1. EXECUTIVE SUMMARY

Overview

On the evening of Wednesday, September 1, 2021, the remnants of Hurricane Ida reached New York. Although the storm had been reclassified as a post-tropical cyclone by that point, it smashed the City's record for the most single-hour rainfall, caused widespread flooding and hundreds of millions of dollars of damage, and took the lives of 13 people within New York City. On September 5, 2021, President Joseph R. Biden, Jr. issued a major disaster declaration for the State of New York ([4615-DR-NY](#)).

On March 22, 2022, the U.S. Department of Housing and Urban Development (HUD) announced that the City of New York ("the City") will receive \$187,973,000 in funding to support long-term recovery efforts following Hurricane Ida, which will be administered by the NYC Mayor's Office of Management and Budget (OMB). This allocation was formally announced in the *Allocations for Community Development Block Grant Disaster Recovery (CDBG-DR) and Implementation of the CDBG-DR Consolidated Waivers and Alternative Requirements* Federal Register Notice (Vol. 87, No. 100, 5/24/2022, [87 FR 31636](#)) with funds made available through the Disaster Relief Supplemental Appropriations Act, 2022 ([Public Law 117-43](#)). The City released its initial CDBG-DR Hurricane Ida Action Plan for public comment on August 26, 2022. After a public comment period and public hearing, the City submitted its plan to HUD on October 19, 2022. HUD approved the plan on December 19, 2022.

On January 18, 2023, HUD announced via a second Federal Register Notice it was awarding an additional \$1.4 billion in CDBG-DR funds for disasters occurring in 2021 (Vol. 88, No. 11, 1/18/2023, [88 FR 3198](#)). (The two Federal Register notices are collectively referred to throughout this document as "the HUD Notices".) The additional awards were made possible through funds appropriated in the Continuing Appropriations Act, 2023 ([Public Law 117-180](#)), which was enacted on September 30, 2022. Through this allocation, the City will receive an additional \$122,844,000, bringing the City's total CDBG-DR allocation for Hurricane Ida to \$310,817,000.

CDBG-DR funds must be used to address unmet needs related to "disaster relief, long-term recovery, restoration of infrastructure and housing, economic revitalization, and mitigation, in the most impacted and distressed areas." Through this substantial amendment to its Action Plan, Action Plan Amendment (APA) 6, the City proposes to reallocate a total of \$86,562,461 CDBG-DR funds to new and existing programs:

Proposed Reallocation Sources - (\$86,562,461):

- **Resiliency Improvements: 1- to 4-Units - (\$31,753,713)**

In its initial CDBG-DR Action Plan, the City proposed a program to retrofit single-family (up to four units) homes to make them more resilient to stormwater flooding. Since that initial Action Plan release, the City has continued to study the areas most vulnerable to severe flooding and the most effective ways the City's CDBG-DR allocation could support resiliency efforts. As part of this substantial amendment, the City proposes to no longer fund the current iteration of the Resiliency Improvements: 1- to 4-Units program and reallocate funds to other activities that will serve single-family homes, including the Jewel

Streets Housing Mobility and Resiliency program and green infrastructure projects that will better control stormwater in residential areas.

- **NYCHA Restoration and Resiliency: FEMA Local Cost Share - (\$30,483,617)**

The City previously proposed to cover NYCHA's required local match contribution for restoration work funded through the FEMA Public Assistance program in the event the State of New York did not cover them. The State of New York has since confirmed it will cover these costs, so the \$30,483,617 CDBG-DR allocation will be reallocated to programs listed below. Please note the City has also updated its Unmet Needs Analysis to reflect this change.

- **Green Infrastructure Expansion: Brownsville Cloudburst - (\$23,590,547)**

Due to time constraints, the City no longer proposes to use CDBG-DR funds for the Brownsville South Cloudburst project. The City still intends to complete the project but will use alternate funding sources to do so.

- **Green Infrastructure: NYCHA - (\$279,484)**

The City proposes to reallocate projected surplus funding.

- **Resiliency Planning: Emergency Data Improvement Initiative - (\$455,100)**

The City proposes to reallocate projected surplus funding.

Proposed Reallocation Uses - \$86,562,461:

- **Jewel Streets Housing Mobility and Resiliency - \$20,000,000**

The City proposes to direct \$20,000,000 to a pilot program that will acquire and/or retrofit single-family residential properties in the Jewel Streets neighborhood that are expected to continue experiencing significant stormwater flood risks. The program will also offer incentives to eligible program participants to relocate to less flood-prone areas.

- **Resilient Community Spaces in Affordable Housing - \$12,847,000**

The City proposes to construct a resilient community facility in a third location, a 134-unit affordable senior-housing development in Queens.

- **Green Infrastructure Expansion - \$47,590,547**

The City will partially fund the Parkchester/Morris Park (Bronx) and East New York (Brooklyn) Cloudburst projects, which will employ a combination of green and grey infrastructure to absorb, store, and transfer stormwater to minimize flooding from heavy downpours. Parkchester/Morris Park and East New York are Ida-impacted areas the City has determined to be vulnerable to future cloudburst events and include areas zoned for single-family homes. The East New York Cloudburst will receive \$14,000,000 and the Parkchester/Morris Park Cloudburst will receive \$33,590,547 in CDBG-DR funds.

- **Hazard Awareness and Community Outreach - \$397,468**

The City proposes to fund a Resiliency Strategist to better lead data-driven hazard and vulnerability analyses throughout the City.

- **Resiliency Planning -**

The City proposes to expand the scopes of the following studies:

- Geothermal Feasibility Study - \$100,064
- Neighborhood Studies: Jewel Streets - \$266,865

- **CDBG-DR Administration - \$5,360,517**

In addition to the reallocations outlined above, the City is revising the scope of the **Red Hook Flood Protection** program. Due to a separate project taking place in the area, CDBG-DR funds will no longer support resiliency work associated with the substations that serve the Brooklyn Cruise Terminal and the Red Hook Container Terminal. Instead, the CDBG-DR funds for those sites will support construction of the Brooklyn Waterfront Greenway, integrating the Red Hook Coastal Resiliency's flood protection into the surrounding neighborhood.

APA 6 is subject to a 30-day public comment period that will begin on September 15, 2026. Comments must be received no later than Friday, October 16, 2026 at 11:59 P.M. (EST). Written comments may be submitted to CDBGComments@omb.nyc.gov or to the Mayor's Office of Management and Budget (OMB), Attention: Evan Pellegrino, Director of Community Development, 255 Greenwich Street, 8th Floor, New York, New York 10007.

A hearing is scheduled for Thursday, October 8, 2026, from 6:00-7:00pm to obtain comments on the City's proposed use of CDBG-DR funds. The hearing may be attended either in person or virtually. Information for attending the hearing virtually or in person is below:

Zoom link for virtual participation:

https://us06web.zoom.us/webinar/register/WN_fk1F3yIR5OpGKLrWtmhBA.

Webinar ID: 897 3335 4124

Passcode: 1

Location for in person participation:

NYC City Planning Commission Hearing Room
120 Broadway, Lower Concourse
New York, New York 10002

Please inform NYC Department of City Planning if you need reasonable accommodation or foreign language interpretation services to participate in the public hearing. Please email requests to accessibilityinfo@planning.nyc.gov or call 212-720-3366 at least five business days before the hearing.

At the end of the comment period, all comments shall be reviewed, and City responses will be incorporated into the Action Plan. The final Ida Action Plan, containing a summary of the comments and the City's responses, will be submitted to HUD and posted on the City's CDBG-DR website.

Disaster-Specific Overview

New Yorkers are, unfortunately, no strangers to severe weather. As a coastal city along the eastern seaboard, residents have long known New York City is susceptible to heatwaves, blizzards, and coastal flooding. In the summer of 2021, though, a series of severe storms made clear that another threat is

officially upon us: extreme rainfall events leading to inland flooding. Beginning on July 8th with Tropical Storm Elsa and culminating on September 1st and 2nd with Post Tropical Cyclone (PTC) Ida, the city endured three storms that *each* produced rainfalls having only a one percent or less chance of occurring in a given year. Tropical Storm Henri, which hit on August 21st, broke the city's record for rainfall in a single hour, only to be surpassed by PTC Ida 10 days later.

The City has been planning for extreme rainfall for several years – the City released a Stormwater Resiliency Plan in May of 2021 – however, the region had not yet before experienced a storm with the intensity and ferocity of PTC Ida. While the summer's earlier tropical storms brought heavy rainfall, those events took place over longer periods of time and did not see the consistent, intense rains wrought by Ida. For the first time ever, the National Weather Service issued a Flash Flood Emergency for New York City. In Staten Island, Ida produced over nine inches of rain in less than 12 hours, with a substantial portion falling in a three-hour period. In the western Bronx, over three inches of rain fell in one hour.

In addition to Ida's historic rainfall totals, the storm was also notable for where flooding occurred. The storm's sustained rainfall overwhelmed the City's sewer system, which typically has the capacity to handle 1.75 inches of rain per hour. As a result, water accumulated in streets and cascaded into the subway system, cellars, and basements particularly in inland areas outside of the 100-year floodplain. Based on the City's analysis of damaged properties, only 6.9% of Ida-impacted buildings are in the 100-year floodplain, and 13.7% are in the 500-year floodplain.

The City estimates approximately 33,500 buildings sustained damage, about 3.3% of all buildings in the city. While Ida's impact was felt throughout all five boroughs, the storm was particularly impactful in the outer boroughs. Of the damaged properties, 39.9% were in Queens, 26.7% were in Brooklyn, 18.7% were in the Bronx, and 12.7% were in Staten Island while only 2.0% were in Manhattan. As a result, the Presidential Disaster Declaration designated Bronx County, Kings County (Brooklyn), Queens County, and Richmond County (Staten Island) eligible for FEMA's Individual and Public Assistance programs, while New York County (Manhattan) is only eligible for FEMA Public Assistance. Additionally, HUD did not include Manhattan in the list of most impacted and distressed areas for which CDBG-DR funds should be prioritized.

Figure 1.1: Disaster Declaration Map for New York State

Figure 1.2: Heat Map of Damaged Properties

Buildings Damaged From Post-Tropical Cyclone Ida

On a borough-basis, Queens and Brooklyn contained the largest numbers of damaged properties. However, when looking at the damage on a Community District Tabulation Area (CDTA) basis, damage was spread relatively evenly throughout the four most-impacted boroughs: no CDTA accounted for more than 7.1% of the damaged properties.

Data on damaged properties was provided by New York City Emergency Management and is summarized by the 2020 Community District Tabulation Areas.

Figure 1.3: Damaged Properties by CDTA - Number of Buildings Damaged

Buildings Damaged From Post-Tropical Cyclone Ida

Data on damaged properties was provided by New York City Emergency Management and is summarized by the 2020 Community District Tabulation Areas.

Figure 1.4: Damaged Properties by CDTA - Percent of Buildings Damaged

Buildings Damaged From Post-Tropical Cyclone Ida

Data on damaged properties was provided by New York City Emergency Management and is summarized by the 2020 Community District Tabulation Areas.

The storm also had a disproportionate impact on residential properties: over 92% of the damaged properties are residential structures despite residential properties representing less than 87% of all buildings citywide. Buildings with commercial space, including mixed-use buildings, account for 7.5% of buildings impacted. Approximately 800 damaged buildings were solely commercial, representing 2.4% of all impacted buildings. Damage to commercial properties was primarily related to losses of inventory and equipment rather than structural damage.

In the immediate aftermath of Ida, the City's Department of Buildings inspected thousands of buildings citywide and deemed 116 buildings structures unsafe to occupy in whole or in part. Further, FEMA inspections completed to date identified 10 residential buildings as having been destroyed, and 1,282 suffered major damage. While the severity of damage was lower than previous storms, such as Hurricane Sandy, the inland nature, the scale of the damage across the outer-boroughs, and the swiftness of the rainfall represent a dramatic shift in how the City responds to, and prepares for, severe weather events.

Based on the City's initial analysis, City needs for DR funding can be grouped into multiple areas:

One- to Four-Unit Homes & Basement Apartments

Small residential buildings were disproportionately impacted: while one- and two-family homes account for 52% of buildings citywide, they comprised 75% of buildings impacted by Ida. These damaged properties are located across the city, though concentrated in Queens, Brooklyn, and the Bronx, with many in lower-income and immigrant communities with a high percentage of at-risk populations. Most damage in one- to four-unit properties is from flooding in sub- or at-grade space (e.g., basements, ground floors).

Basement Apartments

Across the city, tens of thousands of New Yorkers occupy illegal subgrade apartments. These units often lack basic safety requirements, putting occupants at increased risk from floods, fires, and other safety hazards. However, these units are also a key source of affordable housing and critical opportunity for the City to meet its affordable housing goals. These units typically offer more modest rents and can be more accessible to low-income New Yorkers, including groups that are underserved in the housing market. Basement apartments also provide a secondary source of income to property owners, who are often small landlords that live on-site. Complex and outdated codes and regulations make it difficult to bring these units into safe and legal use. Improving safety for basement occupants, especially during flooding events, is a top priority for the City.

High Flood Risk Homes

Since the release of the initial Action Plan, the City conducted outreach to homeowners and tenants who live in high-flood-risk homes and may be interested in a voluntary program to relocate to less vulnerable areas or, in some cases, retrofit their properties to increase flood resilience. Given the interest expressed, the City committed to launch such a program and in 2025 released a Resilient Acquisition Framework that lays out the City's strategy for acquiring properties and supporting residents. (This work was partially CDBG-DR-funded through the Planning for Buyout and Acquisition activity.) This Action Plan amendment recognizes the needs associated with high flood risk homes as an area of unmet need and proposes to fund a pilot program, Jewel Streets Housing Mobility and Resiliency, to partially address this need.

Sewer Backups

Damage arose from flood waters entering both through windows and doors, and from sewers backing up into homes through plumbing fixtures. Backwater valves reduce the likelihood of raw sewage backups into basements and are an inexpensive means to prevent tens of thousands of dollars in damage. The City is currently studying where the installation of backwater valves would be most effective for property owners.

Affordable & Public Housing

The New York City Housing Authority (NYCHA) owns and operates over 170,000 units of public housing that nearly half a million low-income New Yorkers call home. Many of these households would be unable to find an affordable apartment in the City's increasingly expensive and competitive housing market. Preserving this crucial segment of the affordable housing stock – both for NYCHA residents today and generations to come – is a top priority for the City.

Approximately 230 NYCHA-owned properties were impacted by Ida, with 13 developments across the Bronx, Brooklyn, and Queens suffering particularly significant damage. NYCHA currently estimates the cost of damage at NYCHA-managed properties to be at least \$350 million. While a significant portion of this cost will be covered by other sources, NYCHA has a sizeable unmet need for mitigation funding to prevent significant damage, and significant costs, from future events.

Following the release of the City's initial Hurricane Ida Action Plan, the City identified an additional \$51 million unmet need associated with two affordable housing developments in Brooklyn. Hope and Bushwick Gardens were damaged in Hurricane Ida and have flooded twice since. While over \$40 million in restoration work has been completed, additional mitigation work is necessary to prevent future flooding.

Outreach and Other Public Services

Public Information

PTC Ida hit persons with limited English proficiency (LEP) particularly hard. Based on media reports, several of the Ida victims in New York City did not speak or had limited proficiency in English. While the City is able to release emergency alerts in multiple languages through its Notify NYC service, the National Weather Service (NWS) is not. Additionally, users must sign up to receive Notify NYC alerts rather than receiving them more or less automatically, as is the case with location-based NWS alerts. As demonstrated by Ida, inequities in information can lead to drastic and disproportionate impacts on LEP communities and early *and accessible* notification is crucial to protecting and preserving lives.

Flood Insurance

The City is planning and implementing numerous projects to manage extreme rainfall, but it may take years or decades before the full impact of these efforts will be realized. Additionally, the City will never be able to prevent all flooding events. As extreme rainfall events become more frequent, the City will educate and encourage residents to protect themselves by purchasing flood insurance even in inland areas where it has not typically been required. The City recognizes and is working with its federal partners to address the rising costs of insurance policies. However, purchasing flood insurance is the best way to prevent financial devastation from a flood event. The City will also work with owners and renters to perform resiliency audits and retrofits to lower the cost of insurance.

Resiliency and Mitigation

The City has made transformative investments in stormwater management that will improve water quality and prepare for increasingly severe storms. However, there is always a need to do more. The City has developed and will expand numerous approaches to make the city more resilient, including

- Green infrastructure systems that collect stormwater from streets, sidewalks, and other hard surfaces before it can enter the sewer system or cause local flooding;
- Bluebelts and wetlands that convey, store, and filter runoff precipitation or stormwater;
- Grey infrastructure improvements that would expand the capacity of the city's sewers, water treatment plants, pumping stations, etc.; and
- Incorporating mitigation, resiliency, and emergency preparedness considerations into all City facilities (e.g., healthcare facilities, educational facilities, recreation areas and open space, utilities, evacuation centers) and programs (e.g., assistance to small businesses, affordable housing, workforce development efforts).

Planning

Finally, Ida highlighted numerous areas where the City, its governmental partners, and other stakeholders could improve. These areas include, but are not limited to:

- Studying areas for potential resiliency and mitigation efforts;
- Planning to better evacuate occupants from subgrade space in the event of a flash flood;
- Identifying where basement and cellar apartments are located and how they may be better protected from floods, fires, etc.;
- Improving methods for forecasting, monitoring, tracking, and evaluating the impacts of extreme weather events; and
- Evaluating methods for reducing carbon emissions and increasing resiliency.

Summary

Guiding Principles

Prior to and during the development of this Action Plan, the City consulted with disaster-affected residents, local business owners, service providers, the State of New York, NYCHA, the federal government, and other stakeholders to ensure the City's planned uses of funds are responsive to identified needs and consistent with other recovery efforts. When selecting funding initiatives, the City has prioritized programs intended to benefit the City's most vulnerable populations, to mitigate loss of life and property in the future, and that fit within the eligibility criteria of the CDBG-DR grant. As described in the HUD Notice, at least 80% of the City's allocation must be spent in the HUD-defined most impacted and distressed (MID) areas of the Bronx, Brooklyn, Queens, and Staten Island. Additionally, at least 70% of the grant must be used to benefit low- and moderate-income people and areas.

The programs proposed for funding include activities related to housing, infrastructure, economic revitalization, public services, planning, and administration of the grant. Funded activities include

- Financial counseling and flood insurance assistance for small homeowners and renters;
- Subsidizing resiliency measures in one- to four-unit and multi-unit housing, including public housing developments;
- Expanding the city's green infrastructure network;

- Performing outreach and increasing awareness of hazards in vulnerable communities;
- Planning for recovery and resiliency;
- Protecting critical infrastructure and areas from flooding; and
- Strengthening communities through emergency preparedness training.

While OMB will be the main entity administering the grant, implementing these programs will be a coordinated effort between numerous City agencies, the New York City Housing Authority, and the Mayor's Office, particularly the Mayor's Office of Climate and Environmental Justice. The City will continue citizen engagement efforts throughout the duration of this grant and will adjust as necessary.

Proposed Allocation Amounts

Table 1-1: CDBG-DR Program Allocations

Project Names	"Round 1" Funding	"Round 2" Funding	Total Allocation	Expected Benefit to Low- and Moderate-Income Persons	Expected Benefit to City MID Areas
Housing					
NYCHA Restoration and Resiliency	\$57,716,383	\$0	\$57,716,383	\$57,716,383	\$57,716,383
Jewel Streets Housing Mobility and Resiliency	\$20,000,000	\$0	\$20,000,000	\$18,367,495	\$20,000,000
Resiliency Improvements: Multi-Unit	\$21,847,000	\$51,023,632	\$72,870,632	\$72,870,632	\$72,870,632
Infrastructure					
Green Infrastructure Expansion	\$43,720,516	\$33,590,547	\$77,311,063	\$77,311,063	\$77,311,063
Red Hook Flood Protection	\$0	\$10,000,000	\$10,000,000	\$10,000,000	\$10,000,000
Economic Recovery					
Commercial District Emergency Preparedness	\$450,000	\$0	\$450,000	\$450,000	\$450,000
Public Services					
Flood Insurance and Financial Counseling	\$1,000,000	\$1,500,000	\$2,500,000	\$2,500,000	\$2,500,000
Hazard Awareness and Community Outreach	\$7,551,869	\$5,559,678	\$13,111,547	\$12,457,146	\$13,111,547
Planning					
Resiliency Planning	\$26,805,061	\$16,871,463	\$43,676,524	N/A	\$43,676,524
Total Non-Administrative Programs	\$179,090,829	\$118,545,320	\$297,636,149	\$251,672,719	\$297,636,149
Percent				83.94%	
Administration					
CDBG-DR Ida Administration	\$8,882,171	\$4,298,680	\$13,180,851	\$9,226,596	\$13,180,851
Total	\$187,973,000	\$122,844,000	\$310,817,000	\$260,899,315	\$310,817,000

Unmet Needs and Proposed Allocations

Based on the Unmet Needs Assessment in the next section of this plan, the City has estimated an unmet need of \$834,450,000. This estimate is based on the best data available to the City at the time, primarily information from FEMA, the U.S. Small Business Administration, and City analyses. However, the City will update the unmet needs section whenever new, significant data become available.

Table 1-2: Unmet Needs and Proposed Allocations

Category	Remaining Unmet Needs	% of Unmet Needs	Allocations	% of Program Allocation
Housing	\$447,000,000	53.6%	\$150,587,015	48.4%
Infrastructure	\$313,000,000	37.5%	\$87,311,063	28.1%
Economic Revitalization	\$450,000	0.1%	\$450,000	0.1%
Public Services	\$22,000,000	2.6%	\$15,611,547	5.0%
Planning	\$52,000,000	6.2%	\$43,676,524	14.1%
Administrative Costs			\$13,180,851	4.2%
Total	\$834,450,000	100.0%	\$310,817,000	100.0%

2. UNMET NEEDS ASSESSMENT

Overview

CDBG-DR funding is designed to address needs that remain after all other assistance has been exhausted. Accordingly, grantees must conduct a needs assessment to determine where *unmet* needs exist. This HUD-mandated analysis serves as the basis by which the City must allocate its CDBG-DR grant.

HUD requires the assessment to consider four main categories of need: housing, infrastructure, economic recovery, and mitigation. Grantees must account for assistance available from various sources including, but not limited to, federal and state resources (e.g., FEMA and the Small Business Administration), local funds such as City tax levy or City capital funds, and private sources such as insurance proceeds.

The City began assessing Ida's impact immediately as the storm hit and the effort continues to this day. This section will be updated as additional data becomes available, particularly if information reveals unmet needs that had not previously been considered. Any significant changes to the unmet needs section (i.e., changes that would affect eligibility, intended program beneficiaries, or how funds will be distributed) will result in a substantial amendment.

When reviewing the information in this section, please note the following:

Flood Hazard Areas

As Ida was a flooding event, this plan makes numerous references to properties located in floodplains. While the delineation of floodplains can be very technical, this document primarily considers three types of areas, which are designated by the Federal Emergency Management Agency (FEMA):

- The 100-year floodplain, also referred to as the 1% annual chance floodplain or Special Flood Hazard Area, is the area expected to be inundated by a 100-year flood. A common misconception is that the 100-year floodplain generally experiences flooding once every 100 years. That is not the case. Instead, these areas have a 1% or greater chance of experiencing a flood in any single year.
- The 500-year floodplain, also referred to as the 0.2% annual chance floodplain, is the area expected to be inundated by a 500-year flood. Similar to the 1% annual chance floodplain, the areas in the 500-year floodplain have a 0.2% or greater chance of experiencing a flood in any single year.
- Areas of minimal flood hazard are areas that are outside the 100- and 500-year floodplains and are considered to have significantly lower risk of flooding on an annual basis. However, as demonstrated by PTC Ida, areas of minimal flood hazard are still at risk for flooding events, particularly as severe storms become increasingly common.

Sources Referenced

As a global leader in climate resiliency, the City already had a wealth of reports and data to draw upon when completing this Action Plan. These resources, which are referenced throughout this plan, include the following:

- Department of City Planning: [NYC's Floodplain by the Numbers](#) (2020)

- NYC Emergency Management: [NYC's Risk Landscape: A Guide to Hazard Mitigation](#) (2019)
- Mayor's Office: [New York City Stormwater Resiliency Plan](#) (2021)
- Office of the Chief Housing Officer: [Housing Our Neighbors: A Blueprint for Housing and Homelessness](#) (2022)
- Office of the Deputy Mayor for Housing and Economic Development: [Where We Live NYC](#) (2018)
- Office of the Deputy Mayor of Administration, in collaboration with the Department of Environmental Protection and NYC Emergency Management: [The New Normal: Combating Storm-Related Extreme Weather in New York City](#) (2021).

HUD-Identified Most Impacted and Distressed Areas

The Appropriations Act mandates that the City use CDBG-DR funds for “disaster relief, long-term recovery, restoration of infrastructure and housing, economic revitalization, and mitigation in the most impacted and distressed (MID) areas resulting from a major disaster.” The HUD Notices require the City to use at least 80% of the Ida allocation—or \$248,653,600—to benefit the MID areas. As noted in the Executive Summary, PTC Ida was particularly impactful in the outer boroughs. The Presidential Disaster Declaration designated Bronx County, Kings County (Brooklyn), Queens County, and Richmond County (Staten Island) as eligible for FEMA’s Individual and Public Assistance programs, while New York County (Manhattan) is eligible for FEMA Public Assistance. For this reason, the HUD Notice did not include Manhattan in the MID areas for New York City.

Grantee-Identified Most Impacted and Distressed Areas

The HUD Notice also allows the City to use up to 20% of the grant to address unmet needs within areas that are outside the MID areas if they were included in a presidential disaster declaration. While the City is prioritizing its CDBG-DR allocation for the MID areas, funds may be used to benefit Manhattan as well, particularly for planning and mitigation activities. Despite PTC Ida’s disproportionate impact on the outer boroughs, the damage and future risk that extreme rainfall presents for Manhattan cannot be ignored, and the City has included Manhattan in the grantee-identified MID area.

On a borough-basis, Queens and Brooklyn contained the largest numbers of damaged properties. However, when looking at the damage on a Community District Tabulation Area (CDTA) basis, damage was spread relatively evenly throughout the four most-impacted boroughs: no CDTA accounted for more than 7.1% of the damaged properties.

Figure 1.4: Damaged Properties by CDTA - Percent of Buildings Damaged

Buildings Damaged From Post-Tropical Cyclone Ida

Data on damaged properties was provided by New York City Emergency Management and is summarized by the 2020 Community District Tabulation Areas.

Percent of Buildings

Housing Unmet Need

The following section describes the impact of PTC Ida on New York City's housing stock and its residents to inform a framework for recovery and mitigation projects using CDBG-DR funds.

Disaster Damage and Impacts

Pre-Disaster Housing Conditions

New York City continues to face both a housing shortage and an affordability crisis. The share of New York renters who are rent-burdened, meaning they pay more than 30% of their gross income toward rent, remains the highest on record. The figure below shows the median rent burden (rent-to-income ratio) for renter households in New York City from 1965 to 2021.

