About this Report

Prepared by the New York City Department of Health and Mental Hygiene ("the NYC Health Department") per the requirements of the Healthcare Accountability and Consumer Protection Act (Local Law 78 of 2023), the annual Healthcare Accountability Report provides background information on key healthcare accountability topics, examines the financial practices of hospitals and health insurers through reporting of publicly-available data, and includes detailed analyses of hospital and payer price transparency data as well as City spending on healthcare for employees, retirees, and their dependents.

The Mayor delegated implementation of Local Law 78 of 2023 to the NYC Health Department, the City's public health agency. The NYC Health Department's mission is to protect and promote the health of all New Yorkers, working toward a city where every New Yorker can reach their full health potential regardless of who they are, how old they are, where they come from, or what neighborhood they live in.

The NYC Health Department applies core public health approaches — monitoring, mitigation, and prevention — to the business of healthcare. This work draws on a distinct set of tools and perspectives: local data and insights, regular reporting on community- and population-level health outcomes, and a focus on defining and centering New Yorker's health needs.

This is the NYC Health Department's second annual report under Local Law 78. The inaugural report established context on key data sources and topics, set reporting baselines, and identified areas for further exploration and analysis. This report builds on that foundation with updated and expanded analyses, new data, and discussion of evolving policy, best practice, and research at the federal, state, and local levels. Throughout, the report prioritizes New York City–specific data wherever it is publicly available.

Key Insights

Healthcare costs in New York City continue to rise faster than wages and inflation, straining household budgets and creating ripple effects on the health and well-being of New Yorkers. NYC's second annual assessment of healthcare accountability finds that prices — not how much care people actually use — remain the primary cause, uncovering extreme price variation across NYC hospitals and drivers of cost growth in the City's own health plans. Against this backdrop, hospital and insurer practices demand greater transparency and accountability; this year's report examines hospital community benefit spending and financial assistance, healthcare organization financial performance, health insurance claims denials, and rising insurance premiums – a direct and costly consequence of high prices for both consumers and employers alike.

- Prices for the same procedure vary widely by hospital in New York City: the price of a cesarean section ranges from $7,000 to $64,000; an emergency room visit runs from $210 to $6,000.
- For the City's own health plans, spending on outpatient care grew more than any other category, up 13–17% in a single year and concentrated at just two hospital systems.
- Marketplace premiums rose to $909/month in 2025, up 20% in two years. The City spent $10.03B on employee/retiree premiums in FY25, up 15% since FY23.
- 1 in 4 insurance claims was denied in 2024 with fewer than 3% of denials internally appealed, despite appeals succeeding up to one third of the time.
- NYC nonprofit hospitals gave $10.6 billion (20% of expenses) in community benefit in 2024, yet large academic hospitals still serve fewer Medicaid and uninsured patients than their bed counts would suggest.

Executive Summary

State and National Trends Assessment

This report is issued amid a deepening national crisis in healthcare affordability and coverage, bringing potential harms to the health and economic security of New Yorkers and destabilizing the City and State's vast healthcare safety net. In the NYC Health Department's review of research and policy developments, concerning trends in healthcare affordability persist:

- High and rising healthcare spending continues to outpace inflation and wages, generating growing opportunity costs for individuals, businesses, and governments.[1,2] New York State has the second-highest per capita healthcare spending, after Alaska.[3]
- Prices, rather than utilization, are the primary driver of rising healthcare spending.[4,5]
- Hospital care represents the largest single spending category at the state and national level, continuing to increase in outpatient spending at hospital owned facilities.[6,7]
- Prices remain more closely tied to provider and payer market power rather than to quality of care.[8]
- The harmful effects of high and rising healthcare costs continue to fall disproportionately on healthcare consumers along lines of race and income, through higher premiums, greater cost-sharing, medical debt, and delayed or foregone care.[9]

Hospital Financial Analysis

This year's report expands the NYC Health Department's community benefit analysis and introduces two new measures of hospital accountability: the Proportional Share Index and Hospital Bad Debt reporting.

Community Benefit Spending. Average net community benefit spending among NYC nonprofit hospitals rose in 2024, though the picture remains incomplete because public hospitals are not required to report it.

- Average net community benefit spending increased to 20% of total expenses in 2024, up from 18% in 2023.
- NYC nonprofit hospitals reported $10.6B in total net community benefit expenses in 2024, up from $9.5 billion the previous year.
- Public hospital systems, including NYC Health + Hospitals, the nation's largest municipal hospital system, are exempt from filing IRS Form 990 Schedule H this analysis relies on. Because H+H serves many of the city's most marginalized populations, community benefit metrics based solely on nonprofit filings omit a substantial portion of the care provided citywide.
- New York-Presbyterian ($2.1B) and NYU Langone ($1.8B) reported the highest total community benefit spending in 2024, followed by Mount Sinai Hospital ($1.1B) and Montefiore Medical Center ($977M). As in prior years, total spending largely reflects hospital size and operating expense.
- Flushing Hospital (34%), Jamaica Hospital (33%), and Mount Sinai Beth Israel (27%) reported the highest spending rates as a share of total expenses and serve primarily as safety-net hospitals.
- The Brooklyn Hospital Center (9%) and Memorial Sloan Kettering and Hospital for Special Surgery (10%) reported the lowest rates, continuing the pattern seen in 2023.

Proportional Share Index (PSI). PSI is an equity-focused measure developed by the NYC Health Department that assesses whether hospitals serve a proportional share of Medicaid and uninsured inpatient discharges relative to their licensed bed capacity, offering additional context to the analysis of community benefit spending.

- A PSI below 1 indicates a hospital is providing less than its proportional share; a PSI of 1 or above shows it is meeting or exceeding its expected share.

- Public hospitals (1.26) and non-academic hospitals (1.15) provide disproportionate shares of Medicaid and uninsured inpatient care relative to their capacity, while academic medical centers (0.83) serve below-proportional shares.
- Private academic medical centers account for 54% of NYC licensed hospital beds but only 45% of Medicaid and uninsured discharges. Public hospitals, by contrast, account for 24% of beds but 30% of these discharges.
- Facility-level analysis reveals substantial variation within large health systems: hospitals in or near lower-income communities, such as NYU Langone Brooklyn and New York-Presbyterian Allen, had significantly higher PSI values than flagship Manhattan campuses within the same systems.
- PSI can also serve as a pressure test on community benefit reporting, highlighting gaps between reported spending and actual care delivered; while community benefit data captures financial inputs, PSI reflects who is actually being discharged from hospitals.

Hospital Scale and Executive Compensation. The largest NYC systems reported total expenses in the billions of dollars and CEO compensation at these systems varied widely.

- The largest systems reported total expenses ranging from $8B to $12B, including NYC Health + Hospitals ($12.1B), New York-Presbyterian ($11.3B), NYU Langone ($8.7B), and Northwell Health ($8.1B). (These numbers largely reflect their NYC hospital operations.)
- CEO total compensation, including base salary, bonuses, incentives, and other reportable income, ranged from approximately $1M at smaller and public systems to nearly $26.3M at one academic medical system; New York-Presbyterian ($26.3M), NYU Langone ($18M), and Montefiore ($16.7M) reported the highest figures.
- NYC Health + Hospitals' CEO earned approximately $1.1M, similar to leaders of much smaller nonprofit hospitals, despite overseeing a system comparable in size to the largest academic medical centers.
- The hospitals reporting the highest CEO compensation are among those serving below-proportional shares of Medicaid and uninsured patients, while safety-net hospitals with the highest PSI values reported some of the lowest compensation levels. Montefiore is a notable exception: although its CEO received one of the highest compensation packages in 2024, all three Montefiore facilities have a PSI value greater than 1.
- While federal law prohibits unreasonable compensation at nonprofit hospitals, these findings suggest existing standards may be necessary but not sufficient to tie executive pay to community benefit, financial assistance, and patient outcomes.

Bad Debt and Financial Assistance Gaps. Bad debt is the amount hospitals have billed patients and are expected to collect, but ultimately wrote off as uncollectible. This year's report offers a first look at how much hospital bad debt is attributable to patients eligible for financial assistance, and finds that reported figures point to potential gaps in screening and access, alongside significant gaps in reporting.

- NYC nonprofit hospitals reported $593.7M in bad debt in 2024, a figure that is not comparable across institutions and is not counted as community benefit. At least $50.6M was attributable to patients eligible for financial assistance.
- On average, nonprofit hospitals spent just 2% of total expenses on financial assistance at cost. Montefiore, New York-Presbyterian, and NYU Langone, the three systems with the highest CEO compensation, each reported 1% or less.
- Of the 24 nonprofit hospitals reviewed, fewer than half reported any estimate of bad debt attributable to financially eligible patients. Most left the relevant disclosure field blank rather than reporting zero, limiting the usefulness of this data as an oversight tool.

Health Insurer Financial and Claims Denial Analysis

This report expands prior reporting on the business practices of health insurers, offering new insights into insurer financial performance and trends in claims denials and internal appeals.

Health Insurer Financial Performance and Executive Compensation. Insurer financial performance and executive pay varied widely across the NYC market in 2024, offering differing insights based on insurer tax status and organizational scale.

- Of the nine major insurers analyzed, net income ranged from $14B to $25M among for-profit companies and $86M to a loss of $33M among nonprofit companies, showing a broad range of business practices and financial positions among health insurers serving NYC residents.
- CEO salaries ranged from $791K to $26M, though were consistently at or less than 0.1% of revenue.
- UnitedHealthcare Group reported the highest revenue, overhead, net income, and CEO compensation among NYC health insurers.

Claims Denials and Appeals. Health Care Claims Reports provide data on statewide post-service claims denials and internal appeals, offering a window into both insurance practices and the burden of denials on patients and providers.

- Overall, roughly one in four adjudicated claims were denied in full or in part in 2024. Denial rates varied by segment: 25% for Commercial, 29% for Medicaid Managed Care, 32% for Child Health Plus, and 33% for Essential Plan. Full denial rates ranged from 10% for Child Health Plus to 14% for Commercial.
- Internal appeal rates were very low across all market segments: 0.6% of denied Commercial claims, 2.4% of denied Essential Plan claims, and 2.5% of denied Child Health Plus and Medicaid Managed Care claims. Even so, appeal rates were substantially higher in government-subsidized market segments than in the Commercial market, likely reflecting more standardized and accessible appeals processes rather than a higher underlying rate of inappropriate denials.
- Despite low appeal rates, overturn rates among appealed claims were meaningful, ranging from 11% (Child Health Plus) to 29% (Commercial), signaling that a significant volume of potentially inappropriate denials go unchallenged each year.
- Across all market segments, the average billed value of claims increased successively between the claim submission, denial, appeal, and overturn phases, while the volume of claims decreased. The average Commercial claim ($2,016) was significantly lower than the average overturned claim ($19,822), indicating that higher-cost claims are disproportionately denied and appealed.
- "Not medically necessary" denials accounted for only 2% of denied claims by volume but 9% by value, pointing to higher-cost claims disproportionately denied on medical necessity grounds.

Health Insurance Premiums Analysis

For the first time, this year's report examines premiums across multiple health insurance markets, including individual and small group commercial plans, City of New York employee and retiree health plans, and employer-sponsored coverage, with analysis of associated health care costs and employee contributions.

Individual and Small Group Commercial Premiums. Individual and small group premiums continued to grow with differing impacts on enrollment.

- New York State of Health Marketplace plans in NYC averaged $909 per month in 2025, a 19.7% increase over 2 years from 2023.
- As all other metal-tier enrollment dropped, Bronze tier individual insurance enrollment increased by 10,840 members between 2023 and 2025.

- Small group insurance premiums rose by 10.5% over 2 years from $1,119 per month in 2023 to $1,237 per month in 2025.
- The insurance market for small group insurance is significantly smaller than the individual market with only four plans enrolling members and one more exiting (Aetna in 2025) compared to eight plans within the individual market. In addition, it is significantly more concentrated than the individual market with one company (Oxford) having 91.3% of the NYC Region small group market.

City of New York Employee and Retiree Health Plan Premiums and City Expenditures. Premiums for the two largest City Health plans continued to grow as did City expenditures on healthcare for its employees and retirees.

- Combined City premium expenditure for GHI-CBP and "HIP-HMO & Other Plans" for active employees and pre-Medicare retirees rose from $8.7B in FY23 to $9.34B in FY24 (+7.4%) and $10.03B in FY25 (+7.3%), a cumulative increase of 15.3% from FY23 to FY25.

Employer-Sponsored Health Insurance Premiums and Employee Contributions. Consumer premium and out-of-pocket costs remained a significant burden in 2024, particularly for those with employer-sponsored health insurance.

- Employer-sponsored insurance (ESI) individual premiums averaged $9,860 annually, with individuals covering approximately 18% through individual contributions.
- For family insurance plans, employees contributed approximately $6,232 annually for their insurance premiums.

Analysis of CY2025 Facility and Professional Reimbursement for the City of New York Health

This report, provided by the actuarial and consulting firm Milliman, examines health care claims data for the City's two largest health plans to identify the primary drivers of healthcare spending, where spending is concentrated, and how payments vary across services, providers, and regions.

- The CBP covered about 75% of employees, pre-Medicare retirees, and dependents, while HIP HMO covered about 20%. The remaining 5% were enrolled in other plans not included in this report. NYCE PPO launched in January 2026 and will be included beginning with the 2027 report.
- Outpatient care was the biggest driver of spending growth. Spending on outpatient services increased 13% for the CBP and 17% for the HIP HMO from 2024 to 2025.
- Professional services were the second-largest driver of growth. Spending increased 10% for the CBP and 7% for the HIP HMO.
- Inpatient spending grew more slowly. Hospital inpatient spending increased 5% for the CBP and 4% for the HIP HMO, making it the slowest-growing major category.
- Emergency department visits accounted for the largest share of outpatient spending.
- Spending was concentrated among two health systems. Northwell Health and New York-Presbyterian accounted for the largest share of plan spending.
- Regional payment differences persisted. On average, facilities in Long Island and the Mid-Hudson region were paid at higher rates than facilities in New York City.

New York City Hospital Price Transparency Report

This report, provided by the health technology and analytics firm Turquoise Health, analyzes data on negotiated rates (price transparency data) for a subset of inpatient and outpatient procedure codes reported by six major commercial health plans (including one qualified health plan) and 43 hospitals operating in the greater NYC healthcare market.

- The availability of negotiated rates was generally high, although completeness varied by plan, hospital, and procedure code.
- The price transparency data showed high negotiated rates among major healthcare systems and large variability in these rates:
    - Most of the major healthcare systems reported negotiated rates well above 200% of Medicare rates.
    - The (simple) average negotiated inpatient rates, as percentages of Medicare rates, ranged from 76% (H+H) to 336% (New York-Presbyterian) among major healthcare systems.
    - Similarly, the (simple) average negotiated outpatient rates, as percentages of Medicare rates, ranged from 129% (H+H) to 332% (NYU Langone) among major healthcare systems.
- Examination of individual services showed even greater variability in negotiated rates across hospitals:
    - The negotiated rates for a cesarean section (MS-DRG 788) ranged from $7K to $64K.
    - The negotiated rates for psychoses (MS-DRG 885) ranged from $3K to $302K.
    - The negotiated rates for a colonoscopy (HCPCS 45378) ranged from $640 to $13K.
    - The negotiated rates for an emergency department visit with low level of medical decision making (HCPCS 99283) ranged from $210 to $6K.
- The price transparency data also showed variation in negotiated rates across health plans, although this variation is generally less than the variation across hospitals:
    - At Lenox Hill Hospital, the negotiated rates for bronchitis and asthma without complication and comorbidity (MS-DRG 203) ranged from $17K (United Healthcare) to $45K (Cigna).
    - At H+H Elmhurst Hospital, the negotiated rates for incision and drainage of abscess (HCPCS 10060) ranged from $330 (Emblem) to $2,600 (Aetna).

Background

Context: Healthcare Affordability in New York City

The past year has brought an unprecedented convergence of local, state, and federal developments in healthcare, from landmark labor actions and sweeping federal legislation to shifts in drug pricing policy and the restructuring of coverage for hundreds of thousands of New Yorkers. Healthcare affordability remains one of the most consequential challenges facing New York City residents.[10] Rising premiums, deductibles, copayments, and prescription drug costs continue to strain household budgets, even for insured New Yorkers, while narrower provider networks, prior authorization requirements, and coverage denials create additional barriers to timely care.[11,12,13,14]

Mayor Mamdani has made affordability a defining commitment of this administration, and healthcare is central to that agenda. Healthcare costs rank among the largest household expenses nationally, and in New York City, where the overall cost of living is already exceptionally high, they compound existing economic pressures and undermine the financial security of working families. The administration's affordability framework recognizes that healthcare is not a separate policy domain: it is inseparable from housing stability, economic mobility, racial equity, and quality of life. As healthcare spending continues to rise, industry actors have increasingly identified mechanisms to preserve profitability by shifting costs onto consumers, employers, and public purchasers, such as the City of New York.[15] The impacts fall hardest on low-income New Yorkers, communities of color, people with chronic conditions, and those enrolled in public insurance programs.[16]

Two areas warrant scrutiny and stronger transparency measures. First, the expanding use of artificial intelligence and automated tools in utilization management and claims review has generated serious concerns about inappropriate denials and algorithmic decision-making that is neither visible nor accountable to patients or providers.[17] As insurers and third-party administrators rely more heavily on these systems, there is an urgent need for disclosure requirements, audit mechanisms, and enforceable standards governing their use. Second, the ongoing implementation of surprise billing protections and Independent Dispute Resolution (IDR) processes has reshaped reimbursement dynamics across the system — with significant downstream effects on market prices and affordability that are not yet well understood.[18] Greater transparency into IDR outcomes and their market-level impacts is essential to informed policymaking.

In New York State and New York City, healthcare workforce shortages, hospital financial instability, and labor disputes underscore ongoing stress throughout the entire healthcare system.[1920] Labor actions, including the New York State Nurses Association (NYSNA) strikes, reflect broader concerns regarding staffing levels, working conditions, patient safety, and the sustainability of healthcare delivery systems.[2122] These developments have occurred alongside continued increases in healthcare costs for consumers, employers, and government purchasers.

Nationally, confidence in the U.S. healthcare system is at an all-time low; care has become unaffordable for most, while insurers, pharmaceutical companies, and hospital systems post record profit margins.[23] In response, federal policymakers, regulators, and advocates have continued to scrutinize prescription drug pricing, pharmacy benefit managers (PBMs), insurer practices, hospital consolidation, and utilization management policies. Debate surrounding federal healthcare legislation, including HR1 and related federal budget and healthcare proposals, has raised concerns regarding the future stability of healthcare coverage, Medicaid financing, and access to care for vulnerable populations.[24]

These developments occur against a backdrop of accelerating consolidation among hospitals, health systems, and insurers, concentration that reduces competition, increases prices, and limits meaningful consumer choice.[25,26]

The Business Practices of Healthcare are a Public Health Issue

There is overwhelming evidence that healthcare business practices, including pricing decisions, reimbursement structures, market consolidation, utilization management, and claims administration, directly shape community and population health,.[27,28,29,30,31,32,33,34,35,36,37,38] At the systems level, these harms appear as segregated healthcare systems, overcrowded and underfunded safety net institutions, safety net closures, race- and insurance-based discrimination, underinsurance, denials of medically necessary care, and medical debt.[39,40,41,42] At the individual level, they presents through delayed or foregone care, rationed prescription drugs, tradeoffs against food or housing, debt, stress, and worsened health status – harms that are unevenly distributed by race and income.[43,44,45,46,47,48]

While healthcare costs are often blamed on utilization factors, such as an aging population or impacts of the COVID-19 pandemic, research consistently points to price as the main cause.[49,50] Healthcare prices behave differently than prices for other services, rarely corresponding to the actual cost or quality of care or the resulting outcomes.[51,52] The same procedure in the same market can vary widely in price, with the highest prices at the intersection of hospital-affiliated care and commercial insurance.[53,54,55] In adherence to Local Law 78 of 2023, the NYC Health Department applies public health approaches — including monitoring, analysis, and transparency — to the business of healthcare, tracking trends and data on the commercial determinants of health that exacerbate existing health disparities and inequities in New York.

Employer-Sponsored Insurance and the City of New York as a Major Purchaser

Employer-sponsored insurance (ESI) is the single largest source of health benefits nationwide, with 165.6 million Americans under age 65, or 60% of the population, obtaining coverage through their employer.[56,57] Nevertheless, eligibility isn't access: only about 75% of workers can actually enroll, and a meaningful share opt out – nearly a third citing cost. Coverage and eligibility fracture further along income, age, gender, employment type, and race.[58] In recent decades, ESI has gotten steadily less affordable as premium and out-of-pocket costs have outpaced both wage growth and inflation.[59] Rising healthcare costs are increasingly linked to wage stagnation and job loss, hitting low-income and Black and Hispanic households hardest.[60] Premiums rose from 8% to 18% of average compensation between 1988 and 2019—disproportionately affecting Black (18%) and Hispanic (19%) households compared to White households (14%).[61] At the 20th income percentile, premiums consumed 28% of compensation for households, compared to just 4% at the 95th percentile.

Employer-sponsored insurance is regulated under multiple legal frameworks. Most private employer-sponsored health plans are governed by the Employee Retirement Income Security Act (ERISA), while public employer plans, including the New York City Health Benefits Program, are generally exempt from ERISA. [62,63] Employer-sponsored insurance also varies widely in benefit design, funding, costs, and administration.[64] Employers have historically had limited leverage to negotiate healthcare prices due to provider market power and limited access to pricing and claims data.[656667686970] In response to rising healthcare costs, employers — particularly those with self-funded plans, which cover approximately 65% of workers with employer-sponsored insurance — have increasingly sought greater price transparency and access to their own claims data.[71]

Although self-funded employers bear the financial risk of employee healthcare costs, they often rely on third-party administrators (TPAs) and pharmacy benefit managers (PBMs) to administer benefits and may face contractual restrictions that limit access to claims data.[72,73] Recent federal and state legislation has sought to prohibit these restrictions. For ERISA-regulated employers, access to claims data has also taken on greater importance as they have fiduciary obligations to prudently manage health plans and ensure plan expenses are reasonable.[74,75]

The City of New York ("the City") remains a significant purchaser of healthcare through insurance coverage provided to municipal employees, retirees, and their dependents. With over 1.2 million covered lives, the City's health plan is the largest in the State, about equal to the State's public employee plan, the New York State Health Insurance Program (NYSHIP). As one of the nation's largest public purchasers of healthcare, the City has a substantial interest in understanding the factors driving healthcare costs and affordability challenges.[76] Recent changes to municipal healthcare coverage, including implementation of the NYCE PPO plan, further elevated public discussion regarding network adequacy, continuity of care, reimbursement practices, and healthcare purchasing strategies.[77]

Limited Regulatory Authority Over Healthcare at the City Level

Healthcare regulation and enforcement are primarily the responsibility of federal and state governments, with authority distributed across a range of administrative agencies. In New York State, the Department of Health (DOH) regulates healthcare facilities, including hospitals, and administers Medicaid, Child Health Plus, and the Essential Plan.[78,79] The Department of Financial Services (DFS) oversees non-ERISA health insurance plans and monitors prescription drug prices.[80] The State Education Department establishes licensing standards for healthcare professionals.[81] The Office of the Attorney General—particularly its Health Care, Charities, and Antitrust Bureaus—enforces a range of healthcare laws, including those designed to protect healthcare consumers.[82]

By contrast, New York City's direct regulatory authority over the healthcare sector is comparatively limited. The City principally exercises authority through its control over land use and zoning, as well as the administration of certain property tax exemptions. Although these powers are narrower in scope than the State's regulatory authorities, they nonetheless provide the City with meaningful opportunities to shape healthcare investment, facility siting and expansion, and other decisions that influence the accessibility and distribution of healthcare services.[83]

Healthcare Accountability Data Sources

The authority to collect and publish healthcare-related data generally rests with federal and state governments. The NYC Health Department sought data for this report using the following principles:

- → **Publicly available**: All reporting requirements under Local Law 78 are qualified by the phrase "to the extent publicly available." Publicly-available data was interpreted as data that are not privately-owned and held and, preferably, data that are collected, analyzed, and reported by the government or data whose disclosure is compelled by the government. While data may be publicly available, it does not mean that such data is accessible to the public. The NYC Health Department's role is to aggregate, report, and analyze otherwise opaque, though publicly available, data to make it more accessible and actionable.
- → **City level:** The NYC Health Department is committed to collecting, analyzing, and reporting city-level data to produce novel insights and policies that advance the health of New Yorkers. As most healthcare-related data are collected at the state and federal levels, it is important that such data can be disaggregated to include a sufficient New York City sample.
- → **High quality**: The NYC Health Department has rigorous standards for data analysis and public reporting. Some of the key healthcare accountability data sources raise concerns around completeness, accuracy, and independence. The NYC Health Department has weighed these concerns against the strong public interest in understanding and analyzing the available data. Given the importance of this topic and the potential role of this data and analysis in guiding individual healthcare decisions and billions of public and private dollars, the NYC Health Department provides context, commentary, and disclaimers when feasible.

Data Sources for Reporting on Healthcare Accountability in 2026		
Data Source	Reporting Authority	Scope of Authority
Hospital Financial and Community Benefit Reporting		
Statewide Planning and Research Cooperative System (SPARCS)	State - New York State Department of Health	Hospital discharges, data on outpatient and emergency services
Form 990 Schedule H	Federal - Internal Revenue Services	Nonprofit hospitals and health systems
Health Insurer Financial and Claims Denial Reporting		
Form 10-K	Federal – Securities and Exchange Commission	For-profit, publicly traded insurance companies
Proxy Statement (14(a))	Federal – Securities and Exchange Commission	For-profit, publicly traded insurance companies
Form 990	Federal – Internal Revenue Service	Nonprofit insurance companies
Health Care Claims Reports	New York State – Department of Financial Services	Insurers registered in New York State with state-regulated lines of business: Commercial: Employer plans (fully-insured) Commercial: Marketplace plans Essential Plan Medicaid Managed Care Child Health Plus
Health Insurance Premium Reporting		
Individual and Small Group Premium Increase Rate Applications for Qualified Health Plans	New York State – Department of Financial Services	Insurers registered in New York State with Qualified Health Plans offered on the New York State of Health Marketplace
Medical Expenditure Panel Survey – Insurance Component	Federal – Agency for Healthcare Research and Quality	Non-regulatory survey of employer-self-reported insurance coverage and cost information
Analysis of CY2025 Facility and Professional Reimbursement for the City of New York Health Benefits Program (Milliman)		
City Employee Claims data via Milliman (95% of the City's active employees and pre-Medicare retirees and their dependents' claims)	City - Office of Labor Relations	City Employee Health expenditures, plan premiums, and claims data
New York City Hospital Price Transparency Report (Turquoise Health)		
Hospital Price Transparency data	Federal - Department of Health and Human Services; Center for Medicare and Medicaid Services	Most institutions in the United States that are licensed as hospitals or otherwise approved as meeting applicable licensing requirements; exceptions defined in 45 CFR §180.30.
Transparency in Coverage data	Federal - Department of Health and Human Services, Labor and Treasury	Non-grandfathered group health plans and health insurance issuers in the individual and group markets.

Hospital Financial Data Sources

Community Benefits Spending

New York law prohibits for-profit hospital corporations from operating in the state, therefore every hospital here is either private nonprofit or public.[84] Nonprofits must file IRS Form 990 Schedule H, disclosing community benefit spending: financial assistance, subsidized care, and community health initiatives provided in lieu of taxes.[85] Public hospitals, including NYC Health + Hospitals, SUNY Downstate, do not file IRS 990s despite shouldering substantial uncompensated and Medicaid-funded care.[86] The gap leaves city-level community benefit data incomplete.

Separately, hospitals must produce Community Health Needs Assessments (CHNA) and Community Service/Improvement Plans (CHIPs) every three years.[87] CHNAs and CSPs/CHIPs are meant to guide hospital community benefit planning and investments toward identified community health needs, though they do not guarantee all spending will align precisely or that outcomes will be measured uniformly.[88]

Starting in 2026, all NYS hospitals are required to submit their most recent IRS Form 990 — or equivalent data — plus underlying supporting data used to complete it, in a format prescribed by the Department of Health, by July 1 on an annual basis. DOH must publish a statewide summary by October 1.[89] The law requires hospitals to submit community benefit data to the Department of Health. Pending rulemaking and implementation, this creates the potential for the Department to compile a statewide report including total community benefit expenditures and standardized category-level data.
Federal law ties community benefit reporting to tax-exempt status but sets no spending floor. The 2009 Schedule H requirement and the Affordable Care Act's (ACA) CHNA mandate improved disclosure but not accountability. Neither set minimum spending, required alignment with community priorities, nor fixed the data-aggregation problems that bury facility-level variation in statewide averages.[90,91]
While the law represents a major step toward transparency, basic compliance largely mirrors existing IRS 990 requirements. However, the inclusion of the clause requiring submission of "the information used to complete the IRS Form 990 in a manner prescribed by the department" creates a critical opportunity for New York State to require more granular, standardized data, such as itemized expenditures, details of offsetting revenues, and analyses of bad debt expense. Doing so would allow the Department to move beyond the 990's opaque and inconsistent reporting structure, strengthen oversight, and better link hospital community benefit spending to measurable public health outcomes.[92]

Statewide Planning and Research Cooperative System (SPARCS)

The Statewide Planning and Research Cooperative System (SPARCS) is New York State's comprehensive all-payer healthcare data reporting system, established in 1979 to collect patient-level information on healthcare utilization across the state. Administered by the DOH, SPARCS captures detailed data on inpatient hospital stays, emergency department visits, ambulatory surgery, and outpatient services, including patient demographics, diagnoses, procedures, services provided, and charges.[9394]
Healthcare facilities licensed in New York State are required to submit SPARCS data on an ongoing basis through the state's electronic reporting system, making data collection effectively continuous throughout the year. DOH validates and maintains these submissions before releasing de-identified public-use datasets and more detailed restricted datasets through its data access program.[95] While data are collected continuously, public datasets are generally published periodically as annual data files, with compliance dashboards and submission monitoring reports updated weekly to track reporting completeness and quality.[96]

Health Insurer Financial and Claims Denial Data Sources

Form 10-K

Federal law requires publicly traded for-profit insurance companies to file an annual Form 10-K with the U.S. Securities and Exchange Commission (SEC).[97] The filing discloses audited financial statements, revenue across insurance product lines, medical cost trends, executive compensation, financial risk factors, and pending legal proceedings.

The 10-K is a broad corporate disclosure tool applied across industries and is not a health care oversight mechanism. As a result, insurance-specific measures, such as claims denial rates, network adequacy, or state-level premium trends, are generally disclosed only when insurers determine they are financially material to investors, leaving important information about insurer performance and consumer impact outside the scope of routine federal reporting. The SEC's disclosure rules are designed to provide investors with accurate information for pricing securities and corporate risk, rather than to assess whether premium dollars are being used efficiently or equitably.[98]

Only insurers with publicly-registered securities are required to file a 10-K. Nonprofit and mutual insurers have no registered securities and therefore do not file periodic reports such as a 10-K. In addition, even when insurers do provide detailed financial information, it is typically reported at the company-wide or national business-segment level rather than by state or individual health plan. As a result, 10-K filings alone provide limited insight into the financial performance and operations of specific New York health plans.

Proxy Statement (14(a))

Federal law separately requires publicly-traded insurers to file a proxy statement whenever the company solicits shareholder votes, typically for annual shareholder meetings.[99] Proxy statements are designed to provide investors information needed to make voting decisions, such as director elections, executive compensation, and shareholder proposals. Federal law does not require standardized reporting on healthcare performance measures, such as medical spending, claims denials, patient access, network adequacy, or state-level premium impacts.[100]

Form 990

Federal tax law requires organizations recognized as tax-exempt to file an annual Form 990 with the Internal Revenue Service (IRS).[101] These requirements apply to many nonprofit health insurers and health plans, including organizations such as EmblemHealth/HIP, MetroPlus, Healthfirst, and certain Blue Cross Blue Shield plans. Form 990 serves a broad tax-exemption oversight function for all nonprofit filers by documenting that an organization's tax-exempt status supports a charitable or mission-driven purpose rather than private benefit.[102] Because for-profit and mutual insurers do not file Form 990, a significant portion of the New York insurance market is not captured through this reporting system. In addition, Form 990 was not designed to evaluate insurer performance and does not include standardized measures such as medical loss ratios, claims denial rates, premium-to-benefit ratios, or community health investments.

Health Care Claims Reports

New York law requires licensed insurers and health maintenance organizations (HMOs) to submit quarterly and annual reports to DFS on how they process and pay health care claims for comprehensive health insurance coverage.[103] These reports provide prompt-pay and claims-processing oversight by allowing DFS and the public to monitor how quickly and completely issuers are paying claims. DFS publishes the reports by company, identified by the National Association of Insurance Commissioners (NAIC) number, based on information submitted by the insurers. Because the reports are not independently audited by DFS, their accuracy depends on the insurer. In addition, denial rate reporting

does not include reasons for claim denials, external appeal outcome or data on premium levels or medical loss ratios.

Health Insurance Premium Data Sources

Individual and Small Group Premium Rate Applications

Before insurers can implement premium increases for individual and small-group health plans, including HMO plans, NYS law requires them to obtain approval from DFS.[104] Insurers must submit proposed rate adjustments to DFS for review and approval before new rates may take effect. The purpose of this review process is to protect consumers by ensuring that the proposed rate increases are supported by reasonable assumptions and financial information. DFS reviews the factors behind each request, including actuarial assumptions, claims-cost projections, and financial conditions.[105]

For Qualified Health Plans sold on the New York State of Health marketplace, this same prior-approval process determines the premiums applicable to ACA-subsidized individual and small-group coverage, and DFS publishes annual summaries comparing insurers' requested and approved rate changes.[106] This reporting does not apply to self-insured plans or experience-rated large-group policies, which cover a majority of New Yorkers with employer-sponsored coverage, making information on these plans less available for public reporting. Underlying justifications for actuarial and claims adjustments that are submitted to DFS are not fully public, which limits ability to independently verify whether approved rates are actuarially justified.

Medical Expenditure Panel Survey – Insurance Component

Federal law authorizes the Medical Expenditure Panel Survey–Insurance Component (MEPS-IC) conducted by the U.S. Census Bureau and analyzed by the Agency for Healthcare Research and Quality.[107] The purpose of the survey is descriptive and analytic rather than regulatory: it collects data annually from a sample of private- and public-sector employers on the number and types of health plans offered, premiums, employer and employee contribution amounts, eligibility requirements, and employer characteristics, producing national, state, and metropolitan-area estimates.[108] It is the only annual survey providing state-level and, in some cases, metro-level, detail on employer-sponsored insurance costs, making it a significant source for tracking New York-specific premium trends over time, with private-sector tables released each July and public-sector tables in December. MEPS-IC is a statistical survey rather than a regulatory disclosure: results are reported as aggregated state or metropolitan-area estimates subject to sampling error, not tied to individual insurers or plans, and the survey captures premium levels and offer rates but nothing regarding claims payment, denial rates, medical loss ratios, or community investment — meaning it cannot be used to evaluate the conduct or compliance of any single payer operating in New York.

City Expenditures on Employee Healthcare and Claims Data

The City is a large purchaser of employer-sponsored insurance (ESI), covering approximately 1.2 million employees, retirees, and dependents.[109] To support oversight and analysis of healthcare spending, the Mayor's Office of Labor Relations (OLR) contracts with Milliman, an actuarial and consulting firm, to review, analyze, and report on medical and pharmacy claims data provided by Anthem and EmblemHealth. These claims data reflect the amounts actually paid by the City for healthcare services provided to employees, retirees, and their dependents after claims have been adjudicated. Claims data provide a more holistic view of healthcare spending, as they include both information on both payments and utilization, and are therefore essential to understanding the true cost of City healthcare expenditures.

January 1, 2026, marked a pivotal moment for health insurance for New Yorkers, as the City transitioned from the Comprehensive Benefits Plan (CBP) to the (NYCE PPO) representing a switch from being fully insured to being self-insured.[110] Fully-insured employers pay a fixed premium to a third-party insurance carrier that assumes the financial risks of health coverage and administration. In contrast, employers who provide self-insured plans effectively pay their employees' health claims directly, thus taking on the financial risks of health coverage and administration.[111,112] The majority of workers insured by employer-sponsored insurance are enrolled in self-insured plans.[113]

Price Transparency Data

The Hospital Price Transparency (HPT) Final Rule, effective January 1, 2021, requires hospitals to publicly post standard charges in a single machine-readable file (MRF), updated annually.[114] Required data include gross charges, payer-specific negotiated rates, minimum and maximum negotiated rates, and discounted cash prices.[115] Hospitals must attest that data are complete and accurate, make files freely accessible, and publish consumer-friendly prices for at least 300 shoppable services. Because the rule applies only to hospitals, HPT excludes other sites of care such as ambulatory surgery centers (ASCs), urgent care centers, imaging facilities, and physician practices.[116]

The Transparency in Coverage (TiC) Final Rule, implemented in phases from 2022–2024, extends price transparency to most commercial health plans.[117] Insurers must publish monthly machine-readable files containing in-network negotiated rates and out-of-network allowed amounts; prescription drug reporting remains pending CMS guidance. Unlike HPT, TiC captures prices across hospitals, ASCs, imaging centers, and urgent care, but excludes publicly funded coverage, including Original Medicare, Medicare Advantage, Medicaid, CHIP, and Veterans Affairs.

