**DCAS**

Citywide Administrative  
Services

## About DCAS

The Department of Citywide Administrative Services (DCAS) provides effective shared services to support the operations of New York City government. Its commitment to equity, effectiveness, and sustainability guides its work with City agencies on recruiting, hiring, and training employees; providing facilities management for 56 public buildings; acquiring, selling, and leasing City property; purchasing more than \$1 billion in supplies and equipment each year; and implementing conservation and safety programs throughout the City's facilities and vehicle fleet.

Learn more at [nyc.gov/dcas](https://nyc.gov/dcas)

## About the Division of Energy Management

The DCAS Division of Energy Management is at the forefront of the City's energy conservation and sustainability efforts. It oversees more than 10,000 utility accounts for City government agencies across 4,000 public buildings. It implements creative solutions to reduce energy consumption, promote energy efficiency in public buildings, and to generate clean energy on City-owned properties. DCAS manages a \$700 million annual energy supply budget and a \$2.7 billion 10-year capital budget to develop and implement programs to achieve the City's *One City: Built to Last* strategy of an 80% reduction of greenhouse gas emissions by 2050.

## Executive Summary

This report was prepared in compliance with the requirements of Local Law 45 of 2018 (LL45). LL45 requires the Department of Citywide Administrative Services (DCAS) to report on annual electricity and fossil fuel usage, real-time metering, and assessments of and improvements made to the envelopes of covered facilities for four years from the effective date of the law. This is the third of four reports required by LL45, as prepared by DCAS' Division of Energy Management (DEM).

LL45 defines a covered facility as a facility where the City pays for at least one electricity account which had a peak demand of at least 300 kilowatts (kW) over the past fiscal year (Fiscal Year 2020). There are 677 covered facilities as of the end of Fiscal Year 2020 that meet this requirement. A subset of those, 551 facilities in total, are owned by the City; the remainder are leased spaces. Per the requirements of LL45, for all covered facilities, this report identifies: (a) their electricity usage over the past fiscal year and change in usage over the last five years; (b) if they have equipment that allows electricity to be measured and reported in near real-time, referred to as real-time meters (RTM);<sup>1</sup> and (c) if they do not have RTM, whether such equipment is "appropriate and practicable,"<sup>2</sup> and the expected installation timeline. Reporting the change in electricity usage for all covered facilities enables a comparison of the change for each facility to the overall change for all facilities. For City-owned covered facilities, the report also includes the facilities' fossil fuel and steam usage over the past fiscal year,<sup>3</sup> the change in fossil fuel and steam usage over the last five fiscal years, if their facility envelopes have been subject to an assessment within the last year, and any envelope improvement projects commenced, continued, or completed.

For this report, DCAS utilized utility billing data for electricity, natural gas, and steam usage and City agency-reported usage and purchasing records for heating fuel oil, and site inspections for information on covered facilities' RTM "appropriate and

practicable" status. The report drew upon several data sources from DCAS programs to identify facility envelope assessment status, including Local Law 87 energy audits, Deep Energy Retrofit Program reports, Accelerated Conservation and Efficiency Program project reports, individual building energy audits, and 80x50 Incentive Program reports.

Over the past five fiscal years, total electricity usage has decreased by over eight percent for covered facilities as a whole, and fossil fuel and steam usage has decreased by over six percent for City-owned covered facilities.<sup>4</sup> Considering only those facilities that have electricity usage for all of the five previous fiscal years examined, electricity usage as a whole decreased over nine percent. For those City-owned covered facilities which had fossil fuel or steam usage for all the previous five fiscal years examined, fossil fuel and steam usage also decreased by over six percent. At the facility level, almost 70 percent of all covered facilities decreased electricity usage over the past five fiscal years, while 29 percent of covered facilities increased their usage.

Seventy-five percent of the 677 covered facilities already have electricity RTM installed. This assessment implies that RTM installation may be appropriate and practicable for an additional 15 percent of covered facilities. Thus, 90 percent of covered facilities either have RTMs installed, or are potentially viable for future installations.

<sup>1</sup> In this report, RTM refers to "electricity usage telemetry equipment" cited in LL45.

<sup>2</sup> In this report, RTM installation was not deemed "appropriate and practicable" if a covered facility's electricity utility meter room was inaccessible, or if the agency was planning to relocate from the covered facility within the next four years, as reported in the initial Agency survey.

<sup>3</sup> Fossil fuels include heating fuel oil and natural gas. District steam also is presented as it is produced by the burning of fossil fuels locally.

<sup>4</sup> LL45 excludes leased covered facilities from the population required to report fossil fuel usage.

