractions or is intentionally confounded or is not readily available because of the nature of the attraction or mode of conveyance through the building or structure.
411.3 **Automatic fire detection.** Special amusement buildings shall be equipped with an automatic fire detection system[4] in accordance with Section 907.

411.4 **Automatic sprinkler system.** Special amusement buildings shall be equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1. Where the special amusement building is temporary, the sprinkler water supply shall be of an approved temporary means.

**Exception:** Automatic fire sprinklers are not required where the total floor area of a temporary special amusement building is less than 1,000 square feet (93 m²) and the exit access travel distance from any point to an exit is less than 50 feet (15 240 mm).

411.5 **Alarm.** Actuation of a single smoke detector, the automatic sprinkler system or other automatic fire detection device shall immediately sound an alarm at the building initiate a pre-signal system in accordance with NFPA 72 as modified by Appendix Q of this code at a constantly attended location from which emergency action can be the Fire Department shall be notified and live voice evacuation instructions shall be initiated including the capability of manual initiation of requirements using an emergency voice/alarm communications system in accordance with Section 907.2.12.2 907.5.2.2.

411.6 **Emergency voice/alarm communications system.** An emergency voice/alarm communications system shall be provided in accordance with Sections 907.2.12.3 907.2.12 and 907.5.2.2, which is also permitted to serve as a public address system and shall be audible throughout the entire special amusement building.

411.7 **Exit marking.** Exit signs shall be installed at the required exit or exit access doorways of amusement buildings in accordance with this section and Section 1011.4.5 of this code. Approved directional exit markings listed in accordance with UL 1994, shall also be provided. Where mirrors, mazes or other designs are utilized that disguise the path of egress travel such that they are not apparent, approved low-level exit signs that comply with Section 1011.4.5 of this code, and directional path markings shall be provided and located not more than 8 inches (203 mm) above the walking surface and on or near the path of egress travel. Such markings shall become visible in an emergency. The directional exit marking shall be activated by the automatic fire detection system and the automatic sprinkler system in accordance with Section 907.2.12.2.

411.8 **Interior finish.** The interior finish shall be Class A in accordance with Section 803.1.

**SECTION BC 412**

**AIRCRAFT-RELATED OCCUPANCIES**

412.1 **General.** Aircraft-related occupancies shall comply with Sections 412.1 through 412.7 and the New York City Fire Code and Sections 412.1 through 412.8 of this code.

412.2 **Definitions.** The following words and terms shall, for the purposes of this chapter and as used elsewhere in this code, have the meanings shown herein.

**FIXED BASE OPERATOR (FBO).** [A commercial business granted the right by the airport sponsor to operate on an airport and provide aeronautical services, such as fueling, hangaring, tie down and parking, aircraft rental, aircraft maintenance and flight instruction.]
HELIPORT. [An area of land or water or a structural surface that is used, or intended for the use, for the landing and taking off of helicopters, and any appurtenant areas that are used, or intended for use, for heliport buildings or other heliport facilities.]

HELISTOP. [The same as “heliport,” except that no fueling, defueling, maintenance, repairs or storage of helicopters is permitted.]

RESIDENTIAL AIRCRAFT HANGAR. [An accessory building less than 2,000 square feet (186 m²) and 20 feet (6096 mm) in building height constructed on a one-or two-family property where aircraft are stored. Such use will be considered as a residential accessory use incidental to the dwelling.]

TRANSIENT AIRCRAFT. [Aircraft based at another location and that is at the transient location for not more than 90 days.]

412.3 Airport traffic control towers.

[412.3.1 General.] The provisions of Sections 412.3.1 through 412.3.6 412.3.9 shall apply to airport traffic control towers [not exceeding 1,500 square feet (140 m²) per floor] occupied only for the following uses:

1. Airport traffic control cab.
2. Electrical and mechanical equipment rooms.
3. Airport terminal radar and electronics rooms.
4. Office spaces incidental to the tower operation.
5. Lounges for employees, including sanitary facilities.

[412.3.2] 412.3.1 Type of construction. Airport traffic control towers shall be constructed to comply with the height [and area] limitations of Table [412.3.2] 412.3.1.

### TABLE [412.3.2] 412.3.1
HEIGHT [AND AREA] LIMITATIONS FOR AIRPORT TRAFFIC CONTROL TOWERS

For SI: 1 foot = 304.8 mm, 1 square foot = 0.0929 m².

$^a$ Height to be measured from grade plane to cab floor.
412.3.3 Egress. A minimum of one exit stairway shall be permitted for airport traffic control towers of any height provided that the occupant load per floor does not exceed 15. The stairway shall conform to the requirements of Section 1009. The stairway shall be separated from elevators by a minimum distance of one-half of the diagonal of the area served measured in a straight line. The exit stairway and elevator hoistway are permitted to be located in the same shaft enclosure, provided they are separated from each other by a 4-hour fire barrier having no openings. Such stairway shall be pressurized to a minimum of 0.15 inch of water column (43 Pa) and a maximum of 0.35 inch of water column (101 Pa) in the shaft relative to the building with stairway doors closed. Stairways need not extend to the roof as specified in Section 1009.13. The provisions of Section 403 do not apply.

Exception: Smokeproof enclosures as set forth in Section 1022.9 are not required where required stairways are pressurized.

412.3.2 Stairways. Stairways in airport traffic control towers shall be in accordance with Section 1011. Stairways in airport traffic control towers are not required to comply with Section 1011.12. Stairways shall be smokeproof enclosures complying with one of the alternatives provided in Section 909.20. The stairway shall be separated from elevators by a minimum distance of one-half of the diagonal of the area served measured in a straight line.

Exception: The stairway and elevator hoistway are permitted to be located in the same shaft enclosure without the minimum separation distance, provided they are separated from each other by a 4-hour fire barrier having no openings. Such stairway shall be pressurized to a minimum of 0.15 inch of water column (43 Pa) and a maximum of 0.35 inch of water column (101 Pa) in the shaft relative to the building with stairway doors closed.

412.3.3 Exit access. From observation levels, airport traffic control towers shall be permitted to have a single means of exit access for a distance of travel not greater than 100 feet (30 480 mm). Exit access stairways from the observation level need not be enclosed.

412.3.4 Number of exits. Not less than one exit stairway shall be permitted for airport traffic control towers of any height provided that the occupant load per floor is not greater than 15 and the area per floor does not exceed 1,500 square feet (140 m²).

412.3.4.1 Interior finish. Where an airport traffic control tower is provided with only one exit stairway, interior wall and ceiling finishes shall be either Class A or Class B.

412.3.5 Automatic fire detection systems. Airport traffic control towers shall be provided with an automatic fire detection system installed in accordance with Section 907.2.

412.3.5 Standby power. A standby power system that conforms to Chapter 27 shall be provided in airport traffic control towers more than 65 feet (19 812 mm) in height. Power shall be provided to the following equipment:

1. Pressurization equipment, mechanical equipment and lighting.

2. Elevator operating equipment.
3. Fire alarm and smoke detection systems.

412.3.6 Automatic sprinkler system. Where an occupied floor is located more than 35 feet (10 668 mm) above the lowest level of fire department vehicle access, airport traffic control towers shall be equipped with an automatic sprinkler system in accordance with Section 903.3.1.1.

412.3.7 Elevator protection. Wires or cables that provide normal or standby power, control signals, communication with the car, lighting, heating, air conditioning, ventilation and fire detecting systems to elevators shall be protected by construction having a fire-resistance rating of not less than 1 hour, or shall be circuit integrity cable having a fire-resistance rating of not less than 1 hour.

412.3.7.1 Elevators for occupant evacuation. Where provided in addition to an exit stairway, occupant evacuation elevators shall be in accordance with Section 3008.

[412.3.6] 412.3.8 Accessibility. Airport traffic control towers need not be accessible as specified in the provisions of Chapter 11.

412.3.9 Standby power and emergency power. A standby power system and an emergency power system that conform to Chapter 27 shall be provided in airport traffic control towers more than 65 feet (19 812 mm) in height. Standby power shall be provided to the following equipment:

1. Pressurization equipment and mechanical equipment provided in accordance with Section 412.3.2.

2. Elevator operating equipment.

3. Fire alarm and smoke detection systems.

412.3.9.1 Means of egress illumination. Emergency power shall be provided for means of egress illumination in accordance with Sections 1008.3.4 and 1008.3.5.

412.4 Aircraft hangars. Aircraft hangars shall be in accordance with Sections 412.4.1 through 412.4.6.

412.4.1 Exterior walls. Exterior walls located less than 30 feet (9144 mm) from lot lines or a public way shall have a fire-resistance rating not less than 2 hours.

412.4.2 Basements. Where hangars have basements, floors over basements shall be of Type IA construction and shall be made tight against seepage of water, oil or vapors. There shall be no opening or communication between basements and the hangar. Access to basements shall be from outside only.

412.4.3 Floor surface. Floors shall be graded and drained to prevent water or fuel from remaining on the floor. Floor drains shall discharge through an oil separator to the sewer or to an outside vented sump.
**Exception:** Aircraft hangars with individual lease spaces not exceeding 2,000 square feet (186 m²) each in which servicing, repairing or washing is not conducted and fuel is not dispensed shall have floors that are graded toward the door, but shall not require a separator.

**412.4.4 Heating equipment.** Heating equipment shall be placed in another room separated by 2-hour fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 712, or both. Entrance shall be from the outside or by means of a vestibule providing a two-doorway separation.

**Exceptions:**

1. Unit heaters and vented infrared radiant heating equipment suspended [at least] not less than 10 feet (3048 mm) above the upper surface of wings or engine enclosures of the highest aircraft that are permitted to be housed in the hangar [and at least] need not be located in a separate room provided they are mounted not less than 8 feet (2438 mm) above the floor in shops, offices and other sections of the hangar communicating with storage or service areas.

2. Entrance to the separated room shall be permitted by a single interior door [shall be allowed] provided the sources of ignition in the appliances are [at least] not less than 18 inches (457 mm) above the floor.

**412.4.5 Finishing.** The process of “doping,” involving use of a volatile flammable solvent, or of painting, shall be carried on in a separate detached building equipped with automatic fire-extinguishing equipment in accordance with Section 903.

**412.4.6 Fire suppression.** Aircraft hangars shall be provided with a fire suppression system designed in accordance with NFPA 409, based upon the classification for the hangar given in Table 412.4.6 of this code.

**Exception:** Where a fixed base operator has separate repair facilities on site, Group II hangars operated by a fixed base operator used for storage of transient aircraft only shall have a fire suppression system, but the system is exempt from foam requirements.

### 412.4 Hazardous operations

Any Group III aircraft hangar according to Table 412.4.6 that contains hazardous operations including, but not limited to, the following shall be provided with a Group I or II fire suppression system in accordance with NFPA 409 as applicable:

1. Doping.
2. Hot work including, but not limited to, welding, torch cutting and torch soldering.
3. Fuel transfer.
4. Fuel tank repair or maintenance not including defueled tanks in accordance with NFPA 409, inerted tanks or tanks that have never been fueled.
5. Spray finishing operations.
6. Total fuel capacity of all aircraft within the unsprinklered single fire area in excess of 1,600 gallons (6057 L).
7. Total fuel capacity of all aircraft within the maximum single fire area in excess of 7,500 gallons (28390 L) for a hangar with an automatic sprinkler system in accordance with Section 903.3.1.1.

### 412.4.6.2 Separation of maximum single fire areas

Maximum single fire areas established in accordance with hangar classification and construction type in Table 412.4.6 shall be separated by 2-hour fire walls constructed in accordance with Section 706. In determining the maximum single fire area as set forth in Table 412.4.6, ancillary uses that are separated from aircraft servicing areas by a fire barrier of not less than 1 hour, constructed in accordance with Section 707, shall not be included in the area.

### 412.5 Residential aircraft hangars

Residential aircraft hangars [as defined in Section 412.2] shall comply with Sections 412.5.1 through 412.5.5.

</tbody>
</table>

For SI: 1 foot = 304.8 mm, 1 square foot = 0.0929m².

a. Aircraft hangars with a door height greater than 28 feet shall be provided with fire suppression for a Group I hangar regardless of maximum fire area.
b. Groups shall be as classified in accordance with NFPA 409.
c. Membrane structures complying with Section 3102 shall be classified as a Group IV hangar.
d. Construction Types VA and VB are not permitted in Fire Districts. See [BC Table 503] Tables 504.3, 504.4 and 506.2.

412.5.1 Fire separation. A hangar shall not be attached to a dwelling unless separated by a fire barrier having a fire-resistance rating of not less than 1 hour. Such separation shall be continuous from the foundation to the underside of the roof and unpierced except for doors leading to the dwelling unit. Doors into the dwelling unit [must] shall be equipped with self-closing devices and conform to the requirements of Section [715] 716 with [at least a 4-inch (102 mm)] a noncombustible raised sill not less than 4 inches (102 mm) in height. Openings from a [hangar] hangar directly into a room used for sleeping purposes shall not be permitted.

412.5.2 Egress. A hangar shall provide two means of egress. One of the doors into the dwelling shall be considered as meeting only one of the two means of egress.

412.5.3 Smoke alarms. Smoke alarms shall be provided within the hangar in accordance with Section [907.2.11] 907.2.11.

412.5.4 Independent systems. Electrical, mechanical and plumbing drain, waste and vent (DWV) systems installed within the hangar shall be independent of the systems installed within the dwelling. Building sewer lines shall be permitted to be connected outside the structures.

Exception: Smoke detector wiring and feed for electrical subpanels in the hangar.

412.5.5 Height and area limits. Residential aircraft hangars shall be not [exceed] greater than 2,000 square feet (186 m²) in area and 20 feet (6096 mm) in building height.

412.6 Aircraft paint hangars. Aircraft painting operations where flammable liquids are used in excess of the maximum allowable quantities per control area listed in Table [307.7(1)] 307.1(1) shall be conducted in an aircraft paint hangar that complies with the provisions of Sections 412.6.1 through 412.6.6.

412.6.1 Occupancy group. Aircraft paint hangars shall be classified as Group H-2. Aircraft paint hangars shall comply with the applicable requirements of [this code and] the New York City Fire Code and this code for such occupancy.

412.6.2 Construction. The aircraft paint hangar shall be of Type I or II construction.

412.6.3 Operations. Only those flammable liquids necessary for painting operations shall be permitted in quantities less than the maximum allowable quantities per control area in Table 307.1(1). Spray equipment cleaning operations shall be conducted in a liquid use, dispensing and mixing room.

412.6.4 Storage. Storage of flammable liquids shall be in a liquid storage room.

412.6.5 Fire suppression. Aircraft paint hangars shall be provided with fire suppression as required by NFPA 409.

412.6.6 Ventilation. Aircraft paint hangars shall be provided with ventilation as required in the New York City Mechanical Code.
412.7 Aircraft manufacturing facilities. In buildings used for the manufacturing of aircraft, exit access travel distances indicated in Section 1017.1 shall be increased in accordance with the following:

1. The building shall be of Type I or II construction.

2. Exit access travel distance shall not exceed the distances given in Table 412.7.

TABLE 412.7

</tr>
</tbody>
</table>

For SI: 1 foot = 304.8 mm.

a. Contiguous floor area of the aircraft manufacturing facility having the indicated height.
b. Minimum height from finished floor to bottom of ceiling or roof slab or deck.

412.7.1 Ancillary areas. Rooms, areas and spaces ancillary to the primary manufacturing area shall be permitted to egress through such area having a minimum height as indicated in Table 412.7. Exit access travel distance within the ancillary room, area or space shall not exceed that indicated in Table 1017.2 based on the occupancy classification of that ancillary area. Total exit access travel distance shall not exceed that indicated in Table 412.7.

412.8 Heliports and helistops. Heliports and helistops may shall be permitted to be erected on buildings or other locations where they are constructed in accordance with Sections [412.7.4] 412.7.1 through [412.7.4] 412.8.5.

[412.7.4] 412.8.1 Size. The [touchdown or] landing area for helicopters of less than 3,500 pounds (1588 kg) shall be [a minimum of] not less than 20 feet (6096 mm) in length and width. The [touchdown] landing area shall be surrounded on all sides by a clear area having a minimum average width at roof level of 15 feet (4572 mm) but with no width less than 5 feet (1524 mm).

[412.7.2] 412.8.2 Design. Helicopter landing areas and the supports thereof on the roof of a building shall be noncombustible construction. Landing areas shall be designed to confine any flammable liquid spillage to the landing area itself and provisions shall be made to drain such spillage away from any exit or stairway serving the helicopter landing area or from a structure housing such exit or stairway. For structural design requirements, see Section [4605.4] 1607.6.

[412.7.3] 412.8.3 Means of egress. The means of egress from heliports and helistops shall comply with the provisions of Chapter 10. Landing areas located on buildings or structures shall have two or more means of egress. For landing [platforms or roof] areas less than 60 feet (18 288 mm) in length[1] or less than 2,000 square feet (186 m²) in area, the second means of egress is permitted to be a fire escape, alternating tread device,[2] or ladder leading to the floor below.
Rooftop heliports and helistops. Rooftop heliports and helistops shall comply with NFPA 418 and the *New York City Fire Code*.

**412.8.5 Standpipe system.** In buildings equipped with a standpipe system, the standpipe shall extend to the roof level in accordance with Section 905.3.6.

**SECTION BC 413**

**COMBUSTIBLE STORAGE**

413.1 General. Storage of combustible materials in attics, under-floor spaces, concealed spaces, and below-grade storage rooms shall comply with this section.

413.2 Attic, under-floor and concealed spaces. Attic, under-floor and concealed spaces used for storage of combustible materials shall be protected on the storage side as required for 1-hour [fire-resistant] fire-resistance-rated construction. Openings shall be protected by assemblies that are self-closing and are of noncombustible construction or solid wood core not less than 1 3/4 inch (45 mm) in thickness.

**Exceptions** Exception: Neither fire-resistance-rated construction nor opening protectives are required in any of the following locations:

1. Areas protected by approved automatic sprinkler systems.
2. Group R-3 and U occupancies.

413.3 High-piled stock or rack storage. High-piled stock or rack storage in any occupancy group shall comply with the *New York City Fire Code*, including the requirement for permit approval.

**SECTION BC 414**

**HAZARDOUS MATERIALS**

414.1 General. The provisions of Sections 414.1 through 414.7 shall apply to buildings and structures occupied for the manufacturing, processing, dispensing, use or storage of hazardous materials.

414.1.1 Other provisions. Buildings and structures with an occupancy in Group H shall comply with this section and the applicable provisions of the *New York City Fire Code* and Section 415 of this code, including, but not limited to, location, installation and mechanical provisions.

414.1.2 Materials. The safe design of hazardous material occupancies is material dependent. Individual material requirements are also found in the *New York City Mechanical Code*, the *New York City Fire Code*, and Sections 307 and 415 of this code.

414.1.2.1 Aerosols. Level 2 and 3 aerosol products shall be stored and displayed in accordance with the *New York City Fire Code*. See the *New York City Fire Code* and Section 311.2 of this code for occupancy group requirements.
414.1.3 Information required. A report shall be submitted to the [department] Fire Department identifying the maximum expected quantities of hazardous materials to be stored, used in a closed system and used in an open system, and subdivided to separately address hazardous material classification categories based on Tables 307.1(1) and 307.1(2). The methods of protection from such hazards, including but not limited to control areas, fire protection systems and Group H occupancies shall be indicated in the report and on the construction documents. The opinion and report shall be prepared by a qualified person, firm or corporation approved by the [commissioner] Fire Commissioner and [shall be] provided without charge to the [department] Fire Department.

For buildings and structures with an occupancy in Group H, separate floor plans shall be submitted identifying the locations of anticipated contents and processes so as to reflect the nature of each occupied portion of every building and structure.

414.2 Control areas. Control areas shall comply with the New York City Fire Code and Sections 414.2.1 through 414.2.5 of this code.

414.2.1 Construction requirements. Control areas shall be separated from each other by fire barriers constructed in accordance with [Sections] Section 707 or horizontal assemblies constructed in accordance with Section [711], or both.

414.2.2 Percentage of maximum allowable quantities. The percentage of maximum allowable quantities of hazardous materials per control area permitted at each floor level within a building shall be in accordance with Table 414.2.2.
### TABLE 414.2.2

</table>

a. Percentages shall be of the maximum allowable quantity per control area shown in Tables 307.1(1) and 307.1(2), with all increases allowed in the notes to those tables.

b. [Fire] Separation shall include fire barriers and [shall include walls and floors] horizontal assemblies as necessary to provide separation from other portions of the building.

#### 414.2.3 Number
The maximum number of control areas within a building shall be in accordance with Table 414.2.2.

#### 414.2.4 Fire-resistance-rating requirements
The required fire-resistance rating for fire barriers shall be in accordance with Table 414.2.2. The floor assembly of the control area \([\zeta]\) and the construction supporting the floor of the control area \([\zeta]\) shall have a [minimum 2-hour] fire-resistance rating [and shall comply with the requirements the New York City Fire Code] of not less than 2 hours.

**Exception:** The floor assembly of the control area and the construction supporting the floor of the control area are allowed to be 1-hour fire-resistance rated in buildings of Types IIA, IIIA and VA construction, provided that both of the following conditions exist:

1. The building is equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1; and

2. The building is three or fewer stories above grade plane.

#### 414.2.5 Hazardous material in Group M display and storage areas and in Group S storage areas
The aggregate quantity of nonflammable solid and nonflammable or noncombustible liquid hazardous materials permitted within a single control area of a Group M display and storage area, a Group S storage area or an outdoor control area is permitted to exceed the maximum allowable quantities per control area specified in Tables 307.1(1) and 307.1(2) without classifying the building or use as a Group H occupancy, provided that the materials are displayed and stored in accordance with the *New York City Fire Code* and quantities do not exceed the maximum allowable specified in Table 414.2.5(1) of this code.

In Group M occupancy wholesale and retail sales uses, indoor storage of flammable and combustible liquids shall not exceed the maximum allowable quantities per control area as indicated in Table 414.2.5(2) of this code, provided that the materials are displayed and stored in accordance with the *New York City Fire Code*.  

517
The maximum quantity of aerosol products in Group M occupancy retail display areas, storage areas adjacent to retail display areas and retail storage areas shall be in accordance with the New York City Fire Code.

414.2.5.1 Below-grade storage of flammable or combustible mixtures accessory to Group M establishments. Class I liquids shall not be stored in below-grade locations. Storage of Class II and Class III liquids, accessory to retail stores, and partly or completely below grade shall be permitted, provided that such below-grade area is equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 and enclosed by fire barriers having a fire-resistance rating of at least 2 hours, constructed in accordance with the construction type of the building. Openings shall be protected by self-closing assemblies having a fire-resistance rating of at least 1 1/2 hours.

Exception: Class IIIB liquids may be stored in below-grade locations that are not provided throughout with an automatic sprinkler system when such liquids are stored in a room that is separated, vertically and horizontally, from surrounding spaces by fire barriers of not less than 2-hour fire-resistance rating and such room is provided with an automatic sprinkler system.

For SI: 1 pound = 0.454 kg, 1 gallon = 3.785 L.

a. Hazard categories are as specified in the New York City Fire Code.
b. Maximum allowable quantities shall be increased 100 percent in buildings that are sprinklered in accordance with Section 903.3.1.1. When Note c also applies, the increase for both notes shall be applied accumulatively.
c. Maximum allowable quantities shall be increased 100 percent when stored in approved storage cabinets, in accordance with the New York City Fire Code. When Note b also applies, the increase for both notes shall be applied accumulatively.
d. See Table 414.2.2 for design and number of control areas.
e. Allowable quantities for other hazardous material categories shall be in accordance with Section 307.
f. Maximum quantities shall be increased 100 percent in outdoor control areas.
g. Maximum amounts [as permitted to] shall be increased to 2,250 pounds when individual packages are in the original sealed containers from the manufacturer or packager and do not exceed 10 pounds each.
h. Maximum amounts [as permitted to] shall be increased to 4,500 pounds when individual packages are in the original sealed containers from the manufacturer or packager and do not exceed 10 pounds each.
i. The permitted quantities shall not be limited in a building equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.
j. Quantities are unlimited in an outdoor control area.

For SI: 1 foot = 304.8 mm, 1 square foot = 0.0929 m², 1 gallon = 3.785 L, 1 gallon per minute per square foot = 40.75 L/min/m².
a. Control areas shall be separated from each other by not less than a 1-hour fire barrier wall.
b. To be considered as sprinklered, a building shall be equipped throughout with an approved automatic sprinkler system with a design providing minimum densities as follows:
1. For uncartoned commodities on shelves 6 feet or less in height where the ceiling height does not exceed 18 feet, quantities are those permitted with a minimum sprinkler design density of Ordinary Hazard Group 2.
2. For cartoned, palletized or racked commodities where storage is 4 feet 6 inches or less in height and where the ceiling height does not exceed 18 feet, quantities are those permitted with a minimum sprinkler design density of 0.21 gallon per minute per square foot over the most remote 1,500-square-foot area.
c. Where wholesale and retail sales or storage areas exceed 50,000 square feet in area, the maximum allowable quantities are allowed to be increased by 2 percent for each 1,000 square feet of area in excess of 50,000 square feet, up to a maximum of 100 percent of the table amounts. A control area separation is not required. The cumulative amounts, including amounts attained by having an additional control area, shall not exceed 30,000 gallons.

### 414.3 Ventilation

Rooms, areas or spaces [of Group H] in which explosive, corrosive, combustible, flammable or highly toxic dusts, mists, fumes, vapors or gases are or may be emitted due to the processing, use, handling or storage of materials shall be mechanically ventilated [as] where required by the New York City Fire Code [and] or the New York City Mechanical Code. [Ducts conveying explosives or flammable vapors, fumes or dusts shall extend directly to the exterior of the building without entering other spaces. Exhaust ducts shall not extend into or through ducts and plenums.]
Exception: Ducts conveying vapor or fumes having flammable constituents less than 25 percent of their lower flammable limit (LFL) are permitted to pass through other spaces.

Emissions generated at workstations shall be confined to the area in which they are generated as specified in the New York City Fire Code and the New York City Mechanical Code.

The location of supply and exhaust openings shall be in accordance with the New York City Mechanical Code. Exhaust air contaminated by highly toxic material shall be treated in accordance with the New York City Fire Code.

A manual shutoff control for ventilation equipment required by this section shall be provided outside the room adjacent to the principal access door to the room. The switch shall be of the break-glass type and shall be labeled: VENTILATION SYSTEM EMERGENCY SHUTOFF.

414.4 Hazardous material systems. Systems involving hazardous materials shall be suitable for the intended application. Controls shall be designed to prevent materials from entering or leaving process or reaction systems at other than the intended time, rate or path. Automatic controls, where provided, shall be designed to be fail safe.

414.5 Inside storage, dispensing and use. The inside storage, dispensing and use of hazardous materials [in excess of the maximum allowable quantities per control area of Tables 307.1(1) and 307.1(2)] shall be in accordance with the New York City Fire Code and Sections 414.5.1 through 414.5.4 of this code.

414.5.1 Explosion control. Explosion control shall be provided in accordance with the New York City Fire Code as required by Table 414.5.1 where quantities of hazardous materials specified in that table exceed the maximum allowable quantities in Table 307.1(1) or where a structure, room or space is occupied for purposes involving explosion hazards as required by the New York City Fire Code or Section 415 of this code.

\textsuperscript{a} See Section 414.1.3.
b. See the New York City Fire Code.
c. As generated during manufacturing or processing. [See definition of “Combustible dust” in Chapter 1.]
d. Storage or use.
e. In open use or dispensing.
f. Rooms containing dispensing and use of hazardous materials when an explosive environment can occur because of the characteristics or nature of the hazardous materials or as a result of the dispensing or use process.
g. A method of explosion control shall be provided when Class 2 water-reactive materials can form potentially explosive mixtures. [Considered as explosives for the purposes of storage.]
h. Explosion venting is not required for Group H-5 fabrication areas complying with the New York City Fire Code and Section 415.11.1 of this code.

[414.5.2 Monitor control equipment. Monitor control equipment shall be provided where required by the New York City Fire Code.]

[414.5.3 Automatic fire detection systems. Group I occupancies shall be provided with an automatic fire detection system in accordance with Section 907.2.]

[414.5.4] 414.5.2 Emergency or standby power. Where required by the New York City Fire Code or this code, mechanical ventilation, treatment systems, temperature control, alarm, detection or other electrically operated systems [are required, such systems] shall be provided with [an] emergency or standby power [system] in accordance with [Chapter 27] Section 2702 of this code. For storage and use areas for highly toxic or toxic materials, see the New York City Fire Code.

414.5.2.1 Exempt applications. Emergency or standby power is not required for the mechanical ventilation systems provided for any of the following:

[Exceptions:]

1. [Mechanical ventilation for storage] Storage of Class IB and [Class] IC flammable and combustible liquids in closed containers not exceeding 6.5 gallons (25 L) capacity.

2. Storage [areas for] of Class 1 and 2 oxidizers.

4. [For storage, use and handling areas for highly toxic or toxic materials, see Chapter 37 of the New York City Fire Code] Storage of asphyxiant, irritant and radioactive gases.

[5.] 414.5.2.2 Fail-safe engineered systems. Standby power for mechanical ventilation, treatment systems and temperature control systems shall not be required where an approved fail-safe engineered system is installed.

[414.5.5] 414.5.3 Spill control, drainage and containment. Rooms, buildings or areas occupied for the storage of solid and liquid hazardous materials shall be provided with a means to control spillage and to contain or drain off spillage and fire protection water discharged in the storage area where required in the New York City Fire Code. The methods of spill control shall be in accordance with the New York City Fire Code.

[414.5.6] 414.5.4 Storage of medical gases. When required by the New York City Fire Code, a one-hour room shall be provided for the storage of medical gases inside of buildings, with the protected openings and ventilation provisions as required by the New York City Fire Code.
414.6 Outdoor storage, dispensing and use. The outdoor storage, dispensing and use of hazardous materials shall be in accordance with the New York City Fire Code.

414.6.1 Weather protection. Where weather protection is provided for sheltering outdoor hazardous material storage or use areas, such areas shall be considered outdoor storage or use when the weather protection structure complies with Sections 414.6.1.1 through 414.6.1.3.

414.6.1.1 Walls. Walls shall not obstruct more than one side of the structure.

Exception: Walls shall be permitted to obstruct portions of multiple sides of the structure, provided that the obstructed area does not exceed greater than 25 percent of the structure’s perimeter.

414.6.1.2 Separation distance. The distance from the structure to buildings, lot lines, public ways or means of egress to a public way shall not be less than the distance required for an outside hazardous material storage or use area without weather protection.

414.6.1.3 Noncombustible construction. The overhead structure shall be of approved noncombustible construction with a maximum area of 1,500 square feet (140 m²).

Exception: The maximum area is permitted to be increased as provided by Section 506.

SECTION BC 415
GROUPS H-1, H-2, H-3, H-4 AND H-5

415.1 Scope. The provisions of Sections 415.1 through 415.11 shall apply to the storage and use of hazardous materials in excess of the maximum allowable quantities per control area listed in Section 307.1. Buildings and structures with an occupancy in Group H shall also comply with the applicable provisions of the New York City Fire Code and Section 414 of this code including, but not limited to, location and installation provisions.

415.2 Definitions. The following terms are defined in Chapter 2:

CONTINUOUS GAS DETECTION SYSTEM.

DETACHED BUILDING.

EMERGENCY CONTROL STATION.

EXHAUSTED ENCLOSURE.

FABRICATION AREA.

FLAMMABLE VAPORS OR FUMES.

GAS CABINET.

GAS ROOM.
HAZARDOUS PRODUCTION MATERIAL (HPM).

HPM FLAMMABLE LIQUID.

HPM ROOM.

IMMEDIATELY DANGEROUS TO LIFE AND HEALTH (IDLH).

LIQUID.

LIQUID STORAGE ROOM.

LIQUID USE, DISPENSING AND MIXING ROOM.

LOWER FLAMMABLE LIMIT (LFL).

NORMAL TEMPERATURE AND PRESSURE (NTP).

PHYSIOLOGICAL WARNING THRESHOLD LEVEL.

SERVICE CORRIDOR.

SOLID.

STORAGE, HAZARDOUS MATERIALS.

USE (MATERIAL).

WORKSTATION.

415.3 Automatic fire detection systems. Group H occupancies shall be provided with an automatic fire detection system in accordance with Section 907.2.

415.4 Automatic sprinkler system. Group H occupancies shall be equipped throughout with an automatic sprinkler system in accordance with Section 903.2.5.

[414.7] 415.5 Emergency alarms. Emergency alarms for the detection and notification of an emergency condition in Group H occupancies shall be provided as set forth herein.

[414.7.1] 415.5.1 Storage. An approved manual emergency alarm system shall be provided in buildings, rooms or areas used for storage of hazardous materials. Emergency alarm-initiating devices shall be installed outside of each interior exit or exit access door of storage buildings, rooms or areas. Activation of an emergency alarm-initiating device shall sound a local alarm to alert occupants of an emergency situation involving hazardous materials.

[414.7.2] 415.5.2 Dispensing, use and handling. Where hazardous materials having a hazard ranking of 3 or 4 in accordance with NFPA 704 are transported through corridors [or exit enclosures], interior exit stairways or ramps, or exit passageways, there shall be an emergency telephone system, a local manual alarm station or an approved alarm-initiating device at not more
than 150-foot (45,720 mm) intervals and at each exit and exit access doorway throughout the transport route. The signal shall be relayed to an approved central, proprietary or remote supervising station service or constantly attended on-site location and shall also initiate a local audible alarm.

[414.7.3] **415.5.3 Supervision.** Emergency alarm systems shall be supervised by an approved central, proprietary or remote station service or shall initiate an audible and visual signal at a constantly attended on-site location.

**415.5.4 Emergency alarm systems.** Emergency alarm systems shall be provided with emergency power in accordance with Section 2702.

[SECTION BC 415] [GROUPS H-1, H-2, H-3, H-4 AND H-5]

**415.1 Scope.** The provisions of Sections 415.1 through 415.8 shall apply to the storage and use of hazardous materials in excess of the maximum allowable quantities per control area listed in Section 307.1. Buildings and structures with an occupancy in Group H shall also comply with the applicable provisions of Section 414 and the New York City Fire Code, including, but not limited to, location and installation provisions.

**415.2 Definitions.** The following words and terms shall, for the purposes of this chapter and as used elsewhere in the code, have the meanings shown herein.

**CONTINUOUS GAS-DETECTION SYSTEM.** A gas-detection system where the analytical instrument is maintained in continuous operation and sampling is performed without interruption. Analysis is allowed to be performed on a cyclical basis at intervals not to exceed 30 minutes.

**DETACHED BUILDING.** A separate single-story building, without a basement or crawl space, used for the storage, handling or use of hazardous materials and located an approved distance from other buildings and structures.

**EMERGENCY CONTROL STATION.** An approved location on the premises of a semiconductor fabrication facility staffed by trained personnel that monitor the operation of equipment and systems including alert and alarm signals.

**EXHAUSTED ENCLOSURE.** A device, typically consisting of a hood equipped with a fan, that serves to capture and exhaust fumes, mist, vapors and gases generated at a workstation or other local environment. An exhausted enclosure does not include a room provided with general ventilation.

**FABRICATION AREA.** An area within a semiconductor fabrication facility in which processes using hazardous production materials are conducted.

**FLAMMABLE VAPORS OR FUMES.** The concentration of flammable constituents in air that exceed 25 percent of their lower flammable limit (LFL).

**GAS CABINET.** A fully enclosed, noncombustible enclosure used to provide an isolated environment for compressed gas containers in storage or use, including any doors and access ports for exchanging containers and accessing pressure-regulating controls.
[**GAS ROOM.** A separately ventilated, fully enclosed room in which only compressed gases and associated equipment and supplies are stored or used.]

[**HAZARDOUS PRODUCTION MATERIAL (HPM).** A solid, liquid or gas associated with semiconductor manufacturing that has a degree of hazard rating in health, flammability or instability of Class 3 or 4 as defined in NFPA 704 and that is used directly in research, laboratory or production processes which have as their end product materials that are not hazardous.]

[**HPM FLAMMABLE LIQUID.** An HPM liquid that is defined as either a Class I flammable liquid or a Class II or Class IIIA combustible liquid.]

[**HPM ROOM.** A room used in conjunction with or serving a Group H-5 occupancy, where HPM is stored or used and that is classified as a Group H-2, H-3 or H-4 occupancy.]

[**IMMEDIATELY DANGEROUS TO LIFE AND HEALTH (IDLH).** The concentration of airborne contaminants that poses a threat of death, immediate or delayed permanent adverse health effects, or effects that could prevent escape from such an environment as established by the National Institute of Occupational Safety and Health (NIOSH) based on both toxicity and flammability. It generally is expressed in parts per million by volume (ppm v/v) or milligrams per cubic meter (mg/m$^3$). If adequate data do not exist for precise establishment of IDLH concentrations, an independent certified industrial hygienist, industrial toxicologist, appropriate regulatory agency or other source approved by the Fire Commissioner shall make such determination.]

[**LIQUID.** A material that has a melting point that is equal to or less than 68°F (20°C) and a boiling point that is greater than 68°F (20°C) at 14.7 pounds per square inch absolute (psia) (101 kPa). When not otherwise identified, the term “liquid” includes both flammable and combustible liquids.]

[**LIQUID STORAGE ROOM.** A room classified as a Group H-3 occupancy used for the storage of flammable or combustible liquids in an unopened condition.]

[**LIQUID USE, DISPENSING AND MIXING ROOM.** A room in which Class I, II and IIIA flammable or combustible liquids are used, dispensed or mixed in open containers.]

[**LOWER FLAMMABLE LIMIT (LFL).** The minimum concentration of vapor in air at which propagation of flame will occur in the presence of an ignition source. The LFL is sometimes referred to as “LEL” or “lower explosive limit.”]

[**NORMAL TEMPERATURE AND PRESSURE (NTP).** A temperature of 70°F (21°C) and a pressure of 1 atmosphere [14.7 psia (101 kPa)].]

[**PHYSIOLOGICAL WARNING THRESHOLD LEVEL.** A concentration of air-borne contaminants, normally expressed in parts per million (ppm) or milligrams per cubic meter (mg/m$^3$), that represents the concentration at which persons can sense the presence of the contaminant due to odor, irritation or other quick acting physiological response. When used in conjunction with the permissible exposure limit (PEL) the physiological warning threshold levels are those consistent with the classification system used to establish the PEL. See the definition of “Permissible exposure limit (PEL)” in the New York City Fire Code.]
[SERVICE CORRIDOR. A fully enclosed passage other than one designated as a required means of egress, through which HPM can be moved during handling.]

[SOLID. A material that has a melting point, decomposes or sublimates at a temperature greater than 68°F (20°C).]

[WORKSTATION. A defined space within a fabrication area in which a specific function, laboratory procedure or research activity relating to semiconductor manufacture is conducted. A workstation may include equipment using HPM, hazardous materials storage cabinets, flammable liquid storage cabinets or gas cabinets, ventilation equipment, fire protection devices, detection devices, and electrical devices.]

[415.3] 415.6 Fire [Separation] separation distance. Group H occupancies shall be located on property in accordance with the other provisions of this chapter. In Groups H-2 and H-3, not less than 25 percent of the perimeter wall of the occupancy shall be an exterior wall.

Exceptions:

1. Liquid use, dispensing and mixing rooms having a floor area of not more than 500 square feet [(47 m²) (46.5 m²)] need not be located on the outer perimeter of the building where they are in accordance with the New York City Fire Code and NFPA 30.

2. Liquid storage rooms having a floor area of not more than 1,000 square feet (93 m²) need not be located on the outer perimeter where they are in accordance with the New York City Fire Code and NFPA 30.

3. Spray paint booths that comply with the New York City Fire Code need not be located on the outer perimeter.

[415.3.4] 415.6.1 Group H occupancy minimum fire separation distance. Regardless of any other provisions, buildings containing Group H occupancies shall be set back to the minimum fire separation distance as set forth in Items 4 through 4 below 415.6.1.4. Distances shall be measured from the walls enclosing the occupancy to lot lines, including those on a public way. Distances to assumed tax lot lines established for the purpose of determining exterior wall and opening protection[ in accordance with Section 705.3,] are not to be used to establish the minimum fire separation distance for buildings on sites where explosives are manufactured or used when separation is provided in accordance with the quantity distance tables specified for explosive materials in the New York City Fire Code.

[4.——] 415.6.1.1 Group H-1.,[Not] Group H-1 occupancies shall be set back not less than 75 feet (22 860 mm) and not less than required by the New York City Fire Code.
Exceptions:

1. Fireworks manufacturing buildings separated in accordance with NFPA 1124.

2. Buildings containing the following materials when separated in accordance with Table [415.3.1] of this code:
   
   2.1. Organic peroxides, unclassified detonable.
   
   2.2. Unstable reactive materials Class 4.
   
   2.3. Unstable reactive materials, Class 3 detonable.
   
   2.4. Detonable pyrophoric materials.

[2.] 415.6.1.2 Group H-2. Group H-2 occupancies shall be set back not less than 30 feet (9144 mm) where the area of the occupancy exceeds 1,000 square feet (93 m²), and it is not required to be located in a detached building.

[3.] 415.6.1.3 Groups H-2 and H-3. Group H-2 and H-3 occupancies shall be set back not less than 50 feet (15 240 mm) where a detached building is required (see Table [415.3.2] of this code).

[4.] Groups H-2 and H-3. Occupancies containing materials with explosive characteristics shall be separated as required by the New York City Fire Code. Where separations are not specified, the distances required shall not be less than the distances required by Table [415.3.1].

415.6.1.4 Explosive materials. Group H-2 and H-3 occupancies containing materials with explosive characteristics shall be separated as required by the New York City Fire Code. Where separations are not specified, the distances required shall not be less than the distances required by Table 415.6.1.

800 | 900 | 390 | 780 | 70 |
900 | 1,000 | 400 | 800 | 72 |

For SI: 1 pound = 0.454 kg, 1 foot = 304.8 mm.
a. The number of pounds of explosives listed is the number of pounds of trinitrotoluene (TNT) or the equivalent pounds of other explosive.
b. The distance listed is the distance to lot line, including lot lines at public ways.
c. For the purpose of this table, an inhabited building is any building on the same tax lot that is regularly occupied by people. Where two or more buildings containing explosives or magazines are located on the tax lot, each building or magazine shall comply with the minimum distances specified from inhabited buildings and, in addition, they shall be separated from each other by not less than the distance shown for “Separation of magazines,” except that the quantity of explosive materials contained in detonator buildings or magazines shall govern in regard to the spacing of said detonator buildings or magazines from buildings or magazines containing other explosive materials. If any two or more buildings or magazines are separated from each other by less than the specified “Separation of magazines” distances, then such two or more buildings or magazines, as a group, shall be considered as one building or magazine, and the total quantity of explosive materials stored in such group shall be treated as if the explosive were in a single building or magazine located on the site of any building or magazine of the group, and shall comply with the minimum distance specified from other magazines or inhabited buildings.
d. Storage of explosives in a quantity exceeding 1,000 pounds in one magazine is prohibited.
e. Magazine is a building or structure, other than an operating building, approved for storage of explosive materials. Portable or mobile magazines not exceeding 120 square feet (11 m²) in area need not comply with the requirements of this code, however, all magazines shall comply with the New York City Fire Code.
f. This table shall not apply to the temporary storage incidental to transportation.

[415.3.2] 415.6.2 Detached buildings for Group H-1[and], H-2 or H-3 occupancy. The storage or use of hazardous materials in excess of those amounts listed in Table [415.3.2] 415.6.2 shall be in accordance with the applicable provisions of Sections [415.4] 415.7 and [415.5] 415.8.

</table>

For SI: 1 ton = [2,000 pounds] = 906 kg, 1 cubic foot = 0.02832m$^3$, 1 pound = 0.454 kg.

a. For materials that are detonable, the distance to other buildings or lot lines shall be as specified in Table 415.3.2, 415.6.1 based on trinitrotoluene (TNT) equivalence of the material. For materials classified as explosives, see the New York City Fire Code. Unclassified detonable organic peroxides, detonable pyrophoric materials, detonable unstable (reactive) materials and detonable water-reactive materials shall be considered as explosives for the purposes of storage.

b. “Maximum Allowable Quantity” means the maximum allowable quantity per control area set forth in Table 307.1(1).

c. Limited to Division 1.4 materials and articles, including articles packaged for shipment, that are not regulated as an explosive under Bureau of Alcohol, Tobacco and Firearms and Explosives (BATF) regulations or unpackaged articles used in process operations that do not propagate a detonation or deflagration between articles, provided the net explosive weight of individual articles does not exceed 1 pound.

**415.6.2.1 Wall and opening protection.** Where a detached building is required by Table 415.3.2, 415.6.2, there are no requirements for wall and opening protection based on fire separation distance.

**415.4 415.7 Special provisions for Group H-1 occupancies.** Group H-1 occupancies shall be in detached buildings used for no other purpose, shall not exceed one story in height and be without basements, crawl spaces or other under-floor spaces. Roofs shall be of lightweight construction with
suitable thermal insula
tion to prevent sensitive material from reaching its decomposition temperature. Group H-1 occupancies containing materials that are in themselves both physical and health hazards in quantities exceeding the maximum allowable quantities per control area in Table [307.7(2)] 307.1(2) shall comply with requirements for both Group H-1 and H-4 occupancies.

[415.4.1] **Floors in storage rooms.** Floors in storage areas for organic peroxides, pyrophoric materials and unstable (reactive) materials shall be of liquid-tight, noncombustible construction.

[415.5] **Special provisions for Groups Group H-2 and H-3 occupancies.** Group H-2 and H-3 occupancies containing quantities of hazardous materials in excess of those set forth in Table [415.3.2] 415.6.2 shall be in detached buildings used for no other purpose, shall not exceed one story, manufacturing, processing, dispensing, use or storage of hazardous materials. Materials listed for Group H-1 occupancies in height and shall Section 307.3 are permitted to be located within Group H-2 or H-3 detached buildings provided the amount of materials per control area do not exceed the maximum allowed quantity specified in Table 307.1(1).

**415.8.1 Multiple hazards.** Group H-2 or H-3 occupancies containing materials that are in themselves both physical and health hazards in quantities exceeding the maximum allowable quantities per control area in Table 307.1(2) shall comply with requirements for Group H-2, H-3 or H-4 occupancies as applicable.

**415.8.2 Separation of incompatible materials.** Hazardous materials other than those listed in Table 415.6.2 shall be allowed in manufacturing, processing, dispensing, use or storage areas when separated from incompatible materials in accordance with the provisions of the New York City Fire Code.

**415.8.3 Water reactives.** Group H-2 and H-3 occupancies containing water-reactive materials shall be resistant to water penetration. Piping for conveying liquids shall not be over or through areas containing water reactives, unless isolated by approved liquid-tight construction.

**Exception:** Fire protection piping shall be permitted over or through areas containing water reactives without isolating it with liquid-tight construction.

[415.5.1] **Floors in storage rooms.** Floors in storage areas for organic peroxides, oxidizers, pyrophoric materials, unstable (reactive) materials and water-reactive solids and liquids shall be of liquid-tight, noncombustible construction.

[415.5.2] **Waterproof room.** Rooms or areas used for the storage of water-reactive solids and liquids shall be constructed in a manner that resists the penetration of water through the use of waterproof materials. Piping carrying water for other than approved automatic [fire] sprinkler systems shall not be within such rooms or areas.