Both datasets remain self-reported and have important limitations.[118,119] HPT data are frequently criticized for incomplete and inconsistent reporting, limited standardization, and insufficient contextual information, making direct price comparisons difficult. TiC data are broader and updated more frequently but are extremely large, computationally burdensome, contain "ghost rates" (providers listed for services they do not perform), and remain challenging for bundled or episode-based services.[120] While hospital- and insurer-reported prices should theoretically align, evidence evaluating concordance is still emerging.[121,122]

Compliance and enforcement remain uneven. CMS audits found substantial HPT noncompliance, with concerns extending beyond file availability to the completeness and accuracy of reported data.[123] Federal oversight has intensified, some states have adopted or proposed additional enforcement mechanisms, and TiC enforcement is shared between the Department of Labor and state insurance regulators.[124] Overall, transparency data quality continues to improve but remains an important limitation for research and policy analysis.[125]

In addition, the NYC Health Department launched the Health Care Price Comparison tool this year.[126] The tool gives residents clearer access to health care pricing information, helping them make more informed decisions about where to seek care. Built on federal transparency requirements that require hospitals and insurers to publicly disclose negotiated and cash rates, the tool allows users to search common medical procedures, compare total costs across hospitals and facility, and estimate their expected out-of-pocket expenses based on their insurance coverage. Users without insurance can also view available self-pay pricing. The tool increases transparency and empowers New Yorkers to be active drivers in the financial decisions behind where they seek care.

The Possibilities and Limitations of the New York State All-Payer Database

The New York State All-Payer Database (APD) is a comprehensive source of health care claims data that includes information on health care utilization and payments across participating payers. Claims data of this type is invaluable for understanding health care spending because it (1) captures utilization and (2) reflects the amounts actually paid after claims have been fully adjudicated, providing a much more accurate assessment of health care costs than billed charges alone.

APDs (also referred to as All-Payer Claims Databases or APCDs) aggregate medical, pharmacy, and dental claims from both public and private payers and can serve as an invaluable resource for researchers, policymakers, and consumers. Twenty-five states, including New York State, have APCDs that are operational or in early implementation. At this time, access to New York's APD is restricted to DOH users.[127]

New York's APD traces back to 2011 legislation authorizing its creation, driven by the complexity of the health care system and the lack of comparative data on how services are accessed, provided, and paid for. In 2016, the Department of Health (DOH) secured a warehousing and analytics vendor, issued proposed regulations, and began implementation. As written, third-party health care payers are required to submit complete, accurate, and timely data to DOH according to submission specifications that DOH must develop in consultation with the DFS and the payers themselves, with at least 120 days given to come into compliance whenever specifications are issued or revised.[128] Self-insured ERISA plans fall outside the mandatory definition of "third-party health care payer" but may opt in voluntarily. DOH has noted that such participation is consistent with HIPAA because it functions as both a health oversight agency and a public health authority.

The regulation requires payers to submit data electronically through DOH's secure network on a monthly basis, or more often if specified. DOH's accompanying guidance sets concrete timeliness thresholds: at least 95% of a given month's data must be submitted within 60 days of month's end, and 100% within 180 days.[129]

The APD draws together enrollment and benefits data, claims and encounter data, provider data, hospital discharge data, and vital statistics mortality data, governed by role-based access controls that strip direct identifiers and security protocols aligned to New York's IT policies, HIPAA de-identification standards, and CMS requirements. Access remains limited, however: claims data are not yet available for researchers to purchase, though DOH anticipates offering Limited Data Sets in the near future.

Section 1: Hospital Financial and Community Benefit Reporting

Community Benefit Reporting

This section examines community benefit spending, as reported on IRS Form 990 Schedule H, by NYC hospitals. Private nonprofit hospitals must file IRS Form 990 Schedule H, but public hospitals are exempt from this requirement. This means that Health + Hospitals and SUNY Downstate do not file Schedule H and are not included in this analysis, ultimately resulting in an incomplete picture of citywide community benefit contributions.

Findings

Net Community Benefit Expense

In tax year 2024, 24 nonprofit hospitals and health systems in New York City reported a total of $10.6 billion in net community benefit expenses, up from $9.5 billion in 2023. New York-Presbyterian Hospital reported the highest net community benefit expense ($2.1 billion), followed by NYU Langone Hospitals ($1.8 billion), Mount Sinai Hospital ($1.1 billion), and Montefiore Medical Center ($977 million).

Percent of Total Expense

On average, net community benefit expenses accounted for 20% of hospital and health system total annual expenses, up from 18% in 2023. Flushing Hospital Medical Center (34%) and Jamaica Hospital Medical Center (33%) reported the highest net community benefit expense as a percent of total expense. Mount Sinai Beth Israel, which has since closed, reported a net community benefit expense of 27% of its total operating expenses. On the other end, the Brooklyn Hospital Center reported the lowest net community benefit share (9%). Memorial Sloan Kettering and Hospital for Special Surgery, both specialty hospitals, each reported a net community benefit expense of approximately 10%.
Across all hospitals and health systems, the top community benefit expense category was Medicaid reimbursement shortfall (~6% of total hospital expenses), followed by health professions education and subsidized health services (~5% each), and financial assistance (~2%).

Table 1.1. Net Community Benefit and Key Categories of Community Benefit Expense as a Percentage of Total Expenses (2024)[8]						
Employer Identification Number (EIN)	Hospital/System Name	Total Net Community Benefit (CB)	% Net CB of total expenses	Financial Assistance (% of Total Expenses)	Medicaid Shortfall (% of Total Expenses)	Subsidized Health Services (% of Total Expenses)

Data Source: Internal Revenue Service. Form 990, Schedule H, Part I. 2024.

Notes: (1) Most hospitals report on a calendar-year basis. NYU Langone follows a September–August fiscal year. Its 2023 filing is presented here because the majority of that fiscal period falls within 2024. (2) This table only includes nonprofit hospitals in NYC. Calvary Hospital (hospice/palliative care hospital) & Rockefeller University Hospital (research hospital) were excluded from NYC hospitals that filed a 990 form in 2024. (3) Some hospitals file one consolidated form as a system (e.g., NYU), while others file several (e.g., Mount Sinai). (4) See Appendix X–X for the full Schedule H, Part I data.

Discussion

The vagaries, loopholes, and enforcement challenges of the federal community benefit standard are well-documented.[130,131,132] While a growing number of states have established their own community benefit standards via legislation, New York State still follows the federal standard.[133,134,135,136,137] Therefore, the NYC Health Department conducted a straightforward community benefit analysis using the federally recognized categories. Hospital associations often include the additional categories of bad debt, Medicare shortfall, and community building activities because these expenses are reportable on Schedule H; however, the IRS does not treat these categories as de facto measures of community benefit.[12,138,139]

Indeed, this analysis of nonprofit hospitals and health systems operating in New York City illustrates how the application of the federal standard can yield inconsistent results. For example, safety net hospitals reported both some of the highest and some of the lowest percentages of net community benefit expenses. On the one hand, there is Flushing Hospital Medical Center (34%), Jamaica Hospital Medical Center (33%), and Mount Sinai Beth Israel (27%), and on the other, The Brooklyn Hospital Center (9%). These inconsistencies are attributable to some of the foundational weaknesses with the federal community benefit standard and its reporting via Schedule H, including:

- **Lack of standardized cost accounting.** The IRS instructs hospitals to report financial assistance and Medicaid shortfall "at cost," but provides few requirements on how to select among possible methods, resulting in figures that are not directly comparable across institutions.[140] Hospitals and health systems with higher operating costs – including salaries, overhead, and teaching and research infrastructure – will naturally report higher community benefit expenses.
- **Structural advantages for academic medical centers.** Academic medical centers also tend to have more administrative infrastructure in billing, finance, and government affairs, which may support more comprehensive tracking and reporting of community benefit expenses.
- **Over-reliance on Medicaid shortfall, a contested category.** Medicaid shortfall was the top spending category (an average of 6% across all nonprofit hospitals). This is consistent with national trends wherein Medicaid shortfall is not only a leading category for most hospitals, but its shares as a percentage of community benefit is also growing.[141,142,143] However, it is a highly contested category. Researchers observe that Medicaid shortfall is 1) equivalent between for-profit and nonprofit hospitals, undermining the justification that it should be tax-exempt and 2) a reflection of state reimbursement policy rather than a discretionary hospital decision to provide community benefit.[144,145,146] Some argue that excluding Medicaid shortfall provides a more accurate picture of a hospital's community benefit spending and activities.

In addition, the omission of NYC's 12 public acute care hospitals (11 H+H hospitals and one SUNY hospital) is the most significant shortcoming of the federal standard when applied to NYC hospitals. The inaugural Healthcare Accountability Report identified the city's public hospital system as providing a substantial "hidden subsidy" to academic medical centers.[147] Any discussion of how hospitals are meeting the health needs of the community is incomplete without considering the populations served by public hospitals.

Proportional Share Index

This section provides much-needed context to the community benefits Reporting analysis by applying the Proportional Share Index (PSI), a metric developed by the NYC Department of Health that examines Medicaid and self-pay/uninsured discharges in relation to bed capacity for all NYC acute care hospitals,

public and private.[148] Unlike Schedule H reporting, which excludes public hospitals, the PSI captures the full landscape of inpatient care delivery in New York City.

PSI assesses whether hospitals are serving their proportional share of Medicaid and uninsured inpatient discharges relative to their licensed bed capacity. A PSI below 1 indicates a hospital is providing less than its proportional share, while a PSI of 1 or above shows it is meeting or exceeding its expected share.

Methodology

The NYC Health Department used the 2024 Statewide Planning and Research Cooperative System (SPARCS) public inpatient dataset, which includes all hospital discharges reported by licensed facilities in New York City.[149] Discharges are classified by payer, defined as the insurance source billed first for each patient's care, including Medicaid, Medicare, private insurance, self-pay (used as a proxy for uninsured), and other payers (Federal/State/Local/VA, Department of Corrections, and miscellaneous/other).

The NYC Health Department used licensed bed counts (also referred to as certified beds, reflecting beds certified under the hospital's operating certificate issued by the New York State Department of Health) as the measure of hospital capacity. Using licensed beds rather than total discharge volume as the denominator ensures that hospitals serving high volumes of commercially insured patients are not disadvantaged by the metric, provided their share of Medicaid and self-pay service is proportionate to their bed capacity.[150] Licensed beds also anchor the metric to a hospital's primary purpose, as defined by its state-issued operating certificate.[21] Licensed beds are used in preference to length of stay because the PSI is designed to measure equitable access to care rather than intensity or duration of treatment.[151]

Children's hospitals, specialty hospitals, hospitals affected by closure, and hospitals without intensive care units were excluded from the analysis (n=13). Hospitals in these categories are reported as N/A in PSI tables because their service mix and capacity are not comparable to general acute care hospitals. SPARCS inpatient discharge data are reported at the individual hospital level, allowing for facility-level analysis of patient populations.

Each hospital’s Proportional Share Index (PSI) for 2024 was calculated using the following:

$$\text{Capacity Share}_i = \frac{\text{Number of licensed beds for hospital } i}{\text{Total number of licensed beds in NYC}}$$

To achieve a PSI of 1, a hospital’s share of Medicaid and self-pay discharges must equal its share of licensed beds. For example, a hospital with 25% of the city’s licensed beds, but only 5% of the city’s Medicaid discharges has a PSI of 0.2; the hospital would need to provide 5X its current level of Medicaid and self-pay service to achieve a proportional level of service. On the other hand, a hospital with 5% of the city’s beds and 25% of the city’s Medicaid discharges has a PSI of 5; the hospital is providing 5X the level of proportional Medicaid and self-pay service.

Limitations

The PSI has several limitations. First, it focuses exclusively on inpatient utilization, which does not

capture the full scope of healthcare access as care increasingly shifts toward outpatient and ambulatory settings. While it captures relative disparities in inpatient discharges, it does not measure unmet need arising from systemic barriers to care. In addition, the use of licensed rather than staffed beds means that the PSI may understate a hospital's true capacity where beds are unstaffed. A low PSI may reflect either lower discharge volume or higher patient complexity due to longer lengths of stay, and these factors are not distinguished by the measure alone. Nonetheless, the use of licensed beds grounds the metric in the unit most directly tied to a hospital's state authorization, rather than in cost-based measures subject to accounting discretion.

Findings

Table 1.2. PSI by Category: Academic Medical Centers vs. Private, Non-Affiliated vs. Public (City/State) (2024)9

Hospital inpatient discharges 2024	Academic medical center & affiliates	Private, non-affiliated	Public city/state	NYC total
Number of hospitals	21	12	12	45
Total inpatient discharges (a)	558,949	172,565	175,134	906,648
Medicaid & self-pay (b)	156,198	89,802	104,953	350,953 (c)
% Medicaid & self-pay (b ÷ a)	28%	52%	60%	39%
Certified beds (d)	11,256	4,664	4,977	20,897 (e)
Medicaid & self-pay share (b ÷ c)	45%	26%	30%	
Certified beds share (d ÷ e)	54%	22%	24%	
PSI (Medicaid/self-pay share ÷ beds share)	0.83	1.15	1.26	

Data Source: New York State Department of Health, Health Facility 2024 Certification Information; Statewide Planning and Research Cooperative System (SPARCS), Hospital Inpatient Discharges (SPARCS De-Identified), 2024 (October 2025 release).

Notes: Children's hospitals, specialty hospitals, hospitals affected by closure (e.g., Mount Sinai Beth Israel), and hospitals without intensive care units were excluded from the analysis. PSI is calculated from unrounded discharge and bed counts; the share percentages shown are rounded and may not reproduce the PSI values exactly.

In 2024, there were 906,648 inpatient discharges, including 350,953 Medicaid and self-pay discharges (39% of total discharges), among the 45 hospitals included in the analysis.

Of the 45 NYC hospitals included in this analysis, just under half were private academic medical centers (AMCs) or their affiliates (n = 21), accounting for 54% of the city's licensed bed capacity. However, these hospitals accounted for 45% of Medicaid and self-pay discharges, resulting in an average PSI of 0.83.

Private, non-affiliated hospitals accounted for 22% of licensed beds and 26% of Medicaid and self-pay discharges, resulting in a PSI of 1.15. Public hospitals accounted for 24% of licensed beds and 30% of Medicaid and self-pay discharges, resulting in the highest average PSI of 1.26.

While AMCs had a substantial volume of Medicaid and self-pay discharges, their total share of Medicaid and self-pay discharges is lower than would be expected based on their bed capacity. Public and private non-affiliated hospitals, on the other hand, had higher Medicaid and self-pay shares relative to their capacity.

Facility-Level Variation

Table 1.3. PSI, % Medicaid & Self-Pay, and Net Community Benefit by Facility (2024)				
Hospital System	SPARCS Hospital	PSI 2024	% Medicaid & self-pay Discharges 2024	Net Community Benefit (2024)*

St. Barnabas Hospital Health System	St. Barnabas Hospital Health System	1.3	64%	$80.8M
SUNY Downstate	University Hospital of Brooklyn	0.53	42%	N/A
The Brooklyn Hospital Center	The Brooklyn Hospital Center—Downtown Campus	0.72	49%	$50.7M
Wyckoff Heights Medical Center	Wyckoff Heights Medical Center	1.59	74%	$108.6M
Data Source: New York State Department of Health, Health Facility 2024 Certification Information; Statewide Planning and Research Cooperative System (SPARCS), Hospital Inpatient Discharges (SPARCS De-Identified), 2024 (October 2025 release); Internal Revenue Service. Form 990, Schedule H, Part I. 2024.				
Notes: Children's hospitals, specialty hospitals, hospitals affected by closure (e.g., Mount Sinai Beth Israel), and hospitals without intensive care units were excluded from the analysis.				

Large academic health systems such as NYU Langone and New York-Presbyterian reported the highest levels of net community benefit spending. However, the PSIs of individual hospitals within those systems varied greatly. Because community benefit data are often reported at the system level, facility level differences are not reflected.

Hospitals located in or near lower-income areas, such as NYU Langone–Brooklyn (1.99) and New York-Presbyterian Allen (1.73), had higher PSIs, while flagship hospitals, such as NYU Langone Hospitals (.88) and New York-Presbyterian Weill Cornell (.48), had much lower PSIs. Non-academic hospitals, such as BronxCare (1.81), SBH Health System (1.3), and Wyckoff Heights Medical Center (1.59), had higher PSIs and served larger proportions of Medicaid and self-pay, even with lower community benefit totals. Public hospitals, which are not required to report community benefit data, all had PSI values of 1 and above.

While some hospitals had similar – and even above-average – Medicaid and self-pay shares, PSI varied greatly due to bed capacity. For example, Brookdale Hospital Medical Center and Interfaith Medical Center both had Medicaid and self-pay shares of 49%, well above the citywide average of 39%, yet their PSI values differed at 0.83 and 0.56 respectively. This indicates that, for both hospitals, their share of Medicaid and uninsured discharges was proportionally smaller than their share of NYC bed capacity. Conversely, some hospitals had Medicaid and self-pay discharge shares that were slightly below the citywide rate (39%) but PSI values above 1.0; these included New York-Presbyterian Queens (35%; PSI 1.14) and New York-Presbyterian Columbia (37%; PSI 1.00). For these hospitals, their Medicaid and uninsured discharge shares were more proportional relative to their shares of bed capacity.

Discussion

Overall, the PSI analysis demonstrates that a substantial portion of Medicaid and self-pay inpatient care is delivered by public and non-academic hospitals and by specific facilities within larger academic medical systems, rather than being evenly distributed across hospitals.

PSI accounts for some of the critical factors that are absent from the community benefit analysis, most notably:

- *NYC's 12 public acute care hospitals (11 H+H and one SUNY):* These hospitals overwhelmingly serve the city's Medicaid-insured and self-pay/uninsured populations. Indeed, PSI provides empirical backing to the widely held observation that the city's public hospitals, along with a handful of independent safety net hospitals, "disproportionately" serve those with Medicaid and those without insurance.
- *Hospital-level data, as opposed to health systems-level data*: Some health systems file one schedule H for multiple hospitals (New York-Presbyterian) or a couple of hospitals (Mount Sinai), obscuring how resources are allocated to each hospital.
- *An emphasis on patients, rather than financial losses*: While Schedule H has a column for "persons served" under Medicaid, this information is optional. Instead, a hospital's provision of Medicaid service or financial aid is quantified by how much it costs the hospital to provide these services.
- *An emphasis on capacity, rather than cost bases*: community benefit spending is measured in 1) absolute dollars and 2) as a share of a hospital or health system's total expenses. This approach raises questions about how costs are measured.[152] PSI takes concerns about cost basis out of the picture and instead focuses on a verifiable, carefully regulated measure of capacity: licensed beds.

Importantly for New York City's purposes, PSI evaluates hospital performance in meeting a quantifiable, urgent, and city-wide community need: inpatient care for those who are Medicaid insured or uninsured. Nearly half of the city's population (3.6 million) is enrolled in Medicaid, while an estimated half million do not have health insurance – a number that is set to increase significantly due to changes to Medicaid, the Essential Plan, and Premium Tax Credits.[153] PSI is useful not only as a performance metric, but as a theoretical framework that envisions an equitable distribution of care.

As noted above, PSI has limitations; most notably, it looks only at inpatient care and does not account for bed type or care complexity. The NYC Health Department is committed to continuing to refine it through stakeholder engagement and the incorporation of new data sources, as appropriate.

CEO Compensation

This section reports on NYC hospital and health system CEO compensation for 2024, primarily from IRS Form 990 filings, with public payroll data from Open Data NY for NYC Health + Hospitals. In addition, it includes operating expenses from the same 990 for context.

Methodology

The NYC Health Department reviewed IRS Form 990 filings for tax year 2024 for 24 nonprofit hospitals and health systems operating in New York City (each a distinct Form 990/EIN). In addition to the 24 Form 990 filers, NYC Health + Hospitals is included using public payroll data from Open Data NY, as it does not file Form 990. Data were sourced and tabulated from Form 990 Part I (Line 8), Schedule J and Part VII.

Schedule J Part II reports compensation to each listed individual across two rows: row (i), compensation from the filing organization, and row (ii), compensation from related organizations. Where rows reported a nonzero amount for the same individual, all amounts were summed, reflecting compensation from multiple distinct payers rather than duplicate reporting of a single payment. This within-filing summation is distinct from the treatment across filings: where one executive is a reported officer on more than one hospital's 990 within a system, the same compensation may appear on more than one filing, reported by both the filing organization and a related organization. To avoid double-counting, that executive's compensation is reported once rather than summed across filings. Part VII reports total compensation in three components: reportable compensation from the filing organization (column D) and from related organizations (column E), defined as amounts on Form W-2, 1099-MISC, or 1099-NEC, and estimated other compensation including nontaxable benefits and deferred compensation (column F). Schedule J Part II was the primary data source because it provides more comprehensive compensation data than Part VII, capturing base, bonus, deferred, and nontaxable benefit components in detail; Part VII was used for cross-reference and validation.

CEO compensation reflects the compensation reported for the organization's senior executive, as reported in IRS Form 990 filings or public payroll records. Depending on the organization's governance structure, this individual may be identified as the Chief Executive Officer, President, or another equivalent executive leadership position. For consistency, these individuals are referred to collectively as CEOs throughout this report. This approach follows methods used in prior analyses of nonprofit hospital executive compensation.[154]

Several large health systems included in this analysis, including New York-Presbyterian, NYU Langone, Mount Sinai, Montefiore, and Northwell Health, operate hospitals and other facilities beyond New York City. Reported CEO compensation reflects the system executive's total compensation across all related entities (see Schedule J discussion above), while the operating-expenses presented here are taken as reported on each entity's Form 990 without adjustment. In some cases, the operating expenses of entities that file multiple 990s for their NYC facilities are summed to estimate NYC scale. In other cases, operating expenses include facilities beyond the NYC border. Using only 990s ensures the figures are traceable to a single public source, but it means expense totals reflect whatever scope each filing entity encompasses. CEO compensation and operating expenses may therefore differ in organizational scope. As a result, comparisons across entities, and any ratio of compensation to expenses computed from the 990 alone, may combine figures drawn from different organizational scopes, a limitation of this analysis.

Findings

Table 1.4. NYC CEO Compensation vs. Total Operating Expenses (2024)			
Employer Identification Number (EIN)	Hospital/Hospital System	Total Operating Expenses (2024)	CEO Compensation (2024)
	NYC HEALTH + HOSPITALS	$12.1B	$1.1M
	NEW YORK-PRESBYTERIAN	$11.3B	
13-3957095	New York-Presbyterian Hospital	$10.1B	$26.3M
11-1839362	New York-Presbyterian Queens	$1.1B	$1.7M
13-3971298	NYU Langone Hospitals	$8.7B	$18.0M
	NORTHWELL HEALTH	$8.1B	$5.9M
11-2241326	Long Island Jewish Medical Center	$4.5B	$5.9M $5.5M
13-1624070	Lenox Hill Hospital	$2.1B	
11-2868878	Staten Island University Hospital	$1.5B	
	MOUNT SINAI HEALTH SYSTEM	$7.9B	
13-1624096	Mount Sinai Hospital	$4.5B	$5.5M
13-2997301	Mount Sinai West & Morningside	$1.9B	
13-5564934	Mount Sinai Beth Israel	$1.2B	
13-5562304	New York Eye and Ear Infirmary	$139.3M	
91-2154267	Memorial Sloan Kettering	$7.9B	$7.0M
13-1740114	Montefiore Medical Center	$5.6B	$16.7M
	MAIMONIDES HEALTH	$2.0B	
11-1635081	Maimonides Medical Center	$1.9B	$1.8M
11-1986351	Maimonides Midwood Community	$167.3M	
13-1624135	Hospital for Special Surgery	$1.6B	$5.3M
	MEDISYS HEALTH NETWORK	$1.3B	$3.2M
11-1631788	Jamaica Hospital Medical Center	$857.3M	$1.3M
11-1631781	Flushing Hospital Medical Center	$409.0M	
11-1631746	One Brooklyn Health System	$1.1B	
13-1974191	BronxCare Health System	$1.0B	$2.4M
13-1740122	SBH Health System	$585.2M	$1.1M
11-1630755	The Brooklyn Hospital Center	$537.6M	$1.8M
74-3177454	Richmond University Medical Center	$487.9M	$1.4M
11-1631837	Wyckoff Heights Medical Center	$451.8M	$1.4M
11-1665825	Episcopal Health Services	$432.6M	$1.1M

Data Source: Internal Revenue Service. Form 990, 2024; Independent Financial Audits 2024; OpenDataNY for NYC H+H.

Note: (1) CEO compensation reflects total pay across affiliated facilities. For example, Northwell Health CEO is listed across 3 tax forms. (2) Subtotals from Systems with hospitals outside NYC represent the sum of operating expenses reported on the Form 990 filings of the named system's individual New York City acute-care hospital entities. They do not represent consolidated system-wide operating expenses and exclude out-of-NYC facilities, physician practices, foundations, and other affiliated entities where possible to do so. Long Island Jewish Medical Center spans the Queens–Nassau border and is included here as part of Northwell's NYC hospital operations. Component figures are rounded, so subtotals may not equal the exact sum of the rows shown. CEO compensation is reported for the system executive and reflects system-wide oversight; it is therefore not scoped to the hospital subtotal shown.

Reported operating expenses varied widely across the entities in this analysis. NYC Health + Hospitals, the city's public system, reported the largest total (approximately $12.1 billion), on the same order as the combined New York City hospital operations of New York-Presbyterian (approximately $11.3 billion). (NYP's financials do include activity related to some services provided in Westchester.) Among the smaller standalone community hospitals, several reported operating expenses under $500 million, including Wyckoff Heights ($451.8M), Richmond University Medical Center ($487.9M), and Episcopal Health Services ($432.6M).

CEO compensation was highest at the large academic and specialty systems — New York-Presbyterian ($26.3M), NYU Langone ($18.0M), Montefiore ($16.7M), and Memorial Sloan Kettering ($7.0M). Among the standalone community hospitals and the public system, compensation clustered near $1 million, including NYC Health + Hospitals ($1.1M) — notable given it is the city's largest public health system.

Compared to 2023, increases in CEO compensation were primarily associated with changes in bonus and other compensation components rather than base salary. The largest increases were observed at New York-Presbyterian and NYU Langone. Both health systems experienced CEO transitions in 2025 and early 2026, and the higher reported compensation may reflect bonus, deferred, and other retirement-related compensation associated with those long-serving executives. At New York-Presbyterian, approximately $15.7 million of the increase was reported as "other reportable compensation" on Form 990, a category that includes deferred and other non-salary compensation reported during the filing year. Although these transition-related payments may have contributed to higher reported compensation in 2024, both health systems have consistently reported among the highest CEO compensation levels in prior years.

Discussion

The IRS has outlined expectations that nonprofit boards determine executive compensation through independent review and comparability data.[155] In practice, however, nonprofit hospital boards score relatively poorly on attributes associated with effective monitoring, with incentive contracts unlikely to compensate fully for weaker board oversight.[156] Nonprofit hospital CEO compensation is highly variable nationally and is associated with hospital size, teaching status, technology capability, and patient satisfaction, but not with quality of care, patient outcomes, or community benefit.[157] Recent analysis using regression and decomposition methods similarly finds CEO compensation strongly associated with system size, with a smaller significant association with profit and no significant association with charity care provision.[158]

In New York City, the patterns observed in the national literature are broadly reflected but with notable exceptions. Consistent with evidence that hospital size is strongly associated with CEO compensation, the highest-compensated CEOs in 2024 led the city's largest systems as reported on the 990s: New York-Presbyterian Hospital ($26.3 million), NYU Langone Hospitals ($18.0 million), and Montefiore Medical Center ($16.7 million). However, size alone does not explain the pattern: Montefiore reported CEO compensation of $16.7 million, more than twice Memorial Sloan Kettering's $7.0 million. NYC Health + Hospitals represents the sharpest departure from norms: with $12.1 billion in total expenses, it was the largest health system in this analysis, yet its CEO compensation was just $1.1 million, among the lowest reported, reflecting its governance as a public benefit corporation with different accountability and compensation structures than nonprofit hospitals. Applying the national literature's finding that CEO compensation is not associated with community benefit provision, financial assistance levels, or patient outcomes raises questions about what the compensation structures of NYC's nonprofit hospitals are designed to reward, questions that current reporting requirements do not answer and that greater transparency in board-level compensation decisions would help address.[159]

Without access to each hospital's internal compensation rubric and performance metrics, individual pay decisions cannot be fully assessed. Federal law nonetheless establishes two standards governing nonprofit executive compensation: under IRC §501(c)(3), no part of a nonprofit's net earnings may inure to the benefit of any private individual,[160] and under IRC §4958, compensation that exceeds a reasonable amount constitutes an excess benefit transaction subject to excise tax penalties.[161] The compensation levels documented here suggest these standards may be necessary but not sufficient to ensure that executive compensation is tied to the community benefit, financial assistance, and patient outcome priorities that define nonprofit hospital mission.

Bad Debt

This section reports on bad debt and financial assistance practices among NYC nonprofit hospitals and health systems for 2024, as reported on IRS Form 990 Schedule H. It also examines the share of bad debt attributable to patients eligible for financial assistance as an indicator of hospital screening practices and administrative follow-through.

Bad debt refers to amounts that hospitals expected to collect and recorded as revenue but later deemed uncollectible. Unlike financial assistance, also known as charity care, which consists of free or discounted services provided to patients who qualify under the hospital's financial assistance policy, bad debt is typically not treated as a community benefit. Both are disclosed on IRS Form 990 Schedule H, though in separate sections: financial assistance as a community benefit in Part I, and bad debt in Part III.[162]

Bad debt may also be distinguished from medical debt, which, in the hospital context, refers to the balance a patient owes once a bill is issued, after insurance coverage and negotiated discounts are applied. While bad debt is an accounting category reflecting the hospital's perspective on uncollectible balances, medical debt refers to the financial obligation that remains with the patient, regardless of how or whether the hospital has recorded or written off that amount. Medical debt is difficult to quantify as patient-held balances are not captured in any standardized public administrative reporting in New York and are instead measured mainly through surveys and special studies.

Methodology

The NYC Health Department reviewed IRS Form 990 filings for tax year 2024 for 24 nonprofit hospitals and health systems operating in New York City. Data were sourced and tabulated from Form 990 Schedule H Part III, Section A (Bad Debt Expense) for nonprofit hospitals. As noted in the Community Benefits methodology, some nonprofit health systems file a single Schedule H covering multiple hospitals, meaning data in this analysis are reported at the health system level for those entities rather than the individual hospital level. Under Schedule H Part III, Section A, hospitals must report:

- **Bad debt expense:** The IRS asks whether organizations calculate bad debt expense in accordance with Healthcare Financial Management Association Statement No. 15 (“Statement 15”) but does not require its adoption.[163]
- **Estimated bad debt expense attributable to patients eligible under the organization’s Financial Assistance Policy (FAP):** Hospitals are instructed to “use any reasonable methodology” to estimate the amount of bad debt that is “reasonably attributable to patients who likely would qualify under the hospital’s FAP… but for whom insufficient information was obtained to determine their eligibility.”[164] Hospitals must describe the methodology they used to calculate this estimate. Hospitals may also report this amount as a community benefit but must describe their rationale for doing so.

Findings

Table 1.5. Total bad debt reported by NYC nonprofit hospitals, including amounts attributable to patients eligible for financial assistance (2024)					
Employer Identification Number (EIN)	Hospital/System Name	Total Bad Debt (2024)	Bad debt attributable to patients FA eligible	% Bad debt attributable to patients FA eligible	Net Financial Assistance at Cost
13-1974191	BronxCare Health System	$130.3M	$16.4M	13%	$13.9M
91-2154267	Memorial Sloan Kettering	$119.1M	$2.4M	2%	$16.7M
13-1624096	Mount Sinai Hospital	$65.3M			$52.7M
11-2241326	Long Island Jewish Medical Center	$38.5M			$49.6M
11-1631788	Jamaica Hospital Medical Center	$35.0M			$26.3M
13-5564934	Mount Sinai Beth Israel	$26.5M			$9.9M
11-1631837	Wyckoff Heights Medical Center	$23.3M			$7.5M
13-2997301	Mount Sinai West & Morningside	$22.3M			$28.8M
13-3957095	New York-Presbyterian Hospital	$18.5M	$729.5K	4%	$111.9M
11-1986351	Maimonides Midwood Community Hospital	$15.7M	$14.0M	89%	$4.3M
13-1624070	Lenox Hill Hospital	$14.8M			$23.3M
13-1740114	Montefiore Medical Center	$14.1M	$5.8M	41%	$58.4M
11-1631781	Flushing Hospital Medical Center	$11.4M			$27.9M
11-1631746	One Brooklyn Health System	$11.0M	$7.1M	65%	$20.8M
11-1665825	Episcopal Health Services	$8.0M	$1.2M	15%	$5.5M
11-1630755	The Brooklyn Hospital Center	$7.9M	$1.8M	22%	$24.2K
11-2868878	Staten Island University Hospital & South	$7.2M			$11.6M
11-1635081	Maimonides Medical Center	$6.4M			$58.5M
13-1624135	Hospital for Special Surgery	$4.0M			$19.7M
74-3177454	Richmond University Medical Center	$3.9M	$1.2M	30%	$21.6M
11-1839362	New York-Presbyterian Queens	$3.6M	$160.8K	5%	$12.6M
13-1740122	SBH Health System	$3.4M			$16.4M
13-3971298	NYU Langone Hospitals	$2.6M			$102.5M
13-5562304	New York Eye and Ear Infirmary of Mount Sinai	$1.1M			$2.5M
	Total among NYC nonprofit hospitals	*$593.7M*	*$50.6M*	*9%*	*$703.1M*

Data Source: Internal Revenue Service. Form 990, Schedule H, Part III: Bad Debt, Medicare, and Collection Practices, 2024.

Note: Empty cells should not be interpreted as evidence that no bad debt attributable to patients potentially eligible for financial assistance existed; IRS instructions direct hospitals to estimate this amount using a reasonable methodology.

Total reported bad debt across all NYC nonprofit hospitals was approximately $593.7 million, with approximately $50.6 million (9%) attributable to patients eligible for financial assistance. Most reported bad debt was concentrated among a small group of hospitals, including BronxCare ($130.3 M), Memorial Sloan Kettering ($119.1 M), and Mount Sinai Hospital ($65.3 M), which collectively accounted for more than half of total bad debt across all nonprofit hospitals. However, these three hospitals differ substantially in type and mission: Memorial Sloan Kettering is a specialty cancer center, Mount Sinai Hospital is a large academic health system, and BronxCare is a safety net hospital.

Safety net hospitals, including Maimonides Midwood Community Hospital (89%) and One Brooklyn Health (65%), reported the highest shares of bad debt attributable to patients eligible for financial assistance, indicating that a significant portion of their uncompensated care involves patients who may not have been reached by existing screening processes. By contrast, large academic health systems and specialty hospitals, like NYU Langone and Hospital for Special Surgery, reported both low total bad debt and did not report FAP-eligible shares.

Schedule H instructs hospitals to use any reasonable methodology to estimate bad debt attributable to patients who likely would have qualified for financial assistance but for whom insufficient information was obtained, and to describe the methodology used.[165] Of the 24 nonprofit hospitals and health systems reviewed, fewer than half reported any bad debt attributable to financial assistance-eligible patients. In most cases, hospitals that did not report a figure left 990 Schedule H Part III Section A Line 3 (“Line 3”) blank rather than entering zero, indicating they may not have estimated bad debt attributable to FAP-eligible patients. The absence of a reported figure limits the usefulness of this disclosure for oversight and accountability and should not be interpreted as an absence of FAP-eligible bad debt.

When considered alongside bad debt, these figures show wide variation in how hospitals report and classify financial assistance and unpaid patient bills. Some large academic systems reported high levels of net financial assistance at cost and relatively low levels of bad debt attributable to financial assistance-eligible patients. For example, New York-Presbyterian reported $111.9 million in net financial assistance at cost and approximately $729.5 thousand, or 4 percent, of bad debt attributable to financial assistance-eligible patients, while NYU Langone reported $102.5 million in net financial assistance and no reported bad debt attributable to financial assistance-eligible patients. In contrast, other hospitals reported higher levels of bad debt tied to financial assistance eligibility relative to their net financial assistance spending. Maimonides Midwood Community Hospital reported $14 million in bad debt attributable to financial assistance-eligible patients and $4.3 million in net financial assistance at cost, while BronxCare reported $16.4 million in bad debt attributable to financial assistance-eligible patients and $13.9 million in net financial assistance at cost. One Brooklyn Health reported $7.1 million in financial assistance-eligible bad debt alongside $20.8 million in net financial assistance at cost.

These differences suggest variation in how hospitals identify and enroll patients in financial assistance programs, as well as broader differences in how bad debt and financial assistance are defined and reported. New York State has taken meaningful steps to standardize financial assistance eligibility and strengthen patient protections, most recently through legislation effective October 2024.[166][167] However, no state or federal requirement currently mandates that hospitals use a consistent methodology to estimate and report the share of bad debt attributable to patients who likely qualified for financial assistance, limiting the ability of regulators and the public to assess how effectively hospitals are identifying and enrolling eligible patients.

Discussion

The American Hospital Association and others have argued that bad debt attributable to financially eligible patients should be counted toward community benefit obligations.[168][169] This report follows the IRS framework, which does not recognize bad debt as a community benefit on Schedule H.[170][171]

Nonetheless, bad debt figures warrant examination in an accountability context: the share attributable to FAP-eligible patients may serve as one indicator of whether hospitals are effectively screening and enrolling patients who qualify for assistance, and total bad debt offers a partial window into patient financial burden that is otherwise absent from standardized public reporting.

