Symposium Event  
16 February 2024

# e-JUST: Environmental Justice using Urban Scalable Toolkit

**Ashish Sharma**

*Climate and Urban Sustainability Lead  
Discovery Partners Institute, University of Illinois System*

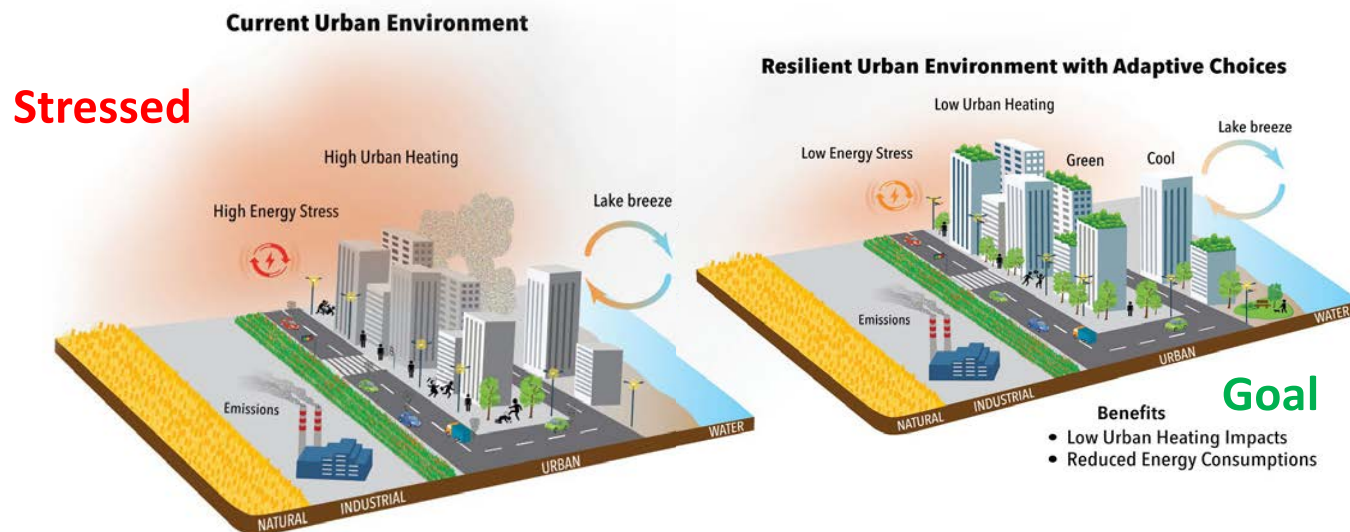

*Climate Scientist, Argonne National Laboratory*

Email: [sharmaa@illinois.edu](mailto:sharmaa@illinois.edu)

# Urban systems

Multiscale, interdependent, social, natural, and engineered complex systems.

# Computer (climate) urban models

## Regional-scale models

## City-scale models

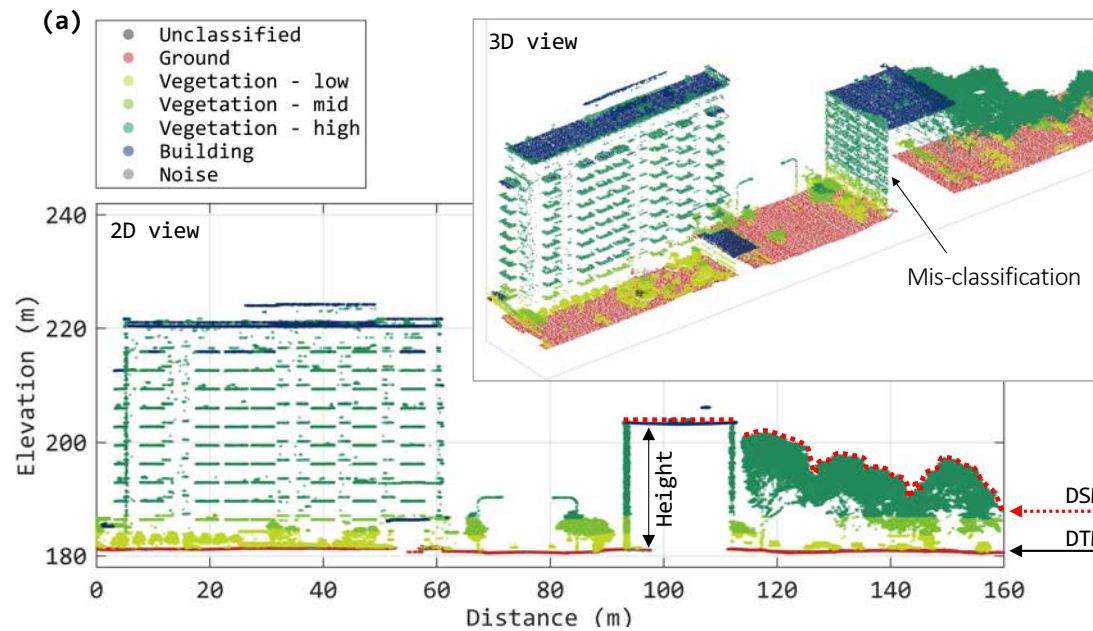

## Neighborhood models (2 m resolution)

Models across scales

- LiDAR data at an exemplary street block

Li and Sharma (in prep)