Figure 2.1: Median Rent Burden of NYC Households, 1965-2021²

Source: NYC Housing and Vacancy Survey, 1965-2021. US Census Bureau/NYC HPD. The U.S. Census Bureau reviewed this data product for unauthorized disclosure of confidential information and approved the disclosure avoidance practices applied to this release. CBDRB-FY22-199 and CBDRB-FY22-POP001-010. Rent burden is defined as gross rent to income ratio

In 2021, the typical New York renter paid 34% of their income toward housing costs. For lower-income households, this high level of rent burden means that residents have less money to spend on food, childcare, education, healthcare, and other necessary expenses. Today, 53% of renter households are rent-burdened, including 32% of renter households who are severely burdened, meaning they pay more than 50% of their income toward housing costs.³

The high cost of housing and lack of affordability is not evenly dispersed throughout the city, which is evident in the borough-wide vacancy rates. In 2021, Manhattan had a significantly higher net rental

² City of New York. Office of the Chief Housing Officer. (2022) [Housing Our Neighbors: A Blueprint for Housing and Homelessness](#), p. 16.

³ Ibid.

vacancy rate than any other borough at 10.01%. The net rental vacancy rate was 4.15% for Queens and Staten Island combined, 2.73% in Brooklyn, and less than one percent in the Bronx. The median rent of an available unit was \$2,750, which would require an income of at least \$110,000, yet the median household income of renters in 2021 was only \$50,000.⁴

Figure 2.2: Low-Cost Rental Units by Share of Total Units⁵

Source: 2015-2019 American Community Surveys Public Use Micro Data. Note: Denominator includes both owner and rental units. Affordable units include both those that receive subsidies or are under regulatory agreements and units that are unregulated but still affordable to families below 60% AMI. Rent tiers are based on 2019 HUD Income Limits.

To further illustrate the variance of affordability across the boroughs, the median monthly rent was \$1,200 in the Bronx, \$1,593 in Brooklyn, \$1,898 in Manhattan, \$1,625 Queens, and \$1,545 in Staten Island. Extremely low vacancy rates and high rates of rent burden indicate that housing mobility for low-income people is extremely limited.⁶

Rent-burdened households have a very limited margin to cope with unexpected financial expenses – a margin that shrinks if household members also lose income due to a hazard event. If someone’s home or apartment is damaged by an extreme weather event or other hazard, finding an affordable place to stay while repairs are being made – even temporarily – can be a serious challenge. To avoid

paying higher rent for temporary shelter or becoming homeless, some people choose to remain in their damaged homes – a choice that can come with its own health hazards.

Housing in the Floodplain

Previous City reports estimate that approximately 71,500 residential properties are in the 1% annual chance floodplain based on FEMA's Preliminary Flood Insurance Rate Maps (PFIRMS).⁷ Much of the information in the following sections is taken from the NYC Department of City Planning's report, *NYC's Floodplain by the Numbers*, which provides an in-depth analysis of the population and building types that occupy the floodplain.

All five boroughs have sizable populations within the floodplain. With over 300,000 residents, Brooklyn contains the largest population living within both the 1% and 0.2% floodplains. On the lower end, the Bronx's floodplain population is nearly 60,000 when factoring in the 0.2% floodplain.⁸

Figure 2.3: Total Population in the 1% and 0.2% Annual Chance Floodplains

Today, over **400,000** people live within the 1% annual chance floodplain. This number nearly doubles to over **780,000** when adding the population in the 0.2% annual chance floodplain.

Development patterns in the floodplain vary across the city; therefore, there is no universal solution for adapting buildings. Single- and two-family residences dominate the landscape in many of the city's coastal areas, including several smaller-scale bungalow communities, while other neighborhoods are characterized by higher density residential, mixed-use, and commercial buildings.

While most buildings in the floodplain – about 70% – are single- and two-family structures, those only encompass a fifth of all household *units* in the floodplain. About 80% of residential units in the floodplain are located within multifamily buildings. Low density residential homes are commonly found throughout coastal neighborhoods in Brooklyn, Queens, Staten Island, and the Bronx. Multifamily buildings, including campus complexes and mixed-use buildings, are more common throughout Manhattan, and some higher density neighborhoods including portions of North Brooklyn, Coney Island, and the Rockaways.⁹

⁷ City of New York. Department of City Planning. (2014, October) [Retrofitting Buildings for Flood Risk](#), p. 16.

⁸ City of New York. Department of City Planning. (2020, October) [NYC's Floodplains by the Numbers](#), p. 3.

⁹ Ibid, p. 7.

Source: Data for building typologies is derived using MapPluto 18V1.

Figure 2.5: Buildings in the 1% and 0.2% Annual Chance Floodplain by Type¹¹

Source: Data for building typologies is derived using MapPluto 18V1.

Floodplain property owners face several challenges when retrofitting buildings to reduce flood risks and meet flood-resistant construction standards. Basements and other below grade spaces are common throughout the floodplain in Brooklyn, Queens, and Staten Island, and are highly vulnerable to coastal flooding. While filling and relocating basements can significantly limit flood damages and losses, doing so can be structurally challenging and costly. Elevating buildings also raises accessibility issues and requires ramps or lifts to access homes on often constrained sites.

Attached and semi-detached buildings face greater challenges to retrofitting than those that are detached and more easily elevated. Some challenges are structural, such as shared party walls, while others relate to the complexity of coordinating among adjoining property owners or managing zoning height and floor area limits.

The City's [Zoning for Coastal Flood Resiliency](#) text amendment provides a framework to better accommodate resiliency investments. However, the cost of retrofitting structures further compounds the issues facing property owners in the floodplain. Like the rest of the City, the floodplain is largely developed. As previously outlined, tenants and property owners already face high rates of housing

¹⁰ Ibid.

¹¹ Ibid.

cost-burden and can thus be financially limited when it comes to investing in resiliency measures. Additionally, there are over 55,000 rent regulated housing units in the 1% annual chance floodplain, providing critically needed affordable housing options for floodplain communities.¹² Though the city's waterfront is comprised of many racially and economically diverse neighborhoods, citywide disparities in access to affordable housing, community resources, and the financial means to invest in flood protection persist and contribute to the challenges of ensuring a safe and resilient city.

Flood Insurance

Flood insurance is an important financial tool to support households' repair needs after a flood. Traditional homeowner and renter insurance policies do not cover flood damage and federal disaster assistance is never guaranteed. Following Hurricane Sandy, homeowners with flood insurance received an average payment of \$68,000. By contrast, federal disaster assistance through FEMA Individual Assistance only provided an average of \$3,685 per household.¹³

The number of city households with active flood insurance policies is between 46,000 and 52,000 based on FEMA data.¹⁴ While the city's rate of resident enrollment surpasses the nationwide rate of enrollment, there is a considerable gap between those who should have flood insurance and those who do. Over the past decade, federal changes to the National Flood Insurance Program (NFIP) have caused flood insurance premiums to rise for many New Yorkers with further increases expected.¹⁵ Barring interventions at the federal level, the increasing costs of flood insurance combined with the significant costs of retrofitting properties may lead to the long-term displacement of low- and moderate-income homeowners from flood-prone areas.

The national average cost of flood insurance is about \$700 per year. However, in New York City, the average annual cost is \$1,152.¹⁶ Based on the FEMA insurance enrollment data and the earlier-cited figure of 71,500 buildings in the 100-year floodplain, there appears to be a gap of at least 19,500 property owners who do not have flood insurance. Closing that gap would cost approximately \$22.5 million using the citywide average premium of \$1,152. When factoring in properties located in the 500-year floodplain, the cost would be substantially more.

Further, not all homes that experience flooding are in designated floodplains. Following PTC Ida, 52% of all recorded damage was outside both the FEMA-established floodplain and the recently-released [NYC Stormwater Flood Maps](#).¹⁷ This unpredicted flooding during PTC Ida indicates that the original projections of how these increasingly frequent storms are going to impact New Yorkers need to be revisited.

A study commissioned by the Natural Resources Defense Council (NRDC) estimated that at least 110,897 single-family homes in the NY metropolitan statistical area, approximately 7%, have prior

¹⁶ Ibid.

¹⁷ City of New York. NYC Emergency Management. (2022, June) *Record Rain In NYC: The Impacts of Post-Tropical Cyclone Ida*, p. 5.

flood damage. People who purchase homes that have previously flooded can expect to pay around \$46,887 over the course of a 15-year mortgage and \$93,774 over a 30 year-mortgage in flood damage costs. In 2021, 7,645 previously flooded homes were purchased. For these homes alone, the combined total of damage costs is \$23,000,000 annually.¹⁸

Single Family vs. Multi Family Needs; Owner Occupied vs. Tenant

Impacted Buildings

Small residential buildings were disproportionately impacted by Ida: while one- and two-family homes account for 52% of buildings citywide, they comprised 75% of buildings impacted. An additional 12% of damaged properties are three- to four-unit homes.¹⁹

Damage arose from flood waters entering through windows and doors and from sewers backing up into homes through plumbing fixtures. In the immediate aftermath of Ida, the City's Department of Buildings inspected thousands of buildings citywide and deemed 116 buildings structures unsafe to occupy in whole or in part.²⁰ Further, FEMA inspections identified 10 residential buildings as having been destroyed and 1,282 suffering major damage.²¹

The charts below reflect federal disaster assistance, aggregated by borough, approved for private homeowners and renters, which is the best available data the City has received to date.

Reports suggest the combined aid of insurance payouts, FEMA IA, and SBA Disaster Loans is not enough to cover the damage caused by PTC Ida. To partially address outstanding needs, the City's Housing Recovery Office implemented a construction and supplemental funding program to cover certain repairs and mitigation work. The program accepted applications for more than one year following Hurricane Ida and 185 households applied. Please note this program is not funded with CDBG-DR funds.

Sub-grade Units and Residents

PTC Ida took the lives of 13 NYC residents, nearly all of whom were in cellar or basement spaces when the storm hit. While both are below-grade structures, they are differentiated by the amount of height below the ground and suitability for housing. A cellar has more than 50% of its floor-to-ceiling height below curb level, and cellar occupancy is explicitly prohibited. Conversely, basements must have more than 50% of their height above curb level, and occupancy may be permitted albeit heavily regulated. Basement apartments in the City are largely deemed illegal for the lack of a second means of egress, as well as a failure to meet other building code requirements.

As discussed in [Housing Our Neighbors: A Blueprint for Housing and Homelessness](#) (released under a prior administration), basement apartments are an important supplement to the housing stock. These units disproportionately serve very low-income households and other communities that lack access to affordable options in the general housing market. The New Yorkers living in basement apartments often face unsafe and unstable living conditions. However, the process of bringing a basement apartment into safe and legal use is too difficult and expensive for many homeowners who could benefit from legally renting out a secondary unit in their home.

To begin the process of solving this problem, the City partnered with the City Council and community-based organizations on a pilot program that provided funding and regulatory relief for a limited number of basement conversions in East New York, Brooklyn. Through this effort, it became clear the City cannot meet its goals for basement conversions without further analysis and statutory changes at the state level. However, initial findings from the City's pilot program suggested converting basement apartments to legal residences could cost approximately \$275,000 to \$375,000 per conversion.²³

In the meantime, the City will improve community outreach to alert basement occupants about potential flooding events ahead of time so they can take necessary precautions. As many basement

²³ City of New York. Office of the Deputy Mayor of Administration, in collaboration with the Department of Environmental Protection and NYC Emergency Management. (2021, October) [The New Normal: Combating Storm-Related Extreme Weather in New York City](#), p. 48.

occupants may have limited English proficiency (LEP), outreach will be strategic and shaped to meet specific community needs.

The City will use CDBG-DR funds to study the feasibility of making basement apartments resilient to floods and other hazards in the interest of increasing access to affordable housing and providing safe residences for low-income people. To read more about how the City is furthering fair housing visit the [Where We Live NYC website](#) or [download the Where We Live Report](#).

High Flood Risk Homes

Flooding events can also create financial liabilities for owners and occupants when properties are damaged. If left unaddressed, flood-related damages can lead to decaying conditions that may cause mold and reduce the quality of the housing stock. These conditions are particularly difficult for low-income communities that have limited access to savings. To counteract this, the City will use funds made available through this grant to increase awareness of flood risks and to connect homeowners and renters with available resources to reduce this risk. These efforts will promote health and safety and reduce the risk of housing instability.

Additionally, since PTC Ida, significant rainfall events have only intensified, with localized, repetitive flooding becoming increasingly common. The City, led by the Mayor's Office of Climate and Environmental Justice (MOCEJ), has conducted significant outreach to homeowners and tenants that live in flood-prone areas and sought input from multiple community stakeholders and over a dozen City agencies. Through these efforts, the City identified several high-risk areas where flood mitigation measures are limited based on current neighborhood conditions (e.g., area topography) and where residents have expressed interest in relocating to less vulnerable areas.

Given the interest expressed, the City committed to launch such a program and in 2025 released a Resilient Acquisition Framework that lays out the City's strategy for acquiring properties and supporting residents. (This work was partially CDBG-DR-funded through the Planning for Buyout and Acquisition activity.) MOCEJ also began collecting formal expressions of interest from homeowners via an online form. Initial efforts have identified at least three potential candidate areas. While agencies are still determining the feasibility of including them and exploring including other areas, the City has announced it intends to pilot the Resilient Acquisitions program in the Jewel Streets neighborhood of Brooklyn and Queens.

Public and Affordable Housing

Damage to Public Housing

The New York City Housing Authority (NYCHA) is home to more than 300,000 low-income residents. According to a City analysis, PTC Ida impacted approximately 230 NYCHA properties.²⁴ Following are the 13 most damaged sites:

- Bronx
 - 1100 Teller
 - 1471 Watson Avenue
 - Bronx River Houses

²⁴ NYC Ida Damaged Building Composite Dataset

- Butler Houses
 - Claremont Consolidated
 - McKinley
 - Moore Houses
 - Sotomayor Houses
 - Webster Houses
- Brooklyn
 - Ingersoll Houses
- Queens
 - Latimer Houses
 - Leavitt Houses
 - Woodside Houses

The preliminary estimate provided in the first Action Plan for these funds has been updated in the table below. NYCHA estimates the revised cost of storm damage is \$353,429,949 (previously \$156,127,254).

The FEMA Public Assistance (PA) program provides grants to governmental entities and certain types of private nonprofits so that communities can respond to and recover from major disasters quickly. Section 406 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act also allows FEMA to fund mitigation work, known as Section 406 Mitigation, during the recovery process to protect these damaged facilities against future events.

NYCHA expects, but is not guaranteed, to receive \$268,174,165 from insurance to cover a portion of the documented damage, while FEMA PA is expected to cover 90% of the remaining balance. New York State will cover NYCHA's 10% local cost share. NYCHA is also applying for Section 406 Mitigation funding to cover approximately \$332,694,546 (previously \$158,708,925) in mitigation work. After expected FEMA and New York State reimbursement, NYCHA estimates it has an unmet need of \$51.64.2M (previously \$30.5M) towards FEMA-assisted restoration and mitigation efforts.

In addition to FEMA-assisted work, NYCHA has identified approximately \$122 million in additional mitigation work that would make properties more resilient to future storms and other hazards. Such work includes, but is not limited to, plumbing replacement in conjunction with replacing storm-damaged heating equipment, the installation of flood doors, making elevators less susceptible to power outages, etc.

Table 2-4: Assisted Housing Impacted by the Disaster²⁵

Borough	Total HCV Units	Total Impacted HCV Units	Total LIHTC Units	Total Impacted LIHTC Units	Total Public Housing Dwelling Units	Total Impacted Public Housing Dwelling Units

Totals	41,212	4,498	227,839	27,225	178,944	9,872

Affordable Housing

Following the release of the City's initial Hurricane Ida Action Plan, the City identified an unmet need associated with an affordable housing development in Brooklyn. Hope Gardens is a community of former public housing buildings converted to a public-private partnership in 2019 via NYCHA's Permanent Affordability Commitment Together (PACT) program. In total, the property comprises 61 separate buildings that include 1,312 deeply affordable housing units and several community facilities.

The PACT conversion, completed in 2022, was the culmination of years of community outreach and brought nearly \$400 million in investment into the property including substantial renovations to each of the housing units and buildings. The capital improvements were meant to address immediate threats to health, comfort, and safety of residents, improve conditions for energy efficiency, introduce upgrades to improve operational function, and to ensure the long-term viability of the campus as an affordable housing and community resource.

The development is spread throughout a square-mile in Bushwick. During PTC Ida, the property suffered stormwater surge of up to four feet in many buildings, damaging ground floor spaces and destroying mechanical equipment located in the building basements. In total, more than 40 of the property's structures suffered damage with the restoration project costing approximately \$27 million. Shortly after Ida, the property suffered additional damage from two other flash flood events, resulting in additional insurance claims for greater than \$15 million. In many cases, the subsequent floods affected the same buildings damaged during Ida, destroyed much of the new mechanical equipment, and disrupted the provision of heat and hot water to the residents.

Stormwater flooding events were of lesser severity in the past but are becoming more frequent and costly, and the repeated heat and hot water outages are difficult for the 4,000+ residents. The City has identified the Hope Gardens Storm Resiliency project, which is projected to cost approximately \$51 million and introduce much needed storm resiliency components, as a significant unmet need. Please note NYCHA has identified additional mitigation and energy efficiency improvements that would add over \$50 million to the project cost. While the additional work has been included in the City's unmet need calculation, CDBG-DR funds are not proposed to fund this additional scope.

Fair Housing, Civil Rights Data, and Advancing Equity

Overview

Although all New Yorkers will experience severe weather and hazards, some segments of the population are more vulnerable than others. Recent population statistics show an increase in the number of seniors and children in New York City, two population segments that could be more vulnerable to hazardous conditions. Other highly vulnerable groups are people with disabilities, access and functional needs, or serious health conditions, people who are socially isolated, and households with limited English proficiency. In addition, low-income populations may have a harder time recovering from the impacts of hazards. The following sections explain why the City considers these population segments as more vulnerable to a range of hazards. The programs proposed for CDBG-DR funding will work to address the disparate impact of damage on communities most impacted by the City's affordability crisis.

Homeownership and Race

The overall homeownership rate declined slightly in every borough, from 33.6% to 31.9%, over 2009-2019. The rate of homeownership for Asian (42.2%) and white (41.2%) households, however, remained significantly higher than Black (26.6%) and Hispanic (15.9%) households in New York City. Nearly two-thirds (65.7%) of households in Staten Island are homeowners, followed by Queens (44.1%), Brooklyn (29.8%), Manhattan (23.3%), and the Bronx, where less than one-fifth (18.9%) of households are homeowners.²⁶

Table 2-5: Grantee Demographics and Disaster Impacted Populations²⁷

Low-Income Population

Approximately 17% of New York City’s population lives below the federal poverty line. When looking at New York City as a whole, Black and Hispanic New Yorkers are overrepresented in high-poverty areas, while White New Yorkers are the only racial group overrepresented in low-poverty areas.³⁰

The following two maps, from the City’s fair housing plan [Where We Live](#), display the intersection of race and high- and low-poverty census tracts across the five boroughs. Areas with a small share of people living in poverty are shown in Figure 2.6. White New Yorkers predominate in low-poverty areas in Manhattan, Staten Island, and western Brooklyn, and are the only group over-represented in low-poverty areas compared to their city-wide share of the population. Other groups are concentrated in a handful of low-poverty areas spread throughout New York City: Flatlands (Brooklyn), southeastern Queens, and the northern Bronx are predominantly Black; parts of northeastern Queens are predominantly Asian/Pacific Islander (PI); and parts of southern Queens have large Hispanic populations. Parts of Staten Island and northeastern Queens are racially diverse while also having low rates of poverty.

Figure 2.6: Population of Low-Poverty (<10%) Census Tracts by Race and Ethnicity, 2012-2016³¹

Figure 2.7 shows the racial and ethnic composition of the population who lives in high-poverty census tracts. Many of these tracts are in the South Bronx, where Hispanic and Black New Yorkers have a large presence. There is a cluster of high-poverty, majority Black Census tracts in eastern Brooklyn, while high-poverty, predominantly White areas are concentrated in Borough Park and Williamsburg, and high-poverty, majority Asian/PI areas are concentrated in Sunset Park.

³¹ Ibid, p. 93.

Figure 2.7: Population of High-Poverty (>40%) Census Tracts by Race and Ethnicity, 2012-2016³²

Sources: ACS 2012-2016, five-year estimates. Table B03002 for race/ethnicity and Table B17001 for poverty – tract level data.

The greatest concentrations of low-income populations are in the South Bronx and Upper Manhattan, and in scattered neighborhoods in Brooklyn.

Affordable, Resilient Housing

In recent years, the number of people seeking affordable housing, coupled with the loss of homes that were damaged by Hurricane Sandy in 2012, have put additional pressure on New York City's tightly constrained housing market. Housing units are being added, but the supply is not growing fast enough to meet the demand. In the future, the number of housing units added is expected to grow significantly, and the City has made access to affordable housing a policy priority.

Manufactured Homes

The City's only manufactured housing community is located on the northwest shore of Staten Island. At this time, the City has not received any reports of Ida-related damage to this community.

Unhoused Population

New York City is one of only three U.S. municipalities that guarantees the right to shelter. The City provides shelter and other services for tens of thousands of people nightly, and shelters are located in all five boroughs. Shelter counts taken prior to and after Hurricane Ida did not show a significant difference in the number of homeless people served by the City shelter system.³⁶ However, the COVID-19 pandemic may have undermined data collection efforts that normally would have taken place after the storm.

At least 130 households received shelter and other services through a City-operated, FEMA-funded hotel program. As part of this program, a nonprofit provided case management services to displaced individuals and families with the goal of relocating evacuees to permanent housing.

Table 2-11: Point-in-Time Count – Type of Shelter

Geography	Emergency Shelter (Jan. 2022)	Transitional Housing	Unsheltered Homeless (Jan. 2022)	Total Known Homeless
New York City	45,347	Unknown	3,439	48,786

Table 2-12: Point-in-Time Count – Impacted by Disaster

Geography	Emergency Shelter (Sept. 2021)	Transitional Housing	Unsheltered Homeless (Jan. 2022)	Total Known Homeless
New York City	45,181	Unknown	3,439	48,620

No homeless shelters or other special needs population shelters reported significant damage from PTC Ida. At this time, the City has not allocated CDBG-DR funds to programs exclusively for the City's unhoused population. However, the City's housing plan, [Housing Our Neighbors: A Blueprint for Housing and Homelessness](#), acknowledges the specific needs of these shelters and the City allocates other HUD funding to meet the specific needs of the unhoused community.

Non-English Speakers

NYC has one of the most diverse populations of any major city in the U.S. and the world. As of 2021, New York City is home to the largest foreign-born population in the nation at 3.1 million people, 36% of the City population. At that time, nearly half of all residents in Queens were foreign-born.

Table 2-13: Number and Percent of Foreign-Born Population by Borough³⁷

	Bronx	Brooklyn	Manhattan	Queens	Staten Island	Citywide
Total Population	1,468,262	2,712,360	1,669,127	2,393,104	493,194	8,736,047
Total Foreign Born	502,165	957,528	466,135	1,124,088	119,539	3,169,455
Foreign Born %	34.20%	35.30%	27.93%	46.97%	24.24%	36.28%

Over 200 languages are spoken in New York City and nearly half of all New Yorkers speak a language other than English at home. According to the 2017-2021 American Community Survey, an estimated 22% of New Yorkers had limited English-speaking proficiency (LEP). LEP persons are at higher risk during an emergency because they might not be aware of or fully understand evacuation orders, instructions on how to access critical City services, directions from first responders, or other warnings.

Table 2-14: Limited English Proficiency Breakdown of Disaster Related Areas³⁸

County	# Speak English Less than 'Very Well'	% Speak English Less than 'Very Well'
Bronx	345,830	25.3%
Brooklyn	538,747	21.4%
Queens	631,398	28.1%
Staten Island	59,782	12.8%

³⁷ United States Census Bureau. American Community Survey 2017-2021 Five-Year Estimates, Table DP02: Selected Social Characteristics in the United States.

³⁸ Ibid.

Warnings for PTC Ida were disseminated by the National Weather Service in English and Spanish. One of the shortfalls identified by the City was the lack of communication in other languages. In the neighborhoods where a majority of the deaths occurred, approximately 40-80% of the households therein speak languages other than English and Spanish.³⁹ Most of the basement deaths from Hurricane Ida's historic flooding were people of Asian descent, including Chinese, Nepalese, and Indo-Caribbean families. The City will use CDBG-DR funds to aid in closing the communication gap and ensure LEP communities have access to weather warnings.

Table 2-15 further demonstrates the diversity of languages spoken in New York City.

Senior Residents

Seniors, one of New York City's fastest-growing demographic groups, face many challenges during severe weather events and other emergencies. Between 2000 and 2016, New York City's senior population increased by 17%, reaching 1.1 million or 13% of total population. Almost 48% of senior New Yorkers are foreign-born and approximately 31% live alone.⁴¹ Lacking English-language proficiency or being socially isolated are two factors that can increase a person's vulnerability in emergencies. Seniors are generally at higher risk during severe weather events or other emergencies if they have chronic health conditions or disabilities; rely heavily on medical services, hospitals, and nursing homes; or have limited access to emergency care. Seniors with mental health conditions, such as dementia, anxiety, or depression, are also at higher risk during these times. Seniors with limited mobility might require accessible transportation or help with refilling prescriptions and other basic tasks.

Power outages during an emergency can endanger seniors who need elevators to reach their apartments, keep medications refrigerated, or use oxygen tanks, motorized wheelchairs, or other power-dependent medical equipment. Where seniors live contributes to their vulnerability. Approximately 8% of New York City's seniors with disabilities live within the 1% annual chance floodplain in communities such as the Rockaways, Coney Island, and Brighton Beach. This percentage does not include seniors living in nursing homes, adult care facilities, and other institutions.

As shown in Table 2-16, nearly 18% of adult care facilities in New York City are located within the floodplain, putting a significant number of the most vulnerable people at risk during extreme weather events.

Table 2-16: Senior Healthcare Facilities Located in the 1% Annual Chance Floodplain⁴²

Facility Type	Total number	Number located in 1% Annual Chance Floodplain	Percent located in 1% Annual Chance Floodplain
Adult Care Facilities	76	14	18%
Adult Care Facility Beds	10,968	2,203	20%
Nursing Homes	171	14	8%
Nursing Home Beds	47,982	3,648	8%

The City will use its CDBG-DR allocation to help provide safer conditions for seniors during future storms.

Children

Approximately 30% of New York City households overall and in each of the MID areas have children under the age of 18, and children are a growing segment of the population. Children are particularly vulnerable to hazards because they depend on parents and other adult caretakers for food, shelter, transportation, and guidance. In addition, the emotional stress that follows a hazard event may linger longer in children than in adults according to the Federal Emergency Management Agency's mental health experts. Children who are from very low- or low-income families or have disabilities are at even greater risk. In New York City, approximately 29% of people under the age of 18 live below the federal

⁴¹ City of New York. NYC Emergency Management. May 2019. *NYC's Risk Landscape: A Guide to Hazard Mitigation*. https://www.nyc.gov/assets/em/downloads/pdf/hazard_mitigation/nycs_risk_landscape_a_guide_to_hazard_mitigation_final.pdf

⁴² Ibid.

poverty level, with over 150,000 of these children being under the age of five. About 3% of New York City's children under the age of 18 have some form of disability.