Accounting and reporting variability limits comparability

Bad debt figures reported on IRS Form 990 Schedule H are difficult to compare across institutions. The wide variation in reported bad debt among NYC hospitals, ranging from $1.1 million to $130.3 million, may reflect differences in administrative and accounting practices as much as differences in patient payment behavior. Hospitals use different screening processes, revenue-cycle strategies, and accounting methods to determine what is recorded as bad debt, and the IRS does not require adoption of Statement 15, the primary industry guidance on differentiating bad debt from implicit price concessions and charity care. Under current revenue-recognition standards (ASC 606), much of what was historically reported as bad debt is now recorded as implicit price concessions within the patient-service-revenue line, and the distinction between the two rests on provider-specific judgments about credit risk. Statement 15 further notes that certain reimbursement amounts may be defined in existing payer contracts as bad debt rather than implicit price concessions, and that there is no requirement to disclose implicit price concessions separately. As a result, some reported bad debt totals may reflect amounts a hospital did not expect to collect at the time of billing rather than strictly unpaid patient bills.

Institutions' definitions of Line 3 (the portion of bad debt attributable to patients who likely qualified for financial assistance) illustrate this inconsistency. For example, New York-Presbyterian reported that Line 3 includes patients who “went through our charity care/financial assistance process and were determined to have financial need,” received “a discount based on our sliding scale charity care policy,” and whose remaining reduced balances “were written off as bad debt and included as a community benefit,”[172] while Memorial Sloan Kettering reported that its Line 3 figure was derived by reviewing “cases that were closed with an 'Incomplete' status in the Financial Assistance Program during 2020 through 2024” and comparing those against “bad debt write-offs from 2024.”[173] These differing methodologies suggest that the same reporting category can capture different underlying phenomena, limiting comparability across institutions.

What bad debt does and does not reveal

Reported bad debt is shaped as much by administrative practice as by patient behavior. Hospitals recognize revenue only for amounts they reasonably expect to collect, based on historical experience with similar patients and payer types. This revenue recognition typically occurs at the portfolio level and does not depend on individual financial assistance eligibility determinations, which are made separately through billing and collections. A patient who would qualify for assistance may therefore move through collections without ever being screened, producing a bad debt write-off rather than financial assistance. Hospitals that screen early and completely are more likely to reclassify balances into financial assistance before they become bad debt; those that screen late or incompletely are more likely to carry those balances as bad debt even when the patient would have qualified. Because screening, timing, and accounting practices differ across institutions, reported bad debt is not a standardized measure of either financial assistance effectiveness or patient hardship, and the same total can reflect very different dynamics.

This is clearest at the extremes. Maimonides Midwood Community Hospital (89%) and One Brooklyn Health (65%) reported that the large majority of their bad debt was attributable to patients who likely qualified for financial assistance, indicating that a significant portion of uncompensated care at these institutions involves patients who may not have been reached by existing screening and enrollment processes. These patterns may reflect staffing limitations, high patient volume, and resource constraints

that safety net hospitals face. By contrast, Memorial Sloan Kettering and Mount Sinai both reported high bad debt totals alongside low or no FAP-eligible shares, suggesting that unpaid balances at these institutions may more often reflect high cost-sharing obligations, coverage gaps, or changes in financial circumstances over the course of treatment rather than unmet financial assistance eligibility. BronxCare reported $130.3 million in total bad debt, the highest among safety net hospitals in this review, but its 13% FAP-eligible share does not indicate a screening gap of the same magnitude seen at Maimonides Midwood or One Brooklyn.

Implications for accountability and reporting

Because administrative choices such as when screening occurs, how thoroughly, and how unpaid balances are classified determine whether hardship is resolved through financial assistance or recorded as bad debt, the Schedule H figure reveals little about the underlying cause of nonpayment. For patients who would have qualified for financial assistance, it reflects a missed screening opportunity; for others, high cost-sharing, coverage gaps, or changes in financial circumstances, none distinguishable from the figure alone, and none leaving a trace in standardized public reporting.

Medical debt remains a nearly invisible category. In New York, there is no centralized public reporting of patient-held balances. Under New York State law, hospitals and consumer reporting agencies are prohibited from including medical debt on consumer credit reports.[174][175] It is therefore observed mainly through patient surveys, qualitative research, and nonprofit data collection. Bad debt figures reported on Schedule H do not capture this burden, so the full scope of patient financial hardship remains outside public accountability frameworks.

These findings suggest that standardization of bad debt definitions across hospitals, combined with consistent implementation of existing financial assistance screening requirements, would reduce the likelihood that balances owed by eligible patients are recorded as bad debt rather than resolved through financial assistance. New York's Hospital Financial Assistance Law already requires hospitals to assume patient eligibility for financial assistance for emergency and medically necessary services, providing a foundation for stronger screening.[176][177] With greater definitional consistency, bad debt could serve alongside financial assistance reporting as an additional indicator of patient financial burden, though current limitations prevent distinguishing unpaid balances that reflect unmet need from those that remain unpaid for other reasons. These gaps limit the ability to determine whether tax-advantaged hospital resources are being used to prevent financial harm or to shift the burden of unpaid care back onto households.

Section 2: Health Insurer Financial and Claims Denial Reporting

Financial Performance & Executive Compensation

This section examines health insurer financial performance and executive compensation, as reported on U.S. Securities and Exchange Commission (SEC) Form 10-K and proxy statement filings by for-profit insurers[178] and Internal Revenue Service (IRS) Form 990 filings by nonprofit insurers for calendar year 2024.[179]

For more information on **SEC Form 10-K, SEC proxy statements,** and **IRS Form 990**, please see **Healthcare Accountability Data Sources**.

Methodology

Under Local Law 78 of 2023, the NYC Health Department must report publicly-available data for insurers whose business accounts for a significant portion of hospital payments in New York City.[180] Major insurers were identified using two criteria applied to health insurers active in NYS in 2024:

1) Insurers offering Medicaid Managed Care plans and plans in at least four additional market segments (e.g., Medicare Advantage, NYS Marketplace, Essential Plan, Child Health Plus, or private small group and individual plans)[181]
2) Insurers with commercial plans with NYC enrollees comprising at least 50% of total NYS enrollees, or with at least 100,000 NYC enrollees.

The nine major insurers consist of a mix of for-profit and nonprofit entities. Given their distinct regulatory filing systems, the NYC Health Department reviewed SEC Form 10-K and SEC Proxy Statements (DEF 14A) for publicly traded, for-profit corporations (filed under the consolidated parent company) and IRS Form 990s for nonprofit organizations (filed under the primary insurance entity operating in New York) for filing year 2024. Financial performance and executive compensation data were extracted and tabulated as outlined in Table 2.1.

Table 2.1. Data Sourcing by Insurer Tax Status

Financial Metric	For-Profit Insurers (SEC Filings)	Nonprofit Insurers (IRS Filings)
Revenue	Form 10-K: Item 7, Summary of Consolidated Financial Results (Total revenues)	Form 990: Part I (Summary), Line 12
Overhead Cost	Form 10-K: Item 7, Summary of Consolidated Financial Results (Operating expenses)	Form 990: Part IX (Statement of Functional Expenses), Line 25, Sum of Columns C and D
Net Income	Form 10-K: Item 7, Summary of Consolidated Financial Results (sum of Net income and Net (income) loss attributable to noncontrolling interests)	Form 990: Part I (Summary), Line 19 (Revenue less expenses)
CEO Compensation	Proxy Statement (DEF 14A): Summary Compensation Table (Total Column)	Form 990: Schedule J, Part II, Column E (Total)
CEO-to-Worker Compensation Ratio	Proxy Statement (DEF 14A): CEO Pay Ratio Section	Nonprofit organizations do not report median employee compensation or CEO-to- Worker Ratio

Limitations

This analysis has several limitations. First, health insurance regulation and enforcement span an array of administrative agencies at the state and federal levels. Therefore, several data sources were referenced to identify the major insurers for this analysis – each with different data reporting requirements – limiting the feasibility of identifying major insurers by NYC enrollment. While enrollment was used to identify insurers dominant in the commercial market as major NYC insurers, this reporting has its own limitations given that guidelines vary by insurance company type and commercial plan type.

Second, due to the presence of both nonprofit and for-profit insurers in this analysis and the respective differences in data sources and reporting requirements, data is presented in separate tables, and totals between tables should not be compared directly. While IRS filings are signed under penalty of perjury and SEC filings are certified by senior officers subject to criminal liability for knowing misstatements, each filing is governed by different audit, compliance, and disclosure standards.[182,183,184] Importantly, SEC Form 10-K and proxy statement filings are typically submitted at the consolidated parent company level while Form 990 filings are submitted at the individual legal organization level. As a result, for-profit insurer data reflect enterprise-wide operations with a national footprint rather than local insurer operations. Conversely, nonprofit insurers in this analysis consist of localized or regional entities with operations primarily in NYS and/or NYC. Additional differences in structural model and operational scale of insurers - regardless of tax status – limit comparisons and reporting on year-over-year trends.

Findings

In filing year 2024, the six major for-profit health insurance companies reported a combined revenue of approximately $1.1 trillion. UnitedHealth Group alone accounted for more than one-third of that total ($400.3 billion), **exceeding the combined revenue of the other five for-profit insurers analyzed. UnitedHealth Group** also reported the highest overhead ($53.0 billion) and net income ($14.4 billion). Oscar Health reported the lowest total revenue ($9.2 billion), overhead ($1.8 billion), and net income ($25.4 million), reflecting its status as a smaller, ACA-focused insurer. The median figures across the six companies were $170.0 billion in revenue, $30.3 billion in overhead, and $4.0 billion in net income.

CEO compensation represented less than 0.1% of revenue across all six for-profit insurers, ranging from 0.005% to 0.054%. Aside from Oscar Health, CEO compensation was notably concentrated among the remaining five for-profit companies, ranging from $17.8 million (CVS Health) to $26.3 million (UnitedHealth Group), despite a nearly tenfold difference in revenue scale.

Table 2.2. Revenue, Overhead Cost, Net Income, and CEO Compensation – For Profit Insurers (2024)

Insurer	Revenue ($ in billions)	Overhead ($ in billions)	Net Income ($ in billions)	CEO Compensation ($ in millions)	CEO Comp. as % of Revenue	CEO-to-Worker Compensation Ratio
Centene (parent company of Fidelis)	$163.1 B	$12.4 B	$3.3 B	$20.6 M	0.013	9 days, 8:01:00
CVS Health (parent company of Aetna)	$372.8	$41.6 B	$4.6 B	$17.8 M	0.005	12 days, 11:01:00
Elevance Health, Inc. (parent company of Anthem BCBS)	$177 B	$20 B	$6 B	$20.5 M	0.012	15 days, 10:01:00
Molina Healthcare	$40.7 B	$2.7 B	$1.2 B	$21.9 M	0.054	11 days, 4:01:00
Oscar Health	$9.2 B	$1.8 B	$25.4 M*	$0.9 M	0.01	08:01:00
UnitedHealth Group (parent company of UnitedHealthcare and Oxford)	$400.3 B	$53 B	$14.4 B	$26.3 M	0.007	14 days, 12:01:00

Data Source: SEC Form 10-K and Proxy Statement
Note: Oscar Health's net income is reported in millions.

In filing year 2024, the three major nonprofit insurance companies reported a combined revenue of approximately $16.6 billion, less than 2% of combined for-profit revenue. Healthfirst reported the highest revenue ($7.0 billion) and net income ($86.3 million). MetroPlus reported revenue of $4.9 billion and net

income of $70.2 million, as well as the lowest overhead ($0.1 billion) and lowest CEO compensation ($0.8 million) of any insurer analyzed. EmblemHealth reported the lowest revenue ($4.7 billion) and was the only insurer in the entire analysis to report a net loss ($33.2 million).

CEO compensation among nonprofit insurers ranged from $0.8 million (MetroPlus) to $5.3 million (EmblemHealth) — substantially lower than the $17.8 million to $26.3 million range observed among for-profit insurers. CEO compensation represented less than 0.2% of revenue across all three nonprofit insurers, ranging from 0.016% (MetroPlus) to 0.112% (EmblemHealth).

Table 2.3. Revenue, Overhead Cost, Net Income, and CEO Compensation – Nonprofit Insurers (2024)

Insurer	Revenue ($ in billions)	Overhead ($ in billions)	Net Income ($ in millions)	CEO Compensation ($ in millions)	CEO Comp. as % of Revenue	CEO-to-Worker Compensation Ratio
HealthFirst Health Plan, Inc.	$7 B	$0.3 B	$86.3 B	$5.2 M	0.074	N/A
EmblemHealth (Health Insurance Plan of Greater New York)	$4.7 B	0.5 B	$-33.2 B	$5.3 M	0.112	N/A
MetroPlus Health Plan, Inc.	4.9 B	0.1 B	$70.2 B	$0.8 M	0.016	N/A

Data Source: IRS Form 990

Discussion

The insurance companies included in this analysis vary widely in organizational scale, structure, market presence, and mission. For example, UnitedHealth Group – the largest insurer in this analysis – is a publicly traded, for-profit conglomerate with approximately 380,000 employees, more than 180 global subsidiaries, and approximately 146 million members globally. In contrast, MetroPlus Health Plan is a nonprofit insurer owned by NYC Health and Hospitals, operates exclusively within NYC, and serves approximately 690,000 members primarily enrolled in Medicaid Managed Care, the Essential Plan, and Child Health Plus.

A fundamental distinction shaping differences across insurers is tax status. For-profit insurance companies are owned by shareholders and exist primarily to generate profit. For-profit companies tend to operate nationally, with information on their financial performance reported at the parent company level. This further limits comparisons between insurers and the ability to isolate for New York-based health insurance operations. Nonprofit insurers, by contrast, are granted tax-exempt status related to their charitable mission, and surpluses are retained for organizational and community purposes rather than distributed to shareholders. Nonprofit insurance companies included in this analysis tend to be limited to the New York State market, with much of their business in NY Marketplace, Essential Plans, Medicaid Managed Care plans. Comparisons and insights from health insurer financial performance must take these factors into account.

CEO compensation broadly tracked organizational scale across for-profit and nonprofit insurers. Nonprofit insurer CEOs earned between $0.8 million and $5.3 million, compared to $0.9 million to $26.3 million among for-profit insurers. However, within the for-profit group, compensation was notably concentrated: four of the six for-profit insurers reported CEO compensation within a narrow range of $17.8 million to $21.9 million despite a nearly tenfold difference in revenue scale, suggesting that executive compensation in the health insurance industry reflects industry norms as much as organizational size.

Post-Service Denials and Internal Appeals

A **post-service claim denial** occurs when an insurer refuses to pay or denies responsibility to pay a claim *after* a medical service has been rendered. This may be distinguished from a **pre-service denial** (also called a preauthorization denial), in which the insurer refuses to pay or denies responsibility to pay a claim *before* the medical service has been provided.

An enrollee or their authorized representative may appeal a denied claim. The first step is an **internal appeal**, in which the insurer reviews its initial decision to deny the claim.[185] If the insurer upholds the denial, the enrollee or their authorized representative may, depending on the type of denial, seek an external, independent review of the denial; this is an **external appeal**.[186]

Methodology

The NYC Health Department reviewed 2023 and 2024 Health Care Claims Reports submitted by 32 health insurers to DFS and publicly posted on the DFS website.[187] Per the public reporting requirement, health insurers must report aggregate information on post-service claims denials and appeals on a quarterly and annual basis via the Health Care Claims Report template.[188] The requirement applies only to comprehensive insurance coverage for state-regulated lines of business: commercial (fully insured), Essential Plan, Child Health Plus, and Medicaid Managed Care. This excludes supplemental plans, self-funded ERISA plans for which an insurer may act as a Third-Party Administrator, and federally-regulated lines of business, such as Medicare Advantage.[189] Prior authorization denials and appeals of pre-service denials are excluded from the reports.

DFS does not require insurers to report the location where services were provided or otherwise geographically disaggregate the data. Therefore, this analysis includes statewide data reported by all 32 insurers across the four health insurance market segments, regardless of whether their business accounts for a significant portion of hospital payments in New York City.[190] See **Appendix 1.7** for the full list of insurers included in the analysis by market segment.

Submitted reports contain information on the volume and monetary value of claims by provider type, including: 1) claims received, paid, and denied during the reporting period; 2) denied claims that were appealed, upheld, and overturned; and 3) denied claims grouped by the primary reason for denial. DFS instructs insurers to report the dollar value of claims as billed charges, allowed amounts, or both, applied consistently throughout their filing. For each denied claim, insurers report only the primary reason for denial from a standardized set of nine categories; multiple denial reasons per claim are not captured. Reports do not include information on the services in the claim.

"Claims" refers to claims adjudicated during the reporting period, recorded as denied in full, paid in full, or paid in part and denied in part. "Appeals" refers to internal appeals adjudicated during the reporting period, recorded as overturned in full, overturned in part, or upheld. This analysis presents denial rates, internal appeal rates, and internal appeal overturn rates, calculated by summing total counts across all insurers as follows:

- *Denial rate:* Claims denied in full or in part ÷ total adjudicated claims.
- *Full denial rate:* Claims denied in full ÷ total adjudicated claims.
- *Appeal rate:* Internal appeals filed ÷ claims denied in full or in part.
- *Overturn rate:* Appeals overturned in full or in part ÷ total adjudicated appeals.
- *Full overturn rate:* Appeals overturned in full ÷ total adjudicated appeals.

The volume and value of claims and appeals were aggregated by market segment using both billed charges and allowed amounts. Denial reasons were aggregated across market segments and provider types. Data in the pharmacy provider category were excluded from this analysis, as pharmacy claims are

high-volume, low-dollar claims, and their inclusion could distort overall denial rates without adding meaningful analytical value.[191]

Insurers that reported no internal appeals despite reporting appeals in other years were excluded due to data quality concerns. The NYC Health Department performed limited, basic internal consistency checks to validate submitted data using the following principles, resulting in the exclusions of some insurers from portions of the analysis.

1. Claims Left Pending (Prior Reporting Period) + Claims Received = Claims Denied in Full + Claims Denied in Part + Claims Paid in Full + Claims Left Pending (Current Reporting Period) using a tolerance of ±1 claim.
2. Appeals Left Pending (Prior Reporting Period) + Appeals Received = Appeals Overturned in Full + Appeals Overturned in Part + Appeals Upheld + Appeals Left Pending (Current Reporting Period) using a tolerance of ±1 appeal.

Limitations

Health Care Claims Report data are self-reported and have not been independently audited or verified by DFS. Variable billing and reporting practices further limit the comparability of findings across insurers, even within the same market segment. For instance, there were discrepancies in the total volume of denied claims and the denial reason totals in the reports, likely reflecting inconsistent application of DFS reporting instructions, assignment of multiple denial reasons to a single claim, or omission of denial reasons entirely. Denial reason findings should therefore be interpreted as approximate distributions rather than precise counts. Some insurers also reported negative numbers of pending claims or appeals; these values were not used in any calculations but reflect underlying data quality issues in insurer submissions.

This report presents monetary findings using billed charges for denials, and both billed charges and allowed amounts claims, appeals, and overturns. Billed charges were reported by nearly all insurers and provide the most complete basis for comparison across market segments. Only a small proportion of insurers reported complete allowed amount data; allowed amounts were used in 12% of adjudicated Commercial claims and in 30% in other market segments. As a result, the reported allowed amount values may be disproportionately influenced by the practices of individual insurers. Further, allowed amounts and billed charges provide separate but limited views of the true cost of denials: billed charges reflect what providers charge rather than what is ultimately paid, while allowed amount data add context about the financial value of overturned appeals, where the allowed amount reflects actual payment made following an overturn.

Findings

Aggregate Denial, Appeal, and Overturn Rates

For 2024, overall denial rates (inclusive of claims denied in full and in part) were high across all market segments ranged from 25% (Commercial) to 33% (Essential Plan), while full denial rates ranged from 10% (Child Health Plus) to 14% (Commercial). Internal appeal rates were very low (2.5% or less) across all segments and especially low for Commercial (0.6%). Among claims that were appealed, however, overturn rates were high, ranging from 11 % (Child Health Plus) to 28% (Commercial). Full overturn rates were lower, ranging from 7% (Child Health Plus) to 24% (Commercial). There was some variation by market segment, with full denial rates and full overturn rates highest for Commercial plans and lowest for Child Health Plus plans. Appeal rates were indistinguishable among government-subsidized market segments, yet much lower among Commercial plans.

Overall, insurers denied roughly 1 in 4 adjudicated claims in full or in part in 2024, driven by the large volume of Commercial claims in the data (see Table 2.5). Rates were consistent from 2023 to 2024; the most noteworthy change was a 25 point decrease in the overturn rate for Commercial appeals (53% to 28%).

Table 2.4. Aggregate Denial Rate, Appeal Rate, and Overturn Rate by Market Segment (2023 vs. 2024)

Year	# Insurers	Market Segment	Denial Rate	Full Denial Rate	Appeal Rate	Overturn Rate	Full Overturn Rate
2024	28	Commercial (Comm)	25%	14%	0.6%	28%	24%

% Point Change			+1.0 pts	+0.5 pts	+0.6 pts	-0.2 pts	+1.2 pts

Data Source: 2023 and 2024 DFS Health Care Claims Reports
Note: Denial rate includes claims denied in full and in part. Overturn rate includes appeals overturned in full and in part. Rates are rounded to the whole value; year to year change is presented in percentage points, rounded to the tenth decimal.
*Pharmacy (Rx) claims excluded.

Billed Charges and Allowed Amounts

DFS allows insurers to report the value of claims as either billed charges, allowed amounts, or both. Table 2.5 calculates the average volume and value of claims for insurers that reported billed charges. Table 2.6 calculates the average volume and value of claims for insurers that reported allowed amounts. While allowed amounts provide a more accurate picture of what was ultimately paid by the insurer, the allowed amount data poses challenges for calculating the value of denied claims, as insurers follow the practice of reporting the allowed amount for denied claims as $0.

In 2024, the average billed value of claims increased significantly from claim submission to claim denial, appeal, and overturn across all market segments, while the total volume of claims decreased significantly from claim submission to overturn. Among Commercial plans, the average billed claim ($2,016) increased to $2,079 for fully or partially denied claims, $2,843 for fully denied claims, $14,913 for appealed claims, and $19,822 for overturned claims. This pattern was consistent across all market

segments, with the average overturned claim significantly more valuable than the average submitted claim.

In 2024, the average allowed amount increased significantly from claim submission to appeal, while the total volume of claims decreased significantly from claim submission to overturn. In the Commercial market, the average allowed amount for overturns ($4,992) was nearly 11 times higher than the average claim ($457), indicating that higher-cost claims are more likely to be successfully appealed.

Billed charges and allowed amounts illustrate the financial impacts of claim denials differently, depicting the two sides of the claim adjudication process in terms of what the provider charges versus what the insurer agrees to pay. For denied claims, the allowed amount is reported as $0, while the average billed charge ($2,843 for fully denied Commercial claims) represents what the consumer may owe the provider when a denial is unchallenged or upheld. Average allowed amounts were much lower than billed charges across all market segments, and more accurately depict what the insurer ultimately pays the provider when a denial is overturned.

Table 2.5. Insurers Reporting Billed Charges: Claims, Denials, Appeals, and Overturns by Market Segment (2024)

Market Segment	# Insurers		Claims	Denials	Full Denials	Appeals	Overturns	Full Overturns
Commercial (Comm)	28	Total #	103,559,446	26,153,513	14,397,047	151,548	43,197	36,621
		Tot. Billed ($M)	$208,764 M	$54,374 M	$40,928 M	$2,260 M	$856 M	N/C
		Avg. Billed ($)	$2,016	$2,079	$2,843	$14,913	$19,822	N/C
Essential Plan (EP)	10	Total #	19,861,575	6,626,586	2,464,645	161,857	45,221	30,525
		Tot. Billed ($M)	$26,154 M	$8,199 M	$4,324 M	$1,490 M	$451 M	N/C
		Avg. Billed ($)	$1,317	$1,237	$1,754	$9,207	$9,983	N/C
Child Health Plus (CHP)	11	Total #	5,286,786	1,679,670	549,975	42,607	4,877	2,902
		Tot. Billed ($M)	$4,444 M	$1,305 M	$640 M	$169 M	$39 M	N/C
		Avg. Billed ($)	$841	$777	$1,165	$3,970	$8,018	N/C
Medicaid Managed Care (MMC)	11	Total #	87,255,346	25,256,491	10,683,035	643,803	160,654	113,362
		Tot. Billed ($M)	$115,332 M	$35,180 M	$18,437 M	$4,514 M	$1,424 M	N/C
		Avg. Billed ($)	$1,322	$1,393	$1,726	$7,011	$8,867	N/C

Data Source: 2024 DFS Health Care Claims Reports
Note: "Denials" includes claims denied in full or denied in part and paid in part. "Overturns" includes appeals overturned in full and in part. Full overturns are not computable (N/C) because the DFS reporting template does not separate billed charges for appeals overturned in full versus overturned in part. **Pharmacy (Rx) claims excluded.*

Table 2.6. Insurers Reporting Allowed Amounts: Claims, Denials, Appeals, and Overturns by Market Segment (2024)

Market Segment	# Insurers		Claims	Denials	Full Denials	Appeals	Overturns	Full Overturns
Commercial (Comm)	12	Total #	12,936,344	1,922,090	1,251,059	70,048	14,334	11,373
		Tot. Allowed ($M)	$5,907 M	$34 M	$0	$165 M	$72 M	N/C
		Avg. Allowed ($)	$457	$18	$0	$2,361	$4,992	N/C
Essential Plan (EP)	5	Total #	14,543,690	3,182,664	1,767,911	150,162	40,786	26,833
		Tot. Allowed ($M)	$4,232 M	$165 M	$0	$303 M	$95 M	N/C
		Avg. Allowed ($)	$291	$52	$0	$2,018	$2,341	N/C
Child Health Plus (CHP)	4	Total #	1,819,683	450,995	228,870	15,563	4,414	2,484
		Tot. Allowed ($M)	$333 M	$38 M	$0	$24 M	$7 M	N/C
		Avg. Allowed ($)	$183	$85	$0	$1,544	$1,566	N/C
Medicaid Managed Care (MMC)	4	Total #	32,076,569	6,489,416	4,485,329	395,381	142,930	98,182
		Tot. Allowed ($M)	$8,775 M	$482 M	$0	$597 M	$217 M	N/C
		Avg. Allowed ($)	$274	$74	$0	$1,510	$1,521	N/C

Data Source: 2024 DFS Health Care Claims Reports
*Note: "Denials" includes claims denied in full or denied in part and paid in part. "Overturns" includes appeals overturned in full and in part. The allowed amount for claims denied in full and the portion of claims denied in part is reported as $0; therefore, the allowed amount shown for "Denials" reflects only the paid portion of partially denied claims. Full overturns are not computable (N/C) because the DFS reporting template does not separate allowed amounts for appeals overturned in full versus overturned in part. *Pharmacy (Rx) claims excluded.*

Denials: Reported Reasons

Under the DFS reporting rubric, insurers must report one, primary reason for a denied claim, using the following categories: not medically necessary, not a covered benefit/exceed benefit limits, provider failure to request preauthorization, provider not in network, coverage not in effect, claim not timely, duplicate claim, coding issue, and other. DFS gives insurers discretion in determining and reporting the primary denial reason, unless "not medically necessary" was among the reasons a claim was denied, in which case DFS instructs insurers to report it as the primary reason for denial.

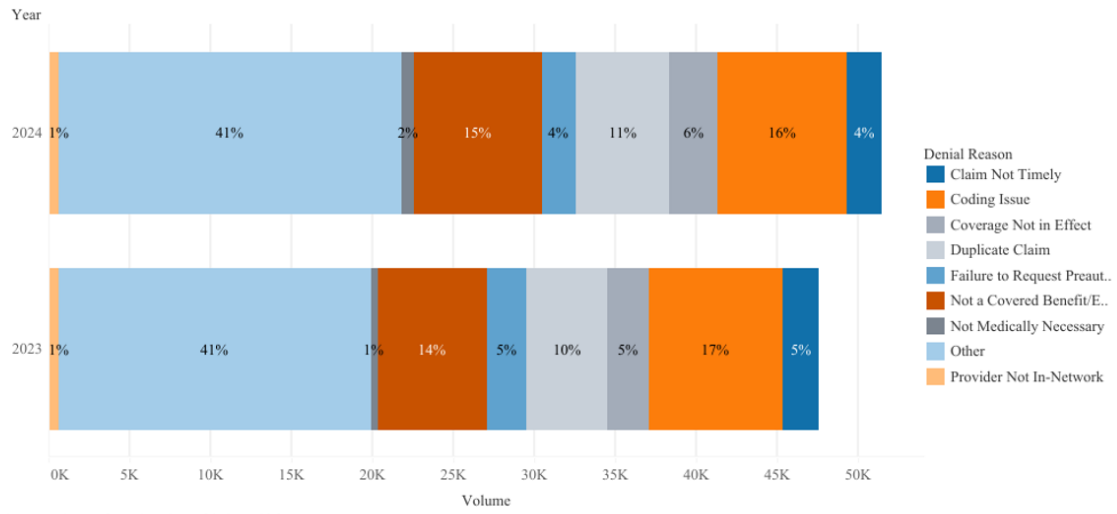

In 2024, "other" was the predominant reason reported by insurers; this was true for claims by volume (41%) and claims by value (29%). Purely administrative issues – duplicate claims, coding errors, or untimely claim submission – accounted for another 31% of denied claims by volume, and 42% by value. Denials related to plan design, including coverage exclusions and network restrictions, represented 16% of denials by volume but only 6% of denials by value.

Even with DFS's guidance to use "not medically necessary" as the primary denial reason whenever it occurs, the category accounted for a very small percentage of denials by volume (2%). However, "not medically necessary" represented a higher percentage of denials by value (9%) and the largest

discrepancy in share by volume versus value, indicating that higher-cost claims are disproportionately denied on medical necessity grounds.

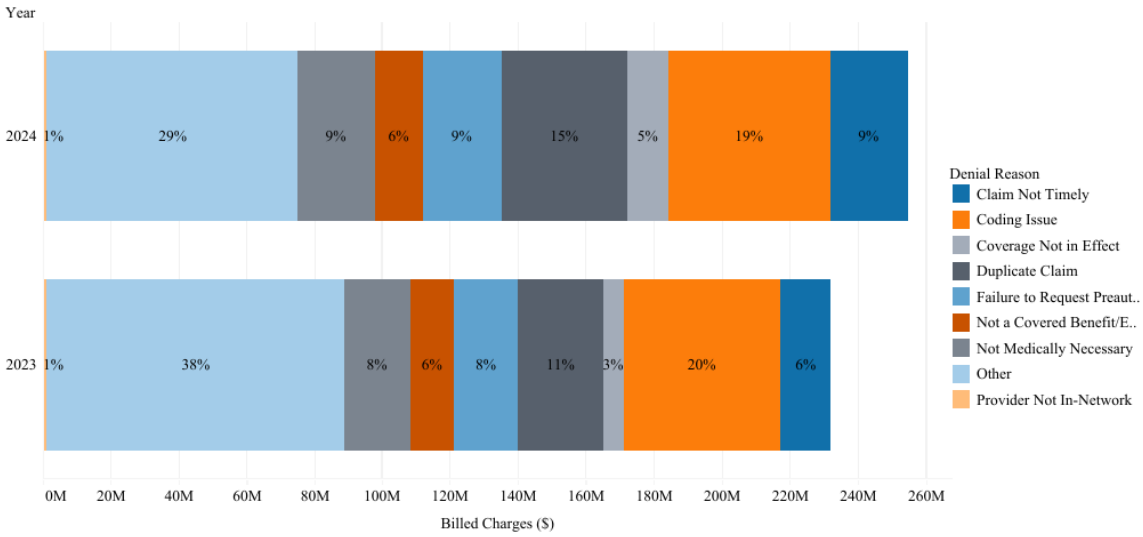

Distribution of primary denial reasons by volume and value was broadly consistent between 2023 and 2024. Denials reported as “Other” declined sharply from 38% to 29% of denied claims by value, suggesting that insurers reported denial reasons with greater specificity for higher-value claims in 2024. “Not medically necessary" denials more than doubled in volume (from 1% to 2% of denied claims) and rose from 8% to 9% of denied claims by value.

Figure 2.1: Aggregate: Primary Reported Reason for Denial by Volume (2024 vs. 2023)

Data Source: 2023 and 2024 DFS Health Care Claims Reports
Note: Denial counts include claims denied in full and in part. Denial reason data are reported only for the combined group of denied claims and cannot be separately analyzed for claims denied in full only. *Pharmacy (Rx) claims excluded. **Nippon Life Insurance Company of America is excluded from 2024 figures. ***Per NYS DFS reporting instructions, insurers are required to report only the primary reason for each claim denial. If any denial reason is "Not Medically Necessary," the claim must be counted under that category; for all other denials, the insurer determines the primary reason and counts the claim once.

Figure 2.2: Aggregate: Primary Reported Reason for Denial by Billed Charges (2024 vs. 2023)

Data Source: 2023 and 2024 DFS Health Care Claims Reports
Note: Denial counts include claims denied in full and in part. Denial reason data are reported only for the combined group of denied claims and cannot be separately analyzed for claims denied in full only. *Pharmacy (Rx) claims excluded. **Nippon Life Insurance Company of America is excluded from 2024 figures. ***Per NYS DFS reporting instructions, insurers are required to report only the primary reason for each claim denial. If any denial reason is "Not Medically Necessary," the claim must be counted under that category; for all other denials, the insurer determines the primary reason and counts the claim once.

Discussion

Statewide data on health care claims, while limited in scope and quality, offer a valuable lens into post-service denials and internal appeals, illuminating both insurer practices and the burdens placed on patients and providers. The findings present a high rate of denied care within New York State-regulated health insurance markets and low use of appeals, suggesting that a significant volume of potentially inappropriate denials go unchallenged each year, with real consequences for patient access to care and financial liability.

Fundamental differences in regulatory standards by market segment.

Meaningful comparisons across market segments are limited by fundamental differences in how health insurance is regulated at the state-level. Commercial insurance plans, which account for the majority of claims in this dataset, are less regulated than government-subsidized plans in terms of pricing, coverage standards, and consumer protections. Essential Plan, Child Health Plus, and Medicaid Managed Care plans are subject to stricter oversight, more standardized coverage rules, and more prescribed appeals processes (e.g., model denial notices,

availability of patient advocacy resources). Higher appeal rates observed in government-subsidized segments may reflect more accessible appeals processes rather than wrongful denials.

Data quality challenges limit a full picture of the claim denials landscape and the ability to inform potential policy solutions.

Data omissions and quality challenges limit a full picture of the claim denials landscape and the ability to inform potential policy solutions. Data on claim denials and appeals in Health Care Claims Reports are self-reported by insurers and are not audited or independently verified by NYS DFS. This gives insurers significant discretion in defining and reporting key terms and leads to inconsistencies in reporting, making it difficult to meaningfully interpret trends in denial practices and justifications as well as the financial impacts on consumers. For instance, nearly 41% of denied claims in 2024 Health Care Claims Reports were categorized as "Other." Moreover, DFS does not require reporting on diagnoses or the specific types of services that were denied, providing limited insight into the circumstances surrounding the denials.

ERISA plans, which cover the majority of commercially insured large employer employees, are excluded from DFS reporting entirely, as are Medicare and Medicare Advantage plans. Additionally, prior-authorization denials are not captured in Health Care Claims Reports yet are a common roadblock to receiving and paying for medically necessary care; a recent survey by Commonwealth Fund found that 13% of respondents with private insurance experienced a prior authorization denial within the last year.[192]

Denied claims bear real and often devastating consequences for patients. While denied claims are common – and tend to be more expensive - across market segments, appeal rates are generally low, raising concerns about the consumer impacts of inappropriate denials.

Despite these limitations, the data reveal several consistent and notable trends. Claim denials were high across market segments in 2024, with one in four adjudicated claims denied in full or in part. Despite meaningful overturn rates (28.5% in the Commercial market), internal appeals were rarely filed, ranging from 0.6% of denied Commercial claims to 2.5% of denied Child Health Plus and Medicaid Managed Care claims, suggesting that a significant volume of inappropriate denials may go unchallenged. Moreover, the data show that more expensive claims are more likely to be fully denied across all market segments; if the administrative cost for denying a claim is roughly fixed, the return on investment for denying more expensive claims is dramatically higher for insurers.

These findings are consistent with findings from other researchers[193]. Denied claims bear real and often devastating consequences for patients, including delayed or foregone care, administrative burdens, and severe financial hardship and medical debt — consequences that are particularly acute given that denied claims tend to be significantly more expensive than the average adjudicated claim. Low appeal utilization raises concerns about access to and awareness of resources to successfully challenge insurer decisions.

The data also raises important questions about the administrative versus clinical justifications for claim denials. Denials on the grounds of administrative issues represented a significant share (31%) of total denials in 2024. Similarly, denials on the basis of failure to request preauthorization for a service requiring prior approval may reflect insurer process requirements as much as provider or patient error, despite the fact that preauthorization requirements are ultimately about the clinical appropriateness of care. The presence of such justifications for denials raises questions about who should bear the responsibility and financial consequences of insurer process requirements result in denied claims.

Section 3: Health Insurance Premium Reporting

This section examines year-over-year trends in health insurance premiums for three groups of insured residents in New York City: commercially-insured residents within individual and small group market plans regulated by New York State Department of Financial Services (DFS), City of New York employee health plan members, and private-sector employer-sponsored insurance (ESI) plan members for the New York metro region. This section also includes additional contextual information about healthcare costs and consumer out-of-pocket costs.