Seventy City-owned covered facilities underwent facility envelope assessments in Fiscal Year 2020. These assessments resulted in 52 recommended envelope improvement projects. Of the 52 recommended projects, one is expected to be completed by the end of Fiscal Year 2021, 35 will be installed with completion dates not yet determined, and 16 projects are still being evaluated for feasibility. For Fiscal Year 2019, 62 envelope assessments resulted in 41 envelope improvement projects. Of the 41 projects, one project has already been completed, 33 projects are expected to be completed by the end of Fiscal Year 2021, two will be installed with their installation dates not yet determined, three projects are still being evaluated for feasibility, and two were rejected for having too long paybacks. For Fiscal Year 2018, 43 envelope assessments resulted in 31 recommended envelope improvement projects. Of those 31 projects, 13 have already been completed, 12 are expected to be completed by end of Fiscal Year 2021, four have been recommended for capital plan integration or were already integrated into a partner agency's capital plan, one will be installed with completion dates not yet determined, and one was rejected for too long payback. In total, from the recommendations from 175 facility envelope assessments conducted since Fiscal Year 2018, 124 envelope projects have been recommended. Of these 124 projects, 14 recommended improvement projects have been completed, 46 are expected to be completed by the end of Fiscal Year 2021, 23 have either been recommended for integration into capital improvement plans or are still being evaluated for viability, 38 have been identified with their date of installation is to be determined, and three have been rejected for extensive payback periods.

**Table 1** has a breakdown of all covered facilities, with agency and City-ownership designation. Section 1 and **Appendix A** have information on covered facilities' electricity usage, and Section 2 and **Appendix B** have information on RTM status. For City-owned covered facilities, Section 3 and **Appendix C** have information on fossil fuel usage, Section 4 and **Appendix D** have information on facility envelope status, and Section 4 and **Appendix E** have information about envelope improvement projects.

## Section 1. Electricity Usage

### Context and Data Collection Methodology

LL45 requires DCAS to report on electricity usage over the past fiscal year and the change in usage over the last five fiscal years for covered facilities. Data about electricity usage is drawn from monthly utility billing information. In this report, electricity usage consists of both grid electricity and onsite solar generation.<sup>5,6</sup> Electricity usage data from Fiscal Years 2016 through 2020 were available for this report.<sup>7</sup>

During preparation of this report, DCAS reexamined the data collection methodologies for all LL45 energy data. DCAS discovered that the automated process used to collect solar generation data for previous LL45 reports did not capture all solar generation data from covered facilities' PV installations.<sup>8</sup> DCAS updated the solar generation collection methodology to match the methodology DCAS uses in other solar generation reporting; the updated methodology includes manual data quality checks and verification of generation data. The range in the magnitude of the adjustment is from 490% to 170%, with Fiscal Year 2016's solar generation needing greater adjustment than solar generation in later fiscal years.

### Electricity Usage Overview

- See **Table 2** for the summary of electricity usage data.
- Total electricity usage has decreased over eight percent in the past five fiscal years for all covered facilities.<sup>9</sup> With respect to covered facilities that have had electrical usage for all five fiscal years reviewed (664 facilities total), electricity usage decreased over nine percent.<sup>10</sup>
- 69 percent (470 facilities) of covered facilities decreased electricity usage over the past five fiscal years, 18 percent (122 facilities) remained stable or increased their usage by up to ten percent, seven percent (45 facilities) increased their electricity

usage between 11 to 24 percent, four percent (27 facilities) of covered facilities increased their usage at least 25 percent, and two percent (13 facilities) of covered facilities did not have electricity data for all five fiscal years (**Figure 1**).

- Where there was an increase in electricity usage at covered facilities, contributing factors may include facility occupancy rates, hours of operation, functional changes, additions in square footage and plug load; such data was not available for this report.
- **Appendix A** lists each facility's Fiscal Year 2020 electricity usage and change in usage over the past five fiscal years.

<sup>5</sup> On-site solar installations began generating electricity at some covered facilities in Fiscal Year 2014.

<sup>6</sup> For systems without operational data acquisition systems the annual generation is estimated as  $kW-DC \times 1100 \text{ sun-hours/year}$  for New York City based on NREL sun-hour data and an industry standard 25% discount factor to account for losses from imperfect azimuth angle, soiling, shading, degradation and even losses due to irradiation from pollution, inter alia.

<sup>7</sup> Fiscal Year 2020 electricity usage is reflective of COVID-related building use and may not be entirely reflective of overall multi-year trends.

<sup>8</sup> This automated solar generation collection methodology was unique to LL45 reporting and never used for any other solar generation reporting.