Table 2-17: Average Household Size and Households with Persons Under 18 Years of Age⁴³

Households	Bronx	Brooklyn	Queens	Staten Island
Total households	521,340	985,108	807,468	169,528
Average household size	2.73	2.71	2.93	2.87
Households with one or more people under 18 years	35.9%	29.4%	29.3%	33.2%

Populations with Disabilities

The U.S. Census assesses several major categories of disabilities:

- Sensory disabilities: Blindness, deafness, or severe vision or hearing impairment.
- Cognitive disabilities: Because of a physical, mental, or emotional problem, having difficulty remembering, concentrating, or making decisions (DREM).
- Physical disabilities: Long-lasting conditions that substantially limit one or more basic physical activities, such as walking, climbing stairs, reaching, lifting, or carrying things.
- Self-care disabilities: Conditions lasting six or more months that make it a challenge to dress, bathe, or move around inside the home.
- Go-outside-the-home disabilities: Conditions lasting six or more months that make it difficult for people to shop or visit a doctor's office by themselves.

According to the 2017-2021 American Community Survey, approximately 11% of all New Yorkers, 37% of its seniors, and 3% of people under the age of 18 have at least one disability. New York City's population with a disability increases relative to population age.

Table 2-18: Number and Percent of Persons in MID Areas with a Disability by Borough⁴⁴

Borough	Total Civilian Non-institutionalized Population	Number of Persons with a Disability	% of Persons with a Disability
Bronx	1,447,001	225,098	15.6%
Brooklyn	2,697,648	268,036	9.9%
Queens	2,378,283	228,780	9.6%

People with disabilities face unique challenges during extreme weather events. The City will use CDBG-DR funding to better understand how the City can ensure safety for vulnerable populations in future weather events.

Summary of Housing Unmet Needs

Based on this assessment, the City has identified the following areas of unmet need associated with Housing activities:

Basement Apartments

As previously discussed, the City estimates converting illegal basement apartments into safe, habitable units may cost up to \$13.75 billion. However, the City must first conduct further analysis of viable options to make such apartments safe from potential flood events. The City estimates this analysis would cost \$520,000.

Public Housing Restoration and Mitigation

NYCHA's estimated unmet need for restoration and mitigation work at Ida-damaged developments is approximately \$172 million.

⁴⁵ Ibid.

⁴⁶ Ibid.

Expanding Flood Risk and Flood Insurance Awareness in Inland Areas

While past extreme events like Hurricane Sandy devastated our coastline, Ida made clear that we are in a new moment where inland neighborhoods face a growing danger. The City must help re-educate New Yorkers living inland on this new danger, and part of that is protecting property owners and renters against financial devastation in the event of a flood disaster. Understanding the real limitations some face around getting insurance, the City will take significant steps to help residents know their options. Additionally, homeowners would benefit from in-home resiliency audits and financial counseling programs, which could lower their premiums. While this is an ongoing need, the estimated need for the immediate future is \$5 million.

High Flood Risk Homes

As described earlier in this section, the City has identified several flood-prone areas where mitigation options are limited and residents have expressed interest in a voluntary acquisition pathway. In some cases, residents have also indicated they'd prefer to remain in the area provided their homes can be retrofitted to make them more resilient to severe weather. Initial outreach efforts have identified at least three candidate areas, including the Jewel Streets neighborhood in Brooklyn and Queens, and a preliminary associated cost of over \$100 million.

Community Outreach

As demonstrated by Ida, equitable access to information can literally be a matter of life and death. The City has identified an increased need to conduct outreach and education, particularly to LEP persons, on the risks of flooding and coastal storms and the steps New Yorkers can take to be prepared. In the immediate future, the City will seek to dramatically increase awareness of the Notify NYC system's ability to send alerts in multiple languages and conduct direct outreach to underserved communities. Estimated need: \$7.25 million.

Public and Affordable Housing Mitigation Projects

The City has identified the following needs intended to prevent damage and increase resiliency from future hazardous conditions and events:

- Upgrading infrastructure to prevent power and heating system outages at NYCHA developments (\$2 million);
- Implementing a stormwater mitigation project at a former public housing development in Bushwick Brooklyn (\$51 million); and
- Incorporating resilient community spaces in affordable housing developments, particularly developments dedicated to vulnerable populations, so residents and the surrounding community may shelter-in-place or find safe refuge during extreme weather events (\$35 million).

Planning: Housing

Finally, the City has identified unmet needs for housing-related planning activities that will help improve the City's response to future disasters. These needs include:

- Evaluating post-disaster housing response options and developing a Housing Recovery Playbook (\$1.75 million);
- Exploring innovative technologies to increase energy efficiency at NYCHA sites (\$400,000);

- Providing a local match for Federal resiliency grants that will be used to study resiliency and mitigation improvements at specific housing sites throughout the city (\$350,000); and
- Exploring the creation of a permanent buyout and acquisition program through which owners of flood-vulnerable 1-4 family properties could voluntarily sell their homes. The project will focus on designing an implementable program for “blue-sky” periods that can be scaled during post-disaster settings (\$1 million for a feasibility study).

Infrastructure Unmet Needs

Fewer than 400 City-owned buildings and facilities sustained damage. Nearly half of all PA costs are attributed to parks and school facilities, which each suffered damage of nearly \$200 million. Nearly half of all PA-eligible expenses are for the repair or replacement of buildings, their contents and systems, heavy equipment, and vehicles, amounting to \$339.1 million in damage. Notably, several public schools that serve as evacuation centers for coastal storms experienced flood damage.

The City is still evaluating PTC Ida’s impact on public facilities and infrastructure and is tracking potential recovery resources from FEMA Public Assistance (PA). FEMA PA-eligible activities include emergency work and permanent restoration work, which are divided into the following categories:

- Emergency work
 - Debris Removal; and
 - Emergency Protective Measures.
- Permanent work
 - Buildings and Equipment;
 - Utilities and Water Control Facilities; and
 - Other.

Current estimates for emergency work and damage to City-owned facilities, excluding NYCHA-owned properties, place the total cost between \$415 million and \$500 million.

FEMA has established the City’s contribution for Hurricane Ida, known as the “Local Match,” as 10% of eligible project costs. However, the state of New York is covering the City’s share of its project costs.

Table 2-21: FEMA Public Assistance Program

PA Category	Estimated PA Cost	10% Local Match	Resiliency	Total Need
Debris	\$8,764,626	\$876,462	\$0	TBD
Emergency Measures	\$51,386,245	\$5,138,624	\$0	TBD
Buildings and Equipment	\$339,129,486	\$33,912,948	\$5,325,103	TBD
Utilities	\$8,540,987	\$854,098	TBD	TBD
Parks and Recreational Facilities	\$3,827,866	\$382,786	\$1,624,073	TBD
Other	\$3,823,169	\$0	\$0	TBD
Total	\$415,472,379	\$41,547,237	TBD	TBD

Summary of Infrastructure Unmet Needs

Based on the City’s analysis of damage and expected reimbursements, the City has not identified a quantifiable unmet need related to the repair and restoration of damaged infrastructure. However, the City has identified unmet needs to make the City’s infrastructure more resilient and for planning

activities to better prepare for and implement emergency protective measures during periods of hazardous conditions. These needs are described in the Mitigation section of this chapter.

Economic Revitalization Unmet Needs

Buildings with commercial space, including mixed-use buildings, account for 7.5% of buildings impacted by Ida. Approximately 800 buildings are solely commercial, 2.4% of all impacted buildings. Overall, an estimated 194,000 commercial units are in buildings impacted by PTC Ida, though high-rise buildings in Manhattan drive this large number.⁴⁷

Over half of impacted buildings with commercial space are in Brooklyn (32%) and the Bronx (27%). Nearly half of impacted commercial buildings are large commercial spaces, with commercial area in the top quartile of City buildings. The large average square footage (compared to the median) reinforces the large size of these buildings, suggesting industrial and warehousing activities.

The City's Department of Small Business Services rapidly supported small businesses hit by the storm by activating its emergency response protocols, including:

- Sending its Emergency Response Unit (ERU) door-to-door to visually assess the impact of Ida, help businesses record and report damage, manage communication from first responders and enforcement agencies, and expedite government and utility processes.
- Working daily with community partners, including Business Improvement Districts (BIDs), Chambers of Commerce, industry associations, elected officials, and others to ensure efforts were coordinated and comprehensive.
- Providing one-on-one support, technical assistance, and information to business owners and communities through its Small Business Hotline (1-888-SBS-4NYC).
- Connecting businesses to legal support for commercial leases.

Similar to residential properties, PTC Ida primarily damaged businesses with ground-floor and/or sub-grade spaces. Based on data available at the time this Action Plan was prepared, damage to commercial properties was primarily related to losses of inventory and equipment rather than structural damage. Additionally, the City's Economic Development Corporation estimates that Hurricane Ida could have resulted in a reduction of \$3.022 billion (in 2021 dollars) in economic output.

The Small Business Administration provides low-interest disaster loans to help businesses recover from declared disasters. The following table displays the number of business loans that were approved by SBA in the months since Ida.

⁴⁷ NYC Ida Damaged Building Composite Dataset

Table 2-22: Total Business Loans Approved by the SBA

SBA Loan Type		Bronx	Brooklyn	Manhattan	Queens	Staten Island	Total

Summary of Economic Recovery Unmet Needs

Based on the City's analysis of damage and reimbursements, the City has not identified an unmet Economic Recovery need *associated with PTC Ida*. However, readers should note it is difficult to truly estimate Ida's impact on the City's economy as the storm occurred during the COVID-19 pandemic. While Ida occurred at a time of relatively low COVID transmission, the City's business sector was, and is still, in the recovery phase. The pandemic was particularly hard on the restaurant, retail, and service (e.g., salons, dry cleaners) sectors, which are also the most common business types to occupy ground-floor spaces in the primarily residential areas that were hardest hit by Ida. The disproportionate impact on these sectors was especially pronounced in New York City, which experienced greater job and wage losses than the rest of the state and the nation.

As shown in the following charts, prepared by the Office of the NYS Comptroller based on information obtained from the NYS Department of Labor, the City has also faced a longer road to recovery than the rest of the state or the nation.

Fig. 2.8: Change in Economic Indicators for Restaurants through the Pandemic, Q2 '19- Q2 '21⁴⁸

Fig. 2.9: Employment in New York City's Retail, Restaurant, and Recreation Sectors⁴⁹

The City's economy has also been impacted by the Great Resignation and other factors, further complicating a true assessment of Ida's impact on businesses. While the City acknowledges the struggles local businesses have endured in recent months and years, the extent of Ida's impact on the economy remains unclear. Accordingly, the City will continue to foster economic recovery through existing programs and new initiatives, but these will primarily not be funded with CDBG-DR funds.

⁴⁹ Ibid.

Mitigation Only Activities

Overview

New York City is by far the most populous city in the United States and its position as a global, coastal city and the sheer scale and diversity of its people, neighborhoods, buildings, and landscape illuminate why careful planning and risk mitigation efforts are so important. Our coastline is approximately 520 miles long and borders an ocean, rivers, bays, tidal straits, inlets, and a harbor. The city covers approximately 305 square miles and across the five boroughs, variations in population density and neighborhood characteristics expose areas to different risks. New York City's over 8 million residents are embedded within a metro region of nearly 22 million people, who are heavily dependent on complex, interdependent regional systems for energy, water, telecommunications, transportation, and wastewater treatment. And with approximately 1 million buildings, the scale of New York City's built environment is both complex and immense.

To determine the potential natural and human-caused threats across New York City, the Mitigation Needs Assessment utilizes data from the City's 2019 Hazard Mitigation Plan (HMP), NYC's Risk Landscape: A Guide to Hazard Mitigation. The HMP information informed the proposed use of CDBG-DR funds and how the City will meet the HUD requirement to use at least 15% of the grant for mitigation efforts targeted towards the unique needs of the MID areas.

The HMP assessed the threat of nine hazards most pressing to New York City: coastal erosion, coastal storms, earthquakes, extreme heat, flooding, high winds, winter weather, cyber threats, and the release of hazardous materials (e.g., chemical, biological, radiological, and nuclear). As mentioned earlier in this plan, the HUD-determined MID areas include four of the five boroughs that make up New York City: the Bronx, Brooklyn, Queens, and Staten Island.

Through the Mitigation Needs Assessment, the City sought to measure the physical and social characteristics that may amplify the impacts of the assessed hazards on vulnerable populations. The mitigation programs funded with CDBG-DR will work to reduce or at the very least, not worsen the conditions outlined in the report.

Top Risks Impacting New York City and the HUD-Identified MID Areas

Coastal Erosion

Coastal erosion is the loss or displacement of coastline land from the interaction of oceans, waves, and beaches, often coupled with the impact of human activity. New York City has identified coastal erosion as a threat to three main areas: the Rockaway peninsula in Queens, Coney Island in Brooklyn, and the South Shore of Staten Island. Collectively, the land in these areas account for 0.7% of New York City and have been identified as Coastal Erosion Hazard Areas (CEHA). The average annual change in shoreline is captured in the table below.

Table 2-23: Average Annual Shoreline Change

CEHA Name	Annual change of shoreline
Rockaway Peninsula, Queens	East and West Shore Area: +15 ft Middle shore Area: -5
Coney Island, Brooklyn	-1.3 ft
South Shore, Staten Island	-1.3 ft

The table below identifies the total number of exposed buildings in each CEHA that face the threat of coastal erosion.

Table 2-24: Acreage and Buildings Within the Coastal Erosion Hazard Areas (CEHA)

CEHA Name	Acreage Exposed	Exposed Building Footprints	Exposed Building Centroids
Coney Island, Brooklyn	305	51	21
Rockaway Peninsula, Queens	708	29	21
South Shore, Staten Island	415	108	55
Total	1,428	188	97

Building owners and residents in each of the three defined Coastal Erosion Hazard Areas are at a financial risk due to the potential for necessary structural repairs or modifications as well as potential relocation expenses if businesses and residents need to move away from the waterfront. This can disproportionately impact low- and moderate-income people, people with disabilities, or seniors as the ability to relocate can be costly and logistically challenging.

Managing coastal erosion requires collaboration between the City, state, and federal partners. Measures to mitigate coastal erosion are already widely used and include implementing environmental protection policies, building nature-based buffers on the shoreline, and constructing barriers to protect against erosion where the water meets the shoreline.

Three of the HUD-defined MID areas, Queens, Brooklyn, and Staten Island, are included in the CEHA designations. The damage from PTC Ida was heavily concentrated inland, minimizing the negative impacts on coastal areas. Therefore, recovery efforts specific to PTC Ida will primarily focus on the need to strengthen inland storm readiness and response as opposed to coastal protection. To that end, the City will ensure the inland mitigation efforts do not worsen the effects of coastal erosion in the identified CEHAs.

Coastal Storms

New York City's densely populated coastline makes it one of the cities most vulnerable to coastal storms. Tropical cyclones and nor'easters are two types of storm systems that threaten the City.

Tropical Cyclones include three types of storms:

- **Tropical depressions:** an organized system of thunderstorms that produce circular wind flow with maximum sustained winds of 38 miles per hour or less.
- **Tropical Storms:** an organized system of thunderstorms with well-defined wind circulation with maximum sustained winds between 39 and 73 mph.
- **Hurricanes:** a strong, highly organized group of thunderstorms, with a well-defined low-pressure center ("eye") and having maximum sustained winds of 74 mph or more.

The following map depicts areas facing the highest threat to coastal storms and potential storm surge.

Figure 2.10: Areas Most Susceptible to Storm Surge During Coastal Storms

Tropical cyclones are the biggest threat to New York City when the water along the coast of Africa, the Caribbean Sea, and the Gulf of Mexico is at its warmest. This is typically between August and October,

with the highest risk around mid-September. The risk to New York City when tropical cyclones make landfall is storm surge, heavy rain, high wind, and tornadoes.

The National Hurricane Center (NHC) estimates New York City may experience a lower category hurricane once every 19 years, and a major hurricane (category 3 or greater) once every 74 years.

A nor'easter is defined as a type of coastal storm that primarily threatens the Mid-Atlantic and New England states between October and April. They typically consist of heavy rain or snow fall that can cause inland flooding, heavy wind, and potentially storm surges. New York City's coastal location amplifies the potential threat of storm surges during both nor'easter storms and tropical cyclones; however, the probability of New York City experiencing a severe nor'easter typically remains low. The most likely threat to New York City during a nor'easter is heavy rainfall that can cause minor to moderate damage across the city.

Based on the storm surge inundation estimates, approximately 35% of all critical facilities and key assets are located within storm surge inundation areas for category 1-4 hurricanes. This includes subway tunnels, subway stations, car tunnels, telecommunication networks, powerlines, and electric substations. Damage to such assets poses a threat to New York City's ability to respond to and ensure the safety of residents during and after a coastal storm.

While the greatest risk for flooding and storm surge damage is isolated in areas near the shoreline, coastal storms that bring heavy rainfall present a risk and need for mitigation strategies in the MID areas. PTC Ida produced more than nine inches of rain over the course of approximately 11 hours. The intensity of the storm exceeded the typical sewer capacity of 1.75 inches of rain per hour.

Figure 2.10 indicates that three of the four PTC Ida MID areas, Queens, Brooklyn, and Staten Island, will face the greatest risk during a coastal storm surge. Storm readiness activities will ensure people at risk from both coastal storms and inland flooding will be better prepared in the future.

Earthquakes

An earthquake is a sudden, rapid shaking of the earth as plates shift, rocks crack beneath the surface, and large plates either collide or try to push past one another. While New York City does not sit along a fault line, the threat of a severe earthquake is considered moderate. However, due to New York City's extreme density of high-rise buildings, and the fact that seismic activity was not required to be considered during building design until 1995, the overall risk posed to City by an earthquake is high.

Figure 2.11 features historical seismic activity in the tristate area between 1737 and 2018. The frequency of damaging earthquakes has historically been low. One of the strongest earthquakes, which occurred in Brooklyn in 1884, is estimated to have registered with a magnitude at 5.2.

As most buildings in NYC were built before 1995, the economic cost to rebuild after a potentially damaging earthquake would be very high. However, New York City continuously works to ensure that buildings remain structurally sound, and public infrastructure is reinforced to withstand seismic activity. A potentially greater threat is posed to those that live in or around neighborhoods with higher rates of code violations. Poor building maintenance could lead to structural insecurities that would be detrimental in the event of an earthquake. As noted in the Housing Unmet Needs Assessment, low-

income people are more likely to occupy a building with outstanding code violations. Thus, the impact of an earthquake in New York City could have a disproportionate effect on low-income people.

Historical seismic activity indicates greater risk to Manhattan, Brooklyn, and Staten Island. However, due to the interconnected nature of the City's infrastructure, the risk would be equally spread amongst all five boroughs.

Figure 2.11: Historical Earthquake Epicenters in the NYC Metro Area (1737-2018)

SOURCE: USGS, NYS DHSES

Extreme Heat

Extreme heat occurrences in New York City are responsible for more deaths than all other extreme weather events combined. Climate change is likely to bring hotter temperatures and more hot days, leading to longer and more frequently registered heat waves. A registered heat wave is any three consecutive days with temperatures at or above 90 degrees Fahrenheit. In fact, heat waves are projected to triple from two heat waves per year to six by 2080.

Due to the extreme density of buildings, and extensive asphalt cover throughout the City, average temperatures are seven degrees Fahrenheit warmer than in neighboring suburbs. Figure 2.12 demonstrates the variability of heat throughout the City.

Figure 2.12: New York City Thermal Imagery (Taken July 17, 2018)
SOURCE: USGS

The areas that face the greatest levels of heat, according to the map above, have the highest building density and lowest levels of vegetation. Notable areas with excessive levels of heat include parts of the Bronx, Queens, Brooklyn, and Staten Island.

Approximately 80% of heat-related deaths in New York are due to extended exposure to heat inside the home, suggesting that air-conditioning could prevent most heat-related deaths and illnesses. According to City estimates, one in four New Yorkers either do not have, or do not regularly use, air

conditioning during hot weather as the expense of doing so is too high. About 17% of households in higher poverty neighborhoods lack air conditioning compared to just 6% of households in lower poverty neighborhoods. This demonstrates a disproportionately harmful impact of extreme heat on lower-income communities. To determine the full extent of the harm to New York City residents, the City measures risk using the Heat Vulnerability Index (HVI), which measures heat intensity and socio-economic variables that assess a community's ability cope with excessive heat. See the map below.

Figure 2.13: Heat Vulnerability Index (HVI) for New York City Community Districts

Communities with the highest vulnerability of death or illness during an extreme heat event have the following characteristics: high surface temperatures, less green space, and poor communities of color whose populations have experienced historical racism and segregation.

In addition to negative health impacts, extreme heat increases the demand for power and stresses the power grid, causing outages that can create a cascade of negative impacts throughout the City. These

impacts can include physical damage of critical infrastructure, the inability for seniors or persons with disabilities to use elevators, and the lack of power to operate life-sustaining medical equipment.

Flooding

New York City is subject to four types of flooding: tidal, coastal, inland, and riverine flooding. The diagram below illustrates the type flooding associated with each category.

Figure 2.14: Four Major Types of Flooding in NYC

SOURCE: NYCEM

Coastal flooding is primarily caused by a storm surge during coastal storms. Water rushes in from the coastline, which can threaten both coastal neighborhoods and low-lying inland areas. The threat of severe coastal flooding during a coastal storm is documented by FEMA Flood Insurance Rate Maps (FIRMs), which project the 1% and 0.2% annual chance of flooding.

Inland flooding is commonly referred to as a “flash flood,” “cloudburst,” or “urban flood.” Such events can be caused by short, intense rainfall often associated with sudden small-scale thunderstorms or downpours from very large storm systems. Other contributing factors to inland flooding are sewer/drainage capacity as well as the presence of impervious surfaces. If sewer and drainage management systems are overwhelmed, flooding may occur.

Riverine flooding occurs when the volume of freshwater flowing in a river or a stream exceeds its holding capacity and water overruns the surrounding banks.

Approximately 400,000 people live within the 1% annual chance floodplain region in NYC. Of this population, the people most at risk are seniors, people with chronic health conditions or disabilities, low-income residents, and rent or housing cost burdened households. These specific populations are at an increased risk due to the increased difficulty of relocating during a flooding event. Additionally, post-flood, these populations are at increased risk of exposure to mold and other hazardous materials, which could lead to health problems, lost wages, loss of employment, or further financial stress.

Flooding also poses an enormous risk to essential infrastructure. This includes electrical systems, steam systems, telecommunications, transportation, highways, as well as wastewater and hazardous materials systems. Of the essential City infrastructure systems, the City's electrical, steam, and wastewater systems face the greatest risk of flooding. Approximately 53% of in-city electric generation capacity, 37% of transmission substation capacity, and 12% of large distribution substation capacity are within the 1% annual chance floodplain. Approximately 88% of the City's steam generation capacity lines are within the 1% annual chance floodplain, and all wastewater and hazardous materials systems are located in the 1% annual chance floodplain. Additionally, all 14 of the wastewater treatment plants are located at low elevations along New York City's waterfront. Flooding of these centers could lead to the release of hazardous waste that could thus cause harm to employees, nearby communities, and surrounding natural areas.

Protecting city infrastructure and preparing communities prior to the arrival of a flood is essential to managing the risk posed by flooding events. This is true of areas both inside and outside the designated floodplain as areas previously considered at low risk of flooding saw damage during PTC Ida, particularly in the inland MID areas of the City.

High Winds

High wind events are winds that exceed 50 to 60 mph. These events can coincide with tornadoes, severe thunderstorms, straight line winds (winds blowing in a single direction that are associated with intense low atmospheric pressure), as well as microbursts or macrobursts (powerful downdrafts causing severe localized damage; associated with thunderstorms).

New York City's dense high-rise environment, high number of older buildings, and numerous open construction sites threaten the public and increase vulnerability. In fact, since 1950 at least one tornado has occurred in each of the five boroughs.

Winter Weather

During the winter months, New York City is subject to snow and ice events, as well as periods of extreme cold. These pose risks to the City's infrastructure as well as residents. On average, New York City experiences 72 days with temperatures at or below 32 degrees Fahrenheit. Additionally, the City experiences a winter storm that drops six or more inches of snow about 13 times every decade. As a result of climate change, these risks are projected to decrease, but in present times, the threat of winter weather poses a risk to New York City residents and infrastructure.

Residents face risks during travel, such as icy conditions on roadways creating slippery conditions that can cause accidents. Power outages create a risk for people that rely on electricity for necessary medical equipment and to heat homes. Without electricity for heat, people may resort to unsafe methods that can lead to further harm such as carbon monoxide poisoning and fires. Additionally, for people that are unhoused, exposure to extreme cold can lead to frostbite, hypothermia, and even death.

The types of infrastructure that are at risk from winter storms are power and telecommunications networks, fuel supply chains, transport systems, and local roadways. The accumulation of snow or prolonged freezing temperatures can cause critical infrastructure to freeze, making the environment slippery and prone to breakage.

To reduce the threat of winter weather to city residents, the Department of Buildings encourages building owners to repair vulnerable masonry and maintain buildings to ensure proper heat retainage. This can include clearing snow and ice off roofs, inspecting exterior walls and window inlets, ensuring all spaces are properly sealed, and wrapping exposed pipes in insulation to slow heat transfer.

Cyber Threats

A cyber-attack involves either the theft or modification of information on City agency computer systems, or a system compromise that has the potential to disrupt essential services.

Nearly every City system, from the delivery of water and electricity to transportation or emergency response, is reliant on technology. Thus, a cyber-attack can have wide ranging effects on both public and private industries including, but not limited to, stolen personal information, a loss of trust in institutions, and the disruption of essential services to New York City residents.

Every New Yorker relies on the continuous delivery of City services, from public transportation and sanitation to public housing and food pantry assistance. Disruption to service delivery could have a disproportionate impact on low-income communities, people with disabilities, and seniors, as they may not have access to resources to supplement City services. For example, if the City faces a cyber-attack during a natural disaster, the City's ability to provide restoration or recovery efforts would be hindered. Those without the means to relocate to a safer area, or who do not understand the threat of the hazard due to a language barrier, will be disproportionately at risk and in greater need of post disaster aid.

Hazardous Materials Release

A hazardous materials incident is a situation in which harmful substances are released into the environment. These types of releases are often classified as chemical, biological, radiological, or nuclear (CBRN) and may result from an accidental or intentional release. New York City's density and congestion leave it highly vulnerable to CBRN releases.

Both the level of risk and harm vary depending on the type of material that's been released.

- **Chemical:** The harm presents at point of contact, meaning direct physical contact or contact through a contaminated source of water, air, or soil. Both can have varying degrees of consequences. Persons most at risk of chemical hazards are first responders, waterfront residents near industrial areas, and low-income individuals who have historically faced the burden of equity issues concerning environmental hazards. There are approximately 16,000 reports of chemical releases per year, with most releases being petroleum. While the threat of widescale intentional release of harmful chemicals is present, it's far less likely than a localized accidental spill.
- **Biological:** New York City is a dense urban environment. The possibility of spreading biological hazards is high as most recently seen with the COVID-19 pandemic, with New York City becoming the early epicenter of cases in the U.S. Individuals that face a higher risk to biological hazards are seniors, young children, people with disabilities and mobility impairments, and people with pre-existing medical conditions or compromised immune systems. Other risks for outbreaks include restaurants or markets selling tainted food, or a sewer overflow that exposes residents to raw sewage.