Individual and Small Group Market Health Insurance Premiums

This section examines premium rate and enrollment trends from 2023 through 2025 for two DFS-regulated commercial products in the New York City region (Region 4): the **individual market** (eight carriers) and the **small group market** (four carriers). Individual market plans are direct-to-consumer plans available for commercial enrollment, primarily through the New York State of Health Marketplace, as well as additional plans offered directly by insurers. Small group plans are available to groups of 2 to 100 members or employees, exclusive of spouses or dependents. Both products are community-rated, meaning rates are set based on an insurer's estimate of overall market trends and its claims experience across all commercial business in the rating pool within the specific NYS region, rather than the insurer's claims experience of a specific individual or group.

Methodology

Under New York State's prior approval rate regulation framework, health insurers must submit proposed premium rate increases, along with standardized supporting documentation, to DFS for review. This data is published annually on the DFS Prior Approval Portal.

The NYC Health Department reviewed individual and small group market rate application filings submitted for rating years 2023 through 2025. NYC Region (Region 4) data were sourced and tabulated from Exhibit 13c of each filing, which reports each carrier's enrollment-weighted average monthly base premium ("All Metals") and member distribution across metal tiers.

For more information on rate application filings, please see **Healthcare Accountability Data Sources**.

Individual Market

The eight major insurance carriers offering individual market plans in the NYC region were reviewed for rating years 2023 through 2025.

Small Group Market

Self-funded and other experience-rated large group plans, where premiums and benefit design are negotiated privately between an employer and insurer based on that group's own claims experience, are outside the scope of DFS prior approval review and are not included in this analysis. A limited number of large group HMO plans are community-rated and therefore subject to DFS review, but they are excluded from this report due to the small number of such plans filed.

One of the four major small group carriers reviewed, Aetna, has no verified 2025 small group filing. Aetna withdrew from the New York small group market in 2026; as a result, although Aetna had small group members in 2025, its 2025 premium and enrollment data were not filed with, and are not captured in, the DFS Portal. All Aetna 2025 figures presented below are estimates derived from Aetna's prior-year enrollment, enrollment trend, and its most recently approved rate increase, and are flagged accordingly.

Findings

Individual Market

All eight carriers in the NYC individual market raised their weighted-average premium in both 2024 and 2025. The market-wide weighted-average premium rose from **$760 per month in 2023** to **$817 in 2024 (+7.6%)** and then to **$909 in 2025 (+11.3%)**, a cumulative increase of **19.7%** over two years, with the larger year-over-year increase occurring in the more recent period.

Premium Rate Trends, 2023–2025

Emblem (HIP) recorded the largest cumulative premium increase in the individual market (+72.9% over two years), more than double the next-largest increase (MetroPlus, +42.7%). UHC recorded the smallest cumulative increase (+9.5%); it was also the most expensive carrier in the market in 2023 ($1,211/month), which limits the comparability of percentage changes across carriers with different starting premiums. Fidelis and Anthem, the two largest carriers by membership, recorded increases of +14.6% and +12.4%, respectively, near the middle of the distribution.

Table 3.1. Individual Market Weighted-Average Monthly Premium by Carrier, NYC Region, 2023–2025

Carrier	2023	2025	2-Yr Change	CAGR
Anthem	$854	$960	+12.4%	+6.0%
Fidelis	$717	$822	+14.6%	+7.1%
Healthfirst	$673	$834	+23.9%	+11.3%
Emblem (HIP)	$937	$1,621	+72.9%	+31.5%
MetroPlus	$655	$935	+42.7%	+19.5%
MVP	$908	$1,078	+18.7%	+8.9%
Oscar	$768	$1,008	+31.2%	+14.5%
UHC	$1,211	$1,326	+9.5%	+4.6%
Weighted-average across carriers	$760	$909	+19.7%	+9.4%

Data Source: NY DFS Individual Rate Filings (SERFF), Exhibit 13c, NYC Area (Region 4), 2023–2025 carrier submissions. Figures reflect each carrier's enrollment-weighted All-Metals premium and actual member distribution as of March 31 of each respective year.

Note: figures reflect the "All Metals" enrollment-weighted average monthly base premium reported in Exhibit 13c. The enrollment-weighted, market-wide average ($760 → $909, +19.7%) differs from the simple average across carriers shown above because it weights by each carrier's actual NYC membership. Also, CAGR refers to the Compound Annual Growth Rate for "All-Metals" enrollment-weighted average monthly base premium from 2023 to 2025.

Enrollment Trends, 2023–2025

NYC individual market enrollment grew by **3,663 members net (+3.5%)** from 2023 to 2025, a small net change at the market level. This aggregate figure reflects offsetting movement at the carrier level: several carriers gained more than a third of their 2023 membership, while others lost a comparable share.

Table 3.2. Individual Market Enrollment by Carrier, NYC Region, 2023–2025

Carrier	2023	2025	Change	% Change
Healthfirst	22,110	30,419	+8,309	+37.6%
Anthem	11,563	16,894	+5,331	+46.1%
Fidelis	34,991	38,390	+3,399	+9.7%
UHC	4,191	4,079	−112	−2.7%
MVP	4,902	3,811	−1,091	−22.3%
Oscar	9,748	7,016	−2,732	−28.0%
Emblem (HIP)	5,492	1,986	−3,506	−63.8%
MetroPlus	11,598	5,663	−5,935	−51.2%
NYC Total	*104,595*	*108,258*	*+3,663*	*+3.5%*

Data Source: NY DFS Individual Rate Filings (SERFF), Exhibit 13c, NYC Area (Region 4), 2023–2025 carrier submissions. Figures reflect each carrier's actual member distribution as of March 31 of each respective year.

Note: Fidelis was the largest individual-market carrier by membership in both 2023 and 2025.

Healthfirst recorded the largest absolute enrollment gain (+8,309 members, +37.6%), and Anthem recorded the largest percentage gain (+5,331 members, +46.1%). MetroPlus recorded the largest absolute loss (−5,935 members, −51.2%), and Emblem (HIP) recorded the largest percentage loss (-3,506 members, −63.8%).

Metal-Tier Enrollment Shift

At the metal-tier level, Bronze plan enrollment grew by **10,840 members** NYC-wide between 2023 and 2025, while every other tier — Platinum, Gold, Silver, and Catastrophic — lost members in aggregate. Healthfirst (+7,715 Bronze members) and Anthem (+4,325 Bronze members) accounted for most of this shift; for both carriers, Bronze-tier enrollment growth alone exceeded their total net enrollment gain, indicating that gains in Bronze enrollment were accompanied by losses in other tiers.

Market Share and Concentration

Market share movement in this dataset is broadly, though not uniformly, associated with the direction of each carrier's premium change relative to the market average. Healthfirst and Anthem, which posted below-average cumulative premium increases, each gained several percentage points of share. Emblem (HIP) and MetroPlus, which posted the two largest cumulative premium increases, recorded the two largest share losses. Oscar is a partial exception: its premium increase was above the market average, but its share loss was more moderate than MetroPlus' or Emblem (HIP)'s. This dataset does not include the information needed to establish whether premium changes caused the associated share movement, and other factors, such as network composition or benefit design, may also contribute.

Table 3.3. Individual Market Share by Carrier, NYC Region, 2023 and 2025			
Carrier	2023 Share	2025 Share	% Point Change
Healthfirst	21.1%	28.6%	+7.5 pts
Anthem	11.1%	15.9%	+4.8 pts
Fidelis	33.5%	34.3%	+0.8 pts
UHC	4.0%	3.8%	−0.2 pts
MVP	4.7%	3.6%	−1.1 pts
Oscar	9.3%	6.6%	−2.7 pts
Emblem (HIP)	5.3%	1.9%	−3.4 pts
MetroPlus	11.1%	5.3%	−5.8 pts
Data Source: NY DFS Individual Rate Filings (SERFF), Exhibit 13c, NYC Area (Region 4), 2023–2025 carrier submissions. Figures reflect each carrier's actual member distribution as of March 31 of each respective year.			

Small Group Market

Premium Rate Trends, 2023–2025

The small group market-wide weighted-average premium across the three verified carriers (Anthem, Emblem (HIP), Oxford) rose from **$1,119 per month in 2023** to **$1,165 in 2024 (+4.1%)** and **$1,237 in 2025 (+6.2%, verified carriers only)**, a cumulative increase of approximately **10.5%** over two years. As in the individual market, the rate of increase accelerated from 2024 to 2025; however, unlike the individual market, small group premiums began from a substantially higher base ($1,119 vs. $760 in 2023) and grew at a slower rate, approximately half the two-year cumulative rate of the individual market (10.5% vs. 19.7%).

Table 3.4. Small Group Market Weighted-Average Monthly Premium by Carrier, NYC Region, 2023–2025					
Carrier	2023	2024	2025	% Change 2023–2024	% Change 2024–2025
Anthem	$1,279	$1,143	$1,211	−10.6%	+5.9%
Emblem (HIP)	$856	$1,178	$1,253	+37.6%	+6.4%
Oxford	$1,124	$1,175	$1,238	+4.6%	+5.4%
Aetna (2025 estimated)	$928	$990	$1,090*	+6.6%	+10.1%*
Weighted-average across carriers	$1,119	$1,165	$1,237**	+4.1%	+6.2%**
Data Source: NY DFS Small Group Rate Filings (SERFF), Exhibit 13c, NYC Area (Region 4), 2023–2025 carrier submissions. Figures reflect each carrier's enrollment-weighted All-Metals premium and actual member distribution as of March 31 of each respective year.					
Note: * Aetna 2025 figures are estimated, not a verified Exhibit 13c filing (see Methodology, above). ** Only verified carriers were included in weighted-average, meaning this figure does not include Aetna for 2025. All-Metals premium; figures rounded to the nearest dollar.					

Two features of this table are notable. First, Emblem (HIP), as in the individual market, recorded the sharpest single-year premium increase of any small group carrier (+37.6% from 2023 to 2024); its subsequent 2024-to-2025 increase (+6.4%) was much closer to the rest of the market, indicating that the

increase was concentrated in a single filing year. Second, Anthem's small group premium declined from 2023 to 2024 (−10.6%) before rising again in 2025, a pattern not observed in the individual market data.

Enrollment Trends, 2023–2025

Unlike the individual market, where aggregate enrollment was roughly flat, the small group market recorded a **net membership decline across every verified carrier**. Total verified small group membership (Anthem, Emblem (HIP), Oxford) fell from **334,848 in 2023** to **284,667 in 2025**, a decline of **15.0%**.

Table 3.5. Small Group Market Enrollment by Carrier, NYC Region, 2023–2025

Carrier	2023	2024	2025	% Change 2023–2025
Oxford	285,267	269,766	259,866	−8.9%
Anthem	25,505	22,915	20,589	−19.3%
Emblem (HIP)	11,210	6,960	4,212	−62.4%
Aetna (estimated)	12,866	14,136	11,624*	−9.7%*
Total (verified, 3 carriers)	334,848	313,777	284,667	−15.0%

Data Source: NY DFS Small Group Rate Filings (SERFF), Exhibit 13c, NYC Area (Region 4), 2023–2025 carrier submissions. Figures reflect each carrier's enrollment-weighted All-Metals premium and actual member distribution as of March 31 of each respective year.

Note: * Aetna 2025 enrollment is estimated (see Methodology, above). Please note that Aetna is not included in the 2025 small group market enrollment due to lack of verifiable data on enrollment.

Emblem (HIP) recorded the steepest enrollment decline in the small group market (−62.4% over two years), closely comparable in magnitude to its individual-market decline over the same period (−63.8%). Among the three verified carriers, Emblem (HIP)'s decline is an outlier; Oxford, the market's dominant carrier, recorded the smallest percentage decline (−8.9%).

Market Share

Oxford's share of the verified small group market rose over the period even as its absolute membership fell, because the remaining carriers' membership fell at a faster rate. Oxford's share rose from **85.2% (2023) to 91.3% (2025, verified)**, while Emblem (HIP)'s share fell from 3.3% to 1.5% and Anthem's declined from 7.6% to 7.2%.

Table 3.6. Small Group Market Share by Carrier, NYC Region, 2023–2025				
Carrier	2023 Share	2024 Share	2025 Share	% Point Change 2023–2025
Oxford	85.2%	86.0%	91.3%	+6.1 pts
Anthem	7.6%	7.3%	7.2%	−0.4 pts
Emblem (HIP)	3.3%	2.2%	1.5%	−1.9 pts
Aetna (estimated)	3.8%	4.5%	3.9%*	≈ flat*
Data Source: NY DFS Small Group Rate Filings (SERFF), Exhibit 13c, NYC Area (Region 4), 2023–2025 carrier submissions.				
Note: 2025 shares for Oxford, Anthem, and Emblem (HIP) are computed against the verified-only total (284,667); Aetna's 2025 share is computed separately against the total including its own estimate. As a result, the four 2025 shares shown will not sum to exactly 100%; this is intentional.				

Discussion

Several features of the underlying data should be considered when interpreting both the individual and small group findings. Exhibit 13c reports subscriber-weighted, rather than member-weighted, average premiums.[194] A weighted average provides a more representative estimate of what the average subscriber pays within and across metal tiers than a simple average of tier-level rates would; however, because it is weighted by subscribers rather than members, it does not account for household size, and the underlying "base premium" reflects the single-adult rate. This may understate the cost burden facing larger households in both markets. Exhibit 13c also captures enrollment as of a single date each year (March 31), so year-over-year comparisons in this section should be understood as comparisons between two points in time rather than as comparisons of annual totals, since enrollment can fluctuate over the course of a year — a particularly relevant caveat for the small group market, where turnover can occur throughout the plan year.

A related timing issue is filing lag: a rate filing submitted for a given year is filed in the prior year and is based on the prior year's data; for example, a filing supporting proposed 2025 rates is submitted in 2024 using 2024 data. Where a carrier does not file a proposed rate for a given year, or is not offering plans in a given year, its data for that year will not appear in the DFS Portal, as is the case for Aetna's 2025 small group figures.

The headline "All Metals" premium reported for each carrier is a composite, not a list price: it is a weighted average across that carrier's actual membership distribution across metal tiers, not a simple average of its tier-level rates, and it does not represent what any individual member necessarily pays, which also depends on plan design, rider selection, age, and tobacco use rating factors not captured in this exhibit. A carrier whose membership is concentrated in Bronze plans will show a lower "All Metals" figure than a carrier with identical tier-level pricing but a richer-metal membership base.

Two further limitations bear specifically on the small group findings. Because Aetna's 2025 small group data were not filed with DFS, all 2025 figures for Aetna are estimates rather than verified filings, and should be treated with greater caution than the verified figures for the other three small group carriers. And with only four small group carriers, and one holding the large majority of membership throughout the period, small group findings are more sensitive to the circumstances of any single carrier than the eight-carrier individual market. Emblem (HIP)'s outlier premium and enrollment figures, for example, carry more weight in the small group market's aggregate statistics than an equivalent outlier would in the individual market.

To better understand the individual and small group market findings, a comparison was done using the data provided to assess market concentration between insurers within these markets. Market concentration is measured using the Herfindahl-Hirschman Index (HHI), calculated as the sum of squared carrier market shares (expressed in percent).

Table 3.7. Individual vs. Small Group Market Comparison, NYC Region, 2023–2025		
Metric	Individual Market	Small Group Market
Number of carriers	8	4 (3 verified for 2025)
2023 weighted-avg. premium	$760/mo	$1,119/mo
2025 weighted-avg. premium	$909/mo	$1,237/mo (verified)
Cumulative premium growth	+19.7%	≈ +10.5%
2023–2025 enrollment change	+1.6% (flat)	−15.0% (verified)
Largest carrier's 2025 share	Fidelis, 34.3%	Oxford, 91.3%
Market concentration (HHI), 2023	≈ 1,960 (moderately concentrated)	≈ 7,340 (highly concentrated)
Market concentration (HHI), 2025	≈ 2,350 (moderately concentrated)	≈ 8,390 verified (highly concentrated)
Data Source: NY DFS Individual and Small Group Rate Filings (SERFF), Exhibit 13c, 2023–2025; additional sources as listed in your uploaded document.		

The two markets moved in different directions on enrollment even as both saw rising premiums. The individual market's roughly flat aggregate enrollment reflects gains for some carriers and losses for others, consistent with substitution between carriers rather than exit from the market altogether. The small group market shows a different pattern: every verified carrier, including Oxford, the carrier with the most moderate premium growth, lost members over the period. This suggests that small group enrollment losses are not primarily driven by carrier-to-carrier switching, and may instead reflect employers discontinuing group coverage altogether — for example, by shifting employees toward individual-market coverage, increasing use of individual coverage health reimbursement arrangements (ICHRAs), or not renewing a small group plan. This dataset does not identify the destination of that lost small group membership.

Both markets recorded rising concentration over the period, though through different mechanisms. In the small group market, Oxford's share rose from 85.2% to 91.3% not because Oxford's own membership grew, but because it declined more slowly than its three smaller competitors; this pattern is consistent with consolidation driven by differential attrition rather than active market gains, and is compounded by Aetna's apparent exit from the segment. In the individual market, concentration also rose (HHI ≈ 1,960 to ≈ 2,350), but through a combination of gains for some carriers (Healthfirst, Anthem) and losses for others (Emblem (HIP), MetroPlus), a pattern more consistent with reallocation of share among carriers that remained active in the market.

A small group market in which a single carrier holds over 90% of verified membership presents different competitive dynamics than an eight-carrier individual market. In a market this concentrated, decisions by the dominant carrier regarding pricing or network design have limited competitive check from alternative carriers with comparable scale.

The concurrent rise in Bronze-tier enrollment (+10,840 members compared to losses in all other Metal tiers) and in premiums across the individual market is consistent with, though not proof of, price-sensitive plan selection by enrollees. Comparing the lowest cost average premiums for bronze tier plans in NYS to silver tier plans, there is on average approximately $178 per month difference in premiums

making a significant difference in annual cost for consumers.[195] Market share changes track imperfectly with premium changes at the carrier level in the individual market, meaning this correlation is descriptive rather than causal.

In order to situate this analysis with the evolving federal context, discussion of the enhanced premium tax credit is drawn from the Congressional Research Service and the Kaiser Family Foundation.[196][197][198] The enhanced premium tax credits ("EPTCs") that had subsidized ACA marketplace premiums since 2021 — first under the American Rescue Plan Act, then extended through 2025 under the Inflation Reduction Act — expired on December 31, 2025, after Congress did not act to extend them before that date. The U.S. House of Representatives passed a three-year extension on January 8, 2026, with bipartisan support (230–196), but the measure was not expected to advance in the Senate in its House-passed form.[199] A separate bipartisan Senate compromise effort was reported to have stalled in late January and early February 2026.[200,201]

This development warrants several observations regarding how future impacts of this legislation may relate to our findings:

- **This dataset does not capture the subsidy itself.** Exhibit 13c reports gross, pre-subsidy premiums — the price a carrier charges, not the amount a subsidized enrollee pays out of pocket. The premium increases in these years (individual market average +19.7% over two years) occurred entirely before the EPTC expiration affected any enrollee's net cost. The subsidy expiration is a 2026 development layered on top of the 2023–2025 gross-premium trend; it does not explain the increases documented above, but its effects may impact future net enrollee costs and enrollment.
- **Individual-market exposure is direct; small group exposure is indirect.** EPTCs apply to ACA marketplace (individual-market) coverage purchased through an exchange. The small group market's community-rated pool is not directly subsidized by EPTCs covered by the above legislation.
- **The Bronze-tier shift may be relevant context.** The market-wide move toward Bronze plans documented in Section 1 (+9,809 members, the only tier to gain) occurred while EPTCs were still in effect and gross premiums were already rising. KFF's modeling estimated that average net marketplace premium payments would more than double without an extension of the enhanced credits, which will be relevant for future filing cycles.[202]

The individual and small group findings describe a period, 2023 through 2025, in which NYS-regulated commercial premiums rose in every carrier and every year in both markets, while enrollment and market structure moved differently across the two markets: substitution between carriers in the individual market, and broad-based decline alongside rising concentration in the small group market. A federal policy change taking effect just after this reporting period — the EPTC expiration — is likely to interact with both of these dynamics, particularly in the individual market, though the extent of that interaction cannot be assessed with the data available for this report.

City Employee Health Plans: GHI-CBP (PPO) and HIP HMO

This section presents premium expenditure and rate data provided by the Office of Labor Relations (OLR) for the City of New York's two most-enrolled health plans, **GHI-CBP (PPO)** and **HIP HMO**, covering active employees, pre-Medicare retirees, and Medicare-eligible retirees, for fiscal years 2023 through 2025.

Methodology

Under New York City law, the City must pay the health insurance premium for City employees, retirees, and dependents.[203] Unlike the DFS-regulated commercial markets, City employees generally do not pay

a share of the premium themselves; the data in this section therefore reflects City premium expenditures, not employee contributions.

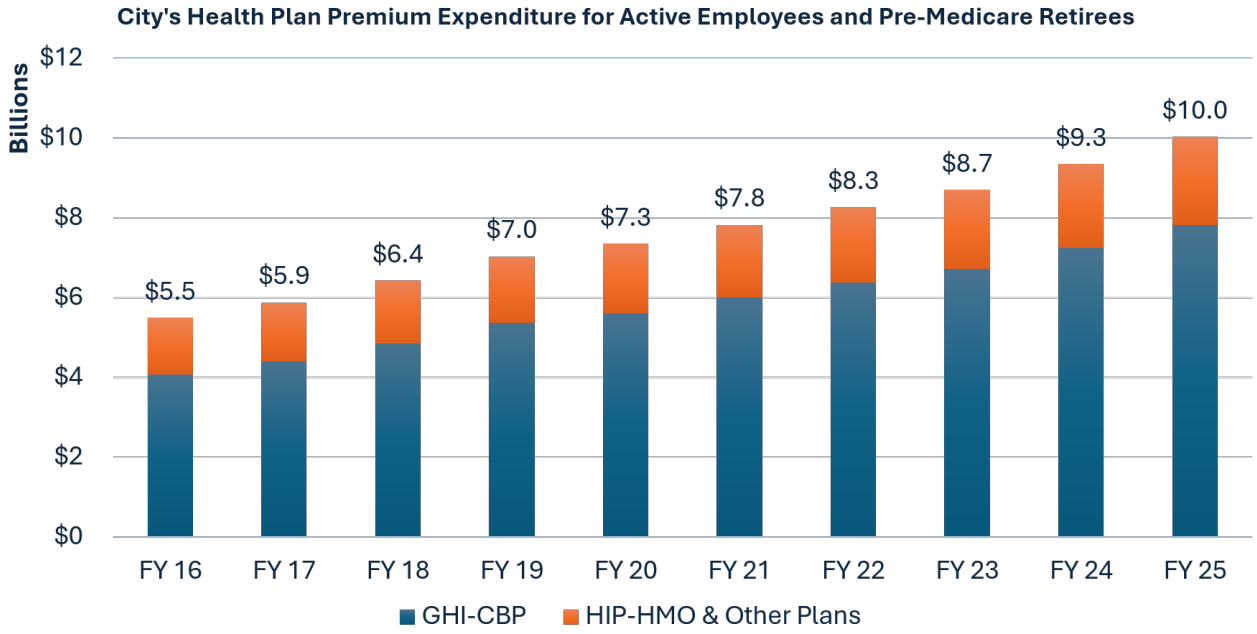

OLR provided premium expenditure figures for two enrollee populations: (1) active employees and pre-Medicare retirees, for whom GHI-CBP and "HIP-HMO & Other Plans" premium expenditures are reported together, and (2) Medicare-eligible retirees, reported separately, for whom City costs include plan premiums, Medicare Part B/IRMAA reimbursements, and welfare fund contributions. Expenditures are calculated at the payment rate, incorporating all City agencies and covered entities, based on enrollee counts multiplied by rates.[204] OLR has noted that variations between this data and the City's Milliman actuarial report are attributable to differences in timing, data sources, and parameters; the two should not be treated as interchangeable. Annual premium rate data (as distinct from total expenditure) is reported separately for GHI-CBP and HIP HMO, at the Individual and Family coverage tiers.

Findings

Premium Expenditures for Active Employees and Pre-Medicare Retirees

Combined City premium expenditure for GHI-CBP and "HIP-HMO & Other Plans" for active employees and pre-Medicare retirees rose from **$8.70 billion in FY23** to **$9.34 billion in FY24 (+7.4%)** and **$10.03 billion in FY25 (+7.3%)**, a cumulative increase of 15.3% from FY23 to FY25.

Figure 3.1. City Health Plan Premium Expenditure, Active Employees and Pre-Medicare Retirees, FY2016–FY2025

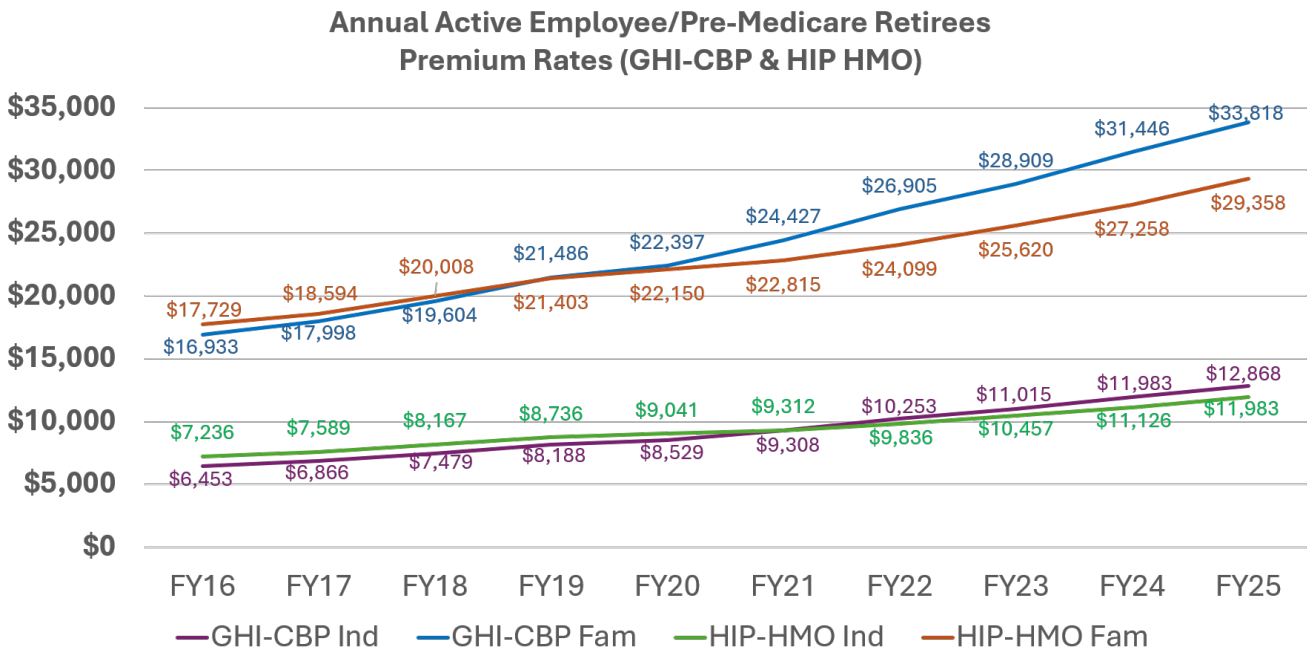

Source: NYC Office of Labor Relations, Overview of Health Insurance Plan Expenditures for City of New York Employees, through FY 2025. Figures rounded to the nearest $0.01 billion; "HIP-HMO & Other Plans" is an aggregated category.

Premium Rates, GHI-CBP and HIP HMO

Annual premium rates for both plans rose in every year shown. From FY24 to FY25, GHI-CBP rates rose **+7.4% (Individual)** and **+7.5% (Family)**; HIP HMO rates rose **+7.7%** at both tiers. From FY23 to FY25, GHI-CBP rates rose **+16.8% (Individual)** and **+17.0% (Family)**, while HIP HMO rates rose **+14.6%** at both tiers, a modestly faster two-year rate of increase for GHI-CBP than for HIP HMO.

Figure 3.2. Annual Premium Rates, GHI-CBP and HIP HMO, FY2016–FY2025

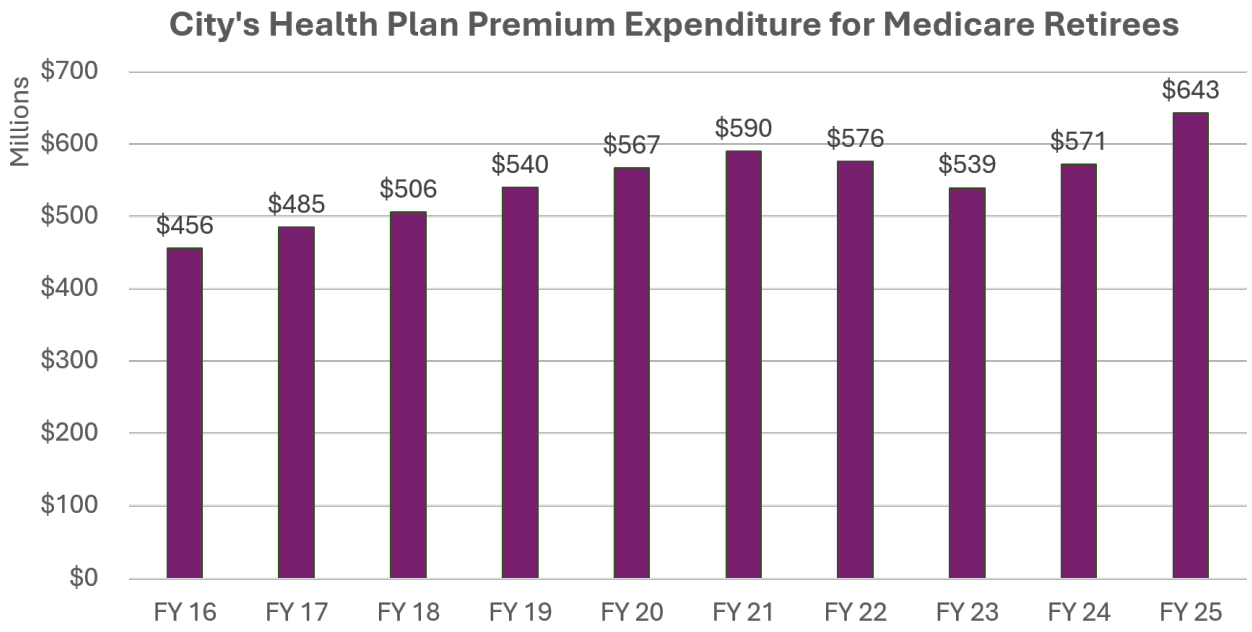

Source: NYC Office of Labor Relations, Overview of Health Insurance Plan Expenditures for City of New York Employees, through FY 2025. Figures rounded to the nearest dollar.

Premium Expenditures for Medicare Retirees

City premium expenditure for Medicare-eligible retirees rose from **$539.5 million in FY23** to **$571.5 million in FY24 (+5.9%)** and **$643.1 million in FY25 (+12.5%)**, a cumulative increase of 19.2% from FY23 to FY25. OLR has noted that expenditure for this population declined in FY22 (beginning with January 1, 2022 rates), primarily due to a reduction in the HIP VIP rate, before increasing significantly beginning January 1, 2025 — the rate-setting action largely underlying the FY25 increase shown below.[205]

Figure 3.3. City Health Plan Premium Expenditure, Medicare Retirees, FY2023–FY2025

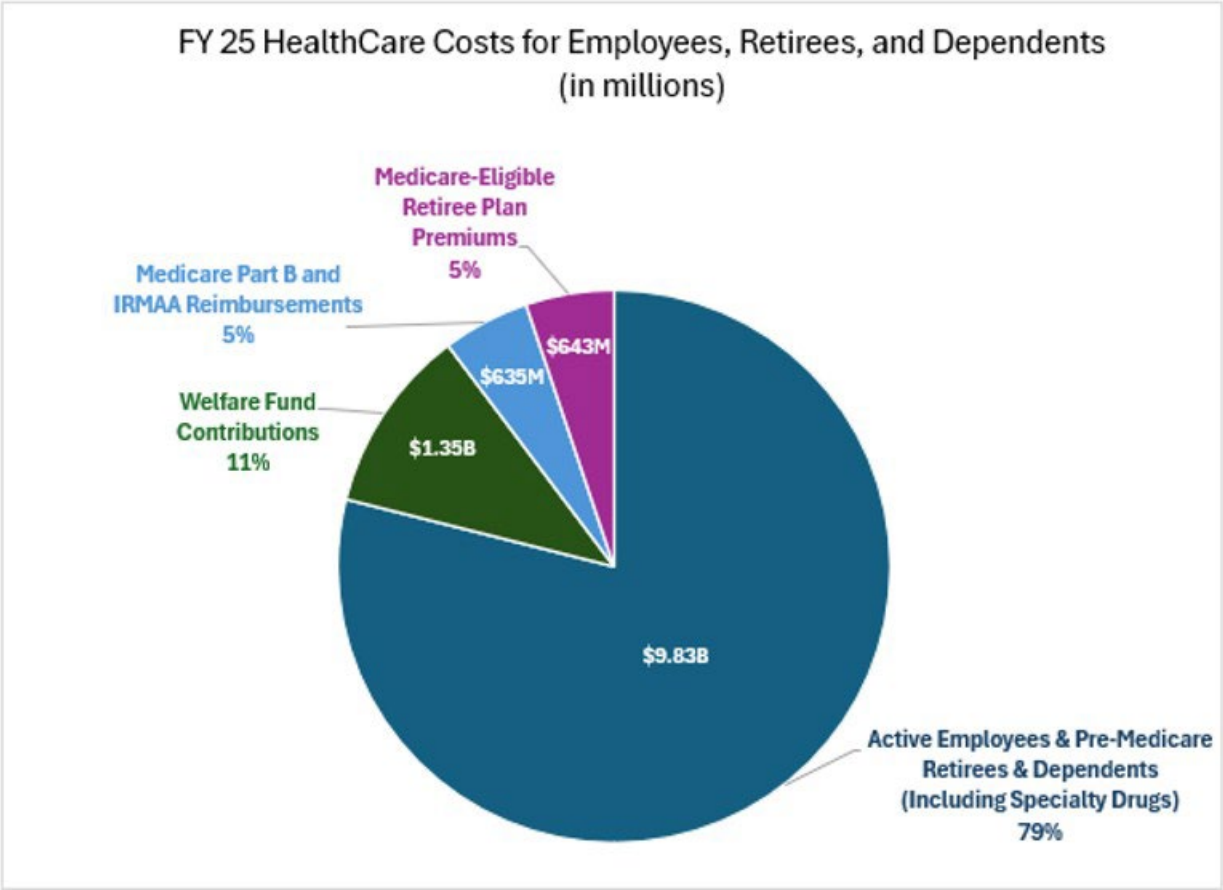

Source: NYC Office of Labor Relations, Overview of Health Insurance Plan Expenditures for City of New York Employees, through FY 2025.

FY 2025 Total Health Care Cost Composition

OLR's FY25 summary of total City health care costs for employees, retirees, and dependents (in millions) reports four components: active employees and pre-Medicare retirees and dependents, including specialty drugs (approximately 79% of the total); welfare fund contributions (approximately 11%); Medicare-eligible retiree plan premiums (approximately 5%); and Medicare Part B/IRMAA reimbursements (approximately 5%).[206]

Figure 3.4. City Health Care Costs for Employees, Retirees and Dependents, FY2023–FY2025

Note: This figure represents gross expenditures and does not account for additional funding or adjustments. Welfare fundi contributions are extrapolated to all covered entities based on available OLR data. Source: NYC Office of Labor Relations, Overview of Health Insurance Plan Expenditures for City of New York Employees, through FY 2025.

Discussion

Across all three populations of City Employee Health Plan members, City premium costs rose steadily from FY23 to FY25, with GHI-CBP growing modestly faster than HIP HMO and Medicare retiree costs the most volatile of the three, reflecting sensitivity to periodic rate-setting decisions such as the FY22 HIP VIP rate reduction rather than to changes in enrollment or utilization. The FY25 cost composition also shows that active employees and pre-Medicare retirees account for the large majority (about 79%) of total City health care costs, with welfare fund contributions and Medicare-related costs making up the remainder.

Employer-Sponsored Insurance Premiums and Out-of-Pocket Costs: Federal Survey Data

This section presents federal survey data on private-sector employer-sponsored insurance (ESI) premiums and employee contributions to healthcare. Because the City pays the full premium for its own employees and retirees, this section does not describe NYC government employees; it instead reports average private-sector employee premium contributions and total premiums for the New York-Newark-Jersey City Metro Area and the remainder of New York State.

Methodology

Data are drawn from the federal Medical Expenditure Panel Survey Insurance Component (MEPS-IC), an annual survey conducted by the Agency for Healthcare Research and Quality (AHRQ), Center for

Financing, Access and Cost Trends.[207] MEPS-IC is a survey-based estimate of employer-sponsored insurance offerings and costs, distinct from the administrative payment-rate data used in Sections 1 through 3 of this chapter; it is subject to sampling variability rather than reflecting a full census of employer plans.

Two measures are reported for private-sector establishments: (1) the average *employee* contribution toward the premium, at the Single and Family coverage tiers, and (2) the average *total* premium (employee contribution plus employer contribution combined) for single coverage.[208] Figures are reported separately for the New York-Newark-Jersey City Metro Area and for the remainder of New York State (i.e., the state excluding that metro area). Data reported in this section reflects 2023-2024 data.