[415.6] **Group H-2.** Occupancies in Group H-2 shall be constructed in accordance with the New York City Fire Code and Sections [415.6.1] 415.9.1 through [415.6.4] 415.9.3 of this code.
415.6.1—Combustible dusts, grain processing and storage. The provisions of Sections 415.6.1.1 through 415.6.1.5 shall apply to buildings in which materials that produce combustible dusts are stored or handled. Buildings that store or handle combustible dusts shall comply with the applicable provisions of NFPA 61, NFPA 69, NFPA 120, NFPA 484, NFPA 651, NFPA 654, NFPA 655, NFPA 664 and NFPA 85, and the New York City Fire Code.

415.6.1.1 Type of construction and height exceptions. Buildings shall be constructed in compliance with the height and area limitations of Table 503 for Group H-2; except that where erected of Type I or II construction, the heights and areas of grain elevators and similar structures shall be unlimited, and where of Type IV construction, the maximum height shall be 65 feet (19,812 mm) and except further that, in isolated areas, the maximum height of Type IV structures shall be increased to 85 feet (25,908 mm).

415.6.1.2 Grinding rooms. Every room or space occupied for grinding or other operations that produce combustible dusts shall be enclosed with fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 712, or both. The minimum fire-resistance rating shall be 2 hours where the area is not more than 3,000 square feet (279 m²), and 4 hours where the area is greater than 3,000 square feet (279 m²).

415.6.1.3 Conveyors. Conveyors, chutes, piping and similar equipment passing through the enclosures of rooms or spaces shall be constructed dirt tight and vapor tight, and be of approved noncombustible materials complying with Chapter 30.

415.6.1.4 Explosion control. Explosion control shall be provided as specified in the New York City Fire Code, or spaces shall be equipped with the equivalent mechanical ventilation complying with the New York City Mechanical Code.

415.6.1.5 Grain elevators. Grain elevators, malt houses and buildings for similar occupancies shall not be located within 30 feet (9144 mm) of interior lot lines or structures on the same lot, except where erected along a railroad right-of-way.

415.6.1.6 Coal pockets. Coal pockets located less than 30 feet (9144 mm) from interior lot lines or from structures on the same lot shall be constructed of not less than Type IB construction. Where more than 30 feet (9144 mm) from interior lot lines, or where erected along a railroad right-of-way, the minimum type of construction of such structures not more than 65 feet (19,812 mm) in building height shall be Type IV.

415.6.2 415.9.1 Flammable and combustible liquids. The storage, handling, processing and transporting of flammable and combustible liquids in Groups H-2 and H-3 occupancies shall be in accordance with the New York City Mechanical Code, the New York City Fire Code, and Sections 415.6.2.1 through 415.6.2.10 of this code.

415.6.2.1 415.9.1.1 Mixed occupancies. Where the storage tank area is located in a building of two or more occupancies and the quantity of liquid exceeds the maximum allowable quantity for one control area, the use shall be completely separated from adjacent fire areas in accordance with the requirements of Section 508.4.
[415.6.2.1.1] **415.9.1.1 Height exception.** Where storage tanks are located within a building no more than one story above grade plane, the height limitation of Section [503] 504 shall not apply for Group H.

[415.6.2.2] **415.9.1.2 Tank protection.** Storage tanks shall be noncombustible and protected from physical damage. Fire barriers or horizontal assemblies or both around the storage tank(s) shall be permitted as the method of protection from physical damage.

[415.6.2.3] **415.9.1.2.1 Tanks.** Storage tanks shall be approved tanks conforming to the requirements of the New York City Fire Code.

[415.6.2.4] **415.9.1.3 Suppression.** Group H shall be equipped throughout with an approved automatic sprinkler system, installed in accordance with Section 903.

[415.6.2.5] **415.9.1.4 Leakage containment.** A liquid-tight containment area compatible with the stored liquid shall be provided. The method of spill control, drainage control and secondary containment shall be in accordance with the New York City Fire Code.

Exception: Rooms where only double-wall storage tanks conforming to Section [415.6.2.3] 415.9.1.3 are used to store Class I, II and IIIA flammable and combustible liquids shall not be required to have a leakage containment area.

[415.6.2.6] **415.9.1.5 Leakage alarm.** An approved automatic alarm shall be provided to indicate a leak in a storage tank and room. The alarm shall sound an audible signal, 15 dBA above the ambient sound level, at every point of entry into the room in which the leaking storage tank is located. An approved sign shall be posted on every entry door to the tank storage room indicating the potential hazard of the interior room environment, or the sign shall state: WARNING, WHEN ALARM SOUNDS, THE ENVIRONMENT WITHIN THE ROOM MAY BE HAZARDOUS. The leakage alarm shall also be supervised in accordance with Chapter 9 to transmit a trouble signal.

[415.6.2.7] **415.9.1.6 Tank vent.** Storage tank vents for Class I, II or IIIA liquids shall terminate to the outdoor air in accordance with the New York City Fire Code.

[415.6.2.8] **415.9.1.7 Room ventilation.** Storage tank areas storing Class I, II or IIIA liquids shall be provided with mechanical ventilation. The mechanical ventilation system shall be in accordance with the New York City Mechanical Code and the New York City Fire Code.

[415.6.2.9] **415.9.1.8 Explosion venting.** Where Class I liquids are being stored, explosion venting shall be provided in accordance with the New York City Fire Code.

[415.6.2.10] **415.9.1.9 Tank openings other than vents.** Tank openings other than vents from tanks inside buildings shall be designed to ensure that liquids or vapor concentrations are not released inside the building.

[415.6.3] **415.9.2 Liquefied petroleum gas-distribution facilities.** The construction and installation of liquefied petroleum gas facilities shall be in accordance with the requirements of
this code, the *New York City Fire Code*, the *New York City Mechanical Code*, the *New York City Fuel Gas Code* and NFPA 58.

[415.6.4] 415.9.3 **Dry cleaning plants.** The construction and installation of dry cleaning plants shall be in accordance with the requirements of this code, the *New York City Mechanical Code*, the *New York City Plumbing Code* and NFPA 32. Dry cleaning solvents and systems shall be classified in accordance with the *New York City Fire Code*.

[415.7] 415.10 **Groups H-3 and H-4.** Groups H-3 and H-4 shall be constructed in accordance with the applicable provisions of this code and the *New York City Fire Code*.

[415.7.1] 415.10.1 **Flammable and combustible liquids.** The storage, handling, processing and transporting of flammable and combustible liquids in Group H-3 occupancies shall be in accordance with Section [415.6.2] 415.9.1.

[415.7.2] 415.10.2 **Gas rooms.** [When] Where gas rooms are provided, such rooms shall be separated from other areas by not less than 1-hour fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section [712] 711, or both.

[415.7.3] 415.10.3 **Floors in storage rooms.** Floors in storage areas for corrosive liquids and highly toxic or toxic materials shall be of liquid-tight, noncombustible construction.

[415.7.4] 415.10.4 **Separation-highly toxic solids and liquids.** Highly toxic solids and liquids not stored in approved hazardous materials storage cabinets shall be isolated from other hazardous materials storage by not less than 1-hour fire-resistance rating.

[415.8 Group H-5.]

[415.8.1 General.] 415.11 **Group H-5.** In addition to the requirements set forth elsewhere in this code, Group H-5 shall comply with the provisions of the *New York City Fire Code* and Section 415.9 of this code, including, but not limited to, automatic sprinkler protection for workstations, gas cabinets, exhausted enclosures, pass-throughs in exit access corridors and exhaust ducts.

[415.8.2] 415.11.1 **Fabrication areas.** Fabrication areas shall comply with Sections 415.11.1.1 through 415.11.1.8.

[415.8.2.1] 415.11.1.1 **Hazardous materials [in fabrication areas].** Hazardous materials and hazardous production materials (HPM) shall comply with Sections 415.11.1.1 through 415.11.1.2.

[415.8.2.1.1] 415.11.1.1.1 **Aggregate quantities.** The aggregate quantities of hazardous materials stored and used in a single fabrication area shall not exceed the quantities set forth in Table [415.8.2.1.1] 415.11.1.1.

**Exception:** The quantity limitations for any hazard category in Table [415.8.2.1.1] 415.11.1.1 shall not apply where the fabrication area contains quantities of
hazardous materials not exceeding the maximum allowable quantities per control area established by Tables 307.1(1) and 307.1(2).

For SI: 1 pound per square foot = 4.882 kg/m², 1 gallon per square foot = 40.7 L/m², 1 cubic foot @ NTP/square foot = 0.305 m³ @ NTP/m² 1 cubic foot = 0.02832 m³.

a. Hazardous materials within piping shall not be included in the calculated quantities.

b. Quantity of hazardous materials in a single fabrication shall not exceed the maximum allowable quantities per control area in Tables 307.1(1) and 307.1(2).

c. Densely packed baled cotton that complies with the packing requirements of ISO 8115 shall not be included in this material class.

d. The aggregate quantity of flammable, pyrophoric, toxic and highly toxic gases shall not exceed 9,000 SCF cubic feet at NTP.

e. The aggregate quantity of pyrophoric gases in the building shall not exceed the amounts set forth in Table 415.3.2.

**[415.8.2.1.2] 415.11.1.1.2 Hazardous production materials.** The maximum quantities of hazardous production materials (HPM) stored in a single fabrication area shall not exceed the maximum allowable quantities per control area established by Tables 307.1(1) and 307.1(2).

**[415.8.2.2] 415.11.1.2 Separation.** Fabrication areas, whose sizes are limited by the quantity of hazardous materials allowed by Table 415.8.2.1.1, shall be separated from each other, from corridors[,] and from other parts of the building by not less than 1-hour fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 712, or both.

Exceptions:

1. Doors within such fire barrier walls, including doors to corridors, shall be only self-closing fire door assemblies having a [fire protection] fire protection rating of not less than 3/4 hour.

2. Windows between fabrication areas and exit access corridors are permitted to be fixed glazing listed and labeled for a fire protection rating of [at least] not less than 3/4 hour in accordance with Section 716.

**[415.8.2.3] 415.11.1.3 Location of occupied levels.** Occupied levels of fabrication areas shall be located at or above the first story above grade plane.

**[415.8.2.4] 415.11.1.4 Floors.** Except for surfacing, floors within fabrication areas shall be of noncombustible construction.

Openings through floors of fabrication areas are permitted to be unprotected where the interconnected levels are used solely for mechanical equipment directly related to such fabrication areas (see also Section 415.8.2.5). Floors forming a part of an occupancy separation shall be liquid tight.

Floors forming a part of an occupancy separation shall be liquid tight.

**[415.8.2.5] 415.11.1.5 Shafts and openings through floors.** Elevator [] and other openings through floors shall be enclosed when required by Section 708 Sections 712 and 713. Mechanical, duct and piping penetrations within a fabrication area shall not extend through more than two floors. The annular space around penetrations for cables, cable trays, tubing, piping, conduit or ducts shall be sealed at the floor level to restrict...
the movement of air. The fabrication area, including the areas through which the ductwork and piping extend, shall be considered a single conditioned environment.

[415.8.2.6] 415.11.1.6 Ventilation. Mechanical exhaust ventilation at the rate of not less than 1 cubic foot per minute per square foot \(0.0051 \text{m}^3/(s \cdot \text{m}^2)\) \(0.0051 \text{m}^3/(s \cdot \text{m}^2)\) of floor area shall be provided throughout portions of the fabrication area where HPM are used or stored. The exhaust air duct system of one fabrication area shall not connect to another duct system outside that fabrication area within the building.

A ventilation system shall be provided to capture and exhaust fumes and vapors at workstations.

Two or more operations at a workstation shall not be connected to the same exhaust system where either one or the combination of the substances removed could constitute a fire, explosion or hazardous chemical reaction within the exhaust duct system.

Exhaust ducts penetrating fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 711 shall be contained in a shaft of equivalent fire-resistance-rated construction. Exhaust ducts shall not penetrate firewalls.

Fire dampers shall not be installed in exhaust ducts.

[415.8.2.7] 415.11.1.7 Transporting hazardous production materials to fabrication areas. HPM shall be transported to fabrication areas through enclosed piping or tubing systems that comply with Section [415.8.6.1] 415.11.6, through service corridors complying with Section [415.8.4] 415.11.3, or in exit access corridors as permitted in the exception to Section [415.8.3] 415.11.2. The handling or transporting of HPM within service corridors shall comply with the New York City Fire Code.

[415.8.2.8] 415.11.1.8 Electrical.

[415.8.2.8.1 General.] Electrical equipment and devices within the fabrication area shall comply with the New York City Electrical Code. The requirements for hazardous locations need not be applied where the average air change is at least four times that set forth in Section [415.8.2.6] 415.11.6 and where the number of air changes at any location is not less than three times that required by Section [415.8.2.6] 415.11.1.6. The use of recirculated air shall be permitted.

[415.8.2.8.2] 415.11.1.8.1 Workstations. Workstations shall not be energized without adequate exhaust ventilation. See Section [415.8.2.6] 415.11.1.6 for workstation exhaust ventilation requirements.

[415.8.3] 415.11.2 Corridors. Corridors shall comply with Chapter 10 and shall be separated from fabrication areas as specified in Section [415.8.2.2] 415.11.1.2. Corridors shall not contain HPM and shall not be used for transporting such materials except through closed piping systems as provided in Section [415.8.6.3] 415.11.6.
Exception: Where existing fabrication areas are altered or modified, HPM is allowed to be transported in existing corridors, subject to the following conditions:

1. Nonproduction HPM is allowed to be transported in corridors if utilized for maintenance, lab work and testing.

2. Corridors. Corridors adjacent to the fabrication area where the alteration work is to be done shall comply with Section 415.8.4 for a length determined as follows:

   2.1 The length of the common wall of the corridor and the fabrication area; and

   2.2 For the distance along the corridor to the point of entry of HPM into the corridor serving that fabrication area.

3. Emergency alarm system. There shall be an emergency telephone system, a local manual alarm station or other approved alarm-initiating device within corridors at not more than 150-foot (45 720 mm) intervals and at each exit and doorway. The signal shall be relayed to an approved central, proprietary or remote station service or the emergency control station and shall also initiate a locale audible alarm.

4. Pass-throughs. Self-closing doors having a fire-protection rating of not less than 1 hour shall separate pass-throughs from existing corridors. Pass-throughs shall be constructed as required for the corridors, and protected by an approved automatic fire-extinguishing system.

415.8.4 415.11.3 Service corridors. Service corridors within a Group H-5 occupancy shall comply with Sections 415.11.3.1 through 415.11.3.4.

415.8.4.1 Occupancy. Service corridors shall be classified as Group H-5.

415.8.4.2 415.11.3.1 Use conditions. Service corridors shall be separated from exit access corridors as required by Section 415.8.2.2 415.11.1.2. Service corridors shall not be used as a required exit access corridor.

415.8.4.3 415.11.3.2 Mechanical ventilation. Service corridors shall be mechanically ventilated as required by Section 415.8.2.6 415.11.1.6 or at not less than six air changes per hour[whichever is greater].

415.8.4.4 415.11.3.3 Means of egress. The maximum distance of travel from any point in a service corridor to an exit, exit access corridor or door into a fabrication area shall be not [exceed greater than 75 feet (22 860 mm)]. Dead ends shall be not [exceed greater than 4 feet (1219 mm) in length. There shall be not less than two exits, and not more than one-half of the required means of egress shall require travel into a fabrication area. Doors from service corridors shall swing in the direction of egress travel and shall be self-closing.
[415.8.4.5] 415.11.3.4 Minimum width. The [minimum] clear width of a service corridor shall be not less than 5 feet (1524 mm), or 33 inches (838 mm) wider than the widest cart or truck used in the service corridor, whichever is greater.

[415.8.4.6] 415.11.3.5 Emergency alarm system. Emergency alarm systems shall be provided in accordance with this section and Sections [414.7.1] 415.5.1 and [414.7.2] 415.5.2. The maximum allowable quantity per control area provisions shall not apply to emergency alarm systems required for HPM.

[415.8.4.6.1] 415.11.3.5.1 Service corridors. An emergency alarm system shall be provided in service corridors, with at least no fewer than one alarm device in each service corridor.

[415.8.4.6.2] 415.11.3.5.2 Exit access corridors and exit enclosures. Emergency alarms for exit access corridors and exit enclosures shall comply with Section [414.7.2] 415.5.2.

[415.8.4.6.3] 415.11.3.5.3 Liquid storage rooms, HPM rooms and gas rooms. Emergency alarms for liquid storage rooms, HPM rooms and gas rooms shall comply with Section [414.7.1] 415.5.1.

[415.8.4.6.4] 415.11.3.5.4 Alarm-initiating devices. An approved emergency telephone system, local alarm manual pull stations, or other approved alarm-initiating devices are allowed to be used as emergency alarm-initiating devices.

[415.8.4.6.5] 415.11.3.5.5 Alarm signals. Activation of the emergency alarm system shall sound a local alarm and transmit a signal to the emergency control station.

[415.8.5] 415.11.4 Storage of hazardous production materials.

[415.8.5.1 General.] Storage of HPM in fabrication areas shall be within approved or listed storage cabinets or gas cabinets[,] or within a workstation. The storage of [hazardous production materials (HPM)] HPM in quantities greater than those listed [in Section 1804.2 of] in the New York City Fire Code shall be in liquid storage rooms, HPM rooms or gas rooms as appropriate for the materials stored. The storage of other hazardous materials shall be in accordance with other applicable provisions of this code and the New York City Fire Code.

[415.8.5.2 Construction.] [415.11.5] HPM rooms [and], gas rooms, liquid storage room construction. HPM rooms [and], gas rooms and liquid shall be [separated from other areas by fire barriers] constructed in accordance with [Section 707 or horizontal assemblies constructed in accordance with Section 712, or both. The minimum fire-resistance rating shall be 2 hours where the area is 300 square feet (27.9 m²) or more and 1 hour where the area is less than 300 square feet (27.9 m²)] Sections 415.11.5.1 through 415.11.5.9.

[415.11.5.1] HPM rooms and gas rooms. HPM rooms and gas rooms shall be separated from other areas by fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 711, or both. The fire-resistance rating
shall be not less than 2 hours where the area is 300 square feet (27.9 m²) or more and not less than 1 hour where the area is less than 300 square feet (27.9 m²).

**[415.8.5.2.2] 415.11.5.2 Liquid storage rooms.** Liquid storage rooms shall be constructed in accordance with the following requirements:

1. Rooms [in excess of] greater than 500 square feet (46.5 m²) in area, shall have [at least] no fewer than one exterior door approved for Fire Department access.

2. Rooms shall be separated from other areas by fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 711, or both. The fire-resistance rating shall be [at least 1 hour] not less than 1 hour for rooms up to 150 square feet (13.9 m²) in area and not less than 2 hours where the room is more than 150 square feet (13.9 m²) in area.

3. Shelving, racks and wainscoting in such areas shall be of noncombustible construction or wood of not less than 1-inch (25 mm) nominal thickness or fire-retardant-treated wood complying with Section 2303.2.

4. Rooms used for the storage of Class I flammable liquids shall not be located in a basement.

**[415.8.5.2.3] 415.11.5.3 Floors.** Except for surfacing, floors of HPM rooms and liquid storage rooms shall be of noncombustible liquid-tight construction. Raised grating over floors shall be of noncombustible materials.

**[415.8.5.3] 415.11.5.4 Location.** Where HPM rooms, liquid storage rooms and gas rooms are provided, they shall have [at least] no fewer than one exterior wall and such wall shall be not less than 30 feet (9144 mm) from tax-lot lines, including tax-lot lines adjacent to public ways.

**[415.8.5.4] 415.11.5.5 Explosion control.** Explosion control shall be provided where required by Section 414.5.1.

**[415.8.5.5] 415.11.5.6 Exits.** Where two exits are required from HPM rooms, liquid storage rooms and gas rooms, one shall be directly to the outside of the building.

**[415.8.5.6] 415.11.5.7 Doors.** Doors in a fire barrier wall, including doors to corridors, shall be self-closing fire door assemblies having a fire-protection rating of not less than \( \frac{3}{4} \) hour.

**[415.8.5.7] 415.11.5.8 Ventilation.** Mechanical exhaust ventilation shall be provided in liquid storage rooms, HPM rooms and gas rooms at the rate of not less than 1 cubic foot per minute per square foot \((0.044 \text{ L/s/m}^2)\) \((0.044 \text{ L/s/m}^2)\) of floor area or six air changes per hour, whichever is greater, for categories of material.

Exhaust ventilation for gas rooms shall be designed to operate at a negative pressure in relation to the surrounding areas and direct the exhaust ventilation to an exhaust system.

**[415.8.5.8] 415.11.5.9 Emergency alarm system.** An approved emergency alarm system shall be provided for HPM rooms, liquid storage rooms and gas rooms.
Emergency alarm-initiating devices shall be installed outside of each interior exit door of such rooms.

Activation of an emergency alarm-initiating device shall sound a local alarm and transmit a signal to the emergency control station.

An approved emergency telephone system, local alarm manual pull stations or other approved alarm-initiating devices are allowed to be used as emergency alarm-initiating devices.

[415.8.6] 415.11.6 Piping and tubing.

[415.8.6.1 General.] Hazardous production materials piping and tubing shall comply with [Sections 416.8.6.1 through 416.8.6.4] this section and ASME B31.3.

[415.8.6.2 Supply piping and tubing.]

[415.8.6.2.1] 415.11.6.1 HPM having a health-hazard ranking of 3 or 4. Systems supplying HPM liquids or gases having a health-hazard ranking of 3 or 4 shall be welded throughout, except for connections, to the systems that are within a ventilated enclosure if the material is a gas, or an approved method of drainage or containment is provided for the connections if the material is a liquid.

[415.8.6.2.2] 415.11.6.2 Location in service corridors. Hazardous production materials supply piping or tubing in service corridors shall be exposed to view.

[415.8.6.2.3] 415.11.6.3 Excess flow control. Where HPM gases or liquids are carried in pressurized piping above 15 pounds per square inch gauge (psig) (103.4 kPa), excess flow control shall be provided. Where the piping originates from within a liquid storage room, HPM room or gas room, the excess flow control shall be located within the liquid storage room, HPM room or gas room. Where the piping originates from a bulk source, the excess flow control shall be located as close to the bulk source as practical.

[415.8.6.3] 415.11.6.4 Installations in corridors and above other occupancies. The installation of HPM piping and tubing within the space defined by the walls of exit access corridors and the floor or roof above, or in concealed spaces above other occupancies, shall be in accordance with [Sections 415.8.6.2] Sections 415.11.6.1 through 415.11.6.3 and the following conditions:

1. Automatic sprinklers shall be installed within the space unless the space is less than 6 inches (152 mm) in the least dimension.

2. Ventilation not less than six air changes per hour shall be provided. The space shall not be used to convey air from any other area.

3. Where the piping or tubing is used to transport HPM liquids, a receptor shall be installed below such piping or tubing. The receptor shall be designed to collect any discharge or leakage and drain it to an approved location. The 1-hour enclosure shall not be used as part of the receptor.
4. HPM supply piping and tubing and nonmetallic waste lines shall be separated from the corridor and from occupancies other than Group H-5 by fire barriers or by an approved method or assembly that [have] has a fire-resistance rating of not less than 1 hour. [Where gypsum wallboard is used, joints on the piping side of the enclosure are not required to be taped, provided the joints occur over framing members.] Access openings into the enclosure shall be protected by approved fire-resistance-rated assemblies.

5. Readily accessible manual or automatic remotely activated fail-safe emergency shutoff valves shall be installed on piping and tubing other than waste lines at the following locations:

5.1. At branch connections into the fabrication area.

5.2. At entries into exit access corridors.

Exception: Transverse crossings of the corridors by supply piping that is enclosed within a ferrous pipe or tube for the width of the corridor need not comply with Items 1 through 5.

[415.8.6.4] 415.11.6.5 Identification. Piping, tubing and HPM waste lines shall be identified in accordance with ANSI A13.1 to indicate the material being transported.

[415.8.7] 415.11.7 Continuous [gas-detection] gas detection systems. A continuous [gas-detection] gas detection system shall be provided for HPM gases [when] where the physiological warning threshold level of the gas is at a higher level than the accepted permissible exposure limit (PEL) for the gas and for flammable gases in accordance with [this section] Sections 415.11.7.1 and 415.11.7.2.

[415.8.7.1] 415.11.7.1 Where required. A continuous [gas-detection] gas detection system shall be provided in the areas identified in Sections [415.8.7.1.1] 415.11.7.1.1 through [415.8.7.1.4] 415.11.7.1.4.

[415.8.7.1.1] 415.11.7.1.1 Fabrication areas. A continuous [gas-detection] gas detection system shall be provided in fabrication areas [when] where gas is used in the fabrication area.

[415.8.7.1.2] 415.11.7.1.2 HPM rooms. A continuous [gas-detection] gas detection system shall be provided in HPM rooms [when] where gas is used in the room.

[415.8.7.1.3] 415.11.7.1.3 Gas cabinets, exhausted enclosures and gas rooms. A continuous [gas-detection] gas detection system shall be provided in gas cabinets and exhausted enclosures. A continuous [gas-detection] gas detection system shall be provided in gas rooms [when] where gases are not located in gas cabinets or exhausted enclosures.

[415.8.7.1.4] 415.11.7.1.4 Corridors. [When] Where gases are transported in piping placed within the space defined by the walls of a corridor[.] and the floor or roof above
the corridor, a continuous gas detection system shall be provided where piping is located and in the corridor.

**Exception:** A continuous gas detection system is not required for occasional transverse crossings of the corridors by supply piping that is enclosed in a ferrous pipe or tube for the width of the corridor.

**[415.8.7.2] 415.11.7.2 [Gas-detection] Gas detection system operation.** The continuous gas detection system shall be capable of monitoring the room, area or equipment in which the gas is located at or below all the following gas concentrations:

1. Immediately dangerous to life and health (IDLH) values where the monitoring point is within an exhausted enclosure, ventilated enclosure or gas cabinet.
2. Permissible exposure limit (PEL) levels where the monitoring point is in an area outside an exhausted enclosure, ventilated enclosure or gas cabinet.
3. For flammable gases, the monitoring detection threshold level shall be vapor concentrations in excess of 25 percent of the lower flammable limit (LFL) where the monitoring is within or outside an exhausted enclosure, ventilated enclosure or gas cabinet.
4. Except as noted in this section, monitoring for highly toxic and toxic gases shall also comply with [Chapter 37 of the New York City Fire Code](#).

**[415.8.7.2.1] 415.11.7.2.1 Alarms.** The gas detection system shall initiate a local alarm and transmit a signal to the emergency control station when a short-term hazard condition is detected. The alarm shall be both visual and audible and shall provide warning both inside and outside the area where the gas is detected. The audible alarm shall be distinct from all other alarms.

**[415.8.7.2.2] 415.11.7.2.2 Shutoff of gas supply.** The gas detection system shall automatically close the shutoff valve at the source on gas supply piping and tubing related to the system being monitored for which gas is detected when a short-term hazard condition is detected. Automatic closure of shutoff valves shall comply with the following:

1. Where the gas detection sampling point initiating the gas detection system alarm is within a gas cabinet or exhausted enclosure, the shutoff valve in the gas cabinet or exhausted enclosure for the specific gas detected shall automatically close.
2. Where the gas detection sampling point initiating the gas detection system alarm is within a room and compressed gas containers are not in gas cabinets or an exhausted enclosure, the shutoff valves on all gas lines for the specific gas detected shall automatically close.
3. Where the gas detection sampling point initiating the gas detection system alarm is within a piping distribution manifold enclosure, the shutoff valve supplying the...
manifold for the compressed gas container of the specific gas detected shall automatically close.

**Exception:** Where the gas detection sampling point initiating the gas detection system alarm is at the use location or within a gas valve enclosure of a branch line downstream of a piping distribution manifold, the shutoff valve for the branch line located in the piping distribution manifold enclosure shall automatically close.

[415.8.8] **415.11.8 Manual fire alarm system.** An approved manual fire alarm system shall be provided throughout buildings containing Group H-5. Activation of the alarm system shall initiate a local alarm and transmit a signal to the emergency control station. The fire alarm system shall be designed and installed in accordance with Section 907.

[415.8.9] **415.11.9 Emergency control station.** An emergency control station shall be provided in accordance with Sections 415.8.9.1 through 415.8.9.3.

[415.8.9.1] **415.11.9.1 Location.** The emergency control station shall be located on the premises at an approved location outside the fabrication area.

[415.8.9.2] **415.11.9.2 Staffing.** Trained personnel shall continuously staff the emergency control station.

[415.8.9.3] **415.11.9.3 Signals.** The emergency control station shall monitor signals from emergency equipment and alarm and detection systems. Such emergency equipment and alarm and detection systems shall include the following systems, whether required by this code or the *New York City Construction Codes* or voluntarily installed:

1. Automatic sprinkler system alarm and monitoring systems.
3. Emergency alarm systems.
4. Continuous gas detection systems.
5. Smoke detection systems.
6. Emergency power system.
7. Automatic detection and alarm systems for pyrophoric liquids and Class 3 water-reactive liquids required in Section 1803 of the *New York City Fire Code*.
8. Exhaust ventilation flow alarm devices for pyrophoric liquids and Class 3 water-reactive liquids cabinet exhaust ventilation systems required in Section 1803 of the *New York City Fire Code*.

[415.8.10] **415.11.10 Emergency power system.** An emergency power system shall be provided in Group H-5 occupancies in accordance with Section 2702. The emergency power system shall supply power automatically to
electrical systems specified in Section 415.11.10.1 when the normal electrical supply system is interrupted.

[415.8.10.1] 415.11.10.1 Required electrical systems. Emergency power shall be provided for electrically operated equipment and connected control circuits for the following systems:

1. HPM exhaust ventilation systems.
2. HPM gas cabinet ventilation systems.
3. HPM exhausted enclosure ventilation systems.
4. HPM gas room ventilation systems.
5. HPM gas detection systems.
6. Emergency alarm systems.
7. Manual and automatic fire alarm systems.
8. Automatic sprinkler system monitoring and alarm systems.
9. Automatic alarm and detection systems for pyrophoric liquids and Class 3 water-reactive liquids required in Section 1803 of the New York City Fire Code.
10. Flow alarm switches for pyrophoric liquids and Class 3 water-reactive liquids cabinet exhaust ventilation systems required in Section 1803 of the New York City Fire Code.
11. Electrically operated systems required elsewhere in this code applicable to the use, storage or handling of HPM.

[415.8.10.2] 415.11.10.2 Exhaust ventilation systems. Exhaust ventilation systems are allowed to be designed to operate at not less than one-half the normal fan speed on the emergency power system where it is demonstrated that the level of exhaust will maintain a safe atmosphere.

[415.8.11] 415.11.11 Automatic sprinkler system protection in exhaust ducts for HPM.

[415.8.11.1] Exhaust ducts for HPM. An approved automatic fire sprinkler system shall be provided in exhaust ducts conveying vapors, fumes, mists or dusts generated from HPM in accordance with this section and the New York City Mechanical Code and Sections 415.11.11.1 through 415.11.11.3 of this code.

[415.11.2] 415.11.11.1 Metallic and noncombustible, nonmetallic exhaust ducts. An approved automatic sprinkler system shall be provided in metallic and noncombustible nonmetallic exhaust ducts where all of the following conditions apply:
1. Where the largest cross-sectional diameter is equal to or greater than 10 inches (254 mm).

2. The ducts are within the building.

3. The ducts are conveying flammable gases, vapors or fumes.

[415.8.11.3] 415.11.11.2 Combustible nonmetallic exhaust ducts. Automatic fire sprinkler system protection shall be provided in combustible nonmetallic exhaust ducts where the largest cross-sectional diameter of the duct is equal to or greater than 10 inches (254 mm).

[Exceptions:] Exception: Ducts need not be provided with automatic sprinkler protection as follows:

1. Ducts listed or approved for applications without automatic [fire] sprinkler system protection.

2. Ducts not more than 12 feet (3658 mm) in length installed below ceiling level.

[415.8.11.4] 415.11.11.3 Automatic sprinkler locations. Sprinkler systems shall be installed at 12-foot (3658 mm) intervals in horizontal ducts and at changes in direction. In vertical ducts, sprinklers shall be installed at the top and at alternate floor levels.

SECTION BC 416
APPLICATION OF FLAMMABLE FINISHES

416.1 General. The provisions of this section shall apply to the construction, installation and use of buildings and structures, or parts thereof, for the [spraying] application of flammable paints, varnishes and lacquers or other flammable materials or mixtures or compounds used for painting, varnishing, staining or similar purposes. Such construction and equipment shall comply with the New York City Fire Code.

416.2 Spray rooms. Spray rooms shall be enclosed with not less than 2-hour fire barriers constructed in accordance with Section 707[4] or horizontal assemblies constructed in accordance with Section 712[7], or both. [The enclosure shall be at least 2-hour fire resistance rated.] Floors shall be waterproofed and drained in an approved manner.

416.2.1 Surfaces. The interior surfaces of spray rooms shall be smooth and shall be so constructed to permit the free passage of exhaust air from all parts of the interior and to facilitate washing and cleaning, and shall be so designed to confine residues within the room. Aluminum shall not be used.

416.2.2 Ventilation. Mechanical ventilation and interlocks with the spraying operation shall be in accordance with the New York City Mechanical Code.

416.3 Spraying spaces. Spraying spaces shall be ventilated with an exhaust system capable of at least six air changes per hour to prevent the accumulation of flammable mist or vapors in accordance with the New York City Mechanical Code. Where such spaces are not separately enclosed, noncombustible spray curtains shall be provided to restrict the spread of flammable vapors.
416.3.1 Surfaces. The interior surfaces of spraying spaces shall be smooth and continuous without edges, shall be so constructed to permit the free passage of exhaust air from all parts of the interior and to facilitate washing and cleaning; and shall be so designed to confine residues within the spraying space. Aluminum shall not be used.

416.4 Spray booths. Spray booths shall be designed, constructed and operated in accordance with the New York City Fire Code.

416.5 Fire protection. An automatic sprinkler system or fire-extinguishing system shall be provided in all spray, dip and immersing spaces and storage rooms and shall be installed in accordance with Chapter 9.

SECTION BC 417
DRYING ROOMS

417.1 General. A drying room or dry kiln installed within a building shall be constructed entirely of approved noncombustible materials or assemblies of such materials regulated by the approved rules or as required in the general and specific sections of Chapter 4 of this chapter for special occupancies, where applicable to the general requirements of Chapter 28 of this code, and in accordance with the New York City Fire Code.

417.2 Piping clearance. Overhead heating pipes shall have a clearance of not less than 2 inches (51 mm) from combustible contents in the dryer.

417.3 Insulation. Where the operating temperature of the dryer is 175°F (79°C) or more, metal enclosures shall be insulated from adjacent combustible materials by not less than 12 inches (305 mm) of airspace, or the metal walls shall be lined with 1/4-inch (6.4 mm) insulating mill board or other approved equivalent insulation.

417.4 Fire protection. Drying rooms designed for high-hazard materials and processes, including special occupancies as provided for in Chapter 4 of this chapter, shall be protected by an approved automatic sprinkler system or fire-extinguishing system complying with the provisions of Chapter 9.

SECTION BC 418
ORGANIC COATINGS

418.1 Building features. Manufacturing of organic coatings shall be done only in buildings that do not have pits or basements and shall comply with the New York City Fire Code. Such buildings shall be protected by an approved automatic sprinkler system in accordance with Chapter 9 of this code.

418.2 Location. Organic coating manufacturing operations and operations incidental to or connected therewith shall not be located in buildings having other occupancies.

418.3 Process mills. Mills operating with close clearances and that process flammable and heat-sensitive materials, such as nitrocellulose, shall be classified as Group H-1 occupancy.

418.4 Tank storage. Storage areas for flammable and combustible liquid tanks inside of structures shall be located at or above grade and shall be separated from the processing area by not less than 2-
hour fire-resistance-rated fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section [742] 711, or both.

**418.5 Nitrocellulose storage.** Nitrocellulose storage shall be located on a detached pad or in a separate structure or a room enclosed with no less than 2-hour fire-resistance-rated fire barriers.

**418.6 Finished products.** Storage rooms for finished products that are flammable or combustible liquids shall be separated from the processing area by fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section [742] 711, or both having a fire-resistance rating of at least 2 hours, and openings in the walls shall be protected with approved opening protectives.

SECTION 419
RESERVED

SECTION BC 420
GROUPS I-1, R-1, R-2, R-3

**420.1 General.** Occupancies in Groups I-1, R-1, R-2 and R-3 shall comply with the provisions of Sections 420.1 through 420.6 and other applicable provisions of this code.

**420.2 Separation walls.** Walls separating dwelling units in the same building, walls separating sleeping units in the same building and walls separating dwelling or sleeping units from other occupancies contiguous to them in the same building shall be constructed as fire barriers constructed in accordance with Section 707 and shall be at least 1-hour fire-resistance-rated.

**420.3 Horizontal separation.** Floor assemblies separating dwelling units in the same buildings, floor assemblies separating sleeping units in the same building and floor assemblies separating dwelling or sleeping units from other occupancies contiguous to them in the same building shall be constructed as horizontal assemblies in accordance with Section [742] 711.

**420.4 Reserved.**

**420.5 Automatic sprinkler system.** Group R occupancies shall be equipped throughout with an automatic sprinkler system in accordance with Section 903.2.8. Group I-1 occupancies shall be equipped throughout with an automatic sprinkler system in accordance with Section 903.2.6. Quick response or residential automatic sprinklers shall be installed in accordance with Section 903.3.2.

**420.6 Fire alarm systems and smoke alarms.** Fire alarm systems and smoke alarms shall be provided in Group I-1, R-1, and R-2 occupancies in accordance with Sections 907.2.6, 907.2.8 and 907.2.9, respectively. Single or multiple station smoke alarms shall be provided in Groups I-1, R-2, and R-3 in accordance with Section 907.2.11.

SECTION BC 421
[RESERVED]
HYDROGEN FUEL GAS ROOMS

**421.1 General.** Where required by the New York City Fire Code, hydrogen fuel gas rooms shall be designed and constructed in accordance with Sections 421.1 through 421.7 of this code.
421.1.1 Scope. Hydrogen fuel gas rooms shall be separately ventilated, fully enclosed, and shall contain all equipment and piping for the immediate on-premises use of hydrogen in indoor fuel cells or other energy production process, and incidental indoor storage of gaseous hydrogen in accordance with the New York City Fire Code. A hydrogen fuel gas room shall not be used to house production or dispensing of hydrogen motor fuel.

421.1.2 Storage. Hydrogen fuel gas rooms shall not be used for storage of gaseous hydrogen in quantities exceeding the maximum allowable quantity per control area set forth in Table 307.1(1). Where approved by the Fire Department, such hydrogen fuel gas rooms permitted to store greater quantities shall be classified as Occupancy Group H.

421.1.3 Definitions. The following term is defined in Chapter 2:

**HYDROGEN FUEL GAS ROOM.**

421.2 Location. Hydrogen fuel gas rooms shall not be located below grade.

421.3 Design and construction. Hydrogen fuel gas rooms not classified as Occupancy Group H shall be separated from other areas of the building in accordance with Section 509.1. Such separation shall have a fire-resistance rating of not less than 2 hours for all occupancy groups.

421.3.1 Pressure control. Hydrogen fuel gas rooms shall be provided with a ventilation system designed to maintain the room at a negative pressure in relation to surrounding area.

421.3.2 Windows. Operable windows in interior walls shall not be permitted. Fixed windows shall be permitted where in accordance with Section 716.

421.4 Exhaust ventilation. Hydrogen fuel gas rooms shall be separately ventilated and provided with mechanical exhaust ventilation in accordance with the applicable provisions of NFPA 2.

421.5 Gas detection system. Hydrogen fuel gas rooms shall be provided with a gas detection system that complies with Sections 421.5.1, 421.5.2, and 918.

421.5.1 System activation. Activation of a gas detection alarm shall initiate the following notification and action:

1. Initiation of distinct audible and visible alarm signals both inside and outside of the hydrogen fuel gas room.

2. Automatic activation of the mechanical exhaust ventilation system.

421.5.2 Failure of the gas detection system. Failure of the gas detection system shall automatically discontinue hydrogen generation, activate the mechanical exhaust ventilation system and transmit a supervisory signal to the control panel and a central station.

421.6 Explosion control. Explosion control shall be provided where required by Section 414.5.1.

421.7 Emergency power. Mechanical exhaust ventilation and gas detection systems shall be provided with an emergency power system in accordance with Section 2702.
SECTION BC 422
AMBULATORY [HEALTH] CARE FACILITIES

422.1 General. [Occupancies classified as Group B ambulatory] Ambulatory [health] care facilities shall comply with the provisions of Sections 422.1 through [422.6] 422.5 and other applicable provisions of this code.

422.2 Separation. Ambulatory care facilities, where there is the potential for four or more care recipients who will be incapable of self-preservation at any time, whether rendered incapable by staff or staff accepted responsibility for a care recipient already incapable, shall be separated from adjacent spaces, corridors or tenants with a fire partition installed in accordance with Section 708.

422.3 Smoke [barriers] compartments. Where the aggregate area of one or more ambulatory care [facility] facilities is greater than 10,000 square feet (929 m²) on one story, the story shall be provided with a smoke barrier to subdivide the story into [a minimum of] no fewer than two smoke compartments [per story]. The travel area of any one such smoke compartment shall be not greater than 22,500 square feet (2092 m²). The distance of travel from any point in a smoke compartment to a smoke barrier door shall be not [exceed] greater than 200 feet (60 960 mm). The smoke barrier shall be installed in accordance with Section [740] 709 with the exception that smoke barriers shall be continuous from outside wall to an outside wall, a floor to a floor, or from a smoke barrier to a smoke barrier or a combination thereof.

422.3.1 Means of egress. Where ambulatory care facilities require smoke compartmentation in accordance with Section 422.3 of this code, the fire protection and emergency preparedness plans shall comply with the applicable provisions of the New York City Fire Code and shall be in accordance with Section 1001.4 of this code.

[422.3] 422.3.2 Refuge area. [At least] Not less than 30 net square feet (2.8 m²) [per] for each nonambulatory [patient] care recipient shall be provided within the aggregate area of corridors, [patient] care recipient rooms, treatment rooms, lounge or dining areas and other low-hazard areas [on each side of each smoke barrier] within each smoke compartment. Each occupant of an ambulatory care facility shall be provided with access to a refuge area without passing through or utilizing adjacent tenant spaces.

[422.4] 422.3.3 Independent egress. A means of egress shall be provided from each smoke compartment created by smoke barriers without having to return through the smoke compartment from which means of egress originated.

[422.5] 422.4 Automatic sprinkler systems. Automatic sprinkler systems shall be provided for ambulatory care facilities in accordance with Section 903.2.2.

[422.6] 422.5 Fire alarm systems. A fire alarm system shall be provided for ambulatory care facilities in accordance with Section [907.2.2.4] 907.2.2.
SECTION BC 423
STORM SHELTERS

423.1 General. In addition to other applicable requirements in this code, storm shelters shall be constructed in accordance with [ICC-500] ICC 500.

423.1.1 Scope. This section applies to the construction of storm shelters constructed as separate detached buildings or constructed as safe rooms within buildings for the purpose of providing safe refuge from storms that produce high winds, such as tornados and hurricanes. Such structures shall be designated to be hurricane shelters, tornado shelters, or combined hurricane and tornado shelters.

423.2 Definitions specific to this section. The following [words and] terms shall, for the purposes of this [chapter and as used elsewhere in this code] section, have the meanings shown herein:[1]:

STORM SHELTER. A building, structure or portion(s) thereof, constructed in accordance with ICC 500 and designated for use during a severe wind storm event, such as a hurricane or tornado.

[COMMUNITY STORM SHELTER] Community storm shelter. A storm shelter not defined as a "Residential [Storm Shelter] storm shelter."

[RESIDENTIAL STORM SHELTER] Residential storm shelter. A storm shelter serving occupants of dwelling units and having an occupant load not exceeding 16 persons.

SECTION 424
CHILDREN’S PLAY STRUCTURES

424.1 Children’s play structures. Children’s play structures installed inside all occupancies covered by this code that exceed 10 feet (3048 mm) in height and 150 square feet (14 m²) in area shall comply with Sections 424.2 through 424.5.

424.2 Materials. Children’s play structures shall be constructed of noncombustible materials or of combustible materials that comply with the following:

1. Fire-retardant-treated wood complying with Section 2303.2 of this code.

2. Light-transmitting plastics complying with Section 2606 of this code.

3. Foam plastics (including the pipe foam used in soft-contained play equipment structures) having a maximum heat-release rate not greater than 100 kilowatts when tested in accordance with UL 1975 or when tested in accordance with NFPA 289, using the 20 kW ignition source.

4. Aluminum composite material (ACM) meeting the requirements of Class A interior finish in accordance with Chapter 8 of this code when tested as an assembly in the maximum thickness intended for use.
5. Textiles and films complying with the fire propagation performance criteria contained in Test Method 1 or Test Method 2, as appropriate, of NFPA 701.

6. Plastic materials used to construct rigid components of soft-contained play equipment structures (such as tubes, windows, panels, junction boxes, pipes, slides and decks) exhibiting a peak rate of heat release not exceeding 400 kW/m² when tested in accordance with ASTM E 1354 at an incident heat flux of 50 kW/m² in the horizontal orientation at a thickness of 6 mm.

7. Ball pool balls, used in soft-contained play equipment structures, having a maximum heat-release rate not greater than 100 kilowatts when tested in accordance with UL 1975 or when tested in accordance with NFPA 289, using the 20 kW ignition source. The minimum specimen test size shall be 36 inches by 36 inches (914 mm by 914 mm) by an average of 21 inches (533 mm) deep, and the balls shall be held in a box constructed of galvanized steel poultry netting wire mesh.

8. Foam plastics shall be covered by a fabric, coating or film meeting the fire propagation performance criteria contained in Test Method 1 or Test Method 2, as appropriate, of NFPA 701.

9. The floor covering placed under the children’s play structure shall exhibit a Class I interior floor finish classification, as described in Section 804, when tested in accordance with NFPA 253.

424.3 Fire protection. Children’s play structures shall be provided with the same level of approved fire protection system required for other structures in the same occupancy.

424.4 Separation. Children’s play structures shall have a horizontal separation from building walls, partitions and from elements of the means of egress of not less than 5 feet (1524 mm). Children’s playground structures shall have a horizontal separation from other children’s play structures of not less than 20 feet (6090 mm).

424.5 Area limits. Children’s play structures shall be not greater than 300 square feet (28 m²) in area.

SECTION BC 425
HYPERBARIC FACILITIES

425.1 Hyperbaric facilities. Hyperbaric facilities shall meet the requirements contained in Chapter 14 of NFPA 99.

SECTION 426
COMBUSTIBLE DUSTS, GRAIN PROCESSING AND STORAGE

426.1 Combustible dusts, grain processing and storage. The provisions of Sections 426.1.1 through 426.1.7 shall apply to buildings in which materials that produce combustible dusts are stored or handled. Buildings that store or handle combustible dusts shall comply with the applicable provisions of NFPA 61, NFPA 69, NFPA 85, NFPA 120, NFPA 484, NFPA 654, NFPA 655 and NFPA 664 and the New York City Fire Code.
426.1.1 Type of construction and height exceptions. Buildings shall be constructed in compliance with the height, number of stories and area limitations specified in Sections 504 and 506; except that where erected of Type I or II construction, the heights and areas of grain elevators and similar structures shall be unlimited, and where of Type IV construction, the maximum building height shall be 65 feet (19 812 mm) and except further that, in isolated areas, the maximum building height of Type IV structures shall be increased to 85 feet (25 908 mm).

426.1.2 Grinding rooms. Every room or space occupied for grinding or other operations that produce combustible dusts in such a manner that the room or space is classified as a Group H-2 occupancy shall be enclosed with fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 711, or both. The fire-resistance rating of the enclosure shall be not less than 2 hours where the area is not more than 3,000 square feet (279 m²), and not less than 4 hours where the area is greater than 3,000 square feet (279 m²).