- **Radiological:** Accidental radiological incidents are most likely to occur near facilities storing radioactive materials or waste. Buildings that store such materials are medical facilities, hospitals, research and development facilities, and universities. These facilities may experience small spills on occasion. The threat to individuals varies depending on exposure. Factors that increase the risk of prolonged illness are age, gender, and pregnancy. Children and fetuses are more sensitive to radioactivity as they are still developing. Women exposed to significant doses of radiation are at a slightly greater risk of developing cancer. With proper storage and monitoring of facilities that store waste, the likelihood of widespread radiological hazards is low.
- **Nuclear:** The closest nuclear facility to New York City is the Indian Point Nuclear Power Plant in Buchanan, New York. An accidental nuclear release at this facility is not expected to expose the City to harmful radiation unless a unique and rare set of meteorological conditions occur simultaneously with a large nuclear release.

As hazardous facilities are located across the City in various locations, the threat is spread across the MID areas. In an effort to better understand where these threats are located, how they impact their surrounding areas, and how best to address them in a fair and equitable manner, New York City passed Local Laws 60 and 64 to assess environmental equity issues and develop a plan to incorporate environmental justice (EJ) into the fabric of City decision-making. This legislatively mandated work, known as Environmental Justice New York City (EJNYC), represents a historic investment from the City of New York to study environmental inequities affecting how and where low-income communities and communities of color live, and to provide all residents the tools to advocate for the best outcomes for their communities. The legislation centers on three main products:

- A report, expected to be released in 2023, which will be the City's first comprehensive study of environmental justice.
- A web-portal and mapping tool based on the data and analysis from the EJNYC Report. This portal will host interactive maps, a data repository, and information on relevant City programs relating to environmental justice. It will be used by City agencies to inform their environmental decision-making and will empower residents and organizers with the tools to continue advocating for the best outcomes for their communities.
- The EJNYC Plan will be the culmination of all the EJNYC work. The plan will identify potential citywide and local initiatives for promoting environmental justice and outline a set of discrete recommendations for better embedding equity and environmental justice into the City's decision-making processes.

In early 2021, the City released an interactive map of the City's Environmental Justice Areas. NYC's environmental justice law defines "Environmental Justice Areas" as low-income or minority communities based on census data. Defining Environmental Justice Areas in this way enables the City to start from a baseline of social vulnerability in the EJNYC Report. These areas have been and continue to be more vulnerable to potential environmental injustices due to factors including history of systemic racism and inequitable resource distribution. The EJNYC Report will identify and describe these injustices.

Figure 2.15: Draft Map of NYC Environmental Justice Areas

Draft Environmental Justice Areas Map is accessible at <https://arcg.is/KCfXq>. Low-income communities are those where the population below poverty is equal to or greater than 23.59% of the total population, while minority communities are those where the minority population is equal to or greater than 51.1% of the total population.

Similarly, the U.S. Centers for Disease Control and Prevention (CDC) / Agency for Toxic Substances and Disease Registry (ATSDR) has developed a measure of social vulnerability, which refers to the potential negative effects on communities caused by external stresses on human health. Such stresses include natural or human-caused disasters or disease outbreaks. Reducing social vulnerability can decrease both human suffering and economic loss.

The CDC/ATSDR Social Vulnerability Index uses 16 U.S. Census variables, including unemployment, racial and ethnic minority status, access to transportation, overcrowded housing, and disability, to help local officials identify communities that may need support before, during, or after disasters. A percentile ranking represents the proportion of tracts (or counties) that are equal to or lower than a

particular tract (or county) in terms of social vulnerability. Possible scores range from 0 (lowest vulnerability) to 1 (highest vulnerability). For example, a CDC/ATSDR SVI ranking of 0.85 signifies that 85% of tracts (or counties) in the state or nation are less vulnerable than the tract (or county) of interest and that 15% of tracts (or counties) in the state or nation are more vulnerable.⁵⁰

Figure 2.16: Map of Social Vulnerability by Census Tract⁵¹

Level of Vulnerability

Table 2-25: Overall Social Vulnerability Scores by Borough⁵²

Borough	SVI Relative to NYS	SVI Relative to U.S.
Bronx	1.000 - High	.9987 - High
Brooklyn	.9836 - High	.8972 - High
Manhattan	.8197 - High	.6849 - Medium/High
Queens	.9180 - High	.7798 - High
Staten Island	.6885 - Medium/High	.5866 - Medium/High

⁵⁰ U.S. Centers for Disease Control and Prevention (CDC) / Agency for Toxic Substances and Disease Registry (ATSDR), https://www.atsdr.cdc.gov/placeandhealth/svi/faq_svi.html

⁵¹ U.S. Centers for Disease Control and Prevention (CDC) / Agency for Toxic Substances and Disease Registry (ATSDR), https://www.atsdr.cdc.gov/placeandhealth/svi/interactive_map.html

⁵² Ibid.

All five boroughs of New York City have relatively high SVIs, with the Bronx having among the highest scores in the state and nation. Additionally, there is significant overlap between higher SVI census tracts and the areas impacted by Hurricane Ida.

Finally, EJScreen is the Environmental Protection Agency's (EPA) environmental justice mapping and screening tool that provides EPA with a nationally consistent dataset and approach for combining environmental and demographic socioeconomic indicators. EJScreen users choose a geographic area; the tool then evaluates 12 environmental indicators and 7 socioeconomic indicators to create Environmental Justice indexes for that area. The EJ index is higher in block groups with large numbers of mainly low-income and/or people of color residents with a higher environmental indicator value.⁵³

As shown in the next two tables, the four counties in NYC's Most Impacted and Distressed Areas rank higher, significantly higher in many cases, than the majority of New York State and the nation for 11 of the 12 variables. The Bronx ranks significantly higher in all 12 categories.

Summary of Mitigation Unmet Needs

There are at least nine hazards that pose a threat to New York City and the MID areas. By identifying the specific vulnerabilities that people in the MID neighborhoods face, the City can better allocate CDBG-DR funds to cost-effective mitigation projects. Such projects will ensure that members and infrastructure in MID areas will be better prepared for the next hazard. While not all hazards will be mitigated with the CDBG-DR funds, the City will ensure that at the very least, other funded projects do not exacerbate their impacts.

Based on this assessment, the City has identified the following areas of unmet need associated with mitigation activities:

Improving City Infrastructure Capacity to Capture/Absorb Stormwater and Prevent Flooding

The City's 7,400 miles of sewer pipes were largely designed a century ago, for a very different climate than the extreme one we now face. Completely recalibrating the City's sewers for storms like Ida would require a potential \$100 billion investment.⁵⁶ While this is an unmet need, that work would take place over decades and would not be a good fit for a time-limited grant.

While the City is committed to pursuing upgrades over the longer-term, the City will supplement sewer work with creative green infrastructure (GI) projects designed to absorb or redirect stormwater. The City has identified \$303 million in currently unfunded GI projects at parks, playgrounds, and other public spaces, including NYCHA developments, that would be eligible for CDBG-DR funds.

Additionally, the City has identified a need to protect critical infrastructure in Red Hook, Brooklyn, which is an area of low topography making it vulnerable to coastal flooding and sea level rise. The area is primarily low- and moderate-income and includes the Red Hook Houses, which is Brooklyn's largest public housing development. The City is currently working with FEMA and NYS Division of Homeland Security and Emergency Services (DHSES) to design and build a neighborhood-wide flood intervention system as part of the Red Hook Coastal Resiliency (RHCR) project. While the RHCR project will protect the neighborhood, due to design constraints, the electrical sub-station for the Food Bazaar falls outside the proposed flood protected area. The Food Bazaar is the area's main grocery store and its main access to fresh, healthy food, making it critical to protect the sub-station so the store can operate during a flood emergency.

As part of the RHCR project, the City will construct the Brooklyn Waterfront Greenway, a pedestrian and bicycle path that will run along the water's edge within the project area, to better integrate the project into the surrounding neighborhood.

The City has identified a \$10 million project that would supplement the larger RHCR project and support its goals of protecting and serving the Red Hook neighborhood.

Enhancement of Extreme Weather Communications

We cannot rely on antiquated tools to protect the city from modern storms. As demonstrated during PTC Ida, the City must ensure proper systems are in place to communicate the threat of hazardous

⁵⁶ NYC Office of the Deputy Mayor of Administration, in collaboration with the Department of Environmental Protection and NYC Emergency Management: The New Normal: Combating Storm-Related Extreme Weather in New York City, October 2021

events to the public, both before and during extreme weather events. To further this, the City has identified unmet needs related to:

- enhanced weather forecasting (\$100,000 per year over the life of the grant);
- developing a system to track real-time impacts so the City can deploy emergency response teams using the best data available (\$1 million); and
- conducting a study to inform updates to the City's evacuation plans, particularly related to flash floods, persons living in basement apartments, vulnerable populations, etc. (\$370,000).

Additionally, the City conducted a review of its efforts following Hurricane Sandy and identified a need related to community engagement and emergency preparedness planning. In response, NYC Emergency Management piloted the Strengthening Communities program, which provides outreach, education, and assistance to local community networks to assist them in developing emergency response plans. Based on the success of the pilot program, the City has proposed to expand the program to other underserved areas, which NYCEM estimates would cost \$9 million.

Planning: Mitigation

The City has identified several planning efforts that will help inform future City initiatives and programs designed to make the city more resilient to hazards and to protect public health and safety. These include:

- Creating a platform incorporating data on subgrade spaces, including those that may be used as basement apartments, so the City can quickly and proactively alert property owners and tenants of potential flood risk. The system would also be used to predict where specific flood events may lead to critical infrastructure failure so the City can make efforts to prevent damage and power outages. Finally, the data collected would enable the City to properly scope capital projects to avoid underground utilities, preventing costly and dangerous accidental utility strikes and unnecessary project delays. Estimated cost: \$10 million.
- Undertaking area-wide planning studies, particularly for areas proposed for rezoning, affordable housing developments, etc. to identify opportunities to incorporate resiliency and mitigation considerations early in the process. While the need for early planning is almost limitless, the City has identified immediate needs of approximately \$12.5 million.
- Further analyzing areas most susceptible to stormwater flooding. Such a study would combine and enhance the City's relevant data sets (e.g., the City's Stormwater Flood Maps, data from the City's Building Elevation and Subgrade Space study, socio-economic and built environment data) to identify and create profiles for areas that are highly vulnerable to stormwater flooding. Estimated cost: \$130,000.
- Updating the City's Zoning Resolution, Building Code, etc. to allow for enhanced inland flood resiliency. After Hurricane Sandy in 2012, the City instituted special zoning and building code regulations in the city's coastal floodplain to facilitate recovery from that storm and the area's long-term resiliency. The City also significantly updated the zoning regulations in 2021 based on lessons learned from the Sandy recovery process. However, these regulations only apply in the coastal floodplain and are not available for homeowners and businesses looking to recover from Hurricane Ida or other future inland storms. Accordingly, the City has identified a need to research changes to facilitate recovery and

resiliency in flood-prone *inland* areas. After identifying possible changes, the project would support the City in undertaking the public review process to add them to the City's Zoning Resolution and Building Code. Estimated cost: \$1.3 million.

- Creating an interagency Emergency Data Governance Committee (EDGC) to identify gaps and challenges in data acquisition and management for operational response and situational awareness (\$3.8 million);
- Integrating field data collected by community entities during emergencies and developing new data products for emergency response (\$2 million);
- Following Hurricane Sandy, the City's resiliency efforts understandably focused heavily on coastal flooding. Over time, the City has worked to transition to a more proactive approach that:
 - focuses on multiple hazards (e.g., extreme heat, inland flooding, sea level rise);
 - considers a diverse array of both large- and small-scale interventions (waterfront resiliency improvements, cool corridors, street trees, bluebelts, drainage improvements, etc.); and
 - targets areas that have typically been underserved through previous resiliency and mitigation projects.

To further this effort, the City's proposed Climate Strong Communities initiative would perform area-wide analyses of climate risks in such areas and identify capital projects to address those risks. Projects coming out of CSC would seek to "future-proof" these areas from the impacts of climate change and support City applications for funding to implement the projects. Estimated cost: \$16.9 million.

3. GENERAL REQUIREMENTS

Fair Housing

CDBG-DR-funded programs in New York City are subject to numerous laws that prohibit discrimination, including the Federal Fair Housing Act, the New York City Human Rights Law; and the New York State Human Rights Law. Protected classes under the NYC Human Rights Law include:

- Age
- Immigration or citizenship status
- Color
- Disability
- Gender (including sexual harassment)
- Gender Identity
- Marital status and partnership status
- National origin
- Pregnancy and lactation accommodations
- Race
- Religion/Creed
- Sexual orientation
- Status as a Veteran or Active Military Service Member

Other federal civil rights laws, including Title VI of the Civil Rights Act, Section 504 of the Rehabilitation Act, and the Americans with Disabilities Act, prohibit discrimination in housing and community development programs and activities. These civil rights laws include obligations such as taking reasonable steps to ensure meaningful access to programs and activities for persons with LEP and effectively communicating with individuals with disabilities by providing auxiliary aids and services. Where applicable, the City will work with its Commission on Human Rights, the Mayor's Office for People with Disabilities, the Mayor's Office of Immigrant Affairs, Mayor's Office of Climate and Environmental Justice, and subrecipients to address potential barriers to participating in the programs identified in this plan.

Citizen Participation

Outreach and Engagement

The City of New York recognizes that affected stakeholders are the center of, and partners in, the development and implementation of this Action Plan. Prior to and during the development of this plan, the City consulted with various parties in the surrounding geographic area to ensure consistency of disaster impacts identified in the plan, and that the plan and planning process was comprehensive and inclusive. These parties included disaster-affected residents, local business owners, service providers, the State of New York, the New York City Housing Authority, the federal government, and other stakeholders.

On September 3rd, 2021, less than two days after PTC Ida reached New York City, the City convened an Extreme Weather Response Task Force, comprised of over 20 City agencies and offices, to explore the City's response to extreme weather events and to review protocols and policies to protect the City in the future. The Task Force focused on several key areas including, but not limited to:

- Short-term infrastructure;
- Long-term infrastructure;
- Basement apartments;
- Homeowner and landlord investments;

- Flood insurance and outreach;
- Preparation and emergency planning;
- Subway flooding;
- Challenges faced by commercial and residential renters;
- Messaging and communications strategies; and
- Environmental justice.

Additionally, the City immediately launched a multi-agency and multi-pronged (phone calls, text messages, online, door-to-door visits) outreach, canvassing, and recovery effort that not only linked impacted residents with crucial services and resources but also provided the City with a wealth of data regarding impact and need.

When preparing this Action Plan specifically, the City consulted with the entities listed below. Consultation efforts were focused on, but not limited to, identifying disaster impacts, needs for both in-kind and direct financial assistance, evaluating capacity to implement programs, and proposals for disaster response.

- United States Federal Emergency Management Agency (FEMA)
- United States Department of Housing and Urban Development (HUD)
- New York State Division of Homeland Security and Emergency Services (NYS DHSES)
- New York State Department of State (NYS DOS)
- New York State Homes and Community Renewal (NYS HCR)
- American Red Cross
- Archdiocese of New York/Catholic Charities of New York
- Business Improvement Districts, Chambers of Commerce, merchants' associations, and other Community-Based Development Organizations
- Human Services Council
- New York Disaster Interfaith Services
- Salvation Army
- Voluntary Organizations Active in Disaster
- NYC Department for the Aging (DFTA)
- NYC Department of Buildings (DOB)
- NYC Department of City Planning (DCP)
- NYC Department of Education (DOE)
- NYC Department of Design and Construction (DDC)
- NYC Department of Environmental Protection (DEP)
- NYC Department of Health and Mental Hygiene (DOHMH)
- NYC Department of Homeless Services (DHS)
- NYC Department of Housing Preservation and Development (HPD)
- NYC Department of Parks and Recreation (DPR or PARKS)
- NYC Department of Small Business Services (SBS)
- NYC Economic Development Corporation (NYCEDC)

- NYC Mayor's Office of Immigrant Affairs (MOIA)
- NYC Mayor's Office of Management and Budget (OMB)
- NYC Mayor's Office of Operations (Operations)
- NYC Office of Emergency Management (NYCEM)
- NYC Office of the Mayor

In addition to the activities above, the City published its initial action plan on www1.nyc.gov/site/cdbgdr/index.page and encouraged relevant stakeholders to submit comments during the 30-day public comment period and public hearing. The release of the plan and the public hearing were advertised in multiple languages and in multiple newspapers (including local and ethnic media outlets), on the City's website, and via emails to interested parties including but not limited to elected officials, all the City's Community Boards, other governmental offices, local development corporations, nonprofit service providers, etc. A summary of public comments, along with the responses from the City, was incorporated into the Appendix of the HUD-submission version of this Plan. Comments related to current and future plan amendments, and the City's responses, will continue to be incorporated throughout the life of the grant.

For more information, interested parties can refer to the City's Hurricane Ida citizen participation plan, which can be found on the website linked above.

The City also notes that MOCEJ and the New York City Panel on Climate Change are standing entities whose missions are to forecast and mitigate the negative impacts of climate change, with a particular focus on equity and vulnerability issues.

Public Hearings

For the City's initial Action Plan submission, the City held a public hearing to obtain the views of residents and other impacted parties. Public hearings are not required for substantial amendments. However, the City will consider scheduling public hearings for amendments on an as-needed basis.

The hearing for the initial Ida Action Plan took place on September 14, 2022 at 7:00PM. While the hearing was virtual, attendees were able to ask questions of and submit comments to the panel. A summary of comments and responses can be found in the Appendix.

Complaints and Appeals

Complaints

Complaints may fall into two categories:

- **Formal complaints:** Formal complaints are written statements of grievance about a specific, addressable issue and may include faxes, emailed comments, handwritten notes, and comments submitted through the City's CDBG-DR website.

The City and all CDBG-DR partners administering programs that interact with the public shall ensure that a grievance process is in place prior to a program commencing. The

process must stipulate how client grievances shall be resolved, and at the minimum contain the following elements:

- How the grievance shall be documented;
- Who (name and position title) shall be authorized to review and respond to the grievance;
- An appeal process if the complainant is not satisfied with first level response;
- Timeline for complaint resolution; and
- Tracking of complaints (how status and results shall be documented and reported).

Investigation results shall be maintained on file by each agency responsible for implementing a program. The City (and its designated subrecipients) shall make every effort to respond to formal complaints within fifteen (15) working days of receipt. If this is not possible, the City (or subrecipient) must document why additional time was needed. The City will track complaints by category through the resolution process.

- **Informal complaints:** Informal complaints are verbal complaints or written complaints that are too general in nature to act upon. The City (and its designated subrecipients) will attempt to resolve informal complaints; however, they are not subject to the written response process described above.

The City notes the following additional routes for submitting complaints:

- Complaints alleging violation of fair housing laws will be directed to HUD for immediate review. Members of the public can file a complaint directly with the HUD Region II Fair Housing and Equal Opportunity Office by emailing ComplaintsOffice02@hud.gov or by calling (800) 496-4294 or TTY (212) 264-0927.
- The City will forward all complaints regarding fraud, waste, or abuse of funds to the HUD Office of the Inspector General (OIG) Fraud Hotline (phone: (800) 347-3735 or email: hotline@hudoig.gov). The City's procedures for identifying and addressing waste, fraud, and mismanagement will also be available for review on the CDBG-DR website.

All program applications, regardless of the language in which they are printed, will include information about the right and process to file a formal complaint.

The City will investigate and respond to all complaints thoroughly, sensitively, and fairly.

Appeals

An appeal is a written request to reverse or revise a decision affecting eligibility for a CDBG-DR-funded program. Each program providing direct assistance to the public will develop and implement policies and procedures for an appeals process including the timeline for considering and responding to the appeal, contact information for submitting appeals, and criteria on which appeals will be considered.

Applicants may appeal decisions related to the following:

- determinations of eligibility for assistance based on income, maintenance of flood insurance, etc.;
- award amount; and
- determinations of necessary and reasonable costs.

Applicants may not appeal decisions based on overall program eligibility criteria. For example, an applicant may appeal a decision of ineligibility by providing documentation the property owner properly maintained flood insurance on the subject property. The applicant may not appeal a decision of ineligibility by requesting to be exempted from the flood insurance requirements.

The City will consider and respond to all appeals thoroughly, sensitively, and fairly.

Public Website

The City's comprehensive website related to its CDBG-Disaster Recovery funding can be accessed at <https://www1.nyc.gov/site/cdbgdr/index.page>. Through this website, the City will account for how all grant funds are used, managed, and administered. At a minimum, the website will include the following information:

- The current version of the CDBG-DR Action Plan, along with all previous HUD-approved versions/amendments;
- Quarterly Performance Reports as developed in HUD's Disaster Recovery Grant Reporting (DRGR) system, other required reports, and other ad hoc reports generated by the City;
- The City's Citizen Participation Plan for its CDBG-DR funds; and
- Procurement documents, including:
 - Policies and procedures;
 - Executed contracts (as defined at [2 CFR § 200.22](#)) funded with at least \$25,000 in CDBG-DR funds;
 - Subrecipient agreements; and
 - Summaries of the description and status of services or goods currently being procured by the City or its subrecipients (e.g., phase of the procurement, requirements for proposals, etc.).
 - Please note contracts and procurement actions qualifying as micro-purchases (\$20,000 or less) are not required to be posted.

The website will be updated in a timely manner to reflect the most up-to-date information about proposed uses of funds, changes in policies and procedures, procurement actions, etc. At a minimum, the website will be updated on a quarterly basis.

Accessibility

The City of New York is committed to ensuring that all digital content can be accessed by New Yorkers with disabilities and persons with Limited English Proficiency. Local law requires City agencies to make a reasonable effort to make their websites accessible, and to develop and implement language access plans. NYCOMB will work with the City's Digital Accessibility Coordinator, based at the Mayor's Office for People with Disabilities, and the Mayor's Office of Immigrant Affairs to ensure the CDBG-DR website meets accessibility and LEP standards.

Amendments

This plan describes needs and programs that were developed based on the best data available at the time. The City recognizes that recovery needs will change over time, particularly as the impacts of climate change continue to be revealed and understood. Thus, the City will amend the Action Plan as

often as necessary to best address its long-term recovery needs and goals. However, an amendment may not be triggered if a proposed change is consistent with the descriptions provided in this plan.

Amendments may be classified as Substantial or Non-Substantial (aka a “Minor Amendment or “Technical Amendment”). The criteria and process for each is described below.

Regardless of the level of the amendment, in order to further the public’s understanding of the City’s Action Plan, the City will ensure the following are posted on the City’s CDBG-DR website:

- Each amendment to the Action Plan;
- A summary description of each Action Plan amendment including:
 - What content is being added, deleted, or changed;
 - A clear illustration of where funds are coming from and moving to; and
 - A revised budget table that reflects the entirety of the City’s CDBG-DR grant.
- The current version of the entire Action Plan as a single document, incorporating all previous amendments.

All amendments will be numbered sequentially and posted to the website in one final, consolidated plan.

Substantial Amendment

The City has determined that a substantial amendment will be required when the following occurs:

- When a program newly identifies or changes the eligibility criteria or benefits offered;
- When the City identifies a new or eliminates an existing category of unmet need;
- The creation of a new program or the deletion of an existing program; and
- The allocation or reallocation of \$10 million or a reallocation that constitutes a change of 15% or greater of a program budget.

The City will continue to monitor the data related to PTC Ida’s impact and will update its Needs Assessment as necessary. At a minimum, the City will review this data and consider updates each time the City prepares a substantial amendment to its Action Plan.

When proposing a substantial amendment, the City will follow its Citizen Participation Plan (CPP). At a minimum, the City will publish a public notice announcing the plan’s release, the timeframe of the associated 30-day public comment period, and instructions for submitting comments. The notice will be published in the media outlets identified in the CPP, translated into the languages described in the CPP, emailed to the Consolidated Plan mailing list, and posted on the City’s CDBG-DR website.

Proposed substantial amendments and translated Executive Summaries will be published on the CDBG-DR website for the duration of the amendment’s 30-day public comment period. Additionally, the City will identify and consider barriers that may limit or prohibit equal participation by and engagement with underserved communities and individuals.

At the end of the comment period, all comments shall be reviewed and City responses will be incorporated into the Action Plan. The final Ida Action Plan, containing a summary of the comments and the City’s responses, will be submitted to HUD and posted on the City’s CDBG-DR website.

Non-Substantial Amendment

A non-substantial amendment, which may also be referred to as a Technical or Minor Amendment, will generally incorporate technical and budgetary corrections and clarifications that do not meet the substantial amendment criteria described previously. Such amendments do not require a comment period. The City will notify HUD five (5) business days before the change is effective.

Displacement of Persons and Other Entities

The City recognizes that displacement or even temporary relocation can lead to emotional and financial impacts. These impacts can be particularly significant for renters who may have concerns about a lack of communication about federally-funded projects, whether they'll be able to return to their home upon completion, etc. Accordingly, the City's policy is to minimize displacement unless it is truly necessary.

The City will coordinate with the NYC Department of Housing Preservation and Development and the New York City Housing Authority before implementing programs proposed under this Action Plan that involve physical work that has the potential to displace residents. The City will update its existing Residential Anti-Displacement and Relocation Assistance Plan (RARAP) and develop Optional Relocation Plans (ORP) for relevant programs. The policies, processes, and available benefits will be incorporated into individual program policies and procedures where relevant, and the RARAP and ORPs will be available on the City's CDBG-DR website. The City's procedures will consider and address the needs of persons with disabilities.

At a minimum, the RARAP and program policies and procedures will incorporate consideration of and compliance with the following:

- Uniform Relocation Assistance and Real Property Acquisition Act of 1970 (URA), as amended ([49 CFR Part 24](#));
- Section 104(d) of the Housing and Community Development Act of 1974, as amended ([42 USC 5304\(d\)](#)); and
- The waivers described in the HUD Notice.

Eminent Domain

CDBG-DR funds may not be used to support any federal, State, or local projects that seek to use the power of eminent domain, unless eminent domain is employed only for a public use. Public use shall not be construed to include economic development that primarily benefits private entities. At this time, none of the City's proposed programs contemplate the use of eminent domain.

Unjustified Discriminatory Impact

The City recognizes its obligation to provide equitable treatment and meaningful involvement of all persons, regardless of race, color, national origin, or income, when developing and implementing City policies and programs, particularly those related to addressing environmental hazards. When identifying programs to fund, the City considered the impacts caused by Ida, the needs that resulted, and how to equitably address those needs while also affirmatively furthering the City's fair housing objectives. Accordingly, the programs in this Action Plan have been selected to:

- Provide relief to those impacted by the storm, with a focus on preventing the economic displacement of lower-income homeowners, and tenants that may occupy rental units in

their homes, that may be forced to relocate due to increasing and recurrent flood-related costs;

- Protect the City's affordable housing stock, both publicly- and privately-owned, with a particular focus on vulnerable populations such as seniors; and
- In cases where resiliency improvements cannot yet be made due to the need for legislative changes and further study (e.g., basement apartments), direct funds to efforts to protect vulnerable populations until more permanent mitigation work can be undertaken.