<sup>9</sup> Usage data in the report has not been weather-normalized.

<sup>10</sup> FY20 had a warmer summer but a colder winter compared to the FY16 base, based on Degree Days (DD). In particular, FY20 had a drop of 8.3% in Cooling Degree Days (CDD) compared to FY16, and an increase of 11.4% in Heating Degree Days (HDD). Overall, it had 5.7% more DD than the FY16 base period. CDD is a monthly count of daily degrees above 65, when energy is needed for cooling and moving air around a building; HDD is a monthly count of daily degree days below 65, when energy is needed for heating and moving air.

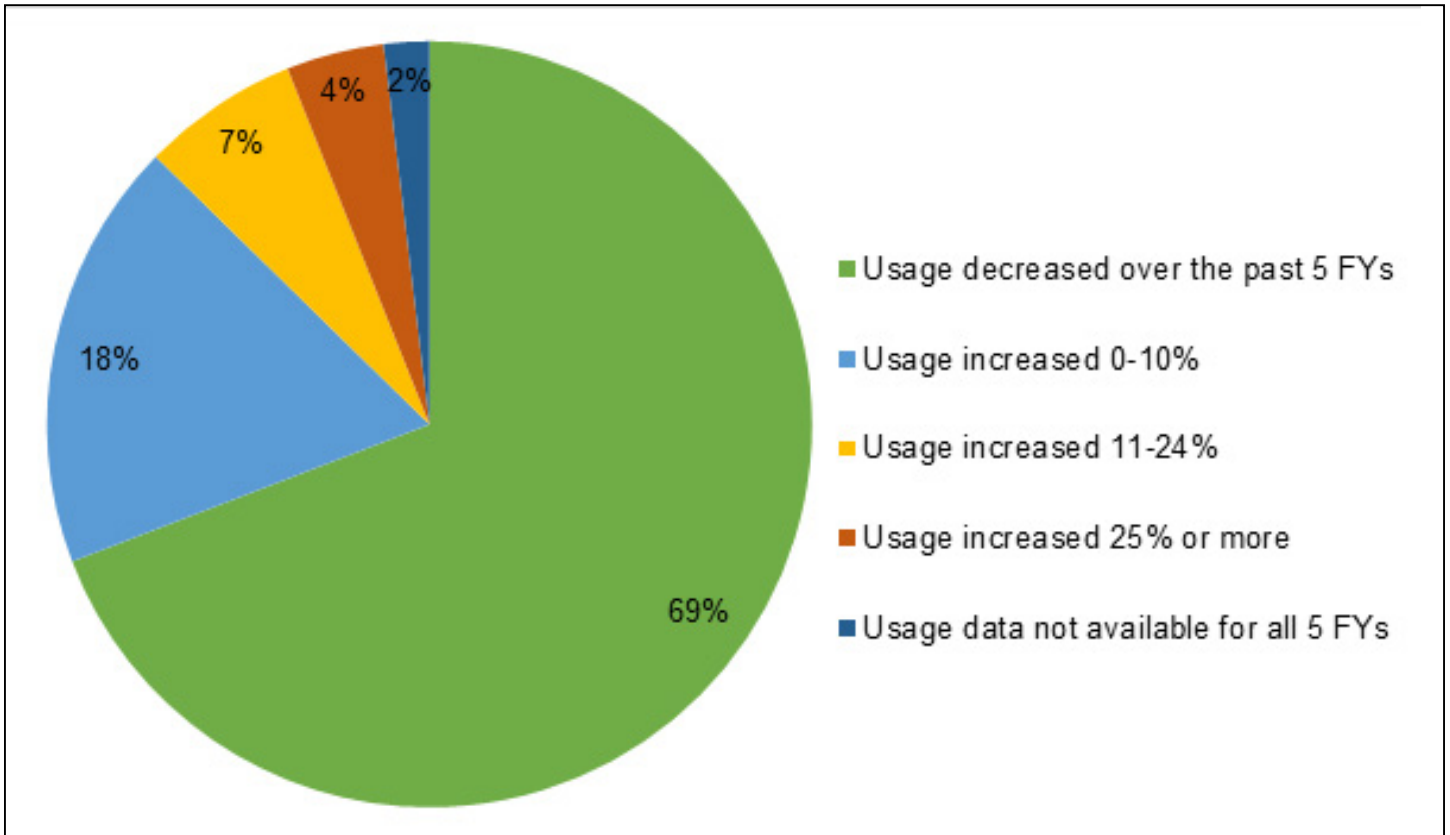

**Table 2. Electricity Usage in Kilowatt-Hours for All Covered Facilities, Fiscal Years 2016-2020**

	FY 2016	FY 2017	FY 2018	FY 2019	FY 2020	Change Over Last 5 FYs	Percentage Change Over Last 5 FYs
Grid Electricity Usage	2,744,936,074	2,786,792,416	2,753,972,588	2,697,892,385	2,508,821,440	-236,114,634	-8.6%
Solar Electricity Generation	4,697,144	7,551,682	7,750,438	7,231,200	8,131,564	3,434,420	73%