Findings

Employee Premium Contributions, 2023–2024

For individual coverage, the average annual private-sector employee contribution in the New York-Newark-Jersey City Metro Area was **$1,751 in 2024**, down from $1,927 in 2023 (a decline of 9.1%). In the remainder of New York State, the average annual individual contribution was **$2,258 in 2024**, up from $1,716 in 2023 (an increase of 31.6%). This is the first year since 2019 in which the average individual employee contribution in the New York metro area was lower than in the remainder of the state.[209]

For family coverage, the average annual employee contribution in the New York-Newark-Jersey City Metro Area was **$6,232 in 2024**, down from $7,588 in 2023 (a decline of 17.9%). The remainder-of-state figure was reported as $6,848 for 2024.[210]

Table 3.8. Average Private-Sector Employee Premium Contribution, NY Metro Area vs. Remainder of NY State, 2023–2024

Coverage Tier / Area	2023	2024	% Change
Individual — NY Metro Area	$1,927	$1,751	−9.1%
Individual — Remainder of NY State	$1,716	$2,258	+31.6%
Family — NY Metro Area	$7,588	$6,232	−17.9%
Family — Remainder of NY State	$6,848	$6,370	−7.0%

Data Source: Agency for Healthcare Research and Quality, MEPS-IC, as listed in your uploaded document.

Total Premiums (Employee + Employer Contribution), 2023–2024

The average total annual individual premium (employee plus employer contribution) for private-sector establishments in the New York-Newark-Jersey City Metro Area was **$9,860 in 2024**, up from $9,615 in 2023 (an increase of 2.5%). In the remainder of New York State, the average total annual individual premium was **$9,179 in 2024**, up from $8,346 in 2023 (an increase of 10.0%). Among the 20 largest metro areas in the country, the New York-Newark-Jersey City Metro Area ranked fourth for total individual premium costs in 2024, behind the Riverside-San Bernardino-Ontario, CA; Miami-Fort Lauderdale-West Palm Beach, FL; and Boston-Cambridge-Newton, MA-NH metro areas.

Table 3.9. Average Total Individual Premium (Employee + Employer Contribution), NY Metro Area vs. Remainder of NY State, 2023–2024			
Area	2023	2024	% Change
NY-Newark-Jersey City Metro Area	$9,615	$9,860	+2.5%
Remainder of NY State	$8,346	$9,179	+10.0%
Data Source: Agency for Healthcare Research and Quality, MEPS-IC, as listed in your uploaded document.			
Note: "Total premium" is the sum of average employee and average employer contributions for single coverage.			

Discussion

An important limitation to note because MEPS-IC is a sample survey rather than an administrative dataset, single-year swings in this section should be read with somewhat more caution than the payment-rate data, which are not self-reported through a survey form.

The most notable pattern in this data is the 2024 crossover in individual employee contributions — the first year since 2019 in which the New York metro area's average contribution fell below the rest-of-state figure — even as the metro area's average total premium (employee plus employer contribution) remained among the highest in the country, ranking fourth of the 20 largest U.S. metro areas. This increasing employer-sponsored premiums and decreasing employee contribution data also underscores a change in how affordability may impact employer-sponsored plan members compared to other populations, such as those in the NYSOH Marketplace. This may allow for consumers to feel their healthcare is more affordable or at least, not increasing, while the cost of care paid by employers continues to increase. This makes comparing the employee contribution to the overall employer-employee paid premium important for understanding healthcare costs and affordability, particularly for smaller companies still addressing these high healthcare costs.

Section 4: Analysis of CY2025 Facility and Professional Reimbursement for the City of New York Health

This analysis is provided in full at following the references.

Section 5: New York City Hospital Price Transparency Report

This analysis is provided in full at following the references.

Acknowledgements

The New York City Local Law 78 of 2023 Healthcare Accountability Annual Report is the result of the collaborative efforts of many individuals and organizations dedicated to improving transparency, accountability, and equitable access to healthcare for New Yorkers.

Under the leadership of Dr. Alister Martin, the New York City Department of Health and Mental Hygiene extends its sincere appreciation to the report contributors whose expertise, dedication, and thoughtful review made this publication possible.

In particular, we thank staff across the Department. for their leadership in contributing to and/or advancing capacity in healthcare accountability through their work in data collection, analysis, policy development, program evaluation, building data infrastructure, and establishing internal and external relationships. Additionally, we would like to name the following contributors:

Lead Writers: Emma Clippinger, Maris Gelman, Ellen Mador

Hospitals and Health Systems: Laila Alsabahi, Jennifer Carmona, Deirdre Flynn, Maris Gelman, Rachel Schwartz

Insurer Financials, Claims, and Premiums: Rebecca Friedman, Bailey Hu, Ellen Mador, Stephanie Ramsey, George Timmins, Ewa Wojas, Brian Yim

Pricing and Price Comparison Tool: Emily Arsen, Ellen Mador, Jenai Jackson, Belinda Jivapong, Tsu-Yu Tsao

Operational support, visuals, and partner engagement: Emily Arsen, Donna Castelblanco, Anika Kalra, Yogeeta Kuldip, Beatrice Mauger, Nimisha Singh, Melissa Wylie

Organizational leadership: Emma Clippinger, Duncan Maru, Ese Oghenejobo, Amy Shah, Tsu-Yu Tsao

We are especially grateful to the New York City Office of Labor Relations for its partnership and continued support in providing data, technical guidance, and subject matter expertise that informed the analyses presented in this report.

We also acknowledge the valuable contributions of New York State Department of Financial Services, Milliman, Turquoise, Health Access Innovation, whose technical assistance, analytical support, and collaborative engagement helped strengthen the report's methodology, data interpretation, and presentation.

Note on generative AI: several authors used generative AI tools to support data checking, brainstorming, and document formatting. All use was conducted in accordance with the DOHMH Generative AI Appropriate Use Policy and applicable City policies and laws. Final content, analysis, and conclusions were reviewed and approved by the authors.

Data Source: Internal Revenue Service. Form 990, Schedule H, Part I. 2024.

Notes: Most hospitals report on a calendar-year basis. NYU Langone follows a September–August fiscal year. Its 2023 filing is presented here because the majority of that fiscal period falls within 2024. This table only includes nonprofit hospitals in NYC. Calvary Hospital (hospice/palliative care hospital) & Rockefeller University Hospital (research hospital) were excluded from NYC hospitals that filed a 990 form in 2024. Some hospitals file one consolidated form as a system (e.g., NYU), while others file several (e.g., Mount Sinai).

Data Source: Internal Revenue Service. Form 990, Schedule H, Part I. 2024.

Notes: Most hospitals report on a calendar-year basis. NYU Langone follows a September–August fiscal year. Its 2023 filing is presented here because the majority of that fiscal period falls within 2024. This table only includes nonprofit hospitals in NYC. Calvary Hospital (hospice/palliative care hospital) & Rockefeller University Hospital (research hospital) were excluded from NYC hospitals that filed a 990 form in 2024. Some hospitals file one consolidated form as a system (e.g., NYU), while others file several (e.g., Mount Sinai).

1. Background and Purpose

This report is being prepared under the New York City Healthcare Accountability & Consumer Protection Act (the "Act") referred to as Local Law 78, effective February 22, 2025. This report is provided to comply with the City's requirements under Local Law 78.

The City of New York (the City) provides comprehensive health benefits for over 1.2 million employees, retirees, and their dependents through multiple health benefit programs from which its members can choose.

The predominant medical program for active employees and pre-Medicare retirees is the Comprehensive Benefit Plan (CBP), which is a preferred provider organization (PPO) that covers approximately 75% of the City's active employees and pre-Medicare retirees and their dependents. The initial report in March 2025 and supplement in September 2025 reported on the CBP. Effective in January 2026, a new PPO program - the New York City Employees PPO (NYCE PPO) - was implemented. Reporting on the NYCE PPO program will be provided in 2027.

In addition to the CBP, approximately 20% of the City's active employees and pre-Medicare retirees are enrolled in the HIP Health Maintenance Organization (HIP HMO) plan administered by Emblem Health. The remaining 5% of medical claims are for individuals enrolled in fully insured community rated plans, where it is not feasible to separate the City's experience.

Milliman received detailed claim data for the CBP plan from Anthem Blue Cross and Blue Shield and for the HIP HMO plan from Emblem Health. That data, along with additional supplemental files, was used to compile the information for this report.

2. Executive Summary

CBP PLAN

The City's calendar year (CY) 2025 allowed medical (facility and professional) spend for the portion of its actives, pre-Medicare retirees and their dependents (collectively "members") in the CBP plan was approximately $6.4 billion, based on the data used in this study. This spend has consistently increased (approximately $5.7 billion in CY2023 to $6.4 billion in CY2025) over the three calendar years (CY2023 through CY2025) as shown in Figure A-CBP.

The CY2025 allowed medical spend on a per member per year (PMPY) basis is $8,628. Member years are calculated as the total member months for all covered lives in the given year divided by 12. We estimate that the reimbursement underlying the PMPY allowed medical spend is 193% of the Medicare Allowed amount for the same set of services.

Figure A-CBP provides four different CBP metrics: average number of members, total allowed medical spend, allowed medical spend per member and allowed spend as a percentage of Medicare Allowed amount. Over the three calendar years included in the study, both the allowed amounts[1] and the percent of Medicare Allowed[2] amount increased, with an annual growth of 5.7% in the allowed amount per member and 2.2% in allowed as a percentage of Medicare Allowed amount.

Figure A-CBP: City Allowed Spend and Percent of Medicare by Calendar Year (CBP; active employees, dependents, and pre-Medicare retirees)

Calendar year	Average Members	Total Allowed Medical Spend ($B)	Total Allowed Medical Spend PMPY	Total Allowed as % of Medicare Reimbursement
2023	736,405	$5.682	$7,716	185%
2024	737,096	$5.800	$7,869	187%
2025	738,954	$6.375	$8,628	193%
Growth rates				
2024/2023	0.1%	2.1%	2.0%	1.2%
2025/2024	0.3%	9.9%	9.6%	3.1%
Average	0.2%	5.9%	5.7%	2.2%

Comparison to Medicare Allowed amounts is commonly used for benchmarking commercial carrier reimbursement rates. Throughout this report we compare the City's allowed amounts as a percentage of what Medicare would pay for the same services (allowed as a percent of Medicare Allowed). This metric captures the price component of medical spend, so its trends will generally differ from the allowed spend PMPY trends, which reflect both price changes and changes in member utilization and service mix.

Figure B-CBP breaks down the allowed PMPY into inpatient facility, outpatient facility, and professional and other services. The percent of total spend for facility claims (services in a hospital inpatient or outpatient setting) grew slightly from CY2023 to CY2024 (from 58.4% to 58.7%) and remained relatively constant from CY2024 to CY 2025 (58.6% of total allowed). The City's PMPY allowed medical spend increases vary by type of service, with inpatient, outpatient, and

[1] Allowed medical spend is the total amount of fee-for-service (FFS) payments and capitation payments for covered medical services including the amount that the plan pays, the patient pays, and any other payer pays for covered services*. Provider bonus and risk sharing payments are not included as these payments are not included in the claims data*. Carrier / plan administrative costs are also not included, and as noted above prescription drug costs and utilization that is not provided through facilities (i.e. through retail and mail order pharmacy) are not included in this analysis.

[2] Medicare Allowed spend is the amount that Medicare would reimburse for the covered services under the Medicare Fee for Service (FFS) program. Medicare prices are adjusted based on a case-mix index (CMI), where the same services receive the same CMI. For outpatient and professional services, Medicare prices are generally consistent within a geographic area and are adjusted for wage and other cost differences across areas. Inpatient prices are based on wages and facility-specific factors like the number of low-income patients and medical education programs. Medicare reimbursement is often used as a "reference price" that is used to compare reimbursement on a standardized basis. Use of a reference price enables comparisons among facilities, types of service, and procedures.

professional spend increasing by 1.9%, 9.5% and 5.5% per year, driven by larger than expected increases between CY2024 and CY2025, as shown below in Figure B-CBP.

Figure B-CBP: City Allowed Medical Spend PMPY by Calendar Year and Major Service Category (CBP; active employees, dependents, and pre-Medicare retirees)

Calendar Year	Average Members	Allowed Medical Spend PMPY				Facility % of Total Allowed
		Inpatient Facility	Outpatient Facility	Professional / Other	Total	
2023	736,405	$2,147	$2,359	$3,210	$7,716	58.4%
2024	737,096	$2,120	$2,497	$3,252	$7,869	58.7%
2025	738,954	$2,228	$2,829	$3,571	$8,628	58.6%
Growth rates						
2024/2023	0.1%	-1.3%	5.9%	1.3%	2.0%	0.3%
2025/2024	0.3%	5.1%	13.3%	9.8%	9.6%	-0.1%
Average	0.2%	1.9%	9.5%	5.5%	5.7%	0.1%

The average CY2025 allowed as a percent of Medicare Allowed ranges from 135% for professional and other non-facility services to 293% for outpatient facility services. The annual growth rate of Medicare Allowed percentages was 1.0% for inpatient, 2.4% for outpatient services and 1.6% for professional services for an overall increase of 2.2% per year. That is, overall prices increased on average by 2.2% per year *in addition to the changes in the Medicare fee schedule*. Figure C-CBP shows these results. Because outpatient services have the highest percent of Medicare Allowed, the growth in outpatient prices and PMPY spend (see Figure B-CBP) is the major contributor to the overall growth in the City's allowed as a percent of Medicare Allowed.

Figure C-CBP: City Allowed as a % of Medicare Allowed (CBP; active employees, dependents, and pre-Medicare retirees)

Calendar Year	Allowed Medical Spend as % of Medicare Allowed Reimbursement				
	Inpatient Facility	Outpatient Facility	Professional / Other	Total	Facility Subtotal
2023	236%	279%	131%	185%	257%
2024	237%	285%	131%	187%	260%
2025	241%	293%	135%	193%	267%
Growth rates					
2024/2023	0.1%	2.0%	0.2%	1.2%	1.3%
2025/2024	2.0%	2.8%	2.9%	3.1%	2.7%
Average	1.0%	2.4%	1.6%	2.2%	2.0%

HIP HMO PLAN

The City's CY2025 allowed medical (facility and professional) spend for the portion of its actives, pre-Medicare retirees and their dependents (collectively "members") in the HIP HMO plan was approximately $1.45 billion, based on the data used in this study. This total spend has been consistent over the three calendar years (CY2023 through CY2025) as shown in Figure A-HMO,

although the average number of members has decreased while the spend per member has increased.

The CY2025 allowed medical spend on a per member per year (PMPY) basis is $8,337. Member years are calculated as the total member months for all covered lives in the given year divided by 12. We estimate that the reimbursement underlying the PMPY allowed medical spend is 195% of the Medicare Allowed amount for the same set of services.

Analyzing the total allowed spend for the HIP HMO is complicated by Emblem's reimbursement methodology, which includes both fee for service (FFS) and capitated payments. This analysis includes both the fee for service (FFS) and capitation amounts, unless noted otherwise.

Figure A-HMO provides four different HIP HMO metrics: average number of members, total allowed medical spend, allowed medical spend per member and allowed spend as a percentage of Medicare Allowed. Over the three calendar years included in the study, both the allowed amounts[1] and the percent of Medicare Allowed[2] increased, with an annual growth of 5.4% in the allowed amount per member and 0.9% in allowed as a percentage of Medicare Allowed, driven by CY2024 to CY2025 growth rates.

Figure A-HMO: City Combined (FFS + Capitated Encounter) Allowed Spend and Percent of Medicare by Calendar Year (HIP HMO; active employees, dependents, and pre-Medicare retirees)

Calendar year	Average Members	Total Allowed Medical Spend ($B)	Total Allowed Medical Spend PMPY	Total Allowed as % of Medicare Reimbursement
2023	189,060	$1.418	$7,498	191%
2024	183,107	$1.401	$7,649	190%
2025	173,925	$1.450	$8,337	195%
Growth rates				
2024/2023	-3.1%	-1.2%	2.0%	-0.4%
2025/2024	-5.0%	3.5%	9.0%	2.2%
Average	-4.1%	1.1%	5.4%	0.9%

Figure B-HMO breaks down the allowed PMPY into inpatient facility, outpatient facility, and professional and other services. The percent of total spend for facility claims (services in a hospital inpatient or outpatient setting) was stable from CY2023 to CY2025, with a slight dip in 2024. The City's PMPY allowed medical spend increases vary by type of service, with inpatient, outpatient, and professional spend increasing by 1.8%, 9.9%, and 5.4% per year, driven by CY2024 to CY2025 growth rates, as shown below in Figure B-HMO.

Figure B-HMO: City Combined (FFS + Capitated Encounter) Allowed Medical Spend PMPY by Calendar Year and Major Service Category (HIP HMO; active employees, dependents, and pre-Medicare retirees)

Calendar Year	Average Members	Allowed Medical Spend PMPY				Facility % of Total Allowed
		Inpatient Facility	Outpatient Facility	Professional / Other	Total	
2023	189,060	$2,547	$2,010	$2,940	$7,498	60.8%
2024	183,107	$2,529	$2,077	$3,043	$7,649	60.2%
2025	173,925	$2,641	$2,429	$3,266	$8,337	60.8%
Growth rates						
2024/2023	-3.1%	-0.7%	3.3%	3.5%	2.0%	-0.6%
2025/2024	-5.0%	4.4%	17.0%	7.3%	9.0%	0.6%
Average	-4.1%	1.8%	9.9%	5.4%	5.4%	0.0%

Figure C-HMO breaks down the allowed medical spend as a percentage of Medicare into inpatient facility, outpatient facility, and professional and other services. The average CY2025 allowed as a percent of Medicare Allowed ranges from 168% for professional and other non-facility services to 240% for outpatient facility services. The annual growth rate of Medicare Allowed percentages was 0.4% for inpatient, -0.1% for outpatient services, and 0.9% for professional services for an overall increase of 0.9% per year. That is, overall prices increased on average by 0.9% per year *in addition to the changes in the Medicare fee schedule*. Figure C-HMO shows these results. Because facility services (inpatient and outpatient) have the highest percent of Medicare Allowed, the growth in facility prices and PMPY spend (see Figure B-HMO) is a contributor to the overall growth in the City's allowed as a percent of Medicare Allowed.

Figure C-HMO: City Combined (FFS + Capitated Encounter) Allowed as a % of Medicare Allowed (HIP HMO; active employees, dependents, and pre-Medicare retirees)

Calendar Year	Allowed Medical Spend as % of Medicare Allowed Reimbursement				
	Inpatient Facility	Outpatient Facility	Professional / Other	Total	Facility Subtotal
2023	197%	241%	165%	191%	214%
2024	194%	241%	165%	190%	212%
2025	198%	240%	168%	195%	216%
Growth rates					
2024/2023	-1.5%	0.0%	0.1%	-0.4%	-0.6%
2025/2024	2.3%	-0.2%	2.1%	2.2%	1.9%
Average	0.4%	-0.1%	1.1%	0.9%	0.6%

COMPARISON OF CBP PLAN TO HIP HMO

This report provides the first opportunity to compare the total allowed medical spend, allowed medical spend per member, and allowed as a percent of Medicare Allowed for the CBP and HIP HMO plans. Generally, while the CBP covers substantially more members than the HIP HMO, the

allowed claim spend per member varies between 2.8% and 3.4% less for the HIP HMO over 2023 to 2025. Figure A-CBP and HMO shows these results.

Figure A-CBP and HMO: Comparison of CBP and HMO Allowed Spend by Calendar Year (active employees, dependents, and pre-Medicare retirees)

Allowed Medical Spend Per Member Per Year (PMPY)

Year	CBP Average Members	CBP PMPY Allowed	HMO Average Members	HMO PMPY Allowed	HMO Allowed PMPY/ CBP Allowed PMPY
2023	736,405	$7,716	189,060	$7,498	-2.8%
2024	737,096	$7,869	183,107	$7,649	-2.8%
2025	738,954	$8,628	173,925	$8,337	-3.4%

In comparing the percent of Allowed claims as a percent of Medicare Allowed, the HIP HMO has reimbursed at a consistently higher percent of Medicare Allowed compared to the CBP. Figure B-CBP and HMO shows these results.

Figure B-CBP and HMO: Comparison of CBP and HIP HMO Allowed as a % of Medicare Allowed by Calendar Year (active employees, dependents, and pre-Medicare retirees)

Allowed as % of Medicare Reimbursement

Year	Total - CBP	Total - HMO	HMO Allowed % Med / CBP Allowed % Med
2023	185%	191%	3.4%
2024	187%	190%	1.8%
2025	193%	195%	0.8%

Finally, we compared the trends on allowed PMPY medical spend, as summarized in Figure C-CBP and HMO. The HIP HMO had slightly higher trends from 2023 to 2024 than the CBP but lower trends from 2024 to 2025, resulting in an overall lower trend from 2023 to 2025 (5.4% annually compared to 5.7%). Figure C-CBP and HMO shows these results.

Figure C-CBP and HMO: Comparison of CBP and HIP HMO Allowed PMPY Medical Spend Trends by Calendar Year (active employees, dependents, and pre-Medicare retirees)

Allowed Medical Spend PMPY Trends

Year	Total PMPY Trend - CBP	Total PMPY Trend - HMO	Total HMO PMPY Trend - Total CBP PMPY Trend
2023 to 2024	2.0%	2.0%	0.0%
2024 to 2025	9.6%	9.0%	-0.6%
Average	5.7%	5.4%	-0.3%

Note that since the City pays a fully insured premium for the HIP HMO and a Minimum Premium for the CBP (and not just claims), the overall spend per member of the HIP HMO and CBP are different from reported here.

3. CBP Plan Results

Figure D-CBP compares the facility experience among New York City-based hospital systems. Three health systems account for approximately 52% of the City's total facility allowed CBP medical spend in CY2025[3].

The CY2025 facility allowed as a percent of Medicare Allowed ranges from 189% to 352% by system. Exhibit II-A-CBP shows the detailed CY2025 results. Different systems rank differently when considering inpatient and outpatient separately. Figure D-CBP summarizes the results of Exhibit II-A-CBP.

Exhibit II-A-CBP shows the City's CY2025 allowed percent of Medicare Allowed for detailed inpatient and outpatient service categories, by system and by facility. The system level results demonstrate that:

- Relative to the average inpatient allowed percent of Medicare Allowed of 241%, the systems range from a high of 343% to a low of 148%
- Relative to the average outpatient allowed percent of Medicare Allowed of 293%, the systems range from a high of 408% to a low of 203%
- Outpatient emergency department allowed amounts range between 363% to 991% of Medicare Allowed with an average of 612%

Figure D-CBP: City Allowed as a % of Medicare Allowed by Hospital System (CBP; CY2025; active employees, dependents, and pre-Medicare retirees)

	Allowed Medical Spend as % of Medicare Allowed Reimbursement			Allowed Medical Spend ($M)			
System Name	Inpatient Facility	Outpatient Facility	Total	Inpatient Facility	Outpatient Facility	Total	% of Total Allowed

[3] Note that the health system volume percentages in Figure D-CBP are rounded.

Figure E-CBP compares the combined facility inpatient and outpatient experience across calendar years for New York City-based hospital systems. The trend in facility allowed spend as a percent of Medicare Allowed over the three years varies by hospital system, with the highest average increase 9.6% per year above the increase in Medicare allowed changes, and the lowest -1.2% per year below the increase in Medicare allowed changes.

Figure E-CBP: City Allowed as a % of Medicare Allowed by Hospital System and Calendar Year (CBP; active employees, dependents, and pre-Medicare retirees)

	Facility Allowed Medical Spend as % of Medicare Allowed Reimbursement			Average Growth Rate	Facility Allowed Medical Spend ($M)		
System Name	2023	2024	2025		2023	2024	2025

Other / Independent / Out of Area	196%	190%	191%	-1.2%	$715.6	$725.6	$804.3
Total	**257%**	**260%**	**267%**	**2.0%**	**$3,318.4**	**$3,403.3**	**$3,737.0**

We also reviewed the Allowed as a percentage of Medicare Allowed by region. On average, both Long Island and Mid-Hudson region facilities have higher reimbursement than the New York City region facilities in each of the three calendar years in the analysis (Exhibit III-B-CBP). As shown in Figure F-CBP below, inpatient allowed percent of Medicare Allowed is highest at Mid-Hudson facilities (296% compared to an average of 241%) and outpatient allowed as a percentage of Medicare Allowed is highest in Long Island (335% compared to an average of 293%) in CY2025.

Figure F-CBP: City Allowed as a % of Medicare Allowed by Geographic Area (CBP; CY2025; active employees, dependents, and pre-Medicare retirees)

	Allowed Medical Spend as % of Medicare Allowed Reimbursement					Allowed Medical Spend Charges ($M)
Provider Region	Inpatient Facility	Outpatient Facility	Professional / Other	Total	Facility Subtotal	
New York City	226%	281%	134%	198%	254%	$3,489.4
Long Island	279%	335%	147%	209%	305%	$1,525.2
Mid-Hudson	296%	273%	165%	207%	283%	$478.1
All Other Regions	237%	303%	113%	148%	273%	$882.7
Total	**241%**	**293%**	**135%**	**193%**	**267%**	**$6,375.5**

Exhibits III-A-CBP and III-B-CBP show detailed results by geographic area, including professional results by service category and specialty grouping (primary care and specialist). For professional services, anesthesia and radiology services have the highest CY2025 allowed percent of Medicare at 446% and 192%, respectively.

Section IV of our analysis looks at the allowed medical spend by procedure for the top 20 inpatient, outpatient and professional services. Section V shows the facility-level detail. Note that our analysis only provides average allowed medical spend for facilities with 25 services in the category to help ensure statistical credibility.

The variation in allowed amount among the top 10 hospital systems for the top 20 MS-DRGs[4] can be significant.

Figure G-CBP below highlights the top 10 MS-DRGs determined by FFS plan spend volume for the City with the average and maximum allowed spend per admit, and the ratio of the maximum to the average. As shown below and in Exhibit V-A-CBP, the ratio of the maximum and average spend varies by admission type with cesarean and vaginal deliveries costing 53% to 67% more than average for the highest spend major acute care facilities.

[4] Medical Severity Diagnosis-Related Groups, a classification system used by the Centers for Medicare and Medicaid Services to categorize and reimburse providers for services.

Figure G-CBP: City Inpatient Allowed Facility Medical Spend per Admit for the Top 10 MS-DRG Codes (CBP; CY2025; Sorted By Total Admissions; active employees, dependents, and pre-Medicare retirees)[5]

MS-DRG	Description	Allowed Medical Spend Per Admit		
		Average	Maximum	Max/Avg
795	Normal Newborn	$10,055	$13,605	1.35
794	Neonate with Other Significant Problems	$17,177	$46,373	2.70
807	Vaginal Delivery without Sterilization or D&C without CC/MCC	$22,842	$38,133	1.67
897	Alcohol, Drug Abuse or Dependence without Rehabilitation Therapy without MCC	$9,486	Masked	n/a
885	Psychoses	$27,437	$93,821	3.42
787	Cesarean Section without Sterilization with CC	$43,533	$66,776	1.53
788	Cesarean Section without Sterilization without CC/MCC	$32,269	$58,582	1.82
806	Vaginal Delivery without Sterilization or D&C with CC	$28,452	$40,896	1.44
871	Septicemia or Severe Sepsis without MV >96 Hours with MCC	$79,245	$182,592	2.30
392	Esophagitis, Gastroenteritis and Miscellaneous Digestive Disorders without MCC	$18,389	$24,827	1.35

The Top 20 services using outpatient Current Procedural Terminology codes (CPTs) (Exhibit IV-B-CBP), are reported by both FFS allowed spend volume and record count. The top 3 CPTs by allowed spend were related to emergency department visits, while other services with high allowed volumes included biopsies, chemotherapy, colonoscopies and arthroplasty. By record count, the top services include labs and emergency department visits. We provide the allowed as a percent of Medicare Allowed for all services, noting a wide range of results. For example, among the top 20 services by allowed amount, we note that CPT code 99282 (Emergency dept visit medium severity) allowed averaged 1119% of Medicare Allowed, while pembrolizumab injections averaged 134% of Medicare Allowed.

The Top 20 services using professional CPTs (Exhibit IV-C-CBP) are reported by both allowed spend volume and record count. Four of the top six CPTs by allowed spend were related to office visits, while other services with high allowed volumes included behavioral health services and urgent care visits. The top services by record count are routine office visits, behavioral health services, and labs. We provide the allowed as a percent of Medicare Allowed for all services, noting a wide range of results. For example, among the top 20 services by allowed, we note that CPT code 01967 (anesthesia for a vaginal delivery) allowed averaged 621% of Medicare Allowed, while many of the traditional office visit codes averaged just around 120%.

Exhibit V-A-CBP provides the City's average FFS allowed by facility for the top 10 facilities and top 20 inpatient MS-DRGs.

[5] Maximum medical spend per admit by DRG is limited to systems with 25 or more admissions in a given DRG. No maximum is shown when all systems have fewer than 25 admissions in a given DRG.

4. HIP HMO Plan Results

As previously discussed, the HIP HMO plan includes both FFS and capitation arrangements for medical services. Capitation payments make up less than 10% of total facility plan spend in CY2024 and CY2025, so we are excluding the capitation payments from all facility-level or facility code-level tables and exhibits. These tables and exhibits will be for FFS services only, unless otherwise noted.

Figure D-HMO compares the facility experience among New York City-based hospital systems. Three health systems account for approximately 52% of the City's total facility allowed HIP HMO medical spend in CY2025[6].

The CY2025 facility FFS allowed as a percent of Medicare Allowed ranges from 85% to 310% by system. Exhibit II-A-HMO shows the detailed CY2025 results. Different systems rank differently when considering inpatient and outpatient separately. Figure D-HMO summarizes the results of Exhibit II-A-HMO.

Exhibit II-A-HMO shows the City's CY2025 FFS allowed percent of Medicare Allowed for detailed inpatient and outpatient service categories, by system and by facility. The system level results demonstrate that:

- Relative to the average inpatient allowed percent of Medicare Allowed of 200%, the systems range from a high of 300% to a low of 60%
- Relative to the average outpatient allowed percent of Medicare Allowed of 257%, the systems range from a high of 374% to a low of 162%
- Outpatient emergency department allowed amounts range between 226% to 650% of Medicare Allowed with an average of 392%

[6] Note that the health system volume percentages in Figure D-HMO are rounded.

Figure D-HMO: City FFS Allowed as a % of Medicare Allowed by Hospital System (HIP HMO; CY2025; active employees, dependents, and pre-Medicare retirees)

Figure E-HMO-Combined compares the combined facility inpatient and outpatient FFS and capitated encounter experience across calendar years for New York City-based hospital systems. The trend in facility allowed spend as a percent of Medicare Allowed over the three years varies by hospital system, with the highest average increase 7.8% per year above the increase in Medicare allowed changes (Montefiore Health System, which moved from capitated arrangements to fee for service pricing between 2023 and 2024), and the lowest -7.6% per year below the increase in Medicare allowed changes.

We included this exhibit to showcase the impacts on hospital system reimbursement trends when the capitated encounters are included in the results. Since the capitated encounters have lower reimbursement levels than the FFS claims on average, they can have material impacts on the growth rates when included.

Figure E-HMO-Combined: City Combined (FFS + Capitated Encounter) Allowed as a % of Medicare Allowed by Hospital System and Calendar Year (HIP HMO; active employees, dependents, and pre-Medicare retirees)

	Facility Allowed Medical Spend as % of Medicare Allowed Reimbursement				Facility Allowed Medical Spend ($M)		
System Name	2023	2024	2025	Average Growth Rate	2023	2024	2025

We also reviewed the Allowed as a percentage of Medicare Allowed by region. On average, both Long Island and Mid-Hudson region facilities have higher reimbursement than the New York City region facilities in each of the three calendar years in the analysis (Exhibit III-B-HMO). As shown in Figure F-HMO below, inpatient allowed percent of Medicare Allowed is highest at Mid-Hudson facilities (287% compared to an average of 198%) and outpatient allowed as a percentage of Medicare Allowed is highest in All Other Regions (288% compared to an average of 240%) in CY2025.

Figure F-HMO: City Combined (FFS + Capitated Encounter) Allowed as a % of Medicare Allowed by Geographic Area (HIP HMO; CY2025; active employees, dependents, and pre-Medicare retirees)

	Allowed Medical Spend as % of Medicare Allowed Reimbursement					Allowed Medical Spend Charges ($M)
Provider Region	Inpatient Facility	Outpatient Facility	Professional / Other	Total	Facility Subtotal

All Other Regions	190%	288%	144%	162%	236%	$135.7
Total	**198%**	**240%**	**168%**	**195%**	**216%**	**$1,450.0**

Exhibits III-A-HMO and III-B-HMO show the detailed results by geographic area, including professional results by service category and specialty grouping (primary care and specialist). For professional services, anesthesia and radiology services have the highest CY2025 allowed percent of Medicare at 389% and 192%, respectively.

Section IV of our analysis looks at the allowed medical spend by procedure for the top 20 inpatient, outpatient and professional services. Section V shows the facility-level detail. Note that our analysis only provides average allowed medical spend for facilities with 25 services in the category to help ensure statistical credibility.

The variation in allowed amount among the top 10 hospital systems for the top 20 MS-DRGs[4] can be significant.

Figure G-HMO below highlights the top 10 MS-DRGs determined by FFS plan spend volume for the City with the average and maximum allowed spend per admit, and the ratio of the maximum to the average. As shown below and in Exhibit V-A-HMO, the ratio of the maximum and average spend varies by admission type with cesarean and vaginal deliveries costing 44% to 51% more than average for the highest spend major acute care facilities.

Figure G-HMO: City Inpatient FFS Allowed Facility Medical Spend per Admit for the Top 10 MS-DRG Codes (HIP HMO; CY2025; Sorted By Total Admissions; active employees, dependents, and pre-Medicare retirees)[5]

MS-DRG	Description	Allowed Medical Spend Per Admit		
		Average	Maximum	Max/Avg
795	Normal Newborn	$6,676	$7,977	1.19
807	Vaginal Delivery without Sterilization or D&C without CC/MCC	$16,137	$24,032	1.49
794	Neonate with Other Significant Problems	$14,699	$49,549	3.37
806	Vaginal Delivery without Sterilization or D&C with CC	$20,643	$31,150	1.51
787	Cesarean Section without Sterilization with CC	$30,782	$44,785	1.45
871	Septicemia or Severe Sepsis without MV >96 Hours with MCC	$61,397	$81,262	1.32
788	Cesarean Section without Sterilization without CC/MCC	$23,477	$33,787	1.44
621	O.R. Procedures for Obesity without CC/MCC	$47,128	Masked	n/a
101	Seizures without MCC	$29,341	Masked	n/a
392	Esophagitis, Gastroenteritis and Miscellaneous Digestive Disorders without MCC	$24,575	$39,233	1.60

The Top 20 services using outpatient Current Procedural Terminology codes (CPTs) (Exhibit IV-B-HMO), are reported by both FFS allowed spend volume and record count. The top 3 CPTs by allowed spend were related to emergency department visits, while other services with high allowed volumes included biopsies, chemotherapy, colonoscopies, and arthroplasty. By record count, the top services include labs and emergency department visits. We provide the allowed as a percent of Medicare Allowed for all services, noting a wide range of results. For example, among the top 20 by allowed, we note that CPT code 99282 (Emergency dept visit medium severity) allowed averaged 599% of Medicare Allowed, while pembrolizumab injections averaged 169% of Medicare Allowed.

The Top 20 services using professional CPTs (Exhibit IV-C-HMO) are reported by both allowed spend volume and record count. Three of the top six CPTs by allowed spend were related to office visits, while other services with high allowed volumes included behavioral health services and urgent care visits. The top services by record count are routine office visits, behavioral health services, and labs. We provide the allowed as a percent of Medicare Allowed for all services, noting a wide range of results. For example, among the top 20 by allowed, we note that CPT code 01967 (anesthesia for a vaginal delivery) allowed averaged 377% of Medicare Allowed, while many of the traditional office visit codes averaged just around 160%.

Exhibit V-A-HMO provides the City's average FFS allowed by facility for the top 10 facilities and top 20 inpatient MS-DRGs.

5. Additional CBP and HIP HMO Comparisons

In addition to the previously provided comparisons of plan results for the CBP and HIP HMO, we also provide a comparison of the allowed percent of Medicare Allowed spend and total allowed spend by facility. While the top two hospital systems (Northwell and New York Presbyterian) are the most utilized systems by both plans, the use rate for the other top systems differs between the CBP and HIP HMO. For instance, NYU ranks third in allowed spend for the CBP whereas Montefiore is the third most utilized system for the HIP HMO. The contractual differences between the two plans by facility are also shown in detail in Figure D-CBP and HMO-FFS. Because the HMO capitated encounters have a lower allowed as a percent of Medicare Allowed spend compared to the HMO FFS claims on average, including the capitated encounters in the below table would bring down the HMO allowed as a percent of Medicare Allowed spend and drive a bigger pricing gap from the CBP plan.