Going forward, the City will take affirmative steps to ensure its programs will not have an unjustified or unintentional discriminatory impact. These steps may include, but are not limited to:

- Having City staff and agencies responsible for fair housing concerns review eligibility criteria before finalizing,
- Advertising the programs in various local and ethnic media sources,
- Working with local community groups who regularly work with and represent such populations as well as persons with disabilities, and
- Ensuring intake staff are properly trained and resourced to work with people with limited English proficiency and disabilities, and that auxiliary aids and other services will be made available when necessary.

The City will monitor applications as they're completed and approved and will make adjustments if it finds unjustified impacts. For programs involving subrecipients, the City will work closely with the provider organizations to implement similar policies.

On a more holistic level, NYCOMB and the agencies receiving funding are working closely with the Mayor's Office of Climate and Environmental Justice to ensure all projects and programs advance the City's climate and environmental justice goals.

Protection of People and Property

Given the lessons learned from Ida, particularly how quickly rain events can become deadly, the City specifically selected programs focused on protecting people and property.

Elevation Standards

For new construction, reconstruction, rehabilitation of substantial damage, or rehabilitation that results in substantial improvement of structures principally for residential use located in the 1% annual (or 100-year) floodplain, the City must follow the HUD requirements described below.

Table 3-1: Structure Type-Elevation Requirement

Structure Type	Elevation Requirement
Located in the 100-year floodplain (1% annual chance)	
Primarily residential	Must be elevated with the lowest floor, including the basement, at least two (2) feet above the 1% annual chance floodplain elevation (base flood elevation).

Structure Type	Elevation Requirement
Located in the 100-year floodplain (1% annual chance)	
Mixed-use structures with no dwelling units and no residents below 2 feet above base flood elevation	Must be elevated or floodproofed in accordance with FEMA floodproofing standards at 44 CFR § 60.3(c)(3)(ii) or a successor standard up to at least 2 feet above base flood elevation.
Non-residential structures including infrastructure	Must be elevated or floodproofed in accordance with FEMA floodproofing standards at 44 CFR § 60.3(c)(3)(ii) or a successor standard up to at least 2 feet above base flood elevation.
Critical Actions, which are sites for which even a slight chance of flooding would be too great because it might result in loss of life, injury to persons or damage to property. Critical Actions include hospitals, nursing homes, emergency shelters, police stations, utilities, etc.	Must be elevated or floodproofed in accordance with FEMA floodproofing standards at 44 CFR § 60.3(c)(2)-(3) or successor standard to the higher of the 500-year floodplain elevation or three feet above the 100-year floodplain elevation. If the 500-year floodplain is unavailable, the structure must be elevated or floodproofed at least three feet above the 100-year floodplain elevation.
Located in the 500-year floodplain (0.2 percent annual chance)	
Critical Actions	Must be elevated or floodproofed in accordance with FEMA floodproofing standards at 44 CFR § 60.3(c)(2)-(3) or successor standard to the higher of the 500-year floodplain elevation or three feet above the 100-year floodplain elevation.

Exceptions

Use of an alternative, FEMA-approved flood standard instead of the elevation requirements described above may be allowable when all of the following conditions apply:

- CDBG-DR funds are used as the non-federal match for FEMA assistance:
- The FEMA-assisted activity, for which CDBG-DR funds will be used as match, commenced before HUD's obligation of CDBG-DR funds to the City (May 31, 2022); and
- The City has determined and documented that the implementation costs of the required CDBG-DR elevation or floodproofing requirements are not "reasonable costs" as that term is defined in the applicable cost principles at [2 CFR § 200.404](#).

Cost Reasonableness and Documentation

The cost to elevate properties can vary significantly and is dependent upon several factors including, but not limited to, the minimum height a property must be elevated and the location, size, and age of the property. In some cases, it may be more expedient or cost-effective to pursue alternatives such as demolition and reconstruction, buyouts, or infrastructure improvements to reduce flood risk for an entire area. The City's policies and procedures for relevant programs will discuss how projects shall be evaluated for elevation and how elevation costs will be reasonably determined relative to other alternatives. For each property considered for elevation, the City (and any related subrecipients) will document decisions to elevate structures.

Activities subject to elevation requirements will comply with applicable federal accessibility mandates and with applicable state and local codes and standards for floodplain management.

Flood Insurance Requirements

The City and assisted property owners must comply with all flood insurance requirements, which generally apply to properties located in a Special Flood Hazard Area (SFHA). The Special Flood Hazard Area is the area expected to be inundated by a 100-year flood, also thought of as an area that has a 1% or greater chance of experiencing a flood in any single year. SFHAs are shown on federal flood maps, known as Flood Insurance Rate Maps, as shaded areas labeled with the letter "A" or "V" sometimes followed by a number or letter.

The flood insurance requirements create obligations for both the City and program beneficiaries, primarily related to the purchase and maintenance of flood insurance and notification requirements when assisted properties are sold. The requirements and how they may apply to each party are described below.

Please read this entire section to understand all the requirements that may apply to assistance provided under this grant. Additionally, please note the flood insurance requirements apply regardless of the amount of assistance provided; as long as funds are used for repair, reconstruction, rehabilitation, restoration, etc. of a property in a SFHA, the insurance requirements are triggered. Program applicants will be counseled on these requirements during the application process and will be required to certify they understand and will comply with them upon award.

The City's policies and procedures for relevant programs will describe how the City will ensure all property owners, including the City itself, comply with these requirements.

Mandatory Purchase of Flood Insurance

Citation: Section 102(a) of the Flood Disaster Protection Act of 1973 ([42 U.S.C. § 4012a](#))

Requirement: Mandates the purchase of flood insurance protection for any HUD-assisted property within a Special Flood Hazard Area.

What this Means: The City (or its designated subrecipients) will conduct a floodplain review for any property proposed for CDBG-DR funding. If the property is in the 100-year floodplain and the owners receives HUD-funded assistance for the repair, rehabilitation, replacement, or restoration of the property, the owner must obtain and maintain flood insurance in the amount and duration prescribed by FEMA's National Flood Insurance Program.

The City acknowledges that this requirement applies to City-owned properties as well and will abide by the requirement.

Prohibition on Providing Assistance in Certain Circumstances

Citation: Section 582 of the National Flood Insurance Reform Act of 1994, as amended, ([42 U.S.C. § 5154a](#))

Requirement: Prohibits providing flood disaster assistance (including any loan assistance payment) to a person for the repair, rehabilitation, replacement, or restoration for damage to any personal, residential, or commercial property if that person at any time has received Federal flood disaster assistance that was conditioned on the person first having obtained flood insurance under applicable

Federal law and the person has subsequently failed to obtain and maintain flood insurance on such property as required.

What this Means: When the City (or its designated subrecipients) conducts a floodplain review for properties proposed for CDBG-DR funding, it will also research whether the property has received assistance related to previous disasters (e.g., Hurricanes Irene and Sandy). Additionally, as part of the program application process, the City will collect information on whether the property had an active flood insurance policy.

If the property owner previously received flood disaster assistance, was required to purchase flood insurance, and failed to obtain and maintain flood insurance, the City will not approve any federally-funded flood disaster assistance for the property.

If the City is unable to determine whether the property owner previously received flood disaster assistance for that property, the owner(s) will be required to sign an affidavit certifying they were not required to purchase insurance.

Citation: [Section IV.E.2.b.](#) of 87 FR 31636

Requirement: Prohibits providing flood disaster assistance (including any loan assistance payment) for the rehabilitation/reconstruction of a house if:

- The combined household income of the property owner is greater than 120% of AMI;
- The property was located in a floodplain at the time of the disaster; and
- The property owner did not obtain flood insurance for the damaged property, even if the property owner was not required to obtain and maintain such insurance.

What this Means: When the City (or its designated subrecipients) processes an application for assistance, the City will also require information to document the property owner's household income. If the property was located in a SFHA at the time of the disaster, the property owner did not have an active flood insurance policy, and the property owner's household income is above the 120% AMI limit in effect at the time the application is being processed, the City will not approve any federally-funded flood disaster assistance for the property.

The chart below displays the 120% AMI thresholds currently in effect. The City will update this chart when HUD releases new information. However, updates to this chart will be considered a technical amendment only and will not constitute a substantial amendment to the Action Plan.

Table 3-2: 120% Area Median Income Limits by Household Size

Household Size	120% AMI
1	\$136,080
2	\$155,520
3	\$174,960
4	\$194,400
5	\$210,000
6	\$225,600
7	\$241,080
8	\$256,680
*Last updated: 11/24/2025	

Source: NYC Department of Housing Preservation and Development Area Median Income webpage

<https://www1.nyc.gov/site/hpd/services-and-information/area-median-income.page>.

Requirement to Maintain Flood Insurance; Requirement for City to Monitor Compliance

Citation: Section 102(a) of the Flood Disaster Protection Act of 1973 ([42 U.S.C. § 4012a](#)); Section 582 of the National Flood Insurance Reform Act of 1994, as amended, ([42 U.S.C. § 5154a](#))

Requirement: Owners of properties located in SFHAs who receive flood disaster assistance for the repair, replacement, or restoration for damage to any personal, residential, or commercial property must maintain flood insurance in the amount and duration prescribed by FEMA's National Flood Insurance Program. Failure to comply with this requirement may exclude the property owner from receiving assistance following future flood events.

What this Means: While the Flood Disaster Protection Act obligates recipients of flood disaster assistance whose properties are in a SFHA to purchase and maintain flood insurance, the National Flood Insurance Reform Act a) requires the City to monitor beneficiaries' compliance with this requirement and b) prohibits future federally-funded flood disaster assistance if the owner fails to comply. If a recipient of CDBG-DR-funded flood assistance under this allocation or previous allocations is required to purchase and maintain flood insurance for a property but fails to do so and the property is damaged in a future flood disaster, the property owner will be ineligible for federally-funded assistance, *including assistance provided through the FEMA Individual Assistance program*.

Notification Requirements

Citation: Section 582 of the National Flood Insurance Reform Act of 1994, as amended, ([42 U.S.C. § 5154a](#))

Requirement: Property owners receiving disaster assistance that triggers the flood insurance purchase requirement have a statutory responsibility to a) notify any transferee of the requirements to obtain and maintain flood insurance and to maintain such written notification in the documents evidencing the transfer of the property. The transferring owner(s) may be liable if they fail to do so. A grantee or subrecipient receiving CDBG-DR funds must notify property owners of their responsibilities under Section 582.

What this Means: If a property owner receives CDBG-DR-funded flood disaster assistance for the repair, replacement, or restoration of damage to any personal, residential, or commercial property in an SFHA and the owner subsequently sells or otherwise transfers the property, the owner must notify any new owners of the requirement to obtain and maintain flood insurance. This notification must be made in writing as part of the property transfer process. If a recipient fails to notify transferees of this requirement (or fails to document this notification), the property owner may be liable for disaster assistance provided to the new property owner in the future. *This requirement supersedes any state or local law(s) that may exempt property owners from notifying transferees of flood damage.*

Construction Standards

The HUD Notice instituted minimum construction standards based on the level and type of assistance provided. The City will comply with these standards where applicable.

The City will require quality inspections, code compliance inspections, and site inspections on all projects. Additionally, as a global leader in the fight against climate change, the City will ensure all CDBG-DR-funded projects will emphasize high-quality, durable, sustainable, and energy efficient construction methods and materials.

New Construction, Reconstruction, or Rehabilitation of Substantially Damaged Residential Buildings

- Construction must meet an industry-recognized Green and Resilient Building Standard that has achieved certification under any of the following:
 - ENERGY STAR (Certified Homes or Multifamily High-Rise);
 - Enterprise Green Communities;
 - LEED;
 - ICC-700 National Green Building Standard Green+ Resilience;
 - Living Building Challenge; or
 - Any other equivalent comprehensive green building program acceptable to HUD.
- Additionally, construction must achieve a minimum energy efficiency standard including any of the following:
 - ENERGY STAR (Certified Homes or Multifamily High-Rise);
 - DOE Zero Energy Ready Home;
 - EarthCraft House, EarthCraft Multifamily;
 - Passive House Institute Passive Building or EnerPHit certification from the Passive House Institute US (PHIUS), International Passive House Association;
 - Greenpoint Rated New Home, Greenpoint Rated Existing Home (Whole House or Whole Building label);
 - Earth Advantage New Homes; or
 - Any other equivalent energy efficiency standard acceptable to HUD.

Non-Substantially Damaged Residential Buildings

The City must follow the guidelines specified in the [HUD CPD Green Building Retrofit Checklist](#) to the extent practicable. Additionally, the City must:

- Use mold resistant products when replacing surfaces such as drywall; and
- Purchase and install ENERGY STAR-labeled, WaterSense-labeled, or Federal Energy Management Program (FEMP)-designated products or appliances when it's necessary and reasonable to replace older or obsolete products as part of the rehabilitation work.

For infrastructure projects, the City will require, to the extent practicable, implementation of the City's Climate Resiliency Design Guidelines.

The City's policies and procedures will describe how the City will review all projects to ensure all costs are necessary and reasonable to meet the desired outcomes.

Contractors' Standards

The City's guiding principles regarding contractor standards are as follows:

- The City recognizes the importance of private sector businesses in providing goods and services to meet the needs of program beneficiaries.
- Full and open competition will ensure that construction costs are reasonable and consistent with market costs.
- The City is committed to addressing historic disparities in City contracting and providing minority- and women-owned businesses increased opportunities.

Contractor Requirements

The City's recovery programs will incorporate best practices of construction standards for all construction contractors. Specific contractor standards will be detailed in each program's policies and procedures and will consider, at a minimum, the type of work being performed, cost reasonableness, review and approval processes for change orders, addressing poor quality work, and warranties for covered work.

Portal Registration

To do business with the City, contractors must create and maintain accounts in two City portals:

- Payee Information Portal (PIP): Vendors must be registered in PIP in order to be reimbursed for eligible expenses;
- Procurement and Sourcing Solutions Portal (PASSPort): Contractor registration in PASSPort will allow vendors to complete required vendor disclosures, find and respond to contracting opportunities, sign contracts upon contract award, and much more. Please note, however, that solicitations for goods and services intended to be funded with CDBG-DR will also be advertised on the City's CDBG-DR website.

The City takes all necessary affirmative steps to assure that minority- and women-owned businesses are used when possible.

Warranties

Every construction program funded with CDBG-DR will require a warranty period post-construction. Each program's policies and procedures and, where applicable, application and award materials will identify the warranties applicable to the work provided under the particular program. Additionally, the City will create a schedule by which it will periodically update beneficiaries on the status/expiration of the warranty. These policies and procedures will be posted on the City's CDBG-DR website.

Fraud, Poor Workmanship, and Associated Issues

Agencies administering construction or construction-related work are subject to [NYC Comptroller's Directive 7](#), which requires agencies to establish an Engineering Audit Office (EAO) that meets the following criteria:

- Reports directly to the agency head or a formally-assigned deputy;
- Is fully segregated from any operational units (i.e., the unit(s) administering the program(s) through which work is performed); and
- Is staffed by New York State-licensed Professional Engineers, Registered Architects, or employees having appropriate construction and/or audit experience.

Each EAO is tasked with auditing the work performed and payment requests prior to the City issuing payment to the contractor. Full details of the auditing process are described in Directive 7 and include, but are not limited to:

- Performing field visits to ensure that the payment requests are justified and to evaluate the quality and progress of the work in question.
- Ensuring change orders are reasonable, consistent with both the contract and/or the change order terms, and adequately documented.
- Timing field visits to discover errors, flawed construction, and other problems before their detection would be precluded by subsequent activity. In general, field visits are expected

to occur at the completion of important work phases including that of major structural components, equipment installation, and substantial completion. (In the case of consultant or other related contracts, reviews would take place at the submission of schematics, preliminary drawings, or the submission of draft final reports.)

- Confirming required permits, licenses, and insurance was obtained prior to starting work.
- Monitoring for compliance with applicable labor laws.
- Performing spot checks for accuracy of prices, quantities, and calculations.
- Confirming the quality and minimum specifications of materials purchased.
- Determining if liquidated damages were necessary and, if so, confirming they were addressed pursuant to the contract terms.

If the City finds questionable, incomplete, or unsatisfactory work, it will withhold payment for the relevant work. Contractors will have the ability to appeal an agency's EAO ruling by submitting additional documentation and/or correct the deficiency. In certain circumstances, the City may need to procure a different contractor to satisfactorily complete the work scope.

Additionally, NYC Administrative Code § 6-132 requires that contractors and subcontractors with a City contract in excess of one hundred thousand dollars (\$100,000) are required to post a notice, in a prominent and accessible place on any site where work pursuant to such contract or subcontract is performed, containing information about the following:

- how its employees can report to the New York City Department of Investigation allegations of fraud, false claims, criminality, or corruption arising out of or in connection with such contract or subcontract, and
- the rights and remedies afforded to its employees under the Administrative Code for lawfully reporting allegations of fraud, false claims, criminality, etc.

In addition to the procedures identified above, property owners receiving CDBG-DR-funded construction assistance that are not satisfied with the quality of the work performed may file complaints with the agency administering the relevant program. The City will thoroughly investigate and respond to each complaint. If, after completing the complaint process, the property owner is still not satisfied with the work, the owner may pursue an appeal using the appeals process identified for the respective program.

Section 3 of the Housing and Urban Development Act of 1968

Section 3 of the Housing and Urban Development Act of 1968, as amended, requires that recipients of HUD assistance, including the City, its designated subrecipients, contractors, and subcontractors working on construction or construction-related projects provide, to the greatest extent feasible:

- training and employment opportunities for low- and very low-income area residents, particularly residents of public housing and residents receiving subsidized housing assistance; and
- contracting opportunities for local businesses owned by and/or employing low-income residents.

To comply with Section 3 and to meet the City's Section 3 goals, the City will ensure agencies receiving CDBG-DR funds for construction implement the following procedures wherever applicable and practicable:

- Consider Section 3 best practices during program design.
- Ensure Section 3 requirements are covered and discussed in procurement documents and at pre-bid meetings.
- Incorporate Section 3 requirements into covered contracts.
- Set selected contractors up for success by discussing the City's expectations, explaining required Section 3 reports, etc.
- Connecting contractors with Section 3 residents, other low- and moderate-income applicants, and City Workforce Development programs as appropriate.
- Build the capacity of stakeholders, including subrecipients and contractors, to meet Section 3 standards through technical assistance, tools, and guidance.

Preparedness, Mitigation, and Resilience

Climate change is the city's biggest environmental threat. While New York City is a global leader in fighting the causes and impacts of climate change, in the wake of Ida, it is clear we must go even further. As rising greenhouse gas emissions accelerate climate change, New Yorkers should expect more frequent and extreme rainfall events that can produce volumes of stormwater the city's infrastructure was not designed to handle. Resilience is defined as a community's ability to minimize damage and recover quickly from extreme events and changing conditions, including natural hazard risks. The City is making important investments to improve resiliency including in the areas described below.

Emphasize High Quality Design, Durability, Energy Efficiency, Sustainability, and Mold Resistance

Flood resilient construction reduces potential damages from flooding and can lower flood insurance premiums. New buildings in the floodplain are required to meet flood resilient standards. Existing buildings can reduce their risk by retrofitting or rebuilding to meet these standards, or can take partial, short-term measures to address safety concerns.

City Capital projects must abide by the City's Climate Resiliency Design Guidelines, through which all new projects and substantial improvements will assess risks to climate hazards in the context of the project's purpose, asset type, site location, and funding, and then determine the appropriate resilient design strategies. Implementing the Guidelines will result in more resilient City facilities that will protect the City's public investments into the future.

Support Adoption and Enforcement of Modern and Resilient Building Codes and Make Land Use Decisions to Reduce Future Natural Hazard Risks

The City's Building Code contains rigorous flood resilient design requirements within the coastal floodplain, but not in inland areas. The City has proposed to use CDBG-DR funds to identify building and zoning code strategies that promote flood resilience in upland locations subject to increasing stormwater floods and continue to improve regulations governing coastal flood risk. Proposed actions might include:

- Requiring backwater valves;
- Requiring sump pump installation;

- Increasing mandatory permeable surface requirements;
- Integrating sea level rise into the City's building code; and
- Studying and suggesting ways to make basement apartments safer.

Establish and Support Recovery Efforts by Funding Feasible, Cost-Effective Measures That Will Make Communities More Resilient Against a Future Disaster

The City is (or may):

- Exploring the use of tax abatements to help low-income homeowners and small building owners cover costs related to making buildings more flood resistant.
- Pursuing multiple financing tools and incentives for retrofitting existing buildings to withstand future weather extremes.
- Continuing the integration of Bluebelts and wetlands to naturally handle precipitation, provide open green space for their communities, and foster diverse habitat for wildlife.
- Expanding stream daylighting, which is a process by which buried rivers and sewers are uncovered and routed above ground again. Through this process, bodies of water that currently drain into city sewers are re-routed into safer water collection areas.
- Expanding the City's "cloudburst" infrastructure network.

Increase Awareness of the Hazards in the City

The most impactful, immediate step we can take is making sure New Yorkers understand our new reality. As we have seen with blizzards, City actions can impact residents' behavior by encouraging more New Yorkers to stay off the roads, prepare their homes, and evacuate as needed. Through this Action Plan, the City is demonstrating its commitment to preparing people, especially in vulnerable areas, before storms arrive. This will mean earlier warnings, encouraging residents to sign up for warnings in foreign languages, more evacuations when necessary and appropriate, and improving citywide models of combined flood risk.

Additionally, the City will work with partners at FEMA, New York State, and the Center for New York City Neighborhoods (CNYCN) to enhance the flood insurance outreach campaign, [FloodHelpNY.org](https://www.floodhelpny.org). This site is a resource for flood insurance and flood risk mitigation strategies customized for owners and renters in 1- to 4-unit buildings. The City will make a concerted effort to reach out to property owners in inland areas that have not historically flooded.

Promote Sound, Sustainable Long-Term Recovery Planning Informed by a Post-Disaster Evaluation of Natural Hazard Risks

The City will undertake numerous planning efforts including, but not limited to, the following:

- Creating a database of subgrade spaces, including those that may be used as basement apartments, so that the City can quickly and proactively alert property owners and tenants of potential flood risk.
- Expanding the City's network of street flooding sensors designed to better understand the frequency, severity, and impact of flooding in New York City.
- Exploring methods for improving the City's post-disaster response, canvassing, and housing recovery efforts.
- Investigating the impact of climate hazards on public facilities such as libraries, senior centers, recreation centers, etc. The City will analyze and develop recommendations about how critical assets and programs can be upgraded, repaired, and made more resilient.

Broadband Infrastructure in Housing

The City recognizes access to the internet is essential for full participation in our city and economy and is committed to closing this digital divide for City residents. The HUD Notice requires that CDBG-DR-funded assistance for the substantial rehabilitation, reconstruction, or new construction of a building with more than four rental units must include the installation of broadband infrastructure, except if the City documents that:

- The location of the new construction or substantial rehabilitation makes the installation of broadband infrastructure infeasible,
- The cost of installing broadband infrastructure would result in a fundamental alteration in the nature of its program or activity, or in an undue financial burden, or
- The structure of the housing to be substantially rehabilitated makes the installation of broadband infrastructure infeasible.

The City will follow the requirements of the HUD Notice where applicable. In cases where the requirement is not triggered, the City will review all residential construction projects for broadband access and may consider installing infrastructure where feasible and reasonable.

Cost-Effectiveness

The City's policies and procedures will incorporate an assessment of the cost-effectiveness of each program or activity funded with CDBG-DR funds. Policies and procedures also will establish the criteria for determining when the cost of the rehabilitation or reconstruction of the property will not be cost-effective relative to other means of assisting the property owner.

For infrastructure projects, the City will also consider the following:

- What the risks and estimated damages would be to the neighboring residents, surrounding properties, etc. if the project were not implemented;
- Whether the project would be rendered obsolete by a longer-term project currently in the City's pipeline;
- How effective the City anticipates the project will be at addressing the problem its intended to alleviate; and
- The cost of future maintenance needs necessary to maintain the project's useful life.

Duplication of Benefits

Background

It is common for multiple sources of funds to be used to address disaster recovery needs. The Robert T. Stafford Disaster Relief and Emergency Assistance Act requires that any federal "program providing financial assistance to persons, business concerns, or other entities suffering losses as a result of a major disaster or emergency, shall assure that no such person, business concern, or other entity will receive such assistance with respect to any part of such loss as to which he has received financial assistance under any other program or from insurance or any other source" ([42 U.S.C. § 5155\(a\)](#)). As a federal disaster assistance program, CDBG-DR grantees must ensure that CDBG-DR funds are used to supplement insurance and other forms of disaster assistance, not to supplant or duplicate other assistance.

A duplication of benefit (DOB) occurs when a beneficiary receives assistance from multiple sources for a cumulative amount that exceeds the total need for a particular recovery purpose (for example, a property owner receives \$325,000 to reconstruct a property that only costs \$300,000 to reconstruct). When a DOB occurs, the recipient of the duplicative assistance is required to return the funds to the appropriate program.

As the CDBG-DR grantee, the City must ensure that CDBG-DR assistance to disaster victims does not duplicate benefits available to that person for the same purpose from another source. Accordingly, for each applicant/recipient of CDBG-DR assistance, the City must perform a DOB analysis to confirm that no other funds are available to meet the need for which the CDBG-DR funds will be provided.

DOB Analysis

Each program will adopt a method of performing a DOB analysis appropriate to the specific program. A general framework is provided below:

1. Assess the applicant's total need.
2. Identify all sources of provided assistance, including funding amounts and intended purposes. When identifying sources, the City must also identify reasonably anticipated assistance, such as insurance proceeds that have not yet been received *or that have not been claimed*. When performing the DOB analysis, the City must consider funding the applicant could have received by acting in a reasonable manner. In other words, the City will count towards the assistance provided funds the applicant would have been entitled to but opted not to apply for.
3. Determine which assistance is not duplicative of the CDBG-DR award and exclude it from the benefit calculation. Non-duplicative assistance includes:
 - a. Funds awarded for a different purpose or for a general, non-specific purpose.
 - b. Funds for the same purpose, but different eligible use.
 - c. Funds not available to the applicant.
 - d. Private (non-governmental) loans, which includes loans that are made by a commercial lending facility, etc. Since private loans are not provided under a governmental program, they do not need to be considered as potentially duplicative assistance.
 - e. Other assets or lines of credit. This includes, but is not limited to, checking or savings accounts, stocks, bonds, mutual funds, pension or retirement benefits, credit cards, mortgages or lines of credit, and life insurance. (However, such assets may be considered when determining whether to award a grant to an applicant if prioritizing awards based on income/need.)
4. Determine the unmet need that is eligible for CDBG-DR assistance.
5. Calculate the CDBG-DR award by deducting all duplicative assistance from the total unmet need.

Once the level of CDBG-DR assistance has been determined and the City provides the award, the City must ensure the funds were used only for the purposes for which they were provided. For example, if

the City awards a grant or loan to rehabilitate a property, the City must monitor expenditure of the funds to ensure they were used strictly for that purpose.