426.1.3 Conveyors. Conveyors, chutes, piping and similar equipment passing through the enclosures of rooms or spaces shall be constructed dirt tight and vapor tight, and be of approved noncombustible materials complying with Chapter 30.

426.1.4 Explosion control. Explosion control shall be provided as specified in the New York City Fire Code, or spaces shall be equipped with the equivalent mechanical ventilation complying with the New York City Mechanical Code.

426.1.5 Grain elevators. Grain elevators, malt houses and buildings for similar occupancies shall not be located within 30 feet (9144 mm) of interior lot lines or structures on the same lot, except where erected along a railroad right-of-way.

426.1.6 Coal pockets. Coal pockets located less than 30 feet (9144 mm) from interior lot lines or from structures on the same lot shall be constructed of not less than Type IB construction. Where more than 30 feet (9144 mm) from interior lot lines, or where erected along a railroad right-of-way, the minimum type of construction of such structures not more than 65 feet (19 812 mm) in building height shall be Type IV.

426.1.7 Tire rebuilding. Buffing operations shall be located in a room separated from the remainder of the building housing the tire rebuilding or tire recapping operation by a 1-hour fire barrier.

Exception: Buffing operations are not required to be separated where all of the following conditions are met:

1. Buffing operations are equipped with an approved continuous automatic water-spray system directed at the point of cutting action;

2. Buffing machines are connected to particle-collecting systems providing a minimum air movement of 1,500 cubic feet per minute (cfm) (0.71 m³/5 ) in volume and 4,500 feet per minute (fpm) (23 m/s) in-line velocity; and
3. The collecting system shall discharge the rubber particles to an approved outdoor noncombustible or fire-resistant container, which is emptied at frequent intervals to prevent overflow.

SECTION BC [424] 427
NONPRODUCTION CHEMICAL LABORATORIES

[424.1] 427.1 General. The provisions of this section shall govern the design, construction and chemical quantity limitations of buildings and portions thereof occupied or designed to be occupied as a nonproduction laboratory. Nonproduction laboratories shall be classified into occupancy groups in accordance with Section [424.5] 427.5. The provisions of this section shall not apply to production laboratories classified in Occupancy Group F or H.

[424.2] 427.2 Standards. Except as otherwise provided in this section, nonproduction laboratories shall meet the design, construction and chemical quantity limitation requirements for laboratory unit fire hazard Class D, as set forth in NFPA 45 as modified by the New York City Fire Code, and the New York City Mechanical Code. The storage arrangement, handling and use of chemicals within nonproduction laboratories and accessory storage rooms, and the operation and maintenance of nonproduction laboratories shall comply with the requirements of the New York City Fire Code, and the rules of the Fire Commissioner.

[424.3] 427.3 Prohibitions. It shall be unlawful in any nonproduction laboratory to:

1. Store or use any explosive.

2. Store or use any unclassified detonable organic peroxide, detonable pyrophoric material, detonable unstable (reactive) material or detonable water-reactive material.

3. Store or use any Class 4 unstable (reactive) material.

4. Store or use any Class 4 oxidizing material.

5. Store or use any flammable gas below grade.

[424.4] 427.4 Definitions specific to this section. The following words and terms shall, for the purposes of this section, have the meanings shown herein:

LABORATORY BUILDING. A structure consisting wholly or principally of one or more laboratory units.

LABORATORY CHEMICAL. A material with a health, flammability, or instability hazard rating of 2, 3, or 4 as defined in NFPA 704.

LABORATORY, NONPRODUCTION. A building or portion thereof wherein chemicals or gases are used or synthesized on a nonproduction basis for testing, research, experimental, instructional or educational purposes.

LABORATORY UNIT. An enclosed space of a minimum 1-hour fire-rated construction, designed or used as a nonproduction laboratory. Laboratory units may include one or more
separate laboratory work areas, and accessory storage rooms or spaces within or contiguous with the laboratory unit, such as offices and lavatories.

**STORAGE CABINET.** A cabinet designed and constructed in accordance with UL 1275, and used for the storage of not more than 60 gallons (227 L) of flammable and combustible liquids.

**STORAGE ROOM.** A room where laboratory chemicals or gases are stored and not otherwise used or synthesized.

[424.5] **427.5 Classification.** Buildings or portions thereof occupied as a nonproduction laboratory may be classified as a Group B occupancy provided they comply with the provisions of Section [424] 427. Nonproduction laboratories not in compliance with the provisions of Section [424.7] 427.7 for laboratory chemical quantity limitations shall be classified as Group H occupancy.

[424.5.1] **427.5.1 Accessory use nonproduction laboratories.** Accessory use nonproduction laboratories occupying an area not more than 10 percent of the area of the story in which such laboratories are located and not exceeding the tabular values in [Table 503] Sections 504 and 506, for the allowable height or area for such use shall be classified according to the main occupancy. Such accessory nonproduction laboratories shall comply with the provisions of Section [424] 427.

[424.6] **427.6 Fire protection.** Fire protection systems in nonproduction laboratories shall be provided in accordance with Section 427.6.1 through 427.6.3.

[424.6.1] **427.6.1 Sprinkler system.** Laboratory units shall be provided throughout with an automatic sprinkler system in accordance with Section 903.3.1.1. The entire building shall be provided throughout with an automatic sprinkler system when the aggregate floor area of all laboratory units within any building exceeds 20,000 square feet (1858 m²).

[424.6.2] **427.6.2 Standpipe and hose system.** In all nonproduction laboratory buildings that are two or more stories above or below the grade level (level of exit discharge), standpipes shall be installed in accordance with Section 905.2.

[424.6.3] **427.6.3 Fire alarm system.** A manual fire alarm system shall be installed in accordance with Section 907.2.2, 907.2.3, or 907.2.6, as applicable.

[424.7] **427.7 Quantity limitations.** Quantity limitations in nonproduction laboratories shall be provided in accordance with Section 427.7.1 through 427.7.10.

[424.7.1] **427.7.1 Flammable and combustible liquids.** The density and total quantity of flammable and combustible liquids allowed within a laboratory unit, outside of storage rooms, shall comply with Table [10.1.1] 9.1.1(A) of NFPA 45, as modified by the *New York City Fire Code*, for laboratory unit fire hazard Class D.

**Exceptions:** The following exceptions apply to other than educational or instructional laboratories:

1. The density of flammable and combustible liquids allowed within a laboratory unit may be increased to those set forth in Table [10.1.1] 9.1.1(A) of NFPA 45 as modified
by the New York City Fire Code, for laboratory unit fire hazard Class B provided the total quantity of flammable and combustible liquid, including any in storage cabinets or safety cans, does not exceed 25 gallons (95 L).

2. The density of flammable and combustible liquids allowed within a laboratory unit may be increased to those set forth in Table [40-1-1] 9.1.1(A) of NFPA 45 as modified by the New York City Fire Code, for laboratory unit fire hazard Class B provided the total quantity of flammable and combustible liquid, including any in storage cabinets or safety cans, does not exceed 30 gallons (114 L) and the walls, floors and ceilings of the laboratory unit are separated from all adjoining areas by 2-hour fire-rated construction.

3. Based on a density of 1 gallon per 100 square feet (3.785 L per 9.3 m²) of area, the quantity of flammable and combustible liquid allowed within a laboratory unit, excluding quantities in storage cabinets or safety cans, may be increased to 100 gallons (379 L), and the total quantities of flammable and combustible liquids, including quantities in storage cabinets or safety cans, may be increased to 200 gallons (757 L) provided the walls, floors and ceilings of the laboratory unit are separated from all adjoining areas by 2-hour fire-rated construction.

[424.7.2] 427.7.2 Flammable solids. The total quantity of flammable solids allowed within a laboratory unit, excluding any quantities in a storage room, shall not exceed 10 pounds (4.5 kg).

Exception: The total quantity of flammable solids allowed within a laboratory unit that is provided with walls, floors and ceilings that separate the laboratory unit from all adjoining areas by 2-hour fire-rated construction shall not exceed 15 pounds (6.8 kg).

[424.7.3] 427.7.3 Oxidizers and organic peroxides. The total quantity of solid and liquid oxidizers and organic peroxides combined allowed within a laboratory unit, excluding any quantities in a storage room, shall not exceed 40 pounds (18 kg), provided not more than 2 pounds (0.908 kg) of which are Class 3 oxidizers and 1 pound (0.454 kg) of which is Class I organic peroxides.

Exception: The total quantity of solid and liquid oxidizers and organic peroxides combined allowed within a laboratory unit that is provided with walls, floors and ceilings that separate the laboratory unit from all adjoining areas by 2-hour fire rated construction shall not exceed 50 pounds (23 kg), provided not more than 2 pounds (0.908 kg) of which is Class 3 oxidizers and 1 pound (0.454 kg) of which are Class I organic peroxides.

[424.7.4] 427.7.4 Unstable (reactive). The total quantity of unstable (reactive) material allowed within a laboratory unit, excluding any quantities in a storage room, shall not exceed 6 pounds (2.7 kg), provided not more than 1 pound (0.454 kg) of which is Class 3 unstable (reactive).

Exception: The total quantity of unstable (reactive) material allowed within a laboratory unit that is provided with walls, floors and ceilings that separate the laboratory unit from all adjoining areas by 2-hour fire-rated construction shall not exceed 12 pounds (5.4 kg), provided not more than 1 pound (0.454 kg) of which is Class 3 unstable (reactive).
[424.7.5] 427.7.5 Water reactive material. The total quantity of water reactive material allowed within a laboratory unit, excluding any quantities in a storage room, shall not exceed 2.5 pounds (1.1 kg).

Exception: The total quantity of water-reactive material allowed within a laboratory unit that is provided with walls, floors and ceilings that separate the laboratory unit from all adjoining areas by 2-hour fire-rated construction shall not exceed 5 pounds (2.3 kg).

[424.7.6] 427.7.6 Pyrophoric material. The total quantity of solid or liquid pyrophoric material allowed within a laboratory unit, excluding any quantities in a storage room, shall not exceed 0.5 pounds (0.227 kg).

Exception: The total quantity of pyrophoric material allowed within a laboratory unit that is provided with walls, floors and ceilings that separate the laboratory unit from all adjoining areas by 2-hour fire rated construction shall not exceed 1 pound (0.454 kg).

[424.7.7] 427.7.7 Highly toxic material. The total quantity of solid or liquid highly toxic material allowed within a laboratory unit, excluding any quantities in a storage room, shall not exceed 5 pounds [(0.227 kg) (2.27 kg)]

[424.7.8] 427.7.8 Toxic material. The total quantity of solid or liquid toxic material allowed within a laboratory unit, excluding any quantities in a storage room, shall not exceed 250 pounds [(946 L)] (113.4 kg).

[424.7.9] 427.7.9 Corrosive material. The total quantity of solid or liquid corrosive material allowed within a laboratory unit, excluding any quantity in a storage room, shall not exceed 250 gallons (946 L).

[424.7.10] 427.7.10 [Highly toxic and toxic] Hazardous gases. [In educational and instructional laboratories, the total quantity] The storage, handling and use of hazardous gases, including highly toxic, toxic, corrosive, and [toxic] asphyxiant gases [combined allowed] within a laboratory unit [exceeding any] shall be in accordance the New York City Fire Code, including quantities [in a storage room, shall not exceed 20 standard cubic feet (0.56 standard cubic m)] permitted and oxygen sensors.

[424.8] 427.8 Storage room classification. Storage rooms for laboratory chemicals accessory to a laboratory unit shall be classified as Occupancy Group S-1 provided they comply with the provisions of Section [424.9] 427.9. Storage rooms not in compliance with the provisions of Section [424.9] 427.9 for laboratory chemical quantity limitations shall be classified as a Group H occupancy.

[424.9] 427.9 Storage rooms. In addition to the quantities allowed within a laboratory unit by Section 427.7, laboratory chemicals that are accessory to a laboratory unit may be stored, whether outside of or entirely within a laboratory unit, in dedicated storage rooms complying with all of the following:

1. Storage room capacity shall be limited to a maximum of 300 gallons (1136 L) of laboratory chemicals, not to exceed 5 gallons per square foot (0.125 L/m²) of floor area.
2. Flammable gas storage rooms shall be limited to 2,500 standard cubic feet (71 standard cubic m) of flammable gas.

3. Storage rooms shall be enclosed by a minimum of 2-hour rated fire barriers.

4. Storage rooms shall be equipped with a continuously operated ventilation system that provides at least 6 changes of air per hour and vents to the outdoors.

5. Each entrance to the storage room shall be provided with a minimum 1 1/2-hour rated self-closing fire door.

6. Each entrance to the storage room shall be provided with a sill at the doorway, except that no sill shall be required in storage rooms containing only flammable gases.

7. Storage rooms shall be equipped with an automatic sprinkler system providing at least one sprinkler for each 90 square feet (8.4 m²) or portion thereof.

8. Laboratory chemicals that are incompatible with each other shall not be stored in the same storage room unless in compliance with the New York City Fire Code for separation of incompatible materials.

9. Storage rooms shall not open directly to an exit or any enclosed exit access component.

10. The floor of any storage room storing flammable gases shall be located at or above grade.

SECTION BC [425] 428
USES AND OCCUPANCIES INVOLVING RADIOACTIVE MATERIALS AND RADIATION-PRODUCING EQUIPMENT

[425.1] 428.1 Scope. This section shall apply to the construction, alteration, and use of buildings or spaces for radioactive materials and radiation-producing equipment.

[425.2] 428.2 City, state and federal regulations. In addition to the requirements of this section, occupancies involving radioactive materials and radiation-producing equipment shall also comply with applicable requirements of the New York City Health Code, and applicable state and federal regulations.

[425.3] 428.3 Laboratories. All laboratories utilizing radioactive materials or radiation-producing equipment required to register under the requirements of the New York City Health Code shall comply with the requirements of Sections [425.3.1] 428.3.1 through [425.3.7] 428.3.7.

[425.3.1] 428.3.1 Construction. All buildings in which such laboratories occur shall be of Type I or II construction.

[425.3.2] 428.3.2 Floors. All floors shall comply with the fire resistance requirements for the class of construction, and provide the degree of radioactive resistance required by applicable
city, state, and federal regulations. A finished material shall be applied to provide a continuous nonporous surface, which may be readily removed.

[425.3.3] **428.3.3 Interior finish.** All insulation of acoustical treatments and interior partitions shall be of noncombustible material. Walls and ceilings shall have nonporous finishes of Class A rating.

[425.3.4] **428.3.4 Sprinkler protection.** Automatic sprinkler protection complying with the construction provisions of Chapter 9 of the *New York City Building Code* shall be provided, and such protection shall be designed for the type of combustible materials wherever such material is used, and for the radioactive material that may be expected to melt, vaporize, or oxidize under fire conditions. Laboratory equipment susceptible to damage from water or other materials used in the sprinkler system may be shielded by hoods except when the equipment provides a source of combustion. Where sprinkler protection uses water, or small water-spray installations are used to fight small isolated fires, floors shall be provided with drainage so that water may be carried to retention tanks for later disposal as required by the *New York City Health Code* when contamination of the water is to be anticipated.

[425.3.5] **428.3.5 Electrical controls.** Electrical controls and equipment shall be installed in accordance with the requirements of the *New York City Electrical Code*.

[425.3.6] **428.3.6 Ventilation.** Exhaust air from areas in which radioactive materials are used or stored shall be exhausted to the outdoors in such manner as not to create a health hazard, and shall not be recirculated to other areas of the building. Air pressure in rooms in which radioactive materials are used or stored shall be maintained below the air pressure of adjoining rooms, so that there is no flow of radioactive gases or dusts into adjoining rooms.

[425.3.6.1] **428.3.6.1 Ducts.** Ducts shall be of sheet steel of not less than No. 16 manufacturers’ standard gauge or of other equivalent noncombustible material having a melting point above 1800°F (982°C). Exhaust ducts within the building, on the discharge side of the fan, shall be welded airtight. Exhaust ducts within the building, on the suction side of the fan, shall have laps in the direction of airflow with smoke-tight joints, and shall be subjected to a smoke test in accordance with the requirements for chimneys in the *New York City Mechanical Code*. Access hatches with tight-closing covers shall be provided for cleaning and for fire-fighting in the exhaust system ducts.

[425.3.6.2] **428.3.6.2 Fume hoods.** Fume hoods shall be exhausted to the outdoors. Controls for hood fans shall be interlocked so that contaminated air cannot be drawn into any space from a hood where the exhaust fan is not in operation.

[425.3.6.3] **428.3.6.3 Fans.** Fan equipment other than the impeller and impeller housing shall be located outside the exhaust stream.

[425.3.6.4] **428.3.6.4 Exhaust.** When the degree of contamination of the exhaust stream exceeds the concentration limits permitted by the health code, the duct system shall be equipped with devices to decontaminate the air to a safe level before discharging to the outdoor air.
[425.3.7] **428.3.7 Plumbing.** Drainage lines from sinks used for radioactive wastes shall be without traps, and shall lead to retention tanks when required by the provisions of the *New York City Health Code*.

[425.4] **428.4 Radiation machines.** Radiation machines or particle accelerators, linear accelerators, cyclotrons, synchrotons, betatrons, or bevatrons shall be located only in buildings of [Group] Type I or II construction; however, this requirement shall not apply to conventional medical, dental, research, or industrial x-ray machines of less than one million-volt capacity.

[425.5] **428.5 Storage.** Radioactive materials shall be stored in sealed containers. When required by the commissioner to avoid too concentrated an exposure within any one space, radioactive materials shall be stored in vaults designed in accordance with the radiation shielding or other requirements for the materials to be stored, and with the requirements of Sections [425.5.1] 428.5.1 through [425.5.3] 428.5.3.

[425.5.1] **428.5.1 Fire protection.** When any materials are subject to melting, vaporization, or oxidation under fire conditions, the storage vaults shall be constructed of walls having a fire-resistance rating of at least 4 hours, and the vaults shall be equipped with automatic sprinklers complying with the construction requirements of Chapter 9 and shall be vented through devices to decontaminate the air to a safe level.

[425.5.2] **428.5.2 Doors.** Doors opening into storage vaults shall meet shielding requirements and have a fire-protection rating of not less than 3 hours.

[425.5.3] **428.5.3 Bins, shelving, partitions and pallets.** All bins, shelving, partitions, and pallets in storage vaults shall be of noncombustible materials. Other methods of storage permitted by the health department or applicable state and federal regulations, such as storage under water, may be used.

§ 6. Chapter 5 of the New York city building code, as added by local law number 33 for the year 2007, table 503 as amended by local law number 8 for the rear 2008, sections 501, 502, 503, 504, 505, 506, 507 and 510, as amended by, and sections 508 and 509, as added by, local law number 141 for the year 2013, is amended to read as follows:

**CHAPTER 5**
**GENERAL BUILDING HEIGHTS AND AREAS; SEPARATION OF OCCUPANCIES**

**SECTION BC 501**
**GENERAL**

**501.1 Scope.** The provisions of this chapter control the height and area of structures hereafter erected and additions to existing structures, including separation of occupancies.
501.2 Address identification. Buildings shall be provided with address numbers or letters in accordance with Section 3-505 of the Administrative Code and the rules issued thereunder by the borough president of the borough in which the property is located. Except as otherwise provided by the rules of the borough president in which the property is located, characters shall be a minimum 4 inches (102 mm) high and a minimum of 0.5 inch (12.7 mm) wide. They shall be installed on a contrasting background and be plainly visible from the street or road fronting the property. Where access is by means of a private road and the building address cannot be viewed from the public way, an appropriately placed monument, pole or sign or any other means authorized by the borough president of the borough in which the property is located shall be used to identify the structure.

501.3 Fire Department access. Access shall be provided to the Fire Department in accordance with Sections 501.3.1 and 501.3.2.

501.3.1 Frontage. Every building, exclusive of accessory buildings, shall have at least 8 percent of the total perimeter of the building adjoining a street or frontage space. For the purposes of this section, building perimeter shall be measured at that story having the maximum enclosed floor area; and buildings provided with a front yard or front setback no deeper than 30 feet (9144 mm) in compliance with the New York City Zoning Resolution shall be considered as adjoining the street or frontage space.

501.3.2 Building access. Provisions shall be made for access by the Fire Department to every building in accordance with [Section 903.2.11.1 of this code and Chapter 5 of] the New York City Fire Code and Section 903.2.11.1 of this code. In addition, multiple dwellings shall comply with Section 54 of the New York State Multiple Dwelling Law, as applicable.

SECTION BC 502
DEFINITIONS

502.1 Definitions. The following [words and] terms [shall, for the purposes of this chapter and as used elsewhere in this code, have the meanings shown herein.] are defined in Chapter 2:

AREA, BUILDING. [The area included within surrounding exterior walls (or exterior walls and firewalls) exclusive of vent shafts and courts. Areas of the building not provided with surrounding walls shall be included in the building area if such areas are included within the horizontal projection of the roof or floor above.]

BASEMENT. [A story partly below the grade plane and having less than one half its clear height (measured from finished floor to finished ceiling) below the grade plane (see “Story” in Section 202 and “Story above grade plane” in this section). A basement shall be considered a story above grade plane.]

CELLAR. [That portion of a building that is partly or wholly underground, and having one-half or more of its clear height (measured from finished floor to finished ceiling) below the grade plane. Cellars shall not be counted as stories in measuring the height of the buildings.]

COMBINED HEAT AND POWER SYSTEMS. [Equipment that simultaneously produces electricity and heat from a single fuel source.]
EQUIPMENT PLATFORM. [An unoccupied, elevated platform used exclusively for mechanical systems or industrial process equipment, including the associated elevated walkways, stairs, alternating tread devices and ladders necessary to access the platform (see Section 505.5).]

FIRE LANE.

FRONTAGE SPACE. [A street or an open space adjoining a building not less than 30 feet (9144 mm) in any dimension. Such open space shall be accessible from a street by a driveway, lane, private road or alley at least 20 feet (6096 mm) in width. Such open space including accessways shall be permanently maintained free of all obstructions that might interfere with its use by the Fire Department.]

GRADE PLANE. [A reference plane representing the level of the curb as established by the city engineer in the Borough President’s office, measured at the center of the front of a building. Where a building faces on more than one street, the grade plane shall be the average of the levels of the curbs at the center of each front.]

[Exception: The grade plane shall not be referenced to the level of the curb, but shall be considered the average elevation of the final grade adjoining all exterior walls of a building, calculated from final grade elevations taken at intervals of 10 feet (3048 mm) around the perimeter of the building where:

1. No curb elevation has been legally established on the city map; or
2. Every part of the building is setback more than 25 feet (7620 mm) from a street line.]

HEIGHT, BUILDING. [The vertical distance from the grade plane to the average height of the highest roof surfaces.]

MEZZANINE. [An intermediate level or levels between the floor and ceiling of any story in accordance with Section 505.]

STORY.

STORY ABOVE GRADE PLANE. [Any story having its finished floor surface entirely above grade plane, except that a basement shall also be considered a story above grade plane (also see definitions of “Story” in Section BC 202 and “Basement” in this section).]

SECTION BC 503
GENERAL BUILDING HEIGHT AND AREA LIMITATIONS

503.1 General. [The building height and] Unless otherwise specifically modified in Chapter 4, building height, number of stories and building area shall not exceed the limits specified in [Table 503] Sections 504 and 506, based on the type of construction as determined by Section 602, and the occupancies as determined by Section 302, except as modified hereafter in this chapter. Building height, number of stories and building area provisions shall be applied independently. Each portion of a building separated by one or more fire walls complying with Section 706 shall be considered to be a separate building.
### Table 503

**Allowable Building Heights and Areas**

Building height limitations shown in feet above grade plane. Story limitations shown as stories above grade plane.

Building area limitations shown in square feet, as determined by the definition of “Area, building,” per story.

</tbody>
</table>

For SI: 1 foot = 304.8 mm, 1 square foot = 0.0929 m².

A = building area per story, S = stories above grade plane, UL = Unlimited, NP = Not permitted.

a. See the following sections for general exceptions to Table 503:
1. Section 504.2, Allowable height increase due to automatic sprinkler system installation.
2. Section 506.2, Allowable area increase due to frontage.
3. Section 507, Unlimited area building.
4. Section 506.3, Allowable area increase due to automatic sprinkler system installation.
5. Section 503.1.1 Special industrial occupancies. Buildings and structures of Type I and II construction designed to house special industrial processes that require large areas and unusual building heights to accommodate cranes or special machinery and equipment, including, among others, rolling mills; structural metal fabrication shops and foundries; or the production and distribution of electric, gas or steam power, shall be exempt from the building height, number of stories and building area limitations [of Table 503] specified in Sections 504 and 506. Mezzanines within such buildings or structures shall comply with Section 505.2. Documents and plans describing the special industrial processes shall be submitted to the commissioner for approval.

503.1.2 Buildings on the same tax lot. Two or more buildings on the same tax lot and under the same ownership and control shall be regulated as separate buildings, or, at the option of the owner, shall be considered as portions of one building [if] where the building height, number of stories of each building and the aggregate building area of the combined buildings are within the limitations [of Table 503 as modified by] specified in Sections 504 and 506. The provisions of this code applicable to the aggregate building shall be applicable to each building.

503.1.3 Type I construction. Buildings of Type I construction permitted to be of unlimited tabular building heights and areas [in accordance with Table 503] are not [required] subject to
[comply with] the special requirements that allow unlimited area buildings in Section 507 or unlimited building height in Sections 503.1.1 and 504.3 or increased building heights and areas for other types of construction.

[503.2 Reserved.]

SECTION BC 504
BUILDING HEIGHT [MODIFICATIONS] AND NUMBER OF STORIES

504.1 General. [The heights permitted by Table 503 shall only be increased in accordance with this section.] The height, in feet, and the number of stories of a building shall be determined based on the type of construction, occupancy classification and whether there is an automatic sprinkler system installed throughout the building.

Exception: The building height of one-story aircraft hangars, aircraft paint hangars and buildings used for the manufacturing of aircraft shall not be limited [if] where the building is provided with an automatic sprinkler system or automatic fire-extinguishing system in accordance with Chapter 9 and is entirely surrounded by public ways or yards not less in width than one and one-half times the building height.

504.2 Automatic sprinkler system increase. Where a building is equipped throughout with an approved automatic sprinkler system in accordance with Section 903.3.1.1, the value specified in Table 503 for maximum building height is increased by 20 feet (6096 mm) and the maximum number of stories is increased by one story. These increases are permitted in addition to the building area increase in accordance with Sections 506.2 and 506.3. For Group R buildings equipped throughout with an approved automatic sprinkler system in accordance with Section 903.3.1.2, the value specified in Table 503 for maximum building height is increased by 20 feet (6096 mm) and the maximum number of stories is increased by one story, but shall not exceed 60 feet (18 288 mm) or six stories, respectively.

Exceptions:

1. Buildings, or portions of buildings, classified as a Group I-2 occupancy of Type IIB, III, IV or V construction.

2. Buildings, or portions of buildings, classified as a Group H-1, H-2, H-3 or H-5 occupancy.

3. Fire resistance rating substitution in accordance with Table 601, Note d.

504.1.1 Unlimited area buildings. The height of unlimited area buildings shall be designed in accordance with Section 507.

504.1.2 Special provisions. The special provisions of Section 510 permit the use of special conditions that are exempt from, or modify, the specific requirements of this chapter regarding the allowable heights of buildings based on the occupancy classification and type of construction, provided the special condition complies with the provisions specified in Section 510.
504.2 Mixed occupancy. In a building containing mixed occupancies in accordance with Section 508, no individual occupancy shall exceed the height and number of story limits specified in Section 504 for the applicable occupancies.

504.3 [Rooftop structures:] Height in feet and number of stories. The maximum height, in feet, of a building shall not exceed the limits specified in Table 504.3. The maximum number of stories of a building shall not exceed the limits specified in Table 504.4.

Exceptions:

1. Rooftop structures including but not limited to roof tanks and their supports, ventilating, air conditioning, combined heat and power systems and similar building service equipment, bulkheads, penthouses, greenhouses, chimneys, and parapet walls 4 feet (1219 mm) or less in height shall not be included in the building height of the building or considered an additional story unless the aggregate area of all such structures, exclusive of any solar thermal and solar (photovoltaic) collectors and/or panels and their supporting equipment, exceeds 33⅓ percent of the area of the roof of the building upon which they are erected. Rooftop structures shall be constructed in accordance with Section 1510.

2. [Exception:] Solar thermal and solar electric (photovoltaic) collectors and/or panels and their supporting equipment that exceed 33⅓ percent of the area of the roof of the building upon which they are erected shall not be included in the height of a building or considered an additional story.

3. Noncombustible steeples, minarets, spires, domes, cupolas and other similar architectural elements, not used for occupancy or storage, shall not be included in the building height of the building or considered an extra story, and may be unlimited in height.

### SECTION BC 505
**MEZZANINES AND EQUIPMENT PLATFORMS**

**505.1 General.** Mezzanines shall comply with Section 505.2. Equipment platforms shall comply with Section 505.3.

**505.2 Mezzanines.** A mezzanine or mezzanines in compliance with Section [505] 505.2 shall be considered a portion of the story [in which it is contained] below. Such mezzanines shall not contribute to either the building area or number of stories as regulated by Section 503.1. The area of the mezzanine shall be included in determining the fire area [defined in Section 902]. The clear height above and below the mezzanine floor construction shall be not [be] less than 7 feet (2134 mm).
Exception: The clear height of habitable spaces above or below mezzanines within dwelling units shall be not less than 8 feet (2438 mm).

[505.2] 505.2.1 Area limitation. The aggregate area of a mezzanine or mezzanines within a room or space shall be not greater than one-third of the floor area of that room or space in which they are located. The enclosed portions of a room or space shall not be included in determining the permissible floor area of the mezzanine. In determining the allowable mezzanine area, the area of the mezzanine shall not be included in the floor area of the room in which it is contained.

Where a room contains both a mezzanine and an equipment platform, the aggregate area of the two raised floor levels shall be not greater than two-thirds of the floor area of that room or space in which they are located.

Exceptions:

1. The aggregate area of mezzanines in buildings and structures of Type I or II construction for special industrial occupancies in accordance with Section 503.1.1 shall be not greater than two-thirds of the area of the room in which the mezzanines are located.

2. The aggregate area of a mezzanine or mezzanines within a dwelling unit shall not exceed one-third of the net floor area of such dwelling unit, whether or not portions of such dwelling unit are enclosed. The area of the mezzanine shall not contribute to the determination of the floor area of the dwelling unit in which it is contained.

[505.3 Egress] 505.2.2 Means of egress. Each occupant of a mezzanine shall have access to at least two independent means of egress where the common path of egress travel exceeds the limitations of Section [1014.3] 1006.2. Where a stairway provides a means of exit access from a mezzanine, the maximum travel distance includes the distance traveled on the stairway measured in the plane of the tread nosing. Accessible means of egress shall be provided in accordance with Section [1007] 1009.

Exception: A single means of egress shall be permitted in accordance with Section [1015.1] 1006.2.

[505.4] 505.2.3 Openness. A mezzanine shall be open and unobstructed to the room in which such mezzanine is located except for walls or railings not more than 42 inches (1067 mm) in height, columns and posts.

Exceptions:

1. Mezzanines or portions thereof are not required to be open to the room in which the mezzanines are located, provided that the occupant load of the aggregate area of the enclosed space does not exceed greater than 10.
2. A mezzanine having two or more means of egress is not required to be open to the room in which the mezzanine is located, if at least one of the means of egress provides direct access to an exit [from] located on the mezzanine level.

3. Mezzanines or portions thereof are not required to be open to the room in which the mezzanines are located, provided that the aggregate floor area of the enclosed space [does] is not [exceed] greater than 10 percent of the mezzanine area.

4. In industrial facilities, mezzanines used for control equipment are permitted to be glazed on all sides.

5. A mezzanine having two or more means of egress shall not be required to be open to the room in which the mezzanine is located in occupancies, other than Groups H and I, that comply with [items] Items 5.1 through 5.4.

5.1. Such occupancy is no more than two stories above grade plane,

5.2. Such occupancy is equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1,

5.3. An approved fire alarm system is installed throughout the entire building or structure in which such occupancy is located, and

5.4. Notification appliances are installed throughout the mezzanine in accordance with NFPA 72.

[§505.5] 505.3 Equipment platforms. Equipment platforms in buildings shall not be considered as a portion of the floor below. Such equipment platforms shall not contribute to either the building area or the number of stories as regulated by Section 503.1. The area of the equipment platform shall not be included in determining the fire area in accordance with Section 903. Equipment platforms shall not be a part of any mezzanine[1] and such platforms and the walkways, [stairs] stairways, alternating tread devices and ladders providing access to an equipment platform shall not serve as a part of the means of egress from the building.

[§505.5.1] 505.3.1 Area [limitations] limitation. The aggregate area of all industrial equipment platforms within a room shall be not [exceed] greater than two-thirds of the area of the room in which they occur. Where an equipment platform is located in the same room as a mezzanine, the area of the mezzanine shall be determined by Section [§505.2] 505.2.1 and the combined aggregate area of the equipment platforms and mezzanines shall be not [exceed] greater than two-thirds of the room in which they are located.

[§505.5.2] 505.3.2 Fire suppression. Where located in a building that is required to be protected by an automatic sprinkler system, industrial equipment platforms shall be fully protected by sprinklers above and below the platform, where required by the standards referenced in Section 903.3.

[§505.5.3] 505.3.3 Guards. Equipment platforms shall have guards where required by Section [4013.1] 1015.2.
SECTION BC 506
BUILDING AREA MODIFICATIONS

506.1 General. The floor area of a building [areas limited by Table 503] shall be permitted to be increased due to frontage (I_f) and determined based on the type of construction, occupancy classification, whether there is an automatic sprinkler system [protection (I_s) in accordance with] installed throughout the [following:] building and the amount of building frontage on public way or open space.

\[
A_a = [A_t + (A_t \times I_f) + (A_t \times I_s)]
\]

([Equation 5-1])

where:

- \(A_a\) = Allowable building area per story (square feet).
- \(A_t\) = Tabular building area per story in accordance with Table 503 (square feet).
- \(I_f\) = Area increase factor due to frontage as calculated in accordance with Section 506.2.
- \(I_s\) = Area increase factor due to sprinkler protection as calculated in accordance with Section 506.3.

506.2 Frontage increase. Where a building has more than 25 percent of its perimeter adjoining a public way or open space having a minimum width of 20 feet (6096 mm), the frontage increase shall be determined in accordance with the following:

\[
I_f = (F/P - 0.25)W/30
\]

([Equation 5-2])

where:

- \(I_f\) = Area increase factor due to frontage.
- \(F\) = Building perimeter that fronts on a public way or open space having 20 feet (6096 mm) open minimum width (feet).
- \(P\) = Perimeter of entire building (feet).
- \(W\) = Width of public way or open space (feet) in accordance with Section 506.2.1.

506.1.1 Unlimited area buildings. Unlimited area buildings shall be designed in accordance with Section 507.

506.1.2 Special provisions. The special provisions of Section 510 permit the use of special conditions that are exempt from, or modify, the specific requirements of this chapter regarding the allowable areas of buildings based on the occupancy classification and type of construction, provided the special condition complies with the provisions specified in Section 510.

506.1.3 Basement and cellar. A single basement or cellar need not be included in the total allowable building area, provided such basement or cellar does not exceed the area permitted for a building with no more than one story above grade plane.
506.2 Allowable area determination. The allowable area of a building shall be determined in accordance with the applicable provisions of Sections 506.2.1 through 506.2.4, and Section 506.3.

</table>

Note: UL = Unlimited; NP = Not permitted.
For SI: 1 square foot = 0.0929 m².
NS = Buildings not equipped throughout with an automatic sprinkler system; S1 = Buildings a maximum of one story above grade plane equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1; SM = Buildings two or more stories above grade plane equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1; S13R = Buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.2; S13D = Buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.3.

a. See the following sections for general exceptions to Table 506.2.
   1. See Chapters 4 and 5 for specific exceptions to the allowable height in this chapter.
   2. Section 506.3. Allowable area increase due to frontage.

b. See Section 903.2 for the minimum thresholds for protection by an automatic sprinkler system for specific occupancies.

c. The NS value is only for use in buildings not required by this code to be equipped throughout with an automatic sprinkler system.

d. For open parking structures, see Section 406.5.

e. For private garages, see Section 406.3.

f. See Section 415.8 for limitations.

g. See Exception 9 of Section D105.1 for allowances of Type VA and VB construction for R-3 occupancies.
h. See Exception 12 of Section D105.1 for allowances of Type VA construction for R-3 occupancies in Lower Density Growth Management Areas.
Type IV construction utilizing cross-laminated timber or structural composite lumber shall be sprinklered where required by Section 903.2.13.

506.2.1 Single-occupancy, one-story buildings. The allowable area of a single-occupancy building with no more than one story above grade plane shall be determined in accordance with Equation 5-1:

\[ A_a = A_t + (NS \times I_f) \]  \hspace{1cm} \text{(Equation 5-1)}

where:

- \( A_a \) = Allowable area (square feet).
- \( A_t \) = Tabular allowable area factor (NS, S1, S13D or S13R value, as applicable) in accordance with Table 506.2.
- \( NS \) = Tabular allowable area factor in accordance with Table 506.2 for nonsprinklered building (regardless of whether the building is sprinklered).
- \( I_f \) = Area increase factor due to frontage (percent) as calculated in accordance with Section 506.3.

506.2.2 Mixed-occupancy, one-story buildings. The allowable area of a mixed-occupancy building with no more than one story above grade plane shall be determined in accordance with the applicable provisions of Section 508.1 based on Equation 5-1 for each applicable occupancy.

[506.2.1 Width limits. The value of “W” shall be at least 20 feet (6096 mm). Where the value of W varies along the perimeter of the building, the calculation performed in accordance with Equation 5-2 shall be based on the weighted average of each portion of exterior wall and open space where the value of W is greater than or equal to 20 feet (6096 mm). Where W exceeds 30 feet (9144 mm), a value of 30 feet (9144 mm) shall be used in calculating the weighted average, regardless of the actual width of the open space. Where two or more buildings are on the same tax lot, W shall be measured from the exterior face of a building to the exterior face of an opposing building, as applicable.]

[Exception: The value of W divided by 30 shall be permitted to be a maximum of 2 when the building meets all requirements of Section 507 except for compliance with the 60-foot (18 288 mm) public way or yard requirement, as applicable.]

[506.2.2 Open space limits. Such open space shall be either on the same zoning lot or dedicated for public use and shall be accessed from a street or approved fire lane.]

[506.3 Automatic sprinkler system increase. Where a building is equipped throughout with an approved automatic sprinkler system in accordance with Section 903.3.1.1, the building area limitation in Table 503 is permitted to be increased by an additional 200 percent \((I_s = 2)\) for buildings with more than one story above grade plane and an additional 300 percent \((I_s = 3)\) for buildings with no more than one story above grade plane. These increases are permitted in addition to the height and story increases in accordance with Section 504.2.]

[Exceptions: The building area limitation increases shall not be permitted for the following conditions:]
[1. The automatic sprinkler system increase shall not apply to buildings with an occupancy in Group H-1.]

[2. The automatic sprinkler system increase shall not apply to the building area of an occupancy in Group H-2 or H-3.]

506.2.2.1 Group H-2 or H-3 mixed occupancies. For buildings a building containing such Group H-2 or H-3 occupancies, the allowable building area shall be determined in accordance with Section 508.4.2, with the sprinkler system increase applicable only to the portions of the building not classified as Group H-2 or H-3.

[3. Fire-resistance rating substitution in accordance with Table-601, Note d.]

506.4 Single occupancy buildings with more than one story. The total allowable building area of a single occupancy building with more than one story above grade plane shall be determined in accordance with this section. The actual aggregate building area at all stories in the building shall not exceed the total allowable building area.

[Exception: A single basement need not be included in the total allowable building area, provided such basement does not exceed the area permitted for a building with no more than one story above grade plane and the finished surface of the floor above the basement does not exceed 6 feet (1829 mm) above grade plane.]

506.4.1 Area determination. The total allowable building area with more than one story above grade plane shall be determined by multiplying the allowable area per story \( (A_a) \), as determined in Section 506.1, by the number of stories above grade plane as listed below.

[1. For buildings with two stories above grade plane, multiply by 2;]

[2. For buildings with three or more stories above grade plane, multiply by 3; and]

[3. No story shall exceed the allowable area per story \( (A_a) \), as determined in Section 506.1 for the occupancies on that story.]

[Exceptions:]

[1. Unlimited area buildings in accordance with Section 507.]

[2. In Group R occupancies 6 stories or less in height, the maximum area of a building equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.2 shall be determined by multiplying the allowable area per story \( (A_a) \), as determined in Section 506.1, by the number of stories above grade plane.]

506.5 Mixed-occupancy area determination. The total allowable building area for buildings containing mixed occupancies shall be determined in accordance with the applicable provisions of this section.

[Exception: A single basement need not be included in the total allowable building area, provided such basement does not exceed the area permitted for a building with no more than one story.
above grade plane and the finished surface of the floor above the basement does not exceed 6 feet (1829 mm) above grade plane.)

[506.5.1 No more than one story above grade plane. For buildings with no more than one story above grade plane and containing mixed occupancies, the total building area shall be determined in accordance with the applicable provisions of Section 508.1.]

506.2.3 Single-occupancy, multistory buildings. The allowable area of a single-occupancy building with more than one story above grade plane shall be determined in accordance with Equation 5-2:

\[ A_a = [A_t + (NS \times I_f)] \times S_a \]  \hspace{1cm} (Equation 5-2)

where:

- \( A_a \) = Allowable area (square feet).
- \( A_t \) = Tabular allowable area factor (NS, S13D, S13R or SM value, as applicable) in accordance with Table 506.2.
- \( NS \) = Tabular allowable area factor in accordance with Table 506.2 for a nonsprinklered building (regardless of whether the building is sprinklered).
- \( I_f \) = Area factor increase due to frontage (percent) as calculated in accordance with Section 506.3.
- \( S_a \) = Actual number of building stories above grade plane, not to exceed three. For buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.2, use the actual number of building stories above grade plane, not to exceed four.

No individual story shall exceed the allowable area \( (A_a) \) as determined by Equation 5-2 using the value of \( S_a = 1 \).

[506.5.2 No more than one story above grade plane. For buildings with no more than one story above grade plane and containing mixed occupancies, each story] 506.2.4 Mixed-occupancy, multistory buildings. Each story of a mixed-occupancy building with more than one story above grade plane shall individually comply with the applicable requirements of Section 508.1. For buildings with more than three stories above grade plane, the total building area shall be such that the aggregate sum of the ratios of the actual area of each story divided by the allowable area of such stories, determined in accordance with Equation 5-3 based on the applicable provisions of Section 508.1, shall not exceed \([3]\) three.

\[ A_a = [A_t + (NS \times I_f)] \]  \hspace{1cm} (Equation 5-3)

where:

- \( A_a \) = Allowable area (square feet).
- \( A_t \) = Tabular allowable area factor (NS, S13D, S13R or SM value, as applicable) in accordance with Table 506.2.
\[ NS = \text{Tabular allowable area factor in accordance with Table 506.2 for a nonsprinklered building (regardless of whether the building is sprinklered).} \]

\[ I_f = \text{Area factor increase due to frontage (percent) as calculated in accordance with Section 506.3.} \]

**Exception:** For buildings designed as separated occupancies under Section 508.4 and equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.2, the total building area shall be such that the aggregate sum of the ratios of the actual area of each story divided by the allowable area of such stories determined in accordance with Equation 5-3 based on the applicable provisions of Section 508.1, shall not exceed four.

506.2.4.1 Group H-2 or H-3 mixed occupancies. For a building containing Group H-2 or H-3 occupancies, the allowable area shall be determined in accordance with Section 508.4.2, with the sprinkler system increase applicable only to the portions of the building not classified as Group H-2 or H-3.

506.3 Frontage increase. Area factor increase shall be determined in accordance with Sections 506.3.1 through 506.3.3.

506.3.1 Minimum percentage of perimeter. To qualify for an area factor increase based on frontage, a building shall have not less than 25 percent of its perimeter on a public way or open space. Such open space shall be either on the same zoning lot or dedicated for public use and shall be accessed from a street or approved fire lane.

506.3.2 Minimum frontage distance. To qualify for an area factor increase based on frontage, the public way or open space adjacent to the building perimeter shall have a minimum distance (W) of 20 feet (6096 mm) measured at right angles from the building face to any of the following:

1. The closest interior tax lot line.
2. The entire width of a street, alley or public way.
3. The exterior face of an adjacent building on the same tax lot.

Where the value of W is greater than 30 feet (9144 mm), a value of 30 feet (9144 mm) shall be used in calculating the building area increase based on frontage, regardless of the actual width of the public way or open space. Where the value of W varies along the perimeter of the building, the calculation performed in accordance with Equation 5-5 shall be based on the weighted average calculated in accordance with Equation 5-4.

\[
W = (L_1 \times w_1 + L_2 \times w_2 + L_3 \times w_3 ...)/F
\]

(Equation 5-4)

where:

\[ W = \text{(Width: weighted average)} = \text{Calculated width of public way or open space (feet).} \]

\[ L_n = \text{Length of a portion of the exterior perimeter wall.} \]

\[ w_n = \text{Width (\geq 20 feet) of a public way or open space associated with that portion of the exterior perimeter wall.} \]
\[ F = \text{Building perimeter that fronts on a public way or open space having a width of 20 feet (6096 mm) or more.} \]

**Exception:** Where a building meets the requirements of Section 507, as applicable, except for compliance with the minimum 60-foot (18288 mm) public way or yard requirement, and the value of \( W \) is greater than 30 feet (9144 mm), the value of \( W \) shall not exceed 60 feet (18288 mm).

**506.3.3 Amount of increase.** The area factor increase based on frontage shall be determined in accordance with Equation 5-5:

\[
I_f = (F/P - 0.25) W/30 \quad \text{(Equation 5-5)}
\]

where:

- \( I_f \) = Area increase factor due to frontage.
- \( F \) = Building perimeter that fronts on a public way or open space having minimum distance of 20 feet (6096 mm).
- \( P \) = Perimeter of entire building (feet).
- \( W \) = Width of public way or open space (feet) in accordance with Section 506.3.2.

**SECTION BC 507**

**UNLIMITED AREA BUILDINGS**

**507.1 General.** The area of buildings of the occupancies and configurations specified in [Section] Sections [507] 507.1 through 507.18 shall not be limited, except that only one cellar or one basement shall be permissible.

**507.1.1 Accessory occupancies.** Accessory occupancies shall be permitted in unlimited area buildings in accordance with the provisions of Section 508.2, otherwise the requirements of Sections 507.3 through 507.18 shall be applied, where applicable.

**507.2 Measurement of open spaces.** Where Sections 507.3 through 507.18 require buildings to be surrounded and adjoined by public ways and yards, those open spaces shall be determined as follows:

1. Yards shall be measured from the building perimeter in all directions to the closest interior lot lines or to the exterior face of an opposing building located on the same tax lot, as applicable.
2. Where the building fronts on a public way, the entire width of the public way shall be used.

**507.2.1 Reduced open space.** The public ways or yards of 60 feet (18288 mm) in width required in Sections 507.3, 507.4, 507.5 and 507.6 shall be permitted to be reduced to not less than 40 feet (12192 mm) in width provided all of the following requirements are met:

1. The reduced width shall not be allowed for more than 75 percent of the perimeter of the building.
2. The exterior walls facing the reduced width shall have a fire-resistance rating of not less than 3 hours.
3. Openings in the exterior walls facing the reduced width shall have opening protectives with a fire protection rating of not less than 3 hours.

