

**LOCAL LAWS**  
**OF**  
**THE CITY OF New York**  
**FOR THE YEAR 2007**

---

No. 33

---

Introduced by Council Members Dilan, Fidler, Gonzalez, James and Reyna (by request of the Mayor)

**A LOCAL LAW**

**To amend the New York city charter and the administrative code of the city of New York, in relation to enacting the New York city construction codes and repealing chapter 1 of title 26 of the administrative code, sections 27-106, 27-118.1, 27-124, 27-125, 27-126, 27-127, 27-128, 27-129, 27-130, 27-131, 27-132, 27-133, 27-134, 27-135, 27-136 and 27-137 of the administrative code, articles 9, 10, 11, 12, 13, 14,15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25 and 27 of subchapter 1 of chapter 1 of title 27 of the administrative code, subchapter 19 of chapter 1 of title 27 of the administrative code and chapters 1, 2, 3, 5, 6, 7 and 8 of title 28 of the administrative code.**

*Be it enacted by the Council as follows:*

Section 1. Items (v) (vi) and (vii) of paragraph b of subdivision 5 of section 1041 of the New York city charter are amended to read as follows:

(v) statement or communication effecting a non-continuous closing of a street; *or* (vi) statement or communication adopted pursuant to sections fifty-one, one hundred ninety-seven-a except pursuant to the first sentence of subdivision b or the third sentence of subdivision c of section one hundred ninety-seven-a, one hundred ninety-seven-c except pursuant to subdivisions i and l of section one hundred ninety-seven-c, one hundred ninety-nine, two hundred, two hundred one, two hundred two and seven hundred five of this charter [; or (vii) building code reference standards amended, revised or added by the commissioner of the department of buildings in consultation with the fire commissioner on all issues relating to fire safety after notice and a public hearing and published as part of the administrative code].

§2. Chapter 1 of title 26 of the administrative code of the city of New York is REPEALED.

§3. Section 27-101 of the administrative code of the city of New York is amended to read as follows:

§27-101 Title. This code shall be known and may be cited as the “1968 building code of the city of New York” or the “1968 building code”, and is hereinafter referred to as “this code” or “the code”.

§4. Section 27-103 of the administrative code of the city of New York is amended to read as follows:

§ 27-103 Scope. [This] *On and after July 1, 2008 this code shall apply to the minimum requirements and standards for the construction, alteration, repair, [demolition, removal, maintenance,] occupancy and use of new and existing buildings in the city of New York [including the installation, alteration, repair, maintenance and use of service equipment therein , except as provided in section six hundred forty-three of the charter] in accordance with and to the extent provided for by chapter 1 of title 28 of the administrative code and the New York city construction codes. On and after July 1, 2008, administration and enforcement of this code shall be in accordance with title 28 of the administrative code.*

§5. Section 27-106 of the administrative code of the city of New York is REPEALED.

§6. Article 4 of subchapter 1 of chapter 1 of title 27 of the administrative code of the city of New York is amended by adding a new section 27-123.3.

§27-123.3 *Definition. For the purposes of this article, the term “existing building” means a building in existence prior to December 6<sup>th</sup>, 1968 or a building constructed in accordance with the building laws and regulations in force prior to such date in accordance with section 27-105 of this code.*

§7. Sections 27-118.1, 27-124, 27-125, 27-126, 27-127, 27-128, 27-129, 27-130, 27-131, 27-132, 27-133, 27-134, 27-135, 27-136 and 27-137 of the administrative code of the city of New York are REPEALED.

§8. Articles 9, 10, 11, 12, 13, 14,15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25 and 27 of subchapter 1 of chapter 1 of title 27 of the administrative code of the city of New York are REPEALED.

§9. Subchapter 19 of chapter 1 of title 27 of the administrative code of the city of New York is REPEALED.

§10. Section 2 of local law number 99 for the year 2005 is amended to read as follows:

§ 2. This local law shall take effect on July 1, [2007] 2008 [provided, however that prior to such date a New York city building code based on the 2003 edition of the International Building Code, a New York city mechanical code based on the 2003 edition of the International Mechanical Code, a New York city residential code based on the 2003 edition of the International Residential Code, a New York city fuel gas

code based on the 2003 edition of the International Fuel Gas Code, all such international codes published by the International Code Council, with recommended changes that reflect the unique character of the city, shall be enacted and that if a local law or laws enacting such New York city codes are not enacted prior to July 1, 2007, this local law shall not take effect, and provided, further,] *except* that prior to the effective date of this local law, the commissioner shall take [all] administrative actions necessary for the timely implementation of this local law including but not limited to the promulgation of rules.

§11. Chapters 1, 2 and 3 of title 28 of the administrative code of the city of New York, as added by local law number 99 for the year 2005, are REPEALED and new chapters 1, 2, 3, 4 and 5 are added to read as follows:

*CHAPTER 1  
ADMINISTRATION*

*ARTICLE 101  
GENERAL*

*§28-101.1 Title. The provisions of this chapter shall apply to the administration of the codes set forth in this title and the 1968 building code. The codes set forth in this title shall be known and may be cited as the “New York city construction codes” and shall consist of:*

*The New York city plumbing code.*

*The New York city building code.*

*The New York city mechanical code.*

*The New York city fuel gas code.*

*§28-101.2 Intent. The purpose of this code is to provide reasonable minimum requirements and standards, based upon current scientific and engineering knowledge, experience and techniques, and the utilization of modern machinery, equipment, materials, and forms and methods of construction, for the regulation of building construction in the city of New York in the interest of public safety, health and welfare, and with due regard for building construction and maintenance costs.*

*§28-101.3 Codes. Any reference in this title to “this code” or “the code” shall be deemed to be a reference to this title and all of the codes comprising the New York city construction codes unless the context or subject matter requires otherwise.*

*§28-101.4 Effective date. Except as otherwise provided in sections 28-101.4.1, 28-101.4.2, 28-101.4.3 and*

*28-101.4.4 on and after the effective date of this code, all work shall be performed in accordance with the provisions of this code.*

*§28-101.4.1 Permit issued or work commenced prior to effective date. If a permit for work was issued prior to the effective date of this code or, if no permit was necessary, work was commenced prior to such effective date, all of the provisions of chapter 1 of title 27 of the administrative code as heretofore in effect shall apply to such work.*

*§28-101.4.2 Applications for construction document approval submitted prior to and within twelve months after the effective date of this code. Any work for which an application for construction document approval was submitted to the department prior to the effective date of this code and not thereafter abandoned, or for which an application for construction document approval is submitted to the department within a period of twelve months after such date may, at the option of the owner, be performed in its entirety in accordance with the provisions of this code, or in accordance with the 1968 building code, provided that such work is commenced within twelve months after the date of issuance of a permit therefore and is diligently carried on to completion. The commissioner may, for good cause, extend the time period for commencement of the work beyond 12 months. Where the owner elects to perform the work in compliance with the 1968 building code, the following conditions shall apply:*

- 1. Except as otherwise limited by the commissioner, administration and enforcement of the 1968 building code shall be in accordance with this code, including but not limited to approval of construction documents, issuance of permits and certificates of occupancy, tests and inspections, penalties and enforcement. Controlled inspections and semi-controlled inspections as referenced in the 1968 building code shall be deemed to be special inspections and shall comply with the provisions of this code relating to special inspections. Materials regulated in their use by the 1968 building code shall be subject to applicable provisions of this code.*
- 2. Safety of public and property during construction operations including demolition shall be governed by chapter 33 of the New York city building code.*

*§28-101.4.3 Optional use of the 1968 building code for alteration of existing buildings. At the option*

*of the owner, and subject to appropriate approval, a permit may be issued after the effective date of this code authorizing work on existing buildings constructed in accordance with the 1968 building code or with the building laws in effect prior to the effective date of the 1968 building code, to be performed in accordance with the requirements and standards set forth in the 1968 building code, subject to the following conditions:*

- 1. The installation and alteration of all appliances, equipment and systems regulated by the New York city fuel gas code, the New York city plumbing code and the New York city mechanical code shall be governed by applicable provisions of those codes relating to new and existing installations.*
- 2. The installation, alteration and additions to fire protection systems regulated by Chapter 9 of the New York city building code, including a change of occupancy group that would require such systems, shall be governed by applicable provisions of such chapter and related referenced standards. With respect to existing buildings, references to occupancy classifications in Chapter 9 of the New York city building code shall be deemed to refer to the equivalent occupancy classification of the 1968 building code.*
- 3. The installation and alteration of elevators, conveyors, and amusement rides shall be governed by chapter 30, appendix K of the New York city building code and the rules of the department.*
- 4. Safety of public and property during construction operations including demolition shall be governed by chapter 33 of the New York city building code.*
- 5. Where the estimated cost of such alteration in any twelve-month period exceeds fifty percent of the cost of replacement of the building or where there is a change in the main use or dominant occupancy of the building, facilities for people with physical disabilities shall be provided in accordance with chapter 11 of the New York city building code as if the building were hereafter erected.*
- 6. Encroachments onto the public right of way shall be governed by chapter 32 of the New York city building code.*

7. *Except as otherwise limited by the commissioner, administration and enforcement of the 1968 building code shall be in accordance with this code, including but not limited to the approval of construction documents, issuance of permits and certificates of occupancy, tests and inspections, penalties and enforcement. Controlled and semi-controlled inspections as referenced in the 1968 building code shall be deemed to be special inspections and shall comply with the provisions of this code relating to special inspections. Materials regulated in their use by the 1968 building code shall be subject to applicable provisions of this code.*

*§28-101.4.4 Alterations that reduce the fire safety or structural safety of existing buildings. Notwithstanding any other provision of this code, where the alteration of any existing building in accordance with a provision of this code would result in a reduction of the fire safety or structural safety of such building, relevant provisions of the 1968 building code shall apply to such alteration unless there is full compliance with those provisions of this code that would mitigate or offset such reduction of fire protection or structural safety.*

*§28-101.5 Definitions. As used in this chapter and elsewhere in this title, the following terms shall have the following meanings unless the context or subject matter requires otherwise:*

*1968 BUILDING CODE. Chapter 1 of title 27 of the administrative code as hereafter in effect.*

*ACCEPTANCE OR ACCEPTED. In reference to construction documents, the endorsement by the department of construction documents with less than full examination by the department based on the professional certification of a registered design professional in accordance with a program established by the commissioner.*

*ADDITION. An alteration of a building in existence that increases its exterior dimensions including but not limited to an extension or increase in floor area or height (including an increase in height or area resulting from the construction of a rooftop structure for mechanical equipment) of the building.*

*ADMINISTRATIVE CODE. The administrative code of the city of New York.*

*ALTERATION. Any construction, addition, change of use or occupancy, or renovation to a building or structure in existence.*

*APPROVAL OR APPROVED. In reference to construction documents, the determination by the department after full examination that submitted construction documents comply with this code and other applicable*

*laws and rules. In reference to materials, the determination by the commissioner that material is acceptable for its intended use.*

*APPROVED AGENCY. An established and recognized agency, or other qualified person, regularly engaged in conducting tests or furnishing inspection services, when approved pursuant to department rules as qualified to perform or witness identified testing or inspection services.*

*APPROVED FABRICATOR. An established and qualified person, firm or corporation approved by the commissioner to custom manufacture or build products or assemblies regulated by this code.*

*APPROVED INSPECTION AGENCY. An approved agency that is approved by the department as qualified to perform one or more of the inspections required by this code.*

*APPROVED TESTING AGENCY. An approved agency that is approved by the department as qualified to test and evaluate the performance of one or more of the materials regulated in their use by this code. Such term shall include, when approved pursuant to department rules, a third party testing or certification agency, evaluation agency, testing laboratory, testing service or other entity concerned with product evaluation.*

*ARCHITECT. A person licensed and registered to practice the profession of architecture under the education law of the state of New York.*

*BUILDING. Any structure used or intended for supporting or sheltering any use or occupancy. The term shall be construed as if followed by the phrase "structure, premises, lot or part thereof" unless otherwise indicated by the text.*

*CHARTER. The New York city charter.*

*CERTIFICATE OF COMPLIANCE. A certificate stating that materials meet specified standards or that work was done in compliance with approved construction documents and other applicable provisions of law and with respect to specified service equipment, a certificate issued by the department authorizing the operation of such equipment.*

*CITY. The city of New York.*

*COMMISSIONER. The commissioner of buildings of the city of New York, or his or her duly authorized representative.*

*CONSTRUCTION DOCUMENTS. Plans and specifications and other written, graphic and pictorial*

*documents, prepared or assembled for describing the design, location and physical characteristics of the elements of the project necessary for obtaining a building permit.*

*DEFERRED SUBMITTAL. Those portions of the design that are not submitted at the time of the application for construction document approval and that are to be submitted to the department within a specified period of time after the issuance of a permit.*

*DEMOLITION. Full or partial demolition.*

*DEMOLITION, FULL: The dismantling, razing, or removal of all of a building or structure, including all operations incidental thereto.*

*DEMOLITION, PARTIAL: The dismantling, razing, or removal of structural members, floors, interior bearing walls, and/or exterior walls or portions thereof, including all operations incidental thereto.*

*DEPARTMENT. The department of buildings of the city of New York.*

*ENGINEER. A person licensed and registered to practice the profession of engineering under the education law of the state of New York.*

*ENLARGEMENT. An addition.*

*EXISTING BUILDING OR STRUCTURE. (i) A building or structure in existence prior to the effective date of this code or one for which a lawful building permit was issued for the erection of such building or structure prior to the effective date of this code. (ii) A building or structure erected in accordance with the 1968 building code under a lawful building permit issued for the erection of such building or structure after the effective date of this code in accordance with section 28-101.4.2 of this code.*

*FABRICATED ITEM. Products and assemblies regulated by this code, that are custom manufactured, or built prior to their incorporation into the work at the job site. Fabricated items shall not include listed, labeled or approved products or assemblies.*

*FIRE PROTECTION PLAN. A report containing a narrative description of the life and fire safety systems and evacuation system for a structure.*

*HEREAFTER. On or after the effective date of this code.*

*HERETOFORE. Before the effective date of this code.*

*INSPECTION CERTIFICATE. Identification applied to a product by an approved agency containing the name of the manufacturer, the function and performance characteristics, and the name and identification of*

*the approved agency that indicates that the product or material has been inspected and evaluated by such approved agency. An inspection certificate shall also mean a certificate issued by the department upon satisfactory completion of an inspection or test.*

*LABEL. Identification applied to material by the manufacturer or an approved agency that contains the name of the manufacturer, the function and performance characteristics of the material, and the name and identification of the approved agency that conducted the evaluation of a representative sample of such material.*

*LABELED. Material to which has been attached a label, symbol or other identifying mark of the manufacturer that contains the name of the manufacturer, the function and performance characteristics of the product or material, and the name and identification of an approved agency and that indicates that a representative sample of the material has been tested and evaluated by an approved agency for compliance with nationally recognized standards or tests to determine suitable usage in a specified manner.*

*LAND SURVEYOR. A person licensed and registered to practice the profession of land surveying under the education law of the state of New York.*

*LISTED. Material identified in a list published by an approved agency that maintains periodic inspection of production of listed material or periodic evaluation services and whose listing states either that the material meets identified nationally recognized standards or has been tested and found suitable for a specified purpose when installed in accordance with the manufacturer's installation instructions.*

*LETTER OF COMPLETION. A document issued by the department indicating that permitted work has been completed, including satisfactory final inspection in accordance with this code. A letter of completion is issued only in circumstances where a certificate of occupancy is not required upon completion of the permitted work.*

*LIMITED PLUMBING ALTERATIONS. An alteration to a plumbing system where the total cost of the proposed work in the building does not exceed twenty five thousand dollars in any 12 month period and the proposed work is limited to the following:*

- 1. The installation of new plumbing or gas piping, or the rerouting of existing plumbing or gas piping;*
- 2. The addition of not more than two plumbing fixtures or fixture connections;*

3. *The mounting of new plumbing fixtures on existing roughings, other than the mere replacement of existing fixtures constituting a minor alteration or ordinary repair under this code; and*
4. *The installation or replacement of backflow preventers.*

*LIMITED SPRINKLER ALTERATIONS. An alteration to an existing sprinkler system where the total cost of the proposed work in the building does not exceed twenty five thousand dollars in any 12-month period and the proposed work is limited to the following:*

1. *Replacement of parts required for the operation of a sprinkler system;*
2. *Replacement of sprinkler heads, provided that orifice sizes, type and deflector positions remain the same;*
3. *Changes that do not alter the type of sprinkler system;*
4. *Relocation of piping that does not affect the operation of the sprinkler system; and*
5. *Rearrangement of not more than 20 sprinkler heads in areas presently sprinklered in light hazard occupancy, as such term is defined in reference standards, which will remain in such occupancy, provided that the addition of sprinkler heads in existing systems shall be limited to light hazard occupancies in rooms or spaces not exceeding 800 square feet (74.3 m<sup>2</sup>) requiring only one head with the maximum spacing allowed by the code, and provided that the number of new heads does not exceed a total of five.*

*LIMITED STANDPIPE ALTERATIONS. An alteration to an existing standpipe system where the total cost of the proposed work in the building does not exceed twenty five thousand dollars in any 12-month period and the proposed work is limited to the following:*

1. *Replacement of parts required for the operation of a combined standpipe system; and*
2. *Relocation of combined standpipe auxiliary hose sources and cabinets within 10 feet (3048 mm) of their original location, provided that the existing covered area is not affected and provided that such relocation complies with this code for a new installation.*

*MANUFACTURER'S DESIGNATION. Identification applied to material by the manufacturer indicating that the material complies with a specified standard or set of rules.*

*MARK. Identification applied to a product by the manufacturer indicating the name of the manufacturer and the function of a product or material.*

*MATERIALS. Materials, assemblies, appliances, equipment, devices, systems, products and methods of construction regulated in their use by this code or regulated in their use by the 1968 building code.*

*OCCUPANCY. The purpose or activity for which a building or space is used or is designed, arranged or intended to be used.*

*OWNER. Any person, agent, firm, partnership, corporation or other legal entity having a legal or equitable interest in, or control of the premises.*

*PARTY WALL. A fire division on an interior lot line common to two adjoining buildings.*

*PERMIT. An official document or certificate issued by the commissioner that authorizes performance of specified work or activity.*

*PERSON. An individual, partnership, corporation, or other legal entity.*

*PREMISES. Land, improvements thereon, or any part thereof.*

*PROFESSIONAL CERTIFICATION. A personal verification of a registered design professional made under such professional's signature and seal that accompanies construction documents and other submittal documents filed with the department and that attests that such documents do not contain false information and are in compliance with all applicable provisions of law.*

*REGISTERED DESIGN PROFESSIONAL. An architect or engineer.*

*REGISTERED DESIGN PROFESSIONAL OF RECORD. The registered design professional who prepared or supervised the preparation of applicable construction documents filed with the department.*

*REQUIRED. Shall mean required by the provisions of this code.*

*RETAINING WALL. A wall designed to prevent the lateral displacement of soil or other materials.*

*SIGN-OFF. The issuance by the department of a letter of completion or certificate of occupancy for permitted work indicating the satisfactory completion of all required inspections and receipt by the department of all required submittal documents.*

*SERVICE EQUIPMENT. Equipment or systems, and all components thereof, that provide sanitation, power, light, heat, ventilation, air conditioning, refuse disposal, fire-fighting, transportation or other facilities for buildings.*

*SINGLE ROOM OCCUPANCY MULTIPLE DWELLING. See section 28-107.2.*

*SPECIAL INSPECTION. Inspection of selected materials, equipment, installation, fabrication, erection or*

*placement of components and connections, to ensure compliance with approved construction documents and referenced standards as required by chapter 17 of the New York city building code or elsewhere in this code or its referenced standards.*

*SPECIAL INSPECTOR. An individual having required qualifications and authorized by the department to perform or witness particular special inspections required by this code or by the rules of the department, including but not limited to a qualified registered design professional so authorized.*

*SUPERINTENDENT OF CONSTRUCTION (CONSTRUCTION SUPERINTENDENT). An individual, when authorized pursuant to department rules as qualified to superintend permitted construction work on behalf of the owner.*

*STRUCTURE. That which is built or constructed, including among others: buildings, stadia, tents, reviewing stands, platforms, stagings, observation towers, radio towers, tanks, trestles, open sheds, shelters, fences, and display signs.*

*SUBMITTAL DOCUMENTS. Completed application forms, construction documents, reports and any other required documents submitted in compliance with this code or other applicable laws and rules including but not limited to special inspection reports, certifications or approvals from other governmental agencies and other data required by this code or by the department.*

*USE (USED). The purpose for which a building, structure, or space is occupied or utilized, unless otherwise indicated by the text. Use (used) shall be construed as if followed by the words “or is intended, arranged, or designed to be used.”*

*UTILITY COMPANY OR PUBLIC UTILITY COMPANY. The term shall be construed to have the same meaning as that contained in section two of the New York state public service law.*

*UTILITY CORPORATION OR PUBLIC UTILITY CORPORATION. The term shall be construed to have the same meaning as that contained in section two of the New York state public service law.*

*WORK NOT CONSTITUTING MINOR ALTERATIONS OR ORDINARY REPAIRS. See section 28-105.4.2.1.*

*WRITING (WRITTEN). The term shall be construed to include handwriting, typewriting, printing, photo-offset, or any other form of reproduction in legible symbols or characters, including, in the discretion of the commissioner, electronic media.*

*WRITTEN NOTICE. A notification in writing delivered by hand to the person or parties intended, or delivered at or sent by mail or in the discretion of the commissioner by electronic media to the last address known to the party giving such notice.*

*ZONING RESOLUTION. The zoning resolution of the city of New York, adopted December fifteenth, nineteen hundred sixty-one, including all amendments thereto.*

*ARTICLE 102  
APPLICABILITY*

*§28-102.1 General. Where, in any specific case, different sections of this code specify different materials, methods of construction or other requirements, the most restrictive shall govern. Where a general requirement conflicts with a specific requirement, the specific requirement shall govern. Where British and metric units of measurement conflict, the British units shall govern.*

*§28-102.2 Other laws. The provisions of this code do not presumptively provide for matters that are contained in the charter, the labor law, the multiple dwelling law, the zoning resolution, or the general city law. Where there is conflict or inconsistency between the requirements of this code and other applicable laws and rules, unless otherwise required, such conflict shall be resolved in favor of the more restrictive requirement.*

*§28-102.3 Separability. If any clause, sentence, paragraph, section or part of this code shall be adjudged to be invalid, such judgment shall not affect, impair or invalidate the remainder thereof, but shall be confined in its operation to the clause, sentence, paragraph, or part thereof directly involved in the controversy in which such judgment shall have been rendered.*

*§28-102.4 Existing buildings. The lawful use or occupancy of any existing building or structure, including the use of any service equipment therein, may be continued unless a retroactive change is specifically required by the provisions of this code or other applicable laws or rules. The continuation of the unlawful use or occupancy of a building or structure after the effective date of this code contrary to the provisions of this code or other applicable law or rule shall be a violation of this code.*

*§28-102.4.1 Existing buildings must comply with the applicable retroactive requirements of the 1968 building code. Existing buildings must comply with the applicable retroactive requirements of the 1968 building code including those requiring the installation of fire safety and building safety systems and the filing of verifying reports with the department of such installations by the dates specified in*

*section 27-228.5 of the administrative code or in other applicable provisions of such 1968 building code. A violation of such provisions shall be a violation of this code.*

*§28-102.4.2 Change in use or occupancy. Except as otherwise provided in sections 28-101.4.1, 28-101.4.2 28-101.4.3 or 28-101.4.4 changes in the use or occupancy of any building or structure made after the effective date of this code shall comply with the provisions of this code. Any changes made in the use or occupancy of a building or structure not in compliance with this code shall be prohibited and shall be a violation of this code. After a change in use or occupancy has been made in a building, the re-establishment of a prior use or occupancy that would not be lawful in a new building of the same construction class shall be prohibited unless and until all the applicable provisions of this code and other applicable laws and rules for such reestablished use or occupancy shall have been complied with. A change from a use prohibited by the provisions of this code, but which was permitted prior to the effective date of this code, to another use prohibited by the provisions of this code shall be deemed a violation of this code.*

*§28-102.4.3 Alteration of existing structures. Except as otherwise provided in sections 28-101.4.1, 28-101.4.2, 28-101.4.3 and 28-101.4.4, existing structures altered after the effective date of this code shall comply with the provisions of this code. In accordance with subdivision eleven of section three of the multiple dwelling law and article 4 of subchapter 1 of the 1968 building code, at the option of the owner, multiple dwellings erected prior to December 6, 1969 may be altered and buildings erected prior to December 6, 1969 may be converted to multiple dwellings in accordance with applicable provisions of the multiple dwelling law and the building laws and regulations in effect prior to December 6, 1968, provided the general safety and public welfare are not thereby endangered.*

*§28-102.4.4 Occupancy classifications. With regard to existing buildings, references to occupancy classifications in this code shall be deemed to refer to the equivalent occupancy classification under the 1968 building code.*

*§28-102.5 Grading of lots. The regulation of lots, in conformity with the street on which they are situated, shall be calculated at curb level. Where a lot has more than one street frontage, and is so situated that the street frontages intersect, the curb of the longest street frontage shall be used. When the street frontages do not intersect, the curb along each frontage shall be used to one-half the depth of the lot between street*

*frontages. A lot as referred to in this section 28-102.5 shall mean a parcel of land twenty-five feet by one hundred feet, or less, in one ownership whether adjacent land be in the same or other ownership; but, for this purpose, no land in the same ownership may be divided into lots smaller than twenty-five feet by one hundred feet.*

*§28-102.6 Appendices. All enacted appendices are a part of the provisions of this code.*

*ARTICLE 103  
DUTIES AND POWERS OF COMMISSIONER OF BUILDINGS*

*§28-103.1 Jurisdiction. This code shall be enforced by the commissioner of buildings, pursuant to the provisions of section six hundred forty-three of the New York city charter. However, the commissioner of small business services may also enforce all of the provisions of this code with respect to buildings under the jurisdiction of the department of small business services and the fire commissioner may also enforce all the provisions of this code relating to:*

- 1. The approved number of persons in places of assembly (overcrowding);*
- 2. Obstruction of aisles, corridors, and exits;*
- 3. The posting and availability for inspection of certificates of occupancy or other authorization of lawful occupancy, certificates of compliance and place of assembly certificates of operation;*
- 4. The maintenance of fire, smoke and carbon monoxide detection and alarm systems, fire extinguishing systems, refrigerating systems, storage tanks and auxiliary storage tanks for oil burning equipment, exit signs and path markings, and any fire or life safety system, equipment or device intended for use by fire fighting personnel or whose use or operation is subject to the New York city fire code or other law or rule enforced by the New York city fire department, and any related installation and signage; and*
- 5. The installation and testing of fire alarm systems, smoke-detecting and carbon monoxide detecting devices that are interconnected with a fire alarm system or monitored by a central station, and fire extinguishing systems for commercial cooking appliances.*

*§28-103.1.1 Installation of equipment required by the New York city fire code. Where the installation of exit signs, emergency means of egress illumination, special mechanical ventilation and sprinkler and fire alarm systems is required by the New York city fire code, the fire commissioner shall require such installations to be in accordance with this code.*

*§28-103.1.2 Enforcement of New York city construction codes on property within the jurisdiction of the*

*department of small business services. This code and the 1968 building code shall apply to property within the jurisdiction of the department of small business services pursuant to the New York city charter including, but not limited to, structures on waterfront property used in conjunction with and in furtherance of waterfront commerce and/or navigation. It shall be administered and enforced by the department of small business services in the same manner as property within the jurisdiction of the department.*

*§28-103.2 Interpretation. This code shall be liberally interpreted to secure the beneficial purposes thereof.*

*§28-103.3 Variations. The requirements and standards prescribed in this code shall be subject to variation in specific cases by the commissioner, or by the board of standards and appeals, under and pursuant to the provisions of paragraph two of subdivision (b) of section six hundred forty-five and section six hundred sixty-six of the New York city charter, as amended.*

*§28-103.4 Appeals. An appeal from any decision or interpretation of the commissioner may be taken to the board of standards and appeals pursuant to the procedures of the board, except as provided in section 25-205 of the administrative code or as otherwise provided in this code.*

*§28-103.5 Seal; judicial notice. The commissioner may design and adopt a seal for the department for use in the authentication of the orders and proceedings of the department, and for such other purposes as the commissioner may prescribe. The courts shall take judicial notice of such seal, and of the signature of the commissioner, the deputy commissioners, and the borough superintendents of the department.*

*§28-103.6 Proofs, affidavits and oaths. Proofs, affidavits and examinations as to any matter arising in connection with the performance of any of the duties of the department may be taken by or before the commissioner, or a deputy commissioner, or such other person as the commissioner may designate; and such commissioner, deputy or other person may administer oaths in connection therewith.*

*§28-103.7 Cooperation of other departments. Upon request of the commissioner, it shall be the duty of all departments to cooperate with the department of buildings at all times, and to furnish to such department such information, reports and assistance as the commissioner may require.*

*§28-103.8 Matters not provided for. Any matter or requirement essential for fire or structural safety or essential for the safety or health of the occupants or users of a structure or the public, and which is not*

*covered by the provisions of this code or other applicable laws and rules, shall be subject to determination and requirements by the commissioner in specific cases.*

*§28-103.9 Additional tests. Whenever there is insufficient evidence of compliance with the provisions of this code, or evidence that a material or method of construction does not conform to the requirements of this code, or in order to substantiate claims for alternative materials or methods, the commissioner shall have the authority to require tests as evidence of compliance to be made at no expense to the city. Test methods shall be as specified in this code, or by other recognized test standards approved by the commissioner. In the absence of recognized and accepted test methods, the commissioner shall approve the testing procedures. Tests shall be performed as directed by the commissioner. Reports of such tests shall be retained by the department for the period required for retention of public records.*

*§28-103.10 Supporting documentation for materials. Whenever this code or the rules of the department permits the use of material regulated in its use by this code or the 1968 building code without the prior approval of the commissioner, the commissioner may, in the interest of public safety, require the submittal of supporting documentation that any material used or proposed to be used complies with the applicable code standard for such use. Such supporting documentation may consist of but shall not be limited to certification documents of an approved agency, test reports, analysis, computations or other evidence of such compliance.*

*§28-103.11 Applications and permits. The department shall receive and review applications, construction documents, and other submittal documents and shall issue permits, in accordance with the provisions of this code.*

*§28-103.12 Identification. Department personnel shall carry metal badges with suitable inscriptions thereon or other prescribed identification when inspecting structures or premises or otherwise in the performance of their duties under this code.*

*§28-103.13 Right of entry. The commissioner or his or her authorized representatives, in the discharge of their duties, shall have the right to enter upon and inspect, at all reasonable times, any buildings, enclosure, premises, or any part thereof, or any signs or service equipment contained therein or attached thereto for the purpose of determining compliance with the provisions of this code and other applicable building laws and rules. Officers and employees of the department shall identify themselves by exhibiting*

*the official badge or other identification prescribed by the department; and other authorized representatives of the commissioner shall identify themselves by producing and exhibiting their authority in writing signed by the commissioner. If access is not obtained, the commissioner shall have recourse to remedies provided by law to secure entry.*

*§28-103.14 Department records. The department shall keep official records of applications received, permits and certificates issued, fees collected, reports of inspections, and notices and orders issued. Such records shall be retained in the official records for the period required for retention of public records.*

*§28-103.14.1 List of permits for cellular antenna. The commissioner shall maintain a separate list of alteration permits issued for the erection or placement of antennae used to provide cellular telephone or similar service or any structure related to such service which shall, at a minimum, set forth the name, business address and business telephone number of the applicant, the date of the application, the date the permit was issued, the location for which the permit was issued, including the premises address and the zoning district, whether residential, commercial, or manufacturing, and the number of permits issued for such purpose at the same location. Such list shall be made available to the public upon request between regular business hours and shall be available to the public in electronic format on a 24-hour basis on the department's website.*

*§28-103.15 Insurance. The commissioner may require applicants for permits to obtain and furnish proof of workers' compensation, disability and general liability insurance in such amounts and in accordance with such specifications as shall be set forth in the rules of the department or as otherwise required by law.*

*§28-103.16 Inspections of completed buildings, structures, signs, service equipment and construction machinery and equipment. In addition to other required inspections, the commissioner may make or require inspections of completed buildings, structures, signs, service equipment installations and construction machinery and equipment to ascertain compliance with the provisions of this code and other laws that are enforced by the department. Such inspections may be made on behalf of the department by officers and employees of the department and other city departments and governmental agencies; and by approved agencies, special inspectors or other persons when the commissioner is satisfied as to their qualifications and reliability. The commissioner may accept inspection and test reports from persons authorized by this code or by the commissioner to perform such inspections. Such reports shall be filed*

*with the department.*

*§28-103.17 Certain outside work, employment and financial interests of department employees prohibited. It shall be unlawful for any officer or employee of the department to be engaged in conducting or carrying on business as an architect, engineer, carpenter, plumber, iron worker, mason or builder, or any other profession or business concerned with the construction, alteration, sale, rental, development, or equipment of buildings. It shall also be unlawful for such employees to be engaged in the manufacture or sale of automatic sprinklers, fire extinguishing apparatus, fire protection devices, fire prevention devices, devices relating to the means or adequacy of exit from buildings, or articles entering into the construction or alteration of buildings, or to act as agent for any person engaged in the manufacture or sale of such articles, or own stock in any corporation engaged in the manufacture or sale of such articles.*

*§28-103.18 Investigation of complaints. The commissioner shall cause all complaints to be investigated. For purposes of investigating complaints of violations of law enforced by the department, the commissioner may by rule establish a program to classify structures based on their enforcement history and may create criteria for such classification and assign enforcement resources accordingly.*

*§28-103.18.1 Complaint records. The department shall keep records of complaints made by any person in reference to any building or other matter under the jurisdiction of the department. Recorded complaints shall include the name and residence of the complainant, the name of the person complained of, the date of the entry of the complaint and any suggested remedies. Except for entries of names and residences of the complainants, such records shall be made available for public examination.*

*§28-103.19 Addition, modification, and deletion of referenced standards. The standards referenced in this code may be added to, deleted or modified pursuant to local law or by rule of the department. Every such rule adding, deleting or modifying a referenced standard shall indicate the promulgating agency of the standard, the standard identification, the effective date and title and the section or sections of this code to which such standard applies. The commissioner shall act in consultation with the fire commissioner on matters relating to fire safety.*

*Exception: Referenced standards in the New York city plumbing code, other than referenced national standards contained in chapter 13 of such code, shall not be added to, deleted, or modified by rule.*

*ARTICLE 104  
CONSTRUCTION DOCUMENTS*

*§28-104.1 General. The department shall not issue a permit pursuant to this code, or a place of assembly operation certificate pursuant to this code unless and until it approves all required construction documents for such work. The department shall not issue an electrical work permit pursuant to the New York city electrical code for fire and emergency alarm systems, solar panels and wind turbines unless and until it approves all required construction documents for such work. Such construction documents shall be prepared by or under the supervision of a registered design professional as required by this code. An application for an associated work permit shall not be submitted to the department until all required construction documents have been approved.*

*§28-104.1.1 Construction documents subject to the New York city fire code. Except as the New York city fire code may otherwise provide, the construction documents for facilities and systems for which the fire code provides design and installation requirements, including but not limited to fire alarm systems, flammable and combustible liquids, compressed gases, explosives and other hazardous materials; flammable spraying systems and facilities; automatic water sprinkler systems for hazardous material and combustible material storage, and non-water fire extinguishing systems, shall be subject to the review and approval of the fire commissioner in accordance with the New York city fire code. Approval by the department of construction documents for new or existing buildings containing such facilities and systems shall not be construed as approval of such systems and facilities.*

*§28-104.2 Application for approval of construction documents. The department shall assign a job number to and docket all applications for approval of construction documents and any amendments thereto filed with it. The department shall examine the construction documents promptly after their submission. The examination shall be made under the direction of the commissioner for compliance with the provisions of this code and other applicable laws and rules. The personnel employed for the examination of construction documents shall be qualified registered design professionals, experienced in building construction and design.*

*§28-104.2.1 Less than full examination of construction documents. The commissioner may, in the commissioner's discretion, establish a program whereby construction documents may be accepted with less than full examination by the department based on the professional certification of an applicant*

*who is a registered design professional.*

*§28-104.2.1.1 Effect of acceptance. Except as otherwise specified in this code or in the rules of the department, for the purposes of this code, the acceptance of construction documents in accordance with such program shall have the same force and effect as the approval of construction documents after full examination by the department. Except as otherwise specified in this code or in the rules of the department, references in this code to approved construction documents or to the approval of construction documents shall also be deemed to refer to accepted construction documents or to the acceptance of construction documents, as applicable.*

*§28-104.2.1.2 Program requirements. The commissioner may establish qualifications and requirements for registered design professionals to participate in such program and may exclude, suspend or otherwise sanction participants for cause.*

*§28-104.2.1.3 Mandatory program requirements. Registered design professionals participating in such program shall be subject to sections 28-104.2.1.3 .1 through 28-104.2.1.3 .2*

*§28-104.2.1.3.1 Probation. A registered design professional shall not be eligible to participate in the program during any period of probation imposed as a sanction by the board of regents pursuant to section 6511 of the education law.*

*§28-104.2.1.3.2 Mandatory sanctions. The commissioner shall, after the opportunity for a hearing before the office of administrative trials and hearings in accordance with department rules, exclude, suspend or otherwise condition the participation of a registered design professional who (i) knowingly or negligently submits a professional certification of an application and/or construction documents that contains false information or is not in compliance with all applicable provisions of law, or (ii) submits two professionally certified applications for construction document approval within any 12-month period containing errors that result in revocation of an associated permit or that otherwise demonstrate incompetence or a lack of knowledge of applicable laws. The term “otherwise condition” shall mean limitations on such professional’s participation in the program, such as, but not limited to, audits and monitoring of the registered design professional’s applications and other submissions.*

*§28-104.2.1.3.2.1 Reinstatement. A registered design professional who is excluded from the program in accordance with section 28-104.2.1.3 may apply for reinstatement one year or more after such exclusion. An applicant who the commissioner finds is qualified to resume participation in the program shall be on probation for a period of not less than 6 months after reinstatement and during that time shall as a condition of such reinstatement attend one or more training or continuing education courses, approved by the department, related to compliance with the building code and related laws and rules and the zoning\_resolution. The professional shall submit satisfactory proof of the successful completion of such training or continuing education courses to the department.*

*§28-104.2.1.3.2.2 Construction. Nothing herein shall be construed to limit the commissioner's power, consistent with state and local law, to adopt rules that include additional grounds to limit the filing privileges of or otherwise sanction registered design professionals, after the opportunity for a hearing, who it determines, knowingly or negligently submit applications or other documents to the department that contain false information or are not in compliance with all applicable provisions of law or that otherwise demonstrate incompetence or a lack of knowledge of applicable law or standards.*

*§28-104.2.1.4 Database. The department shall create and maintain a database of all registered design professionals who have been excluded, suspended or otherwise sanctioned by the department. Within 7 business days of the date a sanction is imposed, the department shall post on its website and shall make available upon request, the name of the registered design professional, a description of the sanction, the initial date of the sanction, the reinstatement date, if applicable, the address of the premises for which the application associated with the sanction was submitted, and whether the sanction was imposed after a hearing or a settlement.*

*§28-104.2.1.5 Applicant requirement. The program shall include a condition that the applicant remain with the job until it is signed-off by the department and that if the applicant withdraws from the job before the issuance of a letter of completion or certificate of occupancy, as*

*applicable, all work shall stop and no permit, letter of completion or certificate of occupancy shall be issued until a successor registered design professional is designated as applicant and such person submits (i) a professional certification indicating his or her concurrence with the construction documents as accepted by the department or (ii) new construction documents are approved or accepted by the department.*

*§28-104.2.2 Approval or acceptance to be indicated on construction documents. All construction documents, when approved, shall be stamped or endorsed “approved” under the official method of the department, followed by a notation of the date except that construction documents accepted with less than full examination by the department shall be stamped or endorsed “accepted” instead of “approved”. One set of “approved” or “accepted” construction documents shall be retained by the department and another set shall be maintained at the job site until the work authorized by the permit is completed and signed-off by the department.*

*§28-104.2.3 Time limitation of application. An application for approval of construction documents shall be deemed to have been abandoned 12 months after the date of its submission, unless such application has been diligently prosecuted after rejection in whole or in part, or unless a permit shall have been issued pursuant to this code, except that the commissioner may upon application, for reasonable cause, grant extensions of time for additional 12-month periods.*

*§28-104.2.4 Conditions of approval. All construction documents approved by the commissioner shall be conditioned upon and subject to compliance with the requirements of this code and other applicable laws and rules in effect at the time of issuance of the associated work permit or place of assembly certificate of operation.*

*§28-104.2.5 Phased or partial approval. In the case of construction documents for the construction of new buildings or the alteration of buildings, the commissioner may grant partial approval of construction documents for the issuance of foundation and earthwork permits before the construction documents for the entire building or structure have been submitted. The approval of such partial applications will be subject to the submittal and approval of construction documents, filed together or separately, comprising:*

- 1. The lot diagram showing the exact location of the lot and dimensions to the nearest corner;*

2. *A complete zoning analysis showing compliance of the proposed work with the zoning resolution;*
3. *The foundation plans, as provided for in this code; and*
4. *The floor and roof plans showing compliance with exit requirements, as provided for in this code.*

*The issuance of such foundation and earthwork permit is subject to submission of required submittal documents. The owner and the holder of such foundation and earthwork permit shall proceed at their own risk with the construction operation and without assurance that a permit for the entire structure will be granted.*

*§28-104.2.6 Deferred submittal. With the prior approval of the department, the applicant may defer submittal of portions of the design until a specified period of time after the issuance of a permit. The applicant shall list the deferred submittal items on the initial application for construction document approval. The deferred submittal items shall not be constructed or installed until the design and submittal documents for the item have been approved by the department.*

*§28-104.2.7 Time period for review. Completed construction documents complying with the provisions of this code and other applicable laws and rules shall be approved by the commissioner and written notice of approval shall be given the applicant promptly and no later than 40 calendar days after the submission of a complete application.*

*Exceptions:*

1. *On or before the fortieth day, the commissioner may, for good cause shown and upon notification to the applicant, extend such time for an additional 20 calendar days.*
2. *Such time period for review shall commence in accordance with article 107 for single room occupancy multiple dwellings.*

*§28-104.2.8 Notification of rejection. Applications failing to comply with the provisions of this code and other applicable laws and rules shall be rejected and written notice of rejection, stating the grounds of rejection, shall be given the applicant promptly and not later than the date required in section 28-104.2.7.*

*§28-104.2.9 Resubmission. Whenever an application has been rejected and is thereafter revised and*

*resubmitted to meet the stated grounds of rejection, the revised application and construction documents shall be approved if they meet the stated grounds of rejection and otherwise comply with the provisions of this code and other applicable laws and rules or shall be rejected if they fail to meet the stated grounds of rejection or otherwise fail to so comply. Written notice of approval or written notice of rejection, stating the grounds of rejection, shall be given the applicant promptly and not later than 20 calendar days after the resubmission of such documents.*

*§28-104.2.10 Revocation of approval. The commissioner may, on notice to the applicant, revoke the approval of construction documents for failure to comply with the provisions of this code or other applicable laws or rules; or whenever there has been any false statement or any misrepresentation as to a material fact in the submittal documents upon the basis of which such approval was issued; or whenever an approval has been issued in error and conditions are such that approval should not have been issued. Such notice shall inform the applicant of the reasons for the proposed revocation and that the applicant has the right to present to the commissioner or his or her representative within 10 business days of personal service or 15 calendar days of the posting of service by mail, information as to why the approval should not be revoked.*

*§28-104.2.10.1 Effect on work permit. The effect of revocation of approval of construction documents is the automatic revocation of all associated work permits that may have been issued.*

*§28-104.3 Amended construction documents. Subject to the time limitations set forth in this code, amendments to approved construction documents shall be submitted, reviewed and approved before the final inspection of the work or equipment is completed; and such amendments when approved shall be deemed part of the original construction documents. The department may allow minor revisions of construction documents to be made and submitted to the department after the completion of work but prior to sign-off of the work in accordance with department rules.*

*§28-104.4 Place of filing. Except as otherwise provided by rule, applications for construction document approval shall be filed in the department office in the borough in which the work or equipment is located or at the discretion of the commissioner shall be submitted electronically.*

*§28-104.5 Fees. Filing fees shall be paid as required by article 112.*

*§28-104.6 Applicant. The applicant for approval of construction documents shall be the registered design*

professional who prepared or supervised the preparation of the construction documents on behalf of the owner.

*Exception: The applicant may be other than a registered design professional for:*

1. *Limited plumbing alterations, limited sprinkler alterations, and limited standpipe alterations, where the applicant is licensed to perform such work pursuant to this code;*
2. *Demolition applications other than those specified in section 3306.5 of the New York city building code, where the applicant is the demolition contractor performing such demolition. In such cases, the commissioner may require structural plans designed by a registered design professional to address any critical structural, sequencing or site safety items;*
3. *Elevator applications;*
4. *Other categories of work consistent with rules promulgated by the commissioner.*

*§28-104.7 Submittal of construction documents. All construction documents submitted to the department shall contain such information and shall be in such form as shall be set forth in this section 28-104.7 and the rules of the department. Construction documents shall also conform to standards as may be prescribed in the applicable sections of the construction codes.*

*§28-104.7.1 Scope. Construction documents shall be complete and of sufficient clarity to indicate the location and entire nature and extent of the work proposed, and shall show in detail that they conform to the provisions of this code and other applicable laws and rules; if there exist practical difficulties in the way of carrying out the strict letter of the code, laws or rules, the applicant shall set forth the nature of such difficulties.*

*§28-104.7.2 Forms. The applicant shall submit construction documents on or accompanied by forms provided by the department.*

*§28-104.7.3 Media. Construction documents shall be printed upon suitable material, or presented as electronic media documents as determined by the commissioner. Plans shall be drawn to suitable scale.*

*§28-104.7.4 Quantities. The applicant shall submit the number of copies of construction documents as the commissioner shall require.*

*§28-104.7.5 Citations to code sections required. In no case shall terms such as “code compliant”,*

“approved”, “legal” or similar terms be used in the construction documents as a substitute for specific reference to a particular code section, approval or standard in order to show compliance with code requirements or other applicable laws and rules.

§28-104.7.6 City Datum. All elevations noted in the construction documents shall be referred to and clearly identified as the United States coast and geodetic survey mean sea level datum of 1929 (national geodetic vertical datum, “NGVD”), which is hereby established as the city datum. By way of examples, tables 104.7.6.1 through 104.7.6.5 shall be used to convert borough elevations to their corresponding equivalent NGVD elevations.

**TABLE 104.7.6.1**

<b>BRONX</b> <b>Elevations</b>	<b>To obtain</b> <b>equivalency:</b>	<b>NGVD</b> <b>Elevations</b>
10.000	→ add 2.608 →	12.608
7.392	→ add 2.608 →	10.000

**TABLE 104.7.6.2**

<b>BROOKLYN</b> <b>Elevations</b>	<b>To obtain</b> <b>equivalency:</b>	<b>NGVD</b> <b>Elevations</b>
10.000	→ add 2.547 →	12.547
7.453	→ add 2.547 →	10.000

**TABLE 104.7.6.3**

<b>MANHATTAN</b> <b>Elevations</b>	<b>To obtain</b> <b>equivalency:</b>	<b>NGVD</b> <b>Elevations</b>
10.000	→ add 2.752 →	12.752

**TABLE 104.7.6.4**

<b>QUEENS Elevations</b>	<b>To obtain equivalency:</b>	<b>NGVD Elevations</b>
10.000	→ add 2.725 →	12.725
7.275	→ add 2.725 →	10.000

**TABLE 104.7.6.5**

<b>+STATEN ISLAND Elevations</b>	<b>To obtain equivalency:</b>	<b>NGVD Elevations</b>
10.000	→ add 3.192 →	13.192
6.808	→ add 3.192 →	10.000

§28-104.7.7 *Identification of special inspections.* Whenever materials are subject to special inspection, as provided in this code, such materials shall be listed on the title sheet of the construction documents, or the sheet immediately following, as subject to special inspection.

§28-104.7.8 *Identification of materials.* Construction documents shall identify all materials proposed to be used, including identification of the test standard to which they conform, and where applicable, supporting information or test data from the manufacturer attesting to such conformance.

§28-104.7.9 *Energy conservation construction code.* The application shall contain all information required to demonstrate compliance with the energy conservation construction code of New York state.

§28-104.7.10 *Preparer.* Each plan or drawing shall contain the registration number, seal, signature (or equivalent as approved by the commissioner) and address of the registered design professional who prepared or supervised the preparation of the plans.

§28-104.7.11 *Additional information.* In addition to the data and information specified in this code and the rules of the department, the commissioner is authorized to require the submission of additional plans, surveys, computations, analyses, test reports, photographs, special inspection and such other data and information as may be necessary to determine compliance with this code and other

*applicable laws and rules.*

*§28-104.7.12 Waiver of certain documents. The commissioner is authorized to waive the submission of any of the required construction documents and other data if review of such documents is not necessary to ascertain compliance with this code or not required for the phase of work for which a permit is sought.*

*§28-104.8 Applications. All applications shall comply with sections 28-104.8.1 through 28-104.8.4.*

*§28-104.8.1 Applicant statements. The application shall contain the following signed and sealed statements by the applicant:*

- 1. A statement certifying that the applicant is authorized by the owner to make the application and certifying that, to the best of the applicant's knowledge and belief, the construction documents comply with the provisions of this code or the 1968 building code, if applicable, and other applicable laws and rules; if there exist practical difficulties in the way of carrying out the strict letter of the code, laws or rules, the applicant shall set forth the nature of such difficulties in such signed statement; and*
- 2. A statement certifying (i) that the site of the building to be altered or demolished, or the site of the new building to be constructed, contains no occupied housing accommodations subject to rent control or rent stabilization under chapters 3 and 4 of title 26 of the administrative code, or (ii) that the owner has notified the New York state division of housing and community renewal of the owner's intention to file such plans and has complied with all requirements imposed by the regulations of such agency as preconditions for such filing; or (iii) that the owner has not notified such agency of the owner's intention to file because the nature and scope of the work proposed, pursuant to such regulations, does not require notification.*
- 3. A professional certification.*
- 4. A statement certifying compliance with the energy conservation construction code of New York state.*

*§28-104.8.2 Owner statement. The application shall contain a signed statement by the owner, cooperative owners' corporation, or condominium owners' association stating that the applicant is authorized to make the application and, if applicable, acknowledging that construction documents will*

*be accepted with less than full examination by the department based on the professional certification of the applicant. Such statement shall list the owner's full name and address, as well as the names of the principal officers, partners or other principals if a corporation, partnership or other entity. Principal officers of a corporation shall be deemed to include the president, vice presidents, secretary and treasurer.*

*§28-104.8.3 Information of applicant, filing representative, and owner. The application shall set forth the full names, addresses, telephone numbers, and where available, e-mail addresses of the following persons and where any of such persons are corporations, partnerships or other business entities, the names and addresses of the principal officers, partners or other principals of such entity:*

- 1. The applicant;*
- 2. The filing representative;*
- 3. The owner, cooperative owners' corporation, or condominium owners' association; and*
- 4. Where a person other than the owner has engaged the applicant, such cooperative unit shareholder, condominium unit owner, lessee, or mortgagee.*

*§28-104.8.4 Tenant protection plan. Construction documents for alterations of buildings in which any dwelling unit will be occupied during construction shall include a tenant protection plan. Such plan shall contain a statement that the building contains dwelling units that will be occupied during construction and shall indicate in sufficient detail the specific units that are or may be occupied during construction, the means and methods to be employed to safeguard the safety and health of the occupants, including, where applicable, details such as temporary fire-rated assemblies, opening protectives, or dust containment procedures. The elements of the tenant protection plan may vary depending on the nature and scope of the work but at a minimum shall make detailed and specific provisions for:*

- 1. Egress. At all times in the course of construction provision shall be made for adequate egress as required by this code and the tenant protection plan shall identify the egress that will be provided. Required egress shall not be obstructed at any time except where approved by the commissioner.*

2. *Fire safety. All necessary laws and controls, including those with respect to occupied dwellings, as well as additional safety measures necessitated by the construction shall be strictly observed.*
3. *Health requirements. Specification of methods to be used for control of dust, disposal of construction debris, pest control and maintenance of sanitary facilities, and limitation of noise to acceptable levels shall be included.*
  - 3.1. *There shall be included a statement of compliance with applicable provisions of law relating to lead and asbestos.*
4. *Compliance with housing standards. The requirements of the New York city housing maintenance code, and, where applicable, the New York state multiple dwelling law shall be strictly observed.*
5. *Structural safety. No structural work shall be done that may endanger the occupants.*
6. *Noise restrictions. Where hours of the day or the days of the week in which construction work may be undertaken are limited pursuant to the New York city noise control code, such limitations shall be stated.*

*ARTICLE 105  
PERMITS*

*§28-105.1 General. It shall be unlawful to construct, enlarge, alter, repair, move, demolish, remove or change the use or occupancy of any building or structure in the city, or to erect, install, alter, repair, or use or operate any sign or service equipment in or in connection therewith, or to erect, install, alter, repair, remove, convert or replace any gas, mechanical, plumbing or fire suppression system in or in connection therewith or to cause any such work to be done unless and until a written permit therefore shall have been issued by the commissioner in accordance with the requirements of this code, subject to such exceptions and exemptions as may be provided in section 28-105.4.*

*§28-105.2 Classification of work permits. For the purposes of this code, work permits shall be classified as follows:*

1. *New building permits: for the construction of new buildings.*
2. *Alteration permits: for the alteration of buildings or structures, including partial demolition in conjunction therewith.*

3. *Foundation and earthwork permits: for the construction or alteration of foundations, including earthwork, excavation, and fill.*
4. *Full demolition permits: for the full demolition of buildings or structures.*
5. *Plumbing permits: for the installation or alteration of plumbing and plumbing systems, including gas piping. Such permits shall include permits for limited plumbing alterations.*
6. *Sign permits: for the erection or alteration of signs and sign structures.*
7. *Service equipment permits: for the installation or alteration of service equipment, including but not limited to air conditioning and ventilating systems, boilers, elevators, escalators, moving walkways and dumbwaiters.*
8. *Temporary construction equipment permits: for the erection, installation and use of temporary structures to facilitate construction and/or for public or worker safety during construction, including but not limited to temporary fences, railings, catch platforms, over-the-sidewalk chutes, footbridges, sidewalk sheds, and scaffolds.*
9. *Fire suppression system permits: for the installation and alteration of fire suppression systems, including but not limited to sprinkler systems, standpipe systems, and non-water systems. Such permits shall include permits for limited sprinkler alterations and limited standpipe alterations.*
10. *Crane and derrick permits: for the use of power operated cranes and derricks during construction.*

*§28-105.3 Separate permits required. Separate work permits shall be required, as provided above, except that separate permits for foundations and earthwork, or for the installation or alteration of air conditioning systems, ventilation systems, and heating systems shall not be required whenever such work is included in and forms a part of the construction documents filed for the construction of a new building or the alteration of a building or structure.*

*§28-105.4 Work exempt from permit. Exemptions from permit requirements of this code shall not be deemed to grant authorization for any work to be done in any manner in violation of the provisions of this code, the zoning resolution or any other law or rules enforced by the department. Such exemptions shall not relieve any owner of the obligation to comply with the requirements of or file with other city agencies. Unless otherwise indicated, permits shall not be required for the following:*

1. *Emergency work, as set forth in section 28-105.4.1.*

2. *Minor alterations and ordinary repairs, as described in section 28-105.4.2.*
3. *Certain work performed by a public utility company or public utility corporation, as set forth in section 28-105.4.3.*
4. *Ordinary plumbing work, as set forth in section 28-105.4.4.*
5. *Permits for the installation of certain signs, as set forth in section 28-105.4.5.*
6. *Other categories of work as described in department rules, consistent with public safety.*

*§28-105.4.1 Emergency work. Work that would otherwise require a permit may be performed without a permit to the extent necessary to relieve an emergency condition. An application for a permit shall be submitted within 2 business days after the commencement of the emergency work and shall include written description of the emergency condition and the measures undertaken to mitigate the hazard.*

*Emergency work may include but shall not be limited to:*

1. *Erection of sidewalk sheds, fences, or other similar structures to protect the public from an unsafe condition.*
2. *Stabilization of unsafe structural conditions.*
3. *Repair of gas leaks.*
4. *Repair or replacement of heating or hot water equipment servicing residential occupancies during the heating season as established by the New York city housing maintenance code.*
5. *Replacement of parts required for the operation of a combined standpipe or sprinkler system.*

*§28-105.4.2 Minor alterations and ordinary repairs. A permit shall not be required for minor alterations and ordinary repairs.*

*§28-105.4.2.1 Definitions. The following words and terms shall, for the purposes of this section 28-105.4.2 and as used elsewhere in this code, have the meanings shown herein.*

*MINOR ALTERATIONS. Minor changes or modifications in a building or any part thereof, excluding additions thereto, that do not in any way affect health or the fire or structural safety of the building or the safe use and operation of the service equipment therein. Minor alterations shall not include any of the work described as “work not constituting minor alterations or ordinary repairs.”*

*ORDINARY REPAIRS. Replacements or renewals of existing work in a building, or of parts of the*

*service equipment therein, with the same or equivalent materials or equipment parts, that are made in the ordinary course of maintenance and that do not in any way affect health or the fire or structural safety of the building or the safe use and operation of the service equipment therein. Ordinary repairs shall include the repair or replacement of any plumbing fixture, piping or faucets from any exposed stop valve to the inlet side of a trap. Ordinary repairs shall not include any of the work described as “work not constituting minor alterations or ordinary repairs.”*

*WORK NOT CONSTITUTING MINOR ALTERATIONS OR ORDINARY REPAIRS. Minor alterations or ordinary repairs shall not include:*

- 1. The cutting away of any load bearing or required fire rated wall, floor, or roof construction, or any portion thereof.*
- 2. The removal, cutting, or modification of any beams or structural supports;*
- 3. The removal, change, or closing of any required exit;*
- 4. The addition, rearrangement, relocation, removal or replacement of any parts of the building affecting loading or exit requirements, or light, heat, ventilation, or elevator requirements or accessibility requirements or any fire suppression system;*
- 5. Additions to, alterations of, or rearrangement, relocation, replacement, repair or removal of any portion of a standpipe or sprinkler system, water distribution system, house sewer, private sewer, or drainage system, including leaders, or any soil, waste or vent pipe, or any gas distribution system;*
- 6. Any plumbing work other than the repair or replacement of plumbing fixtures, piping or faucets from the exposed stop valve to the inlet side of a trap;*
- 7. The alteration or repair of a sign for which a permit is required; or*
- 8. Any other work affecting health or the fire or structural safety of the building or the safe use and operation of the service equipment therein.*

*§28-105.4.3 Public utility company or public utility corporation. A permit shall not be required for:*

- 1. The installation or alteration of gas service piping or gas meter piping including meters, valves, regulators, and related equipment, when such work is to be performed and serviced and maintained by utility corporations subject to the jurisdiction of the New York state public*

*service commission;*

- 2. The emergency repair of gas distribution piping when such work is performed by licensed master plumbers or by utility corporations subject to the jurisdiction of the New York state public service commission, in order to alleviate hazardous conditions, provided that a written report describing the details of such repairs shall be filed with the commissioner upon completion of the work.*

*§28-105.4.4 Ordinary plumbing work. The following ordinary plumbing work may be performed without a permit, provided that the licensed plumber performing such work: (i) provides a monthly report listing completed work and work in progress during the preceding month, including the block, lot and address of each job, a description of the work performed or in progress at each address, and the location in each building where the work was performed or is in progress; (ii) pays the fees for such work in accordance with this code; and (iii) submits to the department a certification that the work was performed in accordance with this code and all applicable laws and rules. Ordinary plumbing work shall include:*

- 1. The removal of a domestic plumbing system not connected to a fire suppression system, or the removal of a portion of such system.*
- 2. The relocation of up to two plumbing fixtures within the same room to a maximum of 10 feet (3048 mm) distant from the original location, except in health care facilities.*
- 3. The installation, replacement or repair of a food waste grinder (food waste disposal) or back flow preventer and the replacement or repair of a sump pump.*
- 4. The replacement of closet bends.*
- 5. In buildings in occupancy group R2 occupied by fewer than six families or in buildings in occupancy group R3, the replacement of a gas water heater or a gas fired boiler with a capacity of 350,000 BTU or less where the existing appliance gas cock is not moved, provided that the plumber has inspected the chimney and found it to be in good operational condition.*
- 6. The repair or replacement of any non-gas, non-fire suppression piping not longer than 10 feet (3048 mm) inside a building, or connected piping previously repaired or replaced under this provision.*

7. *The repair or replacement of non-fire suppression branch piping after the riser shutoff valve, including the replacement of fixtures, limited to two bathrooms and one kitchen per building per monthly reporting period.*

*§28-105.4.5 Sign permits. A sign permit shall not be required where the sign is:*

1. *Painted directly on the exterior wall surface of a building or on the surface of a fence;*
2. *A wall sign of not more than six square feet (0.56 m<sup>2</sup>) in area;*
3. *Erected by employees of a city agency, including traffic and other similar signs;*
4. *A ground sign advertising the sale or rental of the premises on which it is erected, provided the sign does not exceed 12 square feet (1.1 m<sup>2</sup>) in area;*
5. *Temporary and erected during construction work and related thereto; or*
6. *Temporary for special decorative display use for holidays, public demonstrations, or the promotion of civic, welfare or charitable purposes, except that signs that utilize streets or cross streets shall be subject to the requirements of the department of transportation.*
7. *Temporary signs announcing the sale or rental of real property.*

*§28-105.5 Application for permit. All applications for permits shall be submitted on forms furnished by the department. Applications shall include all information required by this code, other applicable law or the rules of the department. The applicant shall list any portions of the design that have been approved for deferred submittal in accordance with section 28-104.2.6. The application shall set forth an inspection program for the job. An application for a permit shall be submitted no later than 12 months after the approval of all required construction documents (other than those documents approved for deferred submittal).*

*§28-105.6 Fees. Applications for permits shall be accompanied by the payment of appropriate fees as provided for in article 112.*

*§28-105.7 Time limitation of applications. An application for a permit shall be deemed to have been abandoned 12 months after the date of its submission, unless such application has been diligently prosecuted after rejection in whole or in part, or a permit shall have been issued except that the*

*commissioner may, for reasonable cause, and upon payment of all reinstatement fees as provided for in this code, grant extensions of time for additional 12-month periods.*

*§28-105.8 Validity of permit. The issuance or granting of a permit shall not be construed to be a permit for, or an approval of, any violation of any of the provisions of this code or of any other law or rule. Permits presuming to give authority to violate or cancel the provisions of this code or other law or rule shall not be valid. The issuance of a permit based on construction documents and other data shall not prevent the commissioner from requiring the correction of errors in the construction documents and other data. The commissioner is authorized to prevent any occupancy, use or work in violation of this code, the zoning resolution or other law or rule enforced by the department.*

*§28-105.8.1 Duration of permit. Permits may be issued for a period of up to two years unless otherwise limited by law.*

*§28-105.8.2 Signature of commissioner on permit. Every permit issued by the commissioner shall have his or her signature affixed thereto; but the commissioner may authorize any subordinate to affix such signature, including by the use of electronic means.*

*§28-105.9 Expiration. All permits issued by the commissioner shall expire by limitation and become invalid if the permitted work or use is not commenced within 12 months from the date of issuance of the permit or, if commenced, is suspended or abandoned for a period of 12 months thereafter. All permits for work in an area of special flood hazard pursuant to Appendix G of the New York city building code shall expire if the actual start of permanent construction has not occurred within 180 days from the date on which such permit is issued. The commissioner may, however, upon good cause shown, reinstate a work permit at any time within a period of two years from the date of issuance of the original permit, provided that the work shall comply with all the requirements of this code and other applicable laws and rules in effect at the time application for reinstatement is made, and provided further that the applicant shall pay all reinstatement fees as required by article 112. The permit shall automatically expire upon the expiration of required insurance or if the applicant holds a license issued by the department upon the expiration or revocation of such license during the term of the permit.*

*§28-105.10 Suspension or revocation of permit. The commissioner is authorized to suspend or revoke a permit issued under the provisions of this code.*

*§28-105.10.1 Notice of proposed revocation. The commissioner may, on written notice to the permit holder, revoke any permit for failure to comply with the provisions of this code or other applicable laws or rules; or whenever there has been any false statement or any misrepresentation as to a material fact in the application or submittal documents upon the basis of which such approval was issued; or whenever a permit has been issued in error and conditions are such that the permit should not have been issued. Such notice shall inform the permit holder of the reasons for the proposed revocation and that the applicant has the right to present to the commissioner or his or her representative within 10 business days of delivery of the notice by hand or 15 calendar days of the posting of notice by mail, information as to why the permit should not be revoked.*

*§28-105.10.2 Immediate suspension in cases of imminent peril. The commissioner may immediately suspend any permit without prior notice to the permit holder when the commissioner has determined that an imminent peril to life or property exists. The commissioner shall forthwith notify the permit holder that the permit has been suspended and the reasons therefore, that it is proposed to be revoked, and that the permit holder has the right to present to the commissioner or his or her representative within 10 business days of delivery of the notice by hand or 15 calendar days of the posting of notice by mail information as to why the permit should not be revoked.*

*§28-105.11 Posting of permit. The building permit or copy shall be posted in a conspicuous place at the work site, visible to the public for the duration of the work or the use and operation of the equipment, or until the expiration of the permit. No such permit shall be posted or displayed at any location other than the location of the premises or equipment for which the permit was issued.*

*§28-105.12 Conditions of permit. Permits shall be subject to the following conditions:*

*§28-105.12.1 Compliance with code. Permits shall be deemed to incorporate the provisions that the applicant, the owner, their agents, employees, and contractors shall carry out the permitted work in accordance with the provisions of this code and other applicable laws or rules, whether specified or not, except as variations have been legally permitted or authorized.*

*§28-105.12.2 Compliance with construction documents. All work shall conform to the approved construction documents, and any approved amendments thereto. Changes and revisions during the course of construction shall conform to the amendment requirements of this code.*

*§28-105.12.3 Adherence to lot diagram. All work shall be strictly located in accordance with the lot diagram approved in accordance with this code and no lot or plot shall be changed, increased or diminished in area from that shown on the approved lot diagram, unless and until a revised diagram showing such changes, accompanied by the necessary statement of the owner or applicant, shall have been submitted to and approved by the commissioner.*

*§28-105.12.4 Compliance with safety requirements. All work shall be conducted in accordance with and subject to the safety requirements of this code and other applicable laws or rules, including any order or requirement of the commissioner that the building or structure under construction or alteration be vacated, in whole or in part, during the progress of the work and until the issuance of a certificate of occupancy. Adjoining lots and properties shall be protected in accordance with this code.*

*§28-105.12.5 Compliance with noise control code required. All work shall be performed in compliance with the provisions of the New York city noise control code as set forth in chapter 2 of title 24 of the administrative code. Failure to comply with sections 24-222 and 24-223 of the administrative code shall be a violation of this code.*

*§28-105.12.6 Deferred submittals. Where permits are issued subject to deferred submittal of portions of the design as provided for in section 28-104.2.6, the deferred submittal items shall not be installed until the construction and submittal documents for such portions have been approved by the department and, where applicable, new or amended permits have been issued.*

*§28-105.12.7 Insurance. Where workers compensation, employee disability or liability insurance is required by law or department rule, the applicant for the work permit shall obtain and include proof of such insurance with the work permit application. The permit shall expire by operation of law if the insurance upon which the permit was conditioned lapses, expires or is cancelled, unless the permit holder files proof of alternate insurance before such event.*

*§28-105.12.8 Site safety plan. Where required by this code or by the department, applications shall include a site safety plan approved in accordance with the New York city building code. All work shall adhere to the site safety plan.*

ARTICLE 106  
ASBESTOS INVESTIGATION

*§28-106.1 Asbestos investigation. In addition to the requirements otherwise prescribed, all applications for construction document approval for work on buildings constructed on or before April 1, 1987 shall include asbestos certifications, reports or removal plans as may be required by this article.*

*Exception: Types of activities exempted pursuant to rules of the commissioner of environmental protection.*

*§28-106.2 Demolition and alteration of buildings constructed on or before April 1, 1987. The commissioner shall not approve or accept an application for construction document approval for the demolition or alteration of a building constructed on or before April 1, 1987, unless the applicant submits (i) a certification from an asbestos investigator that the work to be performed will not constitute an asbestos project, (ii) an asbestos inspection report completed in accordance with the provisions of section 24-146.1 of the administrative code, or (iii) proof that an asbestos removal plan has been approved by the commissioner of the New York city department of environmental protection in accordance with section 24-146.1 of the administrative code.*

*§28-106.3 Asbestos project. The commissioner shall not approve construction documents for work that constitutes an asbestos project and for which an asbestos inspection report is required unless the applicant at the time of application and prior to approval of the construction documents certifies on forms prescribed by the commissioner of environmental protection that the applicant is familiar with federal, state and local laws and regulations applicable to asbestos related work.*

*§28-106.4 Definitions. For the purposes of this article, the terms “asbestos,” “asbestos inspection report,” “asbestos investigator,” “asbestos project” and “asbestos removal plan” shall have the meanings as are ascribed in section 24-146.1 of the administrative code.*

ARTICLE 107  
ALTERATION OR DEMOLITION OF SINGLE ROOM OCCUPANCY  
MULTIPLE DWELLINGS

*§28-107.1 General. The commissioner shall not approve construction documents for the alteration or demolition of a single room occupancy multiple dwelling except as set forth in this article.*

*§28-107.2 Definitions. The following words and terms shall, for the purposes of this article and elsewhere in the code, have the meanings shown herein.*

*CLASS A MULTIPLE DWELLING, CLASS B MULTIPLE DWELLING, FURNISHED ROOM HOUSE, ROOMING UNIT AND SINGLE ROOM OCCUPANCY. Shall have the meanings set forth in section 27-2004 of the New York city housing maintenance code.*

*SINGLE ROOM OCCUPANCY MULTIPLE DWELLING. A single room occupancy multiple dwelling means:*

- 1. A “class A multiple dwelling” used in whole or part as a “rooming house” or “furnished room house,” or for “single room occupancy” pursuant to section 248 of the New York state multiple dwelling law;*
- 2. A “class A multiple dwelling” containing “rooming units”; or*
- 3. A “class B multiple dwelling.”*

*Exception: The term single room occupancy multiple dwelling shall not include:*

- 1. College or school dormitories;*
- 2. Clubhouses;*
- 3. Luxury hotels, as such term is defined by the commissioner of housing preservation and development; or*
- 4. Residences whose occupancy is restricted to an institutional use such as housing intended for use by the employees of a single company or institution;*
- 5. City-owned multiple dwellings; or*
- 6. Any multiple dwelling containing fewer than nine “class B” dwelling units; used for single room occupancy unless the total number of such units is more than fifty percent of the total number of dwelling units in such multiple dwelling; or*
- 7. Any multiple dwelling that:*
  - 7.1. Is the subject of a program approved by the commissioner of housing preservation and development and related to the rehabilitation of a single room occupancy multiple dwelling or the provision of housing for persons of low or moderate income, other than a program consisting solely of real property tax abatement or tax exemption; and*
  - 7.2. Has been exempted from the provisions of this article by the commissioner of housing preservation and development.*

*§28-107.3 Covered categories of work. Applications for the approval of construction documents for the following categories of work are covered by this article:*

- 1. Demolition of a single room occupancy multiple dwelling;*
- 2. Alteration of a single room occupancy multiple dwelling to a class A multiple dwelling to be used in whole or in part for other than single room occupancy purposes;*
- 3. Alteration of a single room occupancy multiple dwelling resulting in the removal or addition of kitchen or bathroom facilities; and*
- 4. Such other types of alteration work to a single room occupancy multiple dwelling as shall be prescribed by rule of the commissioner of housing preservation and development, in consultation with the commissioner.*

*Exceptions:*

- 1. Work solely for the purpose of either (i) making the public areas of a multiple dwelling accessible to persons with disabilities without altering the configuration of any dwelling unit or rooming unit or (ii) making a dwelling unit or a rooming unit accessible to persons with disabilities shall not be covered by this article.*
- 2. Repairs, demolition or any other work performed by a city agency or by a contractor pursuant to a contract with a city agency shall not be covered by this article.*

*§28-107.4 Required submittal documents. The commissioner shall not approve any construction documents for a single room occupancy multiple dwelling for the covered categories of work unless the applicant provides:*

- 1. A sworn affidavit by or on behalf of all the owners, as such term is defined in section 27-2004 of the New York city housing maintenance code, of such multiple dwelling that there will be no harassment of the lawful occupants of such multiple dwelling by or on behalf of such owners during the construction period;*
- 2. A tenant protection plan as provided for in this code; and*
- 3. One of the following documents from the commissioner of housing preservation and development:*
  - 3.1. A certification that there has been no harassment of the lawful occupants of such multiple dwelling within the 36 month period prior to submission of an application for such*

*certification to the department of housing preservation and development, provided, however, that such certification shall except any portion of such 36 month period during which title was vested in the city; or*

*3.2. A waiver of such certification.*

*§28-107.5 Filing process. After submitting an application for construction document approval to the commissioner and obtaining the identifying job number for the same, the applicant shall forward a copy of such application to the commissioner of housing preservation and development, together with an application for a certification of no harassment pursuant to section 27-2093 of the housing maintenance code.*

*§28-107.6 Time period for acceptance or rejection. The time period in which the commissioner is required to approve or reject an application for construction document approval or resubmission thereof pursuant to this code shall commence from the date that the commissioner receives either the certification or waiver pursuant to this article.*

*§28-107.7 Denial of certification. Where the commissioner of housing preservation and development denies the certification required by this article, the commissioner shall reject the application for construction document approval.*

*§28-107.8 Request for stop-work or rescission. The commissioner shall be empowered to issue a stop-work notice or order with respect to an alteration or demolition permit and/or to rescind approval of construction documents at the request of the commissioner of housing preservation and development pursuant to section 27-2093 of the New York city housing maintenance code.*

*§28-107.9 Effect of denial or rescission. Where the commissioner rejects or rescinds the approval of construction documents pursuant to this article, no further application for the covered categories of work shall be considered by the commissioner for a period of 36 months following the date of the denial of the certification of no harassment by the commissioner of housing preservation and development or the date of the rescission of such certification of no harassment by such commissioner.*

**ARTICLE 108  
PAVEMENT PLAN**

*§28-108.1 General. The commissioner shall not issue a permit for the erection of a new building or for*

*alterations that will require the issuance of a new or amended certificate of occupancy without a statement that no certificate of occupancy shall be issued unless the sidewalk in front of or abutting such building, including but not limited to the intersection quadrants for corner properties, shall have been paved or repaired by the owner, at his or her own cost, in the manner, of the materials, and in accordance with the standard specifications prescribed by the New York city department of transportation pursuant to sections 19-113 and 19-115 of the administrative code.*

*Exceptions:*

- 1. Application for the erection of an accessory building appurtenant to an existing one- or two-family dwelling.*
- 2. Where the commissioner determines that a sidewalk is not required, provided that such determination shall not affect the obligations of the owner under subdivision a of section 19-152 of the administrative code, nor relieve the owner of any such obligations, nor impair or diminish the rights of the city or its agencies to enforce such obligations.*
- 3. Where the extent of the change in use or occupancy or the cost of the alteration does not exceed a threshold established pursuant to rule of the commissioner.*

*§28-108.2 Pavement plan required. Construction documents shall include a pavement plan processed and approved under guidelines established by the department. The pavement plan shall include documentation sufficient to show compliance with the standards and specifications of the New York city department of transportation pursuant to sections 19-113 and 19-115 of the administrative code.*

*Exception: No pavement plan shall be required with respect to an alteration application for a building where the applicant certifies that there is a sidewalk in existence in front of or abutting such building, including but not limited to the intersection quadrants for corner properties, complying with the specifications of the New York city department of transportation, and that the nature of such alteration work will neither remove such existing sidewalk nor cause damage to such existing sidewalk such that the damage could not be corrected as minor repairs prior to issuance of the certificate of occupancy.*

*§28-108.3 Improvement of streets. The commissioner shall insure that streets are suitably improved in accordance with the standards and specifications of the department of transportation as required by subdivision two of section thirty-six of the general city law and shall otherwise carry out the provisions of*

*such subdivision.*

*ARTICLE 109  
FIRE PROTECTION PLAN*

*§28-109.1 Fire protection plan required for covered buildings. New building and alteration applications for covered buildings as set forth in section 28-109.2 shall include a fire protection plan prepared by or under the supervision of a registered design professional who shall professionally certify such plan. Such plan shall be approved by the department and the fire department prior to issuance of a certificate of occupancy, a temporary certificate of occupancy or a letter of completion, as applicable.*

*Exception: No fire protection plan shall be required for an alteration that meets all three of the following requirements:*

- 1. The alteration does not involve a change of use or occupancy;*
- 2. The alteration does not exceed one million dollars; and*
- 3. The alteration does not create an inconsistency with a previously approved fire protection plan.*

*§28-109.2 Covered buildings. Covered buildings include:*

- 1. High-rise buildings as described in section 403 of the New York city building code.*
- 2. Occupancy groups B, E, F, H, M, or S occupying two or more stories with over 20,000 gross square feet (1858 m<sup>2</sup>) of floor area per floor, or occupying two or more stories in a building with a total floor area exceeding 50,000 gross square feet (4645m<sup>2</sup>).*
- 3. Any building containing an assembly occupancy having an occupant load of 300 or more persons.*
- 4. Occupancy groups I or R-1 occupying two or more stories and containing sleeping accommodations for 30 or more persons.*
- 5. Occupancy group R-2 occupancies containing 30 or more dwelling units in a building where over 10,000 gross square feet (929m<sup>2</sup>) of floor area is occupied by occupancy group A, E, M, or I.*

*§28-109.3 Scope. The plan shall include the following information, where applicable:*

- 1. A description of the building including: address; block and lot numbers; number of stories; height*

- in feet; occupancy group; construction classification; occupancy load and department of buildings job number;*
2. *All floors, exits, doors, corridors, and partitions serving as fire barriers, fire partitions, fire walls; locations and ratings of required enclosures and fire areas; stairs with pressurization; roof access; exit discharges; and locations of any required frontage space; and*
  3. *In narrative form, a description of safety systems and features, including:*
    - 3.1. *Communications systems.*
    - 3.2. *Alarm systems.*
    - 3.3. *Smoke and carbon monoxide detection equipment.*
    - 3.4. *Location of fire command station.*
    - 3.5. *Elevator recall.*
    - 3.6. *Emergency lighting and power.*
    - 3.7. *Standpipes.*
    - 3.8. *Sprinklers.*
    - 3.9. *Emergency power systems.*
    - 3.10. *Mechanical ventilation and air conditioning.*
    - 3.11. *Smoke control systems and equipment.*
    - 3.12. *Furnishings types and materials.*
    - 3.13. *Places of assembly.*
    - 3.14. *Fire department access.*
    - 3.15. *Photoluminescent pathway markings.*
    - 3.16. *Other safety related systems, required and voluntary, to be installed.*

*ARTICLE 110  
SITE SAFETY PLAN*

*§28-110.1 Site safety plan. Where a site safety plan is required by chapter 33 of the New York city building code, such plan shall include the following:*

1. *Location of all construction fences around work site;*
2. *Location of all gates in construction fences;*

3. *Location of standard guardrails around excavations, when required;*
4. *Horizontal and vertical netting program, including details of the initial installation, schedule of horizontal jumps and vertical installations, and designated crane and derrick lifting areas where horizontal netting is omitted. The program shall include as an attachment any department approval obtained regarding required safety netting during construction or demolition operations; the revised site safety plan shall be approved;*
5. *Location of all sidewalk sheds, including appropriate department application numbers and department of transportation permit numbers and expiration dates;*
6. *Location of all temporary walkways, including appropriate department application numbers and department of transportation permit numbers and expiration dates;*
7. *Location of foot bridges and motor vehicle ramps, including appropriate department application numbers and department of transportation permit numbers and expiration dates;*
8. *Protection of side of excavation, when required, including appropriate department application numbers and department of transportation permit numbers and expiration dates;*
9. *Location of all street and sidewalk closing(s), including appropriate department application numbers and department of transportation permit numbers and expiration dates;*
10. *Approximate location of material and personnel hoist(s) and loading areas, including appropriate department application numbers and department of transportation permit numbers and expiration dates;*
11. *Approximate location of all crane and derrick loading areas;*
12. *Location of all surrounding buildings, indicating occupancy, height and type of any required roof protection;*
13. *Location of all standpipe system and siamese hose connections;*
14. *Location of all temporary elevators for fire department use when building is above 75 feet (22 860 mm) in height;*
15. *Location of all exterior contractors' sheds;*
16. *All required safety netting and scaffolding;*
17. *Widths of all sidewalks and roadways; all traffic information; all exits from job site;*

18. A copy of the proposed site safety manager or site safety coordinator's certificate, as applicable, including the certificate for any alternate site safety manager or site safety coordinator; and

19. Such features requiring special sequencing in order to maintain safe conditions with a written description of those sequences.

§28-110.2 *Phased site safety plans.* Multiple layouts of the site safety features enumerated in section 28-110.1 may be submitted at any time during construction operations to show phased site safety designs consistent with the phase of anticipated work.

#### ARTICLE 111 TEMPORARY STRUCTURES AND USES

§28-111.1 *General.* The commissioner is authorized to issue a permit for temporary structures and temporary uses. Such permits shall be limited as to time of service or use, but shall not be permitted for more than 30 days. The commissioner may grant extensions for demonstrated cause.

*Exception:* No permit shall be required for:

1. The erection and use of temporary tents of less than 400 gross square feet (37 m<sup>2</sup>) for not more than 30 days.
2. The erection and use of temporary platforms, reviewing stands, outdoor bandstands and similar miscellaneous structures that cover an area less than 120 square feet (11.16 m<sup>2</sup>), including connecting areas or spaces with a common means of egress or entrance, for not more than 30 days.

§28-111.2 *Conformance.* Temporary structures and uses shall conform to the structural strength, fire safety, means of egress, accessibility, light, ventilation and sanitary requirements of this code as necessary to ensure the public health, safety and general welfare.

§28-111.3 *Termination of approval.* The commissioner is authorized to terminate such permit for a temporary structure or use and to order the temporary structure or use to be discontinued.

§28-111.4 *Application processing.* Application for such structures and uses shall be submitted to the department no later than 15 business days prior to the construction of the temporary structure or the commencement of the temporary use.

*§28-111.5 Fees. Applications for such permits shall be accompanied by the applicable fees in accordance with article 112. Fees for subsequent requests for renewals shall be paid upon approval of such requests.*

**ARTICLE 112**  
**FEES**

*§28-112.1 Payment of fees. A permit, inspection, or other service or privilege as regulated in this code shall not be valid until the fees prescribed herein or in rules have been paid, nor shall a renewal of a permit or other service or privilege or an amendment to a permit be released until the fee has been paid. In addition, an approval required to be reissued due to a change in product name, company name and/or address, contact information or principals, shall not be reissued until a reissuance fee, if any, has been paid. The department shall adopt such rules and shall prescribe such forms as may be necessary to carry out the provisions of this article.*

*Exceptions:*

- 1. A permit, inspection or other service or privilege as regulated in this code shall not be subject to this provision if the owner of the building or property affected is a corporation or association organized and operated exclusively for religious, charitable or educational purposes, or for one or more such purposes, no part of the earnings of which inures to the benefit of any private shareholder or individual, and provided that the property affected is to be used exclusively by such corporation or association for one or more such purposes.*
- 2. A permit, inspection or other service or privilege as regulated by this code shall not be subject to this provision if the work proposed is emergency work performed by a city agency or by a contractor pursuant to a contract with a city agency.*

*§28-112.2 Schedule of permit fees. Permits for new buildings, structures, mechanical, and plumbing systems or alterations requiring a permit shall be accompanied by a fee for each permit in accordance with the fee schedule of Table 28-112.2. Fifty percent of the total fee for the work permit, but not less than one hundred dollars, or the total fee for the work permit where such fee is less than one hundred dollars, shall be paid and shall accompany the first application for the approval of construction documents; and the whole or remainder of the total fee shall be paid before the work permit may be issued. The commissioner may require reasonable substantiation of any statement or other form that may be required by the department.*

<p>Permit to install or alter service equipment except plumbing and fire suppression piping service equipment.</p>	<p>Fee calculated as for respective building alteration.</p>	<p>\$100.</p>	
<p>Permit to install, alter or replace oil-burning equipment:</p> <p><input type="checkbox"/> Where the storage tank exceeds two hundred seventy-five gallon capacity; or where the</p>	<p>\$100.</p>	<p>\$100.</p>	

<p>storage tank is less than two hundred seventy-five gallons and is to be buried, or is to be installed in a multiple dwelling or a place of assembly or in a building along the line of a subway, or is to deliver fuel oil to a burner installed above the lowest floor of a building with a primary Business Group B. occupancy.</p> <p><input type="checkbox"/> In all other conditions.</p>	\$50.	\$100.	
<b>Other</b>			
<p>Permit for foundation, earthwork or open space without roof, whether enclosed or unenclosed, on sites such as parking lots, gasoline or oil-selling stations, storage yards, sales or exhibition or show spaces used for generally similar purposes.</p>	\$10 for each two thousand square feet of area or fraction thereof, but not less than \$100.	\$100.	
<p>Permit for golf driving range.</p>	\$7.50 for each twenty thousand square feet of area or fraction thereof, but not less than \$100.	\$100.	
<p>Accessory building to golf driving range, not to exceed one hundred forty-four square feet.</p>	\$100.	\$100	
<p>Permit for demolition and removal.</p>	Multiply street frontage in feet or fraction thereof x number of stories of the building x \$2.60, but not less than \$260. For corner lot, use the longer street frontage.	\$100.	
<p>Asbestos permits:</p> <p><input type="checkbox"/> Permit for the performance of an asbestos project for which the filing with the department of an asbestos inspection report, or proof of approval by the commissioner of environmental protection of an asbestos removal plan is required.</p> <p><input type="checkbox"/> Application for plan approval or permit for work for which an asbestos investigator is</p>			<p>Specific fee to be established by the commissioner of environmental protection.</p> <p>Terms "asbestos project," "asbestos inspection report" and "asbestos removal plan" shall have the meanings ascribed in Section 24-146.1 of the administrative code.</p>

<i>required to submit an asbestos inspection report certifying that the work to be performed will not constitute an asbestos project.</i>			
<b>Signs</b>			
<i>Permit to erect, install or alter sign: Ground sign.</i>	<i>Basic fee calculated as for building alteration; plus \$5 for each one hundred square feet of surface area, or fraction thereof; but not less than \$35.</i>	\$100.	<i>Each face of any sign, when fronting on different streets, shall be treated as a separate sign.</i>
<i>Permit to erect, install or alter sign: Roof sign having a tight, closed or solid surface.</i>	<i>Basic fee calculated as for building alteration; plus \$15 for each one hundred square feet of surface area, or fraction thereof; but not less than \$70.</i>	\$100.	<i>Each face of any sign, when fronting on different streets, shall be treated as a separate sign.</i>
<i>Permit to erect, install or alter sign: Roof sign without a tight, closed or solid surface, extending to a height of not more than thirty-one feet above roof level.</i>	<i>Basic fee calculated as for building alteration; plus \$15 for each one hundred square feet of surface area, or fraction thereof, but not less than \$100.</i>	\$100.	<i>Each face of any sign, when fronting on different streets, shall be treated as a separate sign.</i>
<i>Permit to erect, install or alter sign: Roof sign without a tight, closed or solid surface, extending to a height over thirty-one feet above roof level.</i>	<i>Basic fee calculated as for building alteration; plus \$25 for each one hundred square feet of area, or fraction thereof, but not less than \$135.</i>	\$100.	<i>Each face of any sign, when fronting on different streets, shall be treated as a separate sign.</i>
<i>Permit to erect, install or alter sign: Illuminated sign projecting beyond street line having thirty square feet or less on one side.</i>	<i>Basic fee calculated as for building alteration.</i>	\$100.	<i>Illuminated sign is subject to annual use fee: \$45.</i>
<i>Permit to erect, install or alter sign: Illuminated sign projecting beyond street line having more than thirty square feet but no more than fifty square feet on one side.</i>	<i>Basic fee calculated as for building alteration.</i>	\$100.	<i>Illuminated sign is subject to annual use fee: \$70.</i>
<i>Permit to erect, install or alter sign: Illuminated sign projecting beyond street line and having more than fifty square feet on one side</i>	<i>Basic fee calculated as for building alteration.</i>	\$100.	<i>Illuminated sign is subject to annual use fee: \$0.75 for each square foot or part thereof annually, but not less than \$100.</i>
<i>Maintenance permit for outdoor signs.</i>	<i>As provided by rule.</i>		
<b>Temporary Structures</b>			
<i>Permit for temporary shed, fence, railing, footbridge, catch platform, building sidewalk shanty, over-the-sidewalk chute.</i>	<i>\$130 for each permit.</i>	\$100.	
<i>Sidewalk shed.</i>	<i>\$130 for the first twenty-five feet or fraction thereof in the length of</i>	\$100.	

	<i>the shed; plus \$10 for each additional twenty-five feet or fraction thereof.</i>		
<i>Permit for temporary structure other than those listed above, including but not limited to tents, grandstands, stages.</i>	<i>\$100 for the first one thousand square feet or fraction thereof; plus \$0.10 for each square foot or fraction thereof in excess of one thousand square feet.</i>	<i>\$100.</i>	
<b>Reinstatement of Applications/Permits</b>			
<i>Application/permit reinstatement fees:</i>			
<input type="checkbox"/> <i>Prior to first permit.</i>	<i>Full fee at the rate in effect on the date of reinstatement.</i>		
<input type="checkbox"/> <i>Following first permit issuance but prior to commencing work.</i>	<i>Full fee at the rate in effect on the date of reinstatement.</i>		
<input type="checkbox"/> <i>Following first permit, with work partially complete.</i>	<i>Based upon the full fee at the rate in effect on the date of reinstatement, the percentage of the fee equal to the percentage of work remaining as determined by the department inspector, plus the renewal fee.</i>		

*§28-112.3 Building permit valuations. Where applicable, the applicant for a permit shall provide an estimated job construction cost at time of application. Cost estimates shall include total value of work, including materials and labor, for which the permit is being issued, such as installation or alteration of building, gas, mechanical, plumbing equipment and permanent systems. If, in the opinion of the department, the valuation is underestimated on the application, the permit shall be denied, unless the applicant can show detailed estimates to meet the approval of the department. Final building permit valuation shall be set by the department.*

*§28-112.4 Work commencing before permit issuance. Any person who commences any work before obtaining the necessary permits shall be subject to a penalty as specified in this code that shall be in addition to the required permit fees.*

*§28-112.5 Related fees. The payment of the fee for the construction, alteration, removal or demolition for work done in connection or concurrently with the work authorized by a building permit shall not relieve the applicant or holder of the permit from the payment of other fees that are prescribed by law.*

*§28-112.6 Refunds and rebates. Upon application to the comptroller of the city of New York, and upon verification of claim by the commissioner, refunds or rebates of partial or full fees shall be provided as set forth in sections 28-112.6.1 through 28-112.6.3.*

*§28-112.6.1 Withdrawal of work permit applications. In the event that an owner withdraws an application, the owner may obtain a refund of all or a portion of the fee paid as follows:*

- 1. If an application for construction document approval is withdrawn prior to the commencement of examination of the application all but forty dollars of the deposit fee paid shall be refunded.*
- 2. If an application for construction document approval is withdrawn during the progress of examination of the application, the comptroller shall retain a percentage of the deposit fee paid, which the department shall certify is the equivalent percentage of the examination completed, but not less than one hundred dollars. The remainder of the deposit fee shall be refunded to the owner.*
- 3. If an application for construction document approval is withdrawn after examination of construction documents and/or construction document approval and before issuance of permit, there shall be refunded by the comptroller 50 percent of the total computed fee for the permit, except that not less than one hundred dollars shall be retained by the comptroller.*

*§28-112.6.2 Withdrawal of cranes and derricks applications. If the applicant withdraws his or her application for a certificate of approval for a power-operated crane, derrick or cableway, such applicant may obtain a refund of a portion of the fees as follows:*

- 1. If the application is withdrawn prior to the commencement of examination by the department, the entire fee shall be refunded except one hundred dollars.*
- 2. If the application is withdrawn after the examination has commenced, the comptroller shall retain a percentage of the fee paid, which the department shall certify is the equivalent percentage of the examination performed, but not less than one hundred dollars. The remainder of the fee shall be refunded to the applicant.*
- 3. If the application is withdrawn after the department has performed its examination, whether or not the application has been approved no part of the fee shall be returned to the applicant.*

*§28-112.6.3 Incentive rebates. With respect to the rebates under this section 28-112.6, the commissioner may, at his or her discretion, issue a rebate of application fees as follows and as established by rule.*

*§28-112.6.3.1 Renewable energy rebates. Owners who demonstrate the production on a zoning lot of five percent or more of the annual energy consumption on the zoning lot through renewable energy sources may receive a fee rebate as established by rule.*

*§28-112.6.3.2 Rebate for energy use reduction. Owners who demonstrate a reduction in energy use from that allowed at the time of permit by the New York state energy conservation construction code as a result of the permitted work may receive a fee rebate as established by rule.*

*§28-112.6.3.3 Rebate for water conservation systems. Owners who demonstrate conservation of water taken from the city supply by providing evidence of achieving the water-recycling discount authorized by the New York city water board may receive a fee rebate as established by rule.*

*§28-112.6.3.4 Rebate for redevelopment, remediation and reuse of contaminated properties known as brownfields. Owners who demonstrate that their site was contaminated and has been certified as remediated by the United States environmental protection agency or the New York state department of environmental conservation, or has received a notice of satisfaction from the New York city department of environmental protection, may receive a fee rebate as established by rule.*

*§28-112.6.3.5 Rebate for recycling construction and demolition waste. Owners who demonstrate the recycling of construction and demolition waste may receive a fee rebate as established by rule.*

*§28-112.6.3.6 Rebate for bicycle storage facilities. Except for R-3 occupancy, owners who demonstrate that they have provided secured indoor bicycling facilities accessible to all building occupants may be rebated their fees as set out in rule. Such facilities shall be identified on approved plans and shall be noted on the certificate of occupancy with a statement that the bicycling accommodations dedicated to such facilities were provided in accordance with this section.*

*§28-112.6.3.7 Rebate for LEED or other environmental design certification. Owners who*

demonstrate certification of their project, which was signed off following the effective date of this code, by the United States Green Building Council based upon the Council's Leadership in Energy and Environmental Design (LEED) rating system or as otherwise provided by rule, may be rebated their fees as set out in rule.

§28-112.6.3.8 *Other rebates.* The commissioner is authorized to promulgate rules to rebate fees following sign-off based upon the installation of energy-conserving systems.

§28-112.7 *Inspection fees.* Aside from the inspection fees covered under permit fees above, the following inspection fees shall be paid according to requirements of this code and as promulgated in rules.

§28-112.7.1 *Fees for the testing, approval, inspection and use of power-operated cranes, derricks and cableways.* The owner of any crane or derrick shall renew the certificate of operation each year.

**Table 28-112.7.1**

<b>Equipment Type</b>	<b>Initial Fee</b>	<b>Renewal Fee for Certificate of Operation</b>	<b>Comments</b>
<p><i>Prototype approval of one configuration of a mobile crane. One configuration shall be comprised of the crane with a main boom, one fixed jib and one set of counterweights.</i></p> <p><i>Amendment to a configuration.</i></p>	<p><i>\$2500 when testing has been monitored and certified by a competent individual or group, other than the manufacturer, acceptable to the commissioner;</i></p> <p><i>\$4000 when, in lieu of monitoring and certification of tests, the commissioner shall require design calculations for such items as the commissioner deems necessary to supplement the tests.</i></p> <p><i>One-half the original configuration fee.</i></p>		<p><i>Additional configurations shall be subject to the same fees as the original configuration.</i></p>
<p><i>Prototype approval of a mobile crane with a hydraulic boom.</i></p>	<p><i>\$4000.</i></p>		
<p><i>Certificate of approval for mobile crane with a boom less than two</i></p>	<p><i>\$500.</i></p>	<p><i>\$250 annually.</i></p>	<p><i>The boom length as herein specified shall include the jibs</i></p>

<i>hundred feet in length; fee also includes initial certificate of operation.</i>			<i>and any other extensions to the boom.</i>
<i>Certificate of approval for mobile crane with a boom two hundred feet or more in length, but less than three hundred feet in length; fee also includes initial certificate of operation.</i>	<i>\$1000.</i>	<i>\$250 annually.</i>	<i>The boom length as herein specified shall include the jibs and any other extensions to the boom.</i>
<i>Certificate of approval for mobile crane with a boom three hundred feet or more in length but less than four hundred feet in length; fee also includes initial certificate of operation.</i>	<i>\$2000.</i>	<i>\$400 annually.</i>	<i>The boom length as herein specified shall include the jibs and any other extensions to the boom.</i>
<i>Certificate of approval for mobile crane with a boom four hundred feet or more in length; fee also includes initial certificate of operation.</i>	<i>\$3000.</i>	<i>\$400 annually.</i>	<i>The boom length as herein specified shall include the jibs and any other extensions to the boom.</i>
<i>Certificate of approval for climber and tower cranes and derricks, regardless of length; fee also includes initial certificate of operation.</i>	<i>\$3000.</i>	<i>\$400 annually.</i>	
<i>Certificate of approval for all other cranes; fee also includes initial certificate of operation.</i>	<i>\$1000.</i>	<i>\$250 annually.</i>	
<i>Certificate of approval required for a mobile crane with a boom not exceeding fifty feet in length with a maximum rated capacity not exceeding three tons; fee also includes initial certificate of operation.</i>	<i>\$300.</i>	<i>\$200 annually.</i>	<i>The boom length as herein specified shall include the jibs and any other extensions to the boom.</i>
<i>New certificate of approval, when the boom or extension thereof is replaced or altered.</i>	<i>The fee shall be the full fee required for testing a new crane or derrick, with a boom or extension of the same size and design as the replacement boom or extension thereof.</i>		
<i>Review only of engineering calculations for mobile crane with a boom exceeding 250 feet to be erected by a licensed master or special rigger, for which a certificate of on-site inspection is not required under this code or rules of the department.</i>	<i>\$100.</i>		
<i>On-site inspection of up to three models of mobile cranes with boom, including jibs and other extensions to the boom two hundred fifty feet or more in length, or derrick.</i>	<i>\$250 on normal working days; \$750 on other than normal working days, upon written request of the applicant.</i>		
<i>All other on-site inspections of cranes.</i>	<i>\$150.</i>		

<i>Amendment to an application for certificate of on-site inspection.</i>	\$100.		
<i>Application for waiver of on-site inspection of mobile crane or derrick.</i>	\$100.		

§28-112.7.2 Periodic inspection fees.

§28-112.8 *Special fees. The department shall be entitled to charge the following special fees:*

**Table 28-112.8**

<b>Item Description</b>	<b>Fee</b>	<b>Comments</b>
<i>Acknowledgement.</i>	<i>As provided by rule.</i>	
<i>Accelerated plan review.</i>	<i>In accordance with rules promulgated by the commissioner.</i>	
<i>Accelerated inspection.</i>	<i>As provided by rule.</i>	
<i>Certificate of occupancy.</i>	<i>As provided by rule.</i>	
<i>Accelerated certificate of occupancy request.</i>	<i>As provided by rule.</i>	
<i>Application for temporary certificate of occupancy.</i>	\$100.	\$100 renewal.
<i>Place of assembly certificate of operation.</i>	\$100.	\$100 renewal.
<i>Reinspection made necessary by a failure to correct a condition or respond to a request to correct that results in issuance of a violation or other order</i>	<i>As provided by rule</i>	
<i>Temporary place of assembly certificate of operation.</i>	\$100.	\$100 renewal.
<i>Temporary use letter for temporary structure.</i>	\$100.	
<i>Temporary use letter for place of assembly.</i>	\$250.	<i>Application shall be submitted at least ten work days prior to the event; late fees shall be imposed at \$100 for each day following required submission date that the application is received by the department.</i>
<i>Ordinary plumbing work.</i>	\$100 for each report.	
<i>Limited plumbing alteration.</i>	<i>Same as for alteration.</i>	
<i>Limited sprinkler and/or standpipe alteration.</i>	<i>Same as for alteration.</i>	
<b><i>Approval or acceptance of materials, assemblies and equipment</i></b>		
<i>Application for approval of materials</i>	\$600.	
<i>Application for amendment of prior approval of materials</i>	\$500.	
<i>Application for change of identification (change of ownership, corporate name or name of product) of prior approval.</i>	\$350.	
<i>Application for approval of materials Evaluated by</i>	\$200.	

<i>an approved testing agency.</i>		
<b>Other fees</b>		
<i>Certificate of pending violation: Multiple and private dwellings.</i>	<i>As provided by rule.</i>	
<i>Certificate of pending violation: All other buildings.</i>	<i>As provided by rule.</i>	
<i>Certified copy of license.</i>	<i>As provided by rule.</i>	
<i>Microfilming of applications for new buildings and alterations and associated documentation for certificates of occupancy, temporary certificates of occupancy and/or letters of completion, as required by rule of the commissioner.</i>	<i>As provided by rule.</i>	
<i>Preparing only or preparing and certifying a copy of a record or document filed in the department, other than a plan, certificate of occupancy or certificate of pending violation.</i>	<i>As provided by rule.</i>	
<i>Half-size print from microfilm of a plan thirty-six by forty-eight inches or less.</i>	<i>As provided by rule.</i>	
<i>Additional copies.</i>		
<i>Half-size print from microfilm of a plan exceeding thirty-six by forty-eight inches.</i>	<i>As provided by rule.</i>	
<i>Additional copies.</i>		

*§28-112.9 Lien on premises for unpaid fee or other charge. Any unpaid fee or charge for an inspection, reinspection, examination or service performed by the department or other unpaid amount owed to the department, and all permits issued by the department, pursuant to law shall constitute a lien upon the land and buildings upon or in respect to which such inspection, reinspection, examination or service was performed or permit issued, as hereinafter provided.*

*§28-112.9.1 Filing of fees. The department shall maintain a record of all unpaid fees and other charges. Such records shall be kept on a building by building basis and shall be accessible to the public during business hours. An entry of an unpaid amount on the records of the department shall constitute notice to all parties.*

*§28-112.9.2 Lien. All such unpaid amounts shall constitute a lien upon the land and building upon, or in respect to which, such inspection, reinspection, examination or service was performed or permit issued when the amount thereof shall have been definitely computed as a statement of account by the department and the department shall file such statement with the department of finance for entry in the records of such department against the premises. Such lien shall have a priority over all other liens and encumbrances except for the lien of taxes and assessments. However, no lien created pursuant to*

*this section 28-112.9 shall be enforced against a subsequent purchaser in good faith or mortgagee in good faith unless the requirements of section 28-112.9.1 are satisfied.*

*§28-112.9.3 Notice. A notice, stating the amount due and the nature of the charge, shall be mailed by the department of finance, to the last known address of the person whose name appears on the records in the office of the department of finance as being the owner or agent or as the person designated by the owner to receive tax bills or, where no name appears, to the premises, addressed to either the owner or the agent.*

*§28-112.9.4 Interest. If such charge is not paid within 30 days from the date of entry, it shall be the duty of the department of finance to receive interest thereon at the rate of 15 percent per annum, to be calculated to the date of payment from the date of entry.*

*§28-112.9.5 Tax lien. Such charge and the interest thereon shall continue to be, until paid, a lien on the premises. Such lien shall be deemed a tax lien within the meaning of sections 11-319 and 11-401 of the administrative code and may be sold, enforced or foreclosed in the manner provided in chapter three or four of title eleven of such code or may be satisfied in accordance with the provisions of section thirteen hundred fifty-four of the real property actions and proceedings law.*

*§28-112.9.6 Reference. The notice mailed by the department of finance pursuant to this section 28-112.9 shall have stamped or printed thereon a reference to this section 28-112.9.*

*§28-112.9.7 Validity not subject to challenge in enforcement proceeding. In any proceedings to enforce or discharge a lien created pursuant to this section 28-112.9 the validity of the lien shall not be subject to challenge based on:*

- 1. The lawfulness of the inspection, reinspection, examination, service or permit; or*
- 2. The propriety and accuracy of the fee for which a lien is claimed, except as provided in this section 28-112.9.*

*§28-112.9.8 Standing to challenge. No such challenge may be made except by (i) the owner of the property, or (ii) a mortgagee or lienor whose mortgage or lien would, but for the provisions of this section 28-112.9, have priority over the department's lien.*

### **ARTICLE 113 MATERIALS**

*§28-113.1 General. Materials shall be used, tested and approved for use in accordance with the specific*

*provisions of this code and department rules, except that the commissioner shall have the power to limit or prohibit the use of any material to protect public safety. Materials shall be identified or described on construction documents and other submittal documents.*

*§28-113.2 Use of materials. Except as set forth in sections 28-113.2.1 through 113.2.6 materials specifically prescribed by this code or department rules may be used as prescribed without the prior approval of the commissioner.*

*§28-113.2.1 Approved material. Whenever this code or the rules of the department requires the use of an approved material, such material shall not be used without the prior approval of the commissioner for such use and may be used only to the extent set forth in such approval.*

*§28-113.2.2 Alternative materials. Except as otherwise specifically limited by this code, the provisions of this code are not intended to prevent the installation of any material or to prohibit any alternative engineered design or method of construction not specifically prescribed by this code, provided that the use of such alternative material has been previously approved by the commissioner and may be used only to the extent set forth in such approval. The use of an alternative material, design, method of construction or equipment shall be approved where the commissioner finds that the proposed design is satisfactory and complies with the intent of the provisions of this code, and that the material, method or work offered is, for the purpose intended, at least the equivalent of that prescribed in this code in quality, strength, effectiveness, fire resistance, durability and safety.*

*§28-113.2.3 Listed or labeled. Whenever this code or the rules of the department requires that material used be listed or labeled to a standard, material that is so listed or labeled may be used in accordance with such list or label without the prior approval of the commissioner. However, the commissioner reserves the right to require that information be submitted with regard to the testing and evaluation of any material so listed or labeled including but not limited to inspection certificates, test or evaluation reports, analysis, computations or other information used to determine that the material so listed or labeled complies with the applicable standard.*

*§28-113.2.4 Material not listed or labeled. Whenever this code or the rules of the department requires that material be listed or labeled to a standard and material proposed to be used is not so listed or labeled, the use of such material shall be subject to prior approval by the commissioner and such*

*material shall be used only to the extent set forth in such approval.*

*§28-113.2.5 Reuse. The use of used material that meets the requirements of this code for new material is permitted unless otherwise provided in this code. Used equipment and devices shall not be reused without the prior approval of the commissioner and may be used only to the extent set forth in such approval.*

*§28-113.2.6 Previously issued approvals. Materials that were previously approved by the board of standards and appeals or by the department before the effective date of this code may continue to be used, but only to the extent set forth in such approval, and only if such approval is not specifically amended or repealed by the commissioner.*

*§28-113.3 Approval procedure. Approval of materials shall be in accordance with the rules of the department. The cost offsets, reports and investigations required under these provisions shall be paid by the applicant.*

*§28-113.3.1 Performance. Specific information consisting of test reports conducted by an approved testing agency in accordance with standards referenced in the construction codes or other such information as necessary, shall be provided for the commissioner to determine whether the material will perform for the use intended.*

*§28-113.3.2 Research and investigation. Sufficient technical data shall be submitted to the commissioner to substantiate the proposed use of any material. If it is determined that the evidence submitted is satisfactory proof of performance for the use intended, the commissioner shall approve the use of the material subject to the requirements of this code.*

*§28-113.3.3 Retesting of materials. All materials tested and accepted for use shall be subject to periodic retesting as determined by the commissioner; and any material that upon retesting is found not to comply with the code requirements or the requirements set forth in the approval of such material shall cease to be acceptable for the use intended. During the period for such retesting, the commissioner may require the use of such material to be restricted or discontinued if necessary to secure safety.*

*§28-113.3.4 New materials. New materials not provided for in this code, and any material of questioned suitability proposed for use in the construction of a building or structure, shall be subjected*

*to the tests prescribed in this code or in the rules of the department to determine character, quality and limitations of use.*

*§28-113.3.5 Research reports. Supporting data, where necessary to assist in the approval of materials not specifically provided for in this code, shall consist of valid research reports from approved sources.*

*§28-113.3.6 Conflicting test results. Whenever there is evidence of conflicting results in the test of any material, the commissioner shall determine the acceptability of the material and/or the acceptable rating for such material.*

*§28-113.3.7 Amendment and repeal. The commissioner shall have the power to amend or repeal the approval of any material, including materials previously approved by the board of standards and appeals.*

*§28-113.3.8 Maintenance of records of approved material. For any material that has been approved, a record of such approval, including the conditions and limitations of the approval, shall be kept on file in the department and shall be open to public inspection at appropriate times.*

*§28-113.3.9 List of approved testing agencies and approved materials. A current list of all approved testing agencies and a current list of all materials specifically approved by the commissioner or previously approved by the board of standards and appeals shall be maintained by the department and published in written form.*

*§28-113.4 Labeling. Materials required to be labeled shall be labeled in accordance with the procedures set forth in this code or the recognized referenced standards.*

*§28-113.4.1 Testing. An approved agency shall test a representative sample of the material being labeled to the relevant standard or standards. The approved agency shall maintain a record of the tests*

*performed. The record shall provide sufficient detail to verify compliance with the test standard.*

*§28-113.4.2 Inspection and identification. The approved agency shall at regular intervals perform an inspection, which shall be in-plant if necessary, of the material that is to be labeled. The inspection shall verify that the labeled material is representative of the material tested.*

*§28-113.4.3 Label information. The label shall contain the manufacturer's or distributor's*

identification, model number, serial number or definitive information describing the material's performance characteristics and the approved agency's identification.

§28-113.4.4 *Shipment and delivery certification of materials listed, labeled or approved. In the case of the shipment or delivery of material listed or labeled to a standard, such material shall be appropriately labeled or accompanied by the inspection certificate of an approved agency that the material is the same as that which was tested and evaluated by such agency. In the case of the shipment or delivery of material previously approved by the commissioner, the material shall be identified by a tag or certificate indicating that the material is the same that was approved for its intended use by the commissioner or, if applicable, previously approved by the board of standards and appeals, and containing the applicable approval number or calendar number under which the material received such approval.*

#### *ARTICLE 114 APPROVED AGENCIES*

§28-114.1 *General. Approved agencies shall satisfy the provisions of this article and the rules of the department as to qualifications and operations. The commissioner may revoke or suspend the commissioner's approval of or otherwise sanction an approved agency for cause.*

§28-114.1.1 *Independent. An approved agency shall perform its authorized duties objectively and competently. The agency shall disclose possible conflicts of interest so that objectivity can be confirmed.*

§28-114.1.2 *Testing equipment. An approved agency shall have adequate testing equipment to perform required tests. The equipment shall be periodically calibrated.*

§28-114.1.3 *Personnel. An approved agency shall employ experienced personnel qualified to conduct, supervise and evaluate the tests or inspections that it undertakes. Special inspections may be performed only by employees of such agency who are special inspectors qualified pursuant to department rules to perform or witness the particular test or inspection. The commissioner may require proof of the qualifications of employees.*

§28-114.1.4 *Background. The commissioner may require an approved agency to submit to an investigation of its background and of the background of its principals as a condition of approval.*

§28-114.1.5 *Insurance. An approved agency shall maintain liability insurance as required by*

*department rules.*

*§28-114.2 Written evaluation by approved agency. An agency's evaluation of material or report of an inspection shall be in writing after satisfactory completion of the required inspection or test.*

*§28-114.3 Records. The approved agency shall maintain records of inspection and test reports for at least six years or for such period as the commissioner shall determine and shall make such records available to the department upon request.*

*§28-114.4 Re-authorization of approved agencies. An approved agency shall have its approval re-authorized in accordance with rules of the department.*

#### **ARTICLE 115 SPECIAL INSPECTORS**

*§28-115.1 General. Special inspectors shall satisfy the provisions of this article and the rules of the department as to qualifications in order to perform special inspections required by chapter 17 of the New York city building code or elsewhere in this code.*

*§28-115.2 Disqualification. The commissioner may disqualify a special inspector from performing special inspections pursuant to this code for cause. The special inspector shall be given prior notice of the proposed disqualification and the opportunity to contest such action. A list of special inspectors who have been disqualified from performing special inspection shall be maintained and made available to the public upon request.*

*§28-115.3 Records. A special inspector shall maintain records of special inspections on a building by building basis for at least 6 years or for such period as the commissioner shall determine and shall make such records available to the department upon request.*

#### **ARTICLE 116 INSPECTIONS AND SIGN-OFF OF COMPLETED WORK**

*§28-116.1 General. Construction or work for which a permit is required shall be subject to inspection in accordance with this code and such construction or work shall remain accessible and exposed for inspection purposes until the required inspection is completed. A satisfactory inspection by the department or the acceptance by the department of a satisfactory report of an inspection by an approved agency or special inspector shall not be construed to be an approval by the department of a violation of the provisions of this code or of any other provision of law. It shall be the duty of the permit holder to cause*

*the work to remain accessible and exposed for inspection purposes. The permit holder shall be liable for any expense entailed in the removal or replacement of any material required to allow inspection. The inspector shall supply a report of the results of each inspection.*

*§28-116.2 Types of inspections. The inspections set forth in sections 28-116.2.1 through 28-116.2.4 are required or authorized by this code.*

*§28-116.2.1 Preliminary inspection. Before approving construction documents, the commissioner is authorized to examine or cause to be examined structures or premises for which an application has been filed.*

*§28-116.2.2 Compliance inspections. In addition to the inspections specified in this code, the commissioner is authorized to make or require other inspections of any construction work to ascertain compliance with the provisions of this code and other laws that are enforced by the department.*

*§28-116.2.3 Special inspections and other inspections required during the progress of work. After the issuance of a work permit, special inspections and other inspections required by this code to be made during the progress of the work shall be made at such times or at such stages of the work and in such manner as shall be provided by this code or as otherwise required by the commissioner. The permit application shall set forth an inspection program for the job. Such inspections may be made by approved agencies or by the department as provided in this code or in the rules of the department. Special inspections shall be performed only by individuals who are special inspectors. The commissioner may accept inspection and test reports from approved agencies and special inspectors and the work may, unless otherwise specifically provided by code provisions or directed by the commissioner, proceed without any verifying inspection or test by the department. The names and business addresses of special inspectors and approved agencies shall be set forth in the work permit application. All inspection reports shall be in writing and signed by the person or entity performing the inspection. A record of all inspections shall be kept by the person performing the inspection. The commissioner may require inspection reports to be filed with the department. Records of inspections made by approved agencies and special inspectors shall be maintained by such persons for a period of six years after sign-off of the job or for such other period of time as the commissioner may require and shall be made available to the department upon request.*

*§28-116.2.3.1 Special inspection of fabricated items. Where fabrication of regulated products is performed on the premises of a fabricator's shop, special inspection of the fabricated items is required. The special inspector shall verify that the fabricator maintains detailed fabrication and quality control procedures that provide a basis for inspection control of the workmanship and the fabricator's ability to conform to approved construction documents and referenced standards. The special inspector shall review the procedures for completeness and adequacy relative to the code requirements for the fabricator's scope of work.*

*Exception: Special inspections shall not be required where the fabricator is approved by the commissioner in accordance with section 28-116.7.*

*§28-116.2.4 Final inspection. There shall be a final inspection of all permitted work. Final inspections shall comply with sections 28-116.2.4.1 through 28-116.2.4.2.*

*§28-116.2.4.1 Final inspection prior to certificate of occupancy. In all cases where the permitted work requires the issuance of a new or amended certificate of occupancy, the final inspection shall be performed by the department in the presence of the, permit holder, the registered design professional of record or the superintendent of construction. Such inspection shall be performed after all work authorized by the building permit is completed and before the issuance of the certificate of occupancy. All failures to comply with the provisions of this code or approved construction documents shall be noted and the owner promptly notified thereof in writing. All defects noted in such inspection shall be corrected. Reports of such final inspections shall be maintained by the department. The final inspection report shall confirm that defects noted have been corrected, that the work is in substantial compliance with the approved construction documents and with this code and with other applicable laws and rules and that all required inspections were performed.*

*§28-116.2.4.2 Final inspection prior to letter of completion. In all cases where the permitted work does not require the issuance of a certificate of occupancy, the final inspection shall be performed by the department or at the option of the owner by an approved agency. Whenever the department performs a final inspection, the department shall charge a fee for such inspection. The applicant shall take all reasonable and necessary steps to insure that the final inspection is performed*

*within one year after the expiration of the last permit. The inspection shall be performed after all work authorized by the building permit is completed. The person performing the inspection shall note all failures to comply with the provisions of this code or approved construction documents and shall promptly notify the owner in writing. All defects noted in such inspection shall be corrected. The final inspection report shall confirm that defects noted have been corrected, that the work is in substantial compliance with the approved construction documents and with this code and other applicable laws and rules and that all required inspections were performed. Final inspection reports shall be filed with and maintained by the department. Records of final inspections made by approved agencies shall be maintained by such persons for a period of six years after sign-off or for such other period as the commissioner shall require and shall be made available to the department upon request.*

*§28-116.3 Inspection requests. It shall be the duty of the permit holder to notify the department or the person designated to perform the inspection when work requiring inspection is ready to be inspected. It shall be the duty of the permit holder to provide access to and means for inspection of such work for any inspections that are required by this code.*

*§28-116.4 Sign-off of completed work. Upon submission of a satisfactory report of final inspection and all required submittal documents, the department shall document the sign-off of the project and issue a letter of completion, or, if applicable, a certificate of occupancy for the work. The owner shall take all reasonable and necessary steps for the issuance by the department of a letter of completion or certificate of occupancy within 1 year following the expiration of the last permit.*

*§28-116.4.1 Issuance of certificate of compliance. The following types of service equipment shall not be operated until the department issues a certificate of compliance after submission of a satisfactory report of inspection and testing of such equipment in accordance with this code and all required submittal documents:*

- 1. Air-conditioning and ventilation systems*
- 2. Elevators, escalators, moving walkways and dumbwaiters*
- 3. Fuel burning and fuel-oil storage equipment*
- 4. Refrigeration systems*

5. *Heating systems*

6. *Boilers.*

*Exception: A certificate of compliance shall not be required in connection with work specifically exempted from permit requirements in accordance with this code or department rules.*

*§28-116.5 Payment of outstanding penalties. The department may refuse to issue a letter of completion or certificate of occupancy pending payment of all outstanding fines or civil penalties imposed for violations of this code, the 1968 building code or other laws enforced by the department at the same building.*

*§28-116.6 List of approved inspection agencies. A current list of all approved inspection agencies shall be maintained by the department and published in written form.*

*§28-116.7 Fabricator approval. Approval of fabricators by the department shall be based upon review of the fabricator's written procedural and quality control manuals and periodic auditing of fabrication practices by an approved agency.*

*§28-116.7.1 Fabricator's certificate of compliance. For all fabricated items, the approved fabricator shall submit a certificate of compliance to the department stating that the work was performed in accordance with the approved construction documents, referenced standards and applicable provisions of law.*

**ARTICLE 117  
PLACES OF ASSEMBLY**

*§28-117.1 Place of assembly certificate of operation. It shall be unlawful to use or occupy any building or space as a place of assembly without a certificate of operation issued by the commissioner. An application for a certificate of operation shall be made to the department in such form and containing such information as the commissioner shall provide. The department shall inspect every place of assembly space prior to the issuance of a certificate of operation. The commissioner shall not issue a certificate of operation unless the department determines that the space conforms substantially to the approved construction documents and to the provisions of this code and that the certificate of occupancy authorizes such use. A certificate of operation shall not be issued to a place of assembly providing seating or other moveable furnishings unless the commissioner approves a plan conforming to this code and the rules of the department. Seating and other moveable furnishings shall be maintained at all times during occupancy in accordance with the approved plan. Any amendment of such plan shall be subject to the prior approval of the commissioner.*

*§28-117.1.1 Contents of certificate of operation. The certificate of operation shall contain the place of assembly certificate number, the number of persons who may legally occupy the space and any other information that the commissioner may determine. Such certificate of operation shall be framed and mounted in a location that is conspicuously visible to a person entering the space. For the purposes of this article a place of assembly permit issued prior to the effective date of this code shall be valid until its expiration. Prior to the expiration of the term of such place of assembly permit, the party responsible for renewal shall apply to the department for a certificate of operation in accordance with this article, except that the issuance of such certificate shall be subject to the same inspection requirement as a renewal of a certificate of operation pursuant to this code.*

*§28-117.2 Temporary place of assembly certificate of operation. At the commissioner's discretion, a temporary certificate of operation may be issued for a place of assembly space upon request by the applicant in accordance with this code provided that public safety is not jeopardized thereby. The applicant shall notify the fire department when a temporary place of assembly certificate of operation is issued.*

*§28-117.3 Duration and renewal of certificate. A place of assembly certificate of operation shall be issued for a term of 1 year and may be renewed annually upon payment of proper fees and proof of satisfactory inspection by the fire department.*

#### *ARTICLE 118 CERTIFICATES OF OCCUPANCY*

*§28-118.1 General provisions. No building or open lot shall be used or occupied without a certificate of occupancy issued by the commissioner. Issuance of a certificate of occupancy shall not be construed as an approval of a violation of the provisions of this code or of other applicable laws and rules.*

*§28-118.2 New buildings or open lots. No building hereafter constructed or open lot shall be occupied or used, in whole or in part, unless and until a certificate of occupancy shall have been issued certifying that such building or open lot conforms substantially to the approved construction documents and the provisions of this code and other applicable laws and rules.*

*§28-118.3 Completed buildings or open lots. The provisions of sections 28-118.3.1 through 28-118.3.4 shall apply to completed buildings or open lots.*

*§28-118.3.1 Change of occupancy or use. No building, open lot or portion thereof hereafter altered so as to change from one occupancy group to another, or from one zoning use group to another, either in*

*whole or in part, shall be occupied or used unless and until the commissioner has issued a certificate of occupancy certifying that the alteration work for which the permit was issued has been completed substantially in accordance with the approved construction documents and the provisions of this code and other applicable laws and rules for the new occupancy or use.*

*§28-118.3.2 Changes inconsistent with existing certificate of occupancy. No change shall be made to a building or open lot or portion thereof inconsistent with the last issued certificate of occupancy or, where applicable, inconsistent with the last issued certificate of completion for such building or open lot or which would bring it under some special provision of this code or other applicable laws or rules, unless and until the commissioner has issued a new certificate of occupancy.*

*§28-118.3.3 Changes to exits. No building hereafter altered so as to cause a major alteration to existing exits shall be occupied or used unless and until the commissioner has issued a certificate of occupancy certifying that the alteration work for which the permit was issued has been completed substantially in accordance with the approved construction documents and the provisions of this code and other applicable laws and rules.*

*§28-118.3.4 Existing buildings or open lots without certificates of occupancy. A building or open lot in existence prior to January 1, 1938 and heretofore legally used or occupied without a certificate of occupancy or, if applicable, a certificate of completion, and subject to the provisions of section 28-102.4 (continuation of lawful existing use), may continue to be used or occupied without a certificate of occupancy or, if applicable, a certificate of completion, pursuant to the requirements of section six hundred forty five of the New York city charter, this code and other applicable laws and rules provided there is no change in the existing use or occupancy classification of the building, open lot or portion thereof.*

*§28-118.3.4.1 Application for certificate of occupancy. Upon application by the owner of such a building or open lot in existence prior to January 1, 1938, the commissioner shall issue a certificate of occupancy for such building, provided that at the time of issuing such certificate, such existing building is in compliance with all retroactive requirements of the 1968 building code applicable to such building and no notices of violation or other notices or orders affecting the building as they relate to the provisions of this code or the 1968 building code are pending before*

*the department, and provided further that it is established to the satisfaction of the commissioner, after inspection and investigation, that the alleged use of the building has heretofore legally existed.*

*§28-118.3.4.2 Partial certificates of occupancy. Partial certificates of occupancy may be issued pursuant to section 28-118.16 .*

*§28-118.4 Applications for certificates of occupancy. All applications for certificates of occupancy shall be submitted on forms furnished by the department. Applications for new buildings or additions to buildings shall be accompanied by an accurate and complete final lot survey made by a land surveyor showing such information as prescribed by the commissioner. The commissioner may waive the requirement of such survey in the case of small sheds, stands, temporary structures, signs, and similar small structures.*

*§28-118.4.1 Applicant. The application for a certificate of occupancy shall be made by or on behalf of the owner of the building or open lot; and if made by a person other than the owner, the application shall be accompanied by a signed statement of the applicant stating that the applicant is authorized by the owner to make the application. The full names and addresses of the owner, and applicant, and of the principal officers thereof, if a corporation, shall be stated in the application.*

*§28-118.4.2 Statement of compliance. When a certificate of occupancy for a new or altered building is applied for, the application shall be accompanied by a signed statement of the registered design professional of record or the superintendent of construction, as applicable, stating that such person has examined the approved construction documents and specifications of the building for which the certificate of occupancy is sought, and that, to the best of his or her knowledge and belief, the building has been erected or altered in accordance with the approved construction documents and specifications and, as erected or altered, complies with the provisions of this code and all other applicable laws and rules, except insofar as variations or variances therefrom have been legally permitted or authorized, specifying such variations or variances in such required statement.*

*§28-118.5 Review of applications for certificates of occupancy. All applications for certificates of occupancy and accompanying submittal documents shall be examined promptly after their submission. If the building is entitled to the certificate of occupancy applied for, the application shall be approved and the*

*certificate of occupancy issued by the commissioner within 10 calendar days after submission of a complete application. Otherwise, the application shall be rejected and written notice of rejection, stating the grounds of rejection, shall be given to the applicant within 10 calendar days of the submission of the application. Wherever an application has been rejected and proof is thereafter submitted establishing that the grounds of rejection have been met and that the building is entitled to the certificate of occupancy applied for, the application shall be approved and the certificate of occupancy issued within 10 calendar days after submission of such proof.*

*§28-118.6 Issuance of certificate of occupancy. After the commissioner inspects the building or open lot and determines that the building or open lot conforms substantially to the approved construction documents and to the provisions of this code and other applicable laws and rules, the commissioner shall issue a certificate of occupancy that shall contain information including, but not limited to:*

- 1. The building permit number.*
- 2. The address of the structure.*
- 3. Block and lot numbers pertaining to the zoning lot as of the date of issuance, as defined in section 12-10 of the New York city zoning resolution.*
- 4. The description of the structure for which the certificate is issued.*
- 5. A statement that the described portion of the structure has been inspected for compliance with the requirements of this code.*
- 6. The name and signature of the commissioner.*
- 7. The code under which the permit was issued.*
- 8. The use and occupancy, in accordance with this code and the zoning resolution.*
- 9. The type of construction as defined in this code.*
- 10. The design occupant load of floors and spaces.*
- 11. Types of major fire suppression or alarm systems.*
- 12. Any special stipulations and conditions of the building permit.*
- 13. The maximum permissible live loads on the several floors of the building.*
- 14. The number of parking spaces.*

*§28-118.7 Pavement plan. No certificate of occupancy shall be issued for any building or open lot*

*requiring a pavement plan pursuant to article 108 unless and until an inspection has been made to show that all work necessary for compliance with the pavement plan has been completed.*

*§28-118.7.1 Certification. No certificate of occupancy shall be issued for any building or open lot requiring a certification pursuant to article 108 unless and until the applicant, after completion of construction work, inspects the sidewalk and certifies that the sidewalk is free from defects.*

*Exception: The commissioner may issue a certificate of occupancy if in lieu of such certification the owner furnishes to the department prior to the issuance of the certificate of occupancy security satisfactory to the department that the sidewalk will be installed and paved or repaired within the time specified by the department.*

*§28-118.8 Sanitary/storm water drainage. No certificate of occupancy shall be issued until the department confirms by inspection that all work relating to the installation of the part of the sanitary/storm water drainage system which lies outside of such property, if and as required by section 24-526 of the administrative code, has been satisfactorily completed.*

*§28-118.9 Fire protection plan. No certificate of occupancy shall be issued until a fire protection plan, if required pursuant to article 109, has been filed and accepted.*

*§28-118.10 Electrical work. No certificate of occupancy shall be issued unless compliance with the New York city electrical code is certified by the commissioner.*

*§28-118.11 Certificates of compliance. No certificate of occupancy shall be issued until certificates of compliance are issued for the following types of service equipment:*

- 1. Air conditioning and ventilation systems.*
- 2. Elevators, escalators, moving walkways and dumbwaiters.*
- 3. Fuel burning and fuel oil storage equipment.*
- 4. Refrigeration systems.*
- 5. Heating systems.*
- 6. Boilers.*

*§28-118.12 Place of assembly certificate of operation. The issuance of a certificate of occupancy shall not authorize the use of any space as a place of assembly unless and until the commissioner thereafter issues a place of assembly certificate of operation.*

*§28-118.13 Certificates of occupancy for air-inflated structures, air-supported structures, and tents. Certificates of occupancy for air-inflated structures, air-supported structures, and tents shall be issued for a period not exceeding one year. Such certificates may be renewed for one-year periods upon demonstration that the structure complies with all laws and rules in effect at the time of the request for renewal.*

*§28-118.14 Payment of outstanding penalties. The department may refuse to issue a certificate of occupancy for a building pending payment of all outstanding fines or civil penalties imposed for violations of this code, the 1968 building code or other laws enforced by the department at the same building.*

*§28-118.15 Temporary certificates of occupancy. Upon application, the commissioner is authorized to issue a temporary certificate of occupancy before the completion of the entire work covered by the permit, provided that the subject portion or portions of the building may be occupied and maintained in a manner that will not endanger public safety, health, or welfare. The commissioner shall set a time period during which the temporary certificate of occupancy is valid.*

*§28-118.16 Amended certificate of occupancy. Where a building exceeds three stories in height and the change does not exceed 20 percent of the total floor area, an amendment to the existing certificate of occupancy for such new use shall be issued by the commissioner certifying that the proposed new occupancy and use conforms to the provisions of the laws governing building construction and that the proposed use will not be in conflict with any provisions of the labor law, multiple dwelling law or the zoning resolution.*

*§28-118.16.1 Partial certificate of occupancy. A partial certificate of occupancy may be issued to a specific floor or floors of an existing building erected prior to January 1, 1938 subject to the following conditions:*

- 1. The building does not have and is not otherwise required to have a certificate of occupancy or certificate of completion, if applicable.*
- 2. The floor or floors for which a certificate of occupancy is issued shall not constitute more than 50 percent of the gross floor area of the building.*
- 3. The building is of noncombustible construction and protected with an automatic sprinkler system.*

4. *Adequate means of egress are provided from all floors.*
5. *Upon inspection, the building is deemed safe for occupancy.*

*§28-118.17 Revocation of certificates of occupancy. The commissioner is authorized to request, in writing, pursuant to section six hundred forty five of the New York city charter that the board of standards and appeals or a court of competent jurisdiction revoke, vacate, or modify a certificate of occupancy issued under the provisions of this code whenever the certificate is issued in error, or on the basis of incorrect information provided to the department.*

*§28-118.18 Record of certificates. A record of all certificates of occupancy shall be kept by the department; and copies thereof shall be furnished by the department upon request, and on the payment of the fee prescribed in article 112 of this chapter. The certificate of occupancy or a copy thereof shall be available for inspection at the building at all reasonable times.*

*§28-118.19 Posting of certificates of occupancy. The owner shall post a copy of the building's certificate of occupancy in accordance with this section 28-118.19, except buildings occupied entirely by group R3. Buildings that are not required to have a certificate of occupancy shall be posted by the owner with a sign or placard in a form prescribed by the commissioner. The certificate of occupancy or sign, as applicable, shall be permanently affixed to the structure in a conspicuous location in a public hall, corridor, management office of the building or as otherwise prescribed by the commissioner.*

*§28-118.19.1 Replacement of posted certificates of occupancy and signs. All posted certificates of occupancy or signs, as applicable, shall not be removed or defaced and, if lost, removed or defaced, shall be immediately replaced. The commissioner may inspect or cause to be inspected periodically all buildings for compliance with the provisions of this code in regard to posting; and the inspection reports shall specify any violation thereof.*

#### *ARTICLE 119 SERVICE UTILITIES*

*§28-119.1 Connection of service utilities. It shall be unlawful for any utility company or utility corporation to supply gas to a building, place or premises in which new meters other than replacement are required until a certificate of approval of gas installation from the department is filed with such utility company or utility corporation. When new gas service piping has been installed it shall be locked-off by the utility*

*company or utility corporation either by locking the gas service line valve or by installing a locking device on the outside gas service line valve. The lock shall not be removed until the gas meter piping (other than utility owned) and gas distribution piping have been inspected and certified as required by the department of buildings as being ready for service.*

*§28-119.1.1 Gas shut-off for alterations to gas piping systems. When alterations, extensions or repairs to existing gas meter piping or gas distribution piping require the shut-off of gas flow to a building, the utility company shall be notified by the owner or his or her authorized representative.*

*§28-119.2 Temporary connection. The commissioner shall have the authority to authorize the temporary connection of the building or system to the gas service utility.*

*§28-119.3 Authority to disconnect utility service. The commissioner may authorize disconnection of gas service to the building, structure or system regulated by this code and the codes referenced in case of emergency where necessary to eliminate an immediate hazard to life or property. The department shall notify the local gas utility company, and wherever possible the owner and occupant of the building, structure or service system of the decision to disconnect prior to taking such action.*

## **CHAPTER 2 ENFORCEMENT**

### **ARTICLE 201 GENERAL**

*§28-201.1 Unlawful acts. It shall be unlawful to erect, construct, alter, extend, repair, fail to maintain, move, remove, demolish, occupy, use or operate any building, structure, premises, or equipment, or to conduct any subject matter regulated by this code or by the zoning resolution, or to cause same to be done, in conflict with or in violation of any of the provisions of this code, the zoning resolution, or the rules of the department or, with regard to existing buildings, any applicable provision of the 1968 building code or any other law or rule enforced by the department. It shall be unlawful to fail to comply with an order of the commissioner or to violate any order of the commissioner issued pursuant to this code, the 1968 building code, the zoning resolution or any law or rule enforced by the department.*

*§28-201.2 Classification of violations. The commissioner shall promulgate rules classifying all violations of this code, the zoning resolution or, with regard to existing buildings, the 1968 building code or other laws or rules enforced by the department as immediately hazardous violations, major violations or lesser*

*violations unless the classification of such violations is specifically directed by this code. Such classification shall be based on the effect of the violation on life, health, safety or the public interest or the necessity for economic disincentive.*

*§28-201.2.1 Specified immediately hazardous violations. The commissioner shall classify the following violations as immediately hazardous:*

- 1. A violation of section 28-210.1 in which a building legally approved for occupancy as a one-family or two-family dwelling (as set forth in the certificate of occupancy or if no certificate of occupancy is required, as evidenced by official records) is illegally converted to or maintained as a dwelling for occupancy by four or more families;*
- 2. Any violation of section 28-211.1 false statement;*
- 3. Any violation of a stop work order or of a cease use order;*
- 4. Any violation of a vacate order or order to seal, secure and close, or closure order;*
- 5. Unlawful demolition;*
- 6. Falsely impersonating an employee or authorized representative of the department;*
- 7. Occupancy without a required certificate of occupancy;*
- 8. Intentional disobedience or violation of any provision of a closure order;*
- 9. Submittal of a materially false or misleading professional certification.*
- 10. A violation of section 28-212.11.*
- 11. A violation of section 28-307.1.*

*§28-201.2.2 Specified major violations. The commissioner shall classify the following violations as major violations:*

- 1. A violation of section 28-210.1 other than a violation that is directed to be classified as immediately hazardous.*
- 2. Failure to perform required façade, elevator and boiler inspections and to file required reports within the applicable time period.*

*§28-201.3 Methods of enforcement. The commissioner may use any of the methods set forth in this code to enforce compliance with this code, the 1968 building code, the zoning resolution, other laws or rules enforced by the department and orders of the commissioner issued pursuant thereto including but not*

*limited to:*

- 1. Proceedings for the recovery of civil penalties for immediately hazardous, major and lesser violations before the environmental control board or other administrative tribunal.*
- 2. Civil judicial proceedings for the recovery of civil penalties or injunctive relief or both for immediately hazardous, major and lesser violations.*
- 3. Criminal judicial proceedings for the imposition of criminal fines or imprisonment or both for immediately hazardous, major and lesser violations.*
- 4. The issuance and enforcement of peremptory orders for immediately hazardous, major and lesser violations.*
- 5. The issuance of a commissioner's request for correction of an unlawful use or condition or order to correct an unlawful use or condition.*
- 6. Other special remedies as set forth in this code, the zoning resolution of other law or rule.*

*§28-201.3.1 Issuance. Officers and employees of the department and of other city agencies designated by the commissioner shall have the power to issue summonses, appearance tickets and notices of violation for violations of this code, the 1968 building code, the zoning resolution of other laws or rules enforced by the department, orders, and requests for corrective action.*

*§28-201.4 Aggravating and mitigating factors. Civil penalties and criminal fines and imprisonment shall be imposed within the ranges set forth in this code or as otherwise specified in this code or other law, with due regard for mitigating and aggravating factors.*

## *ARTICLE 202 CIVIL PENALTIES*

*§28-202.1 Civil penalties. Except as otherwise specified in this code or other law, violations of this code, the 1968 building code, the zoning resolution or other laws or rules enforced by the department shall be punishable by civil penalties within the ranges set forth below:*

- 1. For immediately hazardous violations, a civil penalty of not less than one thousand dollars nor more than twenty-five thousand dollars may be imposed for each violation. In addition to such civil penalty, a separate additional penalty may be imposed of not more than one thousand dollars for each day that the violation is not corrected. The commissioner may by rule establish specified daily penalties within the limit set forth above for particular immediately hazardous violations.*

2. *For major violations, a civil penalty of not more than ten thousand dollars may be imposed for each violation. In addition to such civil penalty, a separate additional penalty may be imposed of not more than two hundred fifty dollars for each month that the violation is not corrected. The commissioner may by rule establish specified monthly penalties within the limit set forth above for particular major violations.*
3. *For lesser violations, a civil penalty of not more than five hundred dollars may be imposed for each violation.*

*§28-202.2 Continuing violations. Notwithstanding the assessment of daily penalties, each day that a violation continues shall be a separate and distinct offense.*

**ARTICLE 203  
CRIMINAL PENALTIES**

*§28-203.1 Criminal fines and imprisonment. Except as otherwise specified in this code or other law, violations of this code, the 1968 building code, the zoning resolution or other laws or rules enforced by the department shall be punishable by criminal fines and imprisonment within the ranges set forth below:*

1. *Every person convicted of violating a provision of this code, the 1968 building code, the zoning resolution or other law or rule enforced by the department or an order of the commissioner issued pursuant thereto that is classified by the commissioner or the code as an immediately hazardous violation shall be guilty of a misdemeanor punishable by a fine of not more than twenty-five thousand dollars or by imprisonment of not more than one year or by both such fine and imprisonment.*
2. *Every person convicted of violating a provision of this code, the 1968 building code, the zoning resolution or other law or rule enforced by the department or an order of the commissioner issued pursuant thereto that is classified by the commissioner or the code as a major violation shall be guilty of a violation punishable by a fine of not more than ten thousand dollars or imprisonment for not more than 15 days or both such fine and imprisonment.*
3. *Every person convicted of violating a provision of this code, the zoning resolution or other law or rule enforced by the department or an order of the commissioner issued pursuant thereto that is classified by the commissioner or the code as a lesser violation shall be guilty of a violation punishable by a fine of not more than five hundred dollars.*

*§28-203.2 Continuing violations. In the case of continuing violations each day's continuance shall be a separate and distinct offense.*

*ARTICLE 204  
ENVIRONMENTAL CONTROL BOARD*

*§28-204.1 General. Any person who shall violate or fail to comply with any of the provisions of this code, the 1968 building code, the zoning resolution or other laws or rules enforced by the department or with any order issued pursuant thereto shall be liable for a civil penalty that may be recovered in a proceeding before the environmental control board. Such proceeding shall be commenced by the service of a notice of violation returnable before the board. Such notice of violation may be issued by employees of the department or of other city agencies designated by the commissioner and may be served by such employees or by a licensed process server.*

*§28-204.2 Order to certify correction. Each such notice of violation shall contain an order of the commissioner directing the respondent to correct the condition constituting the violation and to file a certification with the department that the condition has been corrected. Unless otherwise provided by rule, such order shall require that violations classified as major or lesser be corrected within 30 days from the date of the order and that violations classified as immediately hazardous be corrected forthwith. Such order shall also require that certification of the correction of the violation shall be filed with the department in a manner and form and within such additional period of time as shall be established by rule of the department. In any proceeding before the environmental control board, no civil penalty shall be imposed for a lesser violation if the respondent complies with the commissioner's order to correct and to certify correction of the violation within the applicable time period. However, such violation may serve as a predicate for purposes of assessing aggravating factors attributable to multiple offenses.*

*§28-204.3 Failure of proof. In any proceeding before the environmental control board, if the board finds that the commissioner has failed to prove the violation charged, the order requiring the respondent to correct the condition constituting the violation shall be deemed dismissed.*

*§28-204.4 Failure to certify the correction of a violation. Failure to comply with an order of the commissioner issued pursuant to section 28-204.2 to correct and to certify correction of a violation within the applicable time period shall be a violation of this code for which penalties may be imposed in addition to the penalties that may be or have been imposed for the violation referred to in such order. Upon*

*application, for good cause, the commissioner may extend the time for filing the certification of correction of a violation, but not for more than 30 days for each extension.*

*§28-204.5 False statements in certification of correction. For the purposes of this section 28-204.5, if the environmental control board finds that a certification of correction filed pursuant to section 28-204.2 contained material false statements relating to the correction of a violation, such certification of correction shall be null and void and the penalties set forth in this code for the violation may be imposed as if such false certification had not been filed with and accepted by the department. It shall be an affirmative defense that the respondent neither knew nor should have known that such statements were false,*

*§28-204.6 Tax lien. Enforcement of environmental control board judgments against owners for certain building code violations. Notwithstanding any provision of law to the contrary, an environmental control board judgment against an owner for a building code violation with respect to a private dwelling, a wooden-framed single room occupancy multiple dwelling, or a dwelling with a legal occupancy of three or fewer dwelling units shall constitute a tax lien on the property named in the violation with respect to which such judgment was rendered, as hereinafter provided. Such liens shall be entered and enforced as provided in this section 28-204.6.*

*§28-204.6.1 Record of unpaid judgments. There shall be filed in the office of the department a record of all such unpaid judgments. Such records shall be kept by tax lot and block number and shall be accessible to the public during business hours. An entry of a judgment on the records of the department shall constitute notice to all parties.*

*§28-204.6.2 Lien. All such unpaid judgments shall constitute a lien upon the property named in the violation with respect to which such judgment was rendered when the amount shall have been definitely computed as a statement of account by the department, and the department shall file such statement with the department of finance for entry against the property. Such lien shall have a priority over all other liens and encumbrances except for the lien of taxes and assessments. However, no lien created pursuant to this section 28-204.6 shall be enforced against a subsequent purchaser in good faith or mortgagee in good faith unless the requirements of section 28-204.6.1 are satisfied.*

*§28-204.6.3 Notice. A notice, stating the amount due and the nature of the charge, shall be mailed by the department of finance to the last known address of the person whose name appears on the records*

*of the department as being the owner or agent of the property or as the person designated by the owner to receive tax bills or, where no name appears, to the property, addressed to either the “owner” or the “agent.”*

*§28-204.6.4 Mailing. Such notice mailed by the department of finance pursuant to this section 28-204.6.4 shall have stamped or printed thereon a reference to section 204.6.*

*§28-204.6.5 Failure to pay charge. If such charge is not paid within 30 days from the date of entry, it shall be the duty of the department of finance to receive interest thereon at the same rate as unpaid real property taxes, to be calculated to the date of payment from the date of entry.*

*§28-204.6.6 Enforcement of lien. Such charge and the interest thereon shall continue to be, until paid, a lien on the property. Any remedy or procedure available for the enforcement of tax liens against such property, including, but not limited to, any sale of a tax lien or any foreclosure of a tax lien, shall be available with respect to such tax lien. In addition, such tax lien may be satisfied in accordance with the provisions of section 1354 of the real property actions and proceedings law.*

*§28-204.6.7 Validity of lien. In any proceeding to enforce or discharge a lien created pursuant to this section 28-204.6, the validity of the lien shall not be subject to challenge based on the lawfulness of the judgment, except as provided in this section 28-204.6.*

*§28-204.6.8 Challenge. No such challenge may be made except by the owner of the property or a mortgagee or lienor whose mortgage or lien would, but for the provisions of this section 28-204.6, have priority over the department’s lien.*

*§28-204.6.9 Notice to mortgagees and lienors. Notwithstanding the foregoing provisions, no such judgment shall be entered and enforced as a tax lien against any property unless at the time of the issuance of the notice of violation a copy of such notice was also served on all mortgagees and lienors of record of such property by mail addressed to the recorded addresses of such mortgagees and lienors.*

*§28-204.6.10 Non-exclusive remedy. The procedures provided in this section 28-204.6 for the enforcement of environmental control board judgments against owners shall be in addition to any other methods provided under any other provision of law for the enforcement of such judgments.*

ARTICLE 205  
CIVIL JUDICIAL PROCEEDINGS

*§28-205.1 Civil judicial enforcement. The owner, lessee, person in charge, or occupant of any building, structure, premises, equipment or part thereof, where a violation of this code, the 1968 building code, the zoning resolution or of other laws or rules enforced by the department or any order issued by the commissioner shall exist or the agent, architect, builder, contractor, engineer, or any other person who commits or assists in any such violation or who maintains any building, structure, premises, equipment or part thereof where any such violation shall exist shall be subject to an action or proceeding to restrain, correct or abate such violation, or to compel compliance with such order. Upon request of the commissioner, the corporation counsel may institute judicial actions or proceedings seeking such relief. In addition to any other remedies, in any such action or proceeding the defendant or respondent shall be subject to the payment of civil penalties as provided in this code.*

*§28-205.1.1 Corporation counsel. Such actions and proceedings may be instituted by the corporation counsel in the name of the city in any court of competent jurisdiction in the city and shall be given preference over pending causes therein. In such actions or proceedings, the city may apply for restraining orders, preliminary injunctions or other provisional remedies, with or without notice; and no undertakings shall be required as a condition to the granting or issuing of any such order, injunction or remedy, or by reason thereof. No court shall lose jurisdiction of any action or proceeding hereunder by reason of a plea that the title to real estate is involved if the object of the action is to recover a penalty for the violation of any of the provisions of this code.*

*§28-205.1.1.1 Naming the building as a defendant. The corporation counsel shall name as defendants the building, structure, or premises where the violation shall exist by describing it by block, lot number, and street address and at least one of the owners of some part of or interest in the building, structure, or premises.*

*§28-205.1.1.2 In rem jurisdiction over the building. In rem jurisdiction over the building, structure, or premises where the violation shall exist shall be complete by affixing the summons to the door of the building, structure, or premises and by mailing the summons by certified or registered mail, return receipt requested, to one of the owners of some part of or interest in the*

*building, structure, or premises. Proof of service shall be filed within two days thereafter with the clerk of the court designated in the summons. Service shall be complete upon such filing.*

*§28-205.1.1.3 Service on other defendants. Defendants, other than the building, structure, or premises where the violation shall exist, shall be served with the summons as provided in the civil practice law and rules.*

*§28-205.1.2 Presumptive evidence. In any action or proceeding founded upon a claim by the commissioner that any law or rule enforceable by the department has been violated, or that a lawful order issued by such commissioner has not been complied with, the following presumptions shall apply:*

*§28-205.1.2.1 Presumption of commissioner certificate. A certificate in writing by the commissioner, or his or her authorized representative, shall be presumptive evidence of any matter stated therein.*

*§28-205.1.2.2 Presumption of ownership. The person in whose name the real estate affected by the action is recorded in the office of the city register or the county clerk, as applicable, shall be presumed to be the owner thereof.*

*§28-205.1.2.3 Presumption of employment or agency. Whenever there is evidence that a person was the manager, operator, or supervisor or, in any other way, in charge of the premises, at the time the violation occurred, such evidence shall be presumptive that he or she was an agent or employee of the owner or lessee of the building, structure, or premises.*

*§28-205.1.3 Costs. In no case shall the department, or any officer or employee thereof, be liable for costs in any such action or proceeding; and officers and employees of the department, acting in good faith and without malice, shall be free from liability for acts done in any such action or proceeding.*

*§28-205.1.4 Lien. Any judgment rendered in any such action or proceeding shall be and become a lien upon the premises named in the complaint in such action or proceeding, if any, the lien to date from the time of filing a notice of pendency in the office of the clerk of the county in which the premises is located, and to have priority before any mortgage or other lien existing prior to such filing, except tax and assessment liens.*

*§28-205.1.5 Notice of pendency. The notice of pendency referred to in this section 28-205.1.5 may be*

*filed at the commencement of judicial proceedings; provided the commissioner may deem such action to be necessary. Any notice of pendency filed pursuant to the provisions of this code may be vacated and cancelled of record upon an order of a justice of the court in which such action or proceeding was instituted or is pending, or upon the consent in writing of the corporation counsel. The clerk of the county where the notice is filed is hereby directed and required to mark any such notice of pendency, and any record or docket thereof, as vacated and cancelled of record upon the presentation and filing of a certified copy of such order or consent.*

*ARTICLE 206  
CRIMINAL JUDICIAL PROCEEDINGS*

*§28-206.1 Criminal judicial enforcement. The owner, lessee, person in charge, or occupant of any building, structure, premises, equipment or part thereof, where a violation of this code, the 1968 building code, the zoning resolution or of other laws or rules enforced by the department or any order issued by the commissioner shall exist or the agent, architect, builder, contractor, engineer, or any other person who commits or knowingly assists in any such violation or who maintains any building, structure, premises, equipment or part thereof where any such violation shall exist shall be guilty of a criminal offense punishable by a fine or imprisonment or both a fine and imprisonment in accordance with this code.*

*§28-206.1.1 Other penalties. The criminal penalties provided by this code shall be in addition to or alternative to any civil sanctions authorized to be imposed for an unlawful use or condition cited in this code.*

*ARTICLE 207  
PEREMPTORY ORDERS*

*§28-207.1 Contents and service. Peremptory orders issued by the commissioner shall contain a description of the building, structure, premises, equipment or subject matter affected, and shall be designated by address where applicable. Such orders may be served personally or by posting at the premises followed by regular mail, by any officer or employee of the department, or by any person authorized by the commissioner.*

*§28-207.2 Stop work orders. Whenever the commissioner finds that any building work is being executed in violation of the provisions of this code, the 1968 building code, the zoning resolution or of any laws or rules enforced by the department, or in a dangerous or unsafe manner, the commissioner or his or her*

*authorized representative may issue a stop work order.*

*§28-207.2.1 Issuance. Upon issuance of a stop work order by the commissioner, all work shall immediately stop unless otherwise specified. Such order may require all persons to forthwith vacate the premises pursuant to the provisions of section 28-207.4 and may also require such work to be done as, in the opinion of the commissioner, may be necessary to remove any danger therefrom. The police department or other law enforcement agency or officer shall, upon the request of the commissioner, assist the department in the enforcement of this section 28-207.2. The stop work order may be given verbally or in writing to the owner, lessee or occupant of the property involved, or to the agent of any of them, or to the person or persons executing the work. A verbal order shall be followed promptly by a written order and shall include the reason for the issuance of the stop work order.*

*§28-207.2.2 Unlawful continuance. No person shall with knowledge or notice of a stop work order allow, authorize, promote, continue or cause to be continued any work covered by the stop work order, except such work that may be required by order of the commissioner.*

*§28-207.2.3 Rescission. Upon application, the commissioner shall rescind the stop work order when the condition that gave rise to its issuance has been corrected and either all civil penalties or criminal fines assessed for any violation of such order have been paid or, where a violation is pending, security for the payment of such penalties or fines has been posted in accordance with department rules, or where the stop work order was issued in error or conditions are such that it should not have been issued. The commissioner may by rule require the payment of a fee in the amount of the expense of additional inspection and administrative expense related to such stop work order.*

*§28-207.3 Public nuisance. Whenever any building, structure, place or premises is or may be perilous to life or property by reason of the nature or condition of its contents, its use, the overcrowding of persons therein, defects in its construction, or deficiencies in fire alarm, fire extinguishing equipment or fire escape equipment, or by reason of any condition in violation of law or order of the commissioner, the commissioner may declare that the same, to the extent that the commissioner may specify, is a public nuisance and may order the same to be removed, sealed, abated, repaired, altered or otherwise improved.*

*§28-207.3.1 Rescission. Upon application, the commissioner shall rescind such order when the condition that gave rise to its issuance has been corrected or where the declaration was issued in error*

*or conditions are such that it should not have been issued. The commissioner may by rule require the payment of a fee in the amount of the expense of additional inspection and administrative expense related to such order.*

*§28-207.4 Vacate order. In case any order to remedy a condition that is or may be imminently perilous, dangerous or detrimental to life, public safety or property, issued by the commissioner is not complied with, or the commissioner determines that an emergency exists requiring such action, the commissioner may order and immediately cause any building, structure, place or premises to be vacated. The vacate order may be given verbally or in writing to the owner, lessee or occupant of the property involved, or to the agent of any of them, or to the person or persons executing the work. A verbal order shall be followed promptly by a written order and shall include the reason for the issuance of the vacate order.*

*§28-207.4.1 Basis for vacate. Conditions for which the commissioner may issue a vacate order shall include but shall not be limited to the following conditions that create a hazard to life, public safety, or property:*

- 1. Danger of structural failure;*
- 2. Danger of façade failure;*
- 3. Inadequate fire protection, detection, or suppression;*
- 4. Inadequate egress; or*
- 5. Improper storage of hazardous materials, combustible or toxic.*

*§28-207.4.2 Enforcement of vacate order. All orders issued pursuant to this section 28-207.4 shall be posted upon the premises and made available to the public. Immediately upon the posting of an order upon the premises, officers and employees of the police department, the department, and other authorized officers and employees of the city shall immediately act upon and enforce such order. The police department shall provide all reasonable assistance to the department and other authorized officers and employees necessary to carry out the provisions of this section 28-207.4. A copy of the vacate order shall be filed with the county clerk of the county in which the premises is located. Such filing shall be notice of the vacate order to any subsequent owner and such owner shall be subject to such order.*

*§28-207.4.3 Rescission. Upon application, the commissioner shall rescind the vacate order when the*

*condition that gave rise to its issuance has been corrected and either all civil penalties or criminal fines assessed for any violation of such order have been paid or, where a violation is pending, security for the payment of such penalties or fines has been posted in accordance with department rules, or where the vacate order was issued in error or conditions are such that it should not have been issued. The commissioner may by rule require the payment of a fee in the amount of the expense of additional inspection and administrative expense related to such vacate order.*

*§28-207.5 Cease use orders for service equipment. Whenever the commissioner determines that the operation of any service equipment is or may be dangerous to life, health or safety, the commissioner may issue a cease use order requiring such equipment to be shut down or sealed or otherwise made inoperable. Upon the issuance of such order a tag or notice shall be affixed to the device warning that the equipment is unsafe for operation. It shall be unlawful to operate such equipment or to remove or deface such tag unless and until the cease use order is rescinded by the commissioner.*

*§28-207.5.1 Rescission of cease use order. Upon application, the commissioner shall rescind the cease use order when the condition that gave rise to its issuance has been corrected and either all civil penalties or criminal fines assessed for any violation of such order have been paid or, where a violation is pending, security for the payment of such penalties or fines has been posted in accordance with department rules or where the cease use order was issued in error or conditions are such that it should not have been issued.. The commissioner may by rule require the payment of a fee in the amount of the expense of additional inspection and administrative expense related to such cease use order.*

**ARTICLE 208**  
**COMMISSIONER'S REQUEST FOR CORRECTIVE ACTION**

*§28-208.1 Commissioner's request for corrective action. As an alternative to the issuance of an order or notice of violation, the commissioner may issue a request for corrective action to any person responsible for any claimed unlawful use or condition in any premises. Each request for corrective action shall have the commissioner's signature affixed thereto; but the commissioner may authorize any subordinate to affix such signature, including an electronic signature.*

*§28-208.1.1 Contents and delivery. The request for corrective action shall contain a description of the building, structure, premises, equipment or subject matter affected, shall be designated by address,*

where applicable, shall be sent by regular mail or upon consent by electronic means to the owner, lessee, person in charge, or occupant of the building, structure, premises, equipment or to any person responsible for the unlawful use or condition at the last known address for such person. Requests for corrective action may be sent to a managing agent or other person specifically designated by the owner to attend to such requests on behalf of the owner. Each such request shall describe the unlawful use or condition, call upon the person addressed to correct it and to inform the department of the action taken. A time for correction or response shall be specified. A request for corrective action may be given orally, followed within a reasonable time by a writing as described in this section 28-208.1.1. A request for corrective action shall provide notice that failure to respond to such a request may result in the imposition of a fee for any subsequent inspection that results in the issuance of a notice of violation for the condition.

*§28-208.1.2 Public record.* The department shall keep a record, available to the public, of requests for corrective action issued pursuant to this article. The record of a request for corrective action shall be reflected as withdrawn upon submission to the department of a statement in a form prescribed by rule indicating that the use or condition has been corrected or did not exist or following an inspection by the department that confirms correction. A request for corrective action may be issued in response to a complaint or inspection.

*§28-208.1.3 Other remedies not precluded.* Nothing in this article shall be construed to limit the power of the commissioner to take any other action authorized by this code with respect to any unlawful use or condition including, but not limited to, the commencement of an action or proceeding in a court or before the environmental control board or other administrative tribunal or the issuance of a peremptory order or to require that the commissioner issue a request for corrective action as a prerequisite to any other enforcement action.

ARTICLE 209  
COMMISSIONER'S ORDER TO CORRECT UNLAWFUL USE OR CONDITION

*§28-209.1 General.* The commissioner may issue an order to the persons responsible for any unlawful use or condition in any premises directing such person to correct the unlawful use or condition. Each such order shall have the commissioner's signature affixed thereto; but the commissioner may authorize any subordinate to affix such signature, including an electronic signature.

*§28-209.2 Contents and service of order. All orders issued by the commissioner shall contain a description of the building, structure, premises, equipment or subject matter affected, and shall be designated by address where applicable. All such orders shall be served by regular mail or, upon consent, electronically. Such orders may be served by any officer or employee of the department, or by any person authorized by the commissioner. An order may be given orally, followed within a reasonable time by a written order as described in this section 28-209.2. Failure to comply with a commissioner's order within the stated time period shall be a violation of this code punishable by civil penalties or criminal fines and imprisonment as set forth in this code. Proof of compliance with a commissioner's order shall consist of certification as prescribed by the rules of the department.*

**ARTICLE 210  
ILLEGAL CONVERSIONS**

*§28-210.1 Illegal residential conversions. It shall be unlawful, except in accordance with all requirements of this code, to convert any dwelling for occupancy by more than the legally authorized number of families or to assist, take part in, maintain or permit the maintenance of such conversion. Upon the finding of such violation and the imposition of punishment for such violation as set forth in this code the department or if applicable the environmental control board shall forward to the internal revenue service, the New York state department of taxation and finance and the New York city department of finance the name and address of the respondent or defendant, the address of the building or structure with respect to which the violation occurred and the time period during which the violation was found to have existed.*

**ARTICLE 211  
FALSE STATEMENTS**

*§28-211.1 False statements in certificates, forms, written statements, applications, reports or certificates of correction. It shall be unlawful for any person to make a material false statement in any certificate, professional certification, form, signed statement, application, report or certification of the correction of a violation required under the provisions of this code or any rule of any agency promulgated thereunder that such person knew or should have known to be false.*

*§28-211.1.1 Rebuttable presumption. In any proceeding that relates to a false statement in a certification of correction of a violation filed in compliance with section 28-204.2 if an inspection made within six months after the filing of the certification finds a condition constituting a violation that*

*is the same as the condition described in the notice of violation with respect to which such certification was filed, there shall be a rebuttable presumption that the condition described in such notice of violation continued and is the same condition found in the inspection.*

*§28-211.2 Falsely impersonating an officer. It shall be unlawful for any person to falsely represent himself or herself as an officer, inspector or employee of the department, or as acting under the authority of the department, or without authority to use, wear or display a shield or other insignia or emblem such as is worn by such officer, inspector or employee.*

**ARTICLE 212**  
**ABATEMENT OF PUBLIC NUISANCE CAUSED BY CERTAIN ILLEGAL OCCUPANCIES**

*§28-212.1 Abatement of public nuisances caused by illegal commercial or manufacturing occupancy in residence districts and certain other zoning districts. Any building or part thereof or vacant land that is located in a residence zoning district and that is occupied for a use not permitted in such district in violation of the zoning resolution, without a certificate of occupancy authorizing such use, is hereby declared to be a public nuisance. Any building or part thereof or vacant land that is located in a C-1 or C-2 commercial zoning district and that is occupied for a commercial or manufacturing use indicated under use group 16, 17, or 18 as described in sections 32-25, 42-14, and 42-15 of the zoning resolution, in violation of the zoning resolution, without a certificate of occupancy authorizing such use is hereby declared to be a public nuisance.*

*§28-212.2 Order of closure. If a building or part thereof or vacant land in which such a nuisance occurs is not occupied primarily as a residence, the commissioner may, in addition to or as an alternative to any other remedy under any other provision of law, after notice and the opportunity for a hearing in accordance with this article, order the closing of such building or part thereof or such vacant land to the extent necessary to abate the nuisance.*

*§28-212.3 Notice of hearing. A notice of hearing with respect to an order of closure shall be served on the owner and mortgagee of record of such building or part thereof or such vacant land and on any person alleged to be occupying such building or part thereof or such vacant land at which the nuisance is located.*

*§28-212.4 Service of notice of hearing. Service may be made on the owner by delivering such notice to the owner or to an agent of the owner or to a person of suitable age and discretion at the residence or place of*

*business of the owner or, if upon reasonable application such delivery cannot be completed, by affixing such notice in a conspicuous place at the owner's place of business or residence or by placing it under the entrance door at either of such locations or by delivering such notice to a person employed by the owner to work at or to manage or maintain the premises at which the nuisance is located and, in all instances except personal delivery upon such owner by mailing the notice of hearing as follows:*

*§28-212.4.1 Mailing to owner's registered address. To the person registered with the department of housing preservation and development as the owner or agent of the premises, at the address filed with such department in compliance with article two of subchapter four of chapter two of title twenty-seven of the administrative code;*

*§28-212.4.2 Mailing to billing address. To the person designated as owner of the building or designated to receive real property tax or water bills for the building at the address for such person contained in one of the files compiled by the department of finance for the purpose of the assessment or collection of real property taxes and water charges or in the file compiled by the department of finance from real property transfer forms filed with the city register upon the sale or transfer of real property;*  
*or*

*§28-212.4.3 Mailing to recorded address. To the person in whose name the real estate affected by the order of the commissioner is recorded in the office of the city register or the county clerk as the case may be at the address set forth on the recorded instrument.*

*§28-212.4.4 Service on corporate owner. Service may be made on an owner that is a corporation pursuant to section 306 of the business corporation law; however, service upon a corporation shall be deemed to have been completed 45 days following service upon the secretary of state.*

*§28-212.4.5 Service on mortgagees. Service may be made upon mortgagees of record by mailing such notice to the mortgagees at the address set forth on the recorded instrument.*

*§28-212.4.6 Service on occupants. Service may be made upon an occupant by delivering such notice to the occupant or to a person employed by the occupant to work at or to manage or maintain the premises at which the nuisance is located; or by affixing such notice to the premises at which the nuisance is located in a conspicuous place or by placing a copy under the entrance door of such premises and mailing a copy of such notice to the occupant at such premises; and in all instances*

*except personal delivery upon such occupant, by mailing the notice of hearing to the occupant at the premises at which the nuisance is located.*

*§28-212.4.7 Proof of service. Proof of service pursuant to section 28-212.4.1 through 28-212.4.6 shall be filed with the commissioner.*

*§28-212.5 Conduct of hearing by office of administrative trials and hearings. The hearing shall be conducted by the office of administrative trials and hearings. The administrative law judge assigned to hear the matter shall submit his or her proposed findings of fact and recommended decision to the commissioner. If based on such recommended decision, proposed findings of fact, and the record of the hearing the commissioner determines that the building or part thereof or vacant land is a public nuisance, pursuant to this article, the commissioner may issue an order of closure. Such order shall not bar legally required ingress or egress for residential occupancy of parts of the building that are not subject to the order of closure.*

*§28-212.6 Lack of knowledge not a defense. At such hearing it shall not be a defense that the owner, occupant, lessor, lessee, mortgagee, or other person having an interest in the property lacked knowledge of or did not acquiesce or participate in the creation or continuation of the public nuisance.*

*§28-212.7 Closure not an act of possession. A closure ordered by the commissioner pursuant to this article shall not constitute an act of possession, ownership, or control by the city over the closed premises.*

*§28-212.8 Posting of order of closure. An order of closure shall be posted at the building or part thereof or vacant land that is the subject of such order, and shall be mailed to the record owner of such premises, and any record mortgagee at the address for such person set forth in the recorded instrument, and to the person designated as owner or agent of the building or designated to receive real property tax or water bills for the building at the address for such person contained in one of the files compiled by the department of finance for the purpose of the assessment or collection of real property taxes and water charges or in the file compiled by the department of finance from real property transfer forms filed with the city register upon the sale or transfer of real property. A copy shall also be filed with county clerk or register of the county in which such premises are located. Such filing shall be notice of the order to any subsequent owner and such owner shall be subject to such order.*

*§28-212.9 Enforcement of order of closure. On the tenth business day after the posting of such order and*

*upon the written directive of the commissioner, police officers and authorized employees of the department shall act upon and enforce such order by sealing, padlocking, or otherwise preventing access to the premises in a manner that will not bar legally required ingress or egress for residential occupancy of parts of the building that are not subject to the closure order.*

*§28-212.10 Rescission of order of closure. If at any time after the issuance of such order, the owner, mortgagee, or other person having an interest in the property provides assurance, in a form satisfactory to the commissioner, that the illegal commercial or manufacturing use of the premises has been discontinued and will not reoccur, or such owner, mortgagee, or other person establishes that the premises may be lawfully occupied for such use, the commissioner shall rescind the closure order. If such order is rescinded, the commissioner shall, upon request of such owner, mortgagee, or other person, provide a copy of such rescission, which may be filed with the county clerk or register of the county in which such premises are located. No such re-occupancy shall be permitted without a certificate of occupancy authorizing such use.*

*§28-212.11 Violation of closure order. It shall be unlawful for any person to use or occupy or to permit any other person to use or occupy any building or part thereof or vacant land that has been sealed, padlocked, or otherwise closed pursuant to an order of the commissioner. It shall be unlawful to mutilate or remove a posted order of the commissioner. Intentional disobedience or violation of any provision of a closure order shall be punishable as an immediately hazardous violation.*

**ARTICLE 213  
PENALTY FOR WORK WITHOUT A PERMIT**

*§28-213.1 Department penalty for work without a permit. In addition to any penalties otherwise authorized by law pursuant to article 202 and the rules of the department, whenever any work for which a permit is required pursuant to this code has been performed without a permit, a penalty shall be imposed by the department as provided in this article.*

*§28-213.1.1 Penalty for work without permit on one or two-family dwelling. Where work has been performed without a permit on a one-family or two-family dwelling the penalty shall equal four times the amount of the fee payable for the permit. Where only part of the work has been performed without a permit, the penalty shall be reduced proportionately according to the amount of work still to be performed at the time a permit is issued. Notwithstanding the foregoing, no such penalty shall be less*

*than five hundred dollars.*

*§28-213.1.2 Penalty for work without permit on other than one or two-family dwelling. The penalty for work without a permit on buildings other than one or two-family dwellings shall be fourteen times the amount of the fee payable for such permit. Where only part of the work has been performed without a permit, the penalty shall be reduced proportionately according to the amount of work still to be performed at the time a permit is issued. Notwithstanding the foregoing, no such penalty shall be less than five thousand dollars.*

*§28-213.2 Waiver. Such penalty and the permit fee shall be payable by the owner of the building on which the unpermitted work was performed. A waiver or reduction of such penalty shall be available to a subsequent bona fide purchaser of the premises pursuant to department rules.*

*§28-213.3 Payment of penalty required before issuance of permit. No permit shall be issued for work described in this article until the penalty assessed by the department pursuant to this article has been paid.*

*§28-213.4 Procedure. The department shall adopt a rule setting forth a procedure for assessment of penalties pursuant to this article.*

**ARTICLE 214**  
**ORDER TO SEAL, SECURE AND CLOSE**

*§28-214.1 Order to seal, secure and close. If the commissioner determines such action is necessary to the preservation of life and safety the commissioner may order a building subject to a vacate order to be sealed, secured and closed, except that the commissioner shall not order sealed, secured and closed any dwelling unit or other space lawfully used for residential purposes unless such dwelling unit or other space is sealed pursuant to the provisions of article 216.*

*§28-214.1.1 Definition. For the purpose of this article, “sealed” and “sealed, secured and closed” shall mean the use of any means available to render the building, structure or part thereof inaccessible, including but not limited to the use of a padlock or cinder blocks.*

*§28-214.1.2 Hearing. Such order to seal, secure and close shall contain notice of the opportunity for a hearing with respect to such order to determine if the order was properly issued in accordance with the provisions of this article. Such hearing shall be conducted by the commissioner, or in the*

*commissioner's discretion, by the office of administrative trials and hearings or the environmental control board. If the matter is referred to such office or board, the hearing officer shall submit his or her findings of fact and a recommended decision to the commissioner. The hearing shall be held within three business days after the receipt of the written request of an owner, lessor, lessee, or mortgagee for such hearing. The commissioner shall render a decision within three business days after such hearing is concluded or findings of fact and a recommendation are submitted.*

*§28-214.1.3 Service of seal, secure and close order. Such order issued pursuant to this article shall be served as follows: It shall be mailed to the record owner of such premises; any record mortgagee of such premises at the address for such person as set forth in the recorded instrument; and if reasonably ascertainable, the person designated as owner's agent of the building or designated to receive real property tax or water bills for the building at the address for such person contained in one of the files compiled by the department of finance for the purpose of the assessment or collection of real property taxes and water charges or in the file compiled by the department of finance from real property transfer forms filed with the city register upon the sale or transfer of real property. A copy shall also be filed with the county clerk of the county in which such premises is located. Such filing shall be notice of the order to any subsequent owner and such owner shall be subject to such order.*

*§28-214.1.4 Rescission of seal, secure and close order. An order issued pursuant to this article shall not be rescinded unless the owner, lessor, lessee or mortgagee seeking such rescission provides assurance, in a form satisfactory to the commissioner, that the conditions that caused the issuance of such order have been corrected and will not reoccur. If such order is rescinded, upon the request of the owner, lessor, lessee or mortgagee, the commissioner shall provide a certified copy of such rescission, which may be filed with the county clerk of the county in which such premises is located.*

*§28-214.1.5 Expenses of enforcing seal, secure and close orders. The expenses attending the execution of any and all orders duly made by the department shall respectively be a several and joint personal charge against each of the owners or part owners, and each of the lessees and occupants of the building, structure, enclosure, place or premises to which such order relates, and in respect to which such expenses were incurred; and also against every person or body who was by law or contract bound to do that in regard to such building, structure, enclosure, place or premises which such order*

*requires. Such expenses shall also be a lien on all rent and compensation due, or to become due, for the use of any building, structure, place or premises, or any part thereof, to which such order relates, and in respect to which such expenses were incurred.*

*§28-214.1.6 Notice of seal, secure and close order to community. The commissioner shall give written notice of the closing of any building, structure, enclosure, place or premises pursuant to this article, and any subsequent actions taken with respect thereto, as soon as practicable, to the borough president of the borough within which the closing has occurred; the council member representing the district within which the closing has occurred; and the local community board. On January first of each year, the commissioner shall submit a report to the council, setting forth the number of closings made in the previous year, the locations of such closings, and the nature and use of the premises closed. The commissioner shall, in addition, as soon as practicable after a building, structure, enclosure, place or premises has been closed, make and publish a report of said closing in a manner calculated to quickly notify the local community in which such closing occurred. The commissioner shall also make and publish a report of any premises reopened pursuant to his or her permission under this article. Failure to comply with this section 28-214.1.6 shall not invalidate any action taken by the commissioner pursuant to this article.*

*§28-214.2 Access to sealed premises. The commissioner shall allow access to the premises sealed, secured and closed pursuant to this article to an owner, or a lessor, lessee or mortgagee upon the following conditions:*

- 1. The submission of a written affirmation, satisfactory to the commissioner, that such person or persons will commence or cause to be commenced without delay all work necessary to correct the conditions stated in the vacate order or otherwise to make the premises meet all applicable laws and rules and will complete such work within a period of time and in a manner to be approved by the commissioner;*
- 2. The submission of a written affirmation or other proof satisfactory to the commissioner describing the steps that have been taken and will be taken in the future to ensure that the premises will be used or operated in a lawful manner and specifying such lawful use;*
- 3. If a license, permit, certificate of operation or certificate of occupancy is necessary for such lawful*

*use, the submission of a written affirmation or other proof, satisfactory to the commissioner, describing the steps that have been taken and will be taken in the future to ensure that such premises will be used or operated in compliance with any law requiring such license, permit, certificate of operation or certificate of occupancy; and*

- 4. If the premises are leased and the person making the affirmations described above in items 1, 2 and 3 is not such lessee, the commissioner may also require any authorized person seeking access to submit a written affirmation or other proof that proceedings to enable such person to take actions necessary to ensure compliance with the affirmations submitted by such authorized person pursuant to items 1, 2 and 3 have been commenced.*

*§28-214.3 Additional penalties for harm or injury from violation of order to seal, secure and close. Notwithstanding any other law, rule, or regulation, any person, corporation, partnership, association or any other legal entity who permits a building, structure, enclosure, place or premises, or any part thereof, to be unlawfully occupied or used in contravention of an order of the commissioner pursuant to this article, or who negligently fails to prevent or prohibit such unlawful occupancy or use, shall be liable for a civil penalty of not more than one million dollars, if any other person suffers serious physical injury, as defined in section ten of the penal law, or death in the building, structure, place or premises or any part thereof subject to such order as a result of such unlawful occupancy or use. If more than one person suffers serious physical injury or death, such penalty shall be recoverable for each person suffering serious physical injury or death. Such penalty shall be recovered in a civil action brought by the corporation counsel in the name of the city in any court of competent jurisdiction. In determining the amount of the civil penalty to be imposed the court shall consider:*

- 1. The extent and severity of injury to persons and property caused by the violation;*
- 2. The history of violations by the defendant at such premises, or any other premises, of laws or rules enforced by the department;*
- 3. The degree of willfulness, recklessness, or negligence displayed by the defendant in committing the subject violation;*
- 4. The defendant's financial resources; and*
- 5. The defendant's good faith efforts to cure the subject violation, including efforts to obtain entry to*

*or possession of the premises in order to do so.*

*§28-214.3.1 Payment by city. In the event that the family of any person seriously injured or who has died as the result of any unlawful occupancy or use described in this section 28-214.3 is unable to collect a judgment recovered in a civil action for personal injury or wrongful death against a defendant who has violated this section 28-214.3 because of the insolvency of such defendant, the city may, in its discretion, pay to such injured person or the family of such deceased person an amount, as hereinafter provided, collected from such defendant in an action relating to the same injury or death commenced by the corporation counsel against such defendant pursuant to this section 28-214.3.1.*

*§28-214.3.2 Limitations. Payments pursuant to section 28-214.3.1 shall be made as a matter of grace and shall be in such amounts and in accordance with such standards and procedures as shall be established by the mayor, provided, however, that any payment made pursuant to section 28-214.3.1 shall be in an amount not exceeding out-of-pocket expenses, including indebtedness reasonably incurred for medical or other services necessary as a result of the injury upon which such action is based; loss of earnings or support resulting from such injury; burial expenses not exceeding two thousand five hundred dollars of a person who died as a result of such unlawful occupancy or use described in this section 28-214.3; and the unreimbursed cost of repair or replacement of articles of essential personal property lost, damaged or destroyed as a direct result of such unlawful occupancy or use. In no event shall the payment made to any person exceed the amount of such person's uncollected judgment for personal injury or wrongful death and in no event shall the total amount paid to any number of persons with such uncollected judgments against a single defendant exceed the actual amount collected by the city from such defendant in an action under this subdivision.*

**ARTICLE 215  
EMERGENCY POWERS OF THE COMMISSIONER**

*§28-215.1 Emergency work. Notwithstanding any other provisions of law, if the commissioner determines that a structure or any part thereof is in imminent danger of collapse and the exigency of the situation is such that any delay may cause further danger to the public safety, then the commissioner may direct the commissioner of housing preservation and development or the department of citywide administrative services, or other city agency to perform or arrange the performance of the emergency demolition of such*

*structure or part thereof or such other work as deemed by the commissioner to make it safe.*

*§28-215.1.1 Lien for emergency work. The expenses of the city in performing emergency work on any structure or part of such structure pursuant to this article shall constitute a debt recoverable from the owner and a lien upon the land and any part of such structure that was not demolished. Every such lien shall have priority over all other liens and encumbrances on the premises except for the lien of taxes and assessments. Except as otherwise provided by rule of the affected agency, the agency incurring such expense shall be governed by the procedures set forth in article eight of subchapter five of the housing maintenance code with respect to the enforcement of such debt and lien against all types of structures, including those authorized to be occupied or otherwise occupied for residential, commercial, and manufacturing purposes.*

*§28-215.2 Stopping work and securing structures. See section 28-207.2.*

*§28-215.3 Vacating structures. See section 28-207.4.*

*§28-215.4 Violations of protective measures during construction or demolition. During the construction or demolition of a structure, the commissioner shall notify the owner of the structure affected of any failure to comply with any of the provisions of this code that concern the protection of the public and workers during construction or demolition. Unless the owner so notified proceeds immediately to comply with the orders of the commissioner, the commissioner shall have full power to correct the violation. All expenses incurred therefore shall become a lien on the property pursuant to section 28-112.9.*

*§28-215.5 Investigation of accidents or other emergency conditions. When necessary to conduct an investigation of any occurrence affecting building or construction safety, the commissioner may seize or impound equipment, building material, and portions of the affected building or premises for examination and testing. The police department or other authorized law enforcement agency shall cooperate with the commissioner upon request and shall provide a suitable place for the deposit of such items.*

*§28-215.6 Closing streets temporarily. The commissioner may, when necessary for the public safety, temporarily close the sidewalks, streets, structures or places adjacent to a structure or part thereof, and the police commissioner, or any of his or her subordinates shall enforce all orders or requirements made by the commissioner, when so requested by the commissioner.*

*§28-215.7 Recovery of bodies from wrecked structures. Where any persons are known or believed to be*

*buried under the ruins of any fallen structure or part thereof in the city, the commissioner shall cause an examination of the premises to be made for the recovery of the injured and bodies of the dead. Whenever, in making such examination, it shall be necessary to remove any debris from the premises, other city agencies shall cooperate with the commissioner in carrying out the purposes of this section 28-215.7, and shall provide suitable and convenient places for the deposit of such debris.*

*§28-215.8 Non-compliance with orders; execution of work by department. Upon the failure to comply with any order of the commissioner within the time limited thereby, and subject to the provisions of article 216, any work required to be executed by such order may be executed by the commissioner through the officers, agents or contractors of the department; and the city shall be reimbursed promptly for all costs and expenses of such work. Such costs and expenses shall become a lien upon the premises involved and named in the commissioner's order, which may be enforced in accordance with the provisions of section 28-112.9 of this code.*

#### *ARTICLE 216 UNSAFE BUILDINGS*

*§28-216.1 Conditions constituting an unsafe building or structure. Any building, structure or part thereof described in this article shall be deemed an unsafe building and shall be demolished or removed or made safe and secure as provided herein.*

*§28-216.1.1 Compromised structures. Any structure or premises or part of a structure or premises that from any cause may at any time become dangerous or unsafe, structurally or as a fire hazard, or dangerous or detrimental to human life, health or safety, shall be demolished and removed or made safe and secure.*

*§28-216.1.2 Vacant buildings. Any vacant building not continuously guarded or not sealed and kept secure against unauthorized entry shall have all openings sealed in a manner approved by the commissioner, and it shall be the duty of the owner thereof promptly to make any repairs that may be necessary for the purpose of keeping such building sealed and secure.*

*§28-216.2 Record and notice of unsafe building, structure or premises. The department shall cause a report to be filed on an unsafe building, structure or premises. The report shall describe the nature of the occupancy of the structure and the nature of the unsafe condition and be made a record of the department.*

*§28-216.3 Notice and order. The owner, executor, administrator, mortgagee, lessee or any other person who may have a recorded vested or recorded contingent interest in the unsafe building, structure or premises, shall be served with a notice containing a description of the unsafe building, structure or premises and an order requiring such building be vacated pursuant to 28-207.4, if necessary, and sealed, secured, repaired, shored, or demolished and removed as may be deemed necessary by the department.*

*§28-216.3.1 Content. Such notice shall require the person thus served immediately to certify to the department his or her acceptance or rejection of the order. The notice shall further notify said person(s) that upon his or her refusal or neglect to comply with any of the requirements of this provision, a survey of the building or premises named in such notice will be made at a time and place therein named. The notice shall also state that if, pursuant to the survey, it is found that the building, structure, or premises referred to therein is unsafe or dangerous by the surveyors, their report of survey will be placed before the supreme court for trial at a time and place named in such notice.*

*§28-216.4 Method of service. The notice and order shall be served in accordance with the civil practice law and rules of the state of New York.*

*§28-216.5 Owner abatement of unsafe or dangerous conditions. If the person served with a notice and order pursuant to section 28-216.4 shall immediately certify his or her assent to the securing or removal of such unsafe building, structure or premises condition, such person shall be allowed a period of time as determined by the commissioner, or his or her designee, within which to commence and complete the abatement of the unsafe or dangerous condition. Such person shall employ sufficient labor and assistance to secure or remove such conditions as expeditiously as possible.*

*§28-216.6 Survey. A survey of the building or premises shall be conducted as follows:*

*§28-216.6.1 Identity of surveyors. The survey shall be made by three competent persons, of whom one shall be the commissioner or his or her designee; another shall be a registered design professional appointed by a recognized professional organization; and the third shall be a registered design professional appointed by the person served with a notice pursuant to section 28-216.4. If the person served with such notice shall neglect or refuse to appoint such surveyor, the other two surveyors shall make the survey. In case they disagree, they shall appoint a third person to take part in such survey, who shall be a registered design professional of at least 10 years' practice, whose decision shall be*

*final.*

*§28-216.6.2 Posting report of survey. A copy of the report of the survey shall be posted on the structure that is the subject thereof by the persons holding the survey, immediately on their issuing such report.*

*§28-216.6.3 Compensation of surveyors. The registered design professional appointed by the respective professional organization, as hereinbefore provided, who may act on any survey called in accordance with the provisions of this section 28-216.6, and the third surveyor who may have been called in the case of disagreement provided for in this section 28-216.6, shall each be paid a sum to be determined by rule to be promulgated by the department.*

*§28-216.6.4 Cost of survey. Any costs incurred by the city in connection with the survey shall become money due and owing to the city as part of the return of precept and judgment provided for in section 28-216.9 and 28-216.10 of this code or pursuant to lien provided for in section 28-112.9 of this code.*

*§28-216.7 Court proceeding. Whenever the report of survey shall recite that the building, structure or premises surveyed is unsafe or dangerous, the corporation counsel or his or her designee shall, at the time specified in the notice, place such notice and report before a justice of the court named in the notice. The report of survey shall be in writing and constitute the issues to be placed before the court for trial. The purpose of the trial shall be to determine whether the unsafe building, structure, or premises shall be vacated and sealed, secured, shored, or demolished and removed.*

*§28-216.7.1 Precedence of proceeding. The unsafe building proceeding shall have precedence over every other business of such supreme court. The trial on the issues in the unsafe building proceeding shall be held without delay, at the time specified in the notice, and shall be held by a justice of the court or by a referee, whose decision or report in the matter shall be final.*

*§28-216.7.2 Precept to abate. If the justice or referee determines the building, structure or premises that is the subject of the report of survey is unsafe or dangerous, such justice or referee trying the case shall immediately issue a precept directed to the commissioner authorizing the commissioner forthwith to vacate pursuant to section 28-207.4, if necessary, and to seal, secure, shore, or demolish and remove the unsafe building, structure or premises named in such report. The precept shall be effective for a period of three years from the date of issuance.*

*§28-216.7.3 Notice of pendency. A notice of pendency shall be filed in accordance with the following procedure:*

- 1. The notice of pendency shall consist of a copy of the notice described in section 28-216.3 and shall be filed in the office of the clerk of the county where the property affected by such action, suit or proceeding is located. Such notice of pendency may be filed at any time after the service of the notice described in section 28-216.3.*
- 2. Any notice of pendency filed pursuant to the provisions of this section 28-216.7.3 that has not expired may be vacated and cancelled of record upon an order of a justice of the court in which such suit or proceeding was instituted or is pending, or upon the consent in writing of the corporation counsel. The clerk of the county where the notice is filed is hereby directed and required to mark any such notice of pendency, and any record or docket thereof, as vacated and cancelled of record upon the presentation and filing of a certified copy of such order or consent.*

*§28-216.8 Execution of precept. A precept issued pursuant to section 28-216.7.2 shall be executed in accordance with the procedure set forth in sections 28-216.8.1 through 28-216.8.3.*

*§28-216.8.1 Work by the department. Upon receiving a precept under the provisions of section 28-216.7.2, the commissioner shall execute such precept, as therein directed, and may employ such labor and assistance and furnish such materials as may be necessary for that purpose. The commissioner or his or her designee shall direct the commissioner of citywide administrative services or the department of housing preservation and development or other authorized agency to perform work in accordance with the precept. Such work shall be performed by or under the direction of citywide administrative services in accordance with the provisions of section 4-204 of the administrative code, or the department of housing preservation and development, or such other authorized agency.*

*§28-216.8.2 Owner application to perform work. The owner of such unsafe building, structure, or premises, or any party interested therein, if such person applies to the commissioner immediately upon the issuing of such precept, shall be allowed to perform the requirements of such precept at his or her own cost and expense, if the performance shall be done immediately and in accordance with the requirements of such precept and other applicable laws and rules and such other requirements as the*

*commissioner shall impose.*

*§28-216.8.3 Modification of precept. The commissioner or his or her designee shall have authority to modify the requirements of any precept when such commissioner or designee shall be satisfied that such change will secure the safety of such structure or premises equally well.*

*§28-216.8.3.1 Upon application. The commissioner shall also have authority to modify the requirements of any precept upon application to such commissioner in writing by the owner of the unsafe building, structure, or premises, or such owner's authorized representative. In addition, upon application to modify the requirements of any precept to seal or shore the structure by the commissioner of housing preservation and development, citywide administrative services or such other authorized agency, the commissioner or designee shall have authority to modify such precept accordingly when the commissioner shall be satisfied that such change will secure the safety of such structure or premises equally well.*

*§28-216.8.3.2 Notice. After a determination to modify the precept is made by the commissioner, written notice of such determination shall be sent by regular mail to the owner and applicant for the modification if other than the owner, at his or her last known address.*

*§28-216.8.3.3 Failure of owner to perform work. If no action in accordance with the modified precept is undertaken by the owner or applicant for modification within the time period provided in the modification following the granting of such application, the commissioner may direct the department of housing preservation and development or the department of citywide administrative services or such other authorized agency to execute the original precept, provided however that prior to such execution, notice shall be provided by regular mail to the owner of the unsafe building, structure or premises and applicant for the modification if other than the owner, at his or her last known address. The owner shall continue to have the right to request the commissioner to modify the requirements of the precept prior to the execution thereof.*

*§28-216.8.4 Interference prohibited. It shall be unlawful for any person to interfere, obstruct or hinder the commissioner or the commissioner of citywide administrative services, housing preservation and development, or other authorized agency, or any person who, acting under the authority conferred on such person by such commissioner, in performing the work authorized by a precept issued out of any*

*court or modified in accordance with §28-216.8.3, or the work ordered by the commissioner in accordance with such precept under the provisions of section 28-216.8.3.3.*

*§28-216.8.5 Enforcement. The police commissioner shall enforce such orders or requirements when requested by the commissioner and shall likewise enforce same at the request of the commissioner of citywide administrative services, housing preservation and development, or other authorized agency, with respect to work performed by or under the direction of such commissioner pursuant to the provisions of section 28-216.8.3.3.*

*§28-216.9 Return of precept and reimbursement of city. Upon compliance with any precept issued to the commissioner in a proceeding under this article, the commissioner may make return thereof, with an endorsement of the action thereunder and the costs and expenses thereby incurred, to the justice of the court from which such precept issued. Such justice shall then tax and adjust the amount endorsed upon such precept, and shall adjust and allow the disbursements of the proceeding, including but not limited to the preliminary expenses of searches, service of the notice of survey and summons on interested parties, surveys thereof, and costs of executing the precept, which shall be inserted in the judgment in such proceeding. Such justice shall then render judgment for such amount and for the sale of the premises named in such notice, together with all the right, title and interest that the person named in such notice had in the lot, ground or land upon which such structure was placed, at the time of the filing of a notice of pendency in such proceedings, or at the time of the entry of judgment therein, to satisfy such judgment in foreclosure of mortgages. Nothing in this article shall preclude the city from recovering such costs and expenses in any other lawful manner, including pursuant to section 28-112.9 of this code.*

*§28-216.10 Judgment lien. Any judgment rendered in an action or proceeding instituted under this article shall be and become a lien upon the premises named in such action or proceeding, such lien to date from the time of filing a notice of pendency in the office of the clerk of the county wherein the property affected by such action or proceeding, is located. Every such lien shall have priority before any mortgage or other lien as may exist prior to such filing except tax and assessment liens.*

*§28-216.11 Tax lien. Any costs and expenses incurred by any agency of the city pursuant to this article, including but not limited to the preliminary expenses of searches, service of the notice of survey and summons on interested parties, surveys thereof, and costs of executing the precept, shall be a debt*

*recoverable from the owner of the premises and a lien upon the land and buildings upon or in respect to which such costs and expenses were incurred. Every such lien shall have priority over all other liens and encumbrances on the premises except for the lien of taxes and assessments. Except as otherwise provided by rule of the affected agency, the agency incurring such expense shall be governed by the procedures set forth in article eight of subchapter five of the housing maintenance code with respect to the enforcement of such debt and lien.*

*CHAPTER 3  
MAINTENANCE OF BUILDINGS*

*ARTICLE 301  
GENERAL*

*§28-301.1 Owner's responsibilities. All buildings and all parts thereof and all other structures shall be maintained in a safe condition. All service equipment, means of egress, materials, devices, and safeguards that are required in a building by the provisions of this code, the 1968 building code or other applicable laws or rules, or that were required by law when the building was erected, altered, or repaired, shall be maintained in good working condition. Whenever persons engaged in building operations have reason to believe in the course of such operations that any building or other structure is dangerous or unsafe, such person shall forthwith report such belief in writing to the department. The owner shall be responsible at all times to maintain the building and its facilities and all other structures regulated by this code in a safe and code-compliant manner and shall comply with the inspection and maintenance requirements of this chapter.*

*ARTICLE 302  
MAINTENANCE OF EXTERIOR WALLS*

*§28-302.1 General. A building's exterior walls and appurtenances thereof shall be maintained in a safe condition. All buildings greater than six stories shall comply with the maintenance requirement of this article.*

*Exception: The requirements imposed by this article shall not apply to any part of an exterior wall that is less than 12 inches (305 mm) from the exterior wall of an adjacent building.*

*§28-302.2 Inspection requirements. A critical examination of a building's exterior walls and appurtenances thereof shall be conducted at periodic intervals as set forth by rule of the commissioner, but such examination shall be conducted at least once every five years. The initial examination for a new building*

*shall be conducted in the fifth year following the erection or installation of any exterior wall and/or appurtenances as evidenced by the issuance date of a temporary or final certificate of occupancy or as otherwise prescribed by rule.*

- 1. Such examination shall be conducted on behalf of the building owner by or under the direct supervision of a registered design professional with appropriate qualifications as prescribed by the department.*
- 2. Such examination shall include a complete review of the most recently prepared report and an inspection.*
- 3. Such examination shall be conducted in accordance with rules promulgated by the commissioner.*

*§28-302.3 Immediate notice of unsafe condition. Whenever a registered design professional learns of an unsafe condition through a critical examination of a building's exterior walls and appurtenances thereof, such person shall notify the owner and the department immediately in writing of such condition.*

*§28-302.4 Report of critical examination. The registered design professional shall submit a written report to the commissioner within 60 days of completing the critical examination, but not more than five years following submission of the preceding report of critical examination, certifying the results of such critical examination as either safe, unsafe or safe with a repair and maintenance program. The report shall clearly document the condition of the exterior walls and appurtenances thereof and shall include a record of all significant deterioration, unsafe conditions and movement observed as well as a statement concerning the watertightness of the exterior surfaces. Such report must be professionally certified by such registered design professional.*

*§28-302.5 Repair of exterior walls, unsafe condition. Upon the notification to the department of an unsafe condition, the owner, the owner's agent or the person in charge shall immediately commence such repairs, reinforcements or other measures as may be required to secure public safety and to make the building's exterior walls or appurtenances thereof conform to the provisions of this code.*

- 1. All unsafe conditions shall be corrected within 30 days of filing the critical examination report.*
- 2. The registered design professional shall reinspect the premises and file an amended report within two weeks after the repairs have been completed certifying that the unsafe conditions of the building have been corrected.*
- 3. The commissioner may grant an extension of time of up to 90 days to complete the repairs required to*

*correct an unsafe condition upon receipt and review of an initial extension application submitted by the registered design professional together with such additional documentation as may be prescribed by rule.*

4. *The commissioner may grant further extensions of time to complete the repairs required to remove an unsafe condition upon receipt and review of an application for a further extension submitted by the registered design professional together with such further documentation as may be prescribed by rule.*

*§28-302.6 Safe condition with a repair and maintenance program. The registered design professional shall not file a report of a safe condition with a repair and maintenance program for the same building for two consecutive filing periods unless the second such report is accompanied by his or her professional certification attesting to the correction of all conditions identified in the prior report as requiring repair.*

#### *ARTICLE 303 PERIODIC BOILER INSPECTIONS*

*§28-303.1 General. Periodic boiler inspections shall be performed in accordance with this article.*

*§28-303.2 Annual inspection. Except as otherwise provided in this article, all boilers as defined in section 204 of the New York state labor law, excepting those boilers listed in subdivision five of such section of such labor law, shall be inspected at least once a year by a qualified department boiler inspector or an approved agency. Such inspections shall also include the chimney connectors. All individuals who perform periodic inspections pursuant to this article shall be qualified under section 204 of the New York state labor law and the rules promulgated by the commissioner of labor or the commissioner of buildings.*

*§28-303.2.1 Internal inspection required. When the construction of the boiler allows, an internal inspection shall also be performed.*

*§28-303.3 Inspection of high-pressure boilers. Each owner of a high-pressure boiler, as defined in this code, may choose to have the annual boiler inspection conducted by the department or by a qualified boiler inspector in the employ of a duly authorized insurance company.*

*§28-303.4 Staggered inspection cycles. The commissioner may by rule establish staggered inspection cycles for buildings required to comply with this article.*

*§28-303.5 Repair of defects. The owner of each boiler that is subject to periodic inspection shall correct any defects identified in the annual boiler inspection.*

*§28-303.6 Owner's annual statement. The owner of each boiler that is subject to periodic inspection shall file an annual written statement with the commissioner including:*

- 1. The location of each boiler.*
- 2. Whether the owner, agent, or lessee has had the boiler inspected by a qualified boiler inspector in the employ of a duly authorized insurance company or other qualified inspector in accordance with the requirements of this article, setting forth the name and address of the insurance company or other qualified inspector, the date of inspection, and the policy number covering the boiler.*

*§28-303.7 Report of inspection. A signed copy of the report of each boiler inspection shall be filed with the owner's annual statement, on such forms and in such manner as required by the commissioner. The report shall include a certification that identified defects have been corrected. The statement shall be filed within 30 days after installation of a boiler. Thereafter, it shall be filed as set forth in this article and in rules.*

*§28-303.8 Removal or discontinuance notice. The owner of a boiler that is removed or discontinued from use shall file a written notice of such removal or discontinuance with the commissioner within 30 days of the date of removal or discontinuance.*

*§28-303.9 Additional inspections. In addition to the inspections required by this article, the commissioner may make such additional inspections as required to enforce the provisions of this code.*

*§28-303.10 Fees. Every owner of a boiler in use and inspected by a qualified boiler inspector in the employ of a duly authorized insurance company shall pay to the department an annual fee for each boiler in the amount prescribed by this code to cover the city's administrative and supervisory costs. The fee shall be payable at the time of the filing of the owner's annual statement. No fee shall be charged for additional inspections made by the department pursuant to section 28-303.9.*

#### *ARTICLE 304 PERIODIC INSPECTION OF ELEVATORS*

*§28-304.1 General. Every new and existing elevator or conveying system shall be inspected and tested in accordance with the schedule set forth in this article.*

*§28-304.2 Elevators, escalators, moving walkways and dumbwaiters. Elevators, escalators, moving walkways and dumbwaiters shall be inspected and tested in accordance with the schedule set forth in Table N1 of ASME 17.1 as referenced in chapter 35 and as may be modified in chapter 30 and appendix K of the New York city building code.*

*Exception: Elevators located in owner-occupied one-family, two-family or multiple-family dwellings that service only the owner-occupied dwelling unit and that are not occupied by boarders, roomers or lodgers, and elevators located within convents and rectories that are not open to non-occupants on a regular basis are not subject to periodic test requirement of such reference standard.*

*§28-304.3 Chair lifts and stairway chair lifts. Chair lifts and stairway chair lifts shall be inspected and tested at intervals not exceeding one year.*

*§28-304.4 Amusement devices. Amusement devices shall be inspected and tested at intervals not exceeding six months except that for seasonally operated amusement devices, the commissioner may extend the periodic inspection and test for an additional two months.*

*§28-304.5 Frequency of inspection and testing. Elevators and other conveying systems may be subject to more frequent inspection and testing as the commissioner finds necessary to protect public safety.*

*§28-304.6 Inspection and testing process. All devices shall be inspected and tested in accordance with sections 28-304.6.1 through 28-304.6.6*

*§28-304.6.1 Inspection and testing entities. The required periodic inspections shall be made by the department, except that one inspection and test for elevators and escalators shall be made between January first and December thirty-first of each year on behalf of the owner by an approved agency in accordance with this code and with rules promulgated by the commissioner. Required inspections and tests performed on behalf of the owner shall be performed by an approved agency in accordance with rules of the department and witnessed by an approved agency not affiliated with the one performing the test. The department shall be notified at least 10 days prior to the owner's periodic inspection and testing pursuant to rule of the department.*

*§28-304.6.2 Scope. During periodic inspection and testing, in addition to any other requirements prescribed by this code, all parts of the equipment shall be inspected to determine that they are in safe operating condition and that parts subject to wear have not worn to such an extent as to affect the safe and reliable operation of the installation.*

*§28-304.6.3 Reporting an unsafe or hazardous condition. If an inspection reveals that any elevator or other conveying system is unsafe or hazardous to life and safety, the device is to be taken out of service*

*immediately by the agency performing the inspection and the building owner notified immediately. The department shall be notified by telephone or fax within 24 hours.*

*§28-304.6.4 Notation of inspection or test. After each inspection or test, the inspector shall affix the inspection date and his or her signature over a stamp identifying his or her approved agency and his or her approval number on the inspection certificate issued by the department.*

*§28-304.6.5 Inspection and test reports submission. Inspection and test reports shall be submitted on such forms and in such manner as required by the commissioner. Copies of each report (each copy originally signed by the inspector performing the inspection and test and by the inspector witnessing the inspection and test, the agency director, and the building owner) listing all violations of any of the provisions of this code for each device inspected and/or tested, shall be delivered to the owner within 30 calendar days of the inspection or test and filed with the department within 45 calendar days of the inspection or test.*

*§28-304.6.6 Repair. All defects as found and reported in such inspection and test reports shall be corrected within 45 days of the filing of the report, except all hazardous conditions shall be corrected immediately.*

*§28-304.7 Required contract. The owner of all new and existing passenger elevators shall have a contract with an approved agency to perform elevator repair work and maintenance as defined by ASME 17.1. The name, address and telephone number of such agency shall be maintained at each premises, on the mainline disconnect switch and in a location readily accessible to employees of the department and to maintenance and custodial staff at the premises.*

*§28-304.8 Fees. Every owner of elevators and other devices shall pay to the department an inspection fee and a report filing fee for each elevator or device in the amount prescribed by this code.*

*§28-304.9 Additional inspections. The commissioner may make such additional inspections as required to enforce the provisions of this code. No fee shall be charged for such additional inspections.*

#### *ARTICLE 305 RETAINING WALLS*

*§28-305.1 Retaining walls, partition fences and other site structures. In addition to the requirements set forth in chapter 33 of the New York city building code, the responsibility for maintaining and repairing retaining walls, partition fences and other site structures shall be in accordance with sections 28-305.1.1*

and 305.1.2.

