A Final Environmental Impact Statement (EIS) has been prepared by the New York City Department of Environmental Protection (DEP) for the proposed **Kensico - Eastview Connection (KEC) Project**. Acting as lead agency and in accordance with the State Environmental Quality Review Act (SEQRA) (Section 8-0113, Article 8 of the Environmental Conservation Law) as set forth in 6 NYCRR Part 617, and the City Environmental Quality Review (CEQR) process, as set forth in Title 62 RCNY Chapter 5 and Executive Order 91 of 1977 and its amendments, and the State Environmental Review Process (SERP), as required by the State Revolving Loan Fund Program, DEP is hereby certifying this Final EIS as complete.

A Positive Declaration and a Draft Scope of Work (DSOW) for the Draft EIS were issued on March 3, 2021. A public meeting to obtain oral testimony on the DSOW was held on April 7, 2021 via Zoom. The period for submitting written comments remained open until April 21, 2021. A Final Scope of Work (FSOW) was issued on December 17, 2021, finalizing the scope of analysis for the Draft EIS.

Based on the FSOW, the Draft EIS was prepared and certified as complete. The Draft EIS was issued on October 19, 2022. A public meeting to obtain oral testimony on the Draft EIS was held on December 7, 2022 in person and via Zoom. The period for submitting written comments remained open until January 3, 2023. The Draft EIS was made available for review by the public at the repositories (see attachment) and on the DEP website (<https://www1.nyc.gov/site/dep/about/kensico-eastview-connection.page>).

Project Description

DEP proposes to construct a new tunnel between the Kensico Reservoir and the Catskill/Delaware Ultraviolet Light Disinfection (CDUV) Facility. The UV Facility is located on City-owned property (“the Eastview Site”) within the Town of Mount Pleasant in Westchester County, New York. The Proposed Action would be comprised of the following major components:

- A new approximately 2-mile-long, deep rock tunnel between the Kensico Reservoir and the CDUV Facility and the construction of new shafts;
- Subsurface utility easements along the tunnel corridor;
- Construction of a new KEC Screen Chamber;
- Construction of connecting tunnels to the new screen chamber and modifications to the existing Dike Grade Tunnel;
- Consolidation of the electrical supply to the Kensico Campus and construction of a new electrical building;
- Redevelopment of the Kensico Campus including the relocation of Westlake Drive, regrading of the overall site, a new DEP Police booth, and other security improvements;
- Modifications to the chemical feed system at Delaware Shaft 18;
- Modifications to the existing Catskill Upper Effluent Chamber (UEC) located within and adjacent to the Kensico Reservoir;
- Construction of a new Eastview Connection Chamber and interconnection to the CDUV Facility;
- Management of excavated material from construction;
- Shoreline stabilization efforts along Kensico Reservoir south of the UEC; and
- Mitigation as needed for the project.

The KEC tunnel would provide an additional means of conveying water between the Kensico Reservoir and the CDUV Facility. Completion of this project would enhance operational resiliency and redundancy for the water supply system.

The KEC Project (including its environmental review) must be completed prior to the construction of a cover over the Hillview Reservoir. The KEC Project is required by, and must be constructed in accordance with, the terms of the Hillview Consent Decree and Judgment entered by the United States District Court for the Eastern District of New York on May 15, 2019. Completion of the KEC Project would increase flow to the CDUV Facility and improve DEP's ability to maintain Hillview Reservoir water surface levels within normal operating limits during single-basin operations at Hillview Reservoir.

Required Approvals

The KEC Project will require several discretionary actions, including approvals by the State, federal, County, and local entities. For a full list of potentially-required permits and approvals, please refer to the Final EIS.

Significant Impacts and Mitigation

A full assessment of potential impacts was undertaken in preparation of the Final EIS.

There is a potential for significant adverse impacts to natural resources, specifically forested areas and wetlands, and temporary significant adverse traffic impacts. DEP's proposed mitigation plan would address anticipated significant adverse impacts to natural resources. The Proposed Action would provide mitigation for the loss of 9.3 acres of forested area at the Kensico Campus with off-site forest restoration. Similarly, off-site wetland mitigation would fully address the loss of 2.33 acres of wetland impacts due to the Proposed Action. DEP's proposed mitigation plan would also address anticipated temporary significant adverse impacts to

traffic and transportation through the retiming of signals at two intersections and pavement restriping at a third intersection.

As stated above, copies of the **Final EIS** will be available for review at the repositories listed in the attachment to this Notice and will be posted on the DEP website at <https://www1.nyc.gov/site/dep/about/kensico-eastview-connection.page>.