[507.3] 507.3 Nonsprinklered, [one-story] one-story buildings. The area of a Group F-2 or S-2 building no more than one story in height, of other than Type V construction, shall not be limited when the building is surrounded and adjoined on all sides by public ways or yards not less than 60 feet (18 288 mm) in width.

[507.4] 507.4 Sprinklered, [one-story] one-story buildings. The area of a Group A-4 building no more than one story in height above grade plane of other than Type V construction, or the area of a Group B, F, M or S building no more than one story in height of other than Type V construction, shall not be limited when the building is provided with an automatic sprinkler system throughout in accordance with Section 903.3.1.1 and is surrounded and adjoined on all sides by public ways or yards not less than 60 feet (18 288 mm) in width.

Exceptions:

1. In Group F-2 and S-2 occupancies, one-story rack storage facilities of Type II construction that are not accessible to the public shall not be limited in height provided that such buildings conform to the requirements of the New York City Fire Code, and Sections 507.3, 507.4 and 903.3.1.1 of this code and the New York City Fire Code.

2. The automatic sprinkler system shall not be required in areas occupied for indoor participant sports, such as tennis, skating, swimming and equestrian activities, in occupancies in Group A-4, provided that both of the following criteria are met:

   2.1. Exit doors directly to the outside are provided for occupants of the participant sports areas.

   2.2. The building is equipped with a fire alarm system with manual fire alarm boxes installed in accordance with Section 907.

[507.4.1] 507.4.1 Mixed occupancy buildings with Groups A-1 and A-2. Group A-1 and A-2 occupancies of other than Type V construction shall be permitted within mixed occupancy buildings of unlimited area complying with Section 507.3, 507.4, provided all of the following criteria are met:

1. Group A-1 and A-2 occupancies are separated from other occupancies as required for separated occupancies in Section 508.4.4 with no reduction allowed in the fire-resistance rating of the separation based upon the installation of an automatic sprinkler system.

2. Each area of the portions of the building used for Group A-1 or A-2 occupancies shall not exceed the maximum allowable area permitted for such occupancies in Section 503.1 and 3.

3. [All exit] Exit doors from Group A-1 and A-2 occupancies shall discharge directly to the exterior of the building.
507.5 Sprinklered, [two-story] two-story buildings. The area of a Group B, F, M or S building no more than two stories in height shall not be limited when the building is provided with an automatic sprinkler system in accordance with Section 903.3.1.1 throughout, and is surrounded and adjoined on all sides by public ways or yards not less than 60 feet (18 288 mm) in width.

507.5 Reduced open space. The public ways or yards of 60 feet (18 288 mm) required in Sections 507.2, 507.3, 507.4 and 507.6 shall be permitted to be reduced to not less than 40 feet (12 192 mm) in width provided all of the following requirements are met:

1. The reduced width shall not be allowed for more than 75 percent of the perimeter of the building.

2. The exterior wall facing the reduced width shall have a minimum fire resistance rating of 3 hours.

3. Openings in the exterior wall, facing the reduced open space, shall have opening protectives with a minimum fire resistance rating of 3 hours.

507.6 Group A buildings. The area of a Group A-1, A-2, A-3, or A-4 building of Type IIA, IIIA or IV construction shall not be limited where the building is equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1. The area of a one-story, Group A-3 building used as a house of worship, community hall, dance hall, exhibition hall, gymnasium, lecture hall, indoor swimming pool or tennis court of Type IIB construction shall not be limited when all of the following criteria are met:

1. The building shall not have a stage other than a platform.

2. The building shall be equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.

3. The assembly floor shall be located at or within 21 inches (533 mm) of street or grade level and all exits are provided with ramps complying with Section 1010.1 to the street or grade level.

4. The building shall be surrounded and adjoined on all sides by public ways or yards not less than 60 feet (18 288 mm) in width.

507.7 Reserved.

507.8 Group H occupancies. Group H-2, H-3 and H-4 fire occupancies shall be permitted in unlimited area buildings containing Group F and S occupancies in accordance with Sections 507.3, 507.4 and 507.5 and the limitations of this section provisions of Sections 507.8.1 through 507.8.4.

507.8.1 Allowable area. The aggregate floor area of the Group H occupancies located at the perimeter of the building not exceed 10 percent of the area of the building and shall not exceed the area limitations for the Group H occupancies as specified in Table 503 as modified by Section 506.2. Section 506 based upon the percentage of the
perimeter of each Group H floor area that fronts on a public way or open

507.8.1.1 Located within the building. The aggregate floor area of Group H occupancies not located at the perimeter of the building as allowed by Section 415.3 shall not exceed 25 percent of the area limitations for the Group H occupancies as specified in Table 503.

507.8.1.1.1 Liquid use, dispensing and mixing rooms. Liquid use, dispensing and mixing rooms having a floor area of not more than 500 square feet (46.5 m²) need not be located on the outer perimeter of the building where they are in accordance with the New York City Fire Code and NFPA 30.

507.8.1.1.2 Liquid storage rooms. Liquid storage rooms having a floor area of not more than 1,000 square feet (93 m²) need not be located on the outer perimeter where they are in accordance with the New York City Fire Code and NFPA 30.

507.8.1.1.3 Spray paint booths. Spray paint booths that comply with the New York City Fire Code need not be located on the outer perimeter.

507.8.2 Located on building perimeter. Except as provided for in Section 507.8.1.1, Group H occupancies shall be located on the perimeter of the building. In Group H-2 and H-3 occupancies, not less than 25 percent of the perimeter of such occupancies shall be an exterior wall.

507.8.3 Occupancy separations. Group H occupancies shall be separated from the remainder of the unlimited area building and from each other in accordance with Table 508.4.

507.8.4 Height limitations. For two-story unlimited area buildings, the Group H occupancies shall not be located more than one story above grade plane unless permitted based on allowable height and number of stories and feet as set forth in Table 503 based on the type of construction of the unlimited area building.

507.9 Unlimited mixed occupancy buildings with Group H-5. The area of a Group B, F, H-5, M or S building no more than two stories above grade plane shall not be limited where the building is equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1, and is surrounded and adjoined by public ways or yards not less than 60 feet (18 288 mm) in width, provided all of the following criteria are met:

1. Buildings containing Group H-5 occupancy shall be of Type I or II construction.

2. Each area used for Group H-5 occupancy shall be separated from other occupancies as required in Sections 415.11 and 508.4.

3. Each area used for Group H-5 occupancy shall not exceed the maximum allowable area permitted for such occupancies in Section 503.1 including modifications of Section 506.
exception: where the group H-5 occupancy exceeds the maximum allowable area, the
Group H-5 shall be subdivided into areas that are separated by 2-hour fire barriers.

[507.9] 507.10 aircraft paint hangar. The area of a Group H-2 aircraft paint hangar no more than
one story above grade plane shall not be limited where such aircraft paint hangar complies with the
provisions of Section 412.6 and is surrounded and adjoined by public ways or yards not less in width
than one and one-half times the building height.

[507.10] 507.11 Group E buildings. The area of a Group E building of Type IIA, IIIA or IV
construction shall not be limited where the building is protected throughout with an approved
automatic sprinkler system in accordance with Section 903.3.1.1. The area of a one-story Group E
building of Type IIB construction shall not be limited when the following criteria are met:

1. Each classroom shall have not less than two means of egress, with one of the means of egress
   being a direct exit to the outside of the building complying with Section [4020] 1022.

2. The building is equipped throughout with an automatic sprinkler system in accordance with
   Section 903.3.1.1.

3. The building is surrounded and adjoined on all sides by public ways or yards not less than 60
   feet (18 288 mm) in width.

[507.11] 507.12 Motion picture theaters. In buildings of Type II, IIIA and IV construction, the area
of a motion picture theater located on the first story above grade plane shall not be limited when the
building is provided with an automatic sprinkler system throughout in accordance with Section 903.3.1.1
and is surrounded and adjoined on all sides by public ways or yards not less than 60 feet
(18 288 mm) in width.

[507.12] 507.13 Covered and open mall buildings and anchor [stores] buildings. The area of
covered and open mall buildings and anchor [stores] buildings not exceeding three stories in height
that comply with Section [402.6] 402 shall not be limited.

[507.13] 507.14 Group B buildings. Notwithstanding the provisions of Sections [507.2] 507.3 and
[507.3] 507.4, the area of a Group B building of Type IIA, IIIA or IV construction shall not be
limited where the building is protected throughout with an approved automatic sprinkler system in
accordance with Section 903.3.1.1.

and [507.3] 507.4, the area of a Group F-2 building of Type IIA, IIIA or IV construction shall not
be limited where the building is protected throughout with an approved automatic sprinkler system
in accordance with Section 903.3.1.1.

[507.15] 507.16 Group M buildings. Notwithstanding the provisions of Sections [507.2] 507.3 and
[507.3] 507.4, the area of a Group M building of Type IIA, IIIA or IV construction shall not be
limited where the building is protected throughout with an approved automatic sprinkler system in
accordance with Section 903.3.1.1.
507.16 Group R buildings. The area of Group R-1 and R-2 buildings of Type IIA, IIIA or IV construction shall not be limited where the building is protected throughout with an approved automatic sprinkler system in accordance with Section 903.3.1.1 or 903.3.1.2, as applicable.

507.17 Group S-2 buildings. Notwithstanding the provisions of Sections 507.2 507.3 and 507.4, the area of a Group S-2 building of Type IB, IIA, IIIA or IV construction shall not be limited where the building is protected throughout with an approved automatic sprinkler system in accordance with Section 903.3.1.1.

SECTION BC 508
MIXED USE AND OCCUPANCY

508.1 General. Each portion of a building shall be individually classified in accordance with Section 302.1. Where a building contains more than one occupancy group, the building or portion thereof shall comply with the applicable provisions of Section 508.2, 508.3 or 508.4, or a combination of these sections.

Exceptions:

1. Occupancies separated in accordance with Section 510.

2. Where required by Table 415.5.2, areas of Group H-1, H-2 and H-3 occupancies shall be located in a detached building or structure.

3. Where identified in Table 509, rooms or spaces shall be treated as incidental uses.

4. Where not identified in Table 509, mechanical and/or electrical equipment rooms shall be permitted to be classified as the occupancy within which they are located, or at the option of the applicant, classified as Group F-2 occupancy in accordance with Section 306.3.

5. Commercial kitchens classified as Group F-2 need not be separated by fire separations from adjoining dining spaces, provided that the conditions of Items 5.1, 5.2, and 5.3 are met:

5.1. The cooking equipment is vented directly to the outdoors;

5.2. A draft curtain of noncombustible material, at least 24 inches (609 mm) down from the ceiling, is provided to separate the opening between the cooking facilities and the dining spaces; and

5.3. A fire protection system is installed and located as set forth in Item 5.3.1 or 5.3.2.

5.3.1. A fire protection system in accordance with Sections 903 and 904 is installed within the cooking facilities. Additionally, sprinkler heads protecting the opening between the cooking facilities and the dining spaces shall be located within 24 inches (609 mm) of the curtain on the cooking facilities side; or

5.3.2. A fire protection system in accordance with Section 903 is located along any opening between the cooking facilities and the dining space on the cooking
facilities side, with sprinkler heads located within 24 inches (609 mm) of the opening and, if the opening is more than 60 inches (1524 mm) wide, the sprinkler heads are spaced not more than 48 inches (1219 mm) on center.

Where the conditions of Items 5.1, 5.2, and 5.3 cannot be satisfied, such commercial kitchen shall be separated from adjoining dining spaces in accordance with Table 508.4, footnote f.

508.2 Accessory occupancies. Accessory occupancies are those occupancies that are ancillary to the main occupancy of the building or portion thereof. Accessory occupancies shall comply with the provisions of Sections 508.2.1 through 508.2.4.

[508.2.1 Area limitations. Aggregate accessory occupancies shall not occupy more than 10 percent of the building area of the story in which they are located and shall not exceed the tabular values in Table 503, without building area increases in accordance with Section 506 for such accessory occupancies.]

[Exceptions:]

[1. The following accessory occupancies are permitted to occupy more than 10 percent of the floor area of the story in which they are located:]

[1.1. Accessory assembly areas having a floor area less than 750 square feet (69.7 m²).]

[1.2. Assembly areas that are accessory to Group E occupancies.]

[1.3. Accessory religious educational rooms and religious auditoriums with occupant loads of less than 100.]

[2. Rooms or spaces within Group H-2, H-3, H-4 or H-5 occupancy shall not be considered accessory occupancies and shall be treated as separated occupancies.]

508.2.2 508.2.2 Occupancy classification. Accessory occupancies shall be individually classified in accordance with Section 302.1. The requirements of this code shall apply to each portion of the building based on the occupancy classification of that space.

508.2.2 Allowable building height. The allowable height and number of stories of the building containing accessory occupancies shall be in accordance with Section 504 for the main occupancy of the building.

508.2.3 Allowable building area [and-height]. [The allowable building area and height of the building shall be based on the allowable building area and height for the main occupancy in accordance with Section 503.1. The height of each accessory occupancy shall not exceed the tabular values in Table 503, without increases in accordance with Section 504 for such accessory occupancies. The building area of the accessory occupancies shall be in accordance with Section 508.2.1. The allowable area of the building shall be based on the applicable provisions of Section 506 for the main occupancy of the building. Aggregate accessory occupancies shall not occupy more than 10 percent of the building area of the story in which they are located and shall not
exceed the tabular values for nonsprinklered buildings in Table 506.2 for each such accessory occupancy.

**Exceptions:**

1. The following accessory occupancies are permitted to occupy more than 10 percent of the floor area of the story in which they are located:
   1.1. Accessory assembly areas having a floor area less than 750 square feet (69.7 m²).
   1.2. Assembly areas that are accessory to Group E occupancies.
   1.3. Accessory religious educational rooms and religious auditoriums with occupant loads of less than 100.

2. Rooms or spaces within Group H-2, H-3, H-4 or H-5 occupancy shall not be considered accessory occupancies and shall be treated as separated occupancies.

**508.2.4 Separation of occupancies.** No separation is required between accessory occupancies and the main occupancy.

**Exceptions:**

1. Group H-2, H-3, H-4 and H-5 occupancies shall be separated from all other occupancies in accordance with Section 508.4.

2. Separated tenancies in accordance with the requirements of Section 510.

**508.3 Nonseparated occupancies.** Buildings or portions of buildings that comply with the provisions of this section shall be considered as nonseparated occupancies.

**508.3.1 Occupancy [Classification] classification.** Nonseparated occupancies shall be individually classified in accordance with Section 302.1. The requirements of this code shall apply to each portion of the building based on the occupancy classification of that space. In addition, the most restrictive provisions of Chapter 9 which apply to the nonseparated occupancies shall apply to the total nonseparated occupancy area. Where nonseparated occupancies occur in a high-rise building, the most restrictive requirements of Section 403 which apply to the nonseparated occupancies shall apply throughout the high-rise building.

**508.3.2 Allowable building area and height.** The allowable building area and height of the building or portion thereof shall be based on the most restrictive allowances for the occupancy groups under consideration for the type of construction of the building in accordance with Section 503.1.

**508.3.3 Separation.** No separation is required between nonseparated occupancies.

**Exceptions:**
1. Group H-2, H-3, H-4 and H-5 occupancies shall be separated from all other occupancies in accordance with Section 508.4.

2. Separated tenancies in accordance with Section 510.10.

3. [Kitchens] Commercial kitchens shall be separated in accordance with Section [508.4.4] 508.1, Exception 5.

**508.4 Separated occupancies.** Buildings or portions of buildings that comply with the provisions of this section shall be considered as separated occupancies.

</table>

S = Buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1.
NS = Buildings not equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1.
N = No separation requirement.
NP = Not permitted.
a. See Section 420.
b. The required separation from areas used only for private or pleasure vehicles shall be reduced by 1 hour but to not less than 1 hour.

c. See Section [406.1.4] 406.3.4.

d. Separation is not required between occupancies of the same classification.

e. See Section 422.2 for ambulatory care facilities.

f. A commercial kitchen in Group F-2 that does not comply with Section 508.1, Exception 5 shall be separated from adjoining dining spaces with 1-hour fire separation where the dining spaces are equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1, and separated with 2-hour fire separation where the dining spaces is not equipped throughout with an automatic sprinkler system.
508.4.1 **Occupancy classification.** Separated occupancies shall be individually classified in accordance with Section 302.1. Each separated space shall comply with this code based on the occupancy classification of that portion of the building.

508.4.2 **Allowable building area.** In each story, the building area shall be such that the sum of the ratios of the actual building area of each separated occupancy divided by the allowable building area of each separated occupancy shall not exceed 1.

508.4.3 **Allowable height.** Each separated occupancy shall comply with the building height limitations based on the type of construction of the building in accordance with Section 503.1.

  **Exception:** Special provisions [permitted by] of Section 510 shall permit occupancies at building heights other than provided in Section 503.1.

508.4.4 **Separation.** Individual occupancies shall be separated from adjacent occupancies in accordance with Table 508.4.

  **[Exceptions] Exception:**

  [1—] Fire separations of Group H and I-2 occupancies shall not be permitted any reductions in fire-resistance ratings.

  [2—] Nonresidential kitchens need not be separated by fire separations from adjoining dining spaces, provided that all of the following conditions are satisfied:

  [2.1—] The cooking equipment is vented directly to the outdoors; and

  [2.2—] A draft curtain of noncombustible material, at least 24 inches (609 mm) down from the ceiling, is provided to separate the cooking facilities from dining spaces; and

  [2.3—] Fire protection systems in accordance with the provisions of Section 903 and 904 are provided on the cooking facilities side of the curtain, or any opening between the kitchen and dining space, located within 24 inches (609 mm) of the curtain or opening, and spaced not more than 48 inches (1219 mm) on center if the opening is more than 60 inches (1524 mm) wide.

508.4.4.1 **Construction.** Required separations shall be fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section [712] 711, or both, so as to completely separate adjacent occupancies.

**SECTION BC 509**

**INCIDENTAL USES**

509.1 **General.** Incidental uses listed in Table 509 and located within single occupancy or mixed occupancy buildings shall comply with the provisions of this section. Incidental uses are ancillary functions associated with a given occupancy that generally pose a greater level of risk to that occupancy and are limited to those uses listed in Table 509.
**Exception:** Incidental uses within and serving a dwelling unit are not required to comply with this section.

---

a. Boilers servicing more than one dwelling unit in multiple dwellings shall also comply with Section 65 of the New York State Multiple Dwelling Law.

b. Sealed combustion direct vent boilers shall comply with Section 303 of the New York City Mechanical Code and Section 303 of the New York City Fuel Gas Code, as applicable.

c. For mechanical and/or electrical equipment rooms not identified in this Table, see Section 508.1.

For SI: 1 square foot = 0.0929 m², 1 pound per square inch (psi) = 6.9 kPa, 1 British thermal unit (Btu) per hour = 0.293 watts, 1 horsepower = 746 watts, 1 gallon = 3.785 L, 1 cubic foot = 0.0283 m³.
509.2 Occupancy classification. Incidental uses shall not be individually classified in accordance with Section 302.1. Incidental uses shall be included in the building occupancies within which they are located.

509.3 Area limitations. Incidental uses shall not occupy more than 10 percent of the building in which they are located.

509.4 Separation and protection. The incidental uses listed in Table 509 shall be separated from the remainder of the building or equipped with an automatic sprinkler system, or both, in accordance with the provisions of that table.

509.4.1 Separation. Where Table 509 specifies a fire-resistance-rated separation, the incidental uses shall be separated from the remainder of the building by a fire barrier constructed in accordance with Section 707 or a horizontal assembly constructed in accordance with Section [712.111], or both. Construction supporting 1-hour fire barriers or horizontal assemblies used for incidental use separations in buildings of Type IIB, IIIB and VB construction is not required to be fire-resistance rated unless required by other sections of this code.

509.4.2 Protection. Where Table 509 permits an automatic sprinkler system without a fire barrier, the incidental uses shall be separated from the remainder of the building by construction capable of resisting the passage of smoke. The walls shall extend from the top of the foundation or floor assembly below to the underside of the ceiling that is a component of a fire-resistance rated floor assembly or roof assembly above or to the underside of the floor or roof sheathing, or deck or slab above. Doors shall be self- or automatic-closing upon detection of smoke in accordance with Section [715.4.8.3] 716.5.9.3. Doors shall not have air transfer openings and shall not be undercut in excess of the clearance permitted in accordance with NFPA 80. Walls surrounding the incidental use shall not have air transfer openings unless provided with smoke dampers in accordance with Section [707.110.8].

509.4.2.1 Protection limitation. Except as specified in Table 509 for certain incidental uses, where an automatic sprinkler system is provided in accordance with Table 509, only the space occupied by the incidental use need be equipped with such a system.

§ 7. Chapter 6 of the New York city building code, as amended by local law number 141 for the year 2013, is amended to read as follows:

CHAPTER 6
TYPES OF CONSTRUCTION

SECTION BC 601
GENERAL

601.1 Scope. The provisions of this chapter shall control the classification of buildings as to type of construction.

For SI: 1 foot = 304.8 mm.

a. Roof supports: Fire-resistance ratings of primary structural frame and bearing walls are permitted to be reduced by 1 hour where supporting a roof only.

b. 1. Except in Group F-1, H, M and S-1 occupancies, fire protection of structural members in roof construction shall not be required, including protection of primary structural frame members within any portion of the roof, roof framing and decking where every part of the roof construction is 20 feet or more above any floor immediately below. Fire-retardant-treated wood members shall be allowed to be used for such unprotected members.

  2. Except in Group F occupancies subject to regulation under Sections 264(1) and 264(2) of the New York State Labor Law, and in Group I-1, R-1, and R-2 occupancies, in Types I and II construction, fire-retardant-treated wood shall be allowed in buildings including girders and trusses as part of the roof construction when the building is:

   i. Type II construction of any height; or

   ii. Type I construction two stories or less; or when over two stories, the vertical distance from the upper floor to the roof is 20 feet or more.

c. Except in Group F occupancies subject to regulation under Sections 264(1) and 264(2) of the New York State Labor Law, and in Group I-1, R-1 and R-2 occupancies, heavy timber shall be allowed where a 1-hour or less fire-resistance rating is required.

d. An approved automatic sprinkler system in accordance with Section 903.3.1 shall be allowed to be substituted for 1-hour fire-resistance-rated construction, provided such system is not otherwise required by other provisions of the code or used for an allowable area increase in accordance with Section 506.3 for an allowable height increase in accordance with Section 501.2. The 1-hour substitution for the fire-resistance of exterior walls shall not be permitted.

[^a]: Not less than the fire-resistance rating required by other sections of this code.
[^b]: Not less than the fire-resistance rating based on fire separation distance (see Table 602).
[^c]: Not less than the fire-resistance rating as referenced in Section 704.10.
[^d]: See note g of Table 602.
[^e]: See Section 711.2.4 for additional requirements.
[^f]: Type V construction is not permitted inside fire districts except as provided for in Section D105.1 of Appendix D.
[^g]: See Section 403.2.1 for additional requirements for high-rise buildings and fire-resistance rating of columns in such buildings.

For SI: 1 foot = 304.8 mm.

a. Load-bearing exterior walls shall also comply with the fire-resistance rating requirements of Table 601.
b. Group U when used as accessory to Group R-3 shall not be required to have a fire-resistance rating where the fire separation distance is 5 feet or more for freestanding private garages in compliance with Section 406.1, and when the separation distance is 3 feet or more for other freestanding Group U buildings. For freestanding private garages where the fire separation distance is less than 5 feet, refer to Section 406.4 for required fire-resistance rating for exterior walls.
c. See Section 706.1.1 for party walls.
d. Open parking garages complying with Section 406 shall not be required to have a fire-resistance rating.
e. The fire-resistance rating of an exterior wall is determined based upon the fire separation distance of the exterior wall and the story in which the wall is located.
f. For special requirements for Group H occupancies, see Section 415.6.
g. Inside the fire district, exterior load-bearing walls of Type II buildings shall have a fire-resistance rating not less than prescribed below:

| X < 5   | 2 hours |
| 5 ≤ X < 10 | 2 hours |
| 10 ≤ X < 30 | 1 hour |
| X ≥ 30     | As per Table 602 |

h. Inside the fire district, exterior non-load-bearing walls of Type II buildings shall have a fire-resistance rating not less than prescribed below:

| X < 5   | As per Table 602 |
| 5 ≤ X < 10 | As per Table 602 |
| 10 ≤ X < 30 | 1 hour |
| X ≥ 30     | As per Table 602 |

i. For special requirements for Group S aircraft hangars, see Section 412.4.1.

602.1.1 **Minimum requirements.** A building or portion thereof shall not be required to conform to the details of a type of construction higher than that type which meets the minimum requirements based on occupancy even though certain features of such a building actually conform to a higher type of construction. Classification shall be that of the minimum requirement unless all of the requirements for the higher type of construction are met.

**Exception:** Portions of buildings that cantilever over an adjacent building or tax lot shall also comply with the fire-resistance ratings of Section 705.12.

602.2 **Types I and II.** Types I and II construction are those types of construction in which the building elements listed in Table 601 are of noncombustible materials, except as permitted in Section 603 and elsewhere in this code.

602.3 **Type III.** Type III construction is that type of construction in which the exterior walls are of noncombustible materials and the interior building elements are of any material permitted by this code. Fire-retardant-treated wood framing complying with Section 2303.2 shall be permitted within exterior wall assemblies of a 2-hour rating or less.
Exceptions:

1. In Group I-1, R-1, and R-2 occupancies, all exterior walls, fire walls, exit passageways, and shaft enclosures shall be noncombustible.

2. In Group F occupancies subject to Section 270(1) of the New York State Labor Law, all exterior wall assemblies and all structural elements shall meet the requirements for a “fireproof building” as such term is defined in Section 264 of such law.

3. Inside the fire district, exterior load-bearing walls shall be constructed of noncombustible material.

4. Inside the fire district, exterior nonload-bearing walls may be constructed with fire-retardant-treated wood complying with Section 2303.2 where the building is equipped throughout with an automatic sprinkler system in accordance with Sections 903.3.1.1 through 903.3.1.3, unless otherwise prohibited by Exception 1 or 2 above.

602.4 Type IV. Type IV construction [Heavy Timber, HT] is that type of construction in which the exterior walls are of noncombustible materials or other materials permitted by Section 602.4.1 or 602.4.2, and the interior building elements are of solid [or] wood, glue-laminated [wood] timber, heavy timber (HT), structural composite lumber (SCL), or cross-laminated timber (CLT) without concealed spaces. The minimum dimensions for permitted materials including solid timber, glued-laminated timber, SCL, and CLT and details of Type IV construction shall comply with the provisions of Section 2304.11 and this section. [Fire-retardant-treated wood framing complying with Section 2303.2 shall be permitted within exterior wall assemblies with a 2-hour rating or less. Minimum solid sawn nominal dimensions are required for structures built using Type IV construction (HT). For glued laminated members, the equivalent net finished width and depths corresponding to the minimum nominal width and depths of solid sawn lumber are required as specified in Table 602.4.] Interior walls and partitions not less than 1-hour fire-resistance rating or heavy timber complying with Section 2304.11.2.2 shall be permitted. Buildings of Type IV construction utilizing SCL or CLT shall be equipped throughout with an automatic sprinkler system where required by Section 903.2.13. In buildings of Type IV construction utilizing SCL or CLT, a fire watch shall be maintained in accordance with Section 901.7.2 of the New York City Fire Code and Section 3303.3 of this code.

Exceptions:

1. In Group I-1, R-1, and R-2 occupancies, all exterior walls, fire walls, exit passageways, and shaft enclosures shall be noncombustible.

2. In Group F occupancies subject to Section 270(1) of the New York State Labor Law, all exterior wall assemblies and all structural elements shall meet the requirements for a "fireproof building" as defined in Section 264 of such law.

3. Inside the fire district, exterior load-bearing walls shall be constructed of noncombustible material.

4. Inside the fire district, exterior non-bearing walls may be constructed with fire-retardant-treated wood complying with Section 2303.2 of this code where the building is equipped
throughout with an automatic sprinkler system in accordance with Sections 903.3.1.1 through 903.3.1.3, unless otherwise prohibited by Exception 1 or 2 above.

5. Inside the fire district, exterior non-bearing walls are permitted to be constructed with cross-laminated timber (CLT) complying with Section 602.4.2 of this code, unless otherwise prohibited by Exception 1 or 2 above.

602.4.1 Fire-retardant-treated wood in exterior walls. Fire-retardant-treated wood framing and sheathing complying with Section 2303.2 shall be permitted within exterior wall assemblies not less than 6 inches (152 mm) in thickness with a 2-hour rating or less.

602.4.2 Cross-laminated timber in exterior walls. Cross-laminated timber (CLT) complying with Section 2303.1.4 shall be permitted within exterior wall assemblies not less than 6 inches (152.4 mm) in thickness with a 2-hour rating or less, provided the exterior surface of the cross-laminated timber (CLT) is protected by one of the following:

1. Fire-retardant-treated wood sheathing complying with Section 2303.2 and not less than \(\frac{15}{32}\) inch (11.9 mm) thick;

2. Type X gypsum board not less than \(\frac{5}{8}\) inch (15.9 mm) thick; or

3. A noncombustible material.

For SI: 1 inch = 25.4 mm.]

[602.4.1 Columns. Wood columns shall be sawn or glued laminated and shall not be less than 8 inches (203 mm) nominal in any dimension where supporting floor loads and not less than 6 inches (152 mm) nominal in width and not less than 8 inches (203 mm) nominal in depth where supporting roof and ceiling loads only. Columns shall be continuous or superimposed and connected in an approved manner.]
[602.4.2 Floor framing. Wood beams and girders shall be of sawn or glued-laminated timber and shall be not less than 6 inches (152 mm) nominal in width and not less than 10 inches (254 mm) nominal in depth. Framed sawn or glued-laminated timber arches, which spring from the floor line and support floor loads, shall be not less than 8 inches (203 mm) nominal in any dimension. Framed timber trusses supporting floor loads shall have members of not less than 8 inches (203 mm) nominal in any dimension.]

[602.4.3 Roof framing. Wood-frame or glued-laminated arches for roof construction, which spring from the floor line or from grade and do not support floor loads, shall have members not less than 6 inches (152 mm) nominal in width and have less than 8 inches (203 mm) nominal in depth for the lower half of the height and not less than 6 inches (152 mm) nominal in depth for the upper half. Framed or glued-laminated arches for roof construction that spring from the top of walls or wall abutments, framed timber trusses and other roof framing, which do not support floor loads, shall have members not less than 4 inches (102 mm) nominal in width and not less than 6 inches (152 mm) nominal in depth. Spaced members shall be permitted to be composed of two or more pieces not less than 3 inches (76 mm) nominal in thickness where blocked solidly throughout their intervening spaces or where spaces are tightly closed by a continuous wood-cover plate of not less than 2 inches (51 mm) nominal in thickness secured to the underside of the members. Splice plates shall be not less than 3 inches (76 mm) nominal in thickness. Where protected by approved automatic sprinklers under the roof deck, framing members shall be not less than 3 inches (76 mm) nominal in width.]

[602.4.4 Floors. Floors shall be without concealed spaces. Wood floors shall be of sawn or glued-laminated planks, splined or tongue-and-groove, of not less than 3 inches (76 mm) nominal in thickness covered with 1-inch (25 mm) nominal dimension tongue-and-groove flooring, laid crosswise or diagonally, or 0.5-inch (12.7 mm) particleboard or planks not less than 4 inches (102 mm) nominal in width set on edge close together and well spiked and covered with 1-inch (25 mm) nominal dimension flooring or 1⅛-inch (32 mm) woodstructural panel or 0.5-inch (12.7 mm) particleboard. The lumber shall be laid so that no continuous line of joints will occur except at points of support. Floors shall not extend closer than 0.5 inch (12.7 mm) to walls. Such 0.5-inch (12.7 mm) space shall be covered by a molding fastened to the wall and so arranged that it will not obstruct the swelling or shrinkage movements of the floor. Corbeling of masonry walls under the floor shall be permitted to be used in place of molding.]

[602.4.5 Roofs. Roofs shall be without concealed spaces and wood roof decks shall be sawn or glued-laminated, splined or tongue-and-groove plank, not less than 2 inches (51 mm) nominal in thickness, 1⅛-inch thick (32 mm) wood structural panel (exterior glue), or of planks not less than 3 inches (76 mm) nominal in width, set on edge close together and laid as required for floors. Other types of decking shall be permitted to be used if providing equivalent fire resistance and structural properties.]

[602.4.6 Partitions. Partitions shall be of solid wood construction formed by not less than two layers of 1-inch (25 mm) matched boards or laminated construction 4 inches (102 mm) thick, or of 1-hour fire resistance rated construction.]

[602.4.7] [602.4.3 Exterior structural members. Where a horizontal separation of 20 feet (6096 mm) or more is provided, wood columns and arches conforming to heavy timber sizes in
accordance with Section 2304.11 shall be permitted to be used externally[except as prohibited by Section 602.4 for Occupancy Groups F, I-1, R-1 and R-2].

Exception: Where prohibited by Exceptions 1, 2 or 3 of Section 602.4.

602.5 Type V. Type V construction is that type of construction in which the structural elements, exterior walls and interior walls are of any materials permitted by this code. Type V construction shall not be permitted inside the fire district unless otherwise permitted by Section D105.1.

Exception: In Group F occupancies subject to Section 270(1) of the New York State Labor Law, all exterior wall assemblies and all structural elements shall meet the requirements for a “fireproof building” as defined in Section 264 of such law.

SECTION BC 603
COMBUSTIBLE MATERIAL IN [TYPE] TYPES I AND II CONSTRUCTION

603.1 Allowable materials. Combustible materials shall be permitted in buildings of Type I or II construction in the following applications and in accordance with Sections 603.1.1 through 603.1.3:

1. Fire-retardant-treated wood, complying with Section 2303.2, shall be permitted in:

1.1. Nonbearing interior partitions where the required fire-resistance rating is 1 hour or less.

Exception: Public corridors and exits shall be constructed of noncombustible materials.

1.2. Roof construction as permitted in Table 601, Note b.

2. Thermal and acoustical insulation, other than foam plastics, having a flame spread index of not more than 25.

Exceptions:

1. Insulation placed between two layers of noncombustible materials without an intervening airspace shall be allowed to have a flame spread index of not more than 100.

2. Insulation installed between a finished floor and solid decking without intervening airspace shall be allowed to have a flame spread index of not more than 200.

3. Foam plastics in accordance with Chapter 26.

4. Roof coverings that have an A or B classification as defined in Section 1505.

5. Interior floor finish and floor covering materials installed in accordance with Section 804.

6. Millwork such as doors, door frames, window sashes and frames [Millwork such as doors, door frames, window sashes and frames as permitted by Chapter 8].

7. Interior wall and ceiling finishes installed in accordance with Sections 801 and 803.

8. Trim installed in accordance with Section 806.
9. Where not installed greater than 15 feet (4572 mm) above grade, show windows, nailing or furring strips and wooden bulkheads below show windows, including their frames, aprons and show cases.

10. Finish flooring installed in accordance with Section 805.

11. Partitions dividing portions of stores, offices or similar places occupied by one tenant only and which do not establish a corridor serving an occupant load of 30 or more shall be permitted to be constructed of fire-retardant-treated wood, 1-hour fire-resistance-rated construction or of wood panels or similar light construction up to 6 feet (1828.8 mm) in height.

12. Stages and platforms constructed in accordance with Sections 410.3 and 410.4, respectively.

13. Combustible exterior wall coverings, balconies and similar projections and bay or oriel windows in accordance with Chapter 14.

14. Blocking such as for handrails, millwork, cabinets and window and door frames.

16. Mastics and caulking materials applied to provide flexible seals between components of exterior wall construction.

17. Exterior plastic veneer installed in accordance with Section 2605.2.

19. Heavy timber as permitted by Note c to Table 601 and Section [602.4.7] 602.4.3.

20. Aggregates, component materials and admixtures as permitted by Section 703.2.2.

21. Sprayed fire-resistant materials and intumescent and mastic fire-resistant coatings, determined on the basis of fire resistance tests in accordance with Section 703.2 and installed in accordance with Sections [1704.14] 1705.14 and [1704.12] 1705.15, respectively.

22. Materials used to protect penetrations in fire-resistance-rated assemblies in accordance with Section [713] 714.

23. Materials used to protect joints in fire-resistance-rated assemblies in accordance with Section [714] 715.

24. Materials allowed in the concealed spaces of buildings of Types I and II construction in accordance with Section [715.5] 718.5.

25. Materials exposed within plenums complying with Section 602 of the New York City Mechanical Code.
26. Bleachers, grandstands, and folding and telescopic seating within an assembly space in accordance with Section 1029.1.1 of this code.

603.1.1 Ducts. The use of nonmetallic ducts shall be permitted [when] where installed in accordance with the limitations of the New York City Mechanical Code.

603.1.2 Piping. The use of combustible piping materials shall be permitted [when] where installed in accordance with the limitations of the New York City Mechanical Code and the New York City Plumbing Code.

603.1.3 Electrical. The use of electrical wiring methods with combustible insulation, tubing, raceways and related components shall be permitted [when] where installed in accordance with the limitations of the New York City Electrical Code.

§ 8. Chapter 7 of the New York city building code, as amended by and section 704 as added by local law number 141 for the year 2013, section 708.7 as amended by and item 12 of section 715.4.8.3 as added by local law number 17 for the year 2014, and sections 704.11, 708.12.1.3.2 and 708.13.3 and item 1 of section 716.3.3.2 as amended by local law number 51 for the year 2014, is amended to read as follows:

CHAPTER 7
FIRE AND SMOKE PROTECTION FEATURES

SECTION BC 701
GENERAL

701.1 Scope. The provisions of this chapter shall govern the materials and assemblies used for structural fire resistance and fire-resistance-rated construction separation of adjacent spaces to safeguard against the spread of fire and smoke within a building and the spread of fire to or from buildings.

701.2 Multiple use fire assemblies. Fire assemblies that serve multiple purposes in a building shall comply with all of the requirements that are applicable for each of the individual fire assemblies.

SECTION BC 702
DEFINITIONS

702.1 Definitions. The following [words and] terms [shall, for the purposes of this chapter, and as used elsewhere in this code, have the meanings shown herein] are defined in Chapter 2:

ANNULAR SPACE. [The opening around the penetrating item.]
BUILDING ELEMENT. [A fundamental component of building construction, listed in Table 601, which may or may not be of fire-resistance-rated construction and is constructed of materials based on the building type of construction.]

CEILING RADIATION DAMPER. [A listed device installed in a ceiling membrane of a fire-resistance-rated floor/ceiling or roof/ceiling assembly to limit automatically the radiative heat transfer through an air inlet/outlet opening.]

COMBINATION FIRE/SMOKE DAMPER. [A listed device installed in ducts and air transfer openings designed to close automatically upon the detection of heat and resist the passage of flame and smoke. The device is installed to operate automatically, controlled by a smoke detection system, and where required, is capable of being positioned from a fire command center.]

CONCEALED SPACES. [Enclosed spaces within partitions, walls, floors, roofs, stairs, furring, pipe chases and column enclosures and other similar spaces.]

DAMPERS, TYPES OF. [See “Ceiling radiation damper,” “Combination fire/smoke damper,” “Fire damper” and “Smoke damper.”]

[DRAFT STOP. A material, device or construction installed to restrict the movement of air within open spaces of concealed areas of building components such as crawl spaces, floor/ceiling assemblies, roof/ceiling assemblies and attics.] DRAFTSTOP.

F RATING. [The time period that the through-penetration firestop system limits the spread of fire through the penetration when tested in accordance with ASTM E 814.]

FIRE BARRIER. [A fire-resistance-rated wall assembly of materials complying with Section 707 designed to restrict the spread of fire in which continuity of the fire-resistance rating is maintained.]

FIRE DAMPER. [A listed device, installed in ducts and air transfer openings designed to close automatically upon detection of heat and restrict the passage of flame. Fire dampers are classified for use in either static systems that will automatically shut down in the event of a fire, or in dynamic systems that continues to operate during a fire. A dynamic fire damper is tested and rated for closure under elevated temperature airflow.]

FIRE DOOR. [The door component of a fire door assembly.]

FIRE DOOR ASSEMBLY. [Any combination of a fire door, frame, hardware, and other accessories that together, as an opening protective, provide a specific degree of fire protection to the opening.]

FIRE PARTITION. [A vertical assembly of materials complying with Section 709, designed to restrict the spread of fire in which openings are protected.]

FIRE PROTECTION RATING. [The period of time that an opening protective assembly will maintain the ability to confine a fire as determined by tests prescribed in Section 715. Ratings are stated in hours or minutes.]

FIRE-RATED GLAZING.
FIRE RESISTANCE. [That property of materials or their assemblies that prevents or retards the passage of excessive heat, hot gases or flames under conditions of use.]

FIRE-RESISTANCE RATING. [The period of time a building element, component or assembly maintains the ability to withstand fire exposure, continues to perform a given structural function, or both, as determined by the tests, or the methods based on tests, prescribed in Section 703.]

FIRE-RESISTANT JOINT SYSTEM. [An assemblage of specific materials or products that are designed, tested, and fire-resistance rated in accordance with either ASTM E 1966 or UL 2079 to resist for a prescribed period of time the passage of fire through joints made in or between fire-resistance-rated assemblies.]

FIRE SEPARATION DISTANCE. [The distance measured from the building face to one of the following:]

[1. The closest interior tax lot line;]

[2. To the centerline of a street, an alley or public space; or]

[3. To an imaginary line between two buildings on the same tax lot.]

[The distance shall be measured at right angles from the face of the wall.]

FIRE WALL. [A fire-resistance-rated smoke-tight wall having protected openings, which restricts the spread of fire and extends continuously from the foundation to or through the roof, with sufficient structural stability under fire conditions to allow collapse of construction on either side without collapse of the wall.]

FIRE WINDOW ASSEMBLY. [A window, as an opening protective, constructed and glazed to give protection against the passage of fire, smoke and hot gases.]

FIREBLOCKING. [A building material or materials approved for use as fireblocking to resist the free passage of flame or hot gases to other areas of the building through concealed spaces.]

FIRESTOPPING. [A through-penetration firestop or a membrane penetration firestop.]

FLOOR FIRE DOOR ASSEMBLY. [A combination of a fire door, a frame, hardware and other accessories installed, as an opening protective, in a horizontal plane, which together provide a specific degree of fire protection to a through opening in a fire resistance-rated floor (see Section 712.8).]

HORIZONTAL ASSEMBLY. [A fire-resistance rated floor or roof assembly of materials designed to restrict the spread of fire in which continuity of the fire-resistance rating is maintained.]

JOINT.

L RATING.
MEMBRANE PENETRATION. [An opening made through one side (wall, floor or ceiling membrane) of an assembly.]

MEMBRANE PENETRATION FIRESTOP. [A material, device, or assemblage of specific materials or products that is designed, tested and fire resistance rated to resist for a prescribed time period the passage of flame and heat through openings in a protective membrane in order to accommodate cables, cable trays, conduit, tubing, pipes or similar items.]

MEMBRANE-PENETRATION FIRESTOP SYSTEM.

MINERAL FIBER. [Insulation composed principally of fibers manufactured from rock, slag or glass, with or without binders.]

MINERAL WOOL. [Synthetic vitreous fiber insulation made by melting predominantly igneous rock or furnace slag, and other inorganic materials, and then physically forming the melt into fibers.]

PENETRATION FIRESTOP. [A through-penetration firestop or a membrane penetration firestop.]

SELF-CLOSING. [As applied to a fire door or other opening, means equipped with an approved device that will ensure closing after having been opened.]

SHAFT. [An enclosed space extending through one or more stories of a building, connecting vertical openings in successive floors, or floors and roof.]

SHAFT ENCLOSURE. [The walls or construction forming the boundaries of a shaft.]

SMOKE BARRIER. [A continuous membrane, either vertical or horizontal, such as a wall, floor, or ceiling assembly, that is designed and constructed in accordance with Section 710 to restrict the movement of smoke.]

SMOKE COMPARTMENT. [A space within a building enclosed by smoke barriers on all sides, including the top and bottom.]

SMOKE DAMPER. [A listed device installed in ducts and air transfer openings that is designed to resist the passage of air and smoke. The device is installed to operate automatically, controlled by a smoke detection system, and where required, is capable of being positioned from a fire command center.]

SMOKE PARTITION. [A continuous vertical assembly that is designed and constructed to restrict the movement of smoke and is not generally required to have a fire resistance rating in accordance with Section 711.]

SPLICE.

T RATING. [The time period that the penetration firestop system, including the penetrating item, limits the maximum temperature rise to 325°F (163°C) above its initial temperature through the penetration on the nonfire side when tested in accordance with ASTM E 814.]
THROUGH-PENETRATION. An opening that passes through an entire assembly.

THROUGH-PENETRATION FIRESTOP SYSTEM. An assemblage of specific materials or products that are designed, tested and fire resistance rated to resist for a prescribed period of time the spread of fire through penetrations. The F and T rating criteria for penetration firestop systems shall be in accordance with ASTM E 814 or UL 1479. See definitions of “F rating” and “T rating.”

SECTION BC 703
FIRE-RESISTANCE RATINGS AND FIRE TESTS

703.1 Scope. Materials prescribed herein for fire resistance shall conform to the requirements of this chapter.

703.2 Fire-resistance ratings. The fire-resistance rating of building elements, components or assemblies shall be determined in accordance with the test procedures set forth in ASTM E 119 or UL 263 or in accordance with Section 703.3. Where materials, systems or devices that have not been tested as part of a fire-resistance-rated assembly are incorporated into the building element, component or assembly, sufficient data shall be made available to the commissioner to show that the required fire resistance rating is not reduced. Materials and methods of construction used to protect joints and penetrations in fire resistance-rated building elements, components or assemblies shall not reduce the required fire-resistance rating. The fire-resistance rating of penetrations and fire-resistant joint systems shall be determined in accordance with Sections 714 and 715, respectively.

[Exception: In determining the fire-resistance rating of exterior bearing walls, compliance with the ASTM E 119 or UL 263 criteria for unexposed surface temperature rise and ignition of cotton waste due to passage of flame or gases is required only for a period of time corresponding to the required fire-resistance rating of an exterior nonbearing wall with the same fire separation distance, and in a building of the same group. When the fire-resistance rating determined in accordance with this exception exceeds the fire-resistance rating determined in accordance with ASTM E 119 or UL 263, the fire exposure time period, water pressure, and application duration criteria for the hose stream test of ASTM E 119 or UL 263 shall be based upon the fire-resistance rating determined in accordance with this exception.]

703.2.1 Nonsymmetrical wall construction. Interior walls and partitions of nonsymmetrical construction shall be tested with both faces exposed to the furnace, and the assigned fire-resistance rating shall be the shortest duration obtained from the two tests conducted in compliance with ASTM E 119 or UL 263. Where evidence is furnished to show that the wall was tested with the least fire-resistant side exposed to the furnace, subject to acceptance of the commissioner, the wall need not be subjected to tests from the opposite side (see Section 705.5 of this code for exterior walls).

703.2.2 Combustible components. Combustible aggregates may be integrated with other materials to form a noncombustible material provided that the entire mixture, in the form in which it is to be used in construction, meets the requirement of this code for noncombustible construction.
703.2.3 Restrained classification. Fire-resistance-rated assemblies tested under ASTM E 119 or UL 263 shall not be considered to be restrained unless evidence satisfactory to the commissioner is furnished by the registered design professional showing that the construction qualifies for a restrained classification in accordance with ASTM E 119 or UL 263. Restrained construction shall be identified on the [plans] construction documents.

703.2.4 Supplemental features. Where materials, systems or devices that have not been tested as part of a fire-resistance-rated assembly are incorporated into the building element component or assembly, sufficient data shall be made available to the commissioner to show that the required fire-resistance rating is not reduced. Materials and methods of construction used to protect joints and penetrations in fire-resistance-rated building elements, components or assemblies shall not reduce the required fire-resistance rating.