*§28-305.1.1 Structures located on the lot line of adjacent properties and partially on both properties. The owners of adjacent properties shall be responsible jointly for the proper maintenance and repair of retaining walls, partition fences and other site structures, or portions thereof, that are located along the common lot line and on both their properties; and each such owner shall be responsible for one-half of the costs of maintaining and repairing such fences, retaining walls and other site structures, or such portions thereof. Where an owner elects to remove temporarily a retaining wall or partition fence that is required to support a grade differential between the two properties, or for any other reason is required by this code, such owner shall protect the adjacent property, shall not impair its safe use, and shall replace the retaining wall or partition fence at his or her own cost.*

*§28-305.1.2 Structures located entirely on one property. Where such retaining walls, partition fences or other site structures, or portions thereof, are located entirely on one property, the owner of such property shall be wholly responsible for the proper maintenance and repair of the retaining wall, partition fence or other site structure. If, however, the proper maintenance and/or repair of such retaining wall, partition fence or other site structures requires access to the adjoining property, the owner of such adjoining property shall allow such access.*

*§28-305.2 Retaining walls required. Hereafter, when an owner elects to set his or her grade either higher or lower than the grade of an adjoining property at the property line, such owner shall erect, maintain and repair a retaining wall of sufficient height, structure and foundation to support such grade differential, and with proper drainage, in accordance with this code, such that the adjacent property is not impacted, and shall do so at the sole expense of such owner and entirely on the property of such owner without access to the adjoining property.*

*§28-305.3 Special agreement. Nothing in this article shall be construed to prevent the owners of adjacent properties from making or enforcing by private action special agreements with respect to maintenance or repair of retaining walls, partition fences and other site structures or access to adjoining property for such purpose.*

ARTICLE 306  
PARTY WALLS

*§28-306.1 Responsibility for party walls. Repair and maintenance of the construction, design and fire-resistance rating of party walls shall be the joint responsibility of the owners of the adjoining properties, and any change by either owner must maintain the weather protection, structural, vertical fire division and other requirements of this code for party walls.*

*ARTICLE 307  
WORKPLACE EXITS*

*§28-307.1 Obstruction of workplace exits prohibited. Except for the exemptions specified in subdivision j of section 27-371 of the administrative code or chapter 10 of the New York city building code, as applicable, it shall be unlawful for an employer or the agent of an employer to lock the doors of a workplace or otherwise obstruct or prohibit exit from a workplace when such act may endanger the health or safety of any employee, independent contractor or other individual in such workplace in the event of a fire or other hazardous condition or event. The commissioner shall classify a violation of this section as an immediately hazardous violation. Notwithstanding any other provision of this code, upon criminal conviction or civil adjudication of liability for a violation of this section an additional fine or civil penalty of not less than five thousand dollars nor more than twenty thousand dollars shall be imposed for each employee, independent contractor or other individual endangered by a violation of this section.*

*§28-307.1.1 Notice. A sign shall be posted conspicuously at the workplace of a person convicted of or found liable for a violation of section 28-307.1. Such sign shall, in English, Spanish, Korean, Chinese or any other language directed by the fire commissioner, provide notice to employees of the acts prohibited by section 28-307.1 and of the remedies for employer retaliation as set forth in section 28-307.3. The sign shall be in a form and posted in a manner directed by the fire commissioner and may contain any other information deemed necessary by the fire commissioner or as recommended by the police commissioner or the commissioner. The fire commissioner may, in the interest of public safety, adopt a rule requiring the posting of such signs at other workplaces.*

*§28-307.2 Unannounced inspections of workplaces by fire department. In addition to any other inspections required by law or rule, the fire department shall conduct a minimum of fifty unannounced workplace inspections annually to ensure the identification and abatement of any hazardous conditions in violation of section 28-307.1. Such inspections shall include, but not be limited to, sites where there are*

*known or suspected conditions affecting employee safety and health.*

*§28-307.3 Retaliation. It shall be unlawful for an employer or the agent of such employer to take a retaliatory action, as defined by section 740 of the labor law, against an employee because of the lawful acts of such employee in furtherance of a civil or criminal enforcement proceeding arising out of the failure of such employer or agent to comply with section 28-307.1. An employee who is the victim of such retaliatory action may commence an action in any court of competent jurisdiction for the relief provided for in this section and shall be entitled to all relief necessary to make such employee whole. Lawful acts of an employee shall include, but not be limited to, assisting in the investigation and initiation of an enforcement proceeding alleging a violation of section 28-307.1, providing testimony in any such proceeding or providing other assistance in connection therewith. The relief to which such employee shall be entitled shall include, but not be limited to, (i) an injunction to restrain any adverse or retaliatory action, (ii) reinstatement to the position such officer or employee would have had but for such action, or to an equivalent position, (iii) reinstatement of full benefits and seniority rights including payment of any missed back pay, plus interest and (iv) compensation for any special damages sustained as a result of such action, including litigation costs and reasonable attorneys' fees.*

*CHAPTER 4  
LICENSING AND REGISTRATION OF BUSINESSES, TRADES AND OCCUPATIONS  
ENGAGED IN BUILDING WORK*

*ARTICLE 401  
GENERAL*

*§28-401.1 Application. This chapter shall apply to the licensing and registration of businesses, trades and occupations engaged in building work regulated by this code.*

*§28-401.2 General requirements for all licenses. The provisions of this article shall apply to all licenses issued by the department pursuant to this chapter. All applicants and licensees shall comply with the provisions of this article as well as the specific requirements applicable to the particular license as set forth in other articles of this chapter.*

*§28-401.3 Definitions. As used in this chapter the following terms shall have the following meanings unless the context or subject matter requires otherwise.*

*CERTIFICATE OF COMPETENCE. A certificate issued by the department to an individual representing*

*that such individual has completed all requirements for the master plumber or master fire suppression piping contractor license but has not obtained a seal or plate; and that such certificate of competence has been renewed as required and is currently in effect. The certificate of competence shall bear the name of the holder and the certificate number. The holder of a certificate of competence is not a licensed master plumber or licensed master fire suppression piping contractor and may practice the trade for which the certificate is issued only under the direct and continuing supervision of a licensed master plumber or licensed master fire suppression piping contractor or, with respect to a city employee under the direct and continuing supervision of a supervising licensed master plumber or licensed master fire suppression piping contractor.*

*CITY AGENCY. A city, county, borough, or other office, position, administration, department, division, bureau, board or commission, or a corporation, institution or agency of government, the expenses of which are paid, in whole or in part, from the city treasury.*

*COMBINED STANDPIPE SYSTEM. A standpipe to which a sprinkler system is connected or is being connected.*

*DIRECT AND CONTINUING SUPERVISION. Responsible control exercised by a licensed individual, either personally or through one or more, but no more than three, levels of competent supervision over individuals (i) in the direct employ of the licensee, or (ii) in the direct employ of the city agency employing the licensee or (iii) in the direct employ of the business performing the actual work of the licensee's trade or the actual work permitted by the class of license held by the licensee, for which work such licensee assumes full responsibility. Such control shall be evidenced by such licensee's signature, and seal where applicable, upon any required statements, applications and/or permits and by demonstrating involvement of the licensee in the operations of the business, including hiring of employees, responsibility for financial matters, and oversight of work performance. Direct and continuing supervision includes field inspection, supervision of job sites, and the maintenance of records of such supervision and such other requirements as the commissioner may prescribe by rule for a particular license type.*

*DIRECT EMPLOY. An individual is in the direct employ of a licensee or business or a city agency when such individual is on the payroll of such licensee or business or city agency and under the usual common law rules applicable in determining the employer-employee relationship has the status of an employee. The*

*work performed by such employee shall not exceed the class of license held by the licensee. Direct employment shall be evidenced by payroll records, such as social security payments, income tax withholding or the disbursement of other funds as required by law for the benefit of such employee, timekeeping records, such as time cards and sign-in sheets, work orders, and assignment or route logs.*

***FIRE SUPPRESSION PIPING WORK.** The installation, maintenance, repair, modification, extension, or alteration or testing of a fire suppression piping system in any building in the city of New York.*

***FIRE SUPPRESSION PIPING SYSTEM.** Any system including any and all equipment and materials in connection therewith, with the exception of any electrical components that must be installed by a licensed electrician pursuant to the New York city electrical code, the purpose of which is to control, contain, suppress or extinguish fire and shall include:*

- 1. The systems, materials and equipment described or referred to in this code (with the exception of any electrical components that must be installed by a licensed electrician pursuant to the New York city electrical code) which systems, materials or equipment shall include any standpipe system to which a sprinkler system is or is now being connected; provided, however, that such systems, materials or equipment shall not include any systems, materials or equipment constituting plumbing work, with the exception of up to thirty sprinkler heads off the domestic water in any one building; or*
- 2. Any dry, liquid or gaseous chemical fire containment, suppression, control or extinguishing system or any other device or means of control, suppression, containment or extinguishing of fire (with the exception of any electrical components that must be installed by a licensed electrician pursuant to the New York city electrical code) but not including portable fire extinguishers.*

***HIGH-PRESSURE BOILER.** A boiler that carries a pressure of more than fifteen pounds of steam per square inch and is rated in excess of ten horsepower, or that produces hot water over a pressure of one hundred sixty pounds per square inch or at a temperature over 250°F (121°C).*

***LICENSE.** A license, registration, certification or other evidence, issued by the department pursuant to this chapter, representing that an individual, a sole proprietorship, partnership, corporation, business association or other person meets the qualifications and requirements as set out in this chapter and in the rules of the department and is authorized to engage in the particular trade, occupation or business as*

*indicated on the license and representing that such license, with associated plate and/or seal, where applicable, has been renewed as required and is currently in effect. The license shall bear the holder's full name, the type of license, the license class, where applicable, the license number and any restrictions relating to the use of such license. Such term shall not include a certificate of competence.*

*LICENSE BOARD OR BOARD. A panel of trade practitioners and others appointed by the commissioner as provided herein and in rules promulgated by the commissioner with the purpose of advising the commissioner regarding the character and fitness of applicants for a license or certificate of competence, allegations of illegal practices by persons licensed, or other matters as the commissioner may see fit.*

*LICENSED MASTER FIRE SUPPRESSION PIPING CONTRACTOR, MASTER FIRE SUPPRESSION PIPING CONTRACTOR. An individual who has satisfied the requirements of this chapter for the master fire suppression piping contractor license, who has been issued a license, plate and/or seal, and who is authorized under the provisions of this chapter to perform fire suppression piping work in the city of New York, according to the classification of license held. A master fire suppression piping contractor licensee shall practice his or her trade in association with a master fire suppression piping contractor business or as an employee of a city agency.*

*LICENSED MASTER PLUMBER, MASTER PLUMBER. An individual who has satisfied the requirements of this chapter for the master plumber license, who has been issued a license, plate and/or seal, and who is authorized under the provisions of this chapter to perform plumbing work in the city of New York. A master plumber licensee shall practice his or her trade in association with a master plumber business or as an employee of a city agency.*

*PLATE. A plaque issued by the department to a master plumber or a master fire suppression piping contractor setting forth the licensee's name and number, the class of license and the master plumber business or master fire suppression piping contractor business operating pursuant to the plate, and displayed prominently and conspicuously on view to the public at the place of business registered with the department. The plate is the property of the department and is not transferable by the licensee.*

*PLUMBING WORK. The installation, maintenance, repair, modification, extension or alteration of plumbing, standpipe where a sprinkler is not connected or is not now being connected, domestic water, connections to the domestic water, combination domestic water and reserve standpipe supply tank up to and including the*

*roof tank check valve, gas piping or any piping system referred to in the New York city plumbing code, and/or up to thirty sprinkler heads off the domestic water in any building in the city of New York.*

*PRIVATE ELEVATOR INSPECTION AGENCY. An approved agency authorized by the commissioner to operate as an independent contractor for the purpose of inspecting and testing elevators, escalators and other conveying equipment regulated by this code and shall include but shall not be limited to an insurance company, elevator maintenance company, elevator manufacturer or elevator inspection company.*

*SEAL. Emblem issued by the department to an applicant for some license types, that allows the licensee to stamp documents required by this code to be signed and sealed. The seal shall bear the full name of the licensee, the license type, the license class, where applicable, and the license number. The seal is the property of the department and is not transferable by the licensee. For applications and other documents submitted electronically, the digital signature and imprint of the seal may be submitted in a manner authorized by the commissioner.*

*SIGN. A sign as defined in section 12-10 of the zoning resolution.*

*TOTAL BOOM. A boom including jibs and other extensions.*

*§28-401.4 Requirement of license. It shall be unlawful for any person to engage in or carry on in the city any business, trade or occupation regulated by this chapter, without having first obtained a license from the commissioner in accordance with and subject to the provisions of this chapter and the rules of the department. A license issued by the department for any such business, trade or occupation prior to the effective date of this code, shall remain in full force and effect until the expiration or termination thereof in accordance with the terms thereof, unless sooner revoked or suspended for cause as hereinafter provided. Any renewal of such license shall be in accordance with the provisions of this code.*

*§28-401.5 Application and conditions. Every application for a license or certificate of competence shall be made in such form and shall be accompanied by such information as the commissioner may prescribe, and by the required fee. It is a condition of the license or certificate of competence that information in the application be kept correct and current. Any change in required information shall be reported to the department within fourteen days after any change prior to issuance of the license or certificate of competence or within thirty days after any change following issuance.*

*§28-401.6 Qualifications of applicant. All applicants for a license or certificate of competence shall be at*

*least 18 years of age, shall be able to read and write the English language, shall be of good moral character, and shall meet additional qualifications that may be prescribed for the particular license or certificate of competence.*

*§28-401.7 Examination of applicant. Except as otherwise specified for the particular license type, applicants for a license shall be required to take an examination in accordance with the rules of the department. Every applicant shall commence the license application process with the department within one year of passing the examination for licensure and shall furnish to the department a completed license application within one year of submission of the first filing. Failure to provide all requested documents in a timely manner will constitute an incomplete application and may result in denial of the license*

*§28-401.8 Investigation of applicant. Every applicant for a license or certificate of competence shall submit to investigation as directed by a governmental entity in order to determine the applicant's character and fitness. The applicant shall furnish the department with payment for the actual cost of conducting a background investigation. Failure to provide all requested and completed documents in a timely fashion will constitute an incomplete application and will result in a denial of the license or certificate of competence.*

*§28-401.9 Insurance. Except as noted otherwise for a particular license, or exempted by the commissioner pursuant to rule, prior to the issuance of a license, or during the renewal thereof, the applicant shall file with the department (i) satisfactory evidence of a general liability insurance policy in the amount of one million dollars or such other amount as the commissioner may require, listing the New York city department of buildings as the certificate holder; and (ii) satisfactory evidence of an insurance policy for property damage in an amount set forth in rules and conditioned upon the observance of all applicable laws and rules governing the licensed activities and upon the payment of any applicable judgment awarded for damage to or destruction of property occurring in the performance of any regulated work by or under the supervision of the license holder. Each policy of insurance shall contain a provision for continuing liability notwithstanding any recovery under such policy. In addition, prior to the issuance of any license or seal and plate, if applicable, or during any renewal thereof, the applicant shall file with the department satisfactory evidence of compliance with the workers' compensation law and the disability benefits law.*

*§28-401.10 Issuance of license, plate and/or seal, where applicable, or certificate of competence. The*

*commissioner shall issue a license or certificate of competence to each applicant who shall have submitted satisfactory evidence of his or her qualifications, and shall have satisfactorily passed all required examinations and investigations, provided that no license or certificate of competence shall be issued unless and until the applicant shall have paid the required fee and complied with such other and further requirements for the particular license or certificate of competence as may be set forth in this chapter and in rules promulgated by the department. All licenses or certificates of competence issued by the commissioner shall have his or her signature affixed thereto; but the commissioner may authorize any subordinate to affix such signature. For licenses that require a plate and/or the application of a seal, the plate and/or seal shall be issued with the license except as provided otherwise in this chapter. The license, plate and seal are the property of the department and are not transferable by the licensee. No licensee shall make or cause to be made duplicates of a department-issued license, plate or seal. The loss or theft of a license, plate or seal must be reported to the department within five calendar days.*

*§28-401.11 Term of license. All licenses issued by the commissioner for which an examination is required shall expire three years from the date of issuance thereof, and may be renewed every three years thereafter without examination. The commissioner shall have authority to stagger the issuance of licenses for three-year terms. All licenses not requiring examination shall expire one year from the date of issuance thereof, and may be renewed each year thereafter except as otherwise noted for a specific license.*

*§28-401.12 Renewal of license or certificate of competence. Applications for renewal of a license or certificate of competence shall be accompanied by the renewal fee and such additional information as the commissioner may require, and shall be made at least 30 calendar days but not more than 60 calendar days prior to the expiration date of same. The failure of an individual to renew his or her license or certificate of competence shall have the effect of cancellation of the license or certificate of competence upon expiration, and the holder of a plate and/or seal issued by the department shall immediately surrender such plate and/or seal to the department. A person who fails to renew a license or certificate of competence within the time period set forth in this section 28-401.12 may apply for reinstatement of such license pursuant to section 28-401.13. The department may, following notice and an opportunity to be heard, refuse to renew a license or certificate of competence on any grounds on the basis of which it could deny, suspend or revoke such license.*

*§28-401.13 Reinstatement. If a license or certificate of competence expires, the individual may apply for reinstatement of the license or certificate of competence, within one year of the date of its expiration without examination but subject to applicable late and reinstatement fees. Thereafter, and up to five years after the date of expiration, the commissioner may reinstate the license or certificate of competence without examination upon the applicant's demonstration to the commissioner's satisfaction of continued competence in the respective trade and satisfaction of any applicable continuing education requirements. A license or certificate of competence shall not be reinstated after five years from date of expiration.*

*§28-401.14 Continuing education. The commissioner may promulgate rules to require applicants for the renewal of licenses or certificate of competence to complete a prescribed number of hours of continuing education courses approved by the department within the term preceding the application for renewal and to provide proof of same in a form acceptable to the department. Such proof, when required, shall be submitted with the application for renewal.*

*§28-401.15 Schedule of fees.*

<b>License Type</b>	<b>Initial Fee</b>	<b>Renewal Fee</b>	<b>Additional Fees</b>
<i>Master rigger license.</i>	\$200.	\$150 triennially.	<i>Late-renewal fee. \$50. Reissuance fee: \$50.</i>

<i>Master plumber license seal.</i>	\$50.	\$75 triennially.	<i>Replacement fee upon loss of seal, w/affidavit: \$75.</i>
<i>Journeyman plumber registration.</i>	\$50		<i>No renewal, no reissuance.</i>
<i>Master fire suppression piping contractor</i>	\$200.	\$150 triennially.	<i>Late-renewal fees:</i>

(class A, B or C) license (certificate of competence).			Up to 30 days late, \$50; From 31 days to five years late, \$100 for each year or part thereof. Reissuance fee: \$50.
Master fire suppression piping contractor (class A, B or C) license plate.	\$75.	\$100 triennially.	Replacement fee upon loss of plate, w/affidavit: \$100.
Master fire suppression piping contractor (class A, B or C) license seal.	\$50.	\$75 triennially.	Replacement fee upon loss of seal, w/affidavit: \$75.
Journeyman fire suppression piping contractor registration.	\$50		No renewal, no reissuance.
Oil-burning equipment installer. License (class A or B).	\$100.	\$75 triennially.	Late-renewal fee \$50. Reissuance fee: \$50.
High-pressure boiler operating engineer license.	\$50.	\$45 triennially.	Late-renewal fee \$50. Reissuance fee: \$50.
Portable high-pressure boiler operating engineer license.	\$50.	\$45 triennially.	Renewal fee includes renewal fee for a hoisting machine operator license. Late-renewal fee \$50. Reissuance fee: \$50.
Master sign hanger license.	\$100	\$75 triennially.	Late-renewal fee \$50. Reissuance fee: \$50.
Special sign hanger license.	\$100	\$75 triennially.	Late-renewal fee \$50. Reissuance fee: \$50.
Outdoor advertising company registration.	As provided by dept rules	As provided by dept rules.	As provided by dept rules.
Filing representative registration.	\$50	\$25 annually.	Late-renewal fee \$50. Reissuance fee: \$50.
Reinstatement of expired license, certificate of competence or certification without examination, if approved by commissioner, in addition to applicable renewal fees.	Same as initial license		\$100 for each year or part thereof from date of expiration.

*§28-401.16 Restrictions on use of license. No holder of a license issued under this chapter shall authorize, consent to or permit the use of his or her license by or on behalf of any other person, and no person who has not qualified and obtained or renewed a license under this chapter shall hold himself or herself out to the public as licensed, certified, registered or as the holder of a license issued under this chapter, either directly or indirectly, by means of signs, sign cards, plates, stationery, or in any other manner whatsoever.*

*§28-401.17 Use on behalf of a business. Except for such additional requirements as may be set forth for a particular license, nothing in this chapter shall be construed to prohibit the use of a license by the holder thereof for or on behalf of a partnership, corporation or other business association, provided that:*

- 1. At least one member of the partnership or at least one officer of the corporation is licensed for the same business, trade or occupation, and that all work performed by such partnership or corporation is performed by or under the direct and continuing supervision of such license holder*

*or holders; or*

- 2. Such partnership, corporation or other business association is itself authorized to engage in such business as prescribed herein.*

*§28-401.17.1 Use on behalf of a city agency. Nothing in this chapter shall be construed to prohibit the holder of a license who is an employee of a city agency from using such license to practice the trade for which such license is issued for or on behalf of such city agency in the course of such employment except as otherwise limited pursuant to articles 408 and 410 of this chapter for licensed master plumber and licensed master fire suppression piping contractor licensees.*

*§28-401.18 New York city location required. Except as otherwise noted for a particular license, the holder of a license, other than an employee of a city agency, shall have or be employed by a business entity that has an established place of business with an address within the city of New York at which such person can be contacted by the public and the department by mail, telephone or other modes of communication. A post office box is not an acceptable address.*

*§28-401.19 Suspension or revocation of license or certificate of competence. The commissioner shall have the power to suspend or revoke a license or certificate of competence and/or to impose a fine not to exceed twenty-five thousand dollars for each finding of violation, and/or to order any holder thereof to repair damage resulting from any act or omission as set forth in this chapter or in rules, for any of the following:*

- 1. Fraud or deceit in obtaining or renewing a license, plate or seal, certificate of competence, certification, registration, or permit;*
- 2. The making of a material false or misleading statement on any form or report filed with the department or other governmental entity;*
- 3. The failure to file a statement, report or form required by law to be filed;*
- 4. Willfully impeding or obstructing the filing of a statement, report or form of another required by law to be filed;*
- 5. Fraudulent dealings;*
- 6. Negligence, incompetence, lack of knowledge, or disregard of this code and related laws and rules;*
- 7. Failure to comply with this code or any order, rule, or requirement lawfully made by the*

- commissioner including failure to cooperate with investigations related to the trade for which the individual is licensed conducted by the commissioner or other government entity;*
- 8. Failure to comply with any order, rule, regulation or requirement lawfully made by the commissioner of environmental protection or commissioner of transportation pertaining to water services, house connections street openings, street/lane closures or sidewalk closures that relate to requirements of this code;*
  - 9. A practice or pattern of failing timely to perform or complete contracts relating to home improvements as defined by section 20-386 of the administrative code or a practice of abandoning contracts on residential buildings containing four dwelling units or less;*
  - 10. Failure to provide documents, including payroll records, workers compensation or other insurance documents, employee timekeeping records and corporate tax returns, required by the commissioner;*
  - 11. Engaging or assisting in any act that endangers the public safety and welfare;*
  - 12. Conviction of a criminal offense where the underlying act arises out of the individual's professional dealings with the city or any other governmental entity;*
  - 13. Poor moral character that adversely reflects on his or her fitness to conduct work regulated by this code; or*
  - 14. Failure to pay outstanding fines, penalties, or fees related to the individual's professional dealings with the city or any other governmental entity.*

*28-401.19.1 Notice and hearing. The commissioner shall not revoke or suspend a license or certificate of competence for any cause or impose any other sanction on a licensee unless and until the holder has been given at least five calendar days prior written notice and an opportunity to be heard. However, when the public safety may be imminently jeopardized the commissioner shall have the power, pending a hearing and determination of charges, to forthwith suspend any license for a period not exceeding five working days.*

*§28-401.19.2 Surrender of plate or seal. Upon surrender, suspension or revocation of a license for which the department has also issued a plate or seal, the license and such plate and/or seal shall be immediately surrendered to the department.*

*§28-401.19.3 Reinstatement fees. The fees required for the reinstatement of a certificate of competence or license, plate or seal after suspension shall be the same as those required to obtain an original document. If reinstatement of the certificate of competence, license, plate or seal is not requested within 30 days of the lifting of the suspension, then late fees shall be imposed in accordance with article 119 of chapter 1 of this title.*

*§28-401.20 Cooperation required. Any person, including any corporation, partnership, business or other entity, issued a license or certificate of competence by the department shall, pursuant to a request or order of the commissioner or any other city agency or office, cooperate fully and completely with respect to any department or city agency or office investigation. Evidence of cooperation shall include, but is not limited to, appearing before the department or other city agency or office, answering questions completely and accurately, and providing any and all requested documents. Failure to comply with such request or order may subject such person to disciplinary measures authorized by law, including but not limited to suspension or revocation of the license or certificate of competence.*

*§28-401.20.1 Service of request or order. Such request or order by the commissioner or other city agency or office shall be mailed by regular mail to the person named therein to his or her last known business or home address at least ten days before such appearance and shall contain the name of the person, date, time and place of such appearance and, if known or applicable, a description of any requested documents. If the appearance or information is required immediately, the request or order may be transmitted via facsimile or delivered to the person's last known business or home address prior to the date and time specified therein.*

*§28-401.21 Judicial review of determinations. Notwithstanding any other provision of law to the contrary, decisions, orders and interpretations of the commissioner made pursuant to this chapter shall not be subject to review by the board of standards and appeals. Final decisions and orders of the commissioner made pursuant to this chapter shall be subject to review pursuant to article 78 of the civil practice law and rules.*

**ARTICLE 402**  
**SITE SAFETY MANAGER CERTIFICATE**

*§28-402.1 Certificate required. It shall be unlawful to perform the duties and responsibilities of a site safety manager as specified in chapter 33 of the New York city building code unless such work is performed*

*by a person certified as a site safety manager under the provisions of this article.*

*§28-402.2 Qualifications. All applicants for a site safety manager certificate shall submit satisfactory proof establishing that the applicant:*

- 1. Is a registered design professional and has had three years of experience supervising major buildings as that term is defined in chapter 33, and within one year prior to application has satisfactorily completed a 8-hour course approved by the department;*
- 2. Has eight years of construction supervision experience within the 10 years prior to application, including five years supervising major buildings as that term is defined in chapter 33, and within one year prior to application has satisfactorily completed a 40-hour course approved by the department;*
- 3. Has completed an 18 month on-the-job training program working on major buildings as that term is defined in chapter 33 under the direct and continuing supervision of a certified site safety manager. Such on-the-job training program shall conform to rules promulgated by the department. The supervising site safety manager shall certify the trainee's satisfactory completion of the training program. In addition, the applicant shall provide proof that, within one year prior to the date of application, he or she has satisfactorily completed a 40-hour course approved by the department;*
- 4. Has equivalent education and construction experience as determined by the department and within one year prior to application has satisfactorily completed a 40-hour course approved by the department; or*
- 5. Has three years of experience as a certified site safety coordinator and within one year prior to application has satisfactorily completed a 40-hour course approved by the department.*

*ARTICLE 403  
SITE SAFETY COORDINATOR CERTIFICATE*

*§28-403.1 Certificate required. It shall be unlawful to perform the duties and responsibilities of a site safety coordinator as specified in chapter 33 of the New York city building code unless such work is performed by a person certified as a site safety coordinator under the provisions of this article.*

*§28-403.2 Qualifications. All applicants for a site safety coordinator certificate shall submit satisfactory proof establishing that the applicant:*

1. *Is a registered design professional and has had two years of experience supervising major buildings as that term is defined in chapter 33, and within one year prior to application has satisfactorily completed an 8-hour course approved by the department;*
2. *Has five years of construction supervision or construction safety experience within the 10 years prior to application, including three years supervising major buildings as that term is defined in chapter 33, and within one year prior to application has satisfactorily completed an 8-hour course approved by the department; or*
3. *Has equivalent education and construction experience as determined by the department and within one year prior to application has satisfactorily completed a 40-hour course approved by the department.*

*ARTICLE 404  
RIGGER LICENSE*

*§28-404.1 Rigger license required. It shall be unlawful to hoist or lower any article on the outside of any building in the city unless such work is performed by or under the direct and continuing supervision of a person licensed as a rigger under the provisions of this article. The provisions of this article shall apply to the erection or dismantling of a tower crane or a climber crane on a building and to the use of a derrick in their removal, except that such erection or dismantling may be performed by or under the direct and continuing supervision of a licensed climber or tower crane rigger in accordance with rules promulgated by the department.*

*Exception: The provisions of this article shall not apply to the hoisting or lowering of signs if the person so doing possesses a license as a sign hanger, as provided in this chapter, or to the loading or unloading of any building materials or equipment, other than boilers and tanks, from a delivery truck.*

*§28-404.2 Classification. Such licenses shall be classified as follows:*

1. *Master rigger license. Authorizes the holder thereof to hoist or lower any article, irrespective of weight, on the outside of any building.*
2. *Special rigger license. Authorizes the holder thereof to hoist or lower any article not exceeding 2,000 pounds (907 kg) in weight on the outside of any building.*
3. *Climber or tower crane rigger license. Authorizes the holder thereof to erect or dismantle a tower crane or a climber crane on a building and to use a derrick in their removal.*

*§28-404.3 Additional qualifications. Applicants for a rigger license shall have the additional qualifications as set forth in sections 28-404.3.1 through 28-404.3.3.*

*§28-404.3.1 Master rigger qualifications. All applicants for a master rigger license shall submit satisfactory proof establishing that the applicant:*

- 1. Has had at least five years of practical experience in the hoisting and rigging business within the seven years prior to application; and*
- 2. Has knowledge of and is able to explain the risks incident to such business and precautions to be taken in connection therewith, safe loads and computation thereof, types of rigging, size and strength of ropes, cables, blocks, poles, derricks, sheerlegs and other tools used in connection with such business.*

*§28-404.3.2 Special rigger qualifications. All applicants for a special rigger license shall submit satisfactory proof establishing that the applicant:*

- 1. Has had at least one year of practical experience in the hoisting and rigging business within the three years prior to application; and*
- 2. Has knowledge of and is able to explain the risks incident to such business and precautions to be taken in connection therewith.*

*§28-404.3.3 Climber or tower crane rigger qualifications. All applicants for a climber or tower crane rigger license shall submit satisfactory proof establishing that the applicant:*

- 1. Has had at least five years of practical experience in the climber or tower crane rigging business within the seven years prior to application; and*
- 2. Has knowledge of and is able to explain the risks incident to such business and precautions to be taken in connection therewith, including connecting pins, cables, anchorage, platform or pad, plumb of mast, torque of bolts, supervision of rigging and hoisting of loads, placement of components, and coordination of sequencing.*

*§28-404.4 Additional requirements. The additional requirements set forth in sections 28-404.4.1 through 28-404.4.3 shall apply to riggers:*

*§28-404.4.1 Danger warning. Every licensed master or special rigger shall, while rigging operations are in progress at a job site, place, conspicuously, at such job site two plates or signs not less than 18*

*inches (457 mm) by 24 inches (610 mm) in size (i) displaying the word “danger” in letters not less than 6 inches (152 mm) high, and (ii) disclosing the rigger’s name, business address, type of rigger license and license number.*

*§28-404.4.2 Master rigger place of business. Every licensed master rigger shall have a place of business within the city and shall display prominently at such place of business a plate or sign marked with the words “master rigger” and his or her license number immediately thereunder.*

*§28-404.4.3. Fitness to perform work. As a condition of license renewal, a licensed master or special rigger shall provide evidence satisfactory to the department that such licensee is fit to perform the work.*

#### *ARTICLE 405 HOISTING MACHINE OPERATOR LICENSE*

*§28-405.1 Hoisting machine operator license required. It shall be unlawful for any persons to take charge of or operate any power-operated hoisting machine used for hoisting purposes or cableways under the jurisdiction of the department, except power-operated scaffolds and window-washing machines, unless such person is licensed under the provisions of this article or is a holder of a certificate of qualification as a hoisting machine operator issued prior to December 6, 1968 and not allowed to lapse.*

*Exceptions:*

- 1. The commissioner may, by rule, exempt operators of mobile cranes of limited size and capacity from the requirements of this article.*
- 2. The provisions of this article shall not apply to machines under one ton capacity.*

*§28-405.2 Classification. Hoisting machine operator licenses shall be classified as follows:*

- 1. Class A license: Basic license to operate cranes with total boom less than 200 feet (60 960 mm) in length, derricks and cableways, excluding truck-mounted tower cranes that exceed 200 feet (60 960 mm) in height.*
- 2. Class B license: Endorsement on basic license to include the operation of hoisting machinery without limitation or restriction.*
- 3. Class C license: Special hoisting machine operator license to operate a specified class of hoisting machine of limited size and capacity as follows:*

*Class C1: License to operate wheel mounted cranes (single control station) with telescoping,*

*hydraulic or folding booms, including jibs and any other extensions to the boom, not exceeding 200 feet in length (60 960 mm) with a manufacturer's rated capacity of 50 tons (51 t) or less;*

*Class C2: License to operate boom trucks with telescoping, hydraulic or folding booms, including jibs and any other extensions to the boom, not exceeding 200 feet (60 960 mm) in length with a manufacturer's rated capacity of 50 tons (51 t) or less;*

*Class C3: License to operate boom trucks with telescoping, hydraulic or folding booms, including jibs and any other extensions to the boom, not exceeding 135 feet (41 148 mm) in length with a manufacturer's rated capacity of three tons or less, used exclusively for the erection, maintenance or removal of signs.*

*§28-405.3 Additional qualifications. Applicants for a hoisting machine operator license shall have the following additional qualifications.*

*§28-405.3.1 Class A license. All applicants for a class A basic hoisting machine operator license shall have had at least three years experience within the five years prior to application under the direct and continuing supervision of a licensed hoisting machine operator.*

*§28-405.3.2 Class B license. All applicants for a class B hoisting machine operator license shall hold a class A basic hoisting machine operator license, and shall have had at least two years experience prior to application under the direct and continuing supervision of a Class B licensed hoisting machine operator operating the equipment for which they are applying for endorsement and shall satisfactorily demonstrate by operation that they are competent to operate a crane with a boom, including jibs and other extensions, exceeding 200 feet (60 960 mm) in length or truck-mounted tower crane exceeding 200 feet (60 960 mm) in height, or as otherwise provided in rules of the department.*

*§28-405.3.3 Class C license. All applicants for a class C special hoisting machine operator license shall have had at least two years experience within the three years prior to application under the direct and continuing supervision of a licensed hoisting machine operator and have satisfactorily passed a practical examination in the operation of equipment for which such license is to be issued.*

*§28-405.4 Fitness to perform work. As a condition of license renewal, a licensed hoisting machine operator shall provide evidence satisfactory to the department that he or she is fit to perform the work.*

*§28-405.5 Insurance exemption: Unless otherwise required by rule, licensed hoisting machine operators are exempt from the insurance requirements of section 28-401.9.*

**ARTICLE 406  
CONCRETE TESTING LABORATORY LICENSE**

*§28-406.1 Concrete testing laboratory license required. Testing of concrete required by this code or other applicable laws or rules shall be conducted by a concrete testing laboratory licensed in accordance with this article.*

*§28-406.2 Qualifications. All applicants for a concrete testing laboratory license shall maintain a laboratory within 50 miles (80 467 m) of the city and shall submit satisfactory proof establishing that the business is conducted by qualified personnel in accordance with procedures, safety requirements and professional standards as set forth in rules of the department. The department shall inspect an applicant's place of business and equipment and conduct an investigation of applicant's personnel in a manner to be set forth in department rules prior to the issuance or renewal of a license.*

*§28-406.3 Additional requirements. The following additional requirements shall apply to concrete testing laboratories:*

*§28-406.3.1 Director. Each laboratory shall have in responsible charge a director who shall be a registered design professional and who shall personally supervise all technical functions of the laboratory relating to testing of concrete and concrete materials as required in this code and in rules of the department.*

*§28-406.3.2 Certification of reports by director. The director shall certify the truth and accuracy of all reports filed by the laboratory under the provisions of this code or other applicable laws and rules.*

*§28-406.4 No examination required. An examination shall not be required for a concrete testing laboratory license.*

**ARTICLE 407  
WELDER LICENSE**

*§28-407.1 Welder license required. It shall be unlawful to perform manual welding work on any structural member of any building in the city unless such work is performed by a person licensed as a welder under the provisions of this article.*

*§28-407.2 Qualifications. All applicants for a welder license shall submit satisfactory proof of the applicant's*

*fitness to make structural welds, including his or her ability to pass operator qualification tests as determined by the commissioner.*

*§28-407.3 Fitness to perform work. As a condition of license renewal, a licensed welder shall provide evidence satisfactory to the department that such licensee is fit to perform the work.*

*§28-407.4 Insurance exemption. Unless otherwise required by rule, licensed welders are exempt from the insurance requirements of section 28-401.9.*

**ARTICLE 408  
MASTER PLUMBER LICENSE**

*§28-408.1 Master plumber license required. It shall be unlawful for any person:*

- 1. To perform plumbing work unless such person is a licensed master plumber or working under the direct and continuing supervision of a licensed master plumber except that a city employee who holds a master plumber license may only perform replacement, maintenance and repair plumbing work on existing buildings in the course of his or her employment.*
- 2. To use the title licensed master plumber, master plumber or any other title in such manner as to convey the impression that such person is a licensed master plumber unless such person is licensed as such in accordance with the provisions of this article.*

*§28-408.2 Seal. All documents that are required to be filed with any department or agency of the city of New York shall bear the stamp of the seal as well as the signature of the licensee. The licensed master plumber performing the work and services shall personally sign and seal all applications and other documents required to be filed pursuant to this code.*

*§28-408.3 Additional qualifications. Applicants for a master plumber license shall have the following additional qualifications:*

*§28-408.3.1 Experience. All applicants for a master plumber license shall submit satisfactory proof establishing that the applicant:*

- 1. Has had at least seven years total experience within the 10 years prior to application in the design and installation of plumbing systems under the direct and continuing supervision of a licensed master plumber in the United States, with at least two years of such experience as a registered journeyman plumber in accordance with the provisions of article 409, except that*

*during the three years immediately following the effective date of this code there shall be no requirement for such registered journeyman plumber experience;*

- 2. Has received a bachelor's degree in engineering or appropriate engineering technology from an accredited college or university and has had at least five years total experience within the seven years prior to application in the design and installation of plumbing systems under the direct and continuing supervision of a licensed master plumber in the United States, where at least two years of such experience were in New York city;*
- 3. Is an architect or engineer with at least three years of experience within the five years prior to application in the design and installation of plumbing systems under the direct and continuing supervision of a licensed master plumber in the United States, where at least one year of such experience was in New York city; or*
- 4. Has had at least seven years total experience within the 10 years prior to application, with at least two years of such experience working in the design and installation of plumbing systems under the direct and continuing supervision of a licensed master plumber in the United States. The balance of such required experience may be obtained by performing maintenance, replacement and repair plumbing work on existing buildings while in the employ of a city agency under the direct and continuing supervision of a licensed master plumber supervisor employed by the city agency. Three years after the effective date of this code the two years experience in the design and installation of plumbing systems set forth above may only be satisfied by working as a registered journeyman plumber.*
- 5. An employee of a government agency, private inspection agency or other entity, acceptable to the commissioner, whose duties primarily involve the inspection of plumbing work for compliance with the New York city plumbing code and/or other laws relating to the installation, alteration or repair of plumbing systems shall be credited with fifty percent (50%) of the number of years that he or she has been satisfactorily employed in such duties within the ten (10) year period prior to application, which, however, in no event, shall exceed two and one-half (2 1/2) years credit of satisfactory experience. The balance of the required seven years must have been obtained by working in the design and installation of plumbing*

*systems under the direct and continuing supervision of a licensed master plumber in the United States except that the requirement of paragraph 1 of this section 28-408.3.1 that an applicant's working experience must have been within the ten (10) year period prior to application shall not apply to such balance of the work experience required pursuant to this paragraph.*

*§28-408.3.2 Armed services. Applicants who were engaged in plumbing work as above provided prior to entering the armed services of the United States shall be permitted to credit their time in the service as experience in the plumbing business, as above provided; but such service credit shall not exceed one-third of the time required for experience.*

*§28-408.4 Certificate of competence and license, plate and/or seal. The commissioner shall issue a certificate of competence, license, plate, and/or seal, in accordance with the following:*

*§28-408.4.1 Certificate of competence. A certificate of competence shall be issued by the commissioner to an applicant who satisfactorily complies with the experience and examination requirements of this chapter for a license, upon payment of the fee. Such certificate shall contain the full name of the individual and a certificate number, the date of issuance, and shall be signed by the commissioner.*

*§28-408.4.2 Effect of issuance. The issuance of a certificate of competence shall constitute evidence that the person named therein is qualified upon payment of applicable fees to obtain a plate and seal while the certificate is valid except that a city employee while in the employ of the city shall only be entitled to obtain a seal.*

*§28-408.4.3 Plate and/or seal required. The holder of a certificate shall not be entitled to perform work or hold himself or herself out to perform work as a licensed master plumber until such plate and/or seal have been obtained. Further, no holder of a certificate of competence shall enter into any contractual agreement to install or alter any plumbing, gas piping, or any piping system, other than an employment agreement with a master plumber business or a city agency.*

*§28-408.4.4 Effect of failure to obtain plate and/or seal. If a holder of a certificate of competence has held the certificate for five years without a plate and/or seal, then the commissioner may require said person to submit an affidavit and supporting documentation satisfactory to the department stating that over the five-year period the individual has been engaged in the design and installation of plumbing systems*

*in the United States under the direct and continuing supervision of a licensed master plumber. If the holder's qualifications are not satisfactory to the commissioner, the commissioner may require such person to submit to reexamination or to provide evidence of retained proficiency. In addition, additional fees will be due as set forth in this chapter.*

*§28-408.4.5 Requirement for obtaining plate and /or seal. A holder of a certificate of competence shall obtain:*

- 1. A license, plate and seal upon establishing a master plumbing business conforming to the requirements of this article and rules promulgated by the department; or*
- 2. A license and seal upon demonstrating employment with a city agency. The license shall clearly state: "The bearer of this master plumber license is a government employee and as such is not authorized to engage in plumbing contract work outside of his/her government employment and within such government employment shall only engage in maintenance, replacement and repair plumbing work on existing buildings." No plate shall be issued to a licensed master plumber employed by a city agency.*

*§28-408.4.6 Issuance. A certificate of competence or a license, plate, and/or seal as a master plumber shall be issued only to an individual.*

*§28-408.4.7 Duplication prohibited. Not more than one license, plate and/or seal shall be issued to an individual and no individual shall make or cause to be made a duplicate of such license, plate or seal.*

*§28-408.5 Surrender of license, plate or seal. Upon the death or the retirement of a licensed master plumber, or upon the surrender, revocation or suspension of his or her license, his or her license, plate and/or seal shall immediately be surrendered to the commissioner. Nothing contained herein shall be construed to prevent the legal representative of a deceased licensee, with the consent of the commissioner, from retaining such plate and seal for the purpose of completing all unfinished work of the deceased licensee for which plans have been approved and a permit issued, provided such work is performed by or under the direct and continuing supervision of a licensed master plumber and is completed within one year from the date of the death of the original licensee.*

*§28-408.6 Master plumber business. No individual, corporation, partnership or other business association shall conduct a plumbing contracting business in the city of New York, or employ the name "plumber" or*

*“plumbing” in its business name unless such business is a master plumber business as follows:*

- 1. No less than 51 percent of the control and voting capital stock of such entity is owned by one or more individuals who are licensed master plumbers, except as otherwise provided;*
- 2. All plumbing or gas piping work performed by such entity is performed by or under the direct and continuing supervision of such licensed master plumber;*
- 3. The person in charge of such work is such licensed master plumber; and*
- 4. The persons actually performing such work are in the direct employ of such master plumber business as authorized by the code.*

*Exception: A company, corporation, partnership or other business association or its predecessor that was engaged in plumbing work prior to January 25, 1990 may continue to do so in any one or more of such business forms without complying with the foregoing, if (i) application was made to the department prior to July 25, 1990, and (ii) necessary evidence was furnished on or prior to January 25, 1991, that such company, corporation, partnership or other business association or its predecessor had employed an average of ten or more journeymen plumbers doing plumbing work for at least five days a week for a period of 10 years or more out of the twenty years preceding July 25, 1990, provided, that such plumbing business continues to have all plumbing work conducted under the management and direct and continuing supervision of a licensed master plumber in the direct employ of such plumbing business and that such licensed master plumber is not otherwise interested in, associated with or employed by any other plumbing business operating in this city except as a joint venture in which such master plumber’s employer is one of the joint venturers.*

*§28-408.6.1 Use. Nothing herein contained shall be construed to prohibit the use of a master plumber license by the holder thereof for or on behalf of a partnership, corporation or other business association provided that such partnership, corporation or other business is a master plumber business.*

*§28-408.6.2 Identification. All business vehicles, advertising, websites and stationery used in connection with a master plumber business shall display prominently the full name of the licensee, the words “N.Y.C. licensed plumber,” the licensee’s number and the licensee’s business address. If the business is conducted under a trade name, or by a partnership or corporation, the trade name, partnership*

*or corporate name shall be placed immediately above the full name or names of the licensed master plumber or licensed master plumbers to whom the plates were issued.*

*§28-408.6.3 Withdrawal of license. If a licensed master plumber withdraws from a master plumbing business operating pursuant to such individual's license, the right of the business to perform plumbing work shall lapse if the provisions of this section 28-408.6 are no longer satisfied. If a licensed master plumber's license is revoked or suspended, such licensee will be deemed withdrawn from such business.*

*§28-408.6.4 Ownership limitations. An individual who is a licensed master plumber whose interest or ownership in a master plumber business constitutes any portion of the 51 percent interest or control required by this section 28-408.6 shall be prohibited from possessing an interest or ownership in more than one other master plumber business at his or her established place of business, where such interest or ownership would constitute any portion of the 51 percent interest or control required by this section 28-408.6. Both master plumber businesses in which the individual who is a licensed master plumber has an interest shall be located at the same place of business. For the purposes of this section 28-408.6, where two or more individuals who are licensed master plumbers possess an interest or ownership in any master plumber business which together represents more than 51 percent of the interest or control of such entity, all of such licensees shall be deemed to possess a portion of the 51 percent interest or control required by this section 28-408.6.*

*§28-408.6.5 Joint ventures. Nothing contained in this section 28-408.6 shall be construed to prevent a master plumber business from entering into a joint venture of limited duration for a particular project with another master plumber business. The terms of a joint venture must be in writing, and documentation of the joint venture must be submitted to the department for approval prior to the initiation of work under such venture.*

*§28-408.6.6 Supervision. The master plumber shall conduct his or her business to provide direct and continuing supervision in accordance with the provisions of this code.*

*Exception: The provisions of this section 28-408.6.6 shall not apply to minor alterations or ordinary repairs, as defined in this code, or to the installation or alteration of gas service piping and gas meter piping, including meters, valves, regulators or related equipment, when such work*

*is to be performed, serviced and maintained by utility corporations subject to the jurisdiction of the New York state public service commission.*

**ARTICLE 409**  
**JOURNEYMAN PLUMBER REGISTRATION**

*§28-409.1 Journeyman plumber registration; additional qualifications. Upon satisfactory completion of a New York State-recognized training program or affirmation of an applicant's qualifications by an employer licensed master plumber or, in the case of a city agency, a supervising licensed master plumber and upon written stipulation of same by the applicant, the commissioner shall register an applicant as journeyman plumber. Such qualifications shall reflect a progressive understanding, proficiency and competence in the plumbing trade, including:*

- 1. A working familiarity with the plumbing code and technical standards and the ability to apply the code requirements correctly;*
- 2. The application of basic plumbing theory and the utilization of trade skills on the job site;*
- 3. A working knowledge of the tools of the trade and the ability to utilize them properly; and*
- 4. An ability to draft simple diagrams and interpret from drawings for the purpose of the plumbing work in which the applicant is engaged.*

*§28-409.2 Experience. The applicant for journeyman plumber registration shall have a minimum of five years of full-time experience in the performance of plumbing work under the direct and continuing supervision of a licensed master plumber or equivalent, where at least one year of such experience shall have been in New York city.*

*§28-409.3 Registration need not be renewed. The registration for journeyman plumber shall have no expiration and shall not require renewal or re-issuance.*

*§28-409.4 Registration card. The registration card shall clearly state: "This registration is NOT A LICENSE, and the holder is NOT AUTHORIZED TO PERFORM PLUMBING WORK in New York city except under the direct and continuing supervision of a licensed master plumber."*

**ARTICLE 410**  
**MASTER FIRE SUPPRESSION PIPING CONTRACTOR LICENSE**

*§28-410.1 Master fire suppression piping contractor license required. It shall be unlawful for any person:*

- 1. To perform fire suppression piping work unless such person is a licensed master fire suppression*

*pipng contractor or working under the direct and continuing supervision of a licensed master fire suppression piping contractor except that a city employee who holds a license may only perform replacement, maintenance and repair fire suppression piping work on existing buildings in the course of his or her employment.*

- 2. To use the title licensed master fire suppression piping contractor, master fire suppression piping contractor or any other title in such manner as to convey the impression that such person is a licensed master fire suppression piping contractor unless such person is licensed as such in accordance with the provisions of this article.*

*§28-410.2 Seal. All documents that are required to be filed with any department or agency of the city of New York shall bear the stamp of the seal as well as the signature of the licensee. The licensed master fire suppression piping contractor performing the work and services shall personally sign and seal all applications and other documents required to be filed pursuant to the code.*

*§28-410.3 Classification. There shall be three classes of licenses for master fire suppression piping contractor:*

- 1. Class A. The holder of a class A master fire suppression piping contractor license is authorized to perform any work in connection with any and all fire suppression piping systems as set forth in paragraphs 1 and 2 of the definition of fire suppression piping system in section 28-401.3.*
- 2. Class B. The holder of a class B master fire suppression piping contractor license is authorized to perform any work in connection with any and all fire suppression piping systems as set forth in paragraph 1 of the definition of fire suppression piping system in section 28-401.3.*
- 3. Class C. The holder of a class C master fire suppression piping contractor license is authorized to perform any work in connection with any and all fire suppression piping systems as set forth in paragraph 2 of the definition of fire suppression piping system in section 28-401.3.*

*§28-410.4 Additional qualifications. Applicants for a master fire suppression piping contractor license shall have the following additional qualifications:*

*§28-410.4.1 Experience. All applicants for a master fire suppression piping contractor license shall submit satisfactory proof establishing that the applicant:*

- 1. Has had at least seven years total experience within the 10 years prior to application in the*

*design and installation of fire suppression piping systems under the direct and continuing supervision of a licensed master fire suppression piping contractor in the United States with the class of license for which application is made, with at least two years of such experience as a registered journeyman fire suppression piping installer in accordance with the provisions of article 411, except that during the three years immediately following the effective date of this code there shall be no requirement for such registered journeyman fire suppression piping installer experience;*

- 2. Has received a bachelor's degree in engineering or appropriate engineering technology from an accredited college or university and has had at least five years total experience within the seven years prior to application in the design and installation of fire suppression piping systems under the direct and continuing supervision of a licensed master fire suppression piping contractor in the United States for the class of license for which application is made, at least two of which were in New York city;*
- 3. Is an architect or engineer with at least three years of experience within the five years prior to application in the design and installation of fire suppression piping systems in the United States for the class of license for which application is made, where at least one year of such experience was in New York city; or*
- 4. Has had at least seven years total experience within the 10 years prior to application, with at least two years of such experience working in the design and installation of fire suppression piping systems under the direct and continuing supervision of a licensed master fire suppression piping contractor in the United States with the class of license for which application is made. The balance of such required experience may be obtained by performing maintenance, replacement and repair of fire suppression piping work on existing buildings while in the employ of a city agency under the direct and continuing supervision of a licensed master fire suppression piping contractor supervisor employed by the city agency with the class of license for which application is made. Three years after the effective date of this article the two years of experience in the design and installation of fire suppression piping systems set forth above may only be satisfied by working as a registered journeyman fire*

*suppression piping installer.*

5. *An employee of a government agency, private inspection agency or other entity, acceptable to the commissioner, whose duties primarily involve the inspection of plumbing work for compliance with this the New York city plumbing code and/or other laws relating to the installation, alteration or repair of fire suppression piping systems shall be credited with fifty percent (50%) of the number of years that he or she has been satisfactorily employed in such duties within the ten (10) year period prior to application, which, however, in no event, shall exceed two and one-half (2½) years credit of satisfactory experience. The balance of the required seven years must have been obtained by working in the design and installation of fire suppression piping systems under the direct and continuing supervision of a licensed fire suppression piping contractor in the United States except that the requirement of paragraph 1 of this section 28-410.4.1 that an applicant's working experience must have been within the ten (10) year period prior to application shall not apply to such balance of the work experience required pursuant to this paragraph.*

*§28-410.4.2 Armed services. Applicants who were engaged in fire suppression piping work prior to entering the armed services of the United States shall be permitted to credit their time in the service as experience in the fire suppression piping business, as above provided; but such service credit shall not exceed one-third of the time required for experience.*

*§28-410.5 Certificate of competence and license, plate and/or seal. The commissioner shall issue a certificate of competence, license, plate and/or seal in accordance with the following:*

*§28-410.5.1 Certificate of competence. A certificate of competence shall be issued by the commissioner to an applicant who satisfactorily complies with the experience and examination requirements of this article for a license, upon payment of the fee. Such certificate shall contain the full name of the individual and a certificate number, and shall be signed by the commissioner.*

*§28-410.5.2 Effect of issuance. The issuance of a certificate of competence shall constitute evidence that the person named therein is qualified upon payment of applicable fees to obtain a plate and seal while the certificate is valid except that a city employee while in the employ of the city shall only be entitled to obtain a seal.*

*§28-410.5.3 Plate and /or seal required. The holder of a certificate of competence shall not be entitled to perform work or hold himself or herself out to perform work as a licensed master fire suppression piping contractor until such plate and/or seal have been obtained. Further, no holder of a certificate of competence shall enter into any contractual agreement to install or alter any fire suppression piping system other than an employment agreement with a master fire suppression piping business or a city agency.*

*§28-410.5.4 Failure to obtain plate and/or seal. If a holder of a certificate of competence has held the certificate for five years without a plate and/or seal, then the commissioner may require said person to submit an affidavit and supporting documentation satisfactory to the department stating that over the five-year period the individual has been engaged in the design and installation of fire suppression piping systems in the United States under the direct and continuing supervision of a licensed master fire suppression piping contractor. If the holder's qualifications are not satisfactory to the commissioner, the commissioner may require such person to submit to reexamination or to provide evidence of retained proficiency. In addition, additional fees will be due as set forth in this chapter.*

*§28-410.5.5 License plate and/or seal. A holder of a certificate of competence or an applicant who has satisfied all requirements for a master fire suppression piping contractor license shall obtain:*

- 1. A license, plate and seal upon establishing a fire suppression piping contracting business conforming to the requirements of this article and any rules promulgated by the department;  
or*
- 2. A license and seal upon demonstrating employment with a city agency. The license shall clearly state: "The bearer of this master fire suppression piping contractor license is a government employee and as such is not authorized to engage in fire suppression piping contract work outside of his/her government employment and within such government employment shall only engage in maintenance, replacement and repair fire suppression piping work on existing buildings." No plate shall be issued to a licensed master fire suppression piping contractor employed by a city agency.*

*§28-410.5.6 Issuance. A certificate of competence or a license, plate and/or seal as a master fire suppression piping contractor shall be issued only to an individual.*

*§28-410.5.7 Duplication prohibited. Not more than one license, plate and/or seal shall be issued to an individual, and no individual shall make or cause to be made a duplicate of such license, plate or seal.*

*§28-410.6 Waiver of examinations. Any license issued without examination pursuant to an application filed prior to July 25, 1990 pursuant to the provisions of law in effect prior to the effective date of this code that has not lapsed as of the effective date of this code, shall be renewable pursuant to the provisions of this code.*

*§28-410.7 Surrender of license, plate and/or seal. Upon the death or the retirement of a licensed master fire suppression piping contractor, or upon the surrender, revocation or suspension of his or her license, his or her license, plate and seal shall immediately be surrendered to the commissioner. Nothing contained herein shall be construed to prevent the legal representative of a deceased licensee, with the consent of the commissioner, from retaining such plate and seal for the purpose of completing all unfinished work of such deceased licensee for which plans have been approved and a permit issued, provided such work is performed by or under the direct and continuing supervision of a licensed master fire suppression piping contractor and is completed within one year from the date of the death of the original licensee.*

*§28-410.8 Master fire suppression piping contractor business required. No individual, corporation, partnership or other business association shall conduct a fire suppression piping contracting business in the city of New York, or employ the name "fire suppression piping" in its business name, unless the business is a master fire suppression business as follows:*

- 1. No less than 51 percent of the control and voting capital stock of such entity is owned by one or more individuals who are licensed master fire suppression piping contractors, except as otherwise provided; and*
- 2. All fire suppression piping work performed by such entity is performed by or under the direct and continuing supervision of such licensed master fire suppression piping contractor;*
- 3. The person in charge of such work is such licensed master fire suppression piping contractor; and*
- 4. The persons actually performing such work are in the direct employ of such master fire suppression piping contractor business as authorized by the code.*

*Exception: A company, corporation, partnership or other business association or its predecessor that was engaged in fire suppression piping contractor work prior to January 25, 1990 may continue to do so in*

*any one or more of such business forms without complying with the foregoing, if (i) application was made to the department prior to July 25, 1990, and (ii) necessary evidence was furnished on or prior to January 25, 1991, that such company, corporation, partnership or other business association or its predecessor had employed an average of 10 or more journeymen doing fire suppression piping contractor work for at least five days a week for a period of ten years or more out of the 20 years preceding July 25, 1990, provided, that such business continues to have all fire suppression piping contractor work conducted under the management and direct and continuing supervision of a licensed master fire suppression contractor in the direct employ of such business and that such licensed master fire suppression contractor is not otherwise interested in, associated with or employed by any other licensed master fire suppression contracting business operating in this city except as a joint venture in which such licensed master fire suppression contractor's employer is one of the joint venturers.*

*§28-410.8.1 Use. Nothing herein contained shall be construed to prohibit the use of a master fire suppression piping contractor license by the holder thereof for or on behalf of a partnership, corporation or other business association provided that such partnership, corporation or other business is a master fire suppression piping contractor business.*

*§28-410.8.2 Identification. All business vehicles, advertising, websites and stationery used in connection with a master fire suppression piping contractor business shall display prominently the full name of the licensee, the words "N.Y.C. licensed fire suppression piping contractor – class A, B or C," the licensee's number and the licensee's business address. If the business is conducted under a trade name, or by a partnership or corporation, the trade name, partnership or corporate name shall be placed immediately above the full name or names of the licensed master fire suppression piping contractor or licensed master fire suppression piping contractors to whom the plates were issued.*

*§28-410.8.3 Withdrawal of licensee. If a licensed master fire suppression piping contractor withdraws from a master fire suppression piping contractor business operating pursuant to such individual's license, the right of the business to perform fire suppression piping work shall lapse if the provisions of this article are no longer satisfied. If a licensed master fire suppression piping contractor's license is revoked or suspended, such licensee will be deemed withdrawn from such business.*

*§28-410.8.4 Ownership limitations. An individual who is a licensed master fire suppression piping*

*contractor whose interest or ownership in a master fire suppression piping contractor business constitutes any portion of the 51 percent interest or control required by this section 28-410.8 shall be prohibited from possessing an interest or ownership in more than one other fire suppression piping contractor business at his or her established place of business where such interest or ownership would constitute any portion of the 51 percent interest or control required by this section 28-410.8. Both fire suppression piping contractor businesses in which the individual who is a licensed master fire suppression piping contractor has an interest shall be located at the same place of business. For the purposes of this section 28-410.8, where two or more individuals who are licensed master fire suppression piping contractors possess an interest or ownership in any master fire suppression piping contractor business which together represents more than fifty-one percent of the interest or control of such entity, all of such licensees shall be deemed to possess a portion of the 51 percent interest or control required by this section 28-410.8.*

*§28-410.8.5 Joint ventures. Nothing contained in this section 28-410.8 shall be construed to prevent a master fire suppression piping contractor business from entering into a joint venture of limited duration for a particular project with another master fire suppression piping contractor business. The terms of a joint venture must be in writing, and documentation of the joint venture must be submitted to the department for approval prior to the initiation of work under such venture.*

*§28-410.8.6 Supervision. The master fire suppression piping contractor shall conduct his or her business to provide direct and continuing supervision in accordance with the provisions of this article.*

*Exception: The provisions of this section 28-410.8.6 shall not apply to minor alterations or ordinary repairs, as defined in this code, and/or to maintenance of a fire suppression piping system.*

#### **ARTICLE 411 JOURNEYMAN FIRE SUPPRESSION PIPING INSTALLER REGISTRATION**

*§28-411.1 Journeyman fire suppression piping installer registration; additional qualifications. Upon satisfactory completion of a New York state-recognized training program or affirmation of an applicant's qualifications by an employer licensed master fire suppression piping contractor or, in the case of a city agency, a supervising licensed master fire suppression piping contractor and upon written stipulation of same by the applicant, the commissioner shall register an applicant as journeyman fire suppression piping*

*installer. Such qualifications shall reflect a progressive understanding, proficiency and competence in the fire suppression piping trade, including:*

- 1. A working familiarity with the code and technical standards with regard to fire suppression piping, and the ability to apply the code requirements correctly;*
- 2. The application of basic fire suppression theory and the utilization of trade skills on the job site;*
- 3. A working knowledge of the tools of the trade and the ability to utilize them properly; and*
- 4. An ability to draft simple diagrams and interpret from drawings for the purpose of the fire suppression piping work in which the applicant is engaged.*

*§28-411.2 Experience. The applicant for journeyman fire suppression piping installer registration shall have a minimum of five years of full-time experience in the performance of fire suppression piping work under the direct and continuing supervision of a licensed master fire suppression piping contractor or equivalent, where at least one year of such experience shall have been in New York city.*

*§28-411.3 The registration for journeyman fire suppression piping installer shall have no expiration and shall not require renewal or reissuance.*

*§28-411.4 The registration shall clearly state: “This registration is NOT A LICENSE, and the holder is NOT AUTHORIZED TO PERFORM FIRE SUPPRESSION PIPING WORK in New York city except under the direct and continuing supervision of a Licensed Master Fire Suppression Piping Contractor.”*

#### *ARTICLE 412 OIL-BURNING EQUIPMENT INSTALLER LICENSE*

*§28-412.1 Oil-burning equipment installer license required. It shall be unlawful to install oil-burning equipment in the city unless such work is performed by or under the direct and continuing supervision of a person licensed as an oil-burning equipment installer under the provisions of this article.*

*§28-412.2 Classifications. Oil-burning equipment installer licenses shall be classified as follows:*

- 1. Class A oil-burning equipment installer license. Licenses the holder thereof to install any type of oil-burning equipment, as an independent contractor with full responsibility for the manner in which the work is done, and for the material and equipment used, and for the control and direct and continuing supervision of the persons employed on the work. Such equipment shall include but not be limited to burners, boilers and generators.*

2. *Class B oil-burning equipment installer license. Licenses the holder thereof to install oil-burning equipment for the use of domestic fuel oils from number one fuel oil to and including number four fuel oil, as an independent contractor with full responsibility for the manner in which the work is done, for the materials and equipment used, and for the control and direct and continuing supervision of the persons employed on the work.*

*§28-412.3 Qualifications. Applicants for an oil-burning equipment installer license shall have the qualifications set forth in sections 28-412.3.1 through 28-412.3.2.*

*§28-412.3.1 Experience for Class A license. All applicants for a class A oil-burning equipment installer license shall submit satisfactory proof establishing that the applicant has had at least four years practical experience within the seven years prior to application in the installation of oil-burning equipment under the direct and continuing supervision of a Class A-licensed oil-burning equipment installer in the city, including at least one year experience in the installation of oil-burning equipment for the use of number five and number six fuel oils.*

*§28-412.3.2 Experience for class B license. All applicants for a class B oil-burning equipment installer license shall submit satisfactory proof establishing that the applicant has had at least three years practical experience within the five years prior to application in the installation of oil-burning equipment under the direct and continuing supervision of a licensed oil-burning equipment installer in the city.*

*§28-412.4 Fitness to perform work. As a condition of license renewal, a licensed oil burning equipment installer shall provide evidence satisfactory to the department that such licensee is fit to perform the work.*

#### **ARTICLE 413 HIGH-PRESSURE BOILER OPERATING ENGINEER LICENSE**

*§28-413.1 High-pressure boiler operating engineer license required. It shall be unlawful to operate any high-pressure steam boiler for any purpose whatsoever, in the city of New York or in connection with any vessel on the waters in and around the city not subject to the jurisdiction of the United States, unless such boiler is operated by or under the direct and continuing supervision and in the presence of a person having a high-pressure boiler operating engineer license under the provisions of this article.*

*§28-413.2 Qualifications. Applicants for a high-pressure boiler operating engineer license shall present satisfactory proof that:*

1. *Applicant was employed as a fireman, oiler, general assistant, journeyman, boiler-maker or machinist under the direct and continuing supervision of a licensed high-pressure boiler operating engineer in the city for a period of not less than five years within the seven year period preceding the date of the application; however, in lieu of the experience requirement contained in this paragraph, an applicant for a high-pressure boiler operating engineer license who is employed in a fossil fuel production plant located in the Rockaway Peninsula area of Queens county may submit satisfactory proof establishing that the applicant has obtained at least five years experience within the seven years preceding the date of the application which shall include at least two years of experience obtained during employment under the direct and continuing supervision of a licensed high-pressure boiler operating engineer in a steam generating plant located outside of the city of New York but within the state of New York that is owned and operated by a licensed public utility company, and shall also include a separate period of at least three years of experience obtained during employment as a fireman, oiler, general assistant, journeyman, boiler-maker or any comparable position as approved by the commissioner, in such steam generating plant;*
2. *Applicant received a degree in mechanical engineering from an accredited school or college and had one year experience in the operation and maintenance of high-pressure boilers under the direct and continuing supervision of a licensed high-pressure boiler operating engineer in the city within the two year period preceding the date of the application;*
3. *Applicant has held, for a minimum of four years, a certificate as an engineer issued by a board of examining engineers duly established and qualified pursuant to the laws of the United States or any state or territory thereof, or a certificate as a marine engineer issued by the United States Coast Guard, and a minimum of one year experience in the city in the operation and maintenance of stationary high-pressure boiler plants under the direct and continuing supervision of a licensed high-pressure boiler operating engineer within the seven years preceding the date of the application, provided that the applicant shall have filed with such application a signed statement that the applicant is the person named in said certificate together with the supporting signed statements by three licensed high-pressure boiler operating engineers employed in the city of New York at the time of making of such signed statements;*

4. *Applicant exercised direct and continuing supervision, care, operation and maintenance over a steam generating plant of a governmental building, having boilers of 150 or more horsepower, for a minimum of five years and had a minimum of one year of experience on high-pressure boilers under the direct and continuing supervision of a licensed high-pressure boiler operating engineer in the city within the seven year period preceding the date of the application; or*
5. *Applicant successfully completed a New York state approved apprenticeship training program of at least two years and had at least three years experience within the seven years preceding the date of the application in the operation and maintenance of high-pressure boilers in the city under the direct and continuing supervision of a licensed high-pressure boiler operating engineer.*

*§28-413.3 Fitness to perform work. As a condition of license renewal, a licensed high-pressure boiler operating engineer shall provide evidence satisfactory to the department that such licensee is fit to perform the work.*

**ARTICLE 414**  
**PORTABLE HIGH-PRESSURE BOILER OPERATING ENGINEER LICENSE**

*§28-414.1 Portable high-pressure boiler operating engineer license required. It shall be unlawful to operate a portable high-pressure steam boiler for any purpose whatsoever in the city of New York unless such boiler is operated by or under the direct and continuing supervision and in the presence of a person licensed as a portable high-pressure boiler operating engineer.*

*§28-414.2 Qualifications. Applicants for a portable high-pressure boiler operating engineer license shall present satisfactory proof that applicant held a basic license as a hoisting machine operator as provided in this chapter for a minimum of three years within the five year period preceding the date of the application; and served as a fireman, oiler, assistant engineer or engineer on portable high-pressure boilers for a minimum of three years within the seven year period preceding the date of the application at least one year on portable high pressure boilers within the city under the direct and continuing supervision of a licensed portable high-pressure boiler operating engineer.*

*§28-414.3 Fitness to perform work. As a condition of license renewal, a licensed portable high-pressure boiler operating engineer shall provide evidence satisfactory to the department that such licensee is fit to perform the work.*

*ARTICLE 415  
SIGN HANGER LICENSE*

*§28-415.1 Sign hanger license required. It shall be unlawful to hoist or lower or to hang or attach any sign upon or on the outside of any building in the city unless such work is performed by or under the direct and continuing supervision of a person licensed as a sign hanger under the provisions of this article.*

*§28-415.2 Exemptions. The provisions of this article shall not apply to the following:*

- 1. Signs not exceeding 75 square feet (7 m<sup>2</sup>) in area, measured on one face only, nor exceeding 25 pounds (11 kg) in weight;*
- 2. Signs supported directly on the ground; or*
- 3. Directional signs; or*
- 4. Temporary signs erected during the construction or alteration of a building and related to such work; or*
- 5. The erection or placing of any signs by employees of the city, any city department or other city agency.*

*§28-415.3 Classification. Such licenses shall be classified as follows:*

- 1. Master sign hanger license. Authorizes the holder thereof to hoist or lower or to hang or attach any sign, irrespective of weight, upon or on the outside of any building.*
- 2. Special sign hanger license. Authorizes the holder thereof to hoist or lower or to hang or attach any sign not exceeding one hundred fifty square feet in area, measured on one face only, nor exceeding one thousand two hundred pounds in weight, upon or on the outside of any building.*

*§28-415.4 Additional qualifications. Applicants for a sign hanger license shall have the additional qualifications set forth in sections 28-415.4.1 through 28-415.4.2.*

*§28-415.4.1 Master sign hanger qualifications. All applicants for a master sign hanger license shall submit satisfactory proof establishing that the applicant has had at least five years practical experience in sign hanging within the seven years preceding the date of the license application under the direct and continuing supervision of a licensed master sign hanger; and the applicant shall also have a knowledge of and ability to read plans and specifications relating to sign construction and erection, including supporting framework and other supports, and a knowledge of the problems and practices of sign construction and hanging and be familiar with the equipment and tools used in sign hanging.*

*§28-415.4.2 Special sign hanger qualifications. All applicants for a special sign hanger license shall submit satisfactory proof establishing that the applicant has had at least three years practical experience in sign hanging within the five years preceding the date of the license application under the direct and continuing supervision of a licensed sign hanger; and the applicant shall also have a knowledge and ability to read plans and specifications relating to sign construction and erection, including supporting framework and other supports, and a knowledge of the problems and practices of sign construction and hanging and be familiar with the equipment and tools used in sign hanging.*

*§28-415.5 Additional requirements. The additional requirements set forth in sections 28-415.5.1 through 28-415.5.2 shall apply to sign hangers:*

*§28-415.5.1 Danger warning. Every licensed sign hanger shall, while sign hanging operations are in progress at a job site, place conspicuously at such job site two plates or signs not less than 18 inches (457 mm) by 24 inches (610 mm) in size (i) displaying the word “danger” in letters not less than 6 inches (152 mm) high, and (ii) disclosing the sign hanger’s name, business address, type of license and license number.*

*§28-415.5.2 Sign hanger place of business. Every licensed sign hanger shall have a place of business within the city and shall display prominently at such place of business a plate or sign marked with the words “sign hanger” and the license number immediately thereunder.*

*§28-415.6 Fitness to perform work. As a condition of license renewal, a licensed sign hanger shall provide evidence satisfactory to the department that such licensee is fit to perform the work.*

#### **ARTICLE 416 FILING REPRESENTATIVE REGISTRATION**

*§28-416.1 Filing representative registration required. No person shall use the term “registered filing representative” or “filing representative” or any similar representation in such manner as to convey the impression that such person is a registered filing representative in accordance with the provisions of this article; nor shall any person present, submit, furnish or seek approval of applications or construction documents, or remove any documents from the possession of the department, without first having registered with the department such person’s name, address and company affiliation on a form to be furnished by the department.*

*§28-416.2 Exemptions. The following persons are exempt from the provisions of this article:*

1. *The owners of the premises for which the building applications are filed including, in the case of partnerships or corporations, the general partners or the principal officers of the corporation, where the principal officers of a corporation shall include the president, vice presidents, secretary and treasurer;*
2. *The lessees of such premises authorized by the owner to file building applications;*
3. *Condominium unit owners authorized by the condominium board of managers to file building applications;*
4. *Cooperative shareholders authorized by the cooperative board of directors to file building applications;*
5. *Architects;*
6. *Engineers;*
7. *Attorneys admitted to practice in New York state;*
8. *Master plumbers licensed pursuant to this chapter;*
9. *Master fire suppression piping contractors licensed pursuant to this chapter; and*
10. *Master electricians licensed pursuant to subchapter one of chapter 3 of title 27 of the administrative code.*

*§28-416.3 Rules. The commissioner shall promulgate rules for the proper and efficient administration and enforcement of this article. Unless required by rule, a registered filing representative shall not be required to take an examination or to complete continuing education courses as a condition for renewal of the registration.*

#### **ARTICLE 417 BOARDS**

*§28-417.1 Plumbing and fire suppression piping contractor license board. The commissioner shall appoint annually and may remove in his or her discretion each member of a plumbing and fire suppression piping contractor license board that shall have as its purpose the following:*

1. *To advise the commissioner regarding the character and fitness of applicants for certificates of competence and licenses who have passed the required examination.*
2. *To advise the commissioner regarding allegations of illegal practices on the part of licensed master plumbers, licensed master fire suppression piping contractors, master plumber businesses*

- or master fire suppression piping businesses.*
3. *To advise the commissioner regarding plumbing and fire suppression piping practices, code applications, regulations and legislation.*
  4. *To perform such other responsibilities as may be requested by the commissioner and as set forth in rules promulgated by the department.*

*§28-417.1.1 Removal. The commissioner may remove any member of the license board and shall fill any vacancy therein.*

*§28-417.1.2 Membership. Membership of the board shall consist of:*

1. *Two officers or employees of the department;*
2. *Five licensed master plumbers, three of whom shall be selected from nominees of the New York city contracting plumbing association whose members perform the largest dollar value of work within the city and one of whom shall be the holder of a class A or class B master fire suppression piping contractor license. The two remaining licensed master plumber board member positions shall be from the next largest plumbing association in the city of New York.*
3. *Two licensed master fire suppression piping contractors, both of whom shall hold a class A license and shall be selected from nominees of the New York city sprinkler/fire suppression piping contractors association whose members perform the largest dollar value of work within the city;*
4. *A registered journeyman plumber from the organization representing the largest number of registered journeyman plumbers;*
5. *A registered journeyman fire suppression piping installer from the organization representing the largest number of registered journeyman fire suppression piping installers;*
6. *An engineer having at least five years experience in the design of plumbing systems;*
7. *An architect;*
8. *An engineer who is a full member of the society of fire protection engineers;*
9. *Two officers or employees of the fire department representing the fire commissioner; and*
10. *A real estate owner or manager or representative thereof.*

*§28-417.1.3 Organization of the board. A member of the board who is an officer or employee of the department representing the commissioner shall serve as chairperson and all members shall serve without compensation. Nine members including the chairperson, who shall be entitled to vote, shall constitute a quorum of the board for the transaction of business. All actions shall be conducted by majority vote except as otherwise provided, and the board shall keep minutes of its proceedings and records of its investigations. The board shall meet at least once a month except during the months of July and August, and at such other times upon call of the chairperson.*

*§28-417.1.4 Advisory and support personnel. The board may request the commissioner to appoint duly authorized representatives to conduct investigations and other activities incidental to the functions of the license board. Such appointees shall be non-voting members of the committee to which they are appointed, and may include personnel who are not department employees who shall serve without compensation. In addition the commissioner may designate such employees of the department as the commissioner deems necessary to the service and support of the license board.*

**CHAPTER 5  
SPECIAL PROVISIONS RELATING TO REGULATION OF OUTDOOR SIGNS**

**ARTICLE 501  
MAINTENANCE PERMIT FOR OUTDOOR SIGNS**

*§28-501.1 Permit required. The commissioner may, in his or her discretion, when necessary in the public interest, establish a permit requirement for signs maintained in the areas described in this article in accordance with the provisions of this article and the rules of the department. On and after a date to be provided by the rules establishing such a permit requirement, and subject to the provisions of section 28-501.6 of this code, it shall be unlawful to place or maintain a sign, as defined in section 12-10 of the zoning resolution, on any building or premises unless a permit for the maintenance of such sign has been issued by the department pursuant to this article if such sign is within a distance of nine hundred linear feet from and within view of an arterial highway or within a distance of 200 linear feet (60 960 mm) from and within view of a public park with an area of one half acre or more.*

*§28-501.1.1 Other permits notwithstanding. Where a sign maintenance permit has been established by the commissioner pursuant to section 28-501.1 such permit shall be required for all signs maintained in the areas described in such section 28-501.1 and not otherwise excluded under section 28-501.6,*

*whether or not a work permit is required and/or has been issued for the installation, alteration or erection of such sign pursuant to chapter 1 of this title.*

*§28-501.1.2 Arterial highway. For the purposes of this article, the term arterial highway shall include all highways that are shown on the master plan of arterial highways and major streets as principal routes parkways or toll crossings and that have been designated by the city planning commission as arterial highways to which the provisions of sections 42-55 and 32-66 of the zoning resolution shall apply as shown in appendix C of the zoning resolution.*

*§28-501.2 Application. Application for a permit or for the renewal of a permit shall be made on forms to be furnished by the department and shall contain such information as the department shall prescribe. Except as otherwise provided in section 28-501.3, a permit shall remain in effect for a period to be determined by rule and may be renewed. The fee for a permit or for its renewal shall be established by rule. The identification number of the permit shall be displayed on the sign or on the building or premises on which the sign is located or both, in a manner to be provided by rule.*

*§28-501.3 Permit expiration. A permit issued pursuant to this article shall expire and be of no further force or effect where:*

- 1. In the case of a sign which is accessory to a principal use within the meaning of section 12-10 of the zoning resolution, there has been a discontinuance of the operation of the principal use to which such sign is accessory, or in the event the sign is no longer in the same ownership as such principal use or is no longer operated and maintained substantially for the benefit or convenience of the owners, occupants, employees, customers or visitors of the principal use;*
- 2. In the case of any sign for which a permit has been issued pursuant to this article, whether or not accessory to a principal use within the meaning of section 12-10 of the zoning resolution, there has been a change in copy which the commissioner has determined renders such sign no longer in compliance with the zoning resolution. The commissioner shall prescribe by rule procedures for the notification to the department concerning changes in copy which have been made on signs for which permits have been issued under this article. Nothing herein shall be construed as limiting the ability of any person to apply for a new permit pursuant to this article.*

*§28-501.4 Civil penalties. Any person who places or maintains a sign on a building or premises without an*

*appropriate permit in violation of this article shall be liable for a civil penalty of, for a first violation, not more than fifteen thousand dollars and, for a second or subsequent violation, not more than twenty-five thousand dollars. Each day's continuance shall be a separate and distinct violation. Such civil penalties may be recovered in an action in any court of appropriate jurisdiction or in a proceeding before the environmental control board. Such board shall have the power to impose the civil penalties provided for in this article. Notwithstanding the provisions of section six hundred sixty-six of the charter, a notice of violation issued by the department pursuant to this section 28-501.4 shall not be subject to review by the board of standards and appeals.*

*§28-501.5 Construction. This chapter shall not be construed to grant the right to place or maintain a sign on any building or premises where the placement or maintenance of such sign would otherwise be prohibited pursuant to the zoning resolution, the administrative code or any other provision of law. No permit for a sign issued hereunder shall be deemed to constitute permission or authorization to maintain a sign which is unlawful pursuant to any other provisions of law nor shall any permit issued hereunder constitute a defense in an action or proceeding with respect to such an unlawful sign.*

*§28-501.6 Exemption. The provisions of this article shall not apply to:*

- 1. Signs with a surface area of 200 square feet (19 m<sup>2</sup>) or less that are located no higher than 3 feet (914 mm) above the floor of the second story of the building on which the sign is located; and*
- 2. Signs under the control of an outdoor advertising company and included on a certified list of signs, sign structures, and sign locations under the control of such company required to be filed with the department pursuant to this chapter.*

## **ARTICLE 502 OUTDOOR ADVERTISING COMPANIES**

*§28-502.1 Definitions. As used in this chapter, the following terms shall have the following meanings:*

*AFFILIATE. An outdoor advertising company having a controlling interest in another outdoor advertising company or in which such other outdoor advertising company has a controlling interest. In addition, where a person or entity has controlling interests in two or more outdoor advertising companies, such outdoor advertising companies shall be considered affiliates of each other. A "controlling interest" means actual working control, in whatever manner exercised, including without limitation, control through ownership, management, debt instruments or negative control, as the case may be, as defined in rules of the*

*department.*

*OUTDOOR ADVERTISING COMPANY. A person, corporation, partnership or other business entity that as a part of the regular conduct of its business engages in or, by way of advertising, promotions or other methods, holds itself out as engaging in the outdoor advertising business.*

*OUTDOOR ADVERTISING BUSINESS. The business of selling, leasing, marketing, managing, or otherwise either directly or indirectly making space on signs situated on buildings and premises within the city of New York available to others for advertising purposes, whether such advertising directs attention to a business, profession, commodity, service or entertainment conducted, sold, or offered on the same or a different zoning lot and whether such sign is classified as an advertising sign pursuant to section 12-10 of the zoning resolution.*

*SIGN. A sign as defined in section 12-10 of the zoning resolution except that such term shall not include any sign subject to regulation by the department of transportation.*

*SIGN LOCATION. A building or premises on which an outdoor advertising company is entitled to sell, lease, market, manage or otherwise either directly or indirectly make space on signs available to customers, irrespective of whether a sign exists on such building or premises.*

*UNDER THE CONTROL OF AN OUTDOOR ADVERTISING COMPANY in reference to a sign, sign structure, or sign location. That space on such sign, sign structure, or at such sign location that is sold, leased, marketed, managed or otherwise either directly or indirectly made available to others for any purposes by such outdoor advertising company.*

*§28-502.2 Registration of outdoor advertising companies. On and after a date to be provided by rule, it shall be unlawful for an outdoor advertising company to engage in the outdoor advertising business or, by way of advertising, promotions or other methods, hold itself out as engaging in the outdoor advertising business unless such company is registered in accordance with this code and the rules of the department. Such rules shall establish a procedure pursuant to which the department may require the single registration of an outdoor advertising company and its affiliates. An outdoor advertising company and its affiliates made subject to single registration shall be considered a single outdoor advertising company for purposes of this code.*

*§28-502.2.1 Application. Application for registration or the renewal of registration shall be made on*

*forms to be furnished by the department, may be made through electronic means, and shall contain such information as the department shall prescribe. Registration shall remain in force for two years and may be renewed. The fee for such registration and for the renewal of such registration shall be established by rule and may be based on the number of signs in the registered inventory.*

*§28-502.2.2 Security. Each outdoor advertising company shall post a bond or provide another form of security to the city in an amount to be determined by the department by rule to cover:*

- 1. All costs incurred by the city pursuant to this code for painting over, covering, rendering ineffective or for the removal and storage of an illegal sign or sign structure under the control of such outdoor advertising company; and*
- 2. All fines or civil penalties imposed against such company pursuant to this chapter.*

*§28-502.3 Revocation or suspension or registration. The department may revoke, suspend or refuse to renew the registration of an outdoor advertising company or impose fines or other penalties where it is determined by the commissioner, after notice and the opportunity to be heard, that (i) such company has made statements that it knew or should have known are false in any application or certification filed with the department, (ii) such company has failed to comply with section 28-502.3 of this code or the rules adopted pursuant to its provisions by failing to file a listing of signs, sign structures and sign locations under its control as specified in such section within the time and in the manner required by department rules or by filing an incomplete listing of signs, sign structures and sign locations under its control as specified in such section, (iii) such company has been found liable for or has admitted to violations of the zoning resolution under section 28-502.5 of this code committed on three or more occasions within a 36 month period, where such violations relate to the erection, maintenance, attachment, affixing, painting or representation in any other manner on a building or premises of advertising signs, as defined in section 12-10 of the zoning resolution, at locations where the display of such advertising signs is not permitted under the zoning resolution or at locations where the display of such advertising signs violates the size, height, or illumination provisions of the zoning resolution, and such signs are located within a distance of nine hundred linear feet from and within view of an arterial highway or within 200 linear feet (60 960 mm) from and within view of a public park with an area of one half acre or more, (iv) such company has failed to pay any civil penalties imposed or amounts owed to the city pursuant to section 28-502.5 of this code or, (v)*

*such company has violated the department's rules pertaining to outdoor advertising companies. No application for registration by an outdoor advertising company or any affiliate thereof shall be accepted for filing by the department for a period of five years after revocation of or the refusal to renew the registration of such outdoor advertising company pursuant to this code. The department shall not accept or process any applications for permits to install, erect or alter signs pursuant to this code or for the maintenance of signs pursuant to section 28-501.1 of this code where such applications are filed by or where such signs are under the control of an outdoor advertising company or any affiliate thereof after the registration of such outdoor advertising company has been revoked or not renewed or during the term of any period of suspension of such registration. The commissioner may settle any proceeding in which the revocation, suspension or renewal of an outdoor advertising company's registration is at issue upon such terms and conditions as he or she may deem appropriate including but not limited to the agreement of an outdoor advertising company to remove signs along with supporting sign structures as a condition for the dismissal of such proceeding.*

*§28-502.4 Reporting requirement. An outdoor advertising company shall provide the department with a list with the location of signs, sign structures and sign locations under the control of such outdoor advertising company in accordance with the following provisions:*

- 1. The list shall include all signs, sign structures and sign locations located (i) within a distance of 900 linear feet (274 m) from and within view of an arterial highway; or (ii) within a distance of 200 linear feet (60 960 mm) from and within view of a public park with an area of ½ acre (5000 m) or more.*
- 2. The commissioner may, by rule, expand the scope of such list to include the reporting of other signs, sign structures and sign locations, as specified in such rule.*

*§28-502.4.1 Form of list. The list shall be in such form, containing such information and filed at such periodic intervals or upon such other conditions, as the department shall prescribe by rule.*

*§28-502.4.2 Other required information. Such list shall also indicate the work permit identification numbers for the erection, alteration or installation of such signs pursuant to chapter 1 of this title and for the maintenance of such signs pursuant to article 501, unless a permit is not required pursuant to such provisions, as well as the name and license number of the master or special sign hanger who*

*hung or erected each such sign.*

*§28-502.4.3 Certification of list. Such list shall be accompanied by (i) a certification by an architect or engineer, co-signed by a responsible officer of the outdoor advertising company, that all signs reported on such list are in compliance with the zoning resolution; (ii) copies of proof that the sign complies with the zoning resolution and a certification by the sign's owner that to the best of the certifier's knowledge and belief the information provided is accurate, or (iii) a written opinion by the department, stating that the sign to which the opinion refers complies with the zoning resolution. Notwithstanding any inconsistent provision of this code, where, in accordance with the department's rules, the department renders an opinion, determination or decision relating to whether a sign is non-conforming or whether it is located in proximity to an arterial highway as defined by the zoning resolution, such decision, determination or opinion will be appealable to the board of standards and appeals in accordance with applicable law. If a timely appeal to such board is taken, the department shall not issue a notice of violation with respect to such sign pending a determination of such appeal by such board.*

*§28-502.4.4 Public access to list. The commissioner shall make all listings filed pursuant to this article accessible to the public.*

*§28-502.5 Display of name and registration number of outdoor advertising company. On and after a date to be prescribed by rule, the commissioner shall require that each outdoor advertising company display, in a manner to be provided by rule, on each sign under its control or on the building or premises where each sign under its control is located or both, (i) the name and registration number of such company and, (ii) unless a permit is not required, the work permit identification number for the installation, alteration or erection of the sign pursuant to chapter 1 of this code and, if applicable, for the maintenance of the sign pursuant to article 501.*

*§28-502.6 Criminal and civil penalties. Outdoor advertising companies that violate the zoning resolution, this code, the 1968 building code or rules of the department shall be subject to criminal and civil penalties in accordance with this article.*

*§28-502.6.1 General. Notwithstanding any other provision of law, an outdoor advertising company shall be liable for a civil penalty in accordance with this article if a sign under its control has been*

*erected, maintained, attached, affixed, painted on, or in any other manner represented on a building or premises in violation of any provision of the zoning resolution, this code, the 1968 building code or rules adopted pursuant thereto relating to signs.*

*§28-502.6.2 Unlawful for outdoor advertising company to sell space on illegal sign. It shall be unlawful for an outdoor advertising company to sell, lease, market, manage or otherwise make available to others for advertising purposes space on a sign that has been erected, maintained, attached, affixed, painted on or in any other manner represented on a building or premises in violation of any provision of the zoning resolution, this code, the 1968 building code or rules adopted pursuant thereto or to enter into any agreement for such purpose.*

*§28-502.6.3 Unlawful to transfer sign to unregistered outdoor advertising company. On and after a date to be provided by rule, it shall be unlawful for an outdoor advertising company to sell or otherwise transfer control of a sign or sign location or of any right of such company to sell, lease, market, manage or otherwise make space on a sign or at a sign location available to others for advertising purposes to an outdoor advertising company that is not registered in accordance with this article and the rules of the department.*

*§28-502.6.4 Civil penalty. An outdoor advertising company that violates any of the provisions of this article shall be subject to a civil penalty of, for a first violation, not more than fifteen thousand dollars and, for a second or subsequent violation, not more than twenty-five thousand dollars. Each day's continuance shall be a separate and distinct violation.*

*§28-502.6.5 Criminal penalty. Notwithstanding any inconsistent provision of law, an outdoor advertising company shall, upon being found guilty, be subject to fines or imprisonment or both pursuant to this code if a sign under its control has been erected, maintained, attached, affixed, painted on, or in any other manner represented on a building or premises in violation of any provision of the zoning resolution, this code, the 1968 building code or rules adopted pursuant thereto relating to signs.*

*§28-502.6.6 Activity by unregistered company. On and after a date to be provided by rule, an outdoor advertising company that engages in the outdoor advertising business or, by way of advertisement, promotion or other methods holds itself out as engaging in the outdoor advertising business without*

*registering with the department pursuant to this chapter, or, after such registration has been revoked or not renewed pursuant to this code continues to engage in such business beyond a date specified by the commissioner in his or her determination to revoke or not renew, shall be guilty of a misdemeanor subject to a fine not to exceed five thousand dollars or a sentence of imprisonment of not more than one year or both such fine and imprisonment for each offense. In the case of a continuing violation each day's continuance shall be a separate and distinct violation. Such company shall also be liable for a civil penalty of, for a first violation, not more than fifteen thousand dollars and, for a second or subsequent violation, not more than twenty-five thousand dollars. Each day's continuance shall be a separate and distinct violation.*

*§28-502.6.7 Venue. Civil penalties may be recovered in an action in any court of appropriate jurisdiction or in a proceeding before the environmental control board. Such board shall have the power to impose the civil penalties provided for in this article. Notwithstanding the provisions of section six hundred sixty-six of the charter, a notice of violation issued by the department pursuant to this article shall not be subject to review by the board of standards and appeals.*

*§28-502.7 Signs under control of unregistered outdoor advertising company are public nuisance. On and after a date to be provided by rule, it shall be unlawful to erect, maintain, attach, affix, paint on, or in any other manner represent on a building or premises any sign that is under the control of an unregistered outdoor advertising company. In addition to or as an alternative to any other remedies or penalties provided under any other provision of law, the commissioner may commence a proceeding for the removal of such sign or its sign structure or both in accordance with the procedures set forth in this code for the abatement of a nuisance and any such sign and its sign structure is hereby declared to be a public nuisance pursuant thereto. All of the provisions of article 503 of this chapter shall apply to the removal of a sign pursuant to this article except that a sign under the control of an unregistered outdoor advertising company may be removed whether or not it is in compliance with the zoning resolution, this code, the 1968 building code or rules adopted pursuant thereto, and irrespective of whether it has a surface area greater than 200 square feet (19 m<sup>2</sup>).*

*§28-502.8 Franchise or concession disqualification. Notwithstanding any other provision of law to the contrary, an outdoor advertising company, or any affiliate thereof, that has been found guilty of a*

*misdemeanor or liable for a civil penalty pursuant to this article or whose registration has been revoked shall be considered ineligible for the award of any city franchise or concession, and shall be prohibited from administering any advertising program on behalf of a city franchisee or concessionaire, for a period of five years following judgment or decision.*

*§28-502.9 Investigations. The department may investigate any matter within the jurisdiction conferred by this chapter and shall have full power to compel the attendance, examine and take testimony under oath of such persons as it may deem necessary in relation to such investigation, and to require the production of books, accounts, papers and other evidence relevant to such investigation. The department of investigation may, at the request of the commissioner, assist the department in any investigation conducted pursuant to this article.*

*ARTICLE 503  
NUISANCE ABATEMENT FOR ILLEGAL SIGNS*

*§28-503.1 General. A sign with a surface area greater than 200 square feet (19 m<sup>2</sup>) that is erected, maintained, attached, affixed, painted on, or in any other manner represented on a building or premises in violation of the zoning resolution, this code, the 1968 building code or rules adopted pursuant thereto is hereby declared to be a public nuisance. The commissioner may, after notice and hearing, order the removal of such illegal sign or its sign structure or both, as hereinafter provided.*

*§28-503.2 Notice. The commissioner shall serve a notice of hearing with regard to the proposed nuisance abatement on the owner and mortgagee of record of the building or premises and other persons having a recorded interest in the property in the manner provided in article 212 of chapter 2 of this title for the service of an order of closure. If the sign is under the control of an outdoor advertising company and an address for such company is reasonably ascertainable, the notice shall also be served on such outdoor advertising company by mail to the last known address for such company or, if such company is registered in accordance with section 28-502.2, at the address provided to the department by the registrant.*

*§28-503.3 Hearing. The office of administrative trials and hearings shall conduct the hearing. The administrative law judge assigned to hear the matter shall submit his or her proposed findings of fact and recommended disposition to the commissioner. If based on such recommended disposition, proposed findings of fact and the record of the hearing the commissioner determines (i) that the sign has a surface area greater than 200 square feet (19 m<sup>2</sup>) and, (ii) that the sign has been erected, maintained, attached,*

*affixed, painted on, or in any other manner represented on the building or premises in violation of the zoning resolution, this code, the 1968 building code or rules adopted pursuant thereto, he or she may order the removal of the illegal sign or its sign structure or both.*

*§28-503.3.1 Lack of knowledge no defense. At such hearing it shall not be a defense that an owner or other person having an interest in the property lacked knowledge of or did not participate in the erection or maintenance of the illegal sign.*

*§28-503.4 Posting of order. The commissioner's order of removal shall be posted, mailed and filed in the manner provided in this code for an order of closure.*

*§28-503.5 Enforcement of order. On or after the tenth business day after the posting of such order and upon the written directive of the commissioner, police officers and authorized representatives of the department shall act upon and enforce such order by removing, covering, painting over or otherwise rendering ineffective the illegal sign or its sign structure or both. Such work shall at all times be performed by a licensed sign hanger where required by law. Nothing in this article shall be construed to prohibit an owner or other person having an interest in the property from removing or causing the removal of an illegal sign or its sign structure prior to the arrival of such enforcement officers. On and after the posting of such removal order, no further permits for signs shall be issued for such building or premises pursuant to this code and, if the sign structure is not removed, no further display shall be exhibited on such sign structure unless and until the commissioner rescinds such order.*

*§28-503.6 Rescission of order. The commissioner may rescind the order if the owner or other person having an interest in the building or premises provides assurance in a form satisfactory to the commissioner that all signs erected or maintained at such building or premises will be in compliance with the zoning resolution, this code, the 1968 building code or rules adopted pursuant to such provisions. If such order is rescinded, the commissioner shall, upon request of such owner, mortgagee or other person, provide a certified copy of such rescission which may be filed with the county clerk or register of the county in which such building or premises is located.*

*§28-503.7 Costs. The costs and expenses for painting over, covering, rendering ineffective or for the removal and storage of such sign and its sign structure may be recovered from the owner of the premises*

*or, if the illegal sign is under the control of an outdoor advertising company and notice was served on such company in accordance with this article, from such outdoor advertising company. Such amounts may be recovered by the city in an action or proceeding in any court of appropriate jurisdiction and, with respect to amounts owed by an outdoor advertising company, by drawing upon any bond posted or other security provided by such company pursuant to section 28-502.2. Nothing in this article shall be construed to limit the ability of an owner to seek recovery of such costs and expenses from any other party.*

*§28-503.8 Lien. In addition, such costs and expenses shall constitute a lien on the land and building on which the sign was located which may be entered and enforced pursuant to the provisions of this code in the same manner as an unpaid fee.*

*§28-503.9 Storage and disposal. The commissioner shall adopt rules to provide for the storage and disposal of any sign or sign structure removed pursuant to this article. If the identity and address of the owner of such property is reasonably ascertainable, notice of the removal shall be sent to the owner within a reasonable period of time after the removal. If such property is not claimed within thirty days after its removal, it shall be deemed to be abandoned and may be sold at a public auction after having been advertised in the City Record and the proceeds paid into the general fund or if the commissioner determines that the property is not saleable, he or she may turn over such property to the department of sanitation for disposal. Property removed pursuant to this article shall be released to the owner or other person lawfully entitled to possession upon payment of the costs of removal and storage as set forth in the rules of the department and any fines or civil penalties imposed for the violation or, if an action or proceeding for the violation is pending in court or before the environmental control board, upon the posting of a bond or other form of security acceptable to the department in an amount which will secure the payment of such costs and any fines or civil penalties which may be imposed for the violation.*

*§28-503.10 Definitions. For the purposes of this article the terms “sign” and “surface area,” in reference to a sign, shall be as defined under section 12-10 of the zoning resolution.*

*§28-503.11 Review of order. An order of the commissioner issued pursuant to this article shall be a final determination of the commissioner for purposes of review pursuant to article seventy-eight of the civil practice law and rules. Notwithstanding any inconsistent provision of paragraph (a) of subdivision six of*

*section six hundred sixty-six of the New York city charter, such order shall not be subject to review by the board of standards and appeals.*

§12. The title of chapter 4 of title 28 of the administrative code of the city of New York, as added by local law number 99 for the year 2005, is amended to read as follows:

CHAPTER [4] 6

THE NEW YORK CITY PLUMBING CODE

§13. The title to section 401 of the administrative code of the city of New York, as added by local law number 99 for the year 2005, is amended to read as follows:

[SECTION 401] ARTICLE 601

ENACTMENT AND UPDATE OF THE NEW YORK CITY PLUMBING CODE

§14. Sections 28-401.1 and 28-401.2 of the administrative code of the city of New York, as added by local law number 99 for the year 2005, are renumbered to be sections 28-601.1 and 28-601.2.

§15. Chapters 5, 6, 7 and 8 of title 28 of the administrative code of the city of New York, as added by local law number 99 for the year 2005, are REPEALED.

§16. Title 28 of the administrative code of the city of New York is amended by adding a new chapter 7 to read as follows:

CHAPTER 7

THE NEW YORK CITY BUILDING CODE

ARTICLE 701

ENACTMENT AND UPDATE OF THE NEW YORK CITY BUILDING CODE

*§28-701.1 Update. No later than the third year after the effective date of this section 701.1 and every third year thereafter, the commissioner shall submit to the city council proposed amendments that he or she determines should be made to this code to bring it up to date with the latest edition of the International Building Code or otherwise modify the provisions thereof. In addition, prior to the submission of such proposal to the city council, such proposal shall be submitted to an advisory committee established by the commissioner pursuant to this title for review and comment.*

*§28-701.2 Enactment of the New York city building code. The New York city building code based on the 2003 edition of the International Building Code published by the International Code Council, with changes that reflect the unique character of the city, is hereby adopted to read as follows:*

§18. Title 28 of the administrative code of the city of New York is amended by adding a new chapter 9 to read as follows:

**CHAPTER 9**  
**THE NEW YORK CITY FUEL GAS CODE**

**ARTICLE 901**

**ENACTMENT AND UPDATE OF THE NEW YORK CITY FUEL GAS CODE**

*§28-901.1 Update. No later than the third year after the effective date of this section 28-901.1 and every third year thereafter, the commissioner shall submit to the city council proposed amendments that he or she determines should be made to this code to bring it up to date with the latest edition of the International Fuel Gas Code or otherwise modify the provisions thereof. In addition, prior to the submission of such proposal to the city council, such proposal shall be submitted to an advisory committee established by the commissioner pursuant to this title for review and comment.*

*§28-901.2 Enactment of the New York city fuel gas code. The New York city fuel gas code based on the 2003 edition of the International Fuel Gas Code published by the International Code Council, with changes that reflect the unique character of the city, is hereby adopted to read as follows:*

**THE NEW YORK CITY FUEL GAS CODE**

**CHAPTER 1  
ADMINISTRATION**

**SECTION FGC 101  
GENERAL**

**101.1 Title.** *This code shall be known and may be cited as the “New York City Fuel Gas Code,” “NYCFG” or “FGC”. All section numbers in this code shall be deemed to be preceded by the designation “FGC”.*

**101.2 Scope.** *This code shall apply to the installation of fuel-gas piping systems, fuel-gas utilization equipment and related accessories in accordance with Sections 101.2.2 through 101.2.5.*

**101.2.1** *Reserved.*

**101.2.2 Piping systems.** *These regulations cover piping systems for natural gas with an operating pressure of 125 pounds per square inch gauge (psig) (862 kPa gauge) or less. Coverage shall extend to the outlet of the equipment shutoff valves. Piping systems requirements shall include design, materials, components, fabrication, assembly, installation, testing, inspection, operation and maintenance.*

**101.2.3 Gas utilization equipment.** *Requirements for gas utilization equipment and related accessories shall include installation, combustion and ventilation air and venting and connections to piping systems.*

**101.2.4 Systems and equipment outside the scope.** *This code shall not apply to the following:*

1. *Portable LP-gas equipment of all types that is not connected to a fixed fuel piping system.*
2. *Oxygen-fuel gas cutting and welding systems.*
3. *Industrial gas applications using gases such as acetylene and acetylenic compounds, hydrogen, ammonia, carbon monoxide, oxygen and nitrogen.*

4. *Petroleum refineries, pipeline compressor or pumping stations, loading terminals, compounding plants, refinery tank farms and natural gas processing plants.*
5. *Integrated chemical plants or portions of such plants where flammable or combustible liquids or gases are produced by, or used in, chemical reactions.*
6. *LP-gas installations at utility gas plants.*
7. *Liquefied natural gas (LNG) installations.*
8. *Fuel gas piping in power and atomic energy plants.*
9. *Components within proprietary items of equipment, apparatus or instruments such as gas-generating sets, compressors and calorimeters.*
10. *LP-gas equipment for vaporization, gas mixing and gas manufacturing.*
11. *Temporary LP-gas piping for buildings under construction or renovation that is not to become part of the permanent piping system.*
12. *Installation of LP-gas systems for railroad switch heating.*
13. *Installation of hydrogen gas, LP-gas and compressed natural gas (CNG) systems on vehicles.*
14. *Except as provided in Section 401.1.1 and Appendices E and F, gas piping, meters, gas pressure regulators and other appurtenances used by the serving gas supplier in the distribution of gas, other than undiluted LP-gas.*
15. *Building design and construction, except as specified herein.*
16. *Piping systems for mixtures of gas and air within the flammable range with an operating pressure greater than 10 psig (69 kPa gauge).*
17. *Portable fuel cell appliances that are neither connected to a fixed piping system nor interconnected to a power grid.*

**101.2.5 Other fuels.** *The requirements for the design, installation, maintenance, alteration and inspection of mechanical systems operating with fuels other than fuel gas shall be regulated by the New York City Mechanical Code.*

**101.3 Reserved.**

**101.4 Intent.** *The purpose of this code is to provide minimum standards to safeguard life or limb, health, property and public welfare by regulating and controlling the design, construction, installation, quality of materials, location, operation and maintenance or use of fuel gas systems.*

**101.5 Severability.** *If a section, subsection, sentence, clause or phrase of this code is, for any reason, held to be unconstitutional, such decision shall not affect the validity of the remaining portions of this code.*

## **SECTION FGC 102 APPLICABILITY**

**102.1 General.** *The provisions of this code shall apply to all matters affecting or relating to structures and premises, as set forth in Section 101. Where, in a specific case, different sections of this code specify different materials, methods of construction or other requirements, the most restrictive shall govern.*

**102.2 Existing installations.** *Except as otherwise provided for in this chapter or elsewhere in this code, a provision in this code shall not require the removal, alteration or abandonment of, nor prevent the continued utilization and maintenance of, existing installations lawfully in existence on the effective date of this code.*

**102.2.1 Existing buildings.** *Additions, alterations, renovations or repairs related to building or structural issues shall be governed by Chapter 1 of Title 28 of the Administrative code, the New York City Building Code and the 1968 building code, as applicable.*

**102.3 Maintenance.** *Installations, both existing and new, and parts thereof shall be maintained in proper operating condition in accordance with the original design and in a safe condition. Devices or safeguards that are required by this code shall be maintained in compliance with the applicable provisions under which they were installed. The owner or the owner's designated agent shall be responsible for maintenance of installations. To determine compliance with this provision, the commissioner shall have the authority to require an existing installation to be inspected.*

**102.4 Additions, alterations or repairs.** *Additions, alterations, renovations or repairs to installations shall conform to that required for new installations without requiring the existing installation to comply with all of the requirements of this code. Additions, alterations or repairs shall not cause an existing installation to become unsafe, hazardous or overloaded. Minor additions, alterations, renovations and repairs to existing installations shall meet the provisions for new construction, unless such work is done in the same manner and arrangement as was in the existing system, is not hazardous and is approved.*

**102.5 Change in occupancy.** *Refer to Chapter 1 of Title 28 of the Administrative Code.*

**102.6 Reserved.**

**102.7 Reserved.**

**102.8 Referenced standards.** *The standards referenced in this code shall be those that are listed in Chapter 8 and in the rules of the department and such standards shall be considered part of the requirements of this code to the prescribed extent of each such reference. Where differences occur between provisions of this code and the referenced standards, the provisions of this code shall apply. Refer to Article 103 of chapter 1 of Title 28 of the Administrative Code for additional provisions relating to referenced standards.*

**102.9 Requirements not covered by code.** *Requirements necessary for the strength, stability or proper operation of an existing or proposed installation, or for the public safety, health and general welfare, not specifically covered by this code, shall be determined by the commissioner.*

### **SECTION FGC 103**

#### **DEPARTMENT OF BUILDINGS**

**103.1 Enforcement agency.** *Refer to the New York City Charter and Chapter 1 of Title 28 of the Administrative Code.*

**103.2 Reserved.**

**103.3 Reserved.**

**103.4 Reserved.**

### **SECTION FGC 104**

## **DUTIES AND POWERS OF THE COMMISSIONER OF BUILDINGS**

**104.1 General.** *The commissioner shall have the authority to render interpretations and to adopt rules establishing policies, and procedures to clarify and implement the provisions of this code. Such interpretations and rules shall be in compliance with the intent and purpose of this code. See the New York City Charter and Chapter 1 of Title 28 of the Administrative Code for additional provisions relating to the authority of the Commissioner of Buildings.*

### **SECTION FGC 105**

#### **PERMITS**

**105.1 General.** *Permits shall comply with this section, with Article 105 of Chapter 1 of Title 28 of the Administrative Code, and with requirements found elsewhere in this code.*

**105.2 Required.** *Any owner or authorized agent who intends to construct, add to, alter, repair, move, demolish, or change the occupancy of a building or structure, or to erect, install, add to, alter, repair, remove, convert or replace any gas, mechanical or plumbing system, the installation of which is regulated by this code, or to cause any such work to be done, shall first make application for construction document approval in accordance with Chapter 1 of Title 28 of the Administrative Code and this chapter and obtain the required permit.*

**105.3 Work exempt from permit.** *Exemptions from permit requirements of this code as authorized in Chapter 1 of Title 28 of the Administrative Code and the rules of the department shall not be deemed to grant authorization for any work to be done in any manner in violation of the provisions of this code or any other laws or rules.*

**105.4 Validity of permit.** *The issuance or granting of a permit shall not be construed to be a permit for, or an approval of, any violation of any of the provisions of this code or of any other law. Permits presuming to give authority to violate or cancel the provisions of this code or other law shall not be valid. The issuance of a permit based on construction documents and other data shall not prevent the commissioner from requiring the correction of errors in the construction documents and other data. The commissioner is also authorized to prevent occupancy or use of a structure where in violation of this code or of any other law.*

### **SECTION FGC 106**

#### **CONSTRUCTION DOCUMENTS**

**106.1 General.** *Construction documents shall comply with Article 104 of Chapter 1 of Title 28 of the Administrative Code and other applicable provisions of this code and its referenced standards. Such construction documents shall be coordinated with architectural, structural and means of egress plans.*

**106.2 Required documents.** *The applicant shall submit all of the documents specified in Sections 106.3 through 106.8 as appropriate to the nature and extent of the work proposed. Construction documents shall indicate the heating, ventilating, refrigeration, and other mechanical work to be performed, so drawn as to conform to the architectural and structural aspects of the building and to show in detail compliance with this code.*

**106.2.1 Composite plans.** *Composite plans showing compliance of architectural, structural, and mechanical parts of a building may be submitted provided that a clear understanding of each part is not impaired.*

**106.3 Lot diagram.** *The lot diagram shall be provided where applicable to the work proposed, including but not limited to the installation of exterior or rooftop equipment.*

**106.4 Building classification statement.** *Where applicable to the proposed work, the statement shall identify:*

- 1. The occupancy group or groups that apply to parts of the building in accordance with Section 302 of the New York City Building Code;*
- 2. The occupancy group of the main use or dominant occupancy of the building in accordance with Section 302.1 of the New York City Building Code;*
- 3. The construction class of the building in accordance with Section 602 of the New York City Building Code;*
- 4. The structure category in accordance with Table 1604.5 of the New York City Building Code;*
- 5. The height of the building as defined in Section 502.1 of the New York City Building Code;*
- 6. The applicable measurements to the highest and lowest level of fire department access; and*
- 7. Whether the building is inside or outside of the fire districts.*

**106.5 Fuel-gas-burning equipment and fuel-gas piping plans.** *Construction documents for fuel-gas-burning equipment and fuel-gas piping shall contain plans that include the following data and information.*

1. *Riser diagrams showing the story heights, the gas risers, and related equipment.*
2. *Diagrammatic floor plans showing the size, location, material for all gas distribution piping and related equipment.*
3. *Floor plans or partial floor plans showing the location, layout, size, and listing information for all fuel-gas burning equipment, gas vents, and chimneys, with the riser numbers coordinated with other plans and diagrams. The floor plans shall indicate locations of meters, shut-off valves, including the outside gas cut-off required by Appendix E, Section E6. The plans shall also indicate the method or means of providing air to the equipment space, including duct and opening sizes.*
4. *Plans indicating the location and type of any relevant smoke and heat detectors, alarm, and fire extinguishing systems.*
5. *Seismic protection and restraint details for piping and equipment as required by Chapter 16 of the New York City Building Code.*
6. *Details indicating the location, size and materials for all breechings; the thickness and type of insulation materials; and the clearances from combustible walls, partitions, and ceiling; and the fire-resistive ratings of rooms and spaces containing the equipment.*
7. *Details describing the type, material, listing information, height, and termination distances to adjacent properties and structures for chimneys and gas vents.*
8. *Details showing structural supports for fuel-gas-burning equipment where required.*
9. *In areas of special flood hazards, construction documents shall comply with Appendix G of the New York City Building Code.*

**106.6 Heating systems.** *Construction documents for heating systems shall include the temperature to be maintained in every room and the output capacity in BTU per hour (0.2931 W) of the central heating source.*

**106.7 Boilers.** *Construction documents for boiler installations shall indicate the output capacity in BTU per hour, the operating weight of each boiler, the pressure setting of the relief valves, and such other data and information as required this code.*

**106.8 Energy efficiency.** *Construction documents shall include a statement by the registered design professional of record that: "To the best of my knowledge, belief and professional judgment, these plans and specifications are in compliance with the Energy Conservation Construction Code of New York State." In addition, the following requirements shall apply:*

- 1. A lead energy professional shall be identified for each project, who shall draw the relevant information regarding envelope, mechanical systems, service water heating system and lighting and power systems from construction documents into an energy analysis. The energy analysis shall balance total energy consumption of all systems in accordance with the Energy Conservation Construction Code of New York State and shall be signed and sealed by the lead energy professional.*
- 2. The format for the energy analysis shall be as established in the Energy Conservation Construction Code of New York State, or as approved by the department, and shall comprise a sheet within the drawing set. Supporting documentation shall be available within the drawing set or upon request of the department.*

**SECTION FGC 107 (IFGC)  
INSPECTIONS AND TESTING**

**107.1 General.** *Except as otherwise specifically provided, inspections required by this code or by the department during the progress of work may be performed on behalf of the owner by approved agencies or, if applicable, by special inspectors. However, in the interest of public safety, the commissioner may direct that any of such inspections be performed by the department. All inspections shall be performed at the sole cost and expense of the owner. Refer to Article 116 of Chapter 1 of Title 28 of the Administrative Code for additional provisions relating to inspections. In addition to any inspections otherwise required by this code or applicable rules, the following inspections shall be required:*

1. *Progress inspections:*
  - 1.1. *Underground inspection shall be made after trenches or ditches are excavated and bedded, piping is installed and before backfill is put in place. When excavated soil contains rocks, broken concrete, frozen chunks and other rubble that would damage or break the piping or cause corrosive action, clean backfill shall be on the job site.*
  - 1.2. *Rough-in inspection shall be made after the roof, framing, fireblocking and bracing are in place and components to be concealed are complete, and prior to the installation of wall or ceiling membranes.*
2. *Special inspections. Special inspections shall be performed in accordance with this code and Chapter 17 of the New York City Building Code.*
3. *Final inspection. Refer to Article 116 of Chapter 1 of Title 28 of the Administrative Code.*
4. *Issuance of Certificate of Compliance. Upon satisfactory inspection of service equipment and the project satisfied all the requirements for sign-off, the department shall issue certificate of compliance as applicable for the following service equipment:*
  - 4.1. *Fuel-gas-burning equipment,*
  - 4.2. *Heating systems, and*
  - 4.3. *Boilers.*

**107.1.1 Approved inspection agencies.** *Refer to Articles 114 and 115 of Chapter 1 of Title 28 of the Administrative Code.*

**107.1.2 Inspection of prefabricated construction assemblies.** *Prior to the approval of a prefabricated construction assembly having concealed work and the issuance of a permit, the department shall require the submittal of an evaluation report by an approved agency on each prefabricated construction assembly, indicating the complete details of the installation, including a description of the system and its components, the basis upon which the system is being evaluated, test results and similar information and other data as necessary for the commissioner to determine conformance to this code.*

**107.1.2.1 Test and inspection records.** Required test and inspection records shall be available to the commissioner at all times during the fabrication of the installation and the erection of the building; or such records as the commissioner designates shall be filed.

**107.2 Testing.** Installations shall be tested as required in this code and in accordance with Sections 107.2.1 through 107.2.3. Tests shall be made by the permit holder and witnessed by the department or an approved agency.

**107.2.1 New, altered, extended or repaired installations.** New installations and parts of existing installations that have been altered, extended, renovated or repaired, shall be tested as prescribed herein to disclose leaks and defects.

**107.2.2 Apparatus, instruments, material and labor for tests.** Apparatus, instruments, material and labor required for testing an installation or part thereof shall be furnished by the permit holder.

**107.2.3 Reinspection and testing.** Where any work or installation does not pass an initial test or inspection, the necessary corrections shall be made so as to achieve compliance with this code. The work or installation shall then be resubmitted to the department for inspection and testing.

**107.3 Sign-off of completed work.** Refer to Article 116 of Chapter 1 of Title 28 of the Administrative Code.

**107.4 Temporary connection.** The commissioner shall have the authority to allow the temporary connection of an installation to the sources of energy for the purpose of testing the installation or for use under a temporary certificate of occupancy.

## **SECTION FGC 108 VIOLATIONS**

**108.1 General.** Refer to Chapters 2 and 3 of Title 28 of the Administrative Code.

**108.2 Authority to disconnect service utilities.** The commissioner shall have the authority to require disconnection of utility service to the building, structure or system regulated by the technical codes in case of emergency where necessary to eliminate an immediate hazard to life or property. The commissioner shall notify the serving utility, and wherever possible, the owner and occupant of the building, structure or service system of the decision to disconnect prior to taking such action. If not notified prior to disconnection, the owner or occupant of the building, structure or service system shall be notified in

writing, as soon as practicable thereafter.

**108.3 Connection after order to disconnect.** A person shall not make energy source connections to installations regulated by this code that have been disconnected or ordered to be disconnected by the commissioner, or the use of which has been ordered to be discontinued by the commissioner until the commissioner authorizes the reconnection and use of such installations. When an installation is maintained in violation of this code, and in violation of a notice issued pursuant to the provisions of this section, the commissioner shall institute appropriate action to prevent, restrain, correct or abate the violation.

## **CHAPTER 2 DEFINITIONS**

### **SECTION FGC 201 GENERAL**

**201.1 Scope.** Unless otherwise expressly stated, the following words and terms shall, for the purposes of this code and standard, have the meanings indicated in this chapter.

**201.2 Interchangeability.** Words used in the present tense include the future; words in the masculine gender include the feminine and neuter; the singular number includes the plural and the plural, the singular.

**201.3 Terms defined in other codes.** Where terms are not defined in this code and are defined in the New York City Electrical Code, New York City Building Code, New York City Fire Code, New York City Mechanical Code or New York City Plumbing Code, such terms shall have meanings ascribed to them as in those codes.

**201.4 Terms not defined.** Where terms are not defined through the methods authorized by this section, such terms shall have ordinarily accepted meanings such as the context implies.

### **SECTION FGC 202 GENERAL DEFINITIONS**

**ACCESS (TO).** That which enables a device, appliance or equipment to be reached by ready access or by a means that first requires the removal or movement of a panel, door or similar obstruction (see also "Ready access").

**AIR CONDITIONER, GAS-FIRED.** A gas-burning, automatically operated appliance for supplying cooled and/or dehumidified air or chilled liquid.

**ADMINISTRATIVE CODE.** The Administrative Code of the City of New York.

**AIR CONDITIONING.** The treatment of air so as to control simultaneously the temperature, humidity, cleanness and distribution of the air to meet the requirements of a conditioned space.

**AIR, EXHAUST.** Air being removed from any space or piece of equipment and conveyed directly to the atmosphere by means of openings or ducts.

**AIR-HANDLING UNIT.** A blower or fan used for the purpose of distributing supply air to a room, space or area.

**AIR, MAKEUP.** Air that is provided to replace air being exhausted.

**ALTERATION.** Any construction, addition, change of use or occupancy, or renovation to a building or structure in existence. See Section 28-101.5 of the Administrative Code.

**ANODELESS RISER.** A transition assembly in which plastic piping is installed and terminated above ground outside of a building.

**APPLIANCE (EQUIPMENT).** Any apparatus or equipment that utilizes gas as a fuel or raw material to produce light, heat, power, refrigeration or air conditioning.

**APPLIANCE, FAN-ASSISTED COMBUSTION.** An appliance equipped with an integral mechanical means to either draw or force products of combustion through the combustion chamber or heat exchanger.

**APPLIANCE, AUTOMATICALLY CONTROLLED.** Appliances equipped with an automatic burner ignition and safety shutoff device and other automatic devices which accomplish complete turn-on and shutoff of the gas to the main burner or burners, and graduate the gas supply to the burner or burners, but do not affect complete shutoff of the gas.

**APPLIANCE TYPE.**

**Low-heat appliance (residential appliance).** Any appliance in which the products of combustion at the point of entrance to the flue under normal operating conditions have a temperature of 1,000°F (538°C) or less.

**Medium-heat appliance.** Any appliance in which the products of combustion at the point of entrance to the flue under normal operating conditions have a temperature of more than 1,000°F (538°C), but not greater than 2,000°F (1093°C).

**APPLIANCE, UNVENTED.** An appliance designed or installed in such a manner that the products of combustion are not conveyed by a vent or chimney directly to the outside atmosphere.

**APPLIANCE, VENTED.** An appliance designed and installed in such a manner that all of the products of combustion are conveyed directly from the appliance to the outside atmosphere through an approved chimney or vent system.

**APPROVED.** Acceptable to the commissioner. In reference to construction documents, the determination by the department after full examination that submitted construction documents comply with this code and other applicable laws and rules. In reference to materials, the determination by the commissioner that material is acceptable for its intended use. See Section 28-101.5 of the Administrative Code.

**APPROVED AGENCY.** An established and recognized agency, or other qualified person, regularly engaged in conducting tests or furnishing inspection services, when approved pursuant to department rules as qualified to perform or witness identified testing or inspection services. See Chapter 1 of Title 28 of the Administrative Code.

**APPROVED INSPECTION AGENCY.** An approved agency that is approved by the department as qualified to perform one or more of the inspections required by this code. See Chapter 1 of Title 28 of the Administrative Code.

**APPROVED TESTING AGENCY.** An approved agency that is approved by the department as qualified to test and evaluate the performance of one or more of the materials regulated in their use by this code. Such term shall include, when approved pursuant to department rules, a third party testing or certification agency, evaluation agency, testing laboratory, testing service or other entity concerned with product evaluation. See Chapter 1 of Title 28 of the Administrative Code.

**ARCHITECT.** *A person licensed and registered to practice the profession of architecture under the Education Law of the state of New York.*

**ATMOSPHERIC PRESSURE.** *The pressure of the weight of air and water vapor on the surface of the earth, approximately 14.7 pounds per square inch (psi) (101 kPa absolute) at sea level.*

**AUTOMATIC IGNITION.** *Ignition of gas at the burner(s) when the gas controlling device is turned on, including reignition if the flames on the burner(s) have been extinguished by means other than by the closing of the gas controlling device.*

**BAFFLE.** *An object placed in an appliance to change the direction of or retard the flow of air, air-gas mixtures or flue gases.*

**BAROMETRIC DRAFT REGULATOR.** *A balanced damper device attached to a chimney, vent connector, breeching or flue gas manifold to protect combustion equipment by controlling chimney draft. A double-acting barometric draft regulator is one in which the balancing damper is free to move in either direction to protect combustion equipment from both excessive draft and backdraft.*

**BOILER, HIGH-PRESSURE.** *An appliance (equipment) for supplying steam or hot water that, for a steam boiler, operates at a pressure of more than 15 psig (103 kPa gauge), and for a hot water boiler, operates at a pressure exceeding 150 psig (1034 kPa gauge) or at a temperature exceeding 250°F (121°C).*

**BOILER, LOW-PRESSURE.** *A self-contained appliance for supplying steam or hot water as follows:*

**Hot water heating boiler.** *A boiler in which no steam is generated, from which hot water is circulated for heating purposes and then returned to the boiler, and that operates at water pressures not exceeding 160 pounds per square inch gauge (psig) (1100 kPa gauge) and at water temperatures not exceeding 250°F (121°C) at or near the boiler outlet.*

**Hot water supply boiler.** *A boiler, completely filled with water, which furnishes hot water to be used externally to itself, and that operates at water pressures not exceeding 160 psig (1100 kPa gauge) and at water temperatures not exceeding 250°F (121°C) at or near the boiler outlet.*

**Steam heating boiler.** *A boiler in which steam is generated and that operates at a steam pressure not exceeding 15 psig (103 kPa gauge).*

**BRAZING.** A metal-joining process wherein coalescence is produced by the use of a nonferrous filler metal having a melting point above 1,000°F (538°C), but lower than that of the base metal being joined. The filler material is distributed between the closely fitted surfaces of the joint by capillary action.

**BROILER.** A general term including salamanders, barbecues and other appliances cooking primarily by radiated heat, excepting toasters.

**BTU.** Abbreviation for British Thermal Unit, which is the quantity of heat required to raise the temperature of 1 pound (454 g) of water 1°F (1.8°C) (1 Btu = 1055 J).

**BURNER.** A device for the final conveyance of the gas, or a mixture of gas and air, to the combustion zone.

**Induced-draft.** A burner that depends on draft induced by a fan that is an integral part of the appliance and is located downstream from the burner.

**Power.** A burner in which gas, air or both are supplied at pressures exceeding, for gas, the line pressure, and for air, atmospheric pressure, with this added pressure being applied at the burner.

**CHIMNEY.** A primarily vertical structure containing one or more flues, for the purpose of carrying gaseous products of combustion and air from a fuel-burning appliance to the outside atmosphere.

**Factory-built chimney.** A listed and labeled chimney composed of factory-made components, assembled in the field in accordance with manufacturer's instructions and the conditions of the listing.

**Masonry chimney.** A field-constructed chimney composed of solid masonry units, bricks, stones or concrete.

**Metal chimney.** A field-constructed chimney of metal.

**CLEARANCE.** The minimum distance through air measured between the heat-producing surface of the mechanical appliance, device or equipment and the surface of the combustible material or assembly.

**CLOTHES DRYER.** An appliance used to dry wet laundry by means of heated air. Dryer classifications are as follows:

**Type 1.** *Factory-built package, multiple production. Primarily used in family living environment. Usually the smallest unit physically and in function output.*

**Type 2.** *Factory-built package, multiple production. Used in business with direct intercourse of the function with the public. Not designed for use in individual family living environment.*

**COMBUSTION.** *In the context of this code, refers to the rapid oxidation of fuel accompanied by the production of heat or heat and light.*

**COMBUSTION AIR.** *Air necessary for complete combustion of a fuel, including theoretical air and excess air.*

**COMBUSTION CHAMBER.** *The portion of an appliance within which combustion occurs.*

**COMBUSTION PRODUCTS.** *Constituents resulting from the combustion of a fuel with the oxygen of the air, including inert gases, but excluding excess air.*

**COMMISSIONER.** *The Commissioner of Buildings of the City of New York or his or her duly authorized representative. See Section 28-101.5 of the Administrative Code.*

**CONCEALED LOCATION.** *A location that cannot be accessed without damaging permanent parts of the building structure or finished surface. Spaces above, below or behind readily removable panels or doors shall not be considered as concealed.*

**CONCEALED PIPING.** *Piping that is located in a concealed location (see “Concealed Location”).*

**CONDENSATE.** *The liquid that condenses from a gas (including flue gas) caused by a reduction in temperature or increase in pressure.*

**CONNECTOR.** *The pipe that connects an approved appliance to a chimney, flue or vent.*

**CONSTRUCTION DOCUMENTS.** *Plans and specifications and other written, graphic and pictorial documents, prepared or assembled for describing the design, location and physical characteristics of the elements of the project necessary for obtaining a building permit. See Section 28-101.5 of the Administrative Code.*

**CONTROL.** *A manual or automatic device designed to regulate the gas, air, water or electrical supply to, or operation of, a mechanical system.*

**CONVERSION BURNER.** *A unit consisting of a burner and its controls for installation in an appliance originally utilizing another fuel.*

**COUNTER APPLIANCES.** *Appliances such as coffee brewers and coffee urns and any appurtenant water-heating equipment, food and dish warmers, hot plates, griddles, waffle bakers and other appliances designed for installation on or in a counter.*

**CUBIC FOOT.** *The amount of gas that occupies 1 cubic foot (0.02832 m<sup>3</sup>) when at a temperature of 60°F (16°C), saturated with water vapor and under a pressure equivalent to that of 30 inches of mercury (101 kPa).*

**DAMPER.** *A manually or automatically controlled device to regulate draft or the rate of flow of air or combustion gases.*

**DECORATIVE APPLIANCE, VENTED.** *A vented appliance wherein the primary function lies in the aesthetic effect of the flames.*

**DECORATIVE APPLIANCES FOR INSTALLATION IN VENTED FIREPLACES.** *A vented appliance designed for installation within the fire chamber of a vented fireplace, wherein the primary function lies in the aesthetic effect of the flames.*

**DEMAND.** *The maximum amount of gas input required per unit of time, usually expressed in cubic feet per hour, or Btu/h (1 Btu/h = 0.2931 W).*

**DILUTION AIR.** *Air that is introduced into a draft hood and is mixed with the flue gases.*

**DIRECT-VENT APPLIANCES.** *Appliances that are constructed and installed so that all air for combustion is derived directly from the outside atmosphere and all flue gases are discharged directly to the outside atmosphere.*

**DRAFT.** *The pressure difference existing between the equipment or any component part and the atmosphere, that causes a continuous flow of air and products of combustion through the gas passages of the appliance to the atmosphere.*

**Mechanical or induced draft.** *The pressure difference created by the action of a fan, blower or ejector, that is located between the appliance and the chimney or vent termination.*

**Natural draft.** *The pressure difference created by a vent or chimney because of its height, and the temperature difference between the flue gases and the atmosphere.*

**DRAFT HOOD.** *A nonadjustable device built into an appliance, or made as part of the vent connector from an appliance, that is designed to (1) provide for ready escape of the flue gases from the appliance in the event of no draft, backdraft or stoppage beyond the draft hood, (2) prevent a backdraft from entering the appliance, and (3) neutralize the effect of stack action of the chimney or gas vent upon operation of the appliance.*

**DRAFT REGULATOR.** *A device that functions to maintain a desired draft in the appliance by automatically reducing the draft to the desired value.*

**DRIP.** *A nipple and cap placed at a lowpoint in a system of piping to collect condensate and from which the condensate is removable.*

**DRY GAS.** *A gas having a moisture and hydrocarbon dew point below any normal temperature to which the gas piping is exposed.*

**DUCT FURNACE.** *A warm-air furnace normally installed in an air distribution duct to supply warm air for heating. This definition shall apply only to a warm-air heating appliance that depends for air circulation on a blower not furnished as part of the furnace.*

**DUCT SYSTEM.** *A continuous passageway for the transmission air that, in addition to ducts, includes duct fittings, dampers, plenums, fans and accessory air-handling equipment, and appliances.*

**ENGINEER.** *A person licensed and registered to practice the profession of engineering under the Education Law of the State of New York.*

**EQUIPMENT.** *See "Appliance."*

**FIREPLACE.** *A fire chamber and hearth constructed of noncombustible material for use with solid fuels and provided with a chimney.*

**Masonry fireplace.** A hearth and fire chamber of solid masonry units such as bricks, stones, listed masonry units or reinforced concrete, provided with a suitable chimney.

**Factory-built fireplace.** A fireplace composed of listed factory-built components assembled in accordance with the terms of listing to form the completed fireplace.

**FIRING VALVE.** A valve of the plug and barrel type designed for use with gas, and equipped with a lever handle for manual operation and a dial to indicate the percentage of opening.

**FLAME SAFEGUARD.** A device that will automatically shut off the fuel supply to a main burner or group of burners when the means of ignition of such burners becomes inoperative, and when flame failure occurs on the burner or group of burners.

**FLOOR FURNACE.** A completely self-contained furnace suspended from the floor of the space being heated, taking air for combustion from outside such space and with means for observing flames and lighting the appliance from such space.

**Gravity type.** A floor furnace depending primarily upon circulation of air by gravity. This classification shall also include floor furnaces equipped with booster-type fans which do not materially restrict free circulation of air by gravity flow when such fans are not in operation.

**Fan type.** A floor furnace equipped with a fan which provides the primary means for circulating air.

**FLUE.** A passageway within a chimney or vent through which gaseous combustion products pass.

**FLUE, APPLIANCE.** The passage(s) within an appliance through which combustion products pass from the combustion chamber of the appliance to the draft hood inlet opening on an appliance equipped with a draft hood or to the outlet of the appliance on an appliance not equipped with a draft hood.

**FLUE COLLAR.** That portion of an appliance designed for the attachment of a draft hood, vent connector or venting system.

**FLUE GASES.** Products of combustion plus excess air in appliance flues or heat exchangers.

**FLUE LINER (LINING).** A system or material used to form the inside surface of a flue in a chimney or

*vent, for the purpose of protecting the surrounding structure from the effects of combustion products and for conveying combustion products without leakage into the atmosphere.*

**FUEL GAS.** *Fuel gases include: a natural gas, manufactured gas, liquefied petroleum gas, hydrogen gas and mixtures of these gases.*

**FUEL GAS UTILIZATION EQUIPMENT.** *See “Appliance.”*

**FURNACE.** *A completely self-contained heating unit that is designed to supply heated air to spaces remote from or adjacent to the appliance location.*

**FURNACE, CENTRAL.** *A self-contained appliance for heating air by transfer of heat of combustion through metal to the air, and designed to supply heated air through ducts to spaces remote from or adjacent to the appliance location.*

**Downflow furnace.** *A furnace designed with airflow discharge vertically downward at or near the bottom of the furnace.*

**Forced-air furnace with cooling unit.** *A single-package unit, consisting of a gas-fired forced-air furnace of one of the types listed below combined with an electrically or fuel gas-powered summer air-conditioning system, contained in a common casing.*

**Forced-air type.** *A central furnace equipped with a fan or blower which provides the primary means for circulation of air.*

**Gravity furnace with booster fan.** *A furnace equipped with a booster fan that does not materially restrict free circulation of air by gravity flow when the fan is not in operation.*

**Gravity type.** *A central furnace depending primarily on circulation of air by gravity.*

**Horizontal forced-air type.** *A furnace with airflow through the appliance essentially in a horizontal path.*

**Multiple-position furnace.** *A furnace designed so that it can be installed with the airflow discharge in the upflow, horizontal or downflow direction.*

**Upflow furnace.** *A furnace designed with airflow discharge vertically upward at or near the top of the furnace. This classification includes “highboy” furnaces with the blower mounted below the heating element and “lowboy” furnaces with the blower mounted beside the heating element.*

**FURNACE, ENCLOSED.** *A specific heating, or heating and ventilating, furnace incorporating an integral total enclosure and using only outside air for combustion.*

**FURNACE PLENUM.** *An air compartment or chamber to which one or more ducts are connected and which forms part of an air distribution system.*

**GAS CONVENIENCE OUTLET.** *A permanently mounted, manually operated device that provides the means for connecting an appliance to, and disconnecting an appliance from, the supply piping. The device includes an integral, manually operated valve with a nondisplaceable valve member and is designed so that disconnection of an appliance only occurs when the manually operated valve is in the closed position.*

**GAS PIPING.** *An installation of pipe, valves or fittings installed on a premises or in a building and utilized to convey fuel gas.*

**GAS UTILIZATION EQUIPMENT.** *An appliance that utilizes gas as a fuel or raw material or both.*

**HAZARDOUS LOCATION.** *Any location considered to be a fire hazard for flammable vapors, dust, combustible fibers or other highly combustible substances. The location is not necessarily categorized in the New York City Building Code as a high-hazard group classification.*

**HOUSE PIPING.** *See “Piping system.”*

**IGNITION PILOT.** *A pilot that operates during the lighting cycle and discontinues during main burner operation.*

**IGNITION SOURCE.** *A flame, spark or hot surface capable of igniting flammable vapors or fumes. Such sources include appliance burners, burner ignitors, and electrical switching devices.*

**INCINERATOR.** *An appliance used to reduce combustible refuse material to ashes and which is manufactured, sold and installed as a complete unit.*

**INDUSTRIAL AIR HEATERS, DIRECT-FIRED NONRECIRCULATING.** *A heater in which all the*

*products of combustion generated by the burners are released into the air stream being heated. The purpose of the heater is to offset building heat loss by heating only outdoor air.*

***INDUSTRIAL AIR HEATERS, DIRECT-FIRED RECIRCULATING.***

*A heater in which all the products of combustion generated by the burners are released into the air stream being heated. The purpose of the heater is to offset building heat loss by heating outdoor air, and, if applicable, indoor air.*

***INFRARED RADIANT HEATER.*** *A heater that directs a substantial amount of its energy output in the form of infrared radiant energy into the area to be heated. Such heaters are of either the vented or unvented type.*

***JOINT, FLANGED.*** *A joint made by bolting together a pair of flanged ends.*

***JOINT, FLARED.*** *A metal-to-metal compression joint in which a conical spread is made on the end of a tube that is compressed by a flare nut against a mating flare.*

***JOINT, MECHANICAL.*** *A general form of gas-tight joints obtained by the joining of metal parts through a positive-holding mechanical construction, such as flanged joint, threaded joint, flared joint or compression joint.*

***JOINT, PLASTIC ADHESIVE.*** *A joint made in thermoset plastic piping by the use of an adhesive substance which forms a continuous bond between the mating surfaces without dissolving either one of them.*

***JOINT, PLASTIC HEAT FUSION.*** *A joint made in thermoplastic piping by heating the parts sufficiently to permit fusion of the materials when the parts are pressed together.*

***JOINT, WELDED.*** *A gas-tight joint obtained by the joining of metal parts in molten state.*

***LABELED.*** *Material to which has been attached a label, symbol or other identifying mark of the manufacturer that contains the name of the manufacturer, the function and performance characteristics of the product or material, and the name and identification of an approved agency and that indicates that a representative sample of the material has been tested and evaluated by an approved agency for compliance with nationally recognized standards or tests to determine suitable usage in a specified manner. See Section 28-101.5 of the Administrative Code.*

**LIMIT CONTROL.** A device responsive to changes in pressure, temperature or level for turning on, shutting off or throttling the gas supply to an appliance.

**LIQUEFIED PETROLEUM GAS or LPG (LP-GAS).** Liquefied petroleum gas composed predominately of propane, propylene, butanes or butylenes, or mixtures thereof that is gaseous under normal atmospheric conditions, but is capable of being liquefied under moderate pressure at normal temperatures.

**LISTED.** Material identified in a list published by an approved agency that maintains periodic inspection of production of listed material or periodic evaluation services and whose listing states either that the material meets identified nationally recognized standards or has been tested and found suitable for a specified purpose when installed in accordance with the manufacturer's installation instructions. See Section 28-101.5 of the Administrative Code.

**LIVING SPACE.** Space within a dwelling unit utilized for living, sleeping, eating, cooking, bathing, washing and sanitation purposes.

**LOG LIGHTER.** A manually operated solid fuel ignition appliance for installation in a vented solid fuel-burning fireplace.

**LUBRICATED PLUG-TYPE VALVE.** A valve of the plug and barrel type provided with means for maintaining a lubricant between the bearing surfaces.

**MAIN BURNER.** A device or group of devices essentially forming an integral unit for the final conveyance of gas or a mixture of gas and air to the combustion zone, and in which combustion takes place to accomplish the function for which the appliance is designed.

**MECHANICAL EXHAUST SYSTEM.** Equipment installed in and made a part of the vent, which will provide a positive induced draft.

**METER.** The instrument installed to measure the volume of gas delivered through it.

**MODULATING.** Modulating or throttling is the action of a control from its maximum to minimum position in either predetermined steps or increments of movement as caused by its actuating medium.

**MP REGULATOR.** A medium pressure gas regulator, the capacity of which shall be determined by the

*manufacturer.*

**NPS.** *An abbreviation for nominal pipe size.*

**OCCUPANCY.** *The purpose or activity for which a building or space is used or is designed, arranged or intended to be used.*

**OFFSET (VENT).** *A combination of approved bends that makes two changes in direction bringing one section of the vent out of line but into a line parallel with the other section.*

**ORIFICE.** *The opening in a cap, spud or other device whereby the flow of gas is limited and through which the gas is discharged to the burner.*

**OUTLET.** *A threaded connection or bolted flange in a pipe system to which a gas-burning appliance is attached.*

**OXYGEN DEPLETION SAFETY SHUTOFF SYSTEM (ODS).** *A system designed to act to shut off the gas supply to the main and pilot burners if the oxygen in the surrounding atmosphere is reduced below a predetermined level.*

**PILOT.** *A small flame that is utilized to ignite the gas at the main burner or burners.*

**PIPING.** *Where used in this code, "piping" refers to either pipe or tubing, or both.*

**Pipe.** *A rigid conduit of iron, steel, copper, brass or plastic.*

**Tubing.** *Semirigid conduit of copper, aluminum, plastic or steel.*

**PIPING SYSTEM.** *All fuel piping, valves and fittings from the outlet of the point of delivery to the outlets of the equipment shutoff valves.*

**PLASTIC, THERMOPLASTIC.** *A plastic that is capable of being repeatedly softened by increase of temperature and hardened by decrease of temperature.*

**POINT OF DELIVERY.** *For natural gas systems, the point of delivery is the outlet of the service\_meter assembly, or the outlet of the service regulator or service shutoff valve where a meter is not provided.*

*Where a valve is provided at the outlet of the service meter assembly, such valve shall be considered to be downstream of the point of delivery. For undiluted liquefied petroleum gas systems, the point of delivery shall be considered the outlet of the first-stage pressure regulator that provides utilization pressure, exclusive of line gas regulators.*

**PORTABLE FUEL CELL APPLIANCE.** *A fuel cell generator of electricity, which is not fixed in place. A portable fuel cell appliance utilizes a cord and plug connection to a grid-isolated load and has an integral fuel supply.*

**PRESSURE DROP.** *The loss in pressure due to friction or obstruction in pipes, valves, fittings, regulators and burners.*

**PRESSURE TEST.** *An operation performed to verify the gas-tight integrity of gas piping following its installation or modification.*

**PURGE.** *To free a gas conduit of air or gas, or a mixture of gas and air.*

**QUICK-DISCONNECT DEVICE.** *A hand-operated device that provides a means for connecting and disconnecting an appliance or an appliance connector to a gas supply and that is equipped with an automatic means to shut off the gas supply when the device is disconnected.*

**READY ACCESS (TO).** *That which enables a device, appliance or equipment to be directly reached, without requiring the removal or movement of any panel, door or similar obstruction (see "Access").*

**REGISTERED DESIGN PROFESSIONAL.** *An architect or engineer.*

**REGISTERED DESIGN PROFESSIONAL OF RECORD.** *The registered design professional who prepared or supervised the preparation of applicable construction documents filed with the department.*

**REGULATOR.** *A device for controlling and maintaining a uniform supply pressure, either pounds-to-inches water column (MP regulator) or inches-to-inches water column (appliance regulator).*

**REGULATOR, GAS APPLIANCE.** *A pressure regulator for controlling pressure to the manifold of equipment. Types of appliance regulators are as follows:*

***Adjustable.***

1. *Spring type, limited adjustment. A regulator in which the regulating force acting upon the diaphragm is derived principally from a spring, the loading of which is adjustable over a range of not more than 15 percent of the outlet pressure at the midpoint of the adjustment range.*
2. *Spring type, standard adjustment. A regulator in which the regulating force acting upon the diaphragm is derived principally from a spring, the loading of which is adjustable. The adjustment means shall be concealed.*

**Multistage.** *A regulator for use with a single gas whose adjustment means is capable of being positioned manually or automatically to two or more predetermined outlet pressure settings. Each of these settings shall be adjustable or nonadjustable. The regulator may modulate outlet pressures automatically between its maximum and minimum predetermined outlet pressure settings.*

**Nonadjustable.**

1. *Spring type, nonadjustable. A regulator in which the regulating force acting upon the diaphragm is derived principally from a spring, the loading of which is not field adjustable.*
2. *Weight type. A regulator in which the regulating force acting upon the diaphragm is derived from a weight or combination of weights.*

**REGULATOR, LINE GAS PRESSURE.** *A device placed in a gas line between the service pressure regulator and the equipment for controlling, maintaining or reducing the pressure in that portion of the piping system downstream of the device.*

**REGULATOR, MEDIUM-PRESSURE.** *A medium-pressure (MP) regulator reduces the gas piping pressure to the appliance regulator or to the appliance utilization pressure.*

**REGULATOR, PRESSURE.** *A device placed in a gas line for reducing, controlling and maintaining the pressure in that portion of the piping system downstream of the device.*

**REGULATOR, SERVICE PRESSURE.** *A device installed by the serving gas supplier to reduce and limit the service line pressure to delivery pressure.*

**RELIEF OPENING.** *The opening provided in a draft hood to permit the ready escape to the atmosphere of the flue products from the draft hood in the event of no draft, back draft, or stoppage beyond the draft hood, and to permit air into the draft hood in the event of a strong chimney updraft.*

**RELIEF VALVE (DEVICE)** *A safety valve designed to forestall the development of a dangerous condition by relieving either pressure, temperature or vacuum in the hot water supply system.*

**RELIEF VALVE, PRESSURE.** *An automatic valve that opens and closes a relief vent, depending on whether the pressure is above or below a predetermined value.*

**RELIEF VALVE, TEMPERATURE.**

***Reseating or self-closing type.*** *An automatic valve that opens and closes a relief vent, depending on whether the temperature is above or below a predetermined value.*

***Manual reset type.*** *A valve that automatically opens a relief vent at a predetermined temperature and that must be manually returned to the closed position.*

**RELIEF VALVE, VACUUM.** *A valve that automatically opens and closes a vent for relieving a vacuum within the hot water supply system, depending on whether the vacuum is above or below a predetermined value.*

**RISER, GAS.** *A vertical pipe supplying fuel gas.*

**ROOM HEATER, UNVENTED.** *See “Unvented room heater.”*

**ROOM HEATER, VENTED.** *See “Vented room heater.”*

**ROOM LARGE IN COMPARISON WITH SIZE OF EQUIPMENT.** *Rooms having a volume equal to at least 12 times the total volume of a furnace or air-conditioning appliance and at least 16 times the total volume of a boiler. Total volume of the appliance is determined from exterior dimensions and is to include fan compartments and burner vestibules, when used. When the actual ceiling height of a room is greater than 8 feet (2438 mm), the volume of the room is figured on the basis of a ceiling height of 8 feet (2438 mm).*

**SAFETY SHUTOFF DEVICE.** *See “Flame safeguard.”*

**SERVICE PIPING.** *All fuel gas piping, valves, and fittings upstream of the point of delivery.*

**SHAFT.** *An enclosed space extending through one or more stories of a building, connecting vertical openings in successive floors, or floors and the roof.*

**SPECIFIC GRAVITY.** *As applied to gas, specific gravity is the ratio of the weight of a given volume to that of the same volume of air, both measured under the same condition.*

**STATIONARY FUEL CELL POWER PLANT.** *A self-contained package or factory-matched packages which constitute an automatically operated assembly of integrated systems for generating electrical energy and recoverable thermal energy that is permanently connected and fixed in place.*

**THERMOSTAT.**

**Electric switch type.** *A device that senses changes in temperature and controls electrically, by means of separate components, the flow of gas to the burner(s) to maintain selected temperatures.*

**Integral gas valve type.** *An automatic device, actuated by temperature changes, designed to control the gas supply to the burner(s) in order to maintain temperatures between predetermined limits, and in which the thermal actuating element is an integral part of the device.*

1. *Graduating thermostat. A thermostat in which the motion of the valve is approximately in direct proportion to the effective motion of the thermal element induced by temperature change.*
2. *Snap-acting thermostat. A thermostat in which the thermostatic valve travels instantly from the closed to the open position, and vice versa.*

**TRANSITION FITTINGS, PLASTIC TO STEEL.** *An adapter for joining plastic pipe to steel pipe. The purpose of this fitting is to provide a permanent, pressure-tight connection between two materials which cannot be joined directly one to another.*

**UNIT HEATER.**

**High-static pressure type.** *A self-contained, automatically controlled, vented appliance having integral*

means for circulation of air against 0.2 inch (15mm H<sub>2</sub>O) or greater static pressure. Such appliance is equipped with provisions for attaching an outlet air duct and, where the appliance is for indoor installation remote from the space to be heated, is also equipped with provisions for attaching an inlet air duct.

**Low-static pressure type.** A self-contained, automatically controlled, vented appliance, intended for installation in the space to be heated without the use of ducts, having integral means for circulation of air. Such units are allowed to be equipped with louvers or face extensions made in accordance with the manufacturer's specifications.

**UNLISTED BOILER.** A boiler not listed by a nationally recognized testing agency.

**UNVENTED ROOM HEATER.** An unvented heating appliance designed for stationary installation and utilized to provide comfort heating. Such appliance provides radiant heat or convection heat by gravity or fan circulation directly from the heater and does not utilize ducts.

**VALVE.** A device used in piping to control the gas supply to any section of a system of piping or to an appliance.

**Automatic.** An automatic or semiautomatic device consisting essentially of a valve and operator that control the gas supply to the burner(s) during operation of an appliance. The operator shall be actuated by application of gas pressure on a flexible diaphragm, by electrical means, by mechanical means, or by other approved means.

**Automatic gas shutoff.** A valve used in conjunction with an automatic gas shutoff device to shut off the gas supply to a water-heating system. It shall be constructed integrally with the gas shutoff device or shall be a separate assembly.

**Equipment shutoff.** A valve located in the piping system, used to isolate individual equipment for purposes such as service or replacement.

**Individual main burner.** A valve that controls the gas supply to an individual main burner.

**Main burner control.** A valve that controls the gas supply to the main burner manifold.

**Manual main gas-control.** A manually operated valve in the gas line for the purpose of completely

*turning on or shutting off the gas supply to the appliance, except to pilot or pilots that are provided with independent shutoff.*

**Manual reset.** *An automatic shutoff valve installed in the gas supply piping and set to shut off when unsafe conditions occur. The device remains closed until manually reopened.*

**Service shutoff.** *A valve, installed by the serving gas supplier between the service meter or source of supply and the customer piping system, to shut off the entire piping system.*

**VENT.** *A pipe or other conduit composed of factory-made components, containing a passageway for conveying combustion products and air to the atmosphere, listed and labeled for use with a specific type or class of appliance.*

**Special gas vent.** *A vent listed and labeled for use with listed Category II, III and IV appliances.*

**Type B vent.** *A vent listed and labeled for use with appliances with draft hoods and other Category I appliances that are listed for use with Type B vents.*

**Type BW vent.** *A vent listed and labeled for use with wall furnaces.*

**Type L vent.** *A vent listed and labeled for use with appliances that are listed for use with Type L or Type B vents.*

**VENT CONNECTOR.** *(See “Connector”).*

**VENT GASES.** *Products of combustion from appliances plus excess air plus dilution air in the vent connector, gas vent or chimney above the draft hood or draft regulator.*

**VENTED APPLIANCE CATEGORIES.** *Appliances that are categorized for the purpose of vent selection are classified into the following four categories:*

**Category I.** *An appliance that operates with a nonpositive vent static pressure and with a vent gas temperature that avoids excessive condensate production in the vent.*

**Category II.** *An appliance that operates with a nonpositive vent static pressure and with a vent gas temperature that is capable of causing excessive condensate production in the vent.*

**Category III.** *An appliance that operates with a positive vent static pressure and with a vent gas temperature that avoids excessive condensate production in the vent.*

**Category IV.** *An appliance that operates with a positive vent static pressure and with a vent gas temperature that is capable of causing excessive condensate production in the vent.*

**VENTED ROOM HEATER.** *A vented self-contained, free-standing, nonrecessed appliance for furnishing warm air to the space in which it is installed, directly from the heater without duct connections.*

**VENTED WALL FURNACE.** *A self-contained vented appliance complete with grilles or equivalent, designed for incorporation in or permanent attachment to the structure of a building, mobile home or travel trailer, and furnishing heated air circulated by gravity or by a fan directly into the space to be heated through openings in the casing. This definition shall exclude floor furnaces, unit heaters and central furnaces as herein defined.*

**VENTING SYSTEM.** *A continuous open passageway from the flue collar or draft hood of an appliance to the outside atmosphere for the purpose of removing flue or vent gases. A venting system is usually composed of a vent or a chimney and vent connector, if used, assembled to form the open passageway.*

**Mechanical draft venting system.** *A venting system designed to remove flue or vent gases by mechanical means, that consists of an induced draft portion under nonpositive static pressure or a forced draft portion under positive static pressure.*

**Forced-draft venting system.** *A portion of a venting system using a fan or other mechanical means to cause the removal of flue or vent gases under positive static vent pressure.*

**Induced draft venting system.** *A portion of a venting system using a fan or other mechanical means to cause the removal of flue or vent gases under nonpositive static vent pressure.*

**Natural draft venting system.** *A venting system designed to remove flue or vent gases under nonpositive static vent pressure entirely by natural draft.*

**WALL HEATER, UNVENTED-TYPE.** *A room heater of the type designed for insertion in or attachment to a wall or partition. Such heater does not incorporate concealed venting arrangements in its construction*

*and discharges all products of combustion through the front into the room being heated.*

**WATER HEATER.** *Any heating appliance or equipment that heats potable water and supplies such water to the potable hot water distribution system.*

### **CHAPTER 3 GENERAL REGULATIONS**

#### **SECTION FGC 301 GENERAL**

**301.1 Scope.** *This chapter shall govern the approval and installation of all equipment and appliances that comprise parts of the installations regulated by this code in accordance with Section 101.2.*

**301.1.1 Other fuels.** *The requirements for combustion and dilution air for gas-fired appliances shall be governed by Section 304. The requirements for combustion and dilution air for appliances operating with fuels other than fuel gas shall be regulated by the New York City Mechanical Code.*

**301.2 Energy utilization.** *Heating, ventilating and air-conditioning systems of all structures shall be designed and installed for efficient utilization of energy in accordance with the Energy Conservation Construction Code of New York State.*

**301.3 Listed and labeled.** *Appliances regulated by this code shall be listed and labeled.*

**301.4 Labeling.** *Refer to Section 28-113.4 of the Administrative Code and Article 114 of Chapter 1 of Title 28 of the Administrative Code.*

**301.5 Label information.** *A permanent factory-applied nameplate(s) shall be affixed to appliances on which shall appear, in legible lettering, the manufacturer's name or trademark, the model number, serial number and, for listed appliances, the seal or mark of the testing agency. A label shall also include the hourly rating in British thermal units per hour (Btu/h) (W), the type of fuel approved for use with the appliance, and the minimum clearance requirements.*

**301.6 Plumbing connections.** *Potable water supply and building drainage system connections to appliances regulated by this code shall be in accordance with the New York City Plumbing Code.*

**301.7 Fuel types.** Appliances shall be designed for use with the type of fuel gas to which they will be connected and the altitude at which they are installed. Appliances that comprise parts of the installation shall not be converted for the usage of a different fuel, except where approved and converted in accordance with the manufacturer's instructions. The fuel gas input rate shall not be increased or decreased beyond the limit rating for the altitude at which the appliance is installed.

**301.7.1 Liquid petroleum gas.** Storage or use of LPG for a stationary LPG installation shall comply with the New York City Fire Code.

**301.8 Vibration isolation.** Where means for isolation of vibration of an appliance is installed, means for support and restraint of that appliance shall be provided as designed by a registered design professional.

**301.9 Repair.** Defective material or parts shall be replaced or repaired in such a manner so as to preserve the original approval or listing.

**301.10 Wind resistance.** Appliances and supports that are exposed to wind shall be designed and installed to resist the wind pressures determined in accordance with the New York City Building Code.

**301.11 Flood hazard.** For structures located in areas of special flood hazard, the appliance, equipment and system installations regulated by this code shall comply with Appendix G of the New York City Building Code.

**301.12 Seismic resistance.** When earthquake loads are applicable in accordance with the New York City Building Code, the supports shall be designed and installed for the seismic forces in accordance with that code.

**301.13 Ducts.** All ducts required for the installation of systems regulated by this code shall be designed and installed in accordance with the New York City Mechanical Code.

**301.14 Rodent-proofing.** Buildings or structures and the walls enclosing habitable or occupiable rooms and spaces in which persons live, sleep or work, or in which feed, food or foodstuffs are stored, prepared, processed, served or sold, shall be constructed to protect against rodents in accordance with the New York City Building Code.

**301.15 Prohibited location.** The appliances, equipment and systems regulated by this code shall not be located in an elevator shaft.

**301.16 Mechanical systems.** *Hydronic piping, ventilation and other mechanical systems not covered by this code shall be in accordance with the New York City Mechanical Code.*

**301.17 Electrical systems.** *Electrical wiring, controls and connections to equipment and appliances regulated by this code shall be in accordance with the New York City Electrical Code.*

**SECTION FGC 302**  
**STRUCTURAL SAFETY**

**302.1 Structural safety.** *The building shall not be weakened by the installation of any gas piping. In the process of installing or repairing any gas piping, the finished floors, walls, ceilings, tile work or any other part of the building or premises which is required to be changed or replaced shall be left in a safe structural condition in accordance with the requirements of the New York City Building Code.*

**302.2 Penetrations of floor/ceiling assemblies and fire-resistance-rated assemblies.** *Penetrations of floor/ceiling assemblies and assemblies required to have a fire-resistance rating shall be protected in accordance with the New York City Building Code.*

**302.3 Cutting, notching and boring in wood members.** *The cutting, notching and boring of wood members shall comply with Sections 302.3.1 through 302.3.4.*

**302.3.1 Engineered wood products.** *Cuts, notches and holes bored in trusses, laminated veneer lumber, glued-laminated members and I-joists are prohibited except where the effects of such alterations are specifically considered in the design of the member.*

**302.3.2 Joist notching and boring.** *Notching at the ends of joists shall not exceed one-fourth the joist depth. Holes bored in joists shall not be within 2 inches (51 mm) of the top and bottom of the joist and their diameter shall not exceed one-third the depth of the member. Notches in the top or bottom of the joist shall not exceed one-sixth the depth and shall not be located in the middle one-third of the span.*

**302.3.3 Stud cutting and notching.** *In exterior walls and bearing partitions, any wood stud is permitted to be cut or notched to a depth not exceeding 25 percent of its width. Cutting or notching of studs to a depth not greater than 40 percent of the width of the stud is permitted in nonload-bearing partitions supporting no loads other than the weight of the partition.*

**302.3.4 Bored holes.** A hole not greater in diameter than 40 percent of the stud depth is permitted to be bored in any wood stud. Bored holes not greater than 60 percent of the depth of the stud are permitted in nonload-bearing partitions or in any wall where each bored stud is doubled, provided not more than two such successive doubled studs are so bored. In no case shall the edge of the bored hole be nearer than  $\frac{5}{8}$  inch (15.9 mm) to the edge of the stud. Bored holes shall not be located at the same section of stud as a cut or notch.

**302.4 Alterations to trusses.** Truss members and components shall not be cut, drilled, notched, spliced or otherwise altered in any way without the written concurrence and approval of a registered design professional. Alterations resulting in the addition of loads to any member (e.g., HVAC equipment, water heaters) shall not be permitted without verification that the truss is capable of supporting such additional loading.

**302.5 Cutting, notching and boring holes in structural steel framing.** The cutting, notching and boring of holes in structural steel framing members shall be as prescribed by the registered design professional.

**302.6 Cutting, notching and boring holes in cold-formed steel framing.** Flanges and lips of load-bearing, cold-formed steel framing members shall not be cut or notched. Holes in webs of load-bearing, cold-formed steel framing members shall be permitted along the centerline of the web of the framing member and shall not exceed the dimensional limitations, penetration spacing or minimum hole edge distance as prescribed by a registered design professional. Cutting, notching and boring holes of steel floor/roof decking shall be as prescribed by a registered design professional.

**302.7 Cutting, notching and boring holes in nonstructural cold-formed steel wall framing.** Flanges and lips of nonstructural cold-formed steel wall studs shall be permitted along the centerline of the web of the framing member, shall not exceed  $1\frac{1}{2}$  inches (38 mm) in width or 4 inches (102 mm) in length, and the holes shall not be spaced less than 24 inches (610 mm) center to center from another hole or less than 10 inches (254 mm) from the bearing end.

## **SECTION FGC 303 APPLIANCE LOCATION**

**303.1 General.** Appliances shall be located as required by this section, specific requirements elsewhere in this code and the conditions of the equipment and appliance listing.

**303.2 Hazardous locations.** Appliances shall not be located in a hazardous location unless listed and

*approved for the specific installation.*

**303.3 Prohibited locations.** *Appliances shall not be located in, or obtain combustion air from, any of the following rooms or spaces:*

- 1. Sleeping rooms.*
- 2. Bathrooms.*
- 3. Toilet rooms.*
- 4. Storage closets.*
- 5. Surgical rooms.*

**Exceptions:**

- 1. In rooms other than those used for sleeping purposes, direct-vent appliances that obtain all combustion air directly from the outdoors.*
- 2. In rooms other than those used for sleeping purposes, vented room heaters, wall furnaces, vented decorative appliances and decorative appliances for installation in vented solid fuel-burning fireplaces, provided that the room meets the required volume criteria of Section 304.5.*
- 3. In rooms other than those used for sleeping purposes, appliances installed in an enclosure in which all combustion air is taken from the outdoors, in accordance with Section 304.6. Access to such enclosure shall be through a solid weather-stripped door, equipped with an approved self-closing device.*

**303.4 Protection from physical damage.** *Appliances shall not be installed in a location where subject to physical damage unless protected by approved barriers meeting the requirements of the New York City Fire Code.*

**303.5 Indoor locations.** *Furnaces and boilers installed in closets and alcoves shall be listed for such installation.*

**303.6 Outdoor locations.** *Equipment installed in outdoor locations shall be either listed for outdoor installation or provided with protection from outdoor environmental factors that influence the operability, durability and safety of the equipment.*

**303.7 Pit locations.** *Appliances installed in pits or excavations shall not come in direct contact with the surrounding soil. The sides of the pit or excavation shall be held back a minimum of 12 inches (305 mm) from the appliance. Where the depth exceeds 12 inches (305 mm) below adjoining grade, the walls of the pit or excavation shall be lined with concrete or masonry, such concrete or masonry shall extend a minimum of 4 inches (102 mm) above adjoining grade and shall have sufficient lateral load-bearing capacity to resist collapse. The appliance shall be protected from flooding in a manner approved by the commissioner.*

#### **SECTION FGC 304 COMBUSTION, VENTILATION AND DILUTION AIR**

**304.1 General.** *Air for combustion, ventilation and dilution of flue gases for gas utilization equipment installed in buildings shall be provided by application of one of the methods prescribed in Sections 304.5 through 304.9. Where the requirements of Section 304.5 are not met, outdoor air shall be introduced in accordance with one of the methods prescribed in Sections 304.6 through 304.9. Direct-vent appliances, gas appliances of other than natural draft design and vented gas appliances other than Category I shall be provided with combustion, ventilation and dilution air in accordance with the equipment manufacturer's instructions.*

***Exception:** Type 1 clothes dryers that are provided with makeup air in accordance with Section 614.5.*

**304.2 Appliance/equipment location.** *Equipment shall be located so as not to interfere with proper circulation of combustion, ventilation and dilution air.*

**304.3 Draft hood/regulator location.** *Where used, a draft hood or a barometric draft regulator shall be installed in the same room or enclosure as the equipment served so as to prevent any difference in pressure between the hood or regulator and the combustion air supply. A barometric damper may be installed in an adjacent room provided that a louver is installed in the adjacent room to the outside air. The net free area of the louver shall be equal to or greater than the area of the barometric damper.*

**304.4 Makeup air provisions.** *Makeup air requirements for the operation of exhaust fans, kitchen*

*ventilation systems, clothes dryers and fireplaces shall be considered in determining the adequacy of a space to provide combustion air requirements.*

**304.5 Indoor combustion air.** *The required volume of indoor air shall be determined in accordance with Section 304.5.1 or 304.5.2, except that where the air infiltration rate is known to be less than 0.40 air changes per hour (ACH), Section 304.5.2 shall be used. The total required volume shall be the sum of the required volume calculated for all appliances located within the space. Rooms communicating directly with the space in which the appliances are installed through openings not furnished with doors, and through combustion air openings sized and located in accordance with Section 304.5.3, are considered to be part of the required volume.*

**304.5.1 Standard method.** *The minimum required volume shall be 50 cubic feet per 1,000 Btu/h (4.8m<sup>3</sup>/kW) of the appliance input rating.*

**304.5.2 Known air-infiltration-rate method.** *Where the air infiltration rate of a structure is known, the minimum required volume shall be determined as follows:*

*For appliances other than fan-assisted, calculate volume using Equation 3-1.*

$$\text{Required Volume}_{\text{other}} \geq \frac{21 \text{ ft}^3}{ACH} \left( \frac{I_{\text{other}}}{1,000 \text{ Btu / hr}} \right)$$

**(Equation 3-1)**

For fan-assisted appliances, calculate volume using Equation 3-2.

$$\text{Required Volume}_{\text{fan}} \geq \frac{15 \text{ ft}^3}{ACH} \left( \frac{I_{\text{fan}}}{1,000 \text{ Btu / hr}} \right)$$

**(Equation 3-2)**

where:

$I_{\text{other}}$  = All appliances other than fan assisted (input in Btu/h).

$I_{\text{fan}}$  = Fan-assisted appliance (input in Btu/h).

$ACH$  = Air change per hour (percent of volume of space exchanged per hour, expressed as a decimal).

*For purposes of this calculation, an infiltration rate greater than 0.60 ACH shall not be used in Equations 3-1 and 3-2.*

**304.5.3 Indoor opening size and location.** *Openings used to connect indoor spaces shall be sized and located in accordance with Sections 304.5.3.1 and 304.5.3.2 (see Figure 304.5.3).*

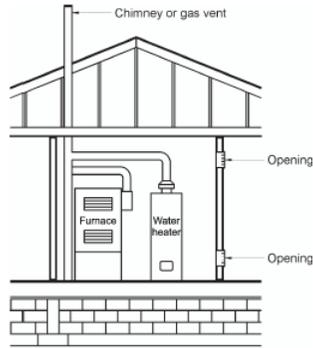

FIGURE 304.5.3  
ALL AIR FROM INSIDE THE BUILDING (see Section 304.5.3)

**304.5.3.1 Combining spaces on the same story.** Each opening shall have a minimum free area of 1 square inch per 1,000 Btu/h (2200 mm<sup>2</sup>/kW) of the total input rating of all gas utilization equipment in the space, but not less than 100 square inches (0.06 m<sup>2</sup>). One opening shall commence within 12 inches (305 mm) of the top and one opening shall commence within 12 inches (305 mm) of the bottom of the enclosure. The minimum dimension of air openings shall be not less than 3 inches (76 mm).

**304.5.3.2 Combining spaces in different stories.** The volumes of spaces in different stories shall be considered as communicating spaces where such spaces are connected by one or more openings in doors or floors having a total minimum free area of 2 square inches per 1,000 Btu/h (4402 mm<sup>2</sup>/kW) of total input rating of all gas utilization equipment.

**304.6 Outdoor combustion air.** Outdoor combustion air shall be provided through opening(s) to the outdoors in accordance with Section 304.6.1 or 304.6.2. The minimum dimension of air openings shall be not less than 3 inches (76 mm). The size of the openings connecting the room to the outdoor air supply shall also comply with any applicable rules of the New York City Department of Environmental Protection.

**304.6.1 Two-permanent-openings method.** Two permanent openings, one commencing within 12 inches (305 mm) of the top and one commencing within 12 inches (305 mm) of the bottom of the enclosure, shall be provided. The openings shall communicate directly, or by ducts, with the outdoors or spaces that freely communicate with the outdoors. Where directly communicating with the outdoors, or where communicating with the outdoors through vertical ducts, each opening shall have a minimum free area of 1 square inch per 4,000 Btu/h (550 mm<sup>2</sup>/kW) of total input rating of all equipment in the enclosure [see Figures 304.6.1(1) and 304.6.1(2)]

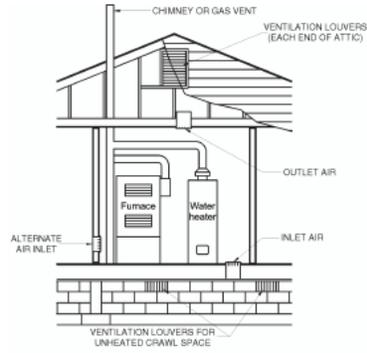

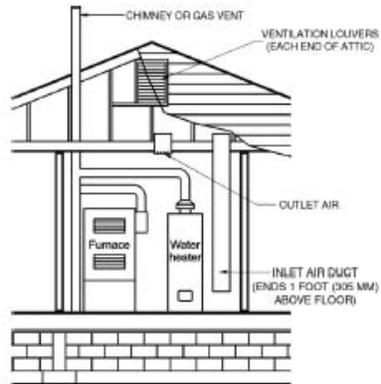

FIGURE 304.6.1(1)  
 ALL AIR FROM OUTDOORS—INLET AIR FROM VENTILATED  
 CRAWL SPACE AND OUTLET AIR TO VENTILATED ATTIC  
 (see Section 304.6.1)

For SI: 1 foot = 304.8 mm.

**FIGURE 304.6.1(2)**  
**ALL AIR FROM OUTDOORS THROUGH VENTILATED ATTIC**  
 (see Section 304.6.1)

*Where communicating with the outdoors through horizontal ducts, each opening shall have a minimum free area of not less than 1 square inch per 2,000 Btu/h (1100 mm<sup>2</sup>/kW) of total input rating of all equipment in the enclosure. [see Figure 304.6.1(3)].*

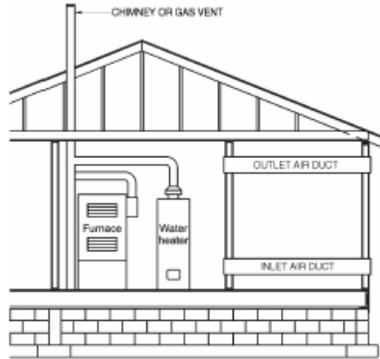

FIGURE 304.6.1(3)  
ALL AIR FROM OUTDOORS  
(see Section 304.6.1)

**304.6.2 One-permanent-opening method.** *One permanent opening, commencing within 12 inches (305 mm) of the top of the enclosure, shall be provided. The equipment shall have clearances of at least 1 inch (25 mm) from the sides and back and 6 inches (152 mm) from the front of the appliance. The opening shall directly communicate with the outdoors or through a vertical or horizontal duct to the outdoors or spaces that freely communicate with the outdoors [see Figure 304.6.2] and shall have a minimum free area of 1 square inch per 3,000 Btu/h (734 mm<sup>2</sup>/kW) of the total input rating of all equipment located in the enclosure, and not less than the sum of the areas of all vent connectors in the space.*

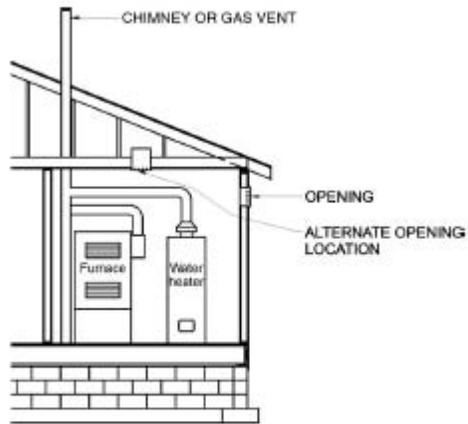

FIGURE 304.6.2  
SINGLE COMBUSTION AIR OPENING,  
ALL AIR FROM THE OUTDOORS  
(see Section 304.6.2)

**304.7 Combination indoor and outdoor combustion air.** *The use of a combination of indoor and outdoor combustion air shall be in accordance with Sections 304.7.1 through 304.7.3.*

**304.7.1 Indoor openings.** *Where used, openings connecting the interior spaces shall comply with Section 304.5.3.*

**304.7.2 Outdoor opening location.** *Outdoor opening(s) shall be located in accordance with Section 304.6.*

**304.7.3 Outdoor opening(s) size.** *The outdoor opening(s) size shall be calculated in accordance with the following:*

- 1. The ratio of interior spaces shall be the available volume of all communicating spaces divided by the required volume.*
- 2. The outdoor size reduction factor shall be one minus the ratio of interior spaces.*
- 3. The minimum size of outdoor opening(s) shall be the full size of outdoor opening(s) calculated in accordance with Section 304.6, multiplied by the reduction factor. The minimum dimension of air openings shall be not less than 3 inches (76 mm).*

**304.8 Reserved.**

**304.9 Mechanical combustion air supply.** *Where all combustion air is provided by a mechanical air supply system, the combustion air shall be supplied from the outdoors at a rate not less than 0.35 cubic feet per minute per 1,000 Btu/h (0.034 m<sup>3</sup>/min per kW) of total input rating of all appliances located within the space. Combustion air rates shall also comply with any applicable rules of the New York City Department of Environmental Protection.*

**304.9.1 Makeup air.** *Where exhaust fans are installed, makeup air shall be provided to replace the exhausted air.*

**304.9.2 Appliance interlock.** *Each of the appliances served shall be interlocked with the mechanical air supply system to prevent main burner operation when the mechanical air supply system is not in operation.*

**304.9.3 Combined combustion air and ventilation air system.** *Where combustion air is provided by the building's mechanical ventilation system, the system shall provide the specified combustion air rate in addition to the required ventilation air.*

**304.10 Louvers and grilles.** *The required size of openings for combustion, ventilation and dilution air shall be based on the net free area of each opening. Where the free area through a design of louver or grille is known, it shall be used in calculating the size opening required to provide the free area specified. Where the design and free area of louvers and grilles are not known, it shall be assumed that wood louvers will have 10-percent free area and metal louvers and grilles will have 60-percent free area. Screens shall have a mesh size not smaller than ¼ inch (6.4 mm). Nonmotorized louvers and grilles shall be fixed in the open position. Motorized louvers shall be interlocked with the equipment so that they are proven to be in the full open position prior to main burner ignition and during main burner operation. Means shall be provided to prevent the main burner from igniting if the louvers fail to open during burner start-up and to shut down the main burner if the louvers close during operation.*

**304.11 Combustion air ducts.** *Combustion air ducts shall comply with all of the following:*

- 1. Ducts shall be of galvanized steel complying with Chapter 6 of the New York City Mechanical Code or of equivalent corrosion-resistant material listed and labeled for this application.*
- 2. Ducts shall terminate in an unobstructed space allowing free movement of combustion air to the appliances.*
- 3. Ducts shall serve a single enclosure.*
- 4. Ducts shall not serve both upper and lower combustion air openings where both such openings are used. The separation between ducts serving upper and lower combustion air openings shall be maintained to the source of combustion air.*
- 5. Ducts shall not be screened where terminating in an attic space.*
- 6. Horizontal upper combustion air ducts shall not slope downward toward the source of combustion air.*
- 7. The remaining space surrounding a chimney liner, gas vent, special gas vent or plastic piping installed within a masonry, metal or factory-built chimney shall not be used to supply combustion*

air.

**Exception:** Direct-vent gas-fired appliances designed for installation in a solid fuel-burning fireplace where installed in accordance with the listing and the manufacturer's instructions.

8. Combustion air intake openings located on the exterior of a building shall have the lowest side of such openings located not less than 12 inches (305 mm) vertically from the adjoining grade level.

**304.12 Protection from fumes and gases.** Where corrosive or flammable process fumes or gases, other than products of combustion, are present, means for the disposal of such fumes or gases shall be provided. Such fumes or gases include carbon monoxide, hydrogen sulfide, ammonia, chlorine and halogenated hydrocarbons. In barbershops, beauty shops and other facilities where chemicals that generate corrosive or flammable products, such as aerosol sprays, are routinely used, nondirect-vent-type appliances shall be located in an equipment room separated or partitioned off from other areas with provisions for combustion air and dilution air from the outdoors. Direct-vent appliances shall be installed in accordance with the appliance manufacturer's installation instructions.

## **SECTION FGC 305 INSTALLATION**

**305.1 General.** Equipment and appliances shall be installed as required by the terms of their approval, in accordance with the conditions of listing, the manufacturer's instructions and this code. Manufacturers' installation instructions shall be available on the job site at the time of inspection. Where a code provision is less restrictive than the conditions of the listing of the equipment or appliance or the manufacturer's installation instructions, the conditions of the listing and the manufacturer's installation instructions shall apply.

**305.2 Hazardous area.** Equipment and appliances having an ignition source shall not be installed in Group H occupancies or control areas where open use, handling or dispensing of combustible, flammable or explosive materials occurs.

**305.3 Elevation of ignition source.** Equipment and appliances having an ignition source shall be elevated such that the source of ignition is not less than 18 inches (457 mm) above the floor in hazardous locations and public garages, private garages, repair garages, motor fuel-dispensing facilities and parking garages. For the purpose of this section, rooms or spaces that are not part of the living space of a dwelling unit and that communicate directly with a private garage through openings shall be considered to be part of the

private garage.

**Exception:** Elevation of the ignition source is not required for appliances that are listed as flammable vapor resistant and for installation without elevation.

**305.4 Public garages, motor fuel-dispensing facilities and repair garages.** Appliances located in public garages, motor fuel-dispensing facilities, or other areas frequented by motor vehicles shall be installed a minimum of 8 feet (2438 mm) above the floor. Where motor vehicles exceed 6 feet (1829 mm) in height and are capable of passing under an appliance, appliances shall be installed a minimum of 2 feet (610 mm) higher above the floor than the height of the tallest vehicle.

**Exceptions:**

1. The requirements of this section shall not apply where the appliances are protected from motor vehicle impact and installed in accordance with Section 305.3 and NFPA 88B.
2. Appliances installed in repair garages shall be separated from repair areas by walls or partitions, floors, or floor ceiling assemblies that are constructed so as to prohibit the transmission of vapors and having a fire-resistance rating of not less than one hour, and that have no openings in the wall separating the repair area within 8 feet (2438 mm) of the floor. Wall penetration shall be firestopped. Air for combustion purposes shall be obtained from the outdoors. The heating room shall not be used for the storage of combustible materials.
3. Heating appliances for vehicle repair areas where there is no dispensing or transferring of Class I or Class II flammable or combustible liquids or liquefied petroleum gas shall be installed in accordance with NFPA 30A

**305.5 Private garages.** Appliances located in private garages shall be installed with a minimum clearance of 6 feet (1829 mm) above the floor.

**Exception:** The requirements of this section shall not apply where the appliances are protected from motor vehicle impact and installed in accordance with Section 305.3.

**305.6 Construction and protection.** Boiler rooms and furnace rooms shall be protected as required by the New York City Building Code.

**305.7 Clearances from grade.** Equipment and appliances installed at grade level shall be supported on a level concrete slab or other approved material extending above adjoining grade or shall be suspended a minimum of 6 inches (152 mm) above adjoining grade.

**305.8 Clearances to combustible construction.** Heat-producing equipment and appliances shall be installed to maintain the required clearances to combustible construction as specified in the listing and manufacturer's instructions. Such clearances shall be reduced only in accordance with Section 308. Clearances to combustibles shall include such considerations as door swing, drawer pull, overhead projections or shelving and window swing. Devices, such as door stops or limits and closers, shall not be used to provide the required clearances.

## **SECTION FGC 306 ACCESS AND SERVICE SPACE**

**306.1 Clearances for maintenance and replacement.** Clearances around appliances to elements of permanent construction, including other installed appliances, shall be sufficient to allow inspection, service, repair or replacement without removing such elements of permanent construction or disabling the function of a required fire-resistance-rated assembly.

**306.2 Appliances in rooms.** Rooms containing appliances requiring access shall be provided with a door and an unobstructed passageway measuring not less than 36 inches (914 mm) wide and 80 inches (2032 mm) high.

**Exception:** Within a dwelling unit, appliances installed in a compartment, alcove, basement or similar space shall be provided with access by an opening or door and an unobstructed passageway measuring not less than 24 inches (610 mm) wide and large enough to allow removal of the largest appliance in the space, provided that a level service space of not less than 30 inches (762 mm) deep and the height of the appliance, but not less than 30 inches (762 mm), is present at the front or service side of the appliance with the door open.

**306.3 Appliances in attics.** Attics containing appliances requiring access shall be provided with an opening and unobstructed passageway large enough to allow removal of the largest component of the appliance. The passageway shall not be less than 30 inches (762 mm) high and 22 inches (559 mm) wide and not more than 20 feet (6096 mm) in length when measured along the centerline of the passageway from the opening to the equipment. The passageway shall have continuous solid flooring not less than 24 inches

(610 mm) wide. A level service space not less than 30 inches (762 mm) deep and 30 inches (762 mm) wide shall be present at the front or service side of the equipment. The clear access opening dimensions shall be a minimum of 20 inches by 30 inches (508 mm by 762 mm), where such dimensions are large enough to allow removal of the largest component of the appliance.

**Exceptions:**

1. The passageway and level service space are not required where the appliance is capable of being serviced and removed through the required opening.
2. Where the passageway is not less than 6 feet (1829 mm) high for its entire length, the passageway shall be not greater than 50 feet (15 250 mm) in length.

**306.3.1 Electrical requirements.** A lighting fixture controlled by a switch located at the required passageway opening and a receptacle outlet shall be provided at or near the equipment location in accordance with the New York City Electrical Code.

**306.4 Appliances under floors.** Under-floor spaces containing appliances requiring access shall be provided with an access opening and unobstructed passageway large enough to remove the largest component of the appliance. The passageway shall not be less than 30 inches (762 mm) high and 22 inches (559 mm) wide, nor more than 20 feet (6096 mm) in length when measured along the centerline of the passageway from the opening to the equipment. A level service space not less than 30 inches (762 mm) deep and 30 inches (762 mm) wide shall be present at the front or service side of the appliance. If the depth of the passageway or the service space exceeds 12 inches (305 mm) below the adjoining grade, the walls of the passageway shall be lined with concrete or masonry extending 4 inches (102 mm) above the adjoining grade and having sufficient lateral-bearing capacity to resist collapse. The clear access opening dimensions shall be a minimum of 22 inches by 30 inches (559 mm by 762 mm), where such dimensions are large enough to allow removal of the largest component of the appliance.

**Exceptions:**

1. The passageway is not required where the level service space is present when the access is open and the appliance is capable of being serviced and removed through the required opening.
2. Where the passageway is not less than 6 feet high (1829 mm) for its entire length, the passageway shall not be limited in length.

**306.4.1 Electrical requirements.** *A lighting fixture controlled by a switch located at the required passageway opening and a receptacle outlet shall be provided at or near the equipment location in accordance with the New York City Electrical Code.*

**306.5 Appliances on roofs or elevated structures.** *Where appliances requiring access are installed on roofs or elevated structures at a height exceeding 16 feet (4877 mm), such access shall be provided by a permanent means of access designed by a registered design professional, the extent of which shall be from grade or floor level to the appliance's level service space. Such access shall not require climbing over obstructions greater than 30 inches high (762 mm) or walking on roofs having a slope greater than four units vertical in 12 units horizontal (33-percent slope).*

*Permanent ladders installed to provide the required access shall comply with the following minimum design criteria.*

- 1. The side railing shall extend above the parapet or roof edge not less than 30 inches (762 mm).*
- 2. Ladders shall have a rung spacing not to exceed 14 inches (356 mm) on center.*
- 3. Ladders shall have a toe spacing not less than 6 inches (152 mm) deep.*
- 4. There shall be a minimum of 18 inches (457 mm) between rails.*
- 5. Rungs shall have a minimum diameter of 0.75-inch (19 mm) and shall be capable of withstanding a 300-pound (136.1 kg) load.*
- 6. Ladders over 30 feet (9144 mm) in height shall be provided with offset sections and landings capable of withstanding a load of 100 pounds per square foot (488.2 kg/m<sup>2</sup>).*
- 7. Ladders shall be protected against corrosion by means designed by a registered design professional.*

*Catwalks installed to provide the required access shall be not less than 24 inches wide (610 mm) and shall have railings as required for service platforms.*

**Exception:** *This section shall not apply to Group R-3 occupancies.*

**306.5.1 Sloped roofs.** *Where appliances are installed on a roof having a slope of three units vertical in 12 units horizontal (25-percent slope) or greater and having an edge more than 30 inches (762 mm) above grade at such edge, a level platform shall be provided on each side of the appliance to which access is required by the manufacturer's installation instructions for service, repair or maintenance. The platform shall not be less than 30 inches (762 mm) in any dimension and shall be provided with guards in accordance with Section 306.6.*

**306.5.2 Electrical requirements.** *A receptacle outlet shall be provided at or near the equipment location in accordance with the New York City Electrical Code.*

**306.6 Guards.** *Guards shall be provided where appliances, fans or other components that require service are located within 10 feet (3048 mm) of a roof edge or open side of a walking surface and such edge or open side is located more than 30 inches (762 mm) above the floor, roof or grade below. The guard shall extend not less than 30 inches (762 mm) beyond each end of such appliances, fans or other components and the top of the guard shall be located not less than 42 inches (1067 mm) above the elevated surface adjacent to the guard. The guard shall be constructed so as to prevent the passage of a 21-inch-diameter (533 mm) sphere and shall comply with the loading requirements for guards specified in the New York City Building Code.*

## **SECTION FGC 307 CONDENSATE DISPOSAL**

**307.1 Fuel-burning appliances.** *Liquid combustion by-products of condensing appliances shall be collected and discharged to a dedicated plumbing fixture, or to a disposal area in accordance with the manufacturer's installation instructions. Condensate piping shall be of corrosion-resistant material and shall not be smaller than the drain connection on the appliance. Such piping shall maintain a minimum slope in the direction of discharge of not less than one-eighth unit vertical in 12 units horizontal (1-percent slope).*

**307.2 Drain pipe materials and sizes.** *Components of the condensate disposal system shall be cast iron, galvanized steel, copper, polyethylene, ABS, CPVC or PVC pipe or tubing. All components shall be selected for the pressure and temperature rating of the installation. Condensate waste and drain line size shall be not less than 3/4-inch internal diameter (19 mm) and shall not decrease in size from the drain connection to the place of condensate disposal. Where the drain pipes from more than one unit are manifolded together for condensate drainage, the pipe or tubing shall be sized by a registered design professional. All horizontal sections of drain piping shall be installed in uniform alignment at a uniform*

*slope.*

**307.3 Traps.** *Condensate drains shall be trapped as required by the equipment or appliance manufacturer.*

**307.4 Evaporators and cooling coils.** *Drainage of condensate from evaporators and cooling coils shall be performed in accordance with the New York City Mechanical Code.*

**307.5 Exceptions.** *Section 307.5 applies to permanently installed equipment. Window units and through-the-wall air-conditioning units are exempt.*

### **SECTION FGC 308 CLEARANCE REDUCTION**

**308.1 Scope.** *This section shall govern the reduction in required clearances to combustible materials and combustible assemblies for chimneys, vents, appliances, devices and equipment. Clearance requirements for air-conditioning equipment and central heating boilers and furnaces shall comply with Sections 308.3 and 308.4.*

**308.2 Reduction table.** *The allowable clearance reduction shall be based on one of the methods specified in Table 308.2 or shall utilize an assembly listed for such application. Where required clearances are not listed in Table 308.2, the reduced clearances shall be determined by linear interpolation between the distances listed in the table. Reduced clearances shall not be derived by extrapolation below the range of the table. The reduction of the required clearances to combustibles for listed and labeled appliances and equipment shall be in accordance with the requirements of this section except that such clearances shall not be reduced where reduction is specifically prohibited by the terms of the appliance or equipment listing [see Figures 308.2(1) through 308.2(3)]*

**TABLE 308.2<sup>a-k</sup>**

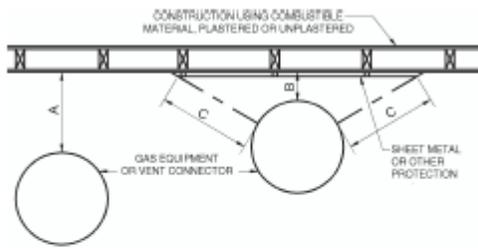

**REDUCTION OF CLEARANCES WITH SPECIFIED FORMS OF PROTECTION**

<b>TYPE OF PROTECTION APPLIED TO AND COVERING ALL SURFACES OF COMBUSTIBLE MATERIAL WITHIN THE DISTANCE SPECIFIED AS THE REQUIRED CLEARANCE WITH NO PROTECTION</b>	<b>WHERE THE REQUIRED CLEARANCE WITH NO PROTECTION</b>									
	36		18		12		9		6	
	<i>Allowable clearances with specified protection (inches)</i>									
	<i>Use Column 1 for clearances for clearances above appliance or horizontal connector. Use Column 2 for clearances from</i>									
	Above Col. 1	Sides and rear Col. 2	Above Col. 1	Sides and rear Col. 2	Above Col. 1	Sides and rear Col. 2	Above Col. 1	Sides and rear Col. 2	Above Col. 1	Sides and rear Col.
1. 3½-inch-thick masonry wall without ventilated	—	24	—	12	—	9	—	6	—	5
2. ½-inch insulation board over 1-inch glass fiber or	24	18	12	9	9	6	6	5	4	3
3. 0.0296 inch (No. 22 gauge) galvanized sheet metal over 1-inch glass fiber or mineral wool batts reinforced	18	12	9	6	6	4	5	3	3	3
4. 3½-inch-thick masonry wall with ventilated airspace	—	12	—	6	—	6	—	6	—	6
5. ½ inch-thick insulation board with ventilated airspace	18	12	9	6	6	4	5	3	3	3
6. 0.024 sheet metal with ventilated airspace over 0.024 sheet metal with ventilated airspace	18	12	9	6	6	4	5	3	3	3
7. 1-inch glass fiber or mineral wool batts sandwiched between two sheets 0.024 sheet metal with ventilated	18	12	9	6	6	4	5	3	3	3

For SI: 1 inch = 25.4 mm, °C = [(°F - 32)/1.8], 1 pound per cubic foot = 16.02 kg/m<sup>3</sup>, 1 Btu per inch per square foot per hour per °F = 0.144 W/m<sup>2</sup> · K.

- a. Reduction of clearances from combustible materials shall not interfere with combustion air, draft hood clearance and relief, and accessibility of servicing.
- b. All clearances shall be measured from the outer surface of the combustible material to the nearest point on the surface of the appliance, disregarding any intervening protection applied to the combustible material.
- c. Spacers and ties shall be of noncombustible material. No spacer or tie shall be used directly opposite an appliance or connector.
- d. For all clearance reduction systems using a ventilated airspace, adequate provision for air circulation shall be provided as described [see Figures 308.2(2) and 308.2(3)]
- e. There shall be at least 1 inch between clearance reduction systems and combustible walls and ceilings for reduction systems using ventilated airspace.

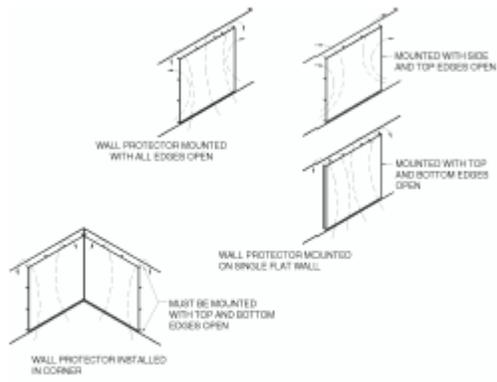

- f. Where a wall protector is mounted on a single flat wall away from corners, it shall have a minimum 1-inch air gap. To provide air circulation, the bottom and top edges, or only the side and top edges, or all edges shall be left open.*
- g. Mineral wool batts (blanket or board) shall have a minimum density of 8 pounds per cubic foot and a minimum melting point of 1500°F.*
- h. Insulation material used as part of a clearance reduction system shall have a thermal conductivity of 1.0 Btu per inch per square foot per hour per °F or less.*
- i. There shall be at least 1 inch between the appliance and the protector. In no case shall the clearance between the appliance and the combustible surface be reduced below that allowed in this table.*
- j. All clearances and thicknesses are minimum; larger clearances and thicknesses are acceptable.*

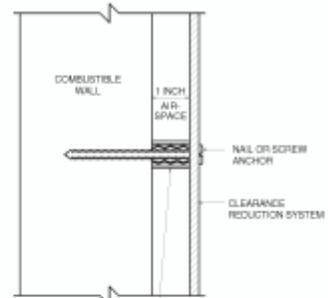

"A" equals the reduced clearance with no protection.