\*Percent change using Fiscal Year 2016 as base year.  
Numbers rounded to the nearest 1 kWh

**Figure 1. Electricity Usage Trends for All Covered Facilities, Fiscal Years 2016-2020**

## Section 2. Real-Time Metering Status

### Context and Data Collection Methodology

LL45 requires DCAS to report on RTM status in covered facilities – specifically, which covered facilities have RTMs; whether RTM installation would be practicable and appropriate in those lacking RTMs; and, where installation is appropriate and practicable, in which fiscal year RTMs will be installed. Generally, RTMs are monitoring devices that automatically relay energy usage data from a utility meter to a digital centralized portal at regular, near real-time intervals. Between early 2015 until the end of Fiscal Year 2020, 549 facilities have been equipped with RTM capabilities; 27 of them are facilities with steam or gas RTM. Given sufficient resources, the City also has set a goal of installing such devices at enough facilities to cover 80 percent of municipal load. This would include all covered facilities where RTMs are practicable and appropriate, plus additional facilities that do not meet the criteria of covered facilities in this report.

DCAS initially focused RTM installation efforts to support the Demand Response (DR) Program; more recently, DCAS has focused on expanding RTM installations to support enrollment in the Load Management (LM) Program. Through the DR Program, facilities reduce electric load during short-term periods of peak demand to preserve grid reliability and limit the use of the most expensive, and often the dirtiest, power plants. Through the newer LM Program, DCAS helps participating facilities identify additional time blocks in which they can reduce energy usage in addition to periods of peak demand. Through the LM Program, DCAS trains building operators to identify operational changes<sup>11</sup> to their buildings that support efficient long-term energy management. In general, RTMs improve performance during DR events by providing near real-time information on the load amount that has been shed. For the LM program, electricity usage patterns provided through RTMs are one important basis for both identifying potential savings periods and assessing the impacts of operational changes.