703.2.5 Exterior bearing walls. In determining the fire-resistance rating of exterior bearing walls, compliance with the ASTM E 119 or UL 263 criteria for unexposed surface temperature rise and ignition of cotton waste due to passage of flame or gases is required only for a period of time corresponding to the required fire-resistance rating of an exterior nonbearing wall with the same fire separation distance, and in a building of the same group. Where the fire-resistance rating, determined in accordance with this section, exceeds the fire-resistance rating determined in accordance with ASTM E 119 or UL 263, the fire exposure time period, water pressure and application duration criteria for the hose stream test of ASTM E 119 or UL 263 shall be based on the fire-resistance rating determined in accordance with this section.

703.3 [Alternative methods] Methods for determining fire resistance. The application of any of the [alternative] methods listed in this section shall be based on the fire exposure and acceptance criteria specified in ASTM E 119 or UL 263. The required fire resistance of a building element, component or assembly shall be permitted to be established by any of the following methods or procedures:

1. Fire-resistance designs documented in approved sources.

2. Prescriptive designs of fire-resistance-rated building elements, components or assemblies as prescribed in Section [720] 721 of this code.

3. Calculations in accordance with Section [721] 722 of this code.

4. Engineering analysis based on a comparison of building element, component or assemblies designs having fire-resistance ratings as determined by the test procedures set forth in ASTM E 119 or UL 263.

5. Alternative protection methods as allowed by rules of the department.

703.4 [Noncombustibility tests.] Automatic sprinklers. Under the prescriptive fire-resistance requirements of this code, the fire-resistance rating of a building element, component or assembly shall be established without the use of automatic sprinklers or any other fire suppression system being incorporated as part of the assembly tested in accordance with the fire exposure, procedures and acceptance criteria specified in ASTM E 119 or UL 263. However, this section shall not prohibit or
limit the duties and powers of the commissioner as allowed by Sections 28-103.1.3 and 28-103.3 of Administrative Code.

**703.5 Noncombustibility tests.** The tests indicated in Sections [703.4.1 and 703.4.2] 703.5.1 and 703.5.2 shall serve as criteria for acceptance of building materials as set forth in Sections 602.2, 602.3 and 602.4 in Type I, II, III and IV construction. The term “noncombustible” does not apply to the flame spread characteristics of interior finish or trim materials. A material shall not be classified as a noncombustible building construction material if it is subject to an increase in combustibility or flame spread beyond the limitations herein established through the effects of age, fabrication or erection techniques, moisture or other atmospheric conditions.

[703.4.1] 703.5.1 Elementary materials. Materials required to be noncombustible shall be tested in accordance with ASTM E 136.

[703.4.2] 703.5.2 Composite materials. Materials having a structural base of noncombustible material as determined in accordance with Section [703.4.4] 703.5.1 of this code with a surfacing not more than 0.125 inch (3.18 mm) thick that has a flame spread index not greater than 50 when tested in accordance with ASTM E 84 or UL 723 shall be acceptable as noncombustible materials.

[703.6] 703.6 Fire-resistance-rated glazing. Fire-resistance-rated glazing, when tested in accordance with ASTM E 119 or UL 263 and complying with the requirements of Section 707 of this code, shall be permitted. Fire-resistance-rated glazing shall bear a label [or other identification showing the name of the manufacturer, the test standard and the identifier “W XXX,” where the “XXX” is the fire resistance rating in minutes. Such label or identification shall be] marked in accordance with Table 716.3 of this code and issued by an approved agency [and] that shall be permanently [affixed to] identified on the glazing.

[703.7] 703.7 Marking and identification. [Fire] Where there is a concealed floor, floor-ceiling or attic space, fire walls, fire barriers, fire partitions, smoke barriers and smoke partitions or any other wall required to have protected openings or penetrations shall be effectively and permanently identified with signs or stenciling in the concealed space. Such identification shall [be located in accessible concealed floor, floor-ceiling or attic spaces; and]:

1. Be [repeated] located within 15 feet (4572 mm) of the end of each wall and at intervals not exceeding 30 feet (9144 mm) measured horizontally along the wall or partition[; and].

2. Include lettering not less than 0.5 inch (12.7 mm) 3 inches (76.2 mm) in height[;] with a minimum 3/8-inch (9.5 mm) stroke in a contrasting color incorporating the suggested wording[;]: “FIRE AND/OR SMOKE BARRIER—PROTECT ALL OPENINGS.”

[Exception: Walls in Group R-2 occupancies that do not have a removable decorative ceiling allowing access to the concealed space.]
SECTION BC 704
FIRE-RESISTANCE RATING OF STRUCTURAL MEMBERS

704.1 Requirements. The fire-resistance ratings of structural members and assemblies shall comply with this section and the requirements for the type of construction as specified in Table 601. The fire-resistance ratings shall be not less than the ratings required for the fire-resistance-rated assemblies supported by the structural members.

**Exception:** Fire barriers, fire partitions, smoke barriers and horizontal assemblies as provided in Sections 707.5, 709.4, 710.4, 708.4 and 712.4, respectively.

704.2 Column protection. Where columns are required to have protection to achieve a fire-resistance rating, the entire column shall be provided individual encasement protection by protecting it on all sides for the full column length, including connections to other structural members, with materials having the required fire-resistance rating. Where the column extends through a ceiling, the encasement protection shall be continuous from the top of the foundation or floor/ceiling assembly below through the ceiling space to the top of the column.

704.3 Protection of the primary structural frame other than columns. Members of the primary structural frame other than columns that are required to have protection to achieve a fire-resistance rating and support more than one floor or one floor and roof, or support a load-bearing wall or a nonload-bearing wall more than one story high, shall be provided individual encasement protection by protecting them on all sides for their full length, including connections to other structural members, with materials having the required fire-resistance rating.

**Exception:** Individual encasement protection may be omitted on those exposed sides where the extent of protection is in accordance with the required fire-resistance rating, as determined in Section 703.

704.4 Protection of secondary members. Secondary members that are required to have protection to achieve a fire-resistance rating shall be protected by individual encasement protection by the membrane or ceiling of a horizontal assembly in accordance with Section 712, or by a combination of both.

704.4.1 Light-frame construction. Studs and boundary elements that are integral elements in load-bearing walls of light-frame construction shall be permitted to have required fire-resistance ratings provided by the membrane protection provided for the load-bearing wall.

704.4.2 Horizontal assemblies. Horizontal assemblies are permitted to be protected with a membrane or ceiling where the membrane or ceiling provides the required fire-resistance rating and is installed in accordance with Section 711.

704.5 Truss protection. The required thickness and construction of fire-resistance-rated assemblies enclosing trusses shall be based on the results of full-scale tests or combinations of tests on truss components or on approved calculations based on such tests that satisfactorily demonstrate that the assembly has the required fire resistance.
704.6 **Attachments to structural members.** The edges of lugs, brackets, rivets and bolt heads attached to structural members shall be protected to the highest required fire-resistance rating of the members connected.

704.7 **Reinforcing.** Thickness of protection for concrete or masonry reinforcement shall be measured to the outside of the reinforcement, including stirrups, ties and spiral reinforcing ties.

704.8 **Embedments and enclosures.** Pipes, wires, conduits, ducts or other service facilities shall not be embedded in the required fire protective covering of a structural member that is required to be individually encased.

**Exception:** Pipes, wires, and conduits may be installed in the space between the required fire protection and the structural member protected, provided that where such facilities pierce the required fire protection:

1. [**The**] The area of the penetration does not exceed two percent of the area of the fire protection on any one face,

2. [**The**] The penetrations are closed off with close-fitting metal escutcheons or plates, and

3. [**The**] The concealed space is firestopped at each story.

704.9 **Impact protection.** Where the fire protective covering of a structural member is subject to impact damage from moving vehicles, the handling of merchandise or other activity, the fire protective covering shall be protected by corner guards or by a substantial jacket of metal or other noncombustible material to a height adequate to provide full protection, but not less than 5 feet (1524 mm) from the finished floor.

**Exception:** Corner protection is not required on concrete columns in open or enclosed parking garages.

704.10 **Exterior structural members.** Load-bearing structural members located within the exterior walls, or exposed to the outside of a building or structure shall be provided with the highest fire-resistance rating as determined in accordance with the following:

1. As required by Table 601 for the type of building element based on the type of construction of the building;

2. As required by Table 601 for exterior bearing walls based on the type of construction; and

3. As required by Table 602 for exterior walls based on the fire separation distance.

704.11 **Lintel protection.** Lintels over openings wider than 4 feet (1219 mm) in masonry walls, other than in walls of masonry veneer on wood frame structures, shall be fire protected as required by Section 704.3 when the full load over the opening is not relieved by a masonry arch of required strength.

[**Exceptions:**]
[1. The members of an assembled metal lintel that support only outer face masonry that is securely bonded or anchored to backing need not be fire protected, provided that the inner members of the assembly support the full load imposed.]

[2. The use of stone lintels in spans exceeding 4 feet (1219 mm) shall not be permitted unless supplemented by fire-protected structural members or masonry arches of the required strength to support the superimposed loads.]

**Bottom flange protection.** Fire protection is not required at the bottom flange of lintels, shelf angles and plates spanning not more than 6 feet 4 inches (1930.4 mm), whether part of the primary structural frame or not, and from the bottom flange of lintels, shelf angles and plates not part of the structural frame, regardless of span.

**704.12 Seismic isolation systems.** Fire-resistance ratings for the isolation system shall meet the fire-resistance rating required for the columns, walls or other structural elements in which the isolation system is installed in accordance with Table 601 of this code. Isolation systems required to have a fire-resistance rating shall be protected with approved materials or construction assemblies designed to provide the same degree of fire resistance as the structural element in which [it] the system is installed when tested in accordance with ASTM E 119 or UL 263 (see Section 703.2 of this code).

Such isolation system protection applied to isolator units shall be capable of retarding the transfer of heat to the isolator unit in such a manner that the required gravity load-carrying capacity of the isolator unit will not be impaired after exposure to the standard time-temperature curve fire test prescribed in ASTM E 119 or UL 263 for a duration not less than that required for the fire-resistance rating of the structure element in which [it] the system is installed.

Such isolation system protection applied to isolator units shall be suitably designed and securely installed so as not to dislodge, loosen, sustain damage or otherwise impair its ability to accommodate the seismic movements for which the isolator unit is designed and to maintain its integrity for the purpose of providing the required fire-resistance protection.

**704.13 Sprayed fire-resistant materials (SFRM).** Sprayed fire-resistant materials (SFRM) shall comply with Sections 704.13.1 through 704.13.5.

**704.13.1 Fire-resistance rating.** The application of SFRM shall be consistent with the fire-resistance rating and the listing, including, but not limited to, minimum thickness and dry density of the applied SFRM, method of application, substrate surface conditions and the use of bonding adhesives, sealants, reinforcing or other materials.

**704.13.2 Manufacturer’s installation instructions.** The application of SFRM shall be in accordance with the manufacturer’s installation instructions. The instructions shall include, but are not limited to, substrate temperatures and surface conditions and SFRM handling, storage, mixing, conveyance, method of application, curing and ventilation.

**704.13.3 Substrate condition.** The SFRM shall be applied to a substrate in compliance with Sections 704.13.3.1 through 704.13.3.2.
704.13.3.1 Surface conditions. Substrates to receive SFRM shall be free of dirt, oil, grease, release agents, loose scale and any other condition that prevents adhesion. The substrates shall also be free of primers, paints and encapsulants other than those fire tested and listed by a nationally recognized testing agency. Primed, painted or encapsulated steel shall be allowed, provided that testing has demonstrated that required adhesion is maintained.

704.13.3.2 Primers, paints and encapsulants. Where the SFRM is to be applied over primers, paints or encapsulants other than those specified in the listing, the material shall be field tested in accordance with ASTM E 736. Where testing of the SFRM with primers, paints or encapsulants demonstrates that required adhesion is maintained, SFRM shall be permitted to be applied to primed, painted or encapsulated wide flange steel shapes subject to the following conditions:

1. The beam flange width of such shape may not exceed 12 inches (305 mm);
2. The column flange width of such shape may not exceed 16 inches (406.4 mm);
3. The beam or column web depth of such shape may not exceed 16 inches (406.4 mm); and
4. The average and minimum bond strength values shall be determined based on a minimum of five bond tests conducted in accordance with ASTM E 736. Bond tests conducted in accordance with ASTM E 736 shall indicate an average bond strength of not less than 80 percent and an individual bond strength of not less than 50 percent, when compared to the bond strength of the SFRM as applied to clean uncoated 1/8-inch-thick (3.2 mm) thick steel plate.

704.13.4 Temperature. A minimum ambient and substrate temperature of 40°F (4.44°C) shall be maintained during and for a minimum of not fewer than 24 hours after the application of the SFRM, unless the manufacturer’s installation instructions allow otherwise.

704.13.5 Finished condition. The finished condition of SFRM applied to structural members or assemblies shall not, upon complete drying or curing, exhibit cracks, voids, spalls, delamination or any exposure of the substrate. Surface irregularities of SFRM shall be deemed acceptable.

704.14 Fire retardant or intumescent coatings on mass timber. Fire retardant or intumescent coatings shall not be used to achieve the required fire-resistance rating on structural elements composed of heavy timber members including, but not limited to, glued-laminated members, cross laminated timber (CLT) or structural composite lumber (SCL).

SECTION BC 705
EXTERIOR WALLS

705.1 General. Exterior walls shall comply with this section. Exterior wall construction shall comply with the provisions of Chapter 14 and Appendix D where applicable.

705.2 Projections. Cornices, eave overhangs, exterior balconies and similar projections, including but not limited to, fascias, belt courses, pilasters, surrounds, gutters, leaders, half-timber work,
shutters, and trellises, which extend beyond the exterior wall shall conform to the requirements of this section and Section 1406, provided that any such projection, if removed, altered or destroyed, will not reduce the structural stability of the building enclosure, and that such projection is installed so as not to reduce the required fire-resistance rating of the building enclosure. Exterior egress balconies and exterior exit stairways and ramps shall comply with the requirements of this section and Sections [1019] 1021 and [1026] 1027, respectively. Projections shall not extend beyond the line used to determine the fire separation distance determined by the following three methods, whichever results in the lesser projection: Table 705.2. Exterior wall coverings and cladding at exterior balconies and similar projections shall comply with Section 1406.3.

[1. A point one third the distance from the exterior face of the wall to the tax lot line where protected openings or a combination of protected and unprotected openings are required in.]

[2. A point one half the distance from the exterior face of the wall to the tax lot line where all openings in the exterior wall are permitted to be unprotected or the building is equipped throughout with an automatic sprinkler system installed under the provisions of Section 705.8.2.]

[3. More than 12 inches (305 mm) into areas where openings are prohibited.]

Exception[:]: Buildings on the same tax lot and considered as portions of one building in accordance with Section 705.3 are not required to comply with this section.

### TABLE 705.2
**MINIMUM SETBACK DISTANCE OF PROJECTION**

<table>

</tr>
<tr>
<td>Greater than 2 feet to less than or equal to 3 feet</td>
<td>24 inches</td>
</tr>
<tr>
<td>Greater than 3 feet to less than 30 feet</td>
<td>24 inches plus 8 inches for every foot of FSD beyond</td>
</tr>
<tr>
<td>30 feet or greater</td>
<td>20 feet</td>
</tr>
</tbody>
</table>

*For SI: 1 foot = 304.8 mm; 1 inch = 25.4 mm.

a. Distance to be measured from the lot line, or lot line equivalent to the exterior wall.

705.2.1 Type I and II construction. Projections from walls, including balconies on the exterior of buildings of Type I or II construction shall be of noncombustible materials.

705.2.2 Type III, IV or V construction. Projections from walls of Type III, IV or V construction shall be of any approved material. Projections located where openings are not permitted or where protection of openings is required shall be constructed of the following:

[705.2.2–Combustible projections. Combustible projections located where openings are not permitted or where protection of openings is required shall be of at least 1-hour fire-resistance rated construction, Type IV construction, fire-retardant treated wood or as required by Section 1406.3.]

1. Noncombustible materials.
2. Combustible materials of not less than 1 hour fire-resistant-rated construction.

3. Heavy timber construction complying with Section 2304.11.

5. As permitted by Section 705.2.2.1.

705.2.2.1 Exterior balconies and similar projections. Exterior balconies and similar projections shall be permitted to be constructed of combustible materials provided that the exterior balcony or similar projection affords the fire-resistance rating required by Table 601 for floor construction.

Exceptions: Balconies or similar projections serving as a required exit shall not be constructed of combustible materials.

705.3 Buildings on the same tax lot. For the purposes of determining the required wall and opening protection, projections and roof-covering requirements, buildings on the same tax lot shall be assumed to have an imaginary line between them.

[Exception:] Exceptions:

1. Two or more buildings on the same tax lot shall be either regulated as separate buildings or shall be considered as portions of one building if the aggregate area of such buildings is within the limits specified in Chapter 5 for a single building. Where the buildings contain different occupancy groups or are of different types of construction, the area shall be that allowed for the most restrictive occupancy or construction.

2. Where an S-2 parking garage of Construction Type I or IIA is erected on the same lot as a Group R-2 building, and there is no fire separation distance between these buildings, then the adjoining exterior walls between the buildings are permitted to have occupant use openings in accordance with Section 706.8. However, opening protectives in such openings shall only be required in the exterior wall of the S-2 parking garage, not in the exterior wall openings in the R-2 building, and these opening protectives in the exterior wall of the S-2 parking garage shall be not less than $1\frac{1}{2}$-hour fire protection rating.

705.4 Materials. Exterior walls shall be of materials permitted by the building type of construction.

705.5 Fire-resistance ratings. Exterior walls shall be fire-resistance-rated in accordance with Tables 601[,] and 602[,] and Appendix D where applicable. The required fire-resistance rating of exterior walls with a fire separation distance of greater than 10 feet (3048 mm) shall be rated for exposure to fire from the inside. The required fire-resistance rating of exterior walls with a fire separation distance of less than or equal to 10 feet (3048 mm) shall be rated for exposure to fire from both sides.

705.6 Structural stability. The wall shall extend to the height required by Section 705.11 and shall have sufficient structural stability such that it will remain in place for the duration of time indicated by the required fire-resistance rating. Exterior walls shall extend to the height required by Section 705.11. Interior structural elements that brace the exterior wall but that are not located within the
plane of the exterior wall shall have the minimum fire-resistance rating required in Table 601 for that structural element. Structural elements that brace the exterior wall but are located outside of the exterior wall or wholly or partly within the plane of the exterior wall shall have the minimum fire-resistance rating required in Tables 601 and 602 for the exterior wall.

**705.7 Unexposed surface temperature.** Where protected openings are not limited by Section 705.8, the limitation on the rise of temperature on the unexposed surface of exterior walls as required by ASTM E 119 or UL 263 shall not apply. Where protected openings are limited by Section 705.8 of this code, the limitation on the rise of temperature on the unexposed surface of exterior walls as required by ASTM E 119 or UL 263 shall not apply provided that a correction is made for radiation from the unexposed exterior wall surface in accordance with the following formula:

\[ A_e = A + (A_f \times F_{eo}) \]  

(Equation 7-1)

where:

- \( A_e \) = Equivalent area of protected openings.
- \( A \) = Actual area of protected openings.
- \( A_f \) = Area of exterior wall surface in the story under consideration exclusive of openings, on which the temperature limitations of ASTM E 119 or UL 263 for walls are exceeded.
- \( F_{eo} \) = An “equivalent opening factor” derived from Figure 705.7 based on the average temperature of the unexposed wall surface and the fire-resistance rating of the wall.

For SI: °C = ((°F) − 32) / 1.8.

FIGURE 705.7
### Equivalent Opening Factor

**705.8 Openings.** Openings in exterior walls shall comply with Sections 705.8.1 through 705.8.6.

**Table 705.8**

</table>

For SI: 1 foot = 304.8 mm.

UP, NS = Unprotected openings in buildings not equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.

UP, S = Unprotected openings in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.

P = Openings protected with an opening protective assembly in accordance with Section 705.8.2.

a. Values indicated are the percentage of the area of the exterior wall, per story.

b. For the requirements for fire walls of buildings with differing heights, see Section 706.6.

c. For openings in a fire wall for buildings on the same tax lot, see Section 706.8.

d. The maximum percentage of unprotected and protected openings shall be 25 percent for Group R-3 occupancies.
e. Unprotected openings shall not be permitted for openings with a fire separation distance of less than 15 feet for Group H-2 and H-3 occupancies.

f. The area of unprotected and protected openings for Group R-3 occupancies shall be limited to Group R-3 occupancies, or applicable in Section 101.2, have no limit if provided with a fire separation distance of 5 feet or more.

g. The area of openings in an open parking structure with a fire separation distance of 10 feet or greater shall have no limit.

h. Includes buildings accessory to Group R-3.

i. Not applicable to Group H-1, H-2 and H-3 occupancies.

j. Protected openings through a wall or walls between buildings shall comply with Section 705.8.

k. Protected openings within a fire separation distance of 3 feet or less are permitted for Group R-2 and R-3 occupied buildings that do not exceed 10 percent of the area of the façade of the story in which they are located. These openings shall not be credited towards meeting any mandatory natural light or ventilation requirements unless they also comply with applicable provisions of Chapter 12 and the Zoning Resolution.

l. In Group R-2 and R-3 occupancies with an exterior separation distance greater than 3 feet, openings shall be in accordance with percentages indicated as “Protected Opening” in Table 705.8. However, such openings shall not be required to be protected.

m. Upon special application, the commissioner may permit exterior wall openings to be constructed in excess of the permitted area established by Table 705.8 provided that such openings are protected and that at the time of their construction they are located at least 60 feet in a direct line, measured at any angle, including vertically and horizontally, from any neighboring building, unless otherwise permitted by Section 705.3 for buildings on the same tax lot. The construction type of the neighboring building shall not be factored into the measurement of the distance between the openings and adjoining building. If any neighboring building is later altered or constructed to come within the above distance limitation, the affected exterior openings shall immediately be closed with construction meeting the fire-resistance rating requirements for exterior wall construction of the building in which they are located. Such additional openings shall not be credited towards meeting any of the mandatory natural light or ventilation requirements unless they also comply with applicable provisions of Chapter 12 and the New York City Zoning Resolution.

n. The area of openings in a building containing only a Group U occupancy private garage or carport, with a fire separation distance of 5 feet (1524 mm) or greater, shall have no limit.

705.8.1 Allowable area of openings. The maximum area of unprotected and protected openings permitted in an exterior wall in any story of a building shall not exceed the percentages specified in Table 705.8.

Exceptions:

1. In other than Group H occupancies, unlimited unprotected openings are permitted in the first story above grade plane either:

   1.1. Where the wall faces a street and has a fire separation distance of more than 15 feet (4572 mm); or

   1.2. Where the wall faces an unoccupied space, the unoccupied space shall be on the same tax lot or dedicated for public use, shall have fire-resistance-rated shall be permitted to have unlimited unprotected openings.

2. Buildings whose exterior bearing walls, exterior nonbearing walls and exterior primary structural frame are not required to be fire-resistance-rated shall be permitted to have unlimited unprotected openings.

705.8.2 Protected openings. Where openings are required to be protected, fire doors and fire shutters shall comply with Section 716.5 and fire window assemblies shall comply with Section 716.6.

Exception: Opening protectives are not required where the building is equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 and the exterior openings are protected by a water curtain using automatic sprinklers approved for that use. The sprinklers and the water curtain shall be installed in accordance with NFPA 13, as modified by Appendix Q.

705.8.3 Unprotected openings. Where unprotected openings are permitted, windows and doors shall be constructed of any approved materials. Glazing shall conform to the requirements of Chapters 24 and 26.
**705.8.4 Mixed openings.** Where both unprotected and protected openings are located in the exterior wall in any story of a building, the total area of the openings shall be determined in accordance with the following formula:

\[
\left(\frac{A_p}{a_p}\right) + \left(\frac{A_u}{a_u}\right) \leq 1 \\
\left(\frac{A_p}{a_p}\right) + \left(\frac{A_u}{a_u}\right) \leq 1
\]  

(Equation 7-2)

where:

- \(A_p\) = Actual area of protected openings, or the equivalent area of protected openings, \(A_e\) (see Section 705.7).
- \(a_p\) = Allowable area of protected openings.
- \(A_u\) = Actual area of unprotected openings.
- \(a_u\) = Allowable area of unprotected openings.

**705.8.5 Vertical separation of openings.** Openings in exterior walls in adjacent stories shall be separated vertically to protect against fire spread on the exterior of the buildings where the openings are within 5 feet (1524 mm) of each other horizontally. Such openings shall be separated vertically [at least] not less than 3 feet ([914] 914.4 mm) by spandrel girders, exterior walls or other similar assemblies that have a fire-resistance rating of [at least] not less than 1 hour, rated for exposure to fire from both sides, or by flame barriers that extend horizontally [at least] not less than 30 inches (762 mm) beyond the exterior wall and that are at least as wide as the opening. Flame barriers shall [also] have a fire-resistance rating of [at least] not less than 1 hour. The unexposed surface temperature limitations specified in ASTM E 119 or UL 263 shall not apply to the flame barriers or vertical separation unless otherwise required by the provisions of this code. Where a curtain wall assembly is used on the exterior wall, the intersection between the floor assembly and curtain wall assembly shall be protected in accordance with Section 713.4 of this code.

**Exceptions:**

1. This section shall not apply to buildings that are three stories or less above grade plane.
2. This section shall not apply to buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 or 903.3.1.2.
3. This section shall not apply to open parking garages.
4. This section shall not apply to Occupancy Group A, E, I or R.
5. This section shall not apply where the opening in the lower story is a protected opening with a fire protection rating of at least ¾ hour.

**705.8.6 Vertical exposure.** For buildings on the same tax lot, opening protectives shall be provided in every opening that is less than 15 feet (4572 mm) vertically above the roof of an adjacent building or structure based on assuming an imaginary line between them. The opening [protective] protectives are required where the fire separation distance between the imaginary line and the adjacent building or structure is less than 15 feet (4572 mm).
Exceptions:

1. Opening protectives are not required where the roof assembly of the adjacent building or structure has a fire-resistance rating of not less than 1 hour for a minimum distance of 10 feet (3048 mm) from the exterior wall facing the imaginary line and the entire length and span of the supporting elements for the fire-resistance-rated roof assembly has a fire-resistance rating of not less than 1 hour.

2. Buildings on the same tax lot and considered as portions of one building in accordance with Section 705.3 are not required to comply with Section 705.8.6.

705.9 Joints. Joints made in or between exterior walls required by this section to have a fire-resistance rating shall comply with Section [714] 715.

Exception: Joints in exterior walls that are permitted to have unprotected openings.

705.9.1 Voids. The void created at the intersection of a floor/ceiling assembly and an exterior curtain wall assembly shall be protected in accordance with Section [714.4] 715.4.

705.10 Ducts and air transfer openings. Penetrations by air ducts and air transfer openings in fire-resistance-rated exterior walls required to have protected openings shall comply with Section [716] 717.

Exception: Foundation vents installed in accordance with this code are permitted.

705.11 Parapets. Parapets shall be provided on exterior walls of buildings.

Exceptions: A parapet need not be provided on an exterior wall where any of the following conditions exist:

1. The wall is not required to be fire-resistance-rated in accordance with Table 602 because of fire separation distance.

2. The building has an area of not more than 1,000 square feet ([93] 92.9 m²) on any floor.

3. Walls that terminate at roofs of not less than 2-hour fire-resistance-rated construction.

4. One-hour fire-resistance-rated exterior walls that terminate at the underside of the roof sheathing, deck or slab, provided that the entire building is covered with a Class A roof covering. Such roof shall not have openings located within 10 feet (3048 mm) of the 1-hour fire-resistance-rated exterior wall and not within 5 feet (1524 mm) for Groups R and U.

4.1. Where the roof/ceiling framing elements are parallel to the walls, such framing and elements supporting such framing shall not be of less than 1-hour fire-resistance-rated construction for a width of 4 feet ([1219 mm] measured from the interior side of the wall) ([1220 mm]) for Groups R and U and 10 feet (3048 mm) for other occupancies[; or], measured from the interior side of the wall.
4.2. Where roof/ceiling framing elements are not parallel to the wall, the entire span of such framing and elements supporting such framing shall not be of less than 1-hour fire-resistance-rated construction.

5. In occupancies of Groups R-2 and R-3, where both are provided with a Class A or B roof covering, the exterior wall shall be permitted to terminate at the underside of the roof sheathing or deck in Type III, IV and V construction, provided one or both of the following criteria is met:

5.1. The roof sheathing or deck is constructed of approved noncombustible materials or of fire-retardant-treated wood for a distance of 4 feet (1219 mm) from the perimeter; or

5.2. The roof is protected with 0.625-inch (16 mm) Type X gypsum board directly beneath the underside of the roof sheathing or deck, supported by a minimum of not less than nominal 2-inch (50.8 mm) ledgers attached to the sides of the roof framing members for a minimum distance of 4 feet (1219 mm) (1220 mm).

6. Where the wall is permitted to have at least not less than 25 percent of the exterior wall areas containing unprotected openings based on fire separation distance as determined in accordance with Section 705.8.

705.11.1 Parapet construction. Parapets shall have the same fire-resistance rating as that required for the supporting wall, and on any side adjacent to a roof surface, shall have noncombustible faces for the uppermost 18 inches (457 mm), including counterflashing and coping materials. The height of the parapet shall be not less than 30 inches (762 mm) above the point where the roof surface and the wall intersect. Where the roof slopes toward a parapet at a slope greater than two units vertical in 12 units horizontal (16.7-percent slope), the parapet shall extend to the same height as any portion of the roof within a fire separation distance where protection of wall openings is required, but in no case shall the height be less than 30 inches (762 mm).

705.12 Portions of a building cantilevered over existing buildings. Where a portion of a building is cantilevered over an adjacent building or tax lot by a horizontal distance greater than 1 foot (304.8 mm), the cantilevered portions shall be protected with construction that conforms to a fire engineering analysis acceptable to the commissioner that conforms to Section 705.12.1. In no case shall the protection for structural elements and horizontal assemblies be less than that required for the building type of construction. In no case shall the fire-resistance rating of exterior walls or any other cantilevered exterior surfaces be less than that required by the building type of construction, and in no case shall the limitations for openings on such exterior surfaces be less than that required for a lot line condition pursuant to Table 705.8, including footnote “m.”

705.12.1 Analysis. The analysis shall demonstrate that all portions of the building that cantilever will withstand the anticipated effects of a design fire in accordance with generally accepted fire engineering principles with respect to at least all of the following building elements:

1. The structural supports and frame of the cantilevered portion of the building;
2. The underside projecting assemblies of the cantilevered portion of the building; and

3. The exterior walls and openings on all sides of the cantilevered portion of the building.

705.12.1 Criteria. With respect to the design fire within the existing building over which the proposed building is cantilevered, the analysis shall include a scenario to burn-out, where any active fire suppression systems do not operate, the fire department does not intervene, all interior vertical compartmentation, including at the entrances to the stairways, has been removed, and the fuel loading exceeds what is normally expected for the current occupancy by a factor of safety acceptable to the commissioner. Where there is no existing building below the cantilever, or where the existing building below the cantilever is significantly underbuilt, the commissioner may require additional data and analysis.

705.12.2 Fire Department access to buildings and roofs. The applicant shall submit to the department an approval from the Fire Department that the proposed cantilever complies with applicable provisions of the New York City Fire Code with respect to access to buildings and roofs.

705.12.3 Fire protection peer review. A fire protection peer review of the analysis required by Sections 705.12.1 and 705.12.1.1 shall be submitted to the department for each such analysis.

705.12.3.1 Fire protection peer reviewer. The fire protection peer review shall be performed by a qualified independent fire protection engineer who has been retained by or on behalf of the owner. A fire protection peer reviewer shall meet the requirements of the rules of the department.

705.12.3.2 Extent of fire protection peer review. The fire protection peer reviewer shall review the fire engineering analysis and construction documents relevant to the analysis for general compliance with the applicable provisions of this code.

705.12.3.3 Fire protection peer review report. The fire protection peer reviewer shall submit a report to the department stating that the fire engineering analysis conforms to the requirements of this code without exception.

705.12.3.4 Responsibility. The responsibility for the fire engineering analysis shall comply with Sections 705.12.3.4.1 and 705.12.3.4.2.

705.12.3.4.1 Applicant of record. The architect or engineer submitting the fire engineering analysis shall retain responsibility for the fire engineering analysis. The activities and reports of the fire protection peer reviewer shall not relieve the applicant of record of this responsibility.

705.12.3.4.2 Fire protection peer reviewer. The fire protection peer reviewer’s report shall state his or her opinion regarding the fire engineering analysis by the applicant of record.
SECTION BC 706
FIRE WALLS

706.1 General. Each portion of a building separated by one or more fire walls that comply with the provisions of this section shall be considered a separate building. The extent and location of such fire walls shall provide a complete separation. Where a fire wall also separates occupancies that are required to be separated by a fire barrier wall, the most restrictive requirements of each separation shall apply. Concealed spaces in cornices and eaves shall comply with the provisions of Section 705.2.2.

706.1.1 Party walls. Any wall located on a property line between adjacent buildings, which is used or adapted for joint service between the two buildings, shall be constructed as a fire wall in accordance with Section 706, and shall create separate buildings.

Exception: Openings in a party wall separating an anchor building and a mall shall be in accordance with Section 402.7.3.

706.1.2 Walls separating attached one- and two-family dwellings. Attached one- and two-family dwellings shall be separated by walls constructed in accordance with Section 706 or Appendix M.

706.2 Structural stability. Fire walls shall be designed and constructed to allow collapse of the structure on either side without collapse of the wall for the duration of time indicated by the required fire-resistance rating under fire conditions. Fire walls designed and constructed in accordance with NFPA 221 shall be deemed to comply with this section.

706.3 Materials. Fire walls shall be constructed of any approved noncombustible materials.

706.4 Fire-resistance rating. Fire walls shall have a fire-resistance rating of not less than that required by Table 706.4.

a. Walls shall be not less than 2-hour fire-resistance-rated where separating buildings of Type II or V construction
b. For Group H-1, H-2 or H-3 buildings, also see Sections 415.7 and 415.8.

706.5 Horizontal continuity. Fire walls shall be continuous from exterior wall to exterior wall and shall extend at least not less than 18 inches (457.2 mm) beyond the exterior surface of exterior walls.

Exceptions:
1. Fire walls shall be permitted to terminate at the interior surface of combustible exterior sheathing or siding provided the exterior wall has a fire-resistance rating of [at least] not less than 1 hour for a horizontal distance of [at least] not less than 4 feet [(1219 mm)] (1220 mm) on both sides of the fire wall. Openings within such exterior walls shall be protected by opening protectives having a fire protection rating of not less than 3/4 hour.

2. Fire walls shall be permitted to terminate at the interior surface of noncombustible exterior sheathing, exterior siding or other noncombustible exterior finishes provided the sheathing, siding, or other exterior noncombustible finish extends a horizontal distance of [at least] not less than 4 feet [(1219 mm)] (1220 mm) on both sides of the fire wall.

3. Fire walls shall be permitted to terminate at the interior surface of noncombustible exterior sheathing where the building on each side of the fire wall is protected by an automatic sprinkler system installed in accordance with Section 903.3.1.1 or 903.3.1.2.

706.5.1 Exterior walls. Where the fire wall intersects [the] exterior walls, the fire-resistance rating and opening protection of the exterior walls shall comply with one of the following:

1. The exterior walls on both sides of the fire wall shall have a 1-hour fire-resistance rating with [3/4] ¾-hour protection where opening protection is required by Section 705.8[1]. The fire-resistance rating of the exterior wall shall extend [a minimum of] not less than 4 feet [(1219 mm)] (1220 mm) on each side of the intersection of the fire wall to exterior wall. Exterior wall intersections at fire walls that form an angle equal to or greater than 180 degrees (3.14 rad) do not need exterior wall protection.

2. Buildings or spaces on both sides of the intersecting fire wall shall assume to have an imaginary lot line at the fire wall and extending beyond the exterior of the fire wall. The location of the assumed line in relation to the exterior walls and the fire wall shall be such that the exterior wall and opening protection meet the requirements set forth in Sections 705.5 and 705.8. Such protection is not required for exterior walls terminating at fire walls that form an angle equal to or greater than 180 degrees (3.14 rad).

706.5.2 Horizontal projecting elements. Fire walls shall extend to the outer edge of horizontal projecting elements such as balconies, roof overhangs, canopies, marquees and architectural similar projections that are within 4 feet [(1219 mm)] (1220 mm) of the fire wall.

Exceptions:

1. Horizontal projecting elements without concealed spaces, provided the exterior wall behind and below the projecting element has not less than 1-hour fire-resistance-rated construction for a distance not less than the depth of the projecting element on both sides of the fire wall. Openings within such exterior walls shall be protected by opening protectives having a fire protection rating of not less than 3/4 hour.

2. Noncombustible horizontal projecting elements with concealed spaces, provided a minimum 1-hour fire-resistance-rated wall extends through the concealed space. The projecting element shall be separated from the building by [a minimum of] not less than 1-hour fire-resistance-rated construction for a distance on each side of the fire
wall equal to the depth of the projecting element. The wall is not required to extend under the projecting element where the building exterior wall is not less than 1-hour fire-resistance-rated for a distance on each side of the fire wall equal to the depth of the projecting element. Openings within such exterior walls shall be protected by opening protectives having a fire protection rating of not less than 3/4 hour.

3. For combustible horizontal projecting elements with concealed spaces, the fire wall need only extend through the concealed space to the outer edges of the projecting elements. The exterior wall behind and below the projecting element shall be of not less than 1-hour fire-resistance-rated construction for a distance not less than the depth of the projecting elements on both sides of the fire wall. Openings within such exterior walls shall be protected by opening protectives having a fire-protection rating of not less than 3/4 hour.

706.6 Vertical continuity. Fire walls shall extend from the foundation through the roof, to form a parapet [at least] not less than 30 inches (762 mm) in height. [Such parapet shall in no event extend to a point less than 4 inches (102 mm) above the highest point of peaked or gabled roof.]

Exceptions:

1. Where a [two-hour] 2-hour fire wall is permitted in accordance with Table 706.4, such wall shall be permitted to terminate at the underside of the roof sheathing, deck or slab provided:

   1.1. The lower roof assembly within 4 feet [(1219 mm)] (1220 mm) of the wall has not less than a 1-hour fire-resistance rating and the entire length and span of supporting elements for the rated roof assembly has a fire-resistance rating of not less than 1 hour; and

   1.2. Openings in the roof shall not be located within 4 feet [(1219 mm)] (1220 mm) of the fire wall; and

   1.3. Each building shall be provided with not less than a Class A roof covering.

2. In buildings of Type I or II construction, fire walls shall be permitted to terminate at the underside of noncombustible roof sheathing, deck, or slabs where both buildings are provided with not less than a Class A roof covering. Openings in the roof shall not be located within 4 feet [(1219 mm)] (1220 mm) of the fire wall.

3. In buildings of Type III, IV and V construction, fire walls shall be permitted to terminate at the underside of noncombustible roof sheathing or decks provided:

   3.1. There are no openings in the roof within 4 feet [(1219 mm)] (1220 mm) of the fire wall; and

   3.2. The roof is covered with a minimum Class A roof covering.

4. [Buildings located above a parking garage] In buildings designed in accordance with Section 510.2[shall be permitted to have the], fire walls [for the buildings] located above
the parking garage extend from the horizontal separation between the parking garage and the buildings. 3-hour horizontal assembly required by Section 510.2, Item 1 shall be permitted to extend from the top of this horizontal assembly.

5. Where a fire wall serves as an interior wall for a building, and the roof on one side or both sides of the fire wall slopes toward the fire wall at a slope greater than two units vertical in 12 units horizontal (2:12), the fire wall shall extend to a height equal to the height of the roof located 4 feet (1220 mm) from the fire wall plus 30 inches (762 mm). In no case shall the extension of the fire wall be less than 30 inches (762 mm).

706.6.1 Stepped buildings. Where a fire wall serves as an exterior wall for a building and separates buildings having different roof levels, such wall shall terminate at a point not less than 30 inches (762 mm) above the lower roof level, provided the exterior wall for a height of 60 feet (18 288 mm) above the lower roof is not less than 1-hour fire-resistance-rated construction from both sides with openings protected by fire assemblies having a fire protection rating of not less than ¾ hour.

Exception: Where the fire wall terminates at the underside of the roof sheathing, deck or slab of the lower roof, provided:

1. The lower roof assembly within 10 feet (3048 mm) of the wall has not less than a 1-hour fire-resistance rating and the entire length and span of supporting elements for the rated roof assembly has a fire-resistance rating of not less than 1 hour.

2. Openings in the lower roof shall not be located within 10 feet (3048 mm) of the fire wall.

706.7 Combustible framing in fire walls. Adjacent combustible members entering into a concrete or masonry fire wall from opposite sides shall not have less than a 4-inch ([102] 101.6 mm) distance between embedded ends. Where combustible members frame into hollow walls or walls of hollow units, hollow spaces shall be solidly filled for the full thickness of the wall and for a distance not less than 4 inches ([102] 101.6 mm) above, below and between the structural members, with noncombustible materials approved for fireblocking.

706.8 Openings. Each opening through a fire wall[1] or a party wall[, or a through wall between two buildings] shall be protected in accordance with Section [715.4] 716.5 and shall not exceed 156 square feet ([145] 14.5 m²)[, with no dimension greater than 12 feet (3658 mm)]. The aggregate width of openings at any floor level shall not exceed 25 percent of the length of the wall.

Exception: Openings shall not be limited to 156 square feet ([145] 14.5 m²) where both buildings are equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1. However, the aggregate width of all openings at any one floor level shall not exceed 25 percent of the length of the wall.

706.9 Penetrations. Penetrations [through] of fire walls shall comply with Section [714] 715.

706.10 Joints. Joints made in or between fire walls shall comply with Section [714] 715.
706.11 Ducts and air transfer openings. Ducts and air transfer openings shall not penetrate fire walls.

Exception: Penetrations by ducts and air transfer openings of fire walls that are not on a tax lot line shall be allowed provided the penetrations comply with Section [716] 717. The size and aggregate width of all openings shall not exceed the limitations of Section 706.8.

SECTION BC 707
FIRE BARRIERS

707.1 General. Fire barriers installed as required elsewhere in this code or the New York City Fire Code, shall comply with this section.

707.2 Materials. Fire barriers shall be of materials permitted by the building type of construction.

707.3 Fire-resistance rating. The fire-resistance rating of fire barriers shall comply with this section.

707.3.1 Shaft enclosures. The fire-resistance rating of the fire barrier separating building areas from a shaft shall comply with Section [708.4] 713.4.

707.3.2 [Exit enclosures] Interior exit stairway and ramp construction. The fire-resistance rating of the fire barrier separating building areas from an interior exit stairway or ramp shall comply with Section [4022.1] 1023.1.

707.3.3 Enclosures for exit access stairways. The fire-resistance rating of the fire barrier separating building areas from an exit access stairway or ramp shall comply with Section 713.4.

707.3.4 Exit passageway. The fire-resistance rating of the fire barrier separating building areas from an exit passageway shall comply with Section [4023.1] 1024.3.

707.3.5 Horizontal exit. The fire-resistance rating of the separation between building areas connected by a horizontal exit shall comply with Section [4025.1] 1026.1.

707.3.6 Atriums. The fire-resistance rating of the fire barrier separating atriums shall comply with Section 404.6.

707.3.7 Incidental uses. The fire barrier separating incidental uses from other spaces in the building shall have a fire-resistance rating of not less than that indicated in Table 509.

707.3.8 Control areas. Fire barriers separating control areas shall have a fire-resistance rating of not less than that required in Section 414.2.4.

707.3.9 Separated occupancies. Where the provisions of Section 508.4 are applicable, the fire barrier separating mixed occupancies shall have a fire-resistance rating of not less than that indicated in [Section] Table 508.4 based on the occupancies being separated.

707.3.10 Fire areas. The fire barriers or horizontal assemblies, or both, separating a single occupancy into different fire areas shall have a fire-resistance rating of not less than that indicated in Table [707.3.9] 707.3.10. The fire barriers or horizontal assemblies, or both,
separating fire areas of mixed occupancies shall have a fire-resistance rating of not less than the highest value indicated in Table [707.3.9] 707.3.10 for the occupancies under consideration.

**Exception:** For fire-resistance ratings of public corridors, see Section 707.3.11.

**707.3.11 Public corridors.** The fire-resistance rating of public corridor walls shall comply with Table 1020.1.2.

**707.4 Exterior walls.** Where exterior walls serve as a part of a required fire-resistance-rated shaft [or exit], stairway or ramp enclosure, or separation, such walls shall comply with the requirements of Section 705 for exterior walls and the fire-resistance-rated enclosure or separation requirements shall not apply.

**Exception:** Exterior walls required to be fire-resistance-rated in accordance with Section [1019.2] 1021 for exterior egress balconies, Section [1022.6] 1023.7 for interior exit [enclosures] stairways and ramps and Section [1026.6] 1027.6 for exterior exit [ramps and] stairways and ramps.

**707.5 Continuity.** Fire barriers shall extend from the top of the floor/ceiling assembly below to the underside of the floor or roof sheathing, slab or deck above and shall be securely attached thereto. Such fire barriers shall be continuous through concealed spaces, such as the space above a suspended ceiling. Joints and voids at intersections shall comply with Sections 707.8 and 707.9.

**Exceptions:**

1. Shaft enclosures shall be permitted to terminate at a top enclosure complying with Section 713.12.

2. Interior exit stairway and ramp enclosures required by Section 1023 and exit access stairway and ramp enclosures required by Section 1019 shall be permitted to terminate at a top enclosure complying with Section 713.12.

**707.5.1 Supporting construction.** The supporting construction for a fire barrier shall be protected to afford the required fire-resistance rating of the fire barrier supported. Hollow vertical spaces within a fire barrier shall be fireblocked in accordance with Section [717.2] 718.2 at every floor level.

**Exceptions:**
1. The maximum required fire-resistance rating for assemblies supporting fire barriers separating tank storage as provided for in Section [415.6.2.4] 415.9.1.2 shall be 2 hours, but not less than required by Table 601 for the building construction type.

2. Shaft enclosures shall be permitted to terminate at a top enclosure complying with Section 708.12.

3. Supporting construction for 1-hour fire barriers required by Table 509 in buildings of Type IIB, IIIB and VB construction is not required to be fire-resistance-rated unless required by other sections of this code.

707.6 Openings. Openings in a fire barrier shall be protected in accordance with Section [715] 716. Openings shall be limited to a maximum aggregate width of 25 percent of the length of the wall, and the maximum area of any single opening shall not exceed 156 square feet ([45] 14.5 m²). Openings in [vertical exit] enclosures for exit access stairways and ramps, interior exit stairways and ramps and exit passageways shall also comply with Sections [1022.3 and 1023.5] 1019, 1023.4 and 1024.5, respectively.

Exceptions:

1. Openings shall not be limited to 156 square feet ([45] 14.5 m²) where adjoining floor areas are equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.

2. Openings [for fire doors serving an exit enclosure] shall not be limited to 156 square feet ([45] 14.5 m²) or an aggregate width of 25 percent of the length of the wall where the opening protective is a fire door serving enclosures for exit access stairways and ramps, and/or interior exit stairways and ramps.

3. Openings shall not be limited to 156 square feet ([45] 14.5 m²) or an aggregate width of 25 percent of the length of the wall where the opening protective has been tested in accordance with ASTM E 119 or UL 263 and has a minimum fire-resistance rating not less than the fire-resistance rating of the wall.