Figure D-CBP and HMO-FFS: City Allowed as a % of Medicare Allowed by Hospital System - Calendar Year 2025 (CBP and HIP HMO (FFS-only); active employees, dependents, and pre-Medicare retirees)

	CBP Allowed Medical Spend			HMO Allowed Medical Spend		
System Name	Allowed % of Medicare Allowed Reimbursement	Facility Allowed Total ($M)	% of Total Allowed	Allowed % of Medicare Allowed Reimbursement	Facility Allowed Total ($M)	% of Total Allowed
Northwell Health	343%	$915.8	25%	254%	$150.8	19%
New York Presbyterian	339%	$537.1	14%	260%	$128.2	16%
NYU Langone Health	289%	$492.2	13%	266%	$78.0	10%
Memorial Sloan Kettering	281%	$242.1	6%	256%	$29.1	4%
Mount Sinai Health System	189%	$237.9	6%	182%	$74.7	10%
Montefiore Health System	325%	$209.8	6%	310%	$126.3	16%
Catholic Health Services (CHS)	274%	$115.5	3%	265%	$11.3	1%
Hospital for Special Surgery	352%	$84.9	2%	276%	$9.9	1%
Maimonides Health	203%	$54.4	1%	223%	$11.5	1%
Stony Brook	243%	$42.9	1%	276%	$8.5	1%
Other / Independent / Out of Area	191%	$804.3	22%	142%	$150.9	19%
Total	**267%**	**$3,737.0**	**100%**	**223%**	**$779.3**	**100%**

6. Included Exhibits

SECTION I: REIMBURSEMENT BY CALENDAR YEAR, MAJOR SERVICE CATEGORY, AND AGE BAND

Exhibit I-A-CBP and Exhibit I-A-HMO show allowed medical spend per member per year (PMPY) amounts and percent of Medicare reimbursement by calendar year (CY) and major service category. The majority of the City's allowed medical spend is for facility services (inpatient and outpatient). For the HIP HMO plan, we show these results on FFS-only, capitation-only, and combined bases. These exhibits also contain the year-over-year trends for PMPY and percent of Medicare reimbursement.

Exhibit I-B-CBP and Exhibit I-B-HMO show allowed medical spend and percent of Medicare reimbursement by calendar year, major service category, and member age band. Allowed spend PMPYs and percent of Medicare reimbursement generally increase as age band increases, with the exception of the 0-1 age band. The 0-1 and older age bands have higher utilization of inpatient services. Outpatient and professional percents of Medicare are highest in the 0-1 age band each calendar year.

Exhibit I-C-CBP and Exhibit I-C-HMO show allowed medical spend and percent of Medicare reimbursement by calendar year for durable medical equipment (DME) services and for all professional services in total. For the HIP HMO plan, we show these results on FFS-only, capitation-only, and combined bases.

SECTION II: REIMBURSEMENT BY HOSPITAL SYSTEM

Exhibit II-A-CBP and Exhibit II-A-HMO show percent of Medicare reimbursement by detailed service category and hospital as well as allowed spend totals by major service category and hospital for CY2025. For the HIP HMO plan, this exhibit is limited to FFS services only. These exhibits also include the same metrics for the top 10 hospital systems measured by allowed volume. The 'Rel' columns represent the relativity of the hospital or hospital system's percent of Medicare reimbursement relative to the all-facility averages. We limited the facilities shown in the exhibits to facilities with over $5M in annual allowed medical spend between calendar years 2023 and 2025 for the CBP plan and over $1M in annual allowed medical spend between calendar years 2023 and 2025 for the HIP HMO plan. Any facilities below this threshold or outside the core service area are mapped to "Other Providers" in the facility and system listing. This exhibit can be useful to compare relative reimbursement between hospital and hospital systems.

Exhibit II-B-CBP and Exhibit II-B-HMO show percent of Medicare reimbursement and allowed spend totals by major service category, hospital, and calendar year. For the HIP HMO plan, this exhibit is limited to FFS services only. These exhibits also include the same metrics for the top 10 hospital systems measured by allowed volume. The 'Rel' columns represent the relativity of the hospital or hospital system's percent of Medicare reimbursement relative to the all-facility averages. These exhibits can be useful to compare relative reimbursement between hospital and hospital systems across years. Exhibit II-C-HMO shows the same information for the FFS and capitated encounter data combined.

Exhibit II-D-CBP and Exhibit-II-D-HMO show utilization and allowed spend metrics by hospital and calendar year for inpatient services. For the HIP HMO plan, this exhibit is limited to FFS services only. Utilization metrics include the number of admissions (admits), days, and average length of stay. Case Mix is calculated as the sum of DRG weights divided by total admits. This metric can be useful for comparing the relative severity of services performed by each hospital and hospital system. These exhibits can be useful to compare the City's inpatient average length of stay, case mix, and allowed medical spend per admit across hospitals and hospital system and calendar year. Exhibit II-E-CBP and Exhibit II-E-HMO show the same information excluding maternity and newborn admissions.

SECTION III: REIMBURSEMENT BY PROVIDER REGION

Exhibit III-A-CBP and Exhibit-III-A-HMO show percent of Medicare reimbursement by detailed service category and provider region as well as allowed spend by major service category and provider region. Appendix 1 contains a mapping of county to provider region where any out of state providers are mapped to "All Other Regions." The 'Rel' columns represent the relativity of the hospital or hospital system's percent of Medicare reimbursement relative to the all-facility averages. These exhibits can be useful to compare percent of Medicare reimbursement and allowed spend across regions.

Exhibit III-B-CBP and Exhibit III-B-HMO show percent of Medicare reimbursement and allowed spend by major service category and provider region. These exhibits can be useful to compare percent of Medicare reimbursement and allowed spend across regions and years. The exhibits

show that percent of Medicare reimbursement has increased each calendar year across all regions.

For the HIP HMO plan, the data included in these exhibits include both FFS claims and capitated encounters.

SECTION IV: AVERAGE REIMBURSEMENT FOR TOP PROCEDURES

Our analysis reports the top 20 services for inpatient facility, outpatient facility, and professional/other. The analysis includes percent of Medicare Allowed comparisons, which can be helpful for normalizing for unit counting differences and data issues, since Medicare applies unit adjustments to help ensure payment accuracy.

For inpatient, we use MS-DRGs (Exhibit IV-A-CBP and Exhibit IV-A-HMO), reporting the top 20 by both allowed medical spend volume and admit count. For the HIP HMO plan, this exhibit is limited to FFS services only. As discussed in footnote 8, the Medicare CMI for inpatient maternity and newborn admissions may not be appropriate for commercial populations, making the percent of Medicare for these services less meaningful.

The top 20 services using outpatient CPTs (Exhibit IV-B-CBP and Exhibit IV-B-HMO), are reported by both allowed medical spend volume and record count. For the HIP HMO plan, this exhibit is limited to FFS services only.

The top 20 services using professional CPTs (Exhibit IV-C-CBP and Exhibit IV-C-HMO) are reported by both allowed medical spend volume and record count. The data included in these tables include both FFS claims and capitated encounters.

SECTION V: AVERAGE REIMBURSEMENT BY FACILITY FOR TOP PROCEDURES

Exhibit V-A-CBP and Exhibit V-A-HMO provide the City's average allowed by facility for the top 10 facilities and top 20 inpatient MS-DRGs. We only show the facility averages when at least 25 services were performed. The average allowed per admission varies by facility, with more variation for some MS-DRGs than others. Exhibit V-B-CBP and Exhibit V-B-HMO provide comparable information for outpatient services. Again, there is a wide range of allowed amounts for certain CPT codes.

Exhibit V-A-CBP and Exhibit V-A-HMO contain two tables of allowed medical spend per admit by hospital for calendar year 2025 for the top 20 MS-DRGs by allowed volume and the top 20 MS-DRGs by admit count, respectively. We included the results across all hospitals as well as the top 10 hospitals by allowed volume over calendar years 2023 through 2025. We blinded results for any facility that had below 25 admits for the given MS-DRG.

Exhibit V-B-CBP and Exhibit V-B-HMO contain two tables of allowed medical spend per record by hospital for calendar year 2025 for the top 20 outpatient CPT codes by allowed volume and the top 20 outpatient CPT codes by record count, respectively. We included the results across all hospitals as well as the top 10 hospitals by allowed volume over calendar years 2023 through 2025. We blinded results for any facility that had below 25 records for the given CPT.

Exhibit V-C-CBP and Exhibit V-C-HMO contain utilization and allowed spend metrics by facility for calendar year 2025 for the top 20 MS-DRGs by admit count, respectively. We included the results across all hospitals as well as the top 10 hospitals by allowed volume over calendar years 2023 through 2025. We blinded results for any facility that had below 25 admits for the given DRG.

For the HIP HMO plan, these exhibits are limited to FFS services only.

7. Methodology

Our analysis uses historical medical claims and capitated encounter data to assess prices. We define allowed medical spend to be the full amount that providers may collect for a given service inclusive of the amount reimbursed by the health plan and any member paid amounts such as copayments, coinsurance, and deductibles. The CBP plan pays providers on a fee-for-service basis (FFS) only. The HIP HMO plan pays providers on both a FFS basis and using capitation. Under capitation, providers are paid a fixed amount to provide services for an assigned group of members. The results presented here reflect the City employee health plan's facility and professional prices from the medical claims and capitated encounter data for the City employees and their covered dependents. Individuals with Medicare coverage are excluded from the analysis.

For the HIP HMO capitated encounters, we define the allowed medical spend as the capitation payments made by Emblem to the capitated entities, as these payments represent the total payments for the capitated services. Each quarter, we allocated the capitation payments made by Emblem to the services incurred in the quarter (the capitated encounters) based on the repriced Medicare Allowed amounts for the capitated encounters. This spreads the capitation paid across the corresponding encounters as a fixed percent of Medicare. This approach enables reviewing the capitation payments allocated to specific claim types and providers and combining the capitation and FFS payments.

The per member per year (PMPY) views reflect the total allowed spend in the given calendar year on a per member basis.

Prices are benchmarked to what Medicare would pay for the same services using the Milliman *Medicare Repricer* software[7]. The software reprices electronic claims records to Medicare Allowed amounts using the detailed service coding. Prices are compared to Medicare by dividing the City employee health plan allowed amounts by the Medicare Allowed amount to calculate the percent of Medicare Allowed. Claims are excluded from the percent of Medicare price analysis when the claim cannot be repriced to Medicare, fails to meet certain financial validation criteria, the City's health plan is not the primary payer, or when the patient has Medicare coverage. A percent of Medicare Allowed of 200% indicates that the City employee health plan price is two times the Medicare price for the set of services analyzed. Comparing to Medicare prices is a means of evaluating prices for different time periods, types of services, and providers. While we show the allowed medical spend as a percent of Medicare Allowed for all services, we note that the Medicare Allowed amounts for delivery and newborn admissions may not be as meaningful

[7] See: https://www.milliman.com/en/products/medicare-repricer

of a benchmark for commercial prices due in the source of Medicare's price relativities for delivery and newborn admissions[8].

Facility claims are identified as claims billed by a hospital, skilled nursing facility, dialysis facility, ambulatory surgical center, or other type of facility. As shown in the summaries of allowed medical spend by facility, the City's facility allowed medical spend is predominately for hospital claims. Inpatient facility claims are identified as claims with room and board charges. Claims for inpatient admissions that originate in a hospital emergency room are assigned to inpatient facility. In general, claims performed in an off-campus outpatient department that are billed by a hospital are assigned to the billing hospital in the *by facility* views presented in this report. In some exhibits facility claims are aggregated by the hospital billing identifier and by the hospital system. Some hospitals have multiple campuses assigned to the hospital billing identifier, for example 330214 - NYU Langone Hospitals includes multiple locations in the New York City area.

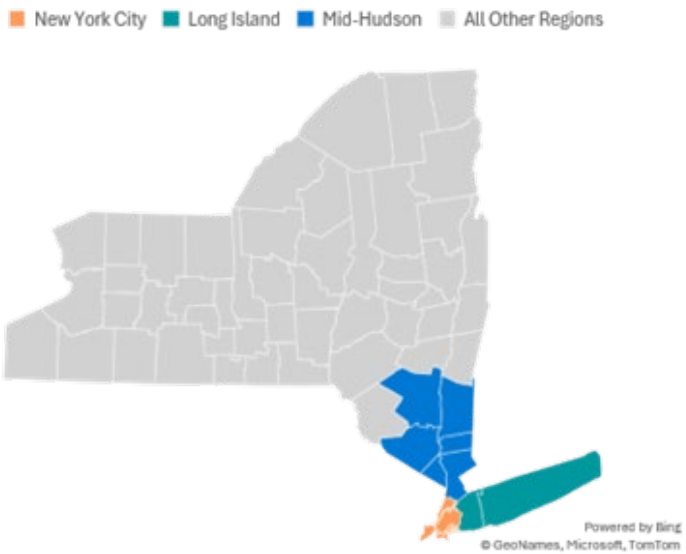

Non-facility claims are assigned to professional/other and include the professional fees associated with physician services rendered in a hospital setting as well as an office setting.

For inpatient admissions, we show allowed medical spend per admission averages by facility and by MS-DRG. Similarly, we show average medical spend per unit by CPT for outpatient facility services. These amounts only include the facility spend associated with the service and exclude professional spend. For professional spend, we show the average allowed medical spend per unit by CPT. Claims are excluded from the average allowed medical spend analysis when the City's health plan is not the primary payer and when the patient has Medicare coverage.

Appendix 1 shows the county to geographic region mapping. The figure below shows a graphical view of the geographic regions. Areas outside of New York State are assigned to "other".

[8] The Medicare MS-DRG weights used to develop maternity Medicare Allowed amounts are based on deliveries for the disabled population covered by Medicare FFS. The newborn MS-DRG weights are based on an older study, conducted before the implementation of the MS-DRGs for FY2008, and may not be meaningful. Additionally, the MS-DRG system has a single DRG for neonate admissions and does not differentiate based on birthweight or gestational age.

FIGURE: GEOGRAPHIC REGION DEFINITIONS

Appendix 2 lists the hospital systems and facilities shown in the report. We limited the facilities shown in the report to facilities with over $5M in annual allowed medical spend between calendar years 2023 and 2025 for the CBP plan and over $1M in annual allowed medical spend between calendar years 2023 and 2025 for the HIP HMO plan. Any facilities below this threshold or outside the core HIP HMO service area are mapped to “Other Providers” in the facility and system listing and excluded from Appendix 2.

Medicare Allowed Pricing

Medicare prices are calculated for the specific services coded on each claim or encounter within the City’s datasets. In general, our analysis reflects all aspects of the Medicare payment methodologies, including the fee schedule rates, adjudication rules like bundling of services, outlier provisions, and other aspects of the Medicare payment methodologies. We use the Medicare fee-for-service fee schedules in effect for each medical claim’s date of services.

Medicare prices are assigned to the commercial claims at the same level of granularity used by Medicare, for example using each inpatient admission’s Diagnosis-Related Group (DRG), the Ambulatory Payment Classification (APC) for outpatient facility, and the CPT and modifier(s) for physician fee schedule priced services. Therefore, the allowed as a percent of Medicare Allowed results are sensitive to the underlying HIP HMO claim experience’s coding. Our process flags and removes or adjusts specific outliers (e.g., unreasonable percent of Medicare or unreasonable unit counts). However, the process is sensitive to data limitations (e.g., incomplete coding or inaccurate unit coding). Additional details on these calculations include:

- Inpatient hospital claims are assigned the Medicare Allowed for each hospital, including Disproportionate Share (DSH), Uncompensated Care, Indirect Medical Education (IME), outlier payments, Value-Based Purchasing (VBP) adjustments, and excluding pass through payments (e.g., Graduate Medical Education and Organ Acquisition per diems).

- Memorial Sloan Kettering was repriced to Prospective Payment System (PPS) Medicare-like rates using wage index, cost-to-charge ratio, and other information published by CMS. Memorial Sloan Kettering is a PPS-exempt cancer hospital and is paid using cost-based methods under Medicare FFS.
- Professional claims are assigned the geographically-adjusted Medicare Allowed amounts and include adjustments for physician specialty. For about 1.6% of professional services, the geographic location was not available and was assumed to be New York County (Manhattan). No adjustments were made for the Merit-based Incentive Payment System (MIPS) and other Medicare physician incentive payment programs.
- No adjustments are made for sequestration.
- We assign prospective Medicare amounts and do not reflect any settlements with the Centers for Medicare and Medicaid Services (CMS) or any CMS provider risk sharing programs (e.g., the Medicare Shared Savings Program).
- Services with no published Medicare Allowed fee are excluded from our analysis. Our analysis includes services not covered by Medicare for which Medicare publishes a fee.
- The Medicare pricing software contains logic to handle maternity claims appropriately, regardless of whether the mother and infant are billed on a single claim or on two separate claims. In both cases, a separate uncompensated care Medicare payment is applied to the mother and newborn discharge.
- Medicare employs claim edits to deny payment for certain services. We assumed all claims with a positive allowed amount were accepted for payment and included these services in the repricing analysis. Any claim that is received and does not appear to be denied will be priced to Medicare, if able. Milliman will make no attempt to assess medical necessity or make coverage determinations for services that are only covered under certain circumstances.

8. Limitations and Considerations

Milliman prepared this report for the City of New York on behalf of its Employee Benefits Program, to support the requirements under Local Law 78. This report is intended for the City's review and discussion purposes only. It should not be used for any other purpose.

This material has been prepared solely for the use and benefit of the City of New York and its Employee Benefits Program. Milliman acknowledges that the report will be provided to the Office of Healthcare System Strategy and Accountability, which will include the report in the documents it provides to the New York City Council. Milliman does not intend to benefit, and assumes no duty or liability to, any third-party recipient of its work. This report should be reviewed in its entirety, and any third-party recipient should engage qualified professionals for advice appropriate to their own specific needs.

This analysis is based on historical data and may not reflect current and future financial relationships. Emerging experience should be monitored and updates made as appropriate. The report presents averages, and significant variation may exist within the data underlying these averages. Some of the figures and exhibits reflect different time periods and may not be directly comparable.

In preparing this information, we relied on Local Law 78, data from the City and its health plan providers, and data and reference materials published by CMS. We accepted this information without audit but reviewed the information for general reasonableness. If the data or information relied upon is inaccurate or incomplete, the information in this material will be likewise inaccurate or incomplete.

Models used in the preparation of our analysis were applied consistently with their intended use. We have reviewed the models, including their inputs, calculations, and outputs for consistency, reasonableness, and appropriateness to the intended purpose and in compliance with generally accepted actuarial practice and relevant actuarial standards of practice (ASOP). The models, including all input, calculations, and output may not be appropriate for any other purpose.

Guidelines issued by the American Academy of Actuaries require actuaries to include their professional qualifications in all actuarial communications. Charlie Mills, Suzanne Taranto, and Austin Levenson are members of the American Academy of Actuaries, and they meet the qualification standards for performing the analyses in this report.

Milliman

Milliman is among the world's largest providers of actuarial, risk management, and technology solutions. Our consulting and advanced analytics capabilities encompass healthcare, property & casualty insurance, life insurance and financial services, and employee benefits. Founded in 1947, Milliman is an independent firm with offices in major cities around the globe.

Appendix 3
City of New York
Glossary

Term	Definition
Allowed	Total capitation amount, distributed across encounter claims, and total amount of fee-for-service payments for covered medical services including the amount that the plan pays, the patient pays, and any other payer pays for covered services. Provider bonus and risk sharing payments are not included. Carrier / plan administrative costs are not included. Prescription drug cost and utilization (i.e., retail and mail order pharmacy) are not included in this analysis.
Capitation	A payment model in which healthcare providers are paid a fixed amount of money per patient per month/year in advance for the delivery of healthcare services.
Capitated Encounters	Healthcare services covered under a Capitation arrangement. Encounters are assigned Medicare Allowed amounts for services provided, the same as fee-for-service claims. The total capitation amount, adjusted to reflect the proportion of claims successfully adjudicated to Medicare Allowed, is distributed to each claim line based on the Medicare Allowed amount for that line (i.e., Total included capitation * Line-level Medicare Allowed / Total Medicare Allowed).
Coordination of Benefits	Total amount of fee-for-service payments for covered medical services including the amount that any other payer pays.
Dependent	Covered dependent of a City of New York employee.
Employee	City of New York employee covered under the medical plan.
Facility	In the context of this report a facility refers to a hospital, ambulatory surgical center (ASC), dialysis center, or other type of facility that bills for medical services separately from the physician or other professional performing the service.
Fee for Service (FFS)	A payment model in which healthcare providers are paid for each service they perform, such as a visit or procedure.
Hospital ID	CMS hospital identifier, specifically the CMS Certification Number (CCN).
Inpatient Case Mix	The average MS-DRG relative weight for a hospital's (or set of) inpatient admits. Formula: MS-DRG Weight / Count of Admits
Medicare Allowed Amount	Total Medicare-approved (i.e., allowed) amount under the Medicare fee-for-service (FFS) program for the service. Reflects prospective payment amounts. Excludes provider bonus payments and settlements.
Member	Enrollees in a health plan or program. Includes both employee enrollees and their spouses/dependents.
Paid Amount	Total amount of fee-for-service payments for covered medical services including the amount that the plan pays. Provider bonus, capitation, and risk sharing payments are not included.
Patient Pay Amount	Total amount of fee-for-service payments for covered medical services including the amount that the patient pays.
Per Member Per Year (PMPY)	The average cost of care for each member of a health plan on an annual basis.
Percent of Medicare	A unit price statistic that compares the actual payments made for a service to the Medicare payments for the same service. Formula: Allowed Amount / Medicare Allowed Amount
Professional	In the context of this report a professional refers to physicians and other health care professionals who bill for medical services.
Specialty	The area of medicine in which the provider has education and expertise.

Exhibit I-A-CBP
City of New York CBP Plan
Employee and Dependent Claims Incurred for January 2023 to December 2025
Allowed Medical Spend by Year

		Allowed Medical Spend Per Member Per Year (PMPY)			
Year	Average Members	Inpatient Facility	Outpatient Facility	Professional / Other	Total

Notes:
Allowed % of Medicare Reimbursement is based on the Medicare fee schedules in effect on the date of service.
Allowed % of Medicare Reimbursement reflects only services that successfully repriced to Medicare allowed.
Allowed % of Medicare Reimbursement includes all inpatient add-ons, such as additional payments for graduate medical education, uncompensated care, and disproportionate share payments.
Facility Name "New York Presbyterian" includes the following campuses:
- Weill Cornell Medical Center
- Columbia University Irving Medical Center
- Westchester Cancer Center

Facility Name "NYU Langone Hospitals" includes the following campuses:
- Tisch Hospital - NYU Langone Hospital Long Island
- Perlmutter Cancer Center
- NYU Langone Hospital Brooklyn

Notes:
Allowed % of Medicare Reimbursement is based on the Medicare fee schedules in effect on the date of service.
Allowed % of Medicare Reimbursement reflects only services that successfully repriced to Medicare allowed.
Allowed % of Medicare Reimbursement includes all inpatient add-ons, such as additional payments for graduate medical education, uncompensated care, and disproportionate share payments.
Facility Name "New York Presbyterian" includes the following campuses:
- Weill Cornell Medical Center
- Columbia University Irving Medical Center
- Westchester Cancer Center

Facility Name "NYU Langone Hospitals" includes the following campuses:
- Tisch Hospital - NYU Langone Hospital Long Island
- Perlmutter Cancer Center
- NYU Langone Hospital Brooklyn

Notes:
Allowed % of Medicare Reimbursement is based on the Medicare fee schedules in effect on the date of service.
Allowed % of Medicare Reimbursement reflects only services that successfully repriced to Medicare allowed.
Allowed % of Medicare Reimbursement includes all inpatient add-ons, such as additional payments for graduate medical education, uncompensated care, and disproportionate share payments.

Notes:
Allowed % of Medicare Reimbursement is based on the Medicare fee schedules in effect on the date of service.
Allowed % of Medicare Reimbursement reflects only services that successfully repriced to Medicare allowed.
Allowed % of Medicare Reimbursement includes all inpatient add-ons, such as additional payments for graduate medical education, uncompensated care, and disproportionate share payments.
Facility Name "New York Presbyterian" includes the following campuses:
- Weill Cornell Medical Center
- Columbia University Irving Medical Center
- Westchester Cancer Center

Facility Name "NYU Langone Hospitals" includes the following campuses:
- Tisch Hospital - NYU Langone Hospital Long Island
- Perlmutter Cancer Center
- NYU Langone Hospital Brooklyn

Notes:
Allowed % of Medicare Reimbursement is based on the Medicare fee schedules in effect on the date of service.
Allowed % of Medicare Reimbursement reflects only services that successfully repriced to Medicare allowed.
Allowed % of Medicare Reimbursement includes all inpatient add-ons, such as additional payments for graduate medical education, uncompensated care, and disproportionate share payments.
Facility Name "New York Presbyterian" includes the following campuses:
- Weill Cornell Medical Center
- Columbia University Irving Medical Center
- Westchester Cancer Center

Facility Name "NYU Langone Hospitals" includes the following campuses:
- Tisch Hospital - NYU Langone Hospital Long Island
- Perlmutter Cancer Center
- NYU Langone Hospital Brooklyn

Notes:
Allowed % of Medicare Reimbursement is based on the Medicare fee schedules in effect on the date of service.
Allowed % of Medicare Reimbursement reflects only services that successfully repriced to Medicare allowed.
Allowed % of Medicare Reimbursement includes all inpatient add-ons, such as additional payments for graduate medical education, uncompensated care, and disproportionate share payments.
Facility Name "New York Presbyterian" includes the following campuses:
- Weill Cornell Medical Center
- Columbia University Irving Medical Center
- Westchester Cancer Center

Facility Name "NYU Langone Hospitals" includes the following campuses:
- Tisch Hospital - NYU Langone Hospital Long Island
- Perlmutter Cancer Center
- NYU Langone Hospital Brooklyn

Notes:
Plan Spend % of Medicare Reimbursement is based on the Medicare fee schedules in effect on the date of service.
Plan Spend % of Medicare Reimbursement reflects only services that successfully repriced to Medicare allowed.
Plan Spend % of Medicare Reimbursement includes all inpatient add-ons, such as additional payments for graduate medical education, uncompensated care, and disproportionate share payments.

Notes:
Plan Spend % of Medicare Reimbursement is based on the Medicare fee schedules in effect on the date of service.
Plan Spend % of Medicare Reimbursement reflects only services that successfully repriced to Medicare allowed.
Plan Spend % of Medicare Reimbursement includes all inpatient add-ons, such as additional payments for graduate medical education, uncompensated care, and disproportionate share payments.

Turquoise

2026 New York City Hospital, Price Transparency Report

Provided By Turquoise

July 2026

Introduction

The objective of this report is to examine how hospitals across New York City are reimbursed by commercial payers for healthcare services. Historically, such analyses have been limited by the lack of publicly available pricing data. However, the advent of price transparency regulations has provided a new opportunity to systematically evaluate hospital payment structures. While transparency data offers significant advantages in facilitating comparative analyses, it also presents methodological challenges that require careful interpretation. In this report, we outline our analytical framework for assessing how payers reimburse hospitals and health systems, define key analytical perspectives ("skews") used in the evaluation, and discuss the nuances of working with price transparency data to ensure accuracy and fidelity. Our findings are presented by payer, providing insights into relative reimbursement patterns across systems. Additionally, we include the underlying rate data—organized by service, hospital, and payer—to enable direct examination of the pricing structures at the individual billing code level.

Regulatory Background

U.S. federal price transparency requirements were established to increase visibility into negotiated healthcare prices. The Hospital Price Transparency Rule became effective January 1, 2021, requiring hospitals to publicly post machine-readable files (MRFs) containing gross charges and payer-specific negotiated rates for all items and services, as well as consumer-facing displays for selected shoppable services. Subsequent rulemaking has focused on schema standardization, enforcement, and data quality, including required use of CMS-defined data elements, improved hospital identifiers, and more explicit representation of negotiated rates (e.g., dollar amounts vs. algorithms). Hospitals disclosures are required on an annual basis.

The Payer Price Transparency, or Transparency in Coverage (TiC) rule, was finalized in 2020 and implemented beginning July 1, 2022. Health plans were required to publish machine-readable files disclosing in-network negotiated rates and out-of-network allowed amounts, followed by phased implementation of consumer price comparison tools. Payer disclosures rely on CMS-defined JSON schemas, with standardized representations of providers, billing codes, negotiated rates, and plan/network identifiers, and are updated on a monthly basis.

Together, these regulations created parallel but distinct transparency datasets, with hospitals reporting prices from the provider perspective and payers reporting negotiated rates from the plan perspective, each governed by evolving CMS-defined schemas intended to improve interoperability and large-scale analysis.

Disclaimer

The negotiated rates presented in this analysis reflect the contracted reimbursement amounts between payers and providers for the facility component of specific, explicit billing codes. These rates represent the agreed-upon payment for particular services or procedures as defined by the payer-provider contract. However, these rates do not necessarily correspond to the total amount a patient may be responsible for paying for a service / episode. Transparency data reflects unit- or line-level negotiated rates for individual services, providing visibility into base reimbursement amounts. However, this data does not necessarily capture additional contractual or adjudication nuances—such as stop-loss provisions, outlier payments, or bundled reimbursement—that may affect final allowed amounts on a claim.

In practice, the actual cost incurred by a patient can be influenced by multiple additional factors. Many services involve not only the facility fee associated with the hospital but also professional fees for physicians, anesthesiologists, radiologists, or other healthcare providers involved in the patient's care. Additionally, ancillary services such as laboratory tests, imaging, and pharmaceuticals may be billed separately and may not be reflected in the negotiated rate for a specific procedure or service.

Furthermore, patient responsibility is determined by the terms of their individual health insurance plan, including deductible obligations, copayments, and coinsurance requirements. As a result, the negotiated rate between a payer and a provider should not be interpreted as a direct representation of out-of-pocket costs for a patient. Anyone seeking an accurate estimate of their financial responsibility should consult their insurer or healthcare provider for a detailed breakdown of applicable charges.

Data Selection + Data Refinement

Clear Rates Data

Healthcare price transparency data provides direct visibility into negotiated reimbursement through hospital and payer machine-readable files, each offering distinct but complementary perspectives on contractual pricing. Hospital disclosures tend to emphasize facility-level services and posted methodologies, while payer disclosures broaden coverage across provider types, networks, and billing structures. Taken together, these sources describe the intended structure of reimbursement but do so with variation in format, completeness, and expression of rates.

Interpreting transparency data in isolation can be challenging because negotiated prices are often reported as formulas rather than final dollar amounts and because contracts rarely enumerate rates for every service. In addition, posted values may differ across sources or across reporting periods, creating ambiguity around which rate most accurately reflects the contracted amount. Reference benchmarks derived from observed payment behavior and standardized fee schedules provide important context for evaluating these reported rates and for distinguishing plausible contractual values from anomalous or unstable signals.

Turquoise developed the Clear Rates dataset to address these challenges by integrating hospital and payer transparency data with supporting reference sources within a unified analytical framework. For each payer–provider–network-billing code combination, all available signals are evaluated jointly to select a single rate that best represents the contracted reimbursement. This approach allows agreement across sources to be identified, reduces sensitivity to idiosyncratic reporting differences, and produces a more stable and interpretable rate surface for analysis.

Transformations and imputations are essential to this integration. Transformations convert reported reimbursement methodologies into standardized dollar values, enabling comparison across heterogeneous contract structures. Imputations extend observed contractual patterns to services that are not explicitly posted, using established reimbursement conventions and internally consistent pricing relationships. Together, these methods allow Clear Rates to present a more complete representation of contractual reimbursement while maintaining traceability to underlying data sources and analytical assumptions.

Transformations and Imputations

In this dataset, transformations and imputations are used to standardize heterogeneous and incomplete reimbursement data into a comparable dollar-denominated rate at the payer–provider–billing code level. These methods address the fact that many price transparency postings do not report final paid amounts and that contracts often omit explicit rates for some services.

Transformations convert reported contract methodologies into standardized dollar values using deterministic rules. Examples include translating percent-of-charge arrangements using observed gross charges or standardizing per-diem rates using CMS-defined length-of-stay metrics. These calculations rely on explicitly reported contract terms combined with external reference data and preserve the reimbursement logic expressed in the original postings.

Imputations are applied when rates are not explicitly reported for all billing codes within a payer–provider–network relationship. Rather than using generic averages, this dataset applies contract-aware inference methods based on observed pricing patterns, such as identifying global percent-of-charge structures, detecting MS-DRG base rates, extending consistent per-diem arrangements, and applying industry-standard fee schedules or surgical groupers. These imputed rates reflect inferred contractual intent rather than purely statistical gap-filling.

Both transformed and imputed rates are explicitly identified and incorporated into the confidence scoring framework, allowing downstream analyses to account for the strength and origin of each rate while maintaining transparency and analytical rigor. Further, all transformations and imputations used in this dataset are referenced below each code-specific table in this analysis.

Confidence Scoring and Rate Exclusion Criteria

Rates in this dataset are assigned a confidence score ranging from 1 to 5, reflecting the strength of evidence supporting each rate. Scores summarize multiple validation signals, including agreement between payer- and hospital-reported rates, alignment with Medicare-based benchmarks, consistency with observed claims payments, and source reliability. Higher scores indicate rates that are well supported and analytically robust, while lower scores indicate weaker or implausible signals.

For this analysis, we retained only rates with confidence scores of 3 or higher. Scores of 3 represent rates that are benchmark-aligned but derived through transformations or inferences, while scores of 4 and 5 represent directly posted or validated rates with strong empirical support. Rates with scores below 3 were excluded to ensure that results reflect defensible and decision-grade pricing signals, whereas scores 3 or above were retained because they represent a higher level of confidence.

Rates with a confidence score of 2 are considered plausible but insufficiently supported, as they fall

outside expected Medicare or claims-based validation thresholds. Rates with a score of 1 are identified as statistically implausible or benchmark-inconsistent outliers. Including these lower-confidence rates would introduce noise and reduce the interpretability and reliability of comparative analyses. This exclusion approach is consistent with the intended analytical use of this dataset and its confidence framework.

Although excluded from quantitative analysis, low-confidence rates were not ignored entirely. In cases where hospitals posted rates that were subsequently assigned confidence scores of 1 or 2, these instances are explicitly noted beneath the rate tables in this analysis. This preserves transparency around the underlying reported data while maintaining a conservative analytical standard.

Carriers And Networks/Plans Selected

The following payers and corresponding plans/networks were selected for this analysis:

- Aetna Open Access Managed Choice
- Anthem New York PPO
- Cigna Open Access Plan
- Emblem GHI HMO
- Healthfirst QHP
- UnitedHealthcare Choice Plus

These specific payers were selected because they represent the largest share of covered lives in the market, ensuring that the analysis reflects pricing dynamics most relevant to the greatest number of patients. Focusing on payers with the highest membership concentration allows the results to be more representative of real-world utilization and financial exposure.

Within each payer, the selected plans and networks were chosen because they either constitute the broadest network offerings, cover the largest enrolled populations for that payer, or have the most complete / comprehensive available transparency data. Broad network plans are more likely to be used by patients seeking care across a wide range of providers, while high-enrollment plans capture the pricing structures experienced by the majority of members. Together, this approach balances market coverage and practical relevance, grounding the analysis in the plans most commonly encountered in practice.

With the exception of Healthfirst, the plans selected for each carrier were limited to non-exchange and non-Essential Plan offerings. This approach was taken to focus the analysis on commercial products that are not subject to marketplace-specific pricing structures, subsidies, or regulatory constraints, and that more closely reflect negotiated rates in the broader commercial market.

Healthfirst represents a notable exception, as its presence in New York City is heavily concentrated in Essential Plans and Qualified Health Plans, which account for a substantial share of its enrolled membership. Including Healthfirst's exchange-based products ensures appropriate representation of a carrier with significant market share, even where non-exchange commercial options are limited or less prevalent.

Hospitals and System Classification

Hospitals included in this analysis were selected based on a predefined geographic and institutional scope. The study population was limited to hospitals located within the New York City Core-Based Statistical Area (CBSA) and physically situated within the state of New York. Eligible facilities were further restricted to short-term acute care hospitals, consistent with standard classifications used in health services research.

The hospitals included in the analysis are not intended to represent a comprehensive inventory of eligible facilities, but rather a subset of hospitals selected to align with the scope and presentation of comparable analyses throughout the annual report.

To mitigate analytical distortion arising from highly fragmented or low-volume health system representation, select hospital systems were consolidated into an "Other" category for specific aggregation-based analyses. This categorization was applied solely to address potential skew in comparative metrics and does not imply clinical or operational homogeneity among the included institutions.