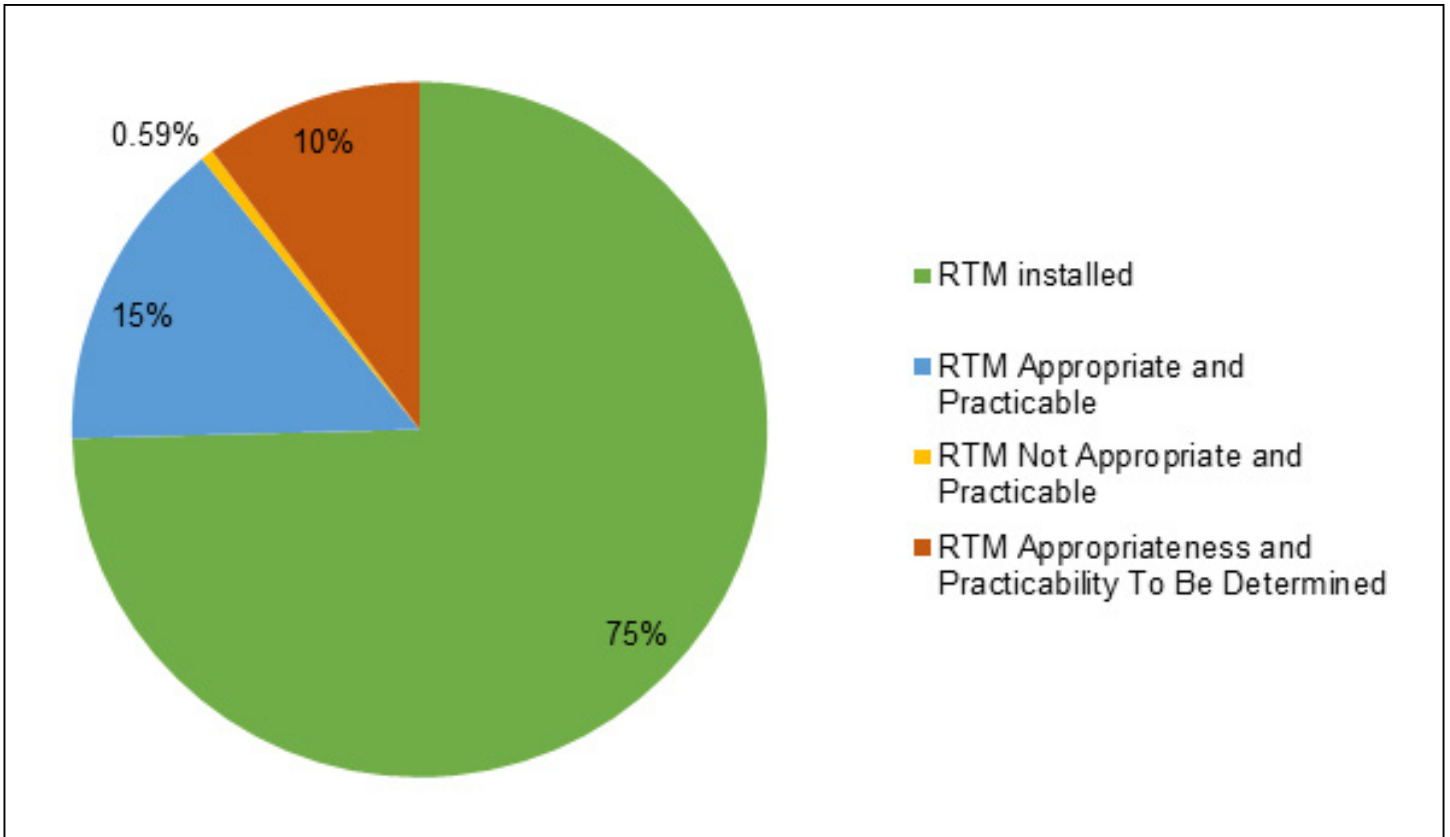

In Fiscal Year 2018, DCAS surveyed agencies to evaluate whether RTMs would be appropriate and practicable in covered facilities that do not yet have them. Since that survey, DCAS has conducted site surveys at more than half covered facilities to determine the appropriateness and practicality of RTM installations. A small percentage of covered facilities still require a site inspection to determine whether RTM is appropriate and practicable.

### Real-Time Metering Overview

- Of the 677 covered facilities, 75 percent (505 facilities) of covered facilities already have electricity RTM installed. This leaves a balance of 25 percent (172 facilities) that currently do not have installations (**Figure 2**).
- To date, of these 172 covered facilities, RTMs have been identified as appropriate and practicable for 99 facilities (57 percent of covered facilities without RTM installations). Nearly three percent (four facilities) of covered facilities without RTM installations indicated that RTM is not appropriate nor practicable. The remaining 40 percent of the 172 facilities (69 facilities) will require a site inspection, so both the appropriateness and practicability of RTM and the potential schedule for installation can be determined. These site inspections will be scheduled in Fiscal Year 2021 and should be completed by the end of Fiscal Year 2021. Depending on the results of site surveys and current building usage, RTM installations, where appropriate and practicable, are expected to be completed in Fiscal Year 2023.
- **Appendix B** includes the RTM status of each of the covered facilities for which electricity usage is reported.

<sup>11</sup> Changes may include, but not be limited to, adjusting heating and cooling setpoints; identifying and addressing simultaneous heating and cooling; and adjusting the operations schedule to perform functions during periods of lower overall energy demand.

**Figure 2. RTM Status for All Covered Facilities**

## Section 3. Fossil Fuel and Steam Usage

### Context and Data Collection Methodology

LL45 requires DCAS to report on fossil fuel use for the last fiscal year and change in usage over the last five fiscal years for City-owned covered facilities (551 facilities). In this report, fossil fuels are defined as heating fuel oil (Fuel Oil Numbers 2, 4, 6) and natural gas. District steam usage from the Con Edison steam system is also included in this report because it is produced from fossil fuel usage within New York City. Fossil fuels and steam primarily are used for heat and hot water in covered facilities. To curb criteria air pollutants,<sup>12</sup> the City mandated the phasing out of heavy heating fuels (i.e., Fuel Oils Numbers 4 and 6), and has pursued efforts to switch facilities to natural gas and use oil as emergency back-up. Heavy fuel oil phase-out has reduced City CO<sub>2</sub> emissions by almost one million tons and PM<sub>2.5</sub> emissions by 65 percent since 2011.<sup>13</sup> Several covered facilities, such as schools and hospitals, still rely on Fuel Oil Number 2 to heat some of their covered facilities. New York City requires all fuel oil to be ultra-low sulfur with a minimum biodiesel content of five percent; this results in Fuel Oil Number 2 having 95% fewer PM<sub>2.5</sub> emissions than those of now-phased out Fuel Oil Number 6. As such, Fuel Oil Number 2 has a similar emission profile to that of natural gas.