"B" equals the reduced clearance permitted in accordance with Table 308.2. The protection applied to the construction using combustible material shall extend far enough in each direction to make "C" equal to "A."

**FIGURE 308.2(1)**  
**EXTENT OF PROTECTION NECESSARY TO**  
**REDUCE CLEARANCES FROM GAS EQUIPMENT OR**  
**VENT CONNECTIONS**

For SI: 1 inch = 25.4 mm.

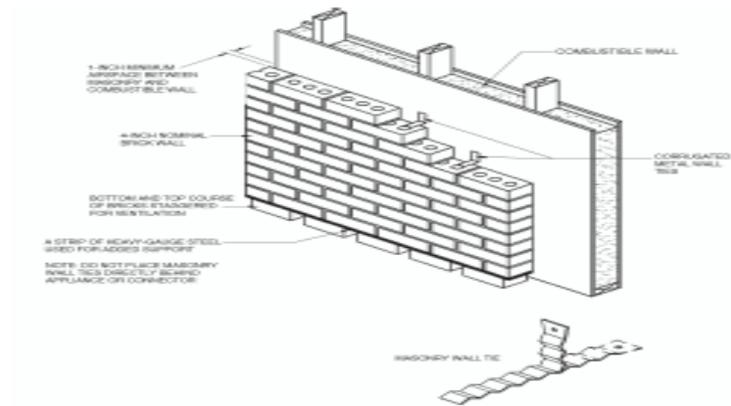

1-INCH NONCOMBUSTIBLE SPACER SUCH AS STACKED WASHERS, SMALL-DIAMETER PIPE, TUBING OR ELECTRICAL CONDUIT.

MASONRY WALLS CAN BE ATTACHED TO COMBUSTIBLE WALLS USING WALL TIES.

DO NOT USE SPACERS DIRECTLY BEHIND APPLIANCE OR CONNECTOR.

FIGURE 908.2(2)  
WALL PROTECTOR CLEARANCE REDUCTION SYSTEM

For SI: 1 inch = 25.4 mm.

FIGURE 308.2(3)  
MASONRY CLEARANCE REDUCTION SYSTEM

**308.3 Clearances for indoor air-conditioning equipment.** Clearance requirements for indoor air-conditioning equipment shall comply with Sections 308.3.1 through 308.3.5.

**308.3.1 Equipment installed in rooms that are large in comparison with the size of the equipment.** Air-conditioning equipment installed in rooms that are large in comparison with the size of the equipment shall be installed with clearances in accordance with the terms of their listing and the manufacturer's instructions.

**308.3.2 Equipment installed in rooms that are not large in comparison with the size of the equipment.** Air-conditioning equipment installed in rooms that are not large in comparison with the size of the equipment, such as alcoves and closets, shall be listed for such installations and installed in accordance with the manufacturer's instructions. Listed clearances shall not be reduced by the protection methods described in Table 308.2, regardless of whether the enclosure is of combustible or noncombustible material.

**308.3.3 Clearance reduction.** Air-conditioning equipment installed in rooms that are large in comparison with the size of the equipment shall be permitted to be installed with reduced clearances to combustible material provided the combustible material or equipment is protected as described in Table 308.2.

**308.3.4 Plenum clearances.** Where the furnace plenum is adjacent to plaster on metal lath or noncombustible material attached to combustible material, the clearance shall be measured to the surface of the plaster or other noncombustible finish where the clearance specified is 2 inches (51 mm) or less.

**308.3.5 Clearance from supply ducts.** Air-conditioning equipment shall have the clearance from supply ducts within 3 feet (914 mm) of the furnace plenum be not less than that specified from the furnace plenum. No clearance is necessary beyond this distance.

**308.4 Central-heating boilers and furnaces.** Clearance requirements for central-heating boilers and furnaces shall comply with Sections 308.4.1 through 308.4.6. The clearance to this equipment shall not interfere with combustion air, draft hood clearance and relief, and accessibility for servicing.

**308.4.1 Equipment installed in rooms that are large in comparison with the size of the equipment.** Central-heating furnaces and low-pressure boilers installed in rooms large in comparison with the size

*of the equipment shall be installed with clearances in accordance with the terms of their listing and the manufacturer's instructions.*

**308.4.2 Equipment installed in rooms that are not large in comparison with the size of the equipment.** *Central-heating furnaces and low-pressure boilers installed in rooms that are not large in comparison with the size of the equipment, such as alcoves and closets, shall be listed for such installations. Listed clearances shall not be reduced by the protection methods described in Table 308.2 and illustrated in Figures 308.2(1) through 308.2(3), regardless of whether the enclosure is of combustible or noncombustible material.*

**308.4.3 Clearance reduction.** *Central-heating furnaces and low-pressure boilers installed in rooms that are large in comparison with the size of the equipment shall be permitted to be installed with reduced clearances to combustible material provided the combustible material or equipment is protected as described in Table 308.2.*

**308.4.4 Clearance for servicing equipment.** *Front clearance shall be sufficient for servicing the burner and the furnace or boiler.*

**308.4.5 Plenum clearances.** *Where the furnace plenum is adjacent to plaster on metal lath or noncombustible material attached to combustible material, the clearance shall be measured to the surface of the plaster or other noncombustible finish where the clearance specified is 2 inches (51 mm) or less.*

**308.4.6 Clearance from supply ducts.** *Central-heating furnaces shall have the clearance from supply ducts within 3 feet (914 mm) of the furnace plenum be not less than that specified from the furnace plenum. No clearance is necessary beyond this distance.*

## **SECTION FGC 309**

### **ELECTRICAL**

**309.1 Grounding.** *Gas piping shall not be used as a grounding electrode.*

**309.2 Connections.** *Electrical connections between equipment and the building wiring, including the grounding of the equipment, shall conform to the New York City Electrical Code.*

## **SECTION FGC 310**

## **ELECTRICAL BONDING**

**310.1 Gas pipe bonding.** *Each above-ground portion of a gas piping system that is likely to become energized shall be electrically continuous and bonded to an effective ground-fault current path. Gas piping shall be considered to be bonded where it is connected to gas utilization equipment that is connected to the equipment grounding conductor of the circuit supplying that equipment.*

## **CHAPTER 4 GAS PIPING INSTALLATIONS**

### **SECTION FGC 401 GENERAL**

**401.1 Scope.** *This chapter shall govern the design, installation, modification and maintenance of fuel gas piping systems. The scope covered by this chapter includes piping systems from the point of delivery to the connections with the equipment and includes the design, materials, components, fabrication, assembly, installation, testing, inspection, operation and maintenance of such piping systems.*

**401.1.1 Meters and service piping.** *Service piping includes the fuel gas piping up to the point of delivery. Meters and service piping shall comply with the requirements of Appendix E and Appendix F of this code. In addition, service piping located within buildings shall be designed and installed in accordance with the structural integrity, firestopping, and fire protection provisions of the New York City Building Code.*

**401.1.2 Plastic piping.** *Underground plastic piping installed outside of buildings, shall be in compliance with Appendix E and Appendix F of this code.*

**401.2 Reserved.**

**401.3 Modifications to existing systems.** *In modifying or adding to existing piping systems, sizes shall be maintained in accordance with this chapter.*

**401.4 Additional appliances.** *Where an additional appliance is to be served, the existing piping shall be checked to determine if it has adequate capacity for all appliances served. If inadequate, the existing system shall be enlarged as required or separate piping of adequate capacity shall be provided.*

**401.5 Identification.** For other than black steel pipe, exposed piping shall be identified by a yellow label marked "Gas" in black letters. The marking shall be spaced at intervals not exceeding 5 feet (1524 mm). The marking shall not be required on pipe located in the same room as the equipment served.

**401.6 Interconnections.** Where two or more meters are installed on the same premises but supply separate consumers, the piping systems shall not be interconnected on the outlet side of the meters.

**401.7 Piping meter identification.** Piping from multiple meter installations shall be marked with an approved permanent identification by the installer so that the piping system supplied by each meter is readily identifiable.

**401.8 Minimum sizes.** All pipe utilized for the installation, extension and alteration of any piping system shall be sized to supply the full number of outlets for the intended purpose and shall be sized in accordance with Section 402.

## **SECTION FGC 402**

### **PIPE SIZING**

**402.1 General considerations.** Piping systems shall be of such size and so installed as to provide a supply of gas sufficient to meet the maximum demand without undue loss of pressure between the point of delivery and the gas utilization equipment.

**402.2 Maximum gas demand.** The volume of gas to be provided, in cubic feet per hour, shall be determined directly from the manufacturer's input ratings of the gas utilization equipment served. Where an input rating is not indicated, the gas supplier, equipment manufacturer or a qualified agency shall be contacted, or the rating from Table 402.2 shall be used for estimating the volume of gas to be supplied. The total connected hourly load shall be used as the basis for pipe sizing, assuming that all equipment could be operating at full capacity simultaneously. Where a diversity of load can be established, pipe sizing shall be permitted to be based on such loads.

**TABLE 402.2  
APPROXIMATE GAS INPUT FOR TYPICAL APPLIANCES**

APPLIANCE	INPUT BTU/H (Approx.)
<b>Space Heating Units</b>	
Hydronic boiler	
Single family	100,000
Multifamily, per unit	60,000
Warm-air furnace	
Single family	100,000
Multifamily, per unit	60,000
<b>Space and Water Heating Units</b>	
Hydronic boiler	
Single family	120,000
Multifamily, per unit	75,000
<b>Water Heating Appliances</b>	
Water heater, automatic instantaneous	35,000
Capacity at 2 gal/minute	50,000
Capacity at 4 gal/minute	
Capacity at 6 gal/minute	142,800
Water heater, automatic storage, 30- to 40-gal. tank	285,000
Water heater, automatic storage, 50-gal. tank	428,400
Water heater, domestic, circulating or side-arm	35,000
<b>Cooking Appliances</b>	
Built-in oven or broiler unit, domestic	65,000
Built-in top unit, domestic	25,000
Range, free-standing, domestic	40,000
<b>Other Appliances</b>	
Barbecue	3,000
Clothes dryer, Type 1 (domestic)	35,000
Gas fireplace, direct vent	40,000
Gas light	80,000
Gas log	40,000
Refrigerator	2,500

For SI: 1 British thermal unit per hour = 0.293 W, 1 gallon = 3.785 L,  
1 gallon per minute = 3.785 L/m.

**402.3 Sizing.** Gas piping shall be sized in accordance with one of the following:

1. Pipe sizing tables or sizing equations in accordance with Section 402.4.
2. The sizing tables included in a listed piping system's manufacturer's installation instructions.
3. Other approved engineering methods.
4. Individual outlets to gas ranges shall not be less than .75 inches (19 mm) NPS.

**402.4 Sizing tables and equations.** Where Tables 402.4(1) through 402.4(6) are used to size piping or tubing, the pipe length shall be determined in accordance with Section 402.4.1, 402.4.2 or 402.4.3.

Where Equations 4-1 and 4-2 are used to size piping or tubing, the pipe or tubing shall have smooth inside walls and the pipe length shall be determined in accordance with Section 402.4.1, 402.4.2 or 402.4.3.

1. Low-pressure gas equation [Less than 1.5 pounds per square inch (psi) (10.3 kPa)]:

$$D = \frac{Q^{0.381}}{19.17 \left( \frac{\Delta H}{C_r \times L} \right)^{0.206}} \quad \text{(Equation 4-1)}$$

2. High-pressure gas equation [1.5 psi (10.3 kPa) and above]:

$$D = \frac{Q^{0.381}}{18.93 \left[ \frac{(P_1^2 - P_2^2) \times Y}{C_r \times L} \right]^{0.206}} \quad \text{(Equation 4-2)}$$

where:

- $D$  = Inside diameter of pipe, inches (mm).  
 $Q$  = Input rate appliance(s), cubic feet per hour at 60°F (16°C) and 30-inch mercury column  
 $P_1$  = Upstream pressure, psia ( $P_1 + 14.7$ )  
 $P_2$  = Downstream pressure, psia ( $P_2 + 14.7$ )  
 $L$  = Equivalent length of pipe, feet  
 $\Delta H$  = Pressure drop, inch water column (27.7 inch water column = 1 psi)

For SI: 1 cubic foot = 0.028 m<sup>3</sup>, 1 foot = 305 mm, 1-inch water column = 0.249 kPa, 1 pound per square inch = 6.895 kPa, 1 British thermal unit per hour = 0.293 W.

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm, 1 cubic foot per hour = 0.0283 m<sup>3</sup>/h, 1 pound per square inch = 6.895 kPa, 1-inch water column = 0.2488 kPa.

**402.4.1 Longest length method.** *The pipe size of each section of gas piping shall be determined using the longest length of piping from the point of delivery to the most remote outlet and the load of the section.*

**402.4.2 Branch length method.** *Pipe shall be sized as follows:*

- 1. Pipe size of each section of the longest pipe run from the point of delivery to the most remote outlet shall be determined using the longest run of piping and the load of the section.*
- 2. The pipe size of each section of branch piping not previously sized shall be determined using the length of piping from the point of delivery to the most remote outlet in each branch and the load of the section.*

**402.4.3 Hybrid pressure.** *The pipe size for each section of higher pressure gas piping shall be determined using the longest length of piping from the point of delivery to the most remote line pressure regulator. The pipe size from the line pressure regulator to each outlet shall be determined using the length of piping from the regulator to the most remote outlet served by the regulator.*

**402.5 Allowable pressure drop.** *The design pressure loss in any piping system under maximum probable flow conditions, from the point of delivery to the inlet connection of the equipment, shall be such that the supply pressure at the equipment is greater than the minimum pressure required for proper equipment operation.*

**402.6 Gas distribution pressures.** *No gas distribution piping containing gas at a pressure in excess of ½ psig (3.5 kPa gauge) shall be run within a building, except that pressure not exceeding 3 psig (20 kPa gauge) is permitted for the following uses: (a) commercial (b) industrial (c) other large volume use in which fuel requirements for boiler room equipment exceed 4,000 cubic feet per hour (113.2 m<sup>3</sup>/h) and such large volume use is supplied through separate gas distribution piping to the boiler room. Gas pressure not exceeding 15 psig (100 kPa gauge) is permitted for boiler room equipment in excess of 100,000 cubic feet per hour (2830 m<sup>3</sup>/h) provided the gas distribution piping is installed as provided for in Section 404. The use of pressure in excess of 15 psig (100 kPa gauge) shall be permitted for distribution piping provided all of the requirements of Section 406 are met.*

**SECTION FGC 403  
PIPING MATERIALS**

**403.1 General.** *Materials used for piping systems shall be new and comply with the requirements of this chapter or shall be approved.*

**403.1.1 Pipe size and pressure limitations.**

1. *All requirements for installation of gas distribution piping with operating pressures at ½ psig (3.5 kPa gauge) or less and above ½ psig (3.5 kPa gauge) shall be in accordance with Chapter 4 of this code.*
2. *Gas distribution piping operating at a pressure of over ½ psig (3.5 kPa gauge) to 3 psig (20 kPa gauge) and size 4 inches (102 mm) or larger shall be welded.*
3. *All gas distribution piping operating at a pressure above 3 psig (20 kPa gauge) shall be welded.*
4. *All welding of gas distribution piping shall be subject to controlled inspection as set forth in Section 406.*
5. *All piping 4 inches and greater operating at pressure exceeding 3 psig (20 kPa gauge) must be butt welded, subject to special inspection and radiographed.*
6. *Threaded piping may be used up to 4 inches at pressure no greater than ½ psig (3.5 kPa gauge).*

**403.2 Used materials.** *Used pipe, fittings, valves and other materials shall not be re-used.*

**403.3 Other materials.** *Material not covered by the standards specifications listed herein shall be investigated and tested to determine that it is safe and suitable for the proposed service, and, in addition, shall be recommended for that service by the manufacturer subject to approval by the commissioner.*

**403.4 Metallic pipe.** *Metallic pipe shall comply with Sections 403.4.1 through 403.4.4.*

**403.4.1 Cast iron.** *Cast-iron pipe shall not be used.*

**403.4.2 Steel.** *Carbon steel and wrought-iron pipe shall be at least of standard weight and shall comply with one of the following standards:*

1. ASME B 36.10, 10M

2. ASTM A 53; or

3. ASTM A 106.

**403.4.3 Copper and brass.** *Copper and brass pipe shall not be used.*

**403.4.4 Aluminum.** *Aluminum-alloy pipe shall not be used.*

**403.5 Metallic tubing.** *Metallic tubing shall not be used.*

**403.6 Plastic pipe, tubing and fittings.** *Plastic pipe, tubing and fittings shall not be used except as provided for in Sections 401.1.1 and 401.1.2.*

**403.7 Workmanship and defects.** *Pipe and fittings shall be clear and free from cutting burrs and defects in structure or threading, and shall be thoroughly brushed, and chip and scale blown. Defects in pipe and fittings shall not be repaired. Defective pipe and fittings shall be replaced (see Section 406.1.2).*

**403.8 Protective coating.** *Where in contact with material or atmosphere exerting a corrosive action, metallic piping and fittings coated with a corrosion-resistant material shall be used. External coatings or linings used on piping or components shall not be considered as adding strength.*

**403.9 Metallic pipe threads.** *Metallic pipe and fitting threads shall be taper pipe threads and shall comply with ASME B1.20.1.*

**403.9.1 Damaged threads.** *Pipe with threads that are stripped, chipped, corroded or otherwise damaged shall not be used. Where a weld opens during the operation of cutting or threading, that portion of the pipe shall not be used.*

**403.9.2 Number of threads.** *Field threading of metallic pipe shall be in accordance with Table 403.9.2.*

TABLE 403.9.2  
SPECIFICATIONS FOR THREADING METALLIC PIPE

IRON PIPE SIZE (inches)	APPROXIMATE LENGTH OF THREADED PORTION (inches)	APPROXIMATE NUMBER OF THREADS TO BE CUT
$\frac{1}{2}$	$\frac{3}{4}$	10
$\frac{3}{4}$	$\frac{3}{4}$	10
1	$\frac{7}{8}$	10
$1\frac{1}{4}$	1	11
$1\frac{1}{2}$	1	11
2	1	11
$2\frac{1}{2}$	$1\frac{1}{2}$	12
3	$1\frac{1}{2}$	12
4	$1\frac{5}{8}$	13

For SI: 1 inch = 25.4 mm.

**403.9.3 Thread compounds.** Thread (joint) compounds (pipe dope) shall be resistant to the action of liquefied petroleum gas or to any other chemical constituents of the gases to be conducted through the piping. Use of cotton thread (lamp wick) is prohibited.

**403.10 Metallic piping joints and fittings.** The type of piping joint used shall be suitable for the pressure-temperature conditions and shall be selected giving consideration to joint tightness and mechanical strength under the service conditions. The joint shall be able to sustain the maximum end force caused by the internal pressure and any additional forces caused by temperature expansion or contraction, vibration, fatigue or the weight of the pipe and its contents.

**403.10.1 Pipe joints.** Pipe joints shall be threaded, flanged, or welded.

**403.10.2 Tubing joints.** Tubing joints shall not be used.

**403.10.3 Flared joints.** Flared joints shall not be used.

**403.10.4 Metallic fittings.** Metallic fittings, including valves, strainers and filters, shall comply with the following:

1. Threaded fittings in sizes larger than 4 inches (102 mm) shall not be used.
2. Fittings used with steel or wrought-iron pipe shall be steel or malleable iron.
3. Cast-iron fittings:
  - 3.1. Flanges shall be permitted.
  - 3.2. Bushings shall not be used.

**403.11 Reserved.**

**403.12 Flanges.** All flanges shall comply with ASME B16.1, ASME B16.20, AWWA C111/A21.11 or MSS SP-6. The pressure-temperature ratings shall equal or exceed that required by the application.

**403.12.1 Flange facings.** Standard facings shall be permitted for use under this code. Where 150-pound (1034 kPa) pressure-rated steel flanges are bolted to Class 125 cast-iron flanges, the raised

*face on the steel flange shall be removed.*

**403.13 Flange gaskets.** *Material for gaskets shall be capable of withstanding the design temperature and pressure of the piping system, and the chemical constituents of the gas being conducted, without change to its chemical and physical properties. The effects of fire exposure to the joint shall be considered in choosing material. Acceptable materials include metal or non-asbestos fiber and aluminum “O” rings and spiral wound metal gaskets. When a flanged joint is opened, the gasket shall be replaced. Full-face gaskets shall be used with all cast-iron flanges.*

#### **SECTION FGC 404 PIPING SYSTEM INSTALLATION**

**404.1 Prohibited locations.** *Piping shall not be installed in or through a circulating air duct, trash or clothes chute, chimney or gas vent, ventilating duct, dumbwaiter or elevator shaft. Piping, fixtures, or equipment shall be located so as not to interfere with the normal operation of windows or doors and other exit openings. The following installation limitations shall apply:*

- 1. Stair enclosures. Gas piping shall not be installed within a stair enclosure or required exit or exit way.*
- 2. Fire standpipe riser. Gas piping shall not be installed in any shaft containing standpipe risers.*
- 3. Fire pump. Gas piping or gas consumption devices or any other gas equipment shall not be installed within any space housing a fire pump.*
- 4. Fire rated construction. Gas piping shall not be installed within concealed spaces of fire-rated construction.*
- 5. Public corridor. Gas piping shall not be installed in public corridors providing access to required exits.*

**404.2 Piping in solid partitions and walls.** *Concealed piping shall not be located in solid partitions and solid walls, unless installed in a chase or casing.*

**404.3 Piping in concealed locations.** *Portions of a piping system installed in concealed locations shall not have unions, tubing fittings, bushings, compression couplings or swing joints made by combinations of*

*fittings.*

**404.4 Piping through foundation wall.** *Underground piping, where installed below grade through the outer foundation or basement wall of a building, shall be encased in a protective pipe sleeve. The annular space between the gas piping and the sleeve shall be sealed.*

**404.5 Branch take-off.** *Branches shall be taken off the riser with not less than a two-elbow swing.*

**404.6 Piping in solid floors.** *Piping in solid floors shall be laid in channels in the floor and covered in a manner that will allow access to the piping with a minimum amount of damage to the building. Where such piping is subject to exposure to excessive moisture or corrosive substances, the piping shall be protected in an approved manner. As an alternative to installation in channels, the piping shall be installed in a casing of Schedule 40 steel or wrought iron pipe with tightly sealed ends and joints. At least one end shall have a vented outlet piped to a safe location outdoors. The vent terminal shall be outdoors, minimum 18 inches (457 mm) above grade, not under an opening to building or overhang, and shall be installed so as to prevent the entrance of water and insects. Both ends of such casing shall extend not less than 2 inches (51 mm) beyond the point where the pipe emerges from the floor.*

**404.7 Above-ground outdoor piping.** *All piping installed outdoors shall be elevated not less than 3½ inches (152 mm) above ground and where installed across roof surfaces, shall be elevated not less than 3½ inches (152 mm) above the roof surface. Piping installed above ground, outdoors, and installed across the surface of roofs shall be securely supported to the structure and located where it will be protected from physical damage. Where passing through an outside wall, the piping shall also be protected against corrosion by coating or wrapping with an inert material. Where piping is encased in a protective pipe sleeve, the annular space between the piping and the sleeve shall be sealed. At least one end shall have a vented outlet piped to safe location outdoors. The vent terminal shall be outdoors, minimum 18 inches (457 mm) above grade, not under an opening to building or overhang, and shall be installed so as to prevent the entrance of water and insects.*

**404.8 Protection against corrosion.** *Metallic pipe exposed to corrosive action, such as soil condition or moisture, shall be protected in an approved manner. Zinc coatings (galvanizing) shall not be deemed adequate protection for gas piping underground. Ferrous metal exposed in exterior locations shall be protected from corrosion. Zinc coatings (galvanizing) shall be deemed adequate protection for gas piping exposed in exterior locations. Where dissimilar metals are joined underground, an insulating coupling or fitting shall be used. Piping shall not be laid in contact with cinders.*

**404.8.1 Prohibited use.** *Uncoated threaded or socket-welded joints shall not be used in piping in contact with soil or where internal or external crevice corrosion is known to occur.*

**404.8.2 Protective coatings and wrapping.** *Pipe protective coatings and wrappings shall be approved for the application and shall be factory applied.*

**Exception:** *Where installed in accordance with the manufacturer's installation instructions, field application of coatings and wrappings shall be permitted for pipe nipples, fittings and locations where the factory coating or wrapping has been damaged or necessarily removed at joints.*

**404.9 Minimum burial depth.** *Underground piping systems shall be installed a minimum depth of 24 inches (610 mm) below grade.*

**404.10 Trenches.** *The trench shall be graded so that the pipe has a firm, substantially continuous bearing on the bottom of the trench.*

**404.11 Piping underground beneath buildings.** *Piping installed underground beneath buildings is prohibited except where the piping is encased in a conduit of wrought iron or steel pipe designed to withstand the superimposed loads. Such conduit shall extend into an occupiable portion of the building and, at the point where the conduit terminates in the building, the space between the conduit and the gas piping shall be sealed to prevent the possible entrance of any gas leakage. The conduit shall be designed for the same pressure as the pipe. Such conduit shall extend not less than 4 inches (102 mm) outside the building, and shall be vented. The vent terminal shall be outdoors, minimum 18 inches (457 mm) above grade, not under an opening to building or overhang, and shall be installed so as to prevent the entrance of water and insects. The conduit shall be protected from corrosion in accordance with Section 404.8.*

**404.12 Outlet closures.** *Gas outlets that do not connect to appliances shall be capped gas tight.*

**Exception:** *Listed and labeled flush-mounted-type quick disconnect devices and listed and labeled gas convenience outlets shall be installed in accordance with the manufacturer's installation instructions.*

**404.13 Location of outlets.** *The unthreaded portion of piping outlets shall extend not less than 1 inch (25 mm) through finished ceilings and walls and where extending through floors or outdoor patios and slabs, shall not be less than 2 inches (51 mm) above them. The outlet fitting or piping shall be securely supported. Outlets shall not be placed behind doors. Outlets shall be located in the room or space where the appliance is installed.*

**Exception:** Listed and labeled flush-mounted-type quick disconnect devices and listed and labeled gas convenience outlets shall be installed in accordance with the manufacturer's installation instructions.

**404.14** Reserved.

**404.15 Prohibited devices.** A device shall not be placed inside the piping or fittings that will reduce the cross-sectional area or otherwise obstruct the free flow of gas.

**Exception:** Approved gas filters.

**404.16 Testing of piping.** Before any system of piping is put in service or concealed, it shall be tested to ensure that it is gas tight. Testing, inspection and purging of piping systems shall comply with Section 406.

## **SECTION FGC 405**

### **RESERVED**

## **SECTION FGC 406**

### **INSPECTION, TESTING AND PURGING**

**406.1 General.** Prior to acceptance and initial operation, all piping installations shall be inspected and pressure tested to determine that the materials, design, fabrication, and installation practices comply with the requirements of this code.

**406.1.1 Inspections.** Inspection shall consist of visual examination, during or after manufacture, fabrication, assembly, or pressure tests as appropriate. Supplementary types of nondestructive inspection techniques, such as magnetic-particle, radiographic, ultrasonic, etc., shall not be required unless specifically listed herein or in the engineering design.

**406.1.1.1 Welder's qualifications.** Welders installing gas piping within buildings at any pressure shall be qualified for all pipe sizes, wall thicknesses and all positions in accordance with ASME Boiler and Pressure Vessel Code, Section IX and requalified on an annual basis. The qualification testing shall be performed by an approved agency, and the inspector shall have a minimum radiography qualification of Level II in accordance with the ASNT, Document No. SNT-TC-1A, Supplement A. Copies of the certified welder qualification reports shall be maintained by the welder and shall be made available to the department upon request.

**406.1.1.2 Welding requirements.** All welded gas distribution and meter piping main and branch supplies to customer equipment operating in excess of 3 psig (20 kPa gauge) inside buildings shall be welded; and shall be subject to special inspection in accordance with Chapter 17 of the New York City Building Code.

Radiography shall be performed on all butt welds in gas meter and gas distribution piping operating at pressures exceeding 3 psig (20 kPa gauge) within buildings, in accordance with ASME Boiler and Pressure Vessel Code, Section IX.

**406.1.2 Repairs and additions.** In the event repairs or additions are made after the pressure test, the affected piping shall be tested.

**406.1.3 New branches.** Where new branches are installed from the point of delivery to new appliances, only the newly installed branches shall be required to be pressure tested. Connections between the new piping and the existing piping shall be tested with a noncorrosive leak-detecting fluid or other approved leak-detecting methods.

**406.1.4 Section testing.** A piping system shall be permitted to be tested as a complete unit or in sections. Under no circumstances shall a valve in a line be used as a bulkhead between gas in one section of the piping system and test medium in an adjacent section, unless two valves are installed in series with a valved “telltale” located between these valves. A valve shall not be subjected to the test pressure unless it can be determined that the valve, including the valve-closing mechanism, is designed to safely withstand the test pressure.

**406.1.5 Regulators and valve assemblies.** Regulator and valve assemblies fabricated independently of the piping system in which they are to be installed shall be permitted to be tested with inert gas or air at the time of fabrication.

**406.2 Test medium.** The test medium shall be air, nitrogen, carbon dioxide or an inert gas. Oxygen shall not be used. Fresh water may be used as the test medium only where the required test pressure exceeds 100 psig (689 kPa).

**406.3 Test preparation.** Pipe joints, including welds, shall be left exposed for examination during the test.

**Exception:** Covered or concealed pipe end joints that have been previously tested in accordance with

*this code.*

**406.3.1 Expansion joints.** *Expansion joints shall be provided with temporary restraints, if required, for the additional thrust load under test.*

**406.3.2 Equipment isolation.** *Equipment that is not to be included in the test shall be either disconnected from the piping or isolated by blanks, blind flanges, or caps. Flanged joints at which blinds are inserted to blank off other equipment during the test shall not be required to be tested.*

**406.3.3 Equipment disconnection.** *Where the piping system is connected to equipment or components designed for operating pressures of less than the test pressure, such equipment or equipment components shall be isolated from the piping system by disconnecting them and capping the outlet(s).*

**406.3.4 Valve isolation.** *Where the piping system is connected to equipment or components designed for operating pressures equal to or greater than the test pressure, such equipment shall be isolated from the piping system by closing the individual equipment shutoff valve(s).*

**406.3.5 Testing precautions.** *All testing of piping systems shall be done with due regard for the safety of employees and the public during the test. Bulkheads, anchorage, and bracing suitably designed to resist test pressures shall be installed if necessary. Prior to testing, the interior of the pipe shall be purged to flush out all foreign material including weld splatter, dirt, rags, and other debris left inside the pipe during welding operations and piping installation.*

**406.4 Test pressure measurement.** *Upon completion of the installation of a section of a gas system or of the entire gas system, and before appliances are connected thereto, the completed section or system shall be verified as to materials, and tested and proven tight as follows:*

1. *Gas distribution piping shall comply with the following:*

1.1. *Distribution pressures up to ½ psig (3.5 kPa gauge). The completed piping is to be tested with a non-mercury gauge at a pressure of 3 psig (20 kPa gauge) for a minimum of 30 minutes.*

1.2. *Distribution pressures over ½ psig (3.5 kPa gauge) through 3 psig (20 kPa gauge). The completed piping is to be tested at 50 psig (340 kPa gauge) for a minimum of 30 minutes.*

- 1.3. *Distribution pressures over 3 psig (20 kPa gauge) through 15 psig (100 kPa gauge). The completed piping is to be tested at 100 psig (689 kPa gauge) for a minimum of 1 hour.*
- 1.4. *Distribution pressures above 15 psig (100 kPa gauge). The completed piping is to be tested to twice the maximum allowable operating pressure, but not less than 100 psig (689 kPa gauge), for a minimum of 1 hour.*
- 1.5 *Where the test pressure exceeds 125 psig (862 kPa gauge), the test pressure shall not exceed a value that produces a hoop stress in the piping greater than 50 percent of the specified minimum yield strength of the pipe.*
2. *Meter piping shall be pressure tested in accordance with the requirements of the serving utility. These requirements shall be either the same as those for testing distribution piping in numbered paragraph 1 of this section or, if different, the piping shall be certified by the local utility as being tested in compliance with their requirements.*
3. *Notwithstanding the above, all factory applied coated and wrapped pipe shall be pressure tested at a minimum of 90 psig (621 kPa gauge). For testing, the piping shall be filled with air or an inert gas, and the source of pressure shall be isolated before the pressure readings are made. All test duration time periods are to be measured after stabilization of testing medium. Fresh water may be used as the test medium only where the required test pressure exceeds 100 psig (689 kPa gauge).*

**406.4.1 Minimum standards for non-mercury gauges:**

1. *This section establishes minimum standards for non-mercury gauges to test gas piping, drainage and vent systems.*
2. *Each gauge shall meet the following requirements:*
  - 2.1. *The gauge shall be manufactured and used in accordance with ASME B 40.100, which incorporates ASME B 40.1 and ASME B 40.7, and the manufacturer shall provide with the gauge a written statement that the gauge is manufactured in accordance with such ASME standard;*

- 2.2. *The gauge shall be labeled with the name of the manufacturer;*
- 2.3. *The gauge shall be kept in a padded separate rigid box and the manufacturer's instructions for use and protection of the gauge shall be complied with;*
- 2.4. *The units of measurement "psi" shall appear on the face of the gauge; and*
- 2.5. *The gauge shall be kept in good working order.*

**406.4.2 Analog gauges used to measure pressure in the magnitude of 3 psig (20 kPa gauge).** Each analog gauge used to measure pressure in the magnitude of 3 psig (20 kPa gauge) shall meet the following requirements in addition to satisfying the minimum requirements set forth in section 406.4.1:

1. *The face of the gauge shall not be smaller than 2¼ inches (57 mm) in diameter;*
2. *The gauge shall have a minimum of 270° dial arc;*
3. *The gauge shall be calibrated in increments of not greater than one-tenth of a pound;*
4. *The range of the gauge shall not exceed 5 psig (34.5 kPa gauge) when a 2¼ inch (57 mm) diameter gauge is used;*
5. *The 1/10 psig (.69 kPa gauge) interval on the gauge shall not be smaller than 1/10 of an inch (2.5 mm) of arc;*
6. *The gauge shall be provided with an effective stop for the indicating pointer at the zero point;*
7. *The gauge shall be protected from excessive pressure with a shut off valve and prior to using the 5 psig ( 34.5 kPa gauge) the snifter valve shall be tested with a tire gauge to determine the magnitude of pressure; and*
8. *The gauge shall have a calibration screw.*

**406.4.3 Analog gauges used to measure pressure in the magnitude of 5 psig (34.5 kPa gauge).** Each analog gauge used to measure pressure in the magnitude of 5 psig (34.5 kPa gauge) shall meet the following requirements in addition to satisfying the minimum requirements set forth in Section 406.4.1:

1. *The face of the gauge shall not be smaller than 2¼ inches (57 mm) in diameter;*
2. *The gauge shall have a minimum of 270° dial arc;*
3. *The gauge shall be calibrated in increments not greater than one-fifth of a pound;*
4. *The range of the gauge shall not exceed 10 psig (69 kPa gauge) when a 2¼ inch (57 mm) diameter gauge is used;*
5. *The <sup>1</sup>/<sub>5</sub> interval on the gauge shall not be smaller than <sup>1</sup>/<sub>10</sub> of an inch of arc;*
6. *The gauge shall be provided with an effective stop for the indicating pointer at the zero point;*
7. *The gauge shall be protected from excessive pressure with a shut-off valve and prior to using the 10 psig (69 kPa gauge) the snifter valve shall be tested with a tire gauge to determine the magnitude of pressure; and*
8. *The gauge shall have a calibration screw.*

**406.4.4 Digital gauges used to measure pressure in the magnitude of 3 psig (20 kPa gauge) and higher.** *Each digital gauge used to measure pressure in the magnitude of 3 psig (20 kPa gauge) and higher shall meet the following requirements in addition to satisfying the minimum requirements set forth in Section 406.4.1:*

1. *The gauge shall have a minimum reading of <sup>1</sup>/<sub>100</sub> of a psig, and*
2. *An extra charged battery shall be readily available for immediate use with the gauge.*

**406.4.5 Witnessing tests of gas piping systems.** *Tests of gas piping systems in accordance with this code shall be witnessed by department plumbing inspectors, or approved agencies. The department shall prescribe qualifications for individuals who are authorized to witness such tests on behalf of approved agencies, including but not limited to the requirement that such individuals shall be licensed master plumbers or registered design professionals with not less than five years experience in the inspection and testing of gas piping systems.*

**406.4.6 Notification.** *The holder of the plumbing permit shall give at least two days prior written notice to the commissioner that the plumbing work covered by the permit is ready for inspections and test.*

**406.5 Detection of leaks and defects.** *The piping system shall withstand the test pressure specified without showing any evidence of leakage or other defects. Any reduction of test pressures as indicated by pressure gauges shall be deemed to indicate the presence of a leak unless such reduction can be readily attributed to some other cause.*

**406.5.1 Detection methods.** *The leakage shall be located by means of an approved gas detector, a noncorrosive leak detection fluid, or other approved leak detection methods. Matches, candles, open flames, or other methods that could provide a source of ignition shall not be used.*

**406.5.2 Corrections.** *Where leakage or other defects are located, the affected portion of the piping system shall be repaired or replaced and retested.*

**406.6 System and equipment leakage test.** *Leakage testing of systems and equipment shall be in accordance with Sections 406.6.1 through 406.6.4.*

**406.6.1 Test gases.** *Leak checks using fuel gas shall be permitted in piping systems that have been pressure tested in accordance with Section 406.*

**406.6.2 Before turning gas on.** *Before gas is introduced into a system of new gas piping, the entire system shall be inspected to determine that there are no open fittings or ends and that all valves at unused outlets are closed and plugged or capped.*

**406.6.2.1 Establishing gas supply.** *It shall be unlawful for any utility company to supply gas to a building, place or premises in which new meters other than replacement are required until a certificate of approval of gas installation from the department is filed with such utility company. When new gas service piping has been installed it shall be locked-off by the utility either by locking the gas service line valve or by installing a locking device on the outside gas service line valve. The lock shall not be removed until the gas meter piping (other than utility-owned) and gas distribution piping has been inspected and certified as required by the department as being ready for service.*

**406.6.2.2 Alterations to gas piping systems.** When alterations, extensions or repairs to existing gas meter piping or gas distribution piping requires the shut-off of gas flow to a building, the utility shall be notified by the owner or his or her authorized representative.

**406.6.3 Test for leakage.** Immediately after the gas is turned on into a new system or into a system that has been initially restored after an interruption of service, the piping system shall be tested for leakage. Where leakage is indicated, the gas supply shall be shut off until the necessary repairs have been made.

**406.6.4 Placing equipment in operation.** Gas utilization equipment shall be permitted to be placed in operation after the piping system has been tested and determined to be free of leakage and purged in accordance with Section 406.7.2.

**406.6.4.1 Requirements for placing equipment in operation.** The following will be required prior to placing equipment in operation as applicable:

1. Required fire protections systems (sprinkler or standpipe) are completed, inspected and ready for service.
2. Such equipment and related gas pipings are inspected by the department or authorized inspector.
3. Associated fire suppression system is inspected and approved by the Fire Department.

**406.7 Purging.** Purging of piping shall comply with Sections 406.7.1 through 406.7.4.

**406.7.1 Removal from service.** Where gas piping is to be opened for servicing, addition, or modification, the section to be worked on shall be turned off from the gas supply at the nearest convenient point, and the line pressure vented to the outdoors, or to ventilated areas of sufficient size to prevent accumulation of flammable mixtures. The remaining gas in this section of pipe shall be displaced with an inert gas as required by Table 406.7.1.

**TABLE 406.7.1  
LENGTH OF PIPING REQUIRING PURGING WITH  
INERT GAS FOR SERVICING OR MODIFICATION**

<b>NOMINAL PIPE SIZE (inches)</b>	<b>LENGTH OF PIPING REQUIRING PURGING</b>
2½	> 50 feet
3	> 30 feet
4	> 15 feet
6	> 10 feet
8 or larger	Any length

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm.

**406.7.2 Placing in operation.** *Where piping full of air is placed in operation, the air in the piping shall be displaced with fuel gas, except where such piping is required by Table 406.7.2 to be purged with an inert gas prior to introduction of fuel gas. The air can be safely displaced with fuel gas provided that a moderately rapid and continuous flow of fuel gas is introduced at one end of the line and air is vented out at the other end. The fuel gas flow shall be continued without interruption until the vented gas is free of air. The point of discharge shall not be left unattended during purging. After purging, the vent shall then be closed. Where required by Table 406.7.2, the air in the piping shall first be displaced with an inert gas, and the inert gas shall then be displaced with fuel gas.*

**TABLE 406.7.2  
LENGTH OF PIPING REQUIRING PURGING WITH  
INERT GAS BEFORE PLACING IN OPERATION**

<b>NOMINAL PIPE SIZE (inches)</b>	<b>LENGTH OF PIPING REQUIRING PURGING</b>
3	> 30 feet
4	> 15 feet
6	> 10 feet
8 or larger	Any length

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm.

**406.7.3 Discharge of purged gases.** *The open end of piping systems being purged shall not discharge into confined spaces or areas where there are sources of ignition unless precautions are taken to perform this operation in a safe manner by ventilation of the space, control of purging rate, and elimination of all hazardous conditions.*

**406.7.4 Placing equipment in operation.** *After the piping has been readied for operation, all equipment shall be purged and then placed in operation, as necessary.*

## **SECTION FGC 407**

### **PIPING SUPPORT**

**407.1 General.** *Piping shall be provided with support in accordance with Section 407.2. In addition, when earthquake loads are applicable in accordance with the New York City Building Code, a detailed piping system stress analysis including seismic analysis shall be performed. The pipe supports and restraints shall be designed and installed to accommodate the resultant seismic forces, moments and displacements from this stress analysis in accordance with the New York City Building Code.*

**407.2 Design and installation.** *Piping shall be supported with pipe hooks, metal pipe straps, bands, brackets, or hangers suitable for the size of piping, of adequate strength and quality, and located at intervals so as to prevent or damp out excessive vibration. Piping shall be anchored to prevent undue strains on connected equipment and shall not be supported by other piping. Pipe hangers and supports shall conform to the requirements of MSS SP-58 and shall be spaced in accordance with Section 415. Supports, hangers, and anchors shall be installed so as not to interfere with the free expansion and contraction of the piping between anchors. All parts of the supporting equipment shall be designed and installed so they will not be disengaged by movement of the supported piping.*

## **SECTION FGC 408**

### **DRIPS AND SLOPED PIPING**

**408.1 Slopes.** *Piping for other than dry gas conditions shall be sloped not less than ¼ inch in 15 feet (6.3 mm in 4572 mm) to prevent traps. The local gas supplier/utility company should be consulted to determine the type of fuel gas available for the intended service.*

**408.2 Drips.** *Where the local gas supplier/utility company requires, a manufactured test fitting or drip leg shall be installed downstream of a lockable supply/riser valve in accordance with the requirements for installation of the serving utility. No other locations will be allowed to prevent additional unapproved gas*

connections.

**408.3 Reserved.**

**408.4 Sediment trap.** Where a sediment trap is not incorporated as part of the gas utilization equipment, a sediment trap shall be installed downstream of the equipment shutoff valve as close to the inlet of the equipment as practical. The sediment trap shall be either a tee fitting with a capped nipple in the bottom opening of the run of the tee or other device approved as an effective sediment trap. Illuminating appliances, ranges, clothes dryers and outdoor grills need not be so equipped.

## **SECTION FGC 409 SHUTOFF VALVES**

**409.1 General.** Piping systems shall be provided with shutoff valves in accordance with this section.

**409.1.1 Valve approval.** Shutoff valves shall be of an approved type. Shutoff valves shall be constructed of materials compatible with the piping. Shutoff valves installed in a portion of a piping system operating above 0.5 psig (3.5 kPa gauge) shall comply with ASME B 16.33. Shutoff valves installed in a portion of a piping system operating at 0.5 psig (3.5 kPa gauge) or less shall comply with ANSI Z 21.15 or ASME B 16.33.

**409.1.2 Prohibited locations.** Shutoff valves shall be prohibited in concealed locations and furnace plenums.

**409.1.3 Access to shutoff valves.** Shutoff valves shall be located in places so as to provide access for operation and shall be installed so as to be protected from damage.

**409.2 Meter valve.** Every meter shall be equipped with a shutoff valve located on the supply side of the meter.

**409.3 Shutoff valves for multiple-house line systems.** Where a single meter is used to supply gas to more than one building or tenant, a separate shutoff valve shall be provided for each building or tenant.

**409.3.1 Multiple tenant buildings.** In multiple tenant buildings, where a common piping system is installed to supply other than one- and two-family dwellings, shutoff valves shall be provided for each tenant. Each tenant shall have access to the shutoff valve serving that tenant's space.

**409.3.2 Individual buildings.** *In a common system serving more than one building, shutoff valves shall be installed outdoors at each building.*

**409.3.3 Identification of shutoff valves.** *Each house line shutoff valve shall be plainly marked with an identification tag attached by the installer so that the piping systems supplied by such valves are readily identified.*

**409.4 MP regulator valves.** *A listed shutoff valve shall be installed immediately ahead of each MP regulator.*

**409.5 Equipment shutoff valve.** *Each appliance shall be provided with a shutoff valve separate from the appliance. The shutoff valve shall be located in the same room as the appliance, not further than 6 feet (1829 mm) from the appliance, and shall be installed upstream from the union, connector or quick disconnect device it serves. Such shutoff valves shall be provided with access.*

**Exception:** *Shutoff valves for vented decorative appliances and decorative appliances for installation in vented fireplaces shall not be prohibited from being installed in an area remote from the appliance where such valves are provided with ready access. Such valves shall be permanently identified and shall serve no other equipment. Piping from the shutoff valve to within 3 feet (914 mm) of the appliance connection shall be sized in accordance with Section 402.*

**409.5.1 Shutoff valve in fireplace.** *Equipment shutoff valves located in the firebox of a fireplace shall be installed in accordance with the appliance manufacturer's instructions.*

**409.6 Outside gas cut-off.** *An outside gas service line valve or other outside shutoff device or method acceptable to the commissioner shall be provided in accordance with Section E.2 of Appendix E of this code.*

## **SECTION FGC 410 FLOW CONTROLS**

**410.1 Pressure regulators.** *A line pressure regulator shall be installed where the appliance is designed to operate at a lower pressure than the supply pressure. Access shall be provided to pressure regulators. Pressure regulators shall be protected from physical damage. Regulators installed on the exterior of the building shall be approved for outdoor installation.*

**410.2 MP regulators.** *MP pressure regulators shall comply with the following:*

1. *The MP regulator shall be approved and shall be suitable for the inlet and outlet gas pressures for the application.*
2. *The MP regulator shall maintain a reduced outlet pressure under lockup (no-flow) conditions.*
3. *The capacity of the MP regulator, determined by published ratings of its manufacturer, shall be adequate to supply the appliances served.*
4. *The MP pressure regulator shall be provided with access. Where located indoors, the regulator shall be vented to the outdoors or shall be equipped with a leak-limiting device, in either case complying with Section 410.3.*
5. *A tee fitting with one opening capped or plugged shall be installed between the MP regulator and its upstream shutoff valve. Such tee fitting shall be positioned to allow connection of a pressure-measuring instrument and to serve as a sediment trap.*
6. *A tee fitting with one opening capped or plugged shall be installed not less than 10 pipe diameters downstream of the MP regulator outlet. Such tee fitting shall be positioned to allow connection of a pressure-measuring instrument.*

**410.3 Venting of regulators.** *Pressure regulators that require a vent shall have an independent vent to the outside of the building. The vent shall be designed to prevent the entry of water or foreign objects. The vent terminal shall be outdoors, a minimum of 18 inches (457 mm) above grade, not under an opening to building or overhang, and shall be installed so as to prevent the entrance of water and insects.*

**Exception:** *A vent to the outside of the building is not required for regulators less than 1 ¼ inches NPS equipped with and labeled for utilization with approved vent-limiting devices installed in accordance with the manufacturer's instructions.*

**SECTION FGC 411  
APPLIANCE CONNECTIONS**

**411.1 Connecting appliances.** Appliances shall be connected to the piping system by one of the following:

1. Rigid metallic pipe and fittings. Space heaters and water heaters within dwelling units shall be connected using rigid piping and fittings only. Use of semirigid (flexible) metallic tubing, fittings, appliance connectors, or quick-disconnect devices is not permitted for this application.
2. Semirigid (flexible) metallic tubing and metallic fittings. Lengths shall not exceed 6 feet (1829 mm) and shall be located entirely in the same room as the appliance. Semirigid metallic tubing shall not enter a motor-operated appliance through an unprotected knockout opening.
3. Listed and labeled appliance connectors installed in accordance with the manufacturer's installation instructions and located entirely in the same room as the appliance.
4. Listed and labeled quick-disconnect devices used in conjunction with listed and labeled appliance connectors.
5. Listed and labeled convenience outlets used in conjunction with listed and labeled appliance connectors.
6. Listed and labeled appliance connectors complying with ANSI Z 21.69 and listed for use with food service equipment having casters, or that is otherwise subject to movement for cleaning, and other large movable equipment.

**411.1.1 Protection from damage.** Connectors and tubing shall be installed so as to be protected against physical damage.

**411.1.2 Appliance fuel connectors.** Connectors shall have an overall length not to exceed 3 feet (914 mm), except for range and domestic clothes dryer connectors, which shall not exceed 6 feet (1829 mm) in length. Connectors shall not be concealed within, or extended through, walls, floors, partitions, ceilings or appliance housings. A shutoff valve not less than the nominal size of the connector shall be installed ahead of the connector in accordance with Section 409.5. Connectors shall be sized to provide the total demand of the connected appliance.

**Exception:** Fireplace inserts factory equipped with grommets, sleeves, or other means of protection in accordance with the listing of the appliance.

**411.1.3 Movable appliances.** *Where appliances are equipped with casters or are otherwise subject to periodic movement or relocation for purposes such as routine cleaning and maintenance, such appliances shall be connected to the supply system piping by means of an approved flexible connector designed and labeled for the application. Such flexible connectors shall be installed and protected against physical damage in accordance with the manufacturer's installation instructions.*

## **SECTION FGC 412**

### **LIQUEFIED PETROLEUM GAS MOTOR VEHICLE FUEL-DISPENSING STATIONS**

**412.1 Applicability.** *Motor fuel-dispensing facilities for LP-gas fuel shall be designed and operated in accordance with the New York City Fire Code.*

**412.2 Reserved.**

**412.3 Reserved.**

**412.4 Reserved.**

**412.5 Reserved.**

**412.6 Reserved.**

**412.7 Reserved.**

**412.8 Reserved.**

## **SECTION FGC 413**

### **COMPRESSED NATURAL GAS MOTOR VEHICLE FUEL-DISPENSING STATIONS**

**413.1 Applicability.** *Motor fuel-dispensing facilities for CNG fuel shall be designed and operated in accordance with the New York City Fire Code.*

**413.2 Reserved.**

**413.3 Reserved.**

*413.4 Reserved.*

*413.5 Reserved.*

*413.6 Reserved.*

*413.7 Reserved.*

*413.8 Reserved.*

**SECTION FGC 414**

**RESERVED**

**SECTION FGC 415**

**PIPING SUPPORT INTERVALS**

*415.1 Interval of support. Piping shall be supported at intervals not exceeding the spacing specified in Table 415.1.*

**TABLE 415.1  
SUPPORT OF PIPING**

<b>STEEL PIPE, NOMINAL SIZE OF PIPE (inches)</b>	<b>SPACING OF SUPPORTS (feet)</b>	<b>NOMINAL SIZE OF TUBING (SMOOTH-WALL) (inch O.D.)</b>	<b>SPACING OF SUPPORTS (feet)</b>

**CHAPTER 5**  
**CHIMNEYS AND VENTS**

**SECTION FGC 501**  
**GENERAL**

**501.1 Scope.** *This chapter shall govern the installation, alteration, maintenance, design, minimum safety requirements, repair and approval of factory-built chimneys, chimney liners, vents and connectors, field built chimneys and connectors and the utilization of masonry chimneys serving gas-fired appliances. The requirements for the installation, maintenance, repair and approval of factory-built chimneys, chimney liners, vents and connectors serving appliances burning fuels other than fuel gas shall be regulated by the New York City Mechanical Code. The construction, repair, maintenance and approval of masonry chimneys shall be regulated by the New York City Building Code.*

**501.1.1 Adjoining chimneys and vents.** *Adjoining chimneys and vents shall be in accordance with Sections 501.1.1.1 to 501.1.1.8.*

**501.1.1.1 Responsibility of owner of taller building.** *Whenever a building is erected, enlarged, or increased in height so that any portion of such building, except chimneys or vents, extends higher than the top of any previously constructed chimneys or vents within 100 feet (30 480 mm), the owner of such new or altered building shall have the responsibility of altering such chimneys or vents to make them conform with the requirements of this chapter. A chimney or vent that is no longer connected with a fireplace or combustion or other equipment for which a chimney or vent was required, shall be exempt from this requirement. Such alterations shall be accomplished by one of the following means or a combination thereof:*

- 1. Carry up the previously constructed chimneys or vents to the height required in this chapter.*
- 2. Offset such chimneys or vents to a distance beyond that required in Chapter 5 of this code from the new or altered building provided that the new location of the outlet of the offset chimney or vent shall otherwise comply with the requirements of this chapter.*
- 3. Such requirements shall not dispense with or modify any additional requirements that may be applicable pursuant to rules of the New York City Department of Environmental Protection.*

**501.1.1.2 Protection of draft.** *After the alteration of a chimney or vent as required by this section, it shall be the responsibility of the owner of the new or altered building to provide any mechanical equipment or devices necessary to maintain the proper draft in the equipment.*

**501.1.1.3 Written notification.** *The owner of the new or altered building shall notify the owner of the building affected in writing at least forty-five days before starting the work required and request written consent to do such work. Such notice shall be accompanied by plans indicating the manner in which the proposed alterations are to be made.*

**501.1.1.4 Approval.** *The plans and method of alteration shall be subject to the approval of the commissioner.*

**501.1.1.5 Refusal of consent.** *If consent is not granted by the owner of the previously constructed building to do the alteration work required by this section, such owner shall signify his or her refusal in writing to the owner of the new or altered building and to the commissioner; and the owner of the new or altered building having submitted plans that conform to the requirements of this section, shall thereupon be released from any responsibility for the proper operation of the equipment due to loss of draft and for any health hazard or nuisance that may occur as a result of the new or altered building. Such responsibilities shall then be assumed by the owner of the previously constructed building. Similarly, should such owner fail to grant consent within forty-five days from the date of written request or fail to signify his or her refusal, he or she shall then assume all responsibilities as prescribed above.*

**501.1.1.6 Procedure.** *It shall be the obligation of the owner of the new or altered building to:*

- 1. Schedule this work so as to create a minimum of disturbance to the occupants of the affected building; and*
- 2. Provide such essential services as are normally supplied by the equipment while it is out of service; and*
- 3. Where necessary, support such extended chimneys, vents and equipment from this building or to carry up such chimneys or vents within his or her building; and*

4. *Provide for the maintenance, repair, and/or replacement of such extensions and added equipment; and*
5. *Make such alterations of the same material as the original chimney or vent so as to maintain the same quality and appearance, except where the affected owner of the chimney or vent shall give his or her consent to do otherwise. All work shall be done in such fashion as to maintain the architectural aesthetics of the existing building. Where there is practical difficulty in complying strictly with the provisions of this Item, the commissioner may permit an equally safe alternative.*

**501.1.1.7 Existing violations.** *Any existing violations on the previously constructed equipment shall be corrected by the owner of the equipment before any equipment is added or alterations made at the expense of the owner of the new or altered building.*

**501.1.1.8 Variance.** *The commissioner may grant a variance in accordance with the provisions of this code.*

**501.2 General.** *Every appliance shall discharge the products of combustion to the outdoors, except for appliances exempted by Section 501.8.*

**501.2.1 Design.** *Chimneys and vents shall be designed and constructed so as to provide the necessary draft and capacity for each appliance connected to completely exhaust the products of combustion to the outside air. The temperature on adjacent combustible surfaces shall not be raised above 160°F (71°C). Condensation shall not be developed to an extent that can cause deterioration of the chimney or vent.*

**501.2.2 Outlets.** *The outlet shall be arranged that the flue gases are not directed so that they jeopardize people, overheat combustible structures, or enter building openings in the vicinity of the outlet. Gas fired appliances shall be vented in accordance with this code and NFPA 54.*

**501.2.3 Support.** *Chimneys and vents shall not be supported by the equipment they serve unless such equipment has been specifically designed for such loads.*

**501.3 Masonry chimneys.** *Masonry chimneys shall be constructed in accordance with Section 503.5.3 and the New York City Building Code.*

**501.4 Minimum size of chimney or vent.** *Chimneys and vents shall be sized in accordance with Section 504.*

**501.5 Abandoned inlet openings.** *Abandoned inlet openings in chimneys and vents shall be closed by an approved method.*

**501.6 Positive pressure.** *Where an appliance equipped with a mechanical forced draft system creates a positive pressure in the venting system, the venting system shall be designed for positive pressure applications.*

**501.7 Connection to fireplace.** *Connection of appliances to chimney flues serving fireplaces shall be in accordance with Sections 501.7.1 through 501.7.3.*

**501.7.1 Closure and access.** *A noncombustible seal shall be provided below the point of connection to prevent entry of room air into the flue. Means shall be provided for access to the flue for inspection and cleaning.*

**501.7.2 Connection to factory-built fireplace flue.** *An appliance shall not be connected to a flue serving a factory-built fireplace unless the appliance is specifically listed for such installation. The connection shall be made in accordance with the appliance manufacturer's installation instructions.*

**501.7.3 Connection to masonry fireplace flue.** *A connector shall extend from the appliance to the flue serving a masonry fireplace such that the flue gases are exhausted directly into the flue. The connector shall be accessible or removable for inspection and cleaning of both the connector and the flue. Listed direct connection devices shall be installed in accordance with their listing.*

**501.8 Equipment not required to be vented.** *The following appliances shall not be required to be vented:*

1. *Ranges.*
2. *Built-in domestic cooking units listed and marked for optional venting.*
3. *Hot plates and laundry stoves.*
4. *Type 1 clothes dryers (Type 1 clothes dryers shall be exhausted in accordance with the requirements of Section 614).*

5. *A single booster-type automatic instantaneous water heater, where designed and used solely for the sanitizing rinse requirements of a dishwashing machine, provided that the heater is installed in a commercial kitchen having a mechanical exhaust system. Where installed in this manner, the draft hood, if required, shall be in place and unaltered and the draft hood outlet shall be not less than 36 inches (914 mm) vertically and 6 inches (152 mm) horizontally from any surface other than the heater.*
6. *Refrigerators.*
7. *Counter appliances.*
8. *Specialized equipment of limited input such as laboratory burners and gas lights.*
9. *Recirculating direct-fired industrial air heaters as provided for in Section 612.*

*Where the appliances and equipment listed in Items 5 through 9 above are installed so that the aggregate input rating exceeds 20 British thermal units (Btu) per hour per cubic feet (207 watts per m<sup>3</sup>) of volume of the room or space in which such appliances and equipment are installed, one or more shall be provided with venting systems or other approved means for conveying the vent gases to the outdoor atmosphere so that the aggregate input rating of the remaining unvented appliances and equipment does not exceed the 20 Btu per hour per cubic foot (207 watts per m<sup>3</sup>) figure. Where the room or space in which the equipment is installed is directly connected to another room or space by a doorway, archway, or other opening of comparable size that cannot be closed, the volume of such adjacent room or space shall be permitted to be included in the calculations.*

**501.9 Chimney entrance.** *Connectors shall connect to a masonry chimney flue at a point not less than 12 inches (305 mm) or one chimney diameter above the lowest portion of the interior of the chimney flue.*

**501.10 Connections to exhauster.** *Appliance connections to a chimney or vent equipped with a power exhauster shall be made on the inlet side of the exhauster. Joints and vent systems on the positive pressure side of the exhauster shall be sealed to prevent flue-gas leakage as specified by the manufacturer's installation instructions for the exhauster.*

**501.11 Masonry chimneys.** *Masonry chimneys utilized to vent appliances shall be located, constructed and sized as specified in the manufacturer's installation instructions for the appliances being vented and*

Section 503.

**501.12 Residential and low-heat appliances flue lining systems.** *Flue lining systems for use with residential-type and low-heat appliances shall be limited to the following:*

- 1. Clay flue lining complying with the requirements of ASTM C 315 or equivalent. Clay flue lining shall be installed in accordance with the New York City Building Code.*
- 2. Listed chimney lining systems complying with UL 1777.*
- 3. Other approved materials that will resist, without cracking, softening or corrosion, flue gases and condensate at temperatures up to 1,800°F (982°C).*

**501.13 Category I appliance flue lining systems.** *Flue lining systems for use with Category I appliances shall be limited to the following:*

- 1. Flue lining systems complying with Section 501.12.*
- 2. Chimney lining systems listed and labeled for use with gas appliances with draft hoods and other Category I gas appliances listed and labeled for use with Type B vents.*

**501.14 Category II, III and IV appliance venting systems.** *The design, sizing and installation of vents for Category II, III and IV appliances shall be in accordance with the appliance manufacturer's installation instructions.*

**501.15 Existing chimneys and vents.** *Where an appliance is permanently disconnected from an existing chimney or vent, or where an appliance is connected to an existing chimney or vent during the process of a new installation, the chimney or vent shall comply with Sections 501.15.1 through 501.15.4.*

**501.15.1 Size.** *The chimney or vent shall be resized as necessary to control flue gas condensation in the interior of the chimney or vent and to provide the appliance or appliances served with the required draft. For Category I appliances, the resizing shall be in accordance with Section 502.*

**501.15.2 Flue passageways.** *The flue gas passageway shall be free of obstructions and combustible deposits and shall be cleaned if previously used for venting a solid or liquid fuel-burning appliance or fireplace. The flue liner, chimney inner wall or vent inner wall shall be continuous and shall be free of*

*cracks, gaps, perforations or other damage or deterioration which would allow the escape of combustion products, including gases, moisture and creosote.*

**501.15.3 Cleanout.** *Masonry chimney flues shall be provided with a cleanout opening having a minimum height of 6 inches (152 mm). The upper edge of the opening shall be located not less than 6 inches (152 mm) below the lowest chimney inlet opening. The cleanout shall be provided with a tight-fitting, noncombustible cover of a minimum size of 8 inches (203 mm) by 8 inches (203 mm).*

**501.15.4 Clearances.** *Chimneys and vents shall have airspace clearance to combustibles in accordance with the New York City Building Code and the chimney or vent manufacturer's installation instructions. Noncombustible firestopping or fireblocking shall be provided in accordance with the New York City Building Code.*

**Exception:** *Masonry chimneys equipped with a chimney lining system tested and listed for installation in chimneys in contact with combustibles in accordance with UL 1777, and installed in accordance with the manufacturers instructions, shall not be required to have clearance between combustible materials and exterior surfaces of the masonry chimney.*

## **SECTION FGC 502**

### **VENTS**

**502.1 General.** *All vents, except as provided in Section 503.7, shall be listed and labeled. Type B and BW vents shall be tested in accordance with UL 441 and labeled or field fabricated in accordance with NFPA 211. Type L vents shall be tested in accordance with UL 641. Vents for Category II and III appliances shall be tested in accordance with UL 1738. Plastic vents for Category IV appliances shall not be required to be listed and labeled where such vents are as specified by the appliance manufacturer and are installed in accordance with the appliance manufacturer's installation instructions.*

**502.2 Connectors required.** *Connectors shall be used to connect appliances to the vertical chimney or vent, except where the chimney or vent is attached directly to the appliance. Vent connector size, material, construction and installation shall be in accordance with Section 503.*

**502.3 Vent application.** *The application of vents shall be in accordance with Table 503.4.*

**502.4 Insulation shield.** *Where vents pass through insulated assemblies, an insulation shield constructed of not less than 26 gage sheet (0.016 inch) (0.4mm) metal shall be installed to provide clearance between the*

vent and the insulation material. The clearance shall not be less than the clearance to combustibles specified by the vent manufacturer's installation instructions. Where vents pass through attic space, the shield shall terminate not less than 2 inches (51 mm) above the insulation materials and shall be secured in place to prevent displacement. Insulation shields provided as part of a listed vent system shall be installed in accordance with the manufacturer's installation instructions.

**502.5 Installation.** Vent systems shall be sized, installed and terminated in accordance with the vent and appliance manufacturer's installation instructions and Section 503.

**502.6 Support of vents.** All portions of vents shall be adequately supported for the design and weight of the materials employed.

### **SECTION FGC 503 VENTING OF EQUIPMENT**

**503.1 General.** This section recognizes that the choice of venting materials and the methods of installation of venting systems are dependent on the operating characteristics of the equipment being vented. The operating characteristics of vented equipment can be categorized with respect to (1) positive or negative pressure within the venting system; and (2) whether or not the equipment generates flue or vent gases that might condense in the venting system. See Section 202 for the definition of these vented appliance categories.

**503.2 Venting systems required.** Except as permitted in Sections 503.2.1 through 503.2.3 and 501.8, all equipment shall be connected to venting systems.

**503.2.1 Ventilating hoods.** Ventilating hoods and exhaust systems shall be permitted to be used to vent equipment installed in commercial applications (see Section 503.3.4) and to vent industrial equipment, such as where the process itself requires fume disposal.

**503.2.2 Direct-vent equipment.** Listed direct-vent equipment shall be considered properly vented where installed in accordance with the terms of its listing, the manufacturer's instructions, and Section 503.8.

**503.2.3 Equipment with integral vents.** Equipment incorporating integral venting means shall be considered properly vented when installed in accordance with its listing, the manufacturer's instructions, and Section 503.8.

**503.3 Design and construction.** A venting system shall be designed and constructed so as to develop a positive flow adequate to convey flue or vent gases to the outdoor atmosphere.

**503.3.1 Equipment draft requirements.** A venting system shall satisfy the draft requirements of the equipment in accordance with the manufacturer's instructions.

**503.3.2 Design and construction.** Gas utilization equipment required to be vented shall be connected to a venting system designed and installed in accordance with the provisions of Sections 503.4 through 503.15.

**503.3.3 Mechanical draft systems.** Mechanical draft systems shall comply with the following:

1. Mechanical draft systems shall be listed and shall be installed in accordance with the terms of their listing and both the appliance and the mechanical draft system manufacturer's instructions.
2. Equipment, except incinerators, requiring venting shall be permitted to be vented by means of mechanical draft systems of either forced or induced draft design.
3. Forced draft systems and all portions of induced draft systems under positive pressure during operation shall be designed and installed so as to prevent leakage of flue or vent gases into a building.
4. Vent connectors serving equipment vented by natural draft shall not be connected into any portion of mechanical draft systems operating under positive pressure.
5. When a mechanical draft system is employed, provision shall be made to prevent the flow of gas to the main burners when the draft system is not performing so as to satisfy the operating requirements of the equipment for safe performance.
6. The exit terminals of mechanical draft systems shall be in compliance with Section 503.8.

**503.3.4 Ventilating hoods and exhaust systems.** Ventilating hoods and exhaust systems shall be permitted to be used to vent gas utilization equipment installed in commercial applications. Where automatically operated equipment is vented through a ventilating hood or exhaust system equipped

*with a damper or with a power means of exhaust, provisions shall be made to allow the flow of gas to the main burners only when the damper is open to a position to properly vent the equipment and when the power means of exhaust is in operation.*

**503.3.5 Circulating air ducts and furnace plenums.** *No portion of a venting system shall extend into or pass through any circulating air duct or furnace plenum.*

**503.4 Type of venting system to be used.** *The type of venting system to be used shall be in accordance with Table 503.4.*

**TABLE 503.4**  
**TYPE OF VENTING SYSTEM TO BE USED**

<b>GAS UTILIZATION EQUIPMENT</b>	<b>TYPE OF VENTING SYSTEM</b>
<i>Listed Category I equipment</i>	<i>Type B gas vent (Section 503.6)</i>
<i>Listed equipment equipped with draft hood</i>	<i>Chimney (Section 503.5)</i>
<i>Equipment listed for use with Type B gas vent</i>	<i>Single-wall metal pipe (Section 503.7)</i>
<i>Listed vented wall furnaces</i>	<i>Type B-W gas vent (Sections 503.6, 608)</i>
<i>Category II equipment</i>	<i>As specified or furnished by manufacturers of listed</i>
<i>Category III equipment</i>	<i>As specified or furnished by manufacturers of listed</i>
<i>Category IV equipment</i>	<i>As specified or furnished by manufacturers of listed</i>
<i>Incinerators, indoors</i>	<i>Chimney (Section 503.5)</i>
<i>Incinerators, outdoors</i>	<i>Single-wall metal pipe (Sections 503.7, 503.7.6)</i>
<i>Equipment which may be converted to use of solid fuel</i>	<i>Chimney (Section 503.5)</i>
<i>Unlisted combination gas and oil-burning equipment</i>	<i>Chimney (Section 503.5)</i>
<i>Listed combination gas and oil-burning equipment</i>	<i>Type L vent (Section 503.6) or chimney (Section 503.5)</i>
<i>Combination gas and solid fuel-burning equipment</i>	<i>Chimney (Section 503.5)</i>
<i>Equipment listed for use with chimneys only</i>	<i>Chimney (Section 503.5)</i>
<i>Unlisted equipment</i>	<i>Chimney (Section 503.5)</i>
<i>Decorative appliance in vented fireplace</i>	<i>Chimney</i>
<i>Direct vent equipment</i>	<i>See Section 503.2.2, 503.2.3</i>
<i>Equipment with integral vent</i>	<i>See Section 503.2.3, 503.2.4</i>

**503.4.1 Plastic piping.** *Plastic piping used for venting equipment listed for use with such venting materials shall be permitted when approved by the commissioner.*

**503.4.2 Special gas vent.** *Special gas vent shall be listed and installed in accordance with the terms of the special gas vent listing and the manufacturers' instructions.*

**503.5 Masonry, metal, and factory-built chimneys.** *Masonry, metal and factory-built chimneys shall comply with Sections 503.5.1 through 503.5.10.*

**503.5.1 Factory-built chimneys.** *Factory-built chimneys shall be installed in accordance with their listing and the manufacturers' instructions. Factory-built chimneys used to vent appliances that operate at positive vent pressure shall be listed for such application.*

**503.5.2 Metal chimneys.** *Metal chimneys shall be built and installed in accordance with NFPA 211.*

**503.5.3 Masonry chimneys.** *Masonry chimneys shall be built and installed in accordance with Chapter 21 of the New York City Building Code and NFPA 211, and shall be lined with approved clay flue lining, a listed chimney lining system, or other approved material that will resist corrosion, erosion, softening, or cracking from vent gases at temperatures up to 1800°F (982°C).*

**Exception:** *Masonry chimney flues serving listed gas appliances with draft hoods, Category I appliances and other gas appliances listed for use with Type B vent shall be permitted to be lined with a chimney lining system specifically listed for use only with such appliances. The liner shall be installed in accordance with the liner manufacturer's instructions and the terms of the listing. A permanent identifying label shall be attached at the point where the connection is to be made to the liner. The label shall read: "This chimney liner is for appliances that burn gas only. Do not connect to solid or liquid fuel-burning appliances or incinerators."*

*For information on installation of gas vents in existing masonry chimneys, see Section 503.6.5.*

**503.5.4 Chimney termination.** *Chimneys serving gas fired equipment shall comply with the appliance listing, the manufacturer's instructions and the following requirements:*

- 1. Chimneys serving appliances less than 600°F (316°C) shall extend at least 3 feet (914 mm) above the highest construction, such as a roof ridge, parapet wall, or penthouse, within 10 feet (3048 mm) of the chimney outlet, whether the construction is on the same building as the*

*chimney or on another building. However, such constructions do not include other chimneys, vents, or open structural framing. Any chimney located beyond 10 feet (3048 mm) from such construction, but not more than the distance determined by Equation 5-1 shall be at least as high as the construction.*

2. *Chimneys serving appliances between 600°F (316°C) and 1000°F (538°C) shall extend at least 10 feet (3048 mm) above the highest construction, such as a roof ridge, or parapet wall or penthouse within 20 feet (6096 mm) of the chimney outlet, whether the construction is on the same building as the chimney or on another building. However, such constructions do not include other chimneys, and vents or open structural framing. Any chimney located beyond 20 feet (6096 mm) from such construction, but not more than the distance determined by Equation 5-1 shall be at least as high as the construction.*
3. *Chimneys serving appliances greater than 1000°F shall extend at least 20 feet (6096 mm) above the highest construction, such as roof ridge, parapet wall, penthouse, or other obstruction within 50 feet (15 240 mm) of the chimney outlet, whether the construction is on the same building as the chimney or in another building. However, such constructions do not include other chimneys, vents, or open structural framing. Any chimney located beyond 50 feet (15 240 mm) from such construction but not more than the distance determined by Equation 5-1 shall be at least as high as the construction.*
4. *Termination caps shall not be permitted and a 3 inch (76 mm) minimum drain installed to receive collected water shall be required. A positive means shall be provided to prevent water from entering the appliance.*

**Exception:** *Termination caps shall be permitted on listed factory built chimneys,*

5. *Decorative shrouds shall not be installed at the termination of factory-built chimneys except where such shrouds are listed and labeled for use with the specific factory-built chimney system and are installed in accordance with the manufacturers' installation instructions.*
6. *The following equation shall be used for determining the distances referred to in Items 1, 2 and 3 of this section.*

$$D = F \times \sqrt{A} \quad (\text{Equation 5-1})$$

where: *D* = Distance, in feet, measured from the center of the chimney outlet to the nearest edge of the construction.

where: *F* = Value determined from Table below

where: *A* = Free area, in square inches, of chimney flue space.

<i>“F” FACTOR FOR DETERMINING CHIMNEY DISTANCES</i>			
<i>Type of Fuel</i>	<i>“F” Factor</i>		
	<i>600°F (316°C) and less</i>	<i>600°F (316°C) to 1000°F (538°C)</i>	<i>Greater than 1000°F (538°C)</i>
<i>Gas</i>	2	2	3

**503.5.5 Size of chimneys.** *The effective area of a chimney venting system serving listed appliances with draft hoods, Category I appliances, and other appliances listed for use with Type B vents shall be determined in accordance with one of the following methods:*

1. *The provisions of Section 504.*
2. *For sizing an individual chimney venting system for a single appliance with a draft hood, the effective areas of the vent connector and chimney flue shall be not less than the area of the appliance flue collar or draft hood outlet, nor greater than seven times the draft hood outlet area.*
3. *For sizing a chimney venting system connected to two appliances with draft hoods, the effective area of the chimney flue shall be not less than the area of the larger draft hood outlet plus 50 percent of the area of the smaller draft hood outlet, nor greater than seven times the smallest draft hood outlet area.*
4. *Chimney venting systems using mechanical draft shall be sized in accordance with approved engineering methods.*
5. *Other approved engineering methods.*

**503.5.5.1 Incinerator venting.** *Where an incinerator is vented by a chimney serving other gas utilization equipment, the gas input to the incinerator shall not be included in calculating chimney size, provided the chimney flue diameter is not less than 1 inch (25 mm) larger in equivalent diameter than the diameter of the incinerator flue outlet.*

**503.5.6 Inspection of chimneys.** *Before replacing an existing appliance or connecting a vent connector to a chimney, the chimney passageway shall be examined to ascertain that it is clear and free of obstructions and it shall be cleaned if previously used for venting solid or liquid fuel-burning appliances or fireplaces.*

**503.5.6.1 Chimney lining.** *Chimneys shall be lined in accordance with NFPA 211.*

**Exception:** *Existing chimneys shall be permitted to have their use continued when an appliance is replaced by an appliance of similar type, input rating, and efficiency.*

**503.5.6.2 Cleanouts.** *Cleanouts shall be examined to determine if they will remain tightly closed when not in use.*

**503.5.6.3 Unsafe chimneys.** *Where inspection reveals that an existing chimney is not safe for the intended application, it shall be repaired, rebuilt, lined, relined, or replaced with a vent or chimney to conform to NFPA 211 and it shall be suitable for the equipment to be vented.*

**503.5.6.4 Test run.** *All new chimneys shall be test run by the design professional engineer responsible for the testing under operating conditions to demonstrate fire safety and the complete exhausting of smoke and the products of combustion to the outer air. The results of such test run shall be certified as correct by the design professional engineer responsible for the test and shall be submitted in writing to the department.*

**503.5.6.5 Requirement of a smoke test.** *A smoke test shall be made as outlined below. Any faults or leaks found shall be corrected. Such smoke test shall be witnessed by a representative of the commissioner. In lieu thereof, the commissioner may accept the test report of the design professional engineer responsible for the test which shall be submitted in writing to the department.*

**503.5.6.5.1 Smoke test.** *To determine the tightness of chimney construction, a smoke test shall be made in accordance with the following conditions and requirements:*

- 1. The equipment, materials, power and labor necessary for such test shall be furnished by, and at the expense of, the owner or holder of the work permit.*
- 2. If the test shows any evidence of leakage or other defects, such defects shall be corrected in accordance with the requirement of this chapter and the test shall be repeated until the results are satisfactory.*
- 3. Method of test. The chimney shall be filled with a thick penetrating smoke produced by one or more smoke machines, or smoke bombs, or other equivalent method. As the smoke appears at the stack opening on the roof, such opening shall be tightly closed and a pressure equivalent to one-half inch column of water measured at the base of the stack, shall be applied. The test shall be applied for a length of time sufficient to permit the inspection of the chimney.*

**503.5.7 Chimneys serving equipment burning other fuels.** Chimneys serving equipment burning other fuels shall comply with Sections 503.5.7.1 through 503.5.7.4.

**503.5.7.1 Solid fuel-burning appliances.** Gas utilization equipment shall not be connected to a chimney flue serving a separate appliance designed to burn solid fuel.

**503.5.7.2 Liquid fuel-burning appliances.** Where one chimney flue serves gas utilization equipment and equipment burning liquid fuel, the equipment shall be connected through separate openings or shall be connected through a single opening where joined by a suitable fitting located as close as practical to the chimney. Where two or more openings are provided into one chimney flue, they shall be at different levels. Where the gas utilization equipment is automatically controlled, it shall be equipped with a safety shutoff device.

**503.5.7.3 Combination gas- and solid fuel-burning appliances.** A combination gas- and solid fuel-burning appliance shall be permitted to be connected to a single chimney flue where equipped with a manual reset device to shut off gas to the main burner in the event of sustained back draft or flue gas spillage. The chimney flue shall be sized to properly vent the appliance.

**503.5.7.4 Combination gas- and oil fuel-burning appliances.** A listed combination gas- and oil fuel-burning appliance shall be permitted to be connected to a single chimney flue. The chimney flue shall be sized to properly vent the appliance.

**503.5.8 Support of chimneys.** All portions of chimneys shall be supported for the design and weight of the materials employed. Factory-built chimneys shall be supported and spaced in accordance with their listings and the manufacturer's instructions.

**503.5.9 Cleanouts.** Where a chimney that formerly carried flue products from liquid or solid fuel-burning appliances is used with an appliance using fuel gas, an accessible cleanout shall be provided. The cleanout shall have a tight-fitting cover and shall be installed at the base of all chimneys in accordance with the rules of the New York City Department of Environmental Protection. The cleanout shall be gas tight if the chimney is to be of positive pressure.

**503.5.10 Space surrounding lining or vent.** The remaining space surrounding a chimney liner, gas vent, special gas vent, or plastic piping installed within a masonry chimney flue shall not be used to vent another appliance. The insertion of another liner or vent within the chimney as provided in this code and the liner or vent manufacturer's instructions shall not be prohibited.

*The remaining space surrounding a chimney liner, gas vent, special gas vent, or plastic piping installed within a masonry, metal or factory-built chimney, shall not be used to supply combustion air. Such space shall not be prohibited from supplying combustion air to direct-vent appliances designed for installation in a solid fuel-burning fireplace and installed in accordance with the listing and the manufacturer's instructions.*

**503.6 Gas vents.** *Gas vents shall comply with Sections 503.6.1 through 503.6.12 (see Section 202, Definitions).*

**503.6.1 Installation, general.** *Gas vents shall be installed in accordance with the terms of their listings and the manufacturer's instructions.*

**503.6.2 Type B-W vent capacity.** *A Type B-W gas vent shall have a listed capacity not less than that of the listed vented wall furnace to which it is connected.*

**503.6.3 Roof penetration.** *A gas vent passing through a roof shall extend through the roof flashing, roof jack, or roof thimble and shall be terminated by a listed termination cap.*

**503.6.4 Offsets.** *Type B and Type L vents shall extend in a generally vertical direction with offsets not exceeding 45 degrees (0.79 rad), except that a vent system having not more than one 60-degree (1.04 rad) offset shall be permitted. Any angle greater than 45 degrees (0.79 rad) from the vertical is considered horizontal. The total horizontal length of a vent plus the horizontal vent connector length serving draft-hood-equipped appliances shall not be greater than 75 percent of the vertical height of the vent.*

**Exception:** *Systems designed and sized as provided in Section 504 or in accordance with other approved engineering methods.*

*Vents serving Category I fan-assisted appliances shall be installed in accordance with the appliance manufacturer's instructions and Section 504 or other approved engineering methods.*

**503.6.5 Gas vents installed within masonry chimneys.** *Gas vents installed within masonry chimneys shall be installed in accordance with the terms of their listing and the manufacturer's installation instructions. Gas vents installed within masonry chimneys shall be identified with a permanent label installed at the point where the vent enters the chimney. The label shall contain the following*

language: “This gas vent is for appliances that burn gas. Do not connect to solid or liquid fuel-burning appliances or incinerators.”

**503.6.6 Gas vent terminations.** A gas vent shall terminate in accordance with one of the following:

1. Above the roof surface with a listed cap or listed roof assembly. Gas vents 12 inches (305 mm) in size or smaller with listed caps shall be permitted to be terminated in accordance with Figure 503.6.6, provided that such vents are at least 8 feet (2438 mm) from a vertical wall or similar obstruction. All other gas vents shall terminate not less than 2 feet (610mm) above the highest point where they pass through the roof and at least 2 feet (610 mm) higher than any portion of a building within 10 feet (3048 mm).
2. As provided for direct-vent systems in Section 503.2.2.
3. As provided for equipment with integral vents in Section 503.2.3.
4. As provided for mechanical draft systems in Section 503.3.3.
5. As provided for ventilating hoods and exhaust systems in Section 503.3.4.

However, such constructions do not include chimneys or other vents, or open structural framing. The vent shall be as high as such construction which is located beyond ten feet from the vent and up to and including the distance determined by the following formula:

$$D = 2A$$

*(Equation 5-2)*

*where: D = Distance in feet, measured from the center of the vent outlet to the nearest edge of the construction.*

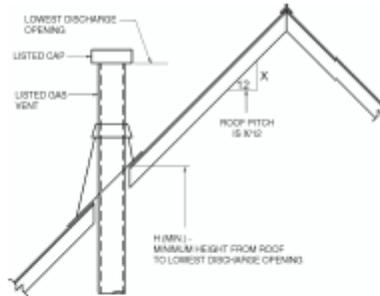

*where: A = Free area, in square inches, of vent flue space.*

**503.6.6.1 Decorative shrouds.** *Decorative shrouds shall not be installed at the termination of gas vents except where such shrouds are listed for use with the specific gas venting system and are installed in accordance with the manufacturer's installation instructions.*

**503.6.6.2 Rain and debris.** *All gas vents shall terminate in an approved vent or cowl, which shall prevent downdrafts and prevent rain and debris from entering the vent.*

**FIGURE 503.6.6**

**GAS VENT TERMINATION LOCATIONS FOR LISTED CAPS 12 INCHES OR LESS IN SIZE AT  
LEAST 8 FEET FROM A VERTICAL WALL**

ROOF PITCH	H (min)ft
Flat to 6/12	1.0
Over 6/12 to 7/12	1.25
Over 7/12 to 8/12	1.5
Over 8/12 to 9/12	2.0
Over 9/12 to 10/12	2.5
Over 10/12 to 11/12	3.25
Over 11/12 to 12/12	4.0
Over 12/12 to 14/12	5.0
Over 14/12 to 16/12	6.0
Over 16/12 to 18/12	7.0
Over 18/12 to 20/12	7.5
Over 20/12 to 21/12	8.0

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm.

**503.6.7 Minimum height.** A Type B or a Type L gas vent shall terminate at least 5 feet (1524 mm) in vertical height above the highest connected equipment draft hood or flue collar. A Type B-W gas vent shall terminate at least 12 feet (3658 mm) in vertical height above the bottom of the wall furnace.

**503.6.8 Exterior wall penetrations.** A gas vent extending through an exterior wall shall not terminate adjacent to the wall or below eaves or parapets, except as provided in Sections 503.2.3 and 503.3.3.

**503.6.9 Size of gas vents.** Venting systems shall be sized and constructed in accordance with Section 504 or other approved engineering methods acceptable to the commissioner. Gas vents shall also comply with the manufacturers' instructions.

**503.6.9.1 Category I appliances.** The sizing of natural draft venting systems serving one or more listed appliances equipped with a draft hood or appliances listed for use with Type B gas vent, installed in a single story of a building, shall be in accordance with one of the following methods:

1. The provisions of Section 504.
2. For sizing an individual gas vent for a single, draft-hood-equipped appliance, the effective area of the vent connector and the gas vent shall be not less than the area of the appliance draft hood outlet, nor greater than seven times the draft hood outlet area.
3. For sizing a gas vent connected to two appliances with draft hoods, the effective area of the vent shall be not less than the area of the larger draft hood outlet plus 50 percent of the area of the smaller draft hood outlet, nor greater than seven times the smaller draft hood outlet area.
4. Engineering practices acceptable to the commissioner.

**503.6.9.2 Category II, III, and IV appliances.** The sizing of gas vents for Category II, III, and IV equipment shall be in accordance with the equipment manufacturer's instructions.

**503.6.9.3 Mechanical draft.** Chimney venting systems using mechanical draft shall be designed and sized to develop a positive flow adequate to carry all products of combustion to the outside atmosphere.

**503.6.10 Gas vents serving equipment on more than one floor.** A single or common gas vent shall be

*permitted in multistory installations to vent Category I equipment located on more than one floor level, provided the venting system is designed and installed in accordance with this section and approved engineering methods.*

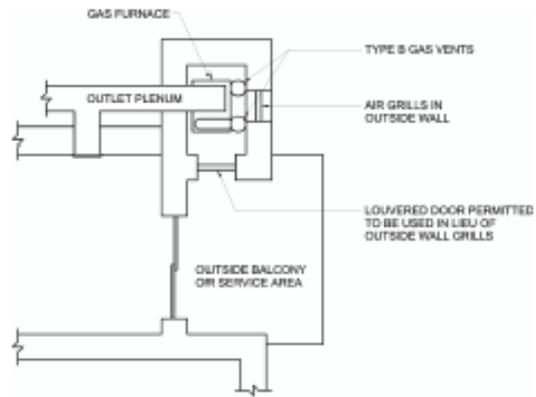

**503.6.10.1 Equipment separation.** *All equipment connected to the common vent shall be located in rooms that do not communicate with occupiable and or habitable spaces. habitable space. Each of these rooms shall have provisions for an adequate supply of combustion, ventilation, and dilution air that is not supplied from habitable space (see Figure 503.6.10.1).*

**503.6.10.2 Sizing.** *The size of the connectors and common segments of multistory venting systems for equipment listed for use with Type B double-wall gas vent shall be in accordance with Table 504.3(1) and Figures 503.6.10.2(1) and 503.6.10.2(2), provided:*

- 1. The available total height (H) for each segment of a multistory venting system is the vertical distance between the level of the highest draft hood outlet or flue collar on that floor and the centerline of the next highest interconnection tee (see Figure B-13).*
- 2. The size of the connector for a segment is determined from its gas utilization equipment heat input and available connector rise, and shall not be smaller than the draft hood outlet or flue collar size.*
- 3. The size of the common vertical segment, and of the interconnection tee at the base of that segment, shall be based on the total gas utilization equipment heat input entering that segment and its available total height.*

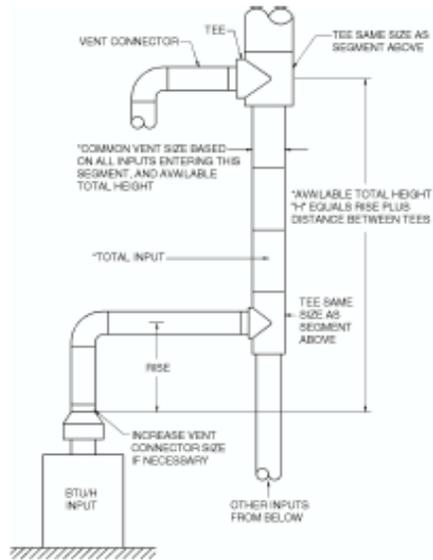

**FIGURE 503.6.10.1**

**PLAIN VIEW OF PRACTICAL SEPARATION METHOD FOR MULTISTORY GAS VENTING**

**MULTISTORY GAS VENT DESIGN PROCEDURE FOR EACH SEGMENT SYSTEM**

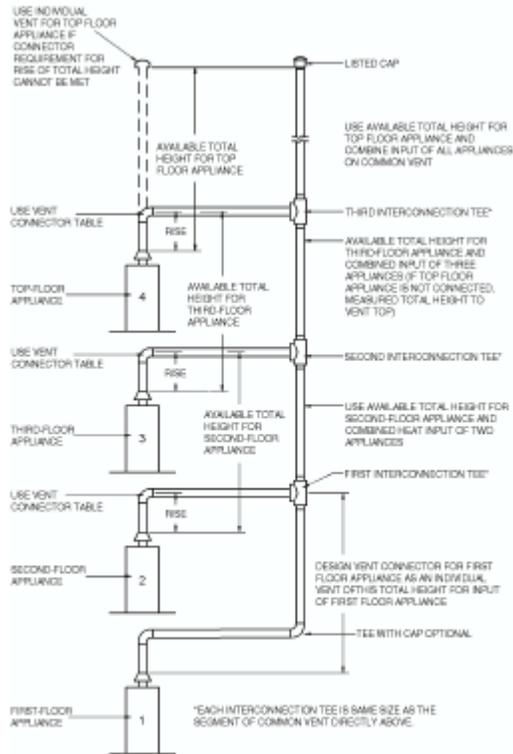

Vent connector size depends on:

- Input
- Rise
- Available total height " $H$ "
- Table 504.3(1) connectors

Common vent size depends on:

- Combined inputs
- Available total height " $H$ "
- Table 504.3(1) common vent

**FIGURE 503.6.10.2(2)**  
**MULTISTORY VENT SYSTEMS**

**Principles of design of multistory vents using vent connector and common vent design tables (see Sections 504.3.11 through 504.3.17).**

**503.6.11 Support of gas vents.** Gas vents shall be supported and spaced in accordance with their listings and the manufacturer's instructions.

**503.6.12 Marking.** Gas vents shall be permanently identified by a label attached to the wall or ceiling at a point where the vent connector enters the gas vent. The label shall read:

*"This gas vent is for appliances that burn gas. Do not connect to solid or liquid fuel- burning appliances or incinerators."*

**503.7 Single-wall metal pipe.** Single-wall metal pipe vents shall comply with Sections 503.7.1 through 503.7.12.

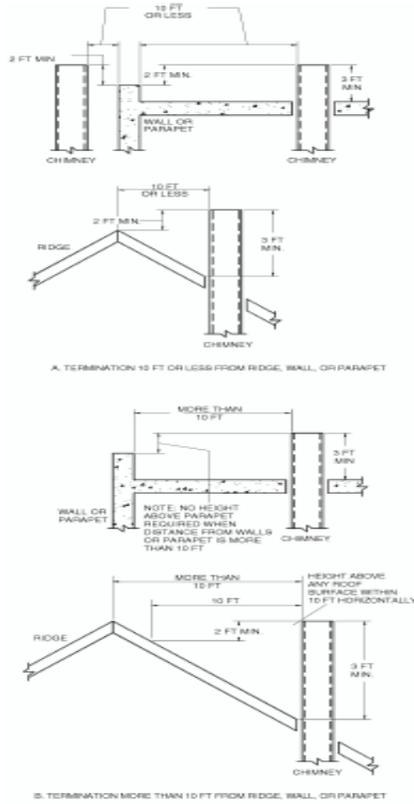

**503.7.1 Construction.** Single-wall metal pipe shall be constructed of galvanized sheet steel not less than 0.0304 inch (0.7 mm) thick or other approved, noncombustible, corrosion- resistant material.

**503.7.2 Climate protection.** Uninsulated single-wall metal pipe shall not be used outdoors for venting gas utilization equipment.

**503.7.3 Termination.** Single-wall metal pipe shall terminate at least 5 feet (1524 mm) in vertical height above the highest connected equipment draft hood outlet or flue collar. Single-wall metal pipe shall extend at least 2 feet (610 mm) above the highest point where it passes through a roof of a building and at least 2 feet (610 mm) higher than any portion of a building within a horizontal distance of 10 feet (3048 mm) (see Figure 503.5.4). An approved cap or roof assembly shall be attached to the terminus of a single-wall metal pipe (see also Section 503.7.8, Item 3). However, such constructions do not include chimneys or other vents, or open structural framing. The single wall metal pipe shall be as high as such construction which is located beyond ten feet from the vent and up to and including the distance determined by Equation 5-2.

**FIGURE 503.5.4**

**TYPICAL TERMINATION LOCATIONS FOR CHIMNEYS AND SINGLE-WALL METAL PIPES SERVING RESIDENTIAL-TYPE AND LOW-HEAT EQUIPMENT**

**503.7.4 Limitations of use.** *Single-wall metal pipe shall be used only for runs directly from the space in which the equipment is located through the roof or exterior wall to the outdoor atmosphere.*

**503.7.5 Roof penetrations.** *A pipe passing through a roof shall extend without interruption through the roof flashing, roof jacket, or roof thimble. Where a single-wall metal pipe passes through a roof constructed of combustible material, a noncombustible, non-ventilating thimble shall be used at the point of passage. The thimble shall extend at least 18 inches (457 mm) above and 6 inches (152 mm) below the roof with the annular space open at the bottom and closed only at the top. The thimble shall be sized in accordance with Section 503.10.16.*

**503.7.6 Installation.** *Single-wall metal pipe shall not originate in any unoccupied attic or concealed space and shall not pass through any attic, inside wall, concealed space, or floor. The installation of a single-wall metal pipe through an exterior combustible wall shall comply with Section 503.10.15. Single-wall metal pipe used for venting an incinerator shall be exposed and readily examinable for its full length and shall have suitable clearances maintained.*

**503.7.7 Clearances.** *Minimum clearances from single-wall metal pipe to combustible material shall be in accordance with Table 503.7.7. The clearance from single-wall metal pipe to combustible material shall be permitted to be reduced where the combustible material is protected as specified for vent connectors in Table 308.2.*

**TABLE 503.7.7<sup>a</sup>**  
**CLEARANCES FOR CONNECTORS**

EQUIPMENT	MINIMUM DISTANCE FROM COMBUSTIBLE MATERIAL			
	Listed Type B gas vent material	Listed Type L vent material	Single-wall metal pipe	Factory-built chimney sections
Listed equipment with draft hoods and equipment listed for use with Type B gas vents	As listed	As listed	6 inches	As listed
Residential boilers and furnaces with listed gas conversion burner and with draft hood	6 inches	6 inches	9 inches	As listed
Residential appliances listed for use with Type L vents	Not permitted	As listed	9 inches	As listed
Listed gas-fired toilets	Not permitted	As listed	As listed	As listed
Unlisted residential appliances with draft hood	Not permitted	6 inches	9 inches	As listed
Residential and low-heat equipment other than above	Not permitted	9 inches	18 inches	As listed
Medium-heat equipment	Not permitted	Not permitted	36 inches	As listed

For SI: 1 inch = 25.4 mm.

a. These clearances shall apply unless the listing of an appliance or connector specifies different clearances, in which case the listed clearances shall apply.

**503.7.8 Size of single-wall metal pipe.** A venting system constructed of single-wall metal pipe shall be sized in accordance with one of the following methods and the equipment manufacturer's instructions:

1. For a draft-hood-equipped appliance, in accordance with Section 504.
2. For a venting system for a single appliance with a draft hood, the areas of the connector and the pipe each shall be not less than the area of the appliance flue collar or draft hood outlet, whichever is smaller. The vent area shall not be greater than seven times the draft hood outlet area.
3. Other approved engineering methods.

**503.7.9 Pipe geometry.** Any shaped single-wall metal pipe shall be permitted to be used, provided that its equivalent effective area is equal to the effective area of the round pipe for which it is substituted, and provided that the minimum internal dimension of the pipe is not less than 2 inches (51 mm).

**503.7.10 Termination capacity.** The vent cap or a roof assembly shall have a venting capacity not less than that of the pipe to which it is attached.

**503.7.11 Support of single-wall metal pipe.** All portions of single-wall metal pipe shall be supported for the design and weight of the material employed.

**503.7.12 Marking.** Single-wall metal pipe shall comply with the marking provisions of Section 503.6.12.

**503.8 Venting system termination location.** The location of venting system terminations shall comply with the following:

1. Gas venting systems shall be extended at least 2 feet (610 mm) above the highest construction, such as a roof ridge, parapet wall, or penthouse, within 10 feet (3048 mm) of the vent outlet whether the construction is on the same building as the chimney or on another building. However, such constructions do not include chimneys or other vents, or open structural framing. The vent shall be as high as such construction which is located beyond 10 feet (3048 mm) from the vent and up to and including the distance determined by Equation 5-2.

**Exception:** Direct vent appliances approved by the commissioner and installed in accordance with the manufacturer's instructions.

2. Where permitted, through-the-wall vents for Category II and IV appliances and non-categorized

*condensing appliances shall not terminate over public walkways or over an area where condensate or vapor could create a nuisance or hazard or could be detrimental to the operation of regulators, relief valves or other equipment. Where local experience indicates that condensate is a problem with Category I and III appliances, this provision shall also apply.*

3. *A mechanical draft venting system shall terminate at least 3 feet (914 mm) above any forced-air inlet located within 10 feet (3048 mm).*

**Exceptions:**

1. *This provision shall not apply to the combustion air intake of a direct-vent appliance.*
2. *This provision shall not apply to the separation of the integral outdoor air inlet and flue gas discharge of listed outdoor appliances.*

**503.9 Condensation drainage.** *Provision shall be made to collect and dispose of condensate from venting systems serving Category II and IV equipment and noncategorized condensing appliances in accordance with Section 503.8, Item 2.*

**503.10 Vent connectors for Category I equipment.** *Vent connectors for Category I equipment shall comply with Sections 503.10.1 through 503.10.16.*

**503.10.1 Where required.** *A vent connector shall be used to connect equipment to a gas vent, chimney, or single-wall metal pipe, except where the gas vent, chimney, or single-wall metal pipe is directly connected to the equipment.*

**503.10.2 Materials.** *Vent connectors shall be constructed in accordance with Sections 503.10.2.1 through 503.10.2.5.*

**503.10.2.1 General.** *A vent connector shall be made of noncombustible corrosion-resistant material capable of withstanding the vent gas temperature produced by the equipment and of sufficient thickness to withstand physical damage.*

**503.10.2.2 Vent connectors located in unconditioned areas.** *Where the vent connector used for equipment having a draft hood or a Category I appliance is located in or passes through attics, crawl spaces or other unconditioned spaces, that portion of the vent connector shall be listed Type B or Type L or listed vent material or listed material having equivalent insulation properties.*

**503.10.2.3 Residential-type appliance connectors.** Where vent connectors for residential-type appliances are not installed in attics or other unconditioned spaces, connectors for listed appliances having draft hoods and for appliances having draft hoods and equipped with listed conversion burners shall be one of the following:

1. Type B or Type L vent material;
2. Galvanized sheet steel not less than 0.018 inch (0.46 mm) thick;
3. Aluminum (1100 or 3003 alloy or equivalent) sheet not less than 0.027 inch (0.69 mm) thick;
4. Stainless steel sheet not less than 0.012 inch (0.31 mm) thick;
5. Smooth interior wall metal pipe having resistance to heat and corrosion equal to or greater than that of Item 2, 3 or 4 above; or
6. A listed vent connector.

Vent connectors shall not be covered with insulation.

**Exception:** Listed insulated vent connectors shall be installed according to the terms of their listing.

**503.10.2.4 Low-heat equipment.** A vent connector for low-heat equipment shall be a factory-built chimney section or steel pipe having resistance to heat and corrosion equivalent to that for the appropriate galvanized pipe as specified in Table 503.10.2.4. Factory-built chimney sections shall be joined together in accordance with the chimney manufacturers' instructions.

**TABLE 503.10.2.4**

**MINIMUM THICKNESS FOR GALVANIZED STEEL VENT CONNECTORS FOR LOW-HEAT APPLIANCES**

<b>DIAMETER OF CONNECTOR (inches)</b>	<b>MINIMUM THICKNESS (inch)</b>
Less than 6	0.019
6 to less than 10	0.023
10 to 12 inclusive	0.029
14 to 16 inclusive	0.034
Over 16	0.056

For SI: 1 inch = 25.4 mm.

**503.10.2.5 Medium-heat appliances.** *Vent connectors for medium-heat equipment and commercial and industrial incinerators shall be constructed of factory-built medium-heat chimney sections or steel of a thickness not less than that specified in Table 503.10.2.5 and shall comply with the following:*

- 1. A steel vent connector for equipment with a vent gas temperature in excess of 1000°F (538°C), measured at the entrance to the connector shall be lined with medium-duty fire brick (ASTM C 64, Type F), or the equivalent.*
- 2. The lining shall be at least 2½ inches (64 mm) thick for a vent connector having a diameter or greatest cross-sectional dimension of 18 inches (457 mm) or less.*
- 3. The lining shall be at least 4½ inches (114 mm) thick laid on the 4½-inch (114 mm) bed for a vent connector having a diameter or greatest cross-sectional dimension greater than 18 inches (457 mm).*
- 4. Factory-built chimney sections, if employed, shall be joined together in accordance with the chimney manufacturers' instructions.*

**TABLE 503.10.2.5**

**MINIMUM THICKNESS FOR STEEL VENT CONNECTORS FOR MEDIUM-HEAT EQUIPMENT AND  
COMMERCIAL AND INDUSTRIAL INCINERATORS VENT CONNECTOR SIZE**

<b>DIAMETER (inches)</b>	<b>AREA (square inches)</b>	<b>MINIMUM THICKNESS (inch)</b>
Up to 14	Up to 154	0.053
Over 14 to 16	154 to 201	0.067
Over 16 to 18	201 to 254	0.093
Over 18	Larger than 254	0.123

For SI: 1 inch = 25.4 mm, 1 square inch = 645.16 mm<sup>2</sup>.

**503.10.3 Size of vent connector.** Vent connectors shall be sized in accordance with Sections 503.10.3.1 through 503.10.3.5.

**503.10.3.1 Single draft hood and fan-assisted.** A vent connector for equipment with a single draft hood or for a Category I fan-assisted combustion system appliance shall be sized and installed in accordance with Section 504 or other approved engineering methods.

**503.10.3.2 Multiple draft hoods.** For a single appliance having more than one draft hood outlet or flue collar, the manifold shall be constructed according to the instructions of the appliance manufacturer. Where there are no instructions, the manifold shall be designed and constructed in accordance with approved engineering practices. As an alternate method, the effective area of the manifold shall equal the combined area of the flue collars or draft hood outlets and the vent connectors shall have a minimum 1-foot (305 mm) rise.

**503.10.3.3 Multiple appliances.** Where two or more appliances are connected to a common vent or chimney, each vent connector shall be sized in accordance with Section 504 or other approved engineering methods.

As an alternative method applicable only when all of the appliances are draft hood equipped, each vent connector shall have an effective area not less than the area of the draft hood outlet of the appliance to which it is connected.

**503.10.3.4 Common connector/manifold.** Where two or more gas appliances are vented through a common vent connector or vent manifold, the common vent connector or vent manifold shall be located at the highest level consistent with available headroom and the required clearance to combustible materials and shall be sized in accordance with Section 504 or other approved engineering methods.

As an alternate method applicable only where there are two draft hood equipped appliances, the effective area of the common vent connector or vent manifold and all junction fittings shall be not less than the area of the larger vent connector plus 50 percent of the area of the smaller flue collar outlet.

**503.10.3.5 Size increase.** Where the size of a vent connector is increased to overcome installation limitations and obtain connector capacity equal to the equipment input, the size increase shall be made at the equipment draft hood outlet.

**503.10.4 Two or more appliances connected to a single vent.** Where two or more vent connectors enter a common gas vent, chimney flue, or single-wall metal pipe, the smaller connector shall enter at the highest level consistent with the available headroom or clearance to combustible material. Vent connectors serving Category I

*appliances shall not be connected to any portion of a mechanical draft system operating under positive static pressure, such as those serving Category III or IV appliances.*

**503.10.5 Clearance.** *Minimum clearances from vent connectors to combustible material shall be in accordance with Table 503.7.7.*

**Exception:** *The clearance between a vent connector and combustible material shall be permitted to be reduced where the combustible material is protected as specified for vent connectors in Table 308.2.*

**503.10.6 Flow resistance.** *A vent connector shall be installed so as to avoid turns or other construction features that create excessive resistance to flow of vent gases.*

**503.10.7 Joints.** *Joints between sections of connector piping and connections to flue collars and hood outlets shall be fastened by one of the following methods:*

- 1. Sheet metal screws.*
- 2. Vent connectors of listed vent material assembled and connected to flue collars or draft hood outlets in accordance with the manufacturers' instructions.*
- 3. Welding.*

**503.10.8 Slope.** *A vent connector shall be installed without dips or sags and shall slope upward toward the vent or chimney at least 1/4 inch per foot (21 mm/m).*

**Exception:** *Vent connectors attached to a mechanical draft system installed in accordance with the manufacturers' instructions.*

**503.10.9 Length of vent connector.** *A vent connector shall be as short as practical and the equipment located as close as practical to the chimney or vent. Except as provided for in Section 503.10.3, the maximum horizontal length of a single-wall connector shall be 75 percent of the height of the chimney or vent. Except as provided for in Section 503.10.3, the maximum horizontal length of a Type B double-wall connector shall be 100 percent of the height of the chimney or vent. For a chimney or vent system serving multiple appliances, the maximum length of an individual connector, from the appliance outlet to the junction with the common vent or another connector, shall be 100 percent of the height of the chimney or vent.*

**503.10.10 Support.** A vent connector shall be supported in accordance with the manufacturer's recommendations for the design and weight of the material employed to maintain clearances and prevent physical damage and separation of joints.

**503.10.11 Chimney connection.** Where entering a flue in a masonry or metal chimney, the vent connector shall be installed above the extreme bottom to avoid stoppage. Where a thimble or slip joint is used to facilitate removal of the connector, the connector shall be firmly attached to or inserted into the thimble or slip joint to prevent the connector from falling out. Means shall be employed to prevent the connector from entering so far as to restrict the space between its end and the opposite wall of the chimney flue (see Section 501.9).

**503.10.12 Inspection.** The entire length of a vent connector shall be provided with ready access for inspection, cleaning, and replacement.

**503.10.13 Fireplaces.** A vent connector shall not be connected to a chimney flue serving a fireplace.

**503.10.14 Passage through ceilings, floors, or walls.** A vent connector shall not pass through any ceiling, floor or fire-resistance-rated wall. A single-wall metal pipe connector shall not pass through any interior wall.

**Exception:** Vent connectors made of listed Type B or Type L vent material and serving listed equipment with draft hoods and other equipment listed for use with Type B gas vents shall be permitted to pass through walls or partitions constructed of combustible material if the connectors are installed with not less than the listed clearance to combustible material.

**503.10.15 Single-wall connector penetrations of combustible walls.** A vent connector made of a single-wall metal pipe shall not pass through a combustible exterior wall unless guarded at the point of passage by a ventilated metal thimble not smaller than the following:

1. For listed appliances equipped with draft hoods and appliances listed for use with Type B gas vents, the thimble shall be not less than 4 inches (102 mm) larger in diameter than the vent connector. Where there is a run of not less than 6 feet (1829 mm) of vent connector in the open between the draft hood outlet and the thimble, the thimble shall be permitted to be not less than 2 inches (51 mm) larger in diameter than the vent connector.
2. For unlisted appliances having draft hoods, the thimble shall be not less than 6 inches (152 mm) larger in diameter than the vent connector.
3. For residential and low-heat appliances, the thimble shall be not less than 12 inches (305 mm) larger in

diameter than the vent connector.

**Exception:** *In lieu of thimble protection, all combustible material in the wall shall be removed from the vent connector a sufficient distance to provide the specified clearance from such vent connector to combustible material. Any material used to close up such opening shall be noncombustible.*

**503.10.16 Medium-heat connectors.** *Vent connectors for medium-heat equipment shall not pass through walls or partitions constructed of combustible material.*

**503.11 Vent connectors for Category II, III, and IV appliances.** *Vent connectors for Category II, III and IV appliances shall be as specified for the venting systems in accordance with Section 503.4.*

**503.12 Draft hoods and draft controls.** *The installation of draft hoods and draft controls shall comply with Sections 503.12.1 through 503.12.7.*

**503.12.1 Equipment requiring draft hoods.** *Vented equipment shall be installed with draft hoods.*

**Exception:** *Incinerators, direct-vent equipment, fan-assisted combustion system appliances, equipment requiring chimney draft for operation, equipment equipped with blast, power, or pressure burners that are not listed for use with draft hoods, and equipment designed for forced venting.*

**503.12.2 Installation.** *A draft hood supplied with or forming a part of listed vented equipment shall be installed without alteration, exactly as furnished and specified by the equipment manufacturer.*

**503.12.2.1 Draft hood required.** *If a draft hood is not supplied by the equipment manufacturer where one is required, a draft hood shall be installed, shall be of a listed or approved type and, in the absence of other instructions, shall be of the same size as the equipment flue collar. Where a draft hood is required with a conversion burner, it shall be of a listed or approved type.*

**503.12.2.2 Special design draft hood.** *Where it is determined that a draft hood of special design is needed or preferable for a particular installation, the installation shall be in accordance with the recommendations of the equipment manufacturer and shall be approved by the department.*

**503.12.3 Draft control devices.** *Where a draft control device is part of the equipment or is supplied by the equipment manufacturer, it shall be installed in accordance with the manufacturers' instructions. In the absence of manufacturers' instructions, the device shall be attached to the flue collar of the equipment or as near to the equipment as practical.*

**503.12.4 Additional devices.** Equipment requiring controlled chimney draft shall be permitted to be equipped with a listed double-acting barometric-draft regulator installed and adjusted in accordance with the manufacturers' instructions.

**503.12.5 Location.** Draft hoods and barometric draft regulators shall be installed in the same room or enclosure as the equipment in such a manner as to prevent any difference in pressure between the hood or regulator and the combustion air supply.

**503.12.6 Positioning.** Draft hoods and draft regulators shall be installed in the position for which they were designed with reference to the horizontal and vertical planes and shall be located so that the relief opening is not obstructed by any part of the equipment or adjacent construction. The equipment and its draft hood shall be located so that the relief opening is accessible for checking vent operation.

**503.12.7 Clearance.** A draft hood shall be located so its relief opening is not less than 6 inches (152 mm) from any surface except that of the equipment it serves and the venting system to which the draft hood is connected. Where a greater or lesser clearance is indicated on the equipment label, the clearance shall be not less than that specified on the label. Such clearances shall not be reduced.

**503.13 Manually operated dampers.** A manually operated damper shall not be placed in the vent connector for any equipment. Fixed baffles shall not be classified as manually operated dampers.

**503.14 Automatically operated vent dampers.** An automatically operated vent damper shall be of a listed type complete with safety controls to prove open position of the damper before equipment operation.

**503.15 Obstructions.** Devices that retard the flow of vent gases shall not be installed in a vent connector, chimney, or vent. The following shall not be considered as obstructions:

1. Draft regulators and safety controls specifically listed for installation in venting systems and installed in accordance with the terms of their listing.
2. Approved draft regulators and safety controls that are designed and installed in accordance with approved engineering methods.
3. Listed heat reclaimers and automatically operated vent dampers installed in accordance with the terms of their listing.

4. *Approved economizers, heat reclaimers, and recuperators installed in venting systems of equipment not required to be equipped with draft hoods, provided that the gas utilization equipment manufacturer's instructions cover the installation of such a device in the venting system and performance in accordance with Sections 503.3 and 503.3.1 is obtained.*
5. *Vent dampers serving listed appliances installed in accordance with Sections 504.2.1 and 504.3.1 or other approved engineering methods.*

**SECTION FGC 504**  
**SIZING OF CATEGORY I APPLIANCE**  
**VENTING SYSTEMS**

**504.1 Definitions.** *The following definitions apply to the tables in this section.*

**APPLIANCE CATEGORIZED VENT DIAMETER/ AREA.** *The minimum vent area/diameter permissible for Category I appliances to maintain a non-positive vent static pressure when tested in accordance with nationally recognized standards.*

**FAN-ASSISTED COMBUSTION SYSTEM.** *An appliance equipped with an integral mechanical means to either draw or force products of combustion through the combustion chamber or heat exchanger.*

**FAN Min.** *The minimum input rating of a Category I fan-assisted appliance attached to a vent or connector.*

**FAN Max.** *The maximum input rating of a Category I fan-assisted appliance attached to a vent or connector.*

**NAT Max.** *The maximum input rating of a Category I draft-hood-equipped appliance attached to a vent or connector.*

**FAN + FAN.** *The maximum combined appliance input rating of two or more Category I fan-assisted appliances attached to the common vent.*

**FAN + NAT.** *The maximum combined appliance input rating of one or more Category I fan-assisted appliances and one or more Category I draft-hood-equipped appliances attached to the common vent.*

**NA.** *Vent configuration is not allowed due to potential for condensate formation or pressurization of the venting system, or not applicable due to physical or geometric restraints.*

**NAT + NAT.** *The maximum combined appliance input rating of two or more Category I draft-hood-equipped*

*appliances attached to the common vent.*

***504.2 Application of single-appliance vent Tables 504.2(1) through 504.2(5).*** *The application of Tables 504.2(1) through 504.2(5) shall be subject to the requirements of Sections 504.2.1 through 504.2.15.*

	30	NA	NA	NA	NA	222	330	605	1,010

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm, 1 British thermal unit per hour = 0.2931 W.

**504.2.1 Vent obstructions.** *These venting tables shall not be used where obstructions, as described in Section 503.15, are installed in the venting system. The installation of vents serving listed appliances with vent dampers shall be in accordance with the appliance manufacturer's instructions or in accordance with the following:*

- 1. The maximum capacity of the vent system shall be determined using the "NAT Max" column.*
- 2. The minimum capacity shall be determined as if the appliance were a fan-assisted appliance, using the "FAN Min" column to determine the minimum capacity of the vent system. Where the corresponding "FAN Min" is "NA," the vent configuration shall not be permitted and an alternative venting configuration shall be utilized.*

**504.2.2 Minimum size.** *Where the vent size determined from the tables is smaller than the appliance draft hood outlet or flue collar, the smaller size shall be permitted to be used provided that all of the following requirements are met:*

- 1. The total vent height (H) is at least 10 feet (3048 mm).*
- 2. Vents for appliance draft hood outlets or flue collars 12 inches (305 mm) in diameter or smaller are not reduced more than one table size.*
- 3. Vents for appliance draft hood outlets or flue collars larger than 12 inches (305 mm) in diameter are not reduced more than two table sizes.*
- 4. The maximum capacity listed in the tables for a fan-assisted appliance is reduced by 10 percent ( $0.90 \times$  maximum table capacity).*
- 5. The draft hood outlet is greater than 4 inches (102 mm) in diameter. Do not connect a 3-inch-diameter (76 mm) vent to a 4-inch-diameter (102 mm) draft hood outlet. This provision shall not apply to fan-assisted appliances.*

**504.2.3 Vent offsets.** *Single-appliance venting configurations with zero (0) lateral lengths in Tables 504.2(1), 504.2(2), and 504.2(5) shall not have elbows in the venting system. For vent configurations with lateral lengths, the venting tables include allowance for two 90-degree (1.57rad) turns. For each elbow up to and including 45 degrees (0.79 rad), the maximum capacity listed in the venting tables shall be reduced by 5 percent. For each elbow greater than 45 degrees (0.79 rad) up to and including 90 degrees (1.57 rad), the maximum capacity listed in the venting tables shall be reduced by 10 percent.*

**504.2.4 Zero lateral.** *Zero (0) lateral (L) shall apply only to a straight vertical vent attached to a top outlet draft hood or flue collar.*

**504.2.5 Reserved.**

**504.2.6 Multiple input rate appliances.** *For appliances with more than one input rate, the minimum vent capacity (FAN Min) determined from the tables shall be less than the lowest appliance input rating, and the maximum vent capacity (FAN Max/NAT Max) determined from the tables shall be greater than the highest appliance rating input.*

**504.2.7 Liner system sizing.** *Listed corrugated metallic chimney liner systems in masonry chimneys shall be sized by using Table 504.2(1) or 504.2(2) for Type B vents with the maximum capacity reduced by 20 percent ( $0.80 \times$  maximum capacity) and the minimum capacity as shown in Table 504.2(1) or 504.2(2). Corrugated metallic liner systems installed with bends or offsets shall have their maximum capacity further reduced in accordance with Section 504.2.3. The 20-percent reduction for corrugated metallic chimney liner systems includes an allowance for one long-radius 90-degree (157 rad) turn at the bottom of the liner.*

-11°F or Lower Local 99% Winter Design Temperature: -11°F or Lower Not recommended for any vent configurations								

Note: See Figure B-19 in Appendix B for a map showing local 99 percent winter design temperatures in the United States.

For SI: °C = [(°F - 32)/1.8], 1 inch = 25.4 mm, 1 square inch = 645.16 mm<sup>2</sup>, 1 foot = 304.8 mm, 1 British thermal unit per hour = 0.2931 W.

**504.2.8 Vent area and diameter.** Where the vertical vent has a larger diameter than the vent connector, the vertical vent diameter shall be used to determine the minimum vent capacity, and the connector diameter shall be used to determine the maximum vent capacity. The flow area of the vertical vent shall not exceed seven times the flow area of the listed appliance categorized vent area, flue collar area, or draft hood outlet area unless designed in accordance with approved engineering methods.

**504.2.9 Chimney and vent locations.** Tables 504.2(1), 504.2(2), 504.2(3), 504.2(4) and 504.2(5) shall be used for chimneys and vents not exposed to the outdoors below the roof line. A Type B vent or listed chimney lining system passing through an unused masonry chimney flue shall not be considered to be exposed to the outdoors. Table 504.2(3) in combination with Table 504.3(6) shall be used for clay-tile-lined exterior masonry chimneys, provided all of the following are met:

1. Vent connector is Type B double-wall.
2. Vent connector length is limited to 1½ feet for each inch (18 mm per mm) of vent connector diameter.
3. The appliance is draft hood equipped.
4. The input rating is less than the maximum capacity given by Table 504.2(3).
5. For a water heater, the outdoor design temperature is not less than 5°F (-15°C).
6. For a space-heating appliance, the input rating is greater than the minimum capacity given by Table 504.3(6).

Where these conditions cannot be met, an alternative venting design shall be used, such as a listed chimney lining system.

**Exception:** The installation of vents serving listed appliances shall be permitted to be in accordance with the appliance manufacturer's instructions and the terms of the listing.

**504.2.10 Corrugated vent connector size.** Corrugated vent connectors shall be not smaller than the listed appliance categorized vent diameter, flue collar diameter, or draft hood outlet diameter.

**504.2.11 Vent connector size limitation.** Vent connectors shall not be increased in size more than two sizes greater than the listed appliance categorized vent diameter, flue collar diameter, or draft hood outlet diameter.

**504.2.12 Component commingling.** *In a single run of vent or vent connector, different diameters and types of vent and connector components shall be permitted to be used, provided that all such sizes and types are permitted by the tables.*

**504.2.13 Table interpolation.** *Interpolation shall be permitted in calculating capacities for vent dimensions that fall between the table entries.*

**504.2.14 Extrapolation prohibited.** *Extrapolation beyond the table entries shall not be permitted.*

**504.2.15 Engineering calculations.** *For vent heights less than 6 feet (1829 mm) and greater than shown in the tables, engineering methods shall be used to calculate vent capacities. Signed and sealed calculations shall be submitted with filing application.*

**504.3 Application of multiple appliance vent Tables 504.3(1) through 504.3(8).** *The application of Tables 504.3(1) through 504.3(8) shall be subject to the requirements of Sections 504.3.1 through 504.3.2.5.*

**504.3.1 Vent obstructions.** *These venting tables shall not be used where obstructions, as described in Section 503.15, are installed in the venting system. The installation of vents serving listed appliances with vent dampers shall be in accordance with the appliance manufacturer's instructions or in accordance with the following:*

- 1. The maximum capacity of the vent connector shall be determined using the NAT Max column.*
- 2. The maximum capacity of the vertical vent or chimney shall be determined using the FAN+NAT column when the second appliance is a fan-assisted appliance, or the NAT+NAT column when the second appliance is equipped with a draft hood.*
- 3. The minimum capacity shall be determined as if the appliance were a fan-assisted appliance.*
  - 3.1. The minimum capacity of the vent connector shall be determined using the FAN Min column.*
  - 3.2. The FAN+FAN column shall be used where the second appliance is a fan-assisted appliance, and the FAN+NAT column shall be used where the second appliance is equipped with a draft hood, to determine whether the vertical vent or chimney configuration is not permitted (NA). Where the vent configuration is NA, the vent configuration shall not be permitted and an alternative venting configuration shall be utilized.*

**504.3.2 Connector length limit.** *The vent connector shall be routed to the vent utilizing the shortest possible route. Except as provided in Section 504.3.3, the maximum vent connector horizontal length shall be 1½ feet for each inch (457 mm per mm) of connector diameter as shown in Table 504.3.2.*

**TABLE 504.3.2  
MAXIMUM VENT CONNECTOR LENGTH**

<b>CONNECTOR DIAMETER MAXIMUM (inches)</b>	<b>CONNECTOR HORIZONTAL LENGTH (feet)</b>
3	4½
4	6
5	7½
6	9
7	10½
8	12
9	13½
10	15
12	18
14	21
16	24
18	27
20	30
22	33
24	36

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm.

**504.3.3 Connectors with longer lengths.** Connectors with longer horizontal lengths than those listed in Section 504.3.2 are permitted under the following conditions:

1. The maximum capacity (FAN Max or NAT Max) of the vent connector shall be reduced 10 percent for each additional multiple of the length listed above. For example, the maximum length listed above for a 4-inch (102 mm) connector is 6 feet (1829 mm). With a connector length greater than 6 feet (1829 mm) but not exceeding 12 feet (3658 mm), the maximum capacity must be reduced by 10 percent (0.90 maximum vent connector capacity). With a connector length greater than 12 feet (3658 mm) but not exceeding 18 feet (5486 mm), the maximum capacity must be reduced by 20 percent (0.80 maximum vent capacity).
2. For a connector serving a fan-assisted appliance, the minimum capacity (FAN Min) of the connector shall be determined by referring to the corresponding single appliance table. For Type B double-wall connectors, Table 504.2(1) shall be used. For single-wall connectors, Table 504.2(2) shall be used. The height (H) and lateral (L) shall be measured according to the procedures for a single-appliance vent, as if the other appliances were not present.

**504.3.4 Vent connector manifold.** Where the vent connectors are combined prior to entering the vertical portion of the common vent to form a common vent manifold, the size of the common vent manifold and the common vent shall be determined by applying a 10-percent reduction (0.90 maximum common vent capacity) to the common vent capacity part of the common vent tables. The length of the common vent connector manifold ( $L_M$ ) shall not exceed 1½ feet for each inch (457 mm per mm) of common vent connector manifold diameter (D) (see Figure B-11).

**504.3.5 Common vertical vent offset.** Where the common vertical vent is offset, the maximum capacity of the common vent shall be reduced in accordance with Section 504.3.6. The horizontal length of the common vent offset ( $L_o$ ) shall not exceed 1½ feet for each inch (457 mm per mm) of common vent diameter.

**504.3.6 Elbows in vents.** For each elbow up to and including 45 degrees (0.79 rad) in the common vent, the maximum common vent capacity listed in the venting tables shall be reduced by 5 percent. For each elbow greater than 45 degrees (0.79 rad) up to and including 90 degrees (1.57 rad), the maximum common vent capacity listed in the venting tables shall be reduced by 10 percent.

**504.3.7 Elbows in connectors.** The vent connector capacities listed in the common vent sizing tables include allowance for two 90-degree (1.57 rad) elbows. For each additional elbow up to and including 45 degrees (0.79 rad), the maximum vent connector capacity listed in the venting tables shall be reduced by 5 percent. For each elbow greater than 45 degrees (0.79 rad) up to and including 90 degrees (1.57 rad), the maximum vent connector

capacity listed in the venting tables shall be reduced by 10 percent.

**504.3.8 Common vent minimum size.** *The cross-sectional area of the common vent shall be equal to or greater than the cross-sectional area of the largest connector.*

**504.3.9 Common vent fittings.** *At the point where tee or wye fittings connect to a common vent, the opening size of the fitting shall be equal to the size of the common vent. Such fittings shall not be prohibited from having reduced size openings at the point of connection of appliance vent connectors.*

**504.3.10 Connector rise measurement.** *Connector rise (R) for each appliance connector shall be measured from the draft hood outlet or flue collar to the centerline where the vent gas streams come together.*

**504.3.11 Vent height measurement.** *For multiple units of equipment all located on one floor, available total height (H) shall be measured from the highest draft hood outlet or flue collar up to the level of the outlet of the common vent.*

**504.3.12 Multistory height measurement.** *For multistory installations, available total height (H) for each segment of the system shall be the vertical distance between the highest draft hood outlet or flue collar entering that segment and the centerline of the next higher interconnection tee.*

**504.3.13 Multistory lowest portion sizing.** *The size of the lowest connector and of the vertical vent leading to the lowest interconnection of a multistory system shall be in accordance with Table 504.2(1) or 504.2(2) for available total height (H) up to the lowest interconnection.*

**504.3.14 Multistory common vent offsets.** *Where used in multistory systems, vertical common vents shall be Type B double wall and shall be installed with a listed vent cap.*

**504.3.15 Multistory common vent offsets.** *Offsets in multistory common vent systems shall be limited to a single offset in each system, and systems with an offset shall comply with all of the following:*

- 1. The offset angle shall not exceed 45 degrees (0.79 rad) from vertical.*
- 2. The horizontal length of the offset shall not exceed 1½ feet for each inch (457 mm per mm) of common vent diameter of the segment in which the offset is located.*
- 3. For the segment of the common vertical vent containing the offset, the common vent capacity listed in the common venting tables shall be reduced by 20 percent (0.80 × maximum common vent capacity).*

4. A multi-story common vent shall not be reduced in size above the offset.

**504.3.16 Vertical vent maximum size.** Where two or more appliances are connected to a vertical vent or chimney, the flow area of the largest section of vertical vent or chimney shall not exceed seven times the smallest listed appliance categorized vent areas, flue collar area, or draft hood outlet area unless designed in accordance with approved engineering methods.

**504.3.17 Multiple input rate appliances.** For appliances with more than one input rate, the minimum vent connector capacity (FAN Min) determined from the tables shall be less than the lowest appliance input rating, and the maximum vent connector capacity (FAN Max or NAT Max) determined from the tables shall be greater than the highest appliance input rating.

**504.3.18 Liner system sizing.** Listed, corrugated metallic chimney liner systems in masonry chimneys shall be sized by using Table 504.3(1) or 504.3(2) for Type B vents, with the maximum capacity reduced by 20 percent ( $0.80 \times$  maximum capacity) and the minimum capacity as shown in Table 504.3(1) or 504.3(2). Corrugated metallic liner systems installed with bends or offsets shall have their maximum capacity further reduced in accordance with Sections 504.3.5 and 504.3.6. The 20-percent reduction for corrugated metallic chimney liner systems includes an allowance for one long-radius 90-degree (1.57 rad) turn at the bottom of the liner.

**504.3.19 Chimney and vent location.** Tables 504.3(1), 504.3(2), 504.3(3), 504.3(4), and 504.3(5) shall be used for chimneys and vents not exposed to the outdoors below the roof line. A Type B vent or listed chimney lining system passing through an unused masonry chimney flue shall not be considered to be exposed to the outdoors. Tables 504.3(7) and 504.3(8) shall be used for clay-tile-lined exterior masonry chimneys, provided all of the following conditions are met:

1. Vent connector is Type B double-wall.
2. At least one appliance is draft hood equipped.
3. The combined appliance input rating is less than the maximum capacity given by Table 504.3(7a) for NAT+NAT or Table 504.3(8a) for FAN+NAT.
4. The input rating of each space-heating appliance is greater than the minimum input rating given by Table 504.3(7b) for NAT+NAT or Table 504.3(8b) for FAN+NAT.
5. The vent connector sizing is in accordance with Table 504.3(3).

Where these conditions cannot be met, an alternative venting design shall be used, such as a listed chimney lining system.

**Exception:** Vents serving listed appliances installed in accordance with the appliance manufacturer's instructions and the terms of the listing.

**504.3.20 Connector maximum and minimum size.** Vent connectors shall not be increased in size more than two sizes greater than the listed appliance categorized vent diameter, flue collar diameter, or draft hood outlet diameter. Vent connectors for draft hood-equipped appliances shall not be smaller than the draft hood outlet diameter. Where a vent connector size(s) determined from the tables for a fan-assisted appliance(s) is smaller than the flue collar diameter, the use of the smaller size(s) shall be permitted provided that the installation complies with all of the following conditions:

1. Vent connectors for fan-assisted appliance flue collars 12 inches (305 mm) in diameter or smaller are not reduced by more than one table size [e.g., 12 inches to 10 inches (305 mm to 254 mm) is a one-size reduction] and those larger than 12 inches (305 mm) in diameter are not reduced more than two table sizes [e.g., 24 inches to 20 inches (610 mm to 508 mm) is a two-size reduction].
2. The fan-assisted appliance(s) is common vented with a draft-hood-equipped appliances(s).
3. The vent connector has a smooth interior wall.

**504.3.21 Component commingling.** All combinations of pipe sizes, single-wall, and double-wall metal pipe shall be allowed within any connector run(s) or within the common vent, provided all of the appropriate tables permit all of the desired sizes and types of pipe, as if they were used for the entire length of the subject connector or vent. Where single-wall and Type B double-wall metal pipes are used for vent connectors within the same venting system, the common vent must be sized using Table 504.3(2) or 504.3(4), as appropriate.

**504.3.22 Multiple sizes permitted.** Where a table permits more than one diameter of pipe to be used for a connector or vent, all the permitted sizes shall be permitted to be used.

**504.3.23 Table interpolation.** Interpolation shall be permitted in calculating capacities for vent dimensions that fall between table entries.

**504.3.24 Extrapolation prohibited.** Extrapolation beyond the table entries shall not be permitted.

**504.3.25 Engineering calculations.** For vent heights less than 6 feet (1829 mm) and greater than shown in the tables, engineering methods shall be used to calculate vent capacities.

**SECTION FGC 505**  
**DIRECT-VENT, INTEGRAL VENT,**  
**MECHANICAL VENT AND**  
**VENTILATION/EXHAUST HOOD VENTING**

**505.1 General.** The installation of direct-vent and integral vent appliances shall be in accordance with Section 503. Mechanical venting systems and exhaust hood venting systems shall be designed and installed in accordance with Section 503.

**505.1.1 Commercial cooking appliances vented by exhaust hoods.** Refer to Chapter 5 of the New York City Mechanical Code.

**SECTION FGC 506**  
**FACTORY-BUILT CHIMNEYS**

**506.1 Building heating appliances.** Factory-built chimneys for building heating appliances producing flue gases having a temperature not greater than 1,000°F (538°C), measured at the entrance to the chimney, shall be listed and labeled in accordance with UL 103 and shall be installed and terminated in accordance with the manufacturer's installation instructions and this code.

**506.2 Support.** Where factory-built chimneys are supported by structural members, such as joists and rafters, such members shall be designed to support the additional load.

**506.3 Medium-heat appliances.** Factory-built chimneys for medium-heat appliances producing flue gases having a temperature above 1,000°F (538°C), measured at the entrance to the chimney, shall be listed and labeled in accordance with UL 959 and shall be installed and terminated in accordance with the manufacturer's installation instructions and this code.

**CHAPTER 6**  
**SPECIFIC APPLIANCES**

**SECTION FGC 601**  
**GENERAL**

**601.1 Scope.** *This chapter shall govern the approval, design, installation, construction, maintenance, alteration and repair of the appliances and equipment specifically identified herein. The approval, design, installation, construction, maintenance, alteration and repair of non gas-fired appliances shall be regulated by the New York City Mechanical Code.*

**601.2 Fireplaces.** *Fireplaces (solid fuel type or ANSI Z21.50) shall be installed with tight fitting noncombustible fireplace doors to control infiltration losses in construction type listed here:*

1. *Masonry or factory-built fireplaces designed to allow an open burn.*
2. *Whenever a decorative appliance (ANSI Standard Z21.60 gas-log style unit) is installed in a vented solid fuel fireplace.*
3. *Vented decorative gas fireplace appliances (ANSI Standard Z21.50 units).*

*Fireplaces shall be provided with a source of combustion air as required by the fireplace construction provisions of the New York City Building Code.*

**601.3 Flame safeguard device.** *All fuel gas space heating appliances installed or used in a building occupied as a residence shall be equipped with an automatic flame safeguard device that shall shut off the fuel supply to the main burner or group of burners when the flame or pilot light thereof is extinguished.*

## **SECTION FGC 602**

### **DECORATIVE GAS FIRED APPLIANCES FOR INSTALLATION IN FIREPLACES**

**602.1 General.** *Decorative appliances for installation in approved solid fuel-burning fireplaces shall be tested in accordance with ANSI Z21.60 and shall be installed in accordance with the manufacturer's installation instructions. Manually lighted natural gas decorative appliances shall be tested in accordance with ANSI Z21.84.*

**602.2 Flame safeguard device.** *Decorative appliances for installation in approved solid fuel-burning fireplaces, with the exception of those tested in accordance with ANSI Z21.84, shall utilize a direct ignition device, an ignitor or a pilot flame to ignite the fuel at the main burner, and shall be equipped with a flame safeguard device. The flame safeguard device shall automatically shut off the fuel supply to a main burner or group of burners when the means of ignition of such burners becomes inoperative.*

**602.3 Prohibited installations.** *Decorative appliances for installation in fireplaces shall not be installed where prohibited by Section 303.3.*

**SECTION FGC 603**

**LOG LIGHTERS**

**603.1 General.** *Log lighters shall be tested in accordance with CSA 8 and installed in accordance with the manufacturer's installation instructions.*

**603.2 Automatic Valves.** *Automatic valves or semi-automatic valves shall be provided and shall comply with the applicable provisions of ANSI Z21.21.*

**SECTION FGC 604**

**VENTED GAS FIREPLACES  
(DECORATIVE APPLIANCES)**

**604.1 General.** *Vented gas fireplaces shall be tested in accordance with ANSI Z21.50, shall be installed in accordance with the manufacturer's installation instructions and shall be designed and equipped as specified in Section 602.2.*

**604.2 Access.** *Panels, grilles and access doors that are required to be removed for normal servicing operations shall not be attached to the building.*

**SECTION FGC 605**

**VENTED GAS FIREPLACE HEATERS**

**605.1 General.** *Vented gas fireplace heaters shall be installed in accordance with the manufacturer's installation instructions, shall be tested in accordance with ANSI Z21.88 and shall be designed and equipped as specified in Section 602.2. The installation of unvented gas fired space heaters, gas stoves, gas logs, gas fireplaces and gas fireplace inserts is prohibited.*

**605.2 Separate flues.** *Separate flues shall be provided for every fireplace and fireplace stove.*

**605.3 Combustion Air Supply.** *The requirements of the Energy Conservation Construction Code of New York State concerning combustion air supply shall be followed.*

**SECTION FGC 606**

**RESERVED**

**SECTION FGC 607**  
**COMMERCIAL-INDUSTRIAL INCINERATORS AND CREMATORIES**

**607.1 Incinerators and crematories, commercial-industrial.** Commercial-industrial-type incinerators and crematories shall be constructed and installed in accordance with NFPA 82.

**607.2 Compliance.** All new and existing refuse disposal systems shall be installed, altered and maintained in buildings in conformity with the applicable provisions of the New York City Air Pollution Control Code.

**SECTION FGC 608**  
**VENTED WALL FURNACES**

**608.1 General.** Vented wall furnaces shall be tested in accordance with ANSI Z21.49 or Z21.86/CSA 2.32 and shall be installed in accordance with the manufacturer's installation instructions.

**608.2 Venting.** Vented wall furnaces shall be vented in accordance with Section 503.

**608.3 Location.** Vented wall furnaces shall be located so as not to cause a fire hazard to walls, floors, combustible furnishings or doors. Vented wall furnaces installed between bathrooms and adjoining rooms shall not circulate air from bathrooms to other parts of the building.

**608.4 Door swing.** Vented wall furnaces shall be located so that a door cannot swing within 12 inches (305 mm) of an air inlet or air outlet of such furnace measured at right angles to the opening. Doorstops or door closers shall not be installed to obtain this clearance.

**608.5 Ducts prohibited.** Ducts shall not be attached to wall furnaces. Casing extension boots shall not be installed unless listed as part of the appliance.

**608.6 Access.** Vented wall furnaces shall be provided with access for cleaning of heating surfaces, removal of burners, replacement of sections, motors, controls, filters and other working parts, and for adjustments and lubrication of parts requiring such attention. Panels, grilles and access doors that are required to be removed for normal servicing operations shall not be attached to the building construction.

**SECTION FGC 609**  
**FLOOR FURNACES**

**609.1 General.** Floor furnaces shall be tested in accordance with ANSI Z21.48 or Z21.86/CSA 2.32 and shall be

*installed in accordance with the manufacturer's installation instructions.*

**609.2 Placement.** *The following provisions apply to floor furnaces.*

1. *Floors. Floor furnaces shall not be installed in the floor of any doorway, stairway landing, aisle or passageway of any enclosure, public or private, or in an exit way from any such room or space.*
2. *Walls and corners. The register of a floor furnace with a horizontal warm-air outlet shall not be placed closer than 6 inches (152 mm) to the nearest wall. A distance of at least 18 inches (457 mm) from two adjoining sides of the floor furnace register to walls shall be provided to eliminate the necessity of occupants walking over the warm-air discharge. The remaining sides shall be permitted to be placed not closer than 6 inches (152 mm) to a wall. Wall register models shall not be placed closer than 6 inches (152 mm) to a corner.*
3. *Draperies. The furnace shall be placed so that a door, drapery or similar object cannot be nearer than 12 inches (305 mm) to any portion of the register of the furnace.*
4. *Floor construction. Floor furnaces shall be located so as to be readily accessible. Means shall be provided for supporting the furnace when the grille is removed. Floor furnaces shall be installed only on floors of noncombustible construction having at least a two-hour fire rating, except that floor furnace enclosures in one-and two- family dwellings shall be constructed of non-combustible materials with a fire-resistance rating of at least one hour.*
5. *Thermostat. The controlling thermostat for a floor furnace shall be located within the same room or space as the floor furnace or shall be located in an adjacent room or space that is permanently open to the room or space containing the floor furnace.*

**609.3 Bracing.** *The floor around the furnace shall be braced and headed with a support framework designed in accordance with the New York City Building Code.*

**609.4 Clearance.** *The lowest portion of the floor furnace shall have not less than a 6-inch (152 mm) clearance from the grade level; except where the lower 6-inch (152 mm) portion of the floor furnace is sealed by the manufacturer to prevent entrance of water, the minimum clearance shall be not less than 2 inches (51 mm). Where such clearances cannot be provided, the ground below and to the sides shall be excavated to form a pit under the furnace so that the required clearance is provided beneath the lowest portion of the furnace. A 12-inch (305 mm) minimum clearance shall be provided on all sides except the control side, which shall have an 18-inch (457 mm) minimum clearance.*

**609.5** *Reserved.*

**609.6** *Reserved.*

**609.7 Enclosures.** *Enclosures of floor furnaces shall be constructed entirely of non-combustible materials with a fire-resistance rating of at least one-hour and the enclosure shall be provided with adequate outdoor air to ensure proper combustion. The enclosure shall be provided with adequate means of access for servicing the furnace.*

**609.8 Duct temperature.** *The outlet duct temperature of warm air heating furnaces shall not be greater than two hundred fifty degrees Fahrenheit.*

**609.9 One- and two-family dwellings.** *Floor furnace enclosures shall be constructed of non-combustible materials with a fire-resistance rating of at least one-hour. Means shall be provided for supporting the furnace when the grille is removed. Clearances shall be provided as per NFPA 54.*

#### **SECTION FGC 610**

#### **DUCT FURNACES**

**610.1 General.** *Duct furnaces shall be tested in accordance with ANSI Z83.9 or UL 795 and shall be installed in accordance with the manufacturer's installation instructions.*

**610.2 Access panels.** *Ducts connected to duct furnaces shall have removable access panels on both the upstream and downstream sides of the furnace.*

**610.3 Location of draft hood and controls.** *The controls, combustion air inlets and draft hoods for duct furnaces shall be located outside of the ducts. The draft hood shall be located in the same enclosure from which combustion air is taken.*

**610.4 Circulating air.** *Where a duct furnace is installed so that supply ducts convey air to areas outside the space containing the furnace, the return air shall also be conveyed by a duct(s) sealed to the furnace casing and terminating outside the space containing the furnace. The duct furnace shall be installed on the positive pressure side of the circulating air blower.*

**610.5 Unvented duct furnaces.** *Unvented duct furnaces are prohibited.*

#### **SECTION FGC 611**

#### **NONRECIRCULATING DIRECT-FIRED INDUSTRIAL AIR HEATERS**

**611.1 General.** *Nonrecirculating direct-fired industrial air heaters shall be listed to ANSI\_Z83.4/CSA 3.7 and shall be installed in accordance with the manufacturer's instructions.*

**611.2 Installation.** *Nonrecirculating direct-fired industrial air heaters shall not be used to supply any area containing sleeping quarters. Nonrecirculating direct-fired industrial air heaters shall be installed only in industrial or commercial occupancies. Nonrecirculating direct-fired industrial air heaters shall be permitted to provide ventilation air.*

**611.3 Clearance from combustibles materials.** *Nonrecirculating direct-fired industrial air heaters shall be installed with a clearance from combustibles materials of not less than that shown on the rating plate and in the manufacturer's instructions.*

**611.4 Supply air.** *All air handled by a nonrecirculating direct-fired industrial air heater, including combustion air, shall be ducted directly from the outdoors.*

**611.5 Outdoor air louvers.** *If outdoor air louvers of either the manual or automatic type are used, such devices shall be proven to be in the open position prior to allowing the main burners to operate.*

**611.6 Atmospheric vents and gas reliefs or bleeds.** *Nonrecirculating direct-fired industrial air heaters with valve train components equipped with atmospheric vents or gas reliefs or bleeds shall have their atmospheric vent lines or gas reliefs or bleeds lead to the outdoors. Means shall be employed on these lines to prevent water from entering and to prevent blockage by insects and foreign matter. An atmospheric vent line shall not be required to be provided on a valve train component equipped with a listed vent limiter.*

**611.7 Relief opening.** *The design of the installation shall include provisions to permit nonrecirculating direct-fired industrial air heaters to operate at rated capacity without overpressurizing the space served by the heaters by taking into account the structure's designed infiltration rate, providing properly designed relief openings or an interlocked power exhaust system, or a combination of these methods. The structure's designed infiltration rate and the size of relief openings shall be determined by approved engineering methods. Relief openings shall be permitted to be louvers or counterbalanced gravity dampers. Motorized dampers or closable louvers shall be permitted to be used, provided they are verified to be in their full open position prior to main burner operation.*

**611.8 Access.** *Nonrecirculating direct-fired industrial air heaters shall be provided with access for removal of burners; replacement of motors, controls, filters and other working parts; and for adjustment and lubrication of parts requiring maintenance.*

**611.9 Purging.** *Inlet ducting, where used, shall be purged by not less than four air changes prior to an ignition attempt.*

**611.10 Controls.** *Direct-fired make-up air heaters shall be equipped with airflow-sensing devices, safety shutoff devices, operating temperature controls and thermally actuated temperature limit controls in accordance with the terms of their listing.*

## **SECTION FGC 612**

### **RECIRCULATING DIRECT-FIRED INDUSTRIAL AIR HEATERS**

**612.1 General.** *Recirculating direct-fired industrial air heaters shall be listed to ANSI Z83.18 and shall be installed in accordance with the manufacturer's installation instructions.*

**612.2 Location.** *Recirculating direct-fired industrial air heaters shall be installed only in industrial and commercial occupancies. Recirculating direct-fired air heaters shall not serve any area containing sleeping quarters. Recirculating direct-fired industrial air heaters shall not be installed in hazardous locations or in buildings that contain flammable solids, liquids or gases, explosive materials or substances that can become toxic when exposed to flame or heat.*

**612.3 Installation.** *Direct-fired industrial air heaters shall be permitted to be installed in accordance with their listing and the manufacturer's instructions. Direct-fired industrial air heaters shall be installed only in industrial or commercial occupancies. Direct-fired industrial air heaters shall be permitted to provide fresh air ventilation.*

**612.4 Clearance from combustible materials.** *Direct-fired industrial air heaters shall be installed with a clearance from combustible material of not less than that shown on the label and in the manufacturer's instructions.*

**612.5 Air supply.** *Air to direct-fired industrial air heaters shall be taken from the building, ducted directly from outdoors, or a combination of both. Direct-fired industrial air heaters shall incorporate a means to supply outside ventilation air to the space at a rate of not less than 4 cubic feet per minute per 1,000 Btu per hour (0.38 m<sup>3</sup> per min per kW) of rated input of the heater. If a separate means is used to supply ventilation air, an interlock shall be provided so as to lock out the main burner operation until the mechanical means is verified. Where outside air dampers or closing louvers are used, they shall be verified to be in the open position prior to main burner operation.*

**612.6 Atmospheric vents, gas reliefs or bleeds.** *Direct-fired industrial air heaters with valve train components equipped with atmospheric vents, gas reliefs or bleeds shall have their atmospheric vent lines and gas reliefs or bleeds lead to the outdoors.*

*Means shall be employed on these lines to prevent water from entering and to prevent blockage by insects and foreign matter. An atmospheric vent line shall not be required to be provided on a valve train component equipped with a listed vent limiter.*

**612.7 Relief opening.** *The design of the installation shall include adequate provision to permit direct-fired industrial air heaters to operate at rated capacity by taking into account the structure's designed infiltration rate, providing properly designed relief openings or an interlocked power exhaust system, or a combination of these methods. The structure's designed infiltration rate and the size of relief openings shall be determined by a registered design professional. Relief openings shall be permitted to be louvers or counterbalanced gravity dampers. Motorized dampers or closable louvers shall be permitted to be used, provided they are verified to be in their full open position prior to main burner operation.*

**612.8 Controls.** *Recirculating direct-fired air heaters shall be equipped with airflow-sensing devices, safety shutoff devices, operating temperature controls and thermally actuated temperature limit controls in accordance with the terms of their listing.*

#### **SECTION FGC 613**

#### **CLOTHES DRYERS**

**613.1 General.** *Clothes dryers shall be tested in accordance with ANSI Z21.5.1 or ANSI Z21.5.2 and shall be installed in accordance with the manufacturer's installation instructions.*

#### **SECTION FGC 614**

#### **CLOTHES DRYER EXHAUST**

**614.1 Installation.** *Clothes dryers shall be exhausted in accordance with the manufacturer's instructions. Dryer exhaust systems shall be independent of all other systems and shall convey the moisture and any products of combustion to the outside of the building.*

**Exception:** *This section shall not apply to listed and labeled condensing (ductless) clothes dryers.*

**614.2 Duct penetrations.** *Ducts that exhaust clothes dryers shall not penetrate or be located within any fireblocking, draftstopping or any wall, floor/ceiling or other assembly required by the New York City Building Code to be fire-resistance rated, unless such duct is constructed of galvanized steel or aluminum of the thickness specified in Table 603.4 of the New York City Mechanical Code and the fire-resistance rating is maintained in accordance with the New York City Building Code. Fire dampers shall not be installed in clothes dryer exhaust duct systems.*

**614.3 Cleaning access.** Each vertical duct riser or dryers listed to ANSI Z21.5.2 shall be provided with a cleanout or other means for cleaning the interior of the duct.

**614.4 Exhaust installation.** Exhaust ducts for clothes dryers shall terminate on the outside of the building and shall be equipped with a backdraft damper. Screens shall not be installed at the duct termination. Ducts shall not be connected or installed with sheet metal screws or other fasteners that will obstruct the flow. Clothes dryer exhaust ducts shall not be connected to a vent connector, vent or chimney. Clothes dryer exhaust ducts shall not extend into or through ducts or plenums.

**614.5 Makeup air.** Installations exhausting more than 200 cfm (0.09 m<sup>3</sup>/s) shall be provided with makeup air. Where a closet is designed for the installation of a clothes dryer, an opening having an area of not less than 100 square inches (645 mm<sup>2</sup>) for makeup air shall be provided in the closet enclosure, or makeup air shall be provided by other approved means.

**614.6 Domestic clothes dryer ducts.** Exhaust ducts for domestic clothes dryers shall be constructed of metal and shall have a smooth interior finish. The exhaust duct shall be a minimum nominal size of 4 inches (102 mm) in diameter. The entire exhaust system shall be supported and secured in place. The male end of the duct at overlapped duct joints shall extend in the direction of airflow. Clothes dryer transition ducts used to connect the appliance to the exhaust duct system shall be metal and limited to a single length not to exceed 8 feet (2438 mm) and shall be listed and labeled for the application. Transition ducts shall not be concealed within construction.

**614.6.1 Maximum length.** The maximum length of a clothes dryer exhaust duct shall not exceed 25 feet (7620 mm) from the dryer location to the outlet terminal. The maximum length of the duct shall be reduced 2.5 feet (762 mm) for each 45-degree (0.79 rad) bend and 5 feet (1524 mm) for each 90-degree (1.6 rad) bend.

**Exception:** Listed clothes dryers may be installed in accordance with the manufacturer's installation instructions.

**614.6.2 Rough-in required.** Where a compartment or space for a domestic clothes dryer is provided, an exhaust duct system shall be installed.

**614.7 Commercial clothes dryers.** The installation of dryer exhaust ducts serving Type 2 clothes dryers shall comply with the appliance manufacturer's installation instructions. Exhaust fan motors installed in exhaust systems shall be located outside of the airstream. In multiple installations, the fan shall operate continuously or be interlocked to operate when any individual unit is operating. Ducts shall have a minimum clearance of 6 inches (152 mm) to combustible materials.

**SECTION FGC 615**  
**SAUNA HEATERS**

**615.1 General.** Sauna heaters shall be installed in accordance with the manufacturer's installation instructions.

**615.2 Location and protection.** Sauna heaters shall be located so as to minimize the possibility of accidental contact by a person in the room.

**615.2.1 Guards.** Sauna heaters shall be protected from accidental contact by an approved guard or barrier of material having a low coefficient of thermal conductivity. The guard shall not substantially affect the transfer of heat from the heater to the room.

**615.3 Access.** Panels, grilles and access doors that are required to be removed for normal servicing operations shall not be attached to the building.

**615.4 Combustion and dilution air intakes.** Sauna heaters of other than the direct-vent type shall be installed with the draft hood and combustion air intake located outside the sauna room. Where the combustion air inlet and the draft hood are in a dressing room adjacent to the sauna room, there shall be provisions to prevent physically blocking the combustion air inlet and the draft hood inlet, and to prevent physical contact with the draft hood and vent assembly, or warning notices shall be posted to avoid such contact. Any warning notice shall be easily readable, shall contrast with its background and the wording shall be in letters not less than ¼ inch (6.4 mm) high.

**615.5 Combustion and ventilation air.** Combustion air shall not be taken from inside the sauna room. Combustion and ventilation air for a sauna heater not of the direct-vent type shall be provided to the area in which the combustion air inlet and draft hood are located in accordance with Section 304.

**615.6 Heat and time controls.** Sauna heaters shall be equipped with a thermostat which will limit room temperature to 194°F (90°C). If the thermostat is not an integral part of the sauna heater, the heat-sensing element shall be located within 6 inches (152 mm) of the ceiling. If the heat-sensing element is a capillary tube and bulb, the assembly shall be attached to the wall or other support, and shall be protected against physical damage.

**615.6.1 Timers.** A timer, if provided to control main burner operation, shall have a maximum operating time of 1 hour. The control for the timer shall be located outside the sauna room.

**615.7 Sauna room.** A ventilation opening into the sauna room shall be provided. The opening shall be not less than 4 inches by 8 inches (102 mm by 203 mm) located near the top of the door into the sauna room.

**615.7.1 Warning notice.** *The following permanent notice, constructed of approved material, shall be mechanically attached to the sauna room on the outside:*

**WARNING: DO NOT EXCEED 30 MINUTES IN SAUNA. EXCESSIVE EXPOSURE CAN BE HARMFUL TO HEALTH. ANY PERSON WITH POOR HEALTH SHOULD CONSULT A PHYSICIAN BEFORE USING SAUNA.**

*The words shall contrast with the background and the wording shall be in letters not less than ¼ inch (6.4 mm) high.*

**Exception:** *This section shall not apply to one- and two-family dwellings.*

**SECTION FGC 616  
ENGINE AND GAS TURBINE-POWERED EQUIPMENT**

**616.1 Powered equipment.** *Permanently installed equipment powered by internal combustion engines and turbines shall be installed in accordance with the manufacturer's installation instructions and NFPA 37.*

**SECTION FGC 617  
POOL AND SPA HEATERS**

**617.1 General.** *Pool and spa heaters shall be tested in accordance with ANSI Z21.56 and shall be installed in accordance with the manufacturer's installation instructions.*

**SECTION FGC 618  
FORCED-AIR WARM-AIR FURNACES**

**618.1 General.** *Forced-air warm-air furnaces shall be tested in accordance with ANSI Z21.47 or UL 795 and shall be installed in accordance with the manufacturer's installation instructions.*

**618.2 Forced-air furnaces.** *The minimum unobstructed total area of the outside and return air ducts or openings to a forced-air warm-air furnace shall be not less than 2 square inches for each 1,000 Btu/h (4402 mm<sup>2</sup>/W) output rating capacity of the furnace and not less than that specified in the furnace manufacturer's installation instructions. The minimum unobstructed total area of supply ducts from a forced-air warm-air furnace shall be not less than 2 square inches for each 1,000 Btu/h (4402 mm<sup>2</sup>/W) output rating capacity of the furnace and not less than that specified in the furnace manufacturer's installation instructions.*

**Exception:** *The total area of the supply air ducts and outside and return air ducts shall not be required to be*

*larger than the minimum size required by the furnace manufacturer's installation instructions.*

**618.3 Dampers.** *Volume dampers shall not be placed in the air inlet to a furnace in a manner that will reduce the required air to the furnace.*

**618.4 Circulating air ducts for forced-air warm-air furnaces.** *Circulating air for fuel-burning, forced-air-type, warm-air furnaces shall be conducted into the blower housing from outside the furnace enclosure by continuous air-tight ducts.*

**618.5 Prohibited sources.** *Outside or return air for a forced-air heating system shall not be taken from the following locations:*

1. *Closer than 10 feet (3048 mm) from an appliance vent outlet, a vent opening from a plumbing drainage system or the discharge outlet of an exhaust fan, unless the outlet is 3 feet (914 mm) above the outside air inlet.*
2. *Where there is the presence of objectionable odors, fumes or flammable vapors; or where located less than 10 feet (3048 mm) above the surface of any abutting public way or driveway; or where located at grade level by a sidewalk, street, alley or driveway.*
3. *A hazardous or insanitary location or a refrigeration machinery room as defined in the New York City Mechanical Code.*
4. *A room or space, the volume of which is less than 25 percent of the entire volume served by such system. Where connected by a permanent opening having an area sized in accordance with Section 618.2, adjoining rooms or spaces shall be considered as a single room or space for the purpose of determining the volume of such rooms or spaces.*

**Exception:** *The minimum volume requirement shall not apply where the amount of return air taken from a room or space is less than or equal to the amount of supply air delivered to such room or space.*

5. *A room or space containing an appliance where such a room or space serves as the sole source of return air.*

**Exception:** *This shall not apply where:*

1. *The appliance is a direct-vent appliance or an appliance not requiring a vent in accordance with Section 501.8.*

2. *The room or space complies with the following requirements:*
  - 2.1. *The return air shall be taken from a room or space having a volume exceeding 1 cubic foot for each 10 Btu/h (9.6 L/W) of combined input rating of all fuel-burning appliances therein.*
  - 2.2. *The volume of supply air discharged back into the same space shall be approximately equal to the volume of return air taken from the space.*
  - 2.3. *Return-air inlets shall not be located within 10 feet (3048 mm) of any appliance firebox or draft hood in the same room or space.*
3. *Rooms or spaces containing solid fuel-burning appliances, provided that return-air inlets are located not less than 10 feet (3048 mm) from the firebox of such appliances.*
6. *A closet, bathroom, toilet room, kitchen, garage, mechanical room, boiler room or furnace room.*

**618.6 Screen.** *Required outdoor air inlets for residential portions of a building shall be covered with a screen having ¼-inch (6.4 mm) openings. Required outdoor air inlets serving a nonresidential portion of a building shall be covered with screen having openings larger than ¼ inch (6.4 mm) and not larger than 1 inch (25 mm).*

**618.7 Return-air limitation.** *Return air from one dwelling unit shall not be discharged into another dwelling unit.*

## **SECTION FGC 619 CONVERSION BURNERS**

**619.1 Conversion burners.** *The installation of conversion burners shall conform to ANSI Z21.8.*

## **SECTION FGC 620 UNIT HEATERS**

**620.1 General.** *Unit heaters shall be tested in accordance with ANSI Z83.8 and shall be installed in accordance with the manufacturer's installation instructions.*

**620.2 Support.** *Suspended-type unit heaters shall be supported by elements that are designed and constructed to accommodate the weight and dynamic loads. Hangers and brackets shall be of noncombustible material.*

**620.3 Ductwork.** *Ducts shall not be connected to a unit heater unless the heater is listed for such installation.*

**620.4 Clearance.** *Suspended-type unit heaters shall be installed with clearances to combustible materials of not less than 18 inches (457 mm) at the sides, 12 inches (305 mm) at the bottom and 6 inches (152 mm) above the top where the unit heater has an internal draft hood or 1 inch (25mm) above the top of the sloping side of the vertical draft hood.*

*Floor-mounted-type unit heaters shall be installed with clearances to combustible materials at the back and one side only of not less than 6 inches (152 mm). Where the flue gases are vented horizontally, the 6-inch (152 mm) clearance shall be measured from the draft hood or vent instead of the rear wall of the unit heater. Floor-mounted-type unit heaters shall not be installed on combustible floors unless listed for such installation.*

*Clearances for servicing all unit heaters shall be in accordance with the manufacturer's installation instructions.*

**Exception:** *Unit heaters listed for reduced clearance shall be permitted to be installed with such clearances in accordance with their listing and the manufacturer's instructions and as approved by the department.*

#### **SECTION FGC 621**

#### **UNVENTED ROOM HEATERS**

**621.1 General.** *The installation of unvented room heaters is prohibited.*

**621.2** *Reserved.*

**621.3** *Reserved.*

**621.4** *Reserved.*

**621.5** *Reserved.*

**621.6** *Reserved.*

**621.7** *Reserved.*

#### **SECTION FGC 622**

#### **VENTED ROOM HEATERS**

**622.1 General.** *Vented room heaters shall be tested in accordance with ANSI Z21.11.1 or ANSI Z21.86/CSA 2.32, shall be designed and equipped as specified in Section 602.2 and shall be installed in accordance with the manufacturer's installation instructions.*

## **SECTION FGC 623 COOKING APPLIANCES**

**623.1 Cooking appliances.** *Cooking appliances that are designed for permanent installation, including ranges, ovens, stoves, broilers, grills, fryers, griddles, hot plates and barbecues, shall be tested in accordance with ANSI Z21.1, ANSI Z21.58 or ANSI Z83.11 and shall be installed in accordance with the manufacturer's installation instructions.*

**623.1.1 LPG.** *Except as may be permitted by the New York City Fire Code, cooking appliances using LPG are prohibited.*

**623.2 Prohibited location.** *Cooking appliances designed, tested, listed and labeled for use in commercial occupancies shall not be installed within dwelling units or within any area where domestic cooking operations occur.*

**623.3 Domestic appliances.** *Cooking appliances installed within dwelling units and within areas where domestic cooking operations occur shall be listed and labeled as household-type appliances for domestic use.*

**623.4 Domestic range installation.** *Domestic ranges installed on combustibile floors shall be set on their own bases or legs and shall be installed with clearances of not less than that shown on the label.*

**623.5 Open-top broiler unit hoods.** *A ventilating hood shall be provided above a domestic open-top broiler unit, unless otherwise listed for forced down draft ventilation.*

**623.5.1 Clearances.** *A minimum clearance of 24 inches (610 mm) shall be maintained between the cooking top and combustibile material above the hood. The hood shall be at least as wide as the open-top broiler unit and be centered over the unit.*

**623.6 Commercial cooking appliance venting.** *Commercial cooking appliances, other than those exempted by Section 501.8, shall be vented by connecting the appliance to a vent or chimney in accordance with this code and the appliance manufacturer's instructions or the appliance shall be vented in accordance with Section 505.1.1.*

**623.7 Domestic ventilation.** *When a hood is provided for a domestic cooking appliance, the exhaust and make-up air systems shall be properly engineered and designed in accordance with Chapter 5 and the New York City Mechanical Code.*

**SECTION FGC 624**  
**WATER HEATERS**

**624.1 General.** *Water heaters shall be tested in accordance with ANSI Z 21.10.1 and ANSI Z 21.10.3 and shall be installed in accordance with the manufacturer's installation instructions. Water heaters utilizing fuels other than fuel gas shall be regulated by the New York City Mechanical Code.*

**624.1.1 Installation requirements.** *The requirements for water heaters relative to sizing, relief valves, drain pans and scald protection shall be in accordance with the New York City Plumbing Code and the following:*

- 1. No person shall install or maintain in any dwelling unit a gas fuel fired water heater unless the heater obtains combustion air directly from the outside of the building.*
- 2. No person shall install or maintain a gas fueled water heater in a room occupied for sleeping purposes, or cause or permit to be occupied for sleeping purposes any room in which a gas-fueled heater is installed.*
- 3. Each heater shall be connected to a flue or outlet pipe.*

**624.2 Water heaters utilized for space heating.** *Water heaters utilized both to supply potable hot water and provide hot water for space-heating applications shall be listed and labeled for such applications by the manufacturer and shall be installed in accordance with the manufacturer's installation instructions and the New York City Plumbing Code.*

**SECTION FGC 625**  
**REFRIGERATORS**

**625.1 General.** *Refrigerators shall be tested in accordance with ANSI Z21.19 and shall be installed in accordance with the manufacturer's installation instructions.*

*Refrigerators shall be provided with adequate clearances for ventilation at the top and back, and shall be installed in accordance with the manufacturer's instructions. If such instructions are not available, at least 2 inches (51 mm) shall be provided between the back of the refrigerator and the wall and at least 12 inches (305 mm) above the top.*

**SECTION FGC 626**

## **GAS-FIRED TOILETS**

**626.1 General.** *Gas-fired toilets are not approved for use in New York City.*

**626.2 Reserved.**

## **SECTION FGC 627**

### **AIR CONDITIONING EQUIPMENT**

**627.1 General.** *Gas-fired air-conditioning equipment shall be tested in accordance with ANSI Z21.40.1 or ANSI Z21.40.2 and shall be installed in accordance with the manufacturer's installation instructions.*

**627.2 Independent piping.** *Gas piping serving heating equipment shall be permitted to also serve cooling equipment where such heating and cooling equipment cannot be operated simultaneously (see Section 402).*

**627.3 Connection of gas engine-powered air conditioners.** *To protect against the effects of normal vibration in service, gas engines shall not be rigidly connected to the gas supply piping. Where units are powered by internal combustion engines and turbines, installation shall comply with Section 616.1.*

**627.4 Clearances for indoor installation.** *Air-conditioning equipment installed in rooms other than alcoves and closets shall be installed with clearances not less than those specified in Section 308.3 except that air-conditioning equipment listed for installation at lesser clearances than those specified in Section 308.3 shall be permitted to be installed in accordance with such listing and the manufacturer's instructions and air-conditioning equipment listed for installation at greater clearances than those specified in Section 308.3 shall be installed in accordance with such listing and the manufacturer's instructions.*

*Air-conditioning equipment installed in rooms other than alcoves and closets shall be permitted to be installed with reduced clearances to combustible material, provided that the combustible material is protected in accordance with Table 308.2.*

**627.5 Alcove and closet installation.** *Air-conditioning equipment installed in spaces such as alcoves and closets shall be specifically listed for such installation and installed in accordance with the terms of such listing. The installation clearances for air-conditioning equipment in alcoves and closets shall not be reduced by the protection methods described in Table 308.2.*

**627.6 Installation.** *Air-conditioning equipment shall be installed in accordance with the manufacturer's instructions. Unless the equipment is listed for installation on a combustible surface such as a floor or roof, or unless the surface is*

*protected in an approved manner, equipment shall be installed on a surface of noncombustible construction with noncombustible material and surface finish and with no combustible material against the underside thereof.*

**627.7 Plenums and air ducts.** *A plenum supplied as a part of the air-conditioning equipment shall be installed in accordance with the equipment manufacturer's instructions. Where a plenum is not supplied with the equipment, such plenum shall be installed in accordance with the fabrication and installation instructions provided by the plenum and equipment manufacturer. The method of connecting supply and return ducts shall facilitate proper circulation of air.*

*Where air-conditioning equipment is installed within a space separated from the spaces served by the equipment, the air circulated by the equipment shall be conveyed by ducts that are sealed to the casing of the equipment and that separate the circulating air from the combustion and ventilation air.*

**627.8 Refrigeration coils.** *A refrigeration coil shall not be installed in conjunction with a forced-air furnace where circulation of cooled air is provided by the furnace blower, unless the blower has sufficient capacity to overcome the external static resistance imposed by the duct system and cooling coil at the air throughput necessary for heating or cooling, whichever is greater. Furnaces shall not be located upstream from cooling units, unless the cooling unit is designed or equipped so as not to develop excessive temperature or pressure. Refrigeration coils shall be installed in parallel with or on the downstream side of central furnaces to avoid condensation in the heating element, unless the furnace has been specifically listed for downstream installation. With a parallel flow arrangement, the dampers or other means used to control flow of air shall be sufficiently tight to prevent any circulation of cooled air through the furnace.*

*Means shall be provided for disposal of condensate and to prevent dripping of condensate onto the heating element.*

**627.9 Cooling units used with heating boilers.** *Boilers, where used in conjunction with refrigeration systems, shall be installed so that the chilled medium is piped in parallel with the heating boiler with appropriate valves to prevent the chilled medium from entering the heating boiler. Where hot water heating boilers are connected to heating coils located in air-handling units where they might be exposed to refrigerated air circulation, such boiler piping systems shall be equipped with flow control valves or other automatic means to prevent gravity circulation of the boiler water during the cooling cycle.*

**627.10 Switches in electrical supply line.** *Means for interrupting the electrical supply to the air-conditioning equipment and to its associated cooling tower (if supplied and installed in a location remote from the air conditioner) shall be provided within sight of and not over 50 feet (15 240 mm) from the air conditioner and cooling tower.*

## **SECTION FGC 628**

## **ILLUMINATING APPLIANCES**

**628.1 General.** *Illuminating appliances shall be tested in accordance with ANSI Z21.42 and shall be installed in accordance with the manufacturer's installation instructions.*

**628.2 Mounting on buildings.** *Illuminating appliances designed for wall or ceiling mounting shall be securely attached to substantial structures in such a manner that they are not dependent on the gas piping for support.*

**628.3 Mounting on posts.** *Illuminating appliances designed for post mounting shall be securely and rigidly attached to a post. Posts shall be rigidly mounted in accordance with the requirements of the New York City Building Code. Drain openings shall be provided near the base of posts where there is a possibility of water collecting inside them.*

**628.4 Appliance pressure regulators.** *Where an appliance pressure regulator is not supplied with an illuminating appliance and the service line is not equipped with a service pressure regulator, an appliance pressure regulator shall be installed in the line to the illuminating appliance. For multiple installations, one regulator of adequate capacity shall be permitted to serve more than one illuminating appliance.*

## **SECTION FGC 629**

### **SMALL CERAMIC KILNS**

**629.1 General.** *Ceramic kilns with a maximum interior volume of 20 cubic feet (0.566 m<sup>3</sup>) and used for hobby and noncommercial purposes shall be installed in accordance with the manufacturer's installation instructions and the provisions of this code.*

## **SECTION FGC 630**

### **INFRARED RADIANT HEATERS**

**630.1 General.** *Infrared radiant heaters shall be tested in accordance with ANSI Z83.6 and shall be installed in accordance with the manufacturer's installation instructions.*

**630.2 Support.** *Infrared radiant heaters shall be safely and adequately fixed in an approved position independent of gas and electric supply lines. Hanger and brackets shall be of noncombustible material.*

## **SECTION FGC 631**

### **BOILERS**

**631.1 Standards.** *Boilers shall be listed in accordance with the requirements of ANSI Z21.13 or UL 795. If applicable,*

*the boiler shall be designed and constructed in accordance with the requirements of ASME CSD-1 and as applicable, the ASME Boiler and Pressure Vessel Code, Sections I, II, IV, V, VI and IX, NFPA 8501, NFPA 8502 and NFPA 8504. Low pressure boilers shall conform to the requirements of 12 NYCRR Part 4 and high pressure boilers shall conform to the requirements of 12 NYCRR Part 14.*

**631.2 Installation.** *In addition to the requirements of this code, the installation of boilers shall be in accordance with the manufacturer's instructions and the New York City Mechanical Code. Operating instructions of a permanent type shall be attached to the boiler. Boilers shall have all controls set, adjusted and tested by the installer. A complete control diagram together with complete boiler operating instructions shall be furnished by the installer. The manufacturer's rating data and the nameplate shall be attached to the boiler.*

**631.3 Clearance to combustible materials.** *Clearances to combustible materials shall be in accordance with Section 308.4.*

#### **SECTION FGC 632**

#### **EQUIPMENT INSTALLED IN EXISTING UNLISTED BOILERS**

**632.1 General.** *Gas equipment installed in existing unlisted boilers shall comply with Section 631.1 and shall be installed in accordance with the manufacturer's instructions and the New York City Mechanical Code.*

#### **SECTION FGC 633**

#### **FUEL CELL POWER PLANTS**

**633.1 General.** *Stationary fuel-cell power plants having a power output not exceeding 1,000 kW shall be tested in accordance with ANSI Z21.83 and shall be installed in accordance with the manufacturer's installation instructions and NFPA 853.*

#### **SECTION FGC 634**

#### **CHIMNEY DAMPER OPENING AREA**

**634.1 Free opening area of chimney dampers.** *Where an unlisted decorative appliance for installation in a vented fireplace is installed, the fireplace damper shall have a permanent free opening equal to or greater than specified in Table 634.1.*

**TABLE 634.1  
FREE OPENING AREA OF CHIMNEY DAMPER FOR VENTING FLUE GASES  
FROM UNLISTED DECORATIVE APPLIANCES FOR INSTALLATION IN VENTED FIREPLACES**

CHIMNEY HEIGHT (feet)	MINIMUM PERMANENT FREE OPENING (square inches) <sup>a</sup>						
	8	13	20	29	39	51	64
	Appliance input rating (Btu per hour)						
6	7,800	14,000	23,200	34,000	46,400	62,400	8,000
8	8,400	15,200	25,200	37,000	50,400	68,000	86,000
10	9,000	16,800	27,600	40,400	55,800	74,400	96,400
15	9,800	18,200	30,200	44,600	62,400	84,000	108,800
20	10,600	20,200	32,600	50,400	68,400	94,000	122,200
30	11,200	21,600	36,600	55,200	76,800	105,800	138,600

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm, 1 square inch = 645.16 mm<sup>2</sup>, 1 British thermal unit per hour = 0.2931 W.  
a. The first six minimum permanent free openings (8 to 51 square inches) correspond approximately to the cross-sectional areas of chimneys having diameters of 3 through 8 inches, respectively. The 64-square-inch opening corresponds to the cross-sectional area of standard 8-inch by 8-inch chimney tile.

**APPENDIX A  
RESERVED**

**APPENDIX B  
RESERVED**

**APPENDIX C  
RESERVED**

**APPENDIX D  
RESERVED**

**APPENDIX E  
METERS AND GAS SERVICE PIPING**

**E.1 General.** This appendix addresses the requirements for meters and service piping, underground or aboveground, as the piping enters the building. Service piping includes fuel gas piping, valves, and fittings upstream of the point of delivery. Service piping may include piping supplied by the gas service utility, as well as other service piping furnished by the owner serving multiple buildings on the same lot.

**E.2 Gas regulator and gas regulator vent outlets.** Gas meter piping supplying gas to a building at a pressure in excess of ½ psig (3.4 kPa gauge) shall be provided with a regulator that will reduce the pressure of the gas to ½ psig (3.4 kPa gauge) or less prior to entering the gas distribution piping in the building, except where the use of higher pressure is permitted. Where gas distribution pressure in excess of ½ psig (3.4 kPa gauge) is permitted, it shall be regulated not to exceed the maximum pressure level as permitted by the code or the commissioner.

**E.2.1** Inside gas meter piping operating at a pressure in excess of 15 psig (103 kPa gauge) shall comply with the following:

1. Where such piping is greater than 4 inches (102 mm) in diameter, the meter piping shall be installed in a properly ventilated meter room of 3-hour fire rated construction.
2. The maximum distance from the service line valve to the regulator shall be limited as follows:

<b>SERVICE LINE VALVE SIZE</b>	<b>MAXIMUM DISTANCE (LINEAR FEET OF PIPE)</b>
Up through 2 inch (51 mm) pipe size	4 feet (1219 mm)

<i>Over 2 inch (51 mm) through 4 inch (102 mm) pipe size</i>	<i>8 feet (2438 mm)</i>
<i>Over 4 inch (102 mm) through 8 inch (203 mm) pipe size</i>	<i>15 feet (4572 mm)</i>
<i>10 inch (254 mm) pipe size and larger</i>	<i>20 feet (6096 mm)</i>

3. *Where these maximum distances cannot be met, the following shall be required:*

<b><i>FOOTAGE (LINEAR FEET OF PIPE) IN EXCESS OF ABOVE REQUIREMENTS</i></b>	<b><i>ADDITIONAL REQUIREMENTS</i></b>
<i>Up to 5 feet (1534 mm)</i>	<i>The meter room shall have 3 hour fire-rating construction and adequate ventilation</i>
<i>Over 5 feet (1524 mm) through 10 feet (3048 mm)</i>	<i>Above requirements plus a combustible gas-detection alarm system</i>
<i>Over 10 (3048 mm) feet through 15 feet (4572 mm)</i>	<i>Above requirements plus special inspection by the customer or his representative as required by the New York City Building Code.</i>
<i>Over 15 feet (4572 mm) through 20 feet (6096 mm)</i>	<i>Above requirements plus explosion venting per NFPA 68 and NFPA 69 or alternative ventilation acceptable to the commissioner and automatic gas shutoff devices</i>
<i>Over 20 feet (6096 mm)</i>	<i>Above requirements plus suitable fire protection approved by the commissioner</i>

*For new gas installations made in existing structures, the above requirements shall be used to the extent feasible. Alternate designs may be considered by the commissioner.*

**E.2.2** *When located inside the building, each regulator shall be provided with a vent pipe that leads directly to the outdoor air. The vent pipe shall be sized according to local utility requirements. The vent outlet shall not be located under a window or any opening leading back into the premises or located below any overhang or projection. No gas regulator vent outlet shall be covered over, plugged up, or otherwise obstructed, and all gas vents shall be identified by suitable marking on the outlet on the outside of the building.*

**E.2.3** *Gas appliance pressure regulators requiring access to the atmosphere for successful operation shall be equipped with vent leading to the outdoors, unless constructed or equipped with a vent limiting means to limit the escape of gas from the vent opening in the event of diaphragm failure.*

**E.3 Gas meter location.** *Gas meter location shall comply with the following:*

1. *When located inside the building, meters shall be located as near as practicable to the point of entrance of the service and, where possible, the meters shall be located in the cellar or basement unless otherwise permitted by the commissioner. The meter location shall be clean, dry, and free of refuse, steam or chemical fumes. Meters shall be adequately protected against extreme cold or heat and shall be readily accessible for reading and inspection. The area in which the meter is located shall be properly ventilated as per Section E.4. Notwithstanding the foregoing, outside meter installation shall be permitted in areas where the utility company certifies that dry gas is being distributed.*
2. *In a multiple dwelling, no gas meter, other than the replacement of an existing meter shall be located in any boiler room or other room or space containing a heating boiler, in any stair hall, nor in any public hall above the cellar or above the lowest story if there is no cellar. However, in any multiple dwelling where there is an existing gas meter located in any boiler room or other room or space containing a heating boiler, one additional gas meter may be installed in such room or space, provided such additional gas meter is installed adjacent to the existing gas meter and is used in conjunction with the supply of gas for a gas-fired heating boiler or a gas-fired water heater used as a central source of supply of heat or hot water for the tenants residing in such multiple dwelling. Such additional gas meter may be installed only upon the condition that space heaters or hot water appliances in the dwelling units are eliminated.*
3. *Gas meter rooms, when provided, shall at all times be kept clear of all rubbish; and shall not be used in any way for storage purposes, including material or equipment of any kind. A legible sign reading "Gas meter room-No storage permitted" shall be permanently and conspicuously posted on the exterior of the meter room door, except that the sign may be posted on the interior of the meter room door in occupancy group R-3. The lettering of such signs shall be of bold type at least one inch in height and shall be properly spaced to provide good legibility. The lettering and background shall be of contrasting colors. Where gas meters and related equipment are not located in a separate room but are located in an open floor area, no combustible material shall be stored or kept within five feet of such equipment; nor shall the gas meter be within 3 feet (914 mm) of any heating boiler or sources of ignition and, except occupancy group R-3, there shall be a physical barrier required if the room is also used for storage purposes or the like.*
4. *The installation of gas meter piping shall be made in accordance with the requirements of this code and the local utility company.*
5. *Piping containing gas with a pressure exceeding ½ psig (3.4 kPa gauge) and the gas service pressure regulator which may be subjected to accidental vehicular impact shall be suitably protected.*

**E.4 Gas meter room ventilation.** Any one of the following methods shall be considered sufficient to provide proper ventilation to a room or space in which a gas meter(s) is installed:

1. *An opening to the outside air in the wall of such room or space, provided the free area of the opening is not less than 30 square inches (19 321 mm<sup>2</sup>).*
2. *A duct having a cross-section area of at least 50 square inches (32 522 mm<sup>2</sup>) of free area and a maximum length of 15 feet (4572 mm) leading to the outside air. If a longer duct is required due to the building construction, the area of the duct should be increased accordingly, subject to the approval of the commissioner. However, under no circumstances shall the means of ventilation for the gas meter room or space be from an adjoining room or space within the building.*

*The above requirement is not applicable to one- and two-family dwellings, since the gas meter is available for continuous supervision.*

***E.5 Gas service piping connections.*** *Gas service piping connections shall comply with the following:*

1. *Gas service piping shall be fitted with a gas service line valve, the valve located on the supply side of the meter and service regulator, if a service regulator is required. If a plug type valve is used, it shall be constructed so as to prevent the core from being blown out by the pressure of the gas. In addition, it shall be of a type capable of being locked in the off position by the local gas utility. When the gas service line valve is inside the building, it shall be in an accessible location within 2 feet (610 mm) of the point where the gas service connection enters the building or at such other location as may be permitted by the commissioner. Where the gas service connection is installed through a building wall below ground, it shall be protected with a wall sleeve extending at least 4 inches (102 mm) beyond the outer side of the wall and at least 1 inch (25 mm) beyond the inner side of the wall. The sleeve shall be sealed at both ends to prevent the entry of water and gas. Gas service connections, installed through ground slab construction, shall be protected with a floor sleeve sealed at both ends to prevent the entry of water and gas. The sleeve shall extend at least 4 inches (102 mm) above the floor, and shall be installed as specified by the utility company providing the service. It shall terminate at least 4 inches (102 mm) outside the building.*
2. *In all high-pressure areas, the utility company providing the service may inspect the gas service line valve and regulator in accordance with the provisions of 16 NYCRR Part 255 in addition to the department in accordance with Section 406 of this code.*
3. *No gas service shall enter a structure at a horizontal distance of less than 10 feet (3048 mm) from the cellar termination of a stairway, nor shall any gas meters or gas regulators be located less than 10 feet (3048 mm) from such stairway termination. Where such services, meters and regulators are separated from the stairway termination by a permanent partition or wall having a fire-resistance rating of at least 1 hour, the foregoing*

*shall not apply. Unless forbidden by other provisions of this code, locations under a stairway are exempt from this requirement.*

4. *When the structure is erected on fill or on piles, provision shall be made to preclude possible damage to the gas service piping caused by settlement.*
5. *The installation of gas service piping shall be made in accordance with the requirements of the utility corporation providing the service as regulated by the provisions of 16 NYCRR Part 255. Further, such installation shall meet the requirements of the department.*
6. *Gas service piping outside a structure shall be installed not less than 24 inches (610 mm) below grade, except that a lesser distance of not less than 18 inches (457 mm) may be permitted, provided the piping is adequately protected in accordance with the requirements of this code and the utility corporation supplying service, and the piping is not located below a driveway. Any piping that is exposed to outdoor temperatures or installed underground with a cover of less than 2 feet (610 mm) shall be protected against frost, except that frost protection may be omitted in areas where the utility company certifies that dry gas is being distributed.*

**E.6 Outside gas cut-off.** *Outside gas cut-off shall comply with the following:*

1. *An outside gas service line valve or other outside emergency shut-off device or other means acceptable to the commissioner and the Fire Commissioner shall be installed in every gas service pipe outside the building. If buried, such valve, device or method shall be readily accessible from grade. Every existing service which is being replaced or refurbished shall be provided with such valve, device or means, but in any event, all existing gas services shall be provided with such valve, device or method by January 1, 2010. However, in R-3 occupancy the completion date shall be January 1, 2020. The utility company shall provide the Fire Department with suitable tools for operation of such emergency shut-off valves, devices or means. The number of such tools required for supplying Fire Department units shall be determined by the Fire Department. On or before January 31, of each year, the utility company shall report to the department and the Fire Department the actual number of emergency shut-off valves installed for the preceding year.*
2. *If the outside gas service line valve, emergency shut-off device or means is located below ground, it shall be installed in a protective housing, and a cover, easily identifiable shall be provided for the housing. The cover shall be flush with the surface of the ground and kept clear at all times so as to be accessible for immediate use.*

3. *The valve or emergency shut-off device shall be capable of being readily operated by removing the cover of the housing and inserting a portable key or other device over the operating end of the valve or emergency shut-off device.*
4. *If the outside gas service line valve is located above ground, it shall be suitably protected to prevent accidental vehicular impact and must be installed in accordance with provisions of 16 NYCRR Part 255.*
5. *Where a gas-fired generator provides required emergency power in accordance with the New York City Building Code such generator shall have an outside gas cut-off valve that is separate from other gas services to the buildings. Such valves shall be identified by signage.*

**APPENDIX F**  
**PLASTIC FUEL GAS PIPING**

***F.1 General.*** *This appendix addresses and regulates the application of plastic piping for outdoor underground service. The plastic piping may be utilized for outdoor direct burial application.*

***F.2 Plastic piping design requirements.*** *Plastic piping, either insert or direct burial, may be installed subject to the following restrictions:*

1. *Wherever plastic insert piping is used, the existing piping shall act as a mechanical protection between the plastic piping and the surrounding environment. The gas pipe shall be prepared to the extent necessary to remove any sharp edges, projections, or abrasive material which could damage the plastic during and after insertion. Plastic piping shall be inserted into the casing pipe in such a manner as to protect the plastic during the installation. The leading end of the plastic shall be closed before insertion. Care shall be taken to prevent piping from bearing on the end of the casing.*
2. *Persons engaged in the installation of the plastic piping shall be formally trained, qualified, and certified by the serving utility company.*
3. *Plastic piping shall not extend more than 3 inches (76 mm) beyond the inner face of the building wall, and shall not be exposed inside the building. Plastic piping may extend into the building a maximum of 1 foot (305 mm) horizontally and 4 feet (1219 mm) vertically immediately adjacent to the inner face of the building wall when encased in a metallic sleeve and constructed and vented so that uncontrolled gas cannot escape from the metallic sleeve inside the building.*

4. *Joints shall only be either mechanical or heat fusion joints. Each plastic pipe fusion joint must be made in accordance with written procedures that have been proven by destructive burst test to produce joints at least as strong as the pipe being joined.*
  - 4.1. *When plastic pipe or fittings of different material specifications are joined together by heat fusion, a thorough investigation shall be made to determine that the materials are compatible for joining purposes. The joining method used must be compatible with the materials being joined. The recommendations of the manufacturer shall be considered when determining the method to be used.*
  - 4.2. *When compression type mechanical joints are used, the gasket material in the coupling must be compatible with the plastic. An internal tubular rigid stiffener shall be used in conjunction with the coupling. The tubular stiffener shall reinforce the end of the pipe and shall extend at least to the outside end of the compression fitting when installed. The stiffener shall be free of rough or sharp edges and shall not be a force fit in the plastic. A split tubular stiffener shall not be used.*
5. *Changes in direction with plastic piping may be made with bends, elbows and tees. Bends shall be free of buckles, cracks, or other evidence of damage. No miter joints are permitted. The pipe may be bent or deflected provided the radius shall not be less than the minimum recommended by the manufacturer.*
6. *The minimum allowable wall thickness for plastic pipe shall be 0.09 inches (2 mm).*
7. *Plastic pipe shall be laid, and continuously supported, on undisturbed or well-compacted soil to minimize shear stresses. Backfill material for at least 4 inches (102 mm) over the plastic pipe shall be free from large rocks or sharp objects. The trench shall be backfilled to a height of 12 inches (305 mm) above the pipe in 6-inch (152 mm) lifts which shall be hand compacted. The remaining trench shall be backfilled in 12-inch (305 mm) lifts.*
8. *An electrically continuous corrosion-resistant tracer wire (minimum AWG 14) or tape shall be buried with the plastic pipe to facilitate locating the buried gas pipe. The tracer wire or tape shall be yellow in color. One end of the tracer wire shall be brought aboveground at a building wall or riser for easy identification.*
9. *Slack for thermal expansion and contraction or for external loading on direct-buried plastic services shall be provided by snaking the pipe from one side of the trench to the other. Where plastic piping is inserted for a distance of 50 feet (15 240 mm) or more allowances shall be made at the end connections to prevent pull out caused by thermal or by external loading.*
10. *External sleeves shall be used on plastic service lines at main connections to minimize shear stresses.*

11. *Plastic pipe shall not be installed in areas where it may be exposed to temperatures below 20°F (-7°C) or above 140°F (60°C). Plastic pipe shall not be installed within 35 feet (10 688 mm) of an underground steam facility, nor in any vault in which a steam facility is located.*
12. *The specific plastic pipe or fitting to be used shall be thoroughly investigated by the user and material serviceability determined for the conditions anticipated. The selected material shall be adequately resistant to the liquids and the chemical atmosphere which may be encountered. Care shall be exercised at all times to protect plastic material from fire, excessive heat, or harmful chemicals.*
13. *The design pressure is not to exceed 100 psig (690 kPa gauge) for plastic gas service piping.*
14. *The design pressure for plastic gas service piping or the nominal wall thicknesses for a given design pressure shall be determined by one of the following equations:*

$$\frac{P}{R-1} = 2S \times F \quad \text{(Equation F-1)}$$

$$\frac{P}{(D-t)} = 2S \times F \quad \text{(Equation F-2)}$$

where:

*D* = Specified outside diameter, inches

*P* = Design pressure, psi

*S* = Long term hydrostatic strength, psi (Determined in accordance with ASTM D2513)

*t* = Specified wall thickness, inches

*F* = Plastic design factor = .32

*R* = Standard dimension ratio

***F.3 Inspection and handling provisions.*** Plastic piping components are susceptible to damage by mishandling. Gouges, cuts, kinks, or other forms of damage may cause failure. Injurious gouges or grooves shall be removed by cutting out the damaged portion as a cylinder and replacing it with a good piece. Care shall be exercised during handling and installation to prevent such damage. The serving utility shall inspect plastic piping and its components to ensure the absence of imperfections in materials, to ensure sound joints are made, and to ensure conformance with applicable state regulations.

***F.4 Plastic pipe sizing.*** Tables F.4.1, F.4.2 and F.4.3 shall be used to size polyethylene plastic pipes for various inlet pressures and design pressure drops for plastic piping systems.