Health systems representing the highest patient volumes within the study population were retained as explicitly defined categories and are reported individually in aggregate analyses. These systems include:

- Montefiore Health System
- Mount Sinai Health System
- NYC Health and Hospitals
- NYU Langone Health
- New York-Presbyterian Healthcare System
- Northwell Health

Hospitals by County

The included hospitals, organized by the New York county in which they are physically located, are as follows:

- **Bronx:** Montefiore Hospital - Moses Campus, Montefiore Wakefield Campus, NYC Health and Hospitals - Jacobi, NYC Health and Hospitals - Lincoln, NYC Health and Hospitals - North Central Bronx, St Barnabas Hospital
- **Kings:** Brookdale University Hospital Medical Center, Brooklyn Hospital Center at Downtown Campus, Maimonides Medical Center, NYC Health and Hospitals - Kings County, NYC Health and Hospitals - Woodhull, NYC Health and Hospitals/South Brooklyn Health, NYU Langone Hospital - Brooklyn, NewYork-Presbyterian Brooklyn Methodist Hospital, University Hospital at Downstate, Wyckoff Heights Medical Center
- **Nassau:** Mount Sinai South Nassau, NYU Langone Hospital - Long Island, North Shore University Hospital, St Francis Hospital & Heart Center
- **New York:** Lenox Hill Hospital, Memorial Sloan Kettering Cancer Center, Mount Sinai Morningside, NYC Health and Hospitals - Bellevue, NYC Health and Hospitals - Harlem, NYC Health and Hospitals - Metropolitan, NYC Langone Tisch Hospital, NewYork-Presbyterian Columbia University Irving Medical Center, NewYork-Presbyterian Weill Cornell Medical Center, The Mount Sinai Hospital
- **Queens:** Flushing Hospital Medical Center, Jamaica Hospital Medical Center, Long Island Jewish Forest Hills, Long Island Jewish Medical Center, NYC Health and Hospitals - Elmhurst, NYC Health and Hospitals - Queens, NewYork-Presbyterian Queens
- **Richmond:** Richmond University Medical Center, Staten Island University Hospital - North Campus
- **Suffolk:** Good Samaritan University Hospital, Huntington Hospital, Stony Brook University Hospital
- **Westchester:** Westchester Medical Center

Hospitals by System

The included hospitals, organized by health system, are as follows. Systems outside the individually reported categories are grouped under “Other”:

- **Montefiore Health System:** Montefiore Hospital - Moses Campus, Montefiore Wakefield Campus
- **Mount Sinai Health System:** Mount Sinai Morningside, Mount Sinai South Nassau, The Mount Sinai Hospital
- **NYC Health and Hospitals:** NYC Health and Hospitals - Bellevue, NYC Health and Hospitals - Elmhurst, NYC Health and Hospitals - Harlem, NYC Health and Hospitals - Jacobi, NYC Health and Hospitals - Kings County, NYC Health and Hospitals - Lincoln, NYC Health and Hospitals - Metropolitan, NYC Health and Hospitals - North Central Bronx, NYC Health and Hospitals - Queens, NYC Health and Hospitals - Woodhull, NYC Health and Hospitals/South Brooklyn Health
- **NYU Langone Health:** NYC Langone Tisch Hospital, NYU Langone Hospital - Brooklyn, NYU Langone Hospital - Long Island
- **New York-Presbyterian Healthcare System:** NewYork-Presbyterian Brooklyn Methodist Hospital, NewYork-Presbyterian Columbia University Irving Medical Center, NewYork-Presbyterian Queens, NewYork-Presbyterian Weill Cornell Medical Center
- **Northwell Health:** Huntington Hospital, Lenox Hill Hospital, Long Island Jewish Forest Hills, Long Island Jewish Medical Center, North Shore University Hospital, Staten Island University Hospital - North Campus
- **Other** (each hospital’s health system shown in parentheses): Brookdale University Hospital Medical Center (One Brooklyn Health System), Brooklyn Hospital Center at Downtown Campus (independent), Flushing Hospital Medical Center (MediSys Health Network), Good Samaritan University Hospital (Catholic Health), Jamaica Hospital Medical Center (MediSys Health Network), Maimonides Medical Center (Maimonides Health), Memorial Sloan Kettering Cancer Center (independent), Richmond University Medical Center (Richmond University Medical Center), St Barnabas Hospital (SBH Health System), St Francis Hospital & Heart Center (Catholic Health), Stony Brook University Hospital (Stony Brook Medicine), University Hospital at Downstate (SUNY Health), Westchester Medical Center (Westchester Medical Center Health Network), Wyckoff Heights Medical Center (independent)

Analytical Methods

Analytical Structures

The analysis was conducted across two complementary levels: the payer level and the procedure (code) level.

Payer Level Dimension

At the payer level, findings are presented using three distinct analytical dimensions (described below), each designed to characterize negotiated pricing patterns under alternative comparative lenses.

- Rate Availability
- Rate Methodology
- Comparisons to Medicare

Rate Availability

This dimension summarizes the completeness and usability of negotiated rate data for each payer across included health systems. For each health system, results are stratified by care setting (inpatient and outpatient) and report the proportion of applicable services for which a negotiated rate was available, unavailable, or available but excluded based on predefined rate scoring exclusion criteria. The table is intended to document data availability and exclusion patterns at the system and setting level, providing transparency into the underlying data used for subsequent analyses.

Rate Methodology

This dimension illustrates the distribution of negotiated rate methodologies across health systems, stratified by inpatient and outpatient care settings, for a payer. For each health system, the proportional representation of rate methodologies—such as case rates or fee schedules, percent-of-charge arrangements, per diem rates, and other or estimated allowed amount (EAA) structures— are displayed based on how rates were originally reported. This dimension is designed to document the composition and heterogeneity of rate structures across systems and settings, providing methodological context for subsequent pricing analyses.

Comparisons to Medicare

This dimension presents health system–level negotiated inpatient/outpatient rates expressed as a percentage of the faciliy-specific Medicare rate for each hospital.

Procedure Code Level / Data Tables

At the procedure code level, detailed data tables report negotiated rates by payer, alongside facility-specific Medicare reimbursement rates and, where available, cash discount prices. For each reported rate, the originating data source is explicitly identified, and indicators are provided to denote whether imputation or other data preprocessing methods were applied. When such methods were utilized, additional documentation describing the methodology is provided at the provider–payer level. The tables further identify hospitals that disclosed negotiated rates for a given code but were excluded from analysis based on predefined rate scoring exclusion criteria.

Finally, code-level analyses include relative price rankings. Rankings are computed for both health system–level averages and payer-level averages within each procedure code, enabling comparative assessment across institutional and payer dimensions.

Caveats

Comparison to Medicare Benchmarks

Comparisons to Medicare reimbursement were conducted using hospital-specific Medicare payment rates. Within the New York City market, Medicare reimbursement under IPPS—and to a lesser extent OPPS—varies substantially across hospitals due to wage index adjustments and other facility-specific factors. Direct comparison to each hospital's realized Medicare payments can therefore introduce structural variation unrelated to negotiated price levels.

System Aggregation Weighting

For health system–level aggregations, hospitals were equally weighted, such that each hospital contributed identically to system-level measures regardless of bed size or facility scale.

Availability of Rates

Negotiated rates for a given hospital, payer, and billing code combination may be unavailable for a variety of reasons. In some cases, the hospital is not in-network for the applicable health plan, meaning no negotiated rate exists for that combination. However, the absence of a rate in this analysis should not be interpreted as evidence of an out-of-network relationship. Transparency in Coverage data does not consistently distinguish between true nonexistence of a negotiated rate and other causes of missing data, making this distinction difficult to determine reliably.

Code Selection

This analysis is based on a limited subset of procedure codes selected to represent common inpatient and outpatient services. These codes were chosen because they are frequently utilized and provide a consistent foundation for comparing negotiated rates across payers and plans.

While these services are informative for establishing relative pricing benchmarks, they do not reflect the full breadth of a complete claims experience. Many service categories are not captured within this subset. Accordingly, the results should be interpreted as illustrative rather than comprehensive, and as a starting point for comparison rather than a full representation of total cost or utilization across all services.

The following HCPCs codes were selected for the outpatient version of this analysis: 10060, 10140, 10160, 19081, 20605, 32555, 45378, 47562, 49083, 55700, 70486, 70544, 70553, 71045, 73140, 74018, 74170, 78014, 92928, 93650, 93653, 95812, 96375, 99281, 99282, 99283, 99284, 99285

The following MS-DRG codes were selected for the inpatient version of this analysis: 101, 203, 392, 603, 621, 788, 793, 794, 795, 807, 872, 885

Data Currency

The findings in this report reflects transparency data available in Turquoise Health's Clear Rates data set as of 5/1/2026.

Summary of Findings, Payer Specific

All Payers

Combined

Pooled across all six plans, the New York City systems fall into a clear pricing order, and the care setting shifts it. NewYork-Presbyterian and Montefiore command the highest inpatient rates relative to Medicare, while NYU Langone and NewYork-Presbyterian lead outpatient, and NYC Health and Hospitals sits at the bottom of both. The plans themselves differ less from one another than the systems do, though a handful of contracts and the Healthfirst exchange plan stand out. This section previews those patterns, and the individual payer sections carry the detail. The charts here combine every payer into one by-system view.

Key Findings

- **Across Payers:** The five commercial plans pay most systems within a similar band, so plan choice moves a system's Medicare multiple less than the setting or the system does. Exceptions stand out, such as UnitedHealthcare's lower Montefiore inpatient rate and Cigna's lower NewYork-Presbyterian outpatient rate, and Healthfirst diverges from all of them on both price and data quality.
- **Comparisons to Medicare:** Across all payers, NewYork-Presbyterian leads inpatient near 3.4 times Medicare, with Montefiore close behind, while NYC Health and Hospitals falls to roughly 0.8 times. Outpatient reorders the systems, with NYU Langone near 3.3 times at the top and every system above the benchmark.
- **Rate Methodology:** Inpatient rates are almost all case rates or fee schedules, from 79 to 100 percent across systems. Outpatient structures vary, with Mount Sinai concentrated in estimated-allowed-amount forms and Montefiore, NYC Health and Hospitals, and NewYork-Presbyterian carrying percent-of-charge shares.
- **Rate Availability:** Pooled disclosure runs from 79 to 97 percent available across systems and settings. The exceptions are Montefiore inpatient, where a quarter of services carry no rate, and Northwell outpatient, where about a seventh do.

The plans differ less from one another than the systems differ within any single plan, though the contracts still separate in ways the payer sections detail. The five commercial plans pay most systems within a similar band, so switching plans tends to move a system's Medicare multiple less than switching systems does. A few contracts break that pattern: UnitedHealthcare pays Montefiore inpatient near 1.6 times Medicare where the other four commercial plans pay 3.4 to 3.7 times, and Cigna pays NewYork-Presbyterian outpatient near 2.2 times where the others reach 3.2 to 3.9 times. The highest single outpatient multiple appears under Anthem, NYU Langone near 4.9 times, and Emblem lifts Montefiore outpatient to 4.4 times, a system that sits mid-pack under the other plans. Two patterns hold across every commercial plan: NYC Health and Hospitals prices below Medicare inpatient, between roughly 0.5 and 0.8 times, while the academic systems price well above it. Healthfirst, the exchange plan, breaks from all of them. It pays the public system the most inpatient, near 4.7 times Medicare, where the commercial plans pay it the least, and its outpatient rates sit near or below Medicare where the commercial plans run two to four times higher. Data completeness tracks plan reach: under the national plans, Aetna, Anthem, Cigna, and UnitedHealthcare, usable rates are available for most services, while under the two local plans, Emblem and Healthfirst, coverage is thinnest, Emblem thin on outpatient and Healthfirst thin on inpatient.

Pooled across all six plans and set against each hospital's own Medicare rate, the inpatient order runs from the large academic and integrated systems down to the public system. NewYork-Presbyterian tops the inpatient comparison near 3.4 times Medicare, Montefiore follows near 3.2 times, and Northwell, Mount Sinai, and NYU Langone sit between 2 and 2.5 times, with the Other group near 1.7 times. NYC Health and Hospitals lands at roughly 0.8 times Medicare, below the benchmark. That last figure carries the same caveat it does in the payer sections: inpatient IPPS benchmarks vary widely across the market through wage-index and other hospital-level adjustments, and the public system's benchmark runs well above the rest, so its low ratio reflects a large denominator in part rather than low negotiated dollars alone. Outpatient prices reorder the systems, and every one clears Medicare. NYU Langone tops the setting near 3.3 times, NewYork-Presbyterian and Northwell follow near 2.7 to 3 times, and Montefiore, Mount Sinai, the Other group, and NYC Health and Hospitals fall between 1.3 and 2 times.

Rate structures hold steady inpatient and open up outpatient. Case rates and fee schedules cover almost all inpatient rates, from 79 percent at Mount Sinai to 100 percent at Northwell and NYC Health and Hospitals, with small per-diem

shares at Montefiore, NYU Langone, and the Other group and an estimated-allowed-amount share at Mount Sinai. Outpatient structures spread out. Mount Sinai routes about seventy percent of its outpatient rates through estimated-allowed-amount forms, the largest such share, and Montefiore splits its outpatient rates across case rates, percent-of-charge, and estimated-allowed-amount forms. NYC Health and Hospitals and NewYork-Presbyterian each carry percent-of-charge fractions, while Northwell stays almost entirely on case rates or fee schedules. The wider outpatient mix matches the wider outpatient price range.

Coverage runs high for most systems, with two clear gaps. Pooled across payers, inpatient rates are available for 79 to 97 percent of measured services, and outpatient rates for 79 to 94 percent. NewYork-Presbyterian has the most complete inpatient coverage at 97 percent, and NYU Langone the most complete outpatient coverage at 94 percent. The two gaps sit at Montefiore inpatient, where a quarter of services carry no rate, and Northwell outpatient, where about a seventh do. Excluded rates under the confidence-score threshold run heaviest inpatient at NYU Langone, Northwell, and NYC Health and Hospitals, near a sixth of services each. Outside those two gaps, the comparisons rest on populated data.

Figure 4

Aetna

Open Access Managed Choice

Aetna's negotiated rates spread across a wide range in New York City, and the ordering shifts between the two care settings. Montefiore commands the highest inpatient rate relative to Medicare, while NewYork-Presbyterian tops the outpatient comparison, and NYC Health and Hospitals sits at the bottom of both. The rate structures behind these numbers stay uniform inpatient and grow varied outpatient, and rate disclosure runs high enough across systems to support each comparison.

Key Findings

- **Comparisons to Medicare:** Aetna's inpatient rate for Montefiore reaches about 3.7 times Medicare, the market high, while NYC Health and Hospitals falls to roughly 0.6 times. Outpatient ratios reorder the systems and place NewYork-Presbyterian near 3.9 times Medicare at the top, with every system above the benchmark.
- **Rate Methodology:** Inpatient rates are almost entirely case rates or fee schedules, above 90 percent at every system. Outpatient contracts vary more, with NewYork-Presbyterian around a fifth percent-of-charge and Mount Sinai leaning on estimated-allowed-amount structures.
- **Rate Availability:** Negotiated rates cover 91 to 100 percent of measured services everywhere, so no comparison rests on a thin sample. The few exclusions gather in outpatient services and a small number of inpatient pockets.

Relative to each hospital's own Medicare rate, Aetna's inpatient prices climb from the public system to the large academic and integrated systems. Montefiore stands at the top near 3.7 times Medicare, Northwell and NewYork-Presbyterian follow around 2.6 to 2.7 times, and Mount Sinai and NYU Langone sit near 1.8 to 2 times. NYC Health and Hospitals anchors the floor at roughly 0.6 times Medicare, below the benchmark itself. That figure needs one qualification: inpatient IPPS benchmarks vary widely across the market through wage-index and other hospital-level adjustments, and the public system's benchmark runs well above the rest, so its low ratio owes something to a large denominator rather than to unusually low negotiated dollars. Outpatient prices reorder the field. Every system clears its Medicare benchmark, NewYork-Presbyterian tops the setting near 3.9 times, NYU Langone and Northwell follow around 2.9 to 3.3 times, and the remaining systems land between 1.2 and 2.1 times.

The rate structures hold steady inpatient and diverge outpatient. Case rates and fee schedules account for almost all inpatient rates, above 90 percent everywhere and 100 percent at Montefiore, Northwell, NYU Langone, and NYC Health and Hospitals. Outpatient contracts pull in more forms. About a fifth of NewYork-Presbyterian's outpatient rates take a percent-of-charge form, the largest such share, and NYU Langone, NYC Health and Hospitals, and the Other group carry smaller percent-of-charge fractions. Mount Sinai stands apart for its estimated-allowed-amount structures, which cover a third of its inpatient rates and close to 40 percent of its outpatient rates. This wider methodological mix lines up with the wider outpatient price range.

Rate disclosure is strong enough that completeness does not drive the gaps above. Negotiated rates are present for 91 to 100 percent of measured services at every system and setting. The exclusions that occur concentrate outpatient and in a few inpatient pockets, reaching about 9 percent of Other inpatient rates and 6 percent of both NYU Langone inpatient and NewYork-Presbyterian outpatient rates under the confidence-score threshold. Outright missing rates stay uncommon, peaking near 4 percent for Northwell outpatient. The price differences therefore trace to contract terms, and the data supports each comparison.

Figure 12

Anthem

NY PPO

Under Anthem, one system leads the inpatient market and a different pair leads outpatient, so a system's rank shifts with the setting. NewYork-Presbyterian prices highest inpatient, close to Montefiore, while NYU Langone and Northwell push furthest above Medicare outpatient. Rate structures stay conventional inpatient and open up outpatient, and rate coverage under Anthem is patchier than its peers at two inpatient positions, which the availability section flags.

Key Findings

- **Comparisons to Medicare:** NewYork-Presbyterian reaches about 3.8 times Medicare inpatient, ahead of Montefiore near 3.5 times, while NYC Health and Hospitals falls to roughly half of Medicare. Outpatient reorders the field, with NYU Langone near 4.9 times and Northwell near 4.2 times at the top, and every system above the benchmark.
- **Rate Methodology:** Inpatient rates run above 83 percent case rates or fee schedules at every system. Montefiore breaks from the pattern outpatient with more than half its rates in percent-of-charge form, and Mount Sinai leans on estimated-allowed-amounts / other methodologies.
- **Rate Availability:** Across most systems, rates exist for 81 to 100 percent of services, but half of Montefiore's inpatient services carry no available rate, and for NYC Health and Hospitals, inpatient rates exist for only about two-thirds. Those two figures rest on thinner data.

Against each hospital's own Medicare rate, Anthem's inpatient prices peak at NewYork-Presbyterian near 3.8 times Medicare, with Montefiore close behind near 3.5 times. Northwell follows around 2.7 times, Mount Sinai and NYU Langone sit between 2.1 and 2.2 times, and the Other group is near 1.9 times. NYC Health and Hospitals falls to roughly half of Medicare, the only system below the benchmark. As with the other payers, that low ratio deserves a caveat: the public system's inpatient IPPS benchmark runs well above the market because wage-index and hospital-level adjustments lift it, so part of the low ratio reflects the large denominator rather than depressed negotiated dollars. Outpatient prices climb higher and shuffle the order. Every system clears Medicare, NYU Langone tops the setting near 4.9 times with Northwell close behind near 4.2 times, NewYork-Presbyterian follows near 3.3 times, and Montefiore and NYC Health and Hospitals sit at the low end near 1.4 times.

Inpatient rate structures stay conventional, and outpatient structures scatter. Case rates and fee schedules cover from 83 percent of NYU Langone's inpatient rates to all of Northwell's and NYC Health and Hospitals', with per-diem components at NYU Langone and Montefiore. Outpatient introduces more variety. More than half of Montefiore's outpatient rates take a percent-of-charge form, the largest such share under Anthem, and Mount Sinai concentrates its outpatient rates in estimated-allowed-amounts. Smaller percent-of-charge fractions turn up at NYC Health and Hospitals, NewYork-Presbyterian, the Other group, and NYU Langone. The broader mix outpatient parallels the wider spread in outpatient prices.

Coverage under Anthem is less even than the pricing suggests, and two inpatient positions call for care. Half of Montefiore's inpatient services carry no available rate, and NYC Health and Hospitals has an available inpatient rate for only about two-thirds, with the remainder unavailable or excluded under the confidence-score threshold. Everywhere else, availability holds between 81 and 100 percent, so most comparisons draw on populated data. The Montefiore and NYC Health and Hospitals inpatient figures rest on narrower coverage, and their ratios warrant added caution.

Figure 20

Cigna

National OAP

Cigna's negotiated prices place the large academic systems above the public system, and the ordering shifts between settings. Montefiore and NewYork-Presbyterian share the inpatient top near 3.4 to 3.5 times Medicare, while NYU Langone leads outpatient. Inpatient rate structures are conventional while outpatient structures show wide methodological variety, and outpatient disclosure thins at several systems.

Key Findings

- **Comparisons to Medicare:** Montefiore and NewYork-Presbyterian share the inpatient top near 3.4 to 3.5 times Medicare, while NYC Health and Hospitals falls to roughly 0.6 times. Outpatient ratios reorder the systems, with NYU Langone near 3.2 times at the top and every system above the benchmark.
- **Rate Methodology:** Inpatient rates are 78 to 100 percent case rates or fee schedules. Outpatient contracts scatter, with NewYork-Presbyterian near half percent-of-charge and Mount Sinai concentrated in estimated-allowed-amount structures.
- **Rate Availability:** Inpatient rates cover 90 to 100 percent of services, but outpatient coverage thins, with about a quarter of Mount Sinai outpatient services and a tenth of Northwell and NYC Health and Hospitals outpatient services carrying no rate.

Set against each hospital's own Medicare rate, Cigna's inpatient prices peak at Montefiore and NewYork-Presbyterian, near 3.5 and 3.4 times Medicare. Northwell follows around 2.6 times, NYU Langone and Mount Sinai sit near 1.9 times, and the Other group is near 1.7 times. NYC Health and Hospitals lands at roughly 0.6 times Medicare, below the benchmark. The same caveat that applies to the other payers applies here: the public system's inpatient IPPS benchmark sits well above the market once wage-index and hospital-level adjustments are counted, so a large share of its low ratio comes from the denominator rather than from low negotiated dollars. Outpatient prices reshuffle the systems and compress the spread. Every one exceeds Medicare, NYU Langone tops the setting near 3.2 times, Northwell and Montefiore follow near 2.4 to 2.6 times, and the rest cluster between 1.7 and 2.2 times, with NYC Health and Hospitals mid-pack rather than at the bottom.

Inpatient rate structures stay conventional, and outpatient structures spread out widely. Case rates and fee schedules run from 78 percent of Mount Sinai's inpatient rates to all of the rates at Montefiore, NYC Health and Hospitals, NewYork-Presbyterian, and Northwell. Outpatient breaks this apart. Nearly half of NewYork-Presbyterian's outpatient rates take a percent-of-charge form, the largest such share, and Montefiore divides its outpatient rates between percent-of-charge and estimated-allowed-amount structures. Mount Sinai concentrates its outpatient rates in estimated-allowed-amount structures, while the Other group, NYC Health and Hospitals, and NYU Langone each carry sizable percent-of-charge fractions. This outpatient variety corresponds to the wider outpatient price range.

Inpatient disclosure is close to complete, and outpatient disclosure is where the gaps sit. Inpatient rates cover 90 to 100 percent of measured services at every system. Outpatient coverage falls off at three: about a quarter of Mount Sinai's outpatient services and roughly a tenth of both Northwell and NYC Health and Hospitals outpatient services carry no rate. The outpatient figures for those systems draw on narrower data, and their ratios carry more uncertainty as a result.

Figure 28

EmblemHealth

GHI HMO

Emblem shows the widest gaps in rate structure and the thinnest outpatient coverage of any plan here. NewYork-Presbyterian leads the inpatient market near 3.9 times Medicare, and Montefiore tops the outpatient comparison near 4.4 times. Inpatient rate structures stay conventional, outpatient structures swing to extremes, and outpatient coverage falls off at most systems.

Key Findings

- **Comparisons to Medicare:** NewYork-Presbyterian reaches about 3.9 times Medicare inpatient, the market high, while NYC Health and Hospitals falls to roughly 0.6 times. Outpatient ratios run higher, led by Montefiore near 4.4 times, with every system above the benchmark.
- **Rate Methodology:** Inpatient rates are above 88 percent case rates or fee schedules. Outpatient contracts show the report's widest variety, from Montefiore's near-total percent-of-charge to Mount Sinai's all estimated-allowed-amount rates, with three systems entirely on case rates or fee schedules.
- **Rate Availability:** Inpatient rates cover 86 to 100 percent of services, but outpatient coverage is thin, with most of NYC Health and Hospitals outpatient rates excluded and a third of Mount Sinai outpatient services carrying no rate.

Measured against each hospital's own Medicare rate, Emblem's inpatient prices top out at NewYork-Presbyterian near 3.9 times Medicare, with Montefiore next near 3.4 times. Mount Sinai and Northwell follow between 2.1 and 2.3 times, NYU Langone and the Other group sit near 1.7 to 1.8 times, and NYC Health and Hospitals lands at roughly 0.6 times, below the benchmark. The usual caveat applies: the public system's inpatient IPPS benchmark runs well above the market through wage-index and hospital-level adjustments, so part of the low ratio is a denominator effect. Outpatient prices climb and reorder the field. Montefiore tops the setting near 4.4 times, NewYork-Presbyterian, Northwell, and NYU Langone follow between 3.4 and 3.7 times, and the Other group, NYC Health and Hospitals, and Mount Sinai fall between 1.5 and 2 times. Every system clears Medicare in the outpatient setting.

Rate structures split further under Emblem than under any other payer. Case rates and fee schedules cover above 88 percent of inpatient rates at every system, with small per-diem components at Montefiore, NYU Langone, NewYork-Presbyterian, and the Other group. Outpatient runs to extremes. Nearly all of Montefiore's outpatient rates take a percent-of-charge form, and all of Mount Sinai's outpatient rates take estimated-allowed-amount structures. NewYork-Presbyterian, Northwell, and NYC Health and Hospitals stay entirely on case rates or fee schedules, while NYU Langone and the Other group carry moderate percent-of-charge fractions. Montefiore's near-total reliance on percent-of-charge coincides with its position at the top of the outpatient Medicare comparison.

Inpatient disclosure holds up, and outpatient disclosure falls short. Inpatient rates cover 86 to 100 percent of measured services at every system. Outpatient coverage is thin: most of NYC Health and Hospitals outpatient rates fall below the confidence-score threshold, about a third of Mount Sinai outpatient services carry no rate, and Northwell, Montefiore, and the Other group each lose a meaningful outpatient share to missing or excluded rates. The outpatient comparisons rest on narrower data than the inpatient ones, and the NYC Health and Hospitals and Mount Sinai outpatient figures rest on the least complete data in the report.

Figure 36

Healthfirst NY

QHP

Healthfirst is represented in this analysis by its Qualified Health Plan, an exchange product, and its results diverge from those of the commercial payers. Inpatient coverage is limited, so the inpatient comparison is restricted to three systems, among which the public system occupies the highest position rather than the lowest. Outpatient rates fall near or below Medicare, well beneath the levels observed under the commercial plans. As the only exchange plan in the report, Healthfirst may diverge in part for that reason, and its data completeness is the lowest of the six plans.

Key Findings

- **Comparisons to Medicare:** Among the systems with usable inpatient data, the ordering is the inverse of the commercial payers: NYC Health and Hospitals reaches approximately 4.7 times Medicare for inpatient services, above NewYork-Presbyterian at roughly 3.1 times. Outpatient ratios fall near or below Medicare, ranging from about 0.8 times at Montefiore to 1.8 times at NewYork-Presbyterian.
- **Rate Methodology:** The available inpatient rates are expressed as case rates or fee schedules at NewYork-Presbyterian and NYC Health and Hospitals, while the Other group's inpatient rates rest on estimated-allowed-amounts / other methodologies. Outpatient structures are mixed.
- **Rate Availability:** Data completeness is the lowest in the report, with a substantial share of rates excluded under the confidence-score threshold. Outpatient rates are available for roughly half to 90 percent of services, whereas inpatient coverage is sparse and concentrated at NewYork-Presbyterian. Essential Plan and Qualified Health Plan products carry identical rates in a meaningful number of cases.

The inpatient comparison is constrained before pricing is considered. Broadly available inpatient rates exist only for NewYork-Presbyterian; the confidence-score threshold excludes most inpatient rates at Mount Sinai, NYU Langone, and Northwell, and none remain for Montefiore. Three systems remain, and among them the ordering inverts the commercial pattern. Benchmarked against each hospital's facility-specific Medicare rate, NYC Health and Hospitals reaches approximately 4.7 times Medicare, above NewYork-Presbyterian at roughly 3.1 times, with the Other group near the benchmark at approximately 1.1 times. The public system occupies the highest position rather than the lowest, and the IPPS caveat operates in its favor: its inpatient benchmark stands well above the market, so a high ratio atop an elevated denominator indicates a high negotiated rate. Outpatient rates span all seven systems and remain far closer to Medicare than under the commercial plans. NewYork-Presbyterian leads the setting at approximately 1.8 times, NYU Langone sits at the benchmark, and Mount Sinai, Northwell, the Other group, NYC Health and Hospitals, and Montefiore fall at or below Medicare, between roughly 0.8 and 0.9 times.

Rate structures differ across the covered systems. The available inpatient rates are expressed as case rates or fee schedules at NewYork-Presbyterian and NYC Health and Hospitals, while the Other group's inpatient rates rest almost entirely on estimated-allowed-amounts and other methodologies. Outpatient structures are mixed: NewYork-Presbyterian, NYU Langone, and Northwell remain on case rates or fee schedules, NYC Health and Hospitals carries a substantial percent-of-charge share, Mount Sinai concentrates in estimated-allowed-amounts and other methodologies, and Montefiore and the Other group combine case rates with those structures.

Data completeness, rather than price, defines the Healthfirst results, and it is the lowest in the report. A substantial share of rates fell below the confidence-score threshold, with the largest losses in the inpatient setting, where most systems retain too few usable rates to support comparison. Outpatient rates survive for roughly half to 90 percent of measured services across systems, so the outpatient comparisons rest on populated samples, whereas inpatient coverage remains concentrated at NewYork-Presbyterian.

Two features of the source data bear on interpretation. Healthfirst is the only plan in the report represented by an exchange product rather than a commercial one, so part of its divergence from the other payers may reflect that selection rather than Healthfirst's contracting alone. Essential Plan and Qualified Health Plan products also carry identical rates in a meaningful number of cases, which indicates that the Qualified Health Plan rates are not always specific to the exchange product. The inpatient findings should therefore be read as descriptive of the few systems with usable data rather than as a full market comparison.

UnitedHealthcare

Choice Plus

Under UnitedHealthcare, NewYork-Presbyterian leads inpatient pricing and Montefiore sits lower than it does with other payers. NYU Langone tops the outpatient comparison, and NYC Health and Hospitals runs closer to Medicare inpatient than under any other payer here. Inpatient rate structures are conventional, outpatient structures lean on estimated-allowed-amount forms at several systems, and one outpatient coverage gap stands out.

Key Findings

- **Comparisons to Medicare:** NewYork-Presbyterian reaches about 3.3 times Medicare inpatient, the market high, while Montefiore sits mid-pack near 1.6 times and NYC Health and Hospitals falls to roughly 0.8 times. Outpatient ratios run higher, led by NYU Langone near 3.6 times, with every system above the benchmark.
- **Rate Methodology:** Inpatient rates are 78 to 100 percent case rates or fee schedules. Outpatient contracts lean on estimated-allowed-amount structures at Mount Sinai and NYU Langone, while Northwell stays entirely on case rates or fee schedules.
- **Rate Availability:** Inpatient rates cover 88 to 100 percent of services. Outpatient coverage thins at Northwell, where about a third of services carry no rate.

Set against each hospital's own Medicare rate, UnitedHealthcare's inpatient prices peak at NewYork-Presbyterian near 3.3 times Medicare. Northwell and NYU Langone follow between 2.3 and 2.5 times, Mount Sinai sits near 1.9 times, and Montefiore and the Other group land near 1.6 times. Montefiore falls mid-distribution here rather than at the top, a departure from its position under most other payers. NYC Health and Hospitals lands at roughly 0.8 times Medicare, closer to the benchmark than under the other commercial plans but still below it. The public-system caveat still holds: its inpatient IPPS benchmark runs well above the market through wage-index and hospital-level adjustments, so part of the low ratio is a denominator effect. Outpatient prices climb higher and reorder the field. Every system clears Medicare, NYU Langone tops the setting near 3.6 times, NewYork-Presbyterian follows near 3.2 times, and the rest fall between 1.5 and 2.3 times, with NYC Health and Hospitals at the low end.

Inpatient rate structures stay conventional, and outpatient structures lean on estimated-allowed-amount forms. Case rates and fee schedules run from 78 percent of Mount Sinai's inpatient rates to all of the rates at NYC Health and Hospitals, NewYork-Presbyterian, and Northwell, with small per-diem components at several systems. Outpatient shifts the mix. Mount Sinai routes most of its outpatient rates through estimated-allowed-amount structures, the largest such share, and NYU Langone carries a sizable share of the same. Smaller percent-of-charge and estimated-allowed-amount fractions appear at NYC Health and Hospitals, Montefiore, and the Other group, while Northwell holds entirely to case rates or fee schedules. This outpatient variety corresponds to the wider spread in outpatient prices.

Inpatient disclosure is close to complete, and one outpatient gap stands out. Inpatient rates cover 88 to 100 percent of measured services at every system. Outpatient coverage thins at two: about a third of Northwell's outpatient services carry no rate, and the Other group loses a smaller outpatient share to missing or excluded rates. The Northwell outpatient figure draws on narrower data and stands as the least certain in this section.

MS-DRG 392 ESOPHAGITIS, GASTROENTERITIS AND MISCELLANEOUS DIGESTIVE DISORDERS...

*** Rate Types**

* [HPT] = Data Source from Hospital Price Transparency MRF, [TiC] = Data Source from Payer Price Transparency MRF, [HPT+] = Data Sourced from Hospital Price Transparency MRF but Transformed By Turquoise Logic, [TiC+] = Data Sourced from Payer Price Transparency MRF but Transformed By Turquoise Logic,[I] = Data Source by Transparency Data but Rate was Derived from Imputation

*** Imputation / Transformation Logic**

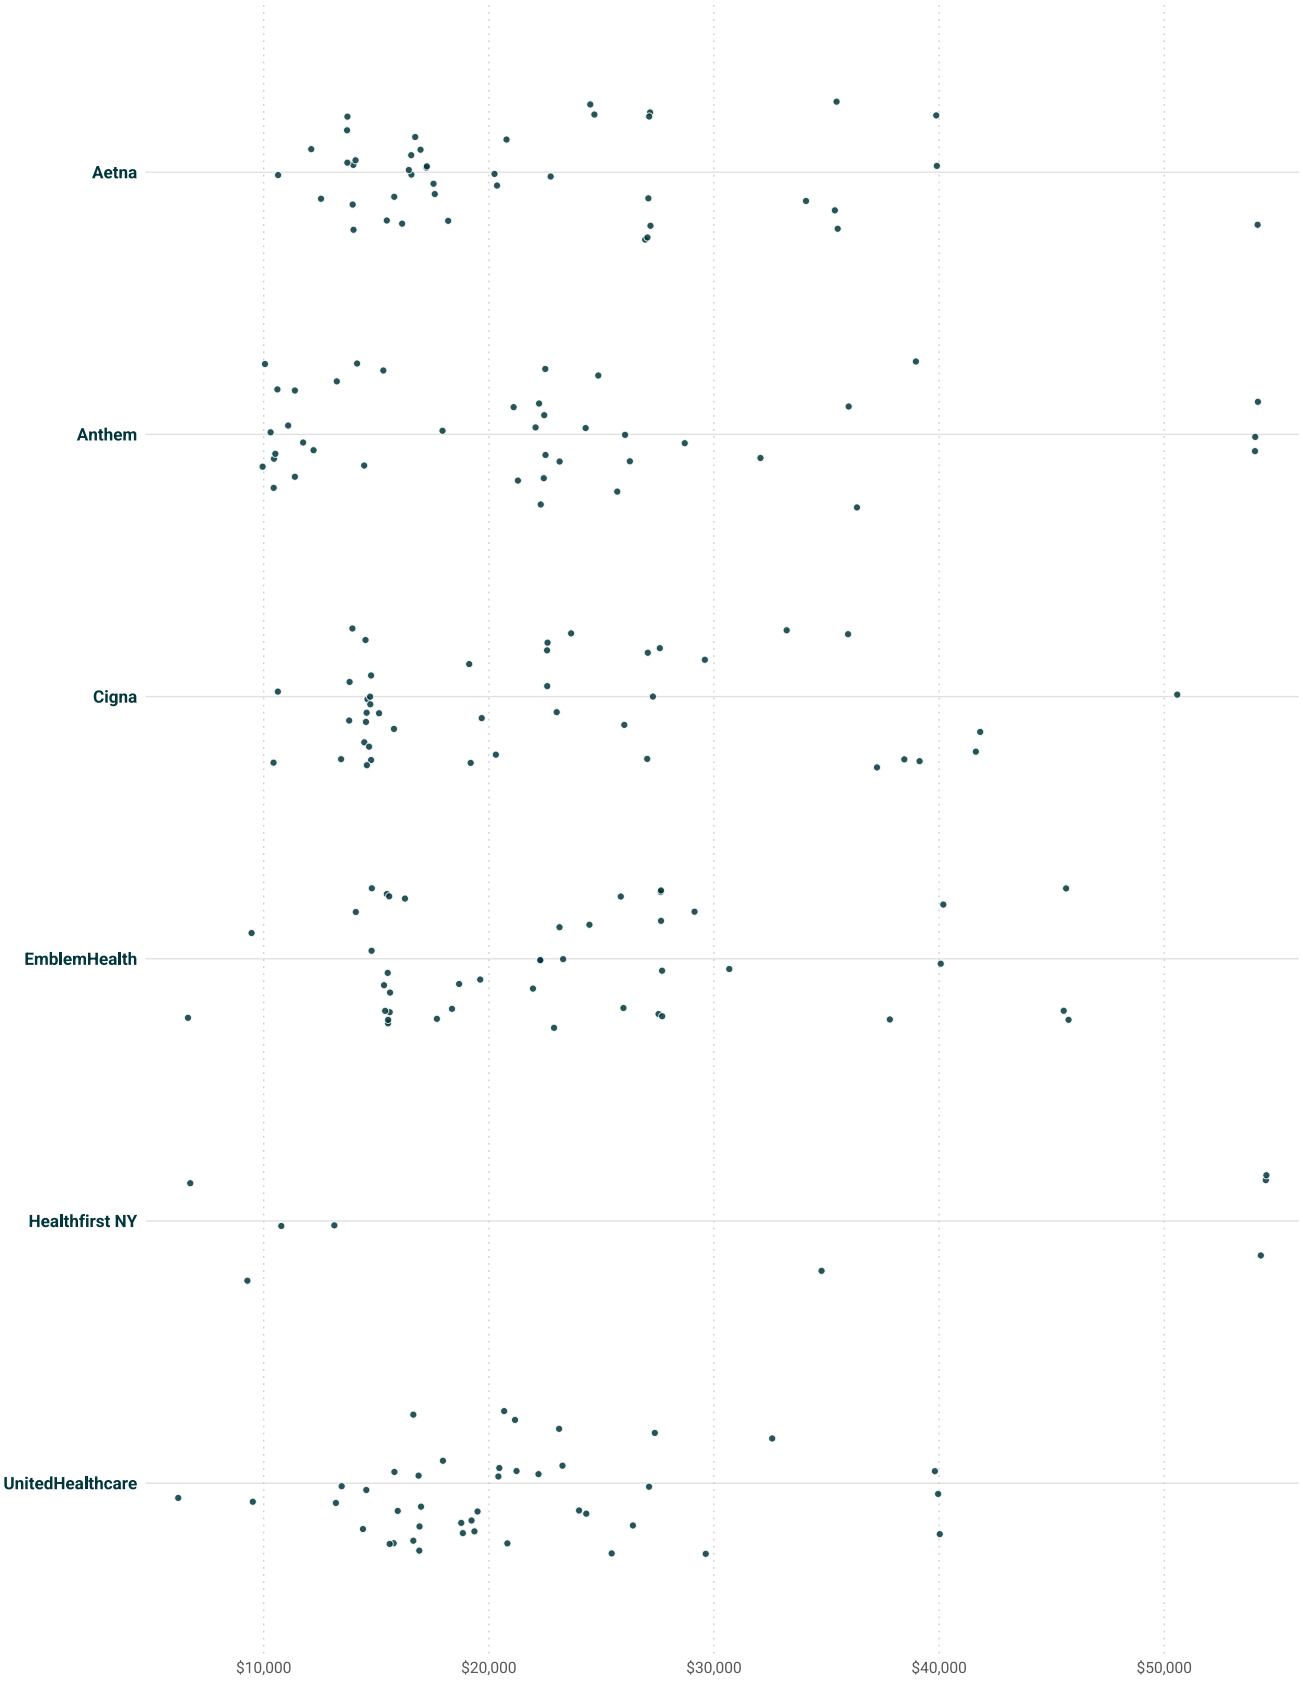

Imputations [I] For the following provider/payer combinations, the rate (RC base per diem) comes from the hospital MRF per diem rate multiplied by the Medicare GLOS (geometric length of stay): Cigna National OAP + Brooklyn Hospital Center at Downtown Campus | EmblemHealth GHI HMO + Memorial Sloan Kettering Cancer Center | UnitedHealthcare Choice Plus + Memorial Sloan Kettering Cancer Center

*** Excluded Data (Posted)**

The following providers posted MRF rates for this specific payer/service combination, but the data was excluded due to failing to meet inclusion criteria

Anthem NY PPO + Brookdale University Hospital Medical Center | Healthfirst NY QHP + Brooklyn Hospital Center at Downtown Campus | Aetna Open Access Managed Choice + Wyckoff Heights Medical Center | Cigna National OAP + Wyckoff Heights Medical Center

Distribution of Rates by Payer, MS-DRG 392

Each dot represents a single hospital's negotiated rate observation.