# Solutions at scales it matters

LiDAR point cloud dataset (ILHMP, 2018)

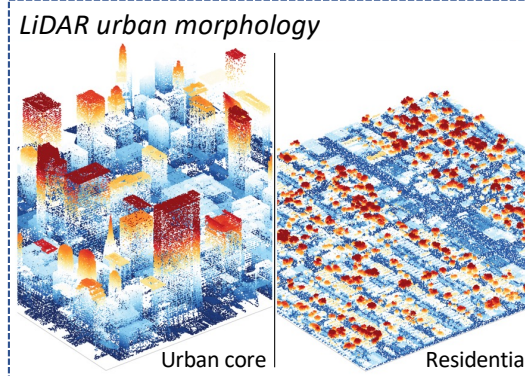

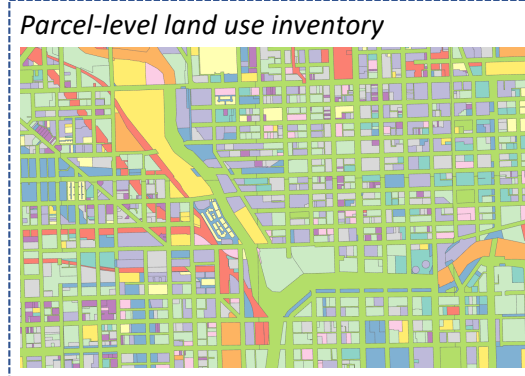

Temperature deviation from areal mean (hourly)

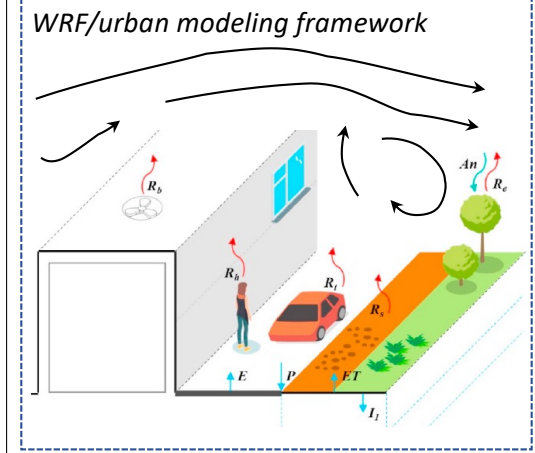

- A physical-informed machine learning framework to estimate street-level environmental stressors

Li and Sharma (in prep)

# Urban informatics

## Urban Weather Forecast

## Machine Learning

Li and Sharma (in press); JAMES

- Forecasting street-level temperature via data fusion of urban informatics

# Street-level temperature estimation

Li and Sharma (in press)