4. Fire window assemblies permitted in atrium separation walls shall not be limited to a maximum aggregate width of 25 percent of the length of the wall.

5. Openings shall not be limited to 156 square feet ([45] 14.5 m²) or an aggregate width of 25 percent of the length of the wall where the opening protective is a fire door assembly in a fire barrier separating an [exit enclosure for exit access stairways and ramps, and/or interior exit stairways and ramps] from an exit passageway in accordance with Section [1022.2.1] 1023.3.1.

6. Openings permitted in atrium enclosures shall comply with the provisions of Section 404.5.

707.7 Penetrations. Penetrations of fire barriers shall comply with Section [743] 714.
707.7.1 Prohibited penetrations. [Penetrations into an exit enclosure or an exit passageway shall be allowed when permitted by Sections 1022.4 or 1023.6, respectively.] Penetrations into enclosures for exit access stairways and ramps, interior exit stairways and ramps, and exit passageways shall be allowed only where permitted by Sections 1019, 1023.5 and 1024.6, respectively.

707.8 Joints. Joints made in or between fire barriers, and joints made at the intersection of fire barriers with underside of [the] a fire-resistance-rated floor or roof sheathing, slab or deck above, and the exterior vertical wall intersection shall comply with Section [714] 715.

707.9 Voids at intersections. The voids created at the intersection of a fire barrier and a nonfire-resistance-rated roof assembly or a nonfire-resistance-rated exterior wall assembly shall be filled. An approved material or system, or a material consistent with the construction requirements of the fire barrier, shall be used to fill the void, and shall be securely installed in or on the intersection for its entire length so as not to dislodge, loosen or otherwise impair its ability to accommodate expected building movements and to retard the passage of fire and hot gases.

707.10 Ducts and air transfer openings. Penetrations in a fire barrier by ducts and air transfer openings shall comply with Section [746] 717.

[707.9.1] 707.10.1 Prohibited ducts and air transfer openings. Penetrations by ducts and air transfer openings into an [exit] enclosure for exit access stairways and ramps shall only be allowed when permitted by Sections [1022.4 and 1023.6] 1023.4 and 1023.6.

[SECTION BC 708
SHAFT ENCLOSURES]

[708.1 General. The provisions of this section shall apply to shafts required to protect openings and penetrations through floor/ceiling and roof/ceiling assemblies. Shaft enclosures shall be constructed as fire barriers in accordance with Section 707 or horizontal assemblies in accordance with Section 712, or both.]

[708.2 Shaft enclosure required. Openings through a floor/ceiling assembly shall be protected by a shaft enclosure complying with this section.]

[Exceptions:]

[1. A shaft enclosure is not required for openings totally within an individual residential dwelling unit and connecting four stories or less where such dwelling unit is fully sprinklered in accordance with Section 903.3.1.1, 903.3.1.2 or 903.3.1.3.]

[2. A shaft enclosure is not required in a building equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 for an escalator opening or stairway which is not a portion of the means of egress protected according to Item 2.1 or 2.2:]

[2.1. Where the area of the floor opening between stories does not exceed twice the horizontal projected area of the escalator or stairway and the opening is protected]
by a draft curtain and closely spaced sprinklers in accordance with NFPA 13, as
modified in Appendix Q. In other than Groups B and M, this application is
limited to openings that do not connect more than four stories.

[2.2. Where the opening is protected by approved power operated automatic shutters
at every penetrated floor. The shutters shall be of nonecombustible construction
and have a fire-resistance rating of not less than 1.5 hours. The shutter shall be
so constructed as to close immediately upon the actuation of a smoke detector
installed in accordance with Section 907.3 and shall completely shut off the well
opening. Escalators shall cease operation when the shutter begins to close. The
shutter shall operate at a speed of not more than 30 feet per minute (152.4 mm/s)
and shall be equipped with a sensitive leading edge to arrest its progress where
in contact with any obstacle, and to continue its progress on release therefrom.]

[3. A shaft enclosure is not required for penetrations by pipe, tube, conduit, wire, cable, and
vents protected in accordance with Section 713.4.]

[4. A shaft enclosure is not required for penetrations by ducts protected in accordance with
Section 716.6. Grease ducts shall be protected in accordance with the New York City
Mechanical Code.]

[5. In other than Group II occupancies, a shaft enclosure is not required for floor openings
complying with the provisions for atriums in Section 404.]

[6. A shaft enclosure is not required for approved masonry chimneys, where annular space
is fireblocked at each floor level in accordance with Section 717.2.5.]

[7. In other than Groups I-2 and I-3, a shaft enclosure is not required for a floor opening or
an air transfer opening that complies with all of the following:]

[7.1. Does not connect more than two stories.]

[7.2. Is not part of the required means of egress system.]

[7.3. Is not concealed within the building construction of a wall or floor/ceiling
assembly.]

[7.4. Is not open to a corridor in Group I and R occupancies where such corridor is
required to be fire-resistance rated in accordance with Tables 1018.1.1 and
1018.1.2.]

[7.5. Is not open to a corridor on nonsprinklered floors in any occupancy where such
corridor is required to be fire-resistance rated in accordance with Tables 1018.1.1
and 1018.1.2.]

[7.6. Is separated from floor openings and air transfer openings serving other floors by
construction conforming to required shaft enclosures.]

[7.7. Is limited to the same smoke compartment.]
[8. A shaft enclosure is not required for automobile ramps in open and enclosed parking garages constructed in accordance with Sections 406.3 and 406.4, respectively.]

[9. A shaft enclosure is not required for floor openings between a mezzanine and the floor below.]

[10. A shaft enclosure is not required for joints protected by a fire-resistant joint system in accordance with Section 714.]

[11. A shaft enclosure shall not be required for floor openings created by unenclosed stairs or ramps in accordance with Exception 3 or 4 in Section 1016.1.]

[12. Floor openings protected by floor fire doors in accordance with Section 712.8.]

[13. In Group I-3 occupancies, a shaft enclosure is not required for floor openings in accordance with Section 408.5.]

[14. A shaft enclosure is not required for elevator hoistways in open or enclosed parking garages that serve only the parking garage.]

[15. In open or enclosed parking garages, a shaft enclosure is not required to enclose mechanical exhaust or supply duct systems when such duct system is contained within and serves only the parking garage.]

[16. Where permitted by other sections of this code.]

[708.3 Materials. The shaft enclosure shall be of materials permitted by the building type of construction.]

[Exception: Noncombustible materials shall be used for shaft enclosures in Group I-1, R-1 and R-2 buildings irrespective of the building type of construction.]

[708.4 Fire-resistance rating. Shaft enclosures shall have a fire-resistance rating of not less than 2 hours where penetrating three stories or more and not less than 1 hour where penetrating fewer than three stories. The number of stories connected by the shaft enclosure shall include any basements or cellars, but not any mezzanines. Shaft enclosures shall have a fire-resistance rating not less than the floor assembly penetrated, but need not exceed 2 hours. Shaft enclosures shall meet the requirements of Section 703.2.]

[708.5 Continuity. Shaft enclosures shall be constructed as fire barriers in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 712 or both. Where the roof construction is of combustible materials, shaft enclosure walls shall extend through the roof construction at least 30 inches (762 mm) above the roof. Where the roof construction is of noncombustible materials, shaft enclosure walls shall extend from the top of the floor/ceiling assembly below to the underside of the floor or roof slab or deck above and shall be securely attached thereto. These walls shall be continuous through concealed spaces such as the space above a suspended ceiling. The supporting construction shall be protected to afford the required fire-resistance rating of the element supported. Hollow vertical spaces within the shaft enclosure construction wall shall be firestopped at every floor level.]
[Exception: A shaft enclosure of a refuse or laundry chute shall extend through combustible or noncombustible roof construction at least 6 feet (1829 mm) above the roof.]

[708.6 Exterior walls. Where exterior walls serve as a part of a required shaft enclosure, such walls shall comply with the requirements of Section 705 for exterior walls and the fire-resistance rated enclosure requirements of Section 707.4 shall not apply.]

[Exception: Exterior walls required to be fire-resistance rated in accordance with Section 1019.2 for exterior egress balconies, Section 1022.6 for exit enclosures and Section 1026.6 for exterior exit ramps and stairways.]

[708.7 Openings. Openings in a shaft enclosure shall be protected in accordance with Section 715 as required for fire barriers. Doors shall be self-closing or automatic closing by smoke detection in accordance with Section 715.4.8.3. Automatic closing by smoke detection is not permitted for doors serving vertical exit enclosures.]

[Exception: For no more than one vertical exit enclosure in a building, doors serving such enclosure may be automatic closing by smoke detection provided that the following conditions are satisfied:]

1. The building contains no Group H space and:

1.1. Is not a high-rise building pursuant to Section 403.1 of this code, or for the purposes of prior code buildings, Section 27-232 of the Administrative Code, and is equipped with a fire alarm system; or

1.2. Is equipped with fire alarm systems and automatic sprinkler systems throughout; or

1.3. Is a high-rise office building, as such term is defined in Section 27-232 of the Administrative Code, that is 100 feet (30 480 mm) or more in height, equipped with a fire alarm system and subdivided into compartments pursuant to subdivision c of Section 27-339 of the Administrative Code.

2. Such doors serve no more than three levels within such vertical exit enclosure, which must be consecutive levels.

3. All levels served by such doors are served by at least one other exit.

4. Such doors are connected to a fire alarm system and installed in accordance with Section 715.4.8.3 and NFPA 80.

5. The hold-open devices of such doors:

5.1. Are capable of manual release at the fire command center or, if a fire command center is not required, at a fire alarm control panel that is near the main building entrance; and

5.2. Are capable of manual release by pulling the doors to the closed position.]
[708.7.1 Prohibited openings. Openings other than those necessary for the purpose of the shaft shall not be permitted in shaft enclosures.]

[708.8 Penetrations. Penetrations in a shaft enclosure shall be protected in accordance with Section 713 as required for fire barriers.]

[708.8.1 Prohibited penetrations. Penetrations other than those necessary for the purpose of the shaft shall not be permitted in shaft enclosures.]

[708.9 Joints. Joints in a shaft enclosure shall comply with Section 714.]

[708.10 Ducts and air transfer openings. Penetrations of a shaft enclosure by ducts and air transfer openings shall comply with Section 716.]

[708.11 Enclosure at the bottom. Shafts that do not extend to the bottom of the building or structure shall comply with one of the following:]

1. They shall be enclosed at the lowest level with construction of the same fire resistance rating as the lowest floor through which the shaft passes, but not less than the rating required for the shaft enclosure; or

2. They shall terminate in a room having a use related to the purpose of the shaft. The room shall be separated from the remainder of the building by fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 712, or both. The fire resistance rating and opening protectives shall be at least equal to the protection required for the shaft enclosure.

[Exceptions:]

1. The fire resistance-rated room separation is not required provided there are no openings in or penetrations of the shaft enclosure to the interior of the building except at the bottom. The bottom of the shaft shall be closed off around the penetrating items with materials permitted by Section 717.3.1 for draftstopping, or the room shall be provided with an approved automatic fire suppression system.

2. A shaft enclosure containing a refuse chute or laundry chute shall not be used for any other purpose and shall terminate in a room protected in accordance with Section 708.13.4.

3. The fire resistance-rated room separation and the protection at the bottom of the shaft are not required provided there are no combustibles in the shaft and there are no openings or other penetrations through the shaft enclosure to the interior of the building.

[708.12 Enclosure at the top. Shafts that do not extend to the top of the building or structure shall:

1. Be enclosed at the highest level with construction of the same fire resistance rating as the highest floor through which the shaft passes, but not less than the rating required for the shaft enclosure; or]
[2. Terminate in a room having a use related to the purpose of the shaft. The room shall be
separated from the remainder of the building by construction having a fire resistance rating
and opening protective at least equal to the protection required for the shaft enclosure.]

[708.12.1 Smoke venting of stair and other closed shafts. All closed shafts, including vertical
exit enclosures, having a floor area exceeding 4 square feet (0.37 m²) shall be provided with a
smoke vent in accordance with Sections 708.12.1.1 through 708.12.1.3.]

[Exception: Elevator and dumbwaiter shafts in accordance with Chapter 30.]

[708.12.1.1 Smoke vent construction. Smoke vents may be constructed as windows, louvers,
skylights, vent ducts, or similar devices. Where a vent duct is installed, such vent ducts shall
be enclosed by construction having the same fire resistance rating as required for the shaft
enclosure.]

[708.12.1.2 Smoke vent dimensions. The effective venting area shall not be less than 3½
percent of the maximum shaft area at any floor, but in no event less than 72 square inches
(0.05 m²).]

[708.12.1.3 Smoke vent location. Smoke vents shall be located in accordance with Section
708.12.1.3.1 or 708.12.1.3.2, as applicable.]

[708.12.1.3.1 Smoke vents located above the roof line. Where a closed shaft or smoke
vent duct penetrates through the roof of the building, the vent shall be located as follows:]

1. The vent shall be located at least 8 inches (203 mm) above a noncombustible roof
assembly or at least 36 inches (914 mm) above a combustible roof assembly.

2. The vent shall be located at least 10 feet (3048 mm) from any window, door,
exterior stairway, or interior lot line. The vent may be located no less than 5 feet
(1524 mm) from any window or door provided that the vent is located at a point
higher than the top of such window or door.

3. Where the vent is constructed as a window or louver, the sill of the window or
louver shall be located at least 36 inches (914 mm) above the roof assembly.

[708.12.1.3.2 Smoke vents located in an exterior wall. Where the exterior wall serves
as part of a shaft enclosure or where a smoke vent duct penetrates the exterior wall of the
building, no openings shall be located in the wall within a distance of 30 feet (9144 mm)
vertically above the vent opening, nor within 5 feet (1524 mm) on either side of the vent
opening.]

[708.13 Refuse and laundry chutes. Refuse and laundry chutes, access and termination rooms and
incinerator rooms shall meet the requirements of Sections 708.13.1 through 708.13.6.]

[Exception: Chutes serving and contained within a single dwelling unit.]

[708.13.1 Refuse and laundry chute enclosures. A shaft enclosure containing a refuse or laundry
chute shall not be used for any other purpose and shall have a fire resistance rating of 2 hours.]
Openings into the shaft, including those from access rooms and termination rooms, shall be protected in accordance with this section and Section 715. Openings into chutes shall not be located in corridors. Doors shall be self-closing.

[708.13.2 Materials. A shaft enclosure containing a refuse or laundry chute shall be constructed of noncombustible materials.]

[708.13.3 Refuse and laundry chute access rooms. Access openings for refuse and laundry chutes shall be located in dedicated rooms or compartments enclosed by not less than 2-hour fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 712, or both. Openings into the access rooms shall be protected by opening protectives having a fire protection rating of not less than 1 1/2-hour. Doors shall be self closing except that where the storage of refuse, including recyclables, or laundry is not permitted in such access rooms doors may be automatic closing upon the detection of smoke in accordance with Section 715.4.8.3.]

[Exception: Access openings for refuse or laundry chutes located within a dwelling unit need not be located within a separate room or compartment.]

[708.13.4 Termination room. Refuse and laundry chutes shall discharge into an enclosed room separated from the remainder of the building by not less than 3-hour fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 712, or both. Openings into the termination room shall be protected by opening protectives having a fire protection rating of not less than 1 1/2-hour. Doors shall be self-closing.]

[Exception: Opening protectives shall not be required at a refuse or laundry chute opening to a termination room.]

[708.13.5 Incinerator room. Incinerator rooms shall comply with Table 509.]

[708.13.6 Automatic fire sprinkler system. An approved automatic fire sprinkler system shall be installed in accordance with Section 903.2.11.6.]

[708.14 Elevator, dumbwaiter and other hoistways. Elevator, dumbwaiter, and other hoistway enclosures shall be constructed in accordance with Section 708 and Chapter 30.]

[708.14.1 Elevator lobby. Except as provided by Sections 403.6.1 and 403.6.2, an enclosed elevator lobby shall be provided in high-rise buildings at the following locations:]

1. Elevators opening onto a fire-resistance-rated corridor, in all occupancy groups.

2. Elevators serving Group B occupancies. Elevators that serve four or more stories that contain space classified in occupancy Group B, inclusive of any lobby or entrance level, shall provide elevator lobbies at every level served by such elevator.

The lobby enclosure shall separate the elevator shaft enclosure doors from each floor by smoke partitions. In addition to the requirements in Section 709 for fire partitions, doors protecting openings in the elevator lobby enclosure walls shall also comply with Section 711.5.3 and penetrations of the elevator lobby enclosure by ducts and air transfer openings shall be...
protected in accordance with Section 711.7. Elevator lobbies shall have at least one means of egress complying with Chapter 10 and other provisions within this code. Access to an exit on any story through an elevator lobby shall be permitted provided that access to at least one other required exit does not require passing through the elevator lobby.]

[Exceptions:]

[1. Enclosed elevator lobbies are not required at the street floor, provided the entire street floor is equipped with an automatic sprinkler system in accordance with Section 903.3.1.1.]

[2. Elevators not required to be located in a shaft in accordance with Section 708.2 are not required to have enclosed elevator lobbies.]

[3. Enclosed elevator lobbies are not required where zero-clearance doors are provided at the hoistway opening in accordance with Section 3002.6. Such doors shall be tested in accordance with UL 1784 without an artificial bottom seal.]

[4. Enclosed elevator lobbies are not required on floors with less than 2,500 square feet (232 m²), provided that the commissioner accepts an alternative design or construction method that accomplishes the purposes of this section, or provided that the commissioner determines that compliance with this section is impracticable in whole or in part, whereby the commissioner may authorize an exemption from the requirements of this section.]

[5. Enclosed elevator lobbies are not required on Group R-2 occupied floors.]

[6. Enclosed elevator lobbies are not required where the elevator hoistway is pressurized in accordance with Section 708.14.2.]

[7. Enclosed elevator lobbies are not required where the elevator serves only open parking garages in accordance with Section 406.3.]

[708.14.1.1 Areas of rescue assistance. Areas of rescue assistance shall be provided as required in Section 1007.6.]

[708.14.2 Enclosed elevator lobby. Where elevator hoistway pressurization is provided in lieu of required enclosed elevator lobbies, the pressurization system shall comply with this section except as provided by Sections 403.6.1 and 403.6.2.]

[708.14.2.1 Pressurization requirements. Elevator hoistways shall be pressurized to maintain a minimum positive pressure of 0.10 inches of water (25 Pa) and a maximum positive pressure of 0.25 inches of water (67 Pa) with respect to adjacent occupied space on all floors. This pressure shall be measured at the midpoint of each hoistway door, with all elevator cars at the floor of recall and all hoistway doors on the floor of recall open and all other hoistway doors closed. The opening and closing of hoistway doors at each level must be demonstrated during this test. The supply air intake shall be from an outside, uncontaminated source located a minimum distance of 20 feet (6096 mm) from any air exhaust system or outlet.]
[708.14.2.2 Rational analysis. A rational analysis complying with Section 909.4 shall be submitted with the construction documents.]

[708.14.2.3 Ducts for system. Any duct system that is part of the pressurization system shall be protected with the same fire-resistance rating as required for the elevator shaft enclosure.]

[708.14.2.4 Fan system. The fan system provided for the pressurization system shall be as required by this section.]

[708.14.2.4.1 Fire resistance. When located within the building, the fan system that provides the pressurization shall be protected with the same fire-resistance rating required for the elevator shaft enclosure.]

[708.14.2.4.2 Smoke detection. The fan system shall be equipped with a smoke detector that will automatically shut down the fan system when smoke is detected within the system.]

[708.14.2.4.3 Separate systems. A separate fan system shall be used for each elevator hoistway.]

[708.14.2.4.4 Fan capacity. The supply fan shall either be adjustable with a capacity of at least 1,000 cfm (0.4719 m³/s) per door, or that specified by a registered design professional to meet the requirements of a designed pressurization system.]

[708.14.2.5 Standby power. The pressurization system shall be provided with standby power from the same source as other required emergency systems for the building.]

[708.14.2.6 Activation of pressurization system. The elevator pressurization system shall be activated upon activation of the building fire alarm system or upon activation of the elevator lobby smoke detectors. Where both a building fire alarm system and elevator lobby smoke detectors are present, each shall be independently capable of activating the pressurization system.]

[708.14.2.7 Special inspection. Special inspection for performance shall be required in accordance with Section 909.18.8. System acceptance shall be in accordance with Section 909.19.]

[708.14.2.8 Marking and identification. Detection and control systems shall be marked in accordance with Section 909.14.]

[708.14.2.9 Control diagrams. Control diagrams shall be provided in accordance with Section 909.15.]

[708.14.2.10 Control panel. A control panel complying with Section 909.16 shall be provided.]

[708.14.2.11 System response time. Hoistway pressurization systems shall comply with the requirements for smoke control system response time in Section 909.17.]
**SECTION BC [709] 708
FIRE PARTITIONS**

[709.1] 708.1 General. The following wall assemblies shall comply with this section.

1. Separation walls as required by Section 420.2 for Groups I-1, R-1, R-2 and R-3.

2. Walls separating tenant spaces in covered and open mall buildings as required by Section 402.7.2 402.4.2.1.

[2:] 3. Corridor walls as required by Section 1018.1 1020.1.

4. Egress balconies as required by Section 1021.2.

[709.2] 708.2 Materials. The walls shall be of materials permitted by the building type of construction.

[709.3] 708.3 Fire-resistance rating. Fire partitions shall have a fire-resistance rating of not less than 1 hour.

**Exception:** Interior corridor walls as permitted by Table 1018.4.1 1020.1.

[709.4] 708.4 Continuity. Fire partitions shall extend from the top of the foundation or floor/ceiling assembly below to the underside of the floor or roof sheathing, slab or deck above or to the fire-resistance-rated floor/ceiling or roof/ceiling assembly above, and shall be securely attached thereto. If the fire partitions are not continuous to the sheathing, deck or slab, the space between the ceiling and the sheathing, deck or slab above shall be fire blocked or draft stopped in accordance with Sections 717.2.1 718.2 and 717.3.1 718.3 at the partition line. The supporting construction shall be protected to afford the required fire-resistance rating of the wall supported.

**Exceptions:**

1. The fire partitions separating tenant spaces in a covered or open mall building, complying with Section 402.7.2 402.4.2.1, are not required to extend beyond the underside of a ceiling that is not part of a fire-resistance-rated assembly. A wall is not required in attic or ceiling spaces above tenant separation walls. However, fireblocking or draftstopping shall be provided in accordance with Section 718.

2. Attic fireblocking or draftstopping is not required at the partition line in Group R-2 buildings that do not exceed four stories above grade plane, provided the attic space is subdivided by draftstopping into areas not exceeding 3,000 square feet (279 m²) or above every two dwelling units, whichever is smaller.

3. Fireblocking or draftstopping is not required at the partition line in buildings equipped with an automatic sprinkler system installed throughout in accordance with Section 903.3.1.1 or 903.3.1.2, provided that automatic sprinklers are installed in combustible floor/ceiling and roof/ceiling spaces.
[709.5] **708.5 Exterior walls.** Where exterior walls serve as a part of a required fire-resistance-rated separation, such walls shall comply with the requirements of Section 705 for exterior walls, and the fire-resistance-rated separation requirements shall not apply.

**Exception:** Exterior walls required to be fire-resistance-rated in accordance with Section [4049.2] 1021.2 for exterior egress balconies, Section [4022.6] 1023.7 for [exit enclosures], interior exit stairways and ramps and Section [4026.6] 1027.6 for exterior exit ramps and stairways and ramps.

[709.6] **708.6 Openings.** Openings in a fire partition shall be protected in accordance with Section [745] 716.

[709.7] **708.7 Penetrations.** Penetrations through fire partitions shall comply with Section [743] 714.

[709.8] **708.8 Joints.** Joints made in or between fire partitions shall comply with Section [744] 715.

[709.9] **708.9 Ducts and air transfer openings.** Penetrations in a fire partition by ducts and air transfer openings shall comply with Section [746] 717.

**SECTION BC [740] 709 SMOKE BARRIERS**

[710.1] **709.1 General.** [Smoke] Vertical and horizontal smoke barriers shall comply with this section.

[710.2] **709.2 Materials.** Smoke barriers shall be of materials permitted by the building type of construction.

[710.3] **709.3 Fire-resistance rating.** A 1-hour fire-resistance rating is required for smoke barriers.

**Exception:** Smoke barriers constructed of minimum 0.10-inch-thick (2.5 mm) thick steel in Group I-3 buildings.

[710.4] **709.4 Continuity.** Smoke barriers shall form an effective membrane continuous from [outside wall to outside wall and from] the top of the foundation or floor/ceiling assembly below to the underside of the floor or roof sheathing, deck[,] or slab above, including continuity through concealed spaces, such as those found above suspended ceilings, and interstitial structural and mechanical spaces. The supporting construction shall be protected to afford the required fire-resistance rating of the wall or floor supported in buildings of other than Type IIB, IIIB or VB construction. Smoke barrier walls used to separate smoke compartments shall comply with Section 709.4.1. Smoke barrier walls used to enclose areas of refuge in accordance with Section 1009.6.4 or to enclose elevator lobbies in accordance with Section 405.4.3, 3007.6.2, or 3008.7.2 shall also comply with Section 709.4.2.

**Exception:** Smoke barrier walls are not required in interstitial spaces where such spaces are designed and constructed with ceilings or exterior walls that provide resistance to the passage of fire and smoke equivalent to that provided by the smoke barrier walls.
709.4.1 **Smoke-barrier walls separating smoke compartments.** Smoke-barrier walls used to separate smoke compartments shall form an effective membrane continuous from outside wall to outside wall.

709.4.2 **Smoke-barrier walls enclosing areas of refuge or elevator lobbies.** Smoke-barrier walls used to enclose areas of refuge in accordance with Section 1009.6.4, or to enclose elevator lobbies in accordance with Sections 405.4.3, 3007.6.2, or 3008.7.2, shall form an effective membrane enclosure that terminates at a fire barrier wall, provided such fire barrier wall has a level of fire protection rating not less than 1 hour, or that terminates at another smoke barrier wall or an outside wall. A smoke and draft control door assembly as specified in Section 716.5.3.1 shall not be required at each elevator hoistway door opening or at each exit doorway between an area of refuge and the enclosure of interior exit stairways or ramps or exit passageways.

709.5 **Openings.** Openings in a smoke barrier shall be protected in accordance with Section [715] 716.

**Exceptions:**

1. In Group I-1, Group I-2 and Group B ambulatory care facilities, where doors are installed across corridors, a pair of opposite-swinging doors without a center mullion shall be installed having vision panels with fire protection-rated glazing materials in approved fire resistance-rated frames, the area of which shall not exceed that tested. Where permitted by the door manufacturer’s listing, positive-latching devices are not required.

2. In Group I-1, Group I-2 and Group B and ambulatory care facilities, horizontal sliding doors installed in accordance with Section [1008.1.4.3] 1010.1.4.3 and protected in accordance with Section [715] 716.

709.5.1 **Group I-2 and ambulatory care facilities.** In Group I-2 and Group B ambulatory care facilities, where doors are installed across a corridor, the doors shall be automatic-closing by smoke detection in accordance with Section 716.5.9.3 and shall have a vision panel with fire-protection-rated glazing materials in fire-protection-rated frames, the area of which shall not exceed that tested.

709.6 **Penetrations.** Penetrations through smoke barriers shall comply with Section [714] 714.

709.7 **Joints.** Joints made in or between smoke barriers shall comply with Section [714] 715.

709.8 **Duct and air transfer openings.** Penetrations by duct and air transfer openings shall comply with Section [716] 717.
SECTION BC [744] 710
SMOKE PARTITIONS

[744.1] 710.1 General. Smoke partitions installed as required elsewhere in the code shall comply with this section.

[744.2] 710.2 Materials. Smoke partitions shall be constructed of noncombustible materials. Glazing may be used provided it is heat-strengthened or tempered glazing complying and shall otherwise comply with Chapter 24, and shall be protected by sprinkler heads installed in a maximum of 6 feet (1829 mm) on center on each side of the smoke partition.

[744.3] 710.3 Fire-resistance rating. Unless required elsewhere in the code, smoke partitions are not required to have a fire-resistance rating.

[744.4] 710.4 Continuity. Smoke partitions shall extend from the top of the foundation or floor below to the underside of the floor or roof sheathing, deck[,] or slab above or to the underside of the ceiling above where the ceiling membrane is constructed to limit the transfer of smoke.

[744.5] 710.5 Openings. Windows shall be sealed to resist the free passage of smoke or be automatic-closing upon detection of smoke. Doors in smoke partitions shall comply with this section. Openings in smoke partitions shall comply with Sections 710.5.1 and 710.5.2.

710.5.1 Windows. Windows in smoke partitions shall be sealed to resist the free passage of smoke or be automatic-closing upon detection of smoke.

710.5.2 Doors. Doors in smoke partitions shall comply with Sections 710.5.2.1 through 710.5.2.3.

[744.5.1] 710.5.2.1 Louvers. Doors in smoke partitions shall not include louvers.

[744.5.2] 710.5.2.2 Smoke and draft-control doors. Where required elsewhere in the code, doors in smoke partitions shall meet the requirements for a smoke and draft control door assembly tested in accordance with UL 1784. The air leakage rate of the door assembly shall not exceed 3.0 cubic feet per minute per square foot (0.015424 m³/s m²) of door opening at 0.10 inch (24.9 Pa) of water for both the ambient temperature test and the elevated temperature exposure test. Installation of smoke doors shall be in accordance with NFPA 105.

710.5.2.2.1 Smoke and draft control door labeling. Smoke and draft control doors complying only with UL 1784 shall be permitted to show the letter “S” on the manufacturer’s labeling.

[744.5.3] 710.5.2.3 Self-closing or automatic-closing doors. Where required elsewhere in the code, doors in smoke partitions shall be [self-closing] self- or automatic-closing by smoke detection in accordance with Section [715.4.8.3] 716.5.9.3.

[744.6] 710.6 Penetrations [and joints]. The space around penetrating items [and in joints] shall be filled with an approved material to limit the free passage of smoke.

710.7 Joints. Joints shall be filled with an approved material to limit the free passage of smoke.
Ducts and air transfer openings. The space around a duct penetrating a smoke partition shall be filled with an approved material to limit the free passage of smoke. Air transfer openings in smoke partitions shall be provided with a smoke damper complying with Section 716.3.2.2.

Exception: Where the installation of a smoke damper will interfere with the operation of a required smoke control system in accordance with Section 909, approved alternative protection shall be utilized.

SECTION BC [712] 711 HORIZONTAL ASSEMBLIES

712.1 General. Floor and roof assemblies required to have a fire-resistance rating shall comply with this section. 711.1 General. Horizontal assemblies shall comply with Section 711.2. Nonfire-resistance-rated floor and roof assemblies shall comply with Section 711.3.

711.2 Horizontal assemblies. Horizontal assemblies shall comply with Sections 711.2.1 through 711.2.6. [712.2] 711.2.1 Materials. The floor and roof assemblies shall be of materials permitted by the building type of construction. [Exception:]

711.2.1.1 Noncombustible materials. Horizontal floor or roof assemblies shall be of noncombustible materials when such assemblies serve as a horizontal offset to a fire wall or fire barrier that is required to be noncombustible.

712.3 Fire-resistance rating. The fire-resistance rating of floor and roof assemblies shall not be less than that required by the building type of construction. Where the floor assembly separates mixed occupancies, the assembly shall have a fire-resistance rating of not less than that required by Section 508.4 based on the occupancies being separated. Where the floor assembly separates a single occupancy into different fire areas, the assembly shall have a fire-resistance rating of not less than that required by Section 707.3.9. Horizontal assemblies separating dwelling units in Group I-1 or R occupancies shall be a minimum of 1-hour fire-resistance-rated construction.

712.3.1 Ceiling panels. Where the weight of lay-in ceiling panels, used as part of fire-resistance-rated floor/ceiling or roof/ceiling assemblies, is not adequate to resist an upward force of 1 pound per square foot (48 Pa), wire or other approved devices shall be installed above the panels to prevent vertical displacement under such upward force.

712.3.2 Access doors. Access doors shall be permitted in ceilings of fire-resistance-rated floor/ceiling and roof/ceiling assemblies provided such doors are tested in accordance with ASTM E 119 or UL 263 as horizontal assemblies and labeled by an approved agency for such purpose.

712.3.3 Unusable space. In 1-hour fire-resistance-rated floor assemblies, the ceiling membrane is not required to be installed over unusable crawl spaces not intended for occupancy or storage.
less than 24 inches (610 mm) in height. In 1-hour fire-resistance-rated roof assemblies, the floor membrane is not required to be installed where the unusable attic space above is not intended for occupancy or storage.

[712.4 Continuity. Assemblies shall be continuous without openings, penetrations or joints except as permitted by this section and Sections 708.2, 713.4, 714, and 1022.1. Skylights and other penetrations through a fire-resistance-rated roof deck or slab are permitted to be unprotected, provided that the structural integrity of the fire-resistance-rated roof assemblies is maintained. Unprotected skylights shall not be permitted in roof construction required to be fire-resistance-rated in accordance with Section 705.8.6. The supporting construction shall be protected to afford the required fire-resistance rating of the horizontal assembly supported.]

[Exception: In buildings of Type IIB, IIIB, or VB construction, the construction supporting the horizontal assembly is not required to be fire-resistance-rated at the followings:

1. Horizontal assemblies at the separations of incidental uses as specified by Table 509, provided the required fire-resistance rating does not exceed 1 hour.

2. Horizontal assemblies at the separations of dwelling units and sleeping units as required by Section 420.3.

3. Horizontal assemblies at smoke barriers constructed in accordance with Section 710.]

[712.5 Penetrations. Penetrations of horizontal assemblies shall comply with Section 713.]

[712.6 Joints. Joints made in or between fire-resistance-rated horizontal assemblies shall comply with Section 714. The void created at the intersection of a floor/ceiling assembly and an exterior curtain wall assembly shall be protected in accordance with Section 714.4.]

[712.7 Ducts and air-transfer openings. Penetrations in horizontal assemblies by ducts and air-transfer openings shall comply with Section 716.]

[712.8 Floor-fire-door assemblies. Floor-fire-door assemblies used to protect openings in fire-resistance-rated floors shall be tested in accordance with NFPA 288, and shall achieve a fire-resistance rating not less than the assembly being penetrated. Floor fire-door assemblies shall be labeled by an approved agency. The label shall be permanently affixed and shall specify the manufacturer, the test standard and the fire-resistance rating.]

[712.9 Smoke barrier. Where horizontal assemblies are required to resist the movement of smoke by other sections of this code in accordance with the definition of smoke barrier, penetrations and joints in such horizontal assemblies shall be protected as required for smoke barriers in accordance with Sections 713.5 and 714.6. Openings through horizontal assemblies shall be protected by shaft enclosures complying with Section 708. Horizontal assemblies shall not be allowed to have unprotected vertical openings.]

711.2.2 Continuity. Assemblies shall be continuous without vertical openings, except as permitted by this section and Section 712.
711.2.3 Supporting construction. The supporting construction shall be protected to afford the required fire-resistance rating of the horizontal assembly supported.

Exception: In buildings of Type IIIB or VB construction, the construction supporting the horizontal assembly is not required to be fire-resistance-rated at the following:

1. Horizontal assemblies at the separations of incidental uses as specified by Table 509 provided the required fire-resistance rating does not exceed 1 hour.

2. Horizontal assemblies at the separations of dwelling units and sleeping units as required by Section 420.3.

3. Horizontal assemblies at smoke barriers constructed in accordance with Section 709.

711.2.4 Fire-resistance rating. The fire-resistance rating of horizontal assemblies shall comply with Sections 711.2.4.1 through 711.2.4.6 but shall be not less than that required by the building type of construction.

711.2.4.1 Separating mixed occupancies. Where the horizontal assembly separates mixed occupancies, the assembly shall have a fire-resistance rating of not less than that required by Section 508.4 based on the occupancies being separated.

711.2.4.2 Separating fire areas. Where the horizontal assembly separates a single occupancy into different fire areas, the assembly shall have a fire-resistance rating of not less than that required by Section 707.3.10.

711.2.4.3 Dwelling units and sleeping units. Horizontal assemblies serving as dwelling or sleeping unit separations in accordance with Section 420.3, located in Group I-1 and R occupancies, shall be not less than 1-hour fire-resistance-rated construction.

711.2.4.4 Separating smoke compartments. Where the horizontal assembly is required to be a smoke barrier, the assembly shall comply with Section 709.

711.2.4.5 Separating incidental uses. Where the horizontal assembly separates incidental uses from the remainder of the building, the assembly shall have a fire-resistance rating of not less than that required by Section 509.

711.2.4.6 Other separations. Where a horizontal assembly is required by other sections of this code, the most restrictive fire-resistance rating shall govern.

711.2.5 Ceiling panels. Where the weight of lay-in ceiling panels, used as part of fire-resistance-rated floor/ceiling or roof/ceiling assemblies, is not adequate to resist an upward force of 1 pound per square foot (47.8 Pa), wire or other approved devices shall be installed above the panels to prevent vertical displacement under such upward force.

711.2.6 Crawl spaces. In 1-hour fire-resistance-rated floor/ceiling assemblies, the ceiling membrane is not required to be installed over crawl spaces that are not intended for occupancy or storage and that are less than 24 inches (609.6 mm) in height. Where the ceiling membrane is not provided, occupancy or storage is not permitted in the crawl space.
711.2.7 Attic spaces. In 1-hour fire-resistance-rated roof assemblies, the floor membrane is not required to be installed where the attic space above the floor membrane is not intended for occupancy or storage. Where the floor membrane is not provided, occupancy or storage is not permitted in the attic space.

711.3 Nonfire-resistance-rated floor and roof assemblies. Nonfire-resistance-rated floor, floor/ceiling, roof and roof/ceiling assemblies shall comply with Sections 711.3.1 and 711.3.2.

711.3.1 Materials. Assemblies shall be of materials permitted by the building type of construction.

711.3.2 Continuity. Assemblies shall be continuous without vertical openings, except as permitted by Section 712.

SECTION BC 712
VERTICAL OPENINGS

712.1 General. Each vertical opening shall comply in accordance with one of the protection methods in Sections 712.1.1 through 712.1.16.

712.1.1 Shaft enclosures. Vertical openings contained entirely within a shaft enclosure complying with Section 713 shall be permitted.

712.1.2 Individual dwelling unit. Unconcealed vertical openings totally within an individual residential dwelling unit and connecting four stories or less, where such dwelling unit is fully sprinklered in accordance with Sections 903.3.1.1, 903.3.1.2 or 903.3.1.3, shall be permitted.

712.1.3 Escalator openings. Where a building is equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1, vertical openings for escalators shall be permitted where protected in accordance with Section 712.1.3.1 or 712.1.3.2.

712.1.3.1 Opening size. Protection by a draft curtain and closely spaced sprinklers in accordance with NFPA 13, as modified by Appendix Q of this code, shall be permitted where the area of the vertical opening between stories does not exceed twice the horizontal projected area of the escalator or stairway. In other than Groups B and M, this application is limited to openings that do not connect more than four stories.

712.1.3.2 Automatic shutters. Protection of the vertical opening by approved shutters at every penetrated floor shall be permitted in accordance with this section. The shutters shall be of noncombustible construction and have a fire-resistance rating of not less than 1.5 hours. The shutter shall be so constructed as to close immediately upon the actuation of a smoke detector installed in accordance with Section 907.3.1 and shall completely shut off the well opening. Escalators shall cease operation when the shutter begins to close. The shutter shall operate at a speed of not more than 30 feet per minute (152.4 mm/s) and shall be equipped with a sensitive leading edge to arrest its progress where in contact with any obstacle, and to continue its progress on release there from.
712.1.4 Penetrations. Penetrations, concealed and unconcealed, shall be permitted where protected in accordance with Section 714.

712.1.5 Joints. Joints shall be permitted where complying with Section 712.1.5.1 or 712.1.5.2, as applicable.

712.1.5.1 Joints in or between horizontal assemblies. Joints made in or between horizontal assemblies shall comply with Section 715. The void created at the intersection of a floor/ceiling assembly and an exterior curtain wall assembly shall be permitted where protected in accordance with Section 715.4.

712.1.5.2 Joints in or between nonfire-resistance-rated floor assemblies. Joints in or between floor assemblies without a required fire-resistance rating shall be permitted where they comply with one of the following:

1. The joint shall be concealed within the cavity of a wall.

2. The joint shall be located above a ceiling.

3. The joint shall be sealed, treated or covered with an approved material or system to resist the free passage of flame and the products of combustion.

Exception: Joints meeting one of the exceptions listed in Section 715.1.

712.1.6 Ducts and air transfer openings. Penetrations by ducts and air transfer openings shall be protected in accordance with Section 717. Grease ducts shall be protected in accordance with the New York City Mechanical Code.

712.1.7 Atriums. In other than Group H occupancies, atriums complying with Section 404 shall be permitted.

712.1.8 Masonry chimney. Approved vertical openings for masonry chimneys shall be permitted where the annular space is fireblocked at each floor level in accordance with Section 718.2.5.

712.1.9 Two-story openings. In other than Groups I-2 and I-3, a vertical opening that is not used as one of the applications listed in this section shall be permitted if the opening complies with all of the items below:

1. Does not connect more than two stories.

2. Does not penetrate a horizontal assembly that separates fire areas or smoke barriers that separate smoke compartments.

3. Is not concealed within the construction of a wall or a floor/ceiling assembly.

4. Is not open to a corridor in Group I and R occupancies, where such corridor is required to be fire-resistance-rated in accordance with Table 1020.1.
5. Is not open to a corridor on nonsprinklered floors, where such corridor is required to be fire-resistance-rated in accordance with Table 1020.1.

6. Is separated from floor openings and air transfer openings serving other floors by construction conforming to required shaft enclosures.

712.1.10 Parking garages. Vertical openings in parking garages for automobile ramps, elevators and duct systems shall comply with Section 712.1.10.1, 712.1.10.2 or 712.1.10.3, as applicable.

712.1.10.1 Automobile ramps. Vertical openings for automobile ramps in open and enclosed parking garages shall be permitted where constructed in accordance with Sections 406.5 and 406.6, respectively.

712.1.10.2 Elevators. Vertical openings for elevator hoistways in open and enclosed parking garages that serve only the parking garage, and complying with Sections 406.5 and 406.6, respectively, shall be permitted.

712.1.10.3 Duct systems. Vertical openings for mechanical exhaust or supply duct systems in open or enclosed parking garages complying with Sections 406.5 and 406.6, respectively, shall be permitted to be unenclosed where such duct system is contained within and serves only the parking garage.

712.1.11 Mezzanine. Vertical openings between a mezzanine complying with Section 505 and the floor below shall be permitted.

712.1.12 Exit access stairways and ramps. Vertical openings containing exit access stairways or ramps in accordance with Section 1019 shall be permitted.

712.1.13 Openings. Vertical openings for floor fire doors and access doors shall be permitted where protected by Section 712.1.13.1 or 712.1.13.2.

712.1.13.1 Horizontal fire door assemblies. Horizontal fire door assemblies used to protect openings in fire-resistance-rated horizontal assemblies shall be tested in accordance with NFPA 288, and shall achieve a fire-resistance rating not less than the assembly being penetrated. Horizontal fire door assemblies shall be labeled by an approved agency. The label shall be permanently affixed and shall specify the manufacturer, the test standard and the fire-resistance rating.

712.1.13.2 Access doors. Access doors shall be permitted in ceilings of fire-resistance-rated floor/ceiling and roof/ceiling assemblies, provided such doors are tested in accordance with ASTM E 119 or UL 263 as horizontal assemblies and labeled by an approved agency for such purpose.

712.1.14 Group I-3. In Group I-3 occupancies, vertical openings shall be permitted in accordance with Section 408.5.

712.1.15 Skylights. Skylights and other penetrations through a fire-resistance-rated roof deck or slab are permitted to be unprotected, provided that the structural integrity of the fire-resistance-rated roof assembly is maintained. Unprotected skylights shall not be permitted in roof assemblies.
required to be fire-resistance-rated in accordance with Section 705.8.6. The supporting construction shall be protected to afford the required fire-resistance rating of the horizontal assembly supported.

### 712.1.16 Openings otherwise permitted
Vertical openings shall be permitted where allowed by other sections of this code.

---

### SECTION BC 713
**SHAFT ENCLOSURES**

#### 713.1 General
The provisions of this section shall apply to shafts required to protect openings and penetrations through floor/ceiling and roof/ceiling assemblies. Interior exit stairways and ramps shall be enclosed in accordance with Section 1023.

#### 713.2 Construction
Shaft enclosures shall be constructed as fire barriers in accordance with Section 707 or horizontal assemblies in accordance with Section 711, or both.

#### 713.3 Materials
The shaft enclosure shall be of materials permitted by the building type of construction.

**Exception:** Noncombustible materials shall be used for shaft enclosures in Group I-1, R-1 and R-2 buildings irrespective of the building type of construction.

#### 713.4 Fire-resistance rating
Shaft enclosures shall have a fire-resistance rating of not less than 2 hours where penetrating three stories or more, and not less than 1 hour where penetrating fewer than three stories. The number of stories connected by the shaft enclosure shall include any basements or cellars, but not any mezzanines. Shaft enclosures shall have a fire-resistance rating not less than the floor assembly penetrated, but need not exceed 2 hours. Shaft enclosures shall meet the requirements of Section 703.2.1.

#### 713.5 Continuity
Shaft enclosures shall be constructed as fire barriers in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 711, or both. Where the roof construction is of combustible materials, shaft enclosure walls shall extend through the roof construction not less than 30 inches (762 mm) above the roof. Where the roof construction is of noncombustible materials, shaft enclosure walls shall extend from the top of the floor/ceiling assembly below to the underside of the floor or roof slab or deck above and shall be securely attached thereto. These walls shall be continuous through concealed spaces such as the space above a suspended ceiling. The supporting construction shall be protected to afford the required fire-resistance rating of the element supported. Hollow vertical spaces within the shaft enclosure construction wall shall be firestopped at every floor level.

**Exception:** A shaft enclosure of a refuse or laundry chute shall extend through combustible or noncombustible roof construction not less than 6 feet (1828.9 mm) above the roof.

#### 713.6 Exterior walls
Where exterior walls serve as a part of a required shaft enclosure, such walls shall comply with the requirements of Section 705 for exterior walls and the fire-resistance-rated enclosure requirements of Section 713.4 shall not apply.
**Exception:** Exterior walls required to be fire-resistance-rated in accordance with Section 1021.2 for exterior egress balconies, Section 1023.7 for interior exit stairways and ramps and Section 1027.6 for exterior exit stairways and ramps.

**713.7 Openings.** Openings in a shaft enclosure shall be protected in accordance with Section 716 as required for fire barriers. Doors shall be self- or automatic-closing by smoke detection in accordance with Section 716.5.9.3. Automatic-closing by smoke detection is not permitted for doors serving interior exit stairways or ramps.

**Exception:** For no more than one interior exit stairway or ramp in a building, doors serving such enclosure may be automatic-closing by smoke detection provided that all the following conditions are satisfied:

1. The building contains no Group H space and:
   1.1. Is not a high-rise building pursuant to Section 403.1 of this code, or for the purposes of prior code buildings, Section 27-232 of the Administrative Code, and is equipped with a fire alarm system; or
   1.2. Is equipped with fire alarm systems and automatic sprinkler systems throughout; or
   1.3. Is a high-rise office building, as such term is defined in Section 27-232 of the Administrative Code, that is 100 feet (30 480 mm) or more in height, equipped with a fire alarm system and subdivided into compartments pursuant to subdivision c of Section 27-339 of the Administrative Code.

2. Such doors serve no more than three levels within such vertical exit enclosure, which must be consecutive levels.

3. All levels served by such doors are served by not less than one other exit.

4. Such doors are connected to a fire alarm system and installed in accordance with NFPA 80 and Section 716.5.9.3 of this code.