The City recognizes that disaster recovery assistance needs are calculated at a point in time, and that a subsequent change in an applicant's circumstances can affect that applicant's remaining unmet need. Such changes in circumstance include subsequent disasters, vandalism or theft of materials, contractor fraud, an increase in the cost of materials and/labor, and changes in local zoning laws or building codes. If such circumstances occur after the CDBG-DR assistance has been calculated or awarded, an applicant or awardee can submit a request for additional funding within program maximum assistance limits. If the applicant can demonstrate a change in circumstances, the City will consider reevaluating the award calculation, contingent upon funding availability, the number of outstanding applications, etc.

The City agency administering the program through which the applicant is served will perform the initial DOB analysis using the best reasonably available data from FEMA, SBA, the National Flood Insurance Program, insurers, etc. Applicants will be required to provide additional information necessary to conduct this review.

In the event the City uncovers a DOB, the City will either withhold the value of the duplication from future payment requests, or the applicant will be required to repay the funds to the City. Such a payment would be considered CDBG-DR program income and would be returned to the CDBG-DR program.

4. PROPOSED USE OF FUNDS

Overview

As described throughout this document, the City of New York consulted with various parties to ensure the City's planned uses of funds are responsive to identified needs and consistent with other recovery efforts. Within the eligibility criteria of the grant, the City has prioritized the use of CDBG-DR funds for programs intended to benefit the City's most vulnerable populations and to mitigate loss of life and property in the future.

The CDBG-DR grant for Ida recovery is subject to various spending thresholds and caps as described below.

- At least 80% (\$248,653,600) must primarily benefit the HUD-identified most impacted and distressed (MID) areas of the Bronx, Brooklyn, Queens, and Staten Island.
- At least 70% (\$217,571,900) must benefit low- and moderate-income (LMI) persons or areas.
- At least \$40,541,000 must be spent on mitigation activities that "increase resilience to disasters and reduce or eliminate the long-term risk of loss of life, injury, damage to and loss of property, and suffering and hardship, by lessening the impact of future disasters."
- No more than 15% (\$46,622,550) may be used for public services activities.
- No more than 15% (\$46,622,550) may be used for planning activities.
- No more than 5% (\$15,540,850) can be spent on administrative activities.

These caps are not mutually exclusive as a single project can meet multiple criteria. For example, the Resiliency Community Spaces in Affordable Housing program described in this section is expected to benefit the MID areas, low- and moderate-income residents, and make properties more resilient to future disasters.

The programs proposed for funding include activities related to housing, infrastructure, economic revitalization, public services, planning, and grant administration. Funded activities include:

- Financial counseling and flood insurance assistance for small homeowners and renters;
- Restoring public housing developments and creating more resilient properties;
- Piloting a voluntary acquisitions and retrofits program for flood-prone areas;
- Incorporating resiliency improvements in existing and future affordable housing;
- Increasing local commercial districts' and other community organizations' capacity to respond to disasters;
- Expanding the city's green infrastructure network;
- Conducting outreach and increasing awareness of hazards, with a particular focus on vulnerable communities;
- Protecting critical infrastructure from flooding; and
- Planning for recovery and resiliency.

Connection to Unmet Need

The City's impact and needs assessment identified several areas of need that could be addressed with CDBG-DR funds. These areas include:

- Protecting the occupants of single-family homes and basement apartments;
- Preventing sewer backups in private homes;
- Restoring and upgrading affordable and public housing;
- Ensuring City residents, including those with limited English proficiency, are aware of potential hazards and how to protect themselves and their properties;
- Expanding green infrastructure to capture stormwater, protect properties, and make the city more resilient to future disasters; and
- Gathering data and factoring resiliency and mitigation considerations into planning efforts.

Each program entry in this section explains in detail how the proposed programs address the specific needs listed above.

Leveraging Funds

As previously outlined, CDBG-DR funds are intended to address needs that remain after other eligible sources of funds have been used. By its very nature, the CDBG-DR program is well-suited to leverage other funding sources. To maximize the impact of the grant, and as part of the City's Duplication of Benefits review process, the City will continue to identify additional sources of assistance. Specific sources include, but are not limited to, the following:

- FEMA Individual Assistance
- FEMA Public Assistance and 406 Mitigation
- FEMA Hazard Mitigation Grant Program
- FEMA Increased Cost of Compliance Program
- FEMA Building Resilient Infrastructure and Communities Program
- FEMA Flood Mitigation Assistance Program
- Small Business Administration Disaster Loan Assistance
- New York City Tax Levy
- New York City Capital Funds
- Community Development Block Grant Entitlement Funds
- Community Development Block Grant - Disaster Recovery Hurricane Sandy Allocation
- Community Development Block Grant - National Disaster Resilience (NDR)
- Infrastructure Investment and Jobs Act

Program Partners

The New York City Mayor's Office of Management and Budget (OMB) is the lead agency and Responsible Entity for the City's Community Development Block Grant programs, both Entitlement and Disaster Recovery. However, implementing the programs proposed in this plan will be a coordinated effort among numerous City agencies, contractors, and, in some cases, subrecipients. Based on information known at this time, the City has identified in each program entry which agency partners and subrecipients are expected to be involved in the respective program.

OMB will execute agreements with all subrecipients. In addition to evaluating the capacity of each organization to carry out their scope of work, the City will provide technical assistance and training to ensure the successful implementation of the program(s) through closeout.

Distribution of Funds

The programs identified in this Action Plan are not entitlement programs and are subject to available funding. Additionally, programs will primarily operate on a reimbursement, rather than advance, basis. In general, funds will not be provided directly to beneficiaries. For example, if CDBG-DR funds are used for rehabilitation in private housing, the City will directly pay the vendor performing the work.

Further details on how funds will be distributed and awarded can be found in each program entry.

Program Income

CDBG-DR grantees may undertake activities that have potential to generate program income (PI), which is income that is directly generated from the use of CDBG-DR funds. The City does not anticipate generating any PI through the activities proposed in this Action Plan. However, the City will establish and follow policies and procedures to properly record and use any PI generated in compliance with the CDBG regulations at [24 CFR § 570.504](#) and Section [III.E.1.a.](#) of the HUD Notice.

The HUD Notice allows grantees to choose whether PI generated by the use of CDBG-DR funds will be returned to the CDBG-DR program or to the City's CDBG Entitlement program. For the time being, any PI generated with grant funds will continue to be used for disaster recovery-related purposes. The City may identify changes to this policy during a future Action Plan amendment.

Resale or Recapture

The HUD Notice requires grantees to establish resale and recapture provisions for certain activities, such as those involving new construction of 1- to 4-unit housing for low- and moderate-income households. At this time, the City does not expect to fund any activities for which such resale and recapture provisions would be appropriate. If the City were to establish such rules, this would constitute a substantial Action Plan amendment for which a 30-day public comment period would be announced.

Environmental Review

The City will meet the applicable environmental review requirements before using or committing funds for each activity.

NYCOMB is the Responsible Entity for CDBG-DR funds. NYCOMB will prepare, or assist partners with preparing, environmental reviews under HUD's environmental review regulations at 24 CFR Part 58 and, where applicable, complete the Request for Release of Funds and certification process. The City may only obligate and draw down funds from the line of credit for an activity after environmental review obligations have been completed. The City's CDBG-DR website will make environmental reviews available for public comment, where applicable, and will host archived reviews for all programs.

Monitoring

The City will conduct routine monitoring to ensure compliance with applicable requirements. The direct and indirect objectives of the City's monitoring activities are:

- To ensure that programs are carried out in accordance with all applicable City, State, and Federal requirements, particularly the CDBG and CDBG-DR regulations and HUD Federal Register notices;
- To prevent and/or identify instances of waste, fraud, or mismanagement of funds;
- To ensure the entity administering the program has sufficient capacity to do so in an effective, efficient, and timely manner;
- To identify areas for technical assistance;
- To identify best practices that can be duplicated in other programs; and
- To assess NYCOMB's own effectiveness in meeting the needs of entities administering funded programs.

The City's CDBG and CDBG-DR monitorings will include, but are not limited to, reviewing compliance within the areas identified below.

- National Objective and Eligibility
- Financial Management
- Procurement
- Labor Standards
- Civil Rights, Accessibility, and Section 504 Compliance
- Duplication of Benefits
- Subrecipient Management & Oversight
- Environmental Review
- Real Property Requirements
- Relocation and Displacement
- Program Performance and Timeliness
- Program Income
- File Management
- Equipment Management

Program Details

Housing

NYCHA Restoration and Resiliency

Program Partners

- NYC Department of Housing Preservation and Development (HPD)
- Subrecipient: New York City Housing Authority (NYCHA)

Eligibility Category	National Objective
Public Housing Modernization	Low- and Moderate-Income Housing

Activity Name	Proposed Budget	Estimated Benefit to MID Areas	Estimated Mitigation Funding	Estimated Low/Mod Benefit
Elevator Resiliency Improvements	\$2,000,000	\$2,000,000	\$2,000,000	\$2,000,000
Mitigation	\$55,716,383	\$55,716,383	\$55,716,383	\$55,716,383
Total	\$57,716,383	\$57,236,383	\$57,716,383	\$57,716,383

Program Description

Through the Public Housing Restoration and Resiliency Program, the City will use CDBG-DR funds for two projects that will benefit current and future NYCHA residents. Each project will benefit different geographic areas, though all will benefit NYCHA properties.

Elevator Resiliency Improvements

During the summer months, periods of excessive heat and heavier load on the electrical grid cause frequent dips in voltage, which can lead to power outages. NYCHA residents can lose access to elevator service when these outages occur, endangering the most vulnerable residents such as senior citizens and those with limited mobility. NYCHA will use CDBG-DR funds to install Alternating Voltage Regulators (AVR), which regulate low voltage conditions to acceptable elevator operating levels. With the addition of AVRs, power outages and possible damage to equipment and electrical systems will be avoided, furthering safe housing for vulnerable populations.

Mitigation

In addition to restoration and FEMA-approved mitigation work, NYCHA has also identified over \$100 million in mitigation projects that would increase resilience to disasters at these 13 developments. CDBG-DR funds would cover additional mitigation work not included in FEMA-approved scope. For example, NYCHA would leverage FEMA funding related to replacing storm-damaged plumbing and heating systems by using CDBG-DR funds to replace plumbing risers that distribute water, steam, or gas throughout the building.

Please note the City's initial Hurricane Ida Action Plan proposed using \$200,000 in CDBG-DR funds to install flood doors at seven flood-prone sites. Since the plan's release, NYCHA has decided to pause this component to further evaluate whether different flood interventions would be a better use of funds. The City has reallocated the \$200,000 to the Severely Damaged Developments Mitigation

component. As costs are finalized for mitigation projects at the most severely damaged developments, NYCHA may propose to use funds to mitigate risk at additional developments that fall within the MID areas.

Tieback to Disaster/Unmet Needs or Qualification as Standalone Mitigation

- The Elevator Resiliency Improvements initiative qualifies as standalone mitigation as it will increase resilience to extreme heat, which the City has identified as a significant risk in its Hazard Mitigation Plan.
- The Mitigation initiative is limited to the 13 developments most impacted by Ida.

Benefit to Most Impacted and Distressed Areas

Approximately 99% of the program allocation will be used to benefit the HUD-defined MID areas. The Elevator Resiliency Improvements site list is subject to change as NYCHA continues to assess the need for AVRs throughout its properties.

Site	Borough
Elevator Resiliency Improvements	
Forest	Bronx
Jackson	Bronx
Mitchel	Bronx
Morrisania Air Rights	Bronx
Pelham Parkway	Bronx
Borinquen Plaza I	Brooklyn
Garvey (Group A)	Brooklyn

Claremont Consolidated	Bronx
McKinley	Bronx
Moore	Bronx
Sotomayor	Bronx
Webster	Bronx
Ingersoll	Brooklyn
Latimer	Queens
Leavitt - 34th Avenue	Queens
Woodside	Queens

Eligibility Criteria and Maximum Assistance

As a provider of housing for low-income renters, NYCHA and its developments are eligible for CDBG-DR funds. Maximum assistance for each site will be determined in part by future FEMA eligibility determinations and cost reasonableness determinations.

Method of Distribution

The City will reimburse NYCHA for expenses incurred for eligible projects. OMB and HPD will review reimbursement requests for eligibility, cost reasonableness, and compliance with applicable requirements.

Program Schedule

Estimated Start Date	Estimated End Date
June 15, 2023	June 14, 2029

PROPOSED ACCOMPLISHMENTS

Project	Number of Units Assisted	Number of Properties Assisted
Elevator Resiliency Improvements	6,000	22
Mitigation	5,990	13

Jewel Streets Housing Mobility and Resiliency

Program Partners

- Mayor's Office of Housing Recovery Operations (HRO)
- NYC Department of Housing Preservation and Development (HPD)
- Mayor's Office of Climate and Environmental Justice (MOCEJ)

Eligibility Category	National Objective
Rehabilitation: Single- and Multi-Unit Residential Acquisition of Real Property Safe Housing Incentives	Low- and Moderate-Income Area Benefit Low- and Moderate-Income Housing Incentives Urgent Need

Activity Name	Proposed Budget	Estimated Benefit to MID Areas	Estimated Mitigation Funding	Estimated Low/Mod Benefit
Acquisitions for Redevelopment	\$5,192,860	\$5,192,860	\$5,192,860	\$5,192,860
Acquisitions for Open Space	\$9,892,130	\$9,892,130	\$9,892,130	\$9,892,130
Flood Mitigation Retrofits	\$3,265,010	\$3,265,010	\$3,265,010	\$1,632,505
Relocation Incentives	\$1,650,000	\$1,650,000	\$1,650,000	\$1,650,000
Total	\$20,000,000	\$20,000,000	\$20,000,000	\$18,367,495

Program Description

The Jewel Streets neighborhood, located on the border of Brooklyn and Queens, suffered significant flood impacts during Hurricane Ida and continues to experience frequent, repeat flood losses from moderate to extreme rainfall events. These issues are exacerbated by challenging topographic conditions, a lack of basic drainage infrastructure, and substandard housing stock.

The City will use CDBG-DR funds to acquire and/or retrofit residential properties in the Jewel Streets neighborhood that are expected to continue experiencing significant flood risks while awaiting the long-term flood mitigation and stormwater infrastructure plan outlined in the CDBG-DR-funded Jewel Streets Neighborhood Plan. CDBG-DR funds will also be used for program administration.

This program will identify between 19 and 25 properties for flood mitigation, prioritizing one- and two-family homes. The City will solicit applications for Jewel Streets residents to express interest in acquisitions and/or retrofits. If demand for acquisitions and/or retrofits exceeds the program budget, applicants will be prioritized based on social vulnerability, location, alignment with City plans, flood

risk, and building typology. These property-scale mitigation efforts will be an important part of the overall solution for long-term neighborhood resiliency.

Two sections of northeast Jewel Streets will be defined as a disaster risk reduction area. A disaster risk reduction area is defined as a clearly delineated area that has been impacted by a hazard that is a predictable threat to the well-being of residents and was caused or exacerbated by Hurricane Ida. The northern section will be bounded by Drew Street to the west, South Conduit Avenue to the north, 78th Street to the east, and Linden Boulevard to the south. The southern section will be bounded by Amber Street to the west, Linden Boulevard to the north, 79th Street to the east, and Loring Avenue, including the area south of Loring to the existing retaining wall, to the south. Incentives will be limited to this area, and acquisitions and retrofits will prioritize this area.

Jewel Streets Disaster Risk Reduction Area

Acquisitions for Open Space

Through this activity, the City will voluntarily acquire properties in the Jewel Streets neighborhood and convert them to permanent open space (active or passive open space, or floodplain restoration). The exact end use of the property will be decided as the broader infrastructure plan for the Jewel Streets area is further developed, though the uses will be limited to the options above. The end use of each property will meet HUD's criteria for a buyout program, which is open space maintained in perpetuity and not containing any structures other than a public facility open on all sides, a restroom, or a flood control structure. CDBG-DR funds will be used to pay for property acquisition and related costs, as well as demolition, clearance, restoration, and interim holding costs.

Acquisitions for Redevelopment

Through this activity, the City will voluntarily acquire properties in the Jewel Streets neighborhood and redevelop them. The end uses of these properties will be primarily open space, such as parks, but may include structures or uses that do not meet HUD's criteria for a buyout program. CDBG-DR funds will be used to pay for property acquisition and related costs, as well as demolition, clearance, and interim holding costs.

Flood Mitigation Retrofits

The City will improve the flood resiliency of 1- to 4-unit homes in the Jewel Streets neighborhood through retrofits. Retrofit work may include floodproofing the structure, installing flood sensors,

elevating critical systems and equipment above flood level, and constructing or maintaining wastewater management infrastructure on the property.

Relocation Incentives

The City will offer Safe Housing Incentives for residents of the Jewel Streets area to relocate. Incentives will be available to homeowners participating in either of the acquisition activities.

Safe Housing Incentives must be used for relocation outside the disaster risk reduction area and into safer housing. The City will inspect the replacement housing to ensure it is safer from flooding.

Tieback to Disaster/Unmet Needs or Qualification as Standalone Mitigation

This program is primarily focused on reducing or eliminating the negative impacts of future flood events. Accordingly, it is best described as standalone mitigation. However, although CDBG-DR funds will not be used to repair damage caused by the storm, the program is intended to reduce or eliminate similar damage to single-family housing that was experienced during PTC Ida.

Benefit to Most Impacted and Distressed Areas

This activity will take place entirely in the HUD-defined MID areas of Brooklyn and Queens.

Eligibility Criteria and Maximum Assistance

The program will prioritize LMI households (up to 80% AMI) to the extent possible, with at least 51% of the funds expected to benefit LMI households. At least 51% of the funds for permanent structure improvement will be committed to LMI households. Incentives will be limited to LMI households.

Flood Mitigation Retrofits will also prioritize LMI households, but non-LMI households are also eligible for assistance using the Urgent Need national objective. In 2022, the City began designing its Jewel Streets Neighborhood Plan, which will improve the flood resiliency of the neighborhood in part by elevating streets and other infrastructure in the area. It is imperative that certain properties are retrofitted so they are not made more vulnerable to flooding when the surrounding infrastructure is elevated.

The individual assistance cap for incentive activities is \$150,000, while the cap for retrofits will not exceed \$180,000.

Method of Distribution

As Program Lead, HRO is responsible for all day-to-day oversight, operational, and administrative functions, including vendor, contract, and financial management. HPD is responsible for grant compliance, reporting, and recordkeeping, and will provide support to HRO in its implementation of the Program through use of its budget, hiring, procurement, and contracting mechanisms. HRO and HPD will coordinate to ensure implementation in accordance with CDBG-DR regulations and requirements. MOCEJ, the agency that developed the citywide Resilient Acquisitions program, will have an ongoing advisory role to ensure consistency with the citywide program.

Program Schedule

Estimated Start Date	Estimated End Date
October 1, 2026	June 30, 2029

Proposed Accomplishments

Over the life of the program, the City estimates acquiring 11 properties, retrofitting 14 properties, and offering incentives to between 6 and 11 households, though exact numbers will be determined by resident interest.

Resiliency Improvements: Multi-Unit

Program Partners

- NYC Department of Housing Preservation and Development (HPD)
- Subrecipients:
 - New York City Housing Authority (NYCHA)

Eligibility Category	National Objective
Public Facilities & Improvements: Other	Low- and Moderate-Income Housing Low- and Moderate-Income Area

Activity Name	Proposed Budget	Estimated Benefit to MID Areas	Estimated Mitigation Funding	Estimated Low/Mod Benefit
Resilient Community Spaces in Affordable Housing	\$21,847,000	\$21,847,000	\$21,847,000	\$21,847,000
Hope Gardens Storm Resiliency	\$51,023,632	\$51,023,632	\$51,023,632	\$51,023,632
Total	\$72,870,632	\$72,870,632	\$72,870,632	\$72,870,632

Program Description

Resilient Community Spaces in Affordable Housing

Three low-income senior housing properties will be selected to serve as Net Positive Community Resiliency Hubs. The hubs will provide safe refuge to residents and communities, allowing them to shelter in place during emergencies, and assist in response and recovery by supporting the City's emergency operations and outreach activities, as well as mitigation.

The selected properties are Livonia C3 – 352 Livonia Avenue, Brooklyn, NY 11212; Luna Green – 3027 West 21st Street, Brooklyn, NY, 11224; and IKOS – 31-07 31st Street, Astoria (Queens), NY, 11106. The sites are part of the Senior Affordable Rental Apartments (SARA) program and are located in low- and moderate-income neighborhoods that are subject to current and future flood risk. SARA projects contain highly vulnerable populations and often people with limited mobility. These buildings are natural loci of expanded community benefit because they contain both community space and social services.

Buildings will be built to higher efficiency and resiliency standards (e.g., incorporating green roofs and/or other green infrastructure such as water retention plazas and planted community spaces). While exact interventions would be tailored to each project, funds would cover design, construction, and enhanced resiliency measures.

Hope Gardens Storm Resiliency

As stated earlier in this plan, Hope Gardens is a community of former public housing buildings comprising 61 separate buildings that include 1,312 deeply affordable housing units and several community facilities. The developments were damaged in PTC Ida and have flooded twice since. While over \$40 million in restoration work has been completed, additional mitigation work is necessary to prevent future flooding. The proposed project will implement much needed flood protection retrofits and greatly mitigate the risk of flood-related heat and hot water service outages.

The flood resiliency project will entail the new construction of centralized exterior mechanical facilities located four feet above grade with new equipment to provide heat and hot water for the properties. All flood-prone equipment currently located in the basements will be removed and all building-critical infrastructure will be moved to the new centralized mechanical facilities, allowing the property to stay on-line in future flooding events. The new mechanical facilities will be placed throughout the property with many serving multiple residential buildings and providing protection from storm events and critical redundancy in case of equipment failure.

Tieback to Disaster/Unmet Needs or Qualification as Standalone Mitigation

Assisted senior developments will provide access to meet unmet preparedness, response, and resiliency needs in communities subject to flooding. During Ida, several of the City's hurricane evacuation sites were flooded themselves due to the inland nature of the flooding. In addition to ensuring the safety of building residents, sites could be used as evacuation centers for potential non-coastal flooding events.

The Hope Gardens Storm Resiliency project activity qualifies as stand-alone mitigation as it will increase resilience to future flooding events. CDBG-DR funds will not be used for storm recovery work, which was completed with different funding.

Benefit to Most Impacted and Distressed Areas

The SARA developments in this program are all located in the HUD-defined Most Impacted and Distressed areas of Brooklyn or Queens. Projects will provide multiple benefits to residents and the surrounding communities across all phases of a disaster lifecycle, including flood mitigation, safe refuge, and space for response and recovery activities. When sites have been selected, the City will issue a substantial amendment subject to a 30-day public comment period.

As Hope Gardens is located in Brooklyn, the entire allocation will be used to benefit the Most Impacted and Distressed areas.

Eligibility Criteria and Maximum Assistance

The SARA buildings are in LMI neighborhoods. Luna Green and Livonia C3 will each receive \$4.5 million in assistance, and IKOS will receive \$12,847,000.

The Hope Gardens project will benefit the low- and moderate-income tenants that reside at these developments.

Method of Distribution

HPD will administer the projects that will benefit the SARA developments. City staff administering the activity will be paid with CDBG-DR funds. Contractors will be reimbursed as work on this program is performed.

For Hope Gardens, the City will reimburse NYCHA for expenses incurred for eligible projects. OMB and HPD will review reimbursement requests for eligibility, cost reasonableness, and compliance with applicable requirements.

NYCHA, acting as a subrecipient, will make the funding available to Hope Gardens I LLC and Bushwick Gardens I LLC, the property managers of Hope Gardens, on a reimbursement basis in accordance

with the budget reviewed and approved by NYCHA for eligibility, cost reasonableness, and compliance with applicable requirements.

PROGRAM SCHEDULE

Estimated Start Date	Estimated End Date
June 1, 2023	June 30, 2029

Proposed Accomplishments

The outcome of the Resilient Community Spaces activity will be three community resiliency hubs in vulnerable LMI neighborhoods. This includes a total of 467 units across the three multi-family developments.

The Hope Gardens Resiliency project includes the design, engineering, permitting, and construction of new mechanical facilities for 41 buildings, including 708 residential units, on the campus in Bushwick, Brooklyn. NYCHA will:

- Engage an Architectural and Mechanical/Electrical/Plumbing Design team to draft design documents for bidding, permitting, construction, and environmental review purposes.
- Complete construction of new mechanical facilities. The residential campus has been divided into groups to optimize efficiency and most effectively manage site constraints. The projects will include removal of the existing heat and hot water systems and replace them with new equipment in new mechanical buildings at grade or on existing roofs.

Infrastructure

Green Infrastructure Expansion

Program Partners

- NYC Department of Environmental Protection (DEP) in collaboration with
 - NYC Department of Design and Construction (DDC)
 - NYC Department of Parks and Recreation (Parks)
 - NYC Department of Transportation (DOT)
- Subrecipient: New York City Housing Authority (NYCHA)

Eligibility Category	National Objective
Public Facilities & Improvements: Flood Drainage Improvements	Low- and Moderate-Income Housing Low- and Moderate-Income Areas

Activity Name	Proposed Budget	Estimated Benefit to MID Areas	Estimated Mitigation Funding	Estimated Low/Mod Benefit
NYCHA Green Infrastructure	\$29,720,516	\$29,720,516	\$29,720,516	\$29,720,516
Parkchester/Morris Park Cloudburst	\$33,590,547	\$33,590,547	\$33,590,547	\$33,590,547
East New York Cloudburst	\$14,000,000	\$14,000,000	\$14,000,000	\$14,000,000
Total	\$77,311,063	\$77,311,063	\$77,311,063	\$77,311,063

Program Description

Green Infrastructure (GI) describes an array of practices that use or mimic natural systems to manage stormwater runoff. GI systems collect stormwater from streets, sidewalks, and other hard surfaces before it can enter the sewer system or cause local flooding. By reducing the amount of stormwater that flows into the sewers, GI projects allow the sewer system to function more effectively, improve the health of local waterways, and prevent costly sewer overflows and backups that can impact property owners.

Allocating CDBG-DR funds to this activity will allow the City to expand its GI network more quickly and ensure that GI projects that will benefit low- and moderate-income areas or households will be prioritized.

In New York City, green infrastructure takes many shapes and forms including but not limited to:

- **Rain gardens** are planted areas in the sidewalk that are designed to collect and manage stormwater. Rain gardens are vegetated or landscaped depressions designed to promote infiltration of stormwater runoff into the underlying soil.
- **Stormwater green streets**, like rain gardens, are planted areas designed to collect and manage stormwater. However, green streets are typically constructed in the roadway, are usually larger than rain gardens, and have varying lengths, widths, and soil depths based on the characteristics of the existing roadway.
- **Infiltration basins** are designed to store rainwater beneath a surface that closely mimics its surroundings, like grass or concrete. They are similar in functionality to rain gardens in

that they capture stormwater, yet they maintain the look and feel of the existing sidewalk. Basins hold the water so that it can be collected and released into the surrounding ground at a slower rate.