**TABLE F.4.1  
POLYETHYLENE PLASTIC PIPE**

<b>Gas</b>	<i>Natural</i>

§17. Title 28 of the administrative code of the city of New York is amended by adding a new chapter 8 to read as follows:

**CHAPTER 8**

**THE NEW YORK CITY MECHANICAL CODE**

**ARTICLE 801**

**ENACTMENT AND UPDATE OF THE NEW YORK CITY MECHANICAL CODE**

*§28-801.1 Update. No later than the third year after the effective date of this section 28-801.1 and every third year thereafter, the commissioner shall submit to the city council proposed amendments that he or she determines should be made to this code to bring it up to date with the latest edition of the International Mechanical Code or otherwise modify the provisions thereof. In addition, prior to the submission of such proposal to the city council, such proposal shall be submitted to an advisory committee established by the commissioner pursuant to this title for review and comment.*

*§28-801.2 Enactment of the New York city mechanical code. The New York city mechanical code based on the 2003 edition of the International Mechanical Code published by the International Code Council, with changes that reflect the unique character of the city, is hereby adopted to read as follows:*

**THE NEW YORK CITY MECHANICAL CODE**

**CHAPTER 1  
ADMINISTRATION**

**SECTION MC 101  
GENERAL**

**101.1 Title.** *This code shall be known and may be cited as the “New York City Mechanical Code,” “NYCMC” or “MC”. All section numbers in this code shall be deemed to be preceded by the designation “MC”.*

**101.2 Scope.** *This code shall regulate the design, installation, maintenance, alteration and inspection of mechanical systems that are permanently installed and utilized to provide control of environmental conditions and related processes within buildings. This code shall also regulate those mechanical systems, system components, equipment and appliances specifically addressed herein. The installation of fuel gas distribution piping and equipment, fuel gas-fired appliances and fuel gas-fired appliance venting systems shall be regulated by the New York City Fuel Gas Code.*

**101.3 Intent.** *The purpose of this code is to provide minimum standards to safeguard life or limb, health, property and public welfare by regulating and controlling the design, construction, installation, quality of materials, location, operation and maintenance or use of mechanical systems.*

**101.4 Severability.** *If a section, subsection, sentence, clause or phrase of this code is, for any reason, held to be unconstitutional, such decision shall not affect the validity of the remaining portions of this code.*

**SECTION MC 102  
APPLICABILITY**

**102.1 General.** *The provisions of this code shall apply to all matters affecting or relating to structures and premises, as set forth in Section 101. Where, in a specific case, different sections of this code specify different materials, methods of construction or other requirements, the most restrictive shall govern.*

**102.2 Existing installations.** *Except as otherwise provided for in this chapter or elsewhere in this code, a provision in this code shall not require the removal, alteration or abandonment of, nor prevent the continued utilization and maintenance of, a mechanical system lawfully in existence on the effective date of*

*this code.*

**102.3 Maintenance.** *Mechanical systems, both existing and new, and parts thereof shall be maintained in proper operating condition in accordance with the original design and in a safe and sanitary condition. Devices or safeguards that are required by this code shall be maintained in compliance with the applicable provisions under which they were installed. The owner shall be responsible for maintenance of mechanical systems. To determine compliance with this provision, the commissioner shall have the authority to require existing mechanical systems to be inspected.*

**102.4 Additions, alterations or repairs.** *Additions, alterations, renovations or repairs to a mechanical system shall conform to requirements for a new mechanical system without requiring the existing mechanical system to comply with all of the requirements of this code. Additions, alterations or repairs shall not cause an existing mechanical system to become unsafe, hazardous or overloaded. Minor additions, alterations, renovations and repairs to existing mechanical systems shall meet the provisions for new construction, unless such work is done in the same manner and arrangement as was in the existing system, is not hazardous and is approved.*

**102.5 Change in occupancy.** *Refer to Chapter 1 of Title 28 of the Administrative Code.*

**102.6 Reserved.**

**102.7 Reserved.**

**102.8 Referenced standards.** *The standards referenced herein shall be those that are listed in Chapter 15 and in the rules of the department and such standards shall be considered as part of the requirements of this code to the prescribed extent of each such reference. Where differences occur between provisions of this code and the referenced standards, the provisions of this code shall apply. Refer to Article 103 of Chapter 1 of Title 28 of the Administrative Code for additional provisions relating to referenced standards.*

**102.9 Requirements not covered by this code.** *Requirements necessary for the strength, stability or proper operation of an existing or proposed mechanical system, or for the public safety, health and general welfare, not specifically covered by this code, shall be determined by the commissioner.*

**SECTION MC 103  
DEPARTMENT OF BUILDINGS**

*103.1 General. Refer to the New York City Charter and Chapter 1 of Title 28 of the Administrative Code.*

#### **SECTION MC 104**

#### **DUTIES AND POWERS OF THE COMMISSIONER OF BUILDINGS**

*104.1 General. The commissioner shall have the authority to render interpretations and to adopt rules establishing policies, and procedures to clarify and implement the provisions of this code. Such interpretations and rules shall be in compliance with the intent and purpose of this code. Refer to the New York City Charter and Chapter 1 of Title 28 of the Administrative Code for additional provisions relating to the authority of the Commissioner of Buildings.*

#### **SECTION MC 105**

#### **PERMITS**

*105.1 General. Permits shall comply with this section, with Article 105 of Chapter 1 of Title 28 of the Administrative Code, and with requirements found elsewhere in this code.*

***105.2 Required.** Any owner or authorized agent who intends to construct, add to, alter, repair, move, demolish, or change the occupancy of a building or structure, or to erect, install, add to, alter, repair, remove, convert or replace any gas, mechanical or plumbing system, the installation of which is regulated by this code, or to cause any such work to be done, shall first make application for construction document approval in accordance with Chapter 1 of Title 28 of the Administrative Code and this chapter and obtain the required permit.*

***105.3 Work exempt from permit.** Exemptions from permit requirements of this code as authorized in Chapter 1 of Title 28 of the Administrative Code and the rules of the department shall not be deemed to grant authorization for any work to be done in any manner in violation of the provisions of this code or any other laws or rules.*

***105.4 Validity of permit.** The issuance or granting of a permit shall not be construed to be a permit for, or an approval of, any violation of any of the provisions of this code or of any other law. Permits presuming to give authority to violate or cancel the provisions of this code or other law shall not be valid. The issuance of a permit based on construction documents and other data shall not prevent the commissioner from requiring the correction of errors in the construction documents and other data. The commissioner is also authorized to prevent occupancy or use of a structure where in violation of this code or of any other law.*

**SECTION MC 106**  
**CONSTRUCTION DOCUMENTS**

**106.1 General.** *Construction documents shall comply with Article 104 of Chapter 1 of title 28 of the Administrative Code and other applicable provisions of this code and its referenced standards. Such construction documents shall be coordinated with architectural, structural and means of egress plans.*

**106.2 Required documents.** *The applicant shall submit all of the documents specified in Sections 106.3 through 106.10 as appropriate to the nature and extent of the work proposed. Construction documents shall indicate the heating, ventilation, refrigeration, and other mechanical work to be performed, so drawn as to conform to the architectural and structural aspects of the building and to show in detail compliance with this code.*

**106.2.1 Composite plans.** *Composite plans showing compliance of architectural, structural, and mechanical parts of a building may be submitted provided that a clear understanding of each part is not impaired.*

**106.3 Lot diagram.** *The lot diagram shall be provided where applicable to the work proposed, including but not limited to the installation of exterior or rooftop equipment.*

**106.4 Building classification statement.** *Where applicable to the proposed work, the statement shall identify:*

- 1. The occupancy group or groups that apply to parts of the building in accordance with Section 302 of the New York City Building Code;*
- 2. The occupancy group of the main use or dominant occupancy of the building in accordance with Section 302.1 of the New York City Building Code;*
- 3. The construction class of the building in accordance with Section 602 of the New York City Building Code;*
- 4. The structure category in accordance with Table 1604.5 of the New York City Building Code;*
- 5. The height of the building as defined in Section 502.1 of the New York City Building Code;*

6. *The applicable measurements to the highest and lowest level of fire department access; and*

7. *Whether the building is inside or outside of the fire districts.*

**106.5 Fuel-burning and fuel-oil storage equipment plans.** *Construction documents for fuel-burning and fuel oil storage equipment shall contain plans that include the following data and information:*

1. *Diagrams of all distribution piping, including vent and fill piping for oil systems, and all safety cut-off and relief devices and valves in piping; indications of the sizes of distribution piping to be used and the fire resistive ratings of the shafts or spaces containing distribution piping where required to be fire rated.*
2. *Diagrammatic floor plans showing the size, location, material for all fuel oil and transfer distribution piping and related equipment.*
3. *Floor plans or partial floor plans showing the location, layout, size, and listing information for all fuel-burning equipment, tanks, vents, and chimneys. The plans shall also indicate the method or means of providing air to the equipment space, including duct and opening sizes.*
4. *Plans indicating the location and type of any relevant smoke and heat detectors, alarm, and fire extinguishing systems.*
5. *Seismic protection and restraint details for piping and equipment as required by Chapter 16 of the New York City Building Code.*
6. *Details indicating the location, size and materials for all breechings; the thickness and type of insulation materials; and the clearances from combustible walls, partitions, and ceiling; and the fire-resistive ratings of rooms and spaces containing the equipment.*
7. *Details describing the type, material, listing information, height, and termination distances to adjacent properties and structures for chimneys and vents.*
8. *Details showing structural supports for fuel-burning equipment where required.*
9. *A statement as to the kind or grade of fuel to be used.*

10. *Plans indicating the location, arrangement, size, load, and maximum capacity of the burning, storage and fuel-pumping equipment.*

11. *In areas of special flood hazards, construction documents shall comply with Appendix G of the New York City Building Code.*

**106.6 Heating systems.** *Construction documents for heating systems shall include the temperature to be maintained in every room and the output capacity in BTU per hour of the central heating source.*

**106.7 Boilers.** *Construction documents for boiler installations shall indicate the output capacity in BTU per hour, the operating weight of each boiler, the pressure setting of the relief valves, and such other data and information as required by this code.*

**106.8 Air conditioning and ventilating systems.** *Construction documents for air conditioning and ventilating systems shall contain plans that include the following data and information:*

1. *The location and sizes of all ducts; the location of all fire and smoke dampers, motors, fans, and filters; the type, air capacity, and size of all equipment; and where not shown on accompanying structural plans, the operating weight and manner of support of equipment.*
2. *The locations of smoke detecting devices.*
3. *The location and size of the fresh air intake, the design population, and the required ventilation for each room or space.*
4. *The amount of air to be exhausted or supplied from each outlet for each room or space.*
5. *In the case of ventilating or exhaust systems for ranges, fryers, ovens, and other similar types of restaurant or bakery equipment, for which a hood is required, the plans shall also show the type of extinguishing system, the location of heat detection devices, nozzles, piping, gas controls, manual and automatic control valves, method of joining ducts, method and location of discharging exhaust from building, the location of break-glass controls, and the quantity in cfm designed for each hood.*

**106.9 Refrigerating systems.** *Construction documents for refrigerating systems shall contain plans that include the following data and information:*

1. *The location of all machinery; the horsepower of compressors; the type and number of pounds of refrigerant to be used; and the air quantities for, and means of, ventilating the machinery space.*
2. *The location of emergency switches for compressors and for ventilation in the machinery rooms.*
3. *The location of pressure relief piping and any city water connections and water-saving devices.*
4. *The tonnage capacity of the machine and the suction and discharge pressures at which the machine is rated.*
5. *The operating weight of the equipment.*
6. *The class of refrigerant utilized.*

**106.10 Energy efficiency.** *Construction documents shall include a statement by the registered design professional of record that: “To the best of my knowledge, belief and professional judgment, these plans and specifications are in compliance with the Energy Conservation Construction Code of New York State.” In addition, the following requirements shall apply:*

1. *A lead energy professional shall be identified for each project, who shall draw the relevant information regarding envelope, mechanical systems, service water heating system and lighting and power systems from construction documents into an energy analysis. The energy analysis shall balance total energy consumption of all systems in accordance with the Energy Conservation Construction Code of New York State and shall be signed and sealed by the lead energy professional.*
2. *The format for the energy analysis shall be as established in the Energy Conservation Construction Code of New York State, or as approved by the department, and shall comprise a sheet within the drawing set. Supporting documentation shall be available within the drawing set or upon request of the department.*

#### **SECTION MC 107**

## **INSPECTIONS AND TESTING**

**107.1 General.** *Except as otherwise specifically provided, inspections required by this code or by the department during the progress of work may be performed on behalf of the owner by approved agencies or, if applicable, by special inspectors. However, in the interest of public safety, the commissioner may direct that any of such inspections be performed by the department. All inspections shall be performed at the sole cost and expense of the owner. Refer to Article 116 of Chapter 1 of Title 28 of the Administrative Code for additional provisions relating to inspections. In addition to any inspections otherwise required by this code or applicable rules, the following inspections shall be required:*

*1. Progress inspections:*

*1.1. Underground inspection shall be made after trenches or ditches are excavated and bedded, piping installed, and before backfill is put in place. When excavated soil contains rocks, broken concrete, frozen chunks and other rubble that would damage or break the piping or cause corrosive action, clean backfill shall be on the job site.*

***Exception:** Ground-source heat pump loop systems tested in accordance with Section 1208.1.1 shall be permitted to be backfilled prior to inspection.*

*1.2. Rough-in inspection shall be made after the roof, framing, fireblocking and bracing are in place and all ducting and other components to be concealed are complete, and prior to the installation of wall or ceiling membranes.*

*2. Special inspections. Special inspections shall be performed in accordance with this code and Chapter 17 of the New York City Building Code.*

*3. Final inspection. Refer to Article 116 of Chapter 1 of Title 28 of the Administrative Code.*

*4. Issuance of Certificate of Compliance. Upon satisfactory inspection of service equipment and the satisfaction of all the requirements for sign-off, the department shall issue a certificate of compliance as applicable for the following service equipment:*

*4.1. Air-conditioning and ventilation systems*

*4.2. Fuel-burning and fuel-oil storage equipment, including generators,*

4.3. Refrigeration systems,

4.4. Heating systems, and

4.5. Boilers.

*The requirements of Section 107.1 shall not be considered to prohibit the operation of any heating equipment or appliances installed to replace existing heating equipment or appliances serving an occupied portion of a structure provided that a request for inspection of such heating equipment or appliances has been filed with the department not more than 48 hours after such replacement work is completed, and before any portion of such equipment or appliances is concealed by any permanent portion of the structure.*

**107.1.1 Approved inspection agencies.** *Refer to Articles 114 and 115 of Chapter 1 of Title 28 of the Administrative Code.*

**107.1.2 Inspection of prefabricated construction assemblies.** *Prior to the approval of a prefabricated construction assembly having concealed mechanical work and the issuance of a permit, the department shall require the submittal of an evaluation report by an approved agency on each prefabricated construction assembly, indicating the complete details of the mechanical system, including a description of the system and its components, the basis upon which the system is being evaluated, test results and similar information, and other data as necessary for the commissioner to determine conformance to this code.*

**107.1.2.1 Test and inspection records.** *Required test and inspection records shall be available to the commissioner at all times during the fabrication of the mechanical system and the erection of the building; or such records as the commissioner designates shall be filed.*

**107.2 Testing.** *Mechanical systems shall be tested as required in this code and in accordance with Sections 107.2.1 through 107.2.3. Tests shall be made by the permit holder and witnessed by the department or an approved agency.*

**107.2.1 New, altered, extended or repaired systems.** *New mechanical systems and parts of existing systems, that have been altered, extended, renovated or repaired, shall be tested as prescribed herein to disclose leaks and defects.*

**107.2.2 Apparatus, material and labor for tests.** Apparatus, material and labor required for testing a mechanical system or part thereof shall be furnished by the permit holder.

**107.2.3 Reinspection and testing.** Where any work or installation does not pass an initial test or inspection, the necessary corrections shall be made so as to achieve compliance with this code. The work or installation shall then be resubmitted to the department for inspection and testing.

**107.3 Sign-off of completed work.** Refer to Article 116 of Chapter 1 of Title 28 of the Administrative Code.

**107.4 Temporary connection.** The commissioner shall have the authority to authorize the temporary connection of a mechanical system to the sources of energy for the purpose of testing mechanical systems or for use under a temporary certificate of occupancy.

## **SECTION MC 108 VIOLATIONS**

**108.1 General.** Refer to Chapters 2 and 3 of Title 28 of the Administrative Code.

## **CHAPTER 2 DEFINITIONS**

### **SECTION MC 201 GENERAL**

**201.1 Scope.** Unless otherwise expressly stated, the following words and terms shall, for the purposes of this code, have the meanings indicated in this chapter.

**201.2 Interchangeability.** Words used in the present tense include the future; words in the masculine gender include the feminine and neuter; the singular number includes the plural and the plural, the singular.

**201.3 Terms defined in other codes.** Where terms are not defined in this code and are defined in the New York City Building Code, the New York City Electrical Code, the New York City Fire Code, the New York City Fuel Gas Code or the New York City Plumbing Code, such terms shall have meanings ascribed to them as in those codes.

**201.4 Terms not defined.** Where terms are not defined through the methods authorized by this section, such terms shall have ordinarily accepted meanings such as the context implies.

**SECTION MC 202**  
**GENERAL DEFINITIONS**

**ABRASIVE MATERIALS.** Moderately abrasive particulate in high concentrations, and highly abrasive particulate in moderate and high concentrations, such as alumina, bauxite, iron silicate, sand and slag.

**ABSORPTION SYSTEM.** A refrigerating system in which refrigerant is pressurized by pumping a chemical solution of refrigerant in absorbent, and then separated by the addition of heat in a generator, condensed (to reject heat), expanded, evaporated (to provide refrigeration), and reabsorbed in an absorber to repeat the cycle; the system may be single or multiple effect, the latter using multiple stages or internally cascaded use of heat to improve efficiency.

**ACCESS (TO).** That which enables a device, appliance or equipment to be reached by ready access or by a means that first requires the removal or movement of a panel, door or similar obstruction [see also "Ready access (to)"].

**AIR.** All air supplied to mechanical equipment and appliances for combustion, ventilation, cooling, etc. Standard air is air at standard temperature and pressure, namely, 70°F (21°C) and 29.92 inches of mercury (101.3 kPa).

**AIR CONDITIONING.** The treatment of air so as to control simultaneously the temperature, humidity, cleanness and distribution of the air to meet the requirements of a conditioned space.

**AIR-CONDITIONING SYSTEM.** A system that consists of heat exchangers, blowers, filters, supply, exhaust and return ducts, and shall include any apparatus installed in connection therewith.

**AIR DISTRIBUTION SYSTEM.** Any system of ducts, plenums and air-handling equipment that circulates air within a space or spaces and includes systems made up of one or more air-handling units.

**AIR, EXHAUST.** Air being removed from any space, appliance or piece of equipment and conveyed directly to the atmosphere by means of openings or ducts.

**AIR, INTAKE.** Air supplied from the outdoors to any space, appliance or piece of equipment.

**AIR, RELIEF.** Air removed from any space, appliance or piece of equipment.

**AIR-HANDLING UNIT.** A blower or fan used for the purpose of distributing supply air to a room, space or area.

**AIR, MAKEUP.** Air that is provided to replace air being exhausted.

**AIR TRANSFER OPENING.** An opening designed to allow the movement of environmental air between two contiguous spaces.

**ALTERATION.** Any construction, addition, change of use or occupancy, or renovation to a building or structure in existence. See Section 28-101.5 of the Administrative Code.

**APPLIANCE.** A device or apparatus that is manufactured and designed to utilize energy and for which this code provides specific requirements.

**APPLIANCE, EXISTING.** Any appliance regulated by this code which was legally installed prior to the effective date of this code, or for which a permit to install has been issued.

**APPLIANCE, FUEL-FIRED.** An appliance that burns solid, liquid and/or gaseous fuel, including but not limited to wood stoves, household cooking ranges, furnaces, boilers, water heaters, clothes dryers and gas-fired refrigerators.

**APPLIANCE, GAS (EQUIPMENT).** Any apparatus or equipment that uses gas as a fuel or raw material to produce light, heat, power, refrigeration or air conditioning.

**APPLIANCE TYPE.**

**High-heat appliance.** Any appliance in which the products of combustion at the point of entrance to the flue under normal operating conditions have a temperature greater than 2,000°F (1093°C).

**Low-heat appliance (residential appliance).** Any appliance in which the products of combustion at the point of entrance to the flue under normal operating conditions have a temperature of 1,000°F (538°C) or less.

**Medium-heat appliance.** Any appliance in which the products of combustion at the point of entrance to the flue under normal operating conditions have a temperature of more than 1,000°F (538°C), but not greater than 2,000°F (1093°C).

**APPLIANCE, VENTED.** An appliance designed and installed in such a manner that all of the products of combustion are conveyed directly from the appliance to the outside atmosphere through an approved chimney or vent system.

**APPROVED.** Acceptable to the commissioner. In reference to construction documents, the determination by the department after full examination that submitted construction documents comply with this code and other applicable laws and rules. In reference to materials, the determination by the commissioner that material is acceptable for its intended use. See Section 28-101.5 of the Administrative Code.

**APPROVED AGENCY.** An established and recognized agency, or other qualified person, regularly engaged in conducting tests or furnishing inspection services, when approved pursuant to department rules as qualified to perform or witness identified testing or inspection services. See Chapter 1 of Title 28 of the Administrative Code.

**APPROVED INSPECTION AGENCY.** An approved agency that is approved by the department as qualified to perform one or more of the inspections required by this code. See Chapter 1 of Title 28 of the Administrative Code.

**APPROVED TESTING AGENCY.** An approved agency that is approved by the department as qualified to test and evaluate the performance of one or more of the materials regulated in their use by this code. Such term shall include, when approved pursuant to department rules, a third party testing or certification agency, evaluation agency, testing laboratory, testing service or other entity concerned with product evaluation. See Chapter 1 of Title 28 of the Administrative Code.

**ARCHITECT.** A person licensed and registered to practice the profession of architecture under the Education Law of the state of New York.

**AUTOMATIC BOILER.** Any class of boiler that is equipped with the controls and limit devices specified in Chapter 10.

**BATHROOM.** A room containing a bathtub, shower, spa or similar bathing fixture.

**BOILER, HIGH-PRESSURE.** *An appliance (equipment) for supplying steam of hot water that, for a steam boiler, operates at a pressure of more than 15 psig (103 kPa gauge), and for a hot water boiler, operates at a pressure exceeding 160 psig (1103 kPa gauge) or at a temperature exceeding 250°F (121°C).*

**BOILER, LOW-PRESSURE.** *A self-contained appliance for supplying steam or hot water as follows:*

**Hot water heating boiler.** *A boiler in which no steam is generated, from which hot water is circulated for heating purposes and then returned to the boiler, and that operates at water pressures not exceeding 160 pounds per square inch gauge (psig) (1103 kPa gauge) and at water temperatures not exceeding 250°F (121°C) at or near the boiler outlet.*

**Hot water supply boiler.** *A boiler, completely filled with water, which furnishes hot water to be used externally to itself, and that operates at water pressures not exceeding 160 psig (1103 kPa gauge) and at water temperatures not exceeding 250°F (121°C) at or near the boiler outlet.*

**Steam-heating boiler.** *See “steam-heating boiler”.*

**BOILER ROOM.** *A room primarily utilized for the installation of a boiler.*

**BRAZED JOINT.** *A gas-tight joint obtained by the joining of metal parts with metallic mixtures or alloys which melt at a temperature above 1,000°F (538°C), but lower than the melting temperature of the parts to be joined.*

**BRAZING.** *A metal joining process wherein coalescence is produced by the use of a nonferrous filler metal having a melting point above 1,000°F (538°C), but lower than that of the base metal being joined. The filler material is distributed between the closely fitted surfaces of the joint by capillary attraction.*

**Btu.** *Abbreviation for British thermal unit, which is the quantity of heat required to raise the temperature of 1 pound (454 g) of water 1°F (0.56°C) (1 Btu = 1055 J).*

**BUILDING.** *Any structure used or intended for supporting or sheltering any use or occupancy. The term shall be construed as if followed by the phrase “structure, premises, lot or part thereof” unless otherwise indicated by the text. See Section 28-101.5 of the Administrative code..*

**CEILING RADIATION DAMPER.** *A device installed to limit radiant heat transfer through an air outlet*

or air inlet opening in the ceiling of a floor-ceiling or roof-ceiling assembly, which device has not less than a 1-hour fire-resistance rating.

**CHIMNEY.** A primarily vertical structure containing one or more flues, for the purpose of carrying gaseous products of combustion and air from a fuel-burning appliance to the outside atmosphere.

**Factory-built chimney.** A listed and labeled chimney composed of factory-made components, assembled in the field in accordance with manufacturer's instructions and the conditions of the listing.

**Masonry chimney.** A field-constructed chimney composed of solid masonry units, bricks, stones or concrete.

**Metal chimney.** A field-constructed chimney of metal.

**CHIMNEY CONNECTOR.** A pipe or metal breeching that connects a fuel-burning appliance to a chimney.

**CLEARANCE.** The minimum distance through air measured between the heat-producing surface of the mechanical appliance, device or equipment and the surface of the combustible material or assembly.

**CLOSED COMBUSTION SOLID-FUEL-BURNING APPLIANCE.** A heat-producing appliance that employs a combustion chamber that has no openings other than the flue collar, fuel charging door and adjustable openings provided to control the amount of combustion air that enters the combustion chamber.

**CLOTHES DRYER.** An appliance used to dry wet laundry by means of heat. Dryer classifications are as follows:

**Type 1.** Factory-built package, multiple production. Primarily used in family living environment. Usually the smallest unit physically and in function output.

**Type 2.** Factory-built package, multiple production. Used in business with direct intercourse of the function with the public. Not designed for use in individual family living environment.

**COMBUSTIBLE ASSEMBLY.** Wall, floor, ceiling or other assembly constructed of one or more component materials that are not defined as noncombustible.

**COMBUSTIBLE LIQUIDS.** Any liquids having a flash point at or above 100°F (38°C), and that are divided into the following classifications:

**Class II.** Liquids having flash points at or above 100°F (38°C) and below 140°F (60°C).

**Class IIIA.** Liquids having flash points at or above 140°F (60°C) and below 200°F (93°C).

**Class IIIB.** Liquids having flash points at or above 200°F (93°C).

**COMBUSTIBLE MATERIAL.** Any material not defined as noncombustible.

**COMBUSTION.** In the context of this code, refers to the rapid oxidation of fuel accompanied by the production of heat or heat and light.

**COMBUSTION AIR.** Air necessary for complete combustion of a fuel, including theoretical air and excess air.

**COMBUSTION CHAMBER.** The portion of an appliance within which combustion occurs.

**COMBUSTION PRODUCTS.** Constituents resulting from the combustion of a fuel with the oxygen of the air, including the inert gases, but excluding excess air.

**COMMERCIAL COOKING RECIRCULATING SYSTEM.** Self-contained system consisting of the exhaust hood, the cooking equipment, the filters, and the fire suppression system. The system is designed to capture cooking vapors and residues generated from commercial cooking equipment. The system removes contaminants from the exhaust air and recirculates the air to the space from which it was withdrawn.

**COMMERCIAL COOKING APPLIANCES.** Appliances used in a commercial food service establishment for heating or cooking food and which produce grease vapors, steam, fumes, smoke or odors that are required to be removed through a local exhaust ventilation system. Such appliances include deep fat fryers; upright broilers; griddles; broilers; steam-jacketed kettles; hot-top ranges; under-fired broilers (charbroilers); ovens; barbecues; rotisseries; and similar appliances. For the purpose of this definition, a food service establishment shall include any building or a portion thereof used for the preparation and serving of food.

**COMMERCIAL KITCHEN HOODS.**

**Backshelf Hood.** A backshelf hood is also referred to as a low-proximity hood, or as a sidewall hood where wall mounted. Its front lower lip is low over the appliance(s) and is “set back” from the front of the appliance(s). It is always closed to the rear of the appliances by a panel where free-standing, or by a panel or wall where wall mounted, and its height above the cooking surface varies. (This style of hood can be constructed with partial end panels to increase its effectiveness in capturing the effluent generated by the cooking operation).

**Double Island Canopy Hood.** A double island canopy hood is placed over back to back appliances or appliance lines. It is open on all sides and overhangs both fronts and the sides of the appliance(s). It could have a wall panel between the backs of the appliances. (The fact that exhaust air is drawn from both sides of the double canopy to meet in the center causes each side of this hood to emulate a wall canopy hood, and thus it functions much the same with or without an actual wall panel between the backs of the appliances).

**Eyebrow Hood.** An eyebrow hood is mounted directly to the face of an appliance, such as an oven and dishwasher, above the opening(s) or door(s) from which effluent is emitted, extending past the sides and overhanging the front of the opening to capture the effluent.

**Pass-over Hood.** A pass-over hood is a free-standing form of a backshelf hood constructed low enough to pass food over the top.

**Single Island Canopy Hood.** A single island canopy hood is placed over a single appliance or appliance line. It is open on all sides and overhangs the front, rear, and sides of the appliance(s). A single island canopy is more susceptible to cross drafts and requires a greater exhaust air flow than an equivalent sized wall-mounted canopy to capture and contain effluent generated by the cooking operation(s).

**Wall Canopy Hood.** A wall canopy exhaust hood is mounted against a wall above a single appliance or line of appliance(s), or it could be free-standing with a back panel from the rear of the appliances to the hood. It overhangs the front and sides of the appliance(s) on all open sides. The wall acts as a back panel, forcing the makeup air to be drawn across the front of the cooking equipment, thus increasing the effectiveness of the hood to capture and contain effluent generated by the cooking operation(s).

**COMMISSIONER.** The Commissioner of Buildings of the City of New York or his or her duly authorized representative. See Section 28-101.5 of the Administrative Code.

**COMPENSATING HOODS.** *Compensating hoods are those having integral (built-in) makeup air supply. The makeup air supply for such hoods is generally supplied from: short-circuit flow from inside the hood, air curtain flow from the bottom of the front face, and front face discharge from the outside front wall of the hood. The compensating makeup airflow can also be supplied from the rear or side of the hood, or the rear, front, or sides of the cooking equipment. The makeup air flow can be one or a combination of methods.*

**COMPRESSOR.** *A specific machine, with or without accessories, for compressing a gas.*

**COMPRESSOR, POSITIVE DISPLACEMENT.** *A compressor in which increase in pressure is attained by changing the internal volume of the compression chamber.*

**COMPRESSOR UNIT.** *A compressor with its prime mover and accessories.*

**CONCEALED LOCATION.** *A location that cannot be accessed without damaging permanent parts of the building structure or finished surface. Spaces above, below or behind readily removable panels or doors shall not be considered as concealed.*

**CONDENSATE.** *The liquid that condenses from a gas (including flue gas) caused by a reduction in temperature or increase in pressure.*

**CONDENSER.** *A heat exchanger designed to liquefy refrigerant vapor by removal of heat.*

**CONDENSING UNIT.** *A specific refrigerating machine combination for a given refrigerant, consisting of one or more power-driven compressors, condensers, liquid receivers (when required), and the regularly furnished accessories.*

**CONDITIONED SPACE.** *An area, room or space being heated or cooled by any equipment or appliance.*

**CONFINED SPACES.** *A space having a volume less than 50 cubic feet per 1,000 British thermal units per hour (Btu/h) ( $4.8 \text{ m}^3/\text{kW}$ ) of the aggregate input rating of all appliances installed in that space.*

**CONSTRUCTION DOCUMENTS.** *Plans and specifications and other written, graphic and pictorial documents, prepared or assembled for describing the design, location and physical characteristics of the elements of the project necessary for obtaining a building permit. See Section 28-101.5 of the*

*Administrative Code.*

**CONTROL.** *A manual or automatic device designed to regulate the gas, air, water or electrical supply to, or operation of, a mechanical system.*

**CONVERSION BURNER.** *A burner designed to supply gaseous fuel to an appliance originally designed to utilize another fuel.*

**COOKING APPLIANCE.** *See “Commercial cooking appliances.”*

**DAMPER.** *A manually or automatically controlled device to regulate draft or the rate of flow of air or combustion gases.*

**Volume damper.** *A device that, when installed, will restrict, retard or direct the flow of air in a duct, or the products of combustion in a heat-producing appliance, its vent connector, vent or chimney therefrom.*

**DESIGN WORKING PRESSURE.** *The maximum allowable working pressure for which a specific part of a system is designed.*

**DIRECT REFRIGERATION SYSTEM.** *A system in which the evaporator or condenser of the refrigerating system is in direct contact with the air or other substances to be cooled or heated.*

**DIRECT-VENT APPLIANCES.** *Appliances that are constructed and installed so that all air for combustion is derived from the outside atmosphere and all flue gases are discharged to the outside atmosphere.*

**DRAFT.** *The pressure difference existing between the equipment or any component part and the atmosphere, that causes a continuous flow of air and products of combustion through the gas passages of the appliance to the atmosphere.*

**Induced draft.** *The pressure difference created by the action of a fan, blower or ejector, that is located between the appliance and the chimney or vent termination.*

**Natural draft.** *The pressure difference created by a vent or chimney because of its height, and the temperature difference between the flue gases and the atmosphere.*

**DRIP.** *The container placed at a low point in a system of piping to collect condensate and from which the condensate is removable.*

**DRY CLEANING SYSTEMS.** *Dry cleaning plants or systems are classified as follows:*

**Type I.** *Those systems using Class I flammable liquid solvents having a flash point below 100°F (38°C).*

**Type II.** *Those systems using Class II combustible liquid solvents having a flash point at or above 100°F (38°C) and below 140°F (60°C).*

**Type III.** *Those systems using Class III combustible liquid solvents having a flash point at or above 140°F (60°C).*

**Types IV and V.** *Those systems using Class IV nonflammable liquid solvents.*

**DUCT.** *A tube or conduit utilized for conveying air. The air passages of self-contained systems are not to be construed as air ducts.*

**DUCT FURNACE.** *A warm-air furnace normally installed in an air distribution duct to supply warm air for heating. This definition shall apply only to a warm-air heating appliance that, for air circulation, depends on a blower not furnished as part of the furnace.*

**DUCT SYSTEM.** *A continuous passageway for the transmission of air that, in addition to ducts, includes duct fittings, dampers, plenums, fans and accessory air-handling equipment and appliances.*

**DWELLING.** *A building or structure that is occupied in whole or in part as the home, residence or sleeping place of one or more families.*

**DWELLING UNIT.** *A single unit consisting of one or more habitable rooms and occupied or arranged to be occupied as a unit separate from all other units within a dwelling.*

**ELECTRIC HEATING APPLIANCE.** *An appliance that produces heat energy to create a warm environment by the application of electric power to resistance elements, refrigerant compressors or dissimilar material junctions.*

**ENERGY RECOVERY VENTILATION SYSTEM.** *Systems that employ air-to-air heat exchangers to recover energy from or reject energy to exhaust air for the purpose of preheating, precooling, humidifying or dehumidifying outdoor ventilation air prior to supplying such air to a space, either directly or as part of an HVAC system.*

**ENGINEER.** *A person licensed and registered to practice the profession of engineering under the Education Law of the State of New York.*

**ENVIRONMENTAL AIR.** *Air that is supplied, returned, recirculated, or exhausted from a space for the purpose of modifying the existing atmosphere within a building.*

**EQUIPMENT.** *All piping, ducts, vents, control devices and other components of systems other than appliances which are permanently installed and integrated to provide control of environmental conditions for buildings. This definition shall also include other systems specifically regulated in this code.*

**EQUIPMENT, EXISTING.** *Any equipment regulated by this code which was legally installed prior to the effective date of this code, or for which a permit to install has been issued.*

**EVAPORATIVE COOLER.** *A device used for reducing the sensible heat of air for cooling by the process of evaporation of water into an airstream.*

**EVAPORATIVE COOLING SYSTEM.** *The equipment and appliances intended or installed for the purpose of environmental cooling by an evaporative cooler from which the conditioned air is distributed through ducts or plenums to the conditioned area.*

**EVAPORATOR.** *That part of the system in which liquid refrigerant is vaporized to produce refrigeration.*

**EXCESS AIR.** *The amount of air provided in addition to theoretical air to achieve complete combustion of a fuel, thereby preventing the formation of dangerous products of combustion.*

**EXHAUST SYSTEM.** *An assembly of connected ducts, plenums, fittings, registers, grilles and hoods through which air is conducted from a space or spaces and exhausted to the outside atmosphere.*

**EXTRA-HEAVY DUTY COOKING APPLIANCE.** *Extra-heavy duty cooking appliances include appliances utilizing solid fuel such as wood, charcoal, briquettes, and mesquite as the primary source of*

heat for cooking.

**FIREPLACE.** *An assembly consisting of a hearth and fire chamber of noncombustible material and provided with a chimney, for use with solid fuels.*

**Factory-built fireplace.** *A listed and labeled fireplace and chimney system composed of factory-made components, and assembled in the field in accordance with manufacturer's instructions and the conditions of the listing.*

**Masonry fireplace.** *A field-constructed fireplace composed of solid masonry units, bricks, stones or concrete.*

**FIREPLACE STOVE.** *A free-standing chimney-connected solid-fuel-burning heater, designed to be operated with the fire chamber doors in either the open or closed position.*

**FLAME SAFEGUARD.** *A device that will automatically shut off the fuel supply to a main burner or group of burners when the means of ignition of such burners becomes inoperative, and when flame failure occurs on the burner or group of burners.*

**FLAME SPREAD INDEX.** *The numerical value assigned to a material tested in accordance with ASTM E 84.*

**FLAMMABILITY CLASSIFICATION.** *Refrigerants shall be assigned to one of the three classes—1, 2 or 3—in accordance with ASHRAE 34.*

**FLAMMABLE LIQUIDS.** *Any liquid that has a flash point below 100°F (38°C), and has a vapor pressure not exceeding 40 psia (276 kPa) at 100°F (38°C). Flammable liquids shall be known as Class I liquids and shall be divided into the following classifications:*

**Class IA.** *Liquids having a flash point below 73°F (23°C) and a boiling point below 100°F (38°C).*

**Class IB.** *Liquids having a flash point below 73°F (23°C) and a boiling point at or above 100°F (38°C).*

**Class IC.** *Liquids having a flash point at or above 73°F (23°C) and below 100°F (38°C).*

**FLAMMABLE VAPOR OR FUMES.** *Mixtures of gases in air at concentrations equal to or greater than the LFL and less than or equal to the upper flammability limit (UFL).*

**FLASH POINT.** *The minimum temperature corrected to a pressure of 14.7 psia (101 kPa) at which the application of a test flame causes the vapors of a portion of the sample to ignite under the conditions specified by the test procedures and apparatus. The flash point of a liquid shall be determined in accordance with ASTM D 56, ASTM D 93 or ASTM D 3278.*

**FLOOR AREA, NET.** *The actual occupied area, not including unoccupied accessory areas or thicknesses of walls.*

**FLOOR FURNACE.** *A completely self-contained furnace suspended from the floor of the space being heated, taking air for combustion from outside such space and with means for observing flames and lighting the appliance from such space.*

**FLUE.** *A passageway within a chimney or vent through which gaseous combustion products pass.*

**FLUE CONNECTION (BREECHING).** *A passage for conducting the products of combustion from a fuel-fired appliance to the vent or chimney (see also “Chimney connector” and “Vent connector”).*

**FLUE GASES.** *Products of combustion and excess air.*

**FLUE LINER (LINING).** *A system or material used to form the inside surface of a flue in a chimney or vent, for the purpose of protecting the surrounding structure from the effects of combustion products and conveying combustion products without leakage into the atmosphere.*

**FUEL GAS.** *A natural gas, manufactured gas, liquefied petroleum gas or a mixture of these.*

**FUEL OIL.** *Kerosene or any hydrocarbon oil having a flash point not less than 100°F (38°C).*

**FUEL-OIL PIPING SYSTEM.** *A closed piping system that connects a combustible liquid from a source of supply to a fuel-oil-burning appliance.*

**FURNACE.** *A completely self-contained heating unit that is designed to supply heated air to spaces remote from or adjacent to the appliance location.*

**FURNACE ROOM.** A room primarily utilized for the installation of fuel-burning space-heating and water-heating appliances other than boilers (see also “Boiler room”).

**FUSIBLE PLUG.** A device arranged to relieve pressure by operation of a fusible member at a predetermined temperature.

**GROUND SOURCE HEAT PUMP LOOP SYSTEM.** Piping buried in horizontal or vertical excavations or placed in a body of water for the purpose of transporting heat transfer liquid to and from a heat pump. Included in this definition are closed loop systems in which the liquid is recirculated and open loop systems in which the liquid is drawn from a well or other source.

**HAZARDOUS LOCATION.** Any location considered to be a fire hazard for flammable vapors, dust, combustible fibers or other highly combustible substances. The location is not necessarily categorized in the New York City Building Code as a high-hazard use group classification.

**HEAT EXCHANGER.** A device that transfers heat from one medium to another.

**HEAT PUMP.** A refrigeration system that extracts heat from one substance and transfers it to another portion of the same substance or to a second substance at a higher temperature for a beneficial purpose.

**HEAT TRANSFER LIQUID.** The operating or thermal storage liquid in a mechanical system, including water or other liquid base, and additives at the concentration present under operating conditions used to move heat from one location to another. Refrigerants are not included as heat transfer liquids.

**HEAVY-DUTY COOKING APPLIANCE.** Heavy-duty cooking appliances include electric under-fired broilers, electric chain (conveyor) broilers, gas under-fired broilers, gas chain (conveyor) broilers, gas open-burner ranges (with or without oven), electric and gas wok ranges, and electric and gas over-fired (upright) broilers and salamanders.

**HIGH-PROBABILITY SYSTEMS.** A refrigeration system in which the basic design or the location of components is such that a leakage of refrigerant from a failed connection, seal or component will enter an occupancy classified area, other than the machinery room.

**HIGH-SIDE PRESSURE.** The parts of a refrigerating system subject to condenser pressure.

**HOOD.** An air-intake device used to capture by entrapment, impingement, adhesion or similar means,

*grease and similar contaminants before they enter a duct system.*

**Type I.** *A kitchen hood for collecting and removing grease vapors and smoke.*

**Type II.** *A general kitchen hood for collecting and removing steam, vapor, heat and odors.*

**HOOD, FUME.** *A hood used for hazardous exhaust systems.*

**HYDROGEN GENERATING APPLIANCE.** *A self-contained package or factory-matched packages of integrated systems for generating gaseous hydrogen. Hydrogen generating appliances utilize electrolysis, reformation, chemical, or other processes to generate hydrogen.*

**IGNITION SOURCE.** *A flame, spark or hot surface capable of igniting flammable vapors or fumes. Such sources include appliance burners, burner ignitors and electrical switching devices.*

**IMMEDIATELY DANGEROUS TO LIFE OR HEALTH (IDLH).** *The concentration of air-borne contaminants that poses a threat of death, immediate or delayed permanent adverse health effects, or effects that could prevent escape from such an environment. This contaminant concentration level is established by the National Institute of Occupational Safety and Health (NIOSH) based on both toxicity and flammability. It is generally expressed in parts per million by volume (ppm v/v) or milligrams per cubic meter (mg/m<sup>3</sup>).*

**INDIRECT REFRIGERATION SYSTEM.** *A system in which a secondary coolant cooled or heated by the refrigerating system is circulated to the air or other substance to be cooled or heated. Indirect systems are distinguished by the method of application shown below:*

**Closed system.** *A system in which a secondary fluid is either cooled or heated by the refrigerating system and then circulated within a closed circuit in indirect contact with the air or other substance to be cooled or heated.*

**Double-indirect open-spray system.** *A system in which the secondary substance for an indirect open-spray system is heated or cooled by an intermediate coolant circulated from a second enclosure.*

**Open-spray system.** *A system in which a secondary coolant is cooled or heated by the refrigerating system and then circulated in direct contact with the air or other substance to be cooled or heated.*

***Vented closed system.*** A system in which a secondary coolant is cooled or heated by the refrigerating system and then passed through a closed circuit in the air or other substance to be cooled or heated, except that the evaporator or condenser is placed in an open or appropriately vented tank.

***JOINT, FLANGED.*** A joint made by bolting together a pair of flanged ends.

***JOINT, FLARED.*** A metal-to-metal compression joint in which a conical spread is made on the end of a tube that is compressed by a flare nut against a mating flare.

***JOINT, MECHANICAL.*** A general form of gas-tight joints obtained by the joining of metal parts through a positive-holding mechanical construction, such as flanged joint, screwed joint or flared joint.

***JOINT, PLASTIC ADHESIVE.*** A joint made in thermoset plastic piping by the use of an adhesive substance which forms a continuous bond between the mating surfaces without dissolving either one of them.

***JOINT, PLASTIC HEAT FUSION.*** A joint made in thermoplastic piping by heating the parts sufficiently to permit fusion of the materials when the parts are pressed together.

***JOINT, PLASTIC SOLVENT CEMENT.*** A joint made in thermoplastic piping by the use of a solvent or solvent cement which forms a continuous bond between the mating surfaces.

***JOINT, SOLDERED.*** A gas-tight joint obtained by the joining of metal parts with metallic mixtures of alloys which melt at temperatures between 400°F (204°C) and 1,000°F (538°C).

***JOINT, WELDED.*** A gas-tight joint obtained by the joining of metal parts in molten state.

***LABELED.*** Material to which has been attached a label, symbol or other identifying mark of the manufacturer that contains the name of the manufacturer, the function and performance characteristics of the product or material, and the name and identification of an approved agency and that indicates that a representative sample of the material has been tested and evaluated by an approved agency for compliance with nationally recognized standards or tests to determine suitable usage in a specified manner. See Section 28-101.5 of the Administrative Code.

***LIGHT-DUTY COOKING APPLIANCE.*** Light-duty cooking appliances include gas and electric ovens (including standard, bake, roasting, revolving, retherm, convection, combination convection/steamer,

conveyor, deck or deck-style pizza, and pastry), electric and gas steam-jacketed kettles, electric and gas compartment steamers (both pressure and atmospheric) and electric and gas cheesemelters.

**LIMIT CONTROL.** A device responsive to changes in pressure, temperature or level for turning on, shutting off or throttling the gas supply to an appliance.

**LIMITED CHARGE SYSTEM.** A system in which, with the compressor idle, the design pressure will not be exceeded when the refrigerant charge has completely evaporated.

**LISTED.** Material identified in a list published by an approved agency that maintains periodic inspection of production of listed material or periodic evaluation services and whose listing states either that the material meets identified nationally recognized standards or has been tested and found suitable for a specified purpose when installed in accordance with the manufacturer's installation instructions. See Section 28-101.5 of the Administrative Code.

**LIVING SPACE.** Space within a dwelling unit utilized for living, sleeping, eating, cooking, bathing, washing and sanitation purposes.

**LOWER EXPLOSIVE LIMIT (LEL).** See "LFL."

**LOWER FLAMMABILITY LIMIT (LFL).** The minimum concentration of refrigerant that is capable of propagating a flame through a homogeneous mixture of refrigerant and air.

**LOW-PRESSURE HOT-WATER-HEATING BOILER.** A boiler furnishing hot water at pressures not exceeding 160 psig (1103 kPa) and at temperatures not exceeding 250°F (121°C).

**LOW-PRESSURE STEAM-HEATING BOILER.** A boiler furnishing steam at pressures not exceeding 15 psig (103 kPa).

**LOW-PROBABILITY SYSTEMS.** A refrigeration system in which the basic design or the location of components is such that a leakage of refrigerant from a failed connection, seal or component will not enter an occupancy-classified area, other than the machinery room.

**LOW-SIDE PRESSURE.** The parts of a refrigerating system subject to evaporator pressure.

**MACHINERY ROOM.** A room meeting prescribed safety requirements and in which refrigeration systems

or components thereof are located (see Sections 1105 and 1106).

**MECHANICAL DRAFT SYSTEM.** A venting system designed to remove flue or vent gases by mechanical means, that consists of an induced-draft portion under nonpositive static pressure or a forced-draft portion under positive static pressure.

**Forced-draft venting system.** A portion of a venting system using a fan or other mechanical means to cause the removal of flue or vent gases under positive static pressure.

**Induced-draft venting system.** A portion of a venting system using a fan or other mechanical means to cause the removal of flue or vent gases under nonpositive static vent pressure.

**Power venting system.** A portion of a venting system using a fan or other mechanical means to cause the removal of flue or vent gases under positive static vent pressure.

**MECHANICAL EQUIPMENT/APPLIANCE ROOM.** A room or space in which nonfuel-fired mechanical equipment and appliances are located.

**MECHANICAL EXHAUST SYSTEM.** A system for removing air from a room or space by mechanical means.

**MECHANICAL JOINT.** A connection between pipes, fittings, or pipes and fittings, which is neither screwed, caulked, threaded, soldered, solvent cemented, brazed nor welded. Also, a joint in which compression is applied along the centerline of the pieces being joined. Some joints are part of a coupling, fitting or adapter.

**MECHANICAL SYSTEM.** A system specifically addressed and regulated in this code and composed of components, devices, appliances and equipment which become part of the building.

**MEDIUM-DUTY COOKING APPLIANCE.** Medium-duty cooking appliances include electric discrete element ranges (with or without oven), electric and gas hot-top ranges, electric and gas griddles, electric and gas double-sided griddles, electric and gas fryers (including open deep fat fryers, donut fryers, kettle fryers, and pressure fryers), electric and gas pasta cookers, electric and gas conveyor pizza ovens, electric and gas tilting skillets (braising pans) and electric and gas rotisseries.

**MODULAR BOILER.** A steam or hot-water-heating assembly consisting of a group of individual boilers

*called modules intended to be installed as a unit with no intervening stop valves. Modules are under one jacket or are individually jacketed. The individual modules shall be limited to a maximum input rating of 400,000 Btu/h (117 228 W/h) gas, 3 gallons per hour (gph) (11.4 L/h) oil, or 115 kW (electric).*

**NATURAL DRAFT SYSTEM.** *A venting system designed to remove flue or vent gases under nonpositive static vent pressure entirely by natural draft.*

**NATURAL VENTILATION.** *The movement of air into and out of a space through intentionally provided openings, such as windows and doors, or through nonpowered ventilators.*

**NONABRASIVE/ABRASIVE MATERIALS.** *Nonabrasive particulate in high concentrations, moderately abrasive particulate in low and moderate concentrations, and highly abrasive particulate in low concentrations, such as alfalfa, asphalt, plaster, gypsum and salt.*

**NONCOMBUSTIBLE MATERIALS.** *Materials that, when tested in accordance with ASTM E 136, have at least three of four specimens tested meeting all of the following criteria:*

- 1. The recorded temperature of the surface and interior thermocouples shall not at any time during the test rise more than 54°F (30°C) above the furnace temperature at the beginning of the test.*
- 2. There shall not be flaming from the specimen after the first 30 seconds.*
- 3. If the weight loss of the specimen during testing exceeds 50 percent, the recorded temperature of the surface and interior thermocouples shall not at any time during the test rise above the furnace air temperature at the beginning of the test, and there shall not be flaming of the specimen.*

**OCCUPANCY.** *The purpose or activity for which a building or space is used or is designed, arranged or intended to be used.*

**OFFSET (VENT).** *A combination of approved bends that make two changes in direction bringing one section of the vent out of line but into a line parallel with the other section.*

**OUTDOOR AIR.** *Air taken from the outdoors, and therefore not previously circulated through the system.*

**OUTDOOR OPENING.** A door, window, louver or skylight openable to the outside atmosphere.

**OUTLET, GAS.** A threaded connection or bolted flange in a piping system to which a gas-burning appliance is attached.

**PANEL HEATING.** A method of radiant space heating in which heat is supplied by large heated areas of room surfaces. The heating element usually consists of warm water piping, warm air ducts, or electrical resistance elements embedded in or located behind ceiling, wall or floor surfaces.

**PELLET FUEL-BURNING APPLIANCE.** A closed-combustion, vented appliance equipped with a fuel-feed mechanism for burning processed pellets of solid fuel of a specified size and composition.

**PIPING.** Where used in this code, “piping” refers to either pipe or tubing, or both.

**Pipe.** A rigid conduit of iron, steel, copper, brass or plastic.

**Tubing.** Semirigid conduit of copper, aluminum, plastic or steel.

**PLASTIC, THERMOPLASTIC.** A plastic that is capable of being repeatedly softened by increase of temperature and hardened by decrease of temperature.

**PLASTIC, THERMOSETTING.** A plastic that is capable of being changed into a substantially infusible or insoluble product when cured under application of heat or chemical means.

**PLENUM.** A compartment or chamber located in one story only to which one or more air ducts are connected and which forms part of the air supply or return system and may be part of the building construction, such as the concealed space above a ceiling.

**PORTABLE FUEL CELL APPLIANCE.** A fuel cell generator of electricity, which is not fixed in place. A portable fuel cell appliance utilizes a cord and plug connection to a grid-isolated load and has an integral fuel supply.

**POWER BOILER.** See “Boiler.”

**PREMISES.** Land, improvements thereon, or any part thereof.

**PRESSURE, FIELD TEST.** *A test performed in the field to prove system tightness.*

**PRESSURE-LIMITING DEVICE.** *A pressure-responsive mechanism designed to stop automatically the operation of the pressure-imposing element at a predetermined pressure.*

**PRESSURE RELIEF DEVICE.** *A pressure-actuated valve or rupture member designed to relieve excessive pressure automatically.*

**PRESSURE RELIEF VALVE.** *A pressure-actuated valve held closed by a spring or other means and designed to relieve pressure automatically in excess of the device's setting.*

**PRESSURE VESSELS.** *Closed containers, tanks or vessels that are designed to contain liquids or gases, or both, under pressure.*

**PRESSURE VESSELS—REFRIGERANT.** *Any refrigerant-containing receptacle in a refrigerating system. This does not include evaporators where each separate section does not exceed 0.5 cubic foot (0.014 m<sup>3</sup>) of refrigerant-containing volume, regardless of the maximum inside dimensions, evaporator coils, controls, headers, pumps and piping.*

**PROTECTIVE ASSEMBLY (REDUCED CLEARANCE).** *Any noncombustible assembly that is labeled or constructed in accordance with Table 308.6 and is placed between combustible materials or assemblies and mechanical appliances, devices or equipment, for the purpose of reducing required airspace clearances. Protective assemblies attached directly to a combustible assembly shall not be considered as part of that combustible assembly.*

**PURGE.** *To clear of air, water or other foreign substances.*

**QUICK-OPENING VALVE.** *A valve that opens completely by fast action, either manually or automatically controlled. A valve requiring one-quarter round turn or less is considered to be quick opening.*

**RADIANT HEATER.** *A heater designed to transfer heat primarily by direct radiation.*

**READY ACCESS (TO).** *That which enables a device, appliance or equipment to be directly reached, without requiring the removal or movement of any panel, door or similar obstruction (see "Access (to)").*

**RECEIVER, LIQUID.** A vessel permanently connected to a refrigeration system by inlet and outlet pipes for storage of liquid refrigerant.

**RECIRCULATED AIR.** Air removed from a conditioned space and intended for reuse as supply air.

**RECLAIMED REFRIGERANTS.** Refrigerants reprocessed to the same specifications as for new refrigerants by means including distillation. Such refrigerants have been chemically analyzed to verify that the specifications have been met. Reclaiming usually implies the use of processes or procedures that are available only at a reprocessing or manufacturing facility.

**RECOVERED REFRIGERANTS.** Refrigerants removed from a system in any condition without necessarily testing or processing them.

**RECYCLED REFRIGERANTS.** Refrigerants from which contaminants have been reduced by oil separation, removal of noncondensable gases, and single or multiple passes through devices that reduce moisture, acidity and particulate matter, such as replaceable core filter dryers. These procedures usually are performed at the field job site or in a local service shop.

**REFRIGERANT.** A substance utilized to produce refrigeration by its expansion or vaporization.

**REFRIGERANT SAFETY CLASSIFICATIONS.** Groupings that indicate the toxicity and flammability classes in accordance with ASHRAE 34.

**REFRIGERATED ROOM OR SPACE.** A room or space in which an evaporator or brine coil is located for the purpose of reducing or controlling the temperature within the room or space to below 68°F (20°C).

**REFRIGERATING SYSTEM.** A combination of interconnected refrigerant-containing parts constituting one closed refrigerant circuit in which a refrigerant is circulated for the purpose of extracting heat.

**REFRIGERATION MACHINERY ROOM.** See “Machinery room.”

**REFRIGERATION SYSTEM, ABSORPTION.** A heat-operated, closed-refrigeration cycle in which a secondary fluid (the absorbent) absorbs a primary fluid (the refrigerant) that has been vaporized in the evaporator.

**Direct system.** A system in which the evaporator is in direct contact with the material or space

*refrigerated, or is located in air-circulating passages communicating with such spaces.*

**Indirect system.** *A system in which a brine coil cooled by the refrigerant is circulated to the material or space refrigerated, or is utilized to cool the air so circulated. Indirect systems are distinguished by the type or method of application.*

**REFRIGERATION SYSTEM CLASSIFICATION.** *Refrigeration systems are classified according to the degree of probability that leaked refrigerant from a failed connection, seal or component will enter an occupied area. The distinction is based on the basic design or location of the components.*

**REFRIGERATION SYSTEM, MECHANICAL.** *A combination of interconnected refrigeration-containing parts constituting one closed refrigerant circuit in which a refrigerant is circulated for the purpose of extracting heat and in which a compressor is used for compressing the refrigerant vapor.*

**REFRIGERATION SYSTEM, SELF-CONTAINED.** *A complete factory-assembled and tested system that is shipped in one or more sections and has no refrigerant-containing parts that are joined in the field by other than companion or block valves.*

**REGISTERED DESIGN PROFESSIONAL.** *Refer to Chapter 1 of Title 28 of the Administrative Code.*

**RETURN AIR.** *Air removed from an approved conditioned space or location and recirculated or exhausted to the outside atmosphere.*

**RETURN AIR SYSTEM.** *An assembly of connected ducts, plenums, fittings, registers and grilles through which air from the space or spaces to be heated or cooled is conducted back to the supply unit (see also "Supply air system").*

**ROOM HEATER, VENTED.** *A free-standing heating unit burning solid or liquid fuel for direct heating of the space in and adjacent to that in which the unit is located.*

**SAFETY VALVE.** *A valve that relieves pressure in a steam boiler by opening fully at the rated discharge pressure. The valve is of the spring-pop type.*

**SELF-CONTAINED EQUIPMENT.** *Complete, factory-assembled and tested, heating, air-conditioning or refrigeration equipment installed as a single unit, and having all working parts, complete with motive power, in an enclosed unit of said machinery.*

**SHAFT.** *An enclosed space extending through one or more stories of a building, connecting vertical openings in successive floors, or floors and the roof.*

**SHAFT ENCLOSURE.** *The walls or construction forming the boundaries of a shaft.*

**SMOKE DAMPER.** *A listed device that is designed to resist the passage of air and smoke. The device is arranged to operate automatically, controlled by a smoke detection system, and when required, is capable of being positioned manually from a remote command station.*

**SMOKE-DEVELOPED INDEX.** *A numerical value assigned to a material tested in accordance with ASTM E 84.*

**SOLID FUEL (COOKING APPLICATIONS).** *Applicable to commercial food service operations only, solid fuel is any bulk material such as hardwood, mesquite, charcoal or briquettes that is combusted to produce heat for cooking operations.*

**SOURCE CAPTURE SYSTEM.** *A mechanical exhaust system designed and constructed to capture air contaminants at their source and to exhaust such contaminants to the outdoor atmosphere.*

**STATIONARY FUEL CELL POWER PLANT.** *A self-contained package or factory-matched packages which constitute an automatically operated assembly of integrated systems for generating useful electrical energy and recoverable thermal energy that is permanently connected and fixed in place.*

**STEAM-HEATING BOILER.** *A boiler operated at pressures not exceeding 15 psi (103 kPa) for steam.*

**STOP VALVE.** *A shutoff valve for controlling the flow of liquid or gases.*

**STORY.** *That portion of a building included between the upper surface of a floor and the upper surface of the floor next above, except that the topmost story shall be that portion of a building included between the upper surface of the topmost floor and the ceiling or roof above.*

**STRENGTH, ULTIMATE.** *The highest stress level that the component will tolerate without rupture.*

**SUPPLY AIR.** *That air delivered to each or any space supplied by the air distribution system or the total air delivered to all spaces supplied by the air distribution system, which is provided for ventilating,*

*heating, cooling, humidification, dehumidification and other similar purposes.*

**SUPPLY AIR SYSTEM.** *An assembly of connected ducts, plenums, fittings, registers and grilles through which air, heated or cooled, is conducted from the supply unit to the space or spaces to be heated or cooled (see also “Return air system”).*

**THEORETICAL AIR.** *The exact amount of air required to supply oxygen for complete combustion of a given quantity of a specific fuel.*

**THERMAL RESISTANCE (R).** *A measure of the ability to retard the flow of heat. The R-value is the reciprocal of thermal conductance.*

**TLV-TWA (THRESHOLD LIMIT VALUE-TIME WEIGHTED AVERAGE).** *The time-weighted average concentration of a refrigerant or other chemical in air for a normal 8-hour workday and a 40-hour workweek, to which nearly all workers are repeatedly exposed, day after day, without adverse effects, as adopted by the American Conference of Government Industrial Hygienists (ACGIH).*

**TOILET ROOM.** *A room containing a water closet and, frequently, a lavatory, but not a bathtub, shower, spa or similar bathing fixture.*

**TOXICITY CLASSIFICATION.** *Refrigerants shall be classified for toxicity to one of two classes in accordance with ASHRAE 34.*

**TRANSITION FITTINGS, PLASTIC TO STEEL.** *An adapter for joining plastic pipe to steel pipe. The purpose of this fitting is to provide a permanent, pressure-tight connection between two materials which cannot be joined directly one to another.*

**UNCONFINED SPACE.** *A space having a volume not less than 50 cubic feet per 1,000 Btu/h (4.8m<sup>3</sup>/kW) of the aggregate input rating of all appliances installed in that space. Rooms communicating directly with the space in which the appliances are installed, through openings not furnished with doors, are considered a part of the unconfined space.*

**UNIT HEATER.** *A self-contained appliance of the fan type, designed for the delivery of warm air directly into the space in which the appliance is located.*

**UNUSUALLY TIGHT CONSTRUCTION.** *Construction meeting all of the following requirements:*

1. Walls exposed to the outside atmosphere having a continuous water vapor retarder with a rating of 1 perm ( $57 \text{ ng/s} \cdot \text{m}^2 \cdot \text{Pa}$ ) or less with openings gasketed or sealed; and
2. Openable windows and doors meeting the air leakage requirements of the Energy Conservation Construction Code of New York State, Section 502.1.4; and
3. Caulking or sealants are applied to areas, such as joints around window and door frames, between sole plates and floors, between wall-ceiling joints, between wall panels, at penetrations for plumbing, electrical and gas lines, and at other openings.

**VENT.** A pipe or other conduit composed of factory-made components, containing a passageway for conveying combustion products and air to the atmosphere, listed and labeled for use with a specific type or class of appliance.

**Pellet vent.** A vent listed and labeled for use with listed pellet-fuel-burning appliances.

**Type L vent.** A vent listed and labeled for use with the following:

1. Oil-burning appliances that are listed for use with Type L vents.
2. Gas-fired appliances that are listed for use with Type B vents.

**VENT CONNECTOR.** The pipe that connects an approved fuel-fired appliance to a vent.

**VENT DAMPER DEVICE, AUTOMATIC.** A device intended for installation in the venting system, in the outlet of an individual automatically operated fuel-burning appliance that is designed to open the venting system automatically when the appliance is in operation and to close off the venting system automatically when the appliance is in a standby or shutdown condition.

**VENTILATION.** The natural or mechanical process of supplying conditioned or unconditioned air to, or removing such air from, any space.

**VENTILATION AIR.** That portion of supply air that comes from the outside (outdoors), plus any recirculated air that has been treated to maintain the desired quality of air within a designated space.

**VENTING SYSTEM.** *A continuous open passageway from the flue collar of an appliance to the outside atmosphere for the purpose of removing flue or vent gases. A venting system is usually composed of a vent or a chimney and vent connector, if used, assembled to form the open passageway.*

**WATER HEATER.** *Any heating appliance or equipment that heats potable water and supplies such water to the potable hot water distribution system.*

### **CHAPTER 3 GENERAL REGULATIONS**

#### **SECTION MC 301 GENERAL**

**301.1 Scope.** *This chapter shall govern the approval and installation of all equipment and appliances that comprise parts of the building mechanical systems regulated by this code in accordance with Section 101.2.*

**301.2 Energy utilization.** *Heating, ventilating and air-conditioning systems of all structures shall be designed and installed for efficient utilization of energy in accordance with the Energy Conservation Construction Code of New York State.*

**301.3 Fuel gas appliances and equipment.** *The approval and installation of fuel gas distribution piping and equipment, fuel gas-fired appliances and fuel gas-fired appliance venting systems shall be in accordance with the New York City Fuel Gas Code.*

**301.4 Listed and labeled.** *All appliances regulated by this code shall be listed and labeled.*

**301.5 Testing of materials and equipment.** *Refer to Section 28-113 of the Administrative Code.*

**301.6 Label information.** *A permanent factory-applied name-plate(s) shall be affixed to appliances on which shall appear in legible lettering, the manufacturer's name or trademark, the model number, serial number and the seal or mark of the approved agency. A label shall also include the following:*

- 1. Electrical equipment and appliances: Electrical rating in volts, amperes and motor phase; identification of individual electrical components in volts, amperes or watts, motor phase; Btu/h (W) output; and required clearances.*

2. *Absorption units: Hourly rating in Btu/h (W); minimum hourly rating for units having step or automatic modulating controls; type of fuel; type of refrigerant; cooling capacity in Btu/h (W); and required clearances.*
3. *Fuel-burning units: Hourly rating in Btu/h (W); type of fuel approved for use with the appliance; and required clearances.*
4. *Electric comfort heating appliances: Name and trade-mark of the manufacturer; the model number or equivalent; the electric rating in volts, ampacity and phase; Btu/h (W) output rating; individual marking for each electrical component in amperes or watts, volts and phase; required clearances from combustibles; and a seal indicating approval of the appliance by an approved agency.*

**301.7 Electrical.** *Electrical wiring, controls and connections to equipment and appliances regulated by this code shall be in accordance with the New York City Electrical Code.*

**301.8 Plumbing connections.** *Potable water supply and building drainage system connections to equipment and appliances regulated by this code shall be in accordance with the New York City Plumbing Code.*

**301.9 Fuel types.** *Fuel-fired appliances shall be designed for use with the type of fuel to which they will be connected and the altitude at which they are installed. Appliances that comprise parts of the building mechanical system shall not be converted for the usage of a different fuel, except where approved and converted in accordance with the manufacturer's instructions. The fuel input rate shall not be increased or decreased beyond the limit rating for the altitude at which the appliance is installed.*

**301.10 Vibration isolation.** *Where vibration isolation of equipment and appliances is employed, supplemental restraint shall be used to accomplish the support and restraint.*

**301.11 Repair.** *Defective material or parts shall be replaced or repaired in such a manner so as to preserve the original approval or listing.*

**301.12 Wind resistance.** *Mechanical equipment, appliances and supports that are exposed to wind shall be designed and installed to resist the wind pressures determined in accordance with the New York City Building Code.*

**301.13 Flood hazard.** For structures located in areas of special flood hazard, mechanical systems, equipment and appliances shall comply with Appendix G of the New York City Building Code.

**301.14 Rodent proofing.** Buildings or structures and the walls enclosing habitable or occupiable rooms and spaces in which persons live, sleep or work, or in which feed, food or foodstuffs are stored, prepared, processed, served or sold, shall be constructed to protect against the entrance of rodents in accordance with the New York City Building Code.

**301.15 Seismic resistance.** When earthquake loads are applicable in accordance with the New York City Building Code, mechanical system supports shall be designed and installed for the seismic forces in accordance with the New York City Building Code.

## **SECTION MC 302**

### **PROTECTION OF STRUCTURE**

**302.1 Structural safety.** The building or structure shall not be weakened by the installation of mechanical systems. Where floors, walls, ceilings or any other portion of the building or structure are required to be altered or replaced in the process of installing or repairing any system, the building or structure shall be left in a safe structural condition in accordance with the New York City Building Code.

**302.2 Penetrations of floor/ceiling assemblies and fire-resistance-rated assemblies.** Penetrations of floor/ceiling assemblies and assemblies required to have a fire-resistance rating shall be protected in accordance with the New York City Building Code.

**302.3 Cutting, notching and boring in wood framing.** The cutting, notching and boring of wood framing members shall comply with Sections 302.3.1 through 302.3.4.

**302.3.1 Joist notching.** Notches on the ends of joists shall not exceed one-fourth the joist depth. Holes bored in joists shall not be within 2 inches (51 mm) of the top or bottom of the joist, and the diameter of any such hole shall not exceed one-third the depth of the joist. Notches in the top or bottom of joists shall not exceed one-sixth the depth and shall not be located in the middle third of the span.

**302.3.2 Stud cutting and notching.** In exterior walls and bearing partitions, any wood stud is permitted to be cut or notched not to exceed 25 percent of its depth. Cutting or notching of studs not greater than 40 percent of their depth is permitted in nonbearing partitions supporting no loads other than the weight of the partition.

**302.3.3 Bored holes.** *A hole not greater in diameter than 40 percent of the stud depth is permitted to be bored in any wood stud. Bored holes not greater than 60 percent of the depth of the stud are permitted in nonbearing partitions or in any wall where each bored stud is doubled, provided not more than two such successive doubled studs are so bored. In no case shall the edge of the bored hole be nearer than 0.625 inch (15.9 mm) to the edge of the stud. Bored holes shall not be located at the same section of stud as a cut or notch.*

**302.3.4 Engineered wood products.** *Cuts, notches and holes bored in trusses, laminated veneer lumber, glue-laminated members and I-joists are prohibited except where the effects of such alterations are specifically considered in the design of the member.*

**302.4 Alterations to trusses.** *Truss members and components shall not be cut, drilled, notched, spliced or otherwise altered in any way without written concurrence and approval of a registered design professional. Alterations resulting in the addition of loads to any member (e.g., HVAC equipment, water heaters) shall not be permitted without verification that the truss is capable of supporting such additional loading.*

**302.5 Cutting, notching and boring in steel framing.** *The cutting, notching and boring of steel framing members shall comply with Sections 302.5.1 through 302.5.3.*

**302.5.1 Cutting, notching and boring holes in structural steel framing.** *The cutting, notching and boring of holes in structural steel framing members shall be as prescribed by the registered design professional.*

**302.5.2 Cutting, notching and boring holes in cold-formed steel framing.** *Flanges and lips of load-bearing cold-formed steel framing members shall not be cut or notched. Holes in webs of load-bearing cold-formed steel framing members shall be permitted along the centerline of the web of the framing member and shall not exceed the dimensional limitations, penetration spacing or minimum hole edge distance as prescribed by the registered design professional. Cutting, notching and boring holes of steel floor/roof decking shall be as prescribed by the registered design professional.*

**302.5.3 Cutting, notching and boring holes in nonstructural cold-formed steel wall framing.** *Flanges and lips of nonstructural cold-formed steel wall studs shall not be cut or notched. Holes in webs of nonstructural cold-formed steel wall studs shall be permitted along the center-line of the web of the framing member, shall not exceed 1.5 inches (38 mm) in width or 4 inches (102 mm) in length, and*

*shall not be spaced less than 24 inches (610 mm) center to center from another hole or less than 10 inches (254 mm) from the bearing end.*

**SECTION MC 303**  
**EQUIPMENT AND APPLIANCE LOCATION**

**303.1 General.** *Equipment and appliances shall be located as required by this section, specific requirements elsewhere in this code and the conditions of the equipment and appliance listing.*

**303.2 Hazardous locations.** *Appliances shall not be located in a hazardous location unless listed and approved for the specific installation.*

**303.3 Prohibited locations.** *Fuel-fired appliances shall not be located in, or obtain combustion air from, any of the following rooms or spaces:*

- 1. Rooms occupied for sleeping purposes.*
- 2. Bathrooms.*
- 3. Toilet rooms.*
- 4. Storage closets.*
- 5. Surgical rooms.*

**Exception:** *This section shall not apply to the following appliances:*

- 1. Direct-vent appliances that obtain all combustion air directly from the outdoors.*
- 2. Solid fuel-fired appliances provided that the room is not a confined space and the building is not of unusually tight construction.*
- 3. Appliances installed in a dedicated enclosure in which all combustion air is taken directly from the outdoors, in accordance with Section 703. Access to such enclosure shall be through a solid door, weather-stripped in accordance with the exterior door air leakage requirements*

*of the Energy Conservation Construction Code of New York State and equipped with an approved self-closing device.*

**303.4 Protection from damage.** *Appliances shall not be installed in a location where subject to mechanical damage unless protected by suitable barriers.*

**303.5 Indoor locations.** *Fuel-fired furnaces and boilers installed in closets and alcoves shall be listed for such installation. For purposes of this section, a closet or alcove shall be defined as a room or space having a volume less than 12 times the total volume of fuel-fired appliances other than boilers and less than 16 times the total volume of boilers. Room volume shall be computed using the gross floor area and the actual ceiling height up to a maximum computation height of 8 feet (2438 mm).*

**303.6 Outdoor locations.** *Appliances installed in other than indoor locations shall be listed and labeled for outdoor installation.*

**303.7 Pit locations.** *Appliances installed in pits or excavations shall not come in direct contact with the surrounding soil. The sides of the pit or excavation shall be held back a minimum of 12 inches (305 mm) from the appliance. Where the depth exceeds 12 inches (305 mm) below adjoining grade, the walls of the pit or excavation shall be lined with concrete or masonry. Such concrete or masonry shall extend a minimum of 4 inches (102 mm) above adjoining grade and shall have sufficient lateral load-bearing capacity to resist collapse. The appliance shall be protected from flooding.*

**303.8 Elevator shafts.** *Mechanical systems shall not be located in an elevator shaft.*

## **SECTION MC 304 INSTALLATION**

**304.1 General.** *Equipment and appliances shall be installed as required by the terms of their approval, in accordance with the conditions of the listing, the manufacturer's installation instructions and this code. Manufacturer's installation instructions shall be available on the job site at the time of inspection.*

**304.2 Conflicts.** *Where conflicts between this code and the conditions of listing or the manufacturer's installation instructions occur, the provisions of this code shall apply.*

**Exception:** Where a code provision is less restrictive than the conditions of the listing of the equipment or appliance or the manufacturer's installation instructions, the conditions of the listing and the manufacturer's installation instructions shall apply.

**304.3 Elevation of ignition source.** Equipment and appliances having an ignition source and located in hazardous locations and public garages, private garages, repair garages, automotive motor-fuel-dispensing facilities and parking garages shall be elevated such that the source of ignition is not less than 18 inches (457 mm) above the floor surface on which the equipment or appliance rests. Such equipment and appliances shall not be installed in Group H occupancies or control areas where open use, handling or dispensing of combustible, flammable or explosive materials occurs. For the purpose of this section, rooms or spaces that are not part of the living space of a dwelling unit and that communicate directly with a private garage through openings shall be considered to be part of the private garage.

**304.4 Hydrogen generating and refueling operations.** Hydrogen generation and refueling operations shall be prohibited except as permitted by the Commissioner of the Fire Department.

**304.5 Public garages.** Appliances located in public garages, motor fuel dispensing facilities, repair garages or other areas frequented by motor vehicles, shall be installed a minimum of 8 feet (2438 mm) above the floor. Where motor vehicles exceed 6 feet (1829 mm) in height and are capable of passing under an appliance, appliances shall be installed a minimum of 2 feet (610 mm) higher above the floor than the height of the tallest vehicle.

**Exception:** The requirements of this section shall not apply where the appliances are protected from motor vehicle impact and installed in accordance with Section 304.3 and NFPA 88B.

**304.6 Private garages.** Appliances located in private garages and carports shall be installed with a minimum clearance of 6 feet (1829 mm) above the floor.

**Exception:** The requirements of this section shall not apply where the appliances are protected from motor vehicle impact and installed in accordance with Section 304.3.

**304.7 Construction and protection.** Boiler rooms and furnace rooms shall be protected as required by the New York City Building Code.

**304.8 Clearances to combustible construction.** Heat-producing equipment and appliances shall be installed to maintain the required clearances to combustible construction as specified in the listing and

*manufacturer's instructions. Such clearances shall be reduced only in accordance with Section 308. Clearances to combustibles shall include such considerations as door swing, drawer pull, overhead projections or shelving and window swing, shutters, coverings and drapes. Devices such as doorstops or limits, closers, drapery ties or guards shall not be used to provide the required clearances.*

**304.9 Clearances from grade.** *Equipment and appliances installed at grade level shall be supported on a level concrete slab or other approved material extending above adjoining grade or shall be suspended a minimum of 6 inches (152 mm) above adjoining grade.*

**304.10 Guards.** *Guards shall be provided where appliances, equipment, fans or other components that require service are located within 10 feet (3048 mm) of a roof edge or open side of a walking surface and such edge or open side is located more than 30 inches (762 mm) above the floor, roof or grade below. The guard shall extend not less than 30 inches (762 mm) beyond each end of such appliance, equipment, fan or component and the top of the guard shall be located not less than 42 inches (1067 mm) above the elevated surface adjacent to the guard. The guard shall be constructed so as to prevent the passage of a 21-inch-diameter (533 mm) sphere and shall comply with the loading requirements for guards specified in the New York City Building Code.*

**304.11 Area served.** *Appliances serving different areas of a building other than where they are installed shall be permanently marked in an approved manner that uniquely identifies the appliance and the area it serves.*

## **SECTION MC 305 PIPING SUPPORT**

**305.1 General.** *All mechanical system piping shall be supported in accordance with this section.*

**305.2 Materials.** *Pipe hangers and supports shall have sufficient strength to withstand all anticipated static and specified dynamic loading conditions associated with the intended use. Pipe hangers and supports that are in direct contact with piping shall be of materials that are compatible with the piping and that will not promote galvanic action.*

**305.3 Structural attachment.** *Hangers and anchors shall be attached to the building structure.*

**305.4 Interval of support.** *Piping shall be supported at distances not exceeding the spacing specified in Table 305.4, or in accordance with MSS SP-69.*

**TABLE 305.4  
PIPING SUPPORT SPACING<sup>a</sup>**

PIPING MATERIAL	MAXIMUM HORIZONTAL SPACING (feet)	MAXIMUM VERTICAL SPACING (feet)
ABS pipe	4	10 <sup>c</sup>
Aluminum pipe and tubing	10	15
Brass pipe	10	10
Brass tubing, 1-1/4-inch diameter and smaller	6	10
Brass tubing, 1-1/2-inch diameter and larger	10	10
Cast-iron pipe <sup>b</sup>	5	15
Copper or copper-alloy pipe	12	10
Copper or copper-alloy tubing, 1-1/4-inch diameter and smaller	6	10
Copper or copper-alloy tubing, 1-1/2-inch diameter and larger	10	10
CPVC pipe or tubing, 1 inch and smaller	3	10 <sup>c</sup>
CPVC pipe or tubing 1-1/4-inch and larger	4	10 <sup>c</sup>
Steel pipe	12	15
Steel tubing	8	10
Lead pipe	Continuous	4
PB pipe or tubing	2 <sup>2</sup> / <sub>3</sub> (32 inches)	4
PEX tubing	2 <sup>2</sup> / <sub>3</sub> (32 inches)	10 <sup>c</sup>
PVC pipe	4	10 <sup>c</sup>

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm.

- a. See Section 301.14.
- b. The maximum horizontal spacing of cast-iron pipe hangers shall be increased to 10 feet where 10-foot lengths of pipe are installed.
- c. Mid-story guide.

**305.5 Protection against physical damage.** *In concealed locations where piping, other than cast-iron or steel, is installed through holes or notches in studs, joists, rafters or similar members less than 1.5 inches (38 mm) from the nearest edge of the member, the pipe shall be protected by shield plates. Protective shield plates shall be a minimum of 0.062-inch-thick (1.6 mm) steel, shall cover the area of the pipe where the member is notched or bored, and shall extend a minimum of 2 inches (51mm) above sole plates and below top plates.*

**SECTION MC 306**  
**ACCESS AND SERVICE SPACE**

**306.1 Clearances for maintenance and replacement.** *Clearances around appliances to elements of permanent construction, including other installed equipment and appliances, shall be sufficient to allow inspection, service, repair or replacement without removing such elements of permanent construction or disabling the function of a required fire-resistance-rated assembly.*

**306.1.1 Central furnaces.** *Central furnaces within compartments or alcoves shall have a minimum working space clearance of 3 inches (76 mm) along the sides, back and top with a total width of the enclosing space being at least 12 inches (305 mm) wider than the furnace. Furnaces having a firebox open to the atmosphere shall have at least 6 inches (152 mm) working space along the front combustion chamber side. Combustion air openings at the rear or side of the compartment shall comply with the requirements of Chapter 7.*

**Exception:** *This section shall not apply to replacement appliances installed in existing compartments and alcoves where the working space clearances are in accordance with the equipment or appliance manufacturer's installation instructions.*

**306.2 Appliances in rooms.** *Rooms containing appliances requiring access shall be provided with a door and an unobstructed passageway measuring not less than 36 inches (914 mm) wide and 80 inches (2032 mm) high.*

**Exception:** *Within a dwelling unit, appliances installed in a compartment, alcove, basement or similar space shall be accessed by an opening or door and an unobstructed passageway measuring not less than 24 inches (610 mm) wide and large enough to allow removal of the largest appliance in the space, provided that a level service space of not less than 30 inches (762 mm) deep and the height of the appliance, but not less than 30 inches (762 mm), is present at the front or service side of the appliance with the door open.*

**306.3 Appliances in attics.** Attics containing appliances requiring access shall be provided with an opening and unobstructed passageway large enough to allow removal of the largest appliance. The passageway shall not be less than 30 inches (762 mm) high and 22 inches (559 mm) wide and not more than 20 feet (6096 mm) in length measured along the centerline of the passageway from the opening to the appliance. The passageway shall have continuous solid flooring not less than 24 inches (610 mm) wide. A level service space not less than 30 inches (762 mm) deep and 30 inches (762 mm) wide shall be present at the front or service side of the appliance. The clear access opening dimensions shall be a minimum of 20 inches by 30 inches (508 mm by 762 mm), where such dimensions are large enough to allow removal of the largest appliance.

**Exception:** The passageway and level service space are not required where the appliance is capable of being serviced and removed through the required opening.

**306.3.1 Electrical requirements.** A lighting fixture controlled by a switch located at the required passageway opening and a receptacle outlet shall be provided at or near the appliance location in accordance with the New York City Electrical Code.

**306.4 Appliances under floors.** Underfloor spaces containing appliances requiring access shall be provided with an access opening and unobstructed passageway large enough to remove the largest appliance. The passageway shall not be less than 30 inches (762 mm) high and 22 inches (559 mm) wide, nor more than 20 feet (6096 mm) in length measured along the centerline of the passageway from the opening to the appliance. A level service space not less than 30 inches (762 mm) deep and 30 inches (762 mm) wide shall be present at the front or service side of the appliance. If the depth of the passageway or the service space exceeds 12 inches (305 mm) below the adjoining grade, the walls of the passageway shall be lined with concrete or masonry. Such concrete or masonry shall extend a minimum of 4 inches (102 mm) above the adjoining grade and shall have sufficient lateral-bearing capacity to resist collapse. The clear access opening dimensions shall be a minimum of 22 inches by 30 inches (559 mm by 762 mm), where such dimensions are large enough to allow removal of the largest appliance.

**Exception:** The passageway is not required where the level service space is present when the access is open and the appliance is capable of being serviced and removed through the required opening.

**306.4.1 Electrical requirements.** A lighting fixture controlled by a switch located at the required passageway opening and a receptacle outlet shall be provided at or near the appliance location in accordance with the New York City Electrical Code.

**306.5 Equipment and appliances on roofs or elevated structures.** Where equipment and appliances requiring access are installed on roofs or elevated structures at a height exceeding 16 feet (4877 mm), such access shall be provided by a permanent means of access, the extent of which shall be from grade or floor level to the equipment and appliances' level service space. Such access shall not require climbing over obstructions greater than 30 inches (762 mm) high or walking on roofs having a slope greater than 4 units vertical in 12 units horizontal (33-percent slope).

Permanent ladders installed to provide the required access shall comply with the following minimum design criteria:

1. The side railing shall extend above the parapet or roof edge not less than 30 inches (762 mm).
2. Ladders shall have rung spacing not to exceed 14 inches (356 mm) on center.
3. Ladders shall have a toe spacing not less than 6 inches (152 mm) deep.
4. There shall be a minimum of 18 inches (457 mm) between rails.
5. Rungs shall have a minimum 0.75 inch (19.1 mm) diameter and be capable of withstanding a 300-pound (136.1 kg) load.
6. Ladders over 30 feet (9144 mm) in height shall be provided with offset sections and landings capable of withstanding 100 pounds (488.2 kg/m<sup>2</sup>) per square foot.
7. Ladders shall be protected against corrosion.

Catwalks installed to provide the required access shall be not less than 24 inches (610mm) wide and shall have railings as required for service platforms.

**Exception:** This section shall not apply to Group R-3 occupancies.

**306.6 Sloped roofs.** Where appliances are installed on a roof having a slope of 3 units vertical in 12 units horizontal (25-percent slope) or greater and having an edge more than 30 inches (762 mm) above grade at such edge, a level platform shall be provided on each side of the appliance to which access is required by the manufacturer's installation instructions for service, repair or maintenance. The platform shall not be

less than 30 inches (762 mm) in any dimension and shall be provided with guards in accordance with Section 304.10.

## **SECTION MC 307**

### **CONDENSATE DISPOSAL**

**307.1 Fuel-burning appliances.** *Liquid combustion by-products of condensing appliances shall be collected and discharged to a plumbing fixture or disposal area in accordance with the manufacturer's installation instructions. Condensate piping shall be of corrosion-resistant material and shall not be smaller than the drain connection on the appliance. Such piping shall maintain a minimum horizontal slope in the direction of discharge of not less than 1/8 unit vertical in 12 units horizontal (1-percent slope).*

**307.2 Evaporators and cooling coils.** *Condensate drain systems shall be provided for equipment and appliances containing evaporators or cooling coils. Condensate drain systems shall be designed, constructed and installed in accordance with Sections 307.2.1 through 307.2.4.*

**307.2.1 Condensate disposal.** *Condensate from all cooling coils and evaporators shall be conveyed from the drain pan outlet to a place of disposal. Condensate shall not discharge into a street, alley or other areas so as to cause a nuisance.*

**307.2.2 Drain pipe materials and sizes.** *Components of the condensate disposal system shall be cast iron, galvanized steel, copper, cross-linked polyethylene, polyethylene, ABS, CPVC or PVC pipe or tubing. All components shall be selected for the pressure and temperature rating of the installation. Condensate waste and drain line size shall be not less than 3/4 inch (19 mm) internal diameter and shall not decrease in size from the drain pan connection to the place of condensate disposal. Where the drain pipes from more than one unit are manifolded together for condensate drainage, the pipe or tubing shall be sized accordingly. All horizontal sections of drain piping shall be installed in uniform alignment at a uniform slope.*

**307.2.3 Auxiliary and secondary drain systems.** *In addition to the requirements of Section 307.2.1, a secondary drain or auxiliary drain pan shall be required for each cooling or evaporator coil where damage to any building components will occur as a result of overflow from the equipment drain pan or stoppage in the condensate drain piping. One of the following methods shall be used:*

1. *An auxiliary drain pan with a separate drain shall be provided under the coils on which condensation will occur. The auxiliary pan drain shall discharge to a conspicuous point of*

*disposal to alert occupants in the event of a stoppage of the primary drain. The pan shall have a minimum depth of 1.5 inches (38 mm), shall not be less than 3 inches (76 mm) larger than the unit or the coil dimensions in width and length and shall be constructed of corrosion-resistant material. Metallic pans shall have a minimum thickness of not less than 0.0276-inch (0.7 mm) galvanized sheet metal. Nonmetallic pans shall have a minimum thickness of not less than 0.0625 inch (1.59 mm).*

- 2. A separate overflow drain line shall be connected to the drain pan provided with the equipment. Such overflow drain shall discharge to a conspicuous point of disposal to alert occupants in the event of a stoppage of the primary drain. The overflow drain line shall connect to the drain pan at a higher level than the primary drain connection.*
- 3. An auxiliary drain pan without a separate drain line shall be provided under the coils on which condensate will occur. Such pan shall be equipped with a water-level detection device that will shut off the equipment served prior to overflow of the pan. The auxiliary drain pan shall be constructed in accordance with Item 1 of this section.*

**307.2.4 Traps.** *Condensate drains shall be trapped as required by the equipment or appliance manufacturer.*

**307.3 Exceptions.** *This section applies to permanently installed equipment. Window units and through-the-wall air-conditioning units are exempt from the requirements of this section.*

## **SECTION MC 308**

### **CLEARANCE REDUCTION**

**308.1 Scope.** *This section shall govern the reduction in required clearances to combustible materials and combustible assemblies for chimneys, vents, kitchen exhaust equipment, mechanical appliances, and mechanical devices and equipment.*

**308.2 Listed appliances and equipment.** *The reduction of the required clearances to combustibles for listed and labeled appliances and equipment shall be in accordance with the requirements of this section except that such clearances shall not be reduced where reduction is specifically prohibited by the terms of the appliance or equipment listing.*

**308.3 Protective assembly construction and installation.** *Reduced clearance protective assemblies, including structural and support elements, shall be constructed of noncombustible materials. Spacers utilized to maintain an airspace between the protective assembly and the protected material or assembly shall be noncombustible. Where a space between the protective assembly and protected combustible material or assembly is specified, the same space shall be provided around the edges of the protective assembly and the spacers shall be placed so as to allow air circulation by convection in such space. Protective assemblies shall not be placed less than 1 inch (25 mm) from the mechanical appliances, devices or equipment, regardless of the allowable reduced clearance.*

**308.4 Allowable reduction.** *The reduction of required clearances to combustible assemblies or combustible materials shall be based on the utilization of a reduced clearance protective assembly in accordance with Section 308.5 or 308.6.*

**308.5 Labeled assemblies.** *The allowable clearance reduction shall be based on a reduced clearance protective assembly that has been tested and bears the label of an approved agency.*

**308.6 Reduction table.** *The allowable clearance reduction shall be based on one of the methods specified in Table 308.6. Where required clearances are not listed in Table 308.6, the reduced clearances shall be determined by linear interpolation between the distances listed in the table. Reduced clearances shall not be derived by extrapolation below the range of the table.*

**TABLE 308.6**  
**CLEARANCE REDUCTION METHODS**

<b>TYPE OF PROTECTIVE ASSEMBLY<sup>a</sup></b>	<b>REDUCED CLEARANCE WITH PROTECTION (inches)<sup>a</sup></b>							
	<b>Horizontal combustible assemblies located above the heat source</b>				<b>Horizontal combustible assemblies located beneath the heat source and</b>			
	<b>Required clearance to</b>				<b>Required clearance to</b>			
	<b>36</b>	<b>18</b>	<b>9</b>	<b>6</b>	<b>36</b>	<b>18</b>	<b>9</b>	<b>6</b>
<i>Galvanized sheet metal, minimum nominal thickness of .0296 inch (No. 22 Gage), mounted on 1-inch glass fiber or mineral wool batt reinforced with wire on the back, 1 inch off the combustible assembly</i>	18	9	5	3	12	6	3	3
<i>Two layers of galvanized sheet metal, minimum nominal thickness of 0.024 inch (No. 24 Gage), having a 1-inch airspace between layers, spaced 1 inch off the combustible</i>	18	9	5	3	12	6	3	3
<i>Two layers of galvanized sheet metal, minimum nominal thickness of 0.024 inch (No. 24 Gage), having 1 inch of fiberglass insulation between layers, spaced 1 inch off the</i>	18	9	5	3	12	6	3	3
<i>0.5-inch inorganic insulating board, over 1 inch of fiberglass or mineral wool batt, against the combustible assembly</i>	24	12	6	4	18	9	5	3
<i>3.5-inch brick wall, spaced 1 inch off the combustible wall</i>	—	—	—	—	12	6	6	6
<i>3.5-inch brick wall, against the combustible wall</i>	—	—	—	—	24	12	6	5

*For SI: 1 inch = 25.4 mm, °C = [(°F)-32]/1.8, 1 pound per cubic foot = 16.02 kg/m<sup>3</sup>, 1.0 Btu • in./ft<sup>2</sup> • h • °F = 0.144 W/m<sup>2</sup> • K.*

*a. Mineral wool and glass fiber batts (blanket or board) shall have a minimum density of 8 pounds per cubic foot and a minimum melting point of 1,500°F. Insulation material utilized as part of a clearance reduction system shall have a thermal conductivity of 1.0 Btu • in./ft<sup>2</sup> • h • °F) or less. Insulation board shall be formed of noncombustible material.*

**308.7 Solid fuel-burning appliances.** *The clearance reduction methods specified in Table 308.6 shall not be utilized to reduce the clearance required for solid fuel-burning appliances that are labeled for installation with clearances of 12 inches (305 mm) or less. Where appliances are labeled for installation with clearances of greater than 12 inches (305 mm), the clearance reduction methods of Table 308.6 shall not reduce the clearance to less than 12 inches (305 mm).*

**308.8 Masonry chimneys.** *The clearance reduction methods specified in Table 308.6 shall not be utilized to reduce the clearances required for masonry chimneys as specified in Chapter 8 and the New York City Building Code.*

**308.9 Chimney connector pass-throughs.** *The clearance reduction methods specified in Table 308.6 shall not be utilized to reduce the clearances required for chimney connector pass-throughs as specified in Section 803.10.4.*

**308.10 Masonry fireplaces.** *The clearance reduction methods specified in Table 308.6 shall not be utilized to reduce the clearances required for masonry fireplaces as specified in Chapter 8 and the New York City Building Code.*

**308.11 Kitchen exhaust ducts.** *The clearance reduction methods specified in Table 308.6 shall not be utilized to reduce the minimum clearances required by Section 506.3.10 for kitchen exhaust ducts enclosed in a shaft.*

## **SECTION MC 309 TEMPERATURE CONTROL**

**309.1 Space-heating systems.** *Interior spaces intended for human occupancy shall be provided with active or passive space-heating systems capable of maintaining a minimum indoor temperature of 68°F (20°C) at a point 3 feet (914 mm) above floor on the design heating day. The installation of portable space heaters shall not be used to achieve compliance with this section. Refer to Section 1204 of the New York City Building Code.*

**Exception:** *Interior spaces where the primary purpose is not associated with human comfort.*

## **SECTION MC 310 EXPLOSION CONTROL**

**310.1 Required.** Structures occupied for purposes involving explosion hazards shall be provided with explosion control in compliance with rules of the Commissioner of the Fire Department. Explosion control systems shall be designed and installed in accordance with the New York City Fire Code.

**SECTION MC 311  
SMOKE AND HEAT VENTS**

**311.1 Required.** Approved smoke and heat vents shall be installed in the roofs of one-story buildings where required by the New York City Fire Code. Smoke and heat vents shall be designed and installed in accordance with the New York City Fire Code.

**SECTION MC 312  
HEATING AND COOLING LOAD CALCULATIONS**

**312.1 Load calculations.** Heating and cooling system design loads for the purpose of sizing systems, appliances and equipment shall be determined in accordance with the procedures described in the ASHRAE Handbook of Fundamentals. Heating and cooling loads shall be adjusted to account for load reductions that are achieved when energy recovery systems are utilized in the HVAC system in accordance with the ASHRAE Handbook - HVAC Systems and Equipment. Alternatively, design loads shall be determined by an approved equivalent computation procedure, using the design parameters specified in Chapter 3 of the Energy Conservation Construction Code of New York State. Heating and cooling system design loads for the purpose of sizing systems, appliances and equipment shall also comply with the requirements of Section 1204 of the New York City Building Code.

**CHAPTER 4  
VENTILATION**

**SECTION MC 401  
GENERAL**

**401.1 Scope.** This chapter shall govern the ventilation of spaces within a building intended to be occupied. This chapter does not govern the requirements for smoke control systems. See Section 513 of this code.

**401.2 Ventilation required.** Every occupied space shall be ventilated by natural means in accordance with Section 402 or by mechanical means in accordance with Section 403.

**401.3 When required.** *Ventilation shall be provided during the periods that the room or space is occupied.*

**401.4 Exits.** *Equipment and ductwork for exit enclosure ventilation shall comply with one of the following items:*

- 1. Such equipment and ductwork shall be located exterior to the building and shall be directly connected to the exit enclosure by ductwork enclosed in construction as required by the New York City Building Code for shafts.*
- 2. Where such equipment and ductwork is located within the exit enclosure, the intake air shall be taken directly from the outdoors and the exhaust air shall be discharged directly to the outdoors, or such air shall be conveyed through ducts enclosed in construction as required by the New York City Building Code for shafts.*
- 3. Where located within the building, such equipment and ductwork shall be separated from the remainder of the building, including other mechanical equipment, with construction as required by the New York City Building Code for shafts.*

*In each case, openings into fire-resistance-rated construction shall be limited to those needed for maintenance and operation and shall be protected by self-closing fire-resistance-rated devices in accordance with the New York City Building Code for enclosure wall opening protectives.*

*Exit enclosure ventilation systems shall be independent of other building ventilation systems.*

**401.5 Opening location.** *Outside air exhaust and intake openings shall be located a minimum of 10 feet (3048 mm) from lot lines or buildings on the same lot. Where openings front on a street or public way, the distance shall be measured to the centerline of the street or public way. Outdoor intakes for high-rise office buildings having occupied floors located more than 75 feet (22 860 mm) above the lowest level of fire department vehicle access serving spaces above the second story and serving spaces greater than 10, 000 square feet (929 square meters) of floor area shall be located at least 20 feet (6096 mm) above ground level, at least 30 feet (9144 mm) from exhaust outlets and other exhaust discharges, and at least 20 feet (6096 mm) from areas that may collect vehicular exhaust, such as off street loading bays.*

**Exception:** *Group R-3.*

**401.5.1 Intake openings.** *Mechanical and gravity outside air intake openings, shall be located a minimum of 20 feet (6096 mm) from any hazardous or noxious contaminant such as vents, chimneys, plumbing vents, streets, alleys, parking lots and loading docks, except as otherwise specified in this code. Where a source of contaminant is located within 20 feet (6096 mm) of an intake opening, such opening shall be located a minimum of 2 feet (610 mm) below the contaminant source.*

*An outdoor air intake opening with gross area of more than 144 square inches (.0929 m<sup>2</sup>) shall be provided with fire dampers and smoke dampers, or combined fire and smoke dampers when such opening is located as follows:*

- 1. Less than 30 feet (9144 mm) above grade.*
- 2. Less than 30 feet (9144 mm) in any direction from any opening in another building.*
- 3. Less than 15 feet (4572 mm) from a lot line.*
- 4. Less than 50 feet (15 240 mm) above and less than 50 feet (15 240 mm) in any direction from a roof constructed of combustible material or a building in which the exterior walls are constructed wholly or partly of wood.*

**Exceptions:**

- 1. Smoke dampers shall not be required for outdoor air intake openings installed in any construction required to have a fire resistance rating that is less than two hours.*
- 2. Smoke dampers shall not be required for outdoor air intake openings of systems greater than 15,000 cfm (7.1 m<sup>3</sup>/s) which are provided with smoke dampers in accordance with Chapter 6 of this code and arranged so as to not introduce smoke into the building or space in which the equipment is located.*

**401.5.2 Exhaust openings.** *To minimize the hazard from fires and from noxious, toxic or obnoxious discharges to structures, any exhaust air discharge to the outside atmosphere shall terminate at or above the roof or setback roof of the buildings or in an exterior wall adjoining a street, yard or court. Exhaust air discharges shall be at least 10 feet (3048 mm) above the sidewalk or ground and shall terminate at least 10 feet (3048 mm) from any window in another building or from any window in a residential portion of the same building, or from any fire escape, exterior stair, or balcony. Exhaust*

*system openings shall be provided with vanes or louvers constructed so as to direct the air away from windows, other openings, and pedestrians.*

**Exception:** *In occupancy groups R-2 and R-3 each dwelling unit may be individually exhausted directly to the outdoors with a dedicated, continuously operated exhaust fan and shall comply with the following:*

- 1. The exhaust system for the kitchen and the toilet/baths may be combined to the inlet of a single fan, provided such exhaust system serves only one dwelling unit.*
- 2. The dedicated exhaust from each dwelling unit shall be directed away from any window serving the same dwelling unit from which the exhaust is taken, and in addition, such exhaust opening shall terminate at least:*
  - 2.1. 2 feet (610 mm) from any window serving the same dwelling unit.*
  - 2.2. 4 feet (1219 mm) from any window serving an adjoining dwelling unit.*
  - 2.3. 4 feet (1219 mm) from any window serving another occupancy group in the same building.*
  - 2.4. 10 feet (3048 mm) from any outdoor air intake opening.*
  - 2.5. 10 feet (3048 mm) above the public sidewalk adjoining the same building.*
- 3. All other minimum distances described in 401.5 shall be met.*

**401.5.3 Flood hazard.** *For structures located in areas of special flood hazard, outdoor exhaust openings shall comply with Appendix G of the New York City Building Code.*

**401.6 Outdoor opening protection.** *Air exhaust and intake openings that terminate outdoors shall be protected with corrosion-resistant screens, louvers or grilles. Openings in louvers, grilles and screens shall be sized in accordance with Table 401.6, and shall be protected against local weather conditions. Outdoor air exhaust and intake openings located in exterior walls shall meet the provisions for exterior wall opening protectives in accordance with the New York City Building Code.*

**TABLE 401.6  
 OPENING SIZES IN LOUVERS, GRILLES AND  
 SCREENS PROTECTING OUTDOOR EXHAUST AND  
 AIR INTAKE OPENINGS**

OUTDOOR OPENING TYPE	MINIMUM AND MAXIMUM OPENING SIZES IN LOUVERS, GRILLES AND SCREENS MEASURED IN ANY DIRECTION
Exhaust openings	Not < ¼ inch and not > ½ inch
Intake openings in residential occupancies	Not < ¼ inch and not > ½ inch
Intake openings in other than residential occupancies	> ¼ inch and not > 1 inch

For SI: 1 inch = 25.4 mm.

**401.7 Contaminant sources.** Stationary local sources producing air-borne particulates, heat, odors, fumes, spray, vapors, smoke or gases in such quantities as to be irritating or injurious to health shall be provided with an exhaust system in accordance with Chapter 5 or a means of collection and removal of the contaminants. Such exhaust shall discharge directly to an approved location at the exterior of the building.

**SECTION MC 402  
NATURAL VENTILATION**

**402.1 General.** Natural ventilation of an occupied space shall comply with Chapter 12 of the New York City Building Code.

**402.2 Reserved.**

**402.3 Reserved.**

**402.4 Reserved.**

**SECTION MC 403  
MECHANICAL VENTILATION**

**403.1 Ventilation system.** Mechanical ventilation shall be provided by a method of supply air and return or exhaust air. The amount of supply air shall be approximately equal to the amount of return and exhaust air. The system shall not be prohibited from producing negative or positive pressure. The system to convey ventilation air shall be designed and installed in accordance with Chapter 6.

Ventilation supply systems shall be designed to deliver the required rate of supply air to the occupied zone within an occupied space. The occupied zone shall have boundaries measured at 3 inches (76 mm) and 72 inches (1829 mm) above the floor and 24 inches (610 mm) from the enclosing walls.

**403.2 Outdoor air required.** The minimum ventilation rate of required outdoor air shall be determined in accordance with Section 403.3.

**403.2.1 Recirculation of air.** The air required by Section 403.3 shall not be recirculated. Air in excess of that required by Section 403.3 shall not be prohibited from being recirculated as a component of supply air to building spaces, except that:

- 1. Ventilation air shall not be recirculated from one dwelling unit to another or to dissimilar occupancies.*
- 2. Supply air to a swimming pool and associated deck areas shall not be recirculated unless such air is dehumidified to maintain the relative humidity of the area at 60 percent or less. Air from this area shall not be recirculated to other spaces.*
- 3. Where mechanical exhaust is required by Table 403.3, recirculation of air from such spaces shall be prohibited. All air supplied to such spaces shall be exhausted, including any air in excess of that required by Table 403.3.*

**403.2.2 Transfer air.** *Except where recirculation from such spaces is prohibited by Table 403.3, air transferred from occupied spaces is not prohibited from serving as makeup air for required exhaust systems in such spaces as kitchens, baths, toilet rooms, elevators and smoking lounges. The amount of transfer air and exhaust air shall be sufficient to provide the flow rates as specified in Sections 403.3 and 403.3.1. The required outdoor air rates specified in Table 403.3 shall be introduced directly into such spaces or into the occupied spaces from which air is transferred or a combination of both.*

**403.3 Ventilation rate.** *Ventilation systems shall be designed to have the capacity to supply the minimum outdoor airflow rate determined in accordance with Table 403.3 based on the occupancy of the space and the occupant load or other parameter as stated therein. The occupant load utilized for design of the ventilation system shall not be less than the number determined from the estimated maximum occupant load rate indicated in Table 403.3. Ventilation rates for occupancies not represented in Table 403.3 shall be determined by an approved engineering analysis. The ventilation system shall be designed to supply the required rate of ventilation air continuously during the period the building is occupied, except as otherwise stated in other provisions of the code.*

**Exception:** *The occupant load is not required to be determined, based on the estimated maximum occupant load rate indicated in Table 403.3, where approved statistical data document the accuracy of an alternate anticipated occupant density.*

**TABLE 403.3**

For SI: 1 cubic foot per minute = 0.0004719 m<sup>3</sup>/s, 1 ton = 908 kg, 1 cubic foot per minute per square foot = 0.00508 m<sup>3</sup>/(s • m<sup>2</sup>), °C = [(°F) - 32] / 1.8, 1 square foot = 0.0929 m<sup>2</sup>.

a. Based upon net floor area.

b. Mechanical exhaust required and the recirculation of air from such spaces as permitted by Section 403.2.1 is prohibited (see Section 403.2.1).

- c. Spaces unheated or maintained below 50°F are not covered by these requirements unless the occupancy is continuous.*
- d. Ventilation systems in enclosed parking garages shall comply with Section 404. A mechanical ventilation system shall not be required in garages having a floor area not exceeding 850 square feet and used for the storage of not more than four vehicles or trucks of 1 ton maximum capacity.*
- e. Where the ventilation rate is expressed in cfm/ft<sup>2</sup>, such rate is based upon cubic feet per minute per square foot of the floor area being ventilated.*
- f. The sum of the outdoor and transfer air from adjacent spaces shall be sufficient to provide an exhaust rate of not less than 1.5 cfm/ft<sup>2</sup>.*
- g. Transfer air permitted in accordance with Section 403.2.2.*
- h. Nonproduction chemical laboratories subject to Section 419 of the New York City Building Code.*

**403.3.1 System operation.** *The minimum flow rate of outdoor air that the ventilation system must be capable of supplying during its operation shall be permitted to be based on the rate per person indicated in Table 403.3 and the actual number of occupants present. Intermittent exhaust shall be permitted where an individual exhaust duct and fan are provided and the operation of the fan is controlled by occupants of the space being vented.*

**403.3.2 Common ventilation system.** *Where spaces having different ventilation rate requirements are served by a common ventilation system, the ratio of outdoor air to total supply air for the system shall be determined based on the space having the largest outdoor air requirement or shall be determined in accordance with the following formula:*

*EQUATION 4-1*

$$Y = \frac{X}{1 + X - Z}$$

Where

$Y = V_{\alpha c} / V_{\alpha}$  = Corrected fraction of outdoor air in system supply.

$X = V_{\alpha} / V_{\alpha}$  = Uncorrected fraction of outdoor air in system supply

$Z = V_{\alpha} / V_{\alpha c}$  = Fraction of outdoor air in critical space.  
The critical space is that space with the greatest required fraction of outdoor air in the supply to this space.

$V_{\alpha c}$  = Corrected total outdoor airflow rate.

$V_{\alpha}$  = Total supply flow rate, i.e., the sum of all supply for all branches of the system.

$V_{\alpha}$  = Sum of outdoor airflow rates for all branches on system.

$V_{\alpha}$  = Outdoor airflow rate required in critical spaces.

$V_{\alpha c}$  = Supply flow rate in critical space.

---

**403.3.3 Variable air volume system control.** Variable air volume air distribution systems, other than those designed to supply only 100-percent outdoor air, shall be provided with controls to regulate the flow of outdoor air. Such control systems shall be designed to maintain the flow of outdoor air at a rate of not less than that required by Section 403 over the entire range of supply air operating rates.

**403.3.4 Balancing.** Ventilation systems shall be balanced by an approved method. Such balancing shall verify that the ventilation system is capable of supplying the airflow rates required by Section 403.

## **SECTION MC 404 ENCLOSED PARKING GARAGES**

**404.1 Enclosed parking garages.** Mechanical ventilation systems for enclosed parking garages are not required to operate continuously where the system is arranged to operate automatically upon detection of a concentration of carbon monoxide of 25 parts per million (ppm) by approved automatic detection devices.

**404.2 Minimum ventilation.** Automatic operation of the system shall not reduce the ventilation rate below 0.05 cfm per square foot ( $0.00025 \text{ m}^3/\text{s} \cdot \text{m}^2$ ) of the floor area and the system shall be capable of producing a ventilation rate of 1.5 cfm per square foot ( $0.0076 \text{ m}^3/\text{s} \cdot \text{m}^2$ ) of floor area.

**404.3 Occupied spaces accessory to public garages.** Connecting offices, waiting rooms, ticket booths and similar uses that are accessory to a public garage shall be maintained at a positive pressure and shall be provided with ventilation in accordance with Section 403.3.

## **SECTION MC 405 SYSTEMS CONTROL**

**405.1 General.** Mechanical ventilation systems shall be provided with manual or automatic controls that will operate such systems whenever the spaces are occupied. Air-conditioning systems that supply required ventilation air shall be provided with controls designed to automatically maintain the required outdoor air supply rate during occupancy.

**405.2 Manual control.** Each air distribution system shall be provided with not less than one manual control to stop the operation of the supply, return, and exhaust fans(s) in an emergency. The manual control shall be provided at an approved location.

**405.2.1 Office buildings.** Any building where the main use or dominant occupancy is classified in occupancy group B having occupied floors located more than 75 feet (22 860 mm) above the lowest level of fire department vehicle access, where a system serves a floor or floors other than the floor on which the equipment is located, shall be provided with the following controls, in addition to the controls required by this chapter:

1. *Manual controls for operating individually each air supply and each exhaust or return fan in the system located as follows:*
  - 1.1. *At the Fire Command Center, and*
  - 1.2. *In the room containing the affected air-handling fans.*
2. *Manual controls for operating individually or in groups each remote control reversible fire shutter, when such shutters are provided in accordance with the provisions of the New York City Building Code, or each smoke damper provided in accordance with the provisions of the New York City Building Code. Such controls shall be located at the Fire Command Center.*

#### **SECTION MC 406**

#### **VENTILATION OF UNINHABITED SPACES**

**406.1 General.** *Uninhabited spaces, such as crawl spaces and attics, shall be provided with natural ventilation openings as required by the New York City Building Code or shall be provided with a mechanical exhaust and supply air system. The mechanical exhaust rate shall be not less than 0.02 cfm per square foot (0.00001 m<sup>3</sup>/s • m<sup>2</sup>) of horizontal area and shall be automatically controlled to operate when the relative humidity in the space served exceeds 60 percent.*

#### **SECTION MC 407**

#### **VENTILATION OF NON-PRODUCTION CHEMICAL LABORATORIES**

**407.1 General.** *Non-production chemical laboratories complying with the hazardous materials quantity limitations of Section 419 of the New York City Building Code shall provide a mechanical ventilation system in accordance with this code and NFPA 45, except that ducts constructed of combustible materials shall not be permitted.*

### **CHAPTER 5**

#### **EXHAUST SYSTEMS**

#### **SECTION MC 501**

#### **GENERAL**

**501.1 Scope.** *This chapter shall govern the design, construction and installation of mechanical exhaust systems, including dust, stock and refuse conveyor systems, exhaust systems serving commercial cooking appliances and energy recovery ventilation systems.*

**501.2 Outdoor discharge.** *The air removed by every mechanical exhaust system shall be discharged outdoors at a point where it will not cause a nuisance and from which it cannot again be readily drawn in by a ventilating system.*

*Air shall not be exhausted into an attic or crawl space.*

**Exception:** *Whole-house ventilation-type attic fans that discharge into the attic space of dwelling units having private attics.*

**501.3 Pressure equalization.** *Mechanical exhaust systems shall be sized to remove the quantity of air required by this chapter to be exhausted. The system shall operate when air is required to be exhausted. Where mechanical exhaust is required in a room or space in other than occupancies in Group R-3, such space shall be maintained with a neutral or negative pressure. If a greater quantity of air is supplied by a mechanical ventilating supply system than is removed by a mechanical exhaust system for a room, adequate means shall be provided for the natural exit of the excess air supplied. If only a mechanical exhaust system is installed for a room or if a greater quantity of air is removed by a mechanical exhaust system than is supplied by a mechanical ventilating supply system for a room, adequate means shall be provided for the natural supply of the deficiency in the air supplied.*

**501.4 Ducts.** *Where exhaust duct construction is not specified in this chapter, such construction shall comply with Chapter 6 of this code.*

**501.5 Independent system required.**

- 1. Single or combined mechanical exhaust systems from bath, toilet, urinal, locker, service sink closets and similar rooms shall be independent of all other exhaust systems, except as permitted in Section 401.5.2.*
- 2. A separate grease duct system shall be provided for each Type I hood except as provided in Section 506.3.5.*
- 3. Hazardous exhaust systems shall be independent of other types of exhaust systems as provided in Section 510.*

## **SECTION MC 502 REQUIRED SYSTEMS**

**502.1 General.** *An exhaust system shall be provided, maintained and operated as specifically required by this section and for all occupied areas where machines, vats, tanks, furnaces, forges, salamanders and other appliances, equipment and processes in such areas produce or throw off dust or particles sufficiently light to float in the air, or which emit heat, odors, fumes, spray, gas or smoke, in such quantities so as to be irritating or injurious to health or safety.*

**502.1.1 Exhaust location.** *The inlet to an exhaust system shall be located in the area of heaviest concentration of contaminants.*

**502.1.2 Fuel-dispensing areas.** *The bottom of an air inlet or exhaust opening in fuel-dispensing areas shall be*

located not more than 18 inches (457 mm) above the floor.

**502.1.3 Equipment, appliance and service rooms.** Equipment, appliance and system service rooms that house sources of odors, fumes, noxious gases, smoke, steam, dust, spray or other contaminants shall be designed and constructed so as to prevent spreading of such contaminants to other occupied parts of the building.

**502.1.4 Hazardous exhaust.** The mechanical exhaust of high concentrations of dust or hazardous vapors shall conform to the requirements of Section 510.

**502.2 Aircraft fueling and defueling.** Compartments housing piping, pumps, air eliminators, water separators, hose reels and similar equipment used in aircraft fueling and defueling operations shall be adequately ventilated at floor level or within the floor itself.

**502.3 Battery-charging areas.** Ventilation shall be provided in an approved manner in battery-charging areas to prevent a dangerous accumulation of flammable gases.

**502.4 Stationary lead-acid battery systems.** Ventilation shall be provided for stationary lead-acid battery systems in accordance with this chapter and Section 502.4.1 or 502.4.2.

**502.4.1 Hydrogen limit.** The ventilation system shall be designed to limit the maximum concentration of hydrogen to 1.0 percent of the total volume of the room.

**502.4.2 Ventilation rate.** Continuous ventilation shall be provided at a rate of not less than 1 cubic foot per minute per square foot (cfm/ft<sup>2</sup>) [0.00508 m<sup>3</sup>/(s · m<sup>2</sup>)] of floor area of the room.

**502.5 Valve-regulated lead-acid batteries.** Valve-regulated lead-acid battery systems as regulated by the New York City Fire Code, shall be provided with ventilation in accordance with Section 502.5.1 or 502.5.2 for rooms and in accordance with Section 502.5.3 or 502.5.4 for cabinets.

**502.5.1 Hydrogen limit in rooms.** The ventilation system shall be designed to limit the maximum concentration of hydrogen to 1.0 percent of the total volume of the room during the worst-case event of simultaneous boost charging of all batteries in the room.

**502.5.2 Ventilation rate in rooms.** Continuous ventilation shall be provided at a rate of not less than 1 cubic foot per minute per square foot (cfm/ft<sup>2</sup>) [0.00508 m<sup>3</sup>/(s · m<sup>2</sup>)] of floor area of the room.

**502.5.3 Hydrogen limit in cabinets.** The ventilation system shall be designed to limit the maximum concentration of hydrogen to 1.0 percent of the total volume of the cabinet during the worst-case event of simultaneous boost charging of all batteries in the cabinet.

**502.5.4 Ventilation rate in cabinets.** Continuous ventilation shall be provided at a rate of not less than 1 cubic foot per minute per square foot (cfm/ft<sup>2</sup>) [0.00508 m<sup>3</sup>/(s · m<sup>2</sup>)] of the floor area covered by the cabinet. The room in which the cabinet is installed shall also be ventilated as required by Section 502.5.1 or 502.5.2.

**502.6 Dry cleaning plants.** Mechanical ventilation in dry cleaning plants shall be provided and shall be adequate to protect employees and the public in accordance with this section and DOL 29 CFR Part 1910.1000, where applicable.

**502.6.1 Type II and Type III systems.** Type II and Type III dry cleaning systems shall be provided with a mechanical ventilation system that is designed to exhaust 1 cubic foot of air per minute for each square foot of floor area (1 cfm/ft<sup>2</sup>) [0.00508 m<sup>3</sup>/(s · m<sup>2</sup>)] in dry cleaning rooms and in drying rooms. The ventilation system shall operate automatically when the dry cleaning equipment is in operation and shall have manual controls at an approved location.

**502.6.2 Type IV and V systems.** Type IV and V dry cleaning systems shall be provided with an automatically activated exhaust ventilation system to maintain a minimum of 100 feet per minute (0.5 m/s) air velocity through the loading door when the door is opened.

**Exception:** Dry cleaning units are not required to be provided with exhaust ventilation where an exhaust hood is installed immediately outside of and above the loading door which operates at an airflow rate as follows:

$$Q = 100 \times A_{LD} \quad \text{(Equation 5-1)}$$

where:

$Q$  = Flow rate exhausted through the hood, cubic feet per minute.

$A_{LD}$  = Area of the loading door, square feet.

**502.6.3 Spotting and pretreating.** *Scrubbing tubs, scouring, brushing or spotting operations shall be located such that solvent vapors are captured and exhausted by the ventilating system.*

**502.7 Application of flammable finishes.** *Mechanical exhaust as required by this section shall be provided for operations involving the application of flammable finishes and shall comply with the New York City Fire Code.*

**502.7.1 During construction.** *Ventilation shall be provided for operations involving the application of materials containing flammable solvents in the course of construction, alteration or demolition of a structure.*

**502.7.2 Limited spraying spaces.** *Positive mechanical ventilation which provides a minimum of six complete air changes per hour shall be installed in limited spraying spaces. Such system shall meet the requirements of the New York City Fire Code for handling flammable vapors. Explosion venting is not required.*

**502.7.3 Spraying areas.** *Mechanical ventilation of spraying areas and resin application areas shall be provided in accordance with Sections 502.7.3.1 through 502.7.3.7.*

**502.7.3.1 Operation.** *Mechanical ventilation shall be kept in operation at all times while spraying operations are being conducted and for a sufficient time thereafter to allow vapors from drying coated articles and finishing material residue to be exhausted. Spraying equipment shall be interlocked with the ventilation of the spraying area such that spraying operations cannot be conducted unless the ventilation system is in operation.*

**502.7.3.2 Recirculation.** *Air exhausted from spraying operations shall not be recirculated.*

**Exceptions:**

1. *Air exhausted from spraying operations shall be permitted to be recirculated as makeup air for unmanned spray operations provided that:*

1.1. *Solid particulate has been removed.*

1.2. *The vapor concentration is less than 25 percent of the lower flammability limit (LFL).*

1.3. *Approved equipment is used to monitor the vapor concentration.*

1.4. *An alarm is sounded and spray operations are automatically shut down if the vapor concentration exceeds 25 percent of the LFL.*

1.5. *The spray booths, spray spaces or spray rooms involved in any recirculation process shall be provided with mechanical ventilation that shall automatically exhaust 100 percent of the*

*required air volume in the event of shutdown by approved equipment used to monitor vapor concentrations.*

2. *Air exhausted from spraying operations shall be permitted to be recirculated as makeup air to manned spraying operations if all of the conditions provided in Exception 1 are included in the installation and documents have been prepared to show that the installation does not present life safety hazards to personnel inside the spray booth, spray space or spray room.*

**502.7.3.3 Air velocity.** *Ventilation systems shall be designed, installed and maintained such that the average air velocity over the open face of the booth, or booth cross section in the direction of airflow during spraying operations, is not less than 100 feet per minute (0.51 m/s).*

**502.7.3.4 Ventilation obstruction.** *Articles being sprayed shall be positioned in a manner that does not obstruct collection of overspray.*

**502.7.3.5 Independent ducts.** *Each spray booth and spray room shall have an independent exhaust duct system discharging to the outdoors.*

**Exceptions:**

1. *Multiple spray booths having a combined frontal area of 18 square feet (1.67m<sup>2</sup>) or less are allowed to have a common exhaust where identical spray-finishing material is used in each booth. If more than one fan serves one booth, such fans shall be interconnected so that all fans operate simultaneously.*
2. *Where treatment of exhaust is necessary for air pollution control or energy conservation, ducts shall be allowed to be manifolded if all of the following conditions are met:*
  - 2.1. *The sprayed materials used are compatible and will not react or cause ignition of the residue in the ducts.*
  - 2.2. *Nitrocellulose-based finishing material shall not be used.*
  - 2.3. *A filtering system shall be provided to reduce the amount of overspray carried into the duct manifold.*
  - 2.4. *Automatic sprinkler protection shall be provided at the junction of each booth exhaust with the manifold, in addition to the protection required by this chapter.*

**502.7.3.6 Termination point.** *The termination point for exhaust ducts discharging to the atmosphere shall be*

located with the following minimum distances.

1. For ducts conveying explosive or flammable vapors, fumes or dusts: 30 feet (9144 mm) from the property line; 10 feet (3048 mm) from openings into the building; 6 feet (1829 mm) from exterior walls and roofs; 30 feet (9144 mm) from combustible walls and openings into the building which are in the direction of the exhaust discharge; 10 feet (3048 mm) above adjoining grade.
2. For other product-conveying outlets: 10 feet (3048 mm) from the property line; 3 feet (914 mm) from exterior walls and roofs; 10 feet (3048 mm) from openings into the building; 10 feet (3048 mm) above adjoining grade.
3. For environmental air duct exhaust: 3 feet (914 mm) from the property line; 3 feet (914 mm) from openings into the building.

**502.7.3.7 Fan motors and belts.** Electric motors driving exhaust fans shall not be placed inside booths or ducts. Fan rotating elements shall be nonferrous or nonsparking or the casing shall consist of, or be lined with, such material. Belts shall not enter the duct or booth unless the belt and pulley within the duct are tightly enclosed.

**502.7.4 Dipping operations.** Vapor areas of dip tank operations shall be provided with mechanical ventilation adequate to prevent the dangerous accumulation of vapors. Required ventilation systems shall be so arranged that the failure of any ventilating fan will automatically stop the dipping conveyor system.

**502.7.5 Electrostatic apparatus.** The spraying area in spray-finishing operations involving electrostatic apparatus and devices shall be ventilated in accordance with Section 502.7.3.

**502.7.6 Powder coating.** Exhaust ventilation for powder-coating operations shall be sufficient to maintain the atmosphere below one-half of the minimum explosive concentration for the material being applied. Nondeposited, air-suspended powders shall be removed through exhaust ducts to the powder recovery cyclone or receptacle.

**502.7.7 Floor resurfacing operations.** To prevent the accumulation of flammable vapors during floor resurfacing operations, mechanical ventilation at a minimum rate of 1 cfm/ft<sup>2</sup> [0.00508 m<sup>3</sup>/(s · m<sup>2</sup>)] of area being finished shall be provided. Such ventilation shall be by approved temporary or portable means. Vapors shall be exhausted to the outdoors. Such ventilation equipment shall be kept in operation while the floor finishing operations are conducted and until any flammable vapors have been exhausted.

**502.7.8 Resin application areas.** Exhaust ventilation for resin application areas shall comply with Section 502.7.3.

**Exception:** Mechanical ventilation is not required for buildings that are unenclosed for at least 75 percent of

*the perimeter.*

**502.8 Hazardous materials - general requirements.** Exhaust ventilation systems for structures containing hazardous materials shall be provided as required in Sections 502.8.1 through 502.8.5 and shall comply with the New York City Fire Code.

**502.8.1 Storage in excess of the maximum allowable quantities.** Indoor storage areas and storage buildings for hazardous materials in amounts exceeding the maximum allowable quantity per control area shall be provided with mechanical exhaust ventilation or natural ventilation where natural ventilation can be shown to be acceptable for the materials as stored.

**Exception:** Storage areas for flammable solids complying with the New York City Fire Code.

**502.8.1.1 System requirements.** Exhaust ventilation systems shall comply with all of the following:

1. The installation shall be in accordance with this code.
2. Mechanical ventilation shall be provided at a rate of not less than 1 cfm/ft<sup>2</sup> [0.00508 m<sup>3</sup>/(s · m<sup>2</sup>)] of floor area over the storage area.
3. The systems shall operate continuously unless alternate designs are approved.
4. A manual shutoff control shall be provided outside of the room in a position adjacent to the access door to the room or in another approved location. The switch shall be of the break-glass type and shall be labeled: VENTILATION SYSTEM EMERGENCY SHUTOFF.
5. The exhaust ventilation system shall be designed to consider the density of the potential fumes or vapors released. For fumes or vapors that are heavier than air, exhaust shall be taken from a point within 12 inches (304 mm) of the floor.
6. The location of both the exhaust and inlet air openings shall be designed to provide air movement across all portions of the floor or room to prevent the accumulation of vapors.
7. The exhaust ventilation shall not be recirculated within the room or building if the materials stored are capable of emitting hazardous vapors.

**502.8.2 Gas rooms, exhausted enclosures and gas cabinets.** The ventilation system for gas rooms, exhausted enclosures and gas cabinets for any quantity of hazardous material shall be designed to operate at a negative pressure in relation to the surrounding area. Highly toxic and toxic gases shall also comply with Sections 502.9.7.1, 502.9.7.2 and 502.9.8.4.

**502.8.3 Indoor dispensing and use.** *Indoor dispensing and use areas for hazardous materials in amounts exceeding the maximum allowable quantity per control area shall be provided with exhaust ventilation in accordance with Section 502.8.1.*

**Exception:** *Ventilation is not required for dispensing and use of flammable solids other than finely divided particles.*

**502.8.4 Indoor dispensing and use-point sources.** *Where gases, liquids or solids in amounts exceeding the maximum allowable quantity per control area and having a hazard ranking of 3 or 4 in accordance with NFPA 704 are dispensed or used, mechanical exhaust ventilation shall be provided to capture fumes, mists or vapors at the point of generation.*

**Exception:** *Where it can be demonstrated that the gases, liquids or solids do not create harmful fumes, mists or vapors.*

**502.8.5 Closed systems.** *Where closed systems for the use of hazardous materials in amounts exceeding the maximum allowable quantity per control area are designed to be opened as part of normal operations, ventilation shall be provided in accordance with Section 502.8.4.*

**502.9 Hazardous materials - requirements for specific materials.** *Exhaust ventilation systems for specific hazardous materials shall be provided as required in Section 502.8 and Sections 502.9.1 through 502.9.11 and shall comply with the New York City Fire Code.*

**502.9.1 Compressed gases medical gas systems.** *Rooms for the storage of compressed medical gases in amounts exceeding the maximum allowable exempt quantity per control area, and which do not have an exterior wall, shall be exhausted through a duct to the exterior of the building. Each space shall be separately exhausted, and each exhaust air stream shall be enclosed in a 1-hour-rated shaft enclosure from the room to the exterior. Approved mechanical ventilation shall be provided at a minimum rate of 1 cfm/ft<sup>2</sup> [0.00508 m<sup>3</sup>/(s · m<sup>2</sup>)] of the area of the room.*

*Gas cabinets for the storage of compressed medical gases in amounts exceeding the maximum allowable quantity per control area shall be connected to an exhaust system. The average velocity of ventilation at the face of access ports or windows shall be not less than 200 feet per minute (1.02 m/s) with a minimum velocity of 150 feet per minute (0.76 m/s) at any point at the access port or window.*

**502.9.2 Corrosives.** *Where corrosive materials in amounts exceeding the maximum allowable quantity per control area are dispensed or used, mechanical exhaust ventilation in accordance with Section 502.8.4 shall be provided.*

**502.9.3 Cryogenics.** Storage areas for stationary or portable containers of cryogenic fluids in any quantity shall be ventilated in accordance with Section 502.8. Indoor areas where cryogenic fluids in any quantity are dispensed shall be ventilated in accordance with the requirements of Section 502.8.4 in a manner that captures any vapor at the point of generation.

**Exception:** Ventilation for indoor dispensing areas is not required where it can be demonstrated that the cryogenic fluids do not create harmful vapors.

**502.9.4 Explosives.** Squirrel cage blowers shall not be used for exhausting hazardous fumes, vapors or gases in operating buildings and rooms for the manufacture, assembly or testing of explosives. Only nonferrous fan blades shall be used for fans located within the ductwork and through which hazardous materials are exhausted. Motors shall be located outside the duct.

**502.9.5 Flammable and combustible liquids.** Exhaust ventilation systems shall be provided as required by Sections 502.9.5.1 through 502.9.5.5 for the storage, use, dispensing, mixing and handling of flammable and combustible liquids. Unless otherwise specified, this section shall apply to any quantity of flammable and combustible liquids.

**Exception:** This section shall not apply to flammable and combustible liquids that are exempt from the New York City Fire Code.

**502.9.5.1 Vaults.** Vaults that contain tanks of Class I liquids shall be provided with continuous ventilation at a rate of not less than 1 cfm/ft<sup>2</sup> of floor area [ $0.00508 \text{ m}^3/(\text{s} \cdot \text{m}^2)$ ], but not less than 150 cfm (4 m<sup>3</sup>/min). Failure of the exhaust airflow shall automatically shut down the dispensing system. The exhaust system shall be designed to provide air movement across all parts of the vault floor. Supply and exhaust ducts shall extend to a point not greater than 12 inches (305 mm) and not less than 3 inches (76 mm) above the floor. The exhaust system shall be installed in accordance with the provisions of NFPA 91. Means shall be provided to automatically detect any flammable vapors and to automatically shut down the dispensing system upon detection of such flammable vapors in the exhaust duct at a concentration of 25 percent of the LFL.

**502.9.5.2 Storage rooms and warehouses.** Liquid storage rooms and liquid storage warehouses for quantities of liquids exceeding those specified in the New York City Fire Code shall be ventilated in accordance with Section 502.8.1.

**502.9.5.3 Cleaning machines.** Areas containing machines used for parts cleaning in accordance with the New York City Fire Code shall be adequately ventilated to prevent accumulation of vapors.

**502.9.5.4 Use, dispensing and mixing.** Continuous mechanical ventilation shall be provided for the use, dispensing and mixing of flammable and combustible liquids in open or closed systems in amounts exceeding the maximum allowable quantity per control area and for bulk transfer and process transfer operations. The

ventilation rate shall be not less than 1 cfm/ft<sup>2</sup> [0.00508m<sup>3</sup>/(s · m<sup>2</sup>)] of floor area over the design area. Provisions shall be made for the introduction of makeup air in a manner that will include all floor areas or pits where vapors can collect. Local or spot ventilation shall be provided where needed to prevent the accumulation of hazardous vapors.

**502.9.5.5 Bulk plants or terminals.** Ventilation shall be provided for portions of properties where flammable and combustible liquids are received by tank vessels, pipe-lines, tank cars or tank vehicles and which are stored or blended in bulk for the purpose of distributing such liquids by tank vessels, pipelines, tank cars, tank vehicles or containers as required by Sections 502.9.5.5.1 through 502.9.5.5.3.

**502.9.5.5.1 General.** Ventilation shall be provided for rooms, buildings and enclosures in which Class I liquids are pumped, used or transferred. Design of ventilation systems shall consider the relatively high specific gravity of the vapors. Where natural ventilation is used, adequate openings in outside walls at floor level, unobstructed except by louvers or coarse screens, shall be provided. Where natural ventilation is inadequate, mechanical ventilation shall be provided. The natural ventilation design shall be approved for each specific application by the commissioner prior to installation and/or use.

**502.9.5.5.2 Basements and pits.** Class I liquids shall not be stored or used within a building having a basement or pit into which flammable vapors can travel, unless such area is provided with ventilation designed to prevent the accumulation of flammable vapors therein.

**502.9.5.5.3 Dispensing of Class I liquids.** Containers of Class I liquids shall not be drawn from or filled within buildings unless a provision is made to prevent the accumulation of flammable vapors in hazardous concentrations. Where mechanical ventilation is required, it shall be kept in operation while flammable vapors could be present.

**502.9.6 Highly toxic and toxic liquids.** Ventilation exhaust shall be provided for highly toxic and toxic liquids as required by Sections 502.9.6.1 and 502.9.6.2.

**502.9.6.1 Treatment system.** This provision shall apply to indoor and outdoor storage and use of highly toxic and toxic liquids in amounts exceeding the maximum allowable quantities per control area. Exhaust scrubbers or other systems for processing vapors of highly toxic liquids shall be provided where a spill or accidental release of such liquids can be expected to release highly toxic vapors at normal temperature and pressure.

**502.9.6.2 Open and closed systems.** Mechanical exhaust ventilation shall be provided for highly toxic and toxic liquids used in open systems in accordance with Section 502.8.4. Mechanical exhaust ventilation shall be provided for highly toxic and toxic liquids used in closed systems in accordance with Section 502.8.5.

**Exception:** Liquids or solids that do not generate highly toxic or toxic fumes, mists or vapors.

**502.9.7 Highly toxic and toxic compressed gases—any quantity.** Ventilation exhaust shall be provided for highly toxic and toxic compressed gases in any quantity as required by Sections 502.9.7.1 and 502.9.7.2.

**502.9.7.1 Gas cabinets.** Gas cabinets containing highly toxic or toxic compressed gases in any quantity shall comply with Section 502.8.2 and the following requirements:

1. The average ventilation velocity at the face of gas cabinet access ports or windows shall be not less than 200 feet per minute (1.02 m/s) with a minimum velocity of 150 feet per minute (0.76 m/s) at any point at the access port or window.
2. Gas cabinets shall be connected to an exhaust system.
3. Gas cabinets shall not be used as the sole means of exhaust for any room or area.

**502.9.7.2 Exhausted enclosures.** Exhausted enclosures containing highly toxic or toxic compressed gases in any quantity shall comply with Section 502.8.2 and the following requirements:

1. The average ventilation velocity at the face of the enclosure shall be not less than 200 feet per minute (1.02 m/s) with a minimum velocity of 150 feet per minute (0.76 m/s).
2. Exhausted enclosures shall be connected to an exhaust system.
3. Exhausted enclosures shall not be used as the sole means of exhaust for any room or area.

**502.9.8 Highly toxic and toxic compressed gases—quantities exceeding the maximum allowable per control area.** Ventilation exhaust shall be provided for highly toxic and toxic compressed gases in amounts exceeding the maximum allowable quantities per control area as required by Sections 502.9.8.1 through 502.9.8.6.

**502.9.8.1 Ventilated areas.** The room or area in which indoor gas cabinets or exhausted enclosures are located shall be provided with exhaust ventilation. Gas cabinets or exhausted enclosures shall not be used as the sole means of exhaust for any room or area.

**502.9.8.2 Local exhaust for portable tanks.** A means of local exhaust shall be provided to capture leakage from indoor and outdoor portable tanks. The local exhaust shall consist of portable ducts or collection systems designed to be applied to the site of a leak in a valve or fitting on the tank. The local exhaust system shall be located in a gas room. Exhaust shall be directed to a treatment system where required by the New York City Fire Code.

**502.9.8.3 Piping and controls—stationary tanks.** *Filling or dispensing connections on indoor stationary tanks shall be provided with a means of local exhaust. Such exhaust shall be designed to capture fumes and vapors. The exhaust shall be directed to a treatment system where required by the New York City Fire Code.*

**502.9.8.4 Gas rooms.** *The ventilation system for gas rooms shall be designed to operate at a negative pressure in relation to the surrounding area. The exhaust ventilation from gas rooms shall be directed to an exhaust system.*

**502.9.8.5 Treatment system.** *The exhaust ventilation from gas cabinets, exhausted enclosures and gas rooms, and local exhaust systems required in Sections 502.9.8.2 and 502.9.8.3 shall be directed to a treatment system where required by the New York City Fire Code.*

**502.9.8.6 Process equipment.** *Effluent from indoor and outdoor process equipment containing highly toxic or toxic compressed gases which could be discharged to the atmosphere shall be processed through an exhaust scrubber or other processing system. Such systems shall be in accordance with the New York City Fire Code.*

**502.9.9 Ozone gas generators.** *Ozone cabinets and ozone gas-generator rooms for systems having a maximum ozone-generating capacity of one-half pound (0.23 kg) or more over a 24-hour period shall be mechanically ventilated at a rate of not less than six air changes per hour. For cabinets, the average velocity of ventilation at makeup air openings with cabinet doors closed shall be not less than 200 feet per minute (1.02 m/s).*

**502.9.10 LP-gas distribution facilities.** *LP-gas distribution facilities shall conform to the requirements of the New York City Fire Code.*

**502.9.11 Silane gas.** *Exhausted enclosures and gas cabinets for the indoor storage of silane gas in amounts exceeding the maximum allowable quantities per control area shall comply with this section.*

- 1. Exhausted enclosures and gas cabinets shall be in accordance with Section 502.8.2.*
- 2. The velocity of ventilation across unwelded fittings and connections on the piping system shall not be less than 200 feet per minute (1.02 m/s).*
- 3. The average velocity at the face of the access ports or windows in the gas cabinet shall not be less than 200 feet per minute (1.02 m/s) with a minimum velocity of 150 feet per minute (0.76 m/s) at any point at the access port or window.*

**502.10 Hazardous production materials (HPM).** *Exhaust ventilation systems and materials for ducts utilized for the exhaust of HPM shall comply with this section, other applicable provisions of this code, the New York City Building Code and the New York City Fire Code.*

**502.10.1 Where required.** Exhaust ventilation systems shall be provided in the following locations in accordance with the requirements of this section and the New York City Building Code:

1. *Fabrication areas: Exhaust ventilation for fabrication areas shall comply with the New York City Building Code. Additional manual control switches shall be provided where required by the commissioner.*
2. *Workstations: A ventilation system shall be provided to capture and exhaust fumes and vapors at workstations.*
3. *Liquid storage rooms: Exhaust ventilation for liquid storage rooms shall comply with Section 502.8.1.1 and the New York City Building Code.*
4. *HPM rooms: Exhaust ventilation for HPM rooms shall comply with Section 502.8.1.1 and the New York City Building Code.*
5. *Gas cabinets: Exhaust ventilation for gas cabinets shall comply with Section 502.8.2. The gas cabinet ventilation system is allowed to connect to a workstation ventilation system. Exhaust ventilation for gas cabinets containing highly toxic or toxic gases shall also comply with Sections 502.9.7 and 502.9.8.*
6. *Exhausted enclosures: Exhaust ventilation for exhausted enclosures shall comply with Section 502.8.2. Exhaust ventilation for exhausted enclosures containing highly toxic or toxic gases shall also comply with Sections 502.9.7 and 502.9.8.*
7. *Gas rooms: Exhaust ventilation for gas rooms shall comply with Section 502.8.2. Exhaust ventilation for gas cabinets containing highly toxic or toxic gases shall also comply with Sections 502.9.7 and 502.9.8.*

**502.10.2 Penetrations.** Exhaust ducts penetrating fire barrier assemblies shall be contained in a shaft of equivalent fire-resistive construction. Exhaust ducts shall not penetrate building separation fire walls. Fire dampers shall not be installed in exhaust ducts.

**502.10.3 Treatment systems.** Treatment systems for highly toxic and toxic gases shall comply with the New York City Fire Code.

**502.11 Motion picture projectors.** Motion picture projectors shall be exhausted in accordance with Section 502.11.1 or 502.11.2.

**502.11.1 Projectors with an exhaust discharge.** Projectors equipped with an exhaust discharge shall be directly connected to a mechanical exhaust system. The exhaust system shall operate at an exhaust rate as indicated by

*the manufacturer's installation instructions.*

**502.11.2 Projectors without exhaust connection.** *Projectors without an exhaust connection shall have contaminants exhausted through a mechanical exhaust system. The exhaust rate for electric arc projectors shall be a minimum of 200 cubic feet per minute (cfm) (0.09 m<sup>3</sup>/s) per lamp. The exhaust rate for xenon projectors shall be a minimum of 300 cfm (0.14 m<sup>3</sup>/s) per lamp. Xenon projector exhaust shall be at a rate such that the exterior temperature of the lamp housing does not exceed 130°F (54°C). The lamp and projection room exhaust systems, whether combined or independent, shall not be interconnected with any other exhaust or return system within the building.*

**502.12 Organic coating processes.** *Enclosed structures involving organic coating processes in which Class I liquids are processed or handled shall be ventilated at a rate of not less than 1 cfm/ft<sup>2</sup> [0.00508 m<sup>3</sup>/(s · m<sup>2</sup>)] of solid floor area. Ventilation shall be accomplished by exhaust fans that intake at floor levels and discharge to a safe location outside the structure. Noncontaminated intake air shall be introduced in such a manner that all portions of solid floor areas are provided with continuous uniformly distributed air movement.*

**502.13 Public garages.** *Mechanical exhaust systems for public garages, as required in Chapter 4, shall operate continuously or in accordance with Section 404.*

**502.14 Motor vehicle operation.** *In areas where motor vehicles operate, mechanical ventilation shall be provided in accordance with Section 403. Additionally, areas in which stationary motor vehicles are operated shall be provided with a source capture system that connects directly to the motor vehicle exhaust systems.*

**Exceptions:**

- 1. This section shall not apply where the motor vehicles being operated or repaired are electrically powered.*
- 2. This section shall not apply to one- and two-family dwellings.*
- 3. This section shall not apply to motor vehicle service areas where engines are operated inside the building only for the duration necessary to move the motor vehicles in and out of the building.*

**502.15 Repair garages.** *Where Class I liquids are stored or used within a building having a basement or pit wherein flammable vapors could accumulate, the basement or pit shall be provided with ventilation at a minimum rate of 1.5 cubic feet per minute per square foot (cfm/ft<sup>2</sup>) [0.008 m<sup>3</sup>/(s · m<sup>2</sup>)] to prevent the accumulation of flammable vapors therein.*

**502.16 Repair garages for natural gas- and hydrogen-fueled vehicles.** *Repair garages used for the repair of natural gas- or hydrogen-fueled vehicles shall be provided with an approved mechanical ventilation system. The mechanical ventilation system shall be in accordance with Sections 502.16.1 and 502.16.2.*

**Exception:** Where approved by the commissioner, natural ventilation shall be permitted in lieu of mechanical ventilation.

**502.16.1 Design.** Indoor locations shall be ventilated utilizing air supply inlets and exhaust outlets arranged to provide uniform air movement to the extent practical. Inlets shall be uniformly arranged on exterior walls near floor level. Outlets shall be located at the high point of the room in exterior walls or the roof.

1. Ventilation shall be by a continuous mechanical ventilation system or by a mechanical ventilation system activated by a continuously monitoring natural gas detection system activating at a gas concentration of not more than 25 percent of the LFL. In all cases, the system shall shut down the fueling system in the event of failure of the ventilation system.
2. The ventilation rate shall be at least 1 cubic foot per minute per 12 cubic feet [0.00138 m<sup>3</sup>/(s · m<sup>3</sup>)] of room volume.

**502.16.2 Operation.** The mechanical ventilation system shall operate continuously.

**Exceptions:**

1. Mechanical ventilation systems that are interlocked with a gas detection system designed in accordance with the New York City Building Code.
2. Mechanical ventilation systems in garages that are used only for the repair of vehicles fueled by liquid fuels or odorized gases, such as CNG, where the ventilation system is electrically interlocked with the lighting circuit.

**502.17 Tire rebuilding or recapping.** Each room where rubber cement is used or mixed, or where flammable or combustible solvents are applied, shall be ventilated in accordance with the applicable provisions of NFPA 91.

**502.17.1 Buffing machines.** Each buffing machine shall be connected to a dust-collecting system that prevents the accumulation of the dust produced by the buffing process.

**502.18 Specific rooms.** Specific rooms, including bathrooms, locker rooms, smoking lounges and toilet rooms, shall be exhausted in accordance with the ventilation requirements of Chapter 4.

**502.19 Domestic kitchen exhaust systems.** In all group R occupancies a minimum of No. 18 Gage galvanized sheet metal shall be used, except that ductwork that complies with Section 603.6.1.2 shall be permitted for independent apartment exhaust systems providing general exhaust ventilation of kitchen and toilet areas.

**502.20 Nonproduction chemical laboratories.** *Nonproduction chemical laboratories shall comply with Section 419 of the New York City Building Code and NFPA 45.*

**SECTION MC 503**  
**MOTORS AND FANS**

**503.1 General.** *Motors and fans shall be sized to provide the required air movement. Motors in areas that contain flammable vapors or dusts shall be of a type approved for such environments. A manually operated remote control installed at an approved location shall be provided to shut off fans or blowers in flammable vapor or dust systems. Electrical equipment and appliances used in operations that generate explosive or flammable vapors, fumes or dusts shall be interlocked with the ventilation system so that the equipment and appliances cannot be operated unless the ventilation fans are in operation. Motors for fans used to convey flammable vapors or dusts shall be located outside the duct or shall be protected with approved shields and dustproofing. Motors and fans shall be provided with a means of access for servicing and maintenance.*

**503.2 Fans.** *Parts of fans in contact with explosive or flammable vapors, fumes or dusts shall be of nonferrous or nonsparking materials, or their casing shall be lined or constructed of such material. When the size and hardness of materials passing through a fan are capable of producing a spark, both the fan and the casing shall be of nonsparking materials. When fans are required to be spark resistant, their bearings shall not be within the airstream, and all parts of the fan shall be grounded. Fans in systems-handling materials that are capable of clogging the blades, and fans in buffing or woodworking exhaust systems, shall be of the radial-blade or tube-axial type.*

**503.3 Equipment and appliances identification plate.** *Equipment and appliances used to exhaust explosive or flammable vapors, fumes or dusts shall bear an identification plate stating the ventilation rate for which the system was designed.*

**503.4 Corrosion-resistant fans.** *Fans located in systems conveying corrosives shall be of materials that are resistant to the corrosive or shall be coated with corrosion-resistant materials.*

**503.5 Fan location.** *Fans exhausting noxious, toxic, hot vapor or grease laden air shall be located as close to the terminus as practicable, at the roof or within a mechanical equipment room, immediately below the roof.*

**Exception:** *Where the fan is listed or approved for such an application.*

**SECTION MC 504**  
**CLOTHES DRYER EXHAUST**

**504.1 Installation.** *Clothes dryers shall be exhausted in accordance with the manufacturer's instructions. Dryer exhaust systems shall be independent of all other systems and shall convey the moisture and any products of combustion to the outside of the building.*

**Exception:** This section shall not apply to listed and labeled condensing (ductless) electric clothes dryers.

**504.2 Exhaust penetrations.** Ducts that exhaust clothes dryers shall not penetrate or be located within any fireblocking, draftstopping or any wall, floor/ceiling or other assembly required by the New York City Building Code to be fire-resistance rated, unless such duct is constructed of galvanized steel or aluminum of the thickness specified in Section 603.4 and the fire-resistance rating is maintained in accordance with the New York City Building Code. Fire dampers, combination fire/smoke dampers and any similar devices that will obstruct the exhaust flow, shall be prohibited in clothes dryer exhaust ducts.

**504.3 Cleanout.** Each vertical riser shall be provided with a means for cleanout.

**504.4 Exhaust installation.** Dryer exhaust ducts for clothes dryers shall terminate on the outside of the building and shall be equipped with a backdraft damper. Screens shall not be installed at the duct termination. Ducts shall not be connected or installed with sheet metal screws or other fasteners that will obstruct the exhaust flow. Clothes dryer exhaust ducts shall not be connected to a vent connector, vent or chimney. Clothes dryer exhaust ducts shall not extend into or through ducts or plenums.

**504.5 Makeup air.** Installations exhausting more than 200 cfm (0.09 m<sup>3</sup>/s) shall be provided with makeup air. Where a closet is designed for the installation of a clothes dryer, an opening having an area of not less than 100 square inches (0.0645 m<sup>2</sup>) shall be provided in the closet enclosure.

**504.6 Domestic clothes dryer ducts.** Exhaust ducts for domestic clothes dryers shall be constructed of metal and shall have a smooth interior finish. The exhaust duct shall be a minimum nominal size of 4 inches (102 mm) in diameter. The entire exhaust system shall be supported and secured in place. The male end of the duct at overlapped duct joints shall extend in the direction of airflow. Clothes dryer transition ducts used to connect the appliance to the exhaust duct system shall be limited to single lengths not to exceed 8 feet (2438 mm) and shall be listed and labeled for the application. Transition ducts shall not be concealed within construction.

**504.6.1 Maximum length.** The maximum length of a clothes dryer exhaust duct shall not exceed 25 feet (7620 mm) from the dryer location to the outlet terminal. The maximum length of duct shall be reduced 2½ feet (762 mm) for each 45-degree (0.79 rad) bend and 5 feet (1524 mm) for each 90-degree (1.6 rad) bend. The maximum length of the exhaust duct does not include the transition duct.

**Exception:** Where the make and model of the clothes dryer to be installed is known and the manufacturer's installation instructions for such dryer are provided, the maximum length of the exhaust duct, including any transition duct, shall be permitted to be in accordance with the dryer manufacturer's installation instructions.

**504.6.2 Rough-in required.** *Where a compartment or space for a domestic clothes dryer is provided, an exhaust duct system shall be installed in accordance with Sections 504.6 and 504.6.1.*

**504.7 Commercial clothes dryers.** *The installation of dryer exhaust ducts serving Type 2 clothes dryers shall comply with the appliance manufacturer's installation instructions. Exhaust fan motors installed in exhaust systems shall be located outside of the airstream. In multiple installations, the fan shall operate continuously or be interlocked to operate when any individual unit is operating. Ducts shall have a minimum clearance of 6 inches (152 mm) to combustible materials. Clothes dryer transition ducts used to connect the appliance to the exhaust duct system shall be limited to single lengths not to exceed 8 feet (2438 mm) in length and shall be listed and labeled for the application. Transition ducts shall not be concealed within construction.*

## **SECTION MC 505**

### **DOMESTIC KITCHEN EQUIPMENT EXHAUST**

**505.1 Domestic systems.** *Where domestic range hoods and domestic appliances equipped with downdraft exhaust are located within dwelling units, such hoods and appliances shall discharge to the outdoors through ducts constructed of galvanized steel, stainless steel, aluminum or copper. Such ducts shall have smooth inner walls and shall be air tight and equipped with a backdraft damper. Such exhaust system shall be installed in strict compliance with the manufacturer's recommendations as well as the requirements of the listing.*

#### **Exceptions:**

1. *Where installed in accordance with the manufacturer's installation instructions and where mechanical or natural ventilation is otherwise provided in accordance with Chapter 4, listed and labeled ductless range hoods shall not be required to discharge to the outdoors.*
2. *Ducts for domestic kitchen cooking appliances equipped with downdraft exhaust systems shall be permitted to be constructed of Schedule 40 PVC pipe provided that the installation complies with all of the following:*
  - 2.1. *The duct shall be installed under a concrete slab poured on grade.*
  - 2.2. *The underfloor trench in which the duct is installed shall be completely backfilled with sand or gravel.*
  - 2.3. *The PVC duct shall extend not greater than 1 inch (25 mm) above the indoor concrete floor surface.*
  - 2.4. *The PVC duct shall extend not greater than 1 inch (25 mm) above grade outside of the building.*
  - 2.5. *The PVC ducts shall be solvent cemented.*

**SECTION MC 506**  
**COMMERCIAL KITCHEN HOOD VENTILATION**  
**SYSTEM DUCTS AND EXHAUST EQUIPMENT**

**506.1 General.** Commercial kitchen hood ventilation ducts and exhaust equipment shall comply with the requirements of this section. Commercial kitchen grease ducts shall be designed for the type of cooking appliance and hood served. All ducts shall lead directly to the exterior of the building and terminate as required by 506.3.12.

**506.2 Corrosion protection.** Ducts exposed to the outside atmosphere or subject to a corrosive environment shall be protected against corrosion in an approved manner.

1. The exterior portion of the ductwork shall be vertical wherever possible and shall be installed and adequately supported on the exterior of a building. Bolts, screws, rivets, and other mechanical fasteners shall not penetrate duct walls. Clearance of any vertical or horizontal ducts to any other material or construction shall comply with Section 506.3.6. and to any additional clearance requirements as may be applicable in accordance with Section 506.5.4.

2. All exterior ducts shall be constructed of stainless steel not less than 0.043 inch (1.09 mm) (No. 18 Gage) in thickness. At the base of each duct and at its termination point a clearly identifiable permanent sign shall be installed identifying the facility from which the duct originates.

1. No portion of an exterior metal duct shall be nearer than 24 inches (610 mm) to any door or window or to any exit, or located where it would be readily accessible to the public, unless it is insulated or shielded to avoid injury to any person coming in contact with the duct.

**Exception:** Listed and labeled factory-built commercial kitchen grease ducts may be used when installed in accordance with Section 304.1.

**506.3 Ducts serving Type I hoods.** Type I exhaust ducts shall be independent of all other exhaust systems except as provided in Section 506.3.5. Commercial kitchen duct systems serving Type I hoods shall be designed, constructed and installed in accordance with Sections 506.3.1 through 506.3.12.3.

**506.3.1 Duct materials.** Ducts serving Type I hoods shall be constructed of materials in accordance with Sections 506.3.1.1 and 506.3.1.2.

**506.3.1.1 Grease duct materials.** Grease ducts serving Type I hoods, and located within buildings, shall be constructed as follows:

1. Ducts with a cross-sectional area up to and including 155 square inches ( 100 000 mm<sup>2</sup>) shall be constructed of 0.0598 inch (1.52 mm) No. 16 Gage steel;
2. Ducts with a cross-sectional area over 155 square inches (100 000 mm<sup>2</sup>), but not more than 200 square inches (0.129 m<sup>2</sup>) shall be constructed of 0.074 inch (1.9 mm) No. 14 Gage steel; and
3. Ducts with a cross-sectional area equal to or more than 200 square inches (0.129 m<sup>2</sup>) shall be constructed of 0.1046 inch (2.66 mm) No. 12 Gage steel.

*If stainless steel is used for ducts of any of the cross-sectional areas shown above, the Gage steel may be increased upwards (resulting in a smaller thickness) by 1 Gage.*

**Exception:** *Listed and labeled factory-built commercial kitchen grease ducts shall be installed in accordance with Section 304.1, and as approved by the commissioner.*

**506.3.1.2 Makeup air ducts.** *Make up air ducts connecting to or within 18 inches (457 mm) of a Type I hood shall be constructed and installed in accordance with Sections 603.1, 603.3, 603.4, 603.9, 603.10, and 603.12. Duct insulation installed within 18 inches (457 mm) of a Type I hood shall be noncombustible or shall be listed for the application.*

**506.3.2 Joints, seams and penetrations of grease ducts.** *Joints, seams and penetrations of grease ducts shall be made with a continuous liquid-tight weld or braze made on the external surface of the duct system.*

**Exceptions:**

1. *Penetrations shall not be required to be welded or brazed where sealed by devices that are listed for the application.*
2. *Internal welding or brazing shall not be prohibited provided that the joint is formed or ground smooth and is provided with ready access for inspection.*
3. *Listed and labeled factory-built commercial kitchen grease ducts installed in accordance with Section 304.1.*

**506.3.2.1 Duct joint types.** *Duct joints shall be butt joints or overlapping duct joints of either the telescoping or bell type. Overlapping joints shall be installed to prevent ledges and obstructions from collecting grease or interfering with gravity drainage to the intended collection point. The difference between the inside cross-sectional dimensions of overlapping sections of duct shall not exceed 0.25 inch (6 mm). The length of overlap for overlapping duct joints shall not exceed 2 inches (51 mm).*

**506.3.2.2 Duct-to-hood joints.** *Duct-to-hood joints shall be made with continuous internal or external liquid-tight welded or brazed joints. Such joints shall be smooth, accessible for inspection, and without grease traps.*

**Exceptions:** *This section shall not apply to:*

1. *A vertical duct-to-hood collar connection made in the top plane of the hood in accordance with all of the following:*
  - 1.1. *The hood duct opening shall have a 1-inch-deep (25 mm), full perimeter, welded flange turned down into the hood interior at an angle of 90 degrees from the plane of the opening.*
  - 1.2. *The duct shall have a 1-inch-deep (25 mm) flange made by a 1-inch by 1-inch (25 mm by 25 mm) angle iron welded to the full perimeter of the duct not less than 1 inch (25 mm) above the bottom end of the duct.*
  - 1.3. *A gasket rated for use at not less than 1,500°F (815°C) is installed between the duct flange and the top of the hood.*
  - 1.4. *The duct-to-hood joint shall be secured by stud bolts not less than 0.25 inch (6.4 mm) in diameter welded to the hood with a spacing not greater than 4 inches (102 mm) on center for the full perimeter of the opening. All bolts and nuts are to be secured with lockwashers.*
2. *Listed and labeled duct-to-hood collar connections installed in accordance with Section 304.1.*

**506.3.2.3 Duct-to-exhaust fan connections.** *Duct-to-exhaust fan connections shall be flanged and gasketed at the base of the fan for vertical discharge fans; shall be flanged, gasketed and bolted to the inlet of the fan for side-inlet utility fans; and shall be flanged, gasketed and bolted to the inlet and outlet of the fan for in-line fans. Approved flexible connectors may be provided.*

**506.3.2.4 Vibration isolation.** *A vibration isolation connector for connecting a duct to a fan shall consist of noncombustible packing in a metal sleeve joint of approved design or shall be a coated-fabric flexible duct connector listed and labeled for the application. Vibration isolation connectors shall be installed only at the connection of a duct to a fan inlet or outlet.*

**506.3.3 Grease duct supports.** *Grease duct bracing and supports shall be of noncombustible material securely attached to the structure and designed to carry gravity and seismic loads within the stress limitations of the New York City Building Code. Bolts, screws, rivets and other mechanical fasteners shall not penetrate duct walls.*

**506.3.4 Air velocity.** Grease duct systems serving a Type I hood shall be designed and installed to provide an air velocity within the duct system of not less than 500 feet per minute (2.54 m/s).

**Exception:** The velocity limitations shall not apply within duct transitions utilized to connect ducts to differently sized or shaped openings in hoods and fans, provided that such transitions do not exceed 3 feet (914 mm) in length and are designed to prevent the trapping of grease.

**506.3.5 Separation of grease duct system.** A separate grease duct system shall be provided for each Type I hood.

**Exceptions:**

1. A separate grease duct system is not required where all of the following conditions are met:
  - 1.1. All interconnected hoods are located within the same story, provided that they are part of the same facility and under the control of one owner or tenant.
  - 1.2. All interconnected hoods are located within the same room or in adjoining rooms, provided that they are part of the same facility and under the control of one owner or tenant.
  - 1.3. Interconnecting ducts do not penetrate assemblies required to be fire-resistance rated.
  - 1.4. The grease duct system does not serve solid fuel-fired appliances.
2. Branch ducts from other equipment in the same kitchen area, for which hoods and filters are not required or from registers exhausting the kitchen space in general, may be connected to the main hood exhaust duct if the following requirements are complied with:
  - 2.1. A fusible link fire damper of the same gage as the hood exhaust duct shall be added at the point of connection of the branch duct to the exhaust duct.
  - 2.2. If the branch connection is made to the portion of the ductwork that will contain the fire extinguishing medium, then the fire dampers required in Exception Item 2.1 shall be arranged to close automatically upon the operation of the fire extinguishing system.
  - 2.3. The branch connection shall be made in either the top or sides of the main duct in a manner to prevent grease from flowing into the branch duct.
  - 2.4. The branch ducts shall be constructed of steel, aluminum, or copper of the gages and weights required in Chapter 6, and they shall be insulated with 2 inches (51 mm) of magnesia or other material having equivalent insulative and fire resistance qualities.

2.5. All registers in these branches shall have fusible link actuated dampers.

2.6. Where branch ductwork is to be used to exhaust vapors from dishwashers, pot sinks, or other similar equipment of a commercial type from which moisture is emitted, copper or aluminum of the minimum gage and weights required in Chapter 6 shall be used. Such ductwork shall be installed so that condensate cannot leak from it.

**506.3.6 Grease duct clearances.** Grease duct systems and exhaust equipment serving a Type I hood shall have a clearance to combustible construction of not less than 18 inches (457 mm), and shall have a clearance to noncombustible construction and gypsum wallboard attached to noncombustible structures of not less than 3 inches (76 mm).

**Exceptions:**

1. Listed and labeled factory-built commercial kitchen grease ducts and exhaust equipment installed in accordance with Section 304.1 and the manufacturer's instructions, and as approved by the commissioner.
2. Protected with a minimum insulation covering of 2 inches (51 mm) of magnesium or calcium silicate block, with staggered joints, attached with galvanized steel wire or material assembly equivalent in insulating and fire resistant qualities which can not be penetrated by grease, shall be applied to all ducts inside of the building as approved by the commissioner.

**506.3.7 Prevention of grease accumulation in grease ducts.** Duct systems serving a Type I hood shall be constructed and installed so that grease cannot collect in any portion thereof, and the system shall slope not less than one-fourth unit vertical in 12 units horizontal (2-percent slope) toward the hood or toward an approved grease reservoir. Where horizontal ducts exceed 75 feet (22 860 mm) in length, the slope shall not be less than one unit vertical in 12 units horizontal (8.3-percent slope). Dampers shall not be installed in the grease duct systems, except as required by Section 506.3.5 Exception Item 2.

**506.3.7.1 Residue trap.** A residue trap shall be provided at the base of each vertical riser with provision for cleanout in accordance with NFPA 96.

**506.3.8 Grease duct cleanouts and other openings.** Grease duct systems shall not have openings therein other than those required for proper operation and maintenance of the system. Any portion of such system having sections not provided with access from the duct entry or discharge shall be provided with cleanout openings. Cleanout openings shall be provided at every change in direction, within 3 feet (914 mm) of the exhaust fan, and as required under Section 506.3.9. Cleanout openings shall be equipped with tight-fitting doors constructed of steel having a thickness not less than that required for the duct. Doors shall be equipped with a substantial

method of latching, sufficient to hold the door tightly closed. Doors shall be designed so that they are operable without the use of a tool. Door assemblies shall have a gasket or sealant that is noncombustible and liquid tight, and shall not have fasteners that penetrate the duct. Listed and labeled access door assemblies shall be installed in accordance with the terms of the listing. Signage shall be provided at all required access doors and openings in accordance with Section 506.3.11.

**506.3.8.1 Personnel entry.** Where ductwork is large enough to allow entry of personnel, not less than one approved or listed opening having dimensions not less than 20 inches by 20 inches (508 mm by 508 mm) shall be provided in the horizontal sections, and in the top of vertical risers. Where such entry is provided, the duct and its supports shall be capable of supporting the additional load and the cleanouts specified in Section 506.3.8 are not required. Where personnel entry is not possible, access for cleaning interior vertical ducts shall be provided on each floor, and for cleaning the base of the vertical riser.

**506.3.9 Grease duct horizontal cleanouts.** Cleanouts located on horizontal sections of ducts shall be spaced not more than 20 feet (6096 mm) apart, unless the opening prescribed by Section 506.3.8.1 is not possible, in which case openings large enough to permit thorough cleaning shall be provided at 12 feet (3658 mm) intervals. The cleanouts shall be located on the side of the duct with the opening not less than 1.5 inches (38 mm) above the bottom of the duct, and not less than 1 inch (25 mm) below the top of the duct. The opening minimum dimensions shall be 12 inches (305 mm) on each side. Where the dimensions of the side of the duct prohibit the cleanout installation prescribed herein, the openings shall be on the top of the duct or the bottom of the duct. Where located on the top of the duct, the opening edges shall be a minimum of 1 inch (25 mm) from the edges of the duct. Where located in the bottom of the duct, cleanout openings shall be designed to provide internal damming around the opening, shall be provided with gasketing to preclude grease leakage, shall provide for drainage of grease down the duct around the dam, and shall be approved for the application. Where the dimensions of the sides, top or bottom of the duct preclude the installation of the prescribed minimum-size cleanout opening, the cleanout shall be located on the duct face that affords the largest opening dimension and shall be installed with the opening edges at the prescribed distances from the duct edges as previously set forth in this section.

**506.3.10 Grease duct enclosure.** A grease duct serving a Type I hood that penetrates a ceiling, wall or floor shall be enclosed from the first point of penetration to the outlet terminal. A duct shall penetrate exterior walls only at locations where unprotected openings are permitted by the New York City Building Code. Ducts shall be enclosed in accordance with the New York City Building Code requirements for shaft construction. The duct enclosure shall be sealed around the duct at the point of penetration and vented to the outside of the building through the use of weather-protected openings. Clearance from the duct to the interior surface of enclosures of combustible construction shall be not less than 18 inches (457 mm). Clearance from the duct to the interior surface of enclosures of noncombustible construction or gypsum wallboard attached to noncombustible structures shall be not less than 6 inches (152 mm). The duct enclosure shall serve a single grease exhaust duct system and shall not contain any other ducts, piping, wiring or systems.

**Exceptions:**

1. *The shaft enclosure provisions of this section shall not be required where a duct penetration is protected with a through-penetration firestop system classified in accordance with ASTM E 814 and having an .F. and .T. rating equal to the fire-resistance rating of the assembly being penetrated and where the surface of the duct is continuously covered on all sides from the point at which the duct penetrates a ceiling, wall or floor to the outlet terminal with a classified and labeled material, system, method of construction or product specifically evaluated for such purpose, which material, system, method of construction or product is approved by the commissioner and installed according to the manufacturer's instructions. Exposed duct wrap systems shall be protected where subject to physical damage.*
2. *As an alternative to Exception Item 1 of this section, a minimum insulation covering of 2 inches (51 mm) of magnesium or calcium silicate block, with staggered joints, attached with galvanized steel wire or material assembly equivalent in insulating and fire resistant qualities which can not be penetrated by grease, and as approved by the commissioner, shall be applied to all ducts inside of the building.*
3. *A duct enclosure shall not be required for a grease duct that penetrates only a nonfire-resistance-rated roof/ceiling assembly.*
  4. *A listed and labeled factory-built commercial kitchen grease duct system, evaluated as an enclosure system for reduced clearances to combustibles, and approved by the commissioner and installed according to manufacturer's instructions.*

**506.3.11 Grease duct fire-resistive access opening.** *Where cleanout openings are located in ducts within a fire-resistance-rated enclosure, access openings shall be provided in the enclosure at each cleanout point. Access openings shall be equipped with tight-fitting sliding or hinged doors that are equal in fire-resistive protection to that of the shaft or enclosure. An approved sign shall be placed on access opening panels with wording as follows: "ACCESS PANEL. DO NOT OBSTRUCT." Cleanout openings provided in ducts that are not located within a fire resistance-rated enclosure shall be provided with signage at the required opening that contains the same wording.*

**506.3.12 Exhaust outlets serving Type I hoods.** *Exhaust outlets for grease ducts serving Type I hoods shall conform to the requirements of Sections 506.3.12.1 through 506.3.12.3.*

**506.3.12.1 Termination above the roof.** *Exhaust outlets that terminate above the roof shall have the discharge opening located not less than 40 inches (1016 mm) above the roof surface. The exhaust flow shall be directed away from the surface of the roof.*

**506.3.12.2 Termination through an exterior wall.** *Exhaust outlets shall be permitted to terminate through exterior walls where the smoke, grease, gases, vapors, and odors in the discharge from such terminations do*

*not create a public nuisance or a fire hazard. Such terminations shall not be located where protected openings are required by the New York City Building Code. Other exterior openings shall not be located within 3 feet (914 mm) of such terminations.*

**506.3.12.3 Termination location.** *Exhaust outlets shall be located not less than 10 feet (3048 mm) horizontally from parts of the same or contiguous buildings, adjacent property lines and air intake openings into any building and shall be located not less than 10 feet (3048 mm) above the adjoining grade level.*

**Exception:** *Exhaust outlets shall terminate not less than 5 feet (1524mm) from an adjacent building, adjacent property line and air intake openings into a building where air from the exhaust outlet discharges away from such locations.*

**506.4 Ducts serving Type II hoods.** *Single or combined Type II exhaust systems for food-processing operations shall be independent of all other exhaust systems. Commercial kitchen exhaust systems serving Type II hoods shall comply with Sections 506.4.1 and 506.4.2.*

**506.4.1 Type II exhaust outlets.** *Exhaust outlets for ducts serving Type II hoods shall comply with Sections 401.5 and 401.5.2. Such outlets shall be protected against local weather conditions and shall meet the provisions for exterior wall opening protectives in accordance with the New York City Building Code.*

**506.4.2 Ducts.** *Ducts and plenums serving Type II hoods shall be constructed of rigid metallic materials. Duct construction, installation, bracing and supports shall comply with Chapter 6. Ducts subject to positive pressure and ducts conveying moisture-laden or waste-heat-laden air shall be constructed, joined and sealed in an approved manner.*

**506.4.2.1 Cooking spaces.** *For all buildings other than those classified as residential occupancy, a minimum of No. 16 Gage for galvanized sheet duct shall be used for nongrease duct exhaust applications.*

**506.5 Exhaust equipment.** *Exhaust equipment, including fans and grease reservoirs, shall comply with Section 506.5.1 through 506.5.5 and shall be of an approved design or shall be listed for the application.*

**506.5.1 Exhaust fans.** *Exhaust fan housings serving a Type I hood shall be constructed as required for grease ducts in accordance with Section 506.3.1.1.*

**Exception:** *Fans listed and labeled in accordance with UL 762.*

**506.5.1.1 Fan motor.** *Exhaust fan motors shall be located outside of the exhaust airstream.*

**506.5.2 Exhaust fan discharge.** *Exhaust fans shall be positioned so that the discharge will not impinge on the*

roof, other equipment or appliances or parts of the structure. A vertical discharge fan serving a Type I hood shall be manufactured with an approved drain outlet at the lowest point of the housing to permit drainage of grease to an approved grease reservoir.

**506.5.3 Exhaust fan mounting.** An upblast fan shall be hinged and supplied with a flexible weatherproof electrical cable to permit inspection and cleaning. The ductwork shall extend a minimum of 18 inches (457 mm) above the roof surface.

**506.5.4 Clearances.** Exhaust equipment serving a Type I hood shall have a clearance to combustibles construction of not less than 18 inches (457 mm).

**Exception:** Factory-built exhaust equipment installed in accordance with Section 304.1 and listed for a lesser clearance.

**506.5.5 Termination location.** The outlet of exhaust equipment serving Type I hoods, shall be in accordance with Section 506.3.12.3.

**Exception:** The minimum horizontal distance between vertical discharge fans and parapet-type building structures shall be 2 feet (610 mm) provided that such structures are not higher than the top of the fan discharge opening.

**506.5.6 Exhaust fan operation.** The operation of the exhaust fan shall be in accordance with the following requirements:

1. The hood exhaust fan(s) shall continue to operate after the exhausting system has been activated unless fan shutdown is required by a listed component of the ventilation system or by the design of the extinguishing system.
2. The hood exhaust fan shall not be required to start automatically upon activation of the extinguishing system if the exhaust fan and all cooking equipment served by the fan have previously been shut down.
3. The cooking appliances shall be interlocked with the exhaust hood system to prevent appliance operation when the exhaust hood system is not operating.

**506.6 Exterior duct installations.** The installation of exterior ducts shall comply with the following requirements:

1. The exterior portion of the ductwork shall be vertical wherever possible and shall be installed and supported on the exterior of a building.
2. Bolts, screws, rivets, and other mechanical fasteners shall not penetrate duct walls.

3. *Clearance of any ducts shall comply with Section 506.3.6.*
4. *All ducts shall be protected on the exterior by paint or other suitable weather-protective coating.*
5. *Ducts constructed of stainless steel shall not be required to have additional paint or weather-protective coatings.*
6. *Ductwork subject to corrosion shall have minimal contact with the building surface.*

**506.7 Identification of ducts.** *All duct systems serving Type I and Type II exhaust equipment shall be permanently labeled: "CAUTION: KITCHEN EXHAUST SYSTEM".*

**506.8 Types I and II hoods.** *All exhaust ducts serving Type I or Type II hoods shall have a minimum insulation covering of 2 inches (51 mm) of magnesium or calcium silicate block, attached with galvanized steel wire or construction equivalent in insulating and fire resistance qualities, and shall be applied to all ducts inside of the building. The insulation shall be applied up to the outer face of the discharge from the building and shall also be applied to the housing of the exhaust fan when it is located inside of the building. Care shall be taken to insure that the insulation extends through the walls and roofs to separate the ducts from the building construction. Masonry or concrete ducts shall not require insulation.*

## **SECTION MC 507 COMMERCIAL KITCHEN HOODS**

**507.1 General.** *Commercial kitchen exhaust hoods shall comply with the requirements of this section. Hoods shall be Type I or Type II and shall be designed to capture and confine cooking vapors and residues.*

### ***Exceptions:***

1. *Factory-built commercial exhaust hoods which are tested in accordance with UL 710, listed, labeled and installed in accordance with Section 304.1 shall not be required to comply with Sections 507.4, 507.7, 507.11, 507.12, 507.13, 507.14 and 507.15.*
2. *Net exhaust volumes for hoods shall be permitted to be reduced during no-load cooking conditions, where engineered or listed multispeed or variable-speed controls automatically operate the exhaust system to maintain capture and removal of cooking effluents as required by this section.*

**507.2 Where required.** *A Type I or Type II hood shall be installed at or above all commercial cooking appliances in accordance with Sections 507.2.1 and 507.2.2. Where any cooking appliance under a single hood requires a Type I hood, a Type I hood shall be installed. Where a Type II hood is required, a Type I or Type II hood shall be installed.*

**507.2.1 Type I hoods.** Type I hoods shall be installed where cooking appliances produce grease or smoke, such as occurs with griddles, fryers, broilers, ovens, ranges and wok ranges.

**507.2.2 Type II hoods.** Type II hoods shall be installed where cooking or dishwashing appliances produce heat or steam and do not produce grease or smoke, such as steamers, kettles, pasta cookers and dishwashing machines.

**Exceptions:**

1. Under-counter-type commercial dishwashing machines.

2. A Type II hood is not required for dishwashers and potwashers that are provided with heat and water vapor exhaust systems that are supplied by the appliance manufacturer and are installed in accordance with the manufacturer's instructions.

**507.2.3 Domestic cooking appliances used for commercial purposes.** Domestic cooking appliances utilized for commercial purposes shall be provided with Type I or Type II hoods as required for the type of appliances and processes in accordance with Sections 507.2, 507.2.1 and 507.2.2.

**507.2.4 Solid fuel.** Type I hoods for use over solid fuel-burning cooking appliances shall discharge to an exhaust system that is independent of other exhaust systems.

**507.3 Fuel-burning appliances.** Where vented fuel-burning appliances are located in the same room or space as the hood, provisions shall be made to prevent the hood system from interfering with normal operation of the appliance vents.

**507.4 Type I materials.** Type I hoods shall be constructed of steel not less than 0.043 inch (1.09 mm) (No. 18 MSG) in thickness, or stainless steel not less than 0.037 inch (0.94 mm) (No. 20 MSG) in thickness.

**507.5 Type II hood materials.** Type II hoods shall be constructed of steel not less than 0.030 inch (0.76 mm) (No. 22 Gage) in thickness, stainless steel not less than 0.024 inch (0.61 mm) (No. 24 Gage) in thickness, copper sheets weighing not less than 24 ounces per square foot (7.3 kg/m<sup>2</sup>), or of other approved material and gage.

**507.6 Supports.** Type I hoods shall be secured in place by noncombustible supports. All Type I and Type II hood supports shall be adequate for the applied load of the hood, the unsupported ductwork, the effluent loading, and the possible weight of personnel working in or on the hood.

**507.7 Hood joints, seams and penetrations.** Hood joints, seams and penetrations shall comply with Sections 507.7.1 and 507.7.2.

**507.7.1 Type I hoods.** External hood joints, seams and penetrations for Type I hoods shall be made with a continuous external liquid-tight weld or braze to the lowest outermost perimeter of the hood. Internal hood joints, seams, penetrations, filter support frames, and other appendages attached inside the hood shall not be required to be welded or brazed but shall be otherwise sealed to be grease tight.

**Exceptions:**

1. Penetrations shall not be required to be welded or brazed where sealed by devices that are listed for the application.
2. Internal welding or brazing of seams, joints, and penetrations of the hood shall not be prohibited provided that the joint is formed smooth or ground so as to not trap grease, and is readily cleanable.

**507.7.2 Type II hoods.** Joints, seams and penetrations for Type II hoods shall be constructed as set forth in Chapter 6, shall be sealed on the interior of the hood and shall provide a smooth surface that is readily cleanable and water tight.

**507.8 Cleaning and grease gutters.** A hood shall be designed to provide for thorough cleaning of the entire hood. Grease gutters shall drain to an approved collection receptacle that is fabricated, designed and installed to allow access for cleaning.

**507.9 Clearances for Type I hood.** A Type I hood shall be installed with a clearance to combustibles of not less than 18 inches (457 mm).

**Exception:** Clearance shall not be required from gypsum wallboard attached to noncombustible structures provided that a smooth, cleanable, nonabsorbent and noncombustible material is installed between the hood and the gypsum wallboard over an area extending not less than 18 inches (457 mm) in all directions from the hood.

**507.10 Hoods penetrating a ceiling.** Type I hoods or portions thereof penetrating a ceiling, wall or furred space shall comply with all the requirements of Section 506.3.10.

**507.11 Grease filters.** Type I hoods shall be equipped with UL 1046 listed grease filters designed for the specific purpose. Grease-collecting equipment shall be provided with access for cleaning. The lowest edge of a grease filter located above the cooking surface shall be not less than the height specified in Table 507.11.

**TABLE 507.11**  
**MINIMUM DISTANCE BETWEEN THE LOWEST EDGE OF A**  
**GREASE FILTER AND THE COOKING SURFACE OR THE HEATING SURFACE**

<i>TYPE OF COOKING APPLIANCE</i>	<i>HEIGHT ABOVE COOKING SURFACE (feet)</i>
<i>Without exposed flame</i>	<i>0.5</i>
<i>Exposed flame and burners</i>	<i>2</i>
<i>Exposed charcoal and charbroil type</i>	<i>4</i>

*For SI: 1 foot = 304.8 mm.*

**507.11.1 Criteria.** Filters shall be of such size, type and arrangement as will permit the required quantity of air to pass through such units at rates not exceeding those for which the filter or unit was designed or approved. Filter units shall be installed in frames or holders so as to be readily removable without the use of separate tools, unless designed and installed to be cleaned in place and the system is equipped for such cleaning in place. Removable filter units shall be of a size that will allow them to be cleaned in a dishwashing machine or pot sink. Filter units shall be arranged in place or provided with drip-intercepting devices to prevent grease or other condensate from dripping into food or on food preparation surfaces.

**507.11.2 Mounting position.** Filters shall be installed at an angle of not less than 45 degrees (0.79 rad) from the horizontal and shall be equipped with a drip tray beneath the lower edge of the filters.

**507.11.3 Filter servicing.** Filters shall be serviced and replaced regularly by qualified employees of the owner or by a cleaning agency. A record indicating the name of the person or firm doing the servicing and the dates when filters were cleaned or replaced shall be available for inspection by the commissioner. They shall be cleaned or replaced as frequently as necessary, but at least every three months, and no exhaust system shall be operated while cooking is being carried on without the filters installed in place.

**507.12 Canopy size and location.** The inside lower edge of canopy-type commercial cooking hoods shall overhang or extend a horizontal distance of not less than 6 inches (152 mm) beyond the edge of the cooking surface, on all open sides. The vertical distance between the front lower lip of the hood and the cooking surface shall not exceed 4 feet (1219 mm).

**Exception:** The hood shall be permitted to be flush with the outer edge of the cooking surface where the hood is closed to the appliance side by a noncombustible wall or panel.

**507.13 Capacity of hoods.** Commercial food service hoods shall exhaust a minimum net quantity of air determined in accordance with this section and Sections 507.13.1 through 507.13.4. The net quantity of exhaust air shall be calculated by subtracting any airflow supplied directly to a hood cavity from the total exhaust flow rate of a hood. Where any combination of extra-heavy-duty, heavy-duty, medium-duty, and light-duty cooking appliances are utilized under a single hood, the highest exhaust rate required by this section shall be used for the entire hood.

**507.13.1 Extra-heavy-duty cooking appliances.** The minimum net airflow for Type I hoods used for extra-heavy-duty cooking appliances shall be determined as follows:

<b>Type of Hood</b>	<b>CFM per linear foot of hood</b>
Wall-mounted canopy	550
Single island canopy	700
Double island canopy (per side)	550
Backshelf/pass-over	Not allowed
Eyebrow	Not allowed

*For SI: 1 cfm per linear foot = 1.55 L/s per linear meter.*

**507.13.2 Heavy-duty cooking appliances.** *The minimum net airflow for Type I hoods used for heavy-duty cooking appliances shall be determined as follows:*

<b>Type of Hood</b>	<b>CFM per linear foot of hood</b>
<i>Wall-mounted canopy</i>	400
<i>Single island canopy</i>	600
<i>Double island canopy (per side)</i>	400
<i>Backshelf/pass-over</i>	400
<i>Eyebrow</i>	Not allowed

*For SI: 1 cfm per linear foot = 1.55 L/s per linear meter.*

**507.13.3 Medium-duty cooking appliances.** *The minimum net airflow for Type I hoods used for medium-duty cooking appliances shall be determined as follows:*

<b>Type of Hood</b>	<b>CFM per linear foot of hood</b>
<i>Wall-mounted canopy</i>	300
<i>Single island canopy</i>	500
<i>Double island canopy (per side)</i>	300
<i>Backshelf/pass-over</i>	300
<i>Eyebrow</i>	250

*For SI: 1 cfm per linear foot = 1.55 L/s per linear meter.*

**507.13.4 Light-duty cooking appliances.** *The minimum net airflow for Type I hoods used for light duty cooking appliances and food service preparation and cooking operations approved for use under a Type II hood shall be determined as follows:*

<b>Type of Hood</b>	<b>CFM per linear foot of hood</b>
<i>Wall-mounted canopy</i>	200
<i>Single island canopy</i>	400
<i>Double island canopy (per side)</i>	250
<i>Backshelf/pass-over</i>	250
<i>Eyebrow</i>	250

*For SI: 1 cfm per linear foot = 1.55 L/s per linear meter.*

**507.14 Noncanopy size and location.** *Noncanopy-type hoods shall be located a maximum of 3 feet (914 mm) above the cooking surface. The edge of the hood shall be set back a maximum of 1 foot (305 mm) from the edge of the cooking surface.*

**507.15 Exhaust outlets.** *Exhaust outlets located within the hood shall be located so as to optimize the capture of particulate matter. Each outlet shall serve not more than a 12-foot (3658 mm) section of hood.*

**507.16 Performance test.** *A performance test shall be conducted upon completion and witnessed by a representative of the Fire Department before final approval of the installation of a ventilation system serving commercial cooking appliances. The test shall verify the rate of exhaust airflow required by Section 507.13, makeup airflow required by Section 508, and proper operation as specified in this chapter. The permit holder shall furnish the necessary test equipment and devices required to perform the tests.*

## **SECTION MC 508 COMMERCIAL KITCHEN MAKEUP AIR**

**508.1 Makeup air.** *Makeup air shall be supplied during the operation of commercial kitchen exhaust systems that are provided for commercial cooking appliances. The amount of makeup air supplied shall be approximately equal to the amount of exhaust air. The makeup air shall not reduce the effectiveness of the exhaust system. Makeup air shall be provided by gravity or mechanical means or both. For mechanical makeup air systems, the exhaust and makeup air systems shall be electrically interlocked to insure that makeup air is provided whenever the exhaust system is in operation. Makeup air intake opening locations shall comply with Sections 401.5 and 401.5.1.*

**508.1.1 Makeup air temperature.** *The temperature differential between makeup air and the air in the conditioned space shall not exceed 10°F (6°C).*

### **Exceptions:**

1. *Makeup air that is part of the air-conditioning system.*
2. *Makeup air that does not decrease the comfort conditions of the occupied space.*

**508.2 Compensating hoods.** *Manufacturers of compensating hoods shall provide a label indicating minimum exhaust flow and/or maximum makeup airflow that provides capture and containment of the exhaust effluent.*

## **SECTION MC 509 FIRE SUPPRESSION SYSTEMS**

**509.1 Where required.** *Commercial food heat-processing appliances required by Section 507.2.1 to have a Type I hood shall be provided with an approved automatic fire suppression system complying with the New York City*

**SECTION MC 510**  
**HAZARDOUS EXHAUST SYSTEMS**

**510.1 General.** *This section shall govern the design and construction of duct systems for hazardous exhaust and shall determine where such systems are required. Hazardous exhaust systems are systems designed to capture and control hazardous emissions generated from product handling or processes, and convey those emissions to the outdoors. Hazardous emissions include flammable vapors, gases, fumes, mists or dusts, and volatile or air-borne materials, including but not limited to perchloroethylene, posing a health hazard, such as toxic or corrosive materials. For the purposes of this section, the health-hazard rating of materials shall be as specified in NFPA 704.*

**510.2 Where required.** *A hazardous exhaust system shall be required wherever operations involving the handling or processing of hazardous materials, in the absence of such exhaust systems and under normal operating conditions, have the potential to create one of the following conditions:*

- 1. A flammable vapor, gas, fume, mist or dust is present in concentrations exceeding 25 percent of the lower flammability limit of the substance for the expected room temperature.*
- 2. A vapor, gas, fume, mist or dust with a health-hazard rating of 4 is present in any concentration.*
- 3. A vapor, gas, fume, mist or dust with a health-hazard rating of 1, 2 or 3 is present in concentrations exceeding 1 percent of the median lethal concentration of the substance for acute inhalation toxicity.*

**510.2.1 Lumber yards and woodworking facilities.** *Equipment or machinery located inside buildings at lumber yards and woodworking facilities which generates or emits combustible dust shall be provided with an approved dust-collection and exhaust system installed in conformance with this section and the New York City Fire Code. Equipment and systems that are used to collect, process or convey combustible dusts shall be provided with an approved explosion-control system.*

**510.2.2 Combustible fibers.** *Equipment or machinery within a building which generates or emits combustible fibers shall be provided with an approved dust-collecting and exhaust system. Such systems shall comply with this code and the New York City Fire Code.*

**510.3 Design and operation.** *The design and operation of the exhaust system shall be such that flammable contaminants are diluted in noncontaminated air to maintain concentrations in the exhaust flow below 25 percent of the contaminant's lower flammability limit.*

**510.4 Independent system.** *Hazardous exhaust systems shall be independent of other types of exhaust systems. Incompatible materials, as defined in the New York City Fire Code, shall not be exhausted through the same*

*hazardous exhaust system. Hazardous exhaust systems shall not share common shafts with other duct systems, except where such systems are hazardous exhaust systems originating in the same fire area.*

*Contaminated air shall not be recirculated to occupied areas unless the contaminants have been removed. Air contaminated with explosive or flammable vapors, fumes or dusts; flammable or toxic gases; or radioactive material shall not be recirculated.*

**510.5 Design.** *Systems for removal of vapors, gases and smoke shall be designed by the constant velocity or equal friction methods. Systems conveying particulate matter shall be designed employing the constant velocity method.*

**510.5.1 Balancing.** *Systems conveying explosive or radioactive materials shall be prebalanced by duct sizing. Other systems shall be balanced by duct sizing with balancing devices, such as dampers. Dampers provided to balance air-flow shall be provided with securely fixed minimum-position blocking devices to prevent restricting flow below the required volume or velocity.*

**510.5.2 Emission control.** *The design of the system shall be such that the emissions are confined to the area in which they are generated by air currents, hoods or enclosures and shall be exhausted by a duct system to a safe location or treated by removing contaminants.*

**510.5.3 Hoods required.** *Hoods or enclosures shall be used where contaminants originate in a limited area of a space. The design of the hood or enclosure shall be such that air currents created by the exhaust systems will capture the contaminants and transport them directly to the exhaust duct.*

**510.5.4 Contaminant capture and dilution.** *The velocity and circulation of air in work areas shall be such that contaminants are captured by an airstream at the area where the emissions are generated and conveyed into a product-conveying duct system. Contaminated air from work areas where hazardous contaminants are generated shall be diluted below the thresholds specified in Section 510.2 with air that does not contain other hazardous contaminants.*

**510.5.5 Makeup air.** *Makeup air shall be provided at a rate approximately equal to the rate that air is exhausted by the hazardous exhaust system. Makeup-air intakes shall be located so as to avoid recirculation of contaminated air.*

**510.5.6 Clearances.** *The minimum clearance between hoods and combustible construction shall be the clearance required by the duct system.*

**510.5.7 Ducts.** *Hazardous exhaust duct systems shall extend directly to the exterior of the building and shall not extend into or through ducts and plenums.*

**510.6 Penetrations.** *Penetrations of structural elements by a hazardous exhaust system shall conform to Sections*

510.6.1 through 510.6.3.

**Exception:** Duct penetrations within H-5 occupancies as allowed by the New York City Building Code.

**510.6.1 Floors.** Hazardous exhaust systems that penetrate a floor /ceiling assembly shall be enclosed in a fire-resistance-rated shaft constructed in accordance with the New York City Building Code.

**510.6.2 Wall assemblies.** Hazardous exhaust duct systems that penetrate fire-resistance-rated wall assemblies shall be enclosed in fire-resistance-rated construction from the first point of penetration to the outlet terminal, except where the interior of the duct is equipped with an approved automatic fire suppression system. Ducts shall be enclosed in accordance with the New York City Building Code requirements for shaft construction and such enclosure shall have a minimum fire-resistance-rating of not less than the highest fire-resistance-rated wall assembly penetrated.

**510.6.3 Fire walls.** Ducts shall not penetrate a fire wall.

**510.7 Suppression required.** Ducts shall be protected with an approved automatic fire suppression system installed in accordance with the New York City Building Code.

**Exceptions:**

1. An approved automatic fire suppression system shall not be required in ducts conveying materials, fumes, mists and vapors that are nonflammable and noncombustible under all conditions and at any concentrations.
2. An approved automatic fire suppression system shall not be required in ducts where the largest cross-sectional diameter of the duct is less than 10 inches (254 mm).

**510.8 Duct construction.** Ducts utilized to convey hazardous exhaust shall be constructed of approved G90 galvanized sheet steel, with a minimum nominal thickness as specified in Table 510.8.

Nonmetallic ducts utilized in systems exhausting nonflammable corrosive fumes or vapors shall be listed and labeled. Nonmetallic duct shall have a flame spread index of 25 or less and a smoke-developed index of 50 or less, when tested in accordance with ASTM E 84. Ducts shall be approved for installation in such an exhaust system.

Where the products being exhausted are detrimental to the duct material, the ducts shall be constructed of alternative materials that are compatible with the exhaust.

**TABLE 510.8  
MINIMUM DUCT THICKNESS**

DIAMETER OF DUCT OR MAXIMUM SIDE DIMENSION	MINIMUM NOMINAL THICKNESS		
	Nonabrasive materials	Nonabrasive/ Abrasive materials	Abrasive materials
0-8 inches	0.028 inch (No. 24 Gage)	0.034 inch (No. 22 Gage)	0.040 inch (No. 20 Gage)
9-18 inches	0.034 inch (No. 22 Gage)	0.040 inch (No. 20 Gage)	0.052 inch (No. 18 Gage)
19-30 inches	0.040 inch (No. 20 Gage)	0.052 inch (No. 18 Gage)	0.064 inch (No. 16 Gage)

**510.8.1 Duct joints.** *Ducts shall be made tight with lap joints having a minimum lap of 1 inch (25 mm).*

**510.8.2 Clearance to combustibles.** *Ducts shall have a clearance to combustibles in accordance with Table 510.8.2. Exhaust gases having temperatures in excess of 600°F (316°C) shall be exhausted to a chimney in accordance with Section 511.2.*

**TABLE 510.8.2**  
**CLEARANCE TO COMBUSTIBLES**

TYPE OF EXHAUST OR TEMPERATURE OF EXHAUST (°F)	CLEARANCE TO COMBUSTIBLES (inches)
Less than 100	1
100-600	12
Flammable vapors	6

For SI: 1 inch = 25.4 mm, EC = [(EF) - 32]/1.8.

**510.8.3 Explosion relief.** Systems exhausting potentially explosive mixtures shall be protected with an approved explosion relief system or by an approved explosion prevention system designed and installed in accordance with NFPA 69. An explosion relief system shall be designed to minimize the structural and mechanical damage resulting from an explosion or deflagration within the exhaust system. An explosion prevention system shall be designed to prevent an explosion or deflagration from occurring.

**510.9 Supports.** Ducts shall be supported at intervals not exceeding 10 feet (3048 mm). Supports shall be constructed of noncombustible material.

**SECTION MC 511**  
**DUST, STOCK AND REFUSE**  
**CONVEYING SYSTEMS**

**511.1 Dust, stock and refuse conveying systems.** Dust, stock and refuse conveying systems shall comply with the provisions of Section 510 and Sections 511.1.1 through 511.2.

**511.1.1 Collectors and separators.** Cyclone collectors and separators and associated supports shall be constructed of noncombustible materials and shall be located on the exterior of the building or structure. A collector or separator shall not be located nearer than 10 feet (3048 mm) to combustible construction or to an unprotected wall or floor opening, unless the collector is provided with a metal vent pipe that extends above the highest part of any roof within a distance of 30 feet (9144 mm).

**511.1.2 Discharge pipe.** Discharge piping shall conform to the requirements for ducts, including clearances required for high-heat appliances, as contained in this code. A delivery pipe from a cyclone collector shall not convey refuse directly into the firebox of a boiler, furnace, dutch oven, refuse burner, incinerator or other appliance.

**511.1.3 Conveying system exhaust discharge.** An exhaust system shall discharge to the outside of the building either directly by flue, or indirectly through the separator, bin or vault into which the system discharges.

**511.1.4 Spark protection.** The outlet of an open-air exhaust terminal shall be protected with an approved metal or other noncombustible screen to prevent the entry of sparks.

**511.1.5 Explosion relief vents.** A safety or explosion relief vent shall be provided on all systems that convey combustible refuse or stock of an explosive nature, in accordance with the requirements of the New York City Building Code.

**511.1.5.1 Screens.** Where a screen is installed in a safety relief vent, the screen shall be attached so as to permit ready release under the explosion pressure.

**511.1.5.2 Hoods.** *The relief vent shall be provided with an approved noncombustible cowl or hood, or with a counterbalanced relief valve or cover arranged to prevent the escape of hazardous materials, gases or liquids.*

**511.2 Exhaust outlets.** *Outlets for exhaust that exceed 600°F (315°C) shall be designed in accordance with Table 511.2.*

*The termination point for exhaust ducts discharging to the atmosphere shall not be less than the following:*

- 1. Ducts conveying explosive or flammable vapors, fumes or dusts: 30 feet (9144 mm) from property line; 10 feet (3048 mm) from openings into the building; 6 feet (1829 mm) from exterior walls or roofs; 30 feet (9144 mm) from combustible walls or openings into the building which are in the direction of the exhaust discharge; and 10 feet (3048 mm) above adjoining grade.*
- 2. Other product-conveying outlets: 10 feet (3048 mm) from property line; 3 feet (914 mm) from exterior wall or roof; 10 feet (3048 mm) from openings into the building; and 10 feet (3048 mm) above adjoining grade.*
- 3. Environmental air duct exhaust: 3 feet (914 mm) from property line; and 3 feet (914 mm) from openings into the building.*

**TABLE 511.2**  
**CONSTRUCTION, CLEARANCE AND TERMINATION REQUIREMENTS FOR**  
**SINGLE-WALL METAL [DUST, STOCK AND REFUSE CONVEYING SYSTEMS]**

SERVING] TEMPERATURE RANGE	MINIMUM THICKNESS		TERMINATION				CLEARANCE			
	Walls (inch)	Lining	Above roof opening	Above any part of			Combustible construction		Noncombustible	
				10	25	50	Interior inst.	Exterior	Interior inst.	Exterior inst.
Low-heat appliances (1,000°F normal operation)	0.127 (No. 10 MSG)	None	3	2	—	—	18	6	Up to 18" diameter, 2-	
Medium-heat appliances	0.127 10 MSG)	Up to 18" dia.—2½" Over 18"—4½"	10	—	10	—	36	24	Over 18" diameter, 4"	
High-heat appliances (Over 2,000°F) <sup>a</sup>	0.127 (No. 10 MSG)	4½" laid on 4½" bed	20	—	—	20	See Note c			

For SI: 1 inch = 25.4 mm, 1 foot = 304.8 mm, °C = [(°F)-32]/1.8.

- a. Lining shall extend from bottom to top of outlet.
- b. Lining shall extend from 24 inches below connector to 24 feet above.
- c. Clearance shall be as specified by the design engineer and shall have sufficient clearance from buildings and structures to avoid overheating combustible materials (maximum 160°F).

**SECTION MC 512**  
**SUBSLAB SOIL EXHAUST SYSTEMS**

**512.1 General.** *When a subslab soil exhaust system is provided, the duct shall conform to the requirements of this section.*

**512.2 Materials.** *Subslab soil exhaust system duct material shall be air duct material listed and labeled to the requirements of UL 181 for Class 0 air ducts, or any of the following piping materials that comply with the New York City Plumbing Code as building sanitary drainage and vent pipe: cast iron; galvanized steel; brass or copper pipe; copper tube of a weight not less than that of copper drainage tube, Type DWV; and plastic piping.*

**512.3 Grade.** *Exhaust system ducts shall not be trapped and shall have a minimum slope of one-eighth unit vertical in 12 units horizontal (1-percent slope).*

**512.4 Termination.** *Subslab soil exhaust system ducts shall extend through the roof and terminate at least 6 inches (152 mm) above the roof and at least 10 feet (3048 mm) from any operable openings or air intake.*

**512.5 Identification.** *Subslab soil exhaust ducts shall be permanently identified within each floor level by means of a tag, stencil or other approved marking.*

**SECTION MC 513**  
**SMOKE CONTROL SYSTEMS**

**513.1 Scope and purpose.** *This section applies to mechanical and passive smoke control systems that are required by the New York City Building Code. The purpose of this section is to establish minimum requirements for the design, installation and acceptance testing of smoke control systems that are intended to provide a tenable environment for the evacuation or relocation of occupants. These provisions are not intended for the preservation of contents, the timely restoration of operations, or for assistance in fire suppression or overhaul activities. Smoke control systems regulated by this section serve a different purpose than the smoke- and heat-venting provisions found in Section 910 of the New York City Building Code.*

**513.2 General design requirements.** *Buildings, structures, or parts thereof required by this code to have a smoke control system or systems shall have such systems designed in accordance with the applicable requirements of Section 909 of the New York City Building Code and the generally accepted and well-established principles of engineering relevant to the design. The construction documents shall include sufficient information and detail to describe adequately the elements of the design necessary for the proper implementation of the smoke control systems. These documents shall be accompanied with sufficient information and analysis to demonstrate compliance with these provisions*

**513.3 Special inspection and test requirements.** *In addition to the ordinary inspection and test requirements which*

*buildings, structures and parts thereof are required to undergo, smoke control systems subject to the provisions of Section 909 of the New York City Building Code shall undergo special inspections and tests sufficient to verify the proper commissioning of the smoke control design in its final installed condition. The design submission accompanying the construction documents shall clearly detail procedures and methods to be used and the items subject to such inspections and tests. Such commissioning shall be in accordance with generally accepted engineering practice and, where possible, based on published standards for the particular testing involved. The special inspections and tests required by this section shall be conducted under the same terms as found in Section 1704 of the New York City Building Code.*

**513.4 Analysis.** *A rational analysis supporting the types of smoke control systems to be employed, their methods of operation, the systems supporting them, and the methods of construction to be utilized shall accompany the submitted construction documents and shall include, but not be limited to, the items indicated in Sections 513.4.1 through 513.4.6.*

**513.4.1 Stack effect.** *The system shall be designed such that the maximum probable normal or reverse stack effects will not adversely interfere with the system's capabilities. In determining the maximum probable stack effects, altitude, elevation, weather history and interior temperatures shall be used.*

**513.4.2 Temperature effect of fire.** *Buoyancy and expansion caused by the design fire in accordance with Section 513.9 shall be analyzed. The system shall be designed such that these effects do not adversely interfere with its capabilities.*

**513.4.3 Wind effect.** *The design shall consider the adverse effects of wind. Such consideration shall be consistent with the wind-loading provisions of the New York City Building Code.*

**513.4.4 HVAC systems.** *The design shall consider the effects of the heating, ventilating and air-conditioning (HVAC) systems on both smoke and fire transport. The analysis shall include all permutations of systems' status. The design shall consider the effects of fire on the HVAC systems.*

**513.4.5 Climate.** *The design shall consider the effects of low temperatures on systems, property and occupants. Air inlets and exhausts shall be located so as to prevent snow or ice blockage.*

**513.4.6 Duration of operation.** *All portions of active or passive smoke control systems shall be capable of continued operation after detection of the fire event for not less than 20 minutes.*

**513.5 Smoke barrier construction.** *Smoke barriers shall comply with the New York City Building Code. Smoke barriers shall be constructed and sealed to limit leakage areas exclusive of protected openings. The maximum allowable leakage area shall be the aggregate area calculated using the following leakage area ratios:*

1. Walls:  $A/A_w = 0.00100$

2. *Exit enclosures:*  $A/A_w = 0.00035$

3. *All other shafts:*  $A/A_w = 0.00150$

4. *Floors and roofs:*  $A/A_F = 0.00050$

where:

$A$  = Total leakage area, square feet ( $m^2$ ).

$A_F$  = Unit floor or roof area of barrier, square feet ( $m^2$ ).

$A_w$  = Unit wall area of barrier, square feet ( $m^2$ ).

The leakage area ratios shown do not include openings due to doors, operable windows or similar gaps. These shall be included in calculating the total leakage area.

**513.5.1 Leakage area.** Total leakage area of the barrier is the product of the smoke barrier gross area times the allowable leakage area ratio. Compliance shall be determined by achieving the minimum air pressure difference across the barrier with the system in the smoke control mode for mechanical smoke control systems. Passive smoke control systems tested using other approved means such as door fan testing shall be as approved by the commissioner.

**513.5.2 Opening protection.** Openings in smoke barriers shall be protected by automatic-closing devices actuated by the required controls for the mechanical smoke control system. Door openings shall be protected by door assemblies complying with the requirements of the New York Building Code for doors in smoke barriers.