Data on natural gas and district steam usage come from monthly utility billing information. For heating oil, City Agencies are responsible for tracking their oil usage and reporting usage to DCAS. In this report, Fiscal Years 2015 through 2019 data are reported, since Fiscal Year 2019 is the most recent year for which full heating oil data currently is available. Natural gas and district steam usage are also reported for this period, to allow for comparability in reporting and presentation of the five-year fossil fuel change.

### Fossil Fuel and Steam Usage Overview

- See **Table 3** for the fossil fuel and steam usage data summary for all covered facilities.
- Over the past five fiscal years, overall fossil fuel plus steam usage has decreased by over six percent, and fossil fuel usage alone has decreased by nearly four percent. Steam usage has decreased by over 15 percent; heating fuel oil usage has decreased almost 32 percent, reflecting the phasing out of Numbers 4 and 6 heavy fuel oils, while natural gas usage has increased by ten percent.
- For covered facilities which used fossil fuels or steam during each of the five fiscal years (510 facilities), overall fossil fuel and steam usage decreased by over six percent between Fiscal Years 2015 and 2019.
- See **Appendix C** for the table of fossil fuel usage and steam data.

<sup>12</sup> Criteria air pollutants, as defined by the US Environmental Protection Agency, refer to ground-level ozone, fine particulate matter (PM<sub>2.5</sub>), carbon monoxide, lead, sulfur dioxide, and nitrogen dioxide.

<sup>13</sup> Email communication from Milka Rodriguez (Mayor's Office of Sustainability) to Emily Poorvin (DCAS), 24 January 2020; "Inventory of New York City Greenhouse Gas Emissions," Mayor's Office of Sustainability, <https://nyc-ghg-inventory.cusp.nyu.edu/#data>.

\*Percent change using Fiscal Year 2015 as base year.  
Numbers rounded to the nearest 1 MMBTU

## Section 4. Facility Envelope Assessment Status

### Context and Data Sources

LL45 requires DCAS to report on whether City-owned covered facilities have undergone facility envelope assessments, and if any improvements to a facility's envelope<sup>14</sup> have been commenced, continued, or completed during the previous fiscal year. This report interprets the terms *envelope assessment* and *envelope improvement* to refer to envelope thermal performance, defined as the capacity of a building's envelope to prevent undesired energy transfers between a building's interior environment and the exterior. Envelope thermal performance is a critical component to energy efficiency, as it serves to both reduce energy loss from inside a building and temper influences from adverse external weather conditions on the building's interior environment – thereby reducing the amount of energy needed to maintain comfortable interior conditions.

Information on electricity usage, fossil fuel usage, and RTM installation status is collected by DCAS and its partner agencies. However, there is no comprehensive collection of information on statuses of envelope assessments or improvements across covered facilities. Therefore, DCAS has used information from the sources that are available.

### Envelope Assessments

Overall, the available data sources can be grouped by those from which limited indirect thermal envelope performance information may be inferred, and data sources that directly measure thermal performance. For this report, the indirect data sources used were **Local Law 87 (LL87) energy audits** and **individual building energy audits**. LL87 energy audits, conducted with DCAS's oversight for covered buildings that are 50,000 square feet and greater,<sup>15</sup> describe the condition of the audited structure's envelope based on visual observation; LL87 does not require a detailed or quantitative assessment of thermal performance. Additionally, DCAS identified buildings with a high need for an energy assessment and conducted energy audits on

these facilities. Sixty-two City-owned covered facilities had energy audits associated with **LL87 energy audits** and three had **individual building energy audits** in Fiscal Year 2020, from which limited thermal performance may be inferred.

For this report, the direct envelope data sources used were records from the **DCAS Deep Energy Retrofit (DER) Program**. Records from these programs provide more detailed information about facilities' envelope thermal performance and other energy performance characteristics. The DER Program funds studies that describe the condition and quantify the approximate thermal performance of the studied building's major envelope elements. Some of these studies also include thermographic imaging to identify areas of high heat transfer and air or water infiltration (**Figure 3**).