Street-level air temperature at resampled locations

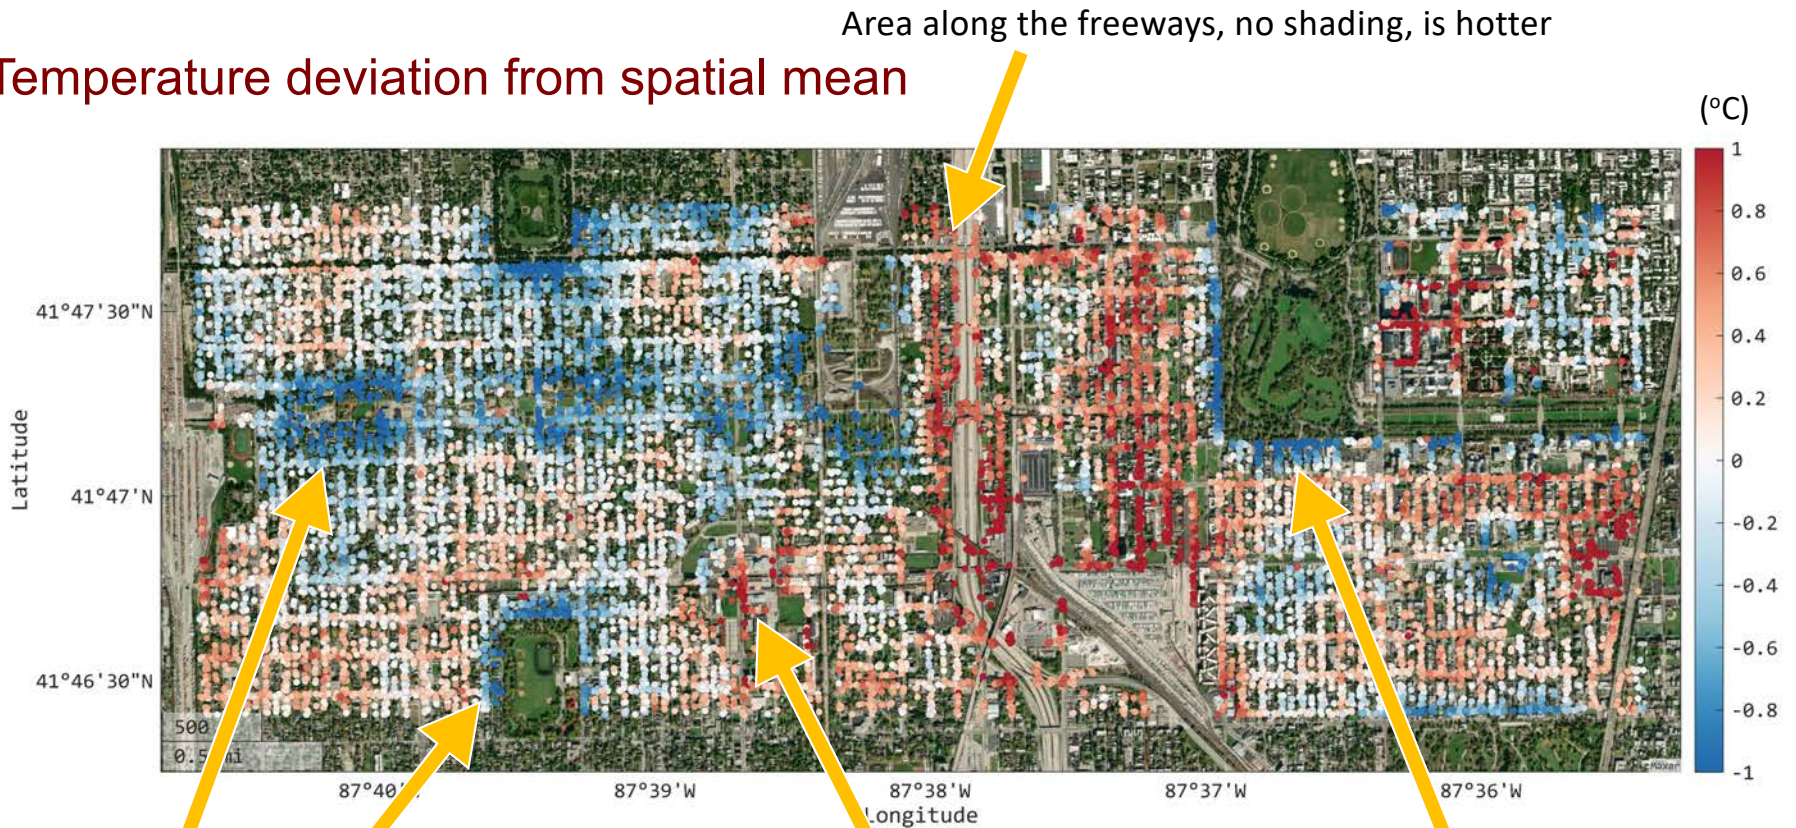

- Downscale 1-km climate prediction to sub-meter street-level air temperature using machine learning.