**Exceptions:**

1. *Passive smoke control systems with automatic-closing devices actuated by spot-type smoke detectors listed for releasing service installed in accordance with the New York City Building Code.*
2. *Fixed openings between smoke zones which are protected utilizing the airflow method.*
3. *In Group I-2 where such doors are installed across corridors, a pair of opposite-swinging doors without a center mullion shall be installed having vision panels with approved fire-rated glazing materials in approved fire-rated frames, the area of which shall not exceed that tested. The doors shall be close-fitting within operational tolerances, and shall not have undercuts, louvers or grilles. The doors shall have head and jamb stops, astragals or rabbets at meeting edges and automatic-closing devices. Positive latching devices are not required.*

4. Group I-3.

5. Openings between smoke zones with clear ceiling heights of 14 feet (4267 mm) or greater and bank down capacity of greater than 20 minutes as determined by the design fire size.

**513.5.2.1 Ducts and air transfer openings.** Ducts and air transfer openings are required to be protected with a minimum Class II, 250°F (121°C) smoke damper complying with the New York City Building Code.

**513.6 Pressurization method.** The primary mechanical means of controlling smoke shall be by pressure differences across smoke barriers. Maintenance of a tenable environment is not required in the smoke control zone of fire origin.

**513.6.1 Minimum pressure difference.** The minimum pressure difference across a smoke barrier shall be 0.05-inch water Gage (12.4 Pa) in fully sprinklered buildings.

*In buildings permitted to be other than fully sprinklered, the smoke control system shall be designed to achieve pressure differences at least two times the maximum calculated pressure difference produced by the design fire.*

**513.6.2 Maximum pressure difference.** The maximum air pressure difference across a smoke barrier shall be determined by required door-opening or closing forces. The actual force required to open exit doors when the system is in the smoke control mode shall be in accordance with the New York City Building Code. Opening and closing forces for other doors shall be determined by standard engineering methods for the resolution of forces and reactions. The calculated force to set a side-hinged, swinging door in motion shall be determined by:

$$F = F_{dc} + K(WA\Delta P)/2(W-d) \quad \text{(Equation 5-2)}$$

where:

$A$  = Door area, square feet ( $m^2$ ).

$d$  = Distance from door handle to latch edge of door, feet ( $m$ ).

$F$  = Total door opening force, pounds (N).

$F_{dc}$  = Force required to overcome closing device, pounds (N).

$K$  = Coefficient 5.2 (1.0).

$W$  = Door width, feet ( $m$ ).

$\Delta P$  = Design pressure difference, inches (Pa) water gage.

**513.7 Airflow design method.** *When approved by the commissioner, smoke migration through openings fixed in a permanently open position, which are located between smoke control zones by the use of the airflow method, shall be permitted. The design airflows shall be in accordance with this section. Air-flow shall be directed to limit smoke migration from the fire zone. The geometry of openings shall be considered to prevent flow reversal from turbulent effects.*

**513.7.1 Velocity.** *The minimum average velocity through a fixed opening shall not be less than:*

$$v = 217.2 [h (T_f - T_o)/(T_f + 460)]^{1/2} \quad \text{(Equation 5-3)}$$

$$\text{For SI: } v = 119.9 [h (T_f - T_o)/T_f]^{1/2}$$

where:

$H$  = Height of opening, feet (m).

$T_f$  = Temperature of smoke, °F (K).

$T_o$  = Temperature of ambient air, °F (K).

$v$  = Air velocity, feet per minute (m/minute).

**513.7.2 Prohibited conditions.** *This method shall not be employed where either the quantity of air or the velocity of the airflow will adversely affect other portions of the smoke control system, unduly intensify the fire, disrupt plume dynamics or interfere with exiting. In no case shall airflow toward the fire exceed 200 feet per minute (1.02 m/s). Where the formula in Section 513.7.1 requires airflow to exceed this limit, the airflow method shall not be used.*

**513.8 Exhaust method.** *When approved by the commissioner, mechanical smoke control for large enclosed volumes, such as in atria or malls, shall be permitted to utilize the exhaust method. The design exhaust volumes shall be in accordance with this section.*

**513.8.1 Exhaust rate.** *The height of the lowest horizontal surface of the accumulating smoke layer shall be maintained at least 10 feet (3048 mm) above any walking surface which forms a portion of a required egress system within the smoke zone. The required exhaust rate for the zone shall be the largest of the calculated plume mass flow rates for the possible plume configurations. Provisions shall be made for natural or mechanical supply of outside air from outside or adjacent smoke zones to make up for the air exhausted. Makeup airflow rates, when measured at the potential fire location, shall not exceed 200 feet per minute (1.02m/s) toward the fire. The temperature of the makeup air shall be such that it does not expose temperature-sensitive fire protection systems beyond their limits.*

**513.8.2 Axisymmetric plumes.** *The plume mass flow rate ( $m_p$ ), in pounds per second (kg/s), shall be determined by placing the design fire center on the axis of the space being analyzed. The limiting flame height shall be determined by:*

$$z_l = 0.533Q_c^{2/5} \quad \text{(Equation 5-4)}$$

For SI:  $z_l = 0.166Q_c^{2/5}$

where:

$M_p$  = Plume mass flow rate, pounds per second (kg/s).

$Q$  = Total heat output.

$Q_c$  = Convective heat output, British thermal units per second (kW).

(The value of  $Q_c$  shall not be taken as less than  $0.70Q$ ).

$z$  = Height from top of fuel surface to bottom of smoke layer, feet (m).

$z_l$  = Limiting flame height, feet (m). The  $z_l$  value must be greater than the fuel equivalent diameter (see Section 513.9).

for  $z > z_l$

$$m_p = 0.022Q_c^{1/3}z^{5/3} + 0.0042Q_c$$

For SI:  $m_p = 0.071Q_c^{1/3}z^{5/3} + 0.0018Q_c$

for  $z = z_l$

$$M_p = 0.011 Q_c$$

For SI:  $m_p = 0.035Q_c$

for  $z < z_l$

$$M_p = 0.0208Q_c^{3/5}z$$

For SI:  $m_p = 0.032Q_c^{3/5}z$

To convert  $m_p$  from pounds per second of mass flow to a volumetric rate, the following formula shall be used:

$$V = 60m_p/\rho \quad \text{(Equation 5-5)}$$

where:

$V$  = Volumetric flow rate, cubic feet per minute ( $m^3/s$ ).

$\rho$  = Density of air at the temperature of the smoke layer, pounds per cubic feet ( $T$ : in  $^{\circ}F$ )[ $kg/m^3$  ( $T$ : in  $^{\circ}C$ )].

**513.8.3 Balcony spill plumes.** *The plume mass flow rate ( $m_p$ ) for spill plumes shall be determined using the geometrically probable width based on architectural elements and projections in the following formula:*

$$M_p = 0.124(QW^2)^{1/3}(z_b + 0.25H) \quad \text{(Equation 5-6)}$$

$$\text{For SI: } m_p = 0.36(QW^2)^{1/3}(z_b + 0.25H)$$

where:

$H$  = Height above fire to underside of balcony, feet (m).

$M_p$  = Plume mass flow rate, pounds per second (kg/s).

$Q$  = Total heat output.

$W$  = Plume width at point of spill, feet (m).

**513.8.4 Window plumes.** *The plume mass flow rate ( $m_p$ ) shall be determined from:*

$$m_p = 0.077(A_w H_w^{1/2})^{1/3} (z_w + a)^{5/3} + 0.18 A_w H_w^{1/2}$$

(Equation 5-7)

For SI:  $m_p = 0.68(A_w H_w^{1/2})^{1/3} (z_w + a)^{5/3} + 1.5 A_w H_w^{1/2}$

where:

$A_w$  = Area of the opening, square feet (m<sup>2</sup>).

$H_w$  = Height of the opening, feet (m).

$M_p$  = Plume mass flow rate, pounds per second (kg/s).

$z_w$  = Height from the top of the window or opening to the bottom of the smoke layer, feet (m).

$$a = 2.4 A_w^{2/5} H_w^{1/5} - 2.1 H_w$$

**513.8.5 Plume contact with walls.** *When a plume contacts one or more of the surrounding walls, the mass flow rate shall be adjusted for the reduced entrainment resulting from the contact provided that the contact remains constant. Use of this provision requires calculation of the plume diameter, that shall be calculated by:*

$$d = 0.48 [(T_c + 460)/(T_a + 460)]^{1/2} z \quad \text{(Equation 5-8)}$$

$$\text{For SI: } d = 0.48 (T_c/T_a)^{1/2} z$$

where:

$d$  = Plume diameter, feet (m).

$T_a$  = Ambient air temperature, °F (°K).

$T_c$  = Plume centerline temperature, °F (°K).

$$= 0.6 (T_a + 460) Q_c^{2/3} Z^{-5/3} + T_a$$

$z$  = Height at which  $T_c$  is determined, feet (m).

$$\text{For SI: } T_c = 0.08 T_a Q_c^{2/3} Z^{-5/3} + T_a$$

---

**513.9 Design fire.** *The design fire shall be based on a  $Q$  of not less than 5,000 Btu per second (5275 kW) unless a rational analysis is performed by the registered design professional and approved by the commissioner. The design fire shall be based on the analysis in accordance with Section 513.4 and this section.*

**513.9.1 Factors considered.** *The engineering analysis shall include the characteristics of the fuel, fuel load, effects included by the fire, and whether the fire is likely to be steady or unsteady.*

**513.9.2 Separation distance.** *Determination of the design fire shall include consideration of the type of fuel, fuel spacing and configuration. The ratio of the separation distance to the fuel equivalent radius shall not be less than 4. The fuel equivalent radius shall be the radius of a circle of equal area to floor area of the fuel package. The design fire shall be increased if other combustibles are within the separation distance as determined by:*

$$R = [Q/(12\pi q'')]^{1/2} \quad \text{(Equation 5-9)}$$

where:

$q''$  = Incident radiant heat flux required for nonpiloted ignition, Btu/ft<sup>2</sup> • s (W/m<sup>2</sup>).

$Q$  = Heat release from fire, Btu/s (kW).

$R$  = Separation distance from target to center of fuel package, feet (m).

**513.9.3 Heat-release assumptions.** *The analysis shall make use of the best available data from approved sources and shall not be based on excessively stringent limitations of combustible material.*

**513.9.4 Sprinkler effectiveness assumptions.** *A documented engineering analysis shall be provided for conditions that assume fire growth is halted at the time of sprinkler activation.*

**513.10 Equipment.** *Equipment such as, but not limited to, fans, ducts, automatic dampers and balance dampers shall be suitable for their intended use, suitable for the probable exposure temperatures that the rational analysis indicates, and as approved by the commissioner.*

**513.10.1 Exhaust fans.** *Components of exhaust fans shall be rated and certified by the manufacturer for the probable temperature rise to which the components will be exposed. This temperature rise shall be computed by:*

$$T_s = (Q_c/mc) + (T_a) \quad \text{(Equation 5-10)}$$

where:

$C$  = Specific heat of smoke at smoke-layer temperature,  
Btu/lb<sup>o</sup>F (kJ/kg × K).

$m$  = Exhaust rate, pounds per second (kg/s).

$Q_c$  = Convective heat output of fire, Btu/s (kW).

$T_a$  = Ambient temperature, <sup>o</sup>F (K).

$T_s$  = Smoke temperature, <sup>o</sup>F (K).

**Exception:** Reduced  $T_s$  as calculated based on the assurance of adequate dilution air.

**513.10.2 Ducts.** Duct materials and joints shall be capable of withstanding the probable temperatures and pressures to which they are exposed as determined in accordance with Section 513.10.1. Ducts shall be constructed and supported in accordance with Chapter 6. Ducts shall be leak tested to 1.5 times the maximum design operating pressure in accordance with nationally accepted practices. Measured leakage shall not exceed 5 percent of design flow. Results of such testing shall be a part of the documentation procedure. Ducts shall be supported directly from fire-resistance-rated structural elements of the building by substantial, noncombustible supports.

**Exception:** Flexible connections, for the purpose of vibration isolation, that are constructed of approved fire-resistance-rated materials.

**513.10.3 Equipment, inlets and outlets.** Equipment shall be located so as to not expose uninvolved portions of the building to an additional fire hazard. Outdoor air inlets shall be located so as to minimize the potential for introducing smoke or flame into the building. Exhaust outlets shall be so located as to minimize reintroduction of smoke into the building and to limit exposure of the building or adjacent buildings to an additional fire hazard.

**513.10.4 Automatic dampers.** Automatic dampers, regardless of the purpose for which they are installed within the smoke control system, shall be listed and conform to the requirements of approved recognized standards.

**513.10.5 Fans.** In addition to other requirements, belt-driven fans shall have 1.5 times the number of belts required for the design duty with the minimum number of belts being two. Fans shall be selected for stable performance based on normal temperature and, where applicable, elevated temperature. Calculations and manufacturer's fan curves shall be part of the documentation procedures. Fans shall be supported and restrained by noncombustible devices in accordance with the structural design requirements of the New York City Building Code. Motors driving fans shall not be operating beyond their nameplate horsepower (kilowatts) as determined from measurement of actual current draw. Motors driving fans shall have a minimum service factor of 1.15.

**513.11 Power systems.** The smoke control system shall be supplied with two sources of power. Primary power shall be the normal building power systems. Secondary power shall be from an approved emergency source complying with the New York City Electrical Code. The emergency power source and its transfer switches shall be in a separate room from the normal power transformers and switch gear and shall be enclosed in a room constructed of not less than 1-hour fire-resistance-rated fire barriers, ventilated directly to and from the exterior. Power distribution from the two sources shall be by independent routes. Transfer to full emergency power shall be automatic and within 60 seconds of failure of the primary power. The systems shall comply with the New York City Electrical Code.

**513.11.1 Power sources and power surges.** Elements of the smoke management system relying on volatile memories or the like shall be supplied with integral uninterruptible power sources of sufficient duration to span 15-minute primary power interruption. Elements of the smoke management system susceptible to power surges shall be suitably protected by conditioners, suppressors or other approved means.

**513.12 Detection and control systems.** Fire detection systems providing control input or output signals to mechanical smoke control systems or elements thereof shall comply with the requirements of Chapter 9 of the New York City Building Code. Such systems shall be equipped with a control unit complying with UL 864 and listed as smoke control equipment.

Control systems for mechanical smoke control systems shall include provisions for verification. Verification shall include positive confirmation of actuation, testing, manual override, the presence of power downstream of all disconnects and, through a preprogrammed weekly test sequence report, abnormal conditions audibly, visually and by printed report.

**513.12.1 Wiring.** In addition to meeting the requirements of the New York City Electrical Code, all wiring, regardless of voltage, shall be fully enclosed within continuous raceways.

**513.12.2 Activation.** Smoke control systems shall be activated in accordance with the New York City Building Code.

**513.12.3 Automatic control.** Where completely automatic control is required or used, the automatic control sequences shall be initiated from an appropriately zoned automatic sprinkler system complying with Chapter 9 of the New York City Building Code or from manual controls that are readily accessible to the Fire Department, and any smoke detectors required by engineering analysis.

**513.13 Control-air tubing.** Control-air tubing shall be of sufficient size to meet the required response times. Tubing shall be flushed clean and dry prior to final connections. Tubing shall be adequately supported and protected from damage. Tubing passing through concrete or masonry shall be sleeved and protected from abrasion and electrolytic action.

**513.13.1 Materials.** Control-air tubing shall be hard-drawn copper, Type L, ACR in accordance with ASTM B 42, ASTM B 43, ASTM B 68, ASTM B 88, ASTM B 251 and ASTM B 280. Fittings shall be wrought copper or brass, solder type in accordance with ASME B16.18 or ASME B 16.22. Changes in direction shall be made with appropriate tool bends. Brass compression-type fittings shall be used at final connection to devices; other joints shall be brazed using a BCuP5 brazing alloy with solidus above 1,100°F (593°C) and liquids below 1,500°F (816°C). Brazing flux shall be used on copper-to-brass joints only.

**Exception:** Nonmetallic tubing used within control panels and at the final connection to devices provided all of the following conditions are met:

1. Tubing shall be listed by an approved agency for flame and smoke characteristics.
2. Tubing and connected device shall be completely enclosed within a galvanized or paint-grade steel enclosure of not less than 0.030 inch (0.76mm) (No. 22 galvanized sheet Gage) thickness. Entry to

*the enclosure shall be by copper tubing with a protective grommet of neoprene or teflon or by suitable brass compression to male barbed adapter.*

3. *Tubing shall be identified by appropriately documented coding.*
4. *Tubing shall be neatly tied and supported within the enclosure. Tubing bridging cabinets and doors or moveable devices shall be of sufficient length to avoid tension and excessive stress. Tubing shall be protected against abrasion. Tubing serving devices on doors shall be fastened along hinges.*

**513.13.2 Isolation from other functions.** *Control tubing serving other than smoke control functions shall be isolated by automatic isolation valves or shall be an independent system.*

**513.13.3 Testing.** *Test control-air tubing at three times the operating pressure for not less than 30 minutes without any noticeable loss in gauge pressure prior to final connection to devices.*

**513.14 Marking and identification.** *The detection and control systems shall be clearly marked at all junctions, accesses and terminations.*

**513.15 Control diagrams.** *Identical control diagrams shall be provided and maintained as required by the New York City Fire Code.*

**513.16 Fire fighter's smoke control panel.** *A fire fighter's smoke control panel for Fire Department emergency response purposes only shall be provided in accordance with the New York City Fire Code.*

**513.17 System response time.** *Smoke control system activation shall comply with the New York City Fire Code.*

**513.18 Acceptance testing.** *Devices, equipment, components and sequences shall be tested in accordance with the New York City Fire Code.*

**513.19 System acceptance.** *Acceptance of the smoke control system shall be in accordance with the New York City Fire Code.*

**513.20 Underground building smoke exhaust system.** *Where required by the New York City Building Code for underground buildings, a smoke exhaust system shall be provided in accordance with this section.*

**513.20.1 Exhaust capability.** *Where compartmentation is required, each compartment shall have an independent smoke exhaust system capable of manual operation. The system shall have an air supply and smoke exhaust capability that will provide a minimum of six air changes per hour.*

**513.20.2 Operation.** *The smoke exhaust system shall be operated in accordance with Section 909 of the New York City Building Code.*

**513.20.3 Alarm required.** *Activation of the smoke exhaust system shall activate an audible alarm at a constantly attended location in accordance with the New York City Fire Code.*

#### **SECTION MC 514 ENERGY RECOVERY VENTILATION SYSTEMS**

**514.1 General.** *Energy recovery ventilation systems shall be installed in accordance with this section. Where required for purposes of energy conservation, energy recovery ventilation systems shall also comply with the Energy Conservation Construction Code of New York State.*

**514.2 Prohibited applications.** *Energy recovery ventilation systems shall not be used in the following systems, unless specifically designed and/or listed for the specific applications and as part of an engineered system.*

1. *Hazardous exhaust systems covered in Section 510.*
2. *Dust, stock and refuse systems that convey explosive or flammable vapors, fumes or dust covered in Section 511.*
3. *Smoke control systems covered in Section 513.*
4. *Commercial kitchen exhaust systems serving Type I and Type II hoods covered in Section 506.*
5. *Clothes dryer exhaust systems covered in Section 504.*

**514.3 Access.** *A means of access shall be provided to the heat exchanger and other components of the system as required for service, maintenance, repair or replacement.*

#### **SECTION MC 515 POST-FIRE SMOKE PURGE SYSTEMS**

**515.1 General.** *Post-fire smoke purge systems shall be provided as required by Chapter 9 of the New York City Building Code.*

#### **CHAPTER 6 DUCT SYSTEMS**

## **SECTION MC 601**

### **GENERAL**

**601.1 Scope.** Duct systems used for the movement of air in air-conditioning, heating, ventilating and exhaust systems shall conform to the provisions of this chapter except as otherwise specified in Chapters 5 and 7.

**Exception:** Ducts discharging combustible material directly into any combustion chamber shall conform to the requirements of NFPA 82.

**601.2 Air movement in corridors.** Corridors shall not be used as a portion of direct supply, return, or exhaust air system serving adjoining areas. Air transfer opening(s) shall not be permitted in walls or in doors separating public corridors from adjoining areas.

#### **Exceptions:**

1. Where located within dwelling units, the use of corridors for conveying return air shall not be prohibited.
2. Where located within tenant spaces of 1,000 square feet (93 m<sup>2</sup>) or less in area, utilization of corridors for conveying return air is permitted.
3. Corridors in Group B office buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 of the New York City Building Code.
4. Air transfer openings serving toilet rooms, bathrooms, shower rooms, sink closets, and similar auxiliary spaces opening onto the public corridor.
5. Group I-3 detention and correctional occupancies with corridor separations of open construction (e.g. grating doors or grating partitions).
6. Air transfer in openings because of pressure differential in Group I-2 health care occupancies from corridors is permitted.
7. Where door clearances do not exceed those specified for fire doors in the New York City Building Code, air transfer caused by pressure differentials shall be permitted.
8. Use of egress corridors as part of an engineered smoke-control system is permitted.

**601.2.1 Corridor ceiling.** Use of the space between the corridor ceiling and the floor or roof structure above as a return air plenum is permitted for one or more of the following conditions:

1. *The corridor is not required to be of fire-resistance-rated construction;*
2. *The corridor is separated from the plenum by fire-resistance- rated construction;*
3. *The air-handling system serving the corridor is shut down upon activation of the air-handling unit smoke detectors required by this code;*
4. *The air-handling system serving the corridor is shut down upon detection of sprinkler waterflow where the building is equipped throughout with an automatic sprinkler system; or*
5. *The space between the corridor ceiling and the floor or roof structure above the corridor is used as a component of an approved engineered smoke control system.*

**601.3 Contamination prevention.** *Exhaust ducts under positive pressure, chimneys, and vents shall not extend into or pass through ducts or plenums.*

## **SECTION MC 602**

### **PLENUMS**

**602.1 General.** *Supply, return, exhaust, relief and ventilation air plenums shall be limited to uninhabited crawl spaces, areas above a finished ceiling or below the finished floor, attic spaces and mechanical equipment rooms. Plenums shall be limited to one fire area. Fuel-fired appliances shall not be installed within a plenum.*

**602.2 Construction.** *Plenum enclosures shall be constructed of materials permitted for the type of construction classification of the building. The temperature of air delivered to or through these plenums shall not exceed 250°F (121°C), except where used as part of an engineered smoke control system.*

*The use of gypsum boards to form plenums shall be limited to systems where the air temperatures do not exceed 125°F (52°C) and the building and mechanical system design conditions are such that the gypsum board surface temperature will be maintained above the air stream dew-point temperature. Air plenums formed by gypsum boards shall not be incorporated in air-handling systems utilizing evaporative coolers.*

**602.2.1 Materials exposed within plenums.** *Except as required by Sections 602.2.1.1 through 602.2.1.5, materials exposed within plenums shall be noncombustible or shall have a flame spread index of not more than 25 and a smoke-developed index of not more than 50 when tested in accordance with ASTM E 84.*

#### **Exceptions:**

1. *Rigid and flexible ducts and connectors shall conform to Section 603.*

2. *Duct coverings, linings, tape and connectors shall conform to Sections 603 and 604.*
3. *This section shall not apply to materials exposed within plenums in one- and two-family dwellings.*
4. *This section shall not apply to smoke detectors.*
5. *Combustible materials enclosed in approved gypsum board assemblies or enclosed in materials listed and labeled for such application.*

**602.2.1.1 Wiring.** *Combustible electrical or electronic wiring methods and materials, optical fiber cable, and optical fiber raceway exposed within a plenum shall have a peak optical density not greater than 0.50, an average optical density not greater than 0.15, and a flame spread not greater than 5 feet (1524 mm) when tested in accordance with NFPA 262. Only type OFNP (plenum rated nonconductive optical fiber cable) shall be installed in plenum-rated optical fiber raceways. Wiring, cable, and raceways addressed in this section shall be listed and labeled as plenum rated and shall be installed in accordance with New York City Electrical Code.*

**602.2.1.2 Fire sprinkler piping.** *Plastic fire sprinkler piping exposed within a plenum shall be used only in wet pipe systems and shall have a peak optical density not greater than 0.50, an average optical density not greater than 0.15, and a flame spread of not greater than 5 feet (1524 mm) when tested in accordance with UL 1887. Piping shall be listed and labeled.*

**602.2.1.3 Pneumatic tubing.** *Combustible pneumatic tubing exposed within a plenum shall have a peak optical density not greater than 0.50, an average optical density not greater than 0.15, and a flame spread of not greater than 5 feet (1524 mm) when tested in accordance with UL 1820. Combustible pneumatic tubing shall be listed and labeled.*

**602.2.1.4 Combustible electrical equipment.** *Combustible electrical equipment exposed within a plenum shall have a peak rate of heat release not greater than 100 kilowatts, a peak optical density not greater than 0.50 and an average optical density not greater than 0.15 when tested in accordance with UL 2043. Combustible electrical equipment shall be listed and labeled.*

**602.2.1.5 Foam plastic insulation.** *Foam plastic insulation used as wall or ceiling finish in plenums shall exhibit a flame spread index of 75 or less and a smoke developed index of 450 or less when tested in accordance with ASTM E 84 and shall also comply with Section 602.2.1.5.1, 602.2.1.5.2 or 602.2.1.5.3.*

**602.2.1.5.1 Separation required.** *The foam plastic insulation shall be separated from the plenum by a thermal barrier complying with Section 2603.4 of the New York City Building Code.*

**602.2.1.5.2 Approval.** *The foam plastic insulation shall be approved based on tests conducted in accordance with Section 2603.8 of the New York City Building Code.*

**602.2.1.5.3 Covering.** *The foam plastic insulation shall be covered by corrosion-resistant steel having a base metal thickness of not less than 0.0160 inch (0.4 mm).*

**602.3 Stud cavity and joist space plenums.** *Stud wall cavities and the spaces between solid floor joists to be utilized as air plenums shall comply with the following conditions:*

- 1. Such cavities or spaces shall not be utilized as a plenum for supply air.*
- 2. Such cavities or spaces shall not be part of a required fire-resistance-rated assembly.*
- 3. Stud wall cavities shall not convey air from more than one floor level.*
- 4. Stud wall cavities and joist space plenums shall comply with the floor penetration protection requirements of the New York City Building Code.*
- 5. Stud wall cavities and joist space plenums shall be isolated from adjacent concealed spaces by approved fireblocking as required in the New York City Building Code.*

**602.4 Flood hazard.** *For structures located in areas of special flood hazard, plenum spaces shall comply with Appendix G of the New York City Building Code.*

**602.5 Firestopping.** *Where required by the New York City Building Code through penetrations shall be firestopped in accordance with Section 712 of the New York City Building Code.*

**602.6 Materials.** *Materials used in the construction of a plenum shall be suitable for continuous exposure to the temperature and humidity conditions of the environmental air in the plenum.*

## **SECTION MC 603**

### **DUCT CONSTRUCTION AND INSTALLATION**

**603.1 General.** *An air distribution system shall be designed and installed to supply the required distribution of air. The installation of an air distribution system shall not affect the fire protection requirements specified in the New York City Building Code. Ducts shall be constructed, braced, reinforced and installed to provide structural strength and durability.*

**603.2 Duct sizing.** *Ducts installed within a single dwelling unit shall be sized in accordance with ACCA Manual D or other approved methods. Ducts installed within all other buildings shall be sized in accordance with the ASHRAE*

*Handbook of Fundamentals or other equivalent computation procedure.*

**603.3 Duct classification.** *Ducts shall be classified based on the maximum operating pressure of the duct at pressures of positive or negative 0.5, 1.0, 2.0, 3.0, 4.0, 6.0 or 10.0 inches of water column. The pressure classification of ducts shall equal or exceed the design pressure of the air distribution in which the ducts are utilized.*

**603.4 Metallic ducts.** *All metallic ducts shall be constructed as specified in the SMACNA HVAC Duct Construction Standards —Metal and Flexible.*

**Exception:** *Ducts installed within single dwelling units shall have a minimum thickness as specified in Table 603.4.*

**TABLE 603.4**  
**DUCT CONSTRUCTION MINIMUM SHEET METAL**  
**THICKNESSES FOR SINGLE DWELLING UNITS**

DUCT SIZE	GALVANIZED		APPROXIMATE ALUMINUM B&S GAGE
	Minimum thickness (inches)	Equivalent Galvanized Gage No.	
Round ducts and enclosed Rectangular ducts			
14" or less	0.013	30	26
Over 14"	0.016	28	24
Exposed rectangular ducts			
14" or less	0.016	28	24
Over 14"	0.019	26	22

For SI: 1 inch = 25.4 mm.

**603.5 Nonmetallic ducts.** *Nonmetallic ducts shall be constructed with Class 0 or Class 1 duct material in accordance with UL 181. Fibrous duct construction shall conform to the SMACNA Fibrous Glass Duct Construction Standards or NAIMA Fibrous Glass Duct Construction Standards. The maximum air temperature within nonmetallic ducts shall not exceed 250°F (121°C).*

**603.6 Air ducts and air connectors.** *Air ducts, both metallic and nonmetallic, shall comply with Sections 603.6.1 and 603.6.1.1. Air connectors, both metallic and nonmetallic, shall comply with Sections 606.6.2 and 603.6.3.*

**603.6.1 Air ducts.** *Air ducts shall be permitted to be rigid or flexible and shall be constructed of materials that are reinforced and sealed to satisfy the requirements for the use of the air duct system, such as the supply air system, the return or exhaust air systems, and the variable volume/pressure air system.*

**603.6.1.1 Materials.** *All air duct materials shall be suitable for continuous exposure to the temperature and humidity conditions of the environmental air in the air duct. Air ducts shall be constructed of any of the following materials:*

- 1. Iron, steel, aluminum, copper, concrete, masonry, or clay tile.*
- 2. Class 0 or Class 1 rigid or flexible air ducts tested in accordance with UL 181 and installed in conformance with the conditions of the listing.*

**Exceptions:**

- 1. Class 0 or Class 1 rigid or flexible air duct shall not be used as a vertical air duct that is more than two stories in height.*
- 2. Class 0 or Class 1 rigid or flexible air ducts shall not be used for air ducts containing air at temperatures in excess of 250°F (121°C)*
- 3. Where the temperature of the conveyed air does not exceed 125°F (52°C) in normal service, negative pressure exhaust or return air ducts shall be permitted to be constructed of gypsum board having a maximum flame spread index/rating of 25 without evidence of continued progressive combustion and a maximum smoke developed index/rating of 50. Air ducts formed by gypsum boards shall have a surface temperature maintained above the air stream dew-point temperature, and shall not be used in air-handling systems utilizing evaporative coolers.*

**Exception:** *The maximum conveyed air temperature of 125°F (52°C) shall not apply to gypsum board material used for emergency smoke exhaust air ducts.*

**603.6.1.2. Installation.** *The materials, thickness, construction, and installation of ducts shall provide structural strength and durability in conformance with recognized good practice. Air ducts shall be considered to be in compliance with this requirement where constructed and installed in accordance with the New York City Building Code. Where no standard exists for the construction of air ducts, they shall be constructed to withstand both the positive and negative pressures of the system.*

**603.6.2 Air Connectors.** *Air connectors are limited-use, flexible air ducts that are required to conform to other provisions applicable to air ducts and shall meet the following requirements:*

1. *Air connectors shall conform to the requirements for Class 0 or Class 1 connectors when tested and approved in accordance with UL 181.*
2. *Class 0 or Class 1 air connectors shall not be used for ducts containing air at temperatures in excess of 250°F (121°C).*
3. *Air connector runs shall not exceed 14 feet (4267 mm) in length.*
4. *Air connectors shall not penetrate any rated wall, partition, or shaft that is required to have a fire resistance rating of 1 hour or more.*
5. *Air connectors shall not pass through floors.*

**603.6.3 Flexible air duct and air connector clearance.** *Flexible air ducts and air connectors shall be installed with a minimum clearance to an appliance as specified in the appliance manufacturer's installation instructions.*

**603.7 Rigid duct penetrations.** *Duct system penetrations of walls, floors, ceilings and roofs and air transfer openings in such building components shall be protected as required by Section 607.*

**603.8 Underground ducts.** *Ducts shall be approved for underground installation. Metallic ducts not having an approved protective coating shall be completely encased in a minimum of 2 inches (51 mm) of concrete.*

**603.8.1 Slope.** *Ducts shall slope to allow drainage to a point provided with access.*

**603.8.2 Sealing.** *Ducts shall be sealed and secured prior to pouring the concrete encasement.*

**603.8.3 Plastic ducts and fittings.** *Plastic ducts shall be constructed of PVC having a minimum pipe stiffness of 8 psi (55 kPa) at 5-percent deflection when tested in accordance with ASTM D 2412. Plastic duct fittings shall be constructed of either PVC or high-density polyethylene. Plastic duct and fittings shall be utilized in underground installations only. The maximum design temperature for systems utilizing plastic duct and fittings shall be 150°F (66°C).*

**603.9 Joints, seams and connections.** All longitudinal and transverse joints, seams and connections in metallic and nonmetallic ducts shall be constructed as specified in SMACNA\_HVAC Duct Construction Standards—Metal and Flexible and SMACNA Fibrous Glass Duct Construction Standards or NAIMA Fibrous Glass Duct Construction Standards. All longitudinal and transverse joints, seams and connections shall be sealed in accordance with the Energy Conservation Construction Code of New York State.

**603.10 Supports.** Ducts shall be supported with approved hangers at intervals not exceeding 10 feet (3048 mm) or by other approved duct support systems designed in accordance with the New York City Building Code. Flexible and other factory-made ducts shall be supported in accordance with the manufacturer's installation instructions. Ducts shall not be hung from or supported by suspended ceilings.

**603.11 Furnace connections.** Ducts connecting to a furnace shall have a clearance to combustibles in accordance with the furnace manufacturer's installation instructions.

**603.11.1 Air duct at heat sources.** Where heat sources from electrical equipment, fossil fuel-burning equipment, or solar energy collection equipment are installed in air ducts, the installation shall avoid the creation of a fire hazard. Air ducts rated as Class 1 in accordance with UL 181, air duct coverings, and linings shall be interrupted at the immediate area of operation of such heat sources in order to meet the clearances specified in the equipment listing.

**Exceptions:**

1. Appliances listed for zero clearance from combustibles where installed with the conditions of their listings.
2. Insulation specifically suitable for the maximum temperature that reasonably can be anticipated on the duct surface shall be permitted to be installed at the immediate area of operation of such appliances.

**603.12 Condensation.** Provisions shall be made to prevent the formation of condensation on the exterior of any duct.

**603.13 Flood hazard areas.** For structures in areas of special flood hazard, ducts shall comply with Appendix G of the New York City Building Code.

**603.14 Location.** Ducts shall not be installed in or within 4 inches (102 mm) of the earth, except where such ducts comply with Section 603.8.

**603.15 Mechanical protection.** Ducts installed in locations where they are exposed to mechanical damage by vehicles or from other causes shall be protected by approved vehicle barriers as required by the New York City Building Code.

**603.16 Weather protection.** All ducts including linings, coverings and vibration isolation connectors installed on the exterior of the building shall be adequately protected against the elements.

**603.17 Registers, grilles and diffusers.** Duct registers, grilles and diffusers shall be installed in accordance with the manufacturer's installation instructions. Balancing dampers or other means of supply air adjustment shall be provided in the branch ducts or at each individual duct register, grille or diffuser.

**603.17.1 Floor registers.** Floor registers shall resist, without structural failure, a 200-pound (90.8 kg) concentrated load on a 2-inch-diameter (51 mm) disc applied to the most critical area of the exposed face.

**603.18 Vibration Isolation Connectors.** Vibration isolation connectors in duct systems shall be made of an approved flame-retardant fabric or shall consist of sleeve joints with packing of approved material, each having a maximum flame spread index/rating of 25 and a maximum smoke developed rating of 50. The fabric shall have a maximum length of 10 inches (254 mm) in the direction of air flow.

## **SECTION MC 604 INSULATION**

**604.1 General.** Duct insulation shall conform to the requirements of Sections 604.2 through 604.13 and the Energy Conservation Construction Code of New York State.

**604.2 Surface temperature.** Ducts that operate at temperatures exceeding 120°F (49°C) shall have sufficient thermal insulation to limit the exposed surface temperature to 120°F (49°C).

**604.3 Coverings and linings.** Coverings and linings, including adhesives when used, shall have a flame spread index not more than 25 and a smoke-developed index not more than 50, when tested in accordance with ASTM E 84. Duct coverings and linings shall not flame, glow, smolder or smoke when tested in accordance with ASTM C 411 at the temperature to which they are exposed in service. The test temperature shall not fall below 250°F (121°C).

**604.4 Foam plastic insulation.** Foam plastic used as duct coverings and linings shall conform to the requirements of Section 604.

**604.5 Appliance insulation.** Listed and labeled appliances that are internally insulated shall be considered as conforming to the requirements of Section 604.

**604.6 Penetration of assemblies.** Duct coverings shall not penetrate a wall or floor required to have a fire-resistance rating or required to be fireblocked.

**604.7 Identification.** External duct insulation and factory-insulated flexible duct shall be legibly printed or identified

at intervals not greater than 36 inches (914 mm) with the name of the manufacturer, the thermal resistance R-value at the specified installed thickness and the flame spread and smoke-developed indexes of the composite materials. All duct insulation product R-values shall be based on insulation only, excluding air films, vapor retarders or other duct components, and shall be based on tested C-values at 75°F (24°C) mean temperature at the installed thickness, in accordance with recognized industry procedures. The installed thickness of duct insulation used to determine its R-values shall be determined as follows:

1. For duct board, duct liner and factory-made rigid ducts not normally subjected to compression, the nominal insulation thickness shall be used.
2. For duct wrap, the installed thickness shall be assumed to be 75 percent (25-percent compression) of nominal thickness.
3. For factory-made flexible air ducts, the installed thickness shall be determined by dividing the difference between the actual outside diameter and nominal inside diameter by two.

**604.8 Lining installation.** Linings shall be interrupted at the area of operation of a fire damper and at a minimum of 6 inches (152 mm) upstream of and 6 inches (152 mm) downstream of electric-resistance and fuel-burning heaters in a duct system. Metal nosings or sleeves shall be installed over exposed duct liner edges that face opposite the direction of airflow.

**604.9 Thermal continuity.** Where a duct liner has been interrupted, a duct covering of equal thermal performance shall be installed.

**604.10 Service openings.** Service openings shall not be concealed by duct coverings unless the exact location of the opening is properly identified.

**604.11 Vapor retarders.** Where ducts used for cooling are externally insulated, the insulation shall be covered with a vapor retarder having a maximum permeance of 0.05 perm [2.87 ng/(Pa • s • m<sup>2</sup>)] or aluminum foil having a minimum thickness of 2 mils (0.051 mm). Insulations having a permeance of 0.05 perm [2.87 ng/(P • s • m<sup>2</sup>)] or less shall not be required to be covered. All joints and seams shall be sealed to maintain the continuity of the vapor retarder.

**604.12 Weatherproof barriers.** Insulated exterior ducts shall be protected with an approved weatherproof barrier.

**604.13 Internal insulation.** Materials used as internal insulation and exposed to the airstream in ducts shall be shown to be durable when tested in accordance with UL 181. Exposed internal insulation that is not impermeable to water shall not be used to line ducts or plenums from the exit of a cooling coil to the downstream end of the drain pan.

## **SECTION MC 605**

### **AIR FILTERS**

**605.1 General.** Heating and air-conditioning systems of the central type shall be provided with approved air filters. Filters shall be installed in the return air system, upstream from any heat exchanger or coil, in an approved convenient location. Liquid adhesive coatings used on filters shall have a flash point not lower than 325°F (163°C).

**605.2 Standards.** Media-type and electrostatic-type air filters shall be listed and labeled. Media-type air filters shall comply with UL 900. High-efficiency particulate air filters shall comply with UL 586. Electrostatic-type air filters shall comply with UL 867. Air filters utilized within dwelling units shall be designed for the intended application and shall not be required to be listed and labeled.

**605.3 Airflow over the filter.** Ducts shall be constructed to allow an even distribution of air over the entire filter.

**605.4 Liquid adhesive tanks.** Tanks for liquid adhesives, into which removable filters are dipped, shall be located either outside the building or, if such a location is not available, in a separate fire resistive room and stored in accordance with NFPA 30. Such tanks shall be metal, equipped with tight-fitting covers and shall be kept tightly covered when not in actual use.

**605.5 Filter maintenance.** All air filters shall be kept free of excess dust and combustible material. Unit filters shall be renewed or cleaned when the resistance to airflow has increased to two times the original resistance or when the resistance has reached a value of recommended replacement by the manufacturer. A permanently installed draft gauge shall be provided for this purpose. Where the filters are of the automatic liquid adhesive type, sludge shall be removed from the liquid adhesive reservoir regularly.

## **SECTION MC 606**

### **SMOKE DETECTION SYSTEMS CONTROL**

**606.1 Controls required.** Air distribution systems shall be equipped with smoke detectors listed and labeled for installation in air distribution systems, as required by this section.

**606.2 Where required.** Smoke detectors shall be installed where indicated in Sections 606.2.1 through 606.2.4.

**Exception:** Smoke detectors shall not be required where air distribution systems are incapable of spreading smoke beyond the enclosing walls, floors and ceilings of the room or space in which the smoke is generated.

**606.2.1 Return air systems.** Smoke detectors shall be installed in return air systems with a design capacity greater than 2,000 cfm (0.9 m<sup>3</sup>/s), in the return air duct or plenum upstream of any filters, exhaust air connections, outdoor air connections, or decontamination equipment and appliances.

**Exception:** Smoke detectors are not required in the return air system where all portions of the building served by the air distribution system are protected by area smoke detectors connected to a fire alarm system in accordance with the New York City Fire Code. The area smoke detection system shall comply with Section 606.4.

**606.2.2 Common supply and return air systems.** Where multiple air-handling systems share common supply or return air ducts or plenums with a combined design capacity greater than 2,000 cfm (0.9 m<sup>3</sup>/s), the return air system shall be provided with smoke detectors in accordance with Section 606.2.1.

**Exception:** Individual smoke detectors shall not be required for each fan-powered terminal unit, provided that such units do not have an individual design capacity greater than 2,000 cfm (0.9 m<sup>3</sup>/s) and will be shut down by activation of one of the following:

1. Smoke detectors required by Sections 606.2.1 and 606.2.3.
2. An approved area smoke detector system located in the return air plenum serving such units.
3. An area smoke detector system as prescribed in the exception to Section 606.2.1.

In all cases, the smoke detectors shall comply with Sections 606.4 and 606.4.1.

**606.2.3 Return air risers.** Where return air risers serve two or more stories and serve any portion of a return air system having a design capacity greater than 15,000 cfm (7.1 m<sup>3</sup>/s), smoke detectors shall be installed at each story. Such smoke detectors shall be located up stream of the connection between the return air riser and any air ducts or plenums.

**606.2.4 Supply air systems.** Smoke detectors listed for use in air distribution systems shall be installed downstream of the air filters and ahead of any branch connections in air supply systems having a capacity greater than 2,000 cfm (0.9 m<sup>3</sup>/s).

**606.3 Installation.** Smoke detectors required by this section shall be installed in accordance with the New York City Electrical Code. The required smoke detectors shall be installed to monitor the entire airflow conveyed by the system including supply air, return air and exhaust or relief air. Access shall be provided to smoke detectors for inspection and maintenance.

**606.4 Controls operation.** Upon activation, the smoke detectors shall automatically shut down their respective air distribution system(s). Air distribution systems that are part of a smoke control system shall switch to the smoke control mode upon activation of a detector.

**606.4.1 Supervision.** *The duct smoke detectors shall be connected to a fire alarm system. The actuation of a duct smoke detector shall activate a visible and audible supervisory signal at a constantly attended location.*

**Exceptions:**

1. *The supervisory signal at a constantly attended location is not required where the duct smoke detector activates the building's alarm-indicating appliances.*
2. *In occupancies not required to be equipped with a fire alarm system, actuation of either area or duct smoke detector shall activate a visible and an audible signal in an approved location. Additionally, duct smoke detector trouble conditions shall activate a visible or audible signal in an approved location and shall be identified as air duct detector trouble.*

**606.4.2 Fan shutdown.** *When any building or floor is provided with an air system utilizing recirculated air and is protected by an automatic sprinkler system or an automatic fire alarm system, provisions shall be made to automatically stop the fans serving the affected area when the sprinkler system or fire alarm system are installed in the area, it shall be required to have only one of these systems arranged to stop the fans.*

**Exceptions:**

1. *Activation of a manual pull station shall not be required to automatically stop the fans.*
2. *Systems having a capacity of 2,000 cfm (0.2 m<sup>3</sup>/s) or less or serving not more than one floor.*

**606.4.3 Manual restart of fans after automatic fire detecting device or fire alarm system shutdown.** *Fans or fan system which have been automatically shut down on activation of an automatic fire detecting device or fire alarm system shall be arranged and equipped so that they do not automatically restart when either the automatic fire detecting device or fire alarm system is reset. The manual means of restarting the fans or fan system shall function independently from the manual resetting of either the automatic fire detecting device or fire alarm system.*

## **SECTION MC 607**

### **DUCTS AND AIR TRANSFER OPENINGS**

**607.1 General.** *The provisions of this section shall govern the protection of duct penetrations and air transfer openings in fire-resistance-rated assemblies.*

**607.1.1 Ducts and air transfer openings without dampers.** *Ducts and air transfer openings that penetrate fire-resistance-rated assemblies and are not required to have dampers by this section shall comply with the requirements of Section 712 of the New York City Building Code.*

**607.2 Installation.** Fire dampers, smoke dampers, combination fire/smoke dampers and ceiling dampers located within air distribution and smoke control systems shall be installed in accordance with the requirements of this section, and the manufacturer's installation instructions and listing.

**607.2.1 Smoke control system.** Where the installation of a fire damper will interfere with the operation of a required smoke control system in accordance with Section 513, approved alternative protection shall be utilized.

**607.2.1.1 Remote operation.** Combination fire and smoke dampers shall be operable by remote controls where necessary for smoke removal. Such dampers shall have provisions that allow them to re-close automatically upon reaching the damper's maximum degradation test temperature in accordance with UL 555S.

**607.2.2 Hazardous exhaust ducts.** Fire dampers for hazardous exhaust duct systems shall comply with Section 510.

**607.2.3 Supply air systems.** Smoke dampers listed for use in air distribution systems shall be installed both upstream and downstream of filters and ahead of any branch connections in supply air-handling apparatus and systems having a capacity equal to or greater than 15,000 cfm (7.1 m<sup>3</sup>/s).

**Exceptions:**

1. Where the air-handling unit is located on the floor that it serves and serves only that floor.
2. Where the air-handling unit is located on the roof and serves only the floor immediately below the roof.
3. Existing buildings using only UL 90D Class 1 filters shall be exempt from this subdivision provided the control system is arranged to shut down the fresh air intake, return air, and exhaust air dampers, and fan shutdown and smoke detection is provided in accordance with Section 606.

**607.3 Damper testing and ratings.** Dampers shall be listed and bear the label of an approved testing agency indicating compliance with the standards in this section. Fire dampers shall comply with the requirements of UL 555. Only fire dampers labeled for use in dynamic systems shall be installed in heating, ventilation and air-conditioning systems designed to operate with fans on during a fire. Smoke dampers shall comply with the requirements of UL 555S. Combination fire/smoke dampers shall comply with the requirements of both UL 555 and UL 555S. Ceiling radiation dampers shall comply with the requirements of UL 555C.

**607.3.1 Fire protection rating.** Fire dampers shall have the minimum fire protection rating specified in Table 607.3.1 for the type of penetration.

**TABLE 607.3.1  
FIRE DAMPER RATING**

<b>TYPE OF PENETRATION</b>	<b>MINIMUM DAMPER RATING (hour)</b>
Less than 3-hour fire-resistance-rated assemblies	1½
3-hour or greater fire-resistance-rated assemblies	3

**607.3.1.1 Fire damper actuating device.** *The fire damper actuating device shall meet one of the following requirements:*

- 1. The operating temperature shall be approximately 50°F (27.8°C) above the normal temperature within the duct system, but not less than 160°F (71°C).*
- 2. The operating temperature shall be not more than 286°F (141°C) where located in a smoke control system complying with Section 513.*
- 3. Where a combination fire/smoke damper is located in a smoke control system complying with Section 513, the operating temperature rating shall be approximately 50°F (27.8°C) above the maximum smoke control system designed operating temperature, or a maximum temperature of 350°F (177°C). The temperature shall not exceed the UL 555S degradation test temperature rating for a combination fire/smoke damper.*

**607.3.2 Smoke damper ratings.** *Smoke damper leakage ratings shall not be less than Class II. Elevated temperature ratings shall be not less than 250°F (121°C).*

**607.3.2.1 Smoke damper actuation methods.** *The smoke damper shall close upon actuation of a listed smoke detector or detectors installed in accordance with Section 606 of this code and Sections 907.10 and 907.11 of the New York City Building Code and one of the following methods, as applicable:*

- 1. Where a damper is installed within a duct, a smoke detector shall be installed in the duct within 5 feet (1524 mm) of the damper with no air outlets or inlets between the detector and the damper. The detector shall be listed for the air velocity, temperature and humidity anticipated at the point where it is installed. Other than in mechanical smoke control systems, dampers shall be closed upon fan shutdown where local smoke detectors require a minimum velocity to operate.*
- 2. Where a damper is installed above smoke barrier doors in a smoke barrier, a spot-type detector listed for releasing service shall be installed on either side of the smoke barrier door opening.*
- 3. Where a damper is installed within an unducted opening in a wall, a spot-type detector listed for releasing service shall be installed within 5 feet (1524 mm) horizontally of the damper.*
- 4. Where a damper is installed in a corridor wall, the damper shall be permitted to be controlled by a smoke detection system installed in the corridor.*
- 5. Where a total-coverage smoke detector system is provided within areas served by an HVAC system, dampers shall be permitted to be controlled by the smoke detection system.*

6. *Smoke dampers that are part of an engineered smoke control system shall be capable of being positioned manually from a command station. Such positioning devices shall be provided for supply and return/exhaust dampers grouped by floor and by type. Damper switch positions shall indicate whether the related dampers are commanded to be either open or closed. Smoke damper positioning switches shall be located at the Fire Command Station, or in a Mechanical Control Center in buildings without a Fire Command Station.*

**607.4 Access and identification.** *Fire and smoke dampers shall be provided with an approved means of access, large enough to permit inspection and maintenance of the damper and its operating parts. The access shall not affect the integrity of fire-resistance-rated assemblies. The access openings shall not reduce the fire-resistance rating of the assembly. Access points shall be permanently identified on the exterior by a label having letters not less than 0.5 inch (12.7 mm) in height reading: SMOKE DAMPER or FIRE DAMPER, followed by an identification marking that is unique to the damper accessed. Access doors in ducts shall be tight fitting and suitable for the required duct construction.*

**607.5 Where required.** *Fire dampers, smoke dampers, combination fire/smoke dampers and ceiling radiation dampers shall be provided at the locations prescribed in this section. Where an assembly is required to have both fire dampers and smoke dampers, combination fire/smoke dampers or a fire damper and a smoke damper shall be required.*

**Exceptions:**

1. *Smoke dampers shall not be required on air systems other than where necessary for the proper function of that system where the system is designed specifically to:
  - 1.1. *Function as an engineered smoke-control system, including the provision of continuous air movement with the air-handling system; or*
  - 1.2. *Provide air to other areas of the building during a fire emergency; or*
  - 1.3. *Provide pressure differentials during a fire emergency.**
2. *Smoke dampers shall not be required to be located within a prescribed distance of a fire rated enclosure where isolation smoke dampers are used in air-handling equipment (Refer to Section 607.2.3).*
3. *Smoke dampers shall not be required in ducts where the air continues to move and the air-handling system installed is arranged to prevent recirculation of exhaust or return air under fire emergency conditions.*

**607.5.1 Fire walls.** Ducts and air transfer openings permitted in firewalls in accordance with Section 705.11 of the New York City Building Code shall be protected with approved fire dampers and smoke dampers installed in accordance with their listing.

**607.5.2 Fire barriers.** Duct penetrations and air transfer openings in fire barriers shall be protected with approved fire dampers installed in accordance with their listing. In addition, smoke dampers shall be installed in penetrations of public corridor walls in accordance with Section 607.5.2.1.

**Exceptions:** Fire dampers are not required at penetrations of fire barriers where any of the following apply:

1. Penetrations are tested in accordance with ASTM E 119 as part of the fire-resistance-rated assembly.
2. Where permitted under Section 513 and ducts are part of an engineered smoke control system.
3. Such walls are penetrated by ducted HVAC systems, have a required fire resistance rating of 1 hour or less, are in areas of other than Group H and are in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 or 903.3.1.2 of the New York City Building Code. For the purposes of this exception, a ducted HVAC system shall be a duct system for the structure's HVAC system. Such a duct system shall be constructed of sheet metal not less than 26-Gage (0.0217-inch) [0.55-mm] thickness and shall be continuous from the air-handling appliance or equipment to the air outlet and inlet terminals.

**607.5.2.1 Public corridors.** A listed smoke damper designed to resist the passage of smoke shall be provided at each point a duct or air transfer opening penetrates a public corridor wall constructed as a fire barrier.

**Exceptions:**

1. Smoke dampers are not required where the building is equipped throughout with an approved smoke control system in accordance with Section 909, and smoke dampers are not necessary for the operation and control of the system.
2. Smoke dampers are not required in corridor penetrations where the duct is constructed of steel not less than 0.019-inch (0.48 mm) in thickness and there are no openings serving the corridor.
3. Smoke dampers are not required in corridor penetrations in Group R-2 buildings and spaces.

**607.5.3 Fire partitions.** Duct penetrations in fire partitions shall be protected with approved fire dampers installed in accordance with their listing.

**Exceptions:** *In occupancies other than Group H, fire dampers are not required where any of the following apply:*

1. *The partitions are tenant separation and corridor walls in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 or 903.3.1.2 of the New York City Building Code and the duct is protected as a through penetration in accordance with the New York City Building Code.*
2. *The duct system is constructed of approved materials in accordance with this code and the duct penetrating the wall meets all of the following minimum requirements.*

*2.1. The duct shall not exceed 100 square inches (0.06 m<sup>2</sup>).*

*2.2. The duct shall be constructed of steel a minimum of 0.0217-inch (0.55 mm) in thickness.*

*2.3. The duct shall not have openings that communicate the corridor with adjacent spaces or rooms.*

*2.4. The duct shall be installed above a ceiling.*

*2.5. The duct shall not terminate at a wall register in the fire-resistance-rated wall.*

*2.6. A minimum 12-inch-long (304.8 mm) by 0.060-inch-thick (1.52 mm) steel sleeve shall be centered in each duct opening. The sleeve shall be secured to both sides of the wall and all four sides of the sleeve with minimum 1½-inch by 1½-inch by 0.060-inch (38 mm by 38 mm by 1.52 mm) steel retaining angles. The retaining angles shall be secured to the sleeve and the wall with No. 10 (M5) screws. The annular space between the steel sleeve and the wall opening shall be filled with rock (mineral) wool batting or approved equivalent on all sides.*

**607.5.4 Smoke barriers.** *A listed smoke damper designed to resist the passage of smoke shall be provided at each point where a duct or an air transfer opening penetrates a smoke barrier wall enclosure required to have smoke and draft control doors in accordance with the New York City Building Code. Smoke dampers and smoke damper actuation methods shall comply with Section 607.5.4.1.*

**Exception:** *Smoke dampers are not required in smoke barrier penetrations where the openings in ducts are limited to a single smoke compartment and the ducts are constructed of steel.*

**607.5.4.1 Smoke damper.** *The smoke damper shall close upon actuation of a listed smoke detector or detectors installed in accordance with the New York City Building Code and Section 607.3.2.1.*

**607.5.5 Shaft enclosures.** *Ducts and air transfer openings shall not penetrate a shaft serving as an exit enclosure except as permitted by Section 1019.1.2 of the New York City Building Code.*

**607.5.5.1 Penetrations of shaft enclosures.** *Shaft enclosures that are permitted to be penetrated by ducts and air transfer openings shall be protected with approved fire and smoke dampers installed in accordance with their listing.*

**Exceptions:**

1. *Fire dampers are not required at penetrations of shafts where:*
  - 1.1. *Steel exhaust subducts extend at least 22 inches (559 mm) vertically in exhaust shafts provided there is a continuous airflow upward to the outside, or*
  - 1.2. *Penetrations are tested in accordance with ASTM E 119 as part of the fire-resistance-rated assembly, or*
  - 1.3. *Ducts are used as part of an approved smoke control system designed and installed in accordance with Section 513 of this code, and where the fire damper will interfere with the operation of the smoke control system, or*
  - 1.4. *The penetrations are in parking garage exhaust or supply shafts that are separated from other building shafts by not less than 2-hour fire-resistance-rated construction.*
2. *In Group B occupancies, equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 of the New York City Building Code, smoke dampers are not required at penetrations of shafts where:*
  - 2.1. *Bathroom and toilet room exhaust openings with steel exhaust subducts, having a wall thickness of at least 0.019 inch (0.48 mm) extend at least 22 inches (559 mm) vertically and where the exhaust fan at the upper terminus is powered continuously in accordance with the provisions of Section 909.11 of the New York City Building Code, and maintains airflow upward to the outside, or*
  - 2.2. *Ducts are used as part of an approved smoke control system designed and installed in accordance with Section 909 of the New York City Building Code, and where the smoke damper will interfere with the operation of the smoke control system.*

3. *Smoke dampers are not required at penetration of exhaust or supply shafts in parking garages that are separated from other building shafts by not less than 2-hour fire-resistance-rated construction.*
4. *Fire dampers and/or smoke dampers shall not be required at a shaft where the shaft is acting as an extension of the mechanical equipment room that it serves and the shaft and mechanical equipment room maintain fire and smoke separation required by the greater of the two spaces from the occupied portions of the building and meet the requirements of Section 707.11 of the New York City Building Code.*
5. *Smoke dampers shall not be required to be located within a prescribed distance of a fire rated enclosure where isolation smoke dampers are used in air-handling equipment.*
6. *Smoke dampers shall not be required in ducts where the air continues to move and the air-handling system installed is arranged to prevent recirculation of exhaust or return air under fire emergency conditions.*

**607.5.5.2 Limitations.** *Shafts that constitute air ducts or that enclose air ducts used for the movement of environmental air shall not enclose:*

1. *Exhaust ducts used for the removal of smoke and grease-laden vapors from cooking equipment;*
2. *Ducts used for removal of flammable vapors;*
3. *Ducts used for moving, conveying, or transporting stock, vapor or dust;*
4. *Ducts used for the removal of nonflammable corrosive fumes and vapors;*
5. *Refuse and linen chutes; or*
6. *Piping.*

**Exception:** *Shafts that constitute air ducts or that enclose air ducts used for the movement of environmental air may enclose noncombustible piping conveying water or other nonhazardous or nontoxic materials.*

**607.6 Horizontal assemblies.** *Penetrations by air ducts of a floor, floor/ceiling assembly or the ceiling membrane of a roof/ceiling assembly shall be protected by a shaft enclosure that complies with the New York City Building Code or shall comply with this section.*

**607.6.1 Through penetrations.** *In occupancies other than Groups I-2 and I-3, a duct and air transfer opening system constructed of approved materials in accordance with this code that penetrates a fire-resistance-rated floor/ceiling assembly that connects not more than two stories is permitted without shaft enclosure protection provided a fire damper is installed at the floor line and the penetration is firestopped.*

**Exception:** *A duct serving a dwelling unit is permitted to penetrate three floors or less without a fire damper at each floor provided it meets all of the following requirements.*

- 1. The duct shall be contained and located within the cavity of a wall and shall be constructed of steel not less than 0.019 inch (0.48 mm) (26 gauge) in thickness.*
- 2. The duct shall open into only one dwelling unit and the duct system shall be continuous from the unit to the exterior of the building.*
- 3. The duct shall not exceed 5-inch (127 mm) nominal diameter and the total area of such ducts shall not exceed 100 square inches (64 516 mm<sup>2</sup>) for any 100 square feet (9.3 m<sup>2</sup>) of the floor area.*
- 4. The annular space around the duct is protected with materials that prevent the passage of flame and hot gases sufficient to ignite cotton waste where subjected to ASTM E 119 time-temperature conditions under a minimum positive pressure differential of 0.01 inch (2.49 Pa) of water at the location of the penetration for the time period equivalent to the fire-resistance rating of the construction penetrated.*
- 5. Grille openings located in a ceiling of a fire-resistance-rated floor/ceiling or roof/ceiling assembly shall be protected with a ceiling radiation damper in accordance with Section 607.6.2.*

**607.6.2 Membrane penetrations.** *Where duct systems constructed of approved materials in accordance with this code penetrate a ceiling of a fire-resistance-rated floor/ceiling or roof/ceiling assembly, shaft enclosure protection is not required provided an approved ceiling radiation damper and firestopping is installed at the ceiling line. Where a duct is not attached to a diffuser that penetrates a ceiling of a fire-resistance-rated floor/ceiling or roof/ceiling assembly, shaft enclosure protection is not required provided an approved ceiling radiation damper and firestopping is installed at the ceiling line. Ceiling radiation dampers shall be installed in accordance with UL 555C and constructed in accordance with the details listed in a fire-resistance-rated assembly or shall be labeled to function as a heat barrier for air-handling outlet/inlet penetrations in the ceiling of a fire-resistance-rated assembly. Ceiling radiation dampers shall not be required where ASTM E 119 fire tests have shown that ceiling radiation dampers are not necessary in order to maintain the fire-resistance rating of the assembly. Ceiling radiation damper shall not be required where exhaust duct penetrations are protected in accordance with Section 712.4.2 of the New York City Building Code and the exhaust ducts are located within the cavity of a wall, and do not pass through another dwelling unit or tenant space.*

**607.6.3 Nonfire-resistance-rated assemblies.** Duct systems constructed of approved materials in accordance with this code that penetrate nonfire-resistance-rated floor assemblies that connect not more than two stories are permitted without shaft enclosure protection provided that the annular space between the assembly and the penetrating duct is filled with an approved noncombustible material to resist the free passage of flame and the products of combustion. Duct systems constructed of approved materials in accordance with this code that penetrate nonrated floor assemblies that connect not more than three stories are permitted without shaft enclosure protection provided that the annular space between the assembly and the penetrating duct is filled with an approved noncombustible material to resist the free passage of flame and the products of combustion, and a fire damper is installed at each floor line.

**Exception:** Fire dampers are not required in ducts within individual residential dwelling units.

**607.7 Flexible ducts and air connectors.** Flexible ducts and air connectors shall not pass through any fire-resistance-rated assembly.

## **SECTION MC 608**

### **AIR OUTLETS AND AIR INLETS**

**608.1 Air Outlets.** Air outlets shall comply with sections 608.1.1 through 608.1.3

**608.1.1 General.** Air supplied to any space shall not contain flammable vapors, flyings, or dust in quantities and concentrations that would introduce a hazardous condition.

**608.1.2 Construction of air outlets.** Air outlets shall be constructed of noncombustible material or a material that has a maximum smoke developed index/rating of 50 and a maximum flame spread index/rating of 25.

**608.1.3 Location of air outlets.** The location of air outlets shall comply with the following requirements:

1. Air outlets shall be located at least 3 inches (76 mm) above the floor.

**Exception:** Air outlets may be located less than 3 inches (76mm) above the floor where provisions have been made to prevent dirt and dust accumulations from entering the system.

2. Where located less than 7 feet (2134 mm) above the floor, outlet openings shall be protected by a grille or screen having openings through which a ½-inch (12.7 mm) sphere cannot pass.
3. Grilles may be located in floors provided they are installed so that they may be removed for cleaning purposes and provided they are constructed as follows:

3.1 Grilles up to 3 square feet (0.2787 m<sup>2</sup>) in gross area shall be designed to support a concentrated live load of 250 pounds (114 kg) on any 4 square inches (2580 mm<sup>2</sup>) of surface.

3.2 Grilles over 3 square feet (0.2787 m<sup>2</sup>) in gross area shall be designed to support the same loads as the floor in the area where used.

3.3 If located where they may be walked upon, the opening in grilles shall reject a ½- inch (12.7 mm) sphere.

**608.2 Air inlets (return or exhaust or return and exhaust).** Air inlets shall be constructed in accordance with 608.2.1 through 608.2.3.

**608.2.1 General.** Air shall not be recirculated from any space in which flammable vapors, flyings, or dust is present in quantities and concentrations that would introduce a hazardous condition into the return air system.

**608.2.2 Construction of air inlets.** Air inlets shall be constructed of noncombustible material or a material that has a maximum flame spread index/rating of 25 and a maximum smoke developed index/rating of 50.

**608.2.3 Location of air inlets.** The location of air inlets shall comply with the following requirements.

1. Air inlets shall be located at least 3 inches (76 mm) above the floor.

**Exception:** Air inlets may be located less than 3 inches (76mm) above the floor where provisions have been made to prevent dirt and dust accumulations from entering the system.

2. Where located less than 7 feet (2134 mm) above the floor, inlet openings shall be protected by a grille or screens having openings through which a ½- inch (12.7 mm) sphere cannot pass.

3. Grilles may be located in floors provided they are installed so that they may be removed for cleaning purposes and provided they are constructed as follows:

3.1. Grilles up to 3 square feet (0.2787 m<sup>2</sup>) in gross area shall be designed to support a concentrated live load of 250 pounds (114 kg) on any 4 square inches (2580 mm<sup>2</sup>) of surface.

3.2. Grilles over 3 square feet (0.2787 m<sup>2</sup>) in gross area shall be designed to support the same loads as the floor in the area where used.

3.3. If located where they may be walked upon, the opening in grilles shall reject a ½- inch (12.7 mm) sphere.

**SECTION MC 609**  
**SERVICE OPENINGS**

**609.1 General.** *Horizontal air ducts and plenums shall be provided with service openings to facilitate the removal of accumulations of dust and combustible materials. Service openings shall be located at approximately 20 feet (6096 mm) intervals along the air duct and at the base of each vertical riser.*

**Exceptions:**

1. *Removable air outlet or air inlet devices of adequate size shall be permitted in lieu of service openings.*
2. *Service openings shall not be required in supply ducts where the supply air has previously passed through an air filter, air cleaner, or water spray. Such air filters and air cleaners shall be properly maintained and replaced when needed.*
3. *Service openings shall not be required where all of the following conditions exist:*
  - 3.1. *The occupancy has no process producing combustible material such as dust, lint, or greasy vapors. Such occupancies include banks, office buildings, churches, hotels, and health care facilities (but not kitchens, laundries, and manufacturing portions of such facilities).*
  - 3.2. *The air inlets are at least 7 feet (2134 mm) above the floor or are protected by corrosion-resistant metal screens of at least 14 mesh (0.07 inches) (1.8 mm) that are installed at the inlets so that they cannot draw papers, refuse, or other combustible solids into the return air duct.*
  - 3.3. *The minimum design velocity in the return duct for the particular occupancy is 1000 feet/minute (5.080 m/s).*

**CHAPTER 7**  
**COMBUSTION AIR**

**SECTION MC 701**  
**GENERAL**

**701.1 Scope.** *The provisions of this chapter shall govern the requirements for combustion and dilution air for fuel-burning appliances other than gas-fired appliances. The requirements for combustion and dilution air for gas-fired appliances shall be in accordance with the New York City Fuel Gas Code.*

**701.2 Combustion and dilution air required.** Every room or space containing fuel-burning appliances shall be provided with combustion and dilution air as required by this code. Combustion and dilution air shall be provided in accordance with Section 702, 703, 704, 705, 706 or 707. Direct vent appliances or equipment that do not draw combustion air from inside of the building are not required to be considered in the determination of the combustion and dilution air requirements. Combustion air requirements shall be determined based on the simultaneous operation of all fuel-burning appliances drawing combustion and dilution air from the room or space. The combustion air system shall maintain the room in which the equipment is located at a pressure not less than the outdoor atmosphere pressure.

**701.3 Circulation of air.** The equipment and appliances within every room containing fuel-burning appliances shall be installed so as to allow free circulation of air. Provisions shall be made to allow for the simultaneous operation of mechanical exhaust systems, fireplaces or other equipment and appliances operating in the same room or space from which combustion and dilution air is being drawn. Such provisions shall prevent the operation of such appliances, equipment and systems from affecting the supply of combustion and dilution air.

**701.4 Crawl space and attic space.** For the purposes of this chapter, an opening to a naturally ventilated crawl space or attic space shall be considered equivalent to an opening to the outdoors.

**701.4.1 Crawl space.** Where lower combustion air openings connect with crawl spaces, such spaces shall have unobstructed openings to the outdoors at least twice that required for the combustion air openings. The height of the crawl space shall comply with the requirements of the New York City Building Code and shall be without obstruction to the free flow of air.

**701.4.2 Attic space.** Where combustion air is obtained from an attic area, the attic ventilating openings shall not be subject to ice or snow blockage, and the attic shall have not less than 30 inches (762 mm) vertical clear height at its maximum point. Attic ventilation openings shall be sufficient to provide the required volume of combustion air and the attic ventilation required by the New York City Building Code. The combustion air openings shall be provided with a sleeve of not less than 0.019 inch (0.48 mm) (No. 26 Gage) galvanized steel or other approved material extending from the appliance enclosure to at least 6 inches (152 mm) above the top of the ceiling joists and insulation.

**701.5 Prohibited sources.** Openings and ducts shall not connect appliance enclosures with a space in which the operation of a fan will adversely affect the flow of the combustion air. Combustion air shall not be obtained from a hazardous location, except where the fuel-fired appliances are located within the hazardous location and are installed in accordance with this code. Combustion air shall not be taken from a refrigeration machinery room, except where a refrigerant vapor detector system is installed to automatically shut off the combustion process in the event of refrigerant leakage. For structures in areas of special flood hazard, air shall be obtained from a location complying with Appendix G of the New York City Building Code. Combustion air shall be obtained solely from the outdoors for a boiler room.

## **SECTION MC 702**

### **INSIDE AIR**

**702.1 All air from indoors.** Combustion and dilution air shall be permitted to be obtained entirely from the indoors in buildings that are not of unusually tight construction. In buildings of unusually tight construction, combustion air shall be obtained from the outdoors in accordance with Section 703, 705, 706 or 707.

**702.2 Air from the same room or space.** The room or space containing fuel-burning appliances shall be an unconfined space as defined in Section 202.

**702.3 Air from adjacent spaces.** Where the volume of the room in which the fuel-burning appliances are located does not comply with Section 702.2, additional inside combustion and dilution air shall be obtained by opening the room to adjacent spaces so that the combined volume of all communicating spaces meets the volumetric requirement of Section 702.2. Openings connecting the spaces shall comply with Sections 702.3.1, 702.3.2 and Figure A-1 of Appendix A of this code.

**702.3.1 Number and location of openings.** Two openings shall be provided, one within 1 foot (305 mm) of the ceiling of the room and one within 1 foot (305 mm) of the floor.

**702.3.2 Size of openings.** The net free area of each opening, calculated in accordance with Section 708, shall be a minimum of 1 square inch per 1,000 Btu/h (2201 mm<sup>2</sup>/kW) of input rating of the fuel-burning appliances drawing combustion and dilution air from the communicating spaces and shall be not less than 100 square inches (64 516 mm<sup>2</sup>).

## **SECTION MC 703**

### **OUTDOOR AIR**

**703.1 All air from the outdoors.** Where all combustion and dilution air is to be provided by outdoor air, the required combustion and dilution air shall be obtained by opening the room to the outdoors. Openings connecting the room to the outdoor air shall comply with Sections 703.1.1 through 703.1.4, and Figures A-2, A-3 and A-4 of Appendix A of this code. The size of the openings connecting the room to the outdoor air supply shall also comply with any applicable rules of the New York City Department of Environmental Protection.

**703.1.1 Number and location of openings.** Two openings shall be provided, one within 1 foot (305 mm) of the ceiling of the room and one within 1 foot (305 mm) of the floor.

**703.1.2 Size of direct openings.** The net free area of each direct opening to the outdoors, calculated in accordance with Section 709, shall be a minimum of 1 square inch per 4,000 Btu/h (550 mm<sup>2</sup>/kW) of combined input rating of the fuel-burning appliances drawing combustion and dilution air from the room.

**703.1.3 Size of horizontal openings.** *The net free area of each opening, calculated in accordance with Section 709 and connected to the outdoors through a horizontal duct, shall be a minimum of 1 square inch per 2,000 Btu/h (1100 mm<sup>2</sup>/kW) of combined input rating of the fuel-burning appliances drawing combustion and dilution air from the room. The cross-sectional area of the duct shall be equal to or greater than the required size of the opening.*

**703.1.4 Size of vertical openings.** *The net free area of each opening, calculated in accordance with Section 709 and connected to the outdoors through a vertical duct, shall be a minimum of 1 square inch per 4,000 Btu/h (550 mm<sup>2</sup>/kW) of combined input rating of the fuel-burning appliances drawing combustion and dilution air from the room. The cross-sectional area of the duct shall be equal to or greater than the required size of the opening.*

## **SECTION MC 704**

### **COMBINED USE OF INSIDE AND OUTDOOR AIR (CONDITION 1)**

**704.1 Combination of air from inside and outdoors.** *This section shall apply only to appliances located in confined spaces in buildings not of unusually tight construction. Where the volumes of rooms and spaces are combined for the purpose of providing indoor combustion air, such rooms and spaces shall communicate through permanent openings in compliance with Sections 702.3.1 and 702.3.2. The required combustion and dilution air shall be obtained by opening the room to the outdoors using a combination of inside and outdoor air, prorated in accordance with Section 704.1.6. The ratio of interior spaces shall comply with Section 704.1.5. The number, location and ratios of openings connecting the space with the outdoor air shall comply with Sections 704.1.1 through 704.1.4.*

**704.1.1 Number and location of openings.** *At least two openings shall be provided, one within 1 foot (305 mm) of the ceiling of the room and one within 1 foot (305 mm) of the floor.*

**704.1.2 Ratio of direct openings.** *Where direct openings to the outdoors are provided in accordance with Section 703.1, the ratio of direct openings shall be the sum of the net free areas of both direct openings to the outdoors, divided by the sum of the required areas for both such openings as determined in accordance with Section 703.1.2.*

**704.1.3 Ratio of horizontal openings.** *Where openings connected to the outdoors through horizontal ducts are provided in accordance with Section 703.1, the ratio of horizontal openings shall be the sum of the net free areas of both such openings, divided by the sum of the required areas for both such openings as determined in accordance with Section 703.1.3.*

**704.1.4 Ratio of vertical openings.** *Where openings connected to the outdoors through vertical ducts are provided in accordance with Section 703.1, the ratio of vertical openings shall be the sum of the net free areas of both such openings, divided by the sum of the required areas for both such openings as determined in accordance with Section 703.1.4.*

**704.1.5 Ratio of interior spaces.** *The ratio of interior spaces shall be the available volume of all communicating spaces, divided by the required volume as determined in accordance with Sections 702.2 and 702.3.*

**704.1.6 Prorating of inside and outdoor air.** *In spaces that utilize a combination of inside and outdoor air, the sum of the ratios of all direct openings, horizontal openings, vertical openings and interior spaces shall equal or exceed 1.*

**SECTION MC 705**  
**COMBINED USE OF INSIDE AND OUTDOOR AIR (CONDITION 2)**

**705.1 General.** *This section shall apply only to appliances located in unconfined spaces in buildings of unusually tight construction. Combustion air supplied by a combined use of indoor and outdoor air shall be supplied through openings and ducts extending to the appliance room or to the vicinity of the appliance.*

**705.1.1 Openings and supply ducts.** *Openings shall be provided, located and sized in accordance with Sections 702.3.1 and 702.3.2; additionally, there shall be one opening to the outdoors having a free area of at least 1 square inch per 5,000 Btu/h (440 mm<sup>2</sup>/kW) of total input of all appliances in the space.*

**SECTION MC 706**  
**FORCED COMBUSTION AIR SUPPLY**

**706.1 Rate of air supplied.** *Where all combustion air and dilution air is provided by a mechanical forced-air system, the combustion air and dilution air shall be supplied at the minimum rate of 1 cfm per 2,400 Btu/h [0.00067 m<sup>3</sup>/(s • kW)] of combined input rating of all the fuel-burning appliances served. Combustion air rates shall also comply with any applicable rules of the New York City Department of Environmental Protection.*

**SECTION MC 707**  
**DIRECT CONNECTION**

**707.1 General.** *Fuel-burning appliances that are listed and labeled for direct combustion air connection to the outdoors shall be installed in accordance with the manufacturer's installation instructions.*

**SECTION MC 708**  
**COMBUSTION AIR DUCTS**

**708.1 General.** *Combustion air ducts shall:*

- 1. Be of galvanized steel complying with Chapter 6 or of equivalent corrosion-resistant material approved for this application.*

**Exception:** Within dwelling units, unobstructed stud and joist spaces shall not be prohibited from conveying combustion air, provided that not more than one required fireblock is removed.

2. Have a minimum cross-sectional dimension of 3 inches (76 mm).
3. Terminate in an unobstructed space allowing free movement of combustion air to the appliances.
4. Have the same cross-sectional areas as the free area of the openings to which they connect.
5. Serve a single appliance enclosure.
6. Not serve both upper and lower combustion air openings where both such openings are used. The separation between ducts serving upper and lower combustion air openings shall be maintained to the source of combustion air.
7. Not be screened where terminating in an attic space.
8. Not slope downward toward the source of combustion air, where serving the upper required combustion air opening.

#### **SECTION MC 709**

#### **OPENING OBSTRUCTIONS**

**709.1 General.** The required size of openings for combustion and dilution air shall be based on the net free area of each opening. The net free area of an opening shall be that specified by the manufacturer of the opening covering. In the absence of such information, openings covered with metal louvers shall be deemed to have a net free area of 60 percent of the area of the opening, and openings covered with wood louvers shall be deemed to have a net free area of 10 percent of the area of the opening. Louvers and grills shall be fixed in the open position.

**Exception:** Louvers interlocked with the appliance so that they are proven to be in the full open position prior to main burner ignition and during main burner operation. Means shall be provided to prevent the main burner from igniting if the louvers fail to open during burner startup and to shut down the main burner if the louvers close during operation.

**709.2 Dampered openings.** Where the combustion air openings are provided with volume, smoke or fire dampers, the dampers shall be electrically interlocked with the firing cycle of the appliances served, so as to prevent operation of any appliance that draws combustion and dilution air from the room when any of the dampers are closed. Manually operated dampers shall not be installed in combustion air openings.

#### **SECTION MC 710**

## **OPENING LOCATION AND PROTECTION**

**710.1 General.** *Combustion air openings to the outdoors shall comply with the location and protection provisions of Sections 401.5 and 401.6 applicable to outside air intake openings.*

### **CHAPTER 8**

#### **CHIMNEYS AND VENTS**

##### **SECTION MC 801**

###### **GENERAL**

**801.1 Scope.** *This chapter shall govern the installation, maintenance, design, minimum safety requirements, repair and approval of factory-built chimneys, chimney liners, vents and connectors, and field built chimneys and connectors. This chapter shall also govern the utilization of masonry chimneys. Gas-fired appliances shall be vented in accordance with the New York City Fuel Gas Code.*

**801.1.1 Adjoining chimneys and vents.** *Adjoining chimneys and vents shall be in accordance with Sections 801.1.1.1 through 801.1.1.8.*

**801.1.1.1 Responsibility of owner of taller building.** *Whenever a building is erected, enlarged, or increased in height so that any portion of such building, except chimneys or vents, extends higher than the top of any previously constructed chimneys or vents within 100 feet (30 480 mm), the owner of such new or altered building shall have the responsibility of altering such chimneys or vents to make them conform with the requirements of this chapter. A chimney or vent that is no longer connected with a fireplace or combustion or other equipment for which a chimney or vent was required, shall be exempt from this requirement. Such alterations shall be accomplished by one of the following means or a combination thereof:*

- 1. Carry up the previously constructed chimneys or vents to the height required in this chapter.*
- 2. Offset such chimneys or vents to a distance beyond that required in Chapter 5 of this code from the new or altered building provided that the new location of the outlet of the offset chimney or vent shall otherwise comply with the requirements of this chapter.*
- 3. Such requirements shall not dispense with or modify any additional requirements that may be applicable pursuant to rules of the New York City Department of Environmental Protection.*

**801.1.1.2 Protection of draft.** *After the alteration of a chimney or vent as required by this section, it shall be the responsibility of the owner of the new or altered building to provide any mechanical equipment or devices necessary to maintain the proper draft in the equipment.*

**801.1.1.3 Written notification.** *The owner of the new or altered building shall notify the owner of the building affected in writing at least forty-five days before starting the work required and request written consent to do such work. Such notice shall be accompanied by plans indicating the manner in which the proposed alterations are to be made.*

**801.1.1.4 Approval.** *The plans and method of alteration shall be subject to the approval of the commissioner.*

**801.1.1.5 Refusal of consent.** *If consent is not granted by the owner of the previously constructed building to do the alteration work required by this section, such owner shall signify his or her refusal in writing to the owner of the new or altered building and to the commissioner; and the owner of the new or altered building having submitted plans that conform to the requirements of this section, shall thereupon be released from any responsibility for the proper operation of the equipment due to loss of draft and for any health hazard or nuisance that may occur as a result of the new or altered building. Such responsibilities shall then be assumed by the owner of the previously constructed building. Similarly, should such owner fail to grant consent within forty-five days from the date of written request or fail to signify his or her refusal, he or she shall then assume all responsibilities as prescribed above.*

**801.1.1.6 Procedure.** *It shall be the obligation of the owner of the new or altered building to:*

- 1. Schedule this work so as to create a minimum of disturbance to the occupants of the affected building; and*
- 2. Provide such essential services as are normally supplied by the equipment while it is out of service; and*
- 3. Where necessary, support such extended chimneys, vents and equipment from this building or to carry up such chimneys or vents within his or her building; and*
- 4. Provide for the maintenance, repair, and/or replacement of such extensions and added equipment; and*
- 5. Make such alterations of the same material as the original chimney or vent so as to maintain the same quality and appearance, except where the affected owner of the chimney or vent shall give his or her consent to do otherwise. All work shall be done in such fashion as to maintain the architectural aesthetics of the existing building. Where there is practical difficulty in complying strictly with the provisions of this Item, the commissioner may permit an equally safe alternative.*

**801.1.1.7 Existing violations.** *Any existing violations on the previously constructed equipment shall be corrected by the owner of the equipment before any equipment is added or alterations made at the expense of the owner of the new or altered building.*

**801.1.1.8 Variance.** *The commissioner may grant a variance in accordance with the provisions of this code.*

**801.2 General.** *Every fuel-burning appliance shall discharge the products of combustion to a vent, factory-built chimney or masonry chimney, except for appliances vented in accordance with Section 804. The chimney or vent shall be designed for the type of appliance being vented.*

**801.2.1 Design.** *Chimneys and vents shall be designed and constructed so as to provide the necessary draft and capacity for each appliance connected to completely exhaust the products of combustion to the outside air. The temperature on adjacent combustible surfaces shall not be raised above 160°F (71°C). Condensation shall not be developed to an extent that can cause deterioration of the chimney or vent.*

**801.2.2 Outlets.** *The outlet shall be arranged that the flue gases are not directed so that they jeopardize people, overheat combustible structures, or enter building openings in the vicinity of the outlet.*

**801.2.3 Support.** *Chimneys and vents shall not be supported by the equipment they serve unless such equipment has been specifically designed for such loads.*

**801.2.4 Oil-fired appliances.** *Oil-fired appliances shall be vented in accordance with this code and NFPA 31.*

**801.2.5 Gas fired appliances.** *Gas fired appliances shall be vented in accordance with the New York City Fuel Gas Code.*

**801.3 Masonry chimneys.** *Masonry chimneys shall be constructed in accordance with the New York City Building Code.*

**801.4 Positive flow.** *Venting systems shall be designed and constructed so as to develop a positive flow adequate to convey all combustion products to the outside atmosphere.*

**801.5 Design.** *Venting systems shall be designed in accordance with this chapter and comply with the requirements of the New York City Air Pollution Control Code.*

**801.6 Minimum size of chimney or vent.** *Except as otherwise provided for in this chapter, the size of the chimney or vent, serving a single appliance, except engineered systems, shall have a minimum area equal to the area of the appliance connection.*

**801.7 Solid fuel appliance flues.** *The cross-sectional area of a flue serving a solid fuel-burning appliance shall be not greater than three times the cross-sectional area of the appliance flue collar or flue outlet.*

**801.8 Abandoned inlet openings.** Abandoned inlet openings in chimneys and vents shall be closed by an approved method, sealed air-tight and permanently labeled as abandoned.

**801.9 Positive pressure.** Where an appliance equipped with a forced or induced draft system creates a positive pressure in the venting system, the venting system shall be designed and listed for positive pressure applications.

**801.10 Connection to fireplace.** Connection of appliances to chimney flues serving fireplaces shall be in accordance with Sections 801.10.1 through 801.10.3.

**801.10.1 Closure and access.** A noncombustible seal shall be provided below the point of connection to prevent entry of room air into the flue. Means shall be provided for access to the flue for inspection and cleaning.

**801.10.2 Connection to factory-built fireplace flue.** An appliance shall not be connected to a flue serving a factory-built fireplace unless the appliance is specifically listed for such installation. The connection shall be made in accordance with the appliance manufacturer's installation instructions.

**801.10.3 Connection to masonry fireplace flue.** A connector shall extend from the appliance to the flue serving a masonry fireplace such that the flue gases are exhausted directly into the flue. The connector shall be provided with access or shall be removable for inspection and cleaning of both the connector and the flue. Listed direct connection devices shall be installed in accordance with their listing.

**801.11 Multiple solid fuel prohibited.** A solid fuel-burning appliance or fireplace shall not connect to a chimney passageway venting another appliance.

**801.12 Chimney entrance.** Connectors shall connect to a chimney flue at a point not less than 12 inches (305 mm) above the lowest portion of the interior of the chimney flue.

**801.13 Cleanouts.** Masonry chimney flues shall be provided with a cleanout opening having a minimum height of 6 inches (152 mm). The upper edge of the opening shall be located not less than 6 inches (152 mm) below the lowest chimney inlet opening. The cleanout shall be provided with a tight-fitting, noncombustible cover of a minimum size of 8 inches by 8 inches (203 mm by 203 mm).

**Exception:** Cleanouts shall not be required for chimney flues serving masonry fireplaces, if such flues are provided with access through the fireplace opening.

**801.14 Connections to exhauster.** All appliance connections to a chimney or vent equipped with a power exhauster shall be made on the inlet side of the exhauster. All joints and piping on the positive pressure side of the exhauster shall be listed for positive pressure applications as specified by the manufacturer's installation instructions for the exhauster.

**801.15 Fuel-fired appliances.** Masonry chimneys utilized to vent fuel-fired appliances shall be located, constructed and sized as specified in the manufacturer's installation instructions for the appliances being vented.

**801.16 Flue lining.** Masonry chimneys shall be lined. The lining material shall be compatible with the type of appliance connected, in accordance with the appliance listing and manufacturer's installation instructions. Listed materials used as flue linings shall be installed in accordance with their listings and the manufacturer's installation instructions.

**801.16.1 Residential and low-heat appliances (general).** Flue lining systems for use with residential-type and low-heat appliances shall be limited to the following:

1. Clay flue lining complying with the requirements of ASTM C 315 or equivalent. Clay flue lining shall be installed in accordance with the New York City Building Code.
2. Listed chimney lining systems complying with UL 1777.
3. Other approved materials that will resist, without cracking, softening or corrosion, flue gases and condensate at temperatures up to 1,800°F (982°C).

**801.17 Space around lining.** The space surrounding a flue lining system or other vent installed within a masonry chimney shall not be used to vent any other appliance. This shall not prevent the installation of a separate flue lining in accordance with the manufacturer's installation instructions and this code.

**801.18 Existing chimneys and vents.** Where an appliance is permanently disconnected from an existing chimney or vent, or where an appliance is connected to an existing chimney or vent during the process of a new installation, the chimney or vent shall comply with Sections 801.18.1 through 801.18.4.

**801.18.1 Size.** The chimney or vent shall be resized as necessary to control flue gas condensation in the interior of the chimney or vent and to provide the appliance or appliances served with the required draft. For the venting of oil-fired appliances to masonry chimneys, the resizing shall be in accordance with NFPA 31.

**801.18.2 Flue passageways.** The flue gas passageway shall be free of obstructions and combustible deposits and shall be cleaned if previously used for venting a solid or liquid fuel-burning appliance or fireplace. The flue liner, chimney innerwall or vent innerwall shall be continuous and shall be free of cracks, gaps, perforations or other damage or deterioration which would allow the escape of combustion products, including gases, moisture and creosote. Where an oil-fired appliance is connected to an existing masonry chimney, such chimney flue shall be repaired or relined in accordance with NFPA 31.

**801.18.3 Cleanout.** Masonry chimneys shall be provided with a cleanout opening complying with Section 801.13.

**801.18.4 Clearances.** *Chimneys and vents shall have air-space clearance to combustibles in accordance with the New York City Building Code and the chimney or vent manufacturer's installation instructions.*

**Exception:** *Masonry chimneys equipped with a chimney lining system tested and listed for installation in chimneys in contact with combustibles in accordance with UL 1777, and installed in accordance with the manufacturer's instructions, shall not be required to have clearance between combustible materials and exterior surfaces of the masonry chimney. Noncombustible fireblocking shall be provided in accordance with the New York City Building Code.*

**801.19 Multistory prohibited.** *Common venting systems for appliances located on more than one floor level shall be prohibited, except where all of the appliances served by the common vent are located in rooms or spaces that are accessed only from the outdoors. The appliance enclosures shall not communicate with the occupiable areas of the building.*

**801.20 Reserved.**

## **SECTION MC 802**

### **VENTS**

**802.1 General.** *All vent systems shall be listed and labeled or field fabricated in accordance with NFPA 211. Type L vents shall be tested in accordance with UL 641.*

**802.2 Vent application.** *The application of vents shall be in accordance with Table 802.2.*

**TABLE 802.2**  
**VENT APPLICATION**

<b>VENT TYPES</b>	<b>APPLIANCE TYPES</b>
Type L oil vents	Oil-burning appliances listed and labeled for venting with Type L

**802.3 Installation.** *Vent systems shall be sized, installed and terminated in accordance with the vent and appliance manufacturer's installation instructions.*

**802.4 Vent termination caps.** *Vent termination caps shall not be permitted and a 2½-inch (64 mm) minimum drain installed to receive condensed water shall be required. A positive means shall be provided to prevent water from entering the appliance.*

**802.5 Type L vent terminations.** *Type L vents shall terminate not less than 2 feet (610 mm) above the highest point of the roof penetration and not less than 2 feet (610 mm) higher than any portion of a building within 10 feet (3048 mm). Chimneys serving appliances less than 600°F (316°C) shall extend at least 3 feet (914 mm) above the highest construction, such as a roof ridge, parapet wall, or penthouse, within 10 feet (3048 mm) of the chimney outlet, whether the construction is on the same buildings as the chimney or on another building. Any chimney located in an area that is more than 10 feet (3048 mm) from such construction but not more than the distance determined by Equation 8-1 and Table 802.5, shall be at least as high as the highest construction in such area. For purposes of determining the required height of the chimney, such construction does not include other chimneys, vents, or open structural framing.*

**(Equation 8-1)**

$$D = F \times \sqrt{A}$$

where:  $D$  = Distance, in feet, measured from the center of the chimney outlet to the nearest edge of the construction.

$F$  = Value determined from Table 802.5.

$A$  = Free area, in square inches, of chimney flue space.

**TABLE 802.5**

**"F" FACTOR FOR DETERMINING CHIMNEY DISTANCES**

<b>"F" FACTOR FOR DETERMINING CHIMNEY DISTANCES</b>			
<b>Type of Fuel</b>	<b>"F" Factor</b>		
	<i>600°F (316°C ) and less</i>	<i>600°F (316°C ) to 1000°F (538°C)</i>	<i>Greater than 1000°F (538°C)</i>
<i>No. 2 Fuel Oil</i>	2.5	2.5	3
<i>No. 4, 6 Fuel Oil</i>	3	3	3

**802.6 Minimum vent heights.** Vents shall terminate not less than 5 feet (1524 mm) in vertical height above the highest connected appliance flue collar.

**Exceptions:**

1. Venting systems of direct vent appliances shall be installed in accordance with the appliance and the vent manufacturer's instructions.
2. Appliances listed for outdoor installations incorporating integral venting means shall be installed in accordance with their listings and the manufacturer's installation instructions.

**802.7 Support of vents.** All portions of vents shall be adequately supported for the design and weight of the materials employed.

**802.8 Insulation shield.** Where vents pass through insulated assemblies, an insulation shield constructed of not less than No. 26 Gage sheet metal shall be installed to provide clearance between the vent and the insulation material. The clearance shall be not less than the clearance to combustibles specified by the vent manufacturer's installation instructions. Where vents pass through attic space, the shield shall terminate not less than 2 inches (51 mm) above the insulation materials and shall be secured in place to prevent displacement. Insulation shields provided as part of a listed vent system shall be installed in accordance with the manufacturer's installation instructions.

## **SECTION MC 803 CONNECTORS**

**803.1 Connectors required.** Connectors shall be used to connect appliances to the vertical chimney or vent, except where the chimney or vent is attached directly to the appliance.

**803.2 Location.** Connectors shall be located entirely within the room in which the connecting appliance is located, except as provided for in Section 803.10.4. Where passing through an unheated space, a connector shall not be constructed of single-wall pipe.

**803.3 Size.** The connector shall not be smaller than the size of the flue collar supplied by the manufacturer of the appliance. Where the appliance has more than one flue outlet, and in the absence of the manufacturer's specific instructions, the connector area shall be not less than the combined area of the flue outlets for which it acts as a common connector.

**803.4 Branch connections.** All branch connections to the vent connector shall be made in accordance with the vent manufacturer's instructions.

**803.5 Manual dampers.** *Manual dampers shall not be installed in connectors except in chimney connectors serving solid fuel-burning appliances.*

**803.6 Automatic dampers.** *Automatic dampers shall be listed and labeled in accordance with UL 17 for oil-fired heating appliances. The dampers shall be installed in accordance with the manufacturer's installation instructions. An automatic vent damper device shall not be installed on an existing appliance unless the appliance is listed and labeled and the device is installed in accordance with the terms of its listing. The name of the installer and date of installation shall be marked on a label affixed to the damper device.*

**803.7 Connectors serving two or more appliances.** *Where two or more connectors enter a common vent or chimney, the smaller connector shall enter at the highest level consistent with available headroom or clearance to combustible material.*

**803.8 Vent connector construction.** *Vent connectors shall be constructed of metal. The minimum nominal thickness of the connector shall be 0.019 inch (0.5 mm) (No. 28 Gage) for galvanized steel, 0.022 inch (0.6 mm) (No. 26 B & S Gage) for copper, and 0.020 inch (0.5 mm) (No. 24 B & S Gage) for aluminum.*

**803.9 Chimney connector construction.** *Chimney connectors for low-heat appliances shall be of sheet steel pipe having resistance to corrosion and heat not less than that of galvanized steel specified in Table 803.9(1). Connectors for medium-heat appliances and high-heat appliances shall be of sheet steel not less than the thickness specified in Table 803.9(2).*

**TABLE 803.9(1)**  
**MINIMUM CHIMNEY CONNECTOR THICKNESS FOR**  
**LOW-HEAT APPLIANCES**

<b>DIAMETER OF CONNECTOR (inches)</b>	<b>MINIMUM NOMINAL THICKNESS (galvanized) (inches)</b>
5 and smaller	0.022 (No. 26 Gage)
Larger than 5 and up to 10	0.028 (No. 24 Gage)
Larger than 10 and up to 16	0.034 (No. 22 Gage)
Larger than 16	0.064 (No. 16 Gage)

For SI: 1 inch = 25.4 mm.

**TABLE 803.9(2)**  
**MINIMUM CHIMNEY CONNECTOR THICKNESS FOR**  
**MEDIUM- AND HIGH-HEAT APPLIANCES**

AREA (square inches)	EQUIVALENT ROUND DIAMETER (inches)	MINIMUM NOMINAL THICKNESS (inches)
0-154	0-14	0.060 (No. 16 Gage)
155-201	15-16	0.075 (No. 14 Gage)
202-254	17-18	0.105 (No. 12 Gage)
Greater than 254	Greater than 18	0.135 (No. 10 Gage)

For SI: 1 inch = 25.4 mm, 1 square inch = 645.16 mm<sup>2</sup>.

**803.10 Installation.** *Connectors shall be installed in accordance with Sections 803.10.1 through 803.10.6.*

**803.10.1 Supports and joints.** *Connectors shall be supported in an approved manner, and joints shall be fastened with sheet metal screws, rivets or other approved means.*

**803.10.2 Length.** *The maximum horizontal length of a single- wall connector shall not affect the capability of the system to produce adequate draft.*

**803.10.3 Connection.** *The connector shall extend to the inner face of the chimney or vent liner, but not beyond. A connector entering a masonry chimney shall be cemented to masonry in an approved manner. Where thimbles are installed to facilitate removal of the connector from the masonry chimney, the thimble shall be permanently cemented in place with high-temperature cement.*

**803.10.4 Connector pass-through.** *Chimney connectors shall not pass through any floor or ceiling, nor through a fire-resistance-rated wall assembly. Chimney connectors for domestic-type appliances shall not pass through walls or partitions constructed of combustible material to reach a masonry chimney unless:*

- 1. The connector is labeled for wall pass-through and is installed in accordance with the manufacturer's instructions; or*
- 2. The connector is put through a device labeled for wall pass-through; or*
- 3. The connector has a diameter not larger than 10 inches (254 mm) and is installed in accordance with one of the methods in Table 803.10.4. Concealed metal parts of the pass-through system in contact with flue gases shall be of stainless steel or equivalent material that resists corrosion, softening or cracking up to 1,800°F (980°C).*

**TABLE 803.10.4  
CHIMNEY CONNECTOR SYSTEMS AND CLEARANCES  
TO COMBUSTIBLE WALL MATERIALS FOR  
DOMESTIC HEATING APPLIANCES<sup>a,b,c,d</sup>**

System A (12-inch clearance)	A 3.5-inch-thick brick wall shall be framed into the combustible wall. A 0.625-inch-thick fire-clay liner (ASTM C 315 or equivalent) <sup>e</sup> shall be firmly cemented in the center of the brick wall maintaining a 12-inch clearance to combustibles. The clay liner shall run from the outer surface of the bricks to the inner surface of the chimney liner.
System B (9-inch clearance)	A labeled solid-insulated factory-built chimney section (1-inch insulation) the same inside diameter as the connector shall be utilized. Sheet metal supports cut to maintain a 9-inch clearance to combustibles shall be fastened to the wall surface and to the chimney section. Fasteners shall not penetrate the chimney flue liner. The chimney length shall be flush with the masonry chimney liner and sealed to the masonry with water-insoluble refractory cement. Chimney manufacturers' parts shall be utilized to securely fasten the chimney connector to the chimney section.
System C (6-inch clearance)	A sheet metal (minimum number 24 Gage) ventilated thimble having two 1-inch air channels shall be installed with a sheet steel chimney connector (minimum number 24 Gage). Sheet steel supports (minimum number 24 Gage) shall be cut to maintain a 6-inch clearance between the thimble and combustibles. One side of the support shall be fastened to the wall on all sides. Glass-fiber insulation shall fill the 6-inch space between the thimble and the supports.
System D (2-inch clearance)	A labeled solid-insulated factory-built chimney section (1-inch insulation) with a diameter 2 inches larger than the chimney connector shall be installed with a sheet steel chimney connector (minimum number 24 Gage). Sheet metal supports shall be positioned to maintain a 2-inch clearance to combustibles and to hold the chimney connector to ensure that a 1-inch airspace surrounds the chimney connector through the chimney section. The steel support shall be fastened to the wall on all sides and the chimney section shall be fastened to the supports. Fasteners shall not penetrate the liner of the chimney section.

For SI: 1 inch = 25.4 mm, 1.0 Btu × in/ft<sup>2</sup> • h • °F = 0.144 W/m<sup>2</sup> • °K.

a. Insulation material that is part of the wall pass-through system shall be noncombustible and shall have a thermal conductivity of 1.0 Btu × in/ft<sup>2</sup> • h • °F or less.

b. All clearances and thicknesses are minimums.

**803.10.5 Pitch.** *Connectors shall rise vertically to the chimney or vent with a minimum pitch equal to one-fourth unit vertical in 12 units horizontal (2-percent slope).*

**803.10.6 Clearances.** *Connectors shall have a minimum clearance to combustibles in accordance with Table 803.10.6. The clearances specified in Table 803.10.6 apply, except where the listing and labeling of an appliance specifies a different clearance, in which case the labeled clearance shall apply. The clearance to combustibles for connectors shall be reduced only in accordance with Section 308 or via the use of a listed chimney or vent connector system.*

**TABLE 803.10.6**  
**CONNECTOR CLEARANCES TO COMBUSTIBLES**

<b>TYPE OF APPLIANCE</b>	<b>MINIMUM</b>
<b><i>Domestic-type appliances</i></b>	
<i>Chimney and vent connectors</i>	<i>18</i>
<i>Electric and oil incinerators</i>	<i>18</i>
<i>Oil and solid fuel appliances</i>	<i>18</i>

<b><i>High-heat appliances</i></b>	
<i>Masonry or metal connectors</i>	<i>In accordance with NFPA 211</i>

**SECTION MC 804**  
**DIRECT-VENT, INTEGRAL VENT AND**  
**MECHANICAL DRAFT SYSTEMS**

**804.1 Direct-vent terminations.** Vent terminals for direct-vent appliances shall be installed in accordance with the manufacturer's installation instructions. Horizontal venting shall be allowed only if in a non-hazardous location and if the appliance has a sealed combustion chamber.

**804.2 Appliances with integral vents.** Appliances incorporating integral venting means shall be installed in accordance with their listings and the manufacturer's installation instructions. Horizontal venting shall be allowed only if in a non hazardous location and if the appliance has a sealed combustion chamber.

**804.2.1 Terminal clearances.** Appliances designed for natural draft venting and incorporating integral venting means shall be located so that a minimum clearance of 9 inches (229 mm) is maintained between vent terminals and from any openings through which combustion products enter the building. Appliances using forced draft venting shall be located so that a minimum clearance of 12 inches (305 mm) is maintained between vent terminals and from any openings through which combustion products enter the building.

**804.3 Mechanical draft systems.** Mechanical draft systems of either forced or induced draft design shall comply with Sections 804.3.1 through 804.3.7.

**804.3.1 Forced draft systems.** Forced draft systems and all portions of induced draft systems under positive pressure during operation shall be designed and installed so as to be gas tight to prevent leakage of combustion products into a building.

**804.3.2 Automatic shutoff.** Power exhausters serving automatically-fired appliances shall be electrically connected to each appliance to prevent operation of the appliance when the power exhauster is not in operation.

**804.3.3 Termination.** The termination of chimneys or vents equipped with power exhausters shall be located a minimum of 10 feet (3048 mm) from the lot line or from adjacent buildings. The exhaust shall be directed away from the building.

**804.3.4 Horizontal terminations.** Horizontal terminations shall only be allowed if they are in a nonhazardous location and if the appliance has a sealed combustion chamber (direct vent) in accordance with the appliance listing and manufacturers instructions. In addition, horizontal terminations shall comply with the following requirements:

1. Where located adjacent to walkways, the termination of mechanical draft systems shall be not less than 7 feet (2134 mm) above the level of the walkway.

2. Vents shall terminate at least 3 feet (914 mm) above any forced air inlet located within 10 feet (3048 mm).
3. The vent system shall terminate at least 4 feet (1219 mm) below, 4 feet (1219 mm) horizontally from or 1 foot (305 mm) above any door, window or gravity air inlet into the building.
4. The vent termination point shall not be located closer than 3 feet (914 mm) to an interior corner formed by two walls perpendicular to each other.
5. The vent termination shall not be mounted directly above or within 3 feet (914 mm) horizontally from any gas or electric metering, regulating, venting relief equipment or other building opening.
6. The bottom of the vent termination shall be located at least 24 inches (610 mm) above finished grade.

**804.3.5 Vertical terminations.** Vertical terminations shall comply with the following requirements and in accordance with the appliance listing and manufacturers instructions:

1. Chimneys serving appliances less than 600°F (316°C) shall extend at least 3 feet (914 mm) above the highest construction, such as a roof ridge, parapet wall, or penthouse, within 10 feet (3048 mm) of the chimney outlet, whether the construction is on the same building as the chimney or on another building. Any chimney located in an area that is more than 10 feet (3048 mm) from such construction, but not more than the distance determined by Equation 8-2 shall be at least as high as the highest construction in such area. However, for purposes of determining the required height of a chimney, such construction does not include other chimneys, vents, or open structural framing.
2. Chimneys serving appliances between 600°F (316°C) and 1000°F (538°C) shall extend at least 10 feet (3048 mm) above the highest construction, such as a roof ridge, or parapet wall or penthouse within 20 feet (6096 mm) of the chimney outlet, whether the construction is on the same building as the chimney or on another building. Any chimney located in an area more than 20 feet (6096 mm) from such construction, but not more than the distance determined from Equation 8-2 shall be at least as high as the highest construction in such area. However, for purposes of determining the required height of the chimney, such construction does not include other chimneys, vents or open structural framing.
3. Chimneys serving appliances greater than 1000°F (538°C) shall extend at least 20 feet (6096 mm) above the highest construction, such as roof ridge, parapet wall, penthouse, or other obstruction within 50 feet (15 240 mm) of the chimney outlet, whether the construction is on the same building as the chimney or in another building. Any chimney located in an area that is more than 50 feet (15 240 mm) from such construction, but not more than the distance determined from Equation 8-2 shall be at least as high as the highest construction located in such area. However, for purposes of determining the required height of the chimney, such construction does not include other chimneys, vents, or open structural framing.

4. *Vent termination caps shall not be permitted and a 3-inch (76 mm) minimum drain installed to receive condensed water shall be required. A positive means shall be provided to prevent water from entering the appliance.*
  
5. *The following formula shall be used in order to determine the distance referred to in Items 1, 2 and 3 of this section:*

$$D = F \times \sqrt{A} \quad (\text{Equation 8-2})$$

where:  $D$  = Distance, in feet, measured from the center of the chimney outlet to the nearest edge of the construction.

where:  $F$  = Value determined from table below

where:  $A$  = Free area, in square inches, of chimney flue space.

**804.3.6 Exhauster connections.** *An appliance vented by natural draft shall not be connected into a vent, chimney or vent connector on the discharge side of a mechanical flue exhauster.*

**804.3.7 Exhauster sizing.** *Mechanical flue exhausters and the vent system served shall be sized and installed in accordance with the manufacturer's installation instructions.*

**804.3.8 Mechanical draft systems for manually fired appliances and fireplaces.** *A mechanical draft system shall be permitted to be used with manually fired appliances and fireplaces where such system complies with all of the following requirements:*

- 1. The mechanical draft device shall be listed and installed in accordance with the manufacturer's installation instructions.*
- 2. A device shall be installed that produces visible and audible warning upon failure of the mechanical draft device or loss of electrical power, at any time that the mechanical draft device is turned on. This device shall be equipped with a battery backup if it receives power from the building wiring.*
- 3. A smoke detector shall be installed in the room with the appliance or fireplace. This device shall be equipped with a battery backup if it receives power from the building wiring.*

## **SECTION MC 805 FACTORY-BUILT CHIMNEYS**

**805.1 Listing.** *Factory-built chimneys shall be listed and labeled and shall be installed and terminated in accordance with this code and the manufacturer's installation instructions.*

**805.2 Solid fuel appliances.** *Factory-built chimneys for use with solid fuel-burning appliances shall comply with the Type HT requirements of UL 103.*

**Exception:** *Chimneys for use with fireplace stoves listed only to UL 737 shall comply with the requirements of UL 103.*

**805.3 Factory-built fireplaces.** *Chimneys for use with factory-built fireplaces shall comply with the requirements of UL 127.*

**805.4 Support.** *Where factory-built chimneys are supported by structural members, such as joists and rafters, such members shall be designed to support the additional load.*

**805.5 Medium-heat appliances.** *Factory-built chimneys for medium-heat appliances producing flue gases having a temperature above 1,000°F (538°C), measured at the entrance to the chimney, shall comply with UL 959.*

**805.6 Decorative shrouds.** *Decorative shrouds shall not be installed at the termination of factory-built chimneys except where such shrouds are listed and labeled for use with the specific factory-built chimney system and are installed in accordance with Section 304.1.*

**SECTION MC 806  
METAL CHIMNEYS**

**806.1 General.** *Metal chimneys shall be constructed and installed in accordance with NFPA 211.*

**806.2 Exterior metal chimneys.** *Exterior metal chimneys shall be galvanized, painted on the exterior surface with a heat resisting paint or constructed of equal corrosion resistive alloys.*

**SECTION MC 807  
CHANGES IN APPLIANCE FUELS**

**807.1 Changes in appliance fuels.** *Conversion from gas to fuel oil for a heating appliances shall be made only if:*

1. *The chimney design meets the requirements of this chapter for the conversion fuel; and*
2. *The chimney size is adequate to vent the combustion products from the new fuel. Conversion from solid or liquid fuels to natural gas fuels for heating appliances shall be made only if:*
  - 2.1 *The chimney design meets the requirements of this chapter for the conversion fuel and the New York City Fuel Gas Code.;*
  - 2.2 *The chimney is thoroughly cleaned prior to the conversion to remove collected flue deposits, which can spill off when gas is used as a fuel;*
  - 2.3 *Chimney provides adequate draft the new fuel;*
  - 2.4 *Drains are installed to remove condensed water; and*
  - 2.5 *Gas vents are installed within the chimney for venting purposes if required by the appliance listing.*

**SECTION MC 808  
REDUCTION OF FLUE SIZE**

**808.1 Reduction of flue size.** Conversion from one fuel to another or the use of an existing chimney to service a fireplace or wood-burning appliance may require a flue size change for proper operation. This may be done if the redesigned flue meets the criteria for the fuel and chimney type to be used as set forth in this chapter.

#### **SECTION MC 809**

#### **CHIMNEY SUPPORTED FROM EQUIPMENT**

**809.1 Chimney support.** Chimneys shall not be supported by the equipment they serve, unless such equipment has been specifically designed for such loads.

#### **SECTION MC 810**

#### **TEST RUN AND SMOKE TEST**

**810.1 Test run.** All new chimneys shall be test run under operating conditions to demonstrate fire safety and the complete exhausting of smoke and the products of combustion to the outer air. The test run shall be conducted by a registered design professional responsible for the test, and the results of such test run shall be certified as correct by such professional and submitted in writing to the department.

**810.2 Requirement of a smoke test.** A smoke test shall be made as outlined in Section 810.3. Any faults or leaks found shall be corrected. Such smoke test shall be witnessed by a representative of the commissioner. In lieu thereof, the commissioner may accept the test report of a registered design professional responsible for the test which shall be submitted in writing to the department.

**810.3 Smoke test.** To determine the tightness of chimney construction, a smoke test shall be made in accordance with the following conditions and requirements:

1. The equipment, materials, power and labor necessary for such test shall be furnished by, and at the expense of, the owner or holder of the work permit.
2. If the test shows any evidence of leakage or other defects, such defects shall be corrected in accordance with the requirements of this chapter, and the test shall be repeated until the results are satisfactory.
3. The chimney shall be filled with a thick penetrating smoke produced by one or more smoke machines, or smoke bombs, or other equivalent method. As the smoke appears at the stack opening on the roof, such opening shall be tightly closed and a pressure equivalent to ½- inch (13 mm) column of water measured at the base of the stack, shall be applied. The test shall be applied for a length of time sufficient to permit the inspection of the chimney.

#### **SECTION MC 811**

#### **EXHAUST GASES FROM INTERNAL COMBUSTION ENGINES**

**811.1 Exhaust pipe construction.** *The exhaust pipe from internal combustion engines shall be constructed in accordance with the requirements for metal chimneys in this chapter, NFPA 211 and NFPA 37 based on the temperature of the gases entering the exhaust pipe, and in accordance with the following:*

1. *The exhaust pipe, if factory fabricated shall be constructed in accordance with their listing and manufacturers instructions.*
2. *The exhaust pipe, if field fabricated, shall be constructed of at least <sup>3</sup>/<sub>16</sub>-inch (5 mm) steel, or of other equivalent metal of similar strength and resistance to the temperature and corrosive action of the exhaust gases.*
3. *No lining shall be required.*
4. *Where the exhaust pipe runs inside a building, it shall be insulated with insulation adequate for the temperature of the pipe, so that the surface temperature shall be not more than 200°F (93°C).*
5. *All joints shall be constructed so as to be gas tight under all operating conditions.*

**811.2 Discharge openings.** *The location of discharge openings for emergency and standby internal combustion engines shall comply with the requirements of NFPA 37 so that the flue gases are not directed to jeopardize the health or safety of people, overheat combustible structures, nor enter building openings in the vicinity of the outlet, nor shall the location of such openings cause the condensate leaving the outlet to come into contact with people.*

**811.2.1 Interference.** *No discharge opening shall be located and constructed so as to interfere with the proper functioning of other openings in the same building or adjoining buildings, to interfere unreasonably with the occupants of the same building or adjoining buildings, or with the general public, or to create a fire or health hazard.*

**811.2.2 Chimneys.** *The exhaust pipe may be connected to a chimney used for other equipment, provided that the operation of the engine does not adversely affect the operation of the other equipment so that it is in violation of the New York City Air Pollution Control Code.*

**811.3 Vertical termination requirements.** *The location of the discharge outlet from all other engines shall comply with the vertical termination requirements of at least a 600°F (316°C) to 1000°F (538°C) chimney or a greater than 1000°F (538°C) chimney based on the temperature of the gases entering the exhaust pipe.*

## **CHAPTER 9**

**SPECIFIC APPLIANCES, FIREPLACES AND  
SOLID FUEL-BURNING EQUIPMENT**

**SECTION MC 901  
GENERAL**

**901.1 Scope.** *This chapter shall govern the approval, design, installation, construction, maintenance, alteration and repair of the appliances and equipment specifically identified herein and factory-built fireplaces. The approval, design, installation, construction, maintenance, alteration and repair of gas-fired appliances shall be regulated by the New York City Fuel Gas Code.*

**901.2 General.** *The requirements of this chapter shall apply to the mechanical equipment and appliances regulated by this chapter, in addition to the other requirements of this code, and installed in accordance with the requirements of NFPA 31, NFPA 54 and NFPA 211.*

**901.3 Hazardous locations.** *Fireplaces and solid fuel-burning appliances shall not be installed in hazardous locations.*

**901.4 Fireplace accessories.** *Listed fireplace accessories shall be installed in accordance with the conditions of the listing and the manufacturer's installation instructions.*

**901.5 Inspection of solid fuel-burning heating appliances, chimneys and flues.** *Inspections of solid fuel burning heating appliances, chimneys and flues shall be in accordance with the New York City Building Code.*

**901.6 Fireplaces.** *Fireplaces (solid-fuel-type or ANSI Z21.50) shall be installed with tight-fitting noncombustible fireplace doors to control infiltration losses in construction types listed here:*

- 1. Masonry or factory-built fireplaces designed to allow an open burn.*
- 2. Decorative appliances (ANSI Z21.60 gas-log style unit) installed in a vented solid fuel fireplace.*
- 3. Vented decorative gas fireplace appliances (ANSI Z21.50 unit).*

*Fireplaces shall be provided with a source of combustion air as required by the fireplace construction provisions of the New York City Building Code and Chapter 7 of this code.*

**SECTION MC 902  
MASONRY FIREPLACES**

**902.1 General.** *Masonry fireplaces shall be constructed in accordance with the New York City Building Code.*

**SECTION MC 903**  
**FACTORY-BUILT FIREPLACES**

**903.1 General.** *Factory-built fireplaces shall be listed and labeled and shall be installed in accordance with the conditions of the listing. Factory-built fireplaces shall be tested in accordance with UL 127.*

**903.2 Hearth extensions.** *Hearth extensions of approved factory-built fireplaces and fireplace stoves shall be installed in accordance with the listing of the fireplace. The hearth extension shall be readily distinguishable from the surrounding floor area.*

**903.3 Unvented gas log heaters.** *The installation of unvented gas fired space heaters, gas stoves, gas logs, gas fireplaces and gas fireplace inserts is prohibited.*

**903.4 Flues.** *Separate flues shall be provided for every fireplace and fireplace stove.*

**903.5 Combustion air supply.** *All installations of factory-built fireplaces shall comply with the requirements of the Energy Conservation Construction Code of New York State concerning combustion air supply.*

**SECTION MC 904**  
**PELLET FUEL-BURNING APPLIANCES**

**904.1 General.** *Pellet fuel-burning appliances shall be listed and labeled and shall be installed in accordance with the terms of the listing. If permitted, such appliances shall be operated in accordance with the New York City Air Pollution Control Code.*

**SECTION MC 905**  
**FIREPLACE STOVES AND ROOM HEATERS**

**905.1 General.** *Fireplace stoves and solid-fuel-type room heaters shall be listed and labeled and shall be installed in accordance with the conditions of the listing. Fireplace stoves shall be tested in accordance with UL 737. Solid-fuel-type room heaters shall be tested in accordance with UL 1482. Fireplace inserts intended for installation in fireplaces shall be listed and labeled in accordance with the requirements of UL 1482 and shall be installed in accordance with the manufacturer's installation instructions.*

**905.2 Connection to fireplace.** *The connection of solid fuel appliances to chimney flues serving fireplaces shall comply with Sections 801.7 and 801.10.*

**905.3 Air pollution.** *All fireplace stoves and room heaters shall comply with the requirements of the New York City Air Pollution Control Code.*

**905.4 Combustion air supply.** All fireplace stoves and room heaters shall comply with the requirements of the Energy Conservation Construction Code of New York State concerning combustion air supply.

**905.5 Flues.** Separate flues and independent combustion air source shall be provided for every fireplace stove and room heater. Combustion air shall be provided in accordance with the manufacturer's recommendations and Chapter 7.

#### **SECTION MC 906**

##### **FACTORY-BUILT BARBECUE APPLIANCES**

**906.1 General.** Factory-built barbecue appliances shall be of an approved type and shall be installed in accordance with the manufacturer's installation instructions, this chapter and Chapters 3, 5, 7, 8 and the New York City Fuel Gas Code. All provisions for the construction and installation of fireplaces shall be complied within the construction and installation of barbecue grills.

#### **SECTION MC 907**

##### **INCINERATORS AND CREMATORIES**

**907.1 General.** Incinerators and crematories shall be listed and labeled in accordance with UL 791 and NFPA 82 and shall be installed in accordance with the manufacturer's installation instructions.

**907.2 Compliance.** All incinerators and crematories shall be installed, altered and maintained in buildings in conformity with the applicable provisions of the Administrative Code and the New York City Air Pollution Control Code.

#### **SECTION MC 908**

##### **COOLING TOWERS, EVAPORATIVE CONDENSERS AND FLUID COOLERS**

**908.1 General.** A cooling tower used in conjunction with an air-conditioning appliance shall be installed in accordance with the manufacturer's installation instructions.

**908.2 Access.** Cooling towers, evaporative condensers and fluid coolers shall be provided with ready access.

**908.3 Location.** Cooling towers, evaporative condensers and fluid coolers shall be located to prevent the discharge vapor plumes from entering occupied spaces. Plume discharges shall be not less than 5 feet (1524 mm) above or 20 feet (6096 mm) away from any ventilation inlet to a building. Location on the property shall be as required for buildings in accordance with the New York City Building Code.

**908.3.1 Indoor.** Cooling towers, evaporative condensers and fluid coolers located inside of buildings shall be constructed of noncombustible materials including fill and drift eliminators.

**908.3.2 Outside.** Cooling towers shall be constructed of noncombustible materials.

**Exception:** Fill and drift eliminators may be made of limited combustibility materials provided all the following conditions are met:

1. The cooling tower is located on a building in construction group 1-A or 1-B of the New York City Building Code.
2. The cooling tower, fill and drift eliminators are located at least 30 feet (9144 mm) away from windows or fresh air intakes which are at an elevation above the roof on which the cooling tower is located, whether in the same building or in an adjoining building.
3. The cooling tower is located not less than 15 feet (4572 mm) from the lot line.
4. The cooling tower is located not less than 10 feet (3048 mm) from any chimney, except that the distance shall not be less than 20 feet (6096 mm) from a chimney venting products of combustion other than from gas or oil-fired appliances, whether on the same or an adjoining building.

**908.4 Support and anchorage.** Supports for cooling towers, evaporative condensers and fluid coolers shall be designed in accordance with the New York City Building Code. Seismic restraints shall be as required by the New York City Building Code. Adequate vibration isolation shall be provided in accordance with the manufacturer's installation guidelines and as required for the supporting structure, and in accordance with the following:

**908.4.1 Cooling towers.** All moving parts of cooling towers located on a roof or floor other than a floor on grade shall be installed on vibration isolators providing a minimum isolation efficiency of 85 percent at fan rotor rpm with a maximum static deflection of 4 inches (102 mm). Each isolator shall incorporate a leveling device and a resilient pad having a minimum thickness of ¼ inch (6 mm).

**908.4.2 Evaporative condensers.** Evaporative and air cooled condensers located on a roof or floor other than a floor on grade shall be mounted on vibration isolators providing a minimum isolation efficiency of 85 percent at fan rotor rpm with a maximum static deflection of 4 inches (102 mm). Each isolator shall incorporate a leveling device and a resilient pad having a minimum thickness of ¼ inch (6 mm).

**908.5 Water supply.** Water supplies and protection shall be as required by the New York City Plumbing Code.

**908.6 Drainage.** Drains, overflows and blowdown provisions shall be indirectly connected to an approved disposal location. Discharge of chemical waste shall be approved by the appropriate regulatory authority.

**908.7 Refrigerants and hazardous fluids.** Heat exchange equipment that contains a refrigerant and that is part of a closed refrigeration system shall comply with Chapter 11. Heat exchange equipment containing heat transfer fluids which are combustible or hazardous shall comply with the New York City Fire Code. Flammable heat transfer fluids are prohibited.

## **SECTION MC 909 VENTED WALL FURNACES**

**909.1 General.** Vented wall furnaces shall be installed in accordance with their listing and the manufacturer's installation instructions. Oil-fired furnaces shall be tested in accordance with UL 730.

**909.2 Location.** Vented wall furnaces shall be located so as not to cause a fire hazard to walls, floors, combustible furnishings or doors. Vented wall furnaces installed between bathrooms and adjoining rooms shall not circulate air from bathrooms to other parts of the building.

**909.3 Door swing.** Vented wall furnaces shall be located so that a door cannot swing within 12 inches (305 mm) of an air inlet or air outlet of such furnace measured at right angles to the opening. Doorstops or door closers shall not be installed to obtain this clearance.

**909.4 Ducts prohibited.** Ducts shall not be attached to wall furnaces. Casing extension boots shall not be installed unless listed as part of the appliance.

**909.5 Manual shutoff valve.** A manual shutoff valve shall be installed ahead of all controls.

**909.6 Access.** Vented wall furnaces shall be provided with access for cleaning of heating surfaces, removal of burners, replacement of sections, motors, controls, filters and other working parts, and for adjustments and lubrication of parts requiring such attention. Panels, grilles and access doors that must be removed for normal servicing operations shall not be attached to the building construction.

## **SECTION MC 910 FLOOR FURNACES**

**910.1 General.** Floor furnaces shall be installed in accordance with their listing and the manufacturer's installation instructions. Oil-fired furnaces shall be tested in accordance with UL 729. Unvented floor furnaces are prohibited.

**910.2 Placement.** Floor furnaces shall not be installed in any corridor, in the floor of any aisle or passageway of any auditorium, public hall, place of assembly, or in any egress element from any such room or space.

With the exception of wall register models, a floor furnace shall not be placed closer than 6 inches (152 mm) to the

nearest wall, and wall register models shall not be placed closer than 6 inches (152 mm) to a corner.

The furnace shall be placed such that a drapery or similar combustible object will not be nearer than 12 inches (305 mm) to any portion of the register of the furnace. Floor furnaces shall not be installed in concrete floor construction built on grade. The controlling thermostat for a floor furnace shall be located within the same room or space as the floor furnace or shall be located in an adjacent room or space that is permanently open to the room or space containing the floor furnace. Floor furnaces shall be located so as to be accessible. Floor furnaces shall be installed only in floors of noncombustible construction having at least a 2-hour fire rating, except as where required for one- and two-family dwellings.

**910.3 Bracing.** The floor around the furnace shall be braced and headed with a support framework design in accordance with the New York City Building Code.

**910.4 Clearance.** The lowest portion of the floor furnace shall have not less than a 6-inch (152 mm) clearance from the grade level; except where the lower 6-inch (152 mm) portion of the floor furnace is sealed by the manufacturer to prevent entrance of water, the minimum clearance shall be reduced to not less than 2 inches (51 mm). Where these clearances are not present, the ground below and to the sides shall be excavated to form a pit under the furnace so that the required clearance is provided beneath the lowest portion of the furnace. A 12-inch (305 mm) minimum clearance shall be provided on all sides except the control side, which shall have an 18-inch (457 mm) minimum clearance.

**910.5 Enclosures.** Enclosures of floor furnaces shall be constructed entirely of noncombustible materials with a fire-resistance rating of at least 1 hour and shall be provided with adequate outdoor air to ensure proper combustion. The enclosure shall be provided with adequate means of access for servicing the furnace.

**910.6 Duct temperature.** The outlet duct temperature of warm air heating furnaces shall not be greater than 250°F (121°C).

**910.7 One- and two- family dwellings.** Floor furnace enclosures shall be constructed of noncombustible materials with a fire-resistance rating of at least 1 hour. Means shall be provided for supporting the furnace when the grille is removed. Clearances shall be provided as per NFPA 54.

## **SECTION MC 911 DUCT FURNACES**

**911.1 General.** Duct furnaces shall be installed in accordance with the manufacturer's installation instructions. Electric furnaces shall be tested in accordance with UL 1995. Unvented furnaces are prohibited.

**911.2 Access panels.** Ducts connected to duct furnaces shall have removable access panels on both the upstream and downstream sides of the furnace.

**911.3 Location of draft hood and controls.** *The controls, combustion air inlets and draft hoods for duct furnaces shall be located outside of the ducts. The draft hood shall be located in the same enclosure from which combustion air is taken.*

**911.4 Circulating air.** *Where a duct furnace is installed so that supply ducts convey air to areas outside the space containing the furnace, the return air shall also be conveyed by a duct(s) sealed to the furnace casing and terminating outside the space containing the furnace. The duct furnace shall be installed on the positive pressure side of the circulating air blower.*

**911.5 Duct Temperature.** *The outlet duct temperature of duct furnaces shall not be greater than 250°F (121°C).*

## **SECTION MC 912 INFRARED RADIANT HEATERS**

**912.1 Support.** *Infrared radiant heaters shall be safely and adequately fixed in an approved position independent of fuel and electric supply lines. Hangers and brackets shall be noncombustible material.*

**912.2 Clearances.** *Heaters shall be installed with clearances from combustible material in accordance with the manufacturer's installation instructions.*

## **SECTION MC 913 CLOTHES DRYERS**

**913.1 General.** *Clothes dryers shall be installed in accordance with the manufacturer's installation instructions. Electric commercial clothes dryers shall be tested in accordance with UL 1240. Electric residential and coin-operated clothes dryers shall be tested in accordance with UL 2158.*

**913.2 Exhaust required.** *Clothes dryers shall be exhausted in accordance with Section 504.*

**Exception:** *Electric clothes dryers provided with a condensate drain.*

**913.3 Clearances.** *Clothes dryers shall be installed with clearance to combustibles in accordance with the manufacturer's instructions.*

## **SECTION MC 914 SAUNA HEATERS**

**914.1 Location and protection.** *Sauna heaters shall be located so as to minimize the possibility of accidental contact by a person in the room.*

**914.1.1 Guards.** Sauna heaters shall be protected from accidental contact by an approved guard or barrier of material having a low coefficient of thermal conductivity. The guard shall not substantially affect the transfer of heat from the heater to the room.

**914.2 Installation.** Sauna heaters shall be listed and labeled and shall be installed in accordance with their listing and the manufacturer's installation instructions.

**914.3 Access.** Panels, grilles and access doors that are required to be removed for normal servicing operations shall not be attached to the building.

**914.4 Heat and time controls.** Sauna heaters shall be equipped with a thermostat that will limit room temperature to 194°F (90°C). If the thermostat is not an integral part of the sauna heater, the heat-sensing element shall be located within 6 inches (152 mm) of the ceiling. If the heat-sensing element is a capillary tube and bulb, the assembly shall be attached to the wall or other support, and shall be protected against physical damage.

**914.4.1 Timers.** A timer, if provided to control main burner operation, shall have a maximum operating time of 1 hour. The control for the timer shall be located outside the sauna room.

**914.5 Sauna room.** A ventilation opening into the sauna room shall be provided. The opening shall be not less than 4 inches by 8 inches (102 mm by 203 mm) located near the top of the door into the sauna room.

**914.5.1 Warning notice.** The following permanent notice, constructed of approved material, shall be mechanically attached to the sauna room on the outside:

**WARNING: DO NOT EXCEED 30 MINUTES IN SAUNA. EXCESSIVE EXPOSURE CAN BE HARMFUL TO HEALTH. ANY PERSON WITH POOR HEALTH SHOULD CONSULT A PHYSICIAN BEFORE USING SAUNA.**

The words shall contrast with the background and the wording shall be in letters not less than 0.25-inch (6.4 mm) high.

**Exception:** This section shall not apply to one- and two-family dwellings.

**SECTION MC 915  
ENGINE AND GAS TURBINE-POWERED  
EQUIPMENT AND APPLIANCES**

**915.1 General.** The installation of liquid-fueled stationary internal combustion engines and gas turbines, including fuel storage and piping, shall meet the requirements of NFPA 37 and Chapter 13 of this code.

**915.2 Powered equipment and appliances.** Permanently installed equipment and appliances powered by internal combustion engines and turbines shall be installed in accordance with the manufacturer's installation instructions and NFPA 37.

**SECTION MC 916  
POOL AND SPA HEATERS**

**916.1 General.** Pool and spa heaters shall be installed in accordance with the manufacturer's installation instructions. Oil-fired pool and spa heaters shall be tested in accordance with UL 726. Electric pool and spa heaters shall be tested in accordance with UL 1261.

**SECTION MC 917  
COOKING APPLIANCES**

**917.1 Cooking appliances.** Cooking appliances that are designed for permanent installation, including ranges, ovens, stoves, broilers, grills, fryers, griddles and barbecues, shall be listed, labeled and installed in accordance with the manufacturer's installation instructions. Oil-fired cooking appliances are prohibited. Solid fuel-fired ovens shall be tested in accordance with UL 2162.

**917.2 Prohibited location.** Cooking appliances designed, tested, listed and labeled for use in commercial occupancies shall not be installed within dwelling units or within any area where domestic cooking operations occur.

**917.3 Domestic appliances.** Cooking appliances installed within dwelling units and within areas where domestic cooking operations occur shall be listed and labeled as household-type appliances for domestic use.

**917.4 Domestic range installation.** Domestic ranges installed on combustible floors shall be set on their own bases or legs and shall be installed with clearances of not less than that shown on the label.

**917.5 Open-top broiler unit hoods.** A ventilating hood shall be provided above a domestic open-top broiler unit, unless otherwise listed for forced down draft ventilation.

**917.5.1 Clearances.** A minimum clearance of 24 inches (610 mm) shall be maintained between the cooking top and combustible material above the hood. The hood shall be at least as wide as the open-top broiler unit and be centered over the unit.

**917.6 Commercial cooking appliance venting.** Commercial cooking appliances, other than those exempted by Section 501.8 of the New York City Fuel Gas Code, shall be vented by connecting the appliance to a vent or chimney in accordance with this code and the appliance manufacturer's instructions or the appliance shall be vented in accordance with Section 505.1.1 of the New York City Fuel Gas Code.

**917.7 Domestic ventilation.** When a hood is required for proper ventilation of a domestic cooking appliance, the exhaust and make-up air systems shall be properly engineered and designed in accordance with Chapter 5.

**SECTION MC 918**  
**FORCED-AIR WARM-AIR FURNACES**

**918.1 Forced-air furnaces.** Oil-fired furnaces shall be tested in accordance with UL 727. Electric furnaces shall be tested in accordance with UL 1995. Solid fuel furnaces shall be tested in accordance with UL 391. Forced-air furnaces shall be installed in accordance with the listings and the manufacturer's installation instructions. Forced-air warm-air furnaces shall be installed in accordance with the requirements of NFPA 31 and the New York City Fuel Gas Code. Unvented furnaces are prohibited.

**918.2 Minimum duct sizes.** The minimum unobstructed total area of the outside and return air ducts or openings to a forced-air warm-air furnace shall be not less than 2 square inches per 1,000 Btu/h (4402 mm<sup>2</sup>/kW) output rating capacity of the furnace and not less than that specified in the furnace manufacturer's installation instructions. The minimum unobstructed total area of supply ducts from a forced-air warm-air furnace shall not be less than 2 square inches for each 1,000 Btu/h (4402mm<sup>2</sup>/kW) output rating capacity of the furnace and not less than that specified in the furnace manufacturer's installation instructions.

**Exception:** The total area of the supply air ducts and outside and return air ducts shall not be required to be larger than the minimum size required by the furnace manufacturer's installation instructions and in accordance with NFPA 54.

**918.3 Heat pumps.** The minimum unobstructed total area of the outside and return air ducts or openings to a heat pump shall be not less than 6 square inches per 1,000 Btu/h (13 208 mm<sup>2</sup>/kW) output rating or as indicated by the conditions of listing of the heat pump. Electric heat pumps shall be tested in accordance with UL 1995.

**918.4 Dampers.** Volume dampers shall not be placed in the air inlet to a furnace in a manner that will reduce the required air to the furnace.

**918.5 Circulating air ducts for forced-air warm-air furnaces.** Circulating air for fuel-burning, forced-air-type, warm-air furnaces shall be conducted into the blower housing from outside the furnace enclosure by continuous air-tight ducts.

**918.6 Prohibited sources.** Outside or return air for a forced-air heating system shall not be taken from the following locations:

1. Closer than 10 feet (3048 mm) from an appliance vent outlet, a vent opening from a plumbing drainage system or the discharge outlet of an exhaust fan, unless the outlet is 3 feet (914 mm) above the outside air

*inlet.*

2. *Where there is the presence of objectionable odors, fumes or flammable vapors; or where located less than 10 feet (3048 mm) above the surface of any abutting public way or driveway; or where located at grade level by a sidewalk, street, alley or driveway.*
3. *A hazardous or unsanitary location or a refrigeration machinery room as defined in this code.*
4. *A room or space, the volume of which is less than 25 percent of the entire volume served by such system. Where connected by a permanent opening having an area sized in accordance with Sections 918.2 and 918.3, adjoining rooms or spaces shall be considered as a single room or space for the purpose of determining the volume of such rooms or spaces.*

**Exception:** *The minimum volume requirement shall not apply where the amount of return air taken from a room or space is less than or equal to the amount of supply air delivered to such room or space.*

5. *A closet, bathroom, toilet room, kitchen, garage, mechanical room, boiler room or furnace room.*
6. *A room or space containing a fuel-burning appliance where such room or space serves as the sole source of return air.*

**Exceptions:**

1. *This shall not apply where the fuel-burning appliance is a direct-vent appliance.*
2. *This shall not apply where the room or space complies with the following requirements:*
  - 2.1. *The return air shall be taken from a room or space having a volume exceeding 1 cubic foot for each 10 Btu/h (9.6 L/W) of combined input rating of all fuel-burning appliances therein.*
  - 2.2. *The volume of supply air discharged back into the same space shall be approximately equal to the volume of return air taken from the space.*
  - 2.3. *Return-air inlets shall not be located within 10 feet (3048 mm) of any appliance firebox or draft hood in the same room or space.*
3. *This shall not apply to rooms or spaces containing solid fuel-burning appliances, provided that return-air inlets are located not less than 10 feet (3048 mm) from the firebox of such appliances.*

**918.7 Outside opening protection.** *Outdoor air intake openings shall be protected in accordance with Section 401.6.*

**918.8 Return-air limitation.** *Return air from one dwelling unit shall not be discharged into another dwelling unit.*

**SECTION MC 919  
CONVERSION BURNERS**

**919.1 Conversion burners.** *The installation of conversion burners shall conform to ANSI Z21.8.*

**SECTION MC 920  
UNIT HEATERS**

**920.1 General.** *Unit heaters shall be installed in accordance with the listing and the manufacturer's installation instructions. Oil-fired unit heaters shall be tested in accordance with UL 731.*

**920.2 Support.** *Suspended-type unit heaters shall be supported by elements that are designed and constructed to accommodate the weight and dynamic loads. Hangers and brackets shall be of noncombustible material. Suspended-type oil-fired unit heaters shall be installed in accordance with NFPA 31.*

**920.3 Ductwork.** *A unit heater shall not be attached to a warm-air duct system unless listed for such installation.*

**SECTION MC 921  
VENTED ROOM HEATERS**

**921.1 General.** *Vented room heaters shall be listed and labeled and shall be installed in accordance with the conditions of the listing and the manufacturer's instructions.*

**SECTION MC 922  
KEROSENE AND OIL-FIRED STOVES**

**922.1 General.** *The installation of kerosene and oil-fired stoves is prohibited.*

**SECTION MC 923  
SMALL CERAMIC KILNS**

**923.1 General.** *The provisions of this section shall apply to kilns that are used for ceramics, have a maximum interior volume of 20 cubic feet (0.566 m<sup>3</sup>) and are used for hobby and noncommercial purposes.*

**923.1.1 Installation.** *Kilns shall be installed in accordance with the manufacturer's installation instructions and the provisions of this code.*

**SECTION MC 924**  
**STATIONARY FUEL CELL POWER PLANTS**

**924.1 General.** *Stationary fuel cell power plants having a power output not exceeding 1,000 kW, shall be tested in accordance with ANSI Z21.83 and shall be installed in accordance with the manufacturer's installation instructions and NFPA 853. Only fuel cell plants that derive hydrogen from natural gas shall be used. No on-site storage of hydrogen, natural gas or any other flammable gas shall be allowed.*

**SECTION MC 925**  
**MASONRY HEATERS**

**925.1 General.** *Masonry heaters shall be constructed in accordance with the New York City Building Code.*

**SECTION MC 926**  
**NOISE CONTROL REQUIREMENTS**

**926.1** *Minimum air-borne noise insulation requirements.*

**926.1.1 Exterior mechanical equipment.** *Mechanical equipment in a building in any occupancy group, when located outside of the building in a yard or court or on a roof, or where the equipment opens to the exterior of the building, shall be subject to the noise output limitations given in Table 926.1 where one or more windows of a dwelling unit in any building in occupancy groups R-1, R-2, and R-3 , are located within a sphere of 100 foot radius (30 480 mm) whose center is any part of the equipment or its housing, unless it can be shown that the sound pressure levels, in octave bands, of the exterior mechanical equipment as measured within the dwelling unit do not exceed the levels given in Table 926.1(2).*

**TABLE 926.1(1)**  
**MAXIMUM SOUND POWER LEVELS PERMITTED FOR EXTERIOR MECHANICAL EQUIPMENT**  
**ADJOINING BUILDINGS**

	<i>Maximum Sound Power Levels in Octave Bands – db re 10<sup>-13</sup> Watts<sup>a</sup></i>							
<i>Minimum distance from equipment to exterior window (ft.)<sup>a</sup></i>	<i>Octave Bands c.p.s. Mid Frequency</i>

<i>100</i>	<i>116</i>	<i>108</i>	<i>101</i>	<i>96</i>	<i>93</i>	<i>91</i>	<i>90</i>	<i>89</i>
	<i>Octave Bands- db re 10<sup>-12</sup> Watts</i>							
<i>12</i>	<i>87</i>	<i>80</i>	<i>73</i>	<i>68</i>	<i>65</i>	<i>63</i>	<i>62</i>	<i>61</i>
<i>25</i>	<i>94</i>	<i>86</i>	<i>79</i>	<i>74</i>	<i>71</i>	<i>69</i>	<i>68</i>	<i>67</i>
<i>50</i>	<i>100</i>	<i>92</i>	<i>85</i>	<i>80</i>	<i>77</i>	<i>75</i>	<i>74</i>	<i>73</i>
<i>100</i>	<i>106</i>	<i>98</i>	<i>91</i>	<i>86</i>	<i>83</i>	<i>81</i>	<i>80</i>	<i>79</i>

**Notes:**

- a. *The minimum distance shall be measured in a straight line regardless of obstructions. Interpolated levels may be used for distances between those given in this table. See note a. at end of Table 1207.2.1 in the New York City Building Code.*
1. *In the event sound power level data for the exterior mechanical equipment is not available, the sound pressure levels in octave bands, of the exterior mechanical equipment shall be measured.*
2. *The measurements shall be obtained with the microphone of the measuring equipment located at the interior of the dwelling unit affected in a line with the window nearest the exterior mechanical equipment. The window shall be fully open and the microphone shall be located 3 feet away from the open portion of the window.*
3. *Measurements shall be obtained during times when the ambient sound pressure levels, in octave bands, are at least 6 db lower at all octave bands than the sound pressure levels measured with the exterior equipment operating. By ambient sound pressure levels is meant the measured sound pressure levels, at the above described measuring location, with the exterior equipment not in operation.*

500	40
1000	36
2000	34
4000	33
8000	32

**Note:**

a. Measurements shall be obtained with a sound level meter and octave band analyzer, calibrated both electronically and acoustically before and after the measurements are made.

**926.1.2 Noise Control Code.** *Sound sources shall also comply with any applicable requirements of Section 24-232 of the Administrative Code, also known as the New York City Noise Control Code.*

**926.2 Minimum structure-borne noise and vibration isolation requirements.** *All isolators shall comply with the requirements of Section 926.2.1 through Section 926.2.9.*

**926.2.1 Boiler rooms.**

**926.2.1.1 Boilers.** *All boilers supported on floors above a story having dwelling units shall be supported on resilient isolators having a minimum static deflection of 1 inch (25 mm). The isolators shall be installed directly under the structural frame of the boiler.*

**926.2.1.2 Boiler breeching and piping.** *When boilers are equipped with mechanical draft fans, the boiler breeching and piping that are supported from or on slabs, floors or walls that are contiguous to the dwelling unit shall be supported for a distance of 50 pipe diameters on or from resilient isolators. Each isolator shall have a minimum static deflection of 1 inch (25 mm).*

**926.2.2 Incinerator charging chutes.**

**926.2.2.1 Metal chutes.** *Metal chutes, metal chute supports, and/or metal chute bracing shall be free of direct contact with the shaft enclosure and the openings provided in the floor construction. Metal chutes shall be resiliently supported at each structural support location. Isolators shall provide a minimum static deflection of 0.30 inches (7.62 mm). All chutes shall be plumb.*

**926.2.2.2 Masonry chutes.** *The interior chute wall shall be plumb and without obstructions for the full height of the shaft and shall have a smooth interior finish.*

**926.2.3 Piping.** *Equipment piping shall be installed as follows:*

- 1. Metal piping connected to power driven equipment shall be resiliently supported from or on the building structure for a distance of 50 pipe diameters from the power driven equipment. The resilient isolators shall have a minimum static deflection of 1 inch (25 mm) for all piping with a 4 inch (25 mm) or larger in actual outside diameter and ½ inch (12.7 mm) for piping with less than 4 inches (25 mm) in actual outside diameter. Piping connected to fluid pressure-reducing valves shall be resiliently isolated for a distance of 50 pipe diameters from pressure reducing valves and isolators shall provide a minimum static deflection of ½ inch (12.7 mm).*
- 2. Equipment such as heat exchangers, absorption refrigeration machines, or similar equipment, that is located on any floor or roof other than a floor on grade, and that is not power driven but is connected by*

*metal piping to power driven equipment, shall be resiliently supported from or on the building structure, for a distance of 50 pipe diameters from the power driven equipment. The resilient supports shall be vibration isolators having a minimum static deflection of 1 inch (25 mm) and shall incorporate approved resilient pads having a minimum thickness of 1/4 inch (6.4 mm).*

**926.2.4 Fans.** *All fan equipment located on any roof or floor other than a floor on grade shall be mounted on or from vibration isolators. Fan equipment with motor drives separated from the fan equipment shall be supported on an isolated integral rigid structural base supporting both the fan and motor. Fan equipment with motor drives supported from the fan equipment shall be mounted directly on vibration isolators. Each isolator shall have provision for leveling. Isolators shall incorporate resilient pads having a minimum thickness of 1/4 inch (6.4 mm). The vibration isolators shall provide a minimum isolation efficiency of 90 percent at fan rotor rpm with a maximum deflection of 2 inches (51 mm). Fans and compressors of 3 horsepower (2.25 kW) or less assembled in unitary containers may meet this requirement with isolators internal to the container providing the isolators meet the above minimum isolator efficiencies.*

**926.2.5 Pumps.** *All pumps of 3 horsepower (2.25 kW) or more located on any floor other than a floor on grade shall be supported on vibration isolators having a minimum isolation efficiency of 85 percent at the lowest disturbing frequency. Each isolator shall incorporate a leveling device and a resilient pad having a minimum thickness of 1/4 inch (6.4 mm).*

**926.2.6 Compressors.** *Compressors and drives located on a floor other than a floor on grade shall be mounted on vibration isolators having a minimum isolation efficiency of 85 percent at the lowest disturbing frequency. Each isolator shall incorporate a leveling device and a resilient pad having a minimum thickness of 1/4 inch (6.4 mm).*

**926.2.7 Cooling towers.** *All moving parts of cooling towers located on a roof or floor other than a floor on grade shall be installed on vibration isolators providing a minimum isolation efficiency of 85 percent at fan rotor rpm with a maximum static deflection of 4 inches (102 mm). Each isolator shall incorporate a leveling device and a resilient pad having a minimum thickness of 1/4 inch (6.4 mm).*

**926.2.8 Evaporative condensers.** *Evaporative and air cooled condensers located on a roof or floor other than a floor on grade shall be mounted on vibration isolators providing a minimum isolation efficiency of 85 percent at fan rotor rpm with a maximum static deflection of 4 inches (102 mm). Each isolator shall incorporate a leveling device and a resilient pad having a minimum thickness of 1/4 inch (6.4 mm).*

**926.2.9 Duct connections to fan equipment.** *Flexible connections shall be installed between fan equipment and connecting ductwork.*

**CHAPTER 10**  
**BOILERS, WATER HEATERS AND**  
**PRESSURE VESSELS**

## **SECTION MC 1001**

### **GENERAL**

**1001.1 Scope.** *This chapter shall establish the minimum safety requirements for and shall govern the installation, alteration and repair of boilers, water heaters and pressure vessels.*

#### **Exceptions:**

- 1. Pressure vessels used for unheated water supply.*
- 2. Portable unfired pressure vessels and Interstate Commerce Commission containers.*
- 3. Containers for bulk oxygen and medical gas.*
- 4. Unfired pressure vessels having a volume of 5 cubic feet (0.14 m<sup>3</sup>) or less operating at pressures not exceeding 250 pounds per square inch (psi) (1724 kPa) and located within occupancies of Groups B, F, H, M, R, S and U.*
- 5. Pressure vessels used in refrigeration systems that are regulated by Chapter 11 of this code.*
- 6. Pressure tanks used in conjunction with coaxial cables, telephone cables, power cables and other similar humidity control systems.*

## **SECTION MC 1002**

### **WATER HEATERS**

**1002.1 General.** *Potable water heaters and hot water storage tanks shall be listed and labeled and installed in accordance with the manufacturer's installation instructions, the New York City Plumbing Code and this code. All water heaters shall be capable of being removed without first removing a permanent portion of the building structure. The potable water connections and relief valves for all water heaters shall conform to the requirements of the New York City Plumbing Code. Domestic electric water heaters shall comply with UL 174 or UL 1453. Commercial electric water heaters shall comply with UL 1453. Oil-fired water heaters shall comply with UL 732.*

**1002.2 Water heaters utilized for space heating.** *Water heaters utilized both to supply potable hot water and provide hot water for space-heating applications shall be listed and labeled for such applications by the manufacturer, and shall be built in accordance with Section IV of the ASME Boiler and Pressure Vessel Code with an "H" code stamp. They shall be installed in accordance with the manufacturer's installation instructions, the ASME Code and the New York City Plumbing Code.*

**1002.2.1 Sizing.** *Water heaters utilized for both potable water heating and space-heating applications shall be sized to prevent the space-heating load from diminishing the required potable water-heating capacity.*

**1002.2.2 Scald protection.** *Where a combination potable water-heating and space-heating system requires water for space heating at temperatures higher than 140°F (60°C), a tempering valve shall be provided to temper the water supplied to the potable hot water distribution system to a temperature of 140°F (60°C) or less.*

**1002.3 Supplemental water-heating devices.** *Potable water-heating devices that utilize refrigerant-to-water heat exchangers shall be approved and installed in accordance with the New York City Plumbing Code and the manufacturer's installation instructions.*

### **SECTION MC 1003 PRESSURE VESSELS**

**1003.1 General.** *All pressure vessels shall bear the label of an approved agency and shall be installed in accordance with the manufacturer's installation instructions. The requirements for unfired pressure vessels shall be the same as required for boilers designed for the same operating temperatures.*

**1003.2 Piping.** *All piping materials, fittings, joints, connections and devices associated with systems utilized in conjunction with pressure vessels shall be designed for the specific application and shall be approved.*

**1003.3 Welding.** *Welding on pressure vessels shall be performed by approved certified welders in compliance with nationally recognized standards, ASME Boiler and Pressure Vessel Code Sections VIII and IX, 12 NYCRR 4-6.2, and 12 NYCRR 14-3.3 through 14-3.18.*

### **SECTION MC 1004 BOILERS**

**1004.1 Standards.** *Oil-fired boilers and their control systems shall be listed and labeled in accordance with UL 726. Electric boilers and their control systems shall be listed and labeled in accordance with UL 834. Boilers shall be designed and constructed in accordance with the requirements of ASME CSD-1 and as applicable: the ASME Boiler and Pressure Vessel Code, Sections I, II, IV, V, VI, VIII and IX; 12 NYCRR Parts 4 and 14; NFPA 8501; NFPA 8502; and NFPA 8504.*

**1004.2 Installation.** *In addition to the requirements of this code, the installation of boilers shall conform to the manufacturer's instructions. Operating instructions of a permanent type shall be attached to the boiler. Boilers shall have all controls set, adjusted and tested by the installer. The manufacturer's rating data and the nameplate shall be attached to the boiler.*

**1004.3 Working clearance.** Clearances shall be maintained around boilers, generators, heaters, tanks and related equipment and appliances so as to permit inspection, servicing, repair, replacement and visibility of all gauges. When boilers are installed or replaced, clearance shall be provided to allow access for inspection, maintenance and repair. Passageways around all sides of boilers shall have an unobstructed width of not less than 18 inches (457 mm), unless otherwise approved, by the commissioner.

**1004.3.1 Top clearance.** High-pressure steam boilers having a steam-generating capacity in excess of 5,000 pounds per hour (2268 kg/h) or having a heating surface in excess of 1,000 square feet (93 m<sup>2</sup>) or input in excess of 5,000,000 Btu/h (1465 kW) shall have a minimum clearance of 7 feet (2134 mm) from the top of the boiler to the ceiling. Steam-heating boilers and hot-water-heating boilers that exceed one of the following limits: 5,000,000 Btu/h input (1465 kW); 5,000 pounds of steam per hour (2268 kg/h) capacity or a 1,000-square-foot (93 m<sup>2</sup>) heating surface; and high-pressure steam boilers that do not exceed one of the following limits: 5,000,000 Btu/h input (1465 kW); 5,000 pounds of steam per hour (2268 kg/h) capacity or a 1,000-square-foot (93 m<sup>2</sup>) heating surface; and all boilers with manholes on top of the boiler, shall have a minimum clearance of 3 feet (914 mm) from the top of the boiler to the ceiling. Package boilers, steam-heating boilers and hot-water-heating boilers without manholes on top of the shell and not exceeding one of the limits of this section shall have a minimum clearance of 2 feet (610 mm) from the ceiling.

**1004.4 Mounting.** Equipment and appliances shall be set or mounted on a level base capable of supporting and distributing the weight contained thereon. Boilers, tanks and equipment shall be securely anchored to the structure. Equipment and appliances requiring vibration isolation shall be installed as designed by a registered design professional in accordance with the manufacturer's installation instructions.

**1004.5 Floors.** Boilers shall be mounted on floors of noncombustible construction, unless listed for mounting on combustible flooring.

**1004.6 Boiler rooms and enclosures.** Boiler rooms and enclosures and access thereto shall comply with the New York City Building Code and Chapter 3 of this code. Boiler rooms shall be equipped with a floor drain or other approved means for disposing of liquid waste.

**1004.7 Operating adjustments and instructions.** Hot water and steam boilers shall have all operating and safety controls set and operationally tested by the installing contractor. A complete control diagram and boiler operating instructions shall be furnished by the installer for each installation.

**1004.8 Burner controls.** Gas and oil modulating burners shall be provided with burner controls (oil and gas equivalent ratings) in accordance with Table 1004.8.

**TABLE 1004.8**  
**MINIMUM CONTROL REQUIREMENTS**

<i>Type of Control</i>	<i>Gross Output Firing Rate of the Boiler or the Burner Oil Delivery Rate (gph), Whichever is Greater</i>		
	<i>#6 Oil</i>	<i>#4 Oil</i>	<i>#2 Oil</i>
<i>On-Off</i>	–	–	<10
<i>Low-High-Off with low fire start</i>	20 to <30	10 to <30	10 to <30
<i>Low-High-Low-Off with proven low fire start</i>	30 to <50	30 to <50	30 to <50
<i>Full Modulation with proven low fire start</i>	≥50	≥50	≥50
<i>Full Modulation with proven low fire start as well as Cross-Limited Oxygen Trim (dry cell electrochemical type)</i>	≥350	≥350	≥350

**SECTION MC 1005**  
**BOILER CONNECTIONS**

**1005.1 Valves.** Every boiler or modular boiler shall have a shutoff valve in the supply and return piping. For multiple boiler or multiple modular boiler installations, each boiler or modular boiler shall have individual shutoff valves in the supply and return piping.

**Exception:** Shutoff valves are not required in a system having a single low-pressure steam boiler of 350,000 Btu/h (103 kW) output or less.

**1005.2 Potable water supply.** The water supply to all boilers shall be connected in accordance with the New York City Plumbing Code.

**SECTION MC 1006**  
**SAFETY AND PRESSURE RELIEF VALVES**  
**AND CONTROLS**

**1006.1 Safety valves for steam boilers.** All steam boilers shall be protected with a safety valve.

**1006.2 Safety relief valves for hot water boilers.** Hot water boilers shall be protected with a safety relief valve.

**1006.3 Pressure relief for pressure vessels.** All pressure vessels shall be protected with a pressure relief valve or pressure-limiting device as required by the manufacturer's installation instructions for the pressure vessel.

**1006.4 Standards of safety and safety relief valves.** Safety and safety relief valves shall be listed and labeled, and shall have a minimum rated capacity for the equipment or appliances served. Safety and safety relief valves shall be set at a maximum of the nameplate pressure rating of the boiler or pressure vessel.

**1006.5 Installation.** Safety or relief valves shall be installed directly into the safety or relief valve opening on the boiler or pressure vessel. Valves shall not be located on either side of a safety or relief valve connection. The relief valve shall discharge by gravity.

**1006.6 Safety and relief valve discharge.** Safety and relief valve discharge pipes shall be of rigid pipe that is approved for the temperature of the system. The discharge pipe shall be the same diameter as the safety or relief valve outlet. Safety and relief valves shall not discharge so as to be a hazard, a potential cause of damage or otherwise a nuisance. High-pressure-steam safety valves shall be vented to the outside of the structure. Where a low-pressure safety valve or a relief valve discharges to the drainage system, the installation shall conform to the New York City Plumbing Code.

**1006.7 Boiler safety devices.** Boilers shall be equipped with controls and limit devices as required by the manufacturer's installation instructions and the conditions of the listing.

**1006.8 Electrical requirements.** The power supply to the electrical control system shall be from a two-wire branch circuit that has a grounded conductor, or from an isolation transformer with a two-wire secondary. Where an isolation transformer is provided, one conductor of the secondary winding shall be grounded. Control voltage shall not exceed 150 volts nominal, line to line. Control and limit devices shall interrupt the ungrounded side of the circuit. A means of manually disconnecting the control circuit shall be provided and controls shall be arranged so that when deenergized, the burner shall be inoperative. Such disconnecting means shall be capable of being locked in the off position and shall be provided with ready access.

**1006.8.1 Remote control (shutdown).** A remote control shall be provided to stop the flow of oil and/or gas and combustion air to any burner or fuel burning internal combustion equipment. Such control shall be located outside all means of egress to the room in which the burner or equipment is located and as close to such entrances as practicable, except that when an outside location is impracticable, such control may be located immediately inside the room in which the burner or equipment is located, provided such location is accessible at all times. All such controls shall be labeled: "REMOTE CONTROL FOR BURNER".

#### **SECTION MC 1007**

##### **BOILER LOW-WATER CUTOFF**

**1007.1 General.** All steam and hot water boilers shall be protected with dual low-water cutoff control.

**1007.1.1 High-Pressure boiler.** If the low-water cut off devices are mounted externally to the boiler, the main and auxiliary low-water cut offs shall be connected to the boiler using isolated steam side and water side connection. No other control devices, gauges or valves except for the water column drain shall be connected to the tappings on the boiler used for low-water cut offs.

**1007.2 Operation.** The low-water cutoff shall automatically stop the combustion operation of the appliance when the water level drops below the lowest safe water level as established by the manufacturer and in accordance with ASME CSD-1.

#### **SECTION MC 1008**

##### **BOILER BLOWOFF/BLOWDOWN VALVES**

**1008.1 General.** Every boiler shall be equipped with blowoff/blowdown valve(s). The valve(s) shall be installed in the openings provided on the boiler. The minimum quantity and size of each valve shall be the quantity and size specified by the boiler manufacturer or the quantity and size of the boiler blowoff/blowdown valve opening.

**1008.2 Discharge.** *Blowoff/blowdown valves shall discharge to a safe place of disposal. Where discharging to the drainage system, the installation shall conform to the New York City Plumbing Code.*

#### **SECTION MC 1009**

#### **HOT WATER BOILER EXPANSION TANK**

**1009.1 Where required.** *An expansion tank shall be installed in every hot water system. For multiple boiler installations, a minimum of one expansion tank is required. Expansion tanks shall be of the closed or open type. Tanks shall be rated for the pressure of the hot water system.*

**1009.2 Closed-type expansion tanks.** *Closed-type expansion tanks shall be installed in accordance with the manufacturer's instructions. The size of the tank shall be based on the capacity of the hot-water-heating system. The minimum size of the tank shall be determined in accordance with the following equation:*

$$V_t = \frac{(0.00041T - 0.0466)V_s}{\left(\frac{P_a}{P_f}\right) - \left(\frac{P_a}{P_o}\right)} \quad \text{(Equation 10-1)}$$

For SI:

$$V_t = \frac{(0.000738T - 0.03348)V_s}{\left(\frac{P_a}{P_f}\right) - \left(\frac{P_a}{P_o}\right)}$$

where:

$V_t$  = Minimum volume of tanks (gallons) (L).

$V_s$  = Volume of system, not including expansion tanks (gallons) (L).

$T$  = Average operating temperature (°F) (°C).

$P_a$  = Atmospheric pressure (psi) (kPa).

$P_f$  = Fill pressure (psi) (kPa).

$P_o$  = Maximum operating pressure (psi) (kPa).

**1009.3 Open-type expansion tanks.** *Open-type expansion tanks shall be located a minimum of 4 feet (1219 mm) above the highest heating element. The tank shall be adequately sized for the hot water system. An overflow with a minimum diameter of 1 inch (25 mm) shall be installed at the top of the tank. The overflow shall discharge to the drainage system in accordance with the New York City Plumbing Code.*

## **SECTION MC 1010**

### **GAUGES**

**1010.1 Hot water boiler gauges.** *Every hot water boiler shall have a pressure gauge and a temperature gauge, or a combination pressure and temperature gauge. The gauges shall indicate the temperature and pressure within the normal range of the system's operation.*

**1010.2 Steam boiler gauges.** *Every steam boiler shall have a water-gauge glass and a pressure gauge. The pressure gauge installed with a siphon shall indicate the pressure within the normal range of the system's operation.*

**1010.2.1 Water-gauge glass.** *The gauge glass shall be installed so that the midpoint is at the normal boiler water level.*

## **SECTION MC 1011**

### **TESTS**

**1011.1 Tests.** *Upon completion of the assembly and installation of boilers and pressure vessels, acceptance tests shall be conducted in accordance with the requirements of the ASME Boiler and Pressure Vessel Code. Boilers shall not be placed in operation upon completion of construction until they have been inspected and tested and a certificate of compliance has been issued by the commissioner. All final inspections and tests for boilers shall be made by a qualified boiler inspector in the employ of the department or a duly authorized insurance company as provided in Section 204 of the Labor Law of the State of New York. Equipment having a Btu input of not more than 350,000 Btu/h (103 kW) shall be exempt from this requirement. Where field assembly of pressure vessels or boilers is required, a copy of the completed U-1 Manufacturer's Data Report required by the ASME Boiler and Pressure Vessel Code shall be submitted to the department.*

**1011.2 Test gauges.** *An indicating test gauge shall be connected directly to the boiler or pressure vessel where it is visible to the operator throughout the duration of the test. The pressure gauge scale shall be graduated over a range of not less than one and one-half times and not greater than four times the maximum test pressure. All gauges utilized for testing shall be calibrated and certified by the test operator.*

**1011.3 Periodic boiler inspections.** *Periodic boiler inspections shall be performed in accordance with Section 28-303 of the Administrative Code.*

## **CHAPTER 11**

## **REFRIGERATION**

### **SECTION MC 1101**

#### **GENERAL**

**1101.1 Scope.** *This chapter shall govern the design, installation, construction and repair of refrigeration systems that vaporize and liquefy a fluid during the refrigerating cycle. Refrigerant piping design and installation, including pressure vessels and pressure relief devices, shall conform to this code. Permanently installed refrigerant storage systems and other components shall be considered as part of the refrigeration system to which they are attached.*

**1101.2 Factory-built equipment and appliances.** *Listed and labeled self-contained, factory-built equipment and appliances shall be tested in accordance with UL 207, 412, 471 or 1995. Such equipment and appliances are deemed to meet the design, manufacture and factory test requirements of this code if installed in accordance with their listing and the manufacturer's installation instructions.*

**1101.3 Protection.** *Any portion of a refrigeration system that is subject to physical damage shall be protected in an approved manner.*

**1101.4 Water connection.** *Water supply and discharge connections associated with refrigeration systems shall be made in accordance with this code and the New York City Plumbing Code.*

**1101.5 Fuel-oil and fuel-gas connection.** *Refrigeration system devices, equipment and appliances utilizing fuel oil or fuel gas for combustion shall be installed in accordance with the applicable provisions of the New York City Fuel Gas Code and this code.*

**1101.6 General.** *Refrigeration systems shall comply with the requirements of this code and, except as modified by this code, ASHRAE 15. Ammonia-refrigerating systems shall comply with this code and, except as modified by this code, ASHRAE 15 and IAR 2.*

**1101.7 Maintenance.** *Mechanical refrigeration systems shall be maintained in proper operating condition, free from accumulations of oil, dirt, waste, excessive corrosion, other debris and leaks.*

**1101.8 Change in refrigerant type.** *The type of refrigerant in refrigeration systems having a refrigerant circuit containing more than 220 pounds (100 kg) of Group A1 or 30 pounds (13.6 kg) of any other group refrigerant shall not be changed without prior notification to the commissioner and compliance with the applicable code provisions for the new refrigerant type. The refrigerant being considered shall be evaluated for suitability by an engineer. Whenever change in the type of refrigerant is to be done, consideration shall be given to the following:*

1. *The effects of the substitute refrigerant on materials in the system;*

2. *The possibility of overloading the liquid receiver, which shall not be more than 80 percent full of liquid;*
3. *The possibility of exceeding motor rating, design working pressure, or other requirements that would violate any of the provisions of this code;*
4. *The proper size of refrigerant controls;*
5. *The effect of the operation and setting of safety devices;*
6. *The possible hazards created by mixture of the original and the substituted refrigerant; and*
7. *The effect of the classification of the refrigerant as provided.*

**1101.9 Refrigerant discharge.** *Notification of refrigerant discharge shall be provided in accordance with the New York City Fire Code.*

**1101.10 Gas and oil fired absorption systems.** *Refrigeration systems utilizing fuel oil or fuel gas for combustion shall be installed in accordance with the applicable provisions of the New York City Fuel Gas Code and this code.*

**1101.11 Signs, nameplates, and operation and emergency shutdown instructions.** *Signs, nameplates, and operation and emergency shutdown instructions for refrigeration systems shall comply with the following:*

1. *Sections 9.15, 11.2.1, 11.2.2, 11.2.4, and 11.7 of ASHRAE 15.*
2. *Each refrigeration unit or system shall be provided with a nameplate indicating the horsepower of the prime mover or compressor and the equivalent of such horsepower in kilowatts.*
3. *Section 1105.10 of this code.*

## **SECTION MC 1102 SYSTEM REQUIREMENTS**

**1102.1 General.** *The system classification, allowable refrigerants, maximum quantity, enclosure requirements, location limitations, and field pressure test requirements shall be determined as follows:*

1. *Determine the refrigeration systems classification, in accordance with Section 1103.3.*
2. *Determine the refrigerant classification in accordance with Section 1103.1.*
3. *Determine the maximum allowable quantity of refrigerant in accordance with Section 1104, based on type of*

*refrigerant, system classification, and occupancy.*

4. *Determine the system enclosure requirements in accordance with Section 1104.*
5. *Refrigeration equipment and appliance location and installation shall be subject to the limitations of Chapter 3.*
6. *Nonfactory-tested, field-erected equipment and appliances shall be pressure tested in accordance with Section 1108.*

**1102.2 Refrigerants.** *The refrigerant shall be that which the equipment or appliance was designed to utilize or converted to utilize. Refrigerants not identified in Table 1103.1 shall be approved before use.*

**1102.2.1 Mixing.** *Refrigerants, including refrigerant blends, with different designations in ASHRAE 34 shall not be mixed in a system.*

**Exception:** *Addition of a second refrigerant is allowed where permitted by the equipment or appliance manufacturer to improve oil return at low temperatures. The refrigerant and amount added shall be in accordance with the manufacturer's instructions.*

**1102.2.2 Purity.** *Refrigerants used in refrigeration systems shall be new, recovered or reclaimed refrigerants in accordance with Section 1102.2.2.1, 1102.2.2.2 or 1102.2.2.3. Where required by the equipment or appliance owner, the installer shall furnish a signed declaration that the refrigerant used meets the requirements of Section 1102.2.2.1, 1102.2.2.2 or 1102.2.2.3.*

**Exception:** *The refrigerant used shall meet the purity specifications set by the manufacturer of the equipment or appliance in which such refrigerant is used where such specifications are different from that specified in Sections 1102.2.2.1, 1102.2.2.2 and 1102.2.2.3.*

**1102.2.2.1 New refrigerants.** *Refrigerants shall be of a purity level specified by the equipment or appliance manufacturer.*

**1102.2.2.2 Recovered refrigerants.** *Refrigerants that are recovered from refrigeration and air-conditioning systems shall not be reused in other than the system from which they were recovered and in other systems of the same owner. Recovered refrigerants shall be filtered and dried before reuse. Recovered refrigerants that show clear signs of contamination shall not be reused unless reclaimed in accordance with Section 1102.2.2.3.*

**1102.2.2.3 Reclaimed refrigerants.** *Used refrigerants shall not be reused in a different owner's equipment or appliances unless tested and found to meet the purity requirements of ARI 700. Contaminated refrigerants*

*shall not be used unless reclaimed and found to meet the purity requirements of ARI 700.*

**SECTION MC 1103**  
**REFRIGERATION SYSTEM CLASSIFICATION**

**1103.1 Refrigerant classification.** *Refrigerants shall be classified in accordance with ASHRAE 34 as listed in Table 1103.1.*

[F] TABLE 1103.1  
REFRIGERANT CLASSIFICATION, AMOUNT AND TLV-TWA

REFRIGERANT	CHEMICAL FORMULA	CHEMICAL NAME OR BLEND	HAZARD CATEGORIES*	REFRIGERANT CLASSIFICATION	DEGREES OF HAZARD <sup>b</sup>	[M] AMOUNT OF REFRIGERANT PER OCCUPIED SPACE

[F] TABLE 1103.1 (continued)  
REFRIGERANT CLASSIFICATION, AMOUNT AND TLV-TWA

REFRIGERANT	CHEMICAL FORMULA	CHEMICAL NAME OR BLEND	HAZARD CATEGORIES <sup>a</sup>	REFRIGERANT CLASSIFICATION OF HAZARD <sup>b</sup>	DEGREES OF HAZARD <sup>b</sup>	[M] AMOUNT OF REFRIGERANT PER OCCUPIED SPACE			
						Pounds per 1,000 cubic feet	ppm	g/m	TLV-TWA <sup>f</sup> (ppm)
R-717	NH <sub>3</sub>	Ammonia	CG,C,F,OHH	B2	3-3-0 <sup>d</sup>	0.022	500	0.35	25
R-718	H <sub>2</sub> O	Water	—	A1	0-0-0	—	—	—	—
R-744	CO <sub>2</sub>	Carbon dioxide	CG,OHH	A1	2-0-0 <sup>d</sup>	4.5	40,000	72	5,000
R-1150	CH <sub>2</sub> =CH <sub>2</sub>	Ethene (ethylene)	CG,F,OHH	A3	1-4-2	0.38	5,200	6.0	1,000
R-1270	CH <sub>3</sub> CH=CH <sub>2</sub>	Propene (propylene)	CG,F,OHH	B3	1-4-1	0.37	3,400	5.0	660

For SI: 1 pound = 0.454 kg, 1 cubic foot = 0.0283 m<sup>3</sup>

a. CG = Compressed gas; C = Corrosive; F = Flammable; OHH = Other Health Hazard.

b. Degrees of hazard are for health, fire, and reactivity, respectively, in accordance with NFPA 704.

c. Reduction to 1-0-0 is allowed if analysis satisfactory to the code official shows that the maximum concentration for a rupture or full loss of refrigerant charge would not exceed the IDLH, considering both the refrigerant quantity and room volume.

d. For installations that are entirely outdoors, use 3-1-0.

e. Class I ozone depleting substance; prohibited for new installations.

f. PEL or consistent occupational exposure limit on a time-weighted average (TWA) basis (unless noted C for ceiling) for an 8 hr/d and 40 hr/wk.

**1103.2 Occupancy classification.** Locations of refrigerating systems are described by occupancy classifications that consider the ability of people to respond to potential exposure to refrigerants. Where equipment or appliances, other than piping, are located outside a building and within 20 feet (6096 mm) of any building opening, such equipment or appliances shall be governed by the occupancy classification of the building. Occupancy classifications shall be defined as follows:

1. *Institutional occupancy is that portion of premises from which, because they are disabled, debilitated or confined, occupants cannot readily leave without the assistance of others. Institutional occupancies include, among others, hospitals, nursing homes, asylums and spaces containing locked cells.*
2. *Public assembly occupancy is that portion of premises where large numbers of people congregate and from which occupants cannot quickly vacate the space. Public assembly occupancies include, among others, auditoriums, ballrooms, classrooms, passenger depots, restaurants and theaters.*
3. *Residential occupancy is that portion of premises that provides the occupants with complete independent living facilities, including permanent provisions for living, sleeping, eating, cooking and sanitation. Residential occupancies include, among others, dormitories, hotels, multiunit apartments and private residences.*
4. *Commercial occupancy is that portion of premises where people transact business, receive personal service or purchase food and other goods. Commercial occupancies include, among others, office and professional buildings, markets (but not large mercantile occupancies) and work or storage areas that do not qualify as industrial occupancies.*
5. *Large mercantile occupancy is that portion of premises where more than 100 persons congregate on levels above or below street level to purchase personal merchandise.*
6. *Industrial occupancy is that portion of premises that is not open to the public, where access by authorized persons is controlled, and that is used to manufacture, process or store goods such as chemicals, food, ice, meat or petroleum.*
7. *Mixed occupancy occurs when two or more occupancies are located within the same building. When each occupancy is isolated from the rest of the building by tight walls, floors and ceilings and by self-closing doors, the requirements for each occupancy shall apply to its portion of the building. When the various occupancies are not so isolated, the occupancy having the most stringent requirements shall be the governing occupancy.*

**1103.3 System classification.** Refrigeration systems shall be classified according to the degree of probability that refrigerant leaked from a failed connection, seal, or component could enter an occupied area. The distinction is based on the basic design or location of the components.

**1103.3.1 Low-probability systems.** *Double-indirect open-spray systems, indirect closed systems and indirect vented closed systems shall be classified as low-probability systems, provided that all refrigerant-containing piping and fittings are isolated when the quantities in Table 1103.1 are exceeded.*

**1103.3.2 High-probability systems.** *Direct systems and indirect open-spray systems shall be classified as high-probability systems.*

**Exception:** *An indirect open-spray system shall not be required to be classified as a high-probability system if the pressure of the secondary coolant is at all times (operating and standby) greater than the pressure of the refrigerant.*

## **SECTION MC 1104 SYSTEM APPLICATION REQUIREMENTS**

**1104.1 General.** *The refrigerant, occupancy and system classification cited in this section shall be determined in accordance with Sections 1103.1, 1103.2 and 1103.3, respectively. For refrigerant blends assigned dual classifications, as formulated and for the worst case of fractionation, the classifications for the worst case of fractionation shall be used. Use of a Group A3 or Group B3 refrigerant is prohibited. In an industrial occupancy, a Group A3 or Group B3 refrigerant may be used in high or low-probability systems only when approved by the commissioner and the Commissioner of the Fire Department. Such use will be approved only if the applicant can demonstrate to the satisfaction of the commissioner and the Commissioner of the Fire Department that the use of the refrigerant is a necessity and does not represent a substantial risk to life, limb, health or property.*

**1104.2 Machinery room.** *Except as provided in Sections 1104.2.1 and 1104.2.2, all components containing the refrigerant shall be located either outdoors or in a machinery room where the quantity of refrigerant in an independent circuit of a system exceeds the amounts shown in Table 1103.1. For refrigerant blends not listed in Table 1103.1, the same requirement shall apply when the amount for any blend component exceeds that indicated in Table 1103.1 for that component. This requirement shall also apply when the combined amount of the blend components exceeds a limit of 69,100 parts per million (ppm) by volume. Machinery rooms required by this section shall be constructed and maintained in accordance with Section 1105 for Group A1 and B1 refrigerants and in accordance with Sections 1105 and 1106 for Group A2, B2, A3 and B3 refrigerants. Nothing in this section shall be construed to allow the use of Group A3 and B3 refrigerants if otherwise prohibited.*

### **Exceptions:**

- 1. Machinery rooms are not required for listed equipment and appliances containing not more than 6.6 pounds (3 kg) of refrigerant, regardless of the refrigerant's safety classification, where installed in accordance with the equipment's or appliance's listing and the equipment or appliance manufacturer's installation instructions.*

2. Piping in conformance with Section 1107 of this chapter and Section 8.10 of ASHRAE 15 is allowed in other locations to connect components installed in a machinery room with those installed outdoors.

**1104.2.1 Institutional occupancies.** The amounts shown in Table 1103.1 shall be reduced by 50 percent for all areas of institutional occupancies except kitchens, laboratories, and mortuaries. The total of all Group A2, B2, A3 and B3 refrigerants shall not exceed 550 pounds (250 kg) in occupied areas or machinery rooms. Nothing in this section shall be construed to allow the use of Group A3 and B3 refrigerants if otherwise prohibited.

**1104.2.2 Industrial occupancies and refrigerated rooms.** This section applies only to industrial occupancies and refrigerated rooms for manufacturing, food and beverage preparation, meat cutting, other processes and storage. Machinery rooms are not required where all of the following conditions are met:

1. The space containing the machinery is separated from other occupancies by tight construction with tight-fitting doors.
2. Access is restricted to authorized personnel.
3. The floor area per occupant is not less than 100 square feet (9.3 m<sup>2</sup>). Where provided with egress directly to the outdoors or into building exits meeting the requirements of the New York City Building Code, the minimum floor area shall not apply.
4. Refrigerant detectors are installed as required for machinery rooms in accordance with Section 1105.3.
5. Surfaces having temperatures exceeding 800°F (427°C) and open flames are not present where any Group A2, B2, A3 or B3 refrigerant is used (see Section 1104.3.4). Nothing in this section shall be construed to allow the use of Group A3 and B3 refrigerants if otherwise prohibited.
6. All electrical equipment and appliances conform to Class 1, Division 2, hazardous location classification requirements of NFPA 70 where the quantity of any Group A2, B2, A3 or B3 refrigerant in a single independent circuit would exceed 25 percent of the lower flammability limit (LFL) upon release to the space. Nothing in this section shall be construed to allow the use of Group A3 and B3 refrigerants if otherwise prohibited.
7. All refrigerant-containing parts in systems exceeding 100 hp (74.6 kW) drive power, except evaporators used for refrigeration or dehumidification; condensers used for heating; control and pressure relief valves for either; and connecting piping, shall be located either outdoors or in a machinery room.

**1104.3 Refrigerant restrictions.** Refrigerant applications, maximum quantities and use shall be restricted in

accordance with Sections 1104.3.1 through 1104.3.4.

**1104.3.1 Air-conditioning for human comfort.** *In other than industrial occupancies where the quantity in a single independent circuit does not exceed the amount in Table 1103.1, Group B1, B2 and B3 refrigerants shall not be used in high-probability systems for air-conditioning for human comfort. Nothing in this section shall be construed to allow the use of Group A3 and B3 refrigerants if otherwise prohibited.*

**1104.3.2 Nonindustrial occupancies.** *Group A2 and B2 refrigerants shall not be used in high-probability systems where the quantity of refrigerant in any independent refrigerant circuit exceeds the amount shown in Table 1104.3.2.*

**TABLE 1104.3.2  
MAXIMUM PERMISSIBLE QUANTITIES OF REFRIGERANTS**

TYPE OF REFRIGERATION SYSTEM	MAXIMUM POUNDS (kg) FOR VARIOUS OCCUPANCIES			
	Institutional	Assembly	Residential	All other occupancies
<b>Sealed absorption system</b>				
In exit access	0(0)	0(0)	3.3(1.5)	3.3(1.5)
In adjacent outdoor locations	0(0)	0(0)	22(10)	22(10)
In other than exit access	0(0)	6.6(3)	6.6(3)	6.6(3)
<b>Unit systems</b>				
In other than exit access	0(0)	0(0)	6.6(3)	6.6(3)

For SI: 1 pound = 0.454 kg.

**1104.3.3 All occupancies.** *The total of all Group A2, B2, A3 and B3 refrigerants other than R-717, ammonia, shall not exceed 1,100 pounds (499 kg) except where approved. Nothing in this section shall be construed to allow the use of Group A3 and B3 refrigerants if otherwise prohibited.*

**1104.3.4 Protection from refrigerant decomposition.** *Where any device having an open flame or surface temperature greater than 800°F (427°C) is used in a room containing more than 6.6 pounds (3 kg) of refrigerant in a single independent circuit, a hood and exhaust system shall be provided in accordance with Section 510. Such exhaust system shall exhaust combustion products to the outdoors.*

**Exception:** *A hood and exhaust system shall not be required:*

1. *Where the refrigerant is R-717, R-718, or R-744;*
2. *Where the combustion air is ducted from the outdoors in a manner that prevents leaked refrigerant from being combusted; or*
3. *Where a refrigerant detector is used to stop the combustion in the event of a refrigerant leak (see Sections 1105.3 and 1105.5).*

**1104.4 Volume calculations.** *Volume calculations shall be in accordance with Sections 1104.4.1 through 1104.4.3.*

**1104.4.1 Noncommunicating spaces.** *Where the refrigerant-containing parts of a system are located in one or more spaces that do not communicate through permanent openings or HVAC ducts, the volume of the smallest, enclosed occupied space shall be used to determine the permissible quantity of refrigerant in the system.*

**1104.4.2 Communicating spaces.** *Where an evaporator or condenser is located in an air duct system, the volume of the smallest, enclosed occupied space served by the duct system shall be used to determine the maximum allowable quantity of refrigerant in the system.*

**Exception:** *If airflow to any enclosed space cannot be reduced below one-quarter of its maximum, the entire space served by the air duct system shall be used to determine the maximum allowable quantity of refrigerant in the system.*

**1104.4.3 Plenums.** *Where the space above a suspended ceiling is continuous and part of the supply or return air plenum system, this space shall be included in calculating the volume of the enclosed space.*

## **SECTION MC 1105**

### **MACHINERY ROOM, GENERAL REQUIREMENTS**

**1105.1 Design and construction.** *Machinery rooms shall be designed and constructed in accordance with the New*

*York City Building Code and this section.*

**1105.2 Openings.** *Ducts and air handlers in the machinery room that operate at a lower pressure than the room shall be sealed to prevent any refrigerant leakage from entering the airstream.*

**1105.3 Refrigerant detector.** *Refrigerant detectors in machinery rooms shall be provided as required by ASHRAE 15.*

**1105.4 Tests.** *Periodic tests of the mechanical ventilating system shall be performed in accordance with manufacturer's specifications and as required by the Commissioner of the Fire Department.*

**1105.5 Fuel-burning appliances.** *Open flames that use combustion air from the machinery room shall not be installed in a machinery room.*

**Exceptions:**

1. *Matches, lighters, halide leak detectors and similar devices.*
2. *Where the refrigerant is carbon dioxide or water.*
3. *Fuel-burning appliances shall not be prohibited in the same machinery room with refrigerant-containing equipment or appliances where combustion air is ducted from outside the machinery room and sealed in such a manner as to prevent any refrigerant leakage from entering the combustion chamber, or where a refrigerant vapor detector is employed to automatically shut off the combustion process in the event of refrigerant leakage.*

**1105.6 Ventilation.** *Machinery rooms shall be mechanically ventilated to the outdoors. Mechanical ventilation shall be capable of exhausting the minimum quantity of air both at normal operating and emergency conditions. Multiple fans or multispeed fans shall be allowed in order to produce the emergency ventilation rate and to obtain a reduced airflow for normal ventilation. Location of the mechanical ventilation openings shall be based on the relative density of the refrigerant to air. When compressors or self-contained unit system are housed in a machinery space, other than in a machinery room or plenum, the space shall be ventilated in accordance with the requirements of Section 1105.6.3.*

**Exception:** *Where a refrigerating system is located outdoors more than 20 feet (6096 mm) from any building opening and is enclosed by a penthouse, lean-to or other open structure, natural ventilation may be provided in lieu of mechanical ventilation. Location of the natural ventilation openings shall be based on the relative density of the refrigerant to air. The free-aperture cross section for the ventilation of the machinery room shall be not less than:*

$$F = \sqrt{G} \quad \text{(Equation 11-1)}$$

For SI:  $F = 0.138 \sqrt{G}$

where:

$F$  = The free opening area in square feet ( $m^2$ ).

$G$  = The mass of refrigerant in pounds (kg) in the largest system, any part of which is located in the machinery room.

**1105.6.1 Discharge location.** *The discharge of the air shall be to the outdoors in accordance with Chapter 5. Exhaust from mechanical ventilation systems shall be discharged not less than 20 feet (6096 mm) from outdoor air intake or openings into buildings and 10 feet (3048 mm) from a fire escape or exterior stair.*

**1105.6.2 Make-up air.** *Provisions shall be made for make-up air to replace that being exhausted. Openings for make-up air shall be located to avoid intake of exhaust air. Supply and exhaust ducts to the machinery room shall serve no other area, shall be constructed in accordance with Chapter 5 and shall be covered with corrosion-resistant screen of not less than ¼-inch (6.4 mm) mesh.*

**Exception:** *The requirement for supply and exhaust ducts to the machinery room to serve no other area shall not apply to a change in the type of refrigerant in a lawfully installed existing refrigerating system being maintained and operated in accordance with these approved installation requirements:*

1. *Where the replacement refrigerant has a safety classification of Group A1; or*
2. *Where the replacement refrigerant is R123 and the engineer or architect demonstrates to the satisfaction of the commissioner that providing such air supply and exhaust ducts represents a hardship and that the proposed alternative provides an equivalent level of safety.*

**1105.6.3 Quantity-normal ventilation.** *During occupied conditions, the mechanical ventilation system shall exhaust the larger of the following:*

1. *Not less than 0.5 cfm per square foot ( $0.0025\text{m}^3/\text{s m}^2$ ) of machinery room area or 20 cfm ( $0.009\text{m}^3/\text{s}$ ) per person; or*
2. *A volume required to limit the room temperature rise to  $18^\circ\text{F}$  ( $10^\circ\text{C}$ ) taking into account the ambient heating effect of all machinery in the room but not above a maximum temperature of  $122^\circ\text{F}$  ( $50^\circ\text{C}$ ).*

**1105.6.4 Quantity-emergency conditions.** *Upon actuation of the refrigerant detector required in Section 1105.3, the mechanical ventilation system shall exhaust air from the machinery room in the following quantity:*

$$Q = 100 \times \sqrt{G} \quad \text{(Equation 11-2)}$$

$$\text{For SI: } Q = 0.07 \times \sqrt{G}$$

where:

$Q$  = The airflow in cubic feet per minute ( $\text{m}^3/\text{s}$ ).

$G$  = The design mass of refrigerant in pounds (kg) in the largest system, any part of which is located in the machinery room.

**1105.7 Termination of relief devices.** *In addition to the requirements of Section 9.7.8 of ASHRAE 15, pressure relief devices, fusible plugs and purge systems located within the machinery room shall terminate outside of the structure at a location not less than 15 feet (4572 mm) above the adjoining grade level and not less than 20 feet (6096 mm) from any window, ventilation opening or exit.*

**1105.7.1 Discharge of Group A2, B2, A3 and B3 refrigerants.** *Discharge of systems containing Group A2 or B2 refrigerants shall be acceptable to the commissioner. Discharge of systems containing Group A3 or B3 refrigerants shall be subject to the approval of the commissioner and the Commissioner of the Fire Department. Nothing in this section shall be construed to approve the use of Group A3 and B3 refrigerants if otherwise prohibited.*

**1105.7.2 Certificate of qualification.** *Discharge of pressure relief devices, fusible plugs and purge systems for refrigerating systems containing flammable, toxic and highly toxic refrigerants and ammonia shall comply with Section 606 of the New York City Fire Code.*

**1105.8 Ammonia discharge.** *Pressure relief valves for ammonia systems shall discharge in accordance with ASHRAE 15.*

**1105.9 Remote control.** *A clearly identified switch of the break-glass type shall provide off-only control of the compressors in the machinery room. A second clearly identified switch of the break-glass type shall provide on-only control of the machinery room ventilation fans. Such switches shall be located outside each entrance to the machinery room and as close to the entrance as practicable, except that when an outside location is impracticable, such switches may be located immediately inside the machinery room provided such location is accessible at all times.*

**1105.10 Emergency signs.** *Signs shall comply with the following:*

1. *Sections 8.11.8 and 11.2.4 of ASHRAE 15.*
2. *Refrigeration units or systems having a refrigerant circuit containing more than 220 pounds (100 kg) of Group A1 or 30 pounds (14 kg) of any other group refrigerant shall be provided with approved emergency signs, charts, and labels in accordance with NFPA 704.*

## **SECTION MC 1106**

### **MACHINERY ROOM, SPECIAL REQUIREMENTS**

**1106.1 General.** *Where required by Section 1104.2, the machinery room shall meet the requirements of this section in addition to the requirements of Section 1105.*

**1106.2 Elevated temperature.** *There shall not be an open flame-producing device or continuously operating hot surface over 800°F (427°C) permanently installed in the room.*

**1106.3 Ammonia room ventilation.** Ventilation systems in ammonia machinery rooms shall be operated continuously.

**Exceptions:**

1. Machinery rooms equipped with a vapor detector that will automatically start the ventilation system and actuate an alarm at a detection level not to exceed 1,000 ppm; or
2. Machinery rooms conforming to the Class 1, Division 2, hazardous location classification requirements of the New York City Electrical Code.

**1106.4 Flammable refrigerants.** Where refrigerants of Groups A2, A3, B2 and B3 are used, the machinery room shall conform to the Class 1, Division 2, hazardous location classification requirements of the New York City Electrical Code.

**Exception:** Ammonia machinery rooms. Nothing in this section shall be construed to approve the use of Group A3 and B3 refrigerants if otherwise prohibited.

**1106.5 Remote controls.** Remote control of the mechanical equipment and appliances located in the machinery room shall be provided at an accessible location immediately outside the machinery room and adjacent to its principal entrance.

**1106.5.1 Refrigeration system.** A clearly identified switch of the break-glass type shall provide off-only control of all electrically energized equipment and appliances in the machinery room, other than refrigerant leak detectors and machinery room ventilation.

**1106.6 Reserved.**

**SECTION MC 1107  
REFRIGERANT PIPING**

**1107.1 General.** All refrigerant piping shall be installed, tested and placed in operation in accordance with this chapter.

**1107.2 Pipe enclosures.** Rigid or flexible metal enclosures or pipe ducts shall be provided for soft, annealed copper tubing used for refrigerant piping erected on the premises and containing other than Group A1 refrigerant. Enclosures shall not be required for connections between condensing units and the nearest riser box(es), provided such connections do not exceed 6 feet (1829 mm) in length.

**1107.3 Condensation.** All refrigerating piping and fittings, brine piping and fittings that, during normal operation,

will reach a surface temperature below the dew point of the surrounding air, and are located in spaces or areas where condensation will cause a safety hazard to the building occupants, structure, electrical equipment or any other equipment or appliances, shall be protected in an approved manner to prevent such damage.

**1107.4 Materials for refrigerant pipe and tubing.** Piping materials shall be as set forth in Sections 1107.4.1 through 1107.4.6.

**1107.4.1 Steel pipe.** Carbon steel pipe with a wall thickness not less than Schedule 80 shall be used for Group A2, A3, B2 or B3 refrigerant liquid lines for sizes 1.5 inches (38 mm) and smaller. Carbon steel pipe with a wall thickness not less than Schedule 40 shall be used for Group A1 or B1 refrigerant liquid lines 6 inches (152 mm) and smaller, Group A2, A3, B2 or B3 refrigerant liquid lines sizes 2 inches (51 mm) through 6 inches (152 mm) and all refrigerant suction and discharge lines 6 inches (152 mm) and smaller. Type F steel pipe shall not be used for refrigerant lines having an operating temperature less than -20°F (-29°C).

**1107.4.2 Copper and brass pipe.** Standard iron-pipe size, copper and red brass (not less than 80-percent copper) pipe shall conform to ASTM B 42 and ASTM B 43.

**1107.4.3 Copper tube.** Copper tube used for refrigerant piping erected on the premises shall be seamless copper tube of Type ACR (hard or annealed) complying with ASTM B 280. Where approved, copper tube for refrigerant piping erected on the premises shall be seamless copper tube of Type K or L (drawn or annealed) in accordance with ASTM B 88. Annealed temper copper tube shall not be used in sizes larger than a 2-inch (51 mm) nominal size. Mechanical joints shall not be used on annealed temper copper tube in sizes larger than <sup>7</sup>/<sub>8</sub>-inch (22.2 mm) OD size.

**1107.4.4 Copper tubing joints.** Copper tubing joints used in refrigerating systems containing Group A2, A3, B1, B2 or B3 refrigerants shall be brazed. Soldered joints shall not be used in such refrigerating systems.

**1107.4.5 Aluminum tube.** Type 3003-0 aluminum tubing with high-pressure fittings shall not be used with methyl chloride and other refrigerants known to attack aluminum.

**1107.4.6 Insulation.** Pipe and chiller insulation shall meet the requirements of Section 1204.1 of this code.

**1107.5 Joints and refrigerant-containing parts in air ducts.** Joints and all refrigerant-containing parts of a refrigerating system located in an air duct of an air-conditioning system carrying conditioned air to and from human-occupied space shall be constructed to withstand, without leakage, a pressure of 150 percent of the higher of the design pressure or pressure relief device setting.

**1107.6 Exposure of refrigerant pipe joints.** Refrigerant pipe joints erected on the premises shall be exposed for visual inspection prior to being covered or enclosed.

**1107.7 Stop valves.** All systems containing more than 6.6 pounds (3 kg) of a refrigerant in systems using positive-displacement compressors shall have stop valves installed as follows:

1. At the inlet of each compressor, compressor unit or condensing unit.
2. At the discharge outlet of each compressor, compressor unit or condensing unit and of each liquid receiver.

**Exceptions:**

1. Systems that have a refrigerant pumpout function capable of storing the entire refrigerant charge in a receiver or heat exchanger.
2. Systems that are equipped with provisions for pumpout of the refrigerant using either portable or permanently installed recovery equipment.
3. Self-contained systems.

**1107.7.1 Liquid receivers.** All systems containing 100 pounds (45 kg) or more of a refrigerant, other than systems utilizing nonpositive displacement compressors, shall have stop valves, in addition to those required by Section 1107.7, on each inlet of each liquid receiver. Stop valves shall not be required on the inlet of a receiver in a condensing unit, nor on the inlet of a receiver which is an integral part of the condenser.

**1107.7.2 Copper tubing.** Stop valves used with soft annealed copper tubing or hard-drawn copper tubing  $\frac{7}{8}$ -inch (22.2 mm) OD standard size or smaller shall be securely mounted, independent of tubing fastenings or supports.

**1107.7.3 Identification.** Stop valves shall be identified where their intended purpose is not obvious. Numbers shall not be used to label the valves, unless a key to the numbers is located near the valves.

## **SECTION MC 1108**

### **FIELD TEST**

**1108.1 General.** Every refrigerant-containing part of every system that is erected on the premises, except compressors, condensers, vessels, evaporators, safety devices, pressure gauges and control mechanisms that are listed and factory tested, shall be tested and proved tight after complete installation, and before operation. Tests shall include both the high- and low-pressure sides of each system at not less than the lower of the design pressures or the setting of the pressure relief device(s). The design pressures for testing shall be those listed on the condensing unit, compressor or compressor unit name-plate, as required by ASHRAE 15.

**Exceptions:**

1. *Gas bulk storage tanks that are not permanently connected to a refrigeration system.*
2. *Systems using an A1 refrigerant erected on the premises with copper tubing not exceeding  $5/8$ -inch (15.8 mm) OD, with wall thickness as required by ASHRAE 15, shall be tested in accordance with Section 1108.1, or by means of refrigerant charged into the system at the saturated vapor pressure of the refrigerant at 70°F (21°C) or higher.*
3. *Limited-charge systems equipped with a pressure relief device, erected on the premises, shall be tested at a pressure not less than one and one-half times the pressure setting of the relief device. If the equipment or appliance has been tested by the manufacturer at one and one-half times the design pressure, the test after erection on the premises shall be conducted at the design pressure.*

**1108.1.1 Booster compressor.** *Where a compressor is used as a booster to obtain an intermediate pressure and discharges into the suction side of another compressor, the booster compressor shall be considered a part of the low side, provided that it is protected by a pressure relief device.*

**1108.1.2 Centrifugal/nonpositive displacement compressors.** *In field-testing systems using centrifugal or other nonpositive displacement compressors, the entire system shall be considered as the low-side pressure for field test purposes.*

**1108.2 Test gases.** *Tests shall be performed with an inert-dried gas including, but not limited to, nitrogen and carbon dioxide. Oxygen, air, flammable gases and mixtures containing such gases shall not be used.*

**Exceptions:**

1. *The use of air is allowed to test R-717, ammonia, systems provided that they are subsequently evacuated before charging with refrigerant.*
2. *Mixtures of dry nitrogen, inert gases, or a combination of them with nonflammable refrigerants in concentrations of a refrigerant weight fraction (mass fraction) not exceeding 5 are allowed for tests.*

**1108.3 Test apparatus.** *The means used to build up the test pressure shall have either a pressure-limiting device or a pressure-reducing device and a gauge on the outlet side.*

**1108.4 Declaration.** *A certificate of test shall be provided for all systems containing 55 pounds (25 kg) or more of refrigerant. The certificate shall give the name of the refrigerant and the field test pressure applied to the high-side and the low side of the system. The certification of test shall be signed by the installer and shall be made part of the public record.*

**SECTION MC 1109**  
**PERIODIC TESTING**

**1109.1 Testing required.** *The following emergency devices and systems shall be periodically tested and the results logged in accordance with the manufacturer's instructions and as required by the Commissioner of the Fire Department:*

1. *Treatment and flaring systems.*
2. *Valves and appurtenances necessary to the operation of emergency refrigeration control boxes.*
3. *Fans and associated equipment intended to operate emergency purge ventilation systems.*
4. *Detection and alarm systems.*

**1109.2 Operation.** *Operating permits and qualification of operators for refrigeration systems shall comply with the requirements of the New York City Fire Code and the rules of the Fire Department.*

**CHAPTER 12**  
**HYDRONIC PIPING**

**SECTION MC 1201**  
**GENERAL**

**1201.1 Scope.** *The provisions of this chapter shall govern the construction, installation, alteration and repair of hydronic piping systems. This chapter shall apply to hydronic piping systems that are part of heating, ventilation and air-conditioning systems. Such piping systems shall include steam, hot water, chilled water, condenser water, cooling coil condensate drain, steam condensate and ground source heat pump loop systems. Potable cold and hot water distribution systems shall be installed in accordance with the New York City Plumbing Code.*

**1201.2 Pipe sizing.** *Piping for hydronic systems shall be sized for the demand of the system.*

**SECTION MC 1202**  
**MATERIAL**

**1202.1 Piping.** *Piping material shall conform to the standards cited in this section.*

**Exception:** *Embedded piping regulated by Section 1209.*

**1202.2 Used existing materials.** Reused pipe, fittings, valves or other materials shall be clean and free of foreign materials.