- The **Deep Energy Retrofit Program** was established by DCAS in 2018 in response to Executive Order 26, and targets existing buildings with high levels of greenhouse gas (GHG) emissions. During Fiscal Year 2019, DCAS continued our efforts within this Program, including drafting DER guidelines, which incorporate specific guidance on envelope assessments. Additionally, in Fiscal Year 2020 DCAS developed envelope assessment guidelines further detailing how envelopes should be studied above the requirements of the DER guidelines. The envelope assessment guidelines have been used for new studies beginning in Fiscal Year 2021, as well as planned studies in upcoming fiscal years. The guidelines were identified as a crucial piece of documentation necessary to anticipate the needs of our partner agencies and ensure proper assessment of City facilities. In 2020, DCAS has been actively working on four DER assessments, three of which are covered under this Local Law.

<sup>14</sup> The facility envelope is the physical barrier between a building's interior environment and the exterior.

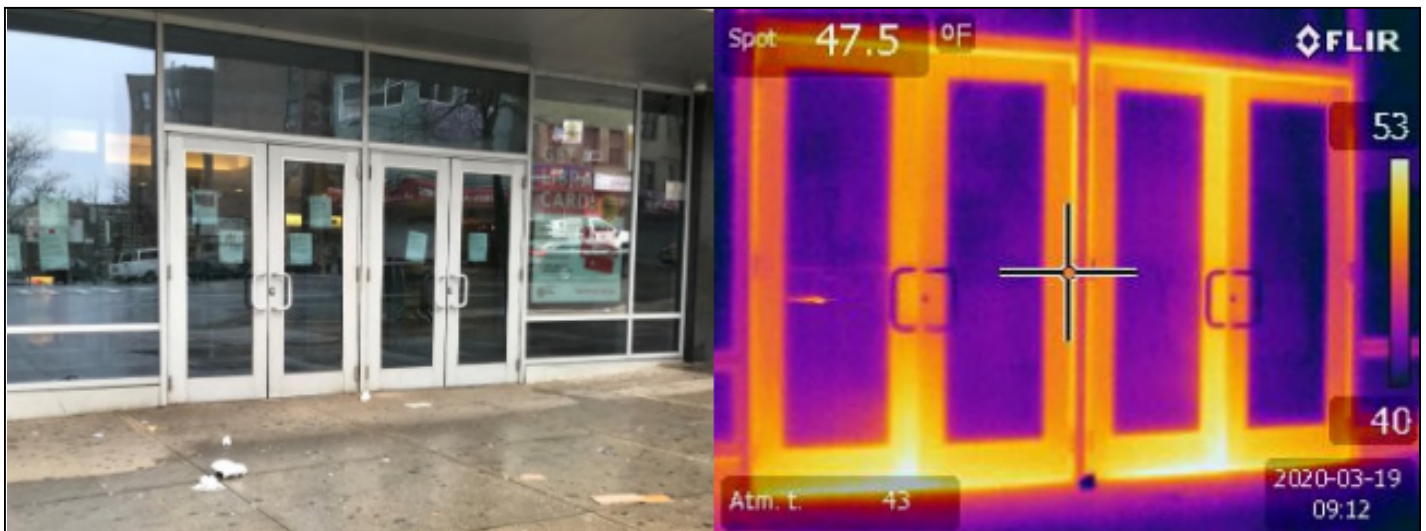

<sup>15</sup> Local Law 87 of 2009, NYC Administrative Code Chapter 3 §28-308.

The **Deep Energy Retrofit Program** supports DCAS investments in major capital projects at the studied buildings. Lessons learned from such studies, such as the cost-effectiveness of triple-paned windows or the maximum insulation that can be applied to the interior of a masonry façade without risking freeze-thaw damage, will also be applied to other energy projects undertaken by DCAS.

Two additional direct data sources of envelope assessments for Fiscal Year 2020 City-owned covered facilities are the **80x50 Incentive Program** and the **Accelerated Conservation and Efficiency (ACE) Program**. The goal of the 80x50 Program is to invest in projects that are part of an agency’s existing capital plan, to further enhance

project performance. The ACE Program funds partner agency-implemented capital projects that may reduce greenhouse gas emissions and energy usage, deliver cost savings, and provide other resiliency and equity benefits. With the allocated funds, the agency can select the most energy efficient systems available, convert fuel sources, optimize retrofits, and approach a building as one system. For existing buildings, these Programs’ projects are similar in scope and impact to DER Program projects, but are implemented by agencies and partner entities rather than by DCAS. One covered facility had its envelope assessed as part of the 80x50 Incentive Program, and one covered facility had its envelope assessed as part of the ACE Program in Fiscal Year 2020. **Appendix D** includes the envelope data discussed in this section.

**Figure 3. Sample Thermographic Image of the Existing Bronx Library Façade**

Thermographic image of exterior doors at the Bronx Library Center. The thermographic image shows two glass double doors with aluminum frames at the entrance to the library. Heat lost through the poorly insulated metal frames is shown in darker yellow; the bright yellow around the edges of the frames shows warm air leaking around the door where weather-stripping has worn away.