- **Green roofs** are made of a top vegetative layer that grows in an engineered soil, which sits on a drainage layer. A green roof can be intensive, with thicker soils that support a wide variety of plants, or extensive, covered in only a light layer of soil and minimal vegetation.
- **Blue roofs** are designed without vegetation solely to detain stormwater. Weirs at the roof drain inlets create temporary ponding and gradually release stormwater.
- **Subsurface detention systems** with infiltration capability provide temporary storage of stormwater runoff underground. These systems have an open-bottom and can incorporate perforated pipe and stormwater chambers for added detention volume. Systems are primarily designed with a gravel bed that stores water until it can infiltrate into the ground.
- **Permeable paving** is a range of materials and techniques, such as permeable pavers or porous concrete, which allow water to seep in between the paving materials and be absorbed into the ground. Permeable paving can be used instead of traditional impermeable concrete or asphalt.

NYCHA Green Infrastructure

Through this program, the City proposes to use CDBG-DR funds to expand NYCHA's GI network in MID areas. The City will fund construction and other costs associated with development of green infrastructure, as well as community engagement services that will inform the design of the GI practices. Softening the landscape and providing more stormwater storage will provide a first line of defense during large precipitation events and will allow the City's grey infrastructure (e.g., sewers and water treatment facilities) to operate more efficiently.

Parkchester/Morris Park Cloudburst

"Cloudburst projects" employ a combination of GI and grey infrastructure to absorb, store, and transfer stormwater to minimize flooding from cloudburst events, which are sudden, heavy downpours in a short amount of time. Cloudburst projects may also feature special community amenities and open spaces for use by the public.

The Parkchester/Morris Park Cloudburst Hub is an area the City has determined to be vulnerable to cloudburst events and one that experienced significant damage as a result of PTC Ida. The project will utilize a combined approach of various green infrastructure typologies, as well as connections to existing and proposed infrastructure to reduce flooding within this neighborhood.

The project will consist of onsite and right-of-way stormwater management strategies, including subsurface drainage cells, porous concrete panels, bioretention, and/or subsurface storage. Underdrains will be installed to collect infiltrated stormwater and convey it to either onsite storage locations or back to the existing sewer system.

This project will be located in the neighborhoods of Parkchester and Morris Park in the Bronx. The general boundaries of this project area are Castle Hill Avenue and Williamsbridge Road to the east; Westchester Avenue to the south; Unionport Road, Fowler Avenue, and Radcliff Avenue to the west, and Pelham Parkway and Lydig Avenue to the north.

East New York Cloudburst

Like Parkchester/Morris Park, the City is designing the East New York Cloudburst Hub project to mitigate the effects of cloudburst events.

The project will prioritize source control, capturing runoff before it enters the sewer system, and may utilize a combination of underdrains, porous parking and bike lanes, vegetated medians, and other methods to capture and convey stormwater into onsite storage areas.

This project will be located in the neighborhood of East New York in Brooklyn. The general boundaries of this project area are Atkins Avenue to the East, Flatlands Avenue to the South, Alabama Avenue to the West, and New Lots Avenue and Blake Avenue to the North.

Tieback to Disaster/Unmet Needs or Qualification as Standalone Mitigation

This program is primarily focused on reducing or eliminating the negative impacts of future flood events. Accordingly, it is best described as standalone mitigation. However, the City will prioritize Ida-impacted areas. Although funds will not be repairing damage caused by the storm, the program is intended to reduce the inland flooding and sewer backups seen during PTC Ida.

The Parkchester/Morris Park and East New York neighborhoods have been identified as areas of high vulnerability to flooding. These areas were also significantly impacted by PTC Ida.

Benefit to Most Impacted and Distressed Areas

The following NYCHA sites are under consideration for green infrastructure projects:

- Brooklyn
 - Albany Houses
 - Cooper Park Houses
 - Farragut Houses
 - Howard Ave Houses
 - Hughes Apartments
 - Lafayette Gardens
 - Marcy Houses
 - Ocean Hill Houses
 - Reid Apartments
 - Stuyvesant Gardens I and II
 - Sumner Houses
 - Tompkins Houses
- Queens
 - Bland Houses
 - Latimer Gardens
 - Pomonok Houses
 - Ravenswood Houses

The Parkchester/Morris Park Cloudburst project will be located entirely in the HUD-defined MID neighborhoods of Parkchester and Morris Park in the Bronx.

The East New York Cloudburst project will be located entirely in the HUD-defined MID neighborhood of East New York in Brooklyn.

Eligibility Criteria and Maximum Assistance

The City will use CDBG-DR funds for GI projects that benefit LMI persons, either through the Low/Mod Housing or Low/Mod Area national objective. Each NYCHA GI project is expected to cost approximately \$1.5 million per site, but actual assistance will be determined based on the particular needs of and what is cost effective for each site.

The Parkchester/Morris Park Cloudburst program is anticipated to cost \$96.7 million, with CDBG-DR contributing \$33,590,547. According to the most recent HUD LMI survey data, the target area is 74.31% residential and 60.49% comprised of LMI persons.

The East New York Cloudburst project is anticipated to cost \$50,600,000, with CDBG-DR contributing \$14,000,000. According to the most recent HUD LMI survey data, the target area is 75.24% residential and 65.86% comprised of LMI persons.

Method of Distribution

The City will reimburse NYCHA for expenses incurred for eligible projects. Payments will be made to competitively bid contractors based upon work performed and costs incurred.

The Parkchester/Morris Park and East New York Cloudburst projects will be led by DEP and supported by DOT and Parks. Parks will develop onsite stormwater management, while DEP and DOT will develop right-of-way stormwater management.

OMB will review reimbursement requests for eligibility, cost reasonableness, and compliance with applicable requirements.

Please note the City may begin the environmental review and procurement processes prior to the execution of the CDBG-DR grant agreement. The City intends to reimburse itself with CDBG-DR funds for eligible expenses once grant funds become available.

PROGRAM SCHEDULE

Estimated Start Date	Estimated End Date
June 15, 2023	August 31, 2029

Proposed Accomplishments

The City expects to complete 18 GI projects through the NYCHA Green Infrastructure activity. The City will estimate the number of beneficiaries as projects are designed.

The City will construct an estimated 34 green infrastructure improvements in the Parkchester/Morris Park Cloudburst and 19 improvements in the East New York Cloudburst.

Red Hook Flood Protection

Program Partners

- NYC Department of Design and Construction (DDC)
- NYC Department of Transportation (DOT)

Eligibility Category	National Objective
Public Facilities & Improvements: Flood Drainage Improvements	Urgent Need Low- and Moderate-Income Limited Clientele: Nature & Location

Proposed Budget	Estimated Benefit to MID Areas	Estimated Mitigation Funding	Estimated Low/Mod Benefit
\$10,000,000	\$10,000,000	\$10,000,000	\$10,000,000

Program Description

The City proposes to use CDBG-DR funds to augment an existing City-State-Federal resiliency project in Red Hook, Brooklyn, which is an area of low topography making it vulnerable to coastal flooding and sea level rise. The City is currently working with FEMA and NYS Division of Homeland Security and Emergency Services (DHSES) to design and build a neighborhood-wide flood intervention system as part of the Red Hook Coastal Resiliency (RHCR) project. The project will be implemented in two general areas of the neighborhood, the Atlantic Basin area and the Beard Street area, and will provide passive flood protection to an elevation of 8 ft (EL8) using measures such as floodwalls and road raising. For flood levels above EL8, deployable floodgates will be activated to provide flood protection up to EL10. (All elevations refer to North American Vertical Datum of 1988, aka NAVD 88.)

CDBG-DR funds will be used to protect an electrical substation that falls outside the proposed flood protected area. This substation serves the Food Bazaar grocery store. Protecting the substation from flooding is essential to ensure that this critical facility can continue to operate during and after a storm event for the community to recover faster.

CDBG-DR funds will also partially fund construction of the Brooklyn Waterfront Greenway, a pedestrian and bicycle path that will run along the water's edge and better integrate the flood protection project into the neighborhood.

Tieback to Disaster/Unmet Needs or Qualification as Standalone Mitigation

This program is primarily focused on reducing or eliminating the negative impacts of future flood events. Accordingly, it is best described as standalone mitigation.

Benefit to Most Impacted and Distressed Areas

This project will benefit Red Hook, Brooklyn, which is fully within the HUD-defined MID area. As stated previously, the substation that will be protected through the project serves a critical facility, the Food Bazaar, which is the main grocery store for the area. The area will also benefit from the Greenway's new and improved pedestrian and bicycle paths. This area includes the nearby NYCHA Red Hook Houses, which is the largest public housing development in Brooklyn.

Eligibility Criteria and Maximum Assistance

This project can reasonably be expected to meet the Low- and Moderate-Income Limited Clientele: Nature & Location national objective. Given the project's proximity to the Red Hook Houses, low- and moderate-income persons can be expected to use both the Brooklyn Waterfront Greenway's public bicycle and pedestrian paths, which will run along the waterfront of the Red Hook neighborhood, and the Food Bazaar, which is the primary grocery store for the area.

Method of Distribution

This project will operate on a reimbursement basis. The NYC Department of Design and Construction will pay competitively-procured contractors to complete design and construction work.

Program Schedule

Estimated Start Date	Estimated End Date
September 1, 2025	August 31, 2029

PROPOSED ACCOMPLISHMENTS

The project will result in the design and construction of one flood-control facility (the Food Bazaar Substation) and approximately 7,380 linear feet of public improvement (the Brooklyn Waterfront Greenway). At a minimum, this project will benefit the approximately 10,665 residents of Red Hook (according to the 2016-2020 American Community Survey).

Economic Recovery

Commercial District Emergency Preparedness

Program Partners

- NYC Department of Small Business Services (SBS)
- Subrecipients: To be determined

Eligibility Category	National Objective
Capacity Building for Nonprofit Organizations	Low- and Moderate-Income Area Low- and Moderate-Income Limited Clientele: Nature & Location

Proposed Budget	Estimated Benefit to MID Areas	Estimated Mitigation Funding	Estimated Low/Mod Benefit
\$450,000	\$450,000	\$0	\$450,000

Program Description

After disasters, community-based development organizations (CBDOs) are often on the front lines, helping to coordinate emergency relief to impacted small businesses. With CDBG-DR funds, SBS will develop an educational cohort-based training program that focuses on resiliency planning. This program will engage six (6) to ten (10) community-based development organizations (CBDOs) and match each to a Fellow. Upon completion of the program, each Fellow will create a presentation based on their findings and deliver their presentation to other CBDOs, who were not matched with a Fellow, through info-sharing opportunities organized by SBS, during a Cohort Showcase. Each CBDO, whether matched with a Fellow or a recipient of their subsequent presentation, will be primarily located in low- and moderate-income (LMI) neighborhoods.

Through this program SBS will provide capacity building services to CBDOs in eligible neighborhoods in the City, as determined by OMB, with a focus on disaster/emergency preparedness, burnout identification and prevention, and resiliency for vulnerable neighborhoods. Upon completion of the program, the selected CBDOs will be able to face potential disasters effectively and develop both short-term preparedness and long-term disaster resilience strategies in order to enhance their ability to support economic recovery for their community following a disaster. As a result of the program, SBS will have enhanced its existing capacity building toolset and strengthened its CBDO network in the City.

Tieback to Disaster/Unmet Needs or Qualification as Standalone Mitigation

This program would mitigate the impacts of future disasters by ensuring CBDOs continue operations and provide aid, resources, and the status of emergency programs directly to the business community.

Benefit to Most Impacted and Distressed Areas

This proposed program would strengthen the emergency preparedness of CBDOs responsible for executing commercial revitalization activities benefitting low- to moderate-income communities in the Bronx, Brooklyn, Queens, and Staten Island.

SBS will target program participants who serve LMI areas facing substantial hazard risks as identified in New York City’s Hazard Mitigation Plan including storm-related extreme weather, coastal flooding, and extreme heat.

Eligibility Criteria and Maximum Assistance

The anticipated duration of this activity is two years, with the cost split evenly over the course of the activity. The estimated benefit per community-based development organization (CBDO) is \$5,000 plus a portion of \$30,000 allocated to group workshops. Through the CBDOs, the beneficiaries of this activity must be 51% or greater LMI individuals or households.

Method of Distribution

SBS will administer this program. The agency will bring on a capacity-building vendor as a competitively procured consultant. The consultant will be responsible for selecting participating CDBOs and fellows based on the standards, criteria, and rubric established by SBS. Work completed by the consultant will be reimbursed with CDBG-DR funds.

Program Schedule

Estimated Start Date	Estimated End Date
July 1, 2023	June 30, 2029

Proposed Accomplishments

It is anticipated that 10 organizations will participate in workshops, individual consultations, and other engagements over the course of the program.

Public Services

Flood Insurance & Financial Counseling

Program Partners

- NYC Department of Housing Preservation and Development (HPD)
- Mayor's Office of Climate & Environmental Justice (MOCEJ)
- Subrecipient: Center for New York City Neighborhoods (CNYCN)

Eligibility Category	National Objective
Public Services: Housing Counseling	Limited Clientele: Income Survey

Proposed Budget	Estimated Benefit to MID Areas	Estimated Mitigation Funding	Estimated Low/Mod Benefit
\$2,500,000	\$2,500,000	\$0	\$2,500,000

Program Description

Many homes that suffered damaged during PTC Ida were not in flood zones and therefore homeowners were not required to hold flood insurance. Meanwhile, homeowners with financial resources are better suited to recover on their own and not need as much assistance from the City, state, and federal governments after a storm.

Through the Flood Insurance & Financial Counseling Program, the City will expand its flood insurance marketing campaign and offer in-home engineering inspections, elevation certificates, and financial counseling sessions for property owners in neighborhoods at-risk from flooding. CDBG-DR funds may be used to pay for inspections, counseling, marketing materials, and program administration.

This program, through increased enrollment in flood insurance, would benefit homeowners and renters by better preparing them to recover from a flood, both through the provision of financial assistance and by offering peace of mind, and potentially lowering their flood insurance premiums. The program would also reduce future recovery costs incurred by governmental entities.

Tieback to Disaster/Unmet Needs or Qualification as Standalone Mitigation

PTC Ida highlighted the lack of flood insurance held by homeowners and renters as an unmet need. This is particularly true in inland areas of the outer boroughs, where there are many 1-4 family homes at increasing risk of flooding due to climate change.

Benefit to Most Impacted and Distressed Areas

The City expects this program will primarily benefit owners of 1-4 unit homes. The program will be implemented citywide but will prioritize the outer boroughs. Based on where these properties are located, the City estimates most beneficiaries (approximately 80%) will be located in the HUD-defined MID areas. Additionally, the City will prioritize assistance for property owners at risk from both coastal flooding and from extreme rain events. The City's recently released [Stormwater Flood Maps](#) may be used to determine target areas.

Eligibility Criteria and Maximum Assistance

The program will provide varying levels of assistance to homeowners of any income level, but at least 51.0% of beneficiaries must be from LMI households. The program will offer in-kind assistance to beneficiaries; thus, no maximum assistance cap is warranted.

Method of Distribution

This program will be administered by HPD and MOCEJ. CDBG-DR funds will reimburse the subrecipient, Center for New York City Neighborhoods, for the services it provides.

Program Schedule

Estimated Start Date	Estimated End Date
July 1, 2024	June 30, 2027

Proposed Accomplishments

The City expects this program will assist 175-225 homeowners over the life of the program. Additionally, outreach and education activities would reach at least 200,000 residents across the five boroughs.

Hazard Awareness and Community Outreach

Program Partners

- New York City Emergency Management (NYCEM)

Eligibility Category	National Objective
Public Services: Other Nonprofit Organization Capacity Building	Low- and Moderate-Income Area Urgent Need

Activity Name	Proposed Budget	Estimated Benefit to MID Areas	Estimated Mitigation Funding	Estimated Low/Mod Benefit
NotifyNYC	\$6,000,000	\$6,000,000		\$6,000,000
Community Engagement Specialist	\$654,401	\$654,401		\$654,401
Weather Monitoring	\$500,000	\$500,000		\$500,000
Resiliency Strategist	\$397,468	\$397,468		\$397,468
Strengthening Communities	\$5,559,678	\$5,559,678		\$5,559,678
Total	\$13,111,547	\$13,111,547		\$13,111,547

Program Description

The below projects and associated staff will focus on critical gaps including public awareness and access to public warning messaging; language access and availability of key services provided by the City; and the overall ability for the public and community organizations to be prepared for weather events such as PTC Ida.

Notify NYC

Notify NYC is the City's free emergency alert program, offered in English and 12 additional languages. Although it has more than one million subscribers, very few receive alerts in languages other than English. To increase enrollment among residents with limited English literacy, NYCEM will conduct targeted outreach. This will include mailing multilingual Notify NYC promotional cards to all New Yorkers, expanding advertising in ethnic media, and developing new creative materials to support the effort – such as a comic book partnership with Marvel aimed at school-aged children.

Community Engagement Specialist

NYCEM will support a Community Engagement Specialist position to provide outreach and education to people with limited English proficiency. Efforts will specifically focus on the risks of flooding, coastal storms, and the steps New Yorkers can take to be prepared. As communities with limited English literacy were disproportionately affected both by Hurricanes Sandy and PTC Ida, this position will be crucial in making sure the most vulnerable communities in NYC are prepared for the next emergency. This position will work in concert with the city-wide mailing and other advertising efforts.

Weather Monitoring

In advance of and during extreme weather events, the City consults with the National Weather Service (NWS) multiple times per day. As a national service, though, NWS may be inundated with requests for guidance and information. In order to receive hazardous weather forecasts and guidance as early as

possible and that are tailored to New York City, CDBG-DR funds will pay for a contract with an additional weather service. This “second opinion” will provide a new data set by which the City can more rapidly and accurately alert residents to storms and other alerts.

Resiliency Strategist

The Resiliency Strategist position manages and enhances risk analysis tools that assess neighborhood-level hazard exposure and vulnerability, helping inform hazard-specific response, mitigation, and recovery planning while prioritizing low- and moderate-income and other vulnerable communities. The Strategist will also analyze historical disaster impacts to identify areas of unmet need, collaborate with City agencies on hazard modeling and long-term planning efforts such as the Hazard Mitigation Plan and All Hazards Recovery Plan, and support outreach to increase public awareness of hazard risks. Through community engagement, public presentations, and promotion of NYCEM’s publicly available risk analysis tools, the position will help ensure that resiliency planning and investments are informed by data and responsive to the needs of historically impacted communities.

Strengthening Communities

NYCEM will expand the Strengthening Communities (SC) program into Ida-impacted neighborhoods. The CDBG-DR-funded SC program will provide up to \$40,000 in grants to community networks in traditionally underserved, LMI neighborhoods, primarily in boroughs outside of Manhattan. These community networks will develop community emergency plans that will be integrated into the City's Emergency Operations Center.

To participate in the program, networks must:

- Be a network or coalition with a lead non-profit (501(c)(3)) organization convening at least four times a year;
- Have been established for at least two years or more;
- Have established communication networks among its member organizations;
- Have connections within the community it serves;
- Commit to establishing a formal community emergency plan for their community;
- Identify two community organizers who are committed to leading and administering all mandatory deliverables; and
- Participate in mandatory capacity-building training classes led by NYCEM.

New networks receive a \$40,000 grant to complete the program and develop a community emergency plan while returning networks receive a \$10,000 grant per year for preparedness activities in their communities. These activities include conducting preparedness events in their communities, participating in emergency preparedness trainings and exercises, and revising and socializing their emergency plans. Due to natural attrition among program partners and varying levels of compliance with program requirements, not all networks will receive the full annual sustainment funding. As a result, unused funds are available to support network activations for community outreach during weather emergencies.

Tieback to Disaster/Unmet Needs or Qualification as Standalone Mitigation

Each project derives from an unmet need highlighted by Ida.

Benefit to Most Impacted and Distressed Areas

While all five boroughs will benefit from this program, two of the four projects are intended to benefit groups identified as most impacted by Ida: immigrants and people with limited English proficiency.

Eligibility Criteria and Maximum Assistance

Through the Strengthening Communities activity, networks are eligible for up to \$40,000 in emergency preparedness start-up funding and then \$10,000 a year for three years to maintain their emergency operations plan. For all other program activities, the City is not offering direct grants/assistance through this program.

Method of Distribution

NYCEM will administer this program. City staff will be paid with CDBG-DR funds through City payroll while contractors and grantees will be reimbursed as work on this program is performed.

Program Schedule

Estimated Start Date	Estimated End Date
April 1, 2023	June 30, 2029

Please note that services described under this program may begin prior to the execution of the CDBG-DR grant agreement. The City intends to reimburse itself with CDBG-DR funds for eligible expenses once grant funds become available. However, in no case will services begin prior to the completion of the required environmental review(s).

Proposed Accomplishments

The City's entire population, over 8 million people, will benefit from this activity.

Program Description

Planning is a critical component of all recovery and resiliency efforts. The City has allocated CDBG-DR funds to a mix of planning activities related to the City's long-term goals:

- Preventing, minimizing, and responding to damage to residential properties;
- Identifying areas most susceptible to flooding;
- Better implementation of disaster recovery programs; and
- Incorporating resiliency into future City development.

Preventing, minimizing, and responding to damage to residential properties*Basement Apartment Resiliency Study*

The Basement Apartment Resiliency Study will be an 18- to 24-month project to ensure future mitigation and conversion investments related to basement apartments are data-driven and efficient based on current climate risks. The study will, among other tasks, examine the factors that contribute to subterranean flooding in 1-4 family homes (e.g., extreme rainfall, topography, impermeable surfaces, insufficient drainage networks).

CDBG-DR funds will be used to conduct surveys, collect data, and analyze stormwater flood maps to identify areas suitable for a future basement legalization program. Additionally, the initiative will develop recommendations and, where applicable, provide preliminary designs for a range of flood hazard mitigation solutions that include, for example, short- and long-term design solutions for homes and safety scope items to mitigate risk to life and safety.

Importantly, this study will also aim to provide cost estimates for recommended flood hazard mitigation methods and identify potential resources for homeowners to help them finance resiliency measures including both public and private incentives, grants, or loan products.

All-Hazards Emergency Sheltering

One of the main lessons learned from PTC Ida is that, in the lead up to extreme storms, the City must be able to quickly implement evacuation strategies, with a particular focus on vulnerable populations such as those residing in basement apartments and people with limited proficiency in English. To address this need, New York City Emergency Management (NYCEM) will contract a vendor to conduct an All-Hazards Shelter Survey. The goal of this survey is to create a pool of accessible sheltering facilities that can be used for smaller scale, all-hazards emergencies. The selected vendor will be charged with identifying 30 sites to serve as emergency shelters with completed accessibility plans. The contractor will also review the existing Coastal Storm Shelter Stockpile deployment plans. These plans detail the types and quantities of supplies that are delivered to Coastal Storm Evacuation Centers and Shelters as well as the timeline for delivering those supplies.

Geothermal Feasibility Study

The Geothermal Feasibility Study will address an unmet need for mitigation at four NYCHA developments. NYCHA is evaluating locations for a demonstration project that would connect multiple buildings to a single geothermal heat pump system, creating a "district" that relies on shared heat pump infrastructure to maximize environmental benefits. The study would evaluate innovative technology that could reduce strain on existing infrastructure, making NYCHA properties less susceptible to failure of critical utilities.

This project will target four NYCHA Developments in Manhattan:

- King Towers
- Lower East Side II
- Wagner
- Ocean Bay Apartments

Post-Disaster Housing Recovery Study

NYCEM will use CDBG-DR funds to evaluate post-disaster housing operations and funding following a range of different disaster events at different scales. The study will conduct research on disaster recovery programs implemented for housing repair (for 1-4 family units and multi-family), including temporary and permanent housing solutions following different disasters and outcomes/solutions implemented. Part of this analysis would include working with stakeholders from City agencies and non-profit organizations on current housing recovery capabilities. Finally, the initiative will result in a housing recovery playbook (standard operating procedure) to operationalize the accepted recommendations from the summary report to be integrated into the City's larger Coastal Storm Plan.

FEMA Flood Mitigation Assistance Cost Share

CDBG-DR funds will be used as the local cost share for FEMA Flood Mitigation Assistance (FMA) grants. For the three grants listed below, CDBG-DR funds will cover 25% of the project costs:

- **Howard Beach:** The FMA Howard Beach Flood Mitigation Study will identify flood mitigation options for 1-4 family homes designated as National Flood Insurance Program (NFIP) Repetitive Loss properties in southern Queens within the Old Howard Beach, Howard Beach, Hamilton Beach, and Lindenwood neighborhoods north of Jamaica Bay. This study will prepare a series of property-specific flood mitigation options for property owners based on unique physical characteristics, flood risks, and household financial vulnerabilities. These may include physical mitigation options or support for residents to move. The final study deliverables will also include content for a future FEMA FMA application to implement the mitigations identified and requested by participating property owners.
- **Esplanade Gardens:** The FMA Esplanade Gardens study will assist this City-supervised affordable housing development, which contains 1,870 apartments and abuts the Harlem River in East Harlem. The goal of the study is to identify the best design for restoring the development's seawall to: (i) protect Esplanade Gardens and neighboring sites from current and future flood risk, and (ii) identify how best to integrate public access and nature-based features into the seawall design. The final study deliverables will include content for a future FEMA application to construct the seawall improvements and implement the access/nature-based elements of the design.
- **Mitchell-Lama:** The City proposes to use FMA and CDBG-DR funds for studies that will serve seven Mitchell-Lama affordable housing developments located in flood-prone areas of Brooklyn, Manhattan, and Queens. The goal of the studies is to recommend and design retrofits to enhance the climate resiliency of the projects. The final study deliverables will include content for a future FEMA application to implement the recommended improvements.

Planning for Buyout and Acquisition

Planning for Buyout and Acquisition will be an 18- to 24-month project to explore the establishment of a permanent Housing Mobility and Land Acquisition Program. Such a program would assist owners of flood-vulnerable 1-4 family properties to voluntarily sell their homes in response to growing climate threats and challenges. The project will focus on designing an implementable program for “blue-sky” periods that can be scaled during post-disaster settings.

CDBG-DR funds will be used to create a method to evaluate and prioritize homes interested in participating in a program based on a combination of physical risk, socioeconomic considerations, and long-term infrastructure goals. The project will also

- consider how to leverage multiple funding streams and align eligibility criteria to meet these disparate streams;
- identify ways to ensure the equitable transition of flood-vulnerable properties to resilient and sustainable land uses;
- foster innovative land stewardship;
- identify best practices and considerations;
- develop policy and procedures to address renter-occupied properties; and
- establish clear protocols and services that support households as they navigate through buyout programs, including housing counseling, down payment assistance, rental assistance, real estate brokerage services, estate planning, and moving assistance.

Identifying areas most susceptible to flooding

3D Underground Platform

The Mayor’s Office of Operations, in partnership with the Department of Environmental Protection (DEP) and the Office of Technology and Innovation (OTI), will use CDBG-DR funds to create a highly secure, 3D data sharing platform for the underground built and natural environment. The study will involve standardizing and centralizing infrastructure asset data and digitizing soil boring records. Upon completion of the project, the City would have critical data necessary to:

- Conduct proactive analysis of critical infrastructure systems and stormwater modeling to predict where a flooding event is most likely to damage critical infrastructure;
- Improve its reactive emergency response capacities; and
- Better manage the City’s assets and improve capital project scoping and delivery by knowing in advance where projects have the potential to disrupt underground utilities.