**1202.3 Material rating.** Materials shall be rated for the operating temperature and pressure of the hydronic system. Materials shall be suitable for the type of fluid in the hydronic system.

**1202.4 Piping materials standards.** Hydronic pipe shall conform to the standards listed in Table 1202.4. The exterior of the pipe shall be protected from corrosion and degradation.

**TABLE 1202.4  
HYDRONIC PIPE**

<b>MATERIAL</b>	<b>STANDARD (see Chapter 15)</b>
Acrylonitrile butadiene styrene (ABS) plastic pipe	ASTM D 1527; ASTM D 2282
Brass pipe	ASTM B 43
Brass tubing	ASTM B 135
Copper or copper-alloy pipe	ASTM B 42; ASTM B 302
Copper or copper-alloy tube	ASTM B 75; ASTM B 88;
Chlorinated polyvinyl chloride	ASTM D 2846; ASTM F 441;
Cross-linked polyethylene/aluminum/cross-linked	ASTM F 1281; CSA CAN/CSA-B-137.10
Cross-linked polyethylene (PEX) tubing	ASTM F 876; ASTM F 877
Polyethylene (PE) pipe, tubing and fittings (for ground source heat pump loop systems)	ASTM D 2513; ASTM D 3035; ASTM D 2447; ASTM D
Polyvinyl chloride (PVC) plastic	ASTM D 1785; ASTM D 2241
Steel pipe	ASTM A 53; ASTM A 106
Steel tubing	ASTM A 254

**TABLE 1202.4—continued**  
**HYDRONIC PIPE**

<b>MATERIAL</b>	<b>STANDARD (see Chapter 15)</b>
Cross-linked polyethylene (PEX) tubing	ASTM F 876; ASTM F 877
Lead pipe	FS WW-P-325B
Polybutylene (PB) plastic pipe and tubing	ASTM D 3309
Polyethylene (PE) pipe, tubing and fittings (for ground source heat pump loop systems)	ASTM D 2513; ASTM D 3035; ASTM D 2447; ASTM D 2683; ASTM F 1055; ASTM D 2837; ASTM D 3350; ASTM D 1693
Polyvinyl chloride (PVC) plastic pipe	ASTM D 1785; ASTM D 2241
Steel pipe	ASTM A 53; ASTM A 106
Steel tubing	ASTM A 254

**1202.5 Pipe fittings.** *Hydronic pipe fittings shall be approved for installation with the piping materials to be installed, and shall conform to the respective pipe standards or to the standards listed in Table 1202.5.*

**TABLE 1202.5  
HYDRONIC PIPE FITTINGS**

<b>MATERIAL</b>	<b>STANDARD (see Chapter 15)</b>
Bronze	ASME B16.24
Copper and copper alloys	ASME B16.15; ASME B16.18; ASME B16.22; ASME B16.23; ASME B16.26; ASME B16.29
Gray iron	ASTM A 126
Malleable iron	ASME B16.3
Plastic	ASTM D 2466; ASTM D 2467; ASTM D 2468; ASTM F 438; ASTM F 439; ASTM F 877
Steel	ASME B16.5; ASME B16.9; ASME B16.11; ASME B16.28; ASTM A 420
Brass	ASTM F 1974

**1202.6 Valves.** Valves shall be constructed of materials that are compatible with the type of piping material and fluids in the system. Valves shall be rated for the temperatures and pressures of the systems in which the valves are installed.

**1202.7 Flexible connectors, expansion and vibration compensators.** Flexible connectors, expansion and vibration control devices and fittings shall be of an approved type.

## **SECTION MC 1203 JOINTS AND CONNECTIONS**

**1203.1 Approval.** Joints and connections shall be of an approved type. Joints and connections shall be tight for the pressure of the hydronic system.

**1203.1.1 Joints between different piping materials.** Joints between different piping materials shall be made with approved adapter fittings. Joints between different metallic piping materials shall be made with approved dielectric fittings or brass converter fittings.

**1203.2 Preparation of pipe ends.** Pipe shall be cut square, reamed and chamfered, and shall be free of burrs and obstructions. Pipe ends shall have full-bore openings and shall not be undercut.

**1203.3 Joint preparation and installation.** When required by Sections 1203.4 through 1203.14, the preparation and installation of brazed, mechanical, soldered, solvent-cemented, threaded and welded joints shall comply with Sections 1203.3.1 through 1203.3.7.

**1203.3.1 Brazed joints.** Joint surfaces shall be cleaned. An approved flux shall be applied where required. The joint shall be brazed with a filler metal conforming to AWS A 5.8.

**1203.3.2 Mechanical joints.** Mechanical joints shall be installed in accordance with the manufacturer's instructions.

**1203.3.3 Soldered joints.** Joint surfaces shall be cleaned. A flux conforming to ASTM B 813 shall be applied. The joint shall be soldered with a solder conforming to ASTM B 32.

**1203.3.4 Solvent-cemented joints.** CPVC joints shall be made in accordance with ASTM D 2846. Joint surfaces shall be clean and free of moisture. An approved primer shall be applied to CPVC and PVC pipe-joint surfaces. Joints shall be made while the cement is wet. Solvent cement conforming to the following standards shall be applied to all joint surfaces:

1. ASTM D 2235 for ABS joints.

2. ASTM F 493 for CPVC joints.

3. ASTM D 2564 for PVC joints.

**1203.3.5 Threaded joints.** Threads shall conform to ASME B 1.20.1. Schedule 80 or heavier plastic pipe shall be threaded with dies specifically designed for plastic pipe. Thread lubricant, pipe-joint compound or tape shall be applied on the male threads only and shall be approved for application on the piping material.

**1203.3.6 Welded joints.** Joint surfaces shall be cleaned by an approved procedure. Joints shall be welded with an approved filler metal.

**1203.3.7 Grooved and shouldered joints.** Grooved and shouldered joints shall be approved and installed in accordance with the manufacturer's installation instructions.

**1203.3.8 Mechanically formed tee fittings.** Mechanically extracted outlets shall have a height not less than three times the thickness of the branch tube wall.

**1203.3.8.1 Full flow assurance.** Branch tubes shall not restrict the flow in the run tube. A dimple/depth stop shall be formed in the branch tube to ensure that penetration into the outlet is of the correct depth. For inspection purposes, a second dimple shall be placed 0.25 inch (6.4 mm) above the first dimple. Dimples shall be aligned with the tube run.

**1203.3.8.2 Brazed joints.** Mechanically formed tee fittings shall be brazed in accordance with Section 1203.3.1.

**1203.4 ABS plastic pipe.** Joints between ABS plastic pipe or fittings shall be solvent-cemented or threaded joints conforming to Section 1203.3.

**1203.5 Brass pipe.** Joints between brass pipe or fittings shall be brazed, mechanical, threaded or welded joints conforming to Section 1203.3.

**1203.6 Brass tubing.** Joints between brass tubing or fittings shall be brazed, mechanical or soldered joints conforming to Section 1203.3.

**1203.7 Copper or copper-alloy pipe.** Joints between copper or copper-alloy pipe or fittings shall be brazed, mechanical, soldered, threaded or welded joints conforming to Section 1203.3.

**1203.8 Copper or copper-alloy tubing.** Joints between copper or copper-alloy tubing or fittings shall be brazed, mechanical or soldered joints conforming to Section 1203.3 or flared joints conforming to Section 1203.8.1.

**1203.8.1 Flared joints.** *Flared joints shall be made by a tool designed for that operation.*

**1203.9 CPVC plastic pipe.** *Joints between CPVC plastic pipe or fittings shall be solvent-cemented or threaded joints conforming to Section 1203.3.*

**1203.10 Reserved.**

**1203.11 Cross-linked polyethylene (PEX) plastic tubing.** *Joints between cross-linked polyethylene plastic tubing and fittings shall conform to Sections 1203.11.1 and 1203.11.2. Mechanical joints shall conform to Section 1203.3.*

**1203.11.1 Compression-type fittings.** *When compression-type fittings include inserts and ferrules or O-rings, the fittings shall be installed without omitting the inserts and ferrules or O-rings.*

**1203.11.2 Plastic-to-metal connections.** *Soldering on the metal portion of the system shall be performed at least 18 inches (457 mm) from a plastic-to-metal adapter in the same water line.*

**1203.12 PVC plastic pipe.** *Joints between PVC plastic pipe and fittings shall be solvent-cemented or threaded joints conforming to Section 1203.3.*

**1203.13 Steel pipe.** *Joints between steel pipe or fittings shall be mechanical joints that are made with an approved elastomeric seal, or shall be threaded or welded joints conforming to Section 1203.3.*

**1203.14 Steel tubing.** *Joints between steel tubing or fittings shall be mechanical or welded joints conforming to Section 1203.3.*

**1203.15 Polyethylene plastic pipe and tubing for ground source heat pump loop systems.** *Joints between polyethylene plastic pipe and tubing or fittings for ground source heat pump loop systems shall be heat fusion joints conforming to Section 1203.15.1, electrofusion joints conforming to Section 1203.15.2, or stab-type insertion joints conforming to Section 1203.15.3.*

**1203.15.1 Heat-fusion joints.** *Joints shall be of the socket-fusion, saddle-fusion or butt-fusion type, fabricated in accordance with the piping manufacturer's instructions. Joint surfaces shall be clean and free of moisture. Joint surfaces shall be heated to melt temperatures and joined. The joint shall be undisturbed until cool. Fittings shall be manufactured in accordance with ASTM D 2683.*

**1203.15.2 Electrofusion joints.** *Joints shall be of the electrofusion type. Joint surfaces shall be clean and free of moisture, and scoured to expose virgin resin. Joint surfaces shall be heated to melt temperatures for the period of time specified by the manufacturer. The joint shall be undisturbed until cool. Fittings shall be manufactured in accordance with ASTM F 1055.*

**1203.15.3 Stab-type insert fittings.** Joint surfaces shall be clean and free of moisture. Pipe ends shall be chamfered and inserted into the fittings to full depth. Fittings shall be manufactured in accordance with ASTM D 2513.

**SECTION MC 1204  
PIPE INSULATION**

**1204.1 Insulation characteristics.** Pipe insulation installed in buildings shall conform to the requirements of the Energy Conservation Construction Code of New York State, shall be tested in accordance with ASTM E 84 and shall have a maximum flame spread index of 25 and a smoke-developed index not exceeding 450. Insulation installed in an air plenum shall comply with Section 602.2.1.

**1204.2 Required thickness.** Hydronic piping shall be insulated to the thickness required by the Energy Conservation Construction Code of New York State.

**SECTION MC 1205  
VALVES**

**1205.1 Where required.** Shutoff valves shall be installed in hydronic piping systems in the locations indicated in Sections 1205.1.1 through 1205.1.5.

**1205.1.1 Heat exchangers.** Shutoff valves shall be installed on the supply and return side of a heat exchanger.

**Exception:** Shutoff valves shall not be required when heat exchangers are integral with a boiler; or are a component of a manufacturer's boiler and heat exchanger packaged unit and are capable of being isolated from the hydronic system by the supply and return valves required by Section 1005.1.

**1205.1.2 Central systems.** Shutoff valves shall be installed on the building supply and return of central utility systems, and district heating and cooling systems.

**1205.1.3 Pressure vessels.** Shutoff valves shall be installed on the connection to any pressure vessel.

**1205.1.4 Pressure-reducing valves.** Shutoff valves shall be installed on both sides of a pressure-reducing valve.

**1205.1.5 Equipment and appliances.** Shutoff valves shall be installed on connections to mechanical equipment and appliances. This requirement does not apply to components of a hydronic system such as pumps, air separators, metering devices and similar equipment.

**1205.2 Reduced pressure.** A pressure relief valve shall be installed on the low-pressure side of a hydronic piping system that has been reduced in pressure. The relief valve shall be set at the maximum pressure of the system design.

*The valve shall be installed in accordance with Section 1006.*

**SECTION MC 1206**  
**PIPING INSTALLATION**

**1206.1 General.** *Piping, valves, fittings and connections shall be installed in accordance with the conditions of approval.*

**1206.1.1 Prohibited tee applications.** *Fluid in the supply side of a hydronic system shall not enter a tee fitting through the branch opening.*

**1206.2 System drain down.** *Hydronic piping systems shall be designed and installed to permit the system to be drained. Where the system drains to the plumbing drainage system, the installation shall conform to the requirements of the New York City Plumbing Code.*

**1206.3 Protection of potable water.** *The potable water system shall be protected from backflow in accordance with the New York City Plumbing Code.*

**1206.4 Pipe penetrations.** *Openings for pipe penetrations in walls, floors or ceilings shall be larger than the penetrating pipe. Openings through concrete or masonry building elements shall be sleeved. The annular space surrounding pipe penetrations shall be protected in accordance with the New York City Building Code.*

**1206.5 Clearance to combustibles.** *A pipe in a hydronic piping system in which the exterior temperature exceeds 250°F (121°C) shall have a minimum clearance of 1 inch (25 mm) to combustible materials.*

**1206.6 Contact with building material.** *A hydronic piping system shall not be in direct contact with building materials that cause the piping material to degrade or corrode, or that interfere with the operation of the system.*

**1206.7 Water hammer.** *The flow velocity of the hydronic piping system shall be controlled to reduce the possibility of water hammer. Where a quick-closing valve creates water hammer, an approved water-hammer arrestor shall be installed. The arrestor shall be located within a range as specified by the manufacturer of the quick-closing valve.*

**1206.8 Steam piping pitch.** *Steam piping shall be installed to drain to the boiler or the steam trap. Steam systems shall not have drip pockets that reduce the capacity of the steam piping.*

**1206.9 Strains and stresses.** *Piping shall be installed so as to prevent detrimental strains and stresses in the pipe. Provisions shall be made to protect piping from damage resulting from expansion, contraction and structural settlement. Piping shall be installed so as to avoid structural stresses or strains within building components.*

**1206.9.1 Flood hazard.** Piping located in areas of special flood hazard shall comply with Appendix G of the New York City Building Code.

**1206.10 Pipe support.** Pipe shall be supported in accordance with Section 305. Seismic supports shall be provided where required by the New York City Building Code.

**1206.11 Condensation.** Provisions shall be made to prevent the formation of condensation on the exterior of piping.

#### **SECTION MC 1207**

##### **TRANSFER FLUID**

**1207.1 Flash point.** The flash point of transfer fluid in a hydronic piping system shall be a minimum of 50°F (28°C) above the maximum system operating temperature.

**1207.2 Makeup water.** The transfer fluid shall be compatible with the makeup water supplied to the system.

#### **SECTION MC 1208**

##### **TESTS**

**1208.1 General.** Hydronic piping systems other than ground-source heat pump loop systems shall be tested hydrostatically at one and one half times the system design operating pressure, but not less than 100 psi (689 kPa). The duration of each test shall be not less than 2 hours. Ground-source heat pump loop systems shall be tested in accordance with Section 1208.1.1.

**1208.1.1 Ground source heat pump loop systems.** Before connection (header) trenches are backfilled, the assembled loop system shall be pressure tested with water at 100 psi (689 kPa) for 30 minutes with no observed leaks. Flow and pressure loss testing shall be performed and the actual flow rates and pressure drops shall be compared to the calculated design values. If actual flow rate or pressure drop values differ from calculated design values by more than 10 percent, the problem shall be identified and corrected.

#### **SECTION MC 1209**

##### **EMBEDDED PIPING**

**1209.1 Materials.** Piping for heating panels shall be standard-weight steel pipe, Type L copper tubing, or approved plastic pipe or tubing rated at 100 psi (689 kPa) at 180°F (82°C).

**1209.2 Pressurizing during installation.** Piping to be embedded in concrete shall be pressure tested prior to pouring concrete. During pouring, the pipe shall be maintained at the proposed operating pressure.

**1209.3 Embedded joints.** Joints of pipe or tubing that are embedded in a portion of the building, such as concrete or plaster, shall be in accordance with the requirements of Sections 1209.3.1 and 1209.2.

**1209.3.1 Steel pipe joints.** Steel pipe shall be welded by electrical arc or oxygen/acetylene method.

**1209.3.2 Copper tubing joints.** Copper tubing shall be joined by brazing with filler metals having a melting point of not less than 1,000°F (538°C).

**1209.4 Reserved.**

## **SECTION MC 1210 HIGH-PRESSURE STEAM PIPING SYSTEMS**

**1210.1 Scope.** The provisions of this section shall apply to high-pressure steam piping system which is defined as a system operating at a steam pressure of more than 15 psi (103 kPa). For purposes of this section, loops, bends or offsets of the piping shall not be considered expansion joints.

**1210.2 New systems.** For purposes of this section, the replacement of existing steam piping systems, the installation of a new system in existing buildings, as well as installations in buildings hereafter constructed, shall be considered to be new high-pressure steam piping systems. The following requirements are applicable:

**1210.2.1 Design.** The design of new steam piping systems shall be conducted as follows:

1. The system shall be designed by an engineer. An application and plans shall be filed and the approval of the department obtained. The plans and application shall contain, but not be limited to, the following information:
  - 1.1. Size and location of all steam piping.
  - 1.2. The operating pressures and temperatures.
  - 1.3. The location, type, specifications and details of all expansion joints.
  - 1.4. The design, size, material and location of all anchors, guides and auxiliary steel, and the stresses thereon.
2. Systems using utility street steam shall be designed for a pressure of 200 psig (1379 kPa) and 413°F (212°C) up to and including the steam pressure reducing valve or valves which reduce the pressure of 90 psig (621 kPa) or below. For steam pressures between 90 psig (621 kPa) and 16 psig (110 kPa), the system shall be designed for 125 psig (108 kPa).

**1210.2.2 Installation.** *The installation of new steam piping systems shall be conducted as follows:*

1. *Installations, including any welding, shall be by special inspection by the engineer responsible for the design, or by an engineer acceptable to him or her.*
2. *Welders shall be qualified for all required pipe sizes, wall thicknesses and positions in accordance with the ASME Boiler and Pressure Vessel Code, Section IX. Requalification is required every three years or sooner if the commissioner has a specific reason to doubt a welder's ability to make sound welds.*
3. *Welder qualification testing shall be performed by an agency listed with the department, and if the testing is by radiography, the inspection shall have a minimum radiography qualification of Level II in accordance with the ASNT, Document No. SNT-TC-1A.*
4. *Copies of the certified welder qualification reports shall be maintained by the responsible welding agency and the company performing the welding, and shall be made available upon request to the department.*
5. *No reports from any welding inspection agency shall be accepted unless such agency has first requested and obtained approval from the department in accordance with rules of the department.*
6. *Pipe welding shall conform to the following:*
  - 6.1 *All piping over 2 inches (51 mm) shall be butt-welded. Piping 2 inches (76 mm) and under may be socket-welded or threaded.*
  - 6.2 *Threaded piping may continue to be used for existing construction in sizes of 6 inches (152 mm) and under.*
  - 6.3 *Where welding is not feasible, the commissioner may allow an acceptable alternative.*
7. *Radiographic examination, when required, shall be performed on butt-welds in accordance with ASME B31.1 based on the piping pressure and shall be as follows:*

<b><i>Piping Pressure</i></b>	<b><i>Percentage</i></b>
<i>90 psig (621 kPa) or below</i>	<i>Not Required</i>
<i>91 psig (627 kPa) to 150 psig (1034 kPa)</i>	<i>10 at Random</i>
<i>Over 150 psig (1034 kPa)</i>	<i>100</i>

However, if, in the opinion of the engineer responsible for controlled inspection, radiographic examination is not required for piping at pressure between 90 psig (621 kPa) and 150 psig (1034 kPa), the engineer shall so specify in writing, and the final report on the installation may omit the foregoing, and be predicated on all of the other requirements noted in this section, and a hydrostatic test.

**1210.2.3 Testing.** Hydrostatic testing shall be conducted on the completed installation at 150 percent of the design pressure for all piping pressure. Where the changes in an existing steam system involve less than 30 percent of the piping in the system, the testing may be in accordance with ASME B31.1.

**1210.2.4 Relocation.** The commissioner, where deemed necessary, shall require the replacement or relocation of any joints, guides or anchors. The commissioner shall cause the joints in potentially hazardous locations, such as those that are located adjacent to tenant occupied spaces, to be relocated, unless means exist or are provided for eliminating the hazard.

**1210.3 Existing systems.** Existing steam piping systems shall be in accordance with Sections 1210.3.1 through 1210.3.3. Upon the completion of a new high-pressure steam piping system and department approval of same, the rules relating to maintenance requirements and the keeping of records for existing high-pressure steam piping systems shall apply.

**1210.3.1 Maintenance inspections.** Expansion joints, anchorage and guides shall be inspected as follows:

1. Expansion joints shall be inspected weekly.
2. The anchorage and guides shall be inspected annually. Exposure of the structural attachments to the buildings of the anchorages or guides shall not be required..
3. A record of such inspections shall be kept by the person in charge of the mechanical equipment of the building or other qualified person designated by the owner and acceptable to the commissioner. The records shall be available at the premises and subject to inspection by the commissioner.

**1210.3.2 Work approval.** No joint, anchorage or guides shall be repaired, replaced or relocated without a work permit issued by the department. The application for the permit shall contain all pertinent information and shall be filed by an engineer knowledgeable as to high-pressure steam piping systems. The engineer shall be responsible for the special inspection of the proposed work in accordance with the approved application. This provision shall not apply to the repacking of a slip or ball joint; however, records of such repacking shall be kept in the inspection records as provided in Section 1210.3.1, Item 3. When, in the opinion of the engineer, the requirement for prior department approval would create an imminent health or safety hazard, the engineer may permit the work to proceed without prior approval. In such cases, the engineer shall, prior to the repair, replacement or relocation, notify by telephone the borough commissioner of the borough in which the building is located; and, if the emergency occurs at other than normal working hours, he or she shall notify the department

*in a manner prescribed by the commissioner. This shall be followed by the filing of the application for department approval as specified in Section 28-105.4.1 of the Administrative Code.*

**CHAPTER 13**  
**FUEL-OIL PIPING AND STORAGE**

**SECTION MC 1301**  
**GENERAL**

**1301.1 Scope.** *This chapter shall govern the design, installation, construction and repair of fuel-oil storage and piping systems. The storage of flammable and combustible liquids not addressed in this chapter shall be in accordance with the New York City Fire Code.*

**1301.2 Storage and piping systems.** *Fuel-oil storage and piping systems shall comply with the requirements of Chapter 13 and, to the extent not otherwise provided for in this code, shall comply with the requirements of NFPA 31. All aboveground and underground storage facilities with a combined storage capacity of over 1,100 gallons (4160 L) shall also comply with the requirements of the New York State Department of Environmental Conservation's Petroleum Bulk Storage Code; 6 NYCRR Parts 612, 613, and 614.*

**1301.3 Fuel type.** *An appliance shall be designed for use with the type of fuel to which it will be connected. Such appliance shall not be converted from the fuel specified on the rating plate for use with a different fuel without securing reapproval from the commissioner.*

**1301.4 Fuel tanks, piping and valves.** *The tank, piping and valves for appliances burning oil shall be installed in accordance with the requirements of this chapter. When oil burning equipment is served by a tank located such that any part of the tank is above the level of the burner inlet connection and where the fuel supply line is taken from the top of the tank, an approved anti-siphon valve or other siphon-breaking device shall be installed. The anti-siphon valve or siphon-breaking device shall be located at the highest point in the supply line.*

**Exceptions:** *An anti-siphon valve or other siphon-breaking device shall not be required where either:*

- 1. An approved foot valve is used in the tank, or*
- 2. No. 6 fuel oil is used.*

**1301.5 Out of service system.** *Fuel-oil storage systems that are temporarily or permanently taken out of service shall comply with the requirements of the Fire Code.*

**1301.6 Fuel-oil spill and overflow prevention equipment.** *Fuel-oil spill and overflow prevention equipment shall comply with EPA 40 CFR Parts 280, and Section 1305.6.6.*

**1301.7 Portable fire extinguishers.** *Portable fire extinguishers with a minimum weight of 30 pounds (13.64 kg) shall be provided as required by the Fire Code and NFPA 10.*

**1301.8 Absorbent materials.** *The building owner shall maintain a sufficient quantity of absorbent materials near fuel-oil storage tanks, pumps, and related equipment to control leaks and slipping hazards.*

**1301.9 Certificate of fitness.** *Where fuel-oil piping systems utilize pumps to transfer fuel-oil to equipment at levels above the lowest floor or to storage tanks at levels above the lowest floor in buildings, a qualified employee or contracted general company holding a certificate of fitness from the Fire Department shall maintain the fuel-oil system.*

## **SECTION MC 1302**

### **MATERIAL**

**1302.1 General.** *Piping materials shall conform to the standards cited in this section.*

**1302.2 Rated for system.** *All materials shall be rated for the operating temperatures and pressures of the system, and shall be compatible with the type of liquid being handled by the system.*

**1302.3 Pipe standards.** *Fuel-oil pipe shall comply with the standards listed in Table 1302.3.*

**Exception:** *Piping for fuel-oil systems utilizing a transfer pump to equipment at levels above the lowest floor or to storage tanks at levels above the lowest floor in buildings shall comply with the requirements of Section 1305.9.5.*

**TABLE 1302.3**  
**FUEL OIL PIPING**

<b>MATERIAL</b>	<b>STANDARD (see Chapter</b>
<i>Brass pipe</i>	<i>ASTM B 43</i>
<i>Copper or copper-alloy pipe</i>	<i>ASTM B 42; ASTM B 302</i>
<i>Copper or copper-alloy tubing (Type K)</i>	<i>ASTM B 75; ASTM B 88; ASTM B 280</i>
<i>Labeled pipe</i>	<i>(See Section 1302.4)</i>
<i>Nonmetallic pipe</i>	<i>ASTM D 2996</i>
<i>Steel pipe</i>	<i>ASTM A 53; ASTM A 106</i>

***a. Brass tubing, steel tubing and copper tubing L or M are not permitted.***

**1302.4 Nonmetallic pipe.** All nonmetallic pipe shall be listed and labeled as being acceptable for the intended application for flammable and combustible liquids. Nonmetallic pipe shall be installed only outside, underground.

**1302.5 Fittings and valves.** Fittings and valves shall be approved for the piping systems, and shall be compatible with, or shall be of the same material as, the pipe or tubing.

**1302.6 Bending of pipe.** Pipe shall be approved for bending. Pipe bends shall be made with approved equipment. The bend shall not exceed the structural limitations of the pipe.

**1302.7 Pumps.** Pumps that are not part of an appliance shall be of a positive-displacement type. The pump shall automatically shut off the supply when not in operation. Pumps shall be listed and labeled in accordance with UL 343.

**1302.8 Flexible connectors and hoses.** Flexible metal connectors and hoses used where rigid connections are impractical or to reduce the effect of jarring and vibration shall be listed and labeled in accordance with UL 536 and shall be installed in compliance with its label and the manufacturer's installation instructions. Connectors made from combustible materials shall not be used inside buildings or above ground outside of buildings.

### **SECTION MC 1303 JOINTS AND CONNECTIONS**

**1303.1 Approval.** Joints and connections shall be approved and of a type approved for fuel-oil piping systems. All threaded joints and connections shall be made tight with suitable lubricant or pipe compound. Unions requiring gaskets or packings, right or left couplings, and sweat fittings employing brazing material having a melting point of less than 1,000°F (538°C) shall not be used in oil lines. Cast-iron fittings shall not be used. Joints and connections shall be tight for the pressure required by test.

**1303.1.1 Joints between different piping materials.** Joints between different piping materials shall be made with approved adapter fittings. Joints between different metallic piping materials shall be made with approved dielectric fittings or brass converter fittings.

**1303.2 Reserved.**

**1303.3 Joint preparation and installation.** Where required by Sections 1303.4 through 1303.10, the preparation and installation of brazed, threaded and welded joints shall comply with Sections 1303.3.1 through 1303.3.4.

**1303.3.1 Brazed joints.** All joint surfaces shall be cleaned. An approved flux shall be applied where required. The joints shall be brazed with a filler metal conforming to AWS A5.8.

**1303.3.2 Mechanical joints.** *Mechanical joints utilizing an elastomeric and/or compression seal are not permitted.*

**1303.3.3 Threaded joints.** *Threads shall conform to ASME B1.20.1. Pipe-joint compound or tape shall be applied on the male threads only.*

**1303.3.4 Welded joints.** *All joint surfaces shall be cleaned by approved procedure. The joint shall be welded with an approved filler metal.*

**1303.4 Brass pipe.** *Joints between brass pipe or fittings shall be brazed, mechanical, threaded or welded joints complying with Section 1303.3.*

**1303.5 Reserved.**

**1303.6 Copper or copper-alloy pipe.** *Joints between copper or copper-alloy pipe or fittings shall be brazed, mechanical, threaded or welded joints complying with Section 1303.3.*

**1303.7 Copper or copper-alloy tubing.** *Joints between copper or copper-alloy tubing or fittings shall be brazed or mechanical joints complying with Section 1303.3 or flared joints. Flared joints shall be made by a tool designed for that operation.*

**1303.8 Nonmetallic pipe.** *Joints between nonmetallic pipe or fittings shall be installed in accordance with the manufacturer's instructions for the labeled pipe and fittings.*

**1303.9 Steel pipe.** *Joints between steel pipe or fittings shall be threaded or welded joints complying with Section 1303.3.*

**1303.10 Reserved.**

**1303.11 Piping protection.** *Proper allowance shall be made for expansion, contraction, jarring and vibration. Piping other than tubing, connected to underground tanks, except straight fill lines and test wells, shall be provided with flexible connectors, or otherwise arranged to permit the tanks to settle without impairing the tightness of the piping connections. Piping serving equipment at levels above the lowest floor or storage tanks at levels above the lowest floor in buildings shall also comply with the requirements of Section 1305.9.6 and 1305.9.7.*

**SECTION MC 1304  
PIPING SUPPORT**

**1304.1 General.** Pipe supports shall be in accordance with Section 305. Piping serving equipment at levels above the lowest floor or storage tanks at levels above the lowest floor in buildings shall also comply with the requirements of Section 1305.9.6 and 1305.9.7.

**SECTION MC 1305**  
**FUEL-OIL SYSTEM INSTALLATION**

**1305.1 General.** Fuel-oil piping systems shall be installed in accordance with this section.

**1305.2 Protection of pipe, equipment and appliances.** All fuel-oil pipe, equipment and appliances shall be protected from physical damage. Piping serving equipment at levels above the lowest floor or storage tanks at levels above the lowest floor in buildings shall also comply with the requirements of Section 1305.9.

**1305.2.1 Flood hazard.** All fuel-oil pipe, tanks, equipment and appliances located in areas of special flood hazard shall comply with Appendix G of the New York City Building Code.

**1305.3 Supply piping.** Supply piping shall comply with the requirements of Sections 1305.3.1 through 1305.3.7.

**1305.3.1 Size.** The fuel-oil system shall be sized for the maximum capacity of fuel oil required. The minimum size of a supply line shall be  $\frac{3}{8}$ -inch (9.5 mm) inside diameter nominal pipe or  $\frac{3}{8}$ -inch (9.5 mm) OD tubing.

**1305.3.2 Connections to tank.** Supply piping shall connect to the top of the fuel-oil tank.

**Exception:** Storage tanks in buildings that comply with all of the following conditions:

1. The tank is located above ground on the lowest floor;
2. The tank does not exceed 330 gallons (1250 L); and
3. The tank is provided with a  $\frac{3}{4}$ -inch (19.1 mm) opening for gravity discharge and a 1-inch (25 mm) opening in the bottom for cleaning and protection against corrosion.

**1305.3.3 Pumps.** Fuel oil shall be supplied by a transfer pump or automatic pump or by other approved means.

**1305.3.4 Smoke detectors.** Appropriate safeties shall be provided so that detection of smoke or heat within the generator or equipment room shall prevent additional fuel oil from being pumped into the piping system within such room, including a fusible link operated lever gate valve in the supply pipe at the wall of the generator room.

**1305.3.5 Horizontal runouts.** Horizontal runouts from risers to the generator or equipment room shall follow as direct a route as practicable.

**1305.3.6 Direct feed.** Systems where day tanks are absent (such as generator installations where fuel oil is taken directly from a fuel-oil pipe or header into the engine) shall comply with Section 1305.9.12.

**1305.3.7 Piping from transfer pump to equipment or storage tanks above the lowest floor.** Supply piping from a transfer pump to equipment at levels above the lowest floor or storage tanks at levels above the lowest floor in buildings shall also comply with the requirements of Section 1305.9.

**1305.4 Return piping.** Return piping shall connect to the top of the fuel-oil tank. The minimum size of a return line shall be ¼-inch (6.4 mm) inside diameter nominal pipe or 5/16-inch (7.9 mm) outside diameter tubing. Valves shall not be installed on return piping unless a means of relieving overpressure is provided. Return piping serving equipment at levels above the lowest floor or storage tanks at levels above the lowest floor in buildings shall also comply with the requirements of Section 1305.9.

**1305.5 System pressure.** The system shall be designed for the maximum pressure required by the fuel-oil-burning appliance. Air or other gases shall not be used to pressurize tanks. Pressure in a storage tank for the purpose of discharging oil shall be prohibited.

**1305.6 Fill piping.** Fill piping shall comply with the requirements of Section 1305.6.1 through 1305.6.6.

**1305.6.1 Size.** Fill piping shall be a minimum of 2 inches (51 mm) in diameter or 3 inches (76 mm) for No. 6 fuel oil.

**1305.6.2 Termination location.** A fill pipe shall terminate outside of a building at or above grade at a point least 2 feet (610 mm) from any building opening and 5 feet (1524 mm) away from any subway grating at the same or lower level. A fill pipe shall terminate in a manner designed to minimize spilling when the filling hose is disconnected. Where No. 6 fuel oil is used, the fill pipe terminal shall be within 3 feet (914 mm) of the curb unless otherwise required by the Department of Transportation or the Transit Authority. If facilities exist for an oil delivery truck to drive onto the premises, the fuel-oil terminal may be located elsewhere other than the curb.

**1305.6.3 Separate fill piping.** Each storage tank shall be provided with a separate fill pipe, except that where a battery of tanks containing the same grade of oil is installed, a common fill and header pipe may be installed.

**1305.6.4 Check valve.** Where the top of the storage tank is above the fill pipe terminal, the fill pipe shall be connected to the top of the tank and provided with a shut-off valve and swing check valve, both of which shall be located at the fill pipe terminal. The shut-off valve and swing check valve may be installed in an accessible location inside the building at or below the level of the fill pipe terminal.

**1305.6.5 Terminal opening.** The fill opening shall be equipped with a tight metal cover designed to discourage tampering. All fill pipe terminals shall be of an approved type and shall be provided with lugs for embedding in

concrete. In lieu of lugs, a set screw or threads to fasten the terminal to the fill pipe may be used. The outer flange of the fill pipe terminal or the seal cap shall be permanently marked: FUEL OIL. The fill pipe terminal shall be threaded or provided with other equivalent means to receive the seal cap. The seal cap shall be suitably slotted for receiving an opening wrench, and an oilproof gasket inserted in a groove in the fill pipe terminal shall be provided so as to make the seal cap leakproof. A strainer shall not be required but if used, shall be of at least 1/8-inch (3.2 mm) mesh. Where a storage system for volatile flammable oil and a storage system for fuel oil are to be used in the same premises, the terminal of the fuel-oil pipe shall be provided with a left-handed thread and the fill pipe fitting shall be of a different size than that required for the fill pipes to the tanks containing the volatile flammable oil.

**1305.6.6 Spill containment.** For fill pipes serving tanks greater than 660 gallons (2500 L), an approved overflow/spill containment device shall be provided.

**1305.7 Normal vent piping.** Normal vent piping shall comply with the requirements of Section 1305.7.1 through 1305.7.9.

**1305.7.1 Size.** Normal vent sizes shall comply with the sizes listed in Tables 1305.7(1) and 1305.7(2); provided, however, for tanks other than those complying with the alternate tank design and construction standards contained in Section 1305.14, the normal vent shall not be smaller in size than the supply pipe.

**TABLE 1305.7(1)**  
**VENT PIPING FOR UNDERGROUND TANKS**

<i>TANK SIZE</i>	<i>MINIMUM VENT DIAMETER</i>
<i>660 gallons (2500 L) or less</i>	<i>1¼ inch (32 mm)</i>
<i>661 gallons (2505 L) to 3,000 gallons (11 355 L)</i>	<i>1½ inch (38 mm)</i>
<i>3,001 gallons (11 360 L) to 10,000 gallons 37 850 L)</i>	<i>2 inch (51 mm)</i>
<i>10,001 gallons 37 855 L) to 20,000 gallons (75 700 L)</i>	<i>2½ inch (64 mm)</i>
<i>Larger than 20,000 gallons (75 700 L)</i>	<i>3 inch (76 mm)</i>

**TABLE 1305.7(2)**

**VENT PIPING FOR TANKS INSTALLED INSIDE BUILDINGS**

<b>TANK SIZE</b>	<b>MINIMUM VENT DIAMETER</b>
<i>660 gallons (2500 L) or less</i>	<i>1 ¼ inch (32 mm)<sup>a</sup></i>
<i>Larger than 660 gallons (2500 L)</i>	<i>Sized to prevent abnormal pressure in the tank during filling but not smaller than the pipe size specified in Table 1305.7(1)</i>

- a. *For tanks constructed to UL 80 specifications the minimum vent diameter shall be 2 inch (51 mm) or as required by Section 1305.8, Item .3, whichever is greater.*

**1305.7.2 Termination location.** *The location of the normal vent pipe terminations shall comply with the following:*

- 1. Liquid fuel normal vent pipes shall terminate outside of buildings in a nonhazardous location at a point not less than 2 feet (610 mm) measured vertically or horizontally from any building opening and not less than 2 feet (610 mm) nor more than 12 feet (3658 mm) above the fill pipe terminal.*
- 2. If the normal vent pipe terminal is not visible from the fill pipe terminal location, a 1-inch (25 mm) tell-tale line shall be connected to the tank and shall parallel the fill pipe and terminate at the fill pipe terminal with an unthreaded end. Such tell-tale lines shall be provided with a check valve set to prevent flow of surface water to the storage tank.*
- 3. Normal vent pipes shall terminate sufficiently above the ground to avoid being obstructed with snow or ice.*
- 4. Normal vent pipes from tanks containing heaters shall be extended to a location where oil vapors discharging from the normal vent will be readily diffused.*

**1305.7.3 Termination caps.** *Outer ends of normal vent pipes shall terminate in a weatherproof vent cap or fitting or be provided with a weatherproof hood. All normal vent caps shall have a minimum free open area equal to the cross-sectional area of the normal vent pipe and shall not employ screens finer than No. 4 mesh.*

**1305.7.4 Tank pressure.** *The tank shall be designed for the maximum static head that will be imposed with the normal vent piping filled with oil.*

**1305.7.5 Multiple Tanks.** *A normal vent pipe shall be provided for each storage tank. Normal vent piping from multiple tanks of the same grade oil with not more than 660 gallons (2500 L) aggregate capacity may be combined. Where a battery of storage tanks complying with the alternate tank design and construction standards contained in Section 1305.14 designed to hold the same grade of oil with not more than 660 gallons (2500 L) aggregate capacity is installed, normal vent pipes may be run into a main header.*

**1305.7.6 Pitch.** *Normal vent pipes shall drain toward the tank. The normal vent pipes shall have no sags or traps where liquid can collect.*

**1305.7.7 Protection.** *Normal vent pipes shall be located so that they are not subjected to physical damage.*

**1305.7.8 Cross-connection.** *Liquid fuel normal vent pipes shall not be cross-connected with fill pipes, lines from burners or overflow lines from auxiliary tanks.*

**1305.7.9 Tanks above the lowest floor.** For tanks installed above the lowest floor, the normal vent shall be piped, in an approved manner, into the vent or top of tank of the lowest floor storage tank that supplies the fuel to such tank.

**1305.8 Emergency relief vent piping.** Each primary tank, the interstitial space of a secondary containment tank and each compartment of a compartment tank complying with UL 142 shall be provided with emergency relief venting. A tank's emergency relief vent piping and normal vent piping shall be combined. The design and installation of the combined normal and emergency relief vent shall be in accordance with Section 1305.7 and Sections 1305.8.1 through 1305.8.4.

**1305.8.1 Piping.** The combination normal and emergency relief venting shall be provided through an open vent pipe connected directly, as applicable, to the primary tank, interstitial space or compartment. The use of a self-closing manway cover, a manway cover provided with long bolts that permit the cover to lift under internal pressure, or other type emergency relief vent device, shall be prohibited.

**1305.8.2 Termination.** Combination normal and emergency relief vent piping shall terminate outdoors.

**1305.8.3 Tanks above the lowest floor.** For tanks installed inside of buildings above the lowest floor, the combination normal and emergency vent piping shall be piped, in an approved manner, into the vent or top of tank of the lowest floor storage tank that supplies the fuel to such tank.

**1305.8.4 Capacity.** The total relief venting capacity of the combination normal and emergency relief venting shall be in accordance with Section 4.2.5.2 of NFPA 30. Construction documents shall include calculations demonstrating that the extension of the normal and emergency vent piping is adequately sized to provide the required emergency vent flow while limiting the back pressure to less than the maximum pressure permitted by the design of the tank. Additionally, consistent with Section 4.2.5.2.5 of NFPA 30, where the design provides for a reduction in the required emergency relief venting capacity based upon the properties of the fuel oil to be stored in the tank, the construction documents shall include supporting calculations.

**1305.9 Supplemental requirements for piping from transfer pumps to equipment or storage tanks above lowest floor.** Fuel-oil piping systems utilizing pumps to transfer fuel-oil to equipment at levels above the lowest floor or storage tanks at levels above the lowest floor in buildings shall comply with the requirements of Section 1305.9.1 through 1305.9.12.

**1305.9.1 Shaft enclosure.** The piping from a transfer pump to equipment at levels above the lowest floor or storage tanks at levels above the lowest floor in buildings, the return piping, and vent piping shall be enclosed in a shaft constructed of 4-inch (102 mm) concrete or masonry having a 4-inch (102 mm) clearance from all pipe or pipe covering, except that no such enclosures shall be required within the room containing the pump, tank, or

*equipment where such room is itself enclosed with construction and materials having at least a 2-hour fire resistance rating.*

**1305.9.2 Ducts or other piping in shafts.** *Pipe shafts containing fuel-oil piping shall not be penetrated by or contain other piping or ducts.*

**1305.9.3 Horizontal offsets.** *Where it is necessary to make horizontal offsets in the supply piping and pipe shafts, such piping shall be enclosed in a sleeve of other piping of at least No. 10 standard Gage steel, two sizes larger than the supply piping and arranged to drain into the shaft. Horizontal piping offsets shall be further enclosed in construction having a 2-hour fire-resistance rating except that no such enclosure or pipe sleeve shall be required within the room containing the pump, tank, or equipment where such room is itself enclosed with construction and materials having at least a 2-hour fire-resistance rating.*

**1305.9.4 Drain at base of shafts; leak detection.** *A drain pipe shall be installed at the base of shafts enclosing the supply and overflow piping. The pipe shall lead to a dedicated sump or minimum 55 gallon (208 L) container with a leak detection alarm, arranged so as to sound an alarm and stop the transfer pump. The alarm shall be connected to a local audible alarm and to a remote alarm located at a supervising station. The wiring shall comply with the New York City Electrical Code.*

**1305.9.5 Piping materials.** *Oil lines for equipment or tanks shall be steel pipe ASTM A 53 or ASTM A 106, grade B seamless Schedule 40 with welded connections up to the oil tank or equipment, except that fittings at the tank or equipment, shut-off valves and other fuel-oil flow and control devices may be screwed or flanged.*

**1305.9.6 Expansion.** *Provision shall be made for expansion in piping without the use of expansion joints.*

**1305.9.7 Movement and vibration.** *The piping shall be located and secured from movement so as to prevent undue stress on the piping and to isolate the piping from vibrations from any equipment.*

**1305.9.8 Connections to header.** *Pipe connections to the main header (supply or return) shall be made from the top of the header, except for systems with equipment above the lowest floor where such equipment is designed to operate utilizing fuel pumped as needed from the lowest floor and without utilizing fuel oil stored above the lowest floor.*

**1305.9.9 Air vents and breakers.** *Required air vents and vacuum breakers shall be designed for their required use.*

**1305.9.10 Curb or pan.** *All air vents and vacuum breakers shall be hard-piped to a curb or pan.*

**1305.9.11 Pipe size; fuel storage above the lowest floor.** *In systems with equipment above the lowest floor where such equipment is designed to operate utilizing fuel stored above the lowest floor, piping diameters shall not*

exceed 4 inches (102 mm). However, where an applicant demonstrates by the inclusion of calculations in the construction documents that a greater diameter is necessary to ensure the proper flow for the functioning of the system, such greater diameter may be permitted. Piping shall not be used for fuel storage purposes.

**1305.9.12 Pipe size; without fuel storage above the lowest floor.** In systems with equipment above the lowest floor, where such equipment is designed to operate utilizing fuel pumped as needed from the lowest floor and without utilizing fuel oil stored above the lowest floor, piping diameters throughout such systems shall not exceed the design flow (three times the maximum firing rate as calculated by the engineer or architect). However, piping diameters within rooms containing such equipment may exceed the calculated design flow pipe size to provide limited reservoir storage to prime equipment, provided such reservoir storage is counted toward the maximum permitted oil storage per story, as provided for in Section 1305.11.1.3.

**1305.10 Devices to control flow to oil-burning equipment.** The following requirements shall apply:

1. The pressure in oil lines to oil-burning equipment located above the lowest floor of a building shall not be more than is required to circulate oil to and from the burners, and all parts of the oil system shall be capable of withstanding the maximum working pressure in that part of the system.
2. A remote control shall be provided to stop the flow of oil to any burner wherever located, and to any oil-burning equipment located on levels above the lowest floor in buildings. Such control shall be located outside the entrance to the room in which the burner is located and as close to such entrance as practicable, except that when an outside location is impracticable, such control may be located immediately inside the room in which the burner is located, provided such location is accessible at all times. All such controls shall be permanently labeled: "REMOTE CONTROL FOR OIL BURNER", "REMOTE CONTROL FOR GENERATOR", or as appropriate to the oil-burning equipment. On storage tanks of 60 gallons (227 L) or less capacity used with manually operated equipment, such remote control may be installed in the supply lines between tank and burner.
3. In systems where either steam or air is used for atomizing the oil, the oil and the atomizing supply shall be interlocked so that where the supply of either is interrupted, the supply of the other will be immediately cut off.

**1305.11 Limitations on quantities of fuel-oil storage..** Quantities of fuel-oil storage shall be limited in accordance with the provisions of this section. For the purposes of this section, fuel oil stored on roofs shall be deemed inside of buildings and located on the floor to which they are adjacent.

**1305.11.1 Inside of buildings.** A total of not more than 100,000 gallons (378 000 L) shall be stored inside of any building. Oil-storage inside of buildings shall also comply with applicable requirements of Sections 1305.11.1.1 through 1305.11.1.3.

**1305.11.1.1 Inside of buildings; below ground.** *The maximum size of each below-ground oil-storage tank inside of a building shall be 35,000 gallons (132 475 L).*

**1305.11.1.2 Inside of buildings; above ground on the lowest floor.** *Fuel-oil storage tanks installed above ground on the lowest floor of a building shall be mounted on and anchored by adequate noncombustible supports. The maximum size of each individual tank shall be 660 gallons (2500 L), and a total of not more than 1375 gallons (5200 L) shall be stored within the same 2-hour fire area.*

**Exceptions.** *Fuel-oil storage tanks shall be permitted to exceed 660 gallons (2500 L), and the total quantity within a fire area shall be permitted to exceed 1375 gallons (5200 L) in accordance with any one of the following options:*

- 1. Buildings of Type I, II, IIIA, IV or VA construction with a total limit of 15,000 gallons.** *The maximum size of each individual tank shall be 15,000 gallons (56 775 L) provided that all such tanks are located in a room or enclosure dedicated to oil storage that is separated from the rest of the building by fire-resistance-rated construction of at least 3 hours. Notwithstanding Section 1305.11.1, in such cases, the maximum total quantity in the building shall be limited to 15,000 gallons (56 775 L).*
- 2. Buildings of Type IIIB or VB construction with a total limit of 10,000 gallons.** *The maximum size of each individual tank shall be 10,000 gallons (37 850 L) provided that all such tanks are located in a room or enclosure dedicated to oil storage that is separated from the rest of the building by fire-resistance-rated construction of at least 3 hours. Notwithstanding Section 1305.11.1, in such cases, the maximum total quantity in the building shall be limited to 10,000 gallons (56 775 L).*
- 3. Buildings of any type construction with a total limit of 100,000 gallons.** *The maximum size of each individual tank shall be 25,000 gallons (94 625 L) provided that all such tanks are enclosed in a vault (i) with walls, floor, and top having a fire resistance rating of not less than 3 hours, (ii) with such walls bonded to the floor, and (iii) with such top and walls of the vault independent of the building structure. An exterior building wall having a fire resistance rating of not less than 3 hours shall be permitted to serve as a wall of the vault. The vault shall be located in a dedicated room or area of the building that is cut off vertically and horizontally from other areas and floors of the building by assemblies having a fire resistance rating of not less than 2 hours. Where the aggregate fuel-oil storage on the lowest level of the building exceeds 50,000 gallons (189 250 L), such storage shall be protected with an alternate extinguishing system complying with Section 904 of the New York City Building Code.*

**1305.11.1.3 Inside of buildings; above the lowest floor.** *Fuel-oil above the lowest floor inside of a building shall be limited to 330 gallons (1249 L) per story. The maximum quantity shall include oversized piping as described in 1305.9.12. Piping installations shall comply with the requirements of Section 1305.9.*

**1305.11.2 Outside of buildings.** Oil-storage outside of buildings shall comply with applicable requirements of Sections 1305.11.2.1 and 1305.11.2.2.

**1305.11.2.1 Outside of buildings; below ground.** The maximum size of each below-ground oil-storage tank outside of a building shall be 35,000 gallons (132 475 L).

**1305.11.2.2 Outside of buildings; above ground.** The maximum size of each above-ground oil-storage tank outside of a building shall be 100,000 gallons (37 800 L).

**1305.12 Standards for Tank Design.** Tanks shall be designed and constructed in compliance with Sections 1305.12.1 and 1305.12.2.

**1305.12.1 Below ground.** Tanks located below ground, inside or outside of buildings, shall comply with any one of the following design standards, as appropriate for the specific installation as determined by the engineer:

1. UL 58; such tanks shall be listed and labeled;
2. UL 1316; such tanks shall be listed and labeled; or
3. Alternate tank design and construction standards contained in Section 1305.14

**1305.12.2 Above ground.** Tanks located above ground, inside or outside of buildings, shall comply with any one of the following design standards, as appropriate for the specific installation as determined by the engineer:

1. UL 80; such tanks shall be listed and labeled;
2. UL 142; such tanks shall be listed and labeled;
3. ASME Boiler and Pressure Vessel Code, Section VIII, Division 1 or 2; such tanks shall be listed and labeled; or
4. Alternate tank design and construction standards contained in Section 1305.14

**1305.13 Installation of tanks.** Tanks shall be installed in accordance with the provisions of section 1305.13.1 through 1305.13.4. For the purposes of this section, fuel oil stored on roofs shall be deemed inside of buildings.

**1305.13.1 Below ground.** Tanks located below ground, inside or outside of buildings, shall comply with the following requirements:

1. **Containment.** Fuel-oil tanks having a capacity of more than 660 gallons (2500 L) shall be provided with secondary containment intended to prevent any leakage of fuel oil from the tank from entering the environment. The capacity of the containment shall equal or exceed the capacity of the tank served.
2. **Burial.** Regardless of capacity, fuel-oil tanks shall be buried with the top of the tank at least 2 feet (610 mm) below ground. Tanks shall be placed in firm soil and shall be surrounded by clean sand or well-tamped earth, free from ashes or other corrosive substance, and free from stones that will not pass a 1-inch (25 mm) mesh.
3. **Anchorage.** When necessary to prevent floating, fuel-oil tanks, regardless of capacity, shall be securely anchored.
4. **Distance to foundations.** Regardless of capacity, no fuel-oil tank shall be buried within 3 feet (914 mm) of any foundation wall or footing.
5. **Special limitations near subways.** Regardless of capacity, no fuel-oil tank shall be placed within 20 feet (6096 mm) of the outside line of a subway wall. For the purpose of the foregoing requirement, a subway shall be deemed to include any subsurface railroad or rapid transit roadbed.

**1305.13.2 Above ground; on the lowest floor inside a building.** Tanks located above ground, on the lowest floor inside of buildings, shall comply with the following requirements:

1. **Containment.** Fuel-oil tanks having a capacity of more than 660 gallons (2500 L) storage shall be provided with secondary containment intended to capture any leakage of fuel oil from the tank. The capacity of the containment shall equal or exceed the capacity of the tank served.
2. **Special limitations near subways.** Regardless of capacity, fuel-oil tanks located within the outer lines of the subway, or within 20 feet (6096 mm) of the outside line of a subway wall shall be placed within a welded steel oil tight pan of not less than No. 18 Gage metal suitably reinforced and of capacity to contain the contents of the tank. For the purpose of the foregoing requirement, a subway shall be deemed to include any subsurface railroad or rapid transit roadbed.

**1305.13.3 Above ground; above the lowest floor inside a building.** Regardless of capacity, fuel-oil tanks and fuel-oil-burning equipment located above ground, above the lowest floor inside of buildings, shall comply with the following requirements:

1. **Enclosure of room.** Fuel-oil tanks and fuel-oil-burning equipment shall be located in a dedicated room or enclosure, having a fire resistance rating of at least 2 hours. Rooftop tanks need not be enclosed provided that all exterior walls and roof surfaces within 10 feet (3048 mm) horizontally and 20 feet (6096 mm) vertically have a fire resistance rating of at least 2 hours.

2. **Fire extinguishing system.** Rooms containing fuel-oil tanks and fuel-oil-burning equipment shall be equipped with an automatic sprinkler system in accordance with section 903.3.1 of the New York City Building Code. To prevent overfilling of the containment barriers, sprinkler shut-offs shall be located on the outside of tank and generator rooms and prominently placarded for immediate control by the Fire Department.
3. **Smoke detection.** Rooms containing fuel-oil tanks and fuel-oil-burning equipment shall be equipped with automatic smoke detection in accordance with Section 907 of the New York City Building Code, except that heat detectors may be utilized where, during normal operation, products of combustion are present in sufficient quantity to actuate a smoke detector.
4. **Ventilation.** Rooms containing fuel-oil tanks shall be ventilated to limit the concentration of vapors within the room at or below 25% of the Lower Flammable Limit (LFL) of the fuel oil being used.
5. **Containment.** Fuel-oil tanks, fuel-oil-burning equipment, and related equipment shall be provided with secondary containment area intended to capture any leakage of fuel oil. Floor drains shall be prohibited in containment areas. For tanks, the capacity of the containment area shall equal or exceed 2 times the capacity of the tank served. For fuel-oil-burning equipment the capacity of the containment area shall equal or exceed 1.5 times the storage capacity of the equipment.
6. **Transfer pumps.** Fuel-oil tanks shall be filled by means of a transfer pump supplied from a primary storage tank located on the lowest floor. A separate transfer pump and piping circuit shall be provided for each storage tank installed above the lowest floor. No intermediate pumping stations shall be provided between the storage tank and the transfer pump. Appropriate devices shall be provided for the automatic and manual starting and stopping of the transfer pumps so as to prevent the overflow of oil from these storage tanks.
7. **Indicators and alarms.** Indicators and alarms shall be provided for fuel oil tanks and rooms containing fuel-oil-burning equipment, including a level sensor for height and capacity of fuel oil, high and low levels, and leak detection. The float switch shall be provided within the containment areas and shall be arranged so as to sound an alarm and stop the transfer pump in case of failure of the tank or the control in the tank. These indicators shall be connected to a local audible alarm in the tank room and to a remote alarm located at a supervising station. The wiring shall comply with the New York City Electrical Code.
8. **Weekly testing.** The operation of the float switch shall be tested at least once each week by the holder of the certificate of fitness as provided for in Sections 1301.9 and .1308.3.

**1305.13.4 Above ground; outside a building.** Tanks located above ground, outside of buildings, shall comply with the following requirements:

1. **Containment.** Regardless of capacity, each fuel-oil storage tank shall be protected by an embankment or dike. Such protection shall have a capacity at least 1½ times the capacity of the tank so surrounded and shall be at least 4 feet (1219 mm) high, but in no case shall the protection be higher than ¼ the height of the tank when the height of the tank exceeds 16 feet (4877 mm). Embankments or dikes shall be made of earthwork with clay core, of masonry, of reinforced concrete or of steel. Earth work embankments shall be firmly and compactly built of good earth free from stones, vegetable matter, or other similar material, and shall have a flat section of at least 3 feet (914 mm) at the top and a slope of at least 1½ (457 mm) rise to 2 feet (610 mm) of run on all sides. Concrete, masonry or steel dikes shall be designed so as to contain safely all of the oil in the tank so surrounded. Embankments or dikes shall be continuous and unpierced, and the outside toe shall be located at least 5 feet (1524 mm) inside of the property line, and no less than 5 feet (1524 mm) from a driveway or parking area.
2. **Distances to buildings, lot lines, and other tanks.** Storage tanks of a capacity greater than 330 gallons (1250 L) shall be not less than 1¼ tank diameters and in no case less than 10 feet (3048 mm) from the tax lot line, the nearest building or adjacent tank. However, in no case shall the clearance between individual tanks and the tax lot line be less than the distance fixed by the following formula:

$$M.C. = 10 + 4 [ (G - 275) / 5000 ]$$

where:

M.C. = minimum clearance from nearest surface of tank to tax lot line, in feet.

G = capacity of tank, in gallons.

3. **Means of egress.** Tanks shall be located so as not to obstruct or interfere with any means of egress.

**1305.14 Alternate tank design and construction standards.** Oil-storage tanks, other than those conforming to ASME Boiler and Pressure Vessel Code, Section VIII, Division 1 or 2, UL 58, UL 80, UL 142, or UL 1316 shall be designed, constructed and installed in accordance with the requirements of Section 1305.14.1 through 1305.14.5.

**1305.14.1 General construction standards.** All tanks shall comply with the requirements of Section 1305.14.1.1 through 1305.14.1.9.

**1305.14.1.1 Materials and workmanship.** All fuel-oil storage tanks shall be built of steel plates or sheets, made by the open hearth or basic oxygen process. Such steel shall be free from physical imperfections, and shall be new, in good condition, and free from rust.

**1305.14.1.2 Assembly.** Tanks, flanges or other pipe connections shall be welded. Filler of any kind between plates shall be prohibited.

**1305.14.1.3 Corrosion resistance.** Tanks to be buried shall be cleaned and then coated on the outside with two coats of corrosion protective material. They shall be further protected by a coating of hot tar, asphalt, or equivalent rust resistive material, applied at the work site. Tanks installed inside buildings above ground shall be coated with one coat of corrosion protective material.

**1305.14.1.4 External loads on underground tanks.** All buried storage tanks shall be constructed of at least ¼-inch (6.4 mm) thick metal and shall be designed to withstand any external loads to which the tank may be subjected.

**1305.14.1.5 Identification.** At the time of installation all storage tanks shall bear a permanently-fixed plate, spot welded or equivalent, bearing the name of the tank manufacturer, the gage of the material, and capacity of the tank. Shop-fabricated storage tanks shall be installed without structural alteration.

**1305.14.1.6 Openings.** All openings shall be through the top of the storage tank, except that storage tanks of 275 gallon (1041 L) capacity or less, located above ground but below the lowest story, may be provided with a ¾-inch (19.1 mm) opening for gravity discharge and a 1-inch (25 mm) opening in the bottom for cleaning and protection against corrosion.

**1305.14.1.7 Manholes.** Tanks for No. 1, No. 2, No. 3 and No. 4 commercial grade oils need not have manholes. However, if manholes are used for tanks containing such oils, the manhole covers shall be bolted and made gas tight. Tanks for No. 5 and No. 6 commercial grade oils shall have manhole covers bolted or otherwise secured to the tanks and kept hydrostatically tight at all times. Tanks 275 gallons (1041 L) capacity or less, and all other tanks without manholes, shall be provided with a 2 screwed connection on the top of the tank to permit measuring the level of the oil within.

**1305.14.1.8 Electrical grounding.** Tanks outside of buildings shall be electrically grounded in accordance with the requirements for equipment grounding of the New York City Electrical Code.

**1305.14.1.9 Protection from heat and flame.** Tanks shall be located at least 7 feet (2134 mm), measured in the most direct manner, from any source of exposed flame unless protected as provided in Section 1305.11.1.2, exception 3, and at least 2 feet (610 mm) from any surface where the temperature exceeds 165 °F (74°C).

**1305.14.2 Additional construction standards for cylindrical tanks exceeding 275 gallons (1041 L).** Cylindrical tanks, including oval, elongated oval, or round tanks, exceeding 275 gallons (1041 L) shall comply with the requirements of Section 1305.14.2.1 through 1305.14.2.3.

**Exception:** Such above-ground vertical tanks that are outside of buildings shall comply with Section 1305.14.1 and 1305.14.5.

**1305.14.2.1 Thickness.** The minimum thickness shall be as follows:

1. Tanks 36 inches (914 mm) in diameter or less shall have at least a 1/4-inch (6.4 mm) shell and 1/4-inch (6.4 mm) heads.
2. Tanks 37 inches (940 mm) to 72 inches (1829 mm) in diameter shall have at least a 1/4-inch (6.4 mm) shell and 5/16-inch (7.9 mm) heads.
3. Tanks 73 (1854 mm) to 120 inches (3048 mm) in diameter shall have at least a 5/16-inch (7.9 mm) shell and 3/8-inch (9.5 mm) heads.
4. Tanks over 120 inches (3048 mm) in diameter shall be of at least 3/8-inch (9.5 mm) steel and shall be stiffened by angle rings or equivalent members so as to retain their cylindrical form.

**1305.14.2.2 Dished heads.** Dished heads for such tanks shall have a curvature the radius of which is not greater than the diameter of the tank. Dished heads shall be formed with an adequate cylindrical extension rim to provide a welding surface.

**1305.14.2.3 Flat heads.** If flat heads are used, they shall be braced in the same manner as described for the bracing of flat sides of rectangular tanks as provided for in Section 1305.14.3.

**1305.14.3 Additional construction standards for rectangular tanks exceeding 275 gallons (1041 L).** Rectangular tanks exceeding 275 gallons (1241 L) capacity shall comply with the requirements of Section 1305.14.3.1 through 1305.14.3.7.

**1305.14.3.1 Thickness.** Plates for rectangular tanks of more than 275 gallon (1040 L) capacity shall be at least 5/16 inches (7.9 mm) thick.

**1305.14.3.2 Corners.** Corners may be made up by bending the plates or by using angles.

**1305.14.3.3 Seams.** All tanks shall have full penetration 5/16 welds at all seams.

**1305.14.3.4 Bracing.** All flat surfaces of rectangular tanks shall be braced by structural members or rods.

**1305.14.3.5 Structural work.** All structural members shall be designed in accordance with the requirements of the New York City Building Code.

**1305.14.3.6 Connections.** Connections between bracing members and the sides of the tank shall be designed so that the connection will not fail before the member will fail.

**1305.14.4 Additional construction standards for tanks 275 gallons (1041 L) or less.** Storage tanks with a capacity of less than or equal to 275 gallons (1041 L) shall have a minimum thickness of shell and head plates of No. 10 manufacturer's standard Gage steel plate. Storage tanks of 60 gallon (227 L) capacity or less shall be similarly constructed but need not be thicker than No.14 manufacturer's standard Gage.

**Exceptions:**

1. Such vertical above-ground cylindrical tanks outside of buildings shall comply with Sections 1305.14.1 and 1305.14.5.
2. Such underground tanks need comply only with Sections 1305.14.1.
3. Storage containers of 6 gallons (23 L) or less used with burners or oil burning heaters need only be designed so as to withstand a hydrostatic pressure test of at least 5 psi (34 kPa) without permanent deformation, rupture, or leakage, and shall be approved. Such containers shall be installed with rigid metal fasteners for wall, floor, or stand-type installations, and shall be protected against mechanical damage. Portable storage containers of 6 gallons (23 L) or less may be filled by a pump mounted on a storage tank, provided that the pump is approved.

**1305.14.5 Additional construction standards for vertical above-ground cylindrical tanks outside of buildings exceeding 6 gallons (23 L).** Vertical above-ground cylindrical storage tanks exceeding 6 gallons (23 L) that are located outside of buildings shall comply with the requirements of Sections 1305.14.5.1 through 1305.14.5.3.

**1305.14.5.1 Plates.** Such tanks shall be built of steel plates of the quality required for cylindrical tanks in accordance with Section 1305.14.2.

**1305.14.5.2 Thickness.** The minimum thickness of shell or bottom plates shall be ¼ inches (6.4 mm), and the minimum thickness of roof plates ⅛ inches (3.2 mm). The thickness of shell plates shall be determined in accordance with the following formula:

$$t = \frac{P \times R \times F}{T \times E}$$

where:

*t = thickness of shell plate in inches.*

*P = head pressure at bottom of ring under consideration in psi.*

*R = radius of shell, in inches.*

*F = factor of safety (taken as 5).*

*T = tensile strength of plate, in psi as verified by mill test certificate.*

*E = efficiency of vertical joint in ring under consideration. E shall in no case be taken greater than 1.00.*

**1305.14.5.3 Seams.** *Roof plates shall have welded water-tight seams, and the roof shall be built to shed water. Bottom plates shall have welded seams. Shell plate seams shall be designed to develop the full strength of the plate.*

## **SECTION MC 1306**

### **OIL GAUGING**

**1306.1 Level indication.** *All tanks located inside buildings shall be equipped with a method of determining the oil level.*

**1306.2 Test wells.** *Test wells shall not be installed inside buildings. Unused tank openings shall be permanently sealed. For outside service, test wells shall be equipped with a tight metal cover designed to discourage tampering.*

**1306.3 Inside tanks.** *The gauging of inside tanks by means of measuring sticks shall not be permitted. An inside tank provided with fill and vent pipes shall be provided with a device to indicate either visually or audibly at the fill point when the oil in the tank has reached a predetermined safe level.*

**1306.4 Gauging devices.** *Gauging devices such as liquid level indicators or signals shall be designed and installed so that oil vapor will not be discharged into a building from the liquid fuel supply system.*

**1306.5 Gauge glass.** *A tank used in connection with any oil burner shall not be equipped with a glass gauge or any gauge which, when broken, will permit the escape of oil from the tank.*

**1306.6 Storage above lowest floors.** *Fuel-oil stored above the lowest floor shall also comply with the indicator requirements of Section 1305.13.3, Item 7.*

## **SECTION MC 1307**

## **FUEL-OIL VALVES**

**1307.1 Building shutoff.** A shutoff valve shall be installed on the fuel-oil supply line at the entrance to the building. Inside or above-ground tanks are permitted to have valves installed at the tank. The valve shall be capable of stopping the flow of fuel oil to the building or to the appliance served where the valve is installed at a tank inside the building.

**1307.2 Appliance shutoff.** A shutoff valve shall be installed at the connection to each appliance where more than one fuel-oil-burning appliance is installed.

**1307.3 Pump relief valve.** A relief valve shall be installed on the pump discharge line where a valve is located downstream of the pump.

**1307.4 Fuel-oil heater relief valve.** A relief valve shall be installed on the discharge line of fuel-oil-heating appliances.

**1307.5 Relief valve operation.** Relief valves shall be set to discharge at not more than 1½ times the maximum working pressure of the system. The discharge from relief valves shall be returned to the storage tank or to the supply line. Shut-off valves are not permitted in the line of relief.

## **SECTION MC 1308**

### **TESTING**

**1308.1 Testing required.** Fuel-oil storage tanks, other than tanks complying with the alternate tank design and construction standards contained in Section 1305.14, shall be tested in accordance with NFPA 31.

**1308.2 Hydrostatic test.** All liquid-fuel piping, and all tanks complying with the alternate tank design and construction standards contained in Section 1305.14, shall be hydrostatically tested for tightness by the contractor who made the installation before the work is closed in and before the system is operated. The piping shall be tested at 1½ times the maximum working pressure applicable to that part of the piping system but at a pressure less than the test pressure required for the storage tank. The minimum pressure for testing tanks shall be 1½ times the maximum working pressure applicable to the tank but in no case less than 25 psig (172 kPag), except as provided for containers 6 gallons (23 L) or less in capacity as provided for in Section 1305.14.4 Exception 3. The hydrostatic pressure shall be maintained until all joints and connections have been visually inspected for leaks, but in no case for less than ½ hour. The tank shall not show any permanent deformation as a result of the test. A record shall be kept of the pressure tests showing the name of the contractor and the pressures at which the piping and the tank were tested.

**1308.3. Weekly testing.** For fuel-oil tanks and fuel-oil-burning equipment located above ground, above the lowest floor inside of buildings, the operation of the float switch shall be tested at least once each week by the holder of the certificate of fitness as provided for in Section 1301.9 and Section 1305.13.3, item 8.

**CHAPTER 14**  
**SOLAR SYSTEMS**

**SECTION MC 1401**  
**GENERAL**

**1401.1 Scope.** *This chapter shall govern the design, construction, installation, alteration and repair of systems, equipment and appliances intended to utilize solar energy for space heating or cooling, domestic hot water heating, swimming pool heating or process heating.*

**1401.2 Potable water supply.** *Potable water supplies to solar systems shall be protected against contamination in accordance with the New York City Plumbing Code.*

**Exception:** *Where all solar system piping is a part of the potable water distribution system, in accordance with the requirements of the New York City Plumbing Code, and all components of the piping system are listed for potable water use, cross connection protection measures shall not be required.*

**1401.3 Heat exchangers.** *Heat exchangers used in domestic water-heating systems shall be approved for the intended use. The system shall have adequate protection to ensure that the potability of the water supply and distribution system is properly safeguarded.*

**1401.4 Solar energy equipment and appliances.** *Solar energy equipment and appliances shall conform to the requirements of this chapter and shall be installed in accordance with the manufacturer's installation instructions.*

**1401.5 Ducts.** *Ducts utilized in solar heating and cooling systems shall be constructed and installed in accordance with Chapter 6 of this code.*

**SECTION MC 1402**  
**INSTALLATION**

**1402.1 Access.** *Access shall be provided to solar energy equipment and appliances for maintenance. Solar systems and appurtenances shall not obstruct or interfere with firefighting operations or the operation of any doors, windows, fire escapes, or other means of egress or other building components requiring operation or access.*

**1402.2 Protection of equipment.** *Solar equipment exposed to vehicular traffic shall be installed not less than 6 feet (1829 mm) above the finished floor.*

**Exception:** *This section shall not apply where the equipment is protected from motor vehicle impact.*

**1402.3 Controlling condensation.** *Where attics or structural spaces are part of a passive solar system, ventilation of*

such spaces, as required by Section 406, is not required where other approved means of controlling condensation are provided.

**1402.4 Roof-mounted collectors.** Roof-mounted solar collectors that also serve as a roof covering shall conform to the requirements for roof coverings in accordance with the New York City Building Code.

**Exception:** The use of plastic solar collector covers shall be limited to those approved plastics meeting the requirements for plastic roof panels in the New York City Building Code.

**1402.4.1 Collectors mounted above the roof.** When mounted on or above the roof covering, the collector array and supporting construction shall be constructed of noncombustible materials or fire-retardant-treated wood conforming to the New York City Building Code to the extent required for the type of roof construction of the building to which the collectors are accessory.

**Exception:** The use of plastic solar collector covers shall be limited to those approved plastics meeting the requirements for plastic roof panels in the New York City Building Code.

**1402.5 Equipment.** The solar energy system shall be equipped in accordance with the requirements of Sections 1402.5.1 through 1402.5.4.

**1402.5.1 Pressure and temperature.** Solar energy system components containing pressurized fluids shall be protected against pressures and temperatures exceeding design limitations with a pressure and temperature relief valve. Each section of the system in which excessive pressures are capable of developing shall have a relief device located so that a section cannot be valved off or otherwise isolated from a relief device. Relief valves shall comply with the requirements of Section 1006.4 and discharge in accordance with Section 1006.6.

**1402.5.2 Vacuum.** The solar energy system components that are subjected to a vacuum while in operation or during shutdown shall be designed to withstand such vacuum or shall be protected with vacuum relief valves.

**1402.5.3 Protection from freezing.** System components shall be protected from damage by freezing of heat transfer liquids at the lowest ambient temperatures that will be encountered during the operation of the system.

**1402.5.4 Expansion tanks.** Liquid single-phase solar energy systems shall be equipped with expansion tanks sized in accordance with Section 1009.

**1402.6 Penetrations.** Roof and wall penetrations shall be flashed and sealed to prevent entry of water, rodents and insects.

**1402.7 Filtering.** Air transported to occupied spaces through rock or dust-producing materials by means other than natural convection shall be filtered at the outlet from the heat storage system.

**SECTION MC 1403**  
**HEAT TRANSFER FLUIDS**

**1403.1 Flash point.** *The flash point of the actual heat transfer fluid utilized in a solar system shall be not less than 50°F (28°C) above the design maximum nonoperating (no-flow) temperature of the fluid attained in the collector.*

**1403.2 Flammable gases and liquids.** *A flammable liquid or gas shall not be utilized as a heat transfer fluid.*

**SECTION MC 1404**  
**MATERIALS**

**1404.1 Collectors.** *Factory-built collectors shall be listed and labeled, and bear a label showing the manufacturer's name and address, model number, collector dry weight, collector maximum allowable operating and nonoperating temperatures and pressures, minimum allowable temperatures and the types of heat transfer fluids that are compatible with the collector. The label shall clarify that these specifications apply only to the collector.*

**1404.2 Thermal storage units.** *Pressurized thermal storage units shall be listed and labeled, and bear a label showing the manufacturer's name and address, model number, serial number, storage unit maximum and minimum allowable operating temperatures, storage unit maximum and minimum allowable operating pressures and the types of heat transfer fluids compatible with the storage unit. The label shall clarify that these specifications apply only to the thermal storage unit.*

**CHAPTER 15**  
**REFERENCED STANDARDS**

**SECTION MC 1501**  
**GENERAL**

**1501.1 General.** This chapter lists the standards that are referenced in various sections of this document. The standards are listed herein by the promulgating agency of the standard, the standard identification, the effective date and title and the section or sections of this document that reference the standard.

**1501.2 Subsequent additions, modifications, or deletions.** Refer to the rules of the department for any subsequent additions, modifications or deletions that may have been made to these standards in accordance with Section 28-103.19 of the Administrative Code.

**1501.3 Applicability.** The application of the referenced standards shall be as specified in Section 102.8.

## APPENDIX A COMBUSTION AIR OPENINGS AND CHIMNEY CONNECTOR PASS-THROUGHS

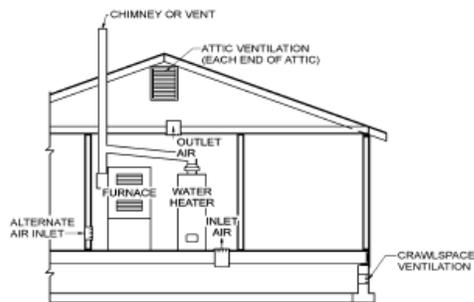

Figures A-1 through A-4 are illustrations of appliances located in confined spaces.

**FIGURE A-1  
ALL AIR FROM INSIDE THE BUILDING**

NOTE: Each opening shall have a free area of not less than 1 square inch per 1,000 Btu per hour of the total input rating of all appliances in the enclosure and not less than 100 square inches.

For SI: 1 square inch = 645 mm<sup>2</sup>, 1 British thermal unit per hour = 0.2931 W.

**FIGURE A-2  
ALL AIR FROM OUTDOORS—INLET AIR FROM VENTILATED CRAWL SPACE AND OUTLET AIR TO VENTILATED ATTIC**

NOTE: The inlet and outlet air openings shall each have a free area of not less than 1 square inch per 4,000 Btu per hour of the total input rating of all appliances in the enclosure.

For SI: 1 square inch = 645 mm<sup>2</sup>, 1 British thermal unit per hour = 0.2931 W.

APPENDIX A

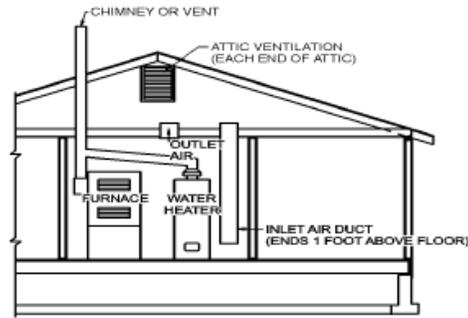

FIGURE A-3  
ALL AIR FROM OUTDOORS THROUGH VENTILATED ATTIC

NOTE: The inlet and outlet air openings shall each have a free area of not less than 1 square inch per 4,000 Btu per hour of the total input rating of all appliances in the enclosure.

For SI: 1 foot = 304.8 mm, 1 square inch = 645 mm<sup>2</sup>, 1 British thermal unit per hour = 0.2931 W.

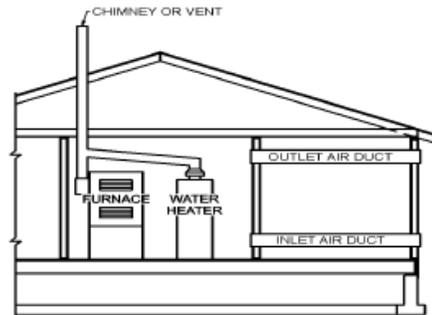

FIGURE A-4  
ALL AIR FROM OUTDOORS THROUGH HORIZONTAL DUCTS OR DIRECT OPENINGS

NOTE: Each air duct opening shall have a free area of not less than 1 square inch per 2,000 Btu per hour of the total input rating of all appliances in the enclosure. If the appliance room is located against an outside wall and the air openings communicate directly with the outdoors, each opening shall have a free area of not less than 1 square inch per 4,000 Btu per hour or the total input rating of all appliances in the enclosure.

For SI: 1 foot = 304.8 mm, 1 square inch = 645 mm<sup>2</sup>, 1 British thermal unit per hour = 0.2931 W.

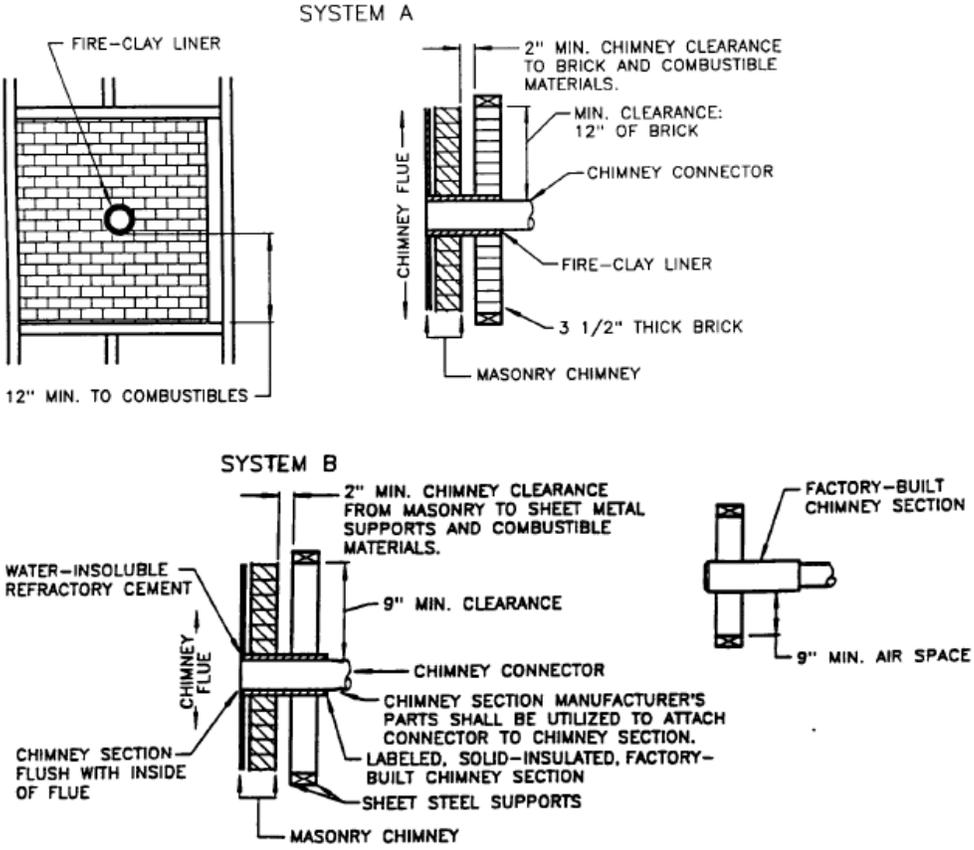

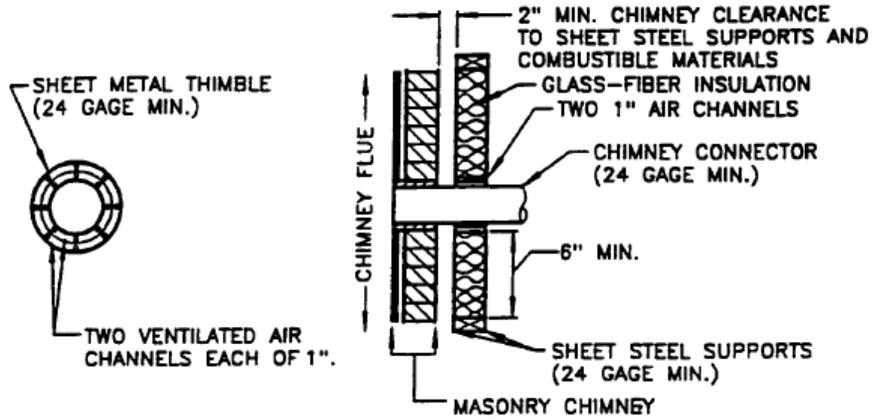

FIGURE A-5

CHIMNEY CONNECTOR SYSTEMS

For SI: 1 inch = 25.4 mm.

**APPENDIX B**  
**RESERVED**

§19. All actions and proceedings , civil or criminal, commenced prior to the effective date of this local law in accordance with any provision repealed by this local law and pending immediately prior to the taking effect of such repeal may be prosecuted and defended to final effect in the same manner as they might if those provisions had not be repealed.

§20. All licenses, permits and certificates of occupancy issued prior to the effective date of this local law pursuant to any provision repealed by this local law and in force immediately prior to taking effect of such repeal shall continue in force until they expire or are revoked as if the provisions under which they were issued had not been repealed. All renewals of such licenses and permits shall be in accordance with the provisions of title 28 of the administrative code of the city of New York as enacted by this local law.

§21. The repeal of item (vii) of paragraph b of subdivision 5 of section 1041 of the New York city charter as set forth in section one of this local law shall not affect the validity of reference standards amended, revised or added by the commissioner of buildings prior to the effective date of this local law and in force on the effective date of this local law.

§22. This local law shall take effect on July 1, 2008 except that section 10 of this local law shall take effect immediately and such section 10 shall be retroactive to and shall be deemed to be in full force and effect on and after July 1, 2007. Prior to July 1, 2008 the commissioner of buildings shall take administrative actions necessary for the timely implementation of this local law, including but not limited to the promulgation of rules.

The City of New York, Office of the City Clerk, s.s.:

I hereby certify that the foregoing is a true copy of a local law of The City of New York, passed by the Council on June 27, 2007 and approved by the Mayor on July 3, 2007.

Michael McSweeney, First Deputy City Clerk  
Acting City Clerk, Clerk of the Council.

CERTIFICATION PURSUANT TO MUNICIPAL HOME RULE LAW § 27

Pursuant to the provisions of Municipal Home Rule Law § 27, I hereby certify that the enclosed Local Law (Local Law 033 of 2007, Council Int. No. 578-A) contains the correct text and:

Received the following vote at the meeting of the New York City Council on June 27, 2007:

47 For, 0 Against, 0 Not Voting

Was signed by the Mayor on July 3, 2007

Was returned to the City Clerk on July 3, 2007

Jeffrey D. Friendlander, Acting Corporation Counsel.

**CHAPTER 1**  
**ADMINISTRATION**

**SECTION BC 101**  
**GENERAL**

**101.1 Title.** *This code shall be known and may be cited as the “New York City Building Code,” “NYCBC” or “BC”. All section numbers in this code shall be deemed to be preceded by the designation “BC”.*

**101.2 Scope.** *The provisions of this code shall apply to the construction, alteration, movement, addition, replacement, repair, equipment, use and occupancy, location, maintenance, removal and demolition of every building or structure or any appurtenances connected or attached to such buildings or structures.*

**101.3 Intent.** *Refer to Chapter 1 of Title 28 of the Administrative Code.*

**101.4 Referenced codes.** *The other codes listed in Sections 101.4.1 through 101.4.7 and referenced elsewhere in this code shall be considered part of the requirements of this code to the prescribed extent of each such reference.*

**101.4.1 Electrical.** *The provisions of the New York City Electrical Code shall apply to the installation of electrical systems, including alterations, repairs, replacement, equipment, appliances, fixtures, fittings and appurtenances thereto.*

**101.4.2 Gas.** *The provisions of the New York City Fuel Gas Code shall apply to the installation of gas piping, gas appliances and related accessories as covered in this code. These requirements apply to gas piping systems extending to the inlet connections of appliances and the installation and operation of residential and commercial gas appliances and related accessories.*

**101.4.3 Mechanical.** *The provisions of the New York City Mechanical Code shall apply to the installation, alterations, repairs and replacement of mechanical systems, including equipment, appliances, fixtures, fittings and/or appurtenances, including ventilating, heating, cooling, air-conditioning and refrigeration systems, incinerators and other energy-related systems.*

**101.4.4 Plumbing.** *The provisions of the New York City Plumbing Code shall apply to the installation, alteration, repair and replacement of plumbing systems, including equipment, appliances, fixtures, fittings and appurtenances, and where connected to a water or sewage system and all aspects of a medical gas system.*

**101.4.5 Fire prevention.** *The provisions of the New York City Fire Code shall apply to:*

1. *The manufacturing, storage, handling, use and transportation of flammable and combustible substances and hazardous materials, except for the installation of storage tanks and auxiliary storage tanks for oil-burning equipment;*
2. *The installation, testing, operation and maintenance of devices, equipment and systems designed to prevent, mitigate, control and extinguish fire, explosions or other life safety hazards;*
3. *The orderly evacuation or other safe conduct of occupants of a building, structure or premises in the event of fire, explosion, biological, chemical or hazardous material incident or release, natural disaster or other emergency, or the threat thereof;*
4. *The prevention, mitigation and control of hazards to firefighters and emergency responders during emergency operations;*
5. *The inspection, testing, operation and maintenance of any automatic or other fire alarm or fire extinguishing device, equipment or system.*

**101.4.6 Energy.** *The provisions of the Energy Conservation Construction Code of New York State shall apply to all matters governing the design and construction of buildings for energy efficiency.*

## **SECTION BC 102 APPLICABILITY**

**102.1 General.** *Where, in any specific case, different sections of this code specify different materials, methods of construction or other requirements, the most restrictive shall govern. Where there is a conflict between a general requirement and a specific requirement, the specific requirement shall be applicable.*

**102.2 Reserved.**

**102.3 Application of references.** *References to chapter or section numbers, or to provisions not specifically identified by number, shall be construed to refer to such chapter, section or provision of this code.*

**102.4 Referenced standards.** *The standards referenced in this code and in the rules of the department shall*

*be considered part of the requirements of this code to the prescribed extent of each such reference. Where differences occur between provisions of this code and referenced standards, the provisions of this code shall apply. Refer to Article 103 of Chapter 1 of Title 28 of the Administrative Code for additional provisions relating to referenced standards.*

**102.5 Partial invalidity.** *In the event that any part or provision of this code is held to be illegal or void, this shall not have the effect of making void or illegal any of the other parts or provisions.*

**102.6 Existing structures.** *The legal occupancy of any existing structure shall be permitted to continue without change, except as is otherwise specifically provided or as is deemed necessary by the commissioner for the general safety and welfare of the occupants and the public. Refer to Chapter 1 of Title 28 of the Administrative Code for additional provisions relating to existing structures.*

**SECTION BC 103  
DEPARTMENT OF BUILDINGS**

**103.1 General.** *Refer to the New York City Charter and Chapter 1 of Title 28 of the Administrative Code.*

**SECTION BC 104  
DUTIES AND POWERS OF COMMISSIONER OF BUILDINGS**

**104.1 General.** *The commissioner shall have the authority to render interpretations and to adopt rules establishing policies, and procedures to clarify and implement the provisions of this code. Such interpretations and rules shall be in compliance with the intent and purpose of this code. Refer to the New York City Charter and Chapter 1 of Title 28 of the Administrative Code for additional provisions relating to the authority of the Commissioner of Buildings.*

**SECTION BC 105  
PERMITS**

**105.1 General.** *Permits shall comply with this section, with Article 105 of Chapter 1 of Title 28 of the Administrative Code, and with requirements found elsewhere in this code.*

**105.2 Required.** *Any owner or authorized agent who intends to construct, add to, alter, repair, move, demolish, or change the occupancy of a building or structure, or to erect, install, add to, alter, repair, remove, convert or replace any gas, mechanical or plumbing system, the installation of which is regulated by this code, or to cause any such work to be done, shall first make application for construction document*

*approval in accordance with Chapter 1 of Title 28 of the Administrative Code and this chapter and obtain the required permit.*

**105.3 Work exempt from permit.** *Exemptions from permit requirements of this code as authorized in Chapter 1 of Title 28 of the Administrative Code and the rules of the department shall not be deemed to grant authorization for any work to be done in any manner in violation of the provisions of this code or any other laws or rules.*

**105.4 Validity of permit.** *The issuance or granting of a permit shall not be construed to be a permit for, or an approval of, any violation of any of the provisions of this code or of any other law. Permits presuming to give authority to violate or cancel the provisions of this code or other law shall not be valid. The issuance of a permit based on construction documents and other data shall not prevent the commissioner from requiring the correction of errors in the construction documents and other data. The commissioner is also authorized to prevent occupancy or use of a structure where in violation of this code or of any other law.*

**105.5 Foundation and earthwork permits.** *In addition to the requirements of Chapter 1 of Title 28 of the Administrative Code and Chapter 33 of this code, applications for foundation and earthwork permits shall include:*

1. *Notice to adjoining owners. Proof of notice to adjoining owners as required by Section 3304.3.2.*
2. *Liens. Satisfactory evidence that the property is free from any lien for unpaid city taxes, assessments, water rates, bail bonds, or judgments obtained by the city, together with consent in writing of the mortgagee, if there is a mortgage upon the property, and the consent in writing of the surrogate's court or supreme court, if the owner of the property is a minor or incompetent.*

**105.5.1 Notice to the department of commencement of foundation and earthwork.** *The foundation and earthwork permit shall be issued on the condition that the applicant will provide written notice to the department at least 24 but no more than 48 hours prior to the commencement of the foundation or earthwork as required by Section 3304.3.1.*

**105.6 Full demolition permits.** *In addition to the requirements of Chapter 1 of Title 28 of the Administrative Code and Chapter 33 of this code, applications for full demolition permits shall include:*

1. *Utility certifications. Certifications by the respective utility companies or governmental agencies having jurisdiction that all gas, electric, water, steam and other service lines to the building have been disconnected as required by Section 3306.9.1.*

2. *Notice to adjoining owners. Proof of notice to adjoining owners as required by Section 3306.3.2.*
3. *Certification of rodent extermination. Certification in accordance with department rules that the building has been treated effectively for rodent extermination as required by Section 3306.9.13.*

**105.6.1 Notice to department of commencement of demolition work.** *The full demolition permit shall be issued on the condition that the applicant will provide written notice to the department at least 48 hours prior to the commencement of demolition work.*

**105.7 Sign permits.** *In addition to the requirements of Chapter 1 of Title 28, permits for the erection, alteration or installation of signs shall be subject to the special provisions set forth in Sections 105.7.1 through 105.7.5.*

**105.7.1 Identification number.** *Every sign permit shall have an identification number.*

**105.7.2 Changing copy or structural change of sign or sign structure.** *The changing of copy on a sign not permitted for changeable copy or any structural change of the sign or sign structure shall require a new permit pursuant to this code.*

**105.7.3 Permit does not constitute authorization for illegal sign.** *The issuance of a permit for the erection, alteration or installation of a sign or sign structure issued pursuant to this code shall not be deemed to constitute permission or authorization to maintain a sign that would otherwise be illegal without a maintenance permit for an outdoor sign if required pursuant to this code and department rule or that is otherwise illegal pursuant to any other provision of law nor shall any permit issued hereunder constitute a defense in an action or proceeding with respect to such an unlawful sign.*

**105.7.4 Name and business address of licensed sign hanger.** *The application shall contain the name and business address of the licensed sign hanger who is to perform or supervise the proposed work.*

**105.7.5 Outdoor advertising company.** *If the sign or sign location is under the control of an outdoor advertising company, as defined in Chapter 5 of Title 28 of the Administrative Code, the application shall be accompanied by the name and, where provided by rule, the registration number of such outdoor advertising company.*

**105.8 Temporary construction equipment permits.** *In addition to the requirements of Chapter 1 of Title 28, permits for the erection, installation and use of temporary construction equipment shall be subject to*

*the special provisions set forth in Sections 105.8.1 through 105.8.3.*

**105.8.1 Application.** *The need for each specific item of construction equipment shall be stated on the application.*

**105.8.2 Term of permit.** *Notwithstanding any other provision of this code, the term of a construction equipment permit shall be one year, or the expiration of the contractor's insurance or the street obstruction bond, if such time period is less than one year and shall be renewable. The permit must be in effect at all times during which the equipment is at the work site.*

**105.8.3 Special provisions for renewal of permit for a sidewalk shed.** *An application for the renewal of a construction equipment permit for a sidewalk shed used in connection with the alteration of a building shall be accompanied by a report, acceptable to the department, prepared by a registered design professional who has examined that part of the premises on which the work requiring the use of a sidewalk shed is being performed. Such report shall document the condition of the applicable part of the premises and the scope of work that has been performed thereon since the issuance of the permit and shall provide an estimate of the additional time needed to complete the work.*

**105.9 Mandatory sewer and catch basin work required by Section 24-526 of the Administrative Code.** *In addition to the requirements of Chapter 1 of Title 28, an applicant for a permit who is required pursuant to Section 24-526 of the Administrative Code to construct or repair defects in sewers or catch basins that lie outside the property shall submit certification from the Department of Environmental Protection that the applicant or owner has provided the Department of Environmental Protection with:*

- 1. A performance bond or other security satisfactory to the Department of Environmental Protection and approved as to form by the Law Department for the full cost, as estimated by the Department of Environmental Protection, of constructing the part of the storm water drainage system for such property which shall lie outside the property line and repairing defects in such construction, if and as required by Section 24-526 of the Administrative Code;*
- 2. Any license or other written instrument that the Department of Environmental Protection or the Law Department may reasonably request that gives the Department of Environmental Protection, its agents and contractors and the surety for a performance bond described in Item 1 above the legal right to enter private property to perform the work described in Item 1 above, pursuant to the terms of the performance bond or in accordance with the conditions of acceptance of other security described in Item 1 above, and the legal right to connect to, to extend or to discharge storm water into any private sewer authorized as a point of disposal pursuant to Section 24-526 of*

*the Administrative Code, in the event that the owner of property fails to do so, if and as required pursuant to Section 24-526 of the Administrative Code;*

3. *Insurance of a kind and in an amount that the Department of Environmental Protection and the Law Department deem satisfactory to insure the city fully for all risks of loss, damage to property or injury to or death of persons to whomever occurring, arising out of or in connection with the performance of all work described in this section.*

## **SECTION BC 106**

### **CONSTRUCTION DOCUMENTS**

**106.1 General.** *Construction documents shall comply with Chapter 1 of Title 28 of the Administrative Code, this section and other applicable provisions of this code and its referenced standards.*

**106.2 Required construction documents.** *In addition to the requirements of Chapter 1 of Title 28 of the Administrative Code, the applicant shall submit any and all of the documents specified in Sections 106.3 through 106.15 as appropriate to the nature and extent of the work proposed.*

**106.2.1 Composite plans.** *Composite plans showing architectural, structural, and mechanical parts of a building may be submitted provided that a clear understanding of each part is not impaired.*

**106.2.2 Multiple building developments.** *The same set of plans may be used for several buildings of the same construction, if such buildings are located on adjoining lots under the same ownership, and if applications for construction document approval for the lots are filed simultaneously.*

**106.3 Lot diagram.** *The lot diagram shall show compliance with the New York City Zoning Resolution, indicating: the size, height, and location of the proposed construction including parking and curb cuts; all existing structures on the zoning lot and their distances from lot and street lines; the established grade and existing curb elevations; and the proposed final grade elevations of the site shown by contours or spot grades at reasonable intervals. The lot diagram shall be drawn in accordance with an accurate boundary survey to the city datum, made by a land surveyor, which shall be attached to and form part of the application. A complete zoning analysis shall accompany the lot diagram with citation to the relevant sections of the New York City Zoning Resolution.*

**106.4 Building classification statement.** *The statement shall identify:*

1. *The occupancy group or groups that apply to parts of the building in accordance with Section 302;*

2. *The occupancy group of the main use or dominant occupancy of the building in accordance with Section 302.1;*
3. *The construction class of the building in accordance with Section 602;*
4. *The structure category in accordance with Table 1604.5;*
5. *The height of the building as defined in Section 502.1;*
6. *The applicable measurements to the highest and lowest level of Fire Department access;*
7. *Whether the building is inside or outside of the fire districts; and*
8. *For multiple dwellings, the multiple dwelling classification as established by the New York State Multiple Dwelling Law.*

**106.5 Means of egress plans.** *Floor and roof plans shall show compliance with the requirements of Chapter 10, with sufficient notations indicating egress features and complete egress analysis as required by this code.*

**106.6 Architectural plans.** *Construction documents for all buildings shall provide detailed drawings of all architectural elements of the building showing compliance with the code, including but not limited to doors, windows and interior finish schedules, and other details necessary to substantiate all required fire-protection characteristics, as well as other details demonstrating compliance with the accessibility requirements of this code. Site safety features shall be shown where applicable. Plans shall also provide details of the exterior wall envelope as required, including flashing, intersections with dissimilar materials, corners, end details, control joints, intersections at roof, eaves or parapets, means of drainage, water-resistive membrane and details around openings.*

**Exception:** *Where a curtain wall system is to be employed containing elements that are normally detailed on shop or working drawings, approval of construction documents shall be conditioned upon deferred submittal of such shop or working drawings showing the approval of the registered design professional who prepared the architectural construction documents, or of a signed statement by such registered design professional that such drawings were prepared to his or her satisfaction. In such cases, submittal of construction documents showing compliance with the Energy Conservation Construction Code of New York State related to such curtain wall may also be deferred.*

**106.7 Structural plans.** *Structural plans shall include the data and information described in this section and in Chapter 16.*

**Exceptions:**

1. *Where structural elements are normally detailed on shop or working drawings, approval of construction documents shall be conditioned upon deferred submittal of such shop or working drawings showing the approval of the registered design professional who prepared the structural construction documents, or of a signed statement by such registered design professional that such drawings were prepared to his or her satisfaction.*
2. *In cases where the detailing of structural elements has been made on the basis of fire-resistance ratings, load tables, or similar data as given in manufacturer's catalogues, approval of construction documents shall be conditional upon submission of a manufacturer's designation attesting to the accuracy of the data and indicating that such data were derived in conformance with the provisions of this code. Where the detailing of structural elements has been made on the basis of data published in technical documents of recognized authority issued or accredited by the agency or association promulgating the applicable referenced standard, such manufacturer's designation will not be required.*

**106.7.1 Foundation plans.** *Foundation plans shall show compliance with the requirements of Chapter 18 of this code regarding foundation design and shall show the plan locations, design elevations of the bottoms, and details as to sizes, reinforcements, and construction of all footings, piers, foundation walls, pile groups, and pile caps. The levels of footings of adjacent structures shall be indicated or, if the adjacent structures are pile supported, this shall be stated. Where applicable, the plans shall include underpinning details. In addition, there shall be a statement indicating the character and minimum class of the soil strata required for the support of the foundation; the allowable soil pressure used for the design of footings; and the character, class, and presumptive bearing capacity of the bearing stratum to which piling is required to penetrate. The types and design capacities of piling and the records of required borings or test pits shall also be shown.*

**106.7.2 Floor plans.** *Floor plans and sections showing all structural requirements shall be provided for all levels.*

**106.7.3 Detailed drawings.** *Drawings shall show sizes, sections, and locations of members, and such other information as may be required to indicate clearly all structural elements and special structural*

engineering features.

**106.7.4 Column schedules.** Column schedules shall show the design load contributed by the framing at any level and the total accumulated design load at each level.

**106.7.5 Truss forces.** Where trusses are employed, a diagram or table shall indicate the loads or moments in the various members under the design loading conditions. The requirement for a diagram or table may be waived when the trusses consist of elements selected from load tables or similar data, subject to the requirements for verification described in this code.

**106.7.6 Prestressing forces.** Where prestressed members are employed, a schedule or table shall show the total prestressing forces and the method and sequence of application.

**106.8 Excavation and earthwork plans.** Where the application is sought solely for earthwork excavation or fill operations, the applicant shall submit 1) a lot diagram and 2) plans showing the exact location, extent, and depth or height of the proposed excavation or fill operation and any protective railings or equipment required by Chapter 33

**106.9 Fire protection system plans.** Construction documents for fire protection systems shall include a plot plan to scale indicating the location of the system in relation to the rest of the building and shall comply with Sections 106.14.1 through 106.14.4. Such plans shall not be required in connection with applications for limited standpipe alterations and limited sprinkler alterations.

**106.9.1 Sprinkler systems.** Sprinkler systems plans shall comply with Section 903.1.2.

**106.9.2 Alternative automatic fire-extinguishing systems.** Alternative automatic fire-extinguishing systems plans shall comply with Section 904.1.1.

**106.9.3 Standpipe systems.** Standpipe systems plans shall comply with Section 905.1.1.

**106.9.4 Fire alarm and detection systems.** Fire alarm and detection systems plans shall comply with Section 907.1.1.

**106.10 Sign installation plans.** Construction documents for signs applications shall comply with Section H105.2 in Appendix H.

**106.11 Sewer adequacy verification for increases in impervious surfaces.** Whenever an alteration

*increases impervious surfaces on the lot to greater than 20 percent of the impervious surfaces existing when the structure was constructed, the applicant shall submit information as to the availability of a public sewer system, as well as the adequacy of any existing system for the disposal of storm water by any means other than storm or combined sewers.*

**Exception:** *Where the total area of impervious surfaces proposed to be increased after the effective date of this code is less than or equal to 1,000 square feet (93 m<sup>2</sup>).*

**106.12 Pre-demolition photographs.** *In addition to the requirements of Section 3306.3, construction documents for full demolition shall comply with the following requirements for archival photographs:*

- 1. Number required. Applications shall contain two sets of photographs of the building or buildings to be demolished or removed. Both sets shall be received by the department on behalf of the New York City Landmarks Preservation Commission and the New York City Municipal Archives Division of the Department of Records and Information Services.*
- 2. Format. The photographs shall conform to the standards and specifications established by rules promulgated by the commissioner upon the advice of the commissioner of the Department of Records and Information Services and the chairperson of the Landmarks Preservation Commission.*

**Exceptions:** *Applications made on behalf of the Department of Housing Preservation and Development or made pursuant to Article 215 of chapter 2 of title 28 of the Administrative Code are exempt from the requirements of this section.*

**106.13 Energy efficiency.** *Construction documents shall include a statement by the registered design professional of record that: "To the best of my knowledge, belief and professional judgment, these plans and specifications are in compliance with the Energy Conservation Construction Code of New York State." In addition, the following requirements shall apply:*

- 1. A lead energy professional shall be identified for each project, who shall draw the relevant information regarding envelope, mechanical systems, service water heating system and lighting and power systems from construction documents into an energy analysis. The energy analysis shall balance total energy consumption of all systems in accordance with the Energy Conservation Construction Code of New York State and shall be signed and sealed by the lead energy professional.*
- 2. The format for the energy analysis shall be as established in the Energy Conservation*

*Construction Code of New York State, or as approved by the department, and shall comprise a sheet within the drawing set. Supporting documentation shall be available within the drawing set or upon request of the department.*

**106.14 Mechanical and fuel gas plans.** *Construction documents for gas piping, heating, ventilation, refrigeration and other mechanical work to be performed shall be submitted as per New York City Mechanical and Fuel Gas Codes.*

**106.15 Plumbing plans.** *Construction documents for plumbing work shall contain plans that include the following data and information. Such plans shall not be required in connection with applications for limited plumbing alterations.*

1. *Riser diagrams showing the story heights, all plumbing fixtures with diagrammatic arrangement of their connections to soil, waste, and vent piping, all soil, waste, and vent stacks from the point of connection with the building drain to their termination above the roof, all leader and storm water piping from the point of connection with the building drain to the roof drain, and all risers.*
2. *Diagrammatic floor plans showing the location, layout, and spacing of all plumbing fixtures, the summation of plumbing loads, the size, location, and material for all building sewers and drains, and the soil, waste, vent, water, and gas distribution piping.*
3. *Floor plans showing typical layouts; and stack details shown on one drawing, provided that such details are clearly identified as to location and stack number.*
4. *Plans clearly indicating all appurtenant equipment, including, but not limited to, pumps, ejectors, water tanks, and piping.*
5. *In the case of plans for new plumbing systems, and alterations of existing plumbing systems, plans indicating:*
  - 5.1. *The relative elevation of the lowest fixture referred to the city datum provided in Section 28-104.7.6 of the Administrative Code and the approximate inside top of the public sewers;*
  - 5.2. *The number, size, and location of all proposed sewer connections and relative location and size of all water mains, leaders, and risers; and*

- 5.3. *A statement from the New York City Department of Environmental Protection, giving the minimum water pressure in the main serving the building.*
6. *Seismic protection and restraint details for piping and equipment as required by Chapter 16 of the New York City Building Code.*
7. *Details showing structural supports for water tanks where required.*
8. *In areas of special flood hazards, construction documents shall comply with Appendix G of the New York City Building Code.*

**SECTION BC 107**  
**TEMPORARY STRUCTURES AND USES**

**107.1 General.** *Refer to Chapter 1 of Title 28 of the Administrative Code.*

**SECTION BC 108**  
**FEES**

**108.1 Payment of fees.** *Refer to Chapter 1 of Title 28 of the Administrative Code.*

**SECTION BC 109**  
**INSPECTIONS**

**109.1 General.** *Except as otherwise specifically provided, inspections required by this code or by the department during the progress of work may be performed on behalf of the owner by approved inspection agencies or, if applicable, by special inspectors. However, in the interest of public safety, the commissioner may direct that any of such inspections be performed by the department. All inspections shall be performed at the sole cost and expense of the owner. Refer to Chapter 1 of Title 28 of the Administrative Code for additional provisions relating to inspections.*

**109.2 Preliminary inspection.** *Refer to Chapter 1 of Title 28 of the Administrative Code.*

**109.3 Required progress inspections.** *The inspections set forth in Sections 109.3.1 through 109.3.8 shall be made during the progress of work to verify substantial compliance with the code and with approved construction documents*

**109.3.1 Footing and foundation inspection.** *Footing and foundation inspections shall be made after excavations for footings are complete and any required reinforcing steel is in place. For concrete*

*foundations, any required forms shall be in place prior to inspection. Materials for the foundation shall be on the job, except where concrete is ready mixed in accordance with ASTM C 94, the concrete need not be on the job.*

**109.3.2 Lowest floor elevation.** *In areas of special flood hazard, upon placement of the lowest floor, including the basement (for flood zone purposes), and prior to further vertical construction, the elevation inspection report required in Item 1 of Section G105.3 of Appendix G shall be submitted to the department.*

**109.3.3 Frame inspection.** *Framing inspections shall be performed to determine compliance with the approved construction documents.*

**Exception:** *Work regulated and inspected under Chapter 17.*

**109.3.4 Fire resistance rated construction inspection.** *Fire resistance rated construction shall be inspected to determine compliance with the approved construction documents, including inspection of the following work:*

- 1. Fire resistance rated partitions, floors, ceilings, shafts;*
- 2. Fire blocking of concealed spaces;*
- 3. Through-penetration firestopping, draftstopping and fireblocking;*
- 4. Fire dampers;*
- 5. Fire shutters; and*
- 6. Protection of structural members.*

**Exception:** *Work regulated and inspected under Chapter 17.*

**109.3.5 Energy code compliance inspections.** *Inspections shall be made to determine compliance with approved construction documents.*

**109.3.6 Other inspections.** *In addition to the inspections specified above, the commissioner is authorized to make or require other inspections of any construction work to ascertain compliance with*

*the provisions of this code and other laws that are enforced by the department.*

**109.4 Special inspections.** *Special inspections required by this code or by the commissioner shall be performed by special inspectors.*

**109.5 Final inspection.** *Refer to Chapter 1 of Title 28 of the Administrative Code.*

**109.6 Issuance of Certificate of compliance.** *Upon satisfactory inspection of service equipment and the project satisfied all the requirements for sign-off, the department shall issue certificate of compliance as applicable for the following service equipment:*

1. *Elevators;*
2. *Escalators;*
3. *Moving walkways;*
4. *Heating systems; and*
5. *Dumbwaiters.*

**109.7 Inspection agencies.** *Refer to Chapter 1 of Title 28 of the Administrative Code.*

**109.8 Inspection requests.** *Refer to Chapter 1 of Title 28 of the Administrative Code.*

**109.9 Satisfactory inspection report required.** *Portions of work requiring inspection may be sequenced or phased to allow continuing progress of that work provided that work shall not be done beyond the point indicated in each successive required inspection for that phase. The inspector shall either indicate the portion of the construction that is satisfactory as completed, or notify the permit holder or the superintendent of construction wherein the same fails to comply with this code. Any portions that do not comply shall be corrected and such portion shall not be covered or concealed until corrected. The person performing the inspection shall complete a report of satisfactory inspection. Refer to Chapter 1 of Title 28 of the Administrative Code.*

**SECTION BC 110  
CERTIFICATE OF OCCUPANCY**

*110.1 General. Refer to Chapter 1 of Title 28 of the Administrative Code.*

**SECTION BC 111**  
**SERVICE UTILITIES**

*111.1 General. Refer to Chapter 1 of Title 28 of the Administrative Code.*

**SECTION BC 112**  
**RESERVED**

**SECTION BC 113**  
**VIOLATIONS**

*113.1 General. Refer to Chapter 2 of Title 28 of the Administrative Code.*

**SECTION BC 114**  
**STOP WORK ORDER**

*114.1 General. Refer to Chapter 2 of Title 28 of the Administrative Code..*

**SECTION BC 115**  
**UNSAFE STRUCTURES AND EQUIPMENT**

*115.1 General. Refer to Chapter 2 and Chapter 3 of Title 28 of the Administrative Code.*

**CHAPTER 2**  
**DEFINITIONS**

**SECTION BC 201**  
**GENERAL**

**201.1 Scope.** *Unless otherwise expressly stated, the following words and terms shall, for the purposes of this code, have the meanings shown in this chapter.*

**201.2 Interchangeability.** *Words used in the present tense include the future; words stated in the masculine gender include the feminine and neuter; the singular number includes the plural and the plural, the singular.*

**201.3 Terms defined in other codes.** *Where terms are not defined in this code and are defined in the New York City Fuel Gas Code, New York City Fire Code, New York City Mechanical Code, New York City Electrical Code or New York City Plumbing Code, such terms shall have the meanings ascribed to them as in those codes.*

**201.4 Terms not defined.** *Where terms are not defined through the methods authorized by this section, such terms shall have ordinarily accepted meanings such as the context implies.*

**SECTION BC 202**  
**DEFINITIONS**

**ACCESSIBLE.** *See Section 1102.1.*

**ACCESSIBLE MEANS OF EGRESS.** *See Section 1002.1.*

**ACCESSIBLE ROUTE.** *See Section 1102.1.*

**ACCESSIBLE UNIT.** *See Section 1102.*

**ACTIVE FAULT/ACTIVE FAULT TRACE.** *See Section 1613.1.*

**ADDITION.** *An alteration of a building in existence that increases its exterior dimensions including but not limited to an extension or increase in floor area or height (including an increase in height or area*

resulting from the construction of a rooftop structure for mechanical equipment) of the building. See Section 28-101.5 of the Administrative Code.

**ADHERED MASONRY VENEER.** See Section 1402.1.

**ADJUSTED SHEAR RESISTANCE.** See Sections 2202.1 and 2302.1.

**ADMINISTRATIVE CODE.** The Administrative Code of the City of New York.

**ADMIXTURE.** See Section 1902.1.

**AEROSOL.** See Section 307.2.

*Level 1 aerosol products.* See Section 307.2.

*Level 2 aerosol products.* See Section 307.2.

*Level 3 aerosol products.* See Section 307.2.

**AGGREGATE.** See Section 1902.1.

**AGGREGATE, LIGHTWEIGHT.** See Section 1902.1.

**AGRICULTURAL, BUILDING.** A structure designed and constructed to house farm implements, hay, grain, poultry, livestock or other horticultural products. This structure shall not be a place of human habitation or a place of employment where agricultural products are processed, treated or packaged, nor shall it be a place used by the public.

**AIR-INFLATED STRUCTURE.** See Section 3102.2.

**AIR-SUPPORTED STRUCTURE.** See Section 3102.2.

*Double skin.* See Section 3102.2.

*Single skin.* See Section 3102.2.

**AISLE ACCESSWAY.** See Section 1002.1.

**ALARM NOTIFICATION APPLIANCE.** See Section 902.1.

**ALARM SIGNAL.** See Section 902.1.

**ALLEY.** See “Public way.”

**ALLOWABLE STRESS DESIGN.** See Section 1602.1.

**ALTERATION.** Any construction, addition, change of use or occupancy, or renovation to a building or structure in existence. See Section 28-101.5 of the Administrative Code.

**ALTERNATE LOAD PATH.** See Section 1624.1.

**ALTERNATE LOAD PATH METHOD.** See Section 1624.1.

**ALTERNATING TREAD DEVICE.** See Section 1002.1.

**ANCHOR.** See Section 2102.1.

**ANCHOR BUILDING.** See Section 402.2.

**ANCHORED MASONRY VENEER.** See Section 1402.1.

**ANNULAR SPACE.** See Section 702.1.

**ANNUNCIATOR.** See Section 902.1.

**APARTMENT.** See Section 310.2.

**APARTMENT, STUDENT.** See Section 310.2.

**APPROVED.** Acceptable to the commissioner. In reference to construction documents, the determination by the department after full examination that submitted construction documents comply with this code and other applicable laws and rules. In reference to materials, the determination by the commissioner that material is acceptable for its intended use. See Section 28-101.5 of the Administrative Code.

**APPROVED AGENCY.** *An established and recognized agency, or other qualified person, regularly engaged in conducting tests or furnishing inspection services, when approved pursuant to department rules as qualified to perform or witness identified testing or inspection services. See Chapter 1 of Title 28 of the Administrative Code.*

**APPROVED FABRICATOR.** *See Section 1702.1.*

**APPROVED INSPECTION AGENCY.** *An approved agency that is approved by the department as qualified to perform one or more of the inspections required by this code. See Chapter 1 of Title 28 of the Administrative Code.*

**APPROVED TESTING AGENCY.** *An approved agency that is approved by the department as qualified to test and evaluate the performance of one or more of the materials regulated in their use by this code. Such term shall include, when approved pursuant to department rules, a third party testing or certification agency, evaluation agency, testing laboratory, testing service or other entity concerned with product evaluation. See Chapter 1 of Title 28 of the Administrative Code.*

**ARCHEOLOGICAL RESOURCE.** *See Section 3302.1.*

**ARCHITECT.** *A person licensed and registered to practice the profession of architecture under the Education Law of the state of New York.*

**ARCHITECTURAL TERRA COTTA.** *See Section 2102.1.*

**AREA.** *See Section 2102.1.*

**Bedded.** *See Section 2102.1.*

**Gross cross-sectional.** *See Section 2102.1.*

**Net cross-sectional.** *See Section 2102.1.*

**AREA, BUILDING.** *See Section 502.1.*

**AREA OF REFUGE.** *See Section 1002.1.*

**AREA OF RESCUE ASSISTANCE.** *See Section 1002.1.*

**AREA OF SPECIAL FLOOD HAZARD.** See Section G201.2.

**ARTICULATING BOOM CRANE.** See Section 3302.1.

**ASPECT RATIO.** See Sections 1624.1.

**ASSISTED RESCUE PATH.** See Section 1002.1.

**ATRIUM.** See Section 404.1.1.

**ATTACHMENTS, SEISMIC.** See Section 1613.1.

**ATTIC.** The space between the ceiling beams of the top story and the roof rafters.

**AUDIBLE ALARM NOTIFICATION APPLIANCE.** See Section 902.1.

**AUTOMATIC.** See Section 902.1.

**AUTOMATIC FIRE-EXTINGUISHING SYSTEM.** See Section 902.1.

**AUTOMATIC SPRINKLER SYSTEM.** See Section 902.1.

**AVERAGE AMBIENT SOUND LEVEL.** See Section 902.1

**AWNING.** An architectural projection that provides weather protection, identity or decoration and is wholly supported by the building to which it is attached. An awning is comprised of a lightweight, rigid skeleton structure over which a covering is attached.

**AXIS OF ROTATION.** See Section 3302.1.

**AXLE.** See Section 3302.1.

**A-ZONE.** See Section G201.2.

**BACKING.** See Section 1402.1.

**BALCONY, EXTERIOR.** See Section 1602.1.

**BARRICADE.** See Section 307.2.

*Artificial barricade.* See Section 307.2.

*Natural barricade.* See Section 307.2.

**BASE.** See Section 1613.1.

**BASE (MOUNTING).** See Section 3302.1.

**BASE FLOOD.** See Section G201.2.

**BASE FLOOD ELEVATION.** See Section G201.2.

**BASE SHEAR.** See Section 1602.1.

**BASIC SEISMIC-FORCE-RESISTING SYSTEMS.** See Section 1602.1.

*Bearing wall system.* See Section 1602.1.

*Building frame system.* See Section 1602.1.

*Dual system.* See Section 1602.1.

*Inverted pendulum system.* See Section 1602.1.

*Moment-resisting frame system.* See Section 1602.1.

*Shear wall-frame interactive system.* See Section 1602.1.

**BASEMENT.** A story partly below the grade plane and having less than one-half its clear height (measured from finished floor to finished ceiling) below the grade plane (see “Story”, “Story above grade plane” in Section 502.1).

**BASEMENT (FOR FLOOD ZONE PURPOSES).** See Section G201.2.

**BEARER (PUTLOG).** See Section 3302.1.

**BED JOINT.** See Section 2102.1.

**BEDROCK.** See Section 1804.2.1.

**Hard sound rock (Class 1a).** See Section 1804.2.1.

**Medium hard rock (Class 1b).** See Section 1804.2.1.

**Intermediate rock (Class 1c).** See Section 1804.2.1.

**Soft rock (Class 1d).** See Section 1804.2.1.

**BLEACHERS.** See Section 1002.1.

**BOARDER (ROOMER, LODGER).** See Section 310.2.

**BOILING POINT.** See Section 307.2.

**BOND BEAM.** See Section 2102.1.

**BOND REINFORCING.** See Section 2102.1.

**BOOM.** See Section 3302.1.

**BOOM POINT.** See Section 3302.1.

**BOUNDARY ELEMENTS.** See Section 1613.1.

**BOUNDARY MEMBERS.** See Section 1602.1.

**BRACED WALL LINE.** See Section 2302.1.

**BRACED WALL PANEL.** See Section 2302.1.

**BRAKE.** See Section 3302.1.

**BREAKAWAY WALL.** See Section G201.2.

**BRICK.** See Section 2102.1.

**Calcium silicate (sand lime brick).** See Section 2102.1.

*Clay or shale. See Section 2102.1.*

*Concrete. See Section 2102.1.*

**BRITTLE.** *See Section 1613.1.*

**BUCKET HOIST.** *See Section 3302.1.*

**BUILDING.** *Any structure used or intended for supporting or sheltering any use or occupancy. The term shall be construed as if followed by the phrase “structure, premises, lot or part thereof” unless otherwise indicated by the text. See Section 28-101.5 of the Administrative code.*

**BUILDINGS AND OTHER STRUCTURES, FLEXIBLE.** *See Section 1609.2.*

**BUILDING, ENCLOSED.** *See Section 1609.2.*

**BUILDING LINE.** *The line established by law, beyond which a building shall not extend, except as specifically provided by law.*

**BUILDING, LOW-RISE.** *See Section 1609.2.*

**BUILDING, OPEN.** *See Section 1609.2.*

**BUILDING, PARTIALLY ENCLOSED.** *See Section 1609.2.*

**BUILDING, SIMPLE DIAPHRAGM.** *See Section 1609.2.*

**BUILT-UP ROOF COVERING.** *See Section 1502.1.*

**BULKHEAD.** *See Section 1502.1.*

**BUTTRESS.** *See Section 2102.1.*

**CABLE-RESTRAINED, AIR-SUPPORTED STRUCTURE.** *See Section 3102.2.*

**CABLEWAY.** *See Section 3302.1.*

**CANOPY.** *An architectural projection that provides weather protection, identity or decoration and is supported by the building to which it is attached and at the outer end by not less than one stanchion. A canopy is comprised of a rigid structure over which a covering is attached.*

**CANTILEVERED COLUMN SYSTEM.** *See Section 1602.1.*

**CARBON DIOXIDE EXTINGUISHING SYSTEMS.** *See Section 902.1.*

**CARBON MONOXIDE ALARM.** *See Section 902.1.*

**CARBON MONOXIDE DETECTOR.** *See Section 902.1.*

**CARBON MONOXIDE PRODUCING EQUIPMENT.** *See Section 902.1.*

**CARPORT.** *See Section 406.1.2.*

**CAST STONE.** *See Section 2102.1.*

**CEILING LIMIT.** *See Section 902.1.*

**CEILING RADIATION DAMPER.** *See Section 702.1.*

**CELL.** *See Section 2102.1.*

**CELLAR.** *See Section 502.1.*

**CEMENT PLASTER.** *See Section 2502.1.*

**CEMENTITIOUS MATERIALS.** *See Section 1902.1.*

**CENTRAL STATION.** *See Section 902.1.*

**CERAMIC FIBER BLANKET.** *See Section 721.1.1.*

**CERTIFICATE OF APPROVAL.** *See Section 3302.1.*

**CERTIFICATE OF COMPLIANCE.** See Section 1702.1 and Section 28-101.5 of the Administrative Code.

**CERTIFICATE OF OPERATION.** See Section 3302.1.

**CERTIFICATE OF ON-SITE INSPECTION.** See Section 3302.1.

**CHIMNEY.** See Section 2102.1.

**CHIMNEY TYPES.** See Section 2102.1.

**High-heat appliance type.** See Section 2102.1.

**Low-heat appliance type.** See Section 2102.1.

**Masonry type.** See Section 2102.1.

**Medium-heat appliance type.** See Section 2102.1.

**CIRCULATION PATH.** See Section 1102.1.

**CITY.** City of New York.

**CLADDING.** See “Components and cladding.”

**CLAMSHELL.** See Section 3302.1.

**CLAYS.** See Section 1804.2.1.

**Hard (Class 4a).** See Section 1804.2.1.

**Stiff (Class 4b).** See Section 1804.2.1.

**Medium (Class 4c).** See Section 1804.2.1.

**Soft (Class 4d).** See Section 1804.2.1.

**CLEAN AGENT.** See Section 902.1.

**CLEANOUT.** See Section 2102.1.

**CLOSED-CIRCUIT TELEPHONE.** See Section E102.1.

**CLOSED SYSTEM.** See Section 307.2.

**COLLAPSE.** See Section 1624.1.

**COLLAR JOINT.** See Section 2102.1.

**COLLECTING SAFE AREA.** See Section 1002.1.

**COLLECTOR.** See Sections 1613.1 and 2302.1.

**COLLECTOR ELEMENTS.** See Section 1602.1.

**COLUMN.** See Section 1902.1.

**COLUMN, MASONRY.** See Section 2102.1.

**COMBINATION FIRE/SMOKE DAMPER.** See Section 702.1.

**COMBINATION SIGN.** See Section H102.1.

**COMBUSTIBLE DUST.** See Section 307.2.

**COMBUSTIBLE FIBERS.** See Section 307.2.

**COMBUSTIBLE LIQUID.** See Section 307.2.

**Class II.** See Section 307.2.

**Class IIIA.** See Section 307.2.

**Class IIIB.** See Section 307.2.

**COMMERCIAL COOKING SYSTEM.** See Section 902.1.

**COMMERCIAL TRUCK MOUNTED CRANE (BOOM TRUCK).** See Section 3302.1.

**COMMISSIONER.** The Commissioner of Buildings of the City of New York or his or her duly authorized representative. See Section 28-101.5 of the Administrative Code.

**COMMON PATH OF EGRESS TRAVEL.** See Section 1002.1.

**COMMON USE.** See Section 1102.1.

**COMPETENT PERSON.** See Section 3302.1.

**COMPONENT.** See Section 1613.1.

*Component equipment.* See Section 1613.1.

*Component, flexible.* See Section 1613.1.

*Component, rigid.* See Section 1613.1.

**COMPONENTS AND CLADDING.** See Section 1609.2.

**COMPOSITE ACTION.** See Section 2102.1.

**COMPOSITE MASONRY.** See Section 2102.1.

**COMPRESSED GAS.** See Section 307.2.

*Nonliquefied compressed gases.* See Section 307.2.

*Liquefied compressed gases.* See Section 307.2.

*Compressed gases in solution.* See Section 307.2.

*Compressed gas mixtures.* See Section 307.2.

**COMPRESSIVE STRENGTH OF MASONRY.** See Section 2102.1.

**CONCEALED SPACES.** See Section 702.1.

**CONCRETE.** See Section 1902.1.

**CONCRETE CARBONATE AGGREGATE.** See Section 721.1.1.

**CONCRETE, CELLULAR.** See Section 721.1.1.

**CONCRETE, LIGHTWEIGHT AGGREGATE.** See Section 721.1.1.

**CONCRETE, PERLITE.** See Section 721.1.1.

**CONCRETE, SAND-LIGHTWEIGHT.** See Section 721.1.1.

**CONCRETE, SILICEOUS AGGREGATE.** See Section 721.1.1.

**CONCRETE, SPECIFIED COMPRESSIVE STRENGTH OF, ( $F'_c$ ).** See Section 1902.1.

**CONCRETE, VERMICULITE.** See Section 721.1.1.

**CONFINED REGION.** See Section 1602.1.

**CONGREGATE LIVING UNIT.** See Section 310.2.

**CONNECTOR.** See Section 2102.1.

**CONSTANTLY ATTENDED LOCATION.** See Section 902.1.

**CONSTRUCTION.** See Section 3302.1.

**CONSTRUCTION DOCUMENTS.** Plans and specifications and other written, graphic and pictorial documents, prepared or assembled for describing the design, location and physical characteristics of the elements of the project necessary for obtaining a building permit. See Section 28-101.5 of the Administrative Code.

**CONSTRUCTION TYPES.** See Section 602.

**Type I.** See Section 602.2.

**Type II.** See Section 602.2.

**Type III.** See Section 602.3.

**Type IV.** See Section 602.4.

**Type V.** See Section 602.5.

**CONTINUOUS GAS-DETECTION SYSTEM.** See Section 415.2.

**CONTRACTION JOINT.** See Section 1902.1.

**CONTROL AREA.** See Section 307.2.

**CONTROLLED LOW-STRENGTH MATERIAL.** A self-compacted, cementitious material used primarily as a backfill in place of compacted fill.

**CONVENTIONAL LIGHT-FRAME WOOD CONSTRUCTION.** See Section 2302.1.

**CORNER SCAFFOLD (ANGLE SCAFFOLD).** See Section 3302.1.

**CORRIDOR.** See Section 1002.1.

**CORRIDOR, INTERIOR.** See Section 1002.1.

**CORRIDOR, PUBLIC.** See Section 1002.1.

**CORROSION RESISTANCE.** The ability of a material to withstand deterioration of its surface or its properties when exposed to its environment.

**CORROSIVE MATERIAL.** See Section 307.2.

**COUNTERWEIGHT.** See Section 3302.1.

**COURT.** An open, uncovered space, unobstructed to the sky, bounded on three or more sides by exterior building walls or other enclosing devices.

**COVER.** See Section 2102.1.

**COVERED MALL BUILDING.** See Section 402.2.

**CRANE.** See Section 3302.1.

**CRAWLER CRANE.** See Section 3302.1.

**CRIPPLE WALL.** See Section 2302.1.

**CROSS AISLE.** See Section 1002.1.

**CRYOGENIC FLUID.** See Section 307.2.

**CURB LINE.** See Section 3201.8.

**CURTAIN WALL.** See Section 1402.1.

**CUSTODIAL CARE FACILITY.** See Section 310.2.

**DALLE GLASS.** See Section 2402.1.

**DAMPER.** See Section 702.1.

**DEAD END.** See Section 1002.1.

**DEAD LOADS.** See Section 1602.1.

**DEBRIS NET OR NETTING.** See Section 3302.1.

**DECK.** See Section 1602.1.

**DECORATIVE GLASS.** See Section 2402.1.

**DEFLAGRATION.** See Section 307.2.

**DEFORMABILITY.** See Section 1602.1.

*High deformability element.* See Section 1602.1.

*Limited deformability element.* See Section 1602.1.

*Low deformability element.* See Section 1602.1.

**DEFORMATION.** See Section 1602.1.

*Limited deformation. See Section 1602.1.*

*Ultimate deformation. See Section 1602.1.*

**DEFORMED REINFORCEMENT.** *See Section 1902.1.*

**DELUGE SPRINKLER SYSTEM.** *See Section 902.1.*

**DEMOLITION.** *See Section 3302.1.*

**DEMOLITION, FULL.** *See Section 3302.1.*

**DEMOLITION, PARTIAL.** *See Section 3302.1.*

**DEPARTMENT.** *Department of Buildings of the City of New York.*

**DERRICK.** *See Section 3302.1.*

**DESIGN EARTHQUAKE.** *See Section 1613.1.*

**DESIGN FLOOD ELEVATION.** *See Section G201.2.*

**DESIGN STRENGTH.** *See Sections 1602.1 and 2102.1.*

**DETACHED BUILDING.** *See Section 307.2.*

**DETECTABLE WARNING.** *See Section 1102.1.*

**DETECTOR, HEAT.** *See Section 902.1.*

**DETONATION.** *See Section 307.2.*

**DEVELOPMENT.** *See Section G201.2.*

**DIAPHRAGM.** *See Sections 1602.1 and 2102.1.*

**Diaphragm, blocked.** *See Section 1602.1.*

*Diaphragm, boundary. See Section 1602.1.*

*Diaphragm, chord. See Section 1602.1.*

*Diaphragm, flexible. See Section 1602.1.*

*Diaphragm, rigid. See Section 1602.1.*

**DIAPHRAGM, UNBLOCKED.** *See Section 2302.1.*

**DIMENSIONS.** *See Section 2102.1.*

*Actual. See Section 2102.1.*

*Nominal. See Section 2102.1.*

*Specified. See Section 2102.1.*

**DISPENSING.** *See Section 307.2.*

**DISPLACEMENT.** *See Section 1613.1.*

*Design displacement. See Section 1613.1.*

*Total design displacement. See Section 1613.1.*

*Total maximum displacement. See Section 1613.1.*

**DISPLACEMENT RESTRAINT SYSTEM.** *See Section 1613.1*

**DISPLAY SIGN.** *See Section H102.1.*

**DOOR, BALANCED.** *See Section 1002.1.*

**DORMITORY UNIT, STUDENT.** *See Section 310.2.*

**DRAFTSTOP.** *See Section 702.1.*

**DRAG STRUT.** *See "Collector" at Section 2302.1.*

**DRUM.** *See Section 3302.1.*

**DRY-CHEMICAL EXTINGUISHING SYSTEM.** *See Section 902.1.*

**DUCT.** See Section 1902.1.

**DURATION OF LOAD.** See Section 1602.1.

**DWELLING.** A building or structure which is occupied in whole or in part as the home, residence or sleeping place of one or more families.

See Section 310.2.

**DWELLING, MULTIPLE.** A dwelling which is either rented, leased, let or hired out, to be occupied, or is occupied, as the residence or home of three or more families living independently of each other. A multiple dwelling does not include a building used for occupancies in Groups I-2, I-3 or I-4.

See Section 310.2.

**DWELLING, ONE-FAMILY.** Any building or structure designed and occupied exclusively for residence purposes on a long-term basis for more than a month at a time by not more than one family. One-family dwellings shall also be deemed to include a dwelling located in a series of one-family dwellings each of which faces or is accessible to a legal street or public thoroughfare, provided that each such dwelling unit is equipped as a separate dwelling unit with all essential services, and also provided that each such unit is arranged so that it may be approved as a legal one-family dwelling.

See Sections 310.2 and M102.1.

**DWELLING, TWO-FAMILY.** Any building or structure designed and occupied exclusively for residence purposes on a long-term basis for more than a month at a time by not more than two families. Two-family dwellings shall also be deemed to include a dwelling located in a series of two-family dwellings each of which faces or is accessible to a legal street or public thoroughfare, provided that each such dwelling is equipped as a separate dwelling with all essential services, and also provided that each such dwelling is arranged so that it may be approved as a legal two-family dwelling.

See Sections 310.2 and M102.1.

**DWELLING UNIT.** A single unit consisting of one or more habitable rooms and occupied or arranged to be occupied as a unit separate from all other units within a dwelling. See Section 310.2.

**DWELLING UNIT (ACCESSIBILITY).** See Section 1102.1.

**DWELLING UNIT OR SLEEPING UNIT, MULTI-STORY.** See Section 1102.1.

**DWELLING UNIT OR SLEEPING UNIT, TYPE B.** See Section 1102.1.

**EFFECTIVE DAMPING.** See Section 1613.1.

**EFFECTIVE DEPTH OF SECTION (d).** See Section 1902.1.

**EFFECTIVE HEIGHT.** See Section 2102.1.

**EFFECTIVE STIFFNESS.** See Section 1613.1.

**EFFECTIVE WIND AREA.** See Section 1609.2.

**EGRESS COURT.** See Section 1002.1.

**ELEMENT.** See Sections 1602.1 and 1624.1.

*Ductile element.* See Section 1602.1.

*Limited ductile element.* See Section 1602.1.

*Nonductile element.* See Section 1602.1.

**EMERGENCY ALARM SYSTEM.** See Section 902.1.

**EMERGENCY CONTROL STATION.** See Section 415.2.

**EMERGENCY ESCAPE AND RESCUE OPENING.** See Section 1002.1.

**EMERGENCY VOICE/ALARM COMMUNICATIONS.** See Section 902.1.

**EMPLOYEE WORK AREA.** See Section 1102.1.

**ENGINEER.** A person licensed and registered to practice the profession of engineering under the Education Law of the State of New York.

**ENLARGEMENT.** An addition.

**EQUIPMENT SUPPORT.** See Section 1602.1.

**ESSENTIAL FACILITIES.** See Section 1602.1.

**EXHAUSTED ENCLOSURE.** See Section 415.2.

**EXISTING CONSTRUCTION.** See Section G201.2.

**EXISTING STRUCTURE.** (i) A building or structure in existence prior to the effective date of this code or one for which a lawful building permit was issued for the erection of such building or structure prior to the effective date of this code. (ii) A building or structure erected in accordance with the 1968 building code under a lawful building permit issued for the erection of such building or structure after the effective date of this code in accordance with section 28-101.4.2 of the Administrative Code. See Section 28-101.5 of the Administrative Code.

**EXISTING STRUCTURE (FOR FLOOD ZONE PURPOSES).** See Section G201.2.

**EXIT.** See Section 1002.1.

**EXIT ACCESS.** See Section 1002.1.

**EXIT DISCHARGE.** See Section 1002.1.

**EXIT DISCHARGE, LEVEL OF.** See Section 1002.1.

**EXIT ENCLOSURE.** See Section 1002.1.

**EXIT, HORIZONTAL.** See Section 1002.1.

**EXIT PASSAGEWAY.** See Section 1002.1.

**EXPANDED VINYL WALL COVERING.** See Section 802.1.

**EXPLOSION.** An effect produced by the sudden violent expansion of gases, that is accompanied by a shockwave or disruption of enclosing materials or structures, or both.

**EXPLOSIVE.** See Section 307.2.

**High explosive.** See Section 307.2.

**Low explosive.** See Section 307.2.

**UN/DOTn Class 1 Explosives.** See Section 307.2.

**Division 1.1.** See Section 307.2.

**Division 1.2.** See Section 307.2.

**Division 1.3.** See Section 307.2.

**Division 1.4.** See Section 307.2.

**Division 1.5.** See Section 307.2.

**Division 1.6.** See Section 307.2.

**EXTERIOR INSULATION FINISH SYSTEM (EIFS).** See Section 1402.1.

**EXTERIOR SURFACES.** See Section 2502.1.

**EXTERIOR WALL.** See Section 1402.1.

**EXTERIOR WALL COVERING.** See Section 1402.1.

**EXTERIOR WALL ENVELOPE.** See Section 1402.1.

**F RATING.** See Section 702.1.

**FABRICATED ITEM.** Products and assemblies regulated by this code, that are custom manufactured, or built prior to their incorporation into the work at the job site. Fabricated items shall not include listed, labeled or approved products or assemblies. See Section 1702.1.

**FABRICATION AREA.** See Section 415.2.

**FACILITY.** See Section 1102.1.

**FACTORED LOAD.** See Section 1602.1.

**FAMILY.** See Section 310.2.

**FIBERBOARD.** See Section 2302.1.

**FIBER CEMENT SIDING.** See Section 1402.1.

**FIRE ALARM BOX, MANUAL.** See Section 902.1.

**FIRE ALARM CONTROL PANEL.** See Section 902.1.

**FIRE ALARM SIGNAL.** See Section 902.1.

**FIRE ALARM SYSTEM.** See Section 902.1.

**FIRE AREA.** See Section 702.1.

**FIRE BARRIER.** See Section 702.1.

**FIRE COMMAND CENTER.** See Section 902.1.

**FIRE DAMPER.** See Section 702.1.

**FIRE DETECTOR, AUTOMATIC.** See Section 902.1.

**FIRE DOOR.** See Section 702.1.

**FIRE DOOR ASSEMBLY.** See Section 702.1.

**FIRE EXIT HARDWARE.** See Section 1002.1.

**FIRE PARTITION.** See Section 702.1.

**FIRE PROTECTION PLAN.** See Section 28-101.5 of the Administrative Code.

**FIRE PROTECTION RATING.** See Section 702.1.

**FIRE PROTECTION SYSTEM.** See Section 902.1.

***FIRE RESISTANCE.*** See Section 702.1.

***FIRE-RESISTANCE RATING.*** See Section 702.1.

***FIRE-RESISTANT JOINT SYSTEM.*** See Section 702.1.

***FIRE SAFETY FUNCTIONS.*** See Section 902.1.

***FIRE SEPARATION DISTANCE.*** See Section 702.1.

***FIRE WALL.*** See Section 702.1.

***FIRE WINDOW ASSEMBLY.*** See Section 702.1.

***FIREBLOCKING.*** See Section 702.1.

***FIRECUTTING.*** See Section 2302.1.

***FIREPLACE.*** See Section 2102.1.

***FIREPLACE THROAT.*** See Section 2102.1.

***FIRESTOPPING.*** See Section 702.1.

***FIREWORKS.*** See Section 307.2.

***FIREWORKS, 1.3G.*** See Section 307.2.

***FIREWORKS, 1.4G.*** See Section 307.2.

***FLAME RESISTANCE.*** See Section 802.1.

***FLAME SPREAD.*** See Section 802.1.

***FLAME SPREAD INDEX.*** See Section 802.1.

**FLAMMABLE GAS.** See Section 307.2.

**FLAMMABLE LIQUEFIED GAS.** See Section 307.2.

**FLAMMABLE LIQUID.** See Section 307.2.

**Class IA.** See Section 307.2.

**Class IB.** See Section 307.2.

**Class IC.** See Section 307.2.

**FLAMMABLE MATERIAL.** See Section 307.2.

**FLAMMABLE SOLID.** See Section 307.2.

**FLAMMABLE VAPORS OR FUMES.** See Section 415.2.

**FLASH POINT.** See Section 307.2.

**FLEXIBLE EQUIPMENT CONNECTIONS.** See Section 1602.1.

**FLEXURAL LENGTH.** See Section 1808.1.

**FLOOD OR FLOODING.** See Section G201.2.

**FLOOD DAMAGE-RESISTANT MATERIALS.** See Section G201.2.

**FLOOD INSURANCE RATE MAP (FIRM).** See Section G201.2.

**FLOOD INSURANCE STUDY.** See Section G201.2.

**FLOODPROOFING, DRY.** See Section G201.2.

**FLOODPROOFING, WET.** See Section G201.2.

**FLOODWAY.** See Section G201.2.

**FLOOR AREA, GROSS.** See Section 1002.1.

**FLOOR AREA, NET.** See Section 1002.1.

**FLOOR FIRE DOOR ASSEMBLY.** See Section 702.1.

**FLUE.** See Section 2102.1.

**FLUE, APPLIANCE.** See Section 2102.1.

**FLUE GASES.** See Section 2102.1.

**FLUE LINER (LINING).** See Section 2102.1.

**FLY GALLERY.** See Section 410.2.

**FOAM-EXTINGUISHING SYSTEM.** See Section 902.1.

**FOAM PLASTIC INSULATION.** See Section 2602.1.

**FOLDING AND TELESCOPIC SEATING.** See Section 1002.1.

**FOOD COURT.** See Section 402.2.

**FOOTING.** See Section 3201.8.

**FRAME.** See Section 1602.1.

**Braced frame.** See Section 1602.1.

**Concentrically braced frame (CBF).** See Section 1602.1.

**Eccentrically braced frame (EBF).** See Section 1602.1.

**Ordinary concentrically braced frame (OCBF).** See Section 1602.1.

**Special concentrically braced frame (SCBF).** See Section 1602.1.

**Moment frame.** See Section 1602.1.

**FRONTAGE SPACE.** See Section 502.1.

**FUNCTIONALLY DEPENDENT FACILITY.** See Section G201.2

**GAS CABINET.** See Section 415.2.

**GAS ROOM.** See Section 415.2.

**GLASS FIBERBOARD.** See Section 721.1.1.

**GLUED BUILT-UP MEMBER.** See Section 2302.1.

**GRADE (LUMBER).** See Section 2302.1.

**GRADE PLANE.** See Section 502.1.

**GRANDSTAND.** See Section 1002.1.

**GRANULAR SOILS.** See Section 1804.2.1.

*Dense (Class 3a).* See Section 1804.2.1.

*Medium (Class 3b).* See Section 1804.2.1.

*Loose (Class 6).* See Section 1804.2.1.

**GREENROOF.** See Section 1502.1.

**GRIDIRON.** See Section 410.2.

**GROSS LEASABLE AREA.** See Section 402.2.

**GROUND SIGN.** See Section H102.1.

**GROUP HOME.** See Section 310.2.

**GROUT.** See Section 2102.1.

**GROUTED MASONRY.** See Section 2102.1.

*Grouted hollow-unit masonry.* See Section 2102.1.

*Grouted multiwythe masonry.* See Section 2102.1.

**GUARD.** See Sections 1002.1 and 1602.1.

**GUARDRAIL SYSTEM (SCAFFOLD).** See Section 3302.1.

**GUY.** See Section 3302.1.

**GYPSUM BOARD.** See Section 2502.1.

**GYPSUM PLASTER.** See Section 2502.1.

**GYPSUM VENEER PLASTER.** See Section 2502.1.

**HABITABLE SPACE.** See Section 1202.1.

**HALOGENATED EXTINGUISHING SYSTEM.** See Section 902.1.

**HANDLING.** See Section 307.2.

**HANDRAIL.** See Section 1002.1.

**HARDBOARD.** See Section 2302.1.

**HAZARDOUS CONTENTS.** See Section 1613.1.

**HAZARDOUS MATERIALS.** See Section 307.2.

**HAZARDOUS PRODUCTION MATERIAL (HPM).** See Section 415.2.

**HEAD JOINT.** See Section 2102.1.

**HEADER (Bonder).** See Section 2102.1.

**HEALTH HAZARD.** See Section 307.2.

**HEAVY DUTY SIDEWALK SHED.** See Section 3302.1.

**HEIGHT, BUILDING.** See Section 502.1.

**HEIGHT, STORY.** See Section 502.1.

**HEIGHT, WALLS.** See Section 2102.1.

**HELIPORT.** See Section 412.5.2.

**HELISTOP.** See Section 412.5.2.

**HEREAFTER.** On or after the effective date of this code.

**HERETOFORE.** Before the effective date of this code.

**HIGH-PRESSURE BOILER.** See Section 28-401.3.

**HIGHLY TOXIC MATERIAL.** See Section 307.2.

**HISTORIC STRUCTURE.** See Section G201.2.

**HOISTING EQUIPMENT.** See Section 3302.1.

**HOISTING MACHINE.** See Section 3302.1.

**HOISTING MECHANISM.** See Section 3302.1.

**HPM FLAMMABLE LIQUID.** See Section 415.2.

**HPM ROOM.** See Section 415.2.

**HURRICANE-PRONE REGIONS.** See Section 1609.2.

**IMMEDIATELY DANGEROUS TO LIFE AND HEALTH (IDLH).** See Section 415.2.

**IMPACT LOAD.** See Section 1602.1.

**IMPORTANCE FACTOR, I.** See Section 1609.2.

**INCOMPATIBLE MATERIALS.** See Section 307.2.

**INDUSTRIAL EQUIPMENT PLATFORM.** See Section 502.1.

**INITIATING DEVICE.** See Section 902.1.

**INSPECTION CERTIFICATE.** See Section 1702.1.

**INTENDED TO BE OCCUPIED AS A RESIDENCE.** See Section 1102.1.

**INTERIOR FINISH.** See Section 802.1.

**INTERIOR FLOOR FINISH.** See Section 802.1.

**INTERIOR SURFACES.** See Section 2502.1.

**INTERIOR WALL AND CEILING FINISH.** See Section 802.1.

**INTERLAYMENT.** See Section 1502.1.

**INVERTED PENDULUM-TYPE STRUCTURES.** See Section 1613.1.

**ISOLATION INTERFACE.** See Section 1613.1.

**ISOLATION JOINT.** See Section 1902.1.

**ISOLATION SYSTEM.** See Section 1613.1.

**ISOLATOR UNIT.** See Section 1613.1.

**JIB.** See Section 3302.1.

**JOINT.** See Section 1602.1.

**JUMP (JUMPING).** See Section 3302.1.

**KEY ELEMENT.** See Section 1624.1.

**KITCHEN.** See Section 1202.1.

**KITCHENETTE.** See Section 1202.1.

**LABEL.** See Section 1702.1.

**LABORATORY BUILDING.** See Section 419.4.

**LABORATORY CHEMICAL.** See Section 419.4.

**LABORATORY, NON-PRODUCTION.** See Section 419.4.

**LABORATORY UNIT.** See Section 419.4.

**LAY.** See Section 3302.1.

**LETTER OF MAP AMENDMENT (LOMA).** See Section G201.2.

**LETTER OF MAP REVISION BASED ON FILL (LOMR-F).** See Section G201.2.

**LIGHT-DIFFUSING SYSTEM.** See Section 2602.1.

**LIGHT DUTY SIDEWALK SHED.** See Section 3302.1.

**LIGHT-FRAME CONSTRUCTION.** A type of construction whose vertical and horizontal structural elements are primarily formed by a system of repetitive wood or light gage steel framing members.

**LIGHT-TRANSMITTING PLASTIC ROOF PANELS.** See Section 2602.1.

**LIGHT-TRANSMITTING PLASTIC WALL PANELS.** See Section 2602.1.

**LIMIT STATE.** See Section 1602.1.

**LIMITED AREA SPRINKLER SYSTEM.** See Section 902.1.

**LIMITED PLUMBING ALTERATIONS.** See Section 28-101.5 of the Administrative Code.

**LIMITED SPRINKLER ALTERATIONS.** See Section 28-101.5 of the Administrative Code.

**LIMITED STANDPIPE ALTERATIONS.** See Section 28-101.5 of the Administrative Code.

**LIQUID.** See Section 415.2.

**LIQUID STORAGE ROOM.** See Section 415.2.

**LIQUID USE, DISPENSING AND MIXING ROOMS.** See Section 415.2.

**LISTED.** See Section 902.1 and Section 28-101.5 of the Administrative Code.

**LIVE LOADS.** See Section 1602.1.

**LIVE LOADS (ROOF).** See Section 1602.1.

**LOAD.** See Section 1613.1.

**Gravity load (W).** See Section 1613.1.

**LOAD (WORKING).** See Section 3302.1.

**LOAD AND RESISTANCE FACTOR DESIGN (LRFD).** See Section 1602.1.

**LOAD FACTOR.** See Section 1602.1.

**LOAD RATINGS.** See Section 3302.1.

**LOAD RATING CHART.** See Section 3302.1.

**LOADS.** See Section 1602.1.

**LOADS EFFECTS.** See Section 1602.1.

**LOCAL COLLAPSE.** See Section 1624.1.

**LOT.** A portion or parcel of land considered as a unit.

**LOT LINE.** A line dividing one lot from another, or from a street or any public place.

**LOWER FLAMMABLE LIMIT (LFL).** See Section 415.2.

**LOWER LOAD BLOCK.** See Section 3302.1.

**LOWEST FLOOR.** See Section G201.2

**MAILBOXES.** See Section E102.1

**MAIN WINDFORCE-RESISTING SYSTEM.** See Section 1609.2.

**MALL.** See Section 402.2.

**MANUAL FIRE ALARM BOX.** See Section 902.1.

**MANUFACTURED HOME.** See Section G201.2.

**MANUFACTURED HOME PARK OR SUBDIVISION.** See Section G201.2.

**MANUFACTURER'S DESIGNATION.** See Section 1702.1.

**MARK.** See Section 1702.1.

**MANUFACTURED HOME PARK OR SUBDIVISION.** See Section G201.2.

**MARKET VALUE OF STRUCTURE.** See Section G201.2.

**MARQUEE.** A permanent roofed structure attached to and supported by the building and that projects into the public right-of-way.

**MASONRY.** See Section 2102.1.

*Ashlar masonry.* See Section 2102.1.

*Coursed ashlar.* See Section 2102.1.

*Glass unit masonry.* See Section 2102.1.

*Plain masonry.* See Section 2102.1.

*Random ashlar.* See Section 2102.1.

*Reinforced masonry.* See Section 2102.1.

*Solid masonry.* See Section 2102.1.

**MASONRY UNIT.** See Section 2102.1.

*Clay.* See Section 2102.1.

*Concrete.* See Section 2102.1.

*Hollow.* See Section 2102.1.

*Solid.* See Section 2102.1.

**MAST-CLIMBING WORK PLATFORMS.** See Section 3302.1.

**MATERIAL HANDLING EQUIPMENT.** See Section 3302.1.

**MATERIAL HOIST (MATERIAL HOISTING EQUIPMENT).** See Section 3302.1.

**MAXIMUM CONSIDERED EARTHQUAKE.** See Section 1613.1.

**MEAN DAILY TEMPERATURE.** See Section 2102.1.

**MEAN ROOF HEIGHT.** See Section 1609.2.

**MEANS OF EGRESS.** See Section 1002.1.

**MECHANICAL-ACCESS OPEN PARKING GARAGES.** See Section 406.3.2.

**MECHANICAL EQUIPMENT SCREEN.** See Section 1502.1.

**MEMBRANE-COVERED CABLE STRUCTURE.** See Section 3102.2.

**MEMBRANE-COVERED FRAME STRUCTURE.** See Section 3102.2.

**MEMBRANE PENETRATION.** See Section 702.1.

**MEMBRANE-PENETRATION FIRESTOP.** See Section 702.1.

**METAL COMPOSITE MATERIAL (MCM).** See Section 1402.1.

**METAL COMPOSITE MATERIAL (MCM) SYSTEM.** See Section 1402.1.

**METAL ROOF PANEL.** See Section 1502.1.

**METAL ROOF SHINGLE.** See Section 1502.1.

**MEZZANINE.** See Section 502.1.

**MINERAL BOARD.** See Section 721.1.1.

**MOBILE CRANE.** See Section 3302.1.

**MOBILE SCAFFOLD.** See Section 3302.1.

**MODIFIED BITUMEN ROOF COVERING.** See Section 1502.1.

**MORTAR.** See Section 2102.1.

**MORTAR, SURFACE-BONDING.** See Section 2102.1.

**MULTILEVEL ASSEMBLY SEATING.** See Section 1102.1.

**MULTIPLE-STATION ALARM DEVICE.** See Section 902.1.

**MULTIPLE-STATION SMOKE ALARM.** See Section 902.1.

**MULTI-POINT ADJUSTABLE SUSPENSION SCAFFOLD.** See Section 3302.1.

**NAILING, BOUNDARY.** See Section 2302.1.

**NAILING, EDGE.** See Section 2302.1.

**NAILING, FIELD.** See Section 2302.1.

**NATIONAL GEODETIC VERTICAL DATUM (NGVD).** See Section G201.2.

**NATURALLY DURABLE WOOD.** See Section 2302.1.

*Decay resistant.* See Section 2302.1.

*Termite resistant.* See Section 2302.1.

**NEW CONSTRUCTION.** See Section G201.2.

**NOMINAL LOADS.** See Section 1602.1.

**NOMINAL SIZE (LUMBER).** See Section 2302.1.

**NONBUILDING STRUCTURE.** See Section 1613.1.

**NONCOMBUSTIBLE MEMBRANE STRUCTURE.** See Section 3102.2.

**NONRESIDENTIAL (FOR FLOOD ZONE PURPOSES).** See Section G201.2.

**NORMALTEMPERATURE AND PRESSURE (NTP).** See Section 415.2.

**NOSING.** See Section 1002.1.

**NOTATIONS.** See Sections 1602.1 and 2102.1.

**OCCUPANCY.** The purpose or activity for which a building or space is used or is designed, arranged or intended to be used..

**OCCUPANCY IMPORTANCE FACTOR.** See Section 1613.1.

**OCCUPANT LOAD.** See Section 1002.1.

**OCCUPIABLE SPACE.** See Section 1202.1.

**OPEN EXTERIOR SPACE.** See Section 1002.1.

**OPEN PARKING GARAGE.** See Section 406.3.2.

**OPEN PARKING LOT.** See Section 406.3.2.

**OPEN SYSTEM.** See Section 307.2.

**ORDINARY REPAIRS.** See Section 28-105.4.2.1.

**ORGANIC PEROXIDE.** See Section 307.2.

*Class I.* See Section 307.2.

*Class II.* See Section 307.2.

*Class III.* See Section 307.2.

*Class IV.* See Section 307.2.

*Class V.* See Section 307.2.

*Unclassified detonable.* See Section 307.2.

**OTHER STRUCTURES.** See Section 1602.1.

**OUTRIGGER (CRANE).** See Section 3302.1.

**OUTRIGGER (SCAFFOLD).** See Section 3302.1.

**OUTRIGGER BEAM (THRUSTOUT).** See Section 3302.1.

**OUTRIGGER SCAFFOLD.** See Section 3302.1.

**OWNER.** Any person, agent, firm, partnership, corporation or other legal entity having a legal or equitable interest in, or control of the premises.

**OXIDIZER.** See Section 307.2.

*Class 4.* See Section 307.2.

*Class 3.* See Section 307.2.

*Class 2.* See Section 307.2.

*Class 1.* See Section 307.2.

**OXIDIZING GAS.** See Section 307.2.

**P-DELTA EFFECT.** See Section 1602.1.

**PANEL (PART OF A STRUCTURE).** See Section 1602.1.

**PANIC HARDWARE.** See Section 1002.1.

**PARKING GARAGE.** See Section 406.2.2.

**PARTIAL DEMOLITION.** See Section 3302.1.

**PARTICLE BOARD.** See Section 2302.1.

**PEDESTAL.** See Section 1902.1.

**PENETRATION FIRESTOP.** See Section 702.1.

**PENTHOUSE.** See Section 1502.1.

**PERFORATED SHEAR WALL.** See Section 2302.1.

**PERFORATED SHEAR WALL SEGMENT.** See Section 2302.1.

**PERMIT.** An official document or certificate issued by the commissioner that authorizes performance of specified work or activity.

**PERSON.** An individual, partnership, corporation, or other legal entity.

**PERSONAL CARE SERVICE.** See Section 310.2.

**PERSONNEL HOIST.** See Section 3302.1.

**PHYSICAL HAZARD.** See Section 307.2.

**PIER FOUNDATIONS.** See Section 1808.1.

*Belled piers.* See Section 1808.1.

**PILE FOUNDATIONS.** See Section 1808.1.

*Augered-cast-in-place piles.* See Section 1808.1.

*Caisson piles.* See Section 1808.1.

*Compacted Concrete Piles.* See Section 1808.1.

*Concrete-filled steel pipe and tube piles.* See Section 1808.1.

*Driven uncased piles.* See Section 1808.1.

*Enlarged base piles.* See Section 1808.1.

*H-Piles.* See Section 1808.1.

*Steel-cased piles.* See Section 1808.1.

*Jacked Piles.* See Section 1808.1.

*Micro-piles/mini-piles.* See Section 1808.1.

*Open end pipe pile.* See Section 1808.1.

**PINRAIL.** See Section 410.2.

**PLAIN CONCRETE.** See Section 1902.1.

**PLAIN REINFORCEMENT.** See Section 1902.1.

**PLASTIC, APPROVED.** See Section 2602.1.

**PLASTIC GLAZING.** See Section 2602.1.

**PLASTIC HINGE.** See Section 2102.1.

**PLATFORM.** See Sections 410.2 and 3302.1.

**POLE SIGN.** See Section H102.1.

**POSITIVE ROOF DRAINAGE.** See Section 1502.1.

**POST-FIRE SMOKE PURGE SYSTEM.** See Section 909.1.1.

**POST-FIRM DEVELOPMENT.** See Section G201.2.

**POST-FIRM STRUCTURE.** See Section G201.2.

**POST TENSIONING.** See Section 1902.1.

**POWER BUGGIES.** See Section 3302.1.

**PRECAST CONCRETE.** See Section 1902.1.

**PRE-FIRM DEVELOPMENT.** See Section G201.2.

**PRE-FIRM STRUCTURE.** See Section G201.2.

**PREMISES.** Land, improvements thereon, or any part thereof.

**PRESERVATIVE-TREATED WOOD.** See Section 2302.1.

**PRESIGNAL SYSTEM.** See Section 902.1.

**PRESSURIZATION.** See Section 909.1.1.

**PRESTRESSED CONCRETE.** See Section 1902.1.

**PRESTRESSED MASONRY.** See Section 2102.1.

**PRESTRESSING STEEL.** See Section 1902.1.

**PRETENSIONING.** See Section 1902.1.

**PRIMARY STRUCTURE.** See Sections 1627.5.

**PRISM.** See Section 2102.1.

**PRIVATE GARAGE.** See Section 406.1.2

**PROJECTING SIGN.** See Sections 3201.8 and H102.1.

**PROSCENIUM WALL.** See Section 410.2.

**PUBLIC ENTRANCE.** See Section 1102.1.

**PUBLIC-USE AREAS.** See Section 1102.1.

**PUBLIC WAY.** See Section 1002.1.

**PYROPHORIC MATERIAL.** See Section 307.2.

**PYROTECHNIC COMPOSITION.** See Section 307.2.

**QUALIFIED PERSON.** See Section 3302.1.

**RAMP.** See Section 1002.1.

**RAMP-ACCESS OPEN PARKING GARAGES.** See Section 406.3.2.

**RECORD DRAWINGS.** *See Section 902.1.*

**RECREATIONAL VEHICLE.** *See Section G201.2.*

**REFERENCE RESISTANCE (D).** *See Section 2302.1.*

**REGISTERED DESIGN PROFESSIONAL.** *An architect or engineer.*

**REGISTERED DESIGN PROFESSIONAL OF RECORD.** *The registered design professional who prepared or supervised the preparation of applicable construction documents filed with the department.*

**REINFORCED CONCRETE.** *See Section 1902.1.*

**REINFORCED PLASTIC, GLASS FIBER.** *See Section 2602.1.*

**REINFORCEMENT.** *See Section 1902.1.*

**REPAIR.** *The reconstruction or renewal of any part of an existing building for the purpose of its maintenance.*

**REQUIRED.** *Required by this code.*

**REQUIRED STRENGTH.** *See Sections 1602.1 and 2102.1.*

**REROOFING.** *See Section 1502.1.*

**RESHORES.** *See Section 1902.1.*

**RESIDENTIAL CARE/ASSISTED LIVING FACILITIES.** *See Section 310.2.*

**RESIDENTIAL (FOR FLOOD ZONE PURPOSES).** *See Section G201.2.*

**RESISTANCE FACTOR.** *See Section 1602.1.*

**RESPONSE RATIO.** *See Section 1624.1.*

**RESTRICTED ENTRANCE.** See Section 1102.1.

**RETRACTABLE AWNING.** See Section 3105.2.

**ROOF ASSEMBLY.** See Section 1502.1.

**ROOF COVERING.** See Section 1502.1.

**ROOF COVERING SYSTEM.** See Section 1502.1.

**ROOF DECK.** See Section 1502.1.

**ROOF RECOVER.** See Section 1502.1.

**ROOF REPLACEMENT.** See Section 1502.1.

**ROOF SIGN.** See Section H102.1.

**ROOF VENTILATION.** See Section 1502.1.

**ROOFTOP STRUCTURE.** See Section 1502.1.

**ROOMING HOUSE.** See Section 310.2.

**ROPE.** See Section 3302.1.

**ROTATION.** See Section 1624.1.

**RUBBLE MASONRY.** See Section 2102.1.

*Coursed rubble.* See Section 2102.1.

*Random rubble.* See Section 2102.1.

*Rough or ordinary rubble.* See Section 2102.1.

**RUNBACK STRUCTURE.** See Section 3302.1.

**RUNNING BOND.** See Section 2102.1.

**SAFE AREA.** See Section 1002.1.

**SANDY GRAVEL AND GRAVELS.** See Section 1804.2.1.

*Dense (Class 2a).* See Section 1804.2.1.

*Medium (Class 2b).* See Section 1804.2.1.

*Loose (Class 6).* See Section 1804.2.1.

**SAND DUNES.** See Section G201.2.

**SCAFFOLD.** See Section 3302.1.

**SCISSOR STAIR.** See Section 1002.1.

**SEATING SECTION.** See Section 1002.1.

**SEISMIC DESIGN CATEGORY.** See Section 1613.1.

**SEISMIC-FORCE-RESISTING SYSTEM.** See Section 1613.1.

**SEISMIC FORCES.** See Section 1613.1.

**SEISMIC USE GROUP.** See Section 1613.1.

**SELF-CLOSING.** See Section 702.1.

**SELF-SERVICE STORAGE FACILITY.** See Section 1102.1.

**SERVICES.** See Section 1102.1.

**SERVICE CORRIDOR.** See Section 415.2.

**SERVICE ENTRANCE.** See Section 1102.1.

**SHAFT.** See Section 702.1.

**SHAFT ENCLOSURE.** See Section 702.1.

**SHEAR PANEL.** See Section 1602.1.

**SHEAR WALL.** See Sections 1602.1, 1613.1 and 2102.1 and 2302.1.

*Detailed plain masonry shear wall.* See Section 2102.1.

*Intermediate pre-stressed masonry shear wall.* See Section 2102.1.

*Intermediate reinforced masonry shear wall.* See Section 2102.1.

*Ordinary plain masonry shear wall.* See Section 2102.1.

*Ordinary plain pre-stressed masonry shear wall.* See Section 2102.1.

*Ordinary reinforced masonry shear wall.* See Section 2102.1.

*Perforated shear wall.* See Section 2302.1.

*Perforated shear wall segment.* See Section 2302.1.

*Special reinforced masonry shear wall.* See Section 2102.1.

*Type I shear wall.* See Section 2202.1.

*Type II shear wall.* See Section 2202.1.

*Type II shear wall segment.* See Section 2202.1.

**SHEAR WALL-FRAME INTERACTIVE SYSTEM.** See Section 1613.1.

**SHELL.** See Section 2102.1.

**SHORES.** See Section 1902.1.

**SHOTCRETE.** See Section 1914.1.

**SIGN.** See Sections 3201.8 and H102.1.

**SIGN STRUCTURE.** See Section H102.1.

**SILTS AND CLAY SLITS.** See Section 1804.2.1.

*Dense (Class 5a).* See Section 1804.2.1.

**Medium (Class 5b).** See Section 1804.2.1.

**Loose (Class 6).** See Section 1804.2.1.

**SINGLE-POINT ADJUSTABLE SUSPENSION SCAFFOLD.** See Section 3302.1.

**SINGLE-PLY MEMBRANE.** See Section 1502.1.

**SINGLE-STATION SMOKE ALARM.** See Section 902.1.

**SITE.** See Section 1102.1.

**SITE CLASS.** See Section 1613.1.

**SITE COEFFICIENTS.** See Section 1613.1.

**SKYLIGHT, UNIT.** A factory-assembled, glazed fenestration unit, containing one panel of glazing material that allows for natural lighting through an opening in the roof assembly while preserving the weather-resistant barrier of the roof.

**SKYLIGHTS AND SLOPED GLAZING.** Glass or other transparent or translucent glazing material installed at a slope of 15 degrees (0.26 rad) or more from vertical. Glazing material in skylights, including unit skylights, solariums, sunrooms, roofs and sloped walls, are included in this definition.

**SLEEPING UNIT.** See Section 310.2.

**SLEEPING UNIT (ACCESSIBILITY).** See Section 1102.1.

**SMOKE.** See Section 909.1.1.

**SMOKE ALARM.** See Section 902.1.

**SMOKE BARRIER.** See Section 702.1.

**SMOKE COMPARTMENT.** See Section 702.1.

**SMOKE-CONTROL MODE.** See Section 909.1.1.

***SMOKE-CONTROL SYSTEM, MECHANICAL.*** See Section 909.1.1.

***SMOKE-CONTROL SYSTEM, PASSIVE.*** See Section 909.1.1.

***SMOKE-CONTROL ZONE.*** See Section 909.1.1.

***SMOKE DAMPER.*** See Section 702.1.

***SMOKE DETECTOR.*** See Section 902.1.

***SMOKE-DEVELOPED INDEX.*** See Section 802.1.

***SMOKE PARTITION.*** See Section 702.1.

***SMOKE-PROTECTED ASSEMBLY SEATING.*** See Section 1002.1.

***SMOKEPROOF ENCLOSURE.*** See Section 902.1.

***SOLID.*** See Section 415.2.

***SPACE FRAME.*** See Section 1602.1.

***SPECIAL AMUSEMENT BUILDING.*** See Section 411.2.

***SPECIAL INSPECTION.*** See Section 1702.1.

***SPECIAL INSPECTION, CONTINUOUS.*** See Section 1702.1.

***SPECIAL INSPECTION, PERIODIC.*** See Section 1702.1.

***SPECIAL INSPECTOR.*** An individual having required qualifications and authorized by the department to perform or witness particular special inspections required by this code or by the rules of the department, including but not limited to a qualified registered design professional so authorized. See Section 1702.1 and Chapter 1 of title 28 of the Administrative Code.

**SPECIAL FLOOD HAZARD AREA.** See Section G201.2.

**SPECIAL TRANSVERSE REINFORCEMENT.** See Section 1602.1.

**SPECIFIC LOCAL LOAD.** See Section 1624.1.

**SPECIFIC LOCAL RESISTANCE METHOD.** See Section 1624.1.

**SPECIFIED.** See Section 2102.1.

**SPECIFIED COMPRESSIVE STRENGTH OF MASONRY ( $f'_m$ ).** See Section 2102.1.

**SPIRAL REINFORCEMENT.** See Section 1902.1.

**SPRAYED FIRE-RESISTANT MATERIALS.** See Section 1702.1.

**STACK BOND.** See Section 2102.1.

**STAGE.** See Section 410.2.

**STAIR.** See Section 1002.1.

**STAIRWAY.** See Section 1002.1.

**STAIRWAY, EXTERIOR.** See Section 1002.1.

**STAIRWAY, INTERIOR.** See Section 1002.1.

**STAIRWAY, SPIRAL.** See Section 1002.1.

**STACK EFFECT.** See Section 909.1.1.

**STANDARD CUBIC FEET (SCF).** See Section 307.2.

**STANDARD GUARDRAIL SYSTEM (SCAFFOLD).** See Section 3302.1.

**STANDPIPE SYSTEM.** See Section 902.1.

**Automatic dry.** See Section 902.1.

**Automatic wet.** See Section 902.1.

**Manual dry.** See Section 902.1.

**Manual wet.** See Section 902.1.

**Semiautomatic dry.** See Section 902.1.

**STANDPIPE SYSTEM, CLASSES OF.** See Section 902.1.

**Class I system.** See Section 902.1.

**Class II system.** See Section 902.1.

**Class III system.** See Section 902.1.

**START OF CONSTRUCTION.** See Section G201.2.

**STEEL CONSTRUCTION, COLD-FORMED.** See Section 2202.1.

**STEEL JOIST.** See Section 2202.1.

**STEEL MEMBER, STRUCTURAL.** See Section 2202.1.

**STEEP SLOPE.** A roof slope greater than two units vertical in 12 units horizontal (17-percent slope).

**STRIPPING OPERATIONS.** See Section 1902.1.

**STIRRUP.** See Section 1902.1.

**STONE MASONRY.** See Section 2102.1.

**Ashlar stone masonry.** See Section 2102.1.

**Rubble stone masonry.** See Section 2102.1.

**STORAGE CABINET.** See Section 419.4.

**STORAGE ROOM.** See Section 419.4.

**STORY.** That portion of a building included between the upper surface of a floor and the upper surface of the floor or roof next above (also see “Basement,” “Mezzanine” and Section 502.1). It is measured as the vertical distance from top to top of two successive tiers of beams or finished floor surfaces and, for the topmost story, from the top of the floor finish to the top of the ceiling joists or, where there is not a ceiling, to the top of the roof rafters.

**STORY ABOVE GRADE PLANE.** Any story having its finished floor surface entirely above grade plane, except that a basement shall also be considered a story above grade plane (also see “Basement” and “Story”). See Section 502.1.

**STORY DRIFT RATIO.** See Section 1613.1.

**STREET.** See Section 3201.8.

**STREET FLOOR.** A floor, usually the principal entrance floor, that is not more than one-half story above or below grade at the location from which egress is provided to the street.

**STREET LINE.** See Section 3201.8.

**STRENGTH, NOMINAL.** See Sections 1602.1 and 2102.1.

**STRENGTH, REQUIRED.** See Sections 1602.1 and 2102.1.

**STRENGTH, DESIGN.** See Section 1602.1.

**STRUCTURAL CONCRETE.** See Section 1902.1.

**STRUCTURAL GLUED-LAMINATED TIMBER.** See Section 2302.1.

**STRUCTURAL NET OR NETTING.** See Section 3302.1.

**STRUCTURE.** That which is built or constructed, including among others: buildings, stadia, tents, reviewing stands, platforms, stagings, observation towers, radio towers, tanks, trestles, open sheds, shelters, fences, and display signs. See Section 28-101.5 of the Administrative Code.

**SUBDIAPHRAGM.** See Section 2302.1.

**SUSTAINED WIND.** See Section 3302.1.

**SUBSTANTIAL DAMAGE.** See Section G201.2.

**SUBSTANTIAL IMPROVEMENT.** See Section G201.2.

**SUPERINTENDENT OF CONSTRUCTION.** See Section 28-101.5 of the Administrative Code.

**SUPERSTRUCTURE.** See Section 3302.1.

**SUPERVISING STATION.** See Section 902.1.

**SUPERVISORY SERVICE.** See Section 902.1.

**SUPERVISORY SIGNAL.** See Section 902.1.

**SUPERVISORY SIGNAL-INITIATING DEVICE.** See Section 902.1.

**SUPPORTED SCAFFOLD.** See Section 3302.1.

**SUSTAINED WIND.** See Section 3302.1

**SWIMMING POOL.** See Section 3109.2.

**SWIMMING POOL, PRIVATE.** See Section 3109.2.

**SWIMMING POOL, PUBLIC.** See Section 3109.2.

**SWING.** See Section 3302.1.

**T RATING.** See Section 702.1.

**TEMPORARY SIGN.** See Section H102.1.

**TENABLE ENVIRONMENT.** See Section 909.1.1.

**TENDON.** See Section 1902.1.

**TENT.** See Section 3102.2.

**THERMALLY ISOLATED SUNROOM ADDITION.** See Section 1202.1.

**THERMOPLASTIC MATERIAL.** See Section 2602.1.

**THERMOSETTING MATERIAL.** See Section 2602.1.

**THROUGH PENETRATION.** See Section 702.1.

**THROUGH-PENETRATION FIRESTOP SYSTEM.** See Section 702.1.

**TIE-DOWN (HOLD-DOWN).** See Section 2302.1.

**TIE, LATERAL.** See Section 2102.1.

**TIE, WALL.** See Section 2102.1.

**TILE.** See Section 2102.1.

**TILE, STRUCTURAL CLAY.** See Section 2102.1.

**TIRES, BULK STORAGE OF.** See Section 902.1.

**TORSIONAL FORCE DISTRIBUTION.** See Section 1613.1.

**TOUGHNESS.** See Section 1613.1.

**TOWER.** See Section 3302.1.

**TOWER CRANE.** See Section 3302.1.

**TOXIC MATERIAL.** See Section 307.2.

**TRANSIENT LODGING.** See Section E102.1.

**TRANSIT.** See Section 3302.1.

**TRAVEL.** See Section 3302.1.

**TREATED WOOD.** See Section 2302.1.

**TRIM.** See Section 802.1.

**TROUBLE SIGNAL.** See Section 902.1.

**TWO-POINT SUSPENSION SCAFFOLD (SWING STAGE).** See Section 3302.1.

**UNADJUSTED SHEAR RESISTANCE.** See Sections 2202.1 and 2302.1.

**UNDERLAYMENT.** See Section 1502.1.

**UNSTABLE (REACTIVE) MATERIAL.** See Section 307.2.

**Class 4.** See Section 307.2.

**Class 3.** See Section 307.2.

**Class 2.** See Section 307.2.

**Class 1.** See Section 307.2.

**USE (USED).** The purpose for which a building, structure, or space is occupied or utilized, unless otherwise indicated by the text. Use (used) shall be construed as if followed by the words "or is intended, arranged, or designed to be used."

**UTILITY COMPANY OR PUBLIC UTILITY COMPANY.** See Section 28-101.5.

**UTILITY CORPORATION OR PUBLIC UTILITY CORPORATION.** See Section 28-101.5.

**VAPOR RETARDER.** *A vapor-resistant material, membrane or covering such as foil, plastic sheeting or insulation facing having a permeance rating of 1 perm ( $5.7 \times 10^{-11}$  kg/Pa · s · m<sup>2</sup>) or less, when tested in accordance with the desiccant method using Procedure A of ASTM E 96. Vapor retarders limit the amount of moisture vapor that passes through a material or wall assembly.*

**VAULT.** *See Section 3201.8.*

**VENEER.** *See Section 1402.1.*

**VENTILATION.** *The natural or mechanical process of supplying conditioned or unconditioned air to, or removing such air from, any space.*

**VISIBLE ALARM NOTIFICATION APPLIANCE.** *See Section 902.1.*

**V-ZONE.** *See Section G201.2.*

**WALKWAY, PEDESTRIAN.** *A walkway used exclusively as a pedestrian trafficway.*

**WALL.** *See Section 2102.1.*

*Cavity wall. See Section 2102.1.*

*Composite wall. See Section 2102.1.*

*Dry-stacked, surface-bonded wall. See Section 2102.1.*

*Masonry-bonded hollow wall. See Section 2102.1.*

*Parapet wall. See Section 2102.1.*

**WALL, LOAD-BEARING.** *See Section 1602.1.*

**WALL, NONLOAD-BEARING.** *See Section 1602.1.*

**WALL SIGN.** *See Section H102.1.*

**WATER-REACTIVE MATERIAL.** *See Section 307.2.*

*Class 3. See Section 307.2.*

*Class 2. See Section 307.2.*

*Class 1. See Section 307.2.*

**WEATHER-EXPOSED SURFACES.** *See Section 2502.1.*

**WEB.** *See Section 2102.1.*

**WET-CHEMICAL EXTINGUISHING SYSTEM.** *See Section 902.1.*

**WHEELCHAIR SPACE.** *See Section 1102.1.*

**WHEEL MOUNTED CRANE (MULTIPLE CONTROL STATIONS).** *See Section 3302.1.*

**WHEEL MOUNTED CRANE (SINGLE CONTROL STATION).** *See Section 3302.1.*

**WIND-BORNE DEBRIS REGION.** *See Section 1609.2.*

**WINDER.** *See Section 1002.1.*

**WIND-RESTRAINT SEISMIC SYSTEM.** *See Section 1613.1.*

**WIRE BACKING.** *See Section 2502.1.*

**WIRELESS PROTECTION SYSTEM.** *See Section 902.1.*

**WOOD SHEAR PANEL.** *See Section 2302.1.*

**WOOD STRUCTURAL PANEL.** *See Section 2302.1.*

*Composite panels. See Section 2302.1.*

*Oriented strand board (OSB). See Section 2302.1.*

*Plywood. See Section 2302.1.*

**WORK NOT CONSTITUTING MINOR ALTERATIONS OR ORDINARY REPAIRS.** *See Section 28-105.4.2.1.*

**WORKSTATION.** *See Section 415.2.*

**WRITING (WRITTEN).** See Section 28-101.5 of the Administrative Code.

**WRITTEN NOTICE.** See Section 28-101.5 of the Administrative Code.

**WYTHER.** See Section 2102.1.

**YARD.** An open space, other than a court, unobstructed from the ground to the sky, except where specifically provided by this code, on the lot on which a building is situated.

**ZONE.** See Section 902.1.

**ZONING RESOLUTION.** See Section 28-101.5.

**CHAPTER 3**  
**USE AND OCCUPANCY CLASSIFICATION**

**SECTION BC 301**  
**GENERAL**

**301.1 Scope.** *The provisions of this chapter shall control the classification of all buildings and structures, and spaces therein, as to use and occupancy.*

**SECTION BC 302**  
**CLASSIFICATION**

**302.1 General.** *Structures or portions of structures shall be classified with respect to occupancy in one or more of the groups listed below. Structures with multiple uses shall be classified according to Section 302.3. Where a structure, or portion thereof, is proposed for a purpose which is not specifically provided for in this code, such structure, or portion thereof shall be classified in the group which the occupancy most nearly resembles, according to the fire safety and relative hazard involved, and as approved by the commissioner.*

1. *Assembly (see Section 303): Groups A-1, A-2, A-3, A-4 and A-5*
2. *Business (see Section 304): Group B*
3. *Educational (see Section 305): Group E*
4. *Factory and Industrial (see Section 306): Groups F-1 and F-2*
5. *High Hazard (see Section 307): Groups H-1, H-2, H-3, H-4 and H-5*
6. *Institutional (see Section 308): Groups I-1, I-2, I-3 and I-4*
7. *Mercantile (see Section 309): Group M*
8. *Residential (see Section 310): Groups R-1, R-2 and R-3*
9. *Storage (see Section 311): Groups S-1 and S-2*

*10. Utility and Miscellaneous (see Section 312): Group U*

*For a listing of Occupancy Group Classifications that corresponds with uses listed in the Zoning Resolution, refer to department rules.*

***302.1.1 Incidental use areas.*** *Spaces that are listed in Table 302.1.1 and are incidental to the main occupancy shall be considered incidental use areas. Such spaces shall be separated or protected, or both, from adjoining occupancies in accordance with Table 302.1.1, or the building shall be classified as a mixed occupancy and comply with Section 302.3. Areas that are incidental to the main occupancy shall be classified in accordance with the main occupancy of the portion of the building in which the incidental use area is located.*

***Exception:*** *Incidental use areas within and serving a dwelling unit are not required to comply with this section.*

**TABLE 302.1.1**  
**INCIDENTAL USE AREAS**

<b>ROOM OR AREA</b>	<b>SEPARATION<sup>a</sup></b>
<i>Furnace room where any piece of equipment is over 400,000 Btu per hour input</i>	<i>2 hour; or 1 hour and provide automatic fire-extinguishing system</i>
<i>Furnace room where any piece of equipment is 400,000 Btu per hour input or less, except in R-3 occupancy</i>	<i>1 hour or provide automatic sprinkler system</i>
<i>Rooms with any boiler over 15 psi and 10 horsepower</i>	<i>2 hour; or 1 hour and provide automatic fire-extinguishing system</i>
<i>Rooms with any boiler 15 psi or less and 10 horsepower or less, except in R-3 occupancy</i>	<i>1 hour or provide automatic sprinkler system</i>
<i>Mechanical and/or electrical equipment room, except in R-3 occupancy</i>	<i>1 hour or provide automatic sprinkler system</i>
<i>Refrigerant machinery rooms</i>	<i>1 hour or provide automatic sprinkler system</i>
<i>Parking garage (Section 406.2)</i>	<i>2 hours; or 1 hour and provide automatic fire-extinguishing system</i>
<i>Hydrogen cut-off rooms</i>	<i>2-hour fire barriers and floor/ceiling assemblies in all occupancy groups.</i>
<i>Incinerator rooms</i>	<i>2 hours and automatic sprinkler system</i>
<i>Paint shops, not classified as Group H, located in occupancies other than Group F</i>	<i>2 hours; or 1 hour and provide automatic fire-extinguishing system</i>
<i>Laboratories and vocational shops, not classified as Group H, located in Group E or I-2 occupancies</i>	<i>2 hour; or 1 hour and provide automatic fire-extinguishing system</i>
<i>Laundry rooms over 100 square feet, except within dwelling units</i>	<i>1 hour or provide automatic fire-extinguishing system</i>
<i>Storage rooms over 100 square feet, except in R-3 occupancy</i>	<i>1 hour or provide automatic fire-extinguishing system</i>
<i>Group I-3 cells equipped with padded surfaces</i>	<i>1 hour</i>
<i>Group I-2 waste and linen collection rooms</i>	<i>1 hour</i>
<i>Waste and linen collection rooms over 100 square feet</i>	<i>1 hour or provide automatic fire-extinguishing system</i>
<i>Stationary lead-acid battery systems having a liquid capacity of more than 100 gallons used for facility</i>	<i>2-hour fire barriers and floor/ceiling assemblies in all occupancy groups</i>

<i>emergency power or uninterrupted power supplies</i>	
<i>Rooms utilizing the electrical installation standards for "information technology rooms" as per Section 645.1 of the New York City Electrical Code</i>	<i>As may be required by the New York City Electrical Code</i>

*For SI: 1 square foot = 0.0929 m<sup>2</sup>, 1 pound per square inch = 6.9 kPa,*

*1 British thermal unit = 0.293 watts, 1 horsepower = 746 watts,*

*1 gallon = 3.785 L.*

*a. Where an automatic fire-extinguishing system is provided, it need only be provided in the incidental use room or area.*

**302.1.1.1 Separation.** Where Table 302.1.1 requires a fire-resistance-rated separation, the incidental use area shall be separated from the remainder of the building with a fire barrier. Where Table 302.1.1 permits an automatic fire-extinguishing system without a fire barrier, the incidental use area shall be separated by construction capable of resisting the passage of smoke. The partitions shall extend from the floor to the underside of the fire-resistance-rated floor/ceiling assembly or fire-resistance rated roof/ceiling assembly or to the underside of the floor or roof deck above. Doors shall be self-closing or automatic-closing upon detection of smoke. Doors shall not have air transfer openings and shall not be undercut in excess of the clearance permitted in accordance with NFPA 80.

**302.2 Accessory use areas.** A room or a space of a different occupancy classification than the main occupancy that is subordinate and secondary to the main occupancy and necessary for the main occupancy to properly function shall be considered an accessory use area.

**302.2.1 Separation.** All accessory use areas shall be separated from the main occupancy by a fire barrier in accordance with Section 302.3.

**Exceptions:** The following accessory use spaces do not require a fire barrier from the principal occupancy:

1. Group A spaces with floor area equal to or less than 750 square feet (69.7 m<sup>2</sup>) and accessory to any other occupancy.
2. Group A spaces that are accessory to Group E occupancies.
3. Group A religious educational rooms and religious auditoriums with occupant loads of less than 100.
4. Group B, E, F, I, M, R, S, and U spaces that are accessory to another occupancy and where the accessory use area occupies a floor area not more than 10 percent of the area of the story in which it is located and does not exceed the tabular values in Table 503 for the allowable height or area for such use.
5. Groups B and M storage areas complying with footnote b of Table 302.3.2.

TABLE 302.3.2  
REQUIRED SEPARATION OF OCCUPANCIES (HOURS)\*

For SI: 1 square foot = 0.0929 m<sup>2</sup>.

NP = Not Permitted.

- a. See Section 302.3.2 for reductions permitted.
- b. Occupancy separation need not be provided for storage areas with Groups B and M if any of the following conditions apply:
  1. The storage area is less than 10 percent of the floor area of the story; and less than 3000 square feet (278.7 m<sup>2</sup>).
  2. The storage area is provided with an automatic fire-extinguishing system and is less than 3,000 square feet (278.7 m<sup>2</sup>); or
  3. The storage area is less than 1,000 square feet (92.9 m<sup>2</sup>).
- c. See exception to Section 302.3.2.
- d. See Section 406.1.4

- e. *Commercial kitchens need not be separated from the restaurant seating areas that they serve, provided:*
1. *The cooking equipment is vented directly to the outdoors; and*
  2. *A draft curtain of noncombustible materials, at least 24 inches (610 mm) down from the ceiling, is provided to separate the cooking facilities from the restaurant seating areas; and*
  3. *Sprinkler heads constructed in accordance with the provisions of this code are provided in the kitchen side of the curtain, within 24 inches (610 mm) of the curtain opening, and any other openings including doors between the kitchen and the seating areas, and spaced not more than 48 inches (1210 mm) on center for each opening that is more than 60 inches (1524 mm) wide.*

**302.3 Mixed occupancies.** *Where a building is occupied by two or more uses not included in the same occupancy classification, the building or portion thereof shall comply with Section 302.3.1 or 302.3.2 or a combination of these sections.*

**Exceptions:**

1. *Occupancies separated in accordance with Section 508.*
2. *Areas of Group H-2, H-3, H-4 or H-5 occupancies shall be separated from any other occupancy in accordance with Section 302.3.2.*
3. *Where required by Table 415.3.2, areas of Group H-1, H-2 or H-3 occupancy shall be located in a separate and detached building or structure.*
4. *Accessory use areas in accordance with Section 302.2.*
5. *Incidental use areas in accordance with Section 302.1.1.*

**302.3.1 Nonseparated occupancies.** *Each portion of the building shall be individually classified as to occupancy.*

*The required type of construction for the entire building shall be determined by applying the height and area limitations for each of the applicable occupancies to the entire building. The most restrictive type of construction, so determined, shall apply to the entire building.*

*All other code requirements shall apply to each portion of the building based on the occupancy of that space except that the most restrictive applicable provisions of Section 403 and Chapter 9 shall apply to these nonseparated occupancies. Fire separations are not required between occupancies, except as required by other provisions.*

**302.3.2 Separated occupancies.** *Each portion of the building shall be individually classified as to occupancy and shall be completely separated from adjacent areas by vertical or horizontal fire barriers having a fire-resistance rating determined in accordance with Table 302.3.2 for occupancies being separated. Where the building is equipped throughout with an automatic sprinkler system installed in accordance with Section*

903.3.1.1, the fire-resistance ratings in Table 302.3.2 are permitted to be reduced by 1 hour, but in no case shall be less than that required for floor construction according to the type of construction, or less than 1 hour, whichever is higher. However, fire barriers separating Group H and I-2 occupancies shall not be permitted any reductions in fire-resistance ratings.

Each fire area shall comply with this code based on the occupancy of that space. Each fire area shall comply with the height limitations based on the occupancy of that space and the type of construction classification. In each story, the building area shall be such that the sum of the ratios of the floor area of each occupancy divided by the allowable area for each occupancy shall not exceed one.

**302.4 Spaces used for different purposes.** A room or space that is intended to be occupied at different times for different purposes shall comply with all the requirements that are applicable to each of the purposes for which the room or space will be occupied.

**302.5 Separation of different tenancies.** Spaces or dwelling units occupied by different tenants shall be separated by fire barriers having at least 1-hour fire resistance rating.

**Exceptions:**

1. Non-residential spaces occupied by different tenants located in buildings that are sprinklered throughout.
2. Tenant spaces in covered mall buildings complying with Section 402.

**SECTION BC 303  
ASSEMBLY GROUP A**

**303.1 Assembly Group A.** Assembly Group A occupancy includes, among others, the use of a building or structure or a portion thereof, excluding a dwelling unit, for the gathering together of any number of persons for purposes such as civic, social or religious functions, recreation, food or drink consumption, awaiting transportation, or similar group activities; or when occupied by 75 persons or more for educational or instructional purposes.

**Exceptions:**

1. A room or space used for assembly purposes by fewer than 75 persons and accessory to another occupancy shall be included as a part of that occupancy

2. *A building or non-accessory tenant space used for assembly purposes by fewer than 75 persons shall be considered a Group B occupancy.*

*Assembly occupancies shall include the following:*

*A-1 Assembly uses, usually with fixed seating, intended for the production and viewing of the performing arts or motion pictures including, but not limited to:*

*Motion picture theaters  
Symphony and concert halls  
Television and radio studios admitting an audience  
Theaters*

*A-2 Assembly uses intended for food and/or drink consumption including, but not limited to:*

*Banquet halls  
Cabarets  
Cafeterias, except as provided for in A-3  
Dance halls  
Night clubs  
Restaurants  
Taverns and bars*

*A-3 Assembly uses intended for worship, recreation or amusement and other assembly uses not classified elsewhere in Group A including, but not limited to:*

*Amusement arcades  
Art galleries  
Bowling alleys  
Cafeterias for children up to and including the 12<sup>th</sup> grade  
Classrooms and instructional rooms with 75 persons or more; such rooms with fewer than 75 persons shall be classified as Group B or E  
Community halls  
Courtrooms  
Custodial care facilities with 75 or more persons, providing care to persons over the age of 2, where no more than four occupants are incapable of responding to an emergency situation without physical assistance from staff  
Dance studio or instruction (not including food or drink consumption)*

*Exhibition halls*  
*Funeral parlors*  
*Gymnasiums (without spectator seating)*  
*Houses of worship*  
*Indoor swimming pools (without spectator seating)*  
*Indoor tennis courts (without spectator seating)*  
*Lecture halls*  
*Museums*  
*Waiting areas in transportation terminals*  
*Pool and billiard parlors*  
*School auditoriums*

**A-4** *Assembly uses intended for viewing of indoor sporting events and activities with\_\_spectator seating including, but not limited to:*

*Arenas*  
*Skating rinks*  
*Swimming pools*  
*Tennis courts*

**A-5** *Assembly uses intended for participation in or viewing outdoor activities including, but not limited to:*

*Amusement park structures*  
*Bleachers*  
*Grandstands*  
*Stadiums*

**303.2 Certificate of Operation.** *A Certificate of Operation shall be required, as per Section 28-117.1, for the following places of assembly:*

- 1. Indoor places of assembly used or intended for use by 75 persons or more, including open spaces at 20 feet (6096 mm) or more above or below grade, such as roofs or roof terraces.*
- 2. Outdoor places of assembly used and intended for use by 200 persons or more.*

**SECTION BC 304**  
**BUSINESS GROUP B**

**304.1 Business Group B.** *Business Group B occupancy includes, among others, the use of a building or structure, or a portion thereof, for office, professional, service-type transactions, or for conducting public or civic services, including the incidental storage of records and accounts and the incidental storage of limited quantities of stocks of goods for office use or purposes. Business Group B occupancies shall include, but not be limited to, the following:*

*Airport traffic control towers*

*Animal hospitals, kennels and pounds*

*Banks*

*Barber and beauty shops*

*Civic administration offices*

*Clinic—outpatient, including group medical centers, and neighborhood family care centers*

*Custodial care facilities with fewer than 75 persons, providing care to persons over the age of 2, where no more than four occupants are incapable of responding to an emergency situation without physical assistance from staff*

*Dry cleaning and laundries; pick-up and delivery stations and self-service*

*Educational occupancies above the 12th grade, where not classified in Group A. Such occupancy may be used occasionally for educational purposes offered to children through the 12<sup>th</sup> grade*

*Electronic data processing*

*Laboratories; non-production testing and research, as per Section 419*

*Libraries when not classified in Group E*

*Motor vehicle showrooms*

*Offices*

*Post offices*

*Photocopying and printing shops using electronic printing equipment*

*Professional services (architects, attorneys, dentists, physicians, engineers, etc.)*

*Radio and television stations not admitting an audience*

*Telephone exchanges*

## **SECTION BC 305**

### **EDUCATIONAL GROUP E**

**305.1 Educational Group E.** *Educational Group E occupancy includes, among others, the use of a building or structure, or a portion thereof, by five or more persons at any one time for educational purposes offered to children through the 12<sup>th</sup> grade and where no more than two children are under the age of 2, including but not limited to, the following:*

*Academies*

*Day care facilities where no more than two children are under the age of 2*

*Libraries accessory to Group E occupancies*

*Schools*

***Exceptions:***

1. *Classrooms and instructional rooms with 75 or more persons shall be classified as Group A-3.*
2. *Day care services provided within a dwelling unit as described in Section 310.*
3. *Custodial care facilities with up to 30 children under the age of 2 are permitted to be classified as Group E when the rooms where such children are cared for are located on the level of exit discharge and each of these child care rooms has an exit door directly to the exterior.*

**305.2** *Reserved.*

**SECTION BC 306**  
**FACTORY GROUP F**

**306.1 Factory Industrial Group F.** *Factory Industrial Group F occupancy includes, among others, the use of a building or structure, or a portion thereof, for assembling, disassembling, fabricating, finishing, manufacturing, packaging, repair, cleaning, laundering or processing operations that are not classified as a Group H hazardous occupancy.*

**306.2 Factory Industrial F-1 Moderate-Hazard Occupancy.** *Factory industrial uses which are not classified as Factory Industrial F-2 Low Hazard shall be classified as F-1 Moderate Hazard and shall include, but not be limited to, the following:*

*Aircraft*

*Aircraft repairs*

*Automobiles and other motor vehicles, manufacturing*

*Automobiles and other motor vehicles, repairs*

*Bakeries*

*Beverages; alcoholic*

*Boats*

*Boat repairs*

*Brooms or brushes*

*Canvas or similar fabric*

*Carpets and rugs*

*Carpets and rugs, cleaning, using or storing solvents having a flash point between 100°F (38°C) and 138.2°F (59°C) (Tag. Closed-cup)*

*Clothing*

*Disinfectants*

*Dry cleaning and dyeing using or storing solvents having a flash point between 100°F (38°C) and 138.2°F (59°C) (Tag. Closed-cup)*

*Electric generation plants*

*Engines (including rebuilding)*

*Food processing, except meat slaughtering or preparation of fish for packing*

*Furniture*

*Hemp products*

*Jute products*

*Laboratories; for production (moderate-hazard), that may involve the synthesis or storage of materials that constitute a physical or health hazard in quantities below those found in Tables 307.7(1) and 307.7(2)*

*Leather products*

*Metals; finishing, plating, grinding, sharpening, polishing, cleaning, rustproofing, heat treatment, or similar processes*

*Millwork (sash & door)*

*Motion pictures filming (without spectators)*

*Musical instruments*

*Optical goods*

*Paper mills or products*

*Photographic film*

*Plastic products*

*Printing or publishing*

*Recreational vehicles*

*Refuse incineration*

*Shoes*

*Soaps and detergents*

*Textiles*

*Tobacco*

*Trailers*

*Upholstering*

*Wood; distillation*

*Woodworking (cabinet) using no more than 2 quarts (1.9 L) per day or storing no more than 20 gallons (75.7 L) of paint, varnish, lacquer or shellac*

**306.3 Factory Industrial F-2 Low-Hazard Occupancy.** *Factory industrial uses that involve the cleaning, laundering, fabrication or manufacturing of noncombustible materials which during finishing, packing or processing do not involve a significant fire hazard shall be classified as F-2 occupancies and shall include, but not be limited to, the following:*

*Appliances*

*Athletic equipment*

*Automobile laundries*

*Automobile wrecking establishments*

*Beverages; bottling works*

*Beverages; non-alcoholic*

*Bicycles*

*Brick and masonry*

*Business machines*

*Cameras and photo equipment*

*Carpets and rugs, cleaning, using or storing solvents having a flash point above 138.2°F (59°C) (Tag. closed-cup)*

*Ceramic products*

*Construction and agricultural machinery*

*Dry cleaning and dyeing using or storing solvents having a flash point above 138.2°F (59°C) (Tag. closed-cup)*

*Electronics*

*Food processing; meat slaughtering or preparation of fish for packing*

*Foundries*

*Glass products*

*Gypsum*

*Ice*

*Laboratories; for production (low-hazard), that may involve the synthesis or storage of materials that constitute a physical or health hazard in quantities below those found in Tables 307.7(1) and 307.7(2)*

*Laundries*

*Machinery*

*Metal products (fabrication and assembly), not including flammable metals and alloys listed in Section 307*

*Plastic products; non-flammable*

*Printing; incidental to primary use, area not exceeding 2,000 square feet (185.8 m<sup>2</sup>)*

*Television filming (without spectators)*

**306.4 Location restrictions.** *Locations of spaces classified in Factory Group F may be restricted within a building containing a Group R occupancy pursuant to Section 508.8*

### **SECTION BC 307 HIGH-HAZARD GROUP H**

**307.1 High-Hazard Group H.** *High-Hazard Group H occupancy includes, among others, the use of a building or structure, or a portion thereof, that involves the manufacturing, processing, generation or storage of materials that constitute a physical or health hazard in quantities in excess of those found in Tables 307.7(1) and 307.7(2) (see also definition of “Control area”).*

**Exception:** *Laboratories for non-production testing, research, experimental, instructional or educational purposes, in compliance with Section 419.*

**307.2 Definitions.** *The following words and terms shall, for the purposes of this section and as used elsewhere in this code, have the meanings shown herein.*

**AEROSOL.** *A product that is dispensed from an aerosol container by a propellant.*

*Aerosol products shall be classified by means of the calculation of their chemical heats of combustion and shall be designated Level 1, 2 or 3.*

**Level 1 aerosol products.** *Those with a total chemical heat of combustion that is greater than 0 and less than or equal to 8,600 British thermal units per pound (Btu/lb) (20 kJ/g).*

**Level 2 aerosol products.** *Those with a total chemical heat of combustion that is greater than 8,600 Btu/lb (20 kJ/g), but less than or equal to 13,000 Btu/lb (30 kJ/g).*

**Level 3 aerosol products.** Those with a total chemical heat combustion that is greater than 13,000 Btu/lb (30 kJ/g).

**BARRICADE.** A structure or other artificial or natural barrier constructed in connection with the storage, handling and use of explosives that provides a shield from the impact of such explosion. A straight line from the top of any sidewall of a building containing explosives to the eave line of any magazine or other building or to a point 12 feet (3658 mm) above the center of a railway or highway shall pass through such barrier.