## Envelope Improvements

Of the 43 envelope assessments conducted in Fiscal Year 2018, 29 of those assessments recommended a total of 31 envelope improvement projects. Thirteen of those 31 recommended improvement projects in Fiscal Year 2018 have been completed, 12 projects are expected to be completed in Fiscal Year 2021, three projects have been recommended for capital plan integration, one project has already been included in an agency partner's capital plan, one project will be installed with the date yet to be determined, and one recommended project was rejected because of an extraordinarily long payback. Of the 62 envelope assessments conducted in Fiscal Year 2019, 39 of those assessments recommended a total of 41 envelope improvement projects. One of those 41 recommended projects in Fiscal Year 2019 has been completed, 33 are expected to be

completed in Fiscal Year 2021, three are still under consideration, two will be installed but the date is to be determined, and two recommended projects were rejected because of extraordinarily long paybacks. Some Fiscal Year 2020 assessments are still being analyzed for recommendations, but many already have finished analysis and produced preliminary envelope improvement project recommendations. Of the 70 envelope assessments conducted in Fiscal Year 2020 by the time of this report was being written, 38 of those 70 assessments recommended a total of 52 envelope improvement projects. One project is in progress and expected to be completed in Fiscal Year 2021, 35 will be installed with the date yet to be determined, and 16 projects are still undergoing consideration. **Appendix E** includes information on envelope improvement projects.

**Table 4. Recommended Envelope Improvement Projects and Status**

Improvement project status	FY18	FY19	FY20 <sup>16</sup>
Total number of recommended improvement projects	31	41	52
Completed	13	1	0
Rejected	1	2	0
Expected to be completed in FY21	12	33	1
Recommended for capital plan integration/Integrated into agency's capital plan	4	0	0
Will be installed with date TBD	1	2	35
Under consideration	0	3	16

<sup>16</sup> Numbers for FY20 reflect the status as of the time of writing this report.

## Section 5. Conclusion

Over the past five fiscal years, total electricity usage has decreased over eight percent for covered facilities with 300 kW and greater peak demand during Fiscal Year 2020. When looking at the population of facilities that were in operation for all five years, electricity usage decreased by more than nine percent. Changes in building usage patterns (e.g., hours of operation, occupancy density, plug loads, functional changes, etc.) may be masking greater energy efficiency gains. For example, a covered facility may work with the LM program to optimize its equipment operation schedule to reduce equipment running time from 20 hours a day to a schedule based on normal staff occupancy which is 10 hours a day; then, the staff occupancy schedule lengthens to 16 hours because of a change in staff responsibilities and activities. The impact of adopting more energy efficient equipment run times is masked by the lengthened staff occupancy schedule. Building usage changes such as the example described occur frequently, and affect measurable impacts of energy efficiency projects on a covered facility's energy usage.

Over the same period, fossil fuel and steam usage has decreased by over six percent for City-owned covered facilities. Over the last five fiscal years, more than two-thirds of covered facilities decreased electricity usage, a quarter increased electricity usage up to 24 percent, and four percent increased their electricity usage by 25 percent or more.

Three-quarters of covered facilities already have electricity RTM installed, and an additional 15 percent have been identified as facilities where RTM is appropriate and practicable. Thus, in total, 90 percent of covered facilities either already have, or may be suitable for, electricity RTM installation.

Seventy City-owned covered facilities underwent facility envelope assessments in Fiscal Year 2020. From the recommendations from envelope assessments for the covered facilities subject to LL45 that have been conducted since Fiscal Year 2018, 14 projects have been completed, 46 are expected to be completed by the end of Fiscal Year 2021, 23 have either been recommended for integration into capital improvement plans or are still being evaluated for viability, 38 have been identified with their date of installation yet to be determined, and three recommended improvement projects have been rejected for too long payback.

## Appendix A: Covered Facilities' Electricity Usage

This appendix includes electricity usage information between Fiscal Years 2016 through 2020 for City-owned and City-leased covered facilities which had peak demand of 300 kW or more in Fiscal Year 2020. The last column is color-coded by usage change. For the last column, white indicates the covered facility was not using electricity in all five fiscal years; **green** indicates that the covered facility experienced a reduction in energy usage over the last five fiscal years; **yellow** indicates that the covered facility experienced an increase in energy usage of zero to 10 percent; **orange** indicates an increase in energy usage of 11 to 24 percent, and **red** indicates an increase in energy usage of 25 percent or more.