5. The hold-open devices of such doors:
   5.1. Are capable of manual release at the fire command center, or if a fire command center is not required, at a fire alarm control panel that is near the main building entrance; and
   5.2. Are capable of manual release by pulling the doors to the closed position.

**713.7.1 Prohibited openings.** Openings other than those necessary for the purpose of the shaft shall not be permitted in shaft enclosures.

**713.8 Penetrations.** Penetrations in a shaft enclosure shall be protected in accordance with Section 714 as required for fire barriers. Structural elements, such as beams or joists, where protected in accordance with Section 714 shall be permitted to penetrate a shaft enclosure.
713.8.1 Prohibited penetrations. Penetrations other than those necessary for the purpose of the shaft shall not be permitted in shaft enclosures.

713.9 Joints. Joints in a shaft enclosure shall comply with Section 715.

713.10 Duct and air transfer openings. Penetrations of a shaft enclosure by ducts and air transfer openings shall comply with Section 717.

713.11 Enclosure at the bottom. Shafts that do not extend to the bottom of the building or structure shall comply with one of the following:

1. They shall be enclosed at the lowest level with construction of the same fire-resistance rating as the lowest floor through which the shaft passes, but not less than the rating required for the shaft enclosure.

2. They shall terminate in a room having a use related to the purpose of the shaft. The room shall be separated from the remainder of the building by fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 711, or both. The fire-resistance rating and opening protectives shall be not less than the protection required for the shaft enclosure.

Exceptions:

1. The fire-resistance-rated room separation is not required, provided there are no openings in or penetrations of the shaft enclosure to the interior of the building except at the bottom. The bottom of the shaft shall be closed off around the penetrating items with materials permitted by Section 718.3.1 for draftstopping, or the room shall be provided with an approved automatic sprinkler system.

2. A shaft enclosure containing a waste or linen chute shall not be used for any other purpose and shall discharge into a room protected in accordance with Section 713.13.4.

3. The fire-resistance-rated room separation and the protection at the bottom of the shaft are not required provided there are no combustibles in the shaft and there are no openings or other penetrations through the shaft enclosure to the interior of the building.

713.12 Enclosure at the top. Shafts that do not extend to the top of the building or structure shall comply with one of the following:

1. They shall be enclosed at the highest level with construction of the same fire-resistance rating as the highest floor through which the shaft passes, but not less than the rating required for the shaft enclosure.

2. They shall terminate in a room having a use related to the purpose of the shaft. The room shall be separated from the remainder of the building by construction having a fire-resistance rating and opening protective not less than the protection required for the shaft enclosure.
713.12.1 Smoke venting of stair and other closed shafts. All closed shafts, including vertical exit enclosures, having a floor area exceeding 4 square feet (0.37 m²) shall be provided with a smoke vent in accordance with Sections 713.12.1.1 through 713.12.1.3. Interior vertical exit shaft enclosures shall also comply with Chapter 10.

Exceptions:

1. Elevator and dumbwaiter shafts in accordance with Chapter 30.

2. Interior exit stairways and ramps constructed as smokeproof enclosures in accordance with Section 1023.11.

713.12.1.1 Smoke vent construction. Smoke vents may be constructed as windows, louvers, skylights, vent ducts, or similar devices, and shall be approved for such use. Where a vent duct is installed, such vent duct shall be enclosed by construction having the same fire-resistance rating as required for the shaft enclosure.

713.12.1.2 Smoke vent dimensions. The effective venting area shall be not less than 3½ percent of the maximum shaft area at any floor, but in no event less than 72 square inches (46451.5 mm²).

713.12.1.3 Smoke vent location. Smoke vents shall be located in accordance with Section 713.12.1.3.1 or 713.12.1.3.2, as applicable.

713.12.1.3.1 Smoke vents located above the roof line. Where a closed shaft or smoke vent duct penetrates through the roof of the building, the vent shall be approved for such use and located as follows:

1. The vent shall be located not less than 8 inches (203.2 mm) above a noncombustible roof assembly or not less than 36 inches (914.4 mm) above a combustible roof assembly.

2. The vent shall be located not less than 10 feet (3048 mm) from any window, door, exterior stairway, or interior lot line. The vent may be located not less than 5 feet (1524 mm) from any window or door provided that the vent is located at a point higher than the top of such window or door.

3. Where the vent is constructed as a window or louver, the sill of the window or louver shall be located not less than 36 inches (914.4 mm) above the roof assembly.

713.12.1.3.2 Smoke vents located in an exterior wall. Where a smoke vent is located in an exterior wall, openings in the wall are prohibited within an area 30 feet (9144 mm) vertically above the vent opening and 5 feet (1524 mm) horizontally on either side of the vent opening.

713.13 Waste and linen chutes, including discharge rooms, and incinerator rooms. Waste and linen chutes, and discharge rooms for such chutes, shall comply with the provisions of NFPA 82,
Chapter 6 of this code and shall meet the requirements of Sections 713.13.1 through 713.13.6 of this code. Incinerator rooms shall meet the provisions of Sections 713.13.4 through 713.13.5 of this code.

**Exception:** Chutes serving and contained within a single dwelling unit.

### 713.13.1 Waste and linen

A shaft enclosure containing a recycling, or waste or linen chute, and any associated discharge room, shall not be used for any other purpose and shall have a fire-resistance rating of 2 hours. Openings into the shaft, including those from access rooms and discharge rooms, shall be protected in accordance with this section and Section 716. Openings into chutes shall not be located in corridors. Doors into chutes shall be self-closing. Discharge doors shall be self- or automatic-closing upon the actuation of a smoke detector in accordance with Section 716.5.9.3, except that heat-activated closing devices shall be permitted between the shaft and the discharge room.

### 713.13.2 Materials

A shaft enclosure containing a waste, recycling, or linen chute shall be constructed of noncombustible materials.

### 713.13.3 Waste and linen chute access rooms

Access openings for waste and linen chutes shall be located in dedicated rooms or compartments enclosed by not less than 2-hour fire barriers constructed in accordance with Section 707 or horizontal assemblies constructed in accordance with Section 711 or both. Openings into the access rooms shall be protected by opening protectives having a fire protection rating of not less than 1-1/2 hours. Doors to access rooms shall be self-closing, except where the storage of waste, including recyclables, or linen and other laundry, is not permitted in such access room, doors may be automatic-closing upon the detection of smoke in accordance with Section 716.5.9.3.

**Exception:** Access openings for waste or linen chutes located within a dwelling unit need not be located within a separate room or compartment.

### 713.13.4 Chute discharge room

Waste or linen chutes shall discharge into an enclosed room separated by not less than 3-hour fire barriers constructed in accordance with Section 707 or by horizontal assemblies constructed in accordance with Section 711, or both. Openings into the discharge room from the remainder of the building shall be protected by opening protectives having a fire protection rating equal to the protection required for the shaft enclosure. Doors shall be self- or automatic-closing upon the detection of smoke in accordance with Section 716.5.9.3. Waste chutes shall not terminate in an incinerator room. Waste and linen rooms that are not provided with chutes need only comply with Table 509.

**Exception:** Opening protectives shall not be required at a waste or linen chute opening to a discharge room.

### 713.13.5 Incinerator room

Incinerator rooms shall comply with Table 509.

### 713.13.6 Automatic sprinkler system

An approved automatic sprinkler system shall be installed in accordance with Section 903.2.11.6.

### 713.14 Elevator, dumbwaiter and other hoistways

Elevator, dumbwaiter and other hoistway enclosures shall be constructed in accordance with Chapter 30 and this section.
713.1 Scope. The provisions of this section shall govern the materials and methods of construction used to protect through penetrations and membrane-penetrations of horizontal assemblies and fire-resistance-rated wall assemblies.

713.1.1 Ducts and air transfer openings. Penetrations of fire-resistance-rated walls by ducts that are not protected with dampers shall comply with Sections 713.2 through 713.3. Penetrations of horizontal assemblies not protected with a shaft as permitted by Exception 4 of Section 708.2, and not required to be protected with fire dampers by other sections of this code, shall comply with Sections 713.4 through 713.4.2. Ducts and air transfer openings that are protected with dampers shall comply with Section 716.

713.1.2 Special inspection. All through-penetration and membrane-penetration firestop systems shall comply with the special inspection requirements of Chapter 17.

713.2 Installation details. Where sleeves are used, they shall be securely fastened to the assembly penetrated. The space between the item contained in the sleeve and the sleeve itself and any space between the sleeve and the assembly penetrated shall be protected in accordance with this section. Insulation and coverings on or in the penetrating item shall not penetrate the assembly unless the specific material used has been tested as part of the assembly in accordance with this section.

713.3 Fire-resistance-rated walls. Penetrations into or through fire walls, fire barriers, smoke barrier walls, and fire partitions shall comply with Sections 713.3.1 through 713.3.3. Penetrations in smoke barrier walls shall also comply with Section 713.5.

713.3.1 Through penetrations. Through penetrations of fire-resistance-rated walls shall comply with Section 713.3.1.1 or 713.3.1.2.

Exception: Where the penetrating items are steel, ferrous or copper pipes, tubes or conduits, the annular space between the penetrating item and the fire-resistance-rated wall is permitted to be protected by either of the following measures:

1. In concrete or masonry walls where the penetrating item is a maximum 6-inch (152.4 mm) nominal diameter and the area of the opening through the wall does not exceed 144 square inches (0.9929 m²) (92903 mm²), concrete, grout or mortar is permitted where installed the full thickness of the wall or the thickness required to maintain the fire-resistance rating of the construction penetrated.

2. The material used to fill the annular space shall prevent the passage of flame and hot gases sufficient to ignite cotton waste subjected to ASTM E 119 or UL 263 time-temperature fire conditions under a minimum positive pressure differential of 0.01 inch (2.49 Pa) of water at the location of the penetration for the time period equivalent to the fire-resistance rating of the construction penetrated.
[713.3.1.1] **Fire-resistance-rated assemblies.** Penetrations shall be installed as tested in an approved fire-resistance-rated assembly.

[713.3.1.2] **Through-penetration firestop system.** Through-penetrations shall be protected by an approved penetration firestop system installed as tested in accordance with ASTM E 814 or UL 1479, with a minimum positive pressure differential of 0.01 inch (2.49 Pa) of water and shall have an F rating of not less than the required fire-resistance rating of the wall penetrated.

[713.3.2] **Membrane penetrations.** Membrane penetrations shall be protected by a membrane penetration firestop installed in accordance with Section [713.3.1] 714.3.1. Where walls or partitions are required to have a fire-resistance rating, recessed fixtures shall be installed such that the required fire resistance will not be reduced.

**Exceptions:**

1. Membrane penetrations of maximum 2-hour fire-resistance-rated walls and partitions by steel electrical boxes that do not exceed 16 square inches (0.0103 m²) in area, provided the aggregate area of the openings does not exceed 100 square inches (0.0645 m²) for any 100 square feet (9.29 m²) of wall area. The annular space between the wall membrane and the box shall not exceed 1/8 inch (3.1 mm) (3.2 mm). Such boxes on opposite sides of the wall or partition shall be separated by one of the following:
   
   1.1. By a horizontal distance of not less than 24 inches (610.6 mm) where the wall or partition is constructed with individual noncommunicating stud cavities;
   
   1.2. By a horizontal distance of not less than the depth of the wall cavity where the wall cavity is filled with cellulose loose-fill, rock wool or slag mineral wool insulation;
   
   1.3. By solid fireblocking in accordance with Section [717.2.4] 718.2.1;
   
   1.4. By protecting both outlet boxes with listed putty pads; or
   
   1.5. By other listed materials and methods.

2. Membrane penetrations by listed electrical boxes of any material, provided such boxes have been tested for use in fire-resistance-rated assemblies and are installed in accordance with the instructions included in the listing. The annular space between the wall membrane and the box shall not exceed 1/8 inch (3.1 mm) (3.2 mm) unless listed otherwise. Such boxes on opposite sides of the wall or partition shall be separated by one of the following:

   2.1. By the horizontal distance specified in the listing of the electrical boxes;
   
   2.2. By solid fireblocking in accordance with Section [717.2.4] 718.2.1;
   
   2.3. By protecting both boxes with listed putty pads; or
2.4. By other listed materials and methods.

3. Membrane penetrations by electrical boxes of any size or type[which] that have been listed as part of a wall opening protective material system for use in fire-resistance-rated assemblies and are installed in accordance with the instructions included in the listing.

4. Membrane penetrations by boxes other than electrical boxes, provided such penetrating items and the annular space between the wall membrane and the box, are protected by an approved membrane-penetration firestop system installed as tested in accordance with ASTM E 814 or UL 1479, with a minimum positive pressure differential of 0.01 inch (2.49 Pa) of water, and shall have an F and T rating of not less than the required fire-resistance rating of the wall penetrated and be installed in accordance with their listing.

5. The annular space created by the penetration of an automatic sprinkler, provided it is covered by a metal escutcheon plate.

6. Membrane penetrations of maximum 2-hour fire resistance-rated walls and partitions by steel electrical boxes that exceed 16 square inches (0.0103 m²) in area, or steel electrical boxes of any size having an aggregate area through the membrane exceeding 100 square inches (0.0645 m²) in any 100 square feet (9.29 m²) of wall area, provided such penetrating items are protected by listed putty pads or other listed materials and methods, and installed in accordance with the listing.

[713.3.3] 714.3.3 Dissimilar materials. Noncombustible penetrating items shall not connect to combustible items beyond the point of fire stopping unless it can be demonstrated to the commissioner that the fire-resistance integrity of the wall is maintained.

[713.4] 714.4 Horizontal assemblies. Penetrations of a fire-resistance-rated floor, floor/ceiling assembly or the ceiling membrane of a roof/ceiling assembly not required to be enclosed in a shaft by Section [708.2] 711.1 shall be protected in accordance with Sections [713.4.1] 714.4.1 through [713.4.2.2] 714.4.2.2.

[713.4.1] 714.4.1 Through penetrations. Through penetrations of fire-resistance-rated horizontal assemblies shall comply with Sections 713.4.1.1 through 713.4.1.4. Penetrations in horizontal smoke barriers shall also comply with Section 713.5.

[713.4.1.1] 714.4.1.1 Through penetrations of fire-resistance-rated horizontal assemblies shall comply with Section 714.4.1.1 or 714.4.1.2.

Exceptions:

1. Penetrations by steel, ferrous or copper conduits, pipes, tubes or vents or concrete or masonry items through a single fire-resistance-rated floor assembly where the annular space is protected with materials that prevent the passage of flame and hot
gases sufficient to ignite cotton waste where subjected to ASTM E 119 or UL 263 time-temperature fire conditions under a minimum positive pressure differential of 0.01 inch (2.49 Pa) of water at the location of the penetration for the time period equivalent to the fire-resistance rating of the construction penetrated. Penetrating items with a maximum 6-inch ([452] 152.4 mm) nominal diameter shall not be limited to the penetration of a single fire-resistance-rated floor assembly provided the aggregate area of the [penetration] penetrations does not exceed 144 square inches ([92 900] 92 903 mm²) in any 100 square feet (9.3 m²) of floor area.

2. Penetrations in a single concrete floor by steel, ferrous or copper conduits, pipes, tubes or vents with a maximum 6-inch ([452] 152.4 mm) nominal diameter, provided that the concrete, grout or mortar is installed the full thickness of the floor or the thickness required to maintain the fire-resistance rating. The penetrating items shall not be limited to the penetration of a single concrete floor provided that the area of the opening through each floor does not exceed 144 square inches ([92 900] 92 903 mm²).

3. Penetrations by listed electrical boxes of any material provided that such boxes have been tested for use in fire-resistance-rated assemblies and installed in accordance with the instructions included in the listing.

[713.4.1.1.1] 714.4.1.1 Installation. [Through penetrations] Through-penetrations shall be installed as tested in the approved fire-resistance-rated assembly.

[713.4.1.1.2] 714.4.1.2 Through-penetration firestop system. [Through penetrations] Through-penetrations shall be protected by an approved through-penetration [fire-stop] firestop system installed and tested in accordance with ASTM E 814 or UL 1479, with a minimum positive pressure differential of 0.01 inch (2.49 Pa) of water. The system shall have both, an F rating (flame) and a T rating (temperature) of not less than 1 hour but not less than the required rating of the floor penetrated.

[Exceptions:]

1. Floor penetrations contained and located within the cavity of a wall do not require a T rating.

2. Floor penetrations by floor drains, tub drains or shower drains contained and located within the concealed space of a horizontal assembly do not require a T rating.

3. Floor penetrations of maximum 4-inch (101.6 mm) nominal diameter penetrating directly into metal-enclosed electrical power switchgear do not require a T rating.

[713.4.1.2] 714.4.2 Membrane penetrations. Penetrations of membranes that are part of a [fire-resistance-rated] horizontal assembly shall comply with Section [713.4.1.1.1 or 714.4.1.1] 714.4.1.1 or 714.4.1.2. Where floor/ceiling assemblies are required to have a fire-resistance rating, recessed fixtures shall be installed such that the required fire resistance will not be reduced.

Exceptions:
1. Membrane penetrations by steel, ferrous or copper conduits, pipes, tubes or vents, or concrete or masonry items where the annular space is protected either in accordance with Section 714.4.1 or to prevent the free passage of flame and the products of combustion. The aggregate area of the openings through the membrane shall not exceed 100 square inches (64 500 mm²) in any 100 square feet (9.3 m²) of ceiling area in assemblies tested without penetrations.

2. Ceiling membrane penetrations of maximum 2-hour horizontal assemblies by steel electrical boxes that do not exceed 16 square inches (10 323 mm²) in area, provided the aggregate area of such penetrations does not exceed 100 square inches (64 500 mm²) in any 100 square feet (9.3 m²) of ceiling area, and the annular space between the ceiling membrane and the box does not exceed 1/8 inch (3.2 mm).

3. Membrane penetrations by electrical boxes of any size or type, which have been listed as part of an opening protective material system for use in horizontal assemblies and are installed in accordance with the instructions included in the listing.

4. Membrane penetrations by listed electrical boxes of any material, provided such boxes have been tested for use in fire-resistance-rated assemblies and are installed in accordance with the instructions included in the listing. The annular space between the ceiling membrane and the box shall not exceed 1/8 inch (3.2 mm) unless listed otherwise.

5. The annular space created by the penetration of a fire sprinkler, provided it is covered by a metal escutcheon plate.

6. Noncombustible items that are cast into concrete building elements and that do not penetrate both top and bottom surfaces of the element, provided such items are installed such that the required fire resistance will not be reduced.

7. The ceiling membrane of 1- and 2-hour fire-resistance-rated horizontal assemblies is permitted to be interrupted with the double wood top plate of a wall assembly that is sheathed with Type X gypsum wallboard, provided that all penetrating items through the double top plates are protected in accordance with Section 714.4.1.1 or 714.4.1.2 and the ceiling membrane is tight to the top plates.

[713.4.1.3 Ducts and air transfer openings. Penetrations of horizontal assemblies by ducts and air transfer openings shall comply with Section 716.]

714.4.3 Penetrations in smoke barriers. Penetrations in smoke barriers shall be protected by an approved through-penetration firestop system installed and tested in accordance with the requirements of UL 1479 for air leakage. The L rating of the system measured at 0.30 inch (7.47 Pa) of water in both the ambient temperature and elevated temperature tests shall not exceed:

1. 5.0 cfm per square foot (0.025 m³/s · m²) of penetration opening for each through-penetration firestop system; or
2. A total cumulative leakage of 50 cfm (0.024 m³/s) for any 100 square feet (9.3 m²) of wall area, or floor area.

[713.4.2] 714.5 Nonfire-resistance-rated assemblies. Penetrations of nonfire-resistance-rated floor or floor/ceiling assemblies or the ceiling membrane of a nonfire-resistance-rated roof/ceiling assembly shall meet the requirements of Section [708] 713 or shall comply with [Sections 713.4.2.1 through 713.4.2] Section 714.5.1 or 714.5.2.

[713.4.2.1] 714.5.1 Noncombustible penetrating items. Noncombustible penetrating items that connect not more than three stories are permitted, provided that the annular space is filled with an approved noncombustible material or with a fill, void or cavity material that is tested and classified for use in through-penetration firestop systems.

[713.4.2.2] 714.5.2 Penetrating items. Penetrating items that connect not more than two stories are permitted, provided that the annular space is filled with an approved material to resist the free passage of flame and the products of combustion.

[713.5] Penetrations in smoke barriers. Penetrations in smoke barriers shall be tested in accordance with the requirements of UL 1479 for air leakage. The air leakage rate of the penetration assemblies measured at 0.30 inch (7.47 Pa) of water in both the ambient temperature and elevated temperature tests, shall not exceed:

1. 5.0 cfm per square foot (0.025 m³/s · m²) of penetration opening for each through-penetration firestop system; or

2. A total cumulative leakage of 50 cfm (0.024 m³/s) for any 100 square feet (9.3 m²) of wall area, or floor area.

SECTION BC [714] 715 FIRE-RESISTANT JOINT SYSTEMS

[714.1] 715.1 General. Joints installed in or between fire-resistance-rated walls, floor or floor/ceiling assemblies and roofs or roof/ceiling assemblies shall be protected by an approved fire-resistant joint system designed to resist the passage of fire for a time period not less than the required fire-resistance rating of the wall, floor or roof in or between which the system is installed. Fire-resistant joint systems shall be tested in accordance with Section [714.3] 715.3. The void created at the intersection of a floor/ceiling assembly and an exterior curtain wall assembly shall be protected in accordance with Section 714.4.

Exception: Fire-resistant joint systems shall not be required for joints in all of the following locations:

1. Floors within a single dwelling unit.

2. Floors where the joint is protected by a shaft enclosure in accordance with Section [708] 713.

3. Floors within atriums where the space adjacent to the atrium is included in the volume of the atrium for smoke control purposes.
4. Floors within malls where a tenant space is separated from the mall. Joints between floors within malls and non-rated assemblies.

5. Floors and ramps within open and enclosed parking garages or structures constructed in accordance with Sections [406.3] 406.5 and [406.4] 406.6, respectively.

7. Walls that are permitted to have unprotected openings.

8. Roofs where openings are permitted.

9. Control joints not exceeding a maximum width of 0.625 inch (15.9 mm) and tested in accordance with ASTM E 119 or UL 263.

715.1.1 Curtain wall assembly. The void created at the intersection of a floor/ceiling assembly and an exterior curtain wall assembly shall be protected in accordance with Section 715.4.

[714.2] 715.2 Installation. A fire-resistant joint system shall be securely installed in accordance with the listing criteria in or on the joint for its entire length so as not to dislodge, loosen or otherwise impair its ability to accommodate expected building movements and to resist the passage of fire and hot gases.

[714.3] 715.3 Fire test criteria. Fire-resistant joint systems shall be tested in accordance with the requirements of either ASTM E 1966 or UL 2079. Nonsymmetrical wall joint systems shall be tested with both faces exposed to the furnace, and the assigned fire-resistance rating shall be the shortest duration obtained from the two tests. Where evidence is furnished to show that the wall was tested with the least fire-resistant side exposed to the furnace, subject to acceptance of the commissioner, the wall need not be subjected to tests from the opposite side.

Exception: For exterior walls with a horizontal fire separation distance greater than 5 feet (1524 mm), the joint system shall be required to be tested for interior fire exposure only.

[714.4] 715.4 Exterior curtain wall/floor intersection. Where fire resistance-rated floor or floor/ceiling assemblies are required, voids created at the intersection of the exterior curtain wall assemblies and such floor assemblies shall be sealed with an approved system to prevent the interior spread of fire. Such systems shall be securely installed and tested in accordance with ASTM E 2307 to prevent the passage of flame, provide an F rating for the time period at least equal to not less than the fire-resistance rating of the floor assembly, and prevent the passage of heat and hot gases sufficient to ignite cotton waste. Height and fire-resistance requirements for curtain wall spandrels shall comply with Section 705.8.5.

Exception: Voids created at the intersection of the exterior curtain wall assemblies and such floor assemblies where the vision glass extends to the finished floor level shall be permitted to be sealed with an approved material to prevent the interior spread of fire. Such material shall be securely installed and capable of preventing the passage of flame and hot gases sufficient to ignite cotton waste where subjected to ASTM E 119 time-temperature fire conditions under a minimum
positive pressure differential of 0.01 inch (0.254 mm) of water column (2.5 Pa) for the time period not less than the fire-resistance rating of the floor assembly.

**715.4.1 Exterior curtain wall/nonfire-resistance-rated floor assembly intersections.** Voids created at the intersection of exterior curtain wall assemblies and nonfire-resistance-rated floor or floor/ceiling assemblies shall be sealed with an approved material or system to retard the interior spread of fire and hot gases between stories.

**715.4.2 Exterior curtain wall/vertical fire barrier intersections.** Voids created at the intersection of nonfire-resistance-rated exterior curtain wall assemblies and fire barriers shall be filled. An approved material or system shall be used to fill the void and shall be securely installed in or on the intersection for its entire length so as not to dislodge, loosen or otherwise impair its ability to accommodate expected building movements and to retard the passage of fire and hot gases.

**[714.5] 715.5 Spandrel wall.** Height and fire-resistance requirements for curtain wall spandrels shall comply with Section 705.8.5. Where Section 705.8.5 does not require a fire-resistance-rated spandrel wall, the requirements of Section [714.4] 715.4 shall still apply to the intersection between the spandrel wall and the floor.

**[714.6] 715.6 Fire-resistant joint systems in smoke barriers.** Fire-resistant joint systems in smoke barriers, and joints at the intersection of a horizontal smoke barrier and an exterior curtain wall, shall be tested in accordance with the requirements of UL 2079 for air leakage. The [air leakage rate] \( L \) rating of the joint system shall not exceed 5 cfm per [lineal] linear foot (0.00775 m\(^3\)/s m) of joint at 0.30 inch (7.47 Pa) of water for both the ambient temperature and elevated temperature tests.

**SECTION BC 716 OPENING PROTECTIVES**

**[715.1] 716.1 General.** Opening protectives required by other sections of this code shall comply with the provisions of this section.

**[715.2] 716.2 Fire-resistance-rated glazing.** Fire-resistance-rated glazing tested as part of a fire-resistance-rated wall or floor/ceiling assembly in accordance with ASTM E 119 or UL 263 and labeled in accordance with Section [703.5] 703.6 shall not otherwise be required to comply with this section where used as part of a wall or floor/ceiling assembly. Fire-resistance-rated glazing shall be permitted in fire [doors] door and fire window assemblies where tested and installed in accordance with their listings and [shall not otherwise be required to comply with] where in compliance with the requirements of this section.

**716.3 Marking fire-rated glazing assemblies.** Fire-rated glazing assemblies shall be marked in accordance with Tables 716.3, 716.5 and 716.6.
TABLE 716.3
MARKING FIRE-RATED GLAZING ASSEMBLIES

</table>

For SI: °C = (°F – 32)/1.8.

716.3.1 Fire-rated glazing identification. For fire-rated glazing, the label shall bear the identification required in Tables 716.3 and 716.5. “D” indicates that the glazing is permitted to be used in fire door assemblies and that the glazing meets the fire protection requirements of NFPA 252. “H” shall indicate that the glazing meets the hose stream requirements of NFPA 252. “T” shall indicate that the glazing meets the temperature requirements of Section 716.5.5.1. The placeholder “XXX” represents the fire-rating period, in minutes.

716.3.2 Fire-protection-rated glazing identification. For fire-protection-rated glazing, the label shall bear the following identification required in Tables 716.3 and 716.6: “OH – XXX.” “OH” indicates that the glazing meets both the fire protection and the hose-stream requirements of NFPA 257 or UL 9 and is permitted to be used in fire window openings. The placeholder “XXX” represents the fire-rating period, in minutes.

716.3.3 Fire-rated glazing that exceeds the code requirements. Fire-rated glazing assemblies marked as complying with hose stream requirements (H) shall be permitted in applications that do not require compliance with hose stream requirements. Fire-rated glazing assemblies marked as complying with temperature rise requirements (T) shall be permitted in applications that do not require compliance with temperature rise requirements. Fire-rated glazing assemblies marked with ratings (XXX) that exceed the ratings required by this code shall be permitted.

[745.3] 716.4 Alternative methods for determining fire protection ratings. The application of any of the alternative methods listed in this section shall be based on the fire exposure and acceptance criteria specified in NFPA 252, NFPA 257 or UL 9. The required fire resistance of an opening protective shall be permitted to be established by any of the following methods or procedures:

1. Designs documented in approved sources.
2. Calculations performed in an approved manner.
3. Engineering analysis based on a comparison of opening protective designs having fire protection ratings as determined by the test procedures set forth in NFPA 252, NFPA 257 or UL 9.
4. Alternative protection methods as allowed by Section 28-113.2 of the Administrative Code.

**[745.4] 716.5 Fire door and shutter assemblies.** Approved fire door and fire shutter assemblies shall be constructed of any material or assembly of component materials that conforms to the test requirements of Section [745.4.1] 716.5.1, [745.4.2] 716.5.2 or [745.4.3] 716.5.3 and the fire protection rating indicated in Table [745.4] 716.5. Fire door frames with transom lights, sidelights or both shall be permitted in accordance with Section [745.4.5] 716.5.6. Fire door assemblies and shutters shall be installed in accordance with the provisions of this section and NFPA 80.

**Exceptions:**

1. Labeled protective assemblies that conform to the requirements of this section or UL 10A, UL 14B and UL 14C for tin-clad fire door assemblies.

2. Floor fire door assemblies in accordance with Section [712.8] 712.1.13.1.

For SI: 1 square inch = 645.2 mm.

a. Two doors, each with a fire protection rating of 1½ hours, installed on opposite sides of the same opening in a fire wall, shall be deemed equivalent in fire protection rating to one 3-hour fire door.

b. Fire-resistance-rated glazing tested to ASTM E 119 in accordance with Section 716.2 shall be permitted, in the maximum size tested.

c. Except where the building is equipped throughout with an automatic sprinkler and the fire-rated glazing meets the criteria established in Section 716.5.5.

d. Under the column heading “Fire-rated glazing marking door vision panel,” W refers to the fire-resistance rating of the glazing, not the frame.

e. See Section 716.5.8.1.2.1.

**[715.4.1] 716.5.1 Side-hinged or pivoted swinging doors.** Fire door assemblies with side-hinged and pivoted swinging doors shall be tested in accordance with NFPA 252 or UL 10C. After 5 minutes into the NFPA 252 test, the neutral pressure level in the furnace shall be established at 40 inches (1016 mm) or less above the sill.

**[715.4.2] 716.5.2 Other types of assemblies.** Fire door assemblies with other types of doors, including swinging elevator doors, horizontal sliding fire door assemblies, and fire shutter assemblies, bottom and side-hinged chute intake doors, and top-hinged chute discharge doors, shall be tested in accordance with NFPA 252 or UL 10B. The pressure in the furnace shall be maintained as nearly equal to the atmospheric pressure as possible. Once established, the pressure shall be maintained during the entire test period.

**[715.4.3] 716.5.3 Door assemblies in corridors and smoke barriers.** Fire door assemblies located in corridor walls or smoke barrier walls having a fire-resistance rating in accordance with Table [715.4] 716.5 shall be tested in accordance with NFPA 252 or UL 10C.

**Exceptions:**

1. Viewports that require a hole not larger than 1 inch ([25] 25.4 mm) in diameter through the door, have [at least an] not less than a 0.25-inch-thick (6.4 mm) thick glass disc
and the holder is of metal that will not melt out where subject to temperatures of 1,700°F (927°C).

2. Corridor door assemblies in occupancies of Group I-2 shall be in accordance with Section 407.3.1.

3. Horizontal sliding doors in smoke barriers that comply with Sections [408.3] 408.6 and 408.8.4 in occupancies in Group I-3.

[715.4.3.1] **Smoke and draft control.** Fire door assemblies shall [also] meet the requirements for a smoke and draft control door assembly tested in accordance with UL 1784. The air leakage rate of the door assembly shall not exceed 3.0 cubic feet per minute per square foot (0.01524 m³/s • m²) of door opening at 0.10 inch (24.9 Pa) of water for both the ambient temperature and elevated temperature tests. Louvers shall be prohibited. Installation of smoke doors shall be in accordance with NFPA 105.

[715.4.3.2] **Glazing in door assemblies.** Glazing material in any other part of the door assembly, including transom lights and sidelights, shall be tested in accordance with NFPA 257 or UL 9, including the hose stream test, in accordance with Section [715.5] 716.6 of this code.

**716.5.4 Reserved.**

[715.4.4] **Doors in interior exit enclosures stairways and ramps and exit passageways.** Fire door assemblies in interior exit enclosures stairways and ramps and exit passageways shall have a maximum transmitted temperature [end point] rise of not more than 450°F (232°C) above ambient at the end of 30 minutes of standard fire test exposure.

**Exception:** The maximum transmitted temperature is not required in buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1 or 903.3.1.2.

[715.4.4.1] **Glazing in doors.** Fire-protection-rated glazing in excess of 100 square inches (0.065 m²) shall be permitted in fire door assemblies when tested as components of the fire assembly and not as glass lights, and shall have a maximum transmitted temperature rise of 450°F (232°C) in accordance with Section 715.4.4] is not permitted. Fire-resistance-rated glazing in excess of 100 square inches (64 516 mm²) shall be permitted in fire doors. Listed fire-resistance-rated glazing in a fire door shall have a maximum transmitted temperature rise in accordance with Section 716.5.5 of this code when the fire door is tested in accordance with NFPA 252, UL 10B or UL 10C.

**Exception:** The maximum transmitted temperature rise is not required in buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1 or 903.3.1.2.

[715.4.5] **Fire door frames with transom lights and sidelights.** Door frames with transom lights, sidelights[1] or both, shall be permitted where a 3/4-hour fire protection rating or less is required in accordance with Table [715.4] 716.5. Where a fire protection rating exceeding
¾ hour is required in accordance with Table 715.4. Fire door frames with transom lights, sidelights, or both, shall be permitted where installed with fire-resistance-rated glazing tested as an assembly in accordance with ASTM E 119 or UL 263 shall be permitted where a fire protection rating exceeding ¾ hour is required in accordance with Table 716.5 of this code.

[715.4.6] 716.5.7 Labeled protective assemblies. Fire door assemblies shall be labeled by an approved agency. The labels shall comply with NFPA 80, and shall be permanently affixed to the door or frame.

[715.4.6.1] 716.5.7.1 Fire door labeling requirements. Fire doors shall be labeled showing the name of the manufacturer or other identification readily traceable back to the manufacturer, the name or trademark of the third-party inspection agency, the fire protection rating and, where required for fire doors in interior exit enclosures stairways and ramps and exit passageways by Section [715.4.4] 716.5.5, the maximum transmitted temperature end point. Smoke and draft control doors complying with UL 1784 shall be labeled as such and shall also comply with Section [715.4.6] 716.5.7. Labels shall be approved and permanently affixed. The label shall be applied at the factory or location where fabrication and assembly are performed.

716.5.7.1.1 Vision light kits, louvers and components. Listed vision light kits and louvers and their required preparations shall be considered as part of the labeled door where such installations are listed and where quality assurance testing is done under the listing program of the third-party testing agency. Fire doors and door assemblies shall be permitted to consist of components, including glazing, vision light kits and hardware that are listed or classified and labeled for such use by different third-party agencies.

[715.4.6.2] 716.5.7.2 Oversized doors. Oversized fire doors shall bear an oversized fire door label by an approved agency or shall be provided with a certificate of inspection furnished by an approved testing agency. [When] Where a certificate of inspection is furnished by an approved testing agency, the certificate shall state that the door conforms to the requirements of design, materials and construction, but has not been subjected to the fire test.

[715.4.6.3] 716.5.7.3 Smoke and draft control door labeling requirements. Smoke and draft control doors complying with UL 1784 shall be labeled in accordance with Section [715.4.6.4] 716.5.7.1 and shall show the letter “S” on the fire rating label of the door. This marking shall indicate that the door and frame assembly are in compliance [when] where listed or labeled gasketing is [also] installed.

[715.4.6.4] 716.5.7.4 Fire door frame labeling requirements. Fire door frames shall be labeled showing the names of the manufacturer and the third-party inspection agency.

716.5.7.5 Fire door operator labeling requirements. Fire door operators for horizontal sliding doors shall be labeled and listed for use with the assembly.

[715.4.7] 716.5.8 Glazing material. [Fire protection-rated] Fire-rated glazing and fire-resistance-rated glazing conforming to the opening protection requirements in Section [715.4] 716.5 shall be permitted in fire door assemblies.
[715.4.7.1 Size limitations. Fire protection-rated glazing used in fire doors shall comply with the size limitations of NFPA 80.]

[Exceptions:]

[1. Fire protection-rated glazing in fire doors located in fire walls shall be prohibited except that where serving in a fire door in a horizontal exit, a self-closing swinging door shall be permitted to have a vision panel of not more than 100 square inches (0.065 m²) without a dimension exceeding 10 inches (254 mm).]

[2. Fire protection-rated glazing shall not be installed in fire doors having a 1 1/2-hour fire protection rating intended for installation in fire barriers, unless the glazing is not more than 100 square inches (0.065 m²) in area.]

716.5.8.1 Size limitations. Fire-resistance-rated glazing shall comply with the size limitations in Section 716.5.8.1.1. Fire-protection-rated glazing shall comply with the size limitations of NFPA 80, and as provided in Section 716.5.8.1.2.

716.5.8.1.1 Fire-rated glazing in door assemblies in fire walls and fire barriers rated greater than 1 hour. Fire-rated glazing tested to ASTM E 119 or UL 263 and NFPA 252, UL 10B or UL 10C shall be permitted in fire door assemblies located in fire walls and in fire barriers in accordance with Table 716.5 of this code to the maximum size tested and in accordance with their listings.

716.5.8.1.2 Fire-protection-rated glazing in door assemblies in fire walls and fire barriers rated greater than 1 hour. Fire-rated glazing shall be prohibited in fire walls and fire barriers except as provided in Sections 716.5.8.1.2.1 and 716.5.8.1.2.2.

716.5.8.1.2.1 Horizontal exits. Fire-protection-rated glazing shall be permitted as vision panels in self-closing swinging fire door assemblies serving as horizontal exits in fire walls where limited to 100 square inches (64.516 mm²) with no dimension exceeding 10 inches (254 mm).

716.5.8.1.2.2 Fire barriers. Fire-rated glazing shall be permitted in fire doors having a 1 1/2-hour fire protection rating intended for installation in fire barriers, where limited to 100 square inches (64.516 mm²).

[715.4.7.2 Exit] 716.5.8.2 Elevator, stairway and [elevator] ramp protective. Approved [fire protection rated] fire-rated glazing used in fire door assemblies in elevator, stairway and [exit] ramp enclosures shall be so located as to furnish clear vision of the passageway or approach to the elevator, [ramp or] stairway or ramp.

[715.4.7.3] 716.5.8.3 Labeling. Fire-rated glazing shall bear a label or other identification showing the name of the manufacturer, the test standard and information required in [Section 715.5.9.1] Table 716.3 that shall be issued by an approved agency and shall be permanently [affixed to] identified on the glazing.
[715.4.7.3.1] Identification. For fire protection rated glazing, the label shall bear the following four-part identification: “D, H or NH, T or NT, XXX.” “D” indicates that the glazing shall “NH” shall indicate that the glazing does not meet the hose stream requirements of the test. “T” shall indicate that the glazing meets the temperature requirements of Section 715.4.4.1. “NT” shall indicate that the glazing does not meet the temperature requirements of Section 715.4.4.1. The placeholder “XXX” shall specify the fire protection rating period, in minutes.]

[715.4.7.4] 716.5.8.4 Safety glazing. [Fire protection rated] Fire-rated glazing installed in fire [doors in areas subject to human impact in hazardous locations] door assemblies shall comply with the safety glazing requirements of Chapter 24 where applicable.

[715.4.8] 716.5.9 Door closing. Fire doors shall be latching and self-closing or automatic-closing in accordance with this section.

 Exceptions:

1. Fire doors located in common walls separating sleeping units in Group R-1 shall be permitted without [automatic-] or self-closing or automatic-closing devices.

2. The elevator car doors and the associated hoistway enclosure doors at the floor level designated for recall in accordance with Section 3003.2 shall be permitted to remain open during Phase I emergency recall operation.

[715.4.8.4] 716.5.9.1 Latch required. Unless otherwise specifically permitted, single fire doors and both leaves of pairs of side-hinged swinging fire doors shall be provided with an active latch bolt that will secure the door when it is closed.

716.5.9.1.1 Chute intake door latching. Chute intake doors shall be positive latching, remaining latched and closed in the event of latch spring failure during a fire emergency.

[715.4.8.2] 716.5.9.2 Automatic-closing fire door assemblies. Automatic-closing fire door assemblies shall be self-closing in accordance with NFPA 80.

[715.4.8.3] 716.5.9.3 Smoke-activated doors. Automatic-closing fire doors installed in the following locations shall be automatic-closing by the actuation of smoke detectors installed in accordance with Section 907.3 or by loss of power to the smoke detector where such detector is powered by the building’s normal electrical service or by loss of power to the hold-open device. Doors that are automatic-closing by smoke detection shall not have more than a 10-second delay before the door starts to close after the smoke detector is actuated.

1. Doors installed across a corridor.

2. Doors installed in the enclosures of exit access stairways and ramps in accordance with Sections 1019 and 1023, respectively.

3. [2:] Doors that protect openings in exits or corridors required to be of fire-resistance-rated construction.
[4.] Doors that protect openings in walls that are capable of resisting the passage of smoke in accordance with Section 509.4.

[5.] Doors installed in smoke barriers in accordance with Section [710.5] 709.5.

[6.] Doors installed in fire partitions in accordance with Section [709.6] 708.6.

[7.] Doors installed in a fire wall in accordance with Section 706.8.

[8.] Doors installed in shaft enclosures in accordance with Section [708.7] 713.7.

[9.] Doors installed in refuse waste and laundry linen chutes, discharge openings and access and termination discharge rooms in accordance with Section [708.13] 713.13. Loading doors installed in waste and linen chutes shall meet the requirements of Sections 716.5.9 and 716.5.9.1.1.

[10.] Doors in the walls for compartmentation of underground buildings in accordance with Section 405.4.2.

[11.] Doors installed in the elevator lobby walls of underground buildings in accordance with Section 405.4.3.

[12.] Doors installed in smoke partitions in accordance with Section [710.5] 710.5.2.3.

[13.] Doors serving vertical interior exit enclosures stairways or ramps in accordance with the exception to Section [708.7] 713.7.

[715.4.8.4] 716.5.9.4 Doors in pedestrian ways. Vertical sliding or vertical rolling steel fire doors in openings through which pedestrian’s travel shall be heat activated or activated by smoke detectors with alarm verification.

[715.4.9] 716.5.10 Swinging fire shutters. Where fire shutters of the swinging type are installed in exterior openings, not less than one row in every three vertical rows shall be arranged to be readily opened from the outside, and shall be identified by distinguishing marks or letters not less than 6 inches (152 mm) high.

[715.4.10] 716.5.11 Rolling fire shutters. Where fire shutters of the rolling type are installed, such shutters shall include approved automatic-closing devices.

[715.5] 716.6 [Fire-protection rated] Fire-protection-rated glazing. Glazing in fire window assemblies shall be fire protection rated in accordance with this section and Table [715.5] 716.6. Glazing in fire door assemblies shall comply with Section [715.4.7] 716.5.8. Fire-protection-rated glazing in fire window assemblies shall be tested in accordance with and shall meet the acceptance criteria of NFPA 257 or UL 9. Fire-protection-rated glazing shall also comply with NFPA 80. Openings in nonfire-resistance-rated exterior wall assemblies that require protection in accordance with Section 705.3, 705.8, 705.8.5 or 705.8.6 shall have a fire protection rating of not less than ¾ hour.
[Exception: Wired glass in accordance with Section 715.5.4.]

[715.5.1] **716.6.1 Testing under positive pressure.** NFPA 257 or UL 9 shall evaluate fire-protection-rated glazing under positive pressure. Within the first 10 minutes of a test, the pressure in the furnace shall be adjusted so [at least] not less than two-thirds of the test specimen is above...
the neutral pressure plane, and the neutral pressure plane shall be maintained at that height for the balance of the test.

[715.5.2] 716.2 Nonsymmetrical glazing systems. Nonsymmetrical fire-protection-rated glazing systems in fire partitions, fire barriers or in exterior walls with a fire separation distance of 5 feet (1524 mm) or less pursuant to Section [704] 705 shall be tested with both faces exposed to the furnace, and the assigned fire protection rating shall be the shortest duration obtained from the two tests conducted in compliance with NFPA 257 or UL 9.

[715.5.3] 716.6.3 Safety glazing. Fire-protection-rated glazing and fire-resistance-rated glazing installed in fire window assemblies [in areas subject to human impact in hazardous locations] shall comply with the safety glazing requirements of Chapter 24 where applicable.

[715.5.4] Wired-glaze. Steel window frame assemblies of 0.125-inch (3.2 mm) minimum solid section or of not less than nominal 0.048-inch-thick (1.2 mm) formed sheet steel members fabricated by pressing, mitering, riveting, interlocking or welding and having provision for glazing with 3/4-inch (6.4 mm) wired glass where securely installed in the building construction and glazed with 3/4-inch (6.4 mm) labeled wired glass shall be deemed to meet the requirements for a 3/4-hour fire window assembly. Wired glass panels shall conform to the size limitations set forth in Table 715.5.4.

</tbody>
</table>

For SI: 1 inch = 25.4 mm, 1 square inch = 645.2 mm^2.

[715.5.5] Nonwired-glass. 716.4 Glass and glazing. Glazing [other than wired glass] in fire window assemblies shall be fire-protection-rated glazing installed in accordance with and complying with the size limitations set forth in NFPA 80.

[715.5.6] 716.6.5 Installation. Fire-protection-rated glazing shall be in the fixed position or be automatic-closing and shall be installed in approved frames.

[715.5.7] 716.6.6 Window mullions. Metal mullions that exceed a nominal height of 12 feet (3658 mm) shall be protected with materials to afford the same fire-resistance rating as required for the wall construction in which the protective is located.
**[715.5.8] 716.6.7 Interior fire window assemblies.** Fire-protection-rated glazing used in fire window assemblies located in fire partitions and fire barriers shall be limited to use in assemblies with a maximum fire-resistance rating of 1 hour in accordance with this section.

**[715.5.8.1] 716.6.7.1 Where 3/4-hour fire protection window assemblies permitted.** Fire-protection-rated glazing requiring 45-minute opening protection in accordance with Table [715.5] 716.6 shall be limited to fire partitions designed in accordance with Section [709] 708 and fire barriers utilized in the applications set forth in Sections 707.3.6, 707.3.7 and [707.3.8] 707.3.9 where the fire-resistance rating does not exceed 1 hour. Fire-resistance-rated glazing assemblies tested in accordance with ASTM E 119 or UL 263 shall not be subject to the limitations of this section.

**[715.5.8.2] 716.6.7.2 Size Area limitations.** The total area of [windows] the glazing in fire-protection-rated window assemblies shall not exceed 25 percent of the area of a common wall with any room.

**[715.5.9] 716.6.8 Labeling requirements.** Fire-protection-rated glazing shall bear a label or other identification showing the name of the manufacturer, the test standard[-] and information required in Section [715.5.9.1] 716.3.2 and Table 716.6 that shall be issued by an approved agency and [shall be] permanently [affixed to the glazing] identified on the glazing.

**[715.5.9.1 Identification.** For fire protection rated glazing, the label shall bear the following two part identification: “OH—XXX.” “OH” indicates that the glazing meets both the fire protection and the hose stream requirements of NFPA 257 or UL 9 and is permitted to be used in openings. “XXX” represents the fire protection rating period, in minutes, that was tested.)