**Artificial barricade.** An artificial mound or revetment, including a barrier constructed of sandbags, with a minimum thickness of 3 feet (914 mm).

**Natural barricade.** Terrain or other natural features of the ground.

**BOILING POINT.** The temperature at which the vapor pressure of a liquid equals the atmospheric pressure of 14.7 pounds per square inch (psi) (101 kPa) gage or 760 mm of mercury. Where an accurate boiling point is unavailable for the material in question, or for mixtures which do not have a constant boiling point, for the purposes of this classification, the 20-percent evaporated point of a distillation performed in accordance with ASTM D 86 shall be used as the boiling point of the liquid.

**CLOSED SYSTEM.** The use of a solid or liquid hazardous material involving a closed vessel or system that remains closed during normal operations where vapors emitted by the product are not liberated outside of the vessel or system and the product is not exposed to the atmosphere during normal operations; and all uses of compressed gases. Examples of closed systems for solids and liquids include product conveyed through a piping system into a closed vessel, system or piece of equipment.

**COMBUSTIBLE DUST.** Finely divided solid material that is 420 microns or less in diameter, will pass through a U.S. standard No. 40 sieve and, when dispersed in air in insufficient concentrations, can be ignited by a flame, spark or other source of ignition.

**COMBUSTIBLE FIBERS.** Readily ignitable and free-burning fibers, such as cocoa fiber, cotton, excelsior, hay, hemp, henequen, istle, jute, kapok, oakum, sisal, Spanish moss, straw, tow, wastepaper or other natural or synthetic fibers that possess such qualities.

**Exception:** Moss used for medicinal purposes.

**COMBUSTIBLE LIQUID.** For the purposes of transportation, a combustible liquid as defined by the United States Department of Transportation. For all other purposes, a liquid, other than a compressed gas or cryogenic fluid, having a closed cup flash point at or above 100°F (38°C) classified as follows:

**Class II.** Liquids having a closed cup flash point at or above 100°F (38°C) and below 140°F (60°C).

**Class IIIA.** Liquids having a closed cup flash point at or above 140°F (60°C) and below 200°F (93°C).

**Class IIIB.** Liquids having a closed cup flash point at or above 200°F (93°C).

**COMPRESSED GAS.** A material, or mixture of materials which is a gas at 68°F (20°C) or less at 14.7 psia (101 kPa) of pressure; and has a boiling point of 68°F (20°C) or less at 14.7 psia (101 kPa) that is either liquefied, nonliquefied or in solution at that temperature and pressure, except those gases which have no other health- or physical-hazard properties are not considered to be compressed until the pressure in the packaging exceeds 41 psia (28 kPa) at 68°F (20°C). Compressed gases shall be classified as follows:

**Nonliquefied compressed gases.** Gases, other than those in solution, which are in a packaging under the charged pressure and are entirely gaseous at a temperature of 68°F (20°C).

**Liquefied compressed gases.** Gases that, in a packaging under the charged pressure, are partially liquid at a temperature of 68°F (20°C).

**Compressed gases in solution.** Nonliquefied gases that are dissolved in a solvent.

**Compressed gas mixtures.** A mixture of two or more compressed gases contained in a single packaging, the hazard properties of which are represented by the properties of the mixture as a whole.

**CONTROL AREA.** Spaces within a building that are enclosed and bounded by exterior walls, fire walls, fire barriers and roofs, or a combination thereof, where quantities of hazardous materials not exceeding the maximum allowable quantities per control area are stored, handled, or used, including any dispensing.

**CORROSIVE MATERIAL.** A material that causes full thickness destruction of human skin at the site of contact within specified periods of time when tested by methods described in DOTn 49 CFR § 173.136 and 173.137. Liquid that has a severe corrosion rate on steel or aluminum based on the criteria in DOTn 49 CFR § 173.173(c)(2) is also a corrosive material.

**CRYOGENIC FLUID.** A liquid having a boiling point lower than -150°F (-101°C) at 14.7 pounds per square inch absolute (psia) (an absolute pressure of 101 kPa).

**DEFLAGRATION.** An exothermic reaction, such as the extremely rapid oxidation of a flammable dust or vapor in air, in which the reaction progresses through the unburned material at a rate less than the velocity of sound. A deflagration can have an explosive effect.

**DETACHED BUILDING.** A separate single-story building, without a basement or crawl space, used for the storage or use of hazardous materials and located at an approved distance from other buildings and structures.

**DETONATION.** An exothermic reaction characterized by the presence of a shock wave in the material which establishes and maintains the reaction. The reaction zone progresses through the material at a rate greater than the velocity of sound. The principal heating mechanism is one of shock compression. Detonations have an explosive effect.

**DISPENSING.** The pouring or transferring of any material from a container, tank or similar vessel, whereby dusts, fumes, mists, vapors, or gases are liberated to the atmosphere.

**EXPLOSIVE.** Any chemical compound, mixture or device, the primary or common purpose of which is to function by explosion. The term includes, but is not limited to, dynamite, black powder, pellet powder, initiating explosives, detonators, safety fuses, squibs, detonating cord, igniter cord, igniters and display fireworks, 1.3G (Class B, Special).

The term “explosive” includes any material determined to be within the scope of 18 USC Chapter 40, as amended, and also includes any material classified as an explosive other than consumer fireworks, 1.4G (Class C, Common) by the hazardous materials regulations of DOTn 49 CFR.

**High explosive.** Explosive material, such as dynamite, which can be caused to detonate by means of a No. 8 test blasting cap when unconfined.

**Low explosive.** Explosive material that will burn or deflagrate when ignited. It is characterized by a rate of reaction that is less than the speed of sound. Examples of low explosives include, but are not limited to, black powder; safety fuse; igniters; igniter cord; fuse lighters; fireworks, 1.3G (Class B, Special) and propellants, 1.3C.

**UN/DOTn Class 1 explosives.** *The former classification system used by DOTn included the terms “high” and “low” explosives as defined herein. The following terms further define explosives under the current system applied by DOTn for all explosive materials defined as hazard Class 1 materials. Compatibility group letters are used in concert with the division to specify further limitations on each division noted (i.e., the letter G identifies the material as a pyrotechnic substance or article containing a pyrotechnic substance and similar materials).*

**Division 1.1.** *Explosives that have a mass explosion hazard. A mass explosion is one which affects almost the entire load instantaneously.*

**Division 1.2.** *Explosives that have a projection hazard but not a mass explosion hazard.*

**Division 1.3.** *Explosives that have a fire hazard and either a minor blast hazard or a minor projection hazard or both, but not a mass explosion hazard.*

**Division 1.4.** *Explosives that pose a minor explosion hazard. The explosive effects are largely confined to the package and no projection of fragments of appreciable size or range is to be expected. An external fire must not cause virtually instantaneous explosion of almost the entire contents of the package.*

**Division 1.5.** *Very insensitive explosives. This division is comprised of substances that have a mass explosion hazard, but that are so insensitive there is very little probability of initiation or of transition from burning to detonation under normal conditions of transport.*

**Division 1.6.** *Extremely insensitive articles which do not have a mass explosion hazard. This division is comprised of articles that contain only extremely insensitive detonating substances and which demonstrate a negligible probability of accidental initiation or propagation.*

**FIREWORKS.** *Any composition or device for the purpose of producing a visible or audible effect for entertainment purposes by combustion, deflagration or detonation that meets the definition of 1.4G fireworks or 1.3G fireworks as set forth herein.*

**FIREWORKS, 1.3G.** *(Formerly Class B, Special Fireworks.) Large fireworks devices, which are explosive materials, intended for use in fireworks displays and designed to produce audible or visible effects by combustion, deflagration or detonation. Such 1.3G fireworks include, but are not limited to, firecrackers containing more than 130 milligrams (2 grains) of explosive composition, aerial shells containing more than 40 grams of pyrotechnic*

composition, and other display pieces which exceed the limits for classification as 1.4G fireworks. Such 1.3G fireworks are also described as fireworks, 49 CFR pt. 172 by the DOTn.

**FIREWORKS, 1.4G.** (Formerly Class C, Common Fireworks.) Small fireworks devices containing restricted amounts of pyrotechnic composition designed primarily to produce visible or audible effects by combustion. Such 1.4G fireworks which comply with the construction, chemical composition and labeling regulations of the DOTn for fireworks, 49 CFR pt. 172, and the U.S. Consumer Product Safety Commission (CPSC) as set forth in 16 CFR pts. 1500 and 1507, are not explosive materials for the purpose of this code.

**FLAMMABLE GAS.** A material which is a gas at 68°F (20°C) or less at 14.7 pounds per square inch absolute (psia) (101 kPa) of pressure (a material that has a boiling point of 68°F (20°C) or less at 14.7 psia (101 kPa)) which:

1. Is ignitable at 14.7 psia (101 kPa) when in a mixture of 13 percent or less by volume with air; or
2. Has a flammable range at 14.7 psia (101 kPa) with air of at least 12 percent, regardless of the lower limit.

The limits specified shall be determined at 14.7 psia (101 kPa) of pressure and a temperature of 68°F (20°C) in accordance with ASTM E 681.

**FLAMMABLE LIQUEFIED GAS.** A liquefied compressed gas which, under a charged pressure, is partially liquid at a temperature of 68°F (20°C) and which is flammable.

**FLAMMABLE LIQUID.** For the purposes of transportation, a combustible liquid as defined by the United States Department of Transportation. For all other purposes, a liquid, other than a compressed gas or cryogenic fluid, having a closed cup flash point below 100°F (38°C) classified as follows:

**Class IA.** Liquids having a flash point below 73°F (23°C) and a boiling point below 100°F (38°C).

**Class IB.** Liquids having a flash point below 73°F (23°C) and a boiling point at or above 100°F (38°C).

**Class IC.** Liquids having a flash point at or above 73°F (23°C) and below 100°F (38°C)

**FLAMMABLE MATERIAL.** A material capable of being readily ignited from common sources of heat or at a temperature of 600°F (316°C) or less.

**FLAMMABLE SOLID.** A solid, other than a blasting agent or explosive, that is capable of causing fire through friction, absorption or moisture, spontaneous chemical change, or retained heat from manufacturing or processing, or which has an ignition temperature below 212°F (100°C) or which burns so vigorously and persistently when ignited as to create a serious hazard. A chemical shall be considered a flammable solid as determined in accordance with the test method of 16 CFR pt. 1500.44, if it ignites and burns with a self-sustained flame at a rate greater than 0.1 inch (2.5 mm) per second along its major axis. This shall include flammable metals, which are flammable pure metals or their flammable alloys.

**FLASH POINT.** The minimum temperature in degrees Fahrenheit at which a liquid will give off sufficient vapors to form an ignitable mixture with air near the surface or in the container, but will not sustain combustion. The flash point of a liquid shall be determined by appropriate test procedure and apparatus as specified in ASTM D 56, ASTM D 93 or ASTM D 3278.

**HANDLING.** The movement of a material in its container, the removal of the material from its container, or any other action or process that may affect the material, other than its storage or use.

**HAZARDOUS MATERIALS.** Those chemicals or substances that are physical hazards or health hazards as defined and classified in this section and the New York City Fire Code, whether the materials are in usable or waste condition.

**HEALTH HAZARD.** A classification of a chemical for which there is statistically significant evidence that acute or chronic health effects are capable of occurring in exposed persons. The term “health hazard” includes chemicals that are toxic or highly toxic, and corrosive.

**HIGHLY TOXIC MATERIAL.** A material that is lethal at the following doses or concentrations:

1. A chemical that has a median lethal dose (LD50) of 50 milligrams or less per kilogram of body weight when administered orally to albino rats weighing between 200 and 300 grams each; or
2. A chemical that has a median lethal dose (LD50) of 200 milligrams or less per kilogram of body weight when administered by continuous contact for 24 hours (or less if death occurs within 24 hours) with the bare skin of albino rabbits weighing between 2 and 3 kilograms each; or
3. A chemical that has a median lethal concentration (LC50) in air of 200 parts per million by volume or less of gas or vapor, or 2 milligrams per liter or less of mist, fume or dust, when administered by continuous

*inhalation for 1 hour (or less if death occurs within 1 hour) to albino rats weighing between 200 and 300 grams each.*

**INCOMPATIBLE MATERIALS.** *Materials that, if mixed or combined, could explode, generate heat, gases or other byproducts, or react in such a way hazardous to life or property.*

**OPEN SYSTEM.** *The use of a solid or liquid hazardous material involving a vessel or system that is continuously open to the atmosphere during normal operations and where vapors are liberated, or the product is exposed to the atmosphere during normal operations. Examples of open systems for solids and liquids include dispensing from or into open beakers or containers, dip tank and plating tank operations.*

**ORGANIC PEROXIDE.** *An organic compound having a double oxygen or peroxy (-O-O-) in its chemical structure. Organic peroxides can pose an explosion hazard (detonation or deflagration), can be shock sensitive, or can be susceptible to decomposition into various unstable compounds over an extended period of time and are classified as follows based upon their hazardous properties:*

*Class I. Organic peroxides that are capable of deflagration but not detonation.*

*Class II. Organic peroxides that burn very rapidly and that pose a moderate reactivity hazard.*

*Class III. Organic peroxides that burn rapidly and that pose a moderate reactivity hazard.*

*Class IV. Organic peroxides that burn in the same manner as ordinary combustibles and that pose a minimal reactivity hazard.*

*Class V. Organic peroxides that burn with less intensity than ordinary combustibles or do not sustain combustion and that pose no reactivity hazard.*

*Unclassified detonable. Organic peroxides that are capable of detonation and pose an extremely high explosion hazard through rapid explosive decomposition.*

**OXIDIZER.** *A material that readily yields oxygen or other oxidizing gas, such as bromine, chlorine and fluorine, or that readily reacts to promote or initiate combustion of combustible materials classified as follows:*

*Class I. An oxidizer whose primary hazard is that it slightly increases the burning rate but which does not cause spontaneous ignition when it comes in contact with combustible materials.*

*Class 2. An oxidizer that will cause a moderate increase in the burning rate or that causes spontaneous ignition of combustible materials with which it comes in contact.*

*Class 3. An oxidizer that will cause a severe increase in the burning rate of combustible materials with which it comes in contact or that will undergo vigorous self-sustained decomposition due to contamination or exposure to heat.*

*Class 4. An oxidizer that can undergo an explosive reaction due to contamination or exposure to thermal or physical shock. Additionally, the oxidizer will enhance the burning rate and can cause spontaneous ignition of combustibles.*

**OXIDIZING GAS.** *A gas that can support and accelerate combustion of other materials.*

**PHYSICAL HAZARD.** *A chemical for which there is evidence that it is a combustible liquid, compressed gas, cryogenic, explosive, flammable gas, flammable liquid, flammable solid, organic peroxide, oxidizer, pyrophoric or unstable (reactive) or water-reactive material.*

**PYROPHORIC MATERIAL.** *A material with an autoignition temperature in air, at or below a temperature of 130°F (54°C).*

**PYROTECHNIC COMPOSITION.** *A chemical mixture that produces visible light displays or sounds through a self-propagating, heat-releasing chemical reaction which is initiated by ignition.*

**STANDARD CUBIC FEET (SCF).** *Cubic feet of gas at normal temperature and pressure (NTP).*

**TOXIC MATERIAL.** *A chemical that is lethal at the following doses or concentrations:*

- 1. A chemical that has a median lethal dose (LD50) of more than 50 milligrams per kilogram, but not more than 500 milligrams per kilogram of body weight when administered orally to albino rats weighing between 200 and 300 grams each; or*
- 2. A chemical that has a median lethal dose (LD50) of more than 200 milligrams per kilogram but not more than 1,000 milligrams per kilogram of body weight when administered by continuous contact for 24 hours (or less if death occurs within 24 hours) with the bare skin of albino rabbits weighing between 2 and 3 kilograms each; or*

3. A chemical that has a median lethal concentration (LC50) in air of more than 200 parts per million but not more than 2,000 parts per million by volume of gas or vapor, or more than 2 milligrams per liter but not more than 20 milligrams per liter of mist, fume or dust, when administered by continuous inhalation for 1 hour (or less if death occurs within 1 hour) to albino rats weighing between 200 and 300 grams each.

**Exception:** For purposes of this code, chlorine shall be classified as a highly toxic material.

**UNSTABLE (REACTIVE) MATERIAL.** A material, other than an explosive, which in the pure state or as commercially produced, will vigorously polymerize, decompose, condense or become self-reactive and undergo other violent chemical changes, including explosion, when exposed to heat, friction or shock, or in the absence of an inhibitor, or in the presence of contaminants, or in contact with incompatible materials. Unstable (reactive) materials are shall be classified as follows:

**Class 1.** Materials that in themselves are normally stable but which can become unstable at elevated temperatures and pressure.

**Class 2.** Materials that in themselves are normally unstable and readily undergo violent chemical change but do not detonate. This class includes materials that can undergo chemical change with rapid release of energy at normal temperatures and pressures, and that can undergo violent chemical change at elevated temperatures and pressures.

**Class 3.** Materials that in themselves are capable of detonation or of explosive decomposition or explosive reaction but which require a strong initiating source or which must be heated under confinement before initiation. This class includes materials that are sensitive to thermal or mechanical shock at elevated temperatures and pressures.

**Class 4.** Materials that in themselves are readily capable of detonation or explosive decomposition or explosive reaction at normal temperatures and pressures. This class includes materials that are sensitive to mechanical or localized thermal shock at normal temperatures and pressures.

**WATER-REACTIVE MATERIAL.** A material that explodes; violently reacts; produces flammable, toxic or other hazardous gases; or evolves enough heat to cause self-ignition or ignition of nearby combustibles upon exposure to water or moisture. Water-reactive materials shall be classified as follows:

**Class 1.** Materials that may react with water with some release of energy, but not violently.

*Class 2. Materials that may form potentially explosive mixtures with water.*

*Class 3. Materials that react explosively with water without requiring heat or confinement.*

**307.3 High-Hazard Group H-1.** *Buildings and structures which contain materials that present a detonation hazard shall be classified as Group H-1. Such materials shall include, but not be limited to, the following:*

*Explosives:*

*Division 1.1*

*Division 1.2*

*Division 1.3*

**Exception:** *Materials that are used and maintained in a form where either confinement or configuration will not elevate the hazard from a mass fire to mass explosion hazard shall be allowed in H-2 occupancies.*

*Division 1.4*

**Exception:** *Articles, including articles packaged for shipment, that are not regulated as an explosive under Bureau of Alcohol, Tobacco and Firearms regulations, or unpackaged articles used in process operations that do not propagate a detonation or deflagration between articles shall be allowed in H-3 occupancies.*

*Division 1.5*

*Division 1.6*

*Organic peroxides, unclassified detonable*

*Oxidizers, Class 4*

*Unstable (reactive) materials, Class 3 detonable and Class 4*

*Pyrophoric materials, detonable*

*Water-reactive materials, Class 2 and 3, detonable*

*No part of this section shall be construed to authorize the manufacture, storage, sale or use of explosives, including fireworks, if otherwise prohibited by the New York City Fire Code and unless in compliance with the requirements of the New York City Fire Code.*

**307.4 High-Hazard Group H-2.** *Buildings and structures which contain materials that present a deflagration hazard or a hazard from accelerated burning shall be classified as Group H-2. Such materials shall include, but not be limited to, the following:*

*Class I, II or IIIA flammable or combustible liquids which are used or stored in normally open containers or systems, or in closed containers or systems pressurized at more than 15 psi (103.4 kPa) gage.*

*Combustible dusts*

*Cryogenic fluids, flammable*

*Flammable gases*

*Organic peroxides, Class I*

*Oxidizers, Class 3, that are used or stored in normally open containers or systems, or in closed containers or systems pressurized at more than 15 psi (103.3 kPa) gage*

*Pyrophoric liquids, solids and gases, nondetonable*

*Unstable (reactive) materials, Class 3, nondetonable*

*Water-reactive materials, Class 3, nondetonable*

*No part of this section shall be construed to authorize an LPG-distribution facility if otherwise prohibited by the New York City Fire Code.*

**307.5 High-Hazard Group H-3.** *Buildings and structures that contain materials that readily support combustion or present a physical hazard shall be classified as Group H-3. Such materials shall include, but not be limited to, the following:*

*Class I, II or IIIA flammable or combustible liquids which are used or stored in normally closed containers or systems pressurized at less than 15 psi (103 kPa) gage.*

*Combustible fibers*

*Cryogenic fluids, oxidizing*

*Flammable solids*

*Organic peroxides, Classes II and III*

*Oxidizers, Classes 1 and 2*

*Oxidizing gases*

*Unstable (reactive) materials, Class 2*

*Water-reactive materials, Class 2, nondetonable*

**307.6 High-Hazard Group H-4.** *Buildings and structures which contain materials that are health hazards shall be classified as Group H-4. Such materials shall include, but not be limited to, the following:*

*Corrosives*

*Highly toxic materials*

*Toxic materials*

**307.7 Group H-5 structures.** *Semiconductor fabrication facilities and comparable research and development areas in which hazardous production materials (HPM) are used and the aggregate quantity of materials is in excess of those listed in Tables 307.7(1) and 307.7(2). Such facilities and areas shall be designed and constructed in accordance with Section 415.9.*

*For SI: 1 cubic foot = 0.023 m<sup>3</sup>, 1 pound = 0.454 kg, 1 gallon = 3.785 L.*

*NL = Not Limited; N/A = Not Applicable; UD = Unclassified Detonable*

*a. For use of control areas, see Section 414.2.*

*b. The aggregate quantity in storage, handling, and use shall not exceed the quantity listed for storage.*

*c. The quantities of alcoholic beverages in retail and wholesale sales occupancies shall not be limited providing the liquids are packaged in individual containers not exceeding 1.3 gallons. In retail and wholesale sales occupancies, the quantities of medicines, foodstuffs, consumer or industrial products, and cosmetics containing not more than 50 percent by volume of water-miscible liquids with the remainder of the solutions not being flammable, shall not be limited, provided that such materials are packaged in individual containers not exceeding 1.3 gallons.*

*d. Maximum allowable quantities, except for liquefied petroleum gas, and flammable liquid motor fuel, may be increased 100 percent in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1. Where Note e applies, the quantities increased shall be as set forth in both notes.*

*e. Quantities, except for liquefied petroleum gas, and flammable liquid motor fuel, may be increased 100 percent when stored in approved cabinets, gas cabinets, exhausted enclosures or safety cans as specified in the New York City Fire Code. Where Note d applies, the quantities increased shall be as set forth in both notes.*

*f. The permitted quantities shall not be limited in a building equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.*

*g. Permitted only in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.*

*h. Containing not more than the maximum allowable quantity per control area of Class IA, IB or IC flammable liquids.*

*i. Stationary fuel oil storage tanks shall comply with the New York City Fire Code.*

*j. Quantities in parenthesis indicate quantity units in parenthesis at the head of each column.*

*k. A maximum quantity of 200 pounds of solid or 20 gallons of liquid Class 3 oxidizers is allowed when such materials are necessary for maintenance purposes, operation or sanitation of equipment. Storage containers and the manner of storage shall be approved.*

*m. For gallons of liquids, divide the amount in pounds by 10 in accordance with the New York City Fire Code.*

- n. For storage and display quantities in Group M and storage quantities in Group S occupancies complying with the New York City Fire Code.
- o. For purposes of this table, gasoline and other flammable liquid motor fuels are classified as a Class IA flammable liquid.
- p. Unclassified detonable organic peroxides , detonable pyrophoric materials, detonable unstable (reactive) materials, and detonable water-reactive materials (see the New York City Fire Code) are considered as explosives for purposes of storage.
- q. The maximum allowable quantities shall be limited by Section 419 for chemical laboratories classified as Occupancy Group B and operating as non-production facilities for testing, research, experimental, instructional, or education purposes.

**TABLE 307.7(2)**

**MAXIMUM ALLOWABLE QUANTITY PER CONTROL AREA OF HAZARDOUS MATERIAL POSING A HEALTH HAZARD<sup>a, b, c, j, k</sup>**

<b>MATERIA L</b>	<b>STORAGE<sup>d</sup></b>			<b>USE-CLOSED SYSTEMS<sup>d</sup></b>			<b>USE-OPEN SYSTEMS<sup>d</sup></b>

<i>Toxic</i>	500	(500) <sup>i</sup>	810 <sup>f</sup>	500	(500) <sup>i</sup>	810 <sup>f</sup>	125	(125) <sup>i</sup>

For SI: 1 cubic foot = 0.028 m<sup>3</sup>, 1 pound = 0.454 kg, 1 gallon = 3.785 L.

- a. For use of control areas, see Section 414.2.
- b. In retail and wholesale sales occupancies, the quantities of medicines, foodstuffs, consumer or industrial products, and cosmetics, containing not more than 50 percent by volume of water-miscible liquids and with the remainder of the solutions not being flammable, shall not be limited, provided that such materials are packaged in individual containers not exceeding 1.3 gallons.
- c. For storage and display quantities in Group M and storage quantities in Group S occupancies complying with the New York City Fire Code.
- d. The aggregate quantity in storage, handling, and use shall not exceed the quantity listed for storage.
- e. Quantities shall be increased 100 percent in buildings equipped throughout with an approved automatic sprinkler system in accordance with Section 903.3.1.1. Where Note f also applies, the increase for both notes shall be applied accumulatively.

- f. Quantities may be increased 100 percent when stored in approved storage cabinets, gas cabinets or exhausted enclosures as specified in the New York City Fire Code. Where Note e applies, the quantities increased shall be as set forth in both notes.*
- g. A single container of anhydrous ammonia containing not more than 150 pounds in a single control area in a nonsprinklered building shall be considered a maximum allowable quantity. Two containers of anhydrous ammonia, each containing not more than 150 pounds, shall be considered a maximum allowable quantity provided the building is equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.*
- h. Allowed only when stored in approved exhausted gas cabinets or exhausted enclosures as specified in the New York City Fire Code.*
- i. Quantities in parenthesis indicate quantity units in parenthesis at the head of each column.*
- j. For gallons of liquids, divide the amount in pounds by 10 in accordance with the New York City Fire Code.*
- k. The maximum allowable quantities shall be limited by Section 419 for chemical laboratories classified as Occupancy Group B and operating as a non-production facilities for testing, research, experimental, instructional, or education purposes.*

**307.8 Multiple hazards.** *Buildings and structures containing a material or materials representing hazards that are classified in one or more of Groups H-1, H-2, H-3 and H-4 shall conform to the code requirements for each of the occupancies so classified.*

**307.9 Exceptions:** *The following shall not be classified in Group H, but shall be classified in the occupancy which they most nearly resemble. Hazardous materials in any quantity shall conform to the requirements of this code, including Section 414, and the New York City Fire Code.*

1. *Buildings and structures that contain not more than the maximum allowable quantities per control area of hazardous materials as shown in Tables 307.7(1) and 307.7(2) provided that such buildings are maintained in accordance with the New York City Fire Code.*
2. *Buildings utilizing control areas in accordance with Section 414.2 that contain not more than the maximum allowable quantities per control area of hazardous materials as shown in Tables 307.7(1) and 307.7(2).*
3. *Buildings and structures occupied for the application of flammable finishes, provided that such buildings or areas conform to the requirements of Section 416 and the New York City Fire Code.*
4. *Wholesale and retail sales and storage of flammable and combustible liquids in mercantile occupancies conforming to the New York City Fire Code.*
5. *Closed systems housing flammable or combustible liquids or gases utilized for the operation of machinery or equipment.*
6. *Cleaning establishments that utilize combustible liquid solvents having a flash point of 140°F (60°C) or higher in closed systems employing equipment listed by an approved testing agency, provided that this occupancy is separated from all other areas of the building by 1-hour fire-resistance-rated fire barrier walls or horizontal assemblies or both.*
7. *Cleaning establishments that utilize a liquid solvent having a flash point at or above 200°F (93°C).*
8. *Liquor stores and distributors without bulk storage.*
9. *Refrigeration systems.*

10. *The storage or utilization of materials for agricultural purposes on the premises.*
11. *Stationary batteries utilized for facility emergency power, uninterrupted power supply or telecommunication facilities provided that the batteries are provided with safety venting caps and ventilation is provided in accordance with the New York City Mechanical Code.*
12. *Corrosives shall not include personal or household products in their original packaging used in retail display or commonly used building materials.*
13. *Buildings and structures occupied for aerosol storage shall be classified as Group S-1, provided that such buildings conform to the requirements of the New York City Fire Code.*
14. *Display and storage of nonflammable solid and nonflammable or noncombustible liquid hazardous materials in quantities not exceeding the maximum allowable quantity per control area in Group M or S occupancies complying with Section 414.2.4.*
15. *The storage of black powder, smokeless propellant and small arms primers in Groups M and R-3 and special industrial explosive devices in Groups B, F, M and S, provided such storage conforms to the quantity limits and requirements prescribed in the New York City Fire Code.*

## **SECTION 308**

### **INSTITUTIONAL GROUP I**

**308.1 Institutional Group I.** *Institutional Group I occupancy includes, among others, the use of a building or structure, or a portion thereof, in which people are cared for or live in a supervised environment, having physical limitations because of health or age are harbored for medical treatment or other care or treatment, or in which people are detained for penal or correctional purposes or in which the liberty of the occupants is restricted. Institutional occupancies shall be classified as Group I-1, I-2, I-3 or I-4.*

**308.1.1 Definitions.** *For definitions of terms related to Group I occupancy classification, see Section 310.2.*

**308.2 Group I-1.** *This occupancy shall include buildings, structures or parts thereof housing persons, on a 24-hour basis, who because of age, mental disability or other reasons, live in a supervised residential environment that provides personal care services. The occupants are capable of self-preservation and capable of responding to an emergency situation without physical assistance from staff. Such occupancy*

shall be subject to the New York State Multiple Dwelling Law. This group shall include, but not be limited to, the following:

*Adult homes, where occupants are capable of self-preservation (see Section 308.2.1)*

*Alcohol and drug abuse rehabilitation centers*

*Assisted living facilities*

*Community Residences or Intermediate Care Facilities (see Section 308.2.2)*

*Congregate care facilities*

*Convalescent facilities*

*Enriched housing, where occupants are capable of self-preservation (see Section 308.2.1)*

*Halfway houses*

*Overnight child care facilities where all supervised occupants are under the age of 18, with no more than two children under the age of 2*

*Residential care facilities*

*Social rehabilitation facilities*

**308.2.1 Adult homes and enriched housing.** *Adult homes and enriched housing facilities operated pursuant to and meeting the additional construction requirements of Section 460 of the New York State Social Services Law and regulations of the New York State Department of Health offering care on a 24-hour basis to persons capable of self-preservation, in the same building, shall be classified as Group I-1.*

**Exception:** *Such a facility offering supervised care on a 24-hour basis for no more than 16 occupants capable of self preservation, in the same building, may be classified in Group R in accordance with Section 310.*

**308.2.2 Community Residences or Intermediate Care Facilities.** *Community Residences or Intermediate Care Facilities, operated pursuant to and meeting the additional construction requirements of the New York State Mental Hygiene Law and applicable regulations of the New York State Office of Mental Health and Office of Mental Retardation and Developmental Disabilities shall be classified as Group I-1.*

**Exceptions:** *Such facilities limited to 14 residents capable of self-preservation and three staff members per dwelling unit shall be classified as:*

1. *Group R-1, where such facility does not occupy more than two dwelling units in a residential building classified as R-1 of Type I or II construction, or one dwelling unit in any other type of construction, and occupied on a transient basis; or*
2. *Group R-2 where such facility does not occupy more than two dwelling units in a residential building classified R-2 of Type I or II construction, or one dwelling unit in any other type of construction, and occupied on a long-term basis; or*
3. *Group R-3 where the number of dwelling units in the building does not exceed two.*

**308.3 Group I-2.** *This occupancy shall include buildings and structures used for medical, surgical, psychiatric, nursing or personal care on a 24-hour basis or overnight of more than two children under the age of 2, or more than three persons who are not capable of self-preservation and not capable of responding to an emergency situation without physical assistance from staff. This group shall include, but not be limited to, the following:*

*Adult homes, where occupants are not capable of self-preservation, operated pursuant to and meeting the additional construction requirements of Section 460 of the New York State Social Services Law and regulations of the New York State Department of Health*

*Community Residences or Intermediate Care Facilities, where occupants are not capable of self-preservation, operated pursuant to and meeting the additional construction requirements of the New York State Mental Hygiene Law and applicable regulations of the New York State Office of Mental Health and Office of Mental Retardation and Developmental Disabilities*

*Enriched Housing, where occupants are not capable of self-preservation, operated pursuant to and meeting the additional construction requirements of Section 460 of the New York State Social Services Law and regulations of the New York State Department of Health*

*Hospitals*

*Nursing homes (both intermediate-care facilities and skilled nursing facilities)*

*Mental hospitals where patients are not under restraint*

*Detoxification facilities*

**Exception:** *Such a facility offering care on a 24-hour basis for 3 or fewer persons who are not capable of self-preservation may occupy not more than one dwelling unit in a Group R occupancy.*

**308.4 Group I-3.** *This occupancy shall include buildings and structures that are inhabited by more than five persons who are under restraint or security. An I-3 facility is occupied by persons who are generally*

*incapable of self-preservation due to security measures not under the occupants' control. This group shall include, but not be limited to, the following:*

*Mental hospitals where patients are under restraint*

*Prisons*

*Jails*

*Reformatories*

*Detention centers*

*Correctional centers*

*Prerelease centers*

*Buildings of Group I-3 shall be classified as one of the occupancy conditions indicated in Section 408.1.*

**308.5 Group I-4.** *This group shall include custodial care facilities providing care to more than two children under the age of 2, or to more than four persons over the age of 2 who are not capable of responding to an emergency situation without physical assistance from the staff. Such occupancy shall include, but not be limited to, adult custodial care facilities and day nurseries.*

***Exceptions:***

- 1. Custodial care facility as described in Section 303.*
- 2. Custodial care facility as described in Section 304.*
- 3. Custodial care facility as described in Exception 3 of Section 305.1.*
- 4. Such facility providing care within a dwelling unit as described in Section 310.*
- 5. Such facility providing care to children under the age of 2 in houses of worship during religious functions.*

**SECTION BC 309**

**MERCANTILE GROUP M**

**309.1 Mercantile Group M.** *Mercantile Group M occupancy includes, among others, buildings and structures or a portion thereof, for the display and sale of merchandise, and involves stocks of goods,*

wares or merchandise incidental to such purposes and accessible to the public. Mercantile occupancies shall include, but not be limited to, the following:

- Department stores*
- Drug stores*
- Markets*
- Motor fuel-dispensing facilities*
- Retail or wholesale stores*
- Sales rooms*

**309.2 Quantity of hazardous materials.** *The aggregate quantity of nonflammable solid and nonflammable or noncombustible liquid hazardous materials stored or displayed in a single control area of a Group M occupancy shall not exceed the quantities in Table 414.2.4.*

## **SECTION 310 RESIDENTIAL GROUP R**

**310.1 Residential Group R.** *Residential Group R includes, among others, the use of a building or structure, or a portion thereof, for dwelling or sleeping purposes when not classified as Institutional Group I. Buildings containing 3 or more dwelling units shall be subject to the New York State Multiple Dwelling Law. Residential occupancies shall be classified as Groups R-1, R-2, or R-3.*

**310.1.1 Group R-1.** *This occupancy shall include:*

1. *Residential buildings or spaces occupied, as a rule, transiently, for a period less than one month, as the more or less temporary abode of individuals or families who are lodged with or without meals, including, but not limited to, the following:*

*Class B multiple dwellings as defined in Section 27-2004 of the New York City Housing Maintenance Code and Section 4 of the New York State Multiple Dwelling Law*

**Exception:** *Class B multiple dwellings classified in Group I-1.*

- Club houses.*
- Hotels (transient)*
- Motels (transient)*
- Rooming houses (boarding houses – transient)*

*Settlement houses*

*Vacation timeshares*

2. *College or school student dormitories, except for student apartments classified as an R-2 occupancy*
3. *Congregate living units owned and operated by a government agency or not-for-profit organization, where the number of occupants in the dwelling unit exceeds the limitations of a family as defined, including, but not limited to, the following:*

*Adult homes or enriched housing with 16 or fewer occupants requiring supervised care within the same building on a 24-hour basis*

*Fraternity and sorority houses*

*Homeless shelters*

**310.1.2 Group R-2.** *This occupancy shall include buildings or portions thereof containing sleeping units or more than two dwelling units that are occupied, as a rule, for shelter and sleeping accommodation on a long-term basis for a month or more at a time. Such occupancy shall be subject to the New York State Multiple Dwelling Law. This group shall include, but not be limited to, the following:*

*Adult homes or enriched housing with 16 or fewer occupants requiring supervised care on a 24-hour basis in the same building, provided that the number of occupants per dwelling unit does not exceed the definition of a family*

*Apartment houses*

*Apartment hotels (nontransient)*

*Class A multiple dwellings as defined in Section 27-2004 of the New York City Housing Maintenance Code and Section 4 of the New York State Multiple Dwelling Law, including the following:*

1. *Dwelling units where the resident of the unit provides custodial care to no more than four persons on less than a 24-hour basis and not overnight.*
2. *Dwelling units where the resident of the unit provides child custodial care as a family day care home registered with the New York City Department of Health and Mental Hygiene in accordance with the New York State Social Services Law with no more than six children*

*between the ages of 2 and 13, or with no more than five children if any are under the age of 2, receiving supervised care on less than a 24-hour basis and not overnight.*

**Exception:** *Class A multiple dwellings classified in Group I-1.*

*Convents and monasteries with more than 20 occupants in the building*

*Student apartments*

**310.1.3 Group R-3.** *This occupancy shall include buildings or portions thereof containing no more than 2 dwelling units, occupied, as a rule, for shelter and sleeping accommodation on a long term basis for a month or more at a time, and are not classified in Group R-1, R-2 or I. This group shall include, but not be limited to, the following:*

*Convents and monasteries with fewer than 20 occupants in the building*

*Group homes*

*One- and two-family dwellings, including the following:*

- 1. Dwelling units where the resident of the unit provides custodial care to no more than four persons on less than a 24-hour basis and not overnight.*
- 2. Dwelling units where the resident of the unit provides child custodial care as a family day care home registered with the New York City Department of Health and Mental Hygiene in accordance with the New York State Social Services Law with no more than six children between the ages of 2 and 13, or with no more than five children if any are under the age of 2, receiving supervised care on less than a 24 hour basis and not overnight.*

**310.2 Definitions.** *The following words and terms shall, for the purposes of this section and as used elsewhere in this code, have the meanings shown herein.*

**APARTMENT.** *A dwelling unit providing permanent provisions for both sanitation and kitchen facilities, occupied or arranged to be occupied by not more than one family maintaining a common household.*

**APARTMENT, STUDENT.** *An apartment occupied or arranged to be occupied by students enrolled at a single accredited college or university and maintaining a common household pursuant to a lease, sublease, or occupancy agreement directly with such college or university.*

**BOARDER (ROOMER, LODGER).** *A person who pays a consideration for living within the household and does not occupy such space as an incident of employment.*

**CONGREGATE LIVING UNIT.** *A dwelling unit, comprised of one or more habitable rooms separated by non-rated partitions, occupied or arranged to be occupied by more than one family or by persons who are not maintaining a common household. Creation of or conversion to such unit shall be subject to Section 27-2077 of the New York City Housing Maintenance Code.*

**CUSTODIAL CARE FACILITY.** *A building or part thereof occupied by persons, on less than a 24-hour basis and not overnight, who because of age, disability or other reasons, receive personal care services by individuals other than parents or guardians, relatives by blood, marriage, domestic partnership, or adoption, in a place other than the home of the person cared for.*

**DWELLING.** *A building or structure which is occupied in whole or in part as the home, residence or sleeping place of one or more families.*

**DWELLING, MULTIPLE.** *A dwelling which is either rented, leased, let or hired out, to be occupied, or is occupied, as the residence or home of three or more families living independently of each other. A multiple dwelling does not include a building used for occupancies in Groups I-2, I-3 or I-4.*

**DWELLING, ONE-FAMILY.** *Any building or structure designed and occupied exclusively for residence purposes on a long-term basis for more than a month at a time by not more than one family. One-family dwellings shall also be deemed to include a dwelling located in a series of one-family dwellings each of which faces or is accessible to a legal street or public thoroughfare, provided that each such dwelling unit is equipped as a separate dwelling unit with all essential services, and also provided that each such unit is arranged so that it may be approved as a legal one-family dwelling.*

**DWELLING, TWO-FAMILY.** *Any building or structure designed and occupied exclusively for residence purposes on a long-term basis for more than a month at a time by not more than two families. Two-family dwellings shall also be deemed to include a dwelling located in a series of two-family dwellings each of which faces or is accessible to a legal street or public thoroughfare, provided that each such dwelling is equipped as a separate dwelling with all essential services, and also provided that each such dwelling is arranged so that it may be approved as a legal two-family dwelling.*

**DWELLING UNIT.** *A single unit consisting of one or more habitable rooms and occupied or arranged to be occupied as a unit separate from all other units within a dwelling.*

**FAMILY.**

1. *A single person occupying a dwelling unit and maintaining a common household with not more than two boarders, roomers or lodgers; or*
2. *Two or more persons related by blood, adoption, legal guardianship, marriage or domestic partnership; occupying a dwelling unit and maintaining a common household with not more than two boarders, roomers or lodgers; or*
3. *Not more than three unrelated persons occupying a dwelling unit and maintaining a common household; or*
4. *Not more than three unrelated persons occupying a dwelling unit in a congregate housing or shared living arrangement and maintaining a common household; or*
5. *Members of a group home; or*
6. *Foster children placed in accordance with provisions of the New York State Social Services Law, their foster parent(s), and other persons related to the foster parents by blood, marriage or domestic partnership; where all residents occupy and maintain a common household with not more than two boarders, roomers or lodgers; or*
7. *Up to seven unrelated students enrolled at a single accredited college or university occupying a student apartment and maintaining a common household pursuant to a lease, sublease, or occupancy agreement directly with such college or university, provided that:*
  - 7.1. *The entire structure in which the dwelling unit is located is fully sprinklered in accordance with Chapter 9; and*
  - 7.2. *Such occupancy does not exceed the maximums contained in Section 27-2075(a) of the New York City Housing Maintenance Code; and*
  - 7.3. *Prior to commencement of such occupancy, and on an annual basis thereafter such college or university has submitted a fire safety plan containing fire safety and evacuation procedures for such dwelling unit that is acceptable to the Fire Commissioner and in compliance with any rules promulgated by the Fire Commissioner; and*

7.4. *The dwelling unit complies with additional occupancy and construction requirements as may be established by rule by the Housing Preservation and Development Commissioner.*

*A common household is deemed to exist if all household members have access to all parts of the dwelling unit. Lack of access to all parts of the dwelling unit establishes a rebuttable presumption that no common household exists.*

**GROUP HOME.** *A facility for the care and maintenance of not fewer than seven nor more than twelve children, supervised by the New York State Board of Social Welfare, and operated pursuant to and meeting any additional construction requirements of Section 374-c of the New York State Social Services Law and applicable regulations of the New York State Department of Social Services. Such a facility occupied by more than twelve children shall be classified as Group I-1.*

**PERSONAL CARE SERVICE.** *The care of residents who do not require chronic or convalescent medical or nursing care. Personal care involves responsibility for the safety of the resident while inside the building.*

**RESIDENTIAL CARE/ASSISTED LIVING FACILITIES.** *A building or part thereof housing persons, on a 24-hour basis, who because of age, mental disability or other reasons, live in a supervised residential environment which provides personal care services. The occupants are capable of self-preservation and are capable of responding to an emergency situation without physical assistance from staff. This classification shall include, but not be limited to, the following: residential board and care facilities, assisted living facilities, halfway houses, congregate care facilities, social rehabilitation facilities, alcohol and drug abuse rehabilitation centers and convalescent facilities.*

**ROOMING HOUSE.** *A dwelling (i) which was originally erected as a single- or two-family private dwelling pursuant to the New York City Building Code in effect prior to December 6, 1968, (ii) which is a "Class B converted dwelling" as such term is defined in the New York City Housing Maintenance Code, and (iii) which has more than half of its habitable rooms as sleeping units. The creation of or conversion to a rooming house shall be limited by Section 27-2077 of the New York City Housing Maintenance Code.*

**SLEEPING UNIT.** *A dwelling unit, which may contain either toilet or kitchen facilities but not both. Any sleeping unit housing more than one family shall also be classified as a congregate living unit. The creation of or conversion to sleeping units shall be limited by Section 27-2077 of the New York City Housing Maintenance Code.*

#### **SECTION BC 311**

## **STORAGE GROUPS**

**311.1 Storage Group S.** *Storage Group S occupancy includes, among others, the use of a building or structure, or a portion thereof, for storage, such as for warehouses, storage rooms, freight depots and distribution centers, when not classified as a hazardous occupancy.*

**311.2 Moderate-hazard storage, Group S-1.** *Buildings occupied for storing any flammable or combustible materials that are likely to permit the development and production of fire with moderate rapidity including, but not limited to, storage of the following:*

*Aerosols, Levels 2 and 3*

*Bags; cloth, burlap and paper*

*Bamboos and rattan*

*Baskets*

*Belting; canvas and leather*

*Books and paper in rolls or packs*

*Boots and shoes*

*Buttons, including cloth covered, pearl or bone*

*Cardboard and cardboard boxes*

*Clothing, woolen wearing apparel*

*Cordage*

*Furniture*

*Furs*

*Glues, mucilage, pastes and size*

*Grains*

*Horns and combs, other than celluloid*

*Leather*

*Linoleum*

*Lumber*

*Photo engravings*

*Resilient flooring*

*Silks*

*Soaps*

*Sugar*

*Tires, bulk storage of*

*Tobacco, cigars, cigarettes and snuff*

*Upholstery and mattresses*

*Wax candles*

**311.3 Low-hazard storage, Group S-2.** *Includes, among others, buildings used for the storage of noncombustible materials such as products on wood pallets or in paper cartons with or without single thickness divisions; or in paper wrappings. Such products are permitted to have a negligible amount of plastic trim, such as knobs, handles or film wrapping. Storage uses shall include, but not be limited to, storage of the following:*

*Asbestos*

*Beverages up to and including 12-percent alcohol in metal, glass or ceramic containers*

*Cement in bags*

*Chalk and crayons*

*Dairy products in nonwaxed coated paper containers*

*Dry cell batteries*

*Electrical coils*

*Electrical motors*

*Empty cans*

*Food products*

*Foods in noncombustible containers*

*Fresh fruits and vegetables in nonplastic trays or containers*

*Frozen foods*

*Glass*

*Glass bottles, empty or filled with noncombustible liquids*

*Gypsum board*

*Inert pigments*

*Ivory*

*Meats*

*Metal cabinets*

*Metal desks with plastic tops and trim*

*Metal parts*

*Metals*

*Mirrors*

*Oil-filled and other types of distribution transformers*

*Parking garages, open or enclosed*

*Porcelain and pottery*

*Stoves*

*Talc and soapstones*

*Washers and dryers*

**SECTION BC 312**

**UTILITY AND MISCELLANEOUS GROUP U**

**312.1 General.** *Buildings and structures of an accessory character and miscellaneous structures not classified in any specific occupancy shall be constructed, equipped and maintained to conform to the requirements of this code commensurate with the fire and life hazard incidental to their occupancy. Group U shall include, but not be limited to, the following:*

*Carports*

*Fences more than 6 feet (1829 mm) high*

*Private garages as per Section 406.1*

*Retaining walls*

*Sheds or greenhouses accessory to Group R-3 occupancies, that are: freestanding, less than 120 square feet (11.15 m<sup>2</sup>) in area, not permanently affixed to the ground, and used for household goods or items associated with the garden or lawn. Any other shed shall be classified as either S-1 or S-2.*

*Tanks*

*Towers*

**CHAPTER 4**  
**SPECIAL DETAILED REQUIREMENTS BASED ON USE AND OCCUPANCY**

**SECTION BC 401**  
**SCOPE**

**401.1 Detailed use and occupancy requirements.** *In addition to the occupancy and construction requirements in this code, the provisions of this chapter apply to the special uses and occupancies described herein.*

**SECTION BC 402**  
**COVERED MALL BUILDINGS**

**402.1 Scope.** *The provisions of this section shall apply to buildings or structures defined herein as covered mall buildings not exceeding three floor levels at any point nor more than three stories above grade. Except as specifically required by this section, covered mall buildings shall meet applicable provisions of this code.*

**Exceptions:**

1. *Foyers and lobbies of Groups B, R-1 and R-2 are not required to comply with this section.*
2. *Buildings need not comply with the provisions of this section where they fully comply with other applicable provisions of this code.*

**402.1.1 Occupancy classification.** *A mall in compliance with the provisions of this section shall be classified as occupancy group M.*

**402.2 Definitions.** *The following words and terms shall, for the purposes of this chapter and as used elsewhere in this code, have the meanings shown herein.*

**ANCHOR BUILDING.** *An exterior perimeter building of a group other than H having direct access to a covered mall building but having required means of egress independent of the mall.*

**COVERED MALL BUILDING.** *A single building enclosing a number of tenants and occupants such as retail stores, drinking and dining establishments, entertainment and amusement facilities, passenger transportation terminals, offices, and other similar uses wherein two or more tenants have a main entrance into one or more malls. For the purpose of this chapter, anchor buildings shall not be considered as a part of the covered mall building.*

**FOOD COURT.** *A public seating area located in the mall that serves adjacent food preparation tenant spaces.*

**GROSS LEASABLE AREA.** *The total floor area designed for tenant occupancy and exclusive use. The area of tenant occupancy is measured from the centerlines of joint partitions to the outside of the tenant walls. All tenant areas, including areas used for storage, shall be included in calculating gross leasable area.*

**MALL.** *A roofed or covered common pedestrian area within a covered mall building that serves as access for two or more tenants and not to exceed three levels that are open to each other.*

**402.3 Lease plan.** *Each covered mall building owner shall provide the department and the Fire Department with a lease plan showing the location of each occupancy and its exits after the certificate of occupancy has been issued. No modifications or changes in occupancy or use shall be made from that shown on the lease plan without prior approval of the commissioner.*

**402.4 Means of egress.** *The covered mall building shall be provided with means of egress as required by this code. Where there is a conflict between the requirements of this code and the requirements of this section, the requirements of this section shall apply.*

**402.4.1 Occupant load.** *The calculated occupant load used to determine the required number of means of egress shall be in accordance with this section.*

**402.4.1.1 Occupant load of tenant spaces.** *The occupant load permitted in any individual tenant space in a covered mall building shall be determined in accordance with Chapter 10. Means of egress requirements for individual tenant spaces shall be based on the occupant load thus determined.*

**402.4.1.2 Occupant load of mall.** *In determining required means of egress of the mall, the total occupant load in the mall shall include the occupant load attributed to the mall as determined by Equation 4-1, plus the occupant load of the food court if any, plus the occupant load discharged into the mall from individual tenant spaces.*

**402.4.1.2.1 Occupant load formula.** *To determine the occupant load attributed to the mall, the number of square feet of floor area of the mall, excluding any food court, shall be divided by the occupant load factor (OLF) value determined by Equation 4-1.*

***(Equation 4-1)***

$$OLF = (0.00007) (GLA) + 25$$

*where:*

*OLF = The occupant load factor (square feet per person).*

*GLA = The gross leasable area (square feet).*

**402.4.1.2.2 OLF range.** *The occupant load factor (OLF) is not required to be less than 30 and shall not exceed 50.*

**402.4.1.2.3 Food courts.** *The occupant load of a food court shall be determined in accordance with Section 1004 and shall be added to the occupant load of the mall.*

**402.4.1.3 Anchor buildings.** *The occupant load of anchor buildings opening into the mall shall not be included in computing the total number of occupants for the covered mall building.*

**402.4.2 Number of means of egress.** *The required number of means of egress shall be determined in accordance with this section.*

**402.4.2.1 Number of means of egress within tenant spaces.** *Wherever the distance of travel to the mall from any location within a tenant space used by persons other than employees exceeds 75 feet (22 860 mm) or the tenant space exceeds an occupant load of 50, no fewer than two means of egress shall be provided.*

**402.4.2.2 Number of means of egress from the mall.** *The number of means of egress from the mall shall be determined in accordance with Chapter 10 and shall be based upon an occupant load calculated in accordance with Section 402.4.1.2.*

**402.4.3 Arrangements of means of egress.** *Means of egress shall be arranged in accordance with this section.*

**402.4.3.1 Anchor building means of egress.** *Required means of egress for anchor buildings shall be provided independently from the mall means of egress system. The occupant load of anchor buildings opening into the mall shall not be included in determining means of egress requirements for the mall. The path of egress travel of malls shall not exit through anchor buildings. Malls terminating at an anchor building where no other means of egress has been provided shall be considered as a dead-end mall.*

**402.4.3.2 Tenant spaces requiring more than one means of egress.** *Where more than one means of egress is required from an individual tenant space as determined by Chapter 10, not more than 50 percent of the occupant load shall discharge into the mall.*

**402.4.3.3 Large assembly occupancy.** *Assembly occupancies with an occupant load of 500 or more shall be so located in the covered mall building such that their entrance will be immediately adjacent to a principal entrance to the mall and shall have not less than one-half of their required means of egress opening directly to the exterior of the covered mall building.*

**402.4.4 Distance to exits.** *The maximum permitted travel distance to exits in covered mall buildings shall be in accordance with this section.*

**402.4.4.1 Distance to exits within tenant spaces.** *The maximum travel distance from any point within an individual tenant space to its entrance to the mall or to an exit shall not exceed 200 feet (60 960 mm).*

**402.4.4.2 Distance to exits within the mall.** *The maximum distance of travel from any point within a mall to an exit shall not exceed 200 feet (60 960 mm).*

**402.4.5 Access to exits.** *Where more than one exit is required, they shall be so arranged that it is possible to travel in either direction from any point in a mall to separate exits. However, in dead ends not exceeding a length equal to twice the width of the mall measured at the narrowest location within the dead end portion of the mall, one direction of travel shall be permitted. The minimum width of an exit passageway or corridor from a mall shall be 66 inches (1676 mm).*

**402.4.5.1 Exit passageway enclosures.** *Where exit passageway enclosures provide a secondary means of egress from a tenant space, doors to the exit passageway enclosures shall be minimum 1-hour fire doors with panic hardware. Such doors shall be self-closing and be so maintained or shall be automatic closing by smoke detection.*

**402.4.6 Service areas fronting on exit passageways.** *Mechanical rooms, electrical rooms, building service areas and service elevators are permitted to open directly into exit passageways provided that the exit passageway is separated from such rooms by fire barriers providing the same fire-resistance rating as required for the exit passageway. Door swings from these rooms shall not project into the minimum width of such exit passageways.*

**402.5 Mall width.** *For the purpose of providing required egress, malls are permitted to be considered as corridors but need not comply with the requirements of Section 1005.1 of this code where the width of the mall is as specified in this section.*

**402.5.1 Minimum width.** *The minimum width of the mall shall be 20 feet (6096 mm). The mall width shall be sufficient to accommodate the occupant load served. There shall be a minimum of 10 feet (3048 mm) clear width to a height of 8 feet (2438 mm) between any projection of a tenant space bordering the mall and the nearest kiosk, vending machine, bench, display opening, food court or other obstruction to means of egress travel.*

**402.6 Types of construction.** *Covered mall buildings, including anchor buildings, shall be only of Type I, II, and IV construction. Their areas shall not be limited provided that the covered mall building and attached anchor buildings and parking garages are surrounded on all sides by a permanent open space of not less than 60 feet (18 288 mm) and the anchor buildings do not exceed three stories in height. The height of covered mall buildings, including anchor buildings, of Type IIB construction shall be limited to one story. The allowable height and area of anchor buildings greater than three stores in height shall comply with Section 503, as modified by Sections 504 and 506. The construction type of open parking garages and enclosed parking garages shall comply with Sections 406.3 and 406.4, respectively.*

**402.7 Fire-resistance-rated separation.** *Fire-resistance-rated separation is not required between tenant spaces and the mall. Fire-resistance-rated separation is not required between a food court and adjacent tenant spaces or the mall.*

**402.7.1 Attached garage.** *An attached parking garage for the storage of passenger vehicles having a capacity of not more than nine persons and open parking garages shall be considered as a separate building where it is separated from the covered mall building by a fire barrier having a fire-resistance rating of at least 2 hours. Openings in such barrier shall be 1½ hour fire-rated self-closing or shall be automatic closing upon the activation of a smoke detector or fire alarm.*

**Exception:** *Where an open parking garage or enclosed parking garage is separated from the covered mall building or anchor building by a distance greater than 10 feet (3048 mm), the provisions of Table 602 shall apply. Pedestrian walkways and tunnels that attach the open parking garage or enclosed parking garage to the covered mall building or anchor building shall be constructed in accordance with Section 3104.*

**402.7.2 Tenant separations.** *Each tenant space shall be separated from other tenant spaces by a fire partition complying with Section 708. A tenant separation wall is not required between any tenant space and the mall.*

**402.7.3 Anchor building separation.** *An anchor building shall be separated from the covered mall building by fire walls complying with Section 705.*

**Exception:** Anchor buildings of not more than three stories above grade that have an occupancy classification of the same uses permitted as tenants of the covered mall building shall be separated by 2-hour fire resistive fire barriers complying with Section 706. Openings between such buildings and the mall need not be protected.

**402.8 Automatic sprinkler system.** The covered mall building and buildings connected shall be provided throughout with an automatic sprinkler system in accordance with Section 903.3.1.1, that shall comply with the following:

1. The automatic sprinkler system shall be complete and operative throughout occupied space in the covered mall building prior to occupancy of any of the tenant spaces. Unoccupied tenant spaces shall be similarly protected unless provided with approved alternate protection.
2. Sprinkler protection for the mall shall be independent from that provided for tenant spaces or anchors. Where tenant spaces are supplied by the same system, they shall be independently controlled.

**Exception:** An automatic sprinkler system shall not be required in spaces or areas of open parking garages constructed in accordance with Section 406.2.

**402.8.1 Standpipe system.** The covered mall building shall be equipped throughout with a standpipe system as required by Section 905.3.3.

**402.9 Smoke control.** A smoke control system shall be provided in accordance with Section 909 for malls greater than one story in height.

**402.10 Kiosks.** Kiosks and similar structures (temporary or permanent) shall meet the following requirements:

1. Combustible kiosks or other structures shall not be located within the mall unless constructed of any of the following materials:
  - 1.1. Fire-retardant-treated wood complying with Section 2303.2.
  - 1.2. Foam plastics having a maximum heat release rate not greater than 100 kW (105 Btu/h) when tested in accordance with the exhibit booth protocol in UL 1975.

- 1.3. *Aluminum composite material (ACM) having a flame spread index of not more than 25 and a smoke-developed index of not more than 450 when tested as an assembly in the maximum thickness intended for use in accordance with ASTM E 84.*
2. *Kiosks or similar structures located within the mall shall be provided with approved fire suppression and detection devices.*
3. *The minimum horizontal separation between kiosks or groupings thereof and other structures within the mall shall be 20 feet (6096 mm).*
4. *Each kiosk or similar structure or groupings thereof shall have a maximum area of 300 square feet (28 m<sup>2</sup>).*

**402.11 Security grilles and doors.** *Horizontal sliding or vertical security grilles or doors that are a part of a required means of egress shall conform to the following:*

1. *They shall remain in the full open position during the period of occupancy by the general public.*
2. *Doors or grilles shall not be brought to the closed position when there are more than 10 persons occupying spaces served by a single exit or 50 persons occupying spaces served by more than one exit.*
3. *The doors or grilles shall be openable from within without the use of any special knowledge or effort where the space is occupied.*
4. *Where two or more exits are required, not more than one-half of the exits shall be permitted to include either a horizontal sliding or vertical rolling grille or doors.*

**402.12 Emergency power.** *Covered mall buildings exceeding 50,000 square feet (4645 m<sup>2</sup>) shall be provided with emergency power systems that are capable of operating the emergency voice/alarm communication system.*

**402.13 Emergency voice/alarm communication system.** *Covered mall buildings exceeding 50,000 square feet (4645 m<sup>2</sup>) in total floor area shall be provided with an emergency voice/alarm communication system. Emergency voice/alarm communication systems serving a mall, required or otherwise, shall be accessible to the Fire Department. The system shall be provided in accordance with Section 907.2.12.2.*

**402.14 Plastic signs.** Within every store or level and from sidewall to sidewall of each tenant space facing the mall, plastic signs shall be limited as specified in Sections 402.14.1 through 402.14.5.

**402.14.1 Area.** Plastic signs shall not exceed 20 percent of the wall area facing the mall.

**402.14.2 Height and width.** Plastic signs shall not exceed a height of 36 inches (914 mm), except if the sign is vertical, the height shall not exceed 96 inches (2438 mm) and the width shall not exceed 36 inches (914 mm).

**402.14.3 Location.** Plastic signs shall be located a minimum distance of 18 inches (457 mm) from adjacent tenants.

**402.14.4 Plastics other than foam plastics.** Plastics other than foam plastics used in signs shall be light-transmitting plastics complying with Section 2606.4 or shall have a self-ignition temperature of 650°F (343°C) or greater when tested in accordance with ASTM D 1929, and a flame spread index not greater than 75 and smoke-developed index not greater than 450 when tested in the manner intended for use in accordance with ASTM E 84 or meet the acceptance criteria of Section 803.2.1 when tested in accordance with NFPA 286.

**402.14.4.1 Encasement.** Edges and backs of plastic signs in the mall shall be fully encased in metal.

**402.14.5 Foam plastics.** Foam plastics used in signs shall have flame-retardant characteristics such that the sign has a maximum heat-release rate of 150 kilowatts when tested in accordance with UL 1975 and the foam plastics shall have the physical characteristics specified in this section. Foam plastics used in signs installed in accordance with Section 402.14 shall not be required to comply with the flame spread and smoke-developed indexes specified in Section 2603.3.

**402.14.5.1 Density.** The minimum density of foam plastics used in signs shall not be less than 20 pounds per cubic foot (pcf) (320 kg/m<sup>3</sup>).

**402.14.5.2 Thickness.** The thickness of foam plastic signs shall not be greater than ½-inch (12.7 mm).

**402.15 Fire Department access to equipment.** Rooms or areas containing controls for air-conditioning systems, automatic fire-extinguishing systems or other detection, suppression or control elements shall be identified for use by the Fire Department.

**SECTION BC 403**  
**HIGH-RISE BUILDINGS**

**403.1 Applicability.** *The provisions of this section shall apply to buildings having occupied floors located more than 75 feet (22 860 mm) above the lowest level of fire department vehicle access.*

**Exception:** *The provisions of this section shall not apply to the following buildings and structures:*

- 1. Buildings occupied entirely by Group R-3 classification.*
- 2. Open parking garages in accordance with Section 406.3.*
- 3. Buildings with an occupancy in Group A-5 in accordance with Section 303.1.*
- 4. Low-hazard special industrial occupancies in accordance with Section 503.1.2.*
- 5. Buildings with an occupancy in Group H-1, H-2 or H-3 in accordance with Section 415.*

**403.2 Automatic sprinkler system.** *Buildings and structures shall be equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1. A secondary water supply shall be provided where required by Section 903.3.5.2 and in any building having occupied floors more than 300 feet (91 440 mm) above the lowest level of fire department vehicle access.*

**403.3 Reserved.**

**403.4 Emergency escape and rescue.** *Emergency escape and rescue openings required by Section 1025 are not required.*

**403.5 Automatic fire detection.** *Smoke detection shall be provided in accordance with Section 907.2.12.1.*

**403.6 Emergency voice/alarm communication systems.** *An emergency voice/alarm communication system shall be provided in accordance with Section 907.2.12.2.*

**403.7 Fire Department communications system.** *A two-way fire department communications system shall be provided for Fire Department use in accordance with Section 907.2.12.3.*

**403.8 Fire command.** A fire command center complying with Section 911 shall be provided in a location approved by the Fire Department.

**403.9 Elevators.** Elevator operation and installation shall be in accordance with Chapter 30.

**403.9.1 Elevator lobbies.** Elevator lobbies shall be provided in accordance with Sections 403.9.1.1 and 403.9.1.2.

**403.9.1.1 Applicability.** Elevator lobbies shall be provided at the following locations:

1. Elevators opening onto a fire-resistance-rated corridor. In all occupancy groups, elevator lobbies shall be provided at any location where an elevator opens onto a fire-resistance rated corridor.
2. Elevators serving B occupancies. Notwithstanding item 1, Elevators that serve four or more stories that contain space classified in occupancy Group B, inclusive of any lobby or entrance level, shall provide elevator lobbies at every level served by such elevator.

**Exceptions:** Elevator lobbies are not required under the following conditions:

1. Street-floor lobbies. Street-floor lobbies provided that the entire street floor is equipped with an automatic sprinkler system in accordance with Section 903.3.1.1.
2. Elevators without shafts. Elevators that are not required to be located in a shaft in accordance with Section 707.2.
3. Zero-clearance doors. Elevator openings provided with zero-clearance doors in addition to hoistway doors and elevator car doors. Such zero-clearance doors shall be tested in accordance with UL 1784 without an artificial bottom seal. When serving as an accessible route, such additional doors shall operate automatically and in compliance with Chapter 11.
4. Small floor areas. On floors with less than 2,500 square feet (232 m<sup>2</sup>), the commissioner may accept an alternative design or construction method that accomplishes the purposes of this section, or if the commissioner determines that compliance with this section is impracticable in whole or in part, the

*commissioner may authorize an exemption from the requirements of this section.*

5. *Pressurized elevator shafts. When the elevator is pressurized in accordance with the requirements of the commissioner.*
6. *Group R-2 occupancy.*

**403.9.1.2 Construction.** *Elevators lobbies shall be constructed in accordance with the following:*

1. *The lobbies shall be constructed as a smoke partition complying with Section 710.*
2. *The lobbies shall separate the elevator from all other spaces on the story.*
3. *The lobbies shall have at least one means of egress complying with Chapter 10 and other provisions of this code.*
4. *Access to an exit on any story through an elevator lobby shall be permitted provided that access to at least one other required exit does not require passing through the elevator lobby.*

**403.9.2 Impact resistant elevator shafts.** *Elevator shafts shall be constructed of impact resistant walls. Minimum impact resistance standards shall be established by rules of the department.*

**403.10 Reserved.**

**403.11 Emergency power systems.** *An emergency power system complying with Section 2702 shall be provided for emergency power loads specified in Sections 403.11.1 and 403.11.2.*

**403.11.1 Emergency power loads in occupancies other than R-2.** *In buildings of any occupancy group other than Group R-2, the following are classified as emergency power loads:*

1. *Exit signs and means of egress illumination required by Chapter 10; and*
2. *Elevator car lighting; and*
3. *Emergency voice/alarm communications systems; and*

4. *Automatic fire detection systems; and*
5. *Fire alarm systems; and*
6. *Power and lighting for the fire command center required by Section 403.8; and*
7. *Electrically powered fire pumps; and*
8. *Ventilation and automatic fire detection equipment for smokeproof enclosures; and*
9. *Elevators in accordance with Section 3003; and*
10. *Stair pressurization systems when provided.*

**403.11.2 Emergency power loads in Group R-2 occupancies.** *Group R-2 occupancies in buildings greater than 125 feet (38 100 mm) in height shall be required to provide an emergency power system to support the following loads:*

1. *Exit signs and means of egress illumination required by Chapter 10;*
2. *At least one elevator serving all floors, or one elevator per bank where different banks serve different portions of the building;*
3. *Emergency voice communications systems; and*
4. *Electrically powered fire pumps, unless electrical power to the motor is taken ahead of the main from the street side of the house service switch.*

*Where a generator is used as the emergency power system, diesel or gas shall be permitted as the fuel source in accordance with Section 2702.1.*

**403.12 Stairway door operation.** *Doors opening into interior stair enclosures shall not be locked from either side. However, a door locked from the stair side may be permitted provided that such door is equipped with an automatic fail safe system for opening in the event of the activation of any automatic fire detection system, or when any elevator recall is activated, or when any signal is received from the fire command center. Such door shall be deemed as openable from the stair side. Stair reentry signs shall be posted throughout the stairway*

indicating that reentry is provided only during fire emergencies. Such signs shall be in accordance with Section 1026.4.2.

**403.12.1 Stairway communications system.** A telephone or other two-way communications system connected to an approved constantly attended station shall be provided at not less than every fifth floor in each required stairway where stair side doors are locked.

**403.13 Smokeproof exit enclosures.** Every required stairway serving occupied floors more than 75 feet (22 860 mm) above the lowest level of fire department vehicle access shall comply with Sections 909.20 and 1019.1.8.

**Exception for R-2 occupancies:** Smokeproof enclosures are not required in occupancy Group R-2 unless provided pursuant to Exception 2 of Section 912.1.

**403.14 Seismic considerations.** For seismic considerations, see Chapter 16.

**403.15 Impact resistant stair enclosures.** Exit stair enclosures shall be constructed of impact resistant walls. Minimum impact resistance standards shall be established by rules of the department.

**403.16 Exit path markings.** All high-rise buildings shall be provided with photoluminescent exit path markings conforming to Section 1026.

**Exception:** Exit paths serving Group R-2.

**403.17 Outdoor air intakes.** For high-rise buildings, outdoor air intakes serving spaces above the second story and serving spaces greater than 10,000 square-feet (929 m<sup>2</sup>) of floor area shall be located in accordance with Section 401.5 of the New York City Mechanical Code.

**Exception:** Group R-2 occupancy.

**403.18 Open web steel joists.** The use of open web steel joists shall be prohibited in high-rise buildings until the commissioner promulgates rules establishing minimum acceptable fireproofing methods.

## **SECTION BC 404**

### **ATRIUMS**

**404.1 General.** *In other than Group H occupancies, and where permitted by Exception 5 in Section 707.2, the provisions of this section shall apply to buildings or structures containing vertical openings defined herein as atriums.*

**404.1.1 Definition.** *The following word and term shall, for the purposes of this chapter and as used elsewhere in this code, have the meaning shown herein.*

**ATRIUM.** *An opening connecting three or more stories other than enclosed stairways, elevators, hoistways, escalators, plumbing, electrical, air-conditioning or any other vertical openings that are not required to be enclosed by other provisions of this code, which is closed at the top and not defined as a mall. Stories, as used in this definition, do not include balconies within assembly groups or mezzanines that comply with Section 505.*

**404.2 Use.** *The floor of the atrium shall not be used for other than low fire hazard uses, and only approved materials and decorations in accordance with the New York City Fire Code shall be used in the atrium space.*

**Exception:** *The atrium floor area is permitted to be used for any approved use where the individual space is provided with an automatic sprinkler system in accordance with Section 903.3.1.1.*

**404.3 Automatic sprinkler protection.** *An approved automatic sprinkler system shall be installed throughout the entire building.*

**Exceptions:**

- 1. That area of a building adjacent to or above the atrium need not be sprinklered provided that portion of the building is separated from the atrium portion by a 2-hour fire barrier wall or horizontal assembly or both.*
- 2. Where the ceiling of the atrium is more than 55 feet (16 764 mm) above the floor, sprinkler protection at the ceiling of the atrium is not required.*

**404.4 Smoke control.** *A smoke control system shall be installed in accordance with Section 909.*

**Exception:** *Smoke control is not required for floor openings meeting the requirements of Section 707.2, Exceptions 2 and 8.*

**404.5 Enclosure of atriums.** *Atrium spaces shall be separated from adjacent spaces by a 2-hour fire barrier*

wall.

**Exceptions:**

1. A glass or glass-block wall forming a smoke partition where automatic sprinklers are spaced 6 feet (1829 mm) or less along both sides of the separation wall, or on the room side only if there is not a walkway on the atrium side, and between 4 inches and 12 inches (102 mm and 305 mm) away from the glass and so designed that the entire surface of the glass is wet upon activation of the sprinkler system. The glass shall be installed in a gasketed frame so that the framing system deflects without breaking (loading) the glass before the sprinkler system operates.
2. The adjacent spaces of any three floors of the atrium shall not be required to be separated from the atrium where such spaces are included in computing the atrium volume for the design of the smoke control system.

**404.6 Emergency power.** Equipment required to provide smoke control shall be connected to an emergency power system in accordance with Section 909.11.

**404.7 Interior finish.** The interior finish of walls and ceilings of the atrium shall not be less than Class B with no reduction in class for sprinkler protection.

**404.8 Travel distance.** In other than the lowest level of the atrium, where the required means of egress is through the atrium space, the portion of exit access travel distance within the atrium space shall not exceed 200 feet (60 960 mm).

**404.9 Types of construction.** Buildings containing atriums shall be only of Type I, IIA, and IV construction.

**SECTION BC 405  
UNDERGROUND BUILDINGS**

**405.1 General.** The provisions of this section apply to building spaces having a floor level used for human occupancy more than 30 feet (9144 mm) below the lowest level of exit discharge.

**Exceptions:**

1. One- and two-family dwellings, sprinklered in accordance with Section 903.3.1.3.

2. *Parking garages with automatic fire suppression systems in compliance with Section 405.3.*
3. *Fixed guideway transit systems.*
4. *Grandstands, bleachers, stadiums, arenas and similar facilities.*
5. *Where the lowest story is the only story that would qualify the building as an underground building and has an area not exceeding 1,500 square feet (139 m<sup>2</sup>) and has an occupant load less than 10.*

**405.2 Construction requirements.** *The underground portion of the building shall be of Type I construction.*

**405.3 Automatic sprinkler system.** *The highest level of exit discharge serving the underground portions of the building and all levels below shall be equipped with an automatic sprinkler system installed in accordance with Section 903.3.1.1. Water-flow switches and control valves shall be supervised in accordance with Section 903.4.*

**405.4 Compartmentation.** *Compartmentation shall be in accordance with Sections 405.4.1 through 405.4.3.*

**405.4.1 Number of compartments.** *A building having a floor level more than 60 feet (18 288 mm) below the lowest level of exit discharge shall be divided into a minimum of two compartments of approximately equal size. Such compartmentation shall extend through the highest level of exit discharge serving the underground portions of the building and all levels below.*

**Exception:** *The lowest story need not be compartmented where the area does not exceed 1,500 square feet (139 m<sup>2</sup>) and has an occupant load of less than 10.*

**405.4.2 Smoke barrier penetration.** *The separation between the two compartments shall be of minimum 2-hour fire barrier wall construction that shall extend from floor slab to floor deck above. Openings between the two compartments shall be limited to plumbing and electrical piping and conduit penetrations firestopped in accordance with Section 712. Doorways shall be protected by door assemblies that are automatic-closing by smoke detection in accordance with Section 715.3 and shall be provided with gasketing and a drop sill to minimize smoke leakage. Where provided, each compartment shall have an air supply and an exhaust system independent of the other compartments.*

**405.4.3 Elevators.** *Where elevators are provided, each compartment shall have direct access to an elevator. Where an elevator serves more than one compartment, an elevator lobby shall be provided and*

*shall be separated from each compartment by a 2-hour fire barrier wall. Doors shall be gasketed, have a drop sill, and be automatic-closing by smoke detection installed in accordance with Section 907.10.*

**405.5 Smoke control system.** *A smoke control system shall be provided in accordance with Sections 405.5.1 and 405.5.2.*

**405.5.1 Control system.** *A smoke control system is required to control the migration of products of combustion in accordance with Section 909 and the provisions of this section. Smoke control shall restrict movement of smoke to the general area of fire origin and maintain means of egress in a usable condition.*

**405.5.2 Smoke exhaust system.** *Where compartmentation is required, each compartment shall have an independent smoke control system. The system shall be automatically activated and capable of manual operation in accordance with Section 907.2.18.*

**405.6 Fire alarm systems.** *A fire alarm system shall be provided where required by Section 907.2.19.*

**405.7 Public address.** *A public address system shall be provided where required by Section 907.2.19.1.*

**405.8 Means of egress.** *Means of egress shall be in accordance with Sections 405.8.1 and 405.8.2.*

**405.8.1 Number of exits.** *Each floor level shall be provided with a minimum of two exits. Where compartmentation is required by Section 405.4, each compartment shall have a minimum of one exit and shall also have an exit access doorway into the adjoining compartment.*

**405.8.2 Smokeproof enclosure.** *Every required stairway serving floor levels more than 30 feet (9144 mm) below its level of exit discharge shall comply with the requirements for a smokeproof enclosure as provided in Section 1019.1.8.*

**405.9 Reserved.**

**405.10 Emergency power.** *An emergency power system complying with Section 2702 shall be provided for emergency power loads specified in Section 405.10.1.*

**405.10.1 Emergency power loads.** *The following loads are classified as emergency power loads:*

1. *Emergency voice/alarm communications systems.*

2. *Fire alarm systems.*
3. *Automatic fire detection systems.*
4. *Elevator car lighting.*
5. *Means of egress and exit sign illumination as required by Chapter 10.*
6. *Smoke control system.*
7. *Ventilation and automatic fire detection equipment for smokeproof enclosures.*
8. *Fire pumps.*
9. *Elevators in accordance with Section 3003.*
10. *Stair pressurization systems when provided.*

**405.11 Standpipe system.** *The underground building shall be provided throughout with a standpipe system in accordance with Section 905.*

**SECTION BC 406**  
**MOTOR VEHICLE-RELATED OCCUPANCIES**

**406.1 Private garages and carports.**

**406.1.1 Classification.** *Private garages and carports, as defined by this section, shall be classified as Group U occupancy.*

**406.1.2 Definitions.** *The following words and terms shall, for the purposes of this chapter and as used elsewhere in this code, have the meanings shown herein.*

**CARPORT.** *A structure or portion of a structure, accessory to a Group R-2 or R-3 occupancy, open on at least two sides and unenclosed for at least 50 percent of perimeter, used for the parking or storage of passenger motor vehicles. Such facility shall not exceed 650 square feet (60.45 m<sup>2</sup>) in area and one story in height*

**PRIVATE GARAGE.** *An enclosed structure or portion of a structure, accessory to a Group R-2 or R-3 occupancy, used for the parking or storage of passenger motor vehicles. Such facility shall not exceed 650 square feet (60 m<sup>2</sup>) in area and one story in height.*

**406.1.3 Floor construction.** *Private garage and carport floors shall be of concrete or equivalent noncombustible material that will not absorb flammable liquids. The area of floor used for parking of vehicles shall be sloped to facilitate the movement of liquids to a drain. The sills of all door openings connecting a dwelling unit to a private garage shall be raised at least 4 inches (102 mm) above the floor level of the garage.*

**Exception:** *Asphalt surfaces shall be permitted at ground level in carports.*

**406.1.3.1 Ramps.** *Ramps shall have a gradient not exceeding one in seven, with nonslip surfaces, and shall be located entirely within the property line. However, upon application to the commissioner, steeper gradients may be accepted, but in no event greater than one in three.*

**406.1.4 Separation.** *Separations shall comply with the following:*

- 1. The private garage shall be separated from the dwelling unit and its attic area by means of a minimum 1-hour fire-rated construction. Garages beneath habitable rooms shall be separated from all habitable rooms above by not less than 1-hour fire-rated construction. Openings from a private garage directly into a room used for sleeping purposes shall not be permitted.*
- 2. No air used for heating, cooling, or ventilation shall be circulated through private garages to dwelling areas.*
- 3. A separation is not required between a Group R-3 occupancy and a carport, provided the carport does not have any enclosed areas above.*

**406.2 Parking garages, open or enclosed.**

**406.2.1 Classification.** *Parking garages shall be either open, as per Section 406.3, or enclosed, as per Section 406.4. Parking garages shall also comply with the special provisions of Section 508.*

**406.2.2 Definitions.** *The following words and terms shall, for the purposes of this chapter and as used elsewhere in this code, have the meanings shown herein.*

**PARKING GARAGE.** *A structure or portion of a structure, other than a private garage or carport, used for the parking or storage of motor vehicles.*

**406.2.3 General requirements.** *All parking garages, open or enclosed, shall comply with the general provisions of this section.*

**406.2.3.1 Clear height.** *The clear height of each floor level in vehicle and pedestrian traffic areas shall not be less than 7 feet (2134 mm). Vehicle and pedestrian areas accommodating van-accessible parking required by Section 1106.5 shall conform to ICC A117.1.*

**406.2.3.2 Guards.** *Guards shall be provided in accordance with Section 1012 at exterior and interior vertical openings on floor and roof areas where vehicles are parked or moved and where the vertical distance to the ground or surface directly below exceeds 30 inches (762 mm).*

**406.2.3.3 Vehicle barriers.** *Parking areas shall be provided with exterior or interior walls or vehicle barriers, except at pedestrian or vehicular accesses, designed in accordance with Section 1607.7. Vehicle barriers not less than 2 feet (610 mm) high shall be placed at the ends of drive lanes and at the end of parking spaces where the difference in adjacent floor elevation is greater than 1 foot (305 mm).*

**406.2.3.4 Ramps.** *Ramps shall have a gradient not exceeding one in seven, with non-slip surfaces. A level landing having a minimum dimension of 20 feet (6096 mm) shall be provided at the discharge point of all ramps at the street level, within the property line. Ramps used for the movement of motor vehicles need not be enclosed when serving tiers above grade. Vehicle ramps may serve as part of a means of egress provided that such ramp complies with the requirements of Sections 1018.1.1 and 1018.1.2.*

**406.2.3.5 Floor surface.** *Parking surfaces shall be of concrete or similar noncombustible and nonabsorbent materials. The area of floor used for parking of vehicles shall be sloped to facilitate the movement of liquids to a drain.*

**Exception:** *Asphalt parking surfaces are permitted at ground level.*

**406.2.3.6 Separation.** *Parking garages shall be separated from other occupancies in accordance with Section 302.1.1.*

**406.2.3.6.1 Openings prohibited.** *Openings from a parking garage directly into a room used for*

*sleeping purposes shall not be permitted.*

**406.2.3.6.2 Special hazards.** *Openings from a parking garage to any room in which there is a fuel-fired appliance shall be by means of a vestibule providing a two-doorway separation. Such vestibule and doorway shall be minimum 1-hour rated construction.*

**Exception:** *A single door, in compliance with Table 715.3, shall be permitted, provided the sources of ignition in the appliance are at least 18 inches (457 mm) above the floor.*

**406.2.3.7 Fire fighter aisles.** *In any parking garage or lot, one or more aisles, at least 24 inches (610 mm) in width, shall be provided to permit access by fire fighting personnel to all parts of the garage or lot. There shall not be more than three rows of parked motor vehicles between aisles.*

### **406.3 Open parking garages.**

**406.3.1 Scope.** *Except where specific provisions are made in the following subsections, other requirements of this code shall apply.*

**406.3.2 Definitions.** *The following words and terms shall, for the purposes of this chapter and as used elsewhere in this code, have the meanings shown herein.*

**MECHANICAL-ACCESS OPEN PARKING GARAGES.** *Open parking garages employing parking machines, lifts, elevators or other mechanical devices for vehicles moving from and to street level and in which public occupancy is prohibited above the street level.*

**OPEN PARKING GARAGE.** *A structure or portion of a structure with the openings as described in Section 406.3.3.1 that is used for the parking or storage of private motor vehicles as described in Section 406.3.4.*

**RAMP-ACCESS OPEN PARKING GARAGES.** *Open parking garages employing a series of continuously rising floors or a series of interconnecting ramps between floors permitting the movement of vehicles under their own power from and to the street level.*

**406.3.3 Construction.** *Open parking garages shall be of Type I, II or IV construction. Open parking garages shall meet the design requirements of Chapter 16. For vehicle barriers, see Section 406.2.3.3.*

**406.3.3.1 Openings.** *For natural ventilation purposes, the exterior side of the structure shall have*

*openings equal to 50 percent of the perimeter walls. The aggregate length of the openings considered to be providing natural ventilation shall constitute a minimum of 40 percent of the perimeter of the tier. Interior walls shall be at least 20 percent open.*

**406.3.4 Uses.** *Mixed uses shall be allowed in the same building as an open parking garage subject to the provisions of Sections 302.3, 402.7.1, 406.3.13, 508.3, 508.4 and 508.7.*

**406.3.5 Area and height.** *Area and height of open parking garages shall be limited as set forth in Chapter 5 for Group S-2 occupancies and as further provided for in Section 302.3.*

**406.3.5.1 Single use.** *When the open parking garage is used exclusively for the parking or storage of private motor vehicles, with no other uses in the building, the area and height shall be permitted to comply with Table 406.3.5.*

**Exception:** *The grade-level tier is permitted to contain an office, waiting and toilet rooms having a total combined area of not more than 1,000 square feet (93 m<sup>2</sup>). Such area need not be separated from the open parking garage. In open parking garages having a spiral or sloping floor, the horizontal projection of the structure at any cross section shall not exceed the allowable area per parking tier. In the case of an open parking garage having a continuous spiral floor, each 9 feet 6 inches (2896 mm) of height, or portion thereof, shall be considered a tier. The clear height of a parking tier shall not be less than 7 feet (2134 mm), except that a lower clear height is permitted in mechanical-access open parking garages where approved by the commissioner.*

TABLE 406.3.5  
OPEN PARKING GARAGES AREA AND HEIGHT

TYPE OF CONSTRUCTION	AREA PER TIER (square foot)	HEIGHT (in tiers)		
		Ramp access	Mechanical access	
			Automatic sprinkler system	
			No	Yes
IA	Unlimited	Unlimited	Unlimited	Unlimited
IB	Unlimited	12 tiers	12 tiers	18 tiers
IIA	50,000	10 tiers	10 tiers	15 tiers
IIIB	50,000	8 tiers	8 tiers	12 tiers
IV	50,000	4 tiers	4 tiers	4 tiers

For SI: 1 square foot = 0.0929 m<sup>2</sup>.

**406.3.6 Reserved**

**406.3.7 Exterior walls.** Exterior walls and openings in exterior walls shall comply with Tables 601 and 602. The distance from an adjacent property line shall be determined in accordance with Table 602 and Section 704.

**406.3.8 Means of egress.** Open parking garages shall meet the means of egress requirements of Chapter 10. However, where no persons other than parking attendants are permitted, required exit stairways shall not be less than 36 inches (914 mm) wide.

**406.3.9 Standpipes.** Standpipes shall be installed where required by the provisions of Section 905.

**406.3.10 Sprinkler systems.** Automatic sprinkler systems and standpipes shall be installed in accordance with the provisions of Section 903. An automatic dry sprinkler system may be installed in unheated garages.

**406.3.11 Enclosure of vertical openings.** Enclosure shall not be required for vertical openings.

**406.3.12 Ventilation.** Openings specified in Section 406.3.3.1 shall satisfy natural ventilation requirements. Additional mechanical ventilation shall not be required.

**406.3.13 Prohibitions.** The following uses and alterations are not permitted:

1. Vehicle repair work.
2. Parking of commercial vehicles, buses, trucks and similar vehicles.
3. Partial or complete closing of required openings in exterior walls by tarpaulins or any other means.

**406.4 Enclosed parking garages.** Parking garages and portions thereof that do not meet the definition of open parking garages shall be classified as an enclosed parking garage and shall meet the requirements of this section.

**406.4.1 Heights and areas.** Enclosed parking garages shall be limited to the allowable heights and areas specified in Table 503. Permitted roof parking shall not be considered as a separate story.

**406.4.2 Ventilation.** *A mechanical ventilation system shall be provided in accordance with the New York City Mechanical Code.*

**406.5 Motor fuel-dispensing facilities.**

**406.5.1 Construction.** *Motor fuel-dispensing facilities shall be designed and constructed in accordance with the New York City Fire Code and this section.*

**406.5.2 Canopies.** *Canopies under which fuels are dispensed shall have a clear, unobstructed height of not less than 14 feet (4267 mm) to the lowest projecting element in the vehicle drive-through area. Canopies and their supports over pumps shall be of noncombustible materials. However, panels constructed of light-transmitting plastic materials shall be permitted to be installed in canopies erected over motor vehicle fuel-dispensing station fuel dispensers, provided the panels are located at least 10 feet (3048 mm) from any building on the same property and face yards or streets not less than 40 feet (12 192 mm) in width on the other sides. The aggregate areas of plastics shall not exceed 1,000 square feet (93 m<sup>2</sup>). The maximum area of any individual panel shall not exceed 100 square feet (9.3 m<sup>2</sup>).*

**406.5.3 Storage tanks.** *Motor fuel storage tanks shall be installed below ground, except as authorized by the rules of the Fire Department. The installation and venting of storage tanks shall be in accordance with the rules of the Fire Department and the requirements of the New York City Fire Code. Storage tanks installed below ground shall comply with the following:*

- 1. The top of the storage tanks shall be at least 24 inches (below finished grade and at least 24 inches (610 mm) below the level of any cellar or basement floor within 10 feet (3048 mm) of the tanks.*
- 2. Storage tanks shall be located so that the forces from any building foundation and support loads are not transmitted to the tanks. The distance from any part of a storage tank to the nearest wall of any basement, pit or cellar, or from any property line that may be built upon, shall not be less than 36 inches (914 mm).*
- 3. Storage tanks shall be covered with a structurally supported reinforced concrete slab at least 8 inches (203 mm) thick, extending at least 12 inches (305 mm) beyond the horizontal outlines of the storage tanks, and placed over a cover of suitable clean backfill material. Such slab shall be designed and reinforced in accordance with ACI 318. All concrete shall have a minimum compressive strength of 4,000 pounds per square inch (27 580 kPa) at 28 days.*

4. Storage tanks shall be placed on a 12-inch (305 mm) thick concrete base slab or installed in such other manner, secured against flotation, and approved by the department.

#### **406.6 Repair garages.**

**406.6.1 General.** Repair garages shall be constructed in accordance with the New York City Fire Code and this section. This occupancy shall not include motor fuel-dispensing facilities, as regulated in Section 406.5.

**406.6.2 Mixed uses.** Mixed uses shall be allowed in the same building as a repair garage subject to the provisions of Section 302.3.

**406.6.3 Ventilation.** Repair garages shall be mechanically ventilated in accordance with the New York City Mechanical Code. The ventilation system shall be controlled at the entrance to the garage.

**406.6.4 Floor surface.** Repair garage floors shall be of concrete or similar noncombustible and nonabsorbent materials.

**Exception:** Slip-resistant, nonabsorbent, interior floor finishes having a critical radiant flux not more than  $0.45 \text{ W/cm}^2$ , as determined by NFPA 253, shall be permitted.

**406.6.5 Heating equipment.** Heating equipment shall be installed in accordance with the New York City Mechanical Code.

**406.6.6 Gas detection system.** Repair garages used for repair of vehicles fueled by CNG, LNG, or hydrogen, shall be provided with an approved flammable gas-detection system.

**406.6.6.1 System design.** The flammable gas-detection system shall be calibrated to the types of fuels or gases used by vehicles to be repaired. The gas detection system shall be designed to activate when the level of flammable gas exceeds 25 percent of the lower explosive limit. Gas detection shall also be provided in lubrication or chassis repair pits of garages used for repairing nonodorized LNG-fueled vehicles.

**406.6.6.2 Operation.** Activation of the gas detection system shall result in all of the following:

1. Initiation of distinct audible and visual alarm signals in the repair garage.

2. *Deactivation of all heating systems located in the repair garage.*

3. *Activation of the mechanical ventilation and exhaust system, where the system is interlocked with gas detection.*

**406.6.6.3 Failure of the gas detection system.** *Failure of the gas detection system shall result in the deactivation of the heating system, activation of the mechanical ventilation system when the system is inter-locked with the gas detection system and cause a trouble signal to sound in an approved location.*

#### **406.7 Open Parking Lots.**

**406.7.1 General.** *The provisions of this section shall govern the construction of open parking lots and to all such existing premises hereafter enlarged or changed in location.*

**406.7.2 Definitions.** *The following words and terms shall, for the purposes of this chapter and as used elsewhere in this code, have the meanings shown herein.*

**OPEN PARKING LOT.** *An exterior space with surfacing at grade used for the storage or sale of more than four motor vehicles, including but not limited to parking lots, motor vehicles sales lots, and accessory open parking spaces.*

**406.7.3 Permit required.** *Any premise intended to be occupied for the storage or sale of motor vehicles on an open parking lot shall require an application to be filed with the department in order to obtain a Certificate of Occupancy. Such Certificate of Occupancy shall indicate the maximum number of vehicles to be accommodated and the type of vehicle, whether private passenger or commercial, to be stored. An application for or including an open parking lot shall be accompanied by a plan exhibiting the following:*

1. *Dimensions of the lot and its location in relation to adjoining streets; and*
2. *Any structure(s) existing or to be erected on the plot; and*
3. *The relative elevations of the parking area, curbs and adjoining yards or courts; and*
4. *Structures, retaining walls, and open spaces on adjoining premises; and*

5. *Retaining walls to be built; and*
6. *Location and dimensions of curb cuts, driveways, and enclosures; and*
7. *Drainage diagram; and*
8. *Specification of surfacing material; and*
9. *Parking stall layout with dimensions; and*
10. *Analysis exhibiting compliance with the New York City Zoning Resolution; and*
11. *Other information as may be requested by the commissioner.*

*A copy of the plan or diagram approved by the department shall be kept on the premises. Certified, reduced size, legible copies may be used for this purpose. When an attendant's shelter is provided on the parking lot, the Certificate of Occupancy issued shall be posted and maintained under glass in the shelter.*

**406.7.4 Locations prohibited.** *All vehicular activities associated with the operation of open parking lots shall be entirely within the property lines of the premises. Vehicles shall not be permitted to encroach upon the sidewalks. No motor vehicle may be stored or parked in any location where it would obstruct a required window or required exit of any adjacent building.*

**406.7.5 Surfacing.** *All driveways, parking stalls, and open spaces used for the parking or storage of motor vehicles shall be surfaced with concrete asphalt, or equivalent durable, dustless material.*

**406.7.5.1 Drainage.** *Open parking lots shall be graded and maintained such that no drainage will flow onto abutting sidewalks and adjoining properties.*

**406.7.5.2 Non-porous surfaces.** *Where the surface paving of an open parking lot is non-porous, such lot shall be drained as required by the New York City Plumbing Code.*

**406.7.5.3 Resurfacing.** *Resurfacing of existing open parking lots shall comply with this section.*

**406.7.6 Curb cuts.** *For the purpose of this section, a curb cut shall include all splays when determining the total length of cut curb. Unless otherwise required by the New York City Zoning Resolution, all curb cuts shall comply with the following requirements:*

1. *The aggregate length of curb cuts shall not exceed 60 percent of any street frontage 100 feet (30 480 mm) or less in length. No single curb cut shall exceed 30 feet (9144 mm) in length, and there shall not be more than two curb cuts on any street frontage 100 feet (30 480 mm) or less in length. The minimum distance between two curb cuts shall be 5 feet (1524 mm).*
2. *For each 50 feet (15 240 mm) of street frontage length over 100 feet (30 480 mm), an additional curb cut no greater than 30 feet (9144 mm) in length may be permitted.*
3. *No curb cut shall commence within 8 feet (2438 mm) of a side lot line, except that on corner lots and lots with street frontage length of 50 feet (15 240 mm) or less, the curb cut may commence 30 inches (762 mm) from the side lot line.*
4. *No curb cut, including splays, shall be less than 10 feet (3048 mm) in length.*

**406.7.7 Driveways.** *Driveways serving passenger vehicles shall be a minimum of 8 feet (2438 mm) in width and shall not exceed the length of the curb cut, not including the lengths of the splays. For all other motor vehicles, the minimum width of driveways shall be 10 feet (3048 mm). Portions of the driveway located between the curb line and the lot line shall be paved in accordance with the requirements of the Department of Transportation for the construction of sidewalks.*

**406.7.8 Curbs and bumpers.** *Open parking lots shall be completely separated from adjoining premises and public sidewalks by curbs or bumpers of concrete, masonry, steel, heavy timber, or other similar and equally substantial materials, and shall be securely anchored so as to stop motor vehicles. Curbs and bumpers shall be at least 8 inches (203 mm) high and 8 inches (203 mm) wide.*

**406.7.8.1 Openings.** *Openings in required perimeter curbs and bumpers shall be permitted only for drainage, for motor vehicle entrances and exits, and for pedestrian entrances and exits. The width of an opening for motor vehicle access shall not exceed the length of the curb cut, not including the lengths of the splays. When an opening for pedestrian access is adjacent to a motor vehicle access opening, the two openings shall be separated by a permanent and substantial post. In no case shall any pedestrian entrance or exit exceed 5 feet (1524 mm) in width.*

**406.7.9 Accessory uses and occupancies.** *Parking lot offices, attendant shelters, storage facilities, and similar structures used in conjunction with open parking lots may be provided as an accessory use and shall comply with the applicable code provisions. Such accessory structures may be constructed of combustible materials subject to the limitations of Section D105.1 of Appendix D.*

**406.7.9.1 Motor fuel-dispensing facilities.** *Motor fuel-dispensing facilities, accessory to open parking lots, shall comply with the requirements of Section 406.5 of this code and the New York City Fire Code. Motor fuel pumps shall be located at least 30 feet (9144 mm) from any parking space or interior lot line.*

**406.7.10 Special provisions applicable to large open parking lots.** *Open parking lots storing ten or more motor vehicles shall also be subject to the special provisions of this section.*

**406.7.10.1 Curbs and bumpers.** *Bumpers shall be situated not less than 1 foot (305 mm) from the perimeter edge of the open parking lot where vehicles are parked parallel to such perimeter edge, and not less than 4 feet (1219 mm) from the perimeter edge where vehicles are parked perpendicular to such perimeter edge. Openings shall be limited as provided for in Section 406.7.8.1.*

**Exception:** *A steel guardrail or other substantial barrier designed in accordance with the provisions of Section 1607.7.3, that will prevent any part of a vehicle from extending across a property line, may be accepted in lieu of bumpers.*

**406.7.10.2 Screen enclosures.** *Open parking lots shall provide a perimeter screen enclosure as per this section unless otherwise required by the New York City Zoning Resolution. Such screen enclosure may be constructed as a masonry wall, woven wire fence, iron picket fence, or uniformly painted fence of fire-resistant material at least 4 feet (1219 mm) high, but not more than 8 feet (2438 mm) above finished grade, subject to the limitations of Section 3111. Such enclosures shall completely separate the lot from adjoining premises and public sidewalks. Openings shall be limited as provided for in Section 406.7.8.1.*

**Exception:** *Screening shall not be required for any portion of the lot adjacent to an existing wall located at the lot line.*

**406.7.10.3 Illumination.** *Open parking lots operating between 6 p.m. and 6 a.m. shall be adequately illuminated to a minimum of 1 foot-candle measured at grade level, distributed over the entire area. Illumination provided with reflectors or floodlights shall be arranged such that the illumination is directed downward and away from adjacent premises.*

**406.7.10.4 Fire fighter aisles.** *In any open parking lot, one or more aisles, at least 24 inches (610 mm) in width, shall be provided to permit access by fire fighting personnel to all parts of the garage or lot. There shall not be more than three rows of parked motor vehicles between aisles.*

**SECTION BC 407**

**GROUP I-2**

**407.1 General.** Occupancies in Group I-2 shall comply with the provisions of this section and other applicable provisions of this code.

**407.2 Corridors.** Corridors in occupancies in Group I-2 shall be continuous to the exits and separated from other areas in accordance with Section 407.3 except spaces conforming to Sections 407.2.1 through 407.2.4.

**407.2.1 Spaces of unlimited area.** Waiting areas and similar spaces constructed as required for corridors shall be permitted to be open to a corridor, only where all of the following criteria are met:

1. The spaces are not occupied for patient sleeping units, treatment rooms, hazardous or incidental use areas as defined in Section 302.1.1.
2. The open space is protected by an automatic fire detection system installed in accordance with Section 907.
3. The corridors onto which the spaces open, in the same smoke compartment, are protected by an automatic fire detection system installed in accordance with Section 907, or the smoke compartment in which the spaces are located is equipped throughout with quick-response sprinklers in accordance with Section 903.3.2.
4. The space is arranged so as not to obstruct access to the required exits.

**407.2.2 Nurses' stations.** Spaces for doctors' and nurses' charting, communications and related clerical areas shall be permitted to be open to the corridor, when such spaces are constructed as required for corridors.

**407.2.3 Mental health treatment areas.** Areas wherein mental health patients who are not capable of self-preservation are housed, or group meeting or multipurpose therapeutic spaces other than incidental use areas as defined in Section 302.1.1, under continuous supervision by facility staff, shall be permitted to be open to the corridor, where the following criteria are met:

1. Each area does not exceed 1,500 square feet (140 m<sup>2</sup>).

2. *The area is located to permit supervision by the facility staff.*
3. *The area is arranged so as not to obstruct any access to the required exits.*
4. *The area is equipped with an automatic fire detection system installed in accordance with Section 907.2.*
5. *Not more than one such space is permitted in any one smoke compartment.*
6. *The walls and ceilings of the space are constructed as required for corridors.*

**407.2.4 Gift shops.** *Gift shops less than 500 square feet (46 m<sup>2</sup>) in area shall be permitted to be open to the corridor provided the gift shop and storage areas are fully sprinklered and storage areas are protected in accordance with Section 302.1.1.*

**407.3 Corridor walls.** *Corridor walls shall be constructed as smoke partitions.*

**407.3.1 Corridor doors.** *Corridor doors, other than those in a wall required to be rated by Section 302.1.1 or for the enclosure of a vertical opening or an exit, shall not have a required fire protection rating and shall not be required to be equipped with self-closing or automatic-closing devices, but shall provide an effective barrier to limit the transfer of smoke and shall be equipped with positive latching. Roller latches are not permitted. Other doors shall conform to Section 715.3.*

**407.3.2 Locking devices.** *Locking devices that restrict access to the patient room from the corridor, and that are operable only by staff from the corridor side, shall not restrict the means of egress from the patient room except for patient rooms in mental health facilities.*

**407.4 Smoke barriers.** *Smoke barriers shall be provided to subdivide every story used by patients for sleeping or treatment and to divide other stories with an occupant load of 50 or more persons, into at least two smoke compartments. Such stories shall be divided into smoke compartments with an area of not more than 22,500 square feet (2090 m<sup>2</sup>) and the travel distance from any point in a smoke compartment to a smoke barrier door shall not exceed 200 feet (60 960 mm). The smoke barrier shall be in accordance with Section 709.*

**407.4.1 Refuge area.** *At least 30 net square feet (2.8 m<sup>2</sup>) per patient shall be provided within the aggregate area of corridors, patient rooms, treatment rooms, lounge or dining areas and other low-hazard areas on each side of each smoke barrier. On floors not housing patients confined to a bed or*

*litter, at least 6 net square feet (0.56 m<sup>2</sup>) per occupant shall be provided on each side of each smoke barrier for the total number of occupants in adjoining smoke compartments.*

**407.4.2 Independent egress.** *A means of egress shall be provided from each smoke compartment created by smoke barriers without having to return through the smoke compartment from which means of egress originated.*

**407.5 Automatic sprinkler system.** *Smoke compartments containing patient sleeping units shall be equipped throughout with an automatic fire sprinkler system in accordance with Section 903.3.1.1. The smoke compartments shall be equipped with approved quick-response or residential sprinklers in accordance with Section 903.3.2.*

**407.6 Automatic fire detection.** *Corridors in nursing homes (both intermediate-care and skilled nursing facilities), detoxification facilities and spaces permitted to be open to corridors by Section 407.2 shall be protected by an automatic fire detection system installed in accordance with Section 907.*

**Exceptions:**

1. *Corridor smoke detection is not required where patient sleeping units are provided with smoke detectors that comply with UL 268. Such detectors shall provide a visual display on the corridor side of each patient sleeping unit and an audible and visual alarm at the nursing station attending each unit.*
2. *Corridor smoke detection is not required where patient sleeping unit doors are equipped with automatic door-closing devices with integral smoke detectors on the unit sides installed in accordance with their listing, provided that the integral detectors perform the required alerting function.*

**407.7 Secured yards.** *Grounds are permitted to be fenced and gates therein are permitted to be equipped with locks, provided that safe dispersal areas having 30 net square feet (2.8 m<sup>2</sup>) for bed and litter patients and 6 net square feet (0.56 m<sup>2</sup>) for ambulatory patients and other occupants are located between the building and the fence. Such provided safe dispersal areas shall not be located less than 50 feet (15 240 mm) from the building they serve.*

**SECTION BC 408**

**GROUP I-3**

**408.1 General.** Occupancies in Group I-3 shall comply with the provisions of this section and other applicable provisions of this code (see Section 308.4).

**408.1.1 Occupancy conditions.** Buildings of Group I-3 shall be classified as one of the occupancy conditions indicated in Sections 408.1.1.1 through 408.1.1.5.

**408.1.1.1 Condition 1.** This occupancy condition shall include buildings in which free movement is allowed from sleeping areas, and other spaces where access or occupancy is permitted, to the exterior via means of egress without restraint. A Condition 1 facility is permitted to be constructed as Group R.

**408.1.1.2 Condition 2.** This occupancy condition shall include buildings in which free movement is allowed from sleeping areas and any other occupied smoke compartment to one or more other smoke compartments. Egress to the exterior is impeded by locked exits and exit is not under an occupant's control.

**408.1.1.3 Condition 3.** This occupancy condition shall include buildings in which free movement is allowed within individual smoke compartments, such as within a residential unit comprised of individual sleeping unit(s) and/or group activity spaces, where egress is impeded by remote-controlled door release, leading by means of egress from such a smoke compartment to another smoke compartment.

**408.1.1.4 Condition 4.** This occupancy condition shall include buildings in which free movement is restricted from an occupied space. Remote-controlled release is provided to permit movement from sleeping units, activity spaces and other occupied areas within the smoke compartment to other smoke compartments and egress to the outside is impeded by locked exit and remote door release.

**408.1.1.5 Condition 5.** This occupancy condition shall include buildings in which free movement is restricted from an occupied space. Staff-controlled manual release is provided to permit movement from sleeping units, activity spaces and other occupied areas within the smoke compartment to other smoke compartments.

**408.2 Mixed occupancies.** Portions of buildings with an occupancy in Group I-3 that are classified as a different occupancy shall meet the applicable requirements of this code for such occupancies. Where security operations necessitate the locking of required means of egress, provisions shall be made for the release of occupants at all times. Means of egress from detention and correctional occupancies that traverse other use areas shall, as a minimum, conform to requirements for detention and correctional occupancies.

**Exception:** It is permissible to exit through a horizontal exit into other contiguous occupancies that do not conform to detention and correctional occupancy egress provisions but that do comply with requirements set forth in the appropriate occupancy, as long as the occupancy is not a high-hazard use.

**408.3 Means of egress.** Except as modified or as provided for in this section, the provisions of Chapter 10 shall apply.

**408.3.1 Door width.** Doors to resident sleeping units shall have a clear width of not less than 28 inches (711 mm).

**408.3.2 Sliding doors.** Where doors in a means of egress are of the horizontal-sliding type, the force to slide the door to its fully open position shall not exceed 50 pounds (220 N) with a perpendicular force against the door of 50 pounds (220 N).

**408.3.3 Spiral stairs.** Spiral stairs that conform to the requirements of Section 1009.9 are permitted for access to and between staff locations.

**408.3.4 Exit discharge.** Exits are permitted to discharge into a fenced or walled courtyard. Enclosed yards or courts shall be of a size to accommodate all occupants, a minimum of 50 feet (15 240 mm) from the building with a net area of 15 square feet (1.4 m<sup>2</sup>) per person.

**408.3.5 Sallyports.** A sallyport shall be permitted in a means of egress where there are provisions for continuous and unobstructed passage through the sallyport during an emergency egress condition.

**408.3.6 Vertical exit enclosures.** One of the required vertical exit enclosures in each building shall be permitted to have glazing installed in doors and interior walls at each landing level providing access to the enclosure, provided that the following conditions are met:

1. The vertical exit enclosure shall not serve more than four floor levels.
2. Vertical exit enclosure doors shall not be less than ¾-hour fire doors complying with Section 715.3
3. The total area of glazing at each floor level shall not exceed 5,000 square inches (3.23 m<sup>2</sup>) and individual panels of glazing shall not exceed 1,296 square inches (0.84 m<sup>2</sup>).

4. *The glazing shall be protected on both sides by an automatic fire sprinkler system. The sprinkler system shall be designed to wet completely the entire surface of any glazing affected by fire when actuated.*
5. *The glazing shall be in a gasketed frame and installed in such a manner that the framing system will deflect without breaking (loading) the glass before the sprinkler system operates.*
6. *Obstructions, such as curtain rods, drapery traverse rods, curtains, drapes or similar materials shall not be installed between the automatic sprinklers and the glazing.*

**408.4 Locks.** *Egress doors are permitted to be locked in accordance with the applicable use condition. Doors from an area of refuge to the exterior are permitted to be locked with a key in lieu of locking methods described in Section 408.4.1. The keys to unlock the exterior doors shall be available at all times and the locks shall be operable from both sides of the door.*

**408.4.1 Remote release.** *Remote release of locks on doors in a means of egress shall be provided with reliable means of operation, remote from the resident living areas, to release locks on all required doors. In Occupancy Conditions 3 or 4, the arrangement, accessibility and security of the release mechanism(s) required for egress shall be such that with the minimum available staff at any time, the lock mechanisms are capable of being released within 2 minutes.*

**Exception:** *Provisions for remote locking and unlocking of occupied rooms in Occupancy Condition 4 are not required provided that not more than 10 locks are necessary to be unlocked in order to move occupants from one smoke compartment to a refuge area within 3 minutes. The opening of necessary locks shall be accomplished with not more than two separate keys.*

**408.4.2 Power-operated doors and locks.** *Power-operated sliding doors or power-operated locks for swinging doors shall be operable by a manual release mechanism at the door, and either emergency power or a remote mechanical operating release shall be provided.*

**Exception:** *Emergency power is not required in facilities with 10 locks or less complying with the exception to Section 408.4.1.*

**408.4.3 Redundant operation.** *Remote release, mechanically operated sliding doors or remote release, mechanically operated locks shall be provided with a mechanically operated release mechanism at each door, or shall be provided with a redundant remote release control.*

**408.4.4 Relock capability.** *Doors remotely unlocked under emergency conditions shall not automatically relock when closed unless specific action is taken at the remote location to enable doors to relock.*

**408.5 Vertical openings.** *Vertical openings shall be enclosed in accordance with Section 707.*

**Exception:** *A floor opening between floor levels of residential housing areas is permitted without enclosure protection between the levels, provided that both of the following conditions are met:*

- 1. The entire normally occupied areas so interconnected are open and unobstructed so as to enable observation of the areas by supervisory personnel.*
- 2. Means of egress capacity is sufficient to provide simultaneous egress for all occupants from all interconnected levels and areas.*

*The height difference between the highest and lowest finished floor levels shall not exceed 23 feet (7010 mm). Each story, considered separately, has at least one-half of its individual required means of egress capacity provided by exits leading directly out of that story without traversing to another story within the interconnected area.*

**408.6 Smoke barrier.** *Occupancies in Group I-3 shall have smoke barriers complying with Section 709 to divide every story occupied by residents for sleeping, or any other story having an occupant load of 50 or more persons, into at least two smoke compartments.*

**Exception:** *Spaces having direct exit to one of the following, provided that the locking arrangement of the doors involved complies with the requirements for doors at the compartment barrier for the use condition involved:*

- 1. A public way.*
- 2. A building separated from the resident housing area by a 2-hour fire-resistance-rated assembly or 50 feet (15 240 mm) of open space.*
- 3. A secured yard or court having a holding space 50 feet (15 240 mm) from the housing area that provides 6 square feet (0.56 m<sup>2</sup>) or more of refuge area per occupant, including residents, staff and visitors.*

**408.6.1 Smoke compartments.** *The maximum number of residents in any smoke compartment shall be 200. The travel distance to a door in a smoke barrier from any room door required as exit access shall not exceed 150 feet (45 720 mm). The travel distance to a door in a smoke barrier from any point in a room shall not exceed 200 feet (60 960 mm).*

**408.6.2 Refuge area.** *At least 6 net square feet (0.56 m<sup>2</sup>) per occupant shall be provided on each side of each smoke barrier for the total number of occupants in adjoining smoke compartments. This space shall be readily available wherever the occupants are moved across the smoke barrier in a fire emergency.*

**408.6.3 Independent egress.** *A means of egress shall be provided from each smoke compartment created by smoke barriers without having to return through the smoke compartment from which means of egress originates.*

**408.7 Subdivision of resident housing areas.** *Sleeping areas and any contiguous day room, group activity space or other common spaces where residents are housed shall be separated from other spaces in accordance with Sections 408.7.1 through 408.7.4.*

**408.7.1 Occupancy Conditions 3 and 4.** *Each sleeping area in Occupancy Conditions 3 and 4 shall be separated from the adjacent common spaces by a smoke-tight partition where the travel distance from the sleeping area through the common space to the exit access corridor exceeds 50 feet (15 240 mm).*

**408.7.2 Occupancy Condition 5.** *Each sleeping area in Occupancy Condition 5 shall be separated from adjacent sleeping areas, corridors and common spaces by a smoke-tight partition. Additionally, common spaces shall be separated from the exit access corridor by a smoke-tight partition.*

**408.7.3 Openings in room face.** *The aggregate area of openings in a solid sleeping room face in Occupancy Conditions 2, 3, 4 and 5 shall not exceed 120 square inches (77 419 mm<sup>2</sup>). The aggregate area shall include all openings including door undercuts, food passes and grilles. Openings shall be not more than 36 inches (914 mm) above the floor. In Occupancy Condition 5, the openings shall be closeable from the room side.*

**408.7.4 Smoke-tight doors.** *Doors in openings in partitions required to be smoke tight by Section 408.7 shall be substantial doors, of construction that will resist the passage of smoke. Latches and door closures are not required on cell doors.*

**408.8 Windowless buildings.** *For the purposes of this section, a windowless building or portion of a building is one with nonopenable windows, windows not readily breakable or without windows. Windowless buildings*

shall be provided with an engineered smoke control system to provide ventilation (mechanical or natural) in accordance with Section 909 for each windowless smoke compartment.

**SECTION BC 409**  
**MOTION PICTURE PROJECTION ROOMS**

**409.1 General.** *The provisions of this section shall apply to rooms in which ribbon-type cellulose acetate or other safety film is utilized in conjunction with electric arc, xenon or other light-source projection equipment that develops hazardous gases, dust or radiation. The projection, use or storage of film having a nitrocellulose base (commonly known as nitrate film) shall not be permitted except under conditions specified in special permits when issued by the Fire Department. Safety film meeting the specification and test standards of NFPA 40 may be projected, used or stored.*

**409.1.1 Projection room required.** *Every motion picture machine projecting film as mentioned within the scope of this section shall be enclosed in a projection room. Appurtenant electrical equipment, such as rheostats, transformers and generators, shall be within the projection room or in an adjacent room of equivalent construction.*

**409.2 Construction of projection rooms.** *Every projection room shall be of permanent construction consistent with the construction requirements for the type of building in which the projection room is located. Openings are not required to be protected. The room shall have a floor area of not less than 80 square feet (7.44 m<sup>2</sup>) for a single machine and at least 40 square feet (3.7 m<sup>2</sup>) for each additional machine. Each motion picture projector, floodlight, spotlight or similar piece of equipment shall have a clear working space of not less than 30 inches by 30 inches (762 mm by 762 mm) on each side and at the rear thereof, but only one such space shall be required between two adjacent projectors. The projection room and the rooms appurtenant thereto shall have a ceiling height of not less than 7 feet 6 inches (2286 mm). The aggregate of openings for projection equipment shall not exceed 25 percent of the area of the wall between the projection room and the auditorium. Openings shall be provided with glass or other approved material, so as to close completely the opening.*

**409.3 Projection room and equipment ventilation.** *Ventilation shall be provided in accordance with the New York City Mechanical Code.*

**409.3.1 Projection room.**

**409.3.1.1 Supply air.** *Each projection room shall be provided with adequate air supply inlets so arranged as to provide well-distributed air throughout the room. Air inlet ducts shall provide an amount of air equivalent to the amount of air being exhausted by projection equipment. Air is*

*permitted to be taken from the outside; from adjacent spaces within the building, provided the volume and infiltration rate is sufficient; or from the building air-conditioning system, provided it is so arranged as to provide sufficient air when other systems are not in operation.*

**409.3.1.2 Exhaust air.** *Projection rooms are permitted to be exhausted through the lamp exhaust system. The lamp exhaust system shall be positively interconnected with the lamp so that the lamp will not operate unless there is the required airflow. Exhaust air ducts shall terminate at the exterior of the building in such a location that the exhaust air cannot be readily recirculated into any air supply system. The projection room ventilation system is permitted to also serve appurtenant rooms, such as the generator and rewind rooms.*

*Each projection machine shall be provided with an exhaust duct that will draw air from each lamp and exhaust it directly to the outside of the building. The lamp exhaust is permitted to serve to exhaust air from the projection room to provide room air circulation. Such ducts shall be of rigid materials, except for a flexible connector approved for the purpose. The projection lamp or projection room exhaust system, or both, is permitted to be combined but shall not be interconnected with any other exhaust or return system, or both, within the building.*

**409.4 Lighting control.** *Provisions shall be made for control of the auditorium lighting and the means of egress lighting systems of theaters from inside the projection room and from at least one other convenient point in the building.*

**409.5 Miscellaneous equipment.** *Each projection room shall be provided with rewind and film storage facilities.*

## **SECTION BC 410 STAGES AND PLATFORMS**

**410.1 Applicability.** *The provisions of this section shall apply to all parts of buildings and structures that contain stages or platforms and similar appurtenances as herein defined.*

**410.2 Definitions.** *The following words and terms shall, for the purposes of this section and as used elsewhere in this code, have the meanings shown herein.*

**FLY GALLERY.** *A raised floor area above a stage from which the movement of scenery and operation of other stage effects are controlled.*

**GRIDIRON.** *The structural framing over a stage supporting equipment for hanging or flying scenery and other stage effects.*

**PINRAIL.** *A rail on or above a stage through which belaying pins are inserted and to which lines are fastened.*

**PLATFORM.** *A raised area within a building used for worship, the presentation of music, plays or other entertainment; the head table for special guests; the raised area for lecturers and speakers; boxing and wrestling rings; theater- in-the-round stages; and similar purposes wherein there are no overhead hanging curtains, drops, scenery or stage effects other than lighting and sound. A temporary platform is one installed for not more than 30 days.*

**PROSCENIUM WALL.** *The wall that separates the stage from the auditorium or assembly seating area.*

**STAGE.** *A space within a building utilized for entertainment or presentations, which includes overhead hanging curtains, drops, scenery or stage effects other than lighting and sound. Stage area shall be measured to include the entire performance area and adjacent backstage and support areas not separated from the performance area by fire-resistance- rated construction. Stage height shall be measured from the lowest point on the stage floor to the highest point of the roof or floor deck above the stage.*

**410.3 Stages.** *Stage construction shall comply with Sections 410.3.1 through 410.3.7.*

**410.3.1 Stage construction.** *Stage floors shall be constructed of materials as required for floors for the type of construction of the building in which such stages are located. Where areas below the stage are used for other occupancies, such stage floor shall be constructed in accordance with the requirements for separated occupancies as per Chapter 3.*

**Exceptions:**

1. *Stages of Type IIB or IV construction with a nominal 2-inch (51 mm) wood deck, provided that the stage is separated from other areas in accordance with Section 410.3.4.*
2. *In all types of construction, the finished floor shall be constructed of wood or approved noncombustible materials. Openings through stage floors shall be equipped with tight-fitting, solid wood trap doors with approved safety locks. The room or space below the stage into which the traps or lifts open shall be completely enclosed by construction having at least the fire-resistance rating required for the stage floor, and such room or space shall not be used*

*as a workshop or storage area. Storage shall not be deemed to include the location in this area of scenery or scenic elements used during a performance. However, no combustible material that has a flame spread rating greater than 25 or that has not been rendered flameproof in accordance with the rules of the Fire Commissioner may be stored in this location at any time.*

**410.3.1.1 Stage height and area.** *Stage areas shall be measured to include the entire performance area and adjacent backstage and support areas not separated from the performance area by fire-resistance-rated construction. Stage height shall be measured from the lowest point on the stage floor to the highest point of the roof or floor deck above the stage.*

**410.3.2 Galleries, gridirons, catwalks and pinrails.** *Beams designed only for the attachment of portable or fixed theater equipment, gridirons, galleries and catwalks shall be constructed of noncombustible materials. Floors of fly galleries and catwalks shall be constructed of noncombustible material. These areas shall not be considered to be floors, stories, mezzanines or levels in applying this code.*

**410.3.3 Exterior stage doors.** *Where protection of openings is required, exterior exit doors shall be protected with fire doors that comply with Section 715. Exterior openings that are located on the stage for means of egress or loading and unloading purposes, and that are likely to be open during occupancy of the theater, shall be constructed with vestibules to prevent air drafts into the auditorium.*

**410.3.4 Proscenium wall.** *Where the stage height is greater than 50 feet (15 240 mm), all portions of the stage shall be completely separated from the seating area by a proscenium wall with not less than a 2-hour fire-resistance rating extending continuously from the foundation to the roof.*

**410.3.5 Proscenium curtain.** *The proscenium opening of every stage with a height greater than 50 feet (15 240 mm) shall be provided with a curtain of approved material or an approved water curtain complying with Section 903.3.1.1. The curtain shall be designed and installed to intercept hot gases, flames and smoke, and to prevent a glow from a severe fire on the stage from showing on the auditorium side for a period of 20 minutes. The closing of the curtain from the full open position shall be affected in less than 30 seconds, but the last 8 feet (2438 mm) of travel shall require not less than 5 seconds.*

**410.3.5.1 Activation.** *The curtain shall be activated by rate-of-rise heat detection installed in accordance with Section 907.10 operating at a rate of temperature rise of 15 to 20°F per minute (8 to 11°C per minute), and by an auxiliary manual control.*

**410.3.5.2 Fire test.** *A sample curtain with a minimum of two vertical seams shall be subjected to the*

*standard fire test specified in ASTM E 119 for a period of 30 minutes. The curtain shall overlap the furnace edges by an amount that is appropriate to seal the top and sides. The curtain shall have a bottom pocket containing a minimum of 4 pounds per linear foot (58 N/m) of batten. The exposed surface of the curtain shall not glow, and flame or smoke shall not penetrate the curtain during the test period. Unexposed surface temperature and hose stream test requirements are not applicable to the proscenium fire safety curtain test.*

**410.3.5.3 Smoke test.** *Curtain fabrics shall have a smoke-developed rating of 25 or less when tested in accordance with ASTM E 84.*

**410.3.5.4 Tests.** *The completed proscenium curtain shall be subjected to operating tests prior to the issuance of a certificate of occupancy.*

**410.3.6 Scenery.** *All scenery or scenic elements shall be of noncombustible materials, or of materials having a flame-spread rating not exceeding 25, or of materials that have been rendered flameproof in compliance with the rules of the Fire Commissioner. Scenery and scenic elements not complying with the above requirements may be used only when expressly permitted by the Fire Department.*

**410.3.7 Stage ventilation.** *Emergency ventilation shall be provided for stages larger than 1,000 square feet (93 m<sup>2</sup>) in floor area, or with a stage height greater than 50 feet (15 240 mm). Such ventilation shall comply with Section 410.3.7.1 or 410.3.7.2.*

**410.3.7.1 Roof vents.** *Two or more vents constructed to open automatically by approved heat-activated devices and with an aggregate clear opening area of not less than 5 percent of the area of the stage shall be located near the center and above the highest part of the stage area. Supplemental means shall be provided for manual operation of the ventilator. Curbs shall be provided as required for skylights in Section 2610.2. Vents shall be labeled.*

**410.3.7.2 Smoke control.** *Smoke control in accordance with Section 909 shall be provided to maintain the smoke layer interface not less than 6 feet (1829 mm) above the highest level of the assembly seating or above the top of the proscenium opening where a proscenium wall is provided in compliance with Section 410.3.4.*

**410.4 Platform construction.** *Permanent platforms shall be constructed of materials as required for the type of construction of the building in which the permanent platform is located. Permanent platforms are permitted to be constructed in accordance with the following:*

1. *The area below the platform shall be enclosed on all sides with solid construction.*
2. *Platforms constructed of untreated wood shall not exceed an area of 400 square feet (37 m<sup>2</sup>). Platforms constructed of fire retardant treated wood shall not exceed an area of 1,200 square feet (111 m<sup>2</sup>). Platforms constructed of noncombustible materials shall not be limited in area.*
3. *Where wood is used, the floor of the platform shall be a least 1 inch (25 mm) nominal thickness. Such floor shall be laid on a solid, noncombustible backing, or shall have all spaces between supporting members fire blocked with noncombustible material.*

*Where the space beneath the permanent platform is used for storage or any other purpose other than equipment, wiring or plumbing, the floor construction shall not be less than 1-hour fire-resistant construction. Where the space beneath the permanent platform is used only for equipment, wiring or plumbing, the underside of the permanent platform need not be protected.*

**410.4.1 Temporary platforms.** *Platforms installed for a period of not more than 30 days are permitted to be constructed of any materials permitted by the code. The space between the floor and the platform above shall only be used for plumbing and electrical wiring to platform equipment.*

**410.5 Dressing and appurtenant rooms.** *Dressing and appurtenant rooms shall comply with Sections 410.5.1 through 410.5.4.*

**410.5.1 Separation from stage.** *Where the stage height is greater than 50 feet (15 240 mm), the stage shall be separated from dressing rooms, scene docks, property rooms, workshops, storerooms and compartments appurtenant to the stage and other parts of the building by a fire barrier wall and horizontal assemblies, or both, with not less than a 2-hour fire-resistance rating with approved opening protectives. For stage heights of 50 feet (15 240 mm) or less, the required stage separation shall be a fire barrier wall and horizontal assemblies, or both, with not less a 1-hour fire-resistance rating with approved opening protectives.*

**410.5.2 Separation from each other.** *Dressing rooms, scene docks, property rooms, workshops, storerooms and compartments appurtenant to the stage shall be separated from each other by fire barrier wall and horizontal assemblies, or both, with not less than a 1-hour fire-resistance rating with approved opening protectives.*

**410.5.3 Opening protectives.** *Openings other than to trunk rooms and the necessary doorways at stage level shall not connect such rooms with the stage, and such openings shall be protected with fire door assemblies that comply with Section 715.*

**410.5.4 Stage exits.** *At least one approved means of egress shall be provided from each side of the stage; and from each side of the space under the stage. At least one means of escape shall be provided from each fly gallery and from the gridiron. A steel ladder, alternating tread stairway or spiral stairway is permitted to be provided from the gridiron to a scuttle in the stage roof.*

**410.6 Automatic sprinkler system.** *Stages shall be equipped with an automatic fire-extinguishing system in accordance with Chapter 9. The system shall be installed under the roof and gridiron, in the tie and fly galleries and in places behind the proscenium wall of the stage and in dressing rooms, lounges, workshops and storerooms accessory to such stages:*

- 1 Automatic sprinklers shall be placed above all rigging lofts; and above all stage areas, other than those portions of stage areas specifically designated on approved plans as performing areas that do not have rigging lofts above and that are not at any time used for storage purposes. Sprinklers above rigging lofts shall be located so that no gridiron or other obstruction intervenes between the sprinkler heads and the scenery or scenic elements.*
- 2. When any part of a stage is sprinklered in accordance with the provisions of Item 1 of this section, or when rigging lofts are provided, such stage areas and rigging lofts shall be completely separated from audience areas by a deluge sprinkler system designed to form a vertical water curtain, with heads spaced to provide a water density of at least 3 gallons per minute per linear foot. A deluge valve actuated by a “rate of rise system “and” fixed temperature system shall control the water curtain system. The heat actuating devices shall be located on not more than 10 foot (3048 mm) centers around the perimeter of the sprinklered area or as otherwise required for the type of device used to assure operation of the system. In addition to the automatic controls, manual-operating devices shall be located at the voice/alarm communication system required by Section 410.8, and adjacent to at least one exit from the stage. Such exit shall be remote from the voice/alarm communication system.*
- 3. When openings are provided in the stage floor for stage lifts, trap doors or stairs, sprinklers spaced 5 feet (1524 mm) on centers shall be provided around the opening at the ceiling below the stage, and baffles at least 12 inches (305 mm) in depth shall be installed around the perimeter of the opening.*

4. *All valves controlling sprinkler supplies shall be provided with tamper switches wired to an annunciator panel located at the voice/alarm communication system required by Section 410.8.*
5. *The operation of any section of the sprinkler system and the deluge system shall activate the emergency ventilating equipment required in Section 410.3.7 and shall be provided with central station supervision in addition to the required local alarm.*
6. *The water flow alarm, tamper switches and deluge system equipment shall be provided with central station supervision in addition to the required local alarm.*

**Exception:** *Sprinklers are not required under stage areas less than 4 feet (1219 mm) in clear height utilized exclusively for storage of tables and chairs, provided the concealed space is separated from the adjacent spaces by not less than 5/8-inch (15.9 mm) Type X gypsum board.*

**410.7 Standpipes.** *Standpipe systems shall be provided in accordance with Section 905.*

**410.8 Voice/alarm communication system.** *Stages shall be provided with a voice/alarm communication system in accordance with Section 907.2.1.1.*

**410.9 Construction in seating areas.**

**410.9.1 Scenery and scenic elements in seating areas.** *Scenery or scenic elements may be placed in seating sections if such elements:*

1. *Are noncombustible, or of materials that have been rendered flameproof in accordance with the rules of the Fire Commissioner, or have a flame spread rating of 25 or less.*
2. *Are adequately braced or secured.*
3. *Do not obstruct the required visibility of, or paths of travel to, exit openings.*

**410.9.2 Platforms or runways in seating areas.** *Platforms or runways for performances, to accommodate the operation of cameras, electronic equipment, or motion picture projection machines not using carbon-arc or other light source that emits a gaseous discharge may be constructed in seating sections, provided such platforms or runways comply with the requirements of Section 410.4, except Item 1 and Section 410.8.*

**410.10 Stage lighting.** Stage lights shall be placed such that they will not develop temperatures on the surface of any material that will cause that material to ignite, or smoke, or cause its flame proofing to deteriorate.

**SECTION BC 411  
SPECIAL AMUSEMENT BUILDINGS**

**411.1 General.** Special amusement buildings having an occupant load of 75 or more shall comply with the requirements for the appropriate Group A occupancy and this section. Amusement buildings having an occupant load of less than 75 shall comply with the requirements for a Group B occupancy and this section.

**Exception:** Amusement buildings or portions thereof that are without walls or a roof and constructed to prevent the accumulation of smoke. All decorative material shall be non-combustible or composed of flame retardant fabric.

**411.2 Special amusement building.** A special amusement building is any temporary or permanent building or portion thereof that is occupied for amusement, entertainment or educational purposes and that contains a device or system that conveys passengers or provides a walkway along, around or over a course in any direction so arranged that the means of egress path is not readily apparent due to visual or audio distractions or is intentionally confounded or is not readily available because of the nature of the attraction or mode of conveyance through the building or structure.

**411.3 Automatic fire detection.** Special amusement buildings shall be equipped with an automatic fire detection system, in accordance with Section 907.

**411.4 Automatic sprinkler system.** Special amusement buildings shall be equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1. Where the special amusement building is temporary, the sprinkler water supply shall be of an approved temporary means.

**Exception:** Automatic fire sprinklers are not required where the total floor area of a temporary special amusement building is less than 1,000 square feet (93 m<sup>2</sup>) and the travel distance from any point to an exit is less than 50 feet (15 240 mm).

**411.5 Alarm.** Actuation of a single smoke detector, the automatic sprinkler system or other automatic fire detection device shall immediately sound an alarm at the building at a constantly attended location from which emergency action can be initiated including the capability of manual initiation of requirements in Section 907.2.11.2.

**411.6 Emergency voice/alarm communications system.** *An emergency voice/alarm communications system shall be provided in accordance with Sections 907.2.11 and 907.2.12.2, which is also permitted to serve as a public address system and shall be audible throughout the entire special amusement building.*

**411.7 Exit marking.** *Exit signs shall be installed at the required exit or exit access doorways of amusement buildings. Approved directional exit markings shall also be provided. Where mirrors, mazes or other designs are utilized that disguise the path of egress travel such that they are not apparent, approved low-level exit signs and directional path markings shall be provided and located not more than 8 inches (203 mm) above the walking surface and on or near the path of egress travel. Such markings shall become visible in an emergency. The directional exit marking shall be activated by the automatic fire detection system and the automatic sprinkler system in accordance with Section 907.2.11.2.*

**411.8 Interior finish.** *The interior finish shall be Class A in accordance with Section 803.1.*

## **SECTION BC 412 AIRCRAFT-RELATED OCCUPANCIES**

**412.1** *Reserved.*

**412.2** *Reserved.*

**412.3** *Reserved.*

**412.4** *Reserved.*

**412.5 Heliports and helistops.**

**412.5.1 General.** *Heliports and helistops may be erected on buildings or other locations where they are constructed in accordance with this section.*

**412.5.2 Definitions.** *The following words and terms shall, for the purposes of this chapter and as used elsewhere in this code, have the meanings shown herein.*

**HELIPORT.** *An area of land or water or a structural surface that is designed or used for the landing and taking off of helicopters, and any appurtenant areas that are designed or used for heliport facilities and operations.*

**HELISTOP.** *An area of land or water or a structural surface that is designed or used for the landing or takeoff of helicopters, and any appurtenant areas, but that is not designed or used for fueling, defueling, maintenance, repairs or storage of helicopters.*

**412.5.3 Size.** *The touchdown or landing area for helicopters of less than 3,500 pounds (1588 kg) shall be a minimum of 20 feet (6096 mm) in length and width. The touchdown area shall be surrounded on all sides by a clear area having a minimum average width at roof level of 15 feet (4572 mm) but with no width less than 5 feet (1524 mm).*

**412.5.4 Design.** *Helicopter landing areas and the supports thereof on the roof of a building shall be noncombustible construction. Landing areas shall be designed to confine any flammable liquid spillage to the landing area itself and provisions shall be made to drain such spillage away from any exit or stairway serving the helicopter landing area or from a structure housing such exit or stairway. For structural design requirements, see Section 1605.5.*

**412.5.5 Means of egress.** *The means of egress from heliports and helistops shall comply with the provisions of Chapter 10. Landing areas located on buildings or structures shall have two or more means of egress. For landing platforms or roof areas less than 60 feet (18 288 mm) in length, or less than 2,000 square feet (186 m<sup>2</sup>) in area, the second means of egress may be a fire escape or ladder leading to the floor below.*

**412.5.6 Rooftop heliports and helistops.** *Rooftop heliports and helistops shall comply with NFPA 418 and the New York City Fire Code.*

## **SECTION BC 413 COMBUSTIBLE STORAGE**

**413.1 General.** *Storage of combustible materials in attics, under-floor spaces, concealed spaces, and below-grade storage rooms shall comply with this section.*

**413.2 Attic, under-floor and concealed spaces.** *Attic, under-floor and concealed spaces used for storage of combustible materials shall be protected on the storage side as required for 1-hour fire-resistant construction. Openings shall be protected by assemblies that are self-closing and are of noncombustible construction or solid wood core not less than 1¾ inch (45 mm) in thickness.*

**Exceptions:**

1. *Areas protected by approved automatic sprinkler systems.*
2. *Group R-3 and U occupancies.*
3. *Groups S-1 and S-2 occupancies.*

**413.3 High-piled stock or rack storage.** *High-piled stock or rack storage in any occupancy group shall comply with the New York City Fire Code.*

**SECTION BC 414**  
**HAZARDOUS MATERIALS**

**414.1 General.** *The provisions of this section shall apply to buildings and structures occupied for the manufacturing, processing, dispensing, use or storage of hazardous materials.*

**414.1.1 Other provisions.** *Buildings and structures with an occupancy in Group H shall also comply with the applicable provisions of Section 415 and the New York City Fire Code, including, but not limited to, location, installation, and mechanical provisions.*

**414.1.2 Materials.** *The safe design of hazardous material occupancies is material dependent. Individual material requirements are also found in Sections 307 and 415, and in the New York City Mechanical Code and the New York City Fire Code.*

**414.1.2.1 Aerosols.** *Level 2 and 3 aerosol products shall be stored and displayed in accordance with the New York City Fire Code.*

**414.1.3 Information required.** *Separate floor plans shall be submitted for buildings and structures with an occupancy in Group H, identifying the locations of anticipated contents and processes so as to reflect the nature of each occupied portion of every building and structure. A report identifying hazardous materials including, but not limited to, materials representing hazards that are classified in Group H to be stored or used, shall be submitted and the methods of protection from such hazards shall be indicated on the construction documents. The opinion and report shall be prepared by a qualified person, firm or corporation approved by the commissioner and shall be provided without charge to the department.*

**414.2 Control areas.** *Control areas shall be those spaces within a building where quantities of hazardous materials not exceeding the maximum quantities allowed by this code are stored, dispensed, used or handled.*

**414.2.1 Construction requirements.** *Control areas shall be separated from each other by not less than a 1-hour fire barrier constructed in accordance with Chapter 7.*

**414.2.2 Number.** *The maximum number of control areas within a building shall be in accordance with Table 414.2.2.*

**TABLE 414.2.2  
DESIGN AND NUMBER OF CONTROL AREAS**

FLOOR LEVEL		PERCENTAGE OF THE MAXIMUM ALLOWABLE QUANTITY PER CONTROL AREA <sup>a</sup>	NUMBER OF CONTROL AREAS PER FLOOR <sup>b</sup>	FIRE-RESISTANCE RATING FOR FIRE BARRIERS IN HOURS <sup>c</sup>
Above grade	Higher than 9	5	1	2
	7-9	5	2	2
	6	12.5	2	2
	5	12.5	2	2
	4	12.5	2	2
	3	50	2	1
	2	75	3	1
	1	100	4	1
Below grade	1	75	3	1
	2	50	2	1
	Lower than 2	Not Allowed	Not Allowed	Not Allowed

- a. Percentages shall be of the maximum allowable quantity per control area shown in Tables 307.7(1) and 307.7(2), with all increases allowed in the notes to those tables.
- b. There shall be a maximum of two control areas per floor in Group M occupancies and in buildings or portions of buildings having Group S occupancies with storage conditions and quantities in accordance with Section 414.2.4.
- c. Fire barriers shall include walls and floors as necessary to provide separation from other portions of the building.

**414.2.3 Separation.** *The required fire-resistance rating for fire barrier assemblies shall be in accordance with Table 414.2.2. The floor construction of the control area, and the construction supporting the floor of the control area, shall have a minimum 2-hour fire-resistance rating and shall comply with the additional requirements of the New York City Fire Code.*

**414.2.4 Hazardous material in Group M display and storage areas and in Group S storage areas.** *The aggregate quantity of nonflammable solid and nonflammable or noncombustible liquid hazardous materials permitted within a single control area of a Group M or S occupancy or an outdoor control area is permitted to exceed the maximum allowable quantities per control area specified in Tables 307.7(1) and 307.7(2) without classifying the building or use as a Group H occupancy, provided that the materials are displayed and stored in accordance with the New York City Fire Code and quantities do not exceed the maximum allowable specified in Table 414.2.4.*

**TABLE 414.2.4**  
**MAXIMUM ALLOWABLE QUANTITY PER INDOOR AND OUTDOOR CONTROL AREA IN GROUP**  
**M AND S OCCUPANCIES**  
**NONFLAMMABLE SOLIDS AND NONFLAMMABLE AND NONCOMBUSTIBLE**  
**LIQUIDS <sup>d,e,f</sup>**

<b>CONDITION</b>		<b>MAXIMUM ALLOWABLE QUANTITY PER</b>	
<b>Material<sup>a</sup></b>	<b>Class</b>	<b>Solids</b>	<b>Liquids</b>

	1	<i>Not Limited</i>	<i>Not Limited</i>

*For SI: 1 pound = 0.454 kg, 1 gallon = 3.785 L.*

- a. Hazard categories are as specified in the New York City Fire Code.*
- b. Maximum allowable quantities shall be increased 100 percent in buildings that are sprinklered in accordance with Section 903.3.1.1. When Note c also applies, the increase for both notes shall be applied accumulatively.*
- c. Maximum allowable quantities shall be increased 100 percent when stored in approved storage cabinets, in accordance with the New York City Fire Code. When Note b also applies, the increase for both notes shall be applied accumulatively.*
- d. See Table 414.2.2 for design and number of control areas.*
- e. Allowable quantities for other hazardous material categories shall be in accordance with Section 307.*
- f. Maximum quantities shall be increased 100 percent in outdoor control areas.*
- g. Maximum amounts are permitted to be increased to 2,250 pounds when individual packages are in the original sealed containers from the manufacturer or packager and do not exceed 10 pounds each.*
- h. Maximum amounts are permitted to be increased to 4,500 pounds when individual packages are in the original sealed containers from the manufacturer or packager and do not exceed 10 pounds each.*
- i. Quantities are unlimited where protected by an automatic sprinkler system.*
- j. Quantities are unlimited in an outdoor control area.*

**414.2.4.1 Below-grade storage of flammable or combustible mixtures accessory to Group M establishments.** Class I liquids shall not be stored in below-grade locations. Storage of Class II and Class III liquids, accessory to retail stores, and partly or completely below grade shall be permitted, provided that such below-grade area is equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 and enclosed by fire barriers having a fire-resistance rating of at least 2 hours, constructed in accordance with the construction type of the building. Openings shall be protected by self-closing assemblies having a fire-resistance rating of at least 1½ hours.

**Exception:** Class IIIB liquids may be stored in below-grade locations that are not provided throughout with an automatic sprinkler system when such liquids are stored in a room that is separated, vertically and horizontally, from surrounding spaces by fire barriers of not less than 2-hour fire-resistance rating and such room is provided with an automatic sprinkler system.

**414.3 Ventilation.** Rooms, areas or spaces of Group H in which explosive, corrosive, combustible, flammable or highly toxic dusts, mists, fumes, vapors or gases are or may be emitted due to the processing, use, handling or storage of materials shall be mechanically ventilated as required by the New York City Fire Code and the New York City Mechanical Code. Ducts conveying explosives or flammable vapors, fumes or dusts shall extend directly to the exterior of the building without entering other spaces. Exhaust ducts shall not extend into or through ducts and plenums.

**Exception:** Ducts conveying vapor or fumes having flammable constituents less than 25 percent of their lower flammable limit (LFL) are permitted to pass through other spaces.

Emissions generated at workstations shall be confined to the area in which they are generated as specified in the New York City Fire Code and the New York City Mechanical Code.

The location of supply and exhaust openings shall be in accordance with the New York City Mechanical Code. Exhaust air contaminated by highly toxic material shall be treated in accordance with the New York City Fire Code.

A manual shutoff control for ventilation equipment required by this section shall be provided outside the room adjacent to the principal access door to the room. The switch shall be of the break-glass type and shall be labeled: VENTILATION SYSTEM EMERGENCY SHUTOFF.

**414.4 Hazardous material systems.** Systems involving hazardous materials shall be suitable for the intended application. Controls shall be designed to prevent materials from entering or leaving process or reaction

*systems at other than the intended time, rate or path. Automatic controls, where provided, shall be designed to be fail safe.*

***414.5 Inside storage, dispensing and use.*** *The inside storage, dispensing and use of hazardous materials in excess of the maximum allowable quantities per control area of Tables 307.7(1) and 307.7(2) shall be in accordance with Sections 414.5.1 through 414.5.5 of this code and the New York City Fire Code.*

***414.5.1 Explosion control.*** *Explosion control shall be provided in accordance with the New York City Fire Code as required by Table 414.5.1 where quantities of hazardous materials specified in that table exceed the maximum allowable quantities in Table 307.7(1) or where a structure, room or space is occupied for purposes involving explosion hazards as required by Section 415 or the New York City Fire Code.*

<i>Where explosion hazards exist<sup>f</sup></i>	<i>Detonation</i>	<i>Required</i>	<i>Not Permitted</i>
	<i>Deflagration</i>	<i>Not Required</i>	<i>Required</i>

a. See Section 414.1.3.

b. See the New York City Fire Code.

c. As generated during manufacturing or processing. See definition of “Combustible dust” in Chapter 3.

- d. *Storage or use.*
- e. *In open use or dispensing.*
- f. *Rooms containing dispensing and use of hazardous materials when an explosive environment can occur because of the characteristics or nature of the hazardous materials or as a result of the dispensing or use process.*
- g. *Considered as explosives for the purposes of storage.*

**414.5.2 Monitor control equipment.** Monitor control equipment shall be provided where required by the New York City Fire Code.

**414.5.3 Automatic fire detection systems.** Group H occupancies shall be provided with an automatic fire detection system in accordance with Section 907.2.

**414.5.4 Emergency power.** Where mechanical ventilation, treatment systems, temperature control, alarm, detection or other electrically operated systems are required, such systems shall be provided with an emergency power system in accordance with the New York City Electrical Code.

**Exceptions:**

1. Storage areas for Class I and II oxidizers.
2. Storage areas for Class III, IV and V organic peroxides.
3. Emergency power for mechanical ventilation, treatment systems and temperature control systems shall not be required where an approved fail-safe engineered system is installed.

**414.5.5 Spill control, drainage and containment.** Rooms, buildings or areas occupied for the storage of solid and liquid hazardous materials shall be provided with a means to control spillage and to contain or drain off spillage and fire protection water discharged in the storage area where required in the New York City Fire Code. The methods of spill control shall be in accordance with the New York City Fire Code.

**414.5.6 Storage of medical gases.** When required by the New York City Fire Code, a one-hour room shall be provided for the storage of medical gases inside of buildings, with the protected openings and ventilation provisions as required by the New York City Fire Code.

**414.6 Outdoor storage, dispensing and use.** The outdoor storage, dispensing and use of hazardous materials shall be in accordance with the New York City Fire Code.

**414.6.1 Weather protection.** Where weather protection is provided for sheltering outdoor hazardous material storage or use areas, such storage or use shall be considered outdoor storage or use, provided that all of the following conditions are met:

1. Structure supports and walls shall not obstruct more than one side nor more than 25 percent of the perimeter of the storage or use area.

2. *The distance from the structure and the structure supports to buildings, lot lines, public ways or means of egress to a public way shall not be less than the distance required for an outside hazardous material storage or use area without weather protection.*
3. *The overhead structure shall be of approved noncombustible construction with a maximum area of 1,500 square feet (140 m<sup>2</sup>).*

**Exception:** *The increases permitted by Section 506 apply.*

**414.7 Emergency alarms.** *Emergency alarms for the detection and notification of an emergency condition in Group H occupancies shall be provided as set forth herein.*

**414.7.1 Storage.** *An approved manual emergency alarm system shall be provided in buildings, rooms or areas used for storage of hazardous materials. Emergency alarm-initiating devices shall be installed outside of each interior exit or exit access door of storage buildings, rooms or areas. Activation of an emergency alarm-initiating device shall sound a local alarm to alert occupants of an emergency situation involving hazardous materials.*

**414.7.2 Dispensing, use and handling.** *Where hazardous materials having a hazard ranking of 3 or 4 in accordance with NFPA 704 are transported through corridors or exit enclosures, there shall be an emergency telephone system, a local manual alarm station or an approved alarm-initiating device at not more than 150-foot (45 720 mm) intervals and at each exit and exit access doorway throughout the transport route. The signal shall be relayed to an approved central station, or remote supervising station service or constantly attended on-site location and shall also initiate a local audible alarm.*

**414.7.3 Supervision.** *Emergency alarm systems shall be supervised by an approved central, proprietary or remote station service or shall initiate an audible and visual signal at a constantly attended on-site location.*

## **SECTION BC 415**

### **GROUPS H-1, H-2, H-3, H-4 AND H-5**

**415.1 Scope.** *The provisions of this section shall apply to the storage and use of hazardous materials in excess of the maximum allowable quantities per control area listed in Section 307.9. Buildings and structures with an occupancy in Group H shall also comply with the applicable provisions of Section 414 and the New York City Fire Code, including, but not limited to, location and installation provisions.*

**415.2 Definitions.** *The following words and terms shall, for the purposes of this chapter and as used elsewhere in the code, have the meanings shown herein.*

**CONTINUOUS GAS-DETECTION SYSTEM.** *A gas detection system where the analytical instrument is maintained in continuous operation and sampling is performed without interruption. Analysis is allowed to be performed on a cyclical basis at intervals not to exceed 30 minutes.*

**EMERGENCY CONTROL STATION.** *An approved location on the premises of a semiconductor fabrication facility staffed by trained personnel that monitor the operation of equipment and systems including alert and alarm signals.*

**EXHAUSTED ENCLOSURE.** *A device, typically consisting of a hood equipped with a fan, that serves to capture and exhaust fumes, mist, vapors and gases generated at a workstation or other local environment. An exhausted enclosure does not include a room provided with general ventilation.*

**FABRICATION AREA.** *An area within a semiconductor fabrication facility in which processes using hazardous production materials are conducted.*

**FLAMMABLE VAPORS OR FUMES.** *The concentration of flammable constituents in air that exceed 25 percent of their lower flammable limit (LFL).*

**GAS CABINET.** *A fully enclosed, noncombustible enclosure used to provide an isolated environment for compressed gas containers in storage or use, including any doors and access ports for exchanging containers and accessing pressure-regulating controls.*

**GAS ROOM.** *A separately ventilated, fully enclosed room in which only compressed gases and associated equipment and supplies are stored or used.*

**HAZARDOUS PRODUCTION MATERIAL (HPM).** *A solid, liquid or gas associated with semiconductor manufacturing that has a degree-of-hazard rating in health, flammability or reactivity of Class 3 or 4 as ranked by NFPA 704 and that is used directly in research, laboratory or production processes that have as their end product materials that are not hazardous.*

**HPM FLAMMABLE LIQUID.** *An HPM liquid that is defined as either a Class I flammable liquid or a Class II or Class IIIA combustible liquid.*

**HPM ROOM.** A room used in conjunction with or serving a Group H-5 occupancy, where HPM is stored or used and that is classified as a Group H-2, H-3 or H-4 occupancy.

**IMMEDIATELY DANGEROUS TO LIFE AND HEALTH (IDLH).** The concentration of air-borne contaminants that poses a threat of death, immediate or delayed permanent adverse health effects, or effects that could prevent escape from such an environment as established by the National Institute of Occupational Safety and Health (NIOSH) based on both toxicity and flammability. It generally is expressed in parts per million by volume (ppm v/v) or milligrams per cubic meter (mg/m<sup>3</sup>). If adequate data do not exist for precise establishment of IDLH concentrations, an independent certified industrial hygienist, industrial toxicologist, appropriate regulatory agency or other source approved by the Fire Commissioner shall make such determination.

**LIQUID.** A material that has a melting point that is equal to or less than 68°F (20°C) and a boiling point that is greater than 68°F (20°C) at 14.7 pounds per square inch absolute (psia) (101 kPa). When not otherwise identified, the term “liquid” includes both flammable and combustible liquids.

**LIQUID STORAGE ROOM.** A room classified as a Group H-3 occupancy used for the storage of flammable or combustible liquids in an unopened condition.

**LIQUID USE, DISPENSING AND MIXING ROOMS.** Rooms in which Class I, II and IIIA flammable or combustible liquids are used, dispensed or mixed in open containers.

**LOWER FLAMMABLE LIMIT (LFL).** The minimum concentration of vapor in air at which propagation of flame will occur in the presence of an ignition source. The LFL is sometimes referred to as “LEL” or “lower explosive limit.”

**NORMAL TEMPERATURE AND PRESSURE (NTP).** A temperature of 70°F (21°C) and a pressure of 1 atmosphere [14.7 psia (101 kPa)].

**SERVICECORRIDOR.** A fully enclosed passage used for transporting HPM and other purposes, but not as a required means of egress.

**SOLID.** A material that has a melting point, decomposes or sublimates at a temperature greater than 68°F (20°C).

**WORKSTATION.** A defined space within a fabrication area in which a specific function, laboratory procedure or research activity relating to semiconductor manufacture is conducted. A workstation may include

equipment using HPM, hazardous materials storage cabinets, flammable liquid storage cabinets or gas cabinets, ventilation equipment, fire protection devices, detection devices, and electrical devices.

**415.3 Location on property.** Group H shall be located on property in accordance with the other provisions of this chapter. In Group H-2 or H-3, not less than 25 percent of the perimeter wall of the occupancy shall be an exterior wall.

**Exceptions:**

1. Liquid use, dispensing and mixing rooms having a floor area of not more than 500 square feet (47 m<sup>2</sup>) need not be located on the outer perimeter of the building where they are in accordance with the New York City Fire Code and NFPA 30.
2. Liquid storage rooms having a floor area of not more than 1,000 square feet (93 m<sup>2</sup>) need not be located on the outer perimeter where they are in accordance with the New York City Fire Code and NFPA 30.
3. Spray paint booths that comply with the New York City Fire Code need not be located on the outer perimeter.

**415.3.1 Group H minimum distance to lot lines.** Regardless of any other provisions, buildings containing Group H occupancies shall be set back a minimum distance from lot lines as set forth in Items 1 through 4 below. Distances shall be measured from the walls enclosing the occupancy to lot lines, including those on a public way. Distances to assumed property lines drawn for the purposes of determination of exterior wall and opening protection are not to be used to establish the minimum distance for separation of buildings on sites where explosives are manufactured or used when separation is provided in accordance with the quantity distance tables specified for explosive materials in the New York City Fire Code.

1. Group H-1. Not less than 75 feet (22 860 mm) and not less than required by the New York City Fire Code.

**Exceptions:**

1. Fireworks manufacturing buildings separated in accordance with NFPA 1124.
2. Buildings containing the following materials when separated in accordance with Table 415.3.1:

*2.1. Organic peroxides, unclassified detonable.*

*2.2. Unstable reactive materials Class 4.*

*2.3. Unstable reactive materials, Class 3 detonable.*

*2.4. Detonable pyrophoric materials.*

- 2. Group H-2. Not less than 30 feet (9144 mm) where the area of the occupancy exceeds 1,000 square feet (93 m<sup>2</sup>), and it is not required to be located in a detached building.*
- 3. Groups H-2 and H-3. Not less than 50 feet (15 240 mm) where a detached building is required (see Table 415.3.2).*
- 4. Groups H-2 and H-3. Occupancies containing materials with explosive characteristics shall be separated as required by the New York City Fire Code. Where separations are not specified, the distances required shall not be less than the distances required by Table 415.3.1.*

**TABLE 415.3.1**  
**MINIMUM SEPARATION DISTANCES FOR BUILDINGS CONTAINING EXPLOSIVES<sup>f</sup>**

<b>QUANTITY OF EXPLOSIVES<sup>a, d</sup></b>		<b>MINIMUM DISTANCE (feet)</b>

900	1,000	400	800	72

For SI: 1 pound = 0.454 kg, 1 foot = 304.8 mm.

- a. The number of pounds of explosives listed is the number of pounds of trinitrotoluene (TNT) or the equivalent pounds of other explosive.
- b. The distance listed is the distance to lot line, including lot lines at public ways.
- c. For the purpose of this table, an inhabited building is any building on the same property that is regularly occupied by people. Where two or more buildings containing explosives or magazines are located on the same property, each building or magazine shall comply with the minimum distance specified from inhabited buildings and, in addition, they shall be separated from each other by not less than the distance shown for "Separation of magazines," except that the quantity of explosives contained in detonator buildings or magazines shall govern in regard to the spacing of said buildings or magazines from buildings or magazines, as a group, shall be considered as one building or magazine, and the total quantity of explosives stored in such group shall be treated as if the explosive were in a single building or magazine located on the site of any building or magazine of the group, and shall comply with the minimum distance specified from other magazines or inhabited buildings.
- d. Storage of explosives in a quantity exceeding 1,000 pounds in one magazine is prohibited.

- e. Magazine is a building or structure, other than an operating building, approved for storage of explosive materials. Portable or mobile magazines not exceeding 120 square feet (11 m<sup>2</sup>) in area need not comply with the requirements of this code, however, all magazines shall comply with the New York City Fire Code.*
- f. This table shall not apply to the temporary storage incidental to transportation.*

*415.3.2 Group H-1 and H-2 or H-3 detached buildings. Where a detached building is required by Table 415.3.2, there are no requirements for wall and opening protection based on location on property.*

**TABLE 415.3.2**  
**REQUIRED DETACHED STORAGE**

<b>DETACHED STORAGE IS REQUIRED WHEN THE QUANTITY OF MATERIAL EXCEEDS THAT</b>			
<b>Material</b>	<b>Class</b>	<b>Solids and Liquids (tons)<sup>a,b</sup></b>	<b>Gases (cubic feet)<sup>a,b</sup></b>
<i>Explosives</i>	<i>Division 1.1</i>	<i>Maximum Allowable Quantity</i>	<i>Not Applicable</i>
	<i>Division 1.2</i>	<i>Maximum Allowable Quantity</i>	
	<i>Division 1.3</i>	<i>Maximum Allowable Quantity</i>	
	<i>Division 1.4</i>	<i>Maximum Allowable Quantity</i>	
<i>Oxidizers</i>	<i>Class 4</i>	<i>Maximum Allowable Quantity</i>	<i>Maximum Allowable Quantity</i>
<i>Unstable (reactives) detonable</i>	<i>Class 3 or 4</i>	<i>Maximum Allowable Quantity</i>	<i>Maximum Allowable Quantity</i>
<i>Oxidizer, liquids and solids</i>	<i>Class 3</i>	<i>1,200</i>	<i>Not Applicable</i>
	<i>Class 2</i>	<i>2,000</i>	<i>Not Applicable</i>
<i>Organic peroxides</i>	<i>Detonable</i>	<i>Maximum Allowable Quantity</i>	<i>Not Applicable</i>
	<i>Class I</i>	<i>Maximum Allowable Quantity</i>	<i>Not Applicable</i>
	<i>Class II</i>	<i>25</i>	<i>Not Applicable</i>
<i>Unstable (reactives) nondetonable</i>	<i>Class 3</i>	<i>1</i>	<i>2,000</i>
	<i>Class 2</i>	<i>25</i>	<i>10,000</i>
<i>Water reactives</i>	<i>Class 3</i>	<i>1</i>	<i>Not Applicable</i>
	<i>Class 2</i>	<i>25</i>	<i>Not Applicable</i>
<i>Pyrophoric gases</i>	<i>Not Applicable</i>	<i>Not Applicable</i>	<i>2,000</i>

For SI: 1 ton = 906 kg, 1 cubic foot = 0.02832 M<sup>3</sup>.

- a. For materials that are detonable, the distance to other buildings or lot lines shall be as specified in Table 415.3.1 based on trinitrotoluene (TNT) equivalence of the material. For materials classified as explosives, see the New York City Fire Code. Unclassified detonable organic peroxides, detonable pyrophoric materials, detonable unstable (reactive) materials and detonable water-reactive materials shall be considered as explosives for the purposes of storage.
- b. "Maximum Allowable Quantity" means the maximum allowable quantity per control area set forth in Table 307.7(1).
- c. Limited to Division 1.4 materials and articles, including articles packaged for shipment, that are not regulated as an explosive under Bureau of Alcohol, Tobacco and Firearms (BATF) regulations or unpackaged articles used in process operations that do not propagate a detonation or deflagration between articles, providing the net explosive weight of individual articles does not exceed 1 pound.

**415.4 Special provisions for Group H-1 occupancies.** Group H-1 occupancies shall be in buildings used for no other purpose, shall not exceed one story in height and be without basement, crawl spaces or other under-floor spaces. Roofs shall be of lightweight construction with suitable thermal insulation to prevent sensitive material from reaching its decomposition temperature. Group H-1 occupancies containing materials that are in themselves both physical and health hazards in quantities exceeding the maximum allowable quantities per control area in Table 307.7(2) shall comply with requirements for both Group H-1 and H-4 occupancies.

**415.4.1 Floors in storage rooms.** Floors in storage areas for organic peroxides, pyrophoric materials and unstable (reactive) materials shall be of liquid-tight, noncombustible construction.

**415.5 Special provisions for Group H-2 and H-3 occupancies.** Group H-2 and H-3 occupancies containing quantities of hazardous materials in excess of those set forth in Table 415.3.2 shall be in buildings used for no other purpose, shall not exceed one story in height and shall be without basements, crawl spaces or other under-floor spaces. Group H-2 and H-3 occupancies containing water-reactive materials shall be resistant to water penetration. Piping for conveying liquids shall not be over or through areas containing water reactives, unless isolated by approved liquid-tight construction.

**Exception:** Fire protection piping.

**415.5.1 Floors in storage rooms.** Floors in storage areas for organic peroxides, oxidizers, pyrophoric materials, unstable (reactive) materials and water-reactive solids and liquids shall be of liquid-tight, noncombustible construction.

**415.5.2 Waterproof room.** Rooms or areas used for the storage of water-reactive solids and liquids shall be constructed in a manner that resists the penetration of water through the use of waterproof materials. Piping carrying water for other than approved automatic fire sprinkler systems shall not be within such rooms or areas.

**415.6 Smoke and heat venting.** Smoke and heat vents complying with Section 910 shall be installed in the following locations:

1. In occupancies classified as Group H-2 or H-3, any of which are over 15,000 square feet (1394 m<sup>2</sup>) in a single floor area.

**Exception:** Buildings of noncombustible construction containing only noncombustible materials.

2. *In areas of buildings in Group H used for storing Class 2, 3 and 4 liquid and solid oxidizers, Class 1 and unclassified detonable organic peroxides, unstable (reactive) materials, or Class 2 or 3 water-reactive materials as required for a high hazard commodity classification as defined in the New York City Fire Code.*

**415.7 Group H-2.** *Occupancies in Group H-2 shall be constructed in accordance with Sections 415.7.1 through 415.7.4 and the New York City Fire Code.*

**415.7.1 Combustible dusts, grain processing and storage.** *The provisions of Sections 415.7.1.1 through 415.7.1.5 shall apply to buildings in which materials that produce combustible dusts are stored or handled. Buildings that store or handle combustible dusts shall comply with the applicable provisions of NFPA 61, NFPA 69, NFPA 120, NFPA 484, NFPA 651, NFPA 654, NFPA 655, NFPA 664 and NFPA 85, and the New York City Fire Code.*

**415.7.1.1 Type of construction and height exceptions.** *Buildings shall be constructed in compliance with the height and area limitations of Table 503 for Group H-2; except that where erected of Type I or II construction, the heights and areas of grain elevators and similar structures shall be unlimited, and where of Type IV construction, the maximum height shall be 65 feet (19 812 mm) and except further that, in isolated areas, the maximum height of Type IV structures shall be increased to 85 feet (25 908 mm).*

**415.7.1.2 Grinding rooms.** *Every room or space occupied for grinding or other operations that produce combustible dusts shall be enclosed with fire barriers and horizontal assemblies or both that have not less than a 2-hour fire-resistance rating where the area is not more than 3,000 square feet (279 m<sup>2</sup>), and not less than a 4-hour fire-resistance rating where the area is greater than 3,000 square feet (279 m<sup>2</sup>).*

**415.7.1.3 Conveyors.** *Conveyors, chutes, piping and similar equipment passing through the enclosures of rooms or spaces shall be constructed dirt tight and vapor tight, and be of approved noncombustible materials complying with Chapter 30.*

**415.7.1.4 Explosion control.** *Explosion control shall be provided as specified in the New York City Fire Code, or spaces shall be equipped with the equivalent mechanical ventilation complying with the New York City Mechanical Code.*

**415.7.1.5 Grain elevators.** Grain elevators, malt houses and buildings for similar occupancies shall not be located within 30 feet (9144 mm) of interior lot lines or structures on the same lot, except where erected along a railroad right-of-way.

**415.7.1.6 Coal pockets.** Coal pockets located less than 30 feet (9144 mm) from interior lot lines or from structures on the same lot shall be constructed of not less than Type IB construction. Where more than 30 feet (9144 mm) from interior lot lines, or where erected along a railroad right-of-way, the minimum type of construction of such structures not more than 65 feet (19 812 mm) in height shall be Type IV.

**415.7.2 Flammable and combustible liquids.** The storage, handling, processing and transporting of flammable and combustible liquids shall be in accordance with this section, the New York City Mechanical Code and the New York City Fire Code.

**415.7.2.1 Mixed occupancies.** Where the storage tank area is located in a building of two or more occupancies, and the quantity of liquid exceeds the maximum allowable quantity for one control area, the use shall be completely separated from adjacent fire areas in accordance with the requirements of Section 302.3.2.

**415.7.2.1.1 Height exception.** Where storage tanks are located within only a single-story building, the height limitation of Section 503 shall not apply for Group H.

**415.7.2.2 Tank protection.** Storage tanks shall be noncombustible and protected from physical damage. A fire barrier wall or horizontal assemblies or both around the storage tank(s) shall be permitted as the method of protection from physical damage.

**415.7.2.3 Tanks.** Storage tanks shall be approved tanks conforming to the requirements of the New York City Fire Code.

**415.7.2.4 Suppression.** Group H shall be equipped throughout with an approved automatic sprinkler system, installed in accordance with Section 903.

**415.7.2.5 Leakage containment.** A liquid-tight containment area compatible with the stored liquid shall be provided. The method of spill control, drainage control and secondary containment shall be in accordance with the New York City Fire Code.

**Exception:** Rooms where only double-wall storage tanks conforming to Section 415.7.2.3 are used to store Class I, II and IIIA flammable and combustible liquids shall not be required to have a leakage containment area.

**415.7.2.6 Leakage alarm.** An approved automatic alarm shall be provided to indicate a leak in a storage tank and room. The alarm shall sound an audible signal, 15 dBA above the ambient sound level, at every point of entry into the room in which the leaking storage tank is located. An approved sign shall be posted on every entry door to the tank storage room indicating the potential hazard of the interior room environment, or the sign shall state: **WARNING, WHEN ALARM SOUNDS, THE ENVIRONMENT WITHIN THE ROOM MAY BE HAZARDOUS.** The leakage alarm shall also be supervised in accordance with Chapter 9 to transmit a trouble signal.

**415.7.2.7 Tank vent.** Storage tank vents for Class I, II or IIIA liquids shall terminate to the outdoor air in accordance with the New York City Fire Code.

**415.7.2.8 Room ventilation.** Storage tank areas storing Class I, II or IIIA liquids shall be provided with mechanical ventilation. The mechanical ventilation system shall be in accordance with the New York City Mechanical Code and the New York City Fire Code.

**415.7.2.9 Explosion venting.** Where Class I liquids are being stored, explosion venting shall be provided in accordance with the New York City Fire Code.

**415.7.2.10 Tank openings other than vents.** Tank openings other than vents from tanks inside buildings shall be designed to ensure that liquids or vapor concentrations are not released inside the building.

**415.7.3 Liquefied petroleum gas-distribution facilities.** Propane, butane, propylene, butylene and other liquefied petroleum gas-distribution facilities shall conform to the provisions of the New York City Fire Code.

**415.7.4 Dry cleaning plants.** The construction and installation of dry cleaning plants shall be in accordance with the requirements of this code, the New York City Mechanical Code, the New York City Plumbing Code and NFPA 32. Dry cleaning solvents and systems shall be classified in accordance with the New York City Fire Code.

**415.8 Groups H-3 and H-4.** Groups H-3 and H-4 shall be constructed in accordance with the applicable provisions of this code and the New York City Fire Code.

**415.8.1 Gas rooms.** When gas rooms are provided, such rooms shall be separated from other areas by not less than a 1-hour fire barrier.

**415.8.2 Floors in storage rooms.** Floors in storage areas for corrosive liquids and highly toxic or toxic materials shall be of liquid-tight, noncombustible construction.

**415.8.3 Separation—highly toxic solids and liquids.** Highly toxic solids and liquids not stored in approved hazardous materials storage cabinets shall be isolated from other hazardous materials storage by construction having a 1-hour fire-resistance rating.

#### **415.9 Group H-5.**

**415.9.1 General.** In addition to the requirements set forth elsewhere in this code, Group H-5 shall comply with the provisions of Section 415.9 and the New York City Fire Code, including, but not limited to, automatic sprinkler protection for workstations, gas cabinets, exhausted enclosures, pass-throughs in exit access corridors, and exhaust ducts.

#### **415.9.2 Fabrication areas.**

##### **415.9.2.1 Hazardous materials in fabrication areas.**

**415.9.2.1.1 Aggregate quantities.** The aggregate quantities of hazardous materials stored and used in a single fabrication area shall not exceed the quantities set forth in Table 415.9.2.1.1.

**Exception:** The quantity limitations for any hazard category in Table 415.9.2.1.1 shall not apply where the fabrication area contains quantities of hazardous materials not exceeding the maximum allowable quantities per control area established by Tables 307.7(1) and 307.7(2).

**TABLE 415.9.2.1.1**

**QUANTITY LIMITS FOR HAZARDOUS MATERIALS IN A SINGLE FABRICATION AREA IN  
GROUP H-5<sup>a</sup>**

<b>HAZARD CATEGORY</b>		<b>SOLIDS</b> <i>(pounds per square feet)</i>	<b>LIQUIDS</b> <i>(gallons per square feet)</i>	<b>GAS</b> <i>(SCF/ square feet)</i>

<i>Highly toxic</i>	<i>Not Limited</i>	<i>Not Limited</i>	<i>Note c</i>
<i>Toxics</i>	<i>Not Limited</i>	<i>Not Limited</i>	<i>Note c</i>

*For SI: 1 pound per square foot = 4.882 kg/m<sup>2</sup>, 1 gallon per square foot = 0.025 L/m<sup>2</sup>, 1 cubic foot = 0.02832 M<sup>3</sup>.*

- a. Hazardous materials within piping shall not be included in the calculated quantities.*
- b. Quantity of hazardous materials in a single fabrication shall not exceed the maximum allowable quantities per control area in Tables 307.7(1) and 307.7(2).*
- c. The aggregate quantity of flammable, pyrophoric, toxic and highly toxic gases shall not exceed 9,000 SCF.*
- d. The aggregate quantity of pyrophoric gases in the building shall not exceed the amounts set forth in Table 415.3.2.*

**415.9.2.1.2 Hazardous production materials.** *The maximum quantities of hazardous production materials stored in a single fabrication area shall not exceed the maximum allowable quantities per control area established by Tables 307.7(1) and 307.7(2).*

**415.9.2.2 Separation.** *Fabrication areas, whose sizes are limited by the quantity of hazardous materials allowed by Table 415.9.2.1.1, shall be separated from each other, from exit access corridors, and from other parts of the building by not less than 1-hour fire barriers.*

**Exceptions:**

1. *Doors within such fire barrier walls, including doors to corridors, shall be only self-closing fire assemblies having a fire-protection rating of not less than ¾ hour.*
2. *Windows between fabrication areas and exit access corridors are permitted to be fixed glazing listed and labeled for a fire protection rating of at least ¾ hour in accordance with Section 715.*

**415.9.2.3 Location of occupied levels.** *Occupied levels of fabrication areas shall be located at or above the first story above grade plane.*

**415.9.2.4 Floors.** *Except for surfacing, floors within fabrication areas shall be of noncombustible construction. Openings through floors of fabrication areas are permitted to be unprotected where the interconnected levels are used solely for mechanical equipment directly related to such fabrication areas (see also Section 415.9.2.5). Floors forming a part of an occupancy separation shall be liquid tight.*

**415.9.2.5 Shafts and openings through floors.** *Elevator shafts, vent shafts and other openings through floors shall be enclosed when required by Section 707. Mechanical, duct and piping penetrations within a fabrication area shall not extend through more than two floors. The annular space around penetrations for cables, cable trays, tubing, piping, conduit or ducts shall be sealed at the floor level to restrict the movement of air. The fabrication area, including the areas through which the ductwork and piping extend, shall be considered a single conditioned environment.*

**415.9.2.6 Ventilation.** *Mechanical exhaust ventilation shall be provided throughout the fabrication area at the rate of not less than 1 cubic foot per minute per square foot (0.044 L/S/m<sup>2</sup>) of floor area. The exhaust air duct system of one fabrication area shall not connect to another duct system outside that fabrication area within the building.*

*A ventilation system shall be provided to capture and exhaust fumes and vapors at workstations.*

*Two or more operations at a workstation shall not be connected to the same exhaust system where either one or the combination of the substances removed could constitute a fire, explosion or hazardous chemical reaction within the exhaust duct system.*

*Exhaust ducts penetrating occupancy separations shall be contained in a shaft of equivalent fire-resistance construction. Exhaust ducts shall not penetrate firewalls.*

*Fire dampers shall not be installed in exhaust ducts.*

**415.9.2.7 Transporting hazardous production materials to fabrication areas.** *Hazardous production materials shall be transported to fabrication areas through enclosed piping or tubing systems that comply with Section 415.9.6.1, through service corridors complying with Section 415.9.4, or in exit access corridors as permitted in the exception to Section 415.9.3. The handling or transporting of hazardous production materials within service corridors shall comply with the New York City Fire Code.*

**415.9.2.8 Electrical.**

**415.9.2.8.1 General.** *Electrical equipment and devices within the fabrication area shall comply with the New York City Electrical Code. The requirements for hazardous locations need not be applied where the average air change is at least four times that set forth in Section 415.9.2.6 and where the number of air changes at any location is not less than three times that required by Section 415.9.2.6. The use of recirculated air shall be permitted.*

**415.9.2.8.2 Workstations.** *Workstations shall not be energized without adequate exhaust ventilation. See Section 415.9.2.6 for workstation exhaust ventilation requirements.*

**415.9.3 Exit access corridors.** *Exit access corridors shall comply with Chapter 10 and shall be separated from fabrication areas as specified in Section 415.9.2.2. Exit access corridors shall not contain HPM and shall not be used for transporting such materials, except through closed piping systems as provided in Section 415.9.6.3.*

**Exception:** *Where existing fabrication areas are altered or modified, HPM is allowed to be transported in existing exit access corridors, subject to the following conditions:*

1. *Corridors. Exit access corridors adjacent to the fabrication area where the alteration work is to be done shall comply with Section 1016 for a length determined as follows:*

1.1. *The length of the common wall of the corridor and the fabrication area; and*

1.2. *For the distance along the exit access corridor to the point of entry of HPM into the exit access corridor serving that fabrication area.*

2. *Emergency alarm system. There shall be an emergency telephone system, a local manual alarm station or other approved alarm-initiating device within exit access corridors at not more than 150-foot (45 720 mm) intervals and at each exit and exit access doorway. The signal shall be relayed to an approved central, proprietary or remote station service or the emergency control station and shall also initiate a local audible alarm.*

3. *Pass-throughs. Self-closing doors having a fire-protection rating of not less than 1 hour shall separate pass-throughs from existing exit access corridors. Pass-throughs shall be constructed as required for the exit access corridors, and protected by an approved automatic fire-extinguishing system.*

#### **415.9.4 Service corridors.**

**415.9.4.1 Occupancy.** *Service corridors shall be classified as Group H-5.*

**415.9.4.2 Use conditions.** *Service corridors shall be separated from exit access corridors as required by Section 415.9.2.2. Service corridors shall not be used as a required exit access corridor.*

**415.9.4.3 Mechanical ventilation.** *Service corridors shall be mechanically ventilated as required by Section 415.9.2.6 or at not less than six air changes per hour, whichever is greater.*

**415.9.4.4 Means of egress.** *The maximum distance of travel from any point in a service corridor to an exit, exit access corridor or door into a fabrication area shall not exceed 75 feet (22 860 mm). Dead ends shall not exceed 4 feet (1219 mm) in length. There shall be not less than two exits, and not more than one-half of the required means of egress shall require travel into a fabrication area. Doors from service corridors shall swing in the direction of egress travel and shall be self-closing.*

**415.9.4.5 Minimum width.** *The minimum clear width of a service corridor shall be 5 feet (1524 mm), or 33 inches (838 mm) wider than the widest cart or truck used in the service corridor, whichever is greater.*

**415.9.4.6 Emergency alarm system.** *Emergency alarm systems shall be provided in accordance with this section and Sections 414.7.1 and 414.7.2. The maximum allowable quantity per control area provisions shall not apply to emergency alarm systems required for HPM.*

**415.9.4.6.1 Service corridors.** *An emergency alarm system shall be provided in service corridors, with at least one alarm device in each service corridor.*

**415.9.4.6.2 Exit access corridors and exit enclosures.** *Emergency alarms for exit access corridors and exit enclosures shall comply with Section 414.7.2.*

**415.9.4.6.3 Liquid storage rooms, HPM rooms and gas rooms.** *Emergency alarms for liquid storage rooms, HPM rooms and gas rooms shall comply with Section 414.7.1.*

**415.9.4.6.4 Alarm-initiating devices.** *An approved emergency telephone system, local alarm manual pull stations, or other approved alarm-initiating devices are allowed to be used as emergency alarm-initiating devices.*

**415.9.4.6.5 Alarm signals.** *Activation of the emergency alarm system shall sound a local alarm and transmit a signal to the emergency control station.*

**415.9.5 Storage of hazardous production materials.**

**415.9.5.1 General.** *Storage of HPM in fabrication areas shall be within approved or listed storage cabinets or gas cabinets, or within a workstation. The storage of hazardous production materials in quantities greater than those listed in Tables 307.7(1) or 307.7(2) shall be in liquid storage rooms, HPM rooms or gas rooms as appropriate for the materials stored. The storage of other hazardous materials shall be in accordance with other applicable provisions of this code and the New York City Fire Code.*

**415.9.5.2 Construction.**

**415.9.5.2.1 HPM rooms and gas rooms.** *HPM rooms and gas rooms shall be separated from other areas by not less than a 2-hour fire barrier where the area is 300 square feet (27.9 m<sup>2</sup>) or*

more and not less than a 1-hour fire barrier where the area is less than 300 square feet (27.9 m<sup>2</sup>).

**415.9.5.2.2 Liquid storage rooms.** Liquid storage rooms shall be constructed in accordance with the following requirements:

1. Rooms in excess of 500 square feet (46.5 m<sup>2</sup>) shall have at least one exterior door approved for Fire Department access.
2. Rooms shall be separated from other areas by fire barriers having a fire-resistance rating of not less than 1-hour for rooms up to 150 square feet (13.9 m<sup>2</sup>) in area and not less than 2 hours where the room is more than 150 square feet (13.9 m<sup>2</sup>) in area.
3. Shelving, racks and wainscoting in such areas shall be of noncombustible construction or wood of not less than 1-inch (25 mm) nominal thickness.
4. Rooms used for the storage of Class I flammable liquids shall not be located in a basement.

**415.9.5.2.3 Floors.** Except for surfacing, floors of HPM rooms and liquid storage rooms shall be of noncombustible liquid-tight construction. Raised grating over floors shall be of noncombustible materials.

**415.9.5.3 Location.** Where HPM rooms, liquid storage rooms and gas rooms are provided, they shall have at least one exterior wall and such wall shall be not less than 30 feet (9144 mm) from property lines, including property lines adjacent to public ways.

**415.9.5.4 Explosion control.** Explosion control shall be provided where required by Section 414.5.1.

**415.9.5.5 Exits.** Where two exits are required from HPM rooms, liquid storage rooms and gas rooms, one shall be directly to the outside of the building.

**415.9.5.6 Doors.** Doors in a fire barrier wall, including doors to corridors, shall be self-closing fire assemblies having a fire-protection rating of not less than ¾ hour.

**415.9.5.7 Ventilation.** *Mechanical exhaust ventilation shall be provided in liquid storage rooms, HPM rooms and gas rooms at the rate of not less than 1 cubic foot per minute per square foot (0.044 L/S/m<sup>2</sup>) of floor area or six air changes per hour, whichever is greater, for categories of material.*

*Exhaust ventilation for gas rooms shall be designed to operate at a negative pressure in relation to the surrounding areas and direct the exhaust ventilation to an exhaust system.*

**415.9.5.8 Emergency alarm system.** *An approved emergency alarm system shall be provided for HPM rooms, liquid storage rooms and gas rooms.*

*Emergency alarm-initiating devices shall be installed outside of each interior exit door of such rooms.*

*Activation of an emergency alarm-initiating device shall sound a local alarm and transmit a signal to the emergency control station.*

*An approved emergency telephone system, local alarm manual pull stations or other approved alarm-initiating devices are allowed to be used as emergency alarm-initiating devices.*

#### **415.9.6 Piping and tubing.**

**415.9.6.1 General.** *Hazardous production materials piping and tubing shall comply with this section and ANSI B31.3.*

##### **415.9.6.2 Supply piping and tubing.**

**415.9.6.2.1 HPM having a health-hazard ranking of 3 or 4.** *Systems supplying HPM liquids or gases having a health-hazard ranking of 3 or 4 shall be welded throughout, except for connections, to the systems that are within a ventilated enclosure if the material is a gas, or an approved method of drainage or containment is provided for the connections if the material is a liquid.*

**415.9.6.2.2 Location in service corridors.** *Hazardous production materials supply piping or tubing in service corridors shall be exposed to view.*

**415.9.6.2.3 Excess flow control.** *Where HPM gases or liquids are carried in pressurized piping above 15 pounds per square inch gauge (psig) (103.4 kPa), excess flow control shall be*

*provided. Where the piping originates from within a liquid storage room, HPM room or gas room, the excess flow control shall be located within the liquid storage room, HPM room or gas room. Where the piping originates from a bulk source, the excess flow control shall be located as close to the bulk source as practical.*

**415.9.6.3 Installations in exit access corridors and above other occupancies.** *The installation of hazardous production material piping and tubing within the space defined by the walls of exit access corridors and the floor or roof above or in concealed spaces above other occupancies shall be in accordance with Section 415.9.6.2 and the following conditions:*

- 1. Automatic sprinklers shall be installed within the space unless the space is less than 6 inches (152 mm) in the least dimension.*
- 2. Ventilation not less than six air changes per hour shall be provided. The space shall not be used to convey air from any other area.*
- 3. Where the piping or tubing is used to transport HPM liquids, a receptor shall be installed below such piping or tubing. The receptor shall be designed to collect any discharge or leakage and drain it to an approved location. The 1-hour enclosure shall not be used as part of the receptor.*
- 4. HPM supply piping and tubing and HPM nonmetallic waste lines shall be separated from the exit access corridor and from occupancies other than Group H-5 by construction as required for walls or partitions that have a fire protection rating of not less than 1 hour. Where gypsum wallboard is used, joints on the piping side of the enclosure are not required to be taped, provided the joints occur over framing members. Access openings into the enclosure shall be protected by approved fire-resistance-rated assemblies.*
- 5. Readily accessible manual or automatic remotely activated fail-safe emergency shutoff valves shall be installed on piping and tubing other than waste lines at the following locations:*
  - 5.1. At branch connections into the fabrication area.*
  - 5.2. At entries into exit access corridors.*

**Exception:** *Transverse crossings of the corridors by supply piping that is enclosed within a ferrous pipe or tube for the width of corridor need not comply with Items 1 through 5.*

**415.9.6.4 Identification.** *Piping, tubing and HPM waste lines shall be identified in accordance with ANSI A13.1 to indicate the material being transported.*

**415.9.7 Continuous gas-detection systems.** *A continuous gas-detection system shall be provided for HPM gases when the physiological warning properties of the gas are at a higher level than the accepted permissible exposure limit (PEL) for the gas and for flammable gases in accordance with this section.*

**415.9.7.1 Where required.** *A continuous gas-detection system shall be provided in the areas identified in Sections 415.9.7.1.1 through 415.9.7.1.4.*

**415.9.7.1.1 Fabrication areas.** *A continuous gas-detection system shall be provided in fabrication areas when gas is used in the fabrication area.*

**415.9.7.1.2 HPM rooms.** *A continuous gas-detection system shall be provided in HPM rooms when gas is used in the room.*

**415.9.7.1.3 Gas cabinets, exhausted enclosures and gas rooms.** *A continuous gas-detection system shall be provided in gas cabinets and exhausted enclosures. A continuous gas-detection system shall be provided in gas rooms when gases are not located in gas cabinets or exhausted enclosures.*

**415.9.7.1.4 Exit access corridors.** *When gases are transported in piping placed within the space defined by the walls of an exit access corridor, and the floor or roof above the exit access corridor, a continuous gas-detection system shall be provided where piping is located and in the exit access corridor.*

**Exception:** *A continuous gas-detection system is not required for occasional transverse crossings of the corridors by supply piping that is enclosed in a ferrous pipe or tube for the width of the corridor.*

**415.9.7.2 Gas-detection system operation.** *The continuous gas-detection system shall be capable of monitoring the room, area or equipment in which the gas is located at or below the PEL or ceiling limit of the gas for which detection is provided. For flammable gases, the monitoring detection threshold level shall be vapor concentrations in excess of 20 percent of the lower explosive limit*

*(LFL). Monitoring for highly toxic and toxic gases shall also comply with the requirements for such material in the New York City Fire Code.*

**415.9.7.2.1 Alarms.** *The gas detection system shall initiate a local alarm and transmit a signal to the emergency control station when a short-term hazard condition is detected. The alarm shall be both visual and audible and shall provide warning both inside and outside the area where the gas is detected.*

**415.9.7.2.2 Shutoff of gas supply.** *The gas detection system shall automatically close the shutoff valve at the source on gas supply piping and tubing related to the system being monitored for which gas is detected when a short-term hazard condition is detected. Automatic closure of shutoff valves shall comply with the following:*

- 1. Where the gas-detection sampling point initiating the gas detection system alarm is within a gas cabinet or exhausted enclosure, the shutoff valve in the gas cabinet or exhausted enclosure for the specific gas detected shall automatically close.*
- 2. Where the gas-detection sampling point initiating the gas detection system alarm is within a room and compressed gas containers are not in gas cabinets or an exhausted enclosure, the shutoff valves on all gas lines for the specific gas detected shall automatically close.*
- 3. Where the gas-detection sampling point initiating the gas detection system alarm is within a piping distribution manifold enclosure, the shutoff valve supplying the manifold for the compressed gas container of the specific gas detected shall automatically close.*

**Exception:** *Where the gas-detection sampling point initiating the gas detection system alarm is at the use location or within a gas valve enclosure of a branch line downstream of a piping distribution manifold, the shutoff valve for the branch line located in the piping distribution manifold enclosure shall automatically close.*

**415.9.8 Manual fire alarm system.** *An approved manual fire alarm system shall be provided throughout buildings containing Group H-5. Activation of the alarm system shall initiate a local alarm and transmit a signal to the emergency control station. The fire alarm system shall be designed and installed in accordance with Section 907.*

**415.9.9 Emergency control station.** *An emergency control station shall be provided on the premises at an approved location, outside of the fabrication area and shall be continuously staffed by trained personnel. The emergency control station shall receive signals from emergency equipment and alarm and detection systems. Such emergency equipment and alarm and detection systems shall include, but not necessarily be limited to, the following where such equipment or systems are required to be provided either in Section 415.9 or elsewhere in this code:*

- 1. Automatic fire sprinkler system alarm and monitoring systems.*
- 2. Manual fire alarm systems.*
- 3. Emergency alarm systems.*
- 4. Continuous gas-detection systems.*
- 5. Smoke detection systems.*
- 6. Emergency power system.*

**415.9.10 Emergency power system.** *An emergency power system shall be provided in Group H-5 occupancies where required in Section 415.9.10.1. The emergency power system shall be designed to supply power automatically to required electrical systems when the normal electrical supply system is interrupted.*

**415.9.10.1 Where required.** *Emergency power shall be provided for electrically operated equipment and connected control circuits for the following systems:*

- 1. HPM exhaust ventilation systems.*
- 2. HPM gas cabinet ventilation systems.*
- 3. HPM exhausted enclosure ventilation systems.*
- 4. HPM gas room ventilation systems.*
- 5. HPM gas detection systems.*

6. *Emergency alarm systems.*
7. *Manual fire alarm systems.*
8. *Automatic sprinkler system monitoring and alarm systems.*
9. *Electrically operated systems required elsewhere in this code applicable to the use, storage or handling of HPM.*

**415.9.10.2 Exhaust ventilation systems.** *Exhaust ventilation systems are allowed to be designed to operate at not less than one-half the normal fan speed on the emergency power system where it is demonstrated that the level of exhaust will maintain a safe atmosphere.*

**415.9.11 Fire sprinkler system protection in exhaust ducts for HPM.**

**415.9.11.1 General.** *Automatic fire sprinkler system protection shall be provided in exhaust ducts conveying vapors, fumes, mists or dusts generated from HPM in accordance with this section and the New York City Mechanical Code.*

**415.9.11.2 Metallic and noncombustible, nonmetallic exhaust ducts.** *Automatic fire sprinkler system protection shall be provided in metallic and noncombustible, nonmetallic exhaust ducts where all of the following conditions apply:*

1. *Where the largest cross-sectional diameter is equal to or greater than 10 inches (254 mm).*
2. *The ducts are within the building.*
3. *The ducts are conveying flammable vapors or fumes.*

**415.9.11.3 Combustible nonmetallic exhaust ducts.** *Automatic fire sprinkler system protection shall be provided in combustible nonmetallic exhaust ducts where the largest cross-sectional diameter of the duct is equal to or greater than 10 inches (254 mm).*

**Exceptions:**

1. *Ducts listed or approved for applications without automatic fire sprinkler system protection.*

2. *Ducts not more than 12 feet (3658 mm) in length installed below ceiling level.*

**415.9.11.4 Automatic sprinkler locations.** *Sprinkler systems shall be installed at 12-foot (3658 mm) intervals in horizontal ducts and at changes in direction. In vertical ducts, sprinklers shall be installed at the top and at alternate floor levels.*

## **SECTION BC 416**

### **APPLICATION OF FLAMMABLE FINISHES**

**416.1 General.** *The provisions of this section shall apply to the construction, installation and use of buildings and structures, or parts thereof, for the spraying of flammable paints, varnishes and lacquers or other flammable materials or mixtures or compounds used for painting, varnishing, staining or similar purposes. Such construction and equipment shall comply with the New York City Fire Code.*

**416.2 Spray rooms.** *Spray rooms shall be enclosed with fire barrier walls and horizontal assemblies or both with not less than a 2-hour fire-resistance rating. Floors shall be waterproofed and drained in an approved manner.*

**416.2.1 Surfaces.** *The interior surfaces of spray rooms shall be smooth and shall be so constructed to permit the free passage of exhaust air from all parts of the interior and to facilitate washing and cleaning, and shall be so designed to confine residues within the room. Aluminum shall not be used.*

**416.3 Spraying spaces.** *Spraying spaces shall be ventilated with an exhaust system capable of at least 6 air changes per hour to prevent the accumulation of flammable mist or vapors in accordance with the New York City Mechanical Code. Where such spaces are not separately enclosed, noncombustible spray curtains shall be provided to restrict the spread of flammable vapors.*

**416.3.1 Surfaces.** *The interior surfaces of spraying spaces shall be smooth and continuous without edges, and shall be so constructed to permit the free passage of exhaust air from all parts of the interior and to facilitate washing and cleaning, and shall be so designed to confine residues within the spraying space. Aluminum shall not be used.*

**416.4 Fire protection.** *An automatic fire-extinguishing system shall be provided in all spray, dip and immersing spaces and storage rooms, and shall be installed in accordance with Chapter 9.*

## **SECTION BC 417**

## **DRYING ROOMS**

**417.1 General.** A drying room or dry kiln installed within a building shall be constructed entirely of approved noncombustible materials or assemblies of such materials regulated by the approved rules or as required in the general and specific sections of Chapter 4 for special occupancies, where applicable to the general requirements of Chapter 28, and in accordance with the New York City Fire Code.

**417.2 Piping clearance.** Overhead heating pipes shall have a clearance of not less than 2 inches (51 mm) from combustible contents in the dryer.

**417.3 Insulation.** Where the operating temperature of the dryer is 175°F (79°C) or more, metal enclosures shall be insulated from adjacent combustible materials by not less than 12 inches (305 mm) of airspace, or the metal walls shall be lined with ¼-inch (6.4 mm) insulating mill board or other approved equivalent insulation.

**417.4 Fire Protection.** Drying rooms designed for high-hazard materials and processes, including special occupancies as provided for in Chapter 4, shall be protected by an approved automatic sprinkler or fire-extinguishing system conforming to the provisions of Chapter 9.

## **SECTION BC 418 ORGANIC COATINGS**

**418.1 Building features.** Manufacturing of organic coatings shall be done only in buildings that do not have pits or basements and shall comply with the New York City Fire Code. Such buildings shall be protected by an approved automatic sprinkler system in accordance with Chapter 9.