Future and Real Time Impact Assessments

This project will develop a customized, NYC-specific forecast tool and dataset that incorporates publicly available and private weather station/sensor data. The intent of this project is to better track predicted and real-time flood events including both the extent of flooding throughout the city and depth of flooding in individual locations. Data would be monitored leading up to, during, and after severe weather events. This would include live-updating maps that can overlay with critical infrastructure and impacted areas. Once the tool is developed and validated, the City would use this information during flood events to better direct emergency response such as deploying emergency resources and messaging. Post-cast data would also be available to immediately determine where flooding has occurred to better prioritize recovery operations including, but not limited to, debris removal, distribution of water pumps, towing damaged vehicles, building inspectors, canvassers, etc.

Additionally, the Department of Environmental Protection (DEP) will support a Flood Risk Project Manager. This position will be responsible for the overall project management, including conducting research and product analyses, leading inter-agency needs assessments and coordination, managing vendors, and supporting the development of a communications and knowledge platform.

Stormwater Flooding Study

The Department of City Planning will conduct a one-year-long planning study to further identify neighborhoods at risk of stormwater flooding, particularly where subgrade spaces are prevalent and potentially being used for habitation. The proposed project will generate maps and statistics to illustrate the flood risk, built environment, socio-economic, and demographic characteristics of the areas of New York City most vulnerable to stormwater flooding.

DCP's study will use DEP's stormwater map data, data DCP has collected on low-lying living spaces through its Building Elevation and Subgrade Space study, as well as socio-economic and built environment data to identify and create profiles for areas that are highly vulnerable to stormwater flooding. Low-lying living spaces and people living in them are especially susceptible to stormwater flooding. Collecting this information and developing these profiles will be an important first step for working with agency partners to identify what can be done to reduce NYC's exposure to this type of flood risk, especially in the most vulnerable areas.

DCP will analyze where the flooding would be most acute and what the consequence of it will be. This information will help lay the groundwork for future mitigation measures, including potential updates to New York City's Building Code and Zoning Resolution to promote stormwater-resistant construction.

Better implementation of disaster recovery programs

Emergency Data Improvement Initiative

In response to the recommendations from the City's after-action report on the extreme rain event linked to Post-Tropical Cyclone Ida in September 2021, NYCEM is initiating the Emergency Data Improvement Initiative. This initiative aims to enhance the integration of field data collected by community entities during emergencies, improve inter-agency data sharing, and develop new data products for emergency response.

Central to this initiative is the formation of an interagency Emergency Data Governance Committee (EDGC), chaired by NYCEM. The committee's mission includes identifying gaps and challenges in data acquisition and management for operational response and situational awareness, evaluating proposed solutions, and establishing standards and protocols for effective data governance. Both organizational and technological solutions will be explored by the committee.

Incorporating resiliency into future City development

Neighborhood Studies

The City will conduct area-wide planning studies that will focus on identifying resiliency opportunities for stormwater collection, mobility, and other public improvements, in addition to examining underlying vulnerabilities at the neighborhood level.

Studies will analyze existing conditions and yield holistic plans for capital investments, the adoption of climate adaptation plans, and land use changes in target areas. Land use changes may include plans to retrofit buildings, facilitate new resilient development, and/or create accessible open space, community facilities, and transportation improvements, as examples.

Studies will target areas where stormwater or other storm-related conditions are expected to worsen due to climate change if preventative measures are not identified and put into place. Many of these areas have high population densities and see regular flooding from storms, which impact streets, businesses, community facilities, religious facilities, and homes. The project sets out to holistically address ongoing issues faced by these communities, such as poor-quality housing, recurrent flooding, and limited access to retail, services, and jobs.

Climate Strong Communities

Through Climate Strong Communities (CSC), the City will use CDBG-DR funds to perform area-wide analyses of climate risks and identify capital projects to address those risks. Projects that come out of the CSC process will work to “future-proof” areas from climate threats like sea level rise/coastal flooding, extreme precipitation, and increased heat, and will be poised to benefit from an unprecedented level of federal and New York State infrastructure funds over the coming years, including, but not limited to, the Infrastructure Investment & Jobs Act, the Inflation Reduction Act, and the NYS Environmental Bond Act.

CSC will focus on underserved neighborhoods across the city and develop 4-6 potential projects per area. Communities have been identified based on high Heat Vulnerability Index (HVI) scores, extreme storm surge, and significant precipitation exposure. Many of the communities also meet environmental justice criteria across a variety of different local, state, and federal metrics. Areas currently considered for funding include Southeast/West Bronx, Southern Brooklyn, Upper Manhattan, North/Central Queens, and the North Shore of Staten Island.

Zoning for Inland Flood Resiliency

The project would research possible zoning and building code changes to facilitate recovery and long-term resiliency in flood-prone inland areas. This would include working with other city agencies (DOB, MOCEJ) with expertise on the topic. After identifying possible changes, the project would support the City in undertaking the public review process to add them to the City’s Zoning Resolution and Building Code.

Tieback to Disaster/Unmet Needs or Qualification as Standalone Mitigation

The speed with which PTC Ida hit the City revealed several areas where increased planning efforts are sorely needed including:

- Determining which properties have sub-grade space, including illegal basement conversions, to improve evacuation efforts, prevent equipment or utility failure, and improve housing quality for tens of thousands of residents;
- Developing standing post-disaster recovery plans and systems so recovery efforts can begin immediately;
- Building a means to track, in real-time, the extent to which flooding is occurring throughout the City, which will result in faster response times by emergency personnel;

- Expanding the areas where the City will analyze opportunities for area-wide resiliency improvements; and
- Explore innovative methods to increase energy efficiency of City-owned properties, particularly large residential properties that can place a substantial strain on the City's electrical grid.

Planning for Recovery and Resiliency projects will lay the groundwork to address unmet recovery and mitigation needs for public infrastructure.

Benefit to Most Impacted and Distressed Areas

Planning activities will target the outer boroughs.

Eligibility Criteria and Maximum Assistance

N/A

Method of Distribution

Multiple agencies and subrecipients will receive funds through this program. City staff will be paid with CDBG-DR funds through City payroll while contractors and subrecipients will be reimbursed as work on these programs is performed.

Program Schedule

Estimated Start Date	Estimated End Date
April 1, 2023	June 30, 2029

Proposed Accomplishments

The City expects to produce 18 plans from this program.

Administration

CDBG-DR Administration

Program Partners

- NYC Mayor's Office of Management and Budget (NYCOMB)
- NYC Office of Emergency Management (NYCEM)
- NYC Department of Environmental Protection (DEP)
- NYC Department of Parks and Recreation (PARKS)
- NYC Department of Transportation (DOT)
- NYC Housing Authority (NYCHA)

Eligibility Category	National Objective
Administration	Not Applicable for Administration Activities

Proposed Budget	Estimated Benefit to MID Areas	Estimated Mitigation Funding	Estimated Low/Mod Benefit
\$13,180,851	\$10,544,681	\$0	\$9,226,596

Program Description

This function involves the planning, management, and citizen participation necessary to formulate, implement, and evaluate the City's CDBG-DR program. These activities include:

- Preparing and implementing the Disaster Recovery program, including publishing public notices, holding public hearings, etc.;
- Developing and maintaining the CDBG-DR Action Plan;
- Preparing Quarterly Performance Reports;
- Maintaining the CDBG-DR website;
- Processing requests for CDBG-DR reimbursement;
- Preparing Environmental Reviews;
- Monitoring City agencies, subrecipients, and contractors;
- Overseeing resiliency projects;
- Liaising with HUD and other Federal departments; and
- Compiling and maintaining necessary records demonstrating compliance with Federal requirements such as fair housing, relocation, labor standards, equal opportunity, etc.

Funds may also be used to prepare applications for other Federal resiliency grant programs, which is an eligible administrative expense under 24 CFR § 570.206(f).

Benefit to Most Impacted and Distressed Areas

As stated in the HUD Notice, grantees may include administrative costs when calculating the benefit to the MID areas. Since the City projects approximately 88% of the grant's *non-administrative* costs will benefit the MID areas, the City assumes 88% of the amount allocated to CDBG-DR Administration will also benefit the MID areas.

ELIGIBILITY CRITERIA AND MAXIMUM ASSISTANCE

N/A

Method of Distribution

City staff will be paid with CDBG-DR funds through City payroll while contractors will be reimbursed as work on these programs is performed.

Program Schedule

Estimated Start Date	Estimated End Date
01/01/2023	12/31/2029

Please note that services described under this program may begin prior to the execution of the CDBG-DR grant agreement. The City intends to reimburse itself with CDBG-DR funds for eligible expenses once grant funds become available. However, in no case will services begin prior to the completion of the required environmental review(s).

Proposed Accomplishments

N/A - the City is not required to quantify accomplishments for Administration activities.

5. APPENDIX

Certifications

Each grantee receiving an allocation under Public Law 117-43 must make the following certifications with its action plan:

- a. The City certifies that it has in effect and is following a residential anti-displacement and relocation assistance plan (RARAP) in connection with any activity assisted with CDBG-DR grant funds that fulfills the requirements of Section 104(d), 24 CFR part 42, and 24 CFR part 570, as amended by waivers and alternative requirements.
- b. The City certifies its compliance with restrictions on lobbying required by 24 CFR part 87, together with disclosure forms, if required by part 87.
- c. The City certifies that the action plan for disaster recovery is authorized under state and local law (as applicable) and that the City, and any entity or entities designated by the grantee, and any contractor, subrecipient, or designated public agency carrying out an activity with CDBG-DR funds, possess(es) the legal authority to carry out the program for which it is seeking funding, in accordance with applicable HUD regulations as modified by waivers and alternative requirements.
- d. The City certifies that activities to be undertaken with CDBG-DR funds are consistent with its action plan.
- e. The City certifies that it will comply with the acquisition and relocation requirements of the URA, as amended, and implementing regulations at 49 CFR part 24, as such requirements may be modified by waivers or alternative requirements.
- f. The City certifies that it will comply with Section 3 of the Housing and Urban Development Act of 1968 (12 U.S.C. 1701u) and implementing regulations at 24 CFR part 75.
- g. The City certifies that it is following a detailed citizen participation plan that satisfies the requirements of 24 CFR 91.115 or 91.105 (except as provided for in waivers and alternative requirements).
- h. The City certifies that it is complying with each of the following criteria:
 - (1) Funds will be used solely for necessary expenses related to disaster relief, long-term recovery, restoration of infrastructure and housing, economic revitalization, and mitigation in the most impacted and distressed areas for which the President declared a major disaster pursuant to the Robert T. Stafford Disaster Relief and Emergency Assistance Act of 1974 (42 U.S.C. 5121 et seq.).
 - (2) With respect to activities expected to be assisted with CDBG-DR funds, the action plan has been developed so as to give the maximum feasible priority to activities that will benefit low- and moderate-income families.

- (3) The aggregate use of CDBG-DR funds shall principally benefit low- and moderate-income families in a manner that ensures that at least 70 percent (or another percentage permitted by HUD in a waiver) of the grant amount is expended for activities that benefit such persons.
- (4) The City will not attempt to recover any capital costs of public improvements assisted with CDBG-DR grant funds, by assessing any amount against properties owned and occupied by persons of low- and moderate-income, including any fee charged or assessment made as a condition of obtaining access to such public improvements, unless: (a) Disaster recovery grant funds are used to pay the proportion of such fee or assessment that relates to the capital costs of such public improvements that are financed from revenue sources other than under this title; or (b) for purposes of assessing any amount against properties owned and occupied by persons of moderate income, the grantee certifies to the Secretary that it lacks sufficient CDBG funds (in any form) to comply with the requirements of clause (a).
- i. The City certifies that the grant will be conducted and administered in conformity with title VI of the Civil Rights Act of 1964 (42 U.S.C. 2000d), the Fair Housing Act (42 U.S.C. 3601-3619), and implementing regulations, and that it will affirmatively further fair housing. An Indian tribe grantee certifies that the grant will be conducted and administered in conformity with the Indian Civil Rights Act.
- j. The City certifies that it has adopted and is enforcing the following policies:
 - (1) A policy prohibiting the use of excessive force by law enforcement agencies within its jurisdiction against any individuals engaged in nonviolent civil rights demonstrations; and
 - (2) A policy of enforcing applicable state and local laws against physically barring entrance to or exit from a facility or location that is the subject of such nonviolent civil rights demonstrations within its jurisdiction.
- k. The City certifies that it (and any subrecipient or administering entity) currently has or will develop and maintain the capacity to carry out disaster recovery activities in a timely manner and that the grantee has reviewed the requirements applicable to the use of grant funds.
- l. The City certifies to the accuracy of its Financial Management and Grant Compliance Certification Requirements, or other recent certification submission, if approved by HUD, and related supporting documentation as provided in section III.A.1. of the Consolidated Notice and the grantee's implementation plan and related submissions to HUD as provided in section III.A.2. of the Consolidated Notice.
- m. The City certifies that it will not use CDBG-DR funds for any activity in an area identified as flood prone for land use or hazard mitigation planning purposes by the state, local, or tribal government or delineated as a Special Flood Hazard Area (or 100-year floodplain) in

FEMA's most current flood advisory maps, unless it also ensures that the action is designed or modified to minimize harm to or within the floodplain, in accordance with Executive Order 11988 and 24 CFR part 55. The relevant data source for this provision is the state, local, and tribal government land use regulations and hazard mitigation plans and the latest-issued FEMA data or guidance, which includes advisory data (such as Advisory Base Flood Elevations) or preliminary and final Flood Insurance Rate Maps.

- n. The City certifies that its activities concerning lead-based paint will comply with the requirements of 24 CFR part 35, subparts A, B, J, K, and R.
- o. The City certifies that it will comply with environmental requirements at 24 CFR part 58.
- p. The City certifies that it will comply with the provisions of title I of the HCDA and with other applicable laws.

The City acknowledges that any person who knowingly makes a false claim or statement to HUD may be subject to civil or criminal penalties under 18 U.S.C. 287, 1001, and 31 U.S.C. 3729.

Waivers

Modification of Prohibition on Flood Disaster Assistance for Households Above 120% of AMI for Failure to Obtain Flood Insurance

The Consolidated Notice, at Section IV.E.2.b., imposes a prohibition on the reconstruction or rehabilitation of a home in a floodplain if the homeowner did not have a flood insurance policy in effect at the time Ida hit *and* the household income is above 120% AMI. While the City understands the intent behind this prohibition, the City requests the applicable household income limit be raised to 165% of AMI to be consistent with many of the City's other affordable housing programs. The City considers this waiver is warranted given the higher cost of living in New York City and the threat of displacement for even middle-income homeowners based on the impacts of climate change. As flood insurance rates increase and sea levels rise, environmental conditions have the potential to permanently displace working- and middle-class New Yorkers from their neighborhoods.

Summary and Response to Public Comments

Initial Action Plan

The City received feedback on the NYC CDBG-DR Hurricane Action Ida Plan by email and at a virtual public hearing held on September 14, 2022. Below is a summary of the comments and City responses to each.

Comment: The City received two comments suggesting the City direct more or all CDBG-DR funding to maintaining and expanding the existing sewer system and catch basins.

City Response: The current design standard for sewers is 1.75 inches/hour and the City continues to invest in expanding the sewer system and catch basins. While the sewers will continue to serve as the backbone of NYC's drainage system, in many areas they cannot be built larger than they already are. Therefore, the City is simultaneously investing in a citywide network of blue and green infrastructure to intercept stormwater before it reaches the sewer system. While the City is making significant

investment in sewers and blue and green infrastructure, these additional federal funds will benefit underinvested areas, including areas of public housing.

Comment: The City received one comment suggesting the City implement a voluntary buyout program for homeowners in areas vulnerable to flooding.

City Response: For New Yorkers living in high-risk flood areas, the City is actively pursuing federal and state resources to develop programs and services that support equitable, voluntary housing mobility. The City's primary goals are to prevent long-term displacement caused by flooding and provide New Yorkers living in flood-prone areas with the resources for a future move. As the City works with state and federal partners to secure these resources, it continues to evaluate and explore a series of housing mobility services, including housing counseling, down payment assistance, rental assistance, real estate brokerage services, estate planning, and moving assistance, and flood insurance.

The City will prioritize the needs of low- and moderate-income households to secure stable and safe future housing. In addition, we will continue to plan for and build more sustainable, resilient neighborhoods citywide, to keep all New Yorkers healthy and safe in the face of climate change.

Comment: The City received two comments suggesting the City offer direct monetary assistance for home repairs such as basement restoration.

City Response: While the City does not propose to use its CDBG-DR allocation to fund outstanding repairs, the City's Housing Recovery Office is operating a [Hurricane Ida Supplemental Funding Program](#) that may cover certain repairs and mitigation work. The application period for this program has been extended through October 3, 2022. Interested parties are encouraged to contact HRO for more information.

Looking forward, programs such as Resiliency in Single-Family Housing and the Resiliency in Basement Apartments study are intended to identify and implement measures that will help alleviate the need for future repairs.

Comment: The City received one comment suggesting the Flood Insurance & Financial Counseling program provide homeowners with resiliency audits and elevation certificates, and that the City should assist homeowners applying for other relief programs and provide financial assistance for the flood insurance premiums.

City Response: The City is committed to supporting and expanding FloodHelpNY, which provides resources and information to New Yorkers about the importance of flood insurance, which remains the best financial tool to help residents and businesses rebuild and repair after a flood.

The Flood Insurance & Financial Counseling Program will offer elevation certificates, as well as in-home engineering inspections and financial counseling sessions, to property owners in neighborhoods at-risk from flooding. CDBG-DR funds may be used to pay for inspections, counseling, marketing materials, and program administration.

Given the importance of flood insurance as a tool to support financial resiliency of New Yorkers, the City remains committed to advocating for policies and programs - like FloodHelpNY - that help preserve the affordability of flood insurance for all New Yorkers. Additionally, the City continues to advocate for federal legislative reforms to the National Flood Insurance Program (NFIP), a federally-

run means-tested affordability program administered by FEMA, which aims to ensure flood insurance remains accessible for all households, including those in New York City.

Comment: The City received one comment suggesting the City work with the State to again reopen the Ida Relief Fund for Excluded New Yorkers.

City Response: The City is committed to supporting all of its residents, including undocumented immigrants. For more information about resources available to immigrants in New York City, please see the Mayor's Office of Immigrant Affairs.

The Ida Relief Fund for Excluded New Yorkers, which was a State program, accepted applications until April 29, 2022. For more information about other resources available from New York State, please see the New York State Office for New Americans (ONA). For any immigrant in need of assistance, or to connect with ONA's programs, call the New Americans Hotline at 1-800-566-7636.

Comment: The City additionally received one comment suggesting the City's outreach and education in target neighborhoods be performed by culturally competent organizations that speak the appropriate language(s).

City Response: The City recognizes its obligation to conduct adequate outreach and education that ensures eligible applicants in targeted neighborhoods, regardless of language or ethnicity, are provided an opportunity to apply for assistance. The Elevated Hazard Awareness & Community Outreach program includes the hiring of an Immigration Outreach Specialist to provide outreach and education to people with limited English proficiency, with a particular focus on the risks of flooding, coastal storms, and the steps New Yorkers can take to be prepared. The City will also work with community-based organizations to advertise its resiliency programs, both federally- and City-funded, as details are finalized. Specific outreach methods will be identified in future Action Plan amendments.

Comment: The City received one comment recommending that the City grant homeowner applicants/beneficiaries of DR-funded programs amnesty from code enforcement efforts and tenants residing in the homes of program applicants amnesty from eviction.

City Response: HPD, as one of the City agencies with code enforcement jurisdiction over certain buildings in the City, is committed to taking into account the effect of any external events on the damage of a property when considering code enforcement activity. However, in cases where such activity may be necessary to protect the health and safety of tenants, the City will pursue the necessary enforcement activity.

Comment: The City received one comment recommending that the Resiliency Improvements in Single-Family Housing program allow funds to address deferred maintenance and health hazards (e.g., mold, lead-based paint).

City Response: The City expects that many properties require deferred maintenance work that is not specifically related to resiliency efforts. The City currently operates various programs to address health hazard and deferred maintenance issues. As the City further defines the program, it will continue to consider this comment. When the program is developed, the City will issue a substantial amendment to this Action Plan, which would be subject to another 30-day public comment period.

Comment: The City received two comments recommending that the Resiliency Improvements in Single-Family Housing program explicitly allow 2- to 4-unit properties to be served.

City Response: The program description for the Resiliency Improvements in Single-Family Housing program already allows for 2- to 4-unit properties to be served. As the City further defines the program criteria, it will continue to consider this comment and may revise the name of the program to more clearly reflect such criteria. When the exact eligibility criteria for the program is developed, the City will issue a substantial amendment to this Action Plan, if necessary, and substantial amendment would be subject to another 30-day public comment period.

Comment: The City received one comment recommending that funds should be used to make repairs and resiliency improvements in basement apartments, not just for the basement study and not just for "whole home" solutions.

City Response: The City currently operates programs to address general repair needs of 1-4 family homes including those with legal basement apartments. As the City further defines the program, it will continue to consider this comment. When the program is developed, the City will issue a substantial amendment to this Action Plan, if necessary, and substantial amendment would be subject to another 30-day public comment period.

Comment: The City received one comment recommending that programs limited to persons/households of specific income should streamline applications by allowing the use of "proxy documentation" (e.g., seniors who receive federal assistance or state/city tax exemptions should automatically be eligible).

City Response: The City agrees that application processes should be streamlined to the extent possible. As the City further defines program criteria, the City will balance this consideration with its obligation to ensure applicants submit necessary documentation demonstrating they meet HUD eligibility criteria.

Comment: The City received three comments in support of the 3D Underground database.

City Response: The City thanks the commenters for their messages of support.

Substantial Amendment 1

The City received feedback on the NYC CDBG-DR Hurricane Action Ida Plan by email. Below is a summary of the comments and City responses to each.

Comment: The City received one comment from a storm victim seeking compensation for losses suffered as a result of Hurricane Ida.

City Response: Based on the HUD Notices, compensation for actual losses is not eligible under the CDBG-DR program. However, the City encourages City residents whose homes were damaged by Hurricane Ida to apply for the housing resiliency program if they meet the criteria, which will be announced in a future amendment.

Data Sources/Methodology

Data Sources

To derive the data used in this Action Plan, the City developed an Ida Damaged Building Composite dataset, which combines information from more than 20 different sources and presents a unique count of buildings impacted by PTC Ida. For each building in New York City, the dataset includes:

- Information on property and land use including but not limited to: topography, neighborhood demographic characteristics, number of units (if applicable), building age, and housing and building code information; and
- Data related to Ida's impact, such as localized rainfall accumulation and flood damage indicators.

Land Use Data

Administrative datasets provided essential information on New York City land, building, and households. Key sources include:

- [Building Footprints](#) from NYC Office of Technology and Innovation.
- [MapPLUTO](#) land use information from the NYC Department of City Planning
- [American Community Survey \(ACS\)](#) from the U.S. Census Bureau
- [Social Vulnerability Index \(SVI\)](#) from the U.S. Centers for Disease Control and Prevention (CDC)
- [Housing Maintenance Code Violations](#) from the NYC Department of Housing Preservation and Development

Ida Impact Data

The City faced several challenges when attempting to quantify Ida's impact. While the City collects an abundance of information during and after emergency events, there is no standard definition of impact or a central data repository of damage. Additionally, unlike coastal flooding, where damage is typically visible from aerial images or the street, damage from inland flooding may not be easily visible from the exterior. Without visual assessments, alternative approaches to identifying damage and estimating impacts are needed. Finally, damage estimates may be impacted by the issues described in the Data Limitations section of this chapter. As described throughout this Action Plan, the City's proposed uses of CDBG-DR funds, particularly for planning efforts, are intended to provide data-driven estimates of damage that result from future disasters.

The City estimated Ida impacts by considering various indicators of storm damage and utility disruption. These data include:

- **Resident-reported damage:** The City directed residents to report damage via the [Severe Weather Damage Assessment Tool](#) and 311 service requests. In addition, the Mayor's Public Engagement Unit collected damage reports through canvassing efforts. While resident-reported damage is not a verified source of damage, the analysis treats all indicators equally as a signal of damage.
- **Verified damage and disruptions:**
 - Utility providers reported outages directly to the City.

- Federal insurance and disaster recovery programs require physical damage assessments in the claim and grant application process and, as a matter of practice, provide aggregated information to City partners.

From this data, the City created damage indicators that reflect the following conditions:

- Health and housing issues: building vacates, mold, plumbing disruptions, paint and plaster problems, floor and stair damage, repair requests, and debris removal requests.
- Water and flooding issues: sewer and sewage complaints, and reports of water leaks.
- Utility disruption: electric and gas outages.
- Claims and awards: approved claims from the National Flood Insurance Program (NFIP) and FEMA Individual Assistance (IA) and FEMA Public Assistance (PA) programs.

Data Limitations

Incomplete Data

Although the Ida Damage Building Composite dataset compiles an abundance of information, additional data could expand analysis and provide a deeper understanding of damage and hazard risk. The lack of an Ida inundation model limits the study of street level conditions and increases reliance on weather station data. Improved data collection on flood depth and rate would heighten awareness of local conditions in an inland flood and inform stormwater modeling and resiliency planning. More widely deployed sensors are a promising measurement tool that could augment traditional methods like field observations of high-water marks from seed or stain lines.

With few exceptions, data regarding the financial cost of flood damages and repair at the building level are not yet widely available to the City. While FEMA is able to provide detailed information on assistance provided through NFIP and FEMA IA, the City and federal governments were still in the process of completing the necessary data sharing agreements when this Action Plan was published. Additionally, the citywide repair cost estimates do not provide insight into the total economic impact or revenue loss due to PTC Ida.

Data Bias

Since the mid-2010s, several researchers have documented differences in 311 reporting behaviors based on neighborhood income and resident demographics. These differences can lead to bias in data, which overestimates the conditions of some groups and underestimates others. In the context of PTC Ida, the real or perceived risk of reporting impact from PTC Ida may be more significant for New Yorkers who are undocumented or residents living in unauthorized housing units, leading to underreporting of damage.

However, the severity of the event may mitigate typical bias patterns in 311 data. More threatening life and safety issues result in more active use of 311 by residents of lower income or socioeconomic status neighborhoods than higher income residents, due in part to limited resources to solve the issues. Additionally, by design, the analysis included a range of indicators independent of resident action (e.g., tonnage removed by the Department of Sanitation by Community District), further reducing reporting behavior bias in damage estimates.

Federally Used Acronyms

AMI	Area Median Income
CBDO	Community Based Development Organization
CDBG	Community Development Block Grant
CDBG-DR	Community Development Block Grant- Disaster Recovery
CFR	Code of Federal Regulations
CO	Certifying Officer
CP	Participation
DOB	Duplication of Benefits
DRGR	Disaster Recovery and Grant Reporting System
FEMA	Federal Emergency Management Agency
HCD Act	Housing and Community Development Act of 1974, as amended
HMGP	Hazard Mitigation Grant Program
IA	(FEMA) Individual Assistance
LIHTC	Low-Income Housing Tax Credit
LMI	Low and moderate-income
NFIP	National Flood Insurance Program
PA	(FEMA) Public Assistance
RE	Responsible Entity
RFP	Request for Proposals
SBA	U.S. Small Business Administration
SFHA	Special Flood Hazard Area

UGLG	Unit of general local government
URA	Uniform Relocation Assistance and Real Property Acquisition Act of 1970, as amended
USACE	U.S. Army Corps of Engineers