# Address Urban Planning issues at street scales

## Temperature deviation from spatial mean

Li and Sharma (in press); JAMES

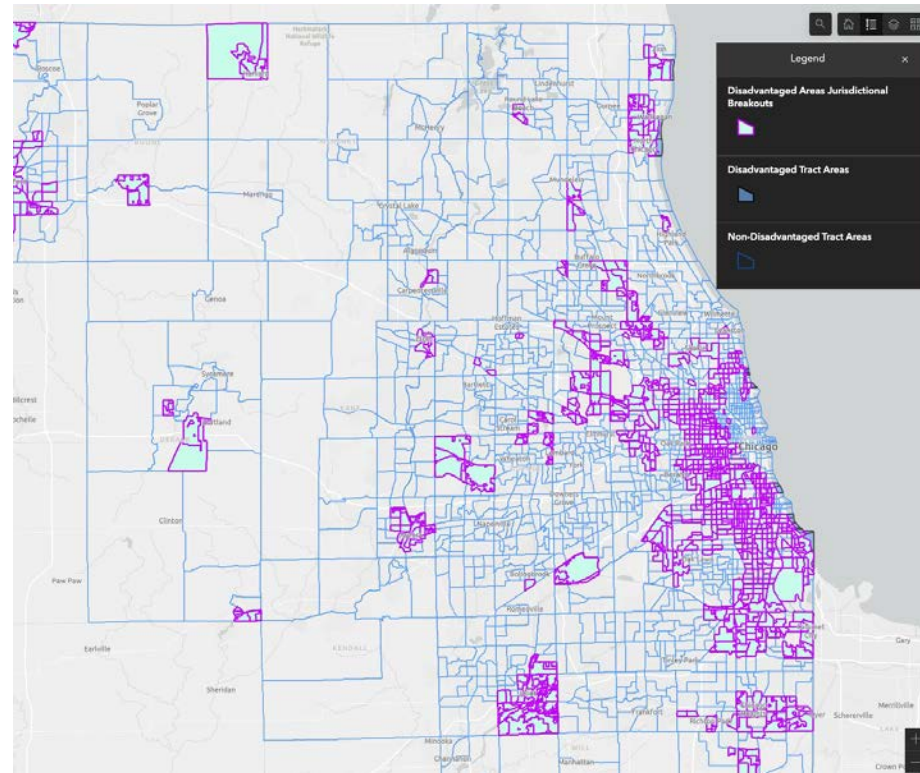

# Nomenclature of Environmental Justice

- **Environmental Justice** -- The just treatment and meaningful involvement of all people - regardless of race, color, national origin, income, or ability - with respect to development, implementation, and evaluation of programs, practices, and activities that affect human health and the environment.
- **Underserved Communities**: populations sharing a particular characteristic, as well as geographic communities, that have been systematically denied a full opportunity to participate in aspects of economic, social, and civic life.
- **EJ Communities**: Geographic locations with significant representation of persons of color, low-income persons, indigenous persons or members of Tribal nations, where such persons experience, or are at risk of experiencing, higher or more adverse human health or environmental outcomes.

# Environmental justice conceptual framework

## Overburdened and Underserved Disadvantage Areas

## Northeast Illinois Climate & Environmental Justice Dashboard

## Income analysis

## Emerging Hotspots

# Social and environmental stresses

- Chicago 8<sup>th</sup> in income inequality among the nation's largest cities.

## Air quality and health burden

## Heat Vulnerability Index

- 'Healthy' level of inequality is needed to encourage growth and progress.

**But how much inequality is too much?**

DISCOVERY PARTNERS INSTITUTE  
PART OF THE UNIVERSITY OF ILLINOIS SYSTEM

## Total Crime (2001-2019)

## Weekly Crime Rate vs Temperature

The high number of crimes (peaks) in a year are observed in the summer months whilst the low number (valleys) in a year are in winter months

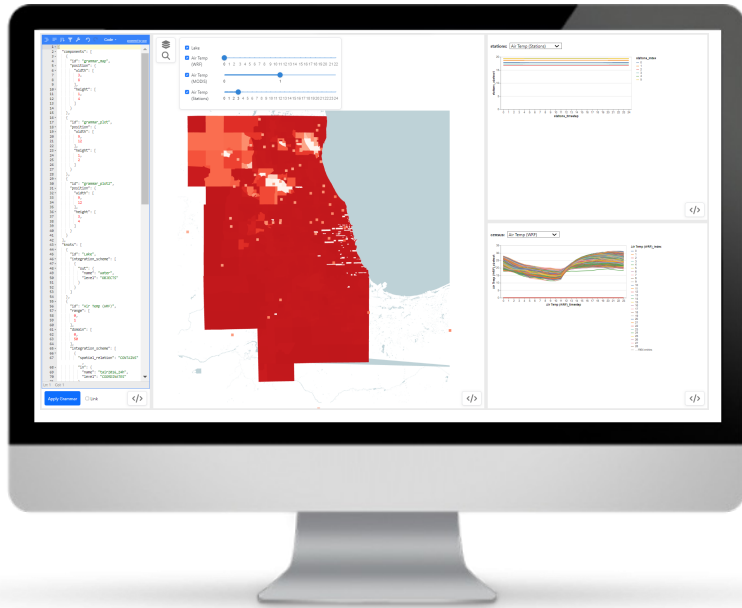

## Seasonal Change in Average Crime Rate by Type

The average monthly number of Battery incidents reported increased in summer by 24% wrt non-summer months to 6,524 average number of incidents

# Urban Flood Forecasting

- Develop a high-resolution coupled hydrodynamic model to visualize flood propagation, identifying fine-scale flooding scenarios.
- Decision support system for early warning flood forecast system
- Engineered and nature-based solutions to mitigate flooding in urban cities.

# Conclusions and Next Steps

**Online + New Data**

**Models + Satellites**

**Story maps**

# Thank you