**418.2 Location.** Organic coating manufacturing operations and operations incidental to or connected therewith shall not be located in buildings having other occupancies.

**418.3 Process mills.** Mills operating with close clearances and that process flammable and heat-sensitive materials, such as nitrocellulose, shall be classified as Group H1 occupancy.

**418.4 Tank storage.** Storage areas for flammable and combustible liquid tanks inside of structures shall be located at or above grade and shall be separated from the processing area by not less than 2-hour fire-resistance-rated fire barriers.

**418.5 Nitrocellulose storage.** Nitrocellulose storage shall be located on a detached pad or in a separate structure or a room enclosed with no less than 2-hour fire-resistance-rated fire barriers.

**418.6 Finished products.** Storage rooms for finished products that are flammable or combustible liquids shall be separated from the processing area by fire barriers having a fire-resistance rating of at least 2 hours, and openings in the walls shall be protected with approved opening protectives.

**SECTION BC 419**  
**NON-PRODUCTION CHEMICAL LABORATORIES**

**419.1 General.** The provisions of this section shall govern the design, construction and chemical quantity limitations of buildings and portions thereof occupied or designed to be occupied as a non-production laboratory. Non-production laboratories shall be classified into occupancy groups in accordance with Section 419.5. The provisions of this section shall not apply to production laboratories classified in occupancy groups F or H.

**419.2 Standards.** Except as otherwise provided in this section, non-production laboratories shall meet the design, construction and chemical quantity limitation requirements for laboratory unit fire hazard class D, as set forth in NFPA 45, and the New York City Mechanical Code. The storage arrangement, handling and use of chemicals within non-production laboratories and accessory storage rooms, and the operation and maintenance of non-production laboratories shall comply with the requirements of the New York City Fire Code, and the rules of the Fire Commissioner.

**419.3 Prohibitions.** It shall be unlawful in any non-production laboratory to:

1. Store or use any explosive.
2. Store or use any unclassified detonable organic peroxide, detonable pyrophoric material, detonable unstable (reactive) material or detonable water-reactive material.
3. Store or use any Class 4 unstable (reactive) material.
4. Store or use any Class 4 oxidizing material.
5. Store or use any flammable gas below-grade.

**419.4 Definitions.** The following words and terms shall, for the purposes of this section, and as used elsewhere in this code, have the meanings shown herein.

**LABORATORY BUILDING.** A structure consisting wholly or principally of one or more laboratory units.

**LABORATORY CHEMICAL.** A material with a health, flammability, or instability hazard rating of 2, 3, or 4 as defined in NFPA 704.

**LABORATORY, NON-PRODUCTION.** A building or portion thereof wherein chemicals or gases are used or synthesized on a non-production basis for testing, research, experimental, instructional or educational purposes.

**LABORATORY UNIT.** An enclosed space of a minimum 1-hour fire-rated construction, designed or used as a non-production laboratory. Laboratory units may include one or more separate laboratory work areas, and accessory storage rooms or spaces within or contiguous with the laboratory unit, such as offices and lavatories.

**STORAGE CABINET.** A cabinet designed and constructed in accordance with UL 1275, Flammable Liquid Storage Cabinets, and used for the storage of not more than 60 gallons (227 L) of flammable and combustible liquids.

**STORAGE ROOM.** A room where laboratory chemicals or gases are stored and not otherwise used or synthesized.

**419.5 Classification.** Buildings or portions thereof occupied as a non-production laboratory may be classified as Group B occupancy provided they comply with the provisions of Section 419. Non-production laboratories not in compliance with the provisions of Section 419.7 for laboratory chemical quantity limitations shall be classified as Group H occupancy.

**419.5.1 Accessory use non-production laboratories.** Accessory non-production laboratories occupying an area not more than 10 percent of the area of the story in which it is located and not exceeding the tabular values in Table 503 for the allowable height or area for such use shall be classified according to the main occupancy. Such accessory non-production laboratories shall comply with the provisions of Section 419.

#### **419.6 Fire protection.**

**419.6.1 Sprinkler system.** Laboratory units shall be provided throughout with an automatic sprinkler system in accordance with Section 903.3.1.1. The entire building shall be provided throughout with an automatic sprinkler system when the aggregate floor area of all laboratory units within any building exceeds 20,000 square feet (1858 m<sup>2</sup>).

**419.6.2 Standpipe and hose system.** *In all non-production laboratory buildings that are two or more stories above or below the grade level (level of exit discharge), standpipes shall be installed in accordance with Section 905.2.*

**419.6.3 Fire alarm system.** *A manual fire alarm system shall be installed in accordance with Section 907.2.2, Section 907.2.3, or Section 907.2.6, as applicable.*

**419.7 Quantity limitations.**

**419.7.1 Flammable and combustible liquids.** *The density and total quantity of flammable and combustible liquids allowed within a laboratory unit, outside of storage rooms, shall comply with Table 10.1.1 of NFPA 45 for laboratory unit fire hazard class D.*

**Exceptions:** *The following exceptions apply to other than educational or instructional laboratories:*

- 1. The density of flammable and combustible liquids allowed within a laboratory unit may be increased to those set forth in Table 10.1.1 of NFPA 45 for laboratory unit fire hazard class B provided the total quantity of flammable and combustible liquid, including any in storage cabinets or safety cans, does not exceed 25 gallons (95 L).*
- 2. The density of flammable and combustible liquids allowed within a laboratory unit may be increased to those set forth in Table 10.1.1 of NFPA 45 for laboratory unit fire hazard class B provided the total quantity of flammable and combustible liquid, including any in storage cabinets or safety cans, does not exceed 30 gallons (114 L) and the walls, floors and ceilings of the laboratory unit are separated from all adjoining areas by 2-hour fire rated construction.*
- 3. Based on a density of 1 gallon per 100 square feet (3.785 L per 9.3 m<sup>2</sup>) of area, the quantity of flammable and combustible liquid allowed within a laboratory unit, excluding quantities in storage cabinets or safety cans, may be increased to 100 gallons (379 L), and the total quantities of flammable and combustible liquids, including quantities in storage cabinets or safety cans, may be increased to 200 gallons (775 L) provided the walls, floors and ceilings of the laboratory unit are separated from all adjoining areas by 2-hour fire rated construction.*

**419.7.2 Flammable solids.** The total quantity of flammable solids allowed within a laboratory unit, excluding any quantities in a storage room, shall not exceed 10 pounds (4.5 kg).

**Exception:** The total quantity of flammable solids allowed within a laboratory unit that is provided with walls, floors and ceilings that separate the laboratory unit from all adjoining areas by 2-hour fire rated construction shall not exceed 15 pounds (6.8 kg).

**419.7.3 Oxidizers and organic peroxides.** The total quantity of solid and liquid oxidizers and organic peroxides combined allowed within a laboratory unit, excluding any quantities in a storage room, shall not exceed 40 pounds (18 kg), provided not more than 2 pounds (0.908 kg) of which are Class 3 oxidizers and 1 pound (0.454 kg) of which are Class I organic peroxides.

**Exception:** The total quantity of solid and liquid oxidizers and organic peroxides combined allowed within a laboratory unit that is provided with walls, floors and ceilings that separate the laboratory unit from all adjoining areas by 2-hour fire rated construction shall not exceed 50 pounds (23 kg), provided not more than 2 pounds (0.908 kg) of which are Class 3 oxidizers and 1 pound (0.454 kg) of which are Class I organic peroxides.

**419.7.4 Unstable (reactive).** The total quantity of unstable (reactive) material allowed within a laboratory unit, excluding any quantities in a storage room, shall not exceed 6 pounds (2.7 kg), provided not more than 1 pound (0.454 kg) of which are Class 3 unstable (reactive).

**Exception:** The total quantity of unstable (reactive) material allowed within a laboratory unit that is provided with walls, floors and ceilings that separate the laboratory unit from all adjoining areas by 2-hour fire rated construction shall not exceed 12 pounds (5.4 kg), provided not more than 1 pound (0.454 kg) of which are Class 3 unstable (reactive).

**419.7.5 Water reactive material.** The total quantity of water reactive material allowed within a laboratory unit, excluding any quantities in a storage room, shall not exceed 2.5 pounds (1.1 kg).

**Exception:** The total quantity of water reactive material allowed within a laboratory unit that is provided with walls, floors and ceilings that separate the laboratory unit from all adjoining areas by 2-hour fire rated construction shall not exceed 5 pounds (2.3 kg).

**419.7.6 Pyrophoric material.** The total quantity of solid or liquid pyrophoric material allowed within a laboratory unit, excluding any quantities in a storage room, shall not exceed 0.5 pounds (0.227 kg).

**Exception:** *The total quantity of pyrophoric material allowed within a laboratory unit that is provided with walls, floors and ceilings that separate the laboratory unit from all adjoining areas by 2-hour fire rated construction shall not exceed 1 pound (0.454 kg).*

**419.7.7 Highly toxic material.** *The total quantity of solid or liquid highly toxic material allowed within a laboratory unit, excluding any quantities in a storage room, shall not exceed 5 pounds (0.227 kg).*

**419.7.8 Toxic material.** *The total quantity of solid or liquid toxic material allowed within a laboratory unit, excluding any quantities in a storage room, shall not exceed 250 pounds (946 L).*

**419.7.9 Corrosive material.** *The total quantity of solid or liquid corrosive material allowed within a laboratory unit, excluding any quantity in a storage room, shall not exceed 250 gallons (946 L).*

**419.7.10 Highly toxic and toxic gases.** *In educational and instructional laboratories, the total quantity of highly toxic and toxic gases combined allowed within a laboratory unit, excluding any quantities in a storage room, shall not exceed 20 standard cubic feet (0.56 standard cubic m).*

**419.8 Storage room classification.** *Storage rooms for laboratory chemicals accessory to a laboratory unit shall be classified as occupancy group S-1 provided they comply with the provisions of Section 419.9. Storage rooms not in compliance with the provisions of Section 419.9 for laboratory chemical quantity limitations shall be classified as Group H occupancy.*

**419.9 Storage rooms.** *In addition to the quantities allowed within a laboratory unit by Section 419.7, laboratory chemicals that are accessory to a laboratory unit may be stored, whether outside of or entirely within a laboratory unit, in dedicated storage rooms complying with all of the following:*

- 1. Storage room capacity shall be limited to a maximum of 300 gallons (1136 L) of laboratory chemicals, not to exceed 5 gallons per square foot (0.125 L/m<sup>2</sup>) of floor area.*
- 2. Flammable gas storage rooms shall be limited to 2,500 standard cubic feet (71 standard cubic m) of flammable gas.*
- 3. Storage rooms shall be enclosed by a minimum of 2-hour rated fire barriers.*
- 4. Storage rooms shall be equipped with a continuously operated ventilation system that provides at least 6 changes of air per hour and vents to the outdoors.*

5. *Each entrance to the storage room shall be provided with a minimum 1½-hour rated self-closing fire door.*
6. *Each entrance to the storage room shall be provided with a sill at the doorway, except that no sill shall be required in storage rooms containing only flammable gases.*
7. *Storage rooms shall be equipped with an automatic sprinkler system providing at least one sprinkler for each 90 square feet (8.4 m<sup>2</sup>) or portion thereof.*
8. *Laboratory chemicals that are incompatible with each other shall not be stored in the same storage room unless in compliance with the New York City Fire Code for separation of incompatible materials.*
9. *Storage rooms shall not open directly to an exit or any enclosed exit access component.*
10. *The floor of any storage room storing flammable gases shall be located at or above grade.*

**419.10 Ventilation.** *Non-production laboratories shall be ventilated in accordance with Section 407 of the New York City Mechanical Code.*

#### **BC SECTION 420**

#### **USES AND OCCUPANCIES INVOLVING RADIOACTIVE MATERIALS AND RADIATION-PRODUCING EQUIPMENT**

**420.1 Scope.** *This section shall apply to the construction, alteration, and use of buildings or spaces for radioactive materials and radiation-producing equipment.*

**420.2 City, state and federal regulations.** *In addition to the requirements of this section, occupancies involving radioactive materials and radiation-producing equipment shall also comply with applicable requirements of the city health code, and applicable state and federal regulations.*

**420.3 Laboratories.** *All laboratories utilizing radioactive materials or radiation producing equipment required to register under the requirements of the New York City Health Code shall comply with the requirements of Section 420.3.1 to 420.3.7.*

**420.3.1 Construction.** *All buildings in which such laboratories occur shall be of group I or II construction.*

**420.3.2 Floors.** All floors shall comply with the fire resistance requirements for the class of construction, and provide the degree of radioactive resistance required by applicable city, state, and federal regulations. A finished material shall be applied to provide a continuous nonporous surface, which may be readily removed.

**420.3.3 Interior finish.** All insulation of acoustical treatments and interior partitions shall be of noncombustible material. Walls and ceilings shall have nonporous finishes of class A rating.

**420.3.4 Sprinkler protection.** Automatic sprinkler protection complying with the construction provisions of Chapter 9 of the New York City Building Code shall be provided, and such protection shall be designed for the type of combustible materials wherever such material is used, and for the radioactive material that may be expected to melt, vaporize, or oxidize under fire conditions. Laboratory equipment susceptible to damage from water or other materials used in the sprinkler system may be shielded by hoods except when the equipment provides a source of combustion. Where sprinkler protection uses water, or small water-spray installations are used to fight small isolated fires, floors shall be provided with drainage so that water may be carried to retention tanks for later disposal as required by the New York City Health Code when contamination of the water is to be anticipated.

**420.3.5 Electrical controls.** Electrical controls and equipment shall be installed in accordance with the requirements of the New York City Electrical Code.

**420.3.6 Ventilation.** Exhaust air from areas in which radioactive materials are used or stored shall be exhausted to the outdoors in such manner as not to create a health hazard, and shall not be re-circulated to other areas of the building. Air pressure in rooms in which radioactive materials are used or stored shall be maintained below the air pressure of adjoining rooms, so that there is no flow of radioactive gases or dusts into adjoining rooms.

**420.3.6.1 Ducts.** Ducts shall be of sheet steel of not less than No. 16 manufacturers' standard gauge or of other equivalent noncombustible material having a melting point above 1800°F (982°C). Exhaust ducts within the building, on the discharge side of the fan, shall be welded airtight. Exhaust ducts within the building, on the suction side of the fan shall have laps in the direction of air flow with smoke-tight joints, and shall be subjected to a smoke test in accordance with the requirements for chimneys in the New York City Mechanical Code. Access hatches with tight-closing covers shall be provided for cleaning and for fire-fighting in the exhaust system ducts.

**420.3.6.2 Fume hoods.** *Fume hoods shall be exhausted to the outdoors. Controls for hood fans shall be interlocked so that contaminated air cannot be drawn into any space from a hood where the exhaust fan is not in operation.*

**420.3.6.3 Fans.** *Fan equipment other than the impeller and impeller housing shall be located outside the exhaust stream.*

**420.3.6.4 Exhaust.** *When the degree of contamination of the exhaust stream exceeds the concentration limits permitted by the health code, the duct system shall be equipped with devices to decontaminate the air to a safe level before discharging to the outdoor air.*

**420.3.7 Plumbing.** *Drainage lines from sinks used for radioactive wastes shall be without traps, and shall lead to retention tanks when required by the provisions of the New York City Health Code.*

**420.4 Radiation machines.** *Radiation machines or particle accelerators, linear accelerators, cyclotrons, synchrotrons, betatrons, or bevatrons shall be located only in buildings of group I or II construction; however, this requirement shall not apply to conventional medical, dental, research, or industrial x-ray machines of less than one million volt capacity.*

**420.5 Storage.** *Radioactive materials shall be stored in sealed containers. When required by the commissioner to avoid too concentrated an exposure within any one space, radioactive materials shall be stored in vaults designed in accordance with the radiation shielding or other requirements for the materials to be stored, and with the requirements of Sections 420.5.1 to 420.5.3.*

**420.5.1 Fire protection.** *When any materials are subject to melting, vaporization, or oxidation under fire conditions, the storage vaults shall be constructed of walls having a fire-resistance rating of at least four hours, and the vaults shall be equipped with automatic sprinklers complying with the construction requirements of Chapter 9 of the New York City Building Code and shall be vented through devices to decontaminate the air to a safe level.*

**420.5.2 Doors.** *Doors opening into storage vaults shall meet shielding requirements and have a fire-protection rating of not less than three hours.*

**420.5.3 Bins, shelving, partitions, and pallets.** *All bins, shelving, partitions, and pallets in storage vaults shall be of noncombustible materials. Other methods of storage permitted by the health department or applicable state and federal regulations, such as storage under water, may be used.*

**CHAPTER 5**  
**GENERAL BUILDING HEIGHTS AND AREAS**

**SECTION BC 501**  
**GENERAL**

**501.1 Scope.** *The provisions of this chapter control the height and area of structures hereafter erected and additions to existing structures.*

**501.2 Premises identification.** *Approved numbers or addresses shall be provided for new buildings and shall be placed in such a position as to be clearly visible and legible from the street or roadway fronting the property. Address numbers shall be Arabic numerals or alphabet letters and shall be a minimum 4 inches (102 mm) in height and stroke of minimum 0.5 inch (12.7 mm) of a contrasting color to the background itself.*

**501.3 Fire Department access.**

**501.3.1 Frontage.** *Every building, exclusive of accessory buildings, shall have at least 8 percent of the total perimeter of the building adjoining a street or frontage space. For the purposes of this section, building perimeter shall be measured at that story having the maximum enclosed floor area; and buildings provided with a front yard or front setback no deeper than 30 feet (9144 mm) in compliance with the Zoning Resolution shall be considered as adjoining the street or frontage space.*

**501.3.2 Building access.** *Provisions shall be made for access by the Fire Department to every building in accordance with this section.*

**Exception:** *The provisions of Section 501.3.2 shall not apply to any story that is completely protected by an automatic sprinkler system complying with Section 903.3.1. Such exception shall not apply to access to cellars or basements as required by Section 54 of the New York State Multiple Dwelling Law.*

**501.3.2.1 Above grade.** *Access shall be provided directly from the outdoors to each story below a height of 100 feet (30 480 mm) except to the first story or ground floor, by at least one window or readily identifiable access panel within each 50 feet (15 240 mm) or fraction thereof of horizontal length of every wall that fronts on a street or frontage space. All windows shall be openable from the inside or breakable from both the inside and the outside, and shall have a size when open of at least 24 inches by 36 inches (610 mm by 914 mm). Panels shall be openable from both the inside*

and outside and shall have a height when open of 48 inches (1219 mm) and a width of at least 32 inches (813 mm). The sill of the window or panel shall not be higher than 36 inches (914 mm) above the inside floor.

**Exception:** Where not all of the windows are openable or breakable, the windows intended to satisfy the requirements of Section 501.3.2.1 shall be readily identifiable.

**501.3.2.2 Below grade.** Access shall be provided directly from the outdoors to the first basement or cellar story below grade, except as provided below, within each 100 feet (30 480 mm) or fraction thereof of horizontal length of every wall that fronts on a street or frontage space. Such access shall be by stairs, doors, windows or other means that provide an opening 48 inches (1219 mm) high and 32 inches (813 mm) wide, the sill of which shall not be higher than 36 inches (914 mm) above the inside floor. If an areaway is used to provide below grade access, the minimum horizontal dimension shall be at least one-third the depth of the areaway or 6 feet (1829 mm) whichever is less.

1. One- and two-family dwellings need not provide direct access.
2. Any building classified occupied by group R-2 not more than three stories in height and with not more than two dwelling units on any story need not provide direct access when such first basement or cellar story is used for dwelling units or for uses accessory to the residential use in the building.
3. Except as provided in item 2 above, for Group R-1 or R-2 occupancies, only one direct access from the outdoors to the first basement or cellar story consisting of a stair or door shall be required when such story is used for dwelling units or for uses accessory to the residential use in the building.

**501.3.2.3 Signs obstructing openings.** Where wall signs are erected to cover doors or windows of existing buildings, access panels shall be provided as necessary to comply with the requirements of Sections 501.3.2.1 and 501.3.2.2.

**501.3.2.4 Location.** Wherever practicable, one access opening in each story shall provide access to a stairway, or where there is no stairway at the exterior wall, one access opening in each story shall be located as close as practicable to a stairway.

## **SECTIONS BC 502**

## **DEFINITIONS**

**502.1 Definitions.** *The following words and terms shall, for the purposes of this chapter and as used elsewhere in this code, have the meanings shown herein.*

**AREA, BUILDING.** *The area included within surrounding exterior walls (or exterior walls and firewalls) exclusive of vent shafts and courts. Areas of the building not provided with surrounding walls shall be included in the building area if such areas are included within the horizontal projection of the roof or floor above.*

**BASEMENT.** *A story partly below the grade plane and having less than one-half its clear height (measured from finished floor to finished ceiling) below the grade plane (see "Story", "Story above grade plane" in Section 502.1).*

**CELLAR.** *That portion of a building that is partly or wholly underground, and having one-half or more of its clear height (measured from finished floor to finished ceiling) below the grade plane. Cellars shall not be counted as stories in measuring the height of the buildings.*

**FRONTAGE SPACE.** *A street; or an open space adjoining a building not less than 30 feet (9144 mm) in any dimension. Such open space shall be accessible from a street by a driveway, lane, private road or alley at least 20 feet (6096 mm) in width. Frontage space including accessways shall be permanently maintained free of all obstructions that might interfere with its use by the Fire Department.*

**GRADE PLANE.** *A reference plane representing the level of the curb as established by the city engineer in the Borough President's office, measured at the center of the front of a building. Where a building faces on more than one street, the grade plane shall be the average of the levels of the curbs at the center of each front.*

**Exception:** *The grade plane shall not be referenced to the level of the curb, but shall be considered the average elevation of the final grade adjoining all exterior walls of a building, calculated from final grade elevations taken at intervals of 10 feet (3048 mm) around the perimeter of the building where:*

- 1. No curb elevation has been legally established on the city map; or*
- 2. Every part of the building is set back more than 25 feet (7620 mm) from a street line.*

**HEIGHT, BUILDING.** *The vertical distance from the grade plane to the average height of the highest roof surfaces.*

**HEIGHT, STORY.** *The vertical distance from top to top of two successive finished floor surfaces; and, for the topmost story, from the top of the floor finish to the top of the ceiling joists or, where there is not a ceiling, to the top of the roof rafters.*

**INDUSTRIAL EQUIPMENT PLATFORM.** *An unoccupied, elevated platform in an industrial occupancy used exclusively for mechanical systems or industrial process equipment, including the associated elevated walkways, stairs and ladders necessary to access the platform (see Section 505.5).*

**MEZZANINE.** *An intermediate level or levels between the floor and ceiling of any story with an aggregate floor area of not more than one-third of the area of the room or space in which the level or levels are located (see Section 505).*

**STORY ABOVE GRADE PLANE.** *Any story having its finished floor surface entirely above grade plane, except that a basement shall also be considered a story above grade plane (also see “Basement” and “Story”).*

**STORY.** *That portion of a building included between the upper surface of a floor and the upper surface of the floor or roof next above (also see “Basement” and “Mezzanine”).*

### **SECTION BC 503**

#### **GENERAL HEIGHT AND AREA LIMITATIONS**

**503.1 General.** *The height and area for buildings of different construction types shall be governed by the intended use and occupancy of the building and shall not exceed the limits in Table 503 except as modified hereafter. Each part of a building included within the exterior walls or the exterior walls and fire walls where provided shall be permitted to be a separate building.*

**503.1.1 Basements.** *Basements need not be included in the total allowable area provided:*

- 1. They do not exceed the area permitted for a one-story building; and*
- 2. The finished surface of the floor above the basement does not exceed 6 feet (1829 mm) above grade plane.*

**503.1.2 Special industrial occupancies.** *Buildings and structures of Type I and II construction designed to house low-hazard industrial processes that require large areas and unusual heights to*

*accommodate craneways or special machinery and equipment including, among others, rolling mills; structural metal fabrication shops and foundries; or the production and distribution of electric, gas or steam power, shall be exempt from the height and area limitations of Table 503.*

**503.1.3 Buildings on same tax lot.** *Two or more buildings on the same tax lot and under the same ownership and control shall be regulated as separate buildings, or shall be considered as portions of one building if the height of each building and the aggregate area of buildings are within the limitations of Table 503 as modified by Sections 504 and 506. The provisions of this code applicable to the aggregate building shall be applicable to each building.*

**503.1.4 Type I construction.** *Buildings of Type I construction permitted to be of unlimited tabular heights and areas in accordance with Table 503 are not required to comply with the special requirements that allow unlimited area buildings in Section 507 or unlimited height in Sections 503.1.2 and 504.3 or increased height and areas for other types of construction.*

**TABLE 503**

**ALLOWABLE HEIGHT AND BUILDING AREAS**

*Height limitations shown as stories and feet above grade plane.*

*Area limitations as determined by the definition of "Area, building," per floor.*

For SI: 1 foot = 304.8 mm, 1 square foot = 0.0929 m<sup>2</sup>.

*UL* = Unlimited, *NP* = Not permitted.

b. For open parking structures, see Section 406.3.

c. For private garages, see Section 406.1.

	Not permitted in Fire District
	Not permitted in Fire District without sprinklers

503.2 Reserved.

**SECTION BC 504**  
**HEIGHT MODIFICATIONS**

**504.1 General.** *The heights permitted by Table 503 shall only be increased in accordance with this section.*

**Exception:** *The height of one-story aircraft hangars, aircraft paint hangars and buildings used for the manufacturing of aircraft shall not be limited if the building is provided with an automatic fire-extinguishing system in accordance with Chapter 9 and is entirely surrounded by public ways or yards not less in width than one and one-half times the height of the building.*

**504.2 Automatic sprinkler system increase.** *Where a building is equipped throughout with an approved automatic sprinkler system in accordance with Section 903.3.1.1, the value specified in Table 503 for maximum height is increased by 20 feet (6096 mm) and the maximum number of stories is increased by one story. These increases are permitted in addition to the area increase in accordance with Sections 506.2 and 506.3. For Group R buildings equipped throughout with an approved automatic sprinkler system in accordance with Section 903.3.1.2, the value specified in Table 503 for maximum height is increased by 20 feet (6096 mm) and the maximum number of stories is increased by one story, but shall not exceed six stories or 60 feet (18 288 mm), respectively.*

**Exceptions:**

1. *Group I-2 of Type IIB, III, IV or V construction.*
2. *Group H-1, H-2, H-3 or H-5.*
3. *Fire-resistance rating substitution in accordance with Table 601, Note d.*

**504.3 Rooftop structures.** *Rooftop structures including but not limited to roof tanks and their supports, ventilating, air conditioning and similar building service equipment, bulkheads, penthouses, chimneys, and parapet walls 4 feet (1219 mm) or less in height shall not be included in the height of the building or considered an additional story unless the aggregate area of all such structures exceeds 33 and one-third percent of the area of the roof of the building upon which they are erected. Rooftop structures shall be constructed in accordance with Section 1509.*

## **SECTION BC 505**

### **MEZZANINES**

**505.1 General.** A mezzanine or mezzanines in compliance with this section shall be considered a portion of the floor below. Such mezzanines shall not contribute to either the building area or number of stories as regulated by Section 503.1. The area of the mezzanine shall be included in determining the fire area defined in Section 702. The clear height above and below the mezzanine floor construction shall not be less than 7 feet (2134 mm).

**Exception:** The clear height of habitable spaces above or below mezzanines within dwelling units shall not be less than 8 feet (2438 mm).

**505.2 Area limitation.** The aggregate area of a mezzanine or mezzanines within a room or space shall not exceed one-third of the area of that room or space in which they are located. The enclosed portions of a room or space shall not be included in determining the permissible floor area of the mezzanine. The area of the mezzanine shall not contribute to the determination of the floor area of the room or space below.

**Exception:**

1. The aggregate area of mezzanines in buildings and structures of Type I or II construction for special industrial occupancies in accordance with Section 503.1.2 shall not exceed two-thirds of the area of the room.
2. The aggregate area of a mezzanine or mezzanines within a dwelling unit shall not exceed one-third of the net floor area of such dwelling unit, whether or not portions of such dwelling unit are enclosed. The area of the mezzanine shall not contribute to the determination of the floor area of the dwelling unit below.

**505.3 Egress.** Each occupant of a mezzanine shall have access to at least two independent means of egress where the common path of egress travel exceeds the limitations of Section 1013.3. Where a stairway provides a means of exit access from a mezzanine, the maximum travel distance includes the distance traveled on the stairway measured in the plane of the tread nosing.

**Exceptions:**

1. A single means of egress shall be permitted in accordance with Section 1014.1.

2. Accessible means of egress shall be provided in accordance with Section 1007.

**505.4 Openness.** A mezzanine shall be open and unobstructed to the room in which such mezzanine is located except for walls or railings not more than 42 inches (1067 mm) high, columns and posts.

**Exceptions:**

1. Mezzanines or portions thereof are not required to be open to the room in which the mezzanines are located, provided that the occupant load of the aggregate area of the enclosed space does not exceed 10.
2. A mezzanine having two or more means of egress is not required to be open to the room in which the mezzanine is located, if at least one of the means of egress provides direct access to an exit from the mezzanine level.
3. Mezzanines or portions thereof are not required to be open to the room in which the mezzanines are located, provided that the aggregate floor area of the enclosed space does not exceed 10 percent of the mezzanine area.
4. In industrial facilities, mezzanines used for control equipment are permitted to be glazed on all sides.
5. In Group F occupancies of unlimited area, meeting the requirements of Section 507.2 or 507.3, mezzanines or portions thereof are not required to be open to the room in which the mezzanines are located, provided that an approved fire alarm system is installed throughout the entire building or structure and notification appliances are installed throughout the mezzanines in accordance with the provisions of NFPA 72. In addition, the fire alarm system shall be initiated by automatic sprinkler water flow.

**505.5 Industrial equipment platforms.** Industrial equipment platforms in buildings shall not be considered as a portion of the floor below. Such equipment platforms shall not contribute to either the building area or the number of stories as regulated by Section 503.1. The area of the industrial equipment platform shall not be included in determining the fire area. Industrial equipment platforms shall not be a part of any mezzanine, and such platforms and the walkways, stairs and ladders providing access to an equipment platform shall not serve as a part of the means of egress from the building.

**505.5.1 Area limitations.** *The aggregate area of all industrial equipment platforms within a room shall not exceed two-thirds of the area of the room in which they occur. Where an equipment platform is located in the same room as a mezzanine, the area of the mezzanine shall be determined by Section 505.2, and the combined aggregate area of the equipment platforms and mezzanines shall not exceed two-thirds of the room in which they occur.*

**505.5.2 Fire suppression.** *Where located in a building that is required to be protected by an automatic sprinkler system, industrial equipment platforms shall be fully protected by sprinklers above and below the platform, where required by the standards referenced in Section 903.3.*

**505.5.3 Guards.** *Equipment platforms shall have guards where required by Section 1012.1.*

**SECTION BC 506**  
**AREA MODIFICATIONS**

**506.1 General.** *The areas limited by Table 503 shall be permitted to be increased due to frontage ( $I_f$ ) and automatic sprinkler system protection ( $I_s$ ) in accordance with the following:*

$$A_a = A_t + \left[ \frac{A_t I_f}{100} \right] + \left[ \frac{A_t I_s}{100} \right] \quad \text{(Equation 5-1)}$$

where:

- $A_a$  = Allowable area per floor (square feet).
- $A_t$  = Tabular area per floor in accordance with Table 503 (square feet).
- $I_f$  = Area increase due to frontage (percent) as calculated in accordance with Section 506.2.
- $I_s$  = Area increase due to sprinkler protection (percent) as calculated in accordance with Section 506.3.

**506.2 Frontage increase.** *Where a building has more than 25 percent of its perimeter adjoining a public way or open space having a minimum width of 20 feet (6096 mm), the frontage increase shall be determined in accordance with the following:*

$$I_f = 100 \left[ \frac{F}{P} - 0.25 \right] \frac{W}{30} \quad \text{(Equation 5-2)}$$

where:

$I_f$  = Area increase due to frontage.

$F$  = Building perimeter which fronts on a public way or open space having 20 feet (6096 mm) open minimum width (feet).

$P$  = Perimeter of entire building (feet).

$W$  = Width of public way or open space (feet) in accordance with Section 506.2.1.

**506.2.1 Width limits.**  $W$  must be at least 20 feet (6096 mm) and the quantity  $W$  divided by 30 shall not exceed 1.0. Where the value of  $W$  varies along the perimeter of the

**506.2.1 Width limits.** *W must be at least 20 feet (6096 mm) and the quantity W divided by 30 shall not exceed 1.0. Where the value of W varies along the perimeter of the building, the calculation performed in accordance with Equation 5-2 shall be based on the weighted average of each portion of exterior wall and open space where the value of W is between 20 and 30 feet (6096 and 9144 mm).*

**Exception:** *The quantity W divided by 30 shall be permitted to not exceed 2.0 when all of the following conditions exist:*

- 1. The building is permitted to be unlimited in area by Section 507; and*
- 2. The only provision preventing unlimited area is compliance with the 60-foot (18 288 mm) public way or yard requirement, as applicable.*

**506.2.2 Open space limits.** *Such open space shall be either on the same zoning lot or dedicated for public use and shall be accessed from a street or approved fire lane.*

**506.3 Automatic sprinkler system increase.** *Where a building is protected throughout with an approved automatic sprinkler system in accordance with Section 903.3.1.1, the area limitation in Table 503 is permitted to be increased by an additional 200 percent ( $I_s = 200$  percent) for multistory buildings and an additional 300 percent ( $I_s = 300$  percent) for single-story buildings. These increases are permitted in addition to the height and story increases in accordance with Section 504.2.*

**Exceptions:**

- 1. Buildings with an occupancy in Group H-1, H-2 or H-3.*
- 2. Fire-resistance rating substitution in accordance with Table 601, Note d.*

**506.4 Area determination.** *The maximum area of a building with more than one story shall be determined by multiplying the allowable area per floor ( $A_a$ ), as determined in Section 506.1, by the number of stories as listed below.*

- 1. For two-story buildings, multiply by 2;*
- 2. For three-story or higher buildings, multiply by 3; and*

3. No story shall exceed the allowable area per floor ( $A_a$ ), as determined in Section 506.1 for the occupancies on that floor.

**Exceptions:**

1. Unlimited area buildings in accordance with Section 507.
2. In group R occupancies 6 stories or less in height, the maximum area of a building equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.2 shall be determined by multiplying the allowable area per floor ( $A_a$ ), as determined in Section 506.1 by the number of stories.

**SECTION BC 507**  
**UNLIMITED AREA BUILDINGS**

**507.1 Nonsprinklered, one story.** The area of a one-story, Group F-2 or S-2 building of other than Type V construction shall not be limited when the building is surrounded and adjoined on all sides by public ways or yards not less than 60 feet (18 288 mm) in width.

**507.2 Sprinklered, one story.** The area of a one-story, Group B, F, M or S building or a one-story Group A-4 building of other than Type V construction shall not be limited when the building is provided with an automatic sprinkler system throughout in accordance with Section 903.3.1.1, and is surrounded and adjoined on all sides by public ways or yards not less than 60 feet (18 288 mm) in width. However, in Group F-2 and S-2 occupancies, one-story rack storage facilities of Type I and II construction that are not accessible to the public shall not be limited in height provided that such buildings conform to the requirements of this section and NFPA 231C.

**Exception:** The automatic sprinkler system shall not be required in areas occupied for indoor participant sports, such as tennis, skating, swimming and equestrian activities, in occupancies in Group A-4, provided that:

1. Exit doors directly to the outside are provided for occupants of the participant sports areas;  
and
2. The building is equipped with a fire alarm system with manual fire alarm boxes installed in accordance with Section 907.

**507.3 Sprinklered, two story.** *The area of a two-story, Group B, F, M or S building shall not be limited when the building is provided with an automatic sprinkler system in accordance with Section 903.3.1.1 throughout, and is surrounded and adjoined on all sides by public ways or yards not less than 60 feet (18 288 mm) in width.*

**507.4 Reduced open space.** *The permanent open space of 60 feet (18 288 mm) required in Sections 507.1, 507.2 and 507.3 shall be permitted to be reduced to not less than 40 feet (12 192 mm) provided the following requirements are met:*

- 1. The reduced open space shall not be allowed for more than 75 percent of the perimeter of the building.*
- 2. The exterior wall facing the reduced open space shall have a minimum fire-resistance rating of 3 hours.*
- 3. Openings in the exterior wall, facing the reduced open space, shall have opening protectives with a fire-resistance rating of 3 hours.*

**507.5 Group A buildings.** *The area of a Group A-1, A-2, A-3, or A-4 building of Type IIA, IIIA, or IV construction shall not be limited where the building is equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1. The area of a one-story, Group A-3 building used as a house of worship, community hall, dance hall, exhibition hall, gymnasium, lecture hall, indoor swimming pool or tennis court of Type IIB construction shall not be limited when all of the following criteria are met:*

- 1. The building shall not have a stage other than a platform.*
- 2. The building shall be equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.*
- 3. The assembly floor shall be located at or within 21 inches (533 mm) of street or grade level and all exits are provided with ramps complying with Section 1010.1 to the street or grade level.*
- 4. The building shall be surrounded and adjoined on all sides by public ways or yards not less than 60 feet (18 288 mm) in width.*

**507.6 High-hazard occupancy groups.** *Group H-2, H-3 and H-4 fire areas shall be permitted in unlimited area buildings having occupancies in Groups F and S, in accordance with the limitations of this section.*

*Fire areas located at the perimeter of the unlimited area building shall not exceed 10 percent of the area of the building, nor the area limitations specified in Table 503 as modified by Section 506.2, based upon the percentage of the perimeter of the fire area that fronts on a street or other unoccupied space. Other fire areas shall not exceed 25 percent of the area limitations specified in Table 503. Fire-resistance-rating requirements of fire barrier assemblies shall be in accordance with Table 302.3.2.*

**507.7 Reserved.**

**507.8 Group E buildings.** *The area of a Group E building of Type IIA, IIIA or IV construction shall not be limited where the building is protected throughout with an approved automatic sprinkler system in accordance with Section 903.3.1.1. The area of a one-story Group E building of Type II, IIIA or IV construction shall not be limited when the following criteria are met:*

- 1. Each classroom shall have not less than two means of egress, with one of the means of egress being a direct exit to the outside of the building complying with Section 1017.*
- 2. The building is equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.*
- 3. The building is surrounded and adjoined on all sides by public ways or yards not less than 60 feet (18 288 mm) in width.*

**507.9 Motion picture theaters.** *In buildings of Type II, IIIA and IV construction, the area of one-story motion picture theaters shall not be limited when the building is provided with an automatic sprinkler system throughout in accordance with Section 903.3.1.1 and is surrounded and adjoined on all sides by public ways or yards not less than 60 feet (18 288 mm) in width.*

**507.10 Group B buildings.** *The area of a Group B building of Type IIA, IIIA or IV construction shall not be limited where the building is protected throughout with an approved automatic sprinkler system in accordance with Section 903.3.1.1.*

**507.11 Group F-2 buildings.** *The area of a Group F-2 building of Type IIA, IIIA or IV construction shall not be limited where the building is protected throughout with an approved automatic sprinkler system in accordance with Section 903.3.1.1.*

**507.12 Group M buildings.** *The area of a Group M building of Type IIA, IIIA or IV construction shall not be limited where the building is protected throughout with an approved automatic sprinkler system in accordance with Section 903.3.1.1.*

**507.13 Group R buildings.** *The area of a Group R1 and R-2 building of Type IIA, IIIA or IV construction shall not be limited where the building is protected throughout with an approved automatic sprinkler system in accordance with Sections 903.3.1.1 or 903.3.1.2, as applicable.*

**507.14 Group S-2 buildings.** *The area of a Group S-2 building of Type IB, IIA, IIIA or IV construction shall not be limited where the building is protected throughout with an approved automatic sprinkler system in accordance with Section 903.3.1.1.*

## **SECTION BC 508 SPECIAL PROVISIONS**

**508.1 General.** *The provisions in this section shall permit the use of special conditions that are exempt from, or modify, the specific requirements of this chapter regarding the allowable heights and areas of buildings based on the occupancy classification and type of construction, provided the special condition complies with the provisions specified in this section for such condition and other applicable requirements of this code.*

**508.2 Group S-2 enclosed parking garage with Group A, B, M or R above.** *A basement and/or the first story above grade plane of a building shall be considered as a separate and distinct building for the purpose of determining area limitations, continuity of fire walls, limitation of number of stories and type of construction, when all of the following conditions are met:*

- 1. The basement and/or the first story above grade plane is of Type IA construction and is separated from the building above with a horizontal floor assembly having a minimum 3-hour fire-resistance rating.*
- 2. Shaft, stairway, ramp or escalator enclosures through the horizontal floor assembly shall have a minimum of 2-hour fire-resistance rating with opening protectives in accordance with Table 715.3.*

**Exception:** *Where the enclosure walls below the horizontal floor assembly have a minimum of 3-hour fire-resistance rating with opening protectives in accordance with Table 715.3, the enclosure walls extending above the horizontal floor assembly shall be permitted to have a 1-hour fire-resistance rating provided:*

1. *The building above the horizontal floor assembly is not required to be of Type I construction;*
2. *The enclosure connects less than four stories, and*
3. *The enclosure opening protectives above the horizontal floor assembly have a minimum 1-hour fire protection rating.*
3. *The building above the horizontal floor assembly contains only Group A having an assembly room with an occupant load of less than 300, or Group B, M or R; and*
4. *The building below the horizontal floor assembly is a Group S-2 enclosed parking garage, used for the parking and storage of private motor vehicles.*

***Exceptions:***

1. *Entry lobbies, mechanical rooms, accessory storage and similar uses incidental to the operation of the building shall be permitted.*
2. *Group A having an assembly room with an occupant load of less than 300, or Group B or M shall be permitted in addition to those uses incidental to the operation of the building, provided that the entire structure below the horizontal floor assembly is protected throughout by an approved automatic sprinkler system.*
5. *The maximum building height in feet/meters as measured from the grade plane shall not exceed the limits set forth in Table 503 for the least restrictive type of construction involved.*

***508.3 Group S-2 enclosed parking garage with Group S-2 open parking garage above.*** A Group S-2 enclosed parking garage located in the basement or first story below a Group S-2 open parking garage shall be classified as a separate and distinct building for the purpose of determining the type of construction when the following conditions are met:

1. *The allowable area of the structure shall be such that the sum of the ratios of the actual area divided by the allowable area for each separate occupancy shall not exceed 1.0.*

2. *The Group S-2 enclosed parking garage is of Type I or II construction and is at least equal to the fire-resistance requirements of the Group S-2 open parking garage.*
3. *The height and the number of the floors above the basement shall be limited as specified in Table 406.3.5.*
4. *The floor assembly separating the Group S-2 enclosed parking garage and Group S-2 open parking garage shall be protected as required for the floor assembly of the Group S-2 enclosed parking garage. Openings between the Group S-2 enclosed parking garage and Group S-2 open parking garage, except exit openings, shall not be required to be protected.*
5. *The Group S-2 enclosed parking garage is used exclusively for the parking or storage of private motor vehicles, but shall be permitted to contain an accessory office, waiting room and toilet room having a total area of not more than 1,000 square feet (93 m<sup>2</sup>), and mechanical equipment rooms incidental to the operation of the building.*

**508.4 Parking beneath Group R.** *Where a maximum one-story above grade plane Group S-2 parking garage, enclosed or open, or combination thereof, of Type I construction or open of Type IV construction, with grade entrance, is provided under a building of Group R, the number of stories to be used in determining the minimum type of construction shall be measured from the floor above such a parking area. The horizontal floor assembly between the parking garage and the Group R above shall comply with the type of construction required for the parking garage and shall also provide a fire-resistance rating not less than the mixed occupancy separation required in Section 302.3.2.*

**508.5 Reserved.**

**508.6 Group R-2 buildings of Type IIA construction.** *The height limitation for buildings of Type IIA construction in Group R-2 shall be increased to nine stories and 100 feet (30 480 mm) where the building is separated by not less than 50 feet (15 240 mm) from any other building on the lot and from property lines, the exits are segregated in an area enclosed by a 2-hour fire-resistance-rated fire wall and the first-floor construction has a fire-resistance rating of not less than 1½ hours.*

**508.7 Open parking garage beneath Groups A, I, B, M and R.** *Open parking garages constructed under Groups A, I, B, M and R shall not exceed the height and area limitations permitted under Section 406.3. The height and area of the portion of the building above the open parking garage shall not exceed the limitations in Section 503 for the upper occupancy. The height, in both feet and stories, of the portion of the*

*building above the open parking garage shall be measured from grade plane and shall include both the open parking garage and the portion of the building above the parking garage.*

**508.7.1 Fire separation.** *Fire separation assemblies between the parking occupancy and the upper occupancy shall correspond to the required fire-resistance rating prescribed in Table 302.3.2 for the occupancies involved. The type of construction shall apply to each occupancy individually, except that structural members, including main bracing within the open parking structure, which is necessary to support the upper occupancy, shall be protected with the more restrictive fire-resistance-rated assemblies of the groups involved as shown in Table 601. Means of egress for the upper occupancy shall conform to Chapter 10 and shall be separated from the parking occupancy by fire barriers having at least a 2-hour fire-resistance rating as required by Section 706, with self-closing doors complying with Section 715. Means of egress from the open parking garage shall comply with Section 406.3.*

**508.8 Industrial uses in buildings containing Group R.** *No space classified as Factory Industrial Group F shall be located above the second story of any building of Type III, IV, or V construction containing a space classified as Residential Group R-1 or R-2.*

**CHAPTER 6**  
**TYPES OF CONSTRUCTION**

**SECTION BC 601**  
**GENERAL**

**601.1 Scope.** *The provisions of this chapter shall control the classification of buildings as to type of construction with respect to occupancy and exterior fire separation distance.*

**SECTION BC 602**  
**CONSTRUCTION CLASSIFICATION**

**602.1 General.** *Buildings and structures erected or to be erected, altered or extended in height or area shall be classified in one of the five construction types defined in Sections 602.2 through 602.5. The building elements shall have a fire-resistance rating not less than that specified in Table 601 and exterior walls shall have a fire-resistance rating not less than that specified in Table 602. Buildings constructed or altered inside the fire district shall further comply with Appendix D.*

**602.1.1 Minimum requirements.** *A building or portion thereof shall not be required to conform to the details of a type of construction higher than that type, which meets the minimum requirements based on occupancy even though certain features of such a building actually conform to a higher type of construction. Classification shall be that of the minimum requirement unless all of the requirements for the higher type of construction are met.*

**602.2 Types I and II.** *Type I and II construction are those types of construction in which the building elements listed in Table 601 are of noncombustible materials.*

**602.3 Type III.** *Type III construction is that type of construction in which the exterior walls are of noncombustible materials and the interior building elements are of any material permitted by this code. Fire-retardant-treated wood framing complying with Section 2303.2 shall be permitted within exterior wall assemblies of a 2-hour rating or less.*

**Exceptions:**

1. *In Group I-1, R-1, and R-2 occupancies, all exterior walls, fire walls, exit passageways, and shaft enclosures shall be non-combustible.*

2. *In Group F occupancies subject to section 270(1) of the New York State Labor Law, all exterior wall assemblies and all structural elements shall meet the requirements for a “fireproof building” as defined in Section 264 of such law.*
3. *Inside the fire district, exterior load-bearing walls shall be constructed of noncombustible material.*
4. *Inside the fire district, exterior non-bearing walls may be constructed with fire-retardant-treated wood complying with Section 2303.2 where the building is equipped throughout with an automatic sprinkler system in accordance with Sections 903.3.1.1 through 903.3.1.3, unless otherwise prohibited by Exception 1 or 2 above.*

**602.4 Type IV.** *Type IV construction (Heavy Timber, HT) is that type of construction in which the exterior walls are of noncombustible materials and the interior building elements are of solid or laminated wood without concealed spaces. The details of Type IV construction shall comply with the provisions of this section. Fire-retardant-treated-wood framing complying with Section 2303.2 shall be permitted within exterior wall assemblies with a 2-hour rating or less.*

**Exceptions:**

1. *In Group I-1, R-1, and R-2 occupancies, all exterior walls, fire walls, exit passageways, and shaft enclosures shall be non-combustible.*
2. *In Group F occupancies subject to Section 270(1) of the New York State Labor Law, all exterior wall assemblies and all structural elements shall meet the requirements for a “fireproof building” as defined in Section 264 of such law.*
3. *Inside the fire district, exterior load-bearing walls shall be constructed of noncombustible material.*
4. *Inside the fire district, exterior non-bearing walls may be constructed with fire-retardant-treated wood complying with Section 2302.2 where the building is equipped throughout with an automatic sprinkler system in accordance with Sections 903.3.1.1 through 903.3.1.3, unless otherwise prohibited by Exception 1 or 2 above.*

**602.4.1 Columns.** Wood columns shall be sawn or glued laminated and shall not be less than 8 inches (203 mm) nominal in any dimension where supporting floor loads and not less than 6 inches (152 mm) nominal in width and not less than 8 inches (203 mm) nominal in depth where supporting roof and ceiling loads only. Columns shall be continuous or superimposed and connected in an approved manner.

**602.4.2 Floor framing.** Wood beams and girders shall be of sawn or glued-laminated timber and shall be not less than 6 inches (152 mm) nominal in width and not less than 10 inches (254 mm) nominal in depth. Framed sawn or glued-laminated timber arches, which spring from the floor line and support floor loads, shall be not less than 8 inches (203 mm) nominal in any dimension. Framed timber trusses supporting floor loads shall have members of not less than 8 inches (203 mm) nominal in any dimension.

**602.4.3 Roof framing.** Wood-frame or glued-laminated arches for roof construction, which spring from the floor line or from grade and do not support floor loads, shall have members not less than 6 inches (152 mm) nominal in width and have less than 8 inches (203 mm) nominal in depth for the lower half of the height and not less than 6 inches (152 mm) nominal in depth for the upper half. Framed or glued laminated arches for roof construction that spring from the top of walls or wall abutments, framed timber trusses and other roof framing, which do not support floor loads, shall have members not less than 4 inches (102 mm) nominal in width and not less than 6 inches (152 mm) nominal in depth. Spaced members shall be permitted to be composed of two or more pieces not less than 3 inches (76 mm) nominal in thickness where blocked solidly throughout their intervening spaces or where spaces are tightly closed by a continuous wood cover plate of not less than 2 inches (51 mm) nominal in thickness secured to the underside of the members. Splice plates shall be not less than 3 inches (76 mm) nominal in thickness. Where protected by approved automatic sprinklers under the roof deck, framing members shall be not less than 3 inches (76 mm) nominal in width.

**602.4.4 Floors.** Floors shall be without concealed spaces. Wood floors shall be of sawn or glued-laminated planks, splined or tongue-and-groove, of not less than 3 inches (76 mm) nominal in thickness covered with 1-inch (25 mm) nominal dimension tongue-and-groove flooring, laid crosswise or diagonally, or 0.5-inch (12.7 mm) particleboard or planks not less than 4 inches (102 mm) nominal in width set on edge close together and well spiked and covered with 1-inch (25mm) nominal dimension flooring or <sup>15</sup>/<sub>32</sub>-inch (12 mm) wood structural panel or 0.5-inch (12.7 mm) particleboard. The lumber shall be laid so that no continuous line of joints will occur except at points of support. Floors shall not extend closer than 0.5 inch (12.7 mm) to walls. Such 0.5-inch (12.7 mm) space shall be covered by a molding fastened to the wall and so arranged that it will not obstruct the swelling or

*shrinkage movements of the floor. Corbeling of masonry walls under the floor shall be permitted to be used in place of molding.*

**602.4.5 Roofs.** *Roofs shall be without concealed spaces and wood roof decks shall be sawn or glued laminated, splined or tongue-and-groove plank, not less than 2 inches (51 mm) thick, 1<sup>1</sup>/<sub>8</sub>-inch-thick (32 mm) wood structural panel (exterior glue), or of planks not less than 3 inches (76 mm) nominal in width, set on edge close together and laid as required for floors. Other types of decking shall be permitted to be used if providing equivalent fire resistance and structural properties.*

**602.4.6 Partitions.** *Partitions shall be of solid wood construction formed by not less than two layers of 1-inch (25 mm) matched boards or laminated construction 4 inches (102 mm) thick, or of 1-hour fire-resistance-rated construction.*

**602.4.7 Exterior structural members.** *Where a horizontal separation of 20 feet (6096 mm) or more is provided, wood columns and arches conforming to heavy timber sizes shall be permitted to be used externally, except as prohibited by Section 602.4 for Occupancy Groups F, I-1, R-1 and R-2.*

**602.5 Type V.** *Type V construction is that type of construction in which the structural elements, exterior walls and interior walls are of any materials permitted by this code. Type V construction shall not be permitted inside the fire district.*

**Exception:** *In Group F occupancies subject to Section 270(1) of the New York State Labor Law, all exterior wall assemblies and all structural elements shall meet the requirements for a “fireproof building” as defined in Section 264 of such law.*

**SECTION BC 603**  
**COMBUSTIBLE MATERIAL IN TYPE I**  
**AND II CONSTRUCTION**

**603.1 Allowable materials.** *Combustible materials shall be permitted in buildings of Type I or II construction in the following applications and in accordance with Sections 603.1.1 through 603.1.3.*

1. *Fire-retardant-treated wood, complying with Section 2303.2, shall be permitted in:*
  - 1.1. *Nonbearing interior partitions where the required fire-resistance rating is 1 hour or less.*

**Exception:** *Public corridors and exits shall be constructed of noncombustible materials.*

1.2. *Roof Construction as permitted in Table 601, Note c, Item 3.*

2. *Thermal and acoustical insulation, other than foam plastics, having a flame spread index of not more than 25.*

**Exceptions:**

1. *Insulation placed between two layers of combustible materials without an intervening airspace shall be allowed to have a flame spread index of not more than 100.*
2. *Insulation installed between a finished floor and solid decking without intervening airspace shall be allowed to have a flame index of not more than 200.*
3. *Foam plastics in accordance with Chapter 26.*
4. *Roof coverings that have an A or B classification as defined in Section 1505.*
5. *Interior floor finish and interior finish, trim and millwork such as doors, door frames, window sashes and frames, as permitted by Chapter 8.*
6. *Where not installed over 15 feet (4572 mm) above grade, show windows, nailing or furring strips, wooden bulkheads below show windows, their frames, aprons and show cases, as permitted by Section 1405.*
7. *Finished flooring applied directly to the floor slab or to wood sleepers that are firestopped in accordance with Section 717.2.7, where combustible finish flooring is permitted by Chapter 8.*
8. *Partitions dividing portions of stores, offices or similar places occupied by one tenant only and which do not establish a corridor serving an occupant load of 30 or more shall be permitted to be constructed of fire-retardant-treated wood, 1-hour fire-resistance-rated construction or of wood panels or similar light construction up to 6 feet (1829 mm) in height.*

9. *Platforms as permitted in Section 410.*
10. *Combustible exterior wall coverings in accordance with Chapter 14.*
11. *Blocking such as for handrails, millwork, cabinets and window and door frames.*
12. *Light-transmitting plastics as permitted by Chapter 26.*
13. *Mastics and caulking materials applied to provide flexible seals between components of exterior wall construction.*
14. *Exterior plastic veneer installed in accordance with Section 2605.2.*
15. *Nailing or furring strips as permitted by Section 803.4.*
16. *Heavy timber as permitted by Note c, Item 2, Table 601 and Section 602.4.7.*
17. *Aggregates, component materials and admixtures as permitted by Section 703.2.2.*
18. *Sprayed cementitious and mineral fiber fire-resistance-rated materials installed to comply with Section 1704.11.*
19. *Materials used to protect penetrations in fire-resistance-rated assemblies in accordance with Section 712.*
20. *Materials used to protect joints in fire-resistance-rated assemblies in accordance with Section 713.*
21. *Materials allowed in the concealed spaces of buildings of Type I and II construction in accordance with Section 717.5.*
22. *Materials exposed within plenums complying with Section 602 of the New York City Mechanical Code.*

**603.1.1 Ducts.** *The use of nonmetallic ducts shall be permitted when installed in accordance with the limitations of the New York City Mechanical Code.*

**603.1.2 Piping.** *The use of combustible piping materials shall be permitted when installed in accordance with the limitations of the New York City Plumbing Code.*

**603.1.3 Electrical.** *The use of electrical wiring methods with combustible insulation, tubing, raceways and related components shall be permitted when installed in accordance with the limitations of the New York City Electrical Code.*

**TABLE 601**  
**FIRE-RESISTANCE RATING REQUIREMENTS FOR BUILDING ELEMENT (hours)**

<b>BUILDING ELEMENT</b>	<b>TYPE I</b>		<b>TYPE II</b>		<b>TYPE III</b>		<b>TYPE IV</b>	<b>TYPE V<sup>d</sup></b>	
	<b>A</b>	<b>B</b>	<b>A<sup>d</sup></b>	<b>B</b>	<b>A<sup>d</sup></b>	<b>B</b>	<b>HT</b>	<b>A<sup>d</sup></b>	<b>B</b>
<i>Structural frame<sup>a</sup></i> <i>Including columns, girders, trusses</i>	3 <sup>b</sup>	2 <sup>b</sup>	1	0	1	0	HT	1	0
<i>Bearing walls</i>									
<i>Exterior<sup>f,g</sup></i>	3	2	1	0	2	2	2	1	0
<i>Interior</i>	3 <sup>b</sup>	2 <sup>b</sup>	1	0	1	0	1/HT	1	0
<i>Nonbearing walls and partitions</i> <i>Exterior</i>	<i>See Table 602</i>								
<i>Nonbearing walls and partitions</i> <i>Interior<sup>e</sup></i>	0	0	0	0	0	0	<i>See Section 602.4.6</i>	0	0
<i>Floor construction<sup>h</sup></i> <i>Including supporting beams and joists</i>	2	2	1	0	1	0	HT	1	0
<i>Roof construction</i> <i>Including supporting beams and joists</i>	1 1/2 <sup>c</sup>	1 <sup>c</sup>	1 <sup>c</sup>	0	1 <sup>c</sup>	0	HT	1 <sup>c</sup>	0

For SI: 1 foot = 304.8 mm.

a. The structural frame shall be considered to be the columns and the girders, beams, trusses and spandrels having direct connections to the columns and bracing members designed to carry gravity loads. The members of floor or roof panels which have no connection to the columns shall be considered secondary members and not a part of the structural frame.

b. Roof supports: Fire-resistance ratings of structural frame and bearing walls are permitted to be reduced by 1 hour where supporting a roof only.

c. 1. Except in Factory-Industrial (F-1), Hazardous (H), Mercantile (M) and Moderate-Hazard Storage (S-1) occupancies, fire protection of structural members shall not be required, including protection of roof framing and decking where every part of the roof construction is 20 feet or more above any floor immediately below. Fire-retardant-treated wood members shall be allowed to be used for such unprotected members.

2. Except in Factory-Industrial (F) occupancies subject to regulation under Sections 264(1) and 264(2) of the New York State Labor Law, and in Group I-1, R-1, and Group R-2 occupancies, in all

*occupancies heavy timber shall be allowed where a 1-hour or less fire-resistance rating is required.*

*3. Except in Factory-Industrial (F) occupancies subject to regulation under Sections 264(1) and 264(2) of the New York State Labor Law, and in Group I-1, R-1, and Group R-2 occupancies, in Type I and II construction, fire-retardant –treated wood shall be allowed in buildings including girders and trusses as part of the roof construction when the building is:*

*i. Type II construction of any height; or*

*ii. Type I construction two stories or less; or when over two stories, the vertical distance from the upper floor to the roof is 20 feet or more.*

*d. An approved automatic sprinkler system in accordance with Section 903.3.1.1 shall be allowed to be substituted for 1-hour fire-resistance-rated construction, provided such system is not otherwise required by other provisions of the code or used for an allowable area increase in accordance with Section 506.3 or an allowable height increase in accordance with Section 504.2. The 1-hour substitution for the fire resistance of exterior walls shall not be permitted.*

*e. Not less than the fire-resistance rating required by other sections of this code.*

*f. Not less than the fire-resistance rating based on fire separation distance (see Table 602).*

*g. See footnote (d) of Table 602.*

*h. See Section 711.3 for additional requirements.*

*i. Type V construction is not permitted inside fire districts.*

**TABLE 602**  
**FIRE-RESISTANCE RATING REQUIREMENTS FOR EXTERIOR WALLS BASED ON FIRE**  
**SEPARATION DISTANCE<sup>a,d,e</sup>**

FIRE SEPARATION DISTANCE (feet)	TYPE OF CONSTRUCTION	GROUP H	GROUP F-1, M, S-1	GROUP A, B, E, F-2, I, R <sup>b</sup> , S-2, U
< 5 <sup>c</sup>	All	3	2	1
≥ 5 < 10	IA Others	3 2	2 1	1 1
≥ 10 < 30	IA, IB IIB, VB Others	2 1 1	1 0 1	1 0 1
≥ 30	All	0	0	0

For SI: 1 foot = 304.8 mm.

- a. Load-bearing exterior walls shall also comply with the fire-resistance rating requirements of Table 601.
- b. Group R-3 and Group U when used as accessory to Group R-3 shall not be required to have a fire-resistance rating where the fire separation distance is 3 feet or more.
- c. See Section 705.1.1 for party walls.
- d. Inside the fire district, exterior load bearing walls of Type II buildings shall have a fire-resistance rating not less than prescribed below:

< 5	2 hours
> (or equal) 5 and <10	2 hours
> (or equal) 10 < 30	1 hour
> (or equal) 30	As per table 602.

- e. Inside the fire district, exterior non-load bearing walls of Type II buildings shall have a fire resistance rating not less than prescribed below:

< 5	As per table 602
> (or equal) 5 and <10	As per table 602
> (or equal) 10 < 30	1 hour
> (or equal) 30	As per table 602.

**CHAPTER 7**  
**FIRE-RESISTANCE-RATED CONSTRUCTION**

**SECTION BC 701**  
**GENERAL**

**701.1 Scope.** *The provisions of this chapter shall govern the materials and assemblies used for structural fire resistance and fire-resistance-rated construction separation of adjacent spaces to safeguard against the spread of fire and smoke within a building and the spread of fire to or from buildings.*

**SECTION BC 702**  
**DEFINITIONS**

**702.1 Definitions.** *The following words and terms shall, for the purposes of this chapter, and as used elsewhere in this code, have the meanings shown herein.*

**ANNULAR SPACE.** *The opening around the penetrating item.*

**CEILING RADIATION DAMPER.** *A listed device installed in a ceiling membrane of a fire-resistance-rated floor/ceiling or roof/ceiling assembly to limit automatically the radiative heat transfer through an air inlet/outlet opening.*

**COMBINATION FIRE/SMOKE DAMPER.** *A listed device installed in ducts and air transfer openings designed to close automatically upon the detection of heat and to also resist the passage of air and smoke. The device is installed to operate automatically, controlled by a smoke detection system, and where required, is capable of being positioned from a remote command station.*

**CONCEALED SPACES.** *Enclosed spaces within partitions, walls, floors, roofs, stairs, furring, pipe chases and column enclosures and other similar spaces.*

**DAMPER.** *See “Ceiling radiation damper,” “Combination fire/smoke damper,” “Fire damper” and “Smoke damper.”*

**DRAFT STOP.** *A material, device or construction installed to restrict the movement of air within open spaces of concealed areas of building components such as crawl spaces, floor/ceiling assemblies, roof/ceiling assemblies and attics.*

**F RATING.** *The time period that the through-penetration fire stop system limits the spread of fire through the penetration when tested in accordance with ASTM E 814.*

**FIRE AREA.** *The aggregate floor area enclosed and bounded by firewalls, fire barriers, exterior walls or fire-resistance-rated horizontal assemblies of a building.*

**FIRE BARRIER.** *A fire-resistance-rated vertical or horizontal assembly of materials complying with Section 706 designed to restrict the spread of fire in which openings are protected.*

**FIRE DAMPER.** *A listed device, installed in ducts and air transfer openings of an air distribution system or smoke control system, designed to close automatically upon detection of heat, to interrupt migratory airflow, and to restrict the passage of flame. Fire dampers are classified for use in either static systems that will automatically shut down in the event of a fire, or in a dynamic system that continues to operate during a fire. A dynamic fire damper is tested and rated for closure under airflow.*

**FIRE DOOR.** *The door component of a fire door assembly.*

**FIRE DOOR ASSEMBLY.** *Any combination of a fire door, frame, hardware, and other accessories that together, as an opening protective, provide a specific degree of fire protection to the opening.*

**FIRE PARTITION.** *A vertical assembly of materials complying with Section 708, designed to restrict the spread of fire in which openings are protected.*

**FIRE PROTECTION RATING.** *The period of time that an opening protective assembly will maintain the ability to confine a fire as determined by tests prescribed in Section 715. Ratings are stated in hours or minutes.*

**FIRE RESISTANCE** *That property of materials or their assemblies that prevents or retards the passage of excessive heat, hot gases or flames under conditions of use.*

**FIRE-RESISTANCE RATING.** *The period of time a building element, component or assembly maintains the ability to withstand fire exposure, continues to perform a given structural function, or both, as determined by the tests, or the methods based on tests, prescribed in Section 703.*

**FIRE-RESISTANT JOINT SYSTEM.** *An assemblage of specific materials or products that are designed, tested, and fire-resistance rated in accordance with either ASTM E 1966 or UL 2079 to resist for a prescribed period of time the passage of fire through joints made in or between fire-resistance-rated*

*assemblies.*

**FIRE SEPARATION DISTANCE.** *The distance measured from the building face to the closest interior tax lot line, to the centerline of a street or other public space, or to an imaginary line between two buildings on the same tax lot. The distance shall be measured at right angles from the face of the wall.*

**FIRE WALL.** *A fire-resistance-rated smoke-tight wall having protected openings, which restricts the spread of fire and extends continuously from the foundation to or through the roof, with sufficient structural stability under fire conditions to allow collapse of construction on either side without collapse of the wall.*

**FIRE WINDOW ASSEMBLY.** *A window, as an opening protective, constructed and glazed to give protection against the passage of fire, smoke, and hot gases.*

**FIREBLOCKING.** *A building material or an assembly of building materials that may or may not have a fire-resistance rating installed to resist the free passage of flame or hot gases to other areas of the building through concealed spaces in accordance with Section 717.*

**FIRESTOPPING.** *A through-penetration firestop or a membrane penetration firestop.*

**FLOOR FIRE DOOR ASSEMBLY.** *A combination of a fire door, a frame, hardware and other accessories installed, as an opening protective, in a horizontal plane, which together provide a specific degree of fire protection to a through opening in a fire-resistance-rated floor (see Section 712.4.6).*

**MEMBRANE PENETRATION.** *An opening made through one side (wall, floor or ceiling membrane) of an assembly.*

**MEMBRANE PENETRATION FIRESTOP.** *A material, device, or assemblage of specific materials or products that is designed, tested and fire-resistance rated to resist for a prescribed time period the passage of flame and heat through openings in a protective membrane in order to accommodate cables, cable trays, conduit, tubing, pipes or similar items.*

**PENETRATION FIRESTOP.** *A through-penetration firestop or a membrane penetration firestop.*

**SELF-CLOSING.** *As applied to a fire door or other opening, means equipped with an approved device that will ensure closing after having been opened.*

**SHAFT.** *An enclosed space extending through one or more stories of a building, connecting vertical openings in successive floors, or floors and roof.*

**SHAFT ENCLOSURE.** *The walls or construction forming the boundaries of a shaft.*

**SMOKE BARRIER.** *A continuous membrane, either vertical or horizontal, such as a wall, floor, or ceiling assembly, that is designed and constructed in accordance with Section 709 to restrict the movement of smoke.*

**SMOKE COMPARTMENT.** *A space within a building enclosed by smoke barriers on all sides, including the top and bottom.*

**SMOKE DAMPER.** *A listed device installed in ducts and air transfer openings that is designed to resist the passage of air and smoke. The device is installed to operate automatically, controlled by a smoke detection system, and where required, is capable of being positioned from a remote command station.*

**SMOKE PARTITION.** *A continuous vertical assembly that is designed and constructed to restrict the movement of smoke and is not generally required to have a fire-resistance rating in accordance with Section 710.*

**T RATING.** *The time period that the penetration firestop system, including the penetrating item, limits the maximum temperature rise to 325°F (163°C) above its initial temperature through the penetration on the nonfire side when tested in accordance with ASTM E 814.*

**THROUGH PENETRATION.** *An opening that passes through an entire assembly.*

**THROUGH-PENETRATION FIRESTOP SYSTEM.** *An assemblage of specific materials or products that are designed, tested and fire-resistance rated to resist for a prescribed period of time the spread of fire through penetrations. The F and T rating criteria for penetration firestop systems shall be in accordance with ASTM E 814. See definitions of “F rating” and “T rating.”*

## **SECTION BC 703**

### **FIRE-RESISTANCE RATINGS AND FIRE TESTS**

**703.1 Scope.** *Materials prescribed herein for fire resistance shall conform to the requirements of this chapter.*

**703.2 Fire-resistance ratings.** *The fire-resistance rating of building elements shall be determined in accordance with the test procedures set forth in ASTM E 119 or in accordance with Section 703.3. Where materials, systems or devices that have not been tested as part of a fire-resistance-rated assembly are incorporated into the assembly, sufficient data shall be made available to the commissioner to show that the required fire-resistance rating is not reduced. Materials and methods of construction used to protect joints and penetrations in fire-resistance- rated building elements shall not reduce the required fire-resistance rating.*

**Exception:** *In determining the fire-resistance rating of exterior bearing walls, compliance with the ASTM E 119 criteria for unexposed surface temperature rise and ignition of cotton waste due to passage of flame or gases is required only for a period of time corresponding to the required fire-resistance rating of an exterior nonbearing wall with the same fire separation distance, and in a building of the same group. When the fire-resistance rating determined in accordance with this exception exceeds the fire-resistance rating determined in accordance with ASTM E 119, the fire exposure time period, water pressure, and application duration criteria for the hose stream test of ASTM E 119 shall be based upon the fire-resistance rating determined in accordance with this exception.*

**703.2.1 Nonsymmetrical wall construction.** *Interior walls and partitions of nonsymmetrical construction shall be tested with both faces exposed to the furnace, and the assigned fire-resistance rating shall be the shortest duration obtained from the two tests conducted in compliance with ASTM E 119. When evidence is furnished to show that the wall was tested with the least fire-resistant side exposed to the furnace, subject to acceptance of the commissioner, the wall need not be subjected to tests from the opposite side (see Section 704.5 for exterior walls).*

**703.2.2 Combustible components.** *Combustible aggregates may be integrated with other materials to form a non-combustible material provided that the entire mixture, in the form in which it is to be used in construction, meets the requirement of this code for noncombustible construction.*

**703.2.3 Restrained classification.** *Fire-resistance-rated assemblies tested under ASTM E 119 shall not be considered to be restrained unless evidence satisfactory to the commissioner is furnished by the registered design professional showing that the construction qualifies for a restrained classification in accordance with ASTM E 119. Restrained construction shall be identified on the plans.*

**703.3 Alternative methods for determining fire resistance** *The application of any of the alternative methods listed in this section shall be based on the fire exposure and acceptance criteria specified in ASTM E 119. The required fire resistance of a building element shall be permitted to be established by any of the*

*following methods or procedures:*

1. *Fire-resistance designs documented in approved sources.*
2. *Prescriptive designs of fire-resistance-rated building elements as prescribed in Section 720.*
3. *Calculations in accordance with Section 721.*
4. *Engineering analysis based on a comparison of building element designs having fire-resistance ratings as determined by the test procedures set forth in ASTM E 119.*
5. *Alternative protection methods as allowed by Section 104.1.*

**703.4 Noncombustibility tests.** *The tests indicated in Sections 703.4.1 and 703.4.2 shall serve as criteria for acceptance of building materials as set forth in Sections 602.2, 602.3 and 602.4 in Type I, II, III and IV construction. The term “noncombustible” does not apply to the flame spread characteristics of interior finish or trim materials. A material shall not be classified as a noncombustible building construction material if it is subject to an increase in combustibility or flame spread beyond the limitations herein established through the effects of age, fabrication or erection techniques, moisture or other atmospheric conditions.*

**703.4.1 Elementary materials.** *Materials required to be noncombustible shall be tested in accordance with ASTM E 136.*

**703.4.2 Composite materials.** *Materials having a structural base of noncombustible material as determined in accordance with Section 703.4.1 with a surfacing not more than 0.125 inch (3.18 mm) thick that has a flame spread index not greater than 50 when tested in accordance with ASTM E 84 shall be acceptable as noncombustible materials.*

## **SECTION BC 704 EXTERIOR WALLS**

**704.1 General.** *Exterior walls shall be fire-resistance rated and have opening protection as required by this section. Exterior wall construction shall comply with the provisions of Chapter 14 and Appendix D where applicable.*

**704.2 Projections.** *Cornices, eave overhangs, exterior balconies and similar architectural appendages,*

*including but not limited to, fascias, belt courses, pilasters, surrounds, gutters, leaders, half-timber work, shutters, trellises, which extend beyond the floor area shall conform to the requirements of this section and Section 1406, provided, if removed or destroyed, will not reduce the structural stability of the building enclosure, and installed so as not to reduce the required fire resistance rating of the enclosure. Exterior egress balconies and exterior exit stairways shall comply with the requirements of this section, Section 1013.5, and Section 1022.1. Projections shall not extend beyond the distance determined by the following two methods, whichever results in the lesser projection:*

- 1. A point one-third the distance to the lot line from an assumed vertical plane located where protected openings are required in accordance with Section 704.8.*
- 2. More than 12 inches (305mm) into areas where openings are prohibited.*

**704.2.1 Type III, IV or V construction.** *Projections from walls of Type III, IV or V construction shall be of any approved material.*

**704.2.2 Combustible projections.** *Combustible projections located where openings are not permitted or where protection of openings is required shall be of at least 1-hour fire-resistance-rated construction, Type IV construction, or as required by Section 1406.3.*

**704.3 Buildings on the same lot.** *For the purposes of determining the required wall and opening protection and roof-covering requirements, buildings on the same tax lot shall be assumed to have an imaginary line between them.*

**Exception:** *Two or more buildings on the same tax lot shall either be regulated as separate buildings or shall be considered as portions of one building if the aggregate area of such buildings is within the limits specified in Chapter 5 for a single building. Where the buildings contain different occupancy groups or are of different types of construction, the area shall be that allowed for the most restrictive occupancy or construction.*

**704.4 Materials.** *Exterior walls shall be of materials permitted by the building type of construction.*

**704.5 Fire-resistance ratings.** *Exterior walls shall be fire-resistance rated in accordance with Tables 601, 602, and Appendix D where applicable. The fire-resistance rating of exterior walls with a fire-separation distance of greater than 5 feet (1524 mm) shall be rated for exposure to fire from the inside. The fire-resistance rating of exterior walls with a fire-separation distance of 5 feet (1524 mm) or less shall be rated for exposure to fire from both sides.*

**704.6 Structural stability.** *The wall shall extend to the height required by Section 704.11 and shall have sufficient structural stability such that it will remain in place for the duration of time indicated by the required fire-resistance rating.*

**704.7 Unexposed surface temperature.** *Where protected openings are not limited by Section 704.8, the limitation on the rise of temperature on the unexposed surface of exterior walls as required by ASTM E 119 shall not apply. Where protected openings are limited by Section 704.8, the limitation on the rise of temperature on the unexposed surface of exterior walls as required by ASTM E 119 shall not apply provided that a correction is made for radiation from the unexposed exterior wall surface in accordance with the following formula:*

$$A_e = A + (A_f \times F_{eo}) \quad \text{(Equation 7-1)}$$

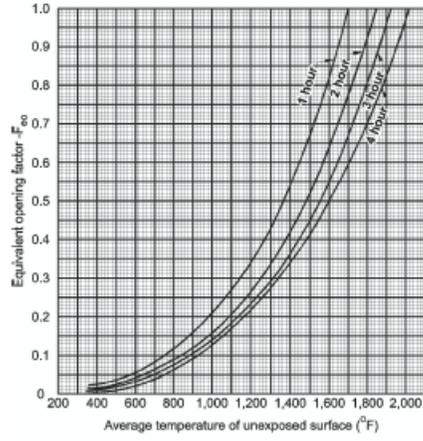

where:

$A_e$  = Equivalent area of protected openings.

$A$  = Actual area of protected openings.

$A_f$  = Area of exterior wall surface in the story under consideration exclusive of openings, on which the temperature limitations of ASTM E 119 for walls are exceeded.

$F_{eo}$  = An "equivalent opening factor" derived from Figure 704.7 based on the average temperature of the unexposed wall surface and the fire-resistance rating of the wall.

For SI:  $^{\circ}\text{C} = [(^{\circ}\text{F}) - 32] / 1.8$ .

FIGURE 704.7  
EQUIVALENT OPENING FACTOR

**704.8 Allowable area of openings.** *The maximum area of unprotected or protected openings permitted in an exterior wall in any story shall not exceed the values set forth in Table 704.8. Where both unprotected and protected openings are located in the exterior wall in any story, the total area of the openings shall comply with the following formula:*

$$\frac{A}{a} + \frac{A_u}{a_u} \leq 1.0 \quad \text{(Equation 7-2)}$$

where:

$A$  = Actual area of protected openings, or the equivalent area of protected openings,  $A_e$  (see Section 704.7).

$a$  = Allowable area of protected openings.

$A_u$  = Actual area of unprotected openings.

$a_u$  = Allowable area of unprotected openings.

**TABLE 704.8**  
**MAXIMUM AREA OF EXTERIOR WALL OPENINGS<sup>a,l</sup>**

<b>CLASSIFICATION OF OPENING</b>	<b>FIRE SEPARATION DISTANCE (feet)</b>							
	<i>0 to 3<sup>e,h</sup></i>	<i>Greater than 3 and not more than 5<sup>b</sup></i>	<i>Greater than 5 and not more than 10<sup>d,f</sup></i>	<i>Greater than 10 and not more than 15<sup>c,d,f</sup></i>	<i>Greater than 15 and not more than 20<sup>c,f</sup></i>	<i>Greater than 20 and not more than 25<sup>c,f</sup></i>	<i>Greater than 25 and not more than 30<sup>c,f</sup></i>	<i>Greater than 30</i>
<i>Unprotected</i>	<i>Not Permitted<sup>g</sup></i>	<i>Not Permitted<sup>b</sup>,g,k</i>	<i>10%</i>	<i>15%</i>	<i>25%</i>	<i>45%</i>	<i>70%</i>	<i>No Limit</i>
<i>Protected</i>	<i>Not Permitted<sup>i</sup>,j</i>	<i>15%<sup>k</sup></i>	<i>25%<sup>k</sup></i>	<i>45%<sup>k</sup></i>	<i>75%<sup>k</sup></i>	<i>No Limit<sup>k</sup></i>	<i>No Limit<sup>k</sup></i>	<i>No Limit</i>

*For SI: 1 foot = 304.8 mm.*

- a. Values given are percentage of the area of the exterior wall.*
- b. For occupancies in Group R-3, the maximum percentage of unprotected and protected exterior wall openings shall be 25 percent.*
- c. The area of openings in an open parking structure with a fire separation distance of greater than 10 feet shall not be limited.*
- d. For occupancies in Group H-2 or H-3, unprotected openings shall not be permitted for openings with a fire separation distance of 15 feet or less.*
- e. For requirements for fire walls for buildings with differing roof heights, see Section 705.6.1.*
- f. The area of unprotected and protected openings is not limited for occupancies in Group R-3, with a fire separation distance greater than 5 feet.*
- g. Buildings whose exterior bearing wall, exterior nonbearing wall and exterior structural frame are not required to be fire-resistance rated shall be permitted to have unlimited unprotected openings.*
- h. Includes accessory buildings to Group R-3.*
- i. Protected openings through a wall or walls between buildings shall comply with Section 705.8.*
- j. Protected openings within a fire separation distance of 3 feet or less are permitted for Occupancy Groups R-2 and R-3 provided such openings do not exceed 10% of the area of the façade of the story in*

*which they are located. These openings shall not be credited towards meeting any mandatory natural light or ventilation requirements.*

*k. In Groups R-2 and R-3 occupancies with an exterior separation distance greater than 3 feet, openings shall be in accordance with percentages indicated as “Protected” Classification of Opening in Table 704.8. However, such openings shall not be required to be protected.*

*l. Upon special application, the commissioner may permit exterior wall openings to be constructed in excess of the permitted area established by Table 704.8 if such openings at the time of their construction are located at least sixty feet in a direct line from any neighboring building, unless otherwise permitted by Section 704.3 for buildings on the same lot. If any neighboring building is later altered or constructed to come within the above distance limitation, the affected exterior openings shall immediately be closed with construction meeting the fire-resistance rating requirements for exterior wall construction of the building in which they are located. Such additional openings shall not be credited toward meeting any of the mandatory natural light or ventilation requirements unless they also comply with applicable provisions of Chapter 12 and the zoning resolution.*

**704.8.1 Automatic sprinkler system.** *In buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1, the maximum allowable area of unprotected openings in occupancies other than Groups H-1, H-2 and H-3 shall be the same as the tabulated limitations for protected openings.*

**704.8.2 First story.** *In occupancies other than Group H, unlimited unprotected openings are permitted in the first story of exterior walls facing a street that have a fire separation distance of greater than 15 feet (4572 mm), or facing an unoccupied space. The unoccupied space shall be on the same lot or dedicated for public use, shall not be less than 30 feet (9144 mm) in width, and shall have access from a street by a posted fire lane in accordance with the New York City Fire Code.*

**704.9 Vertical separation of openings.** *Openings in exterior walls in adjacent stories shall be separated vertically to protect against fire spread on the exterior of the buildings where the openings are within 5 feet (1524 mm) of each other horizontally in accordance with Section 715.4.8. Such openings shall be separated vertically at least 3 feet (914 mm) by spandrel girders, exterior walls or other similar assemblies that have a fire-resistance rating of at least 1 hour or by flame barriers that extend horizontally at least 30 inches (762 mm) beyond the exterior wall and that are at least as wide as the opening. Flame barriers shall also have a fire-resistance rating of at least 1 hour. The unexposed surface temperature limitations specified in ASTM E 119 shall not apply to the flame barriers or vertical separation unless otherwise required by the provisions of this code. Where a curtain wall assembly is used on the exterior wall, the intersection between the floor assembly and curtain wall assembly shall be protected in accordance with Section 713.4.*

**Exceptions:**

1. *This section shall not apply to buildings that are three stories or less in height.*
2. *This section shall not apply to buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 or 903.3.1.2.*
3. *This section shall not apply to open parking garages.*
4. *This section shall not apply to Occupancy Group A, E, I, or R.*

**704.10 Vertical exposure.** *For buildings on the same tax lot, approved protectives shall be provided in every opening that is less than 15 feet (4572 mm) vertically above the roof of an adjoining building or adjacent structure that is within a horizontal fire-separation distance of 15 feet (4572 mm) of the wall in*

which the opening is located.

**Exception:** Opening protectives are not required where the roof construction has a fire-resistance rating of not less than 1 hour for a minimum distance of 10 feet (3048 mm) from the adjoining building and the entire length and span of the supporting elements for the fire-resistance-rated roof assembly has a fire-resistance rating of not less than 1 hour.

**704.11 Parapets.** Parapets shall be provided on exterior walls of buildings.

**Exceptions:** A parapet need not be provided on an exterior wall where any of the following conditions exist:

1. The wall is not required to be fire-resistance rated in accordance with Table 602 because of fire separation distance.
2. The building has an area of not more than 1,000 square feet (93 m<sup>2</sup>) on every floor.
3. Walls that terminate at roofs of not less than 2-hour fire-resistance-rated construction.
4. One-hour fire-resistance-rated exterior walls that terminate at the underside of the roof sheathing, deck or slab, provided that the entire building is covered with a Class A roof covering. Such roof shall not have openings located within 10 feet (3048 mm) of the 1-hour fire-resistance-rated exterior wall and not within 5 feet (1524 mm) for Groups R and U.
  - 4.1. Where the roof/ceiling framing elements are parallel to the walls, such framing and elements supporting such framing shall not be of less than 1-hour fire-resistance-rated construction for a width of 4 feet (1219 mm) measured from the interior side of the wall for Groups R and U and 10 feet (3048 mm) for other occupancies; or
  - 4.2. Where roof/ceiling framing elements are not parallel to the wall, the entire span of such framing and elements supporting such framing shall not be of less than 1-hour fire-resistance-rated construction.
5. In occupancies of Groups R-2 and R-3, both provided with a Class A or B roof covering, the exterior wall shall be permitted to terminate at the roof sheathing or deck in Type III, IV and V construction provided:

- 5.1. *The roof sheathing or deck is constructed of approved noncombustible materials or of fire-retardant-treated wood, for a distance of 4 feet (1219 mm) from the perimeter; or*
- 5.2. *The roof is protected with 0.625-inch (15.88 mm) Type X gypsum board directly beneath the underside of the roof sheathing or deck, supported by a minimum of nominal 2-inch (51 mm) ledgers attached to the sides of the roof framing members, for a minimum distance of 4 feet (1219 mm).*
6. *Where the wall is permitted to have at least 25 percent of the exterior wall areas containing unprotected openings based on fire separation distance as determined in accordance with Section 704.8.*

**704.11.1 Parapet construction.** *Parapets shall have the same fire-resistance rating as that required for the supporting wall, and on any side adjacent to a roof surface, shall have noncombustible faces for the uppermost 18 inches (457 mm), including counterflashing and coping materials. The height of the parapet shall not be less than 30 inches (762 mm) above the point where the roof surface and the wall intersect. Where the roof slopes toward a parapet at a slope greater than two units vertical in 12 units horizontal (16.7-percent slope), the parapet shall extend to the same height as any portion of the roof within a fire separation distance where protection of wall openings is required, but in no case shall the height be less than 30 inches (762 mm).*

**704.12 Opening protection.** *Windows required to be protected in accordance with Section 704.8, 704.9, or 704.10 shall comply with Section 715.4.8. Other openings required to be protected with fire doors or shutters in accordance with Sections 704.8, 704.9 and 704.10 shall comply with Section 715.3.*

**Exception:** *Fire protective assemblies are not required where the building is protected throughout by an automatic sprinkler system and the exterior openings are protected by an approved water curtain using automatic sprinklers approved for that use. The sprinklers and the water curtain shall be installed in accordance with NFPA 13, as modified in Appendix Q.*

**704.12.1 Unprotected openings.** *Where protected openings are not required by Section 704, windows and doors shall be constructed of any approved materials. Glazing shall conform to the requirements of Chapters 24 and 26.*

**704.13 Joints.** *Joints made in or between exterior walls required by this section to have a fire-resistance rating shall comply with Section 713.*

***Exception:** Joints in exterior walls that are permitted to have unprotected openings.*

**704.13.1 Voids.** *The void created at the intersection of a floor/ceiling assembly and an exterior curtain wall assembly shall be protected in accordance with Section 713.4.*

**704.14 Ducts and air transfer openings.** *Penetrations by air ducts and air transfer openings in fire-resistance-rated exterior walls required to have protected openings shall comply with Section 716.*

***Exception:** Foundation vents installed in accordance with this code are permitted.*

## **SECTION BC 705**

### **FIRE WALLS**

**705.1 General.** *Each portion of a building separated by one or more fire walls that comply with the provisions of this section shall be considered a separate building. The extent and location of such fire walls shall provide a complete separation. Where a fire wall also separates groups that are required to be separated by a fire barrier wall, the most restrictive requirements of each separation shall apply. Concealed spaces in cornices and eaves shall comply with the provisions of Section 705.5.2.*

**705.1.1 Party walls.** *Any wall located on a property line between adjacent buildings, which is used or adapted for joint service between the two buildings, shall be constructed as a fire wall in accordance with Section 705, and shall create separate buildings.*

**705.1.2 Walls separating attached one- and two-family dwellings.** *Attached one- and two-family dwellings shall be separated by walls constructed in accordance with Section 705 or Appendix M.*

**705.2 Structural stability.** *Fire walls shall have sufficient structural stability under fire conditions to allow collapse of construction on either side without collapse of the wall for the duration of time indicated by the required fire-resistance rating.*

**705.3 Materials.** *Fire walls shall be constructed of any approved noncombustible materials.*

**705.4 Fire-resistance rating.** *Fire walls shall have a fire-resistance rating of not less than that required by Table 705.4.*

**TABLE 705.4  
FIRE WALL FIRE-RESISTANCE RATINGS**

GROUP	FIRE-RESISTANCE RATING (hours)
A, B, E, H-4, I, R-1, R-2, U	3 <sup>a</sup>
F-1, H-3 <sup>b</sup> , H-5, M, S-1	3
H-1, H-2	4 <sup>b</sup>
F-2, S-2, R-3, R-4	2

- a. Walls shall be not less than 2-hour fire-resistance rated where separating buildings of Type II or V construction.
- b. For Group H-1, H-2 or H-3 buildings, also see Sections 415.4 and 415.5.

**705.5 Horizontal continuity.** Fire walls shall be continuous from exterior wall to exterior wall and shall extend at least 18 inches (457 mm) beyond the exterior surface of exterior walls.

**Exceptions:**

1. Fire walls shall be permitted to terminate at the interior surface of combustible exterior sheathing or siding provided the exterior wall has a fire-resistance rating of at least 1 hour for a horizontal distance of at least 4 feet (1219 mm) on both sides of the fire wall. Openings within such exterior walls shall be protected by fire assemblies having a fire protection rating of not less than  $\frac{3}{4}$  hour.
2. Fire walls shall be permitted to terminate at the interior surface of noncombustible exterior sheathing, exterior siding or other noncombustible exterior finishes provided the sheathing, siding or other exterior noncombustible finish extends to a horizontal distance of at least 4 feet (1219 mm) on both sides of the fire wall.
3. Fire walls shall be permitted to terminate at the interior surface of noncombustible exterior sheathing where the building on each side of the fire wall is protected by an automatic sprinkler system installed in accordance with Section 903.3.1.1 or 903.3.1.2.

**705.5.1 Exterior walls.** Where the fire wall intersects the exterior walls, the fire-resistance rating for the exterior walls on both sides of the fire wall shall have a 1-hour fire-resistance rating with  $\frac{3}{4}$ -hour opening protection where opening protection is required. The fire-resistance rating of the exterior wall shall extend a minimum of 4 feet (1219 mm) on each side of the intersection of the fire wall to exterior wall. Exterior wall intersections at fire walls that form an angle equal to or greater than 180 degrees (3.14 rad) do not need exterior wall protection.

**705.5.2 Horizontal projecting elements.** Fire walls shall extend to the outer edge of horizontal projecting elements such as balconies, roof overhangs, canopies, marquees and architectural projections that are within 4 feet (1219 mm) of the fire wall.

**Exceptions:**

1. Noncombustible horizontal projecting elements without concealed spaces provided the exterior wall behind and below the projecting element has not less than 1-hour fire-resistance-rated construction for a distance not less than the depth of the projecting

*element on both sides of the fire wall. Openings within such exterior walls shall be protected by fire assemblies having a fire protection rating of not less than ¾ hour.*

- 2. Noncombustible horizontal projecting elements with concealed spaces, provided a minimum 1-hour fire-resistance-rated wall extends through the concealed space. The projecting element shall be separated from the building by a minimum of 1-hour fire-resistance-rated construction for a distance on each side of the firewall equal to the depth of the projecting element. The wall is not required to extend under the projecting element where the building exterior wall is a minimum of 1-hour fire-resistance rated for a distance on each side of the firewall equal to the depth of the projecting element. Openings within such exterior walls shall be protected by fire assemblies having a fire protection rating of not less than ¾ hour.*

**705.6 Vertical continuity.** *Fire walls shall extend from the foundation through the roof, to form a parapet at least 30 inches (762 mm) in height. Such parapet shall in no event extend to a point less than 4 inches (102 mm) above the highest point of peaked or gabled roof.*

**Exceptions:**

- 1. Where a two-hour fire wall is permitted in accordance with Table 705.4, such wall shall be permitted to terminate at the underside of the roof sheathing, deck or slab provided:
  - 1.1. The lower roof assembly within 4 feet (1219 mm) of the wall has not less than a 1-hour fire-resistance rating and the entire length and span of supporting elements for the rated roof assembly has a fire-resistance rating of not less than 1 hour; and*
  - 1.2. Openings in the roof shall not be located within 4 feet (1219 mm) of the fire wall; and*
  - 1.3. Each building shall be provided with not less than a Class A roof covering.**
- 2. In buildings of Type I or II constructions, fire walls shall be permitted to terminate at the underside of noncombustible roof sheathing, deck, or slabs where both buildings are provided with not less than a Class A roof covering. Openings in the roof shall not be located within 4 feet (1219 mm) of the fire wall.*
- 3. In buildings of Type III, IV and V construction, fire walls shall be permitted to terminate at the underside of noncombustible roof sheathing or decks provided:*

- 3.1. *There are no openings in the roof within 4 feet (1219 mm) of the fire wall; and*
- 3.2. *The roof is covered with a minimum Class A roof covering.*
4. *Buildings located above a parking garage designed in accordance with Section 508.2 shall be permitted to have the fire walls for the buildings located above the parking garage extend from the horizontal separation between the parking garage and the buildings.*

**705.7 Combustible framing in fire walls.** *Adjacent combustible members entering into a concrete or masonry firewall from opposite sides shall not have less than a 4-inch (102 mm) distance between embedded ends. Where combustible members frame into hollow walls or walls of hollow units, hollow spaces shall be solidly filled for the full thickness of the wall and for a distance not less than 4 inches (102 mm) above, below and between the structural members, with noncombustible materials approved for fire blocking.*

**705.8 Openings.** *Each opening through a fire wall, a party wall, or a through wall between two buildings shall be protected in accordance with Section 715.3 and shall not exceed 120 square feet (11 m<sup>2</sup>), with no dimension greater than 12 feet (3658 mm). The aggregate width of openings at any floor level shall not exceed 25 percent of the length of the wall.*

**Exception:** *Openings shall not be limited to 120 square feet (11 m<sup>2</sup>) where both buildings are equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1. However, the aggregate width of all openings at any one floor level shall not exceed 25 percent of the length of the wall.*

**705.9 Penetrations.** *Penetrations through fire walls shall comply with Section 712.*

**705.10 Joints.** *Joints made in or between fire walls shall comply with Section 713.*

**705.11 Ducts and air transfer openings.** *Ducts and air transfer openings shall not penetrate fire walls.*

**Exception:** *Penetrations by ducts and air transfer openings of fire walls that are not on a tax lot line shall be allowed provided the penetrations comply with Sections 712 and 716. The size and aggregate width of all openings shall not exceed the limitations of Section 705.8.*

**SECTION BC 706**  
**FIRE BARRIERS**

**706.1 General.** *Fire barriers used for separation of shafts, exits, exit passageways, horizontal exits or incidental use areas, to separate different occupancies, to separate a single occupancy into different fire areas, or to separate other areas where a fire barrier is required elsewhere in this code or the New York City Fire Code, shall comply with this section.*

**706.2 Materials.** *The walls and floor assemblies shall be of materials permitted by the building type of construction.*

**706.3 Fire-resistance rating.** *The fire-resistance rating of the walls and floor assemblies shall comply with this section.*

**706.3.1 Shaft enclosures.** *The fire-resistance rating of the fire barrier separating building areas from a shaft shall comply with Section 707.4.*

**706.3.2 Exit enclosures.** *The fire-resistance rating of the fire barrier separating building areas from an exit shall comply with Section 1019.1.*

**706.3.3 Exit passageway.** *The fire-resistance rating of the separation between building areas and an exit passageway shall comply with Section 1020.1.*

**706.3.4 Horizontal exit.** *The fire-resistance rating of the separation between building areas connected by a horizontal exit shall comply with Section 1021.1.*

**706.3.5 Incidental use areas.** *The fire barrier separating incidental use areas shall have a fire-resistance rating of not less than that indicated in Table 302.1.1.*

**706.3.6 Separation of mixed occupancies.** *Where the provisions of Section 302.3.2 are applicable, the fire barrier separating mixed occupancies shall have a fire-resistance rating of not less than that indicated in Section 302.3.2 based on the occupancies being separated.*

**706.3.7 Single-occupancy fire areas.** *The fire barrier separating a single occupancy into different fire areas shall have a fire-resistance rating of not less than that indicated in Table 706.3.7.*

**TABLE 706.3.7**  
**FIRE-RESISTANCE RATING REQUIREMENTS FOR FIRE**  
**BARRIER ASSEMBLIES BETWEEN FIRE AREAS**

OCCUPANCY GROUP	FIRE-RESISTANCE RATING (hours)
H-1, H-2	4
F-1, H-3, S-1	3
A, B, E, F-2, H-4, H-5, I, M, R, S-2	2
U	1

**706.3.8 Atriums.** *The fire-resistance rating of the fire barrier separating atriums shall comply with Section 404.5.*

**706.4 Continuity of fire barrier walls.** *Fire barrier walls shall extend from the top of the floor/ceiling assembly below to the underside of the floor or roof slab or deck above and shall be securely attached thereto. These walls shall be continuous through concealed spaces such as the space above a suspended ceiling. The supporting construction for fire barrier walls shall be protected to afford the required fire-resistance rating of the fire barrier supported except for 1-hour fire-resistance-rated incidental use area separations as required by Table 302.1.1 in buildings of Type IIB, IIIB and VB construction. Hollow vertical spaces within the fire barrier wall shall be fire-stopped at every floor level.*

**Exceptions:**

1. *The maximum required fire-resistance rating for assemblies supporting fire barriers separating tank storage as provided for in Section 415.7.2.1 shall be 2 hours, but not less than required by Table 601 for the building construction type.*
2. *Shaft enclosure shall be permitted to terminate at a top enclosure complying with Section 707.12.*

**706.5 Horizontal fire barriers.** *Horizontal fire barriers shall be constructed in accordance with Section 711.*

**706.6 Exterior walls.** *Where exterior walls serve as a part of a required fire-resistance-rated enclosure, such walls shall comply with the requirements of Section 704 for exterior walls, and the fire-resistance-rated enclosure requirements of Section 706 shall not apply.*

**Exception:** *Exterior walls required to be fire-resistance rated in accordance with Section 1022.6.*

**706.7 Openings.** *Openings in a fire barrier wall shall be protected in accordance with Section 715. Openings shall be limited to a maximum aggregate width of 25 percent of the length of the wall, and the maximum area of any single opening shall not exceed 120 square feet (11 m<sup>2</sup>). Openings in vertical exit enclosures and exit passageways shall also comply with Sections 1019.1.1 and 1020.4, respectively.*

**Exceptions:**

1. *Openings shall not be limited to 120 square feet (11 m<sup>2</sup>) where adjoining fire areas are*

*equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.*

- 2. Openings for fire doors serving an exit enclosure shall not be limited to an aggregate width of 25 percent of the length of the wall.*
- 3. Openings shall not be limited to 120 square feet (11 m<sup>2</sup>) or an aggregate width of 25 percent of the length of the wall where the opening protective assembly has been tested in accordance with ASTM E 119 and has a minimum fire-resistance rating not less than the fire-resistance rating of the wall.*
- 4. Openings permitted in atrium enclosures shall comply with the provisions of Section 404.5.*

**706.8 Penetrations.** *Penetrations through fire barriers shall comply with Section 712.*

**706.8.1 Prohibited penetrations.** *Penetrations into an exit enclosure shall only be allowed when permitted by Sections 1019.12 and 1020.5.*

**706.9 Joints.** *Joints made in or between fire barriers shall comply with Section 713.*

**706.10 Ducts and air transfer openings.** *Penetrations by ducts and air transfer openings shall comply with Sections 712 and 716.*

**706.10.1 Prohibited ducts and air transfer openings.** *Penetrations by ducts and air transfer openings into an exit enclosure shall only be allowed when permitted by Sections 1019.1.2 and 1020.5.*

## **SECTION BC 707**

### **SHAFT ENCLOSURES**

**707.1 General.** *The provisions of this section shall apply to vertical shafts where such shafts are required to protect openings and penetrations through floor/ceiling and roof/ceiling assemblies.*

**707.2 Shaft enclosure required.** *Openings through a floor/ceiling assembly shall be protected by a shaft enclosure complying with this section.*

**Exceptions:**

1. *A shaft enclosure is not required for openings totally within an individual residential dwelling unit and connecting four stories or less where such dwelling unit is fully sprinklered in accordance with Section 903.3.1.1, 903.3.1.2 or 903.3.1.3.*
2. *A shaft enclosure is not required in a building equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 for an escalator opening or stairway which is not a portion of the means of egress protected according to Item 2.1 or 2.2:*
  - 2.1. *Where the area of the floor opening between stories does not exceed twice the horizontal projected area of the escalator or stairway and the opening is protected by a draft curtain and closely spaced sprinklers in accordance with NFPA 13, as modified in Appendix Q. In other than Groups B and M, this application is limited to openings that do not connect more than four stories.*
  - 2.2. *Where the opening is protected by approved power-operated automatic shutters at every floor penetrated. The shutters shall be of noncombustible construction and have a fire-resistance rating of not less than 1.5 hours. The shutter shall be so constructed as to close immediately upon the actuation of a smoke detector installed in accordance with Section 907.11 and shall completely shut off the well opening. Escalators shall cease operation when the shutter begins to close. The shutter shall operate at a speed of not more than 30 feet per minute (152.4 mm/s) and shall be equipped with a sensitive leading edge to arrest its progress where in contact with any obstacle, and to continue its progress on release therefrom.*
3. *A shaft enclosure is not required for penetrations by pipe, tube, conduit, wire, cable, and vents protected in accordance with Section 712.4.*
4. *A shaft enclosure is not required for penetrations by ducts protected in accordance with Section 712.4. Grease ducts shall be protected in accordance with the New York City Mechanical Code.*
5. *In other than Group H Occupancies, a shaft enclosure is not required for floor openings complying with the provisions for atriums in Section 404.*
6. *A shaft enclosure is not required for approved masonry chimneys, where annular space protection is provided at each floor level in accordance with Section 717.2.5.*

7. *In other than Groups I-2 and I-3, a shaft enclosure is not required for a floor opening that complies with all of the following:*
  - 7.1. *Does not connect more than two stories.*
  - 7.2. *Is not part of the required means of egress system except as permitted in Section 1019.1.*
  - 7.3. *Is not concealed within the building construction.*
  - 7.4. *Is not open to a corridor in Group I and R occupancies where such corridor is required to be fire-resistance rated in accordance with Table 1016.1.*
  - 7.5. *Is not open to a corridor on nonsprinklered floors in any occupancy where such corridor is required to be fire-resistance rated in accordance with Table 1016.1.*
  - 7.6. *Is separated from floor openings serving other floors by construction conforming to required shaft enclosures.*
8. *A shaft enclosure is not required for automobile ramps in open parking garages and enclosed parking garages constructed in accordance with Sections 406.3 and 406.4, respectively.*
9. *A shaft enclosure is not required for floor openings between a mezzanine and the floor below.*
10. *A shaft enclosure is not required for joints protected by a fire-resistant joint system in accordance with Section 713.*
11. *Where permitted by other sections of this code.*

**707.3 Materials.** *The shaft enclosure shall be of materials permitted by the building type of construction.*

**Exception:** *Noncombustible materials shall be used for shaft enclosures in Groups I-1, R-1 and R-2 buildings irrespective of the building type of construction.*

**707.4 Fire-resistance rating.** *Shaft enclosures shall have a fire-resistance rating of not less than 2 hours where penetrating three stories or more and not less than 1 hour where penetrating fewer than three stories. The number of stories connected by the shaft enclosure shall include any basements or cellars, but*

not any mezzanines. Shaft enclosures shall be constructed as fire barriers in accordance with Section 706. Shaft enclosures shall have a fire-resistance rating not less than the floor assembly penetrated, but need not exceed 2 hours.

**707.5 Continuity.** Where the roof construction is of combustible materials, shaft enclosure walls shall extend through the roof construction at least 30 inches (762 mm) above the roof. Where the roof construction is of noncombustible materials, shaft enclosure walls shall extend from the top of the floor/ceiling assembly below to the underside of the floor or roof slab or deck above and shall be securely attached thereto. These walls shall be continuous through concealed spaces such as the space above a suspended ceiling. The supporting construction shall be protected to afford the required fire-resistance rating of the element supported. Hollow vertical spaces within the shaft enclosure construction wall shall be firestopped at every floor level.

**Exception:** A shaft enclosure of a refuse or laundry chute shall extend through combustible or noncombustible roof construction at least 6 feet (1829 mm) above the roof.

**707.6 Exterior walls.** Where exterior walls serve as a part of a required shaft enclosure, such walls shall comply with the requirements of Section 704 for exterior walls and the fire-resistance-rated enclosure requirements of Section 707.4 shall not apply.

**Exception:** Exterior walls required to be fire-resistance rated in accordance with Section 1022.6.

**707.7 Openings.** Openings in a shaft enclosure shall be protected in accordance with Section 715 as required for fire barriers. Such openings shall be self-closing or automatic-closing by smoke detection. Automatic-closing by smoke detection is not permitted for required vertical exit doors.

**707.7.1 Prohibited openings.** Openings other than those necessary for the purpose of the shaft shall not be permitted in shaft enclosures.

**707.8 Penetrations.** Penetrations in a shaft enclosure shall be protected in accordance with Section 712 as required for fire barriers.

**707.8.1 Prohibited penetrations.** Penetrations other than those necessary for the purpose of the shaft shall not be permitted in shaft enclosures.

**Exception:** Duct penetrations in accordance with Section 707.10, as permitted in Sections 1019.1.2, 1019.1.3, and 1020.5.

**707.9 Joints.** *Joints in a shaft enclosure shall comply with Section 713.*

**707.10 Ducts and air transfer openings.** *Penetrations of a shaft enclosure by ducts and air transfer openings shall comply with Sections 712 and 716.*

**707.11 Enclosure at the bottom.** *Shafts that do not extend to the bottom of the building or structure shall:*

- 1. Be enclosed at the lowest level with construction of the same fire-resistance rating as the lowest floor through which the shaft passes, but not less than the rating required for the shaft enclosure;  
or*
- 2. Terminate in a room having a use related to the purpose of the shaft. The room shall be separated from the remainder of the building by construction having a fire-resistance rating and opening protectives at least equal to the protection required for the shaft enclosure.*

**Exceptions:**

- 1. The fire-resistance-rated room separation is not required provided there are no openings in or penetrations of the shaft enclosure to the interior of the building except at the bottom. The bottom of the shaft shall be closed off around the penetrating items with materials permitted by Section 717.3.1 for draft stopping, or the room shall be provided with an approved automatic fire suppression system.*
- 2. A shaft enclosure containing a refuse chute or laundry chute shall not be used for any other purpose and shall terminate in a room protected in accordance with Section 707.13.4.*
- 3. The fire-resistance-rated room separation and the protection at the bottom of the shaft are not required provided there are no combustibles in the shaft and there are no openings or other penetrations through the shaft enclosure to the interior of the building.*

**707.12 Enclosure at the top.** *A shaft enclosure that does not extend to the underside of the roof deck of the building shall be enclosed at the top with construction of the same fire-resistance rating as the topmost floor penetrated by the shaft, but not less than the fire-resistance rating required for the shaft enclosure.*

**707.13 Refuse and laundry chutes.** *Refuse and laundry chutes, access and termination rooms and incinerator rooms shall meet the requirements of Sections 707.13.1 through 707.13.6.*

**Exception:** Chutes serving and contained within a single dwelling unit.

**707.13.1 Refuse and laundry chute enclosures.** A shaft enclosure containing a refuse or laundry chute shall not be used for any other purpose and shall have a fire-resistance rating of 2 hours. Openings into the shaft, including those from access rooms and termination rooms, shall be protected in accordance with this section and Section 715. Openings into chutes shall not be located in exit access corridors. Opening protectives shall be self-closing.

**707.13.2 Materials.** A shaft enclosure containing a refuse or laundry chute shall be constructed of noncombustible materials.

**707.13.3 Refuse and laundry chute access rooms.** Access openings for refuse and laundry chutes shall be located in dedicated rooms or compartments completely enclosed by construction that has a fire-resistance rating of not less than 2 hours. Openings into the access rooms shall be protected by opening protectives having a fire protection rating of not less than 1½ hour and shall be self-closing. Openings may be automatic-closing upon the detection of smoke provided that the storage of refuse, including recyclables, or laundry is not permitted in such access rooms.

**Exception:** Access openings for refuse or laundry chutes located within a dwelling unit need not be located within a separate room or compartment.

**707.13.4 Termination room.** Refuse and laundry chutes shall discharge into an enclosed room completely separated from the remainder of the building by construction that has a fire-resistance rating of not less than 3 hours. Openings into the termination room shall be protected by opening protectives having a fire protection rating of not less than 3 hours and shall be self-closing.

**707.13.5 Incinerator room.** Incinerator rooms shall comply with Table 302.1.1.

**707.13.6 Automatic fire sprinkler system.** An approved automatic fire sprinkler system shall be installed in accordance with Section 903.2.10.2.

**707.14 Elevator and dumbwaiter shafts.** Elevator hoist way and dumbwaiter enclosures shall be constructed in accordance with Section 707.4 and Chapter 30.

**707.14.1 Elevator lobby.** Elevator lobbies shall be provided in accordance with Section 403.9.1.

**SECTION BC 708**  
**FIRE PARTITIONS**

**708.1 General.** *The following wall assemblies shall comply with this section.*

1. *Walls separating tenant spaces in covered mall buildings as required by Section 402.7.2.*
2. *Walls as required by Section 1016.1.*

**708.2 Materials.** *The walls shall be of materials permitted by the building type of construction.*

**708.3 Fire-resistance rating.** *The fire-resistance rating of the walls shall be 1 hour.*

**Exception:** *Interior corridor walls as permitted by Table 1016.1.*

**708.4 Continuity.** *Fire partitions shall extend from the top of the floor assembly below to the underside of the floor or roof slab or deck above or to the fire-resistance-rated floor/ceiling or roof/ceiling assembly above, and shall be securely attached thereto. If the partitions are not continuous to the deck, the space between the ceiling and the deck above shall be fire blocked or draft stopped in accordance with Sections 717.2.1 and 717.3.1 at the partition line. The supporting construction shall be protected to afford the required fire-resistance rating of the wall supported.*

**Exceptions:**

1. *The fire partition separating tenant spaces in a mall, complying with Section 402.7.2, is not required to extend beyond the underside of a ceiling that is not part of a fire-resistance-rated assembly. A wall is not required in attic or ceiling spaces above tenant separation walls.*
2. *Fire blocking or draft stopping is not required at the partition line in Group R-2 buildings that do not exceed four stories in height provided the attic space is subdivided by draft stopping into areas not exceeding 3,000 square feet (279 m<sup>2</sup>) or above every two dwelling units, whichever is smaller.*
3. *Fire blocking or draft stopping is not required at the partition line in buildings equipped with an automatic sprinkler system installed throughout in accordance with Section 903.3.1.1 or 903.3.1.2 provided that automatic sprinklers are installed in combustible floor/ceiling and*

*roof/ceiling spaces.*

**708.5 Exterior walls.** *Where exterior walls serve as a part of a required fire-resistance-rated enclosure, such walls shall comply with the requirements of Section 704 for exterior walls and the fire-resistance-rated enclosure requirements of Section 708.3 shall not apply.*

**708.6 Openings.** *Openings in a fire partition shall be protected in accordance with Section 715.*

**708.7 Penetrations.** *Penetrations through fire partitions shall comply with Section 712.*

**708.8 Joints.** *Joints made in or between fire partitions shall comply with Section 713.*

**708.9 Ducts and air transfer openings.** *Penetrations by ducts and air transfer openings shall comply with Sections 712 and 716.*

## **SECTION BC 709 SMOKE BARRIERS**

**709.1 General.** *Smoke barriers shall comply with this section.*

**709.2 Materials.** *Smoke barriers shall be of materials permitted by the building type of construction.*

**709.3 Fire-resistance rating.** *A 1-hour fire-resistance rating is required for smoke barriers.*

**Exception:** *Smoke barriers constructed of minimum 0.10-inch-thick (2.5 mm) steel in Group I-3 buildings.*

**709.4 Continuity.** *Smoke barriers shall form an effective membrane continuous from outside wall to outside wall and from floor slab to floor or roof deck above, including continuity through concealed spaces, such as those found above suspended ceilings, and interstitial structural and mechanical spaces. The supporting construction shall be protected to afford the required fire-resistance rating of the wall or floor supported in buildings of other than Type IIB, IIIB or VB construction.*

**Exception:** *Smoke barrier walls are not required in interstitial spaces where such spaces are designed and constructed with ceilings that provide resistance to the passage of fire and smoke equivalent to that provided by the smoke barrier walls.*

**709.5 Openings.** *Openings in a smoke barrier shall be protected in accordance with Section 715.*

**Exception:** *In Group I-2, where such doors are installed across corridors, a pair of opposite-swinging doors without a center mullion shall be installed having vision panels with approved fire-resistance-rated glazing materials in approved fire-resistance-rated frames, the area of which shall not exceed that tested. The doors shall be close fitting within operational tolerances, and shall not have undercuts, louvers or grilles. The doors shall have head and jamb stops, astragals or rabbets at meeting edges and automatic-closing devices. Positive-latching devices are not required.*

**709.6 Penetrations.** *Penetrations through smoke barriers shall comply with Section 712.*

**709.7 Joints.** *Joints made in or between smoke barriers shall comply with Section 713.*

**709.8 Duct and air transfer openings.** *Penetrations by duct and air transfer openings shall comply with Sections 712 and 716.*

## **SECTION BC 710 SMOKE PARTITIONS**

**710.1 General.** *Smoke partitions installed as required elsewhere in the code shall comply with this section.*

**710.2 Materials.** *Smoke partitions shall be constructed of noncombustible materials. Glazing may be used provided it is heat-strengthened or tempered glazing complying and shall otherwise comply with Chapter 24, and shall be protected by sprinkler heads installed in a maximum of 6 feet (1829 mm) on center on each side of the smoke partition.*

**710.3 Fire-resistance rating.** *Unless required elsewhere in the code, smoke partitions are not required to have a fire-resistance rating.*

**710.4 Continuity.** *Smoke partitions shall extend from the floor to the underside of the floor or roof deck above or to the underside of the ceiling above where the ceiling membrane is constructed to limit the transfer of smoke.*

**710.5 Openings.** *Windows shall be sealed to resist the free passage of smoke or be automatic-closing upon detection of smoke. Doors in smoke partitions shall comply with this section.*

**710.5.1 Louvers.** *Doors in smoke partitions shall not include louvers.*

**710.5.2 Smoke and draft-control doors.** Where required elsewhere in the code, doors in smoke partitions shall be tested in accordance with UL 1784 with an artificial bottom seal installed across the full width of the bottom of the door assembly. The air leakage rate of the door assembly shall not exceed 3.0 cubic feet per minute per square foot [ $\text{ft}^3/(\text{min ft}^2)$ ] ( $0.015424 \text{ m}^3/\text{sm}^2$ ) of door opening at 0.10 inch (24.9 Pa) of water for both the ambient temperature test and the elevated temperature exposure test.

**710.5.3 Self-closing or automatic-closing doors.** Where required elsewhere in the code, doors in smoke partitions shall be self-closing or automatic-closing in accordance with Section 715.3.7.3.

**710.6 Penetrations and joints.** The space around penetrating items and in joints shall be filled with an approved material to limit the free passage of smoke.

**710.7 Ducts and air transfer openings.** Air transfer openings in smoke partitions shall be provided with a smoke damper complying with Section 716.3.2.

**Exception:** Where the installation of a smoke damper will interfere with the operation of a required smoke control system in accordance with Section 909, approved alternative protection shall be utilized.

## **SECTION BC 711 HORIZONTAL ASSEMBLIES**

**711.1 General.** Floor and roof assemblies required to have a fire-resistance rating shall comply with this section.

**711.2 Materials.** The floor and roof assemblies shall be of materials permitted by the building type of construction.

**Exception:** Horizontal floor or roof assemblies shall be of noncombustible materials when such assemblies serve as a horizontal offset to a fire wall or fire barrier that is required to be noncombustible.

**711.3 Fire-resistance rating.** The fire-resistance rating of floor and roof assemblies shall not be less than that required by the building type of construction. Where the floor assembly separates mixed occupancies, the assembly shall have a fire-resistance rating of not less than that required by Section 302.3.2 based on

*the occupancies being separated. Where the floor assembly separates a single occupancy into different fire areas, the assembly shall have a fire-resistance rating of not less than that required by Section 706.3.7. Floor assemblies separating dwelling units in Group I-1 or R Occupancies shall be a minimum of 1-hour fire-resistance-rated construction.*

**711.3.1 Ceiling panels.** *Where the weight of lay-in ceiling panels, used as part of fire-resistance-rated floor/ceiling or roof/ceiling assemblies, is not adequate to resist an upward force of 1 lb/ft.<sup>2</sup> (48 Pa), wire or other approved devices shall be installed above the panels to prevent vertical displacement under such upward force.*

**711.3.2 Access doors.** *Access doors shall be permitted in ceilings of fire-resistance-rated floor/ceiling and roof/ceiling assemblies provided such doors are tested in accordance with ASTM E 119 as horizontal assemblies and labeled by an approved agency for such purpose.*

**711.3.3 Unusable space.** *In 1-hour fire-resistance-rated floor construction, the ceiling membrane is not required to be installed over unusable crawl spaces not intended for occupancy or storage, less than 24 inches (610 mm) in height. In 1-hour fire-resistance-rated roof construction, the floor membrane is not required to be installed where the unusable attic space above is not intended for occupancy or storage.*

**711.4 Continuity.** *Assemblies shall be continuous without openings, penetrations or joints except as permitted by this section and Sections 707.2, 712.4 and 713. Skylights and other penetrations through a fire-resistance-rated roof deck are permitted to be unprotected, provided that the structural integrity of the fire-resistance-rated roof construction is maintained. Unprotected skylights shall not be permitted in roof construction required to be fire-resistance rated in accordance with Section 704.10. The supporting construction shall be protected to afford the required fire-resistance rating of the horizontal assembly supported.*

**711.5 Penetrations.** *Penetrations through fire-resistance-rated horizontal assemblies shall comply with Section 712.*

**711.6 Joints.** *Joints made in or between fire-resistance-rated horizontal assemblies shall comply with Section 713. The void created at the intersection of a floor/ceiling assembly and an exterior curtain wall assembly shall be protected in accordance with Section 713.4.*

**711.7 Ducts and air transfer openings.** *Penetrations by ducts and air transfer openings shall comply with Sections 712 and 716.*

**SECTION BC 712**  
**PENETRATIONS**

**712.1 Scope.** *The provisions of this section shall govern the materials and methods of construction used to protect through penetrations and membrane penetrations.*

**712.1.1 Special inspection.** *All through-penetration and membrane-penetration firestop systems shall comply with the special inspection requirements of Chapter 17.*

**712.2 Installation details.** *Where sleeves are used, they shall be securely fastened to the assembly penetrated. The space between the item contained in the sleeve and the sleeve itself and any space between the sleeve and the assembly penetrated shall be protected in accordance with this section. Insulation and coverings on or in the penetrating item shall not penetrate the assembly unless the specific material used has been tested as part of the assembly in accordance with this section.*

**712.3 Fire-resistance-rated walls.** *Penetrations into or through fire walls, fire barriers, smoke barrier walls, and fire partitions shall comply with this section.*

**712.3.1 Through penetrations.** *Through penetrations of fire-resistance-rated walls shall comply with Section 712.3.1.1 or 712.3.1.2.*

**Exception:** *Where the penetrating items are steel, ferrous or copper pipes or steel conduits, the annular space between the penetrating item and the fire-resistance-rated wall shall be permitted to be protected as follows:*

1. *In concrete or masonry walls where the penetrating item is a maximum 6-inch (152 mm) nominal diameter and the opening is a maximum 144 square inches (0.0929 m<sup>2</sup>), concrete, grout or mortar shall be permitted where installed the full thickness of the wall or the thickness required to maintain the fire-resistance rating; or*
2. *The material used to fill the annular space shall prevent the passage of flame and hot gases sufficient to ignite cotton waste where subjected to ASTM E 119 time-temperature fire conditions under a minimum positive pressure differential of 0.01 inch (2.49 Pa) of water at the location of the penetration for the time period equivalent to the fire-resistance rating of the construction penetrated.*

**712.3.1.1 Fire-resistance-rated assemblies.** Penetrations shall be installed as tested in an approved fire-resistance-rated assembly.

**712.3.1.2 Through-penetration firestop system.** Through penetrations shall be protected by an approved penetration fire stop system installed as tested in accordance with ASTM E 814 or UL 1479, with a minimum positive pressure differential of 0.01 inch (2.49 Pa) of water and shall have an F rating of not less than the required fire-resistance rating of the wall penetrated.

**712.3.2 Membrane penetrations.** Membrane penetrations shall be protected by a membrane penetration firestop installed in accordance with Section 712.3.1. Where walls and partitions are required to have a minimum 1-hour fire-resistance rating, recessed fixtures shall be installed such that the required fire resistance will not be reduced.

**Exceptions:**

1. Steel electrical boxes that do not exceed 16 square inches (0.0103 m<sup>2</sup>) in area provided the total area of such openings does not exceed 100 square inches (0.0645 m<sup>2</sup>) for any 100 square feet (9.29 m<sup>2</sup>) of wall area. Outlet boxes on opposite sides of the wall shall be separated as shown:
  - 1.1. By a horizontal distance of not less than 24 inches (610 mm);
  - 1.2. By a horizontal distance of not less than the depth of the wall cavity where the wall cavity is filled with cellulose loose fill, rock wool or slag mineral wool insulation;
  - 1.3. By solid fire blocking in accordance with Section 717.2.1;
  - 1.4. By protecting both outlet boxes by listed putty pads; or
  - 1.5. By other listed materials and methods.
2. Membrane penetrations for listed electrical outlet boxes of any material are permitted provided such boxes have been tested for use in fire-resistance-rated assemblies and are installed in accordance with the instructions included in the listing. Outlet boxes on opposite sides of the wall shall be separated as follows:
  - 2.1. By a horizontal distance of not less than 24 inches (610 mm);

- 2.2. *By solid fire blocking in accordance with Section 717.2.1;*
  - 2.3. *By protecting both outlet boxes by listed putty pads; or*
  - 2.4. *By other listed materials and methods.*
3. *The annular space created by the penetration of a fire sprinkler provided it is covered by a metal escutcheon plate.*

**712.3.3 Ducts and air transfer openings.** *Penetrations of fire-resistance-rated walls by ducts and air transfer openings that are not protected with fire dampers shall comply with this section.*

**712.3.4 Dissimilar materials.** *Noncombustible penetrating items shall not connect to combustibles beyond the point of fire stopping unless it can be demonstrated to the commissioner that the fire-resistance integrity of the wall is maintained.*

**712.4 Horizontal assemblies.** *Penetrations of a floor, floor/ceiling assembly or the ceiling membrane of a roof/ceiling assembly shall be protected in accordance with Section 707. Penetrations permitted by Exceptions 3 and 4 of Section 707.2 shall comply with Sections 712.4.1 through 712.4.4.*

**Exception:** *Penetrations located within the same room or undivided area as floor openings not required to have a shaft enclosure in accordance with Exceptions 1, 2, 5, 7, 8 or 9 in Section 707.2.*

**712.4.1 Through penetrations.** *Through penetrations of fire-resistance-rated horizontal assemblies shall comply with Section 712.4.1.1 or 712.4.1.2.*

**Exceptions:**

1. *Penetrations by steel, ferrous or copper conduits, pipes, tubes, vents, concrete, or masonry through a single fire-resistance-rated floor assembly where the annular space is protected with materials that prevent the passage of flame and hot gases sufficient to ignite cotton waste where subjected to ASTM E 119 time-temperature fire conditions under a minimum positive pressure differential of 0.01 inch (2.49 Pa) of water at the location of the penetration for the time period equivalent to the fire-resistance rating of the construction penetrated. Penetrating items with a maximum 6-inch (152 mm) nominal diameter shall not be limited to the penetration of a single fire-resistance-rated floor*

*assembly provided that the area of the penetration does not exceed 144 square inches (92 900 mm<sup>2</sup>) in any 100 square feet (9.3m<sup>2</sup>) of floor area.*

- 2. Penetrations in a single concrete floor by steel, ferrous or copper conduits, pipes, tubes and vents with a maximum 6-inch (152 mm) nominal diameter provided concrete, grout or mortar is installed the full thickness of the floor or the thickness required to maintain the fire-resistance rating. The penetrating items with a maximum 6-inch (152 mm) nominal diameter shall not be limited to the penetration of a single concrete floor provided that the area of the penetration does not exceed 144 square inches (0.0929 m<sup>2</sup>).*
- 3. Electrical outlet boxes of any material are permitted provided that such boxes are tested for use in fire-resistance-rated assemblies and installed in accordance with the tested assembly.*

**712.4.1.1 Fire-resistance-rated assemblies.** *Penetrations shall be installed as tested in the approved fire-resistance-rated assembly.*

**712.4.1.2 Through-penetration firestop system.** *Through penetrations shall be protected by an approved through-penetration fire stop system installed and tested in accordance with ASTM E 814 or UL 1479, with a minimum positive pressure differential of 0.01 inch (2.49 Pa) of water. The system shall have an F rating and a T rating of not less than 1 hour but not less than the required rating of the floor penetrated.*

**Exception:** *Floor penetrations contained and located within the cavity of a wall do not require a T rating.*

**712.4.2 Membrane penetrations.** *Penetrations of membranes that are part of a fire-resistance-rated horizontal assembly shall comply with Section 712.4.1.1 or 712.4.1.2. Where floor/ceiling assemblies are required to have a minimum 1-hour fire-resistance rating, recessed fixtures shall be installed such that the required fire resistance will not be reduced.*

**Exceptions:**

- 1. Membrane penetrations by steel, ferrous or copper conduits, electrical outlet boxes, pipes, tubes, vents, concrete, or masonry-penetrating items where the annular space is protected either in accordance with Section 712.4.1 or to prevent the free passage of flame and the products of combustion. Such penetrations shall not exceed an aggregate*

*area of 100 square inches (64 500 mm<sup>2</sup>) in any 100 square feet (9.3 m<sup>2</sup>) of ceiling area in assemblies tested without penetrations.*

- 2. Membrane penetrations by listed electrical outlet boxes of any material are permitted provided such boxes have been tested for use in fire-resistance-rated assemblies and are installed in accordance with the instructions included in the listing.*
- 3. The annular space created by the penetration of a fire sprinkler provided it is covered by a metal escutcheon plate.*

**712.4.3 Nonfire-resistance-rated assemblies.** *Penetrations of horizontal assemblies without a required fire-resistance rating shall meet the requirements of Section 707 or shall comply with Sections 712.4.3.1 through 712.4.3.2.*

**712.4.3.1 Noncombustible penetrating items.** *Noncombustible penetrating items that connect not more than three stories are permitted provided that the annular space is filled with an approved noncombustible material to resist the free passage of flame and the products of combustion.*

**712.4.3.2 Penetrating items.** *Penetrating items that connect not more than two stories are permitted provided that the annular space is filled with an approved material to resist the free passage of flame and the products of combustion.*

**712.4.4 Ducts and air transfer openings.** *Penetrations of horizontal assemblies by ducts and air transfer openings that are not required to have dampers shall comply with this section. Ducts and air transfer openings that are protected with dampers shall comply with Section 716.*

**712.4.5 Dissimilar materials.** *Noncombustible penetrating items shall not connect to combustible materials beyond the point of fire stopping unless it can be demonstrated that the fire-resistance integrity of the horizontal assembly is maintained.*

**712.4.6 Floor fire doors.** *Floor fire door assemblies used to protect openings in fire-resistance-rated floors shall be tested in the horizontal position in accordance with ASTM E 119, and shall achieve a fire-resistance rating not less than the assembly being penetrated. Floor fire doors shall be labeled by an approved agency.*

**SECTION BC 713**  
**FIRE-RESISTANT JOINT SYSTEMS**

**713.1 General.** Joints installed in or between fire-resistance-rated walls, floor or floor/ceiling assemblies and roofs or roof/ceiling assemblies shall be protected by an approved fire-resistant joint system designed to resist the passage of fire for a time period not less than the required fire-resistance rating of the wall, floor or roof in or between which it is installed. Fire-resistant joint systems shall be tested in accordance with Section 713.3. The void created at the intersection of a floor/ceiling assembly and an exterior curtain wall assembly shall be protected in accordance with Section 713.4.

**Exception:** Fire-resistant joint systems shall not be required for joints in all of the following locations:

1. Floors within a single dwelling unit.
2. Floors where the joint is protected by a shaft enclosure in accordance with Section 707.
3. Floors within atriums where the space adjacent to the atrium is included in the volume of the atrium for smoke control purposes.
4. Floors within malls.
5. Floors within open parking structures.
6. Mezzanine floors.
7. Walls that are permitted to have unprotected openings.
8. Roofs where openings are permitted.
9. Control joints not exceeding a maximum width of 0.625 inch (15.9 mm) and tested in accordance with ASTM E 119.

**713.2 Installation.** Fire-resistant joint systems shall be securely installed in or on the joint for its entire length so as not to dislodge, loosen or otherwise impair its ability to accommodate expected building movements and to resist the passage of fire and hot gases.

**713.3 Fire test criteria.** Fire-resistant joint systems shall be tested in accordance with the requirements of either ASTM E 1966 or UL 2079. Nonsymmetrical wall joint systems shall be tested with both faces exposed to the furnace, and the assigned fire-resistance rating shall be the shortest duration obtained from

*the two tests. When evidence is furnished to show that the wall was tested with the least fire-resistant side exposed to the furnace, subject to acceptance of the commissioner, the wall need not be subjected to tests from the opposite side.*

**Exception:** *For exterior walls with a horizontal fire separation distance greater than 5 feet (1524 mm), the joint system shall be required to be tested for interior fire exposure only.*

**713.4 Exterior curtain wall/floor intersection.** *Where fire resistance-rated floor or floor/ceiling assemblies are required, voids created at the intersection of the exterior curtain wall assemblies and such floor assemblies shall be sealed with an approved material or system to prevent the interior spread of fire. Such material or systems shall be securely installed and capable of preventing the passage of flame and hot gases sufficient to ignite cotton waste where subjected to ASTM E 119 time-temperature fire conditions under a minimum positive pressure differential of 0.01 inch (0.254 mm) of water column (2.5 Pa) for the time period at least equal to the fire-resistance rating of the floor assembly. Height and fire-resistance requirements for curtain wall spandrels shall comply with Section 704.9.*

## **SECTION BC 714**

### **FIRE-RESISTANCE RATING OF STRUCTURAL MEMBERS**

**714.1 Requirements.** *The fire-resistance rating of structural members and assemblies shall comply with the requirements for the type of construction and shall not be less than the rating required for the fire-resistance-rated assemblies supported.*

**Exception:** *Fire barriers and fire partitions as provided in Sections 706.4 and 708.4, respectively.*

**714.1.1 Inspection of Fire Protection.** *The installation of all required sprayed-on fire protection shall be subject to the special inspection requirements of Section 1704.11.*

**714.2 Protection of structural members.** *Protection of columns, girders, trusses, beams, lintels or other structural members that are required to have a fire-resistance rating shall comply with this section.*

**714.2.1 Individual protection.** *Columns, girders, trusses, beams, lintels or other structural members that are required to have a fire-resistance rating and that support more than one floor or a roof, or support a load-bearing wall or a non-load-bearing wall more than one story high, shall be individually protected on all sides for the full length with materials having the required fire-resistance rating. Girders, trusses, beams, lintels or other structural members required to have a fire-resistance rating and that support only one floor or a roof, and/or a non-bearing wall not more than one story high,*

*shall be protected by individual encasement, by a membrane or ceiling protection as specified in Section 711, or by a combination of both, which together provide the required fire-resistance rating. Columns shall also comply with Section 714.2.2.*

**714.2.2 Column protection.** *Where columns require a fire-resistance rating, the entire column, including its connections to beams or girders, shall be individually protected. Where the column extends through a ceiling, fire resistance of the column shall be continuous from the top of the floor through the ceiling space to the top of the column.*

**714.2.3 Truss protection.** *The required thickness and construction of fire-resistance-rated assemblies enclosing trusses shall be based on the results of full-scale tests or combinations of tests on truss components or on approved calculations based on such tests that satisfactorily demonstrate that the assembly has the required fire resistance*

**714.2.4 Attachments to structural members.** *The edges of lugs, brackets, rivets and bolt heads attached to structural members shall be protected to the highest fire-resistance rating of the members connected.*

**714.2.5 Reinforcing.** *Thickness of protection for concrete or masonry reinforcement shall be measured to the outside of the reinforcement, including stirrups, ties and spiral reinforcing ties.*

**714.3 Embedments and enclosures.** *Pipes, wires, conduits, ducts or other service facilities shall not be embedded in the required fire protection of a structural member that is required to be individually encased; except that pipes, wires, and conduits may be installed in the space between the required fire protection and the structural member protected, provided that where such facilities pierce the required fire protection, the area of the penetration does not exceed two percent of the area of the fire protection on any one face, the penetrations are closed off with close-fitting metal escutcheons or plates, and the concealed space shall be firestopped at each story.*

**714.4 Impact protection.** *Where the fire protective covering of a structural member is subject to impact damage from moving vehicles, the handling of merchandise or other activity, the fire protective covering shall be protected by corner guards or by a substantial jacket of metal or other noncombustible material to a height adequate to provide full protection, but not less than 5 feet (1524 mm) from the finished floor.*

**714.5 Exterior structural members.** *Load-bearing structural members located within the exterior walls or exposed to the outdoors shall be provided with the highest fire-resistance rating as determined in accordance with the following:*

1. *As required by Table 601 for the type of building element based on the type of construction of the building; and*
2. *As required by Table 601 for exterior bearing walls based on the type of construction; and*
3. *As required by Table 602 for exterior walls based on the fire separation distance.*

**714.6 Lintel protection.** *Lintels over openings wider than 4 feet (1219 mm) in masonry walls, other than in walls of masonry veneer on wood frame structures, shall be fire protected as required by Section 714.2, when the full load over the opening is not relieved by a masonry arch of required strength.*

**Exceptions:**

1. *The members of an assembled metal lintel that support only outer face masonry that is securely bonded or anchored to backing need not be fire protected, provided that the inner members of the assembly support the full load imposed.*
2. *The use of stone lintels in spans exceeding 4 feet (1219 mm) shall not be permitted unless supplemented by fire protected structural members or masonry arches of the required strength to support the superimposed loads.*

**714.7 Seismic isolation systems.** *Fire-resistance ratings for the isolation system shall meet the fire-resistance rating required for the columns, walls, or other structural elements in which the isolation system is installed in accordance with Table 601.*

*Isolation systems required to have a fire-resistance rating shall be protected with approved materials or construction assemblies designed to provide the same degree of fire resistance as the structural element in which it is installed when tested in accordance with ASTM E 119 (see Section 703.2).*

*Such isolation system protection applied to isolator units shall be capable of retarding the transfer of heat to the isolator unit in such a manner that the required gravity load-carrying capacity of the isolator unit will not be impaired after exposure to the standard time-temperature curve fire test prescribed in ASTM E 119 for a duration not less than that required for the fire resistance rating of the structure element in which it is installed.*

*Such isolation system protection applied to isolator units shall be suitably designed and securely installed so as not to dislodge, loosen, sustain damage, or otherwise impair its ability to accommodate the seismic movements for which the isolator unit is designed and to maintain its integrity for the purpose of providing the required fire-resistance protection.*

**SECTION BC 715**  
**OPENING PROTECTIVES**

**715.1 General.** *Opening protectives required by other sections of this code shall comply with the provisions of this section.*

**715.2 Fire-resistance-rated glazing.** *Labeled fire-resistance-rated glazing tested as part of a fire-resistance-rated wall assembly in accordance with ASTM E 119 shall not be required to comply with this section.*

**715.3 Fire door and shutter assemblies.** *Approved fire door and fire shutter assemblies shall be constructed of any material or assembly of component materials that conforms to the test requirements of Section 715.3.1, 715.3.2 or 715.3.3 and the fire protection rating indicated in Table 715.3. Fire door assemblies and shutters shall be installed in accordance with the provisions of this section and NFPA 80.*

**Exceptions:**

1. *Labeled protective assemblies that conform to the requirements of this section or UL 10A, UL 14B and UL 14C for tin-clad fire door assemblies.*
2. *Floor fire doors shall comply with Section 712.4.6.*

**TABLE 715.3**

**FIRE DOOR AND FIRE SHUTTER FIRE PROTECTION RATINGS**

<b>TYPE OF ASSEMBLY</b>	<b>REQUIRED ASSEMBLY RATING</b>	<b>MINIMUM FIRE DOOR AND FIRE SHUTTER</b>
<i>Fire walls and fire barriers having a required fire-resistance rating greater than 1 hour</i>	4	3
	3	3 <sup>a</sup>
	2	1½
<i>Fire barriers having a required fire-resistance rating of 1 hour:</i> <i>Shaft exit enclosure and exit</i>	1	1
	1	¾
<i>Fire partitions:</i> <i>Corridor walls</i>	1	¾
<i>Exterior walls</i>	3	1½
	2	1½

- a. *Two doors, each with a fire protection rating of 1½ hours, installed on opposite sides of the same opening in a fire wall, shall be deemed equivalent in fire protection rating to one 3-hour fire door.*

**715.3.1 Side-hinged or pivoted swinging doors.** Side-hinged and pivoted swinging doors shall be tested in accordance with NFPA 252 or UL 10C. After 5 minutes into the NFPA 252 test, the neutral pressure level in the furnace shall be established at 40 inches (1016 mm) or less above the sill.

**715.3.2 Other types of doors.** Other types of doors, including swinging elevator doors, shall be tested in accordance with NFPA 252 or UL 10B. The pressure in the furnace shall be maintained as nearly equal to the atmospheric pressure as possible. Once established, the pressure shall be maintained during the entire test period.

**715.3.3 Door assemblies in corridors and smoke barriers.** Fire door assemblies located in corridor walls or smoke barrier walls having a fire-resistance rating in accordance with Table 715.3 shall be tested in accordance with NFPA 252 or UL 10C. Glazing material in any part of the door assembly, including transom lites and sidelites, shall be tested in accordance with NFPA 257 in accordance with Section 715.4. Fire door assemblies shall also meet the requirements for a smoke- and draft-control door assembly tested in accordance with UL 1784 with an artificial bottom seal installed across the full width of the bottom of the door assembly. The air leakage rate of the door assembly shall not exceed 3.0 cfm per square foot ( $0.01524 \text{ m}^3/\text{slm}^2$ ) of door opening at 0.10 inch (24.9 Pa) of water for both the ambient temperature and elevated temperature tests. Louvers shall be prohibited.

**Exceptions:**

1. Viewports that require a hole not larger than 1 inch (25 mm) in diameter through the door, have at least an 0.25-inch-thick (6.4 mm) glass disc and the holder is of metal that will not melt out where subject to temperatures of 1,700°F (927°C).
2. Corridor door assemblies in occupancies of Group I-2 shall be in accordance with Section 407.3.1.

**715.3.4 Doors in vertical exit enclosures and exit passageways.** Fire door assemblies in vertical exit enclosures and exit passageways shall have a maximum transmitted temperature end point of not more than 450°F (232°C) above ambient at the end of 30 minutes of standard fire test exposure.

**Exception:** The maximum transmitted temperature end point is not required in buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1 or 903.3.1.2.

**715.3.4.1 Glazing in doors.** Fire-protection-rated glazing in excess of 100 square inches (0.065 m<sup>2</sup>) shall be permitted in fire door assemblies when tested in accordance with NFPA 252 as components of the door assemblies and not as glass lights, and shall have a maximum transmitted temperature end point of 450°F (232°C) in accordance with Section 715.3.4.

**Exception:** The maximum transmitted temperature end point is not required in buildings equipped throughout with an automatic sprinkler system installed in accordance with Section 903.3.1.1 or 903.3.1.2.

**715.3.5 Labeled protective assemblies.** Fire door assemblies shall be labeled by an approved agency. The labels shall comply with NFPA 80, and shall be permanently affixed to the door or frame.

**715.3.5.1 Fire door labeling requirements.** Fire doors shall be labeled showing the name of the manufacturer, the name of the third-party inspection agency, the fire protection rating and, where required for fire doors in exit enclosures by Section 715.3.4, the maximum transmitted temperature end point. Smoke and draft control doors complying with UL 1784 shall be labeled as such. Labels shall be approved and permanently affixed. The label shall be applied at the factory or location where fabrication and assembly are performed.

**715.3.5.2 Oversized doors.** Oversized fire doors shall bear an oversized fire door label by an approved agency or shall be provided with a certificate of inspection furnished by an approved testing agency. When a certificate of inspection is furnished by an approved testing agency, the certificate shall state that the door conforms to the requirements of design, materials and construction, but has not been subjected to the fire test.

**715.3.5.3 Smoke and draft control door labeling requirements.** Smoke and draft control doors complying with UL 1784 shall be labeled in accordance with Section 715.3.5.1 and shall show the letter "S" on the fire rating label of the door. This marking shall indicate that the door and frame assembly are in compliance when listed or labeled gasketing is also installed.

**715.3.5.4 Fire door frame labeling requirements.** Fire door frames shall be labeled showing the names of the manufacturer and the third-party inspection agency.

**715.3.6 Glazing material.** Fire-protection-rated glazing conforming to the opening protection requirements in Section 715.3 shall be permitted in fire door assemblies.

**715.3.6.1 Size limitations.** Wired glass used in fire doors shall comply with Table 715.4.3. Other fire-protection-rated glazing shall comply with the size limitations of NFPA 80.

**Exceptions:**

1. Fire-protection-rated glazing in fire doors located in fire walls shall be prohibited except that where serving as a horizontal exit, a self-closing swinging door shall be permitted to have a vision panel of not more than 100 square inches (0.065 m<sup>2</sup>) without a dimension exceeding 10 inches (254 mm).
2. Fire-protection-rated glazing shall not be installed in fire doors having a 1½-hour fire protection rating intended for installation in fire barriers, unless the glazing is not more than 100 square inches (0.065 m<sup>2</sup>) in area.

**715.3.6.2 Exit and elevator protectives.** Approved fire-protection-rated glazing used in fire doors in elevator and stairway shaft enclosures shall be so located as to furnish clear vision of the passageway or approach to the elevator or stairway.

**715.3.6.3 Labeling.** Fire-protection-rated glazing shall bear a label or other identification showing the name of the manufacturer, the test standard and the fire protection rating. Such label or other identification shall be issued by an approved agency and shall be permanently affixed.

**715.3.6.4 Safety glazing.** Fire-protection-rated glazing installed in fire doors or fire window assemblies in areas subject to human impact in hazardous locations shall comply with Chapter 24.

**715.3.7 Door closing.** Fire doors shall be self-closing or automatic-closing in accordance with this section.

**Exception:** Fire doors located in common walls separating sleeping units in Group R-1 shall be permitted without automatic-closing or self-closing devices.

**715.3.7.1 Latch required.** Unless otherwise specifically permitted, single fire doors and both leaves of pairs of side-hinged swinging fire doors shall be provided with an active latch bolt that will secure the door when it is closed.

**715.3.7.2 Automatic-closing fire door assemblies.** Automatic-closing fire door assemblies shall be self-closing in accordance with NFPA 80.

**715.3.7.3 Smoke-activated doors.** Automatic-closing fire doors installed in the following locations shall be automatic-closing by the actuation of smoke detectors installed in accordance with Section 907.10 or by loss of power to the smoke detector or hold-open device. Fire doors that are automatic-closing by smoke detection shall not have more than a 10-second delay before the door starts to close after the smoke detector is actuated.

1. Doors installed across a corridor.
2. Doors that protect openings in horizontal exits, exits or exit access corridors required to be of fire-resistance-rated construction.
3. Doors that protect openings in walls required to be fire-resistance rated by Table 302.1.1.
4. Doors installed in smoke barriers in accordance with Section 709.5.
5. Doors installed in fire partitions in accordance with Section 708.6.
6. Doors installed in a fire wall in accordance with Section 705.8.

**715.3.7.4 Doors in pedestrian ways.** Vertical sliding or vertical rolling steel fire doors in openings through which pedestrian's travel shall be heat activated or activated by smoke detectors with alarm verification.

**715.3.8 Swinging fire shutters.** Where fire shutters of the swinging type are installed in exterior openings, not less than one row in every three vertical rows shall be arranged to be readily opened from the outside, and shall be identified by distinguishing marks or letters not less than 6 inches (152 mm) high.

**715.3.9 Rolling fire shutters.** Where fire shutters of the rolling type are installed, such shutters shall include approved automatic-closing devices.

**715.4 Fire-protection rated glazing.** Glazing in fire window assemblies shall be fire protection rated in accordance with this section and Table 715.4. Glazing in fire doors shall comply with Section 715.3.6. Fire-protection-rated glazing installed as an opening protective in fire partitions, smoke barriers and fire barriers shall be tested in accordance with and shall meet the acceptance criteria of NFPA 257 for a fire

*protection rating of 45 minutes. Fire-protection-rated glazing shall also comply with NFPA 80. Fire-protection-rated glazing required in accordance with Section 704.12 for exterior wall opening protection shall be tested in accordance with and shall meet the acceptance criteria of NFPA 257 for a fire protection rating as required in Section 715.4.7.*

***Exception:*** *Wired glass in accordance with Section 715.4.3.*

**TABLE 715.4  
FIRE WINDOW ASSEMBLY FIRE PROTECTION RATINGS**

TYPE OF ASSEMBLY	REQUIRED ASSEMBLY RATING (hours)	MINIMUM FIRE WINDOW ASSEMBLY RATING (hours)
Interior walls: Fire walls Fire barriers and fire partitions  Smoke barriers	All > 1 1 1	NP <sup>a</sup> NP <sup>a</sup> $\frac{3}{4}$ $\frac{3}{4}$
Exterior walls	>1 1	$1\frac{1}{2}$ $\frac{3}{4}$
Party walls	All	NP <sup>a</sup>

a. Not permitted except as specified in Section 715.2.

**715.4.1 Testing under positive pressure.** NFPA 257 shall evaluate fire-protection-rated glazing under positive pressure. Within the first 10 minutes of a test, the pressure in the furnace shall be adjusted so at least two-thirds of the test specimen is above the neutral pressure plane, and the neutral pressure plane shall be maintained at that height for the balance of the test.

**715.4.2 Nonsymmetrical glazing systems.** Nonsymmetrical fire-protection-rated glazing systems in fire partitions, fire barriers or in exterior walls with a fire separation of 5 feet (1524 mm) or less pursuant to Section 704 shall be tested with both faces exposed to the furnace, and the assigned fire protection rating shall be the shortest duration obtained from the two tests conducted in compliance with NFPA 257.

**715.4.3 Wired glass.** Steel window frame assemblies of 0.125-inch (3.2 mm) minimum solid section or of not less than nominal 0.048-inch-thick (1.2 mm) formed sheet steel members fabricated by pressing, mitering, riveting, interlocking or welding and having provision for glazing with 1/4-inch (6.4 mm) wired glass where securely installed in the building construction and glazed with 1/4-inch (6.4 mm) labeled wired glass shall be deemed to meet the requirements for a 3/4-hour fire window assembly. Wired glass panels shall conform to the size limitations set forth in Table 715.4.3.

**TABLE 715.4.3**

**FIRE DOOR AND FIRE SHUTTER FIRE PROTECTION RATINGS**

<b>OPENING FIRE PROTECTION RATING</b>	<b>MAXIMUM AREA</b>	<b>MAXIMUM HEIGHT</b>	<b>MAXIMUM WIDTH</b>
<i>3 hours</i>	<i>0</i>	<i>0</i>	<i>0</i>
<i>1 ½ - hour doors in exterior walls</i>	<i>0</i>	<i>0</i>	<i>0</i>
<i>1 and 1 ½ hours</i>	<i>100</i>	<i>33</i>	<i>10</i>
<i>¾ hours</i>	<i>1,296</i>	<i>54</i>	<i>54</i>
<i>Fire window assemblies</i>	<i>1,296</i>	<i>54</i>	<i>54</i>

*For SI: 1 inch = 25.4 mm, 1 square inch = 645.2 mm<sup>2</sup>*

**715.4.4 Nonwired glass.** *Glazing other than wired glass in fire window assemblies shall be fire-protection-rated glazing installed in accordance with and complying with the size limitations set forth in NFPA 80.*

**715.4.5 Installation.** *Fire-protection-rated glazing shall be in the fixed position or be automatic-closing and shall be installed in approved frames.*

**715.4.6 Window mullions.** *Metal mullions that exceed a nominal height of 12 feet (3658 mm) shall be protected with materials to afford the same fire-resistance rating as required for the wall construction in which the protective is located.*

**715.4.7 Interior fire window assemblies.** *Fire-protection-rated glazing used in fire window assemblies located in fire partitions and fire barriers shall be limited to use in assemblies with a maximum fire-resistance rating of 1 hour in accordance with this section.*

**715.4.7.1 Where permitted.** *Fire-protection-rated glazing shall be limited to fire partitions designed in accordance with Section 708 and fire barriers utilized in the applications set forth in Sections 706.3.5 and 706.3.6 where the fire-resistance rating does not exceed 1 hour.*

**715.4.7.2 Size limitations.** *The total area of windows shall not exceed 25 percent of the area of a common wall with any room.*

**715.4.8 Exterior fire window assemblies.** *Exterior openings, other than doors, required to be protected by Section 704.12, where located in a wall required by Table 602 to have a fire-resistance rating of greater than 1 hour, shall be protected with an assembly having a fire protection rating of not less than 1½ hours. Exterior openings required to be protected by Section 704.8, where located in a wall required by Table 602 to have a fire-resistance rating of 1 hour, shall be protected with an assembly having a fire protection rating of not less than ¾ hour. Exterior openings required to be protected by Section 704.9 or 704.10 shall be protected with an assembly having a fire protection rating of not less than ¾ hour. Openings in nonfire-resistance-rated exterior wall assemblies that require protection in accordance with Section 704.8, 704.9 or 704.10 shall have a fire protection rating of not less than ¾ hour.*

**715.4.9 Labeling requirements.** *Fire-protection-rated glazing shall bear a label or other identification showing the name of the manufacturer, the test standard, and the fire protection rating. Such label or identification shall be issued by an approved agency and shall be permanently affixed.*

**SECTION BC 716**  
**DUCTS AND AIR TRANSFER OPENINGS**

**716.1 General.** *The provisions of this section shall govern the protection of ducts and air transfer openings in fire-resistance-rated assemblies.*

**716.1.1 Ducts and air transfer openings without dampers.** *Ducts and air transfer openings that penetrate fire-resistance-rated assemblies and are not required by this section to have dampers shall comply with the requirements of Section 712.*

**716.2 Installation.** *Fire dampers, smoke dampers, combination fire/smoke dampers and ceiling dampers located within air distribution and smoke control systems shall be installed in accordance with the requirements of this section, the New York City Mechanical Code, the manufacturer's installation instructions and listing.*

**716.2.1 Smoke control system.** *Where the installation of a fire damper will interfere with the operation of a required smoke control system in accordance with Section 909, approved alternative protection shall be utilized.*

**716.2.1.1 Remote control.** *Provisions for operation by remote control of combination fire/smoke dampers shall be in accordance with Section 607.3.1.1 of the New York City Mechanical Code.*

**716.2.2 Hazardous exhaust ducts.** *Fire dampers for hazardous exhaust duct systems shall comply with the New York City Mechanical Code.*

**716.2.3 Supply air systems.** *Smoke dampers in supply airhandling systems having a capacity equal to or greater than 15,000 cfm (7.1 m<sup>3</sup>/s) shall be installed in accordance with Section 607.2.3 of the New York City Mechanical Code.*

**716.3 Damper testing and ratings.** *Dampers shall be listed and bear the label of an approved testing agency indicating compliance with the standards in this section. Fire dampers shall comply with the requirements of UL 555. Only fire dampers labeled for use in dynamic systems shall be installed in heating, ventilation and air-conditioning systems designed to operate with fans on during a fire. Smoke dampers shall comply with the requirements of UL 555S. Combination fire/smoke dampers shall comply with the requirements of both UL 555 and UL 555S. Ceiling radiation dampers shall comply with the requirements of UL 555C.*

**716.3.1 Fire protection rating.** *Fire dampers shall have the minimum fire protection rating specified in Table 716.3.1 for the type of penetration.*

**TABLE 716.3.1  
FIRE DAMPER RATING**

<b>TYPE OF PENETRATION</b>	<b>MINIMUM DAMPER RATING (hour)</b>
Less than 3-hour fire-resistance-rated assemblies	1.5
3-hour or greater fire-resistance-rated assemblies	3

**716.3.1.1 Fire damper actuating device.** *The fire damper actuating device shall meet one of the following requirements:*

- 1. The operating temperature shall be approximately 50°F (10°C) above the normal temperature within the duct system, but not less than 160°F (71°C).*
- 2. The operating temperature shall be not more than 286°F (141°C) where located in a smoke control system complying with Section 909.*
- 3. Where a combination fire/smoke damper is located in a smoke control system complying with Section 909, the operating temperature rating shall be approximately 50°F (10°C) above the maximum smoke control system designed operating temperature, or a maximum temperature of 350°F (177°C). The temperature shall not exceed the UL 555S degradation test temperature rating for a combination fire/smoke damper.*

**716.3.2 Smoke damper ratings.** *Smoke damper leakage ratings shall not be less than Class II. Elevated temperature ratings shall not be less than 250°F (121°C).*

**716.3.2.1 Smoke damper actuation methods.** *The smoke damper shall close upon actuation of a listed smoke detector or detectors installed in accordance with Section 907.10 and one of the following methods, as applicable:*

- 1. Where a damper is installed within a duct, a smoke detector shall be installed in the duct within 5 feet (1524 mm) of the damper with no air outlets or inlets between the detector and the damper. The detector shall be listed for the air velocity, temperature and humidity anticipated at the point where it is installed. Other than in mechanical smoke control systems, dampers shall be closed upon fan shutdown where local smoke detectors require a minimum velocity to operate.*
- 2. Where a damper is installed above smoke barrier doors in a smoke barrier, a spot-type detector listed for releasing service shall be installed on either side of the smoke barrier door opening.*
- 3. Where a damper is installed within an unducted opening in a wall, a spot-type detector listed for releasing service shall be installed within 5 feet (1524 mm) horizontally of the damper.*

4. *Where a damper is installed in a corridor wall, the damper shall be permitted to be controlled by a smoke detection system installed in the corridor.*
5. *Where a total-coverage smoke detector system is provided within areas served by a heating, ventilation and air-conditioning (HVAC) system, dampers shall be permitted to be controlled by the smoke detection system.*
6. *Smoke dampers that are part of an engineered smoke control system shall be controlled in accordance with Section 607.3.2.1 of the New York City Mechanical Code.*

**716.4 Access and identification.** *Fire and smoke dampers shall be provided with an approved means of access, large enough to permit inspection and maintenance of the damper and its operating parts. The access shall not affect the integrity of fire-resistance-rated assemblies. The access openings shall not reduce the fire-resistance rating of the assembly. Access points shall be permanently identified on the exterior by a label having letters not less than 0.5 inch (12.7 mm) in height reading: SMOKE DAMPER or FIRE DAMPER followed by an identification marking that is individual and unique to the damper accessed.*

**716.5 Where required.** *Fire dampers, smoke dampers, combination fire/smoke dampers and ceiling radiation dampers shall be provided as specified in this section. Where an assembly is required to have both fire dampers and smoke dampers, combination fire/smoke dampers or a fire damper and a smoke damper shall be required.*

**Exceptions:**

1. *Smoke dampers shall not be required on air systems other than where necessary for the proper function of that system where the system is designed specifically to:*
  - 1.1. *Function as an engineered smoke-control system, including the provision of continuous air movement with the air-handling system;*
  - 1.2. *Provide air to other areas of the building during a fire emergency; or*
  - 1.3. *Provide pressure differentials during a fire emergency.*
2. *Smoke dampers shall not be required to be located within a prescribed distance of a fire rated enclosure where isolation smoke dampers are used in air-handling equipment.*

3. *Smoke dampers shall not be required in ducts where the air continues to move and the air-handling system installed is arranged to prevent recirculation of exhaust or return air under fire emergency conditions*

**716.5.1 Fire walls.** *Ducts and air transfer openings permitted in fire walls in accordance with Section 705.11 shall be protected with approved fire dampers and smoke dampers installed in accordance with their listing.*

**716.5.2 Fire barriers.** *Duct and air transfer openings of fire barriers shall be protected with approved fire dampers installed in accordance with their listing. In addition, smoke dampers shall be installed in penetrations of public corridor walls in accordance with Section 716.5.4.1.*

**Exception:** *Fire dampers are not required at penetrations of fire barriers where any of the following apply:*

1. *Penetrations are tested in accordance with ASTM E 119 as part of the fire-resistance-rated assembly.*
2. *Ducts are used as part of an approved smoke control system in accordance with Section 716.2.1 and Section 909.*
3. *Such walls are penetrated by ducted HVAC systems, have a required fire-resistance rating of 1 hour or less, are in areas of other than Group H and are in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 or 903.3.1.2. For the purposes of this exception, a ducted HVAC system shall be a duct system for conveying supply, return or exhaust air as part of the structure's HVAC system. Such a duct system shall be constructed of sheet steel not less than 26 gage thickness and shall be continuous from the air-handling appliance or equipment to the air outlet and inlet terminals.*

**716.5.2.1 Public corridors.** *A listed smoke damper designed to resist the passage of smoke shall be provided at each point a duct or air transfer opening penetrates a public corridor wall constructed as a fire barrier.*

**Exceptions:**

1. *Smoke dampers are not required where the building is equipped throughout with an approved smoke control system in accordance with Section 909, and smoke dampers are not necessary for the operation and control of the system.*
2. *Smoke dampers are not required in corridor penetrations where the duct is constructed of steel not less than 0.019-inch (0.48 mm) in thickness and there are no openings serving the corridor.*
3. *Smoke dampers are not required in corridor penetrations in Group R-2 buildings and spaces.*

**716.5.3 Shaft enclosures.** *Ducts and air transfer openings shall not penetrate a shaft serving as an exit enclosure except as permitted by Section 1020.5.*

**716.5.3.1 Penetrations of shaft enclosures.** *Shaft enclosures that are permitted to be penetrated by ducts and air transfer openings shall be protected with approved fire and smoke dampers installed in accordance with their listing.*

***Exceptions:***

1. *Fire dampers are not required at penetrations of shafts where:*
  - 1.1. *Steel exhaust subducts are extended at least 22 inches (559 mm) vertically in exhaust shafts provided there is a continuous airflow upward to the outside, or*
  - 1.2. *Penetrations are tested in accordance with ASTM E 119 as part of the rated assembly, or*
  - 1.3. *Ducts are used as part of an approved smoke control system designed and installed in accordance with Section 909, and where the fire damper will interfere with the operation of the smoke control system, or*
  - 1.4. *The penetrations are in parking garage exhaust or supply shafts that are separated from other building shafts by not less than 2-hour fire-resistance-rated construction.*

2. *In Group B occupancies, equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1, smoke dampers are not required at penetrations of shafts where:*
  - 2.1. *Bathroom and toilet room exhaust openings with steel exhaust subducts, having a wall thickness of at least 0.019 inches (0.48 mm) that extend at least 22 inches (559 mm) vertically and the exhaust fan at the upper terminus, powered continuously in accordance with the provisions of Section 909.11, maintains airflow upward to the outside, or*
  - 2.2. *Ducts are used as part of an approved smoke control system, designed and installed in accordance with Section 909, and where the smoke damper will interfere with the operation of the smoke control system, or*
3. *Smoke dampers are not required at penetration of exhaust or supply shafts in parking garages that are separated from other building shafts by not less than 2-hour fire-resistance-rated construction.*
4. *Fire dampers and smoke dampers shall not be required at a shaft where the shaft is acting as an extension of the mechanical equipment room that it serves and the shaft and mechanical equipment room maintain fire and smoke separation required by the greater of the two spaces from the occupied portions of the building and meet the requirements of Section 707.11.*
5. *Smoke dampers shall not be required to be located within a prescribed distance of a fire rated enclosure where isolation smoke dampers are used in air-handling equipment.*
6. *Smoke dampers shall not be required in ducts where the air continues to move and the air-handling system installed is arranged to prevent recirculation of exhaust or return air under fire emergency conditions.*
7. *Smoke dampers shall not be required in exhaust ducts or shafts where the exhaust fan is maintained in operation during occupancy, such as in bathroom and toilet room exhausts.*

**716.5.3.2 Limitations.** Shafts that constitute air ducts shall be limited in accordance with Section 607.5.5.2 of the New York City Mechanical Code.

**716.5.4 Fire partitions.** Duct penetrations in fire partitions shall be protected with approved fire dampers installed in accordance with their listing.

**Exceptions:** In occupancies other than Group H, fire dampers are not required where any of the following apply:

1. The partitions are tenant separation and interior corridor walls in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 or 903.3.1.2 and the duct is protected as a through penetration in accordance with Section 712.
2. The duct system is constructed of approved materials in accordance with the New York City Mechanical Code and the duct penetrating the wall meets all of the following minimum requirements:
  - 2.1. The duct shall not exceed 100 square inches (0.06 m<sup>2</sup>).
  - 2.2. The duct shall be constructed of steel a minimum of 0.0217 inch (0.55 mm) in thickness.
  - 2.3. The duct shall not have openings that communicate the corridor with adjacent spaces or rooms.
  - 2.4. The duct shall be installed above a ceiling.
  - 2.5. The duct shall not terminate at a wall register in the fire-resistance-rated wall.
  - 2.6. A minimum 12-inch-long (0.30 m) by 0.060-inch-thick (1.52 mm) steel sleeve shall be centered in each duct opening. The sleeve shall be secured to both sides of the wall and all four sides of the sleeve with minimum 1-1/2-inch by 1-1/2-inch by 0.060-inch (0.038 m by 0.038 m by 1.52 mm) steel retaining angles. The retaining angles shall be secured to the sleeve and the wall with No. 10 (M5) screws. The annular space between the steel sleeve and wall opening shall be filled with rock (mineral) wool batting or approved equivalent on all sides.

**716.5.5 Smoke barriers.** A listed smoke damper designed to resist the passage of smoke shall be provided at each point a duct or air transfer opening penetrates a smoke barrier. Smoke dampers and smoke damper actuation methods shall comply with Section 716.3.2.1.

**Exception:** Smoke dampers are not required where the openings in ducts are limited to a single smoke compartment and the ducts are constructed of steel.

**716.6 Horizontal assemblies.** Penetrations by ducts and air transfer openings of a floor, floor/ceiling assembly or the ceiling membrane of a roof/ceiling assembly shall be protected by a shaft enclosure that complies with Section 707 or shall comply with this section.

**716.6.1 Through penetrations.** In occupancies other than Groups I-2 and I-3, a duct and air transfer opening system constructed of approved materials in accordance with the New York City Mechanical Code that penetrates a fire-resistance-rated floor/ceiling assembly that connects not more than two stories is permitted without shaft enclosure protection provided a fire damper is installed at the floor line and the penetration is fire blocked in accordance with Section 717.2.5.

**Exception:** A duct serving a dwelling unit is permitted to penetrate three floors or less without a fire damper at each floor provided it meets all of the following requirements.

1. The duct shall be contained and located within the cavity of a wall and shall be constructed of steel not less than 0.019 inch (0.48 mm) (26 gage) in thickness.
2. The duct shall open into only one dwelling unit and the duct system shall be continuous from the unit to the exterior of the building.
3. The duct shall not exceed 5-inch (127 mm) nominal diameter and the total area of such ducts shall not exceed 100 square inches (0.065 m<sup>2</sup>) in any 100 square feet (9.3 m<sup>2</sup>) of floor area.
4. The annular space around the duct is protected with materials that prevent the passage of flame and hot gases sufficient to ignite cotton waste where subjected to ASTM E 119 time-temperature conditions under a minimum positive pressure differential of 0.01 inch (2.49 Pa) of water at the location of the penetration for the time period equivalent to the fire-resistance rating of the construction penetrated.

5. *Grille openings located in a ceiling of a fire-resistance-rated floor/ceiling or roof/ceiling assembly shall be protected with a ceiling radiation damper in accordance with Section 716.6.2.*

**716.6.2 Membrane penetrations.** *Where duct systems constructed of approved materials in accordance with the New York City Mechanical Code penetrate a ceiling of a fire-resistance-rated floor/ceiling or roof/ceiling assembly, shaft enclosure protection is not required provided an approved ceiling radiation damper and firestopping is installed at the ceiling line. Where a duct is not attached to a diffuser that penetrates a ceiling of a fire-resistance-rated floor/ceiling or roof/ceiling assembly, shaft enclosure protection is not required provided an approved ceiling radiation damper and firestopping is installed at the ceiling line. Ceiling radiation dampers shall be tested in accordance with UL 555C and constructed in accordance with the details listed in a fire-resistance-rated assembly or shall be labeled to function as a heat barrier for air-handling outlet/inlet penetrations in the ceiling of a fire-resistance-rated assembly. Ceiling radiation dampers shall not be required where ASTM E 119 fire tests have shown that ceiling radiation dampers are not necessary in order to maintain the fire-resistance rating of the assembly. Ceiling radiation dampers shall not be required where exhaust duct penetrations are protected in accordance with Section 712.4.2 and the exhaust ducts are located within the cavity of a wall, and do not pass through another dwelling unit or tenant space.*

**716.6.3 Non-fire-resistance-rated assemblies.** *Duct systems constructed of approved materials in accordance with the New York City Mechanical Code that penetrate non-fire-resistance-rated floor assemblies and that connect not more than two stories are permitted without shaft enclosure protection provided that the annular space between the assembly and the penetrating duct is filled with an approved noncombustible material to resist the free passage of flame and the products of combustion. Duct systems constructed of approved materials in accordance with the New York City Mechanical Code that penetrate non-fire-resistance-rated floor assemblies and that connect not more than three stories are permitted without shaft enclosure protection provided that the annular space between the assembly and the penetrating duct is filled with an approved noncombustible material to resist the free passage of flame and the products of combustion, and a fire damper is installed at each floor line.*

**Exception:** *Fire dampers are not required in ducts within individual residential dwelling units.*

**716.7 Flexible ducts and air connectors.** *Flexible ducts and air connectors shall not pass through any fire-resistance-rated assembly. Flexible air connectors shall not pass through any wall, floor or ceiling.*

**SECTION BC 717  
CONCEALED SPACES**

**717.1 General.** Fire blocking and draft stopping shall be installed in combustible and noncombustible concealed locations in accordance with this section. Fire blocking shall comply with Section 717.2. Draft stopping in floor/ceiling spaces and attic spaces shall comply with Sections 717.3 and 717.4, respectively. The permitted use of combustible materials in concealed spaces of noncombustible buildings shall be limited to the applications indicated in Section 717.5. Installations of fire blocking and draft stopping shall comply with the special inspection requirements of Chapter 17.

**Exception:** Concealed spaces that are sprinklered in accordance with Chapter 9 or are constructed as a shaft.

**717.2 Fireblocking.** In combustible and noncombustible construction, fire blocking shall be installed to cut off concealed draft openings (both vertical and horizontal) and shall form an effective barrier between floors, between a top story and a roof or attic space. Fire blocking shall be installed in the locations specified in Sections 717.2.2 through 717.2.7.

**717.2.1 Fireblocking materials.** Fire blocking shall consist of 2-inch (51 mm) nominal lumber or two thicknesses of 1-inch (25 mm) nominal lumber with broken lap joints or one thickness of 0.719-inch (18.3 mm) wood structural panel with joints backed by 0.719-inch (18.3 mm) wood structural panel or one thickness of 0.75-inch (19 mm) particleboard with joints backed by 0.75-inch (19 mm) particleboard. Gypsum board, cement fiber board, batts or blankets of mineral wool or glass fiber or other approved materials installed in such a manner as to be securely retained in place shall be permitted as an acceptable fire block. Batts or blankets of mineral or glass fiber or other approved nonrigid materials shall be permitted for compliance with the 10-foot (3048 mm) horizontal fire blocking in walls constructed using parallel rows of studs or staggered studs. Loose-fill insulation material shall not be used as a fire block unless specifically tested in the form and manner intended for use to demonstrate its ability to remain in place and to retard the spread of fire and hot gases. The integrity of fire blocks shall be maintained.

**717.2.1.1 Double stud walls.** Batts or blankets of mineral or glass fiber or other approved nonrigid materials shall be allowed as fire blocking in walls constructed using parallel rows of studs or staggered studs.

**717.2.2 Concealed wall spaces.** Fire blocking shall be provided in concealed spaces of stud walls and partitions, including furred spaces, and parallel rows of studs or staggered studs, as follows:

1. Vertically at the ceiling and floor levels.

2. *Horizontally at intervals not exceeding 10 feet (3048 mm).*

**717.2.3 Connections between horizontal and vertical spaces.** *Fire blocking shall be provided at interconnections between concealed vertical stud wall or partition spaces and concealed horizontal spaces created by an assembly of floor joists or trusses, and between concealed vertical and horizontal spaces such as occur at soffits, drop ceilings, cove ceilings and similar locations.*

**717.2.4 Stairways.** *Fire blocking shall be provided in concealed spaces between stair stringers at the top and bottom of the run. Enclosed spaces under stairs shall also comply with Section 1019.1.5.*

**717.2.5 Ceiling and floor openings.** *Where annular space protection is provided in accordance with Exception 6 of Section 707.2, Exception 1 of Section 712.4.2, or Section 712.4.3, fire blocking shall be installed at openings around vents, pipes, ducts, chimneys and fireplaces at ceiling and floor levels, with an approved material to resist the free passage of flame and the products of combustion. Factory-built chimneys and fireplaces shall be fire blocked in accordance with UL 103 and UL 127.*

**717.2.6 Architectural trim.** *Fire blocking shall be installed within concealed spaces of exterior wall finish and other exterior architectural elements where permitted to be of combustible construction in Section 1406 or where erected with combustible frames, at maximum intervals of 20 feet (6096 mm). If non-continuous, such elements shall have closed ends, with at least 4 inches (102 mm) of separation between sections.*

**Exceptions:**

1. *Fire blocking of cornices is not required in single-family dwellings. Fire blocking of cornices of a two-family dwelling is required only at the line of dwelling unit separation.*
2. *Fire blocking shall not be required where installed on noncombustible framing and the face of the exterior wall finish exposed to the concealed space is covered by one of the following materials:*
  - 2.1. *Aluminum having a minimum thickness of 0.019 inch (0.5 mm).*
  - 2.2. *Corrosion-resistant steel having a base metal thickness not less than 0.016 inch (0.4 mm) at any point.*

2.3. *Other approved noncombustible materials.*

**717.2.7 Concealed sleeper spaces.** *Where wood sleepers are used for laying wood flooring on masonry or concrete fire-resistance-rated floors, the space between the floor slab and the underside of the wood flooring shall be filled with an approved material to resist the free passage of flame and products of combustion or fire blocked in such a manner that there will be no open spaces under the flooring that will exceed 20 square feet (1.86 m<sup>2</sup>) in area and such space shall be filled solidly under permanent partitions so that there is no communication under the flooring between adjoining rooms.*

**Exceptions:**

1. *Fire blocking is not required for slab-on-grade floors in gymnasiums.*
2. *Fire blocking is required only at the juncture of each alternate lane and at the ends of each lane in a bowling facility.*

**717.3 Draft stopping in floors.** *In combustible and noncombustible construction, draft stopping shall be installed to subdivide floor/ceiling assemblies in the locations prescribed in Sections 717.3.2 through 717.3.3.*

**717.3.1 Draft stopping materials.** *In noncombustible construction, draft stopping shall be of noncombustible materials. In combustible construction, draft stopping materials shall not be less than 0.5-inch (12.7 mm) gypsum board, 0.375-inch (9.5 mm) wood structural panel, 0.375-inch (9.5 mm) particleboard or other approved materials adequately supported. The integrity of draft stops shall be maintained.*

**717.3.2 Group R.** *Draft stopping shall be provided in floor/ceiling spaces in Group R buildings. Draft stopping shall be located above and in line with the dwelling unit separations.*

**Exceptions:**

1. *Draft stopping is not required in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.*
2. *Draft stopping is not required in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.2, provided that automatic sprinklers are also installed in the combustible concealed spaces.*

3. *Where laminated wood I-joist assemblies are used, the space between the ceiling and the floor or roof above shall be divided into approximately equal areas not greater than 500 square feet (46.5 m<sup>2</sup>).*
4. *Draft stopping shall not be required where the structural members within the concealed ceiling space are individually protected on all sides for their full length with materials having the required fire resistance rating.*

**717.3.3 Other groups.** *In occupancies other than Group R, draft stopping shall be installed so that horizontal floor areas do not exceed 3,000 square feet (279 m<sup>2</sup>).*

**Exceptions:**

1. *Draft stopping is not required in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.*
2. *Draft stopping shall not be required where the structural members within the concealed ceiling space are individually protected on all sides for their full length with materials having the required fire resistance rating.*

**717.4 Draft stopping in attics.** *In combustible and noncombustible construction, draft stopping shall be installed to subdivide attic spaces and concealed roof spaces in the locations prescribed in Sections 717.4.2 and 717.4.3. Ventilation of concealed roof spaces shall be maintained in accordance with Section 1203.2.*

**717.4.1 Draft stopping materials.** *Materials utilized for draft stopping of attic spaces shall comply with Section 717.3.1.*

**717.4.1.1 Openings.** *Openings in draft stop partitions provided in accordance with Section 1209.2 shall be protected by self-closing doors with automatic latches constructed as required for the partitions.*

**717.4.2 Groups R-1 and R-2.** *Draft stopping shall be provided in attics, mansards, overhangs or other concealed roof spaces of Group R-2 buildings with three or more dwelling units and in all Group R-1 buildings. Draft stopping shall be installed above, and in line with, dwelling unit separation walls that do not extend to the underside of the roof sheathing above.*

**Exceptions:**

1. *Draft stopping shall not be required where the structural members within the concealed attic space are individually protected on all sides for their full length with materials having the required fire resistance rating.*
2. *Draft stopping is not required in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.*
3. *In occupancies in Group R-2 that do not exceed four stories in height, the attic space shall be subdivided by draft stops into areas not exceeding 3,000 square feet (279 m<sup>2</sup>) or above every two dwelling units, whichever is smaller.*
4. *Draft stopping is not required in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.2, provided that automatic sprinklers are also installed in the combustible concealed spaces.*
5. *Where laminated wood I-joist assemblies are used, the space between the ceiling and the floor or roof above shall be divided into approximately equal areas not greater than 500 square feet (46.5 m<sup>2</sup>).*

**717.4.3 Other groups.** *Draft stopping shall be installed in attics and concealed roof spaces, such that any horizontal area does not exceed 3,000 square feet (279 m<sup>2</sup>).*

**Exceptions:**

1. *Draft stopping is not required in buildings equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1.*
2. *Draft stopping shall not be required where the structural members within the concealed attic space are individually protected on all sides for their full length with materials having the required fire resistance rating.*
3. *Where laminated wood I-joist assemblies are used, the space between the ceiling and the floor or roof above shall be divided into approximately equal areas not greater than 500 square feet (46.5 m<sup>2</sup>).*

**717.5 Combustibles in concealed spaces in Type I or II construction.** Combustibles shall not be permitted in concealed spaces of buildings of Type I or II construction.

**Exceptions:**

1. Combustible materials in accordance with Section 603.
2. Combustible materials complying with Section 602 of the New York City Mechanical Code.
3. Class A interior finish materials.
4. Combustible piping within partitions or enclosed shafts installed in accordance with the provisions of this code. Combustible piping shall be permitted within concealed ceiling spaces where installed in accordance with the New York City Mechanical Code and the New York City Plumbing Code.

**SECTION BC 718**

**FIRE-RESISTANCE REQUIREMENTS FOR PLASTER**

**718.1 Thickness of plaster.** The minimum thickness of gypsum plaster or portland cement plaster used in a fire-resistance-rated system shall be determined by the prescribed fire tests. The plaster thickness shall be measured from the face of the lath where applied to gypsum lath or metal lath.

**718.2 Plaster equivalents.** For fire-resistance purposes, 0.5 inch (12.7 mm) of unsanded gypsum plaster shall be deemed equivalent to 0.75 inch (19.1 mm) of one-to-three gypsum sand plaster or 1 inch (25 mm) of portland cement sand plaster.

**718.3 Noncombustible furring.** In buildings of Type I and II construction, plaster shall be applied directly on concrete or masonry or on approved noncombustible plastering base and furring.

**718.4 Double reinforcement.** Plaster protection more than 1 inch (25 mm) in thickness shall be reinforced with an additional layer of approved lath embedded at least 0.75 inch (19.1 mm) from the outer surface and fixed securely in place.

**Exception:** Solid plaster partitions or where otherwise determined by fire tests.

**718.5 Plaster alternatives for concrete.** In reinforced concrete construction, gypsum plaster or portland

*cement plaster is permitted to be substituted for 0.5 inch (12.7 mm) of the required poured concrete protection, except that a minimum thickness of 0.375 inch (9.5 mm) of poured concrete shall be provided in reinforced concrete floors and 1 inch (25 mm) in reinforced concrete columns in addition to the plaster finish. The concrete base shall be prepared in accordance with Section 2510.7.*

**SECTION BC 719**  
**THERMAL-AND SOUND-INSULATING MATERIALS**

**719.1 General.** *Insulating materials, including facings such as vapor retarders and vapor-permeable membranes, similar coverings, and all layers of single and multilayer reflective foil insulations, shall comply with the requirements of this section. Where a flame spread index or a smoke-development index is specified in this section, such index shall be determined in accordance with ASTM E 84. Any material that is subject to an increase in flame spread index or smoke-development index beyond the limits herein established through the effects of age, moisture, or other atmospheric conditions shall not be permitted. Fiberboard insulation shall comply with Chapter 23 and the requirements of this section. Foam plastic insulation shall comply with Chapter 26 and the requirements of this section. Duct and pipe coverings and linings in plenums shall comply with the New York City Mechanical Code.*

**Exceptions:** *Exterior Insulation Finish Systems (EIFS) shall comply with Chapter 14 and Chapter 26.*

**719.1.1 Noncombustible construction.** *Insulating materials used in noncombustible construction must either:*

- 1. Satisfactorily pass a test for determining non-combustibility of elementary materials, based on the test procedures of ASTM E 136; or*
- 2. Have a flame spread index not greater than 25, a smoke-development index not greater than 50, and be without evidence of continued progressive combustion when tested in accordance with ASTM E 84.*

**719.1.2 Combustible construction.** *Insulating materials used in combustible construction shall have a flame spread index not greater than 25, a smoke-development index not greater than 450, and be without evidence of continuous progressive combustion when tested in accordance with ASTM E 84.*

**719.2 Concealed installation.** *Insulating materials, where concealed as installed in buildings of any type construction, shall comply with Sections 719.1, 719.1.1 and 719.1.2. Concealed insulation shall be*

separated from the building interior by a thermal barrier consisting of at least ½-inch (12.7 mm) thick gypsum wallboard or approved equivalent.

**Exception:** Cellulose loose-fill insulation that is not spray applied, complying with the requirements of Section 719.6, shall only be required to meet the smoke-development index of not more than 450.

**719.2.1 Facings.** Where such materials are installed in concealed spaces in buildings of Type III, IV or V construction, the flame spread and smoke-development limits do not apply to facings, coverings, and layers of reflective foil insulation that are installed behind and in substantial contact with the unexposed surface of the ceiling, wall or floor finish.

**719.3 Exposed installation.** Insulation materials, where exposed as installed in buildings of any type construction, shall have a flame spread index of not more than 25 and a smoke-development index of not more than 50.

**Exception:** Cellulose loose-fill insulation that is not spray applied complying with the requirements of Section 719.6 shall only be required to meet the smoke-development index of not more than 50.

**719.3.1 Attic floors.** Exposed insulation materials installed on attic floors shall have a critical radiant flux of not less than 0.12 watt per square centimeter when tested in accordance with ASTM E 970.

**719.3.2 Toxicity.** Upon exposure to fire, insulating materials used in building interiors, including facings such as vapor retarders and vapor permeable membranes, similar coverings, and all layers of single and multi-layer reflective foil insulation, shall not produce products of decomposition or combustion that are more toxic in point of concentration than those given off by wood or paper when decomposing or burning under comparable conditions in accordance with test standards approved by the department.

**719.4 Loose-fill insulation.** Loose-fill insulation materials that cannot be mounted in the ASTM E 84 apparatus without a screen or artificial supports shall comply with the flame spread and smoke-developed limits of Sections 719.2 and 719.3 when tested in accordance with CAN/ULC S102.2.

**Exception:** Cellulose loose-fill insulation shall not be required to comply with this test method, provided such insulation complies with the requirements of Section 719.6.

**719.5 Roof insulation.** *The use of combustible roof insulation not complying with Sections 719.2 and 719.3 shall be permitted in any type construction provided it is applied on top of roof decking or slab and is covered with approved roof coverings directly applied thereto.*

**719.6 Cellulose loose-fill insulation.** *Cellulose loose-fill insulation shall comply with CPSC 16 CFR, Part 1209 and CPSC 16 CFR, Part 1404. Each package of such insulating material shall be clearly labeled in accordance with CPSC 16 CFR, Part 1209 and CPSC 16 CFR, Part 1404.*

**719.7 Insulation and covering on pipe and tubing.** *Insulation and covering on pipe and tubing shall comply with the requirements of the New York City Mechanical Code.*

## **SECTION BC 720**

### **PRESCRIPTIVE FIRE RESISTANCE**

**720.1 General.** *The provisions of this section contain prescriptive details of fire-resistance-rated building elements. The materials of construction listed in Tables 720.1(1), 720.1(2), and 720.1(3) shall be assumed to have the fire-resistance ratings prescribed therein. Where materials that change the capacity for heat dissipation are incorporated into a fire-resistance-rated assembly, fire test results or other substantiating data shall be made available to the commissioner to show that the required fire-resistance-rating time period is not reduced.*

**720.1.1 Thickness of protective coverings.** *The thickness of fire-resistant materials required for protection of structural members shall be not less than set forth in Table 720.1(1), except as modified in this section. The figures shown shall be the net thickness of the protecting materials and shall not include any hollow space in back of the protection.*

**720.1.2 Unit masonry protection.** *Where required, metal ties shall be embedded in transverse joints of unit masonry for protection of steel columns. Such ties shall be as set forth in Table 720.1(1) or be equivalent thereto.*

**720.1.3 Reinforcement for cast-in-place concrete column protection.** *Cast-in-place concrete protection for steel columns shall be reinforced at the edges of such members with wire ties of not less than 0.18 inch (4.6 mm) in diameter wound spirally around the columns on a pitch of not more than 8 inches (203 mm) or by equivalent reinforcement.*

**720.1.4 Plaster application.** *The finish coat is not required for plaster protective coatings where they comply with the design mix and thickness requirements of Tables 720.1(1), 720.1(2) and 720.1(3).*

**720.1.5 Bonded prestressed concrete tendons.** For members having a single tendon or more than one tendon installed with equal concrete cover measured from the nearest surface, the cover shall not be less than that set forth in Table 720.1(1). For members having multiple tendons installed with variable concrete cover, the average tendon cover shall not be less than that set forth in Table 720.1(1), provided:

1. The clearance from each tendon to the nearest exposed surface is used to determine the average cover.
2. In no case can the clear cover for individual tendons be less than one-half of that set forth in Table 720.1(1). A minimum cover of 0.75 inch (19.1 mm) for slabs and 1 inch (25 mm) for beams is required for any aggregate concrete.
3. For the purpose of establishing a fire-resistance rating, tendons having a clear covering less than that set forth in Table 720.1(1) shall not contribute more than 50 percent of the required ultimate moment capacity for members less than 350 square inches ( $0.226 \text{ m}^2$ ) in cross-sectional area and 65 percent for larger members. For structural design purposes, however, tendons having a reduced cover are assumed to be fully effective.

MINIMUM PROTECTION OF STRUCTURAL PARTS BASED ON TIME PERIODS  
FOR VARIOUS NONCOMBUSTIBLE INSULATING MATERIALS<sup>m</sup>**

STRUCTURAL PARTS TO BE PROTECTED	ITEM NUMBER	INSULATING MATERIAL USED	MINIMUM THICKNESS OF INSULATING MATERIAL FOR THE FOLLOWING FIRE-RESISTANCE PERIODS (inches)			
			4 hour	3 hour	2 hour	1 hour
1. Steel columns and all of primary trusses	1-1.1	Carbonate, lightweight and sand-lightweight aggregate concrete, members 6" × 6" or greater (not including sandstone, granite and siliceous gravel). <sup>a</sup>	2½	2	1½	1
	1-1.2	Carbonate, lightweight and sand-lightweight aggregate concrete, members 8" × 8" or greater (not including sandstone, granite and siliceous gravel). <sup>a</sup>	2	1½	1	1
	1-1.3	Carbonate, lightweight and sand-lightweight aggregate concrete, members 12" × 12" or greater (not including sandstone, granite and siliceous gravel). <sup>a</sup>	1½	1	1	1
	1-1.4	Siliceous aggregate concrete and concrete excluded in Item 1-1.1, members 6" × 6" or greater. <sup>a</sup>	3	2	1½	1
	1-1.5	Siliceous aggregate concrete and concrete excluded in Item 1-1.1, members 8" × 8" or greater. <sup>a</sup>	2½	2	1	1
	1-1.6	Siliceous aggregate concrete and concrete excluded in Item 1-1.1, members 12" × 12" or greater. <sup>a</sup>	2	1	1	1
	1-2.1	Clay or shale brick with brick and mortar fill. <sup>a</sup>	3¾	—	—	2¼
	1-3.1	4" hollow clay tile in two 2" layers; ½" mortar between tile and column; ⅜" metal mesh 0.046" wire diameter in horizontal joints; tile fill. <sup>a</sup>	4	—	—	—
	1-3.2	2" hollow clay tile; ¾" mortar between tile and column; ⅜" metal mesh 0.046" wire diameter in horizontal joints; limestone concrete fill; <sup>a</sup> plastered with ¾" gypsum plaster.	3	—	—	—
	1-3.3	2" hollow clay tile with outside wire ties 0.08" diameter at each course of tile or ⅜" metal mesh 0.046" diameter wire in horizontal joints; limestone or trap-rock concrete fill <sup>1</sup> extending 1" outside column on all sides	—	—	3	—
	1-3.4	2" hollow clay tile with outside wire ties 0.08" diameter at each course of tile with or without concrete fill; ¾" mortar between tile and column.	—	—	—	2
	1-4.1	Cement plaster over metal lath wire tied to ¾" cold-rolled vertical channels with 0.049" (No. 18 B.W. gage) wire ties spaced 3" to 6" on center. Plaster mixed 1:2 ½ by volume, cement to sand.	—	—	2½ <sup>b</sup>	7/8
	1-5.1	Vermiculite concrete, 1:4 mix by volume over paperbacked wire fabric lath wrapped directly around column with additional 2" × 2" 0.065"/0.065" (No. 16/16 B.W. gage) wire fabric placed ¾" from outer concrete surface. Wire fabric tied with 0.049" (No. 18 B.W. gage) wire spaced 6" on center for inner layer and 2" on center for outer layer.	2	—	—	—
	1-6.1	Perlite or vermiculite gypsum plaster over metal lath wrapped around column and furred 1¼" from column flanges. Sheets lapped at ends and tied at 6" intervals with 0.049" (No. 18 B.W. gage) tie wire. Plaster pushed through to flanges.	1½	1	—	—
	1-6.2	Perlite or vermiculite gypsum plaster over self-furring metal lath wrapped directly around column, lapped 1" and tied at 6" intervals with 0.049" (No. 18 B.W. gage) wire.	1¾	1¾	1	—
	1-6.3	Perlite or vermiculite gypsum plaster on metal lath applied to ¾" cold-rolled channels spaced 24" apart vertically and wrapped flatwise around column.	1½	—	—	—
	1-6.4	Perlite or vermiculite gypsum plaster over two layers of ½" plain full-length gypsum lath applied tight to column flanges. Lath wrapped with 1" hexagonal mesh of No. 20 gage wire and tied with doubled 0.035" diameter (No. 18 B.W. gage) wire ties spaced 23" on center. For three-coat work, the plaster mix for the second coat shall not exceed 100 pounds of gypsum to 2½ cubic feet of aggregate for the 3-hour system.	2½	2	—	—

**TABLE 720.1(1)—continued  
MINIMUM PROTECTION OF STRUCTURAL PARTS BASED ON TIME PERIODS  
FOR VARIOUS NONCOMBUSTIBLE INSULATING MATERIALS<sup>m</sup>**

STRUCTURAL PARTS TO BE PROTECTED	ITEM NUMBER	INSULATING MATERIAL USED	MINIMUM THICKNESS OF INSULATING MATERIAL FOR THE FOLLOWING FIRE-RESISTANCE PERIODS (inches)			
			4 hour	3 hour	2 hour	1 hour
2. Webs or flanges of steel beams and girders (continued)	2-4.1	Two layers of $\frac{5}{8}$ " Type X gypsum wallboard <sup>c</sup> are attached to U-shaped brackets spaced 24" on center. 0.018" thick (No. 25 carbon sheet steel gage) $\frac{1}{8}$ " deep by 1" galvanized steel runner channels are first installed parallel to and on each side of the top beam flange to provide a $\frac{1}{2}$ " clearance to the flange. The channel runners are attached to steel deck or concrete floor construction with approved fasteners spaced 12" on center. U-shaped brackets are formed from members identical to the channel runners. At the bent portion of the U-shaped bracket, the flanges of the channel are cut out so that $\frac{1}{8}$ " deep corner channels can be inserted without attachment parallel to each side of the lower flange.  As an alternate, 0.021" thick (No. 24 carbon sheet steel gage) 1" x 2" runner and corner angles may be used in lieu of channels, and the web cutouts in the U-shaped brackets may be omitted. Each angle is attached to the bracket with $\frac{1}{2}$ "-long No. 8 self-drilling screws. The vertical legs of the U-shaped bracket are attached to the runners with one $\frac{1}{2}$ " long No. 8 self-drilling screw. The completed steel framing provides a 2 $\frac{1}{8}$ " and 1 $\frac{1}{2}$ " space between the inner layer of wallboard and the sides and bottom of the steel beam, respectively. The inner layer of wallboard is attached to the top runners and bottom corner channels or corner angles with $\frac{1}{4}$ "-long No. 6 self-drilling screws spaced 16" on center. The outer layer of wallboard is applied with 1 $\frac{3}{4}$ "-long No. 6 self-drilling screws spaced 8" on center. The bottom corners are reinforced with metal corner beads.	—	—	1 $\frac{1}{4}$	—
	2-4.2	Three layers of $\frac{5}{8}$ " Type X gypsum wallboard <sup>c</sup> attached to a steel suspension system as described immediately above utilizing the 0.018" thick (No. 25 carbon sheet steel gage) 1" x 2" lower corner angles. The framing is located so that a 2 $\frac{1}{8}$ " and 2" space is provided between the inner layer of wallboard and the sides and bottom of the beam, respectively. The first two layers of wallboard are attached as described immediately above. A layer of 0.035" thick (No. 20 B.W. gage) 1" hexagonal galvanized wire mesh is applied under the soffit of the middle layer and up the sides approximately 2". The mesh is held in position with the No. 6 1 $\frac{5}{8}$ "-long screws installed in the vertical leg of the bottom corner angles. The outer layer of wallboard is attached with No. 6 2 $\frac{1}{4}$ "-long screws spaced 8" on center. One screw is also installed at the mid-depth of the bracket in each layer. Bottom corners are finished as described above.	—	1 $\frac{7}{8}$	—	—
3. Bonded pretensioned reinforcement in prestressed concrete <sup>e</sup>	3-1.1	Carbonate, lightweight, sand-lightweight and siliceous <sup>f</sup> aggregate concrete Beams or girders  Solid slabs <sup>h</sup>	4 <sup>g</sup>	3 <sup>g</sup>	2 $\frac{1}{2}$	1 $\frac{1}{2}$
4. Bonded or unbonded post-tensioned tendons in prestressed concrete <sup>e, i</sup>	4-1.1	Carbonate, lightweight, sand-lightweight and siliceous <sup>f</sup> aggregate concrete Unrestrained members: Solid slabs <sup>h</sup> Beams and girders <sup>j</sup> 8" wide greater than 12" wide	— 3	2 4 $\frac{1}{2}$ 2 $\frac{1}{2}$	1 $\frac{1}{2}$ 2 $\frac{1}{2}$ 2	— 1 $\frac{3}{4}$ 1 $\frac{1}{2}$
	4-1.2	Carbonate, lightweight, sand-lightweight and siliceous aggregate Restrained members: <sup>k</sup> Solid slabs <sup>h</sup> Beams and girders <sup>j</sup> 8" wide greater than 12" wide	1 $\frac{1}{4}$ 2 $\frac{1}{2}$ 2	1 2 1 $\frac{3}{4}$	3 $\frac{3}{4}$ 1 $\frac{3}{4}$ 1 $\frac{1}{2}$	— — —

MINIMUM PROTECTION OF STRUCTURAL PARTS BASED ON TIME PERIODS  
FOR VARIOUS NONCOMBUSTIBLE INSULATING MATERIALS<sup>m</sup>**

STRUCTURAL PARTS TO BE PROTECTED	ITEM NUMBER	INSULATING MATERIAL USED	MINIMUM THICKNESS OF INSULATING MATERIAL FOR THE FOLLOWING FIRE-RESISTANCE PERIODS (inches)			
			4 hour	3 hour	2 hour	1 hour
5. Reinforcing steel in reinforced concrete columns, beams girders and trusses	5-1.1	Carbonate, lightweight and sand-lightweight aggregate concrete, members 12" or larger, square or round. (Size limit does not apply to beams and girders monolithic with floors.)	1½	1½	1½	1½
		Siliceous aggregate concrete, members 12" or larger, square or round. (Size limit does not apply to beams and girders monolithic with floors.)	2	1½	1½	1½
6. Reinforcing steel in reinforced concrete joists <sup>l</sup>	6-1.1	Carbonate, lightweight and sand-lightweight aggregate concrete.	1¼	1¼	1	¾
	6-1.2	Siliceous aggregate concrete.	1¾	1½	1	¾
7. Reinforcing and tie rods in floor and roof slabs <sup>l</sup>	7-1.1	Carbonate, lightweight and sand-lightweight aggregate concrete.	1	1	¾	¾
	7-1.2	Siliceous aggregate concrete.	1¼	1	1	¾

For SI: 1 inch = 25.4 mm, 1 square inch = 645.2 mm<sup>2</sup>, 1 cubic foot = 0.0283 m<sup>3</sup>.

- a. Reentrant parts of protected members to be filled solidly.
- b. Two layers of equal thickness with a ¼-inch airspace between.
- c. For all of the construction with gypsum wallboard described in Table 720.1(1), gypsum base for veneer plaster of the same size, thickness and core type shall be permitted to be substituted for gypsum wallboard, provided attachment is identical to that specified for the wallboard and the joints on the face layer are reinforced, and the entire surface is covered with a minimum of 1/16-inch gypsum veneer plaster.
- d. An approved adhesive qualified under ASTM E 119.
- e. Where lightweight or sand-lightweight concrete having an oven-dry weight of 110 pounds per cubic foot or less is used, the tabulated minimum cover shall be permitted to be reduced 25 percent, except that in no case shall the cover be less than ¾ inch in slabs or 1½ inches in beams or girders.
- f. For solid slabs of siliceous aggregate concrete, increase tendon cover 20 percent.
- g. Adequate provisions against spalling shall be provided by U-shaped or hooped stirrups spaced not to exceed the depth of the member with a clear cover of 1 inch.
- h. Prestressed slabs shall have a thickness not less than that required in Table 720.1(3) for the respective fire resistance time period.
- i. Fire coverage and end anchorages shall be as follows: Cover to the prestressing steel at the anchor shall be ½ inch greater than that required away from the anchor. Minimum cover to steel-bearing plate shall be 1 inch in beams and ¾ inch in slabs.
- j. For beam widths between 8 inches and 12 inches, cover thickness shall be permitted to be determined by interpolation.
- k. Interior spans of continuous slabs, beams and girders shall be permitted to be considered restrained.
- l. For use with concrete slabs having a comparable fire endurance where members are framed into the structure in such a manner as to provide equivalent performance to that of monolithic concrete construction.
- m. Generic fire-resistance ratings (those not designated as PROPRIETARY\* in the listing) in GA 600 shall be accepted as if herein listed.