**SECTION [716] 717 DUCTS AND AIR TRANSFER OPENINGS**

**[716.1] 717.1 General.** The provisions of this section shall govern the protection of duct penetrations and air transfer openings in assemblies required to be protected and duct penetrations in nonfire-resistance-rated floor assemblies.

**717.1.1 Ducts and air transfer openings.** Ducts transitioning horizontally between shafts shall not require a shaft enclosure provided that the duct penetration into each associated shaft is protected with dampers complying with this section.

**[716.1.1] 717.1.2 Ducts that penetrate fire-resistance-rated assemblies without dampers.** Ducts that penetrate fire-resistance-rated assemblies and are not required by this section to have dampers shall comply with the requirements of Sections [713.2] 714.2 through [713.3] 714.3. Ducts that penetrate horizontal assemblies not required to be contained within a shaft and not required by this section to have dampers shall comply with the requirements of [Section 713.4] Sections 714.4 through [714.2.2] 714.5.2.

**[716.1.1.1] 717.1.2.1 Ducts that penetrate nonfire-resistance-rated assemblies.** The space around a duct penetrating a nonfire-resistance-rated floor assembly shall comply with Section [716.6.3] 717.6.3.
[716.2] **717.2 Installation.** Fire dampers, smoke dampers, combination fire/smoke dampers and ceiling radiation dampers located within air distribution and smoke control systems shall be installed in accordance with the requirements of this section, the *New York City Mechanical Code*, the manufacturer’s installation instructions and damper’s listing.

[716.2.1] **717.2.1 Smoke control system.** Where the installation of a fire damper will interfere with the operation of a required smoke control system in accordance with Section 909, approved alternative protection shall be utilized. Where mechanical systems including ducts and dampers utilized for normal building ventilation serve as part of the smoke control system, the expected performance of these systems in smoke control mode shall be addressed in the rational analysis required by Section 909.4.

[716.2.1.1] **717.2.1.1 Remote control.** Provisions for operation by remote control of combination fire/smoke dampers shall be in accordance with Section 607.2.1.1 of the *New York City Mechanical Code*.

[716.2.2] **717.2.2 Hazardous exhaust ducts.** Fire dampers for hazardous exhaust duct systems shall comply with the *New York City Mechanical Code*.

[716.2.3] **717.2.3 Supply air systems.** Smoke dampers in supply air handling systems having a capacity equal to or greater than 15,000 cfm (7.1 m³/s) shall be installed in accordance with Section 607.2.3 of the *New York City Mechanical Code*.

[716.3] **717.3 Damper testing, ratings and actuation.** Damper testing, ratings and actuation shall be in accordance with Sections [716.3.1] through [716.3.3].

[716.3.1] **717.3.1 Damper testing.** Dampers shall be listed and labeled in accordance with the standards in this section.

1. Fire dampers shall comply with the requirements of UL 555. Only fire dampers and ceiling radiation dampers labeled for use in dynamic systems shall be installed in heating, ventilation and air-conditioning systems designed to operate with fans on during a fire. Smoke dampers shall comply with the requirements of UL 555S. Combination fire/smoke dampers shall comply with the requirements of both UL 555 and UL 555S. Ceiling radiation dampers shall comply with the requirements of UL 555C.

2. Smoke dampers shall comply with the requirements of UL 555S.

3. Combination fire/smoke dampers shall comply with the requirements of both UL 555 and UL 555S.

4. Ceiling radiation dampers shall comply with the requirements of UL 555C or shall be tested as part of a fire-resistance-rated floor/ceiling or roof/ceiling assembly in accordance with ASTM E119 or UL 263.

[716.3.2] **717.3.2 Damper rating.** Damper ratings shall be in accordance with Sections [716.3.2.1] through [716.3.2.3].
[716.3.2.4] **717.3.2.1 Fire damper ratings.** Fire dampers shall have the minimum fire protection rating specified in Table [716.3.2.4] 717.3.2.1 for the type of penetration.

<table>

[716.3.2.2] **717.3.2.2 Smoke damper ratings.** Smoke damper leakage ratings shall [not] be [less than] Class I or II. Elevated temperature ratings shall be not [be] less than 250°F (121°C).

[716.3.2.3] **717.3.2.3 Combination fire/smoke damper ratings.** Combination fire/smoke dampers shall have the minimum fire protection rating specified for fire dampers in Table [716.3.2.4] 717.3.2.1 for the type of penetration and shall [also] have a minimum [Class II] leakage rating and a minimum elevated temperature rating of 250°F (121°C) smoke damper rating as specified in Section 717.3.2.2.

[716.3.3] **717.3.3 Damper actuation.** Damper actuation shall be in accordance with Sections [716.3.3.1] 717.3.3.1 through [716.3.3.4] 717.3.3.4 as applicable.

[716.3.3.1] **717.3.3.1 Fire damper actuation device.** The fire damper actuation device shall meet one of the following requirements:

1. The operating temperature shall be approximately 50°F (10°C) above the normal temperature within the duct system, but not less than 160°F (71.1°C).

2. The operating temperature shall be not more than [286°F (141°C)] 350°F (176.7°C) where located in a smoke control system complying with Section 909.

[716.3.3.2] **717.3.3.2 Smoke damper actuation.** The smoke damper shall close upon actuation of a listed smoke detector or detectors installed in accordance with Section 907.3 and one of the following methods, as applicable:

1. Where a smoke damper is installed within a duct, a smoke detector shall be installed [in] inside the duct or outside the duct with sampling tubes protruding into the duct. The detector or tubes within the duct shall be within 5 feet (1524 mm) of the damper [with no air]. Air outlets [or] and inlets shall not be located between the detector or tubes and the damper. The detector shall be listed for the air velocity, temperature and humidity anticipated at the point where it is installed. Other than in mechanical smoke control systems, dampers shall be closed upon fan shutdown where local smoke detectors require a minimum velocity to operate.

**Exceptions:**
1. Duct smoke detectors will not be required at each fire smoke damper provided the supply fan shall shut down and all the fire smoke dampers associated with the supply system automatically close upon actuation of any automatic alarm initiating device on the floor(s).

2. Duct smoke detectors will be required within 5 feet (1.5 m) downstream of any electric duct reheat coil.

3. Non-ducted return air systems shall have a smoke detector located within 5 feet (1.5 m) upstream of each return air protected opening in a 2-hour fire-rated barrier.

4. Ducted return air systems shall have a duct smoke detector located within 5 feet (1.5 m) of a smoke damper; additional smoke detectors will not be required at fire smoke dampers located downstream where there are no additional return air inlets.

2. Where a smoke damper is installed above smoke barrier doors in a smoke barrier, a spot-type detector [listed for releasing service] shall be installed on either side of the smoke barrier door opening. The detector shall be listed for releasing service if used for direct interface with the damper.

3. Where a smoke damper is installed within an unducted opening in a wall, a spot-type detector [listed for releasing service] shall be installed within 5 feet (1524 mm) horizontally of the damper. The detector shall be listed for releasing service if used for direct interface with the damper.

4. Where a smoke damper is installed in a corridor wall or ceiling, the damper shall be permitted to be controlled by a smoke detection system installed in the corridor.

5. Where a [total coverage] smoke detection system is [provided within] installed in all areas served by [a heating, ventilation and air conditioning (HVAC) system, duct in which the damper will be located, the smoke dampers shall be permitted to be controlled by the smoke detection system.

6. Smoke dampers that are part of an engineered smoke control system shall be controlled in accordance with Section 607.3.3.2 of the New York City Mechanical Code.

**[716.3.3.3] 717.3.3.3 Combination fire/smoke damper actuation.** Combination fire/smoke damper actuation shall be in accordance with Sections [716.3.3.1] 717.3.3.1 and [716.3.3.2] 717.3.3.2. Combination fire/smoke dampers installed in smoke control system shaft penetrations shall not be activated by local area smoke detection unless it is secondary to the smoke management system controls.

**[716.3.3.4] 717.3.3.4 Ceiling radiation damper actuation.** The operating temperature of a ceiling radiation damper actuation device shall be 50°F (27.8°C) (10°C) above the normal temperature within the duct system, but not less than 160°F (71°C).
**[716.4] 717.4 Access and identification.** Fire and smoke dampers shall be provided with an approved means of access—that is large enough to permit inspection and maintenance of the damper and its operating parts. The access shall not affect the integrity of fire-resistance-rated assemblies. The access openings shall not reduce the fire-resistance rating of the assembly. Access points shall be permanently identified on the exterior by a label having letters not less than \( \frac{1}{2} \) inch (12.7 mm) in height reading: FIRE/SMOKE DAMPER, SMOKE DAMPER or FIRE DAMPER followed by an identification marking that is individual and unique to the damper accessed.

**[716.5] 717.5 Where required.** Fire dampers, smoke dampers, combination fire/smoke dampers, and ceiling radiation dampers shall be provided as specified in Sections 717.5.1 through 717.5.7 and 717.6. Where an assembly is required to have both fire dampers and smoke dampers, combination fire/smoke dampers or a fire damper and a smoke damper shall be provided.

**Exception:** Ducts 20 square inches \((129 \text{ cm}^2) (12 903.2 \text{ mm}^2)\) or less passing through fire-resistance-rated assemblies shall not require fire dampers or fire smoke dampers.

**[716.4] 717.5.1 Fire walls.** Ducts and air transfer openings permitted in fire walls in accordance with Section 706.11 shall be protected with listed fire dampers and smoke dampers installed in accordance with their listing.

**Exception:** Smoke dampers shall not be required in ducts where the air continues to move and the air-handling system installed is arranged to prevent recirculation of exhaust or return air under fire emergency conditions. The air-handling system shall be continuously monitored to ensure continuous airflow at a constantly attended location and be inspected and maintained in accordance with the system manufacturer’s instructions.

**[716.5.1.1] 717.5.1.1 Horizontal exits.** A listed smoke damper designed to resist the passage of smoke shall be provided at each point that a duct or air transfer opening penetrates a fire wall that serves as a horizontal exit.

**[Exception:** Smoke dampers shall not be required in ducts where the air continues to move and the air-handling system installed is arranged to prevent recirculation of exhaust or return air under fire emergency conditions.]

**[716.5.2] 717.5.2 Fire barriers.** Ducts and air transfer openings that penetrate fire barriers (horizontal and wall assemblies) shall be protected with listed fire dampers installed in accordance with their listing. Ducts and air transfer openings shall not penetrate [exit] enclosures for interior exit stairways and ramps and exit passageways, except as permitted by Sections 1022.4 and 1023.6, 1023.5 and 1024.6, respectively. In addition, smoke dampers shall be installed in penetrations of public corridor and horizontal exit walls in accordance with Sections [716.5.2.1] 717.5.2.1 and [716.5.2.2] 717.5.2.2.

**Exception:** Fire dampers are not required at penetrations of fire barriers where any of the following apply:

1. Penetrations are tested in accordance with ASTM E 119 or UL 263 as part of the fire-resistance-rated assembly.
2. Ducts are used as part of an engineered smoke control system in accordance with [Section] Sections [716.2.1] 717.2.1 and [Section] 909 of this code where the use of a fire damper would interfere with the operation of a smoke control system.

3. Such walls are penetrated by ducted HVAC systems, have a required fire-resistance rating of 1 hour or less, are in areas of other than Group H and are in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 or Section 903.3.1.2 of this code. For the purposes of this exception, a ducted HVAC system shall be a duct system for conveying supply, return or exhaust air as part of the structure’s HVAC system. Such a duct system shall be constructed of sheet steel not less than No. 26 gage thickness and shall be continuous from the air-handling appliance or equipment to the air outlet and inlet terminals.

[716.5.2.1] 717.5.2.1 Horizontal exits. A listed smoke damper designed to resist the passage of smoke shall be provided at each point a duct or air transfer opening penetrates a fire barrier that serves as a horizontal exit.

[Exception: Smoke dampers shall not be required in ducts where the air continues to move and the air handling system installed is arranged to prevent recirculation of exhaust or return air under fire emergency conditions.]

[716.5.2.2] 717.5.2.2 Public corridors. A listed smoke damper designed to resist the passage of smoke shall be provided at each point a duct or air transfer opening penetrates a public corridor wall or floor constructed as a fire barrier.

Exceptions:

1. Smoke dampers are not required where the building is equipped throughout with an engineered smoke control system in accordance with Section 909, and smoke dampers are not necessary for the operation and control of the system.

2. Smoke dampers are not required in corridor penetrations where the duct is constructed of steel not less than 0.019-inch (0.48 mm) in thickness and there are no openings serving the corridor.

3. Smoke dampers are not required in corridor penetrations in Group R-2 buildings and Public Corridors serving R-2 spaces in mixed use buildings.

4. Smoke dampers shall not be required in ducts where the air continues to move and the air-handling system installed is arranged to prevent recirculation of exhaust or return air under fire emergency conditions. The air-handling system shall be continuously monitored to ensure continuous airflow at a constantly attended location and be inspected and maintained in accordance with the system manufacturer’s instructions.

[716.5.3] 717.5.3 Shaft enclosures. Ducts and air transfer openings shall not penetrate a shaft serving as an exit enclosure except as permitted by Section [1022.4] 1023.5. Shaft enclosures
that are permitted to be penetrated by ducts and air transfer openings shall be protected with approved fire and smoke dampers installed in accordance with their listing.

Exceptions:

1. Fire dampers are not required at penetrations of shafts where any of the following criteria are met:
   1.1. [Steel] In buildings equipped throughout with an automatic sprinkler system in accordance with Chapter 9, steel exhaust subducts (are extended at least) having minimum thickness of 0.0187 inch (0.4712 mm) (No. 26 gage) extend not less than 22 inches ([559] 558.8 mm) vertically in exhaust shafts provided that there is a continuous airflow upward to the [outside] outdoors whenever the building is occupied.
   1.2. Penetrations are tested in accordance with ASTM E 119 or UL 263 as part of the fire-resistance-rated assembly[1].
   1.3. Ducts are used as part of an approved smoke control system designed and installed in accordance with Section 909[1] and where the fire damper will interfere with the operation of the smoke control system[± or §].
   1.4. The penetrations are in parking garage exhaust or supply shafts that are separated from other building shafts by not less than 2-hour fire-resistance-rated construction.

2. [In Group B and R occupancies equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1, smoke dampers are not required at penetrations of shafts where kitchen, bathroom and toilet room exhaust openings with steel exhaust subducts, having a minimum thickness of 0.0187 inch (0.4712 mm) (No. 36 gage), extend at least 22 inches (559 mm) vertically and where the exhaust fan at the upper terminus is powered continuously and maintains airflow upward to the outdoors.] Smoke dampers are not required in exhaust ducts or shafts where the exhaust fan is maintained in operation whenever the building is occupied, in bathrooms and toilet room exhausts.

3. Smoke dampers are not required at penetrations of exhaust or supply shafts in parking garages that are separated from other building shafts by not less than 2-hour fire-resistance-rated construction.

4. Smoke dampers are not required at penetrations of shafts where ducts are used as part of an engineered mechanical smoke control system designed in accordance with Section 909 and where the smoke damper will interfere with the operation of the smoke control system.

5. Fire dampers and/or smoke dampers are not required at a shaft where the shaft is acting as an extension of the mechanical equipment room that it serves and the shaft and mechanical equipment room maintain fire and smoke separation required by the
greater of the two spaces from the occupied portions of the building and meet the 

6. Smoke dampers are not required to be located within a prescribed distance of a fire-
rated enclosure within which the air handling equipment is located and where 
isolation smoke dampers are used in air-handling equipment in accordance with 
Section 607.2.3 of the New York City Mechanical Code.

7. Smoke dampers are not required in ducts where the air continues to move and the air-
handling system installed is arranged to prevent recirculation of exhaust or return air 
during a fire emergency condition. Such fans shall be provided with standby power 
in accordance with Chapter 27.

[8. Smoke dampers are not required in exhaust ducts or shafts where the exhaust fan is 
maintained in operation during occupancy, such as in bathroom and toilet room 
exhausts.]

[716.5.3.1] 717.5.3.1 Limitations. Shafts that constitute air ducts shall be limited in 
accordance with Section 607.5.5.2 of the New York City Mechanical Code.

[716.5.4] 717.5.4 Fire partitions. Ducts and air transfer openings that penetrate fire partitions 
shall be protected with listed fire dampers installed in accordance with their listing.

Exceptions: In occupancies other than Group H, fire dampers are not required where any of 
the following apply:

1. The fire partitions are for tenant separation or interior corridor walls in buildings 
equipped throughout with an automatic sprinkler system in accordance with Section 
903.3.1.1 or 903.3.1.2 and the duct is protected as a through penetration in accordance with Section [714] 714.

2. The fire partitions are for tenant partitions in covered mall buildings where the walls 
are not required by provisions elsewhere in the code to extend to the underside of the 
floor or roof sheathing, slab or deck above.

3. The duct system is constructed of approved materials in accordance with the New York 
City Mechanical Code and the duct penetrating the wall complies with all of the 
following requirements:

  3.1. The duct shall not exceed 100 square inches [(0.06 m²)] (64 516 mm²).

  3.2. The duct shall be constructed of steel [a minimum of] not less than 0.0217 inch 
(0.55 mm) in thickness.

  3.3. The duct shall not have openings that communicate the corridor with adjacent 
spaces or rooms.

  3.4. The duct shall be installed above a ceiling.
3.5. The duct shall not terminate at a wall register in the fire-resistance-rated wall.

3.6. A minimum 12-inch-long ([305] 304.8 mm) by 0.060-inch ([1.52 mm] thick steel sleeve shall be centered in each duct opening. The sleeve shall be secured to both sides of the wall and all four sides of the sleeve with minimum 1\(\frac{1}{2}\)-inch by 1\(\frac{1}{2}\)-inch by 0.060-inch ([38] 38.1 mm by [38] 38.1 mm by 1.52 mm) steel retaining angles. The retaining angles shall be secured to the sleeve and the wall with No. 10 (M5) screws. The annular space between the steel sleeve and the wall opening shall be filled with mineral wool batting or approved equivalent on all sides.

4. Such walls are penetrated by ducted HVAC systems, have a required fire-resistance rating of 1 hour or less, and are in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 or 903.3.1.2. For the purposes of this exception, a ducted HVAC system shall be a duct system for conveying supply, return or exhaust air as part of the structure’s HVAC system. Such a duct system shall be constructed of sheet steel not less than No. 26 gage thickness and shall be continuous from the air-handling appliance or equipment to the air outlet and inlet terminals.

[716.5.5] 717.5.5 Smoke barriers. A listed smoke damper designed to resist the passage of smoke shall be provided at each point a duct or air transfer opening penetrates a smoke barrier. Smoke dampers and smoke damper actuation methods shall comply with Section [716.3.3.2] 717.3.3.2.

Exceptions:

1. Smoke dampers are not required where the openings in ducts are limited to a single smoke compartment and the ducts are constructed of steel.

2. Smoke dampers are not required in ducts where the air continues to move and the air-handling system installed is arranged to prevent recirculation of exhaust or return air under fire emergency conditions.

3. Smoke dampers are not required in smoke barriers required by Section 407.5 for Group I-2, Condition 2 where the HVAC system is fully ducted in accordance with Section 603 of the New York City Mechanical Code and where buildings are equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 and equipped with quick-response sprinklers in accordance with Section 903.3.2.

[716.5.6] 717.5.6 Exterior walls. Ducts and air transfer openings in fire-resistance-rated exterior walls required to have protected openings in accordance with Section 705.10 shall be protected with listed fire dampers installed in accordance with their listing.

[716.5.7] 717.5.7 Smoke partitions. A listed smoke damper designed to resist the passage of smoke shall be provided at each point that an air transfer opening penetrates a smoke partition. Smoke dampers and smoke damper actuation methods shall comply with Section [716.3.3.2] 717.3.3.2.
**Exceptions:**

1. Exception:

Where the installation of a smoke damper will interfere with the operation of a required smoke control system in accordance with Section 909, approved alternative protection shall be utilized.

2. Smoke dampers shall not be required in ducts where the air continues to move and the air-handling system installed is arranged to prevent recirculation of exhaust or return air under fire emergency conditions.

### [716.6] 717.6 Horizontal assemblies

Penetrations by ducts and air transfer openings of a floor, floor/ceiling assembly or the ceiling membrane of a roof/ceiling assembly shall be protected by a shaft enclosure that complies with Section [708] 713 or shall comply with Sections [716.6.1] 717.6.1 through [716.6.3] 717.6.3.

### [716.6.1 Through penetrations] 717.6.1 Through penetrations

In occupancies other than Groups I-2 and I-3, a duct and air transfer opening system constructed of approved materials in accordance with the New York City Mechanical Code that penetrates a fire-resistance-rated floor/ceiling assembly that connects not more than two stories is permitted without shaft enclosure protection, provided a listed fire damper is installed at the floor line and the penetration is fireblocked in accordance with Section [717.2.5] 717.2.5 or the duct is protected in accordance with Section [713.4] 714.4. For air transfer openings, see [Exception 7 to] Section [708.2] 712.1.9.

**Exception:** A duct serving a dwelling unit is permitted to penetrate three floors or less without a fire damper at each floor, provided such duct meets all of the following requirements:

1. The duct shall be contained and located within the cavity of a wall and shall be constructed of steel having a minimum wall thickness of 0.187 inches (0.4712 mm) or 0.0187 inches (0.4749 mm) (No. 26 gage).

2. The duct shall open into only one dwelling or sleeping unit and the duct system shall be continuous from the unit to the exterior of the building.

3. The duct shall not exceed 5-inch (127 mm) nominal diameter and the total area of such ducts shall not exceed 100 square inches (0.065 m²) in any 100 square feet (9.3 m²) of floor area.

4. The annular space around the duct is protected with materials that prevent the passage of flame and hot gases sufficient to ignite cotton waste where subjected to ASTM E 119 or UL 263 time-temperature conditions under a minimum positive pressure differential of 0.01 inch (2.49 Pa) of water at the location of the penetration for the time period equivalent to the fire-resistance rating of the construction penetrated.

5. Grille openings located in a ceiling of a fire-resistance-rated floor/ceiling or roof/ceiling assembly shall be protected with a listed ceiling radiation damper installed in accordance with Section [716.6.2] 717.6.2.1 of this code.
Membrane penetrations. Ducts and air transfer openings constructed of approved materials in accordance with the New York City Mechanical Code that penetrate the ceiling membrane of a fire-resistance-rated floor/ceiling assembly or roof/ceiling assembly shall be protected with one of the following:

1. A shaft enclosure in accordance with Section [708] 713.
2. A listed ceiling radiation damper and firestopping is installed at the ceiling line where a duct penetrates the ceiling of a fire-resistance-rated floor/ceiling assembly or roof/ceiling assembly.
3. A listed ceiling radiation damper and firestopping is installed at the ceiling line where a diffuser with no duct attached penetrates the ceiling of a fire-resistance-rated floor/ceiling assembly or roof/ceiling assembly.

Ceiling radiation dampers. Ceiling radiation dampers shall be tested [as part of a fire resistance rated floor/ceiling or roof/ceiling assembly] in accordance with [ASTM E 119 or UL 263] Section 717.3.1. Ceiling radiation dampers shall be installed in accordance with the details listed in [a] the fire-resistance-rated assembly and the manufacturer’s [installation] instructions and the listing. Ceiling radiation dampers are not required where [either] one of the following applies:

1. Tests in accordance with ASTM E 119 or UL 263 have shown that ceiling radiation dampers are not necessary in order to maintain the fire-resistance rating of the assembly.
2. Where exhaust duct penetrations are protected in accordance with Section [713.4.1.2] 714.2 of this code, are located within the cavity of a wall and do not pass through another dwelling unit or tenant space.
3. Where duct and air transfer openings are protected with a duct outlet protection system tested as part of a fire-resistance-rated assembly in accordance with ASTM E 119 or UL 263.

Nonfire-resistance-rated floor assemblies. Duct systems constructed of approved materials in accordance with the New York City Mechanical Code that penetrate nonfire-resistance-rated floor assemblies shall be protected by any of the following methods:

1. A shaft enclosure in accordance with Section [708] 713.
2. The duct connects not more than two stories, and the annular space around the penetrating duct is protected with [an approved] a listed noncombustible material that resists the free passage of flame and the products of combustion.
3. In floor assemblies composed of noncombustible materials, a shaft shall not be required where the duct connects not more than three stories [and], the annular space around the penetrating duct is protected with an approved noncombustible material that resists the free passage of flame and the products of combustion[.] and a fire damper is installed at each floor line.
Exception: Fire dampers are not required in ducts within individual residential dwelling units.

[716.7] 717.7 Flexible ducts and air connectors. Flexible ducts and air connectors shall not pass through any fire-resistance-rated assembly. Flexible air connectors shall not pass through any wall, floor or ceiling.

SECTION BC [747] 718
CONCEALED SPACES

[747.1] 718.1 General. Fireblocking and draftstopping shall be installed in combustible and noncombustible concealed locations in accordance with this section. Fireblocking shall comply with Section [747.2] 718.2. Draftstopping in floor/ceiling spaces and attic spaces shall comply with Sections [747.3] 718.3 and [747.4] 718.4, respectively. The permitted use of combustible materials in concealed spaces of buildings of Type I or II construction shall be limited to the applications indicated in Section [747.5] 718.5. Installations of fireblocking and draftstopping shall comply with the special inspection requirements of Chapter 17.

Exception: Concealed spaces that are sprinklered in accordance with Chapter 9 or are constructed as a shaft.

[747.2] 718.2 Fireblocking. In combustible and noncombustible construction, fireblocking shall be installed to cut off concealed draft openings (both vertical and horizontal) and shall form an effective barrier between floors, between a top story and a roof or attic space. Fireblocking shall be installed in the locations specified in Sections [747.2.2] 718.2.2 through [747.2.7] 718.2.7.

[747.2.1] 718.2.1 Fireblocking materials. Fireblocking shall consist of the following materials:

1. Two-inch ([54] 50.8 mm) nominal lumber.
2. Two thicknesses of 1-inch ([25] 25.4 mm) nominal lumber with broken lap joints.
3. One thickness of 0.719-inch (18.3 mm) wood structural panels with joints backed by 0.719-inch (18.3 mm) wood structural panels.
4. One thickness of 0.75-inch ([19 mm]) (19.1 mm) particleboard with joints backed by 0.75-inch ([19 mm]) (19.1 mm) particleboard.
5. One-half-inch (12.7 mm) gypsum board.
6. One-fourth-inch (6.4 mm) cement[-based] millboard.
7. Batt or blankets of mineral wool[,] and mineral fiber [or other approved materials] installed in such a manner as to be securely retained in place.
8. Other materials approved by the commissioner.

[747.2.1.1] 718.2.1.1 Batt or blankets of mineral wool or mineral fiber. Batt or blankets of mineral or glass fiber or other [approved] listed nonrigid materials shall be permitted for
compliance with the 10-foot (3048 mm) horizontal fireblocking in walls constructed using parallel rows of studs or staggered studs.

[717.2.4.2] 718.2.1.2 Unfaced fiberglass. Unfaced fiberglass batt insulation used as fireblocking shall fill the entire cross section of the wall cavity to a minimum height of 16 inches ([406] 406.4 mm) measured vertically. [Where] Where piping, conduit or similar obstructions are encountered, the insulation shall be packed tightly around the obstruction.

[717.2.4.3] 718.2.1.3 Loose-fill insulation material. Loose-fill insulation material, insulating foam sealants and caulk materials shall not be used as a [fire block] fireblock unless specifically tested in the form and manner intended for use to demonstrate its ability to remain in place and to retard the spread of fire and hot gases.

[717.2.4.4] 718.2.1.4 Fireblocking integrity. The integrity of [fire blocks] fireblocks shall be maintained.

[717.2.4.5] 718.2.1.5 Double stud walls. Batts or blankets of mineral or glass fiber or other approved nonrigid materials shall be allowed as fireblocking in walls constructed using parallel rows of studs or staggered studs.

[717.2.2] 718.2.2 Concealed wall spaces. Fireblocking shall be provided in concealed spaces of stud walls and partitions, including furred spaces, and parallel rows of studs or staggered studs, as follows:

1. Vertically at the ceiling and floor levels.

2. Horizontally at intervals not exceeding 10 feet (3048 mm).

[717.2.3] 718.2.3 Connections between horizontal and vertical spaces. Fireblocking shall be provided at interconnections between concealed vertical stud wall or partition spaces and concealed horizontal spaces created by an assembly of floor joists or trusses, and between concealed vertical and horizontal spaces such as occur at soffits, drop ceilings, cove ceilings and similar locations.

[717.2.4] 718.2.4 Stairways. Fireblocking shall be provided in concealed spaces between stair stringers at the top and bottom of the run. Enclosed spaces under [stairs] stairways shall also comply with Section 1009.6.3 1009.6.3.

[717.2.5] 718.2.5 Ceiling and floor openings. Where required by [Exception 6 of] Section 708.2 708.2, Exception 1 of Section 713.4.1.2 713.4.1.2 or Section 713.4.2 713.4.2, fireblocking of the annular space around vents, pipes, ducts, chimneys and fireplaces at ceilings and floor levels shall be installed with a material specifically tested in the form and manner intended for use to demonstrate its ability to remain in place and resist the free passage of flame and the products of combustion.

[717.2.5.1] 718.2.5.1 Factory-built chimneys and fireplaces. Factory-built chimneys and fireplaces shall be [fire blocked] fireblocked in accordance with UL 103 and UL 127.
Architectural trim. Fireblocking shall be installed within concealed spaces of exterior wall [finish] coverings and other exterior architectural elements where permitted to be of combustible construction as specified in Section 1406 or where erected with combustible frames, at maximum intervals of 20 feet (6096 mm) so that there will be no open space exceeding 100 square feet (9.3 m²). Where wood furring strips are used, they shall be of approved wood of natural decay resistance or preservative-treated wood. If non-continuous, such elements shall have closed ends, with at least 4 inches (102 mm) of separation between sections. For the purposes of this section, fenestration products, and flashing of fenestration products and water-resistive barrier flashing and accessories at other locations, including through wall flashings and attachment accessories, shall not be considered combustible construction.

Exceptions:

1. Fireblocking of cornices is not required in single-family dwellings. Fireblocking of cornices of a two-family dwelling is required only at the line of dwelling unit separation.

2. Fireblocking shall not be required where the exterior wall covering does not contain plastic or foam plastic insulation, is installed on noncombustible framing and the [face of the exposed to the concealed space is covered by] exterior wall covering is one of the following materials:

   2.1. Aluminum siding having a minimum thickness of 0.019 inch (0.5 mm).

   2.2. Corrosion-resistant steel [having a base metal thickness] siding not less than 0.016 inch (0.4 mm) at any point.

   [2.3. Other approved noncombustible materials.]

2.3 Walls in which the water-resistive barrier is the only combustible component and the exterior wall has a wall covering of brick, concrete, stone, terra cotta, stucco or steel with minimum thicknesses in accordance with Table 1405.2.

3. Exterior wall coverings containing plasctics, metal composite materials (MCM) or high-pressure decorative exterior-grade compact laminates (HPL) panels shall comply with Section 718.2.6.1.

718.2.6.1 Exterior wall coverings containing plastics, metal composite materials (MCM) or high-pressure decorative exterior-grade compact laminates (HPL) panels. Exterior wall coverings containing plastics complying with Chapter 26, metal composite materials (MCM) or high-pressure decorative exterior-grade compact laminates (HPL), shall be fireblocked.

718.2.6.1.1 Locations. Noncombustible fireblocking materials shall be required at all of the following locations to cut off concealed spaces within the exterior wall covering:

1. Around wall openings.
2. In alignment with the slab edge, for a height of not less than 8 inches (203.2 mm), and at maximum intervals of 20 feet (6096 mm) vertically.

3. Between different occupancy groups, horizontally or vertically, as applicable.

**718.2.6.1.2 Foam plastic insulation.** Foam plastic insulation in the exterior wall covering shall be interrupted with noncombustible materials approved for fireblocking at locations specified in Section 718.2.6.1.1.

**Exceptions:**

1. One-story buildings complying with Section 2603.4.1.4.

2. Fireblocking shall not be required at each floor level and interrupt the foam plastic insulation provided the foam plastic insulation has a flame spread index of not more than 25 as determined in accordance with ASTM E 84 or UL 723 and comply with the following conditions:

   **2.1. Concrete and masonry veneer.** Fireblocking material shall not be required at each floor level for concrete or masonry veneer installed less than 75 feet (22 860 mm) above grade as part of an exterior wall covering containing foam plastic insulation, with or without air space, and installed on masonry or concrete backup walls.

   **2.2. Exterior insulation and finish systems (EIFS).** Fireblocking material shall not be required at each floor level for EIFS containing foam plastic insulation installed less than 75 feet (22 860 mm) above grade, and installed on masonry or concrete backup walls.

3. **Detached one- and two-family dwellings.** Fireblocking of foam plastic insulation shall not be required at each floor level in detached one- and two-family dwellings of Type V construction that do not exceed three stories or 40 feet (12 192 mm) in height above grade plane.

**[717.2.7] 718.2.7 Concealed sleeper spaces.** Where wood sleepers are used for laying wood flooring on masonry or concrete fire-resistance-rated floors, the space between the floor slab and the underside of the wood flooring shall be filled with an approved material to resist the free passage of flame and products of combustion or fireblocked in such a manner that there will be no open spaces under the flooring that will exceed 20 square feet (1.86 m²) in area and such space shall be filled solidly under permanent partitions so that there is no communication under the flooring between adjoining rooms.

**Exceptions:**

1. Fireblocking is not required for slab-on-grade floors in gymnasiums.

2. Fireblocking is required only at the juncture of each alternate lane and at the ends of each lane in a bowling facility.
[717.3] **718.3 Draftstopping in floors.** In combustible and noncombustible construction, draftstopping shall be installed to subdivide floor/ceiling assemblies in the locations prescribed in Sections [717.3.2] 718.3.2 through [717.3.3] 718.3.3.

[717.3.4] **718.3.1 Draftstopping materials.** In noncombustible construction, draftstopping shall be of noncombustible materials. In combustible construction, draftstopping materials shall not be less than 1/2-inch (12.7 mm) gypsum board, 3/8-inch (9.5 mm) wood structural panel, 3/8-inch (9.5 mm) particleboard, 1-inch (25 mm) nominal lumber, cement fiberboard, batts or blankets of mineral wool or glass fiber, or other approved materials adequately supported. The integrity of draftstopping shall be maintained.

[717.3.2] **718.3.2 Group R.** Draftstopping shall be provided in floor/ceiling spaces in Group R buildings. Draftstopping shall be located above and in line with the dwelling unit separations.

**Exceptions:**

1. Draftstopping is not required in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.

2. Draftstopping is not required in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.2, provided that automatic sprinklers are installed in the combustible concealed spaces where the draftstopping is being omitted.

3. Where laminated wood I-joist assemblies are used, the space between the ceiling and the floor or roof above shall be divided into approximately equal areas not greater than 500 square feet (46.5 m²).

4. Draftstopping shall not be required where the structural members within the concealed ceiling space are individually protected on all sides for their full length with materials having the required fire-resistance rating.

[717.3.3] **718.3.3 Other groups.** In occupancies other than Group R, draftstopping shall be installed so that horizontal floor areas do not exceed 3,000 square feet (279.278.7 m²).

**Exceptions:**

1. Draftstopping is not required in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.

2. Draftstopping shall not be required where the structural members within the concealed ceiling space are individually protected on all sides for their full length with materials having the required fire-resistance rating.

[717.4] **718.4 Draftstopping in attics.** In combustible and noncombustible construction, draftstopping shall be installed to subdivide attic spaces and concealed roof spaces in the locations prescribed in Sections [717.4.2] 718.4.2 and [717.4.3] 718.4.3. Ventilation of concealed roof spaces shall be maintained in accordance with Section 1203.2.
**717.4.1 Draftstopping materials.** Materials utilized for draftstopping of attic spaces shall comply with Section [717.3.1] 718.3.1.

**717.4.1.1 Openings.** Openings in draftstop partitions provided in accordance with Section 1209.2 shall be protected by self-closing doors with automatic latches constructed as required for the partitions.

**717.4.2 Groups R-1 and R-2.** Draftstopping shall be provided in attics, mansards, overhangs or other concealed roof spaces of Group R-2 buildings with three or more dwelling units and in all Group R-1 buildings. Draftstopping shall be installed above, and in line with dwelling unit separation walls that do not extend to the underside of the roof sheathing above.

**Exceptions:**

1. Draftstopping shall not be required where the structural members within the concealed attic space are individually protected on all sides for their full length with materials having the required fire-resistance rating.

2. Draftstopping is not required in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.

3. In occupancies in Group R-2 that do not exceed four stories above grade plane, the attic space shall be subdivided by draftstopping areas not exceeding 3,000 square feet (279\text{ m}^2) or above every two dwelling units, whichever is smaller.

4. Draftstopping is not required in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.2, provided that automatic sprinklers are also installed in the combustible concealed space where the draftstopping is being omitted.

5. Where laminated wood I-joist assemblies are used, the space between the ceiling and the floor or roof above shall be divided into approximately equal areas not greater than 500 square feet (46.5 m²).

**717.4.3 Other groups.** Draftstopping shall be installed in attics and concealed roof spaces, such that any horizontal area does not exceed 3,000 square feet (279\text{ m}^2).

**Exceptions:**

1. Draftstopping is not required in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.

2. Draftstopping shall not be required where the structural members within the concealed attic space are individually protected on all sides for their full length with materials having the required fire-resistance rating.
3. Where laminated wood I-joist assemblies are used, the space between the ceiling and the floor or roof above shall be divided into approximately equal areas not greater than 500 square feet (46.5 m²).

718.5 Combustible materials in concealed spaces in Type I or II construction. Combustible materials shall not be permitted in concealed spaces of buildings of Type I or II construction.

Exceptions:

1. Combustible materials in accordance with Section 603 of this code.
2. Combustible materials exposed within plenums complying with Section 602 of the New York City Mechanical Code.
3. Class A interior finish materials classified in accordance with Section 803 of this code.
4. Combustible piping within partitions or shaft enclosures installed in accordance with the provisions of this code.
5. Combustible piping within concealed ceiling spaces installed in accordance with the New York City Mechanical Code and the New York City Plumbing Code.
6. Combustible insulation and covering on pipe and tubing, installed in concealed spaces other than plenums, complying with Section 719.7 of this code.

SECTION BC 719
FIRE-RESISTANCE REQUIREMENTS FOR PLASTER

719.1 Thickness of plaster. The minimum thickness of gypsum plaster or portland cement plaster used in a fire-resistance-rated system shall be determined by the prescribed fire tests. The plaster thickness shall be measured from the face of the lath where applied to gypsum lath or metal lath.

719.2 Plaster equivalents. For fire-resistance purposes, 1/2 inch (12.7 mm) of unsanded gypsum plaster shall be deemed equivalent to 3/4 inch (19.1 mm) of one-to-three gypsum sand plaster or 1 inch ([25] 25.4 mm) of portland cement sand plaster.

719.3 Noncombustible furring. In buildings of Type I and II construction, plaster shall be applied directly on concrete or masonry or on approved noncombustible plastering base and furring.

719.4 Double reinforcement. Plaster protection more than 1 inch ([25] 25.4 mm) in thickness shall be reinforced with an additional layer of approved lath embedded [at least] not less than 3/4 inch (19.1 mm) from the outer surface and fixed securely in place.
Exception: Solid plaster partitions or where otherwise determined by fire tests.

[718.5] 719.5 Plaster alternatives for concrete. In reinforced concrete construction, gypsum plaster or portland cement plaster is permitted to be substituted for 1/2 inch (12.7 mm) of the required poured concrete protection, except that a minimum thickness of 3/8 inch (9.5 mm) of poured concrete shall be provided in reinforced concrete floors and 1 inch ([25] 25.4 mm) in reinforced concrete columns in addition to the plaster finish. The concrete base shall be prepared in accordance with Section 2510.7.

SECTION BC 719.720 THERMAL- AND SOUND-INSULATING MATERIALS

[719.1] 720.1 General. Insulating materials, including facings such as vapor retarders and vapor-permeable membranes, similar coverings, and all layers of single and multilayer reflective foil insulations, shall comply with the requirements of this section. Where a flame spread index or a smoke-development index is specified in this section, such index shall be determined in accordance with ASTM E 84 or UL 723. Any material that is subject to an increase in flame spread index or smoke-development index beyond the limits herein established through the effects of age, moisture, or other atmospheric conditions shall not be permitted.

Exceptions:

1. Fiberboard insulation shall comply with Chapter 23 of this code.

2. Foam plastic insulation shall comply with Chapter 26 of this code.

3. Duct and pipe insulation and duct and pipe coverings and linings in plenums shall comply with the New York City Mechanical Code.

4. EIFS shall comply with Chapters 14 and 26 of this code.

[719.1.1] 720.1.1 Noncombustible construction. Insulating materials used in noncombustible construction must either:

1. Satisfactorily pass a test for determining noncombustibility of elementary materials, based on the test procedures of ASTM E 136; or

2. Have a flame spread index not greater than 25, a smoke-development index not greater than 50, and be without evidence of continued progressive combustion when tested in accordance with ASTM E 84.

[719.1.2] 720.1.2 Combustible construction. Insulating materials used in combustible construction shall have a flame spread index not greater than 25, a smoke-development index not greater than 450, and be without evidence of continuous progressive combustion when tested in accordance with ASTM E 84.
[719.2] **720.2 Concealed installation.** Insulating materials, where concealed as installed in buildings of any type of construction, shall comply with Sections [719.1.1] 720.1.1, [719.1] 720.1 and [719.1.2] 720.1.2. Concealed insulation shall be separated from the building interior by a thermal barrier consisting of at least \( \frac{1}{2} \)-inch-thick (12.7 mm) thick gypsum wallboard or approved equivalent.

**Exception:** [Cellulose] Cellulosic fiber loose-fill insulation [that is not spray applied] complying with the requirements of Section [719.6] 720.6 shall only be required to meet [the] a smoke-development index of not more than 450, when tested in accordance with CAN/ULC S102.2, provided such insulation has a smoke-development index that complies with the requirements of Section 720.2 or 720.3, as applicable, and Section 720.6 of this code.

[719.2.1] **720.2.1 Facings.** Where such materials are installed in concealed spaces in buildings of Type III, IV or V construction, the flame spread and smoke-development limits do not apply to facings, coverings, and layers of reflective foil insulation that are installed behind and in substantial contact with the unexposed surface of the ceiling, wall or floor finish.

**Exception:** All layers of single and multilayer reflective plastic core insulation shall comply with Section [2613] 2614.

[719.3] **720.3 Exposed installation.** Insulation materials, where exposed as installed in buildings of any type of construction, shall have a flame spread index of not more than 25 and a smoke-development index of not more than 50.

**Exception:** [Cellulose] Cellulosic fiber loose-fill insulation [that is not spray applied] complying with the requirements of Section [719.6] 720.6 shall only be required to meet [the] a flame spread index requirement but shall be required to meet a smoke-development index of not more than 50 when tested in accordance with CAN/ULC S102.2.

[719.3.1] **720.3.1 Attic floors.** Exposed insulation materials installed on attic floors shall have a critical radiant flux of not less than 0.12 watt per square centimeter when tested in accordance with ASTM E 970.

[719.3.2] **Toxicity.** Upon exposure to fire, insulating materials used in building interiors, including facings, such as vapor retarders and vapor-permeable membranes, similar coverings, and all layers of single and multilayer reflective foil insulation, shall not produce products of decomposition or combustion that are more toxic in point of concentration than those given off by wood or paper when decomposing or burning under comparable conditions in accordance with test standards approved by the department.

[719.4] **720.4 Loose-fill insulation.** Loose-fill insulation materials that cannot be mounted in the ASTM E 84 apparatus without a screen or artificial supports shall comply with the flame spread and smoke-developed limits of Sections [719.2] 720.2 and [719.3] 720.3 when tested in accordance with CAN/ULC S102.2.

**Exception:** [Cellulose] Cellulosic fiber loose-fill insulation shall not be required to [be] meet a flame spread index requirement when tested in accordance with CAN/ULC S102.2, provided such insulation has a smoke-development index that complies with the requirements of Section [719.2] 720.2 or [719.3] 720.3, as applicable, and Section [719.6] 720.6.
[749.5] **720.5 Roof insulation.** The use of combustible roof insulation not complying with Sections [749.2] 720.2 and [749.3] 720.3 shall be permitted in any type of construction provided it is applied on top of roof decking or slab and that such insulation is covered with approved roof coverings directly applied thereto.

[749.7] **720.7 Insulation and covering on pipe and tubing.** Insulation and covering on pipe and tubing shall comply with the requirements of the New York City Mechanical Code, the New York City Plumbing Code, and the New York City Energy Conservation Code.

**SECTION BC [720] 721 PRESCRIPTIVE FIRE RESISTANCE**

[720.1] **721.1 General.** The provisions of this section contain prescriptive details of fire-resistance-rated building elements, components or assemblies. The materials of construction listed in Tables [720.1(1)] 721.1(1), [720.1(2)] 721.1(2), and [720.1(3)] 721.1(3) shall be assumed to have the fire-resistance ratings prescribed therein. Where materials that change the capacity for heat dissipation are incorporated into a fire-resistance-rated assembly, fire test results or other substantiating data shall be made available to the commissioner to show that the required fire-resistance[-] rating time period is not reduced.

**TABLE [720.1(1)] 721.1(1) MINIMUM PROTECTION OF STRUCTURAL PARTS BASED ON TIME PERIODS FOR VARIOUS NONCOMPLECTIBLE INSULATING MATERIALS**

</table>

For SI: 1 inch = 25.4 mm, 1 square inch = 645.2 mm², 1 cubic foot = 0.0283 m³.

a. Reentrant parts of protected members to be filled solidly.
b. Two layers of equal thickness with a 1/8-inch airspace between.
c. For all of the construction with gypsum wallboard described in Table 721.1(1), gypsum base for veneer plaster of the same size, thickness and core type shall be permitted to be substituted for gypsum wallboard, provided attachment is identical to that specified for the wallboard and the joints on the face layer are reinforced, and the entire surface is covered with an approved adhesive qualified under ASTM E 119 or UL 263.
d. An approved adhesive qualified under ASTM E 119 or UL 263.

e. Where lightweight or sand-lightweight concrete having an oven-dry weight of 110 pounds per cubic foot or less is used, the tabulated minimum cover shall be permitted to be reduced 25 percent, except that in no case shall the cover be less than 3/4 inch in slabs or 1½ inches in beams or girders.
f. For solid slabs of siliceous aggregate concrete, increase tendon cover 20 percent.
g. Adequate provisions against spalling shall be provided by U-shaped or hooped stirrups spaced not to exceed the depth of the member with a clear cover of 1 inch.
h. Prestressed slabs shall have a thickness not less than that required in Table 721.1(1) for the respective fire resistance time period.
i. Fire coverage and end anchorages shall be as follows: Cover to the prestressing steel at the anchor shall be 1½ inch greater than that required away from the anchor. Minimum cover to steel-bearing plate shall be 1 inch in beams and 1½ inch in slabs.
j. For beam widths between 8 inches and 12 inches, cover thickness shall be permitted to be determined by interpolation.
k. Interior spans of continuous slabs, beams and girders shall be permitted to be considered restrained.

l. For use with concrete slabs having a comparable fire endurance where members are framed into the structure in such a manner as to provide equivalent performance to that of monolithic concrete construction.

m. Generic fire-resistance ratings (those not designated as PROPRIETARY* in the listing) in GA 600 shall be accepted as if herein listed.

n. No additional insulating material is required on an exposed outside face of the column flange to achieve a 1-hour fire-resistance rating.