MS-DRG 603 CELLULITIS WITHOUT MCC

Average Rates by Payer:

- Healthfirst NY: $19,572 (Lowest)
- UnitedHealthcare: $23,053
- Aetna: $24,270
- Anthem: $24,675
- Cigna: $25,101
- EmblemHealth: $26,119 (Highest)
- Medicare: $17,600 (Not Ranked)
- Cash Price: $33,294 (Not Ranked)

Average Rate Rankings by Health System:

- NewYork-Presbyterian Healthcare System: $44,159 (Highest)
- Montefiore Health System: $37,301
- Northwell Health: $27,856
- NYU Langone Health: $26,145
- Mount Sinai Health System: $23,502
- Other: $20,738
- NYC Health and Hospitals: $17,525 (Lowest)

HCPCS 10060 INCISION AND DRAINAGE OF ABSCESS (EG, CARBUNCLE, SUPPURATIVE HIDR...

*** Rate Types**

* [HPT] = Data Source from Hospital Price Transparency MRF, [TiC] = Data Source from Payer Price Transparency MRF, [HPT+] = Data Sourced from Hospital Price Transparency MRF but Transformed By Turquoise Logic, [TiC+] = Data Sourced from Payer Price Transparency MRF but Transformed By Turquoise Logic,[I] = Data Source by Transparency Data but Rate was Derived from Imputation

*** Imputation / Transformation Logic**

Imputations [I] For the following provider/payer combinations, the rate (percent of charge) comes from an imputation of a custom code multiplied by the gross charge from the hospital MRF: Cigna National OAP + Brookdale University Hospital Medical Center | Cigna National OAP + NYC Health and Hospitals - North Central Bronx | Cigna National OAP + NYC Langone Tisch Hospital | Cigna National OAP + NYU Langone Hospital - Brooklyn | Cigna National OAP + NYU Langone Hospital - Long Island | Cigna National OAP + NewYork-Presbyterian Queens | Cigna National OAP + St Barnabas Hospital

Payer Data Transformations [TiC+] For the following provider/payer combinations, the rate (percent of charge) comes from the payer MRF percent of charge and the charge comes from the hospital MRF: Healthfirst NY QHP + Good Samaritan University Hospital | Healthfirst NY QHP + Memorial Sloan Kettering Cancer Center | Healthfirst NY QHP + NYC Health and Hospitals - Bellevue | Healthfirst NY QHP + NYC Health and Hospitals - Elmhurst | Healthfirst NY QHP + NYC Health and Hospitals - Harlem | Healthfirst NY QHP + NYC Health and Hospitals - Jacobi | Healthfirst NY QHP + NYC Health and Hospitals - Kings County | Healthfirst NY QHP + NYC Health and Hospitals - Lincoln | Healthfirst NY QHP + NYC Health and Hospitals - Queens | Healthfirst NY QHP + NYC Health and Hospitals - Woodhull | Healthfirst NY QHP + NYC Health and Hospitals/South Brooklyn Health | Healthfirst NY QHP + St Francis Hospital & Heart Center

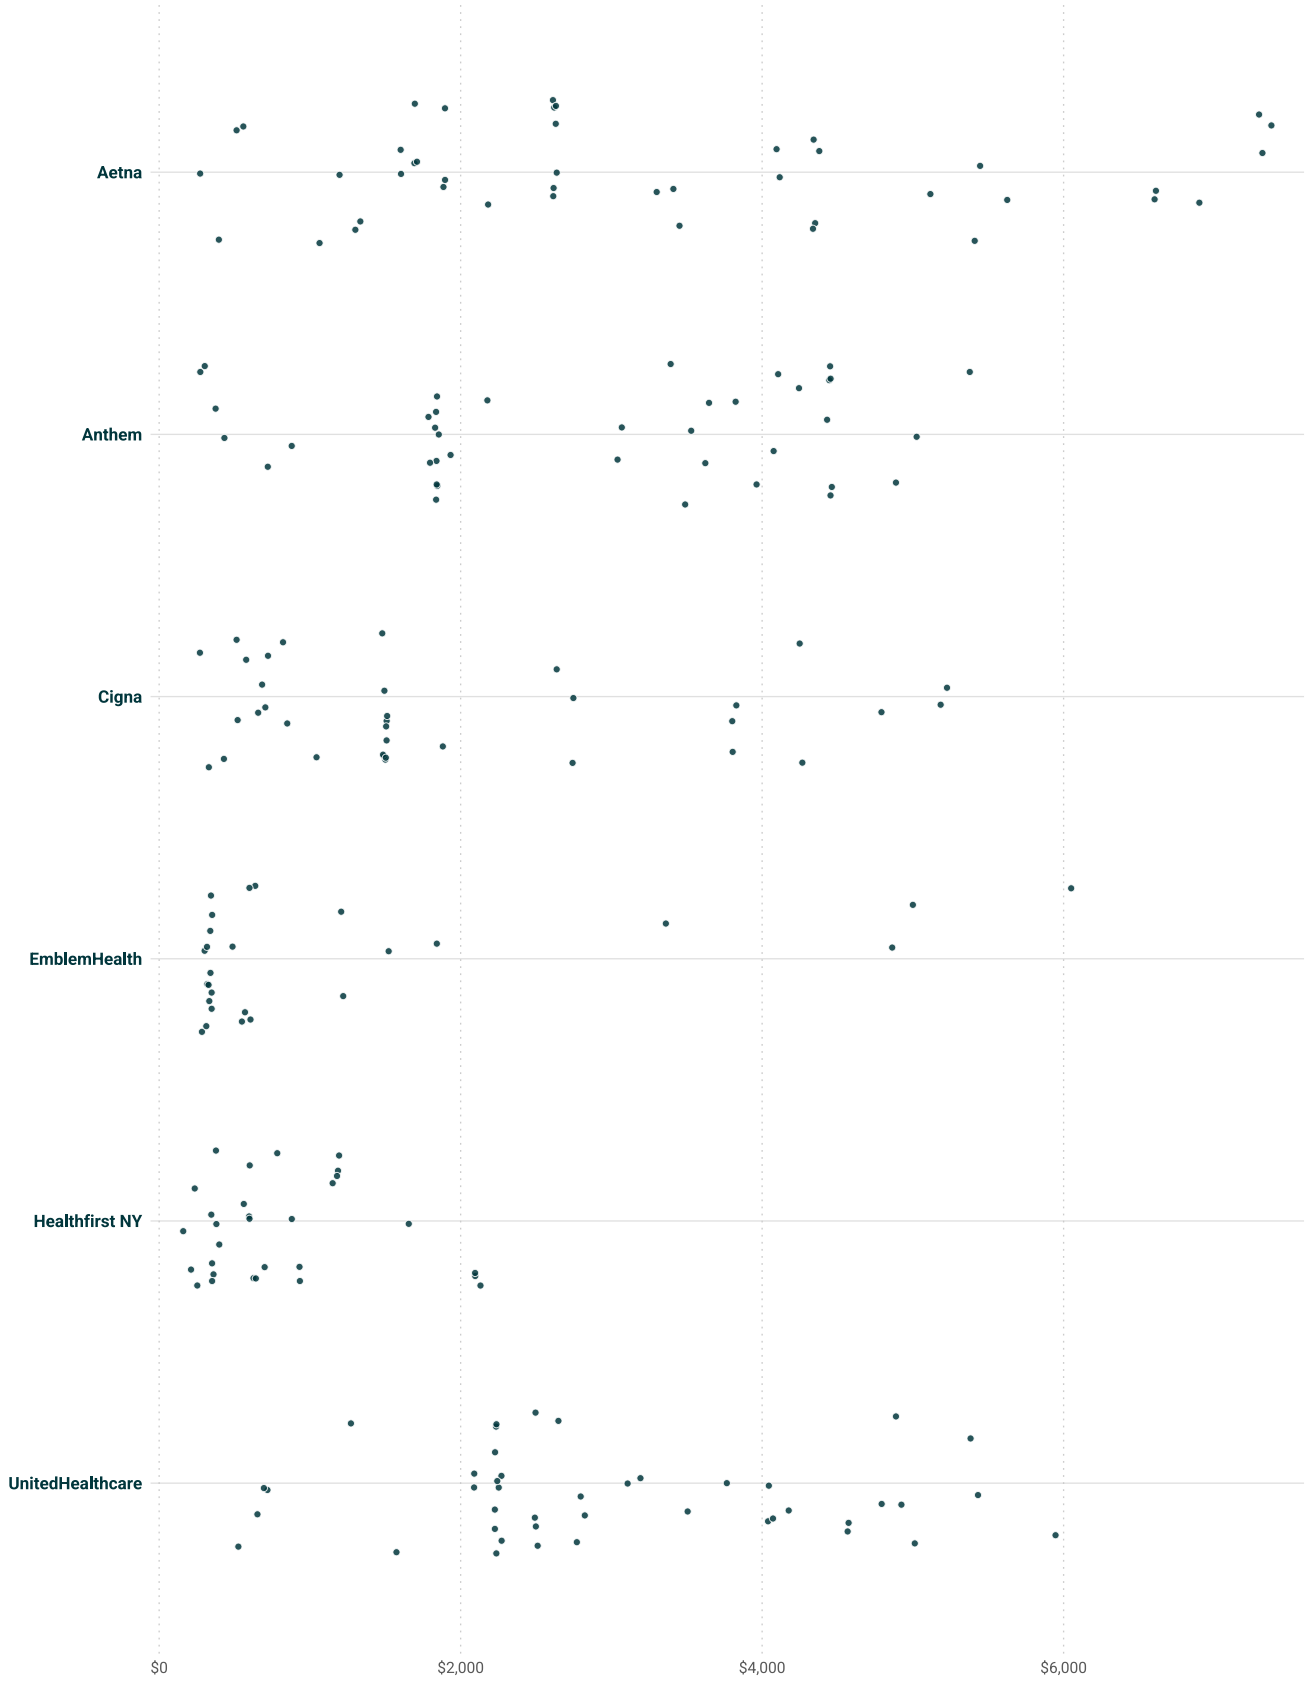

Payer Data Transformations [TiC+] For the following provider/payer combinations, the rate (per diem) comes from the per diem rate from the payer MRF multiplied by the Medicare GLOS (geometric length of stay): EmblemHealth GHI HMO + Flushing Hospital Medical Center | EmblemHealth GHI HMO + Jamaica Hospital Medical Center | EmblemHealth GHI HMO + NYC Health and Hospitals - Bellevue | EmblemHealth GHI HMO + NYC Health and Hospitals - Elmhurst | EmblemHealth GHI HMO + NYC Health and Hospitals - Harlem | EmblemHealth GHI HMO + NYC Health and Hospitals - Jacobi | EmblemHealth GHI HMO + NYC Health and Hospitals - Kings County | EmblemHealth GHI HMO + NYC Health and Hospitals - Lincoln | EmblemHealth GHI HMO + NYC Health and Hospitals - Metropolitan | EmblemHealth GHI HMO + NYC Health and Hospitals - North Central Bronx | EmblemHealth GHI HMO + NYC Health and Hospitals - Queens | EmblemHealth GHI HMO + NYC Health and Hospitals - Woodhull | EmblemHealth GHI HMO + NYC Health and Hospitals/South Brooklyn Health | EmblemHealth GHI HMO + University Hospital at Downstate

*** Excluded Data (Posted)**

The following providers posted MRF rates for this specific payer/service combination, but the data was excluded due to failing to meet inclusion criteria

Healthfirst NY QHP + Brooklyn Hospital Center at Downtown Campus | EmblemHealth GHI HMO + NYC Langone Tisch Hospital | EmblemHealth GHI HMO + NYU Langone Hospital - Brooklyn | Anthem NY PPO + NewYork-Presbyterian Brooklyn Methodist Hospital | EmblemHealth GHI HMO + NewYork-Presbyterian Brooklyn Methodist Hospital | Anthem NY PPO + NewYork-Presbyterian Columbia University Irving Medical Center | EmblemHealth GHI HMO + NewYork-Presbyterian Columbia University Irving Medical Center | Anthem NY PPO + NewYork-Presbyterian Weill Cornell Medical Center | EmblemHealth GHI HMO + NewYork-Presbyterian Weill Cornell Medical Center | EmblemHealth GHI HMO + The Mount Sinai Hospital

Distribution of Rates by Payer, HCPCS 10060

Each dot represents a single hospital's negotiated rate observation.

*** Rate Types**

* [HPT] = Data Source from Hospital Price Transparency MRF, [TiC] = Data Source from Payer Price Transparency MRF, [HPT+] = Data Sourced from Hospital Price Transparency MRF but Transformed By Turquoise Logic, [TiC+] = Data Sourced from Payer Price Transparency MRF but Transformed By Turquoise Logic,[I] = Data Source by Transparency Data but Rate was Derived from Imputation

*** Imputation / Transformation Logic**

Imputations [I] For the following provider/payer combinations, the rate (percent of charge) comes from an imputation of a custom code multiplied by the gross charge from the hospital MRF: Cigna National OAP + Brooklyn Hospital Center at Downtown Campus

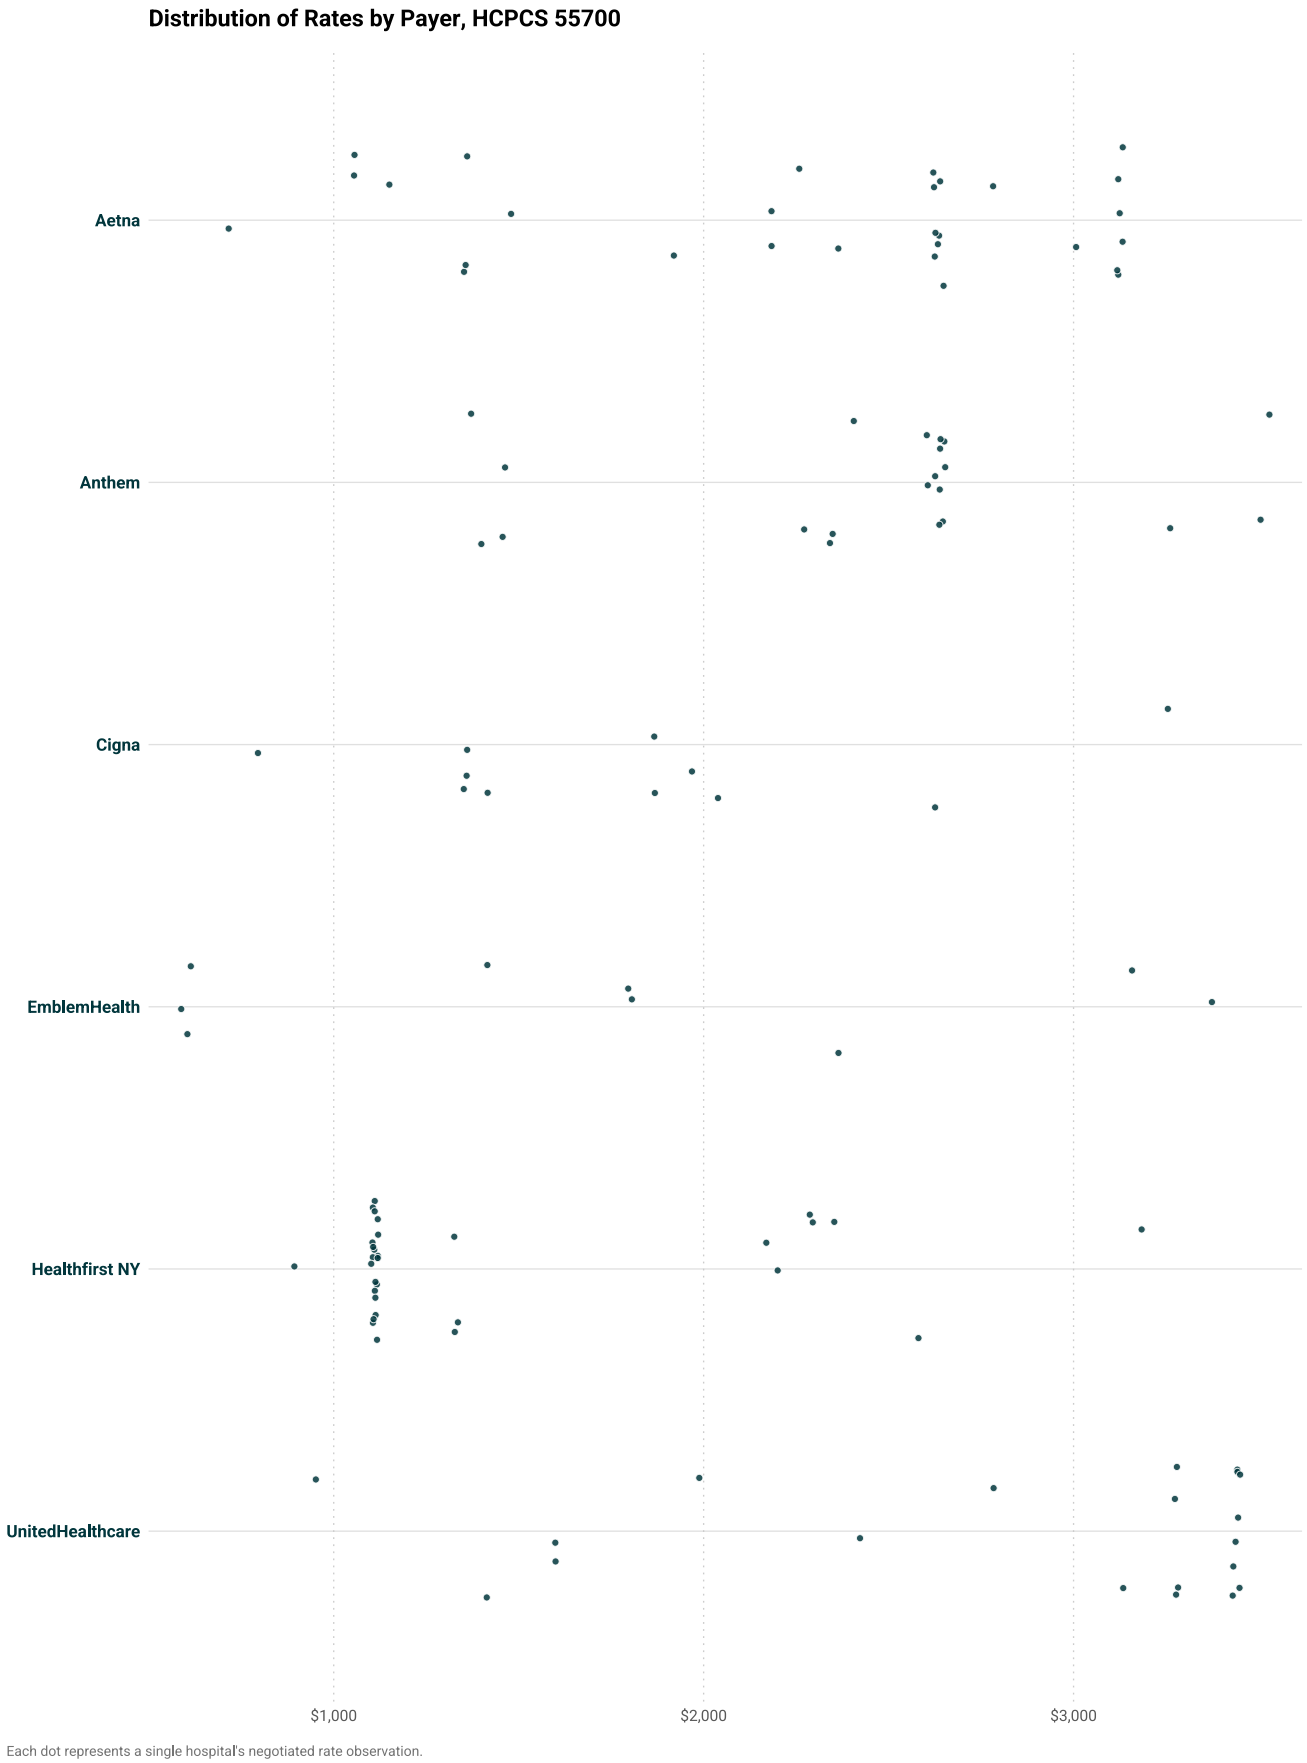

Imputations [I] For the following provider/payer combinations, the rate (OP base rate) comes from payer and hospital data where we inferred the rate from a grouper rate: UnitedHealthcare Choice Plus + Brookdale University Hospital Medical Center | UnitedHealthcare Choice Plus + Brooklyn Hospital Center at Downtown Campus | Aetna Open Access Managed Choice + NYC Health and Hospitals - Bellevue | UnitedHealthcare Choice Plus + NYC Health and Hospitals - Bellevue | Aetna Open Access Managed Choice + NYC Health and Hospitals - Elmhurst | UnitedHealthcare Choice Plus + NYC Health and Hospitals - Elmhurst | Aetna Open Access Managed Choice + NYC Health and Hospitals - Harlem | UnitedHealthcare Choice Plus + NYC Health and Hospitals - Harlem | Aetna Open Access Managed Choice + NYC Health and Hospitals - Jacobi | UnitedHealthcare Choice Plus + NYC Health and Hospitals - Jacobi | Aetna Open Access Managed Choice + NYC Health and Hospitals - Metropolitan | UnitedHealthcare Choice Plus + NYC Health and Hospitals - Metropolitan | Aetna Open Access Managed Choice + NYC Health and Hospitals - North Central Bronx | UnitedHealthcare Choice Plus + NYC Health and Hospitals - North Central Bronx | Aetna Open Access Managed Choice + NYC Health and Hospitals/South Brooklyn Health | UnitedHealthcare Choice Plus + NYC Health and Hospitals/South Brooklyn Health | Aetna Open Access Managed Choice + University Hospital at Downstate | UnitedHealthcare Choice Plus + Wyckoff Heights Medical Center

Payer Data Transformations [TiC+] For the following provider/payer combinations, the rate (per diem) comes from the per diem rate from the payer MRF multiplied by the Medicare GLOS (geometric length of stay): EmblemHealth GHI HMO + Flushing Hospital Medical Center | EmblemHealth GHI HMO + Jamaica Hospital Medical Center

*** Rate Types**

* [HPT] = Data Source from Hospital Price Transparency MRF, [TiC] = Data Source from Payer Price Transparency MRF, [HPT+] = Data Sourced from Hospital Price Transparency MRF but Transformed By Turquoise Logic, [TiC+] = Data Sourced from Payer Price Transparency MRF but Transformed By Turquoise Logic,[I] = Data Source by Transparency Data but Rate was Derived from Imputation

*** Imputation / Transformation Logic**

Hospital Data Transformations [HPT+] For the following provider/payer combinations, the rate (percent of charge) comes from the hospital MRF negotiated_percentage field multiplied by the gross charge from the hospital MRF: Aetna Open Access Managed Choice + Jamaica Hospital Medical Center | Cigna National OAP + Wyckoff Heights Medical Center

Imputations [I] For the following provider/payer combinations, the rate (percent of charge) comes from an imputation of a custom code multiplied by the gross charge from the hospital MRF: Cigna National OAP + St Barnabas Hospital | Cigna National OAP + University Hospital at Downstate

Payer Data Transformations [TiC+] For the following provider/payer combinations, the rate (percent of charge) comes from the payer MRF percent of charge and the charge comes from the hospital MRF: Anthem NY PPO + Richmond University Medical Center

Payer Data Transformations [TiC+] For the following provider/payer combinations, the rate (per diem) comes from the per diem rate from the payer MRF multiplied by the Medicare GLOS (geometric length of stay): EmblemHealth GHI HMO + Huntington Hospital | EmblemHealth GHI HMO + Lenox Hill Hospital | EmblemHealth GHI HMO + Long Island Jewish Medical Center | EmblemHealth GHI HMO + North Shore University Hospital | EmblemHealth GHI HMO + Staten Island University Hospital - North Campus

HCPCS 99282 EMERGENCY DEPARTMENT VISIT FOR THE EVALUATION AND MANAGEMENT ... LEVEL 2

*** Rate Types**

* [HPT] = Data Source from Hospital Price Transparency MRF, [TiC] = Data Source from Payer Price Transparency MRF, [HPT+] = Data Sourced from Hospital Price Transparency MRF but Transformed By Turquoise Logic, [TiC+] = Data Sourced from Payer Price Transparency MRF but Transformed By Turquoise Logic,[I] = Data Source by Transparency Data but Rate was Derived from Imputation

*** Imputation / Transformation Logic**

Imputations [I] For the following provider/payer combinations, the rate (negotiated) comes from an imputation of a custom code: UnitedHealthcare Choice Plus + Huntington Hospital

Imputations [I] For the following provider/payer combinations, the rate (percent of charge) comes from an imputation of a custom code multiplied by the gross charge from the hospital MRF: Cigna National OAP + Brookdale University Hospital Medical Center | Cigna National OAP + St Barnabas Hospital

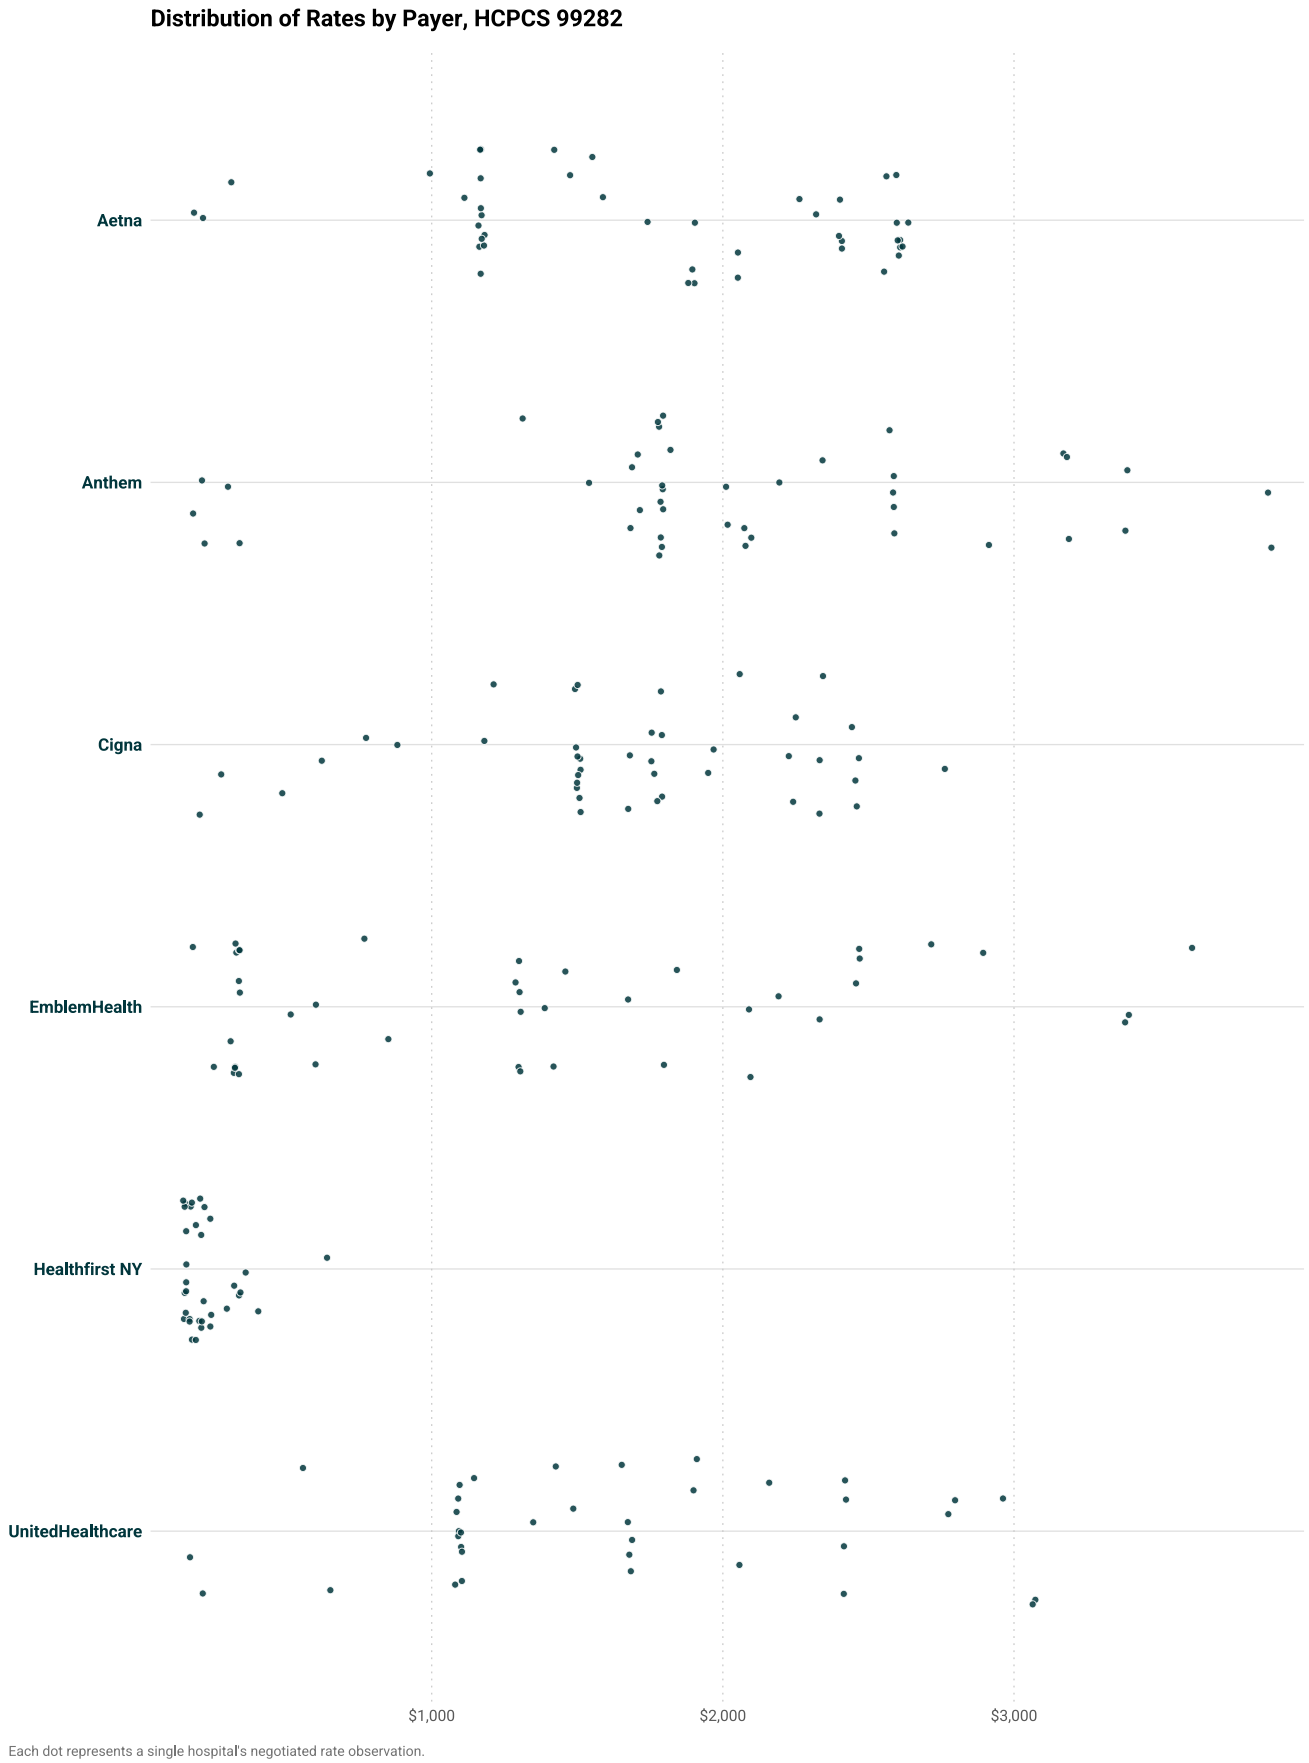

Payer Data Transformations [TiC+] For the following provider/payer combinations, the rate (percent of charge) comes from the payer MRF percent of charge and the charge comes from the hospital MRF: Anthem NY PPO + Westchester Medical Center

Payer Data Transformations [TiC+] For the following provider/payer combinations, the rate (per diem) comes from the per diem rate from the payer MRF multiplied by the Medicare GLOS (geometric length of stay): EmblemHealth GHI HMO + Flushing Hospital Medical Center | EmblemHealth GHI HMO + Jamaica Hospital Medical Center | EmblemHealth GHI HMO + NYC Health and Hospitals - Bellevue | EmblemHealth GHI HMO + NYC Health and Hospitals - Elmhurst | EmblemHealth GHI HMO + NYC Health and Hospitals - Harlem | EmblemHealth GHI HMO + NYC Health and Hospitals - Jacobi | EmblemHealth GHI HMO + NYC Health and Hospitals - Kings County | EmblemHealth GHI HMO + NYC Health and Hospitals - Lincoln | EmblemHealth GHI HMO + NYC Health and Hospitals - Metropolitan | EmblemHealth GHI HMO + NYC Health and Hospitals - North Central Bronx | EmblemHealth GHI HMO + NYC Health and Hospitals - Queens | EmblemHealth GHI HMO + NYC Health and Hospitals - Woodhull | EmblemHealth GHI HMO + NYC Health and Hospitals/South Brooklyn Health

*** Excluded Data (Posted)**

The following providers posted MRF rates for this specific payer/service combination, but the data was excluded due to failing to meet inclusion criteria

Healthfirst NY QHP + Brookdale University Hospital Medical Center | UnitedHealthcare Choice Plus + Flushing Hospital Medical Center | UnitedHealthcare Choice Plus + Jamaica Hospital Medical Center

HCPCS 99285 EMERGENCY DEPARTMENT VISIT FOR THE EVALUATION AND MANAGEMENT ... LEVEL 5

*** Rate Types**

* [HPT] = Data Source from Hospital Price Transparency MRF, [TiC] = Data Source from Payer Price Transparency MRF, [HPT+] = Data Sourced from Hospital Price Transparency MRF but Transformed By Turquoise Logic, [TiC+] = Data Sourced from Payer Price Transparency MRF but Transformed By Turquoise Logic,[I] = Data Source by Transparency Data but Rate was Derived from Imputation

*** Imputation / Transformation Logic**

Imputations [I] For the following provider/payer combinations, the rate (percent of charge) comes from an imputation of a custom code multiplied by the gross charge from the hospital MRF: Cigna National OAP + Brookdale University Hospital Medical Center | Cigna National OAP + NYC Health and Hospitals - North Central Bronx | Cigna National OAP + St Barnabas Hospital

Imputations [I] For the following provider/payer combinations, the rate (negotiated) comes from an imputation of a custom code: UnitedHealthcare Choice Plus + Flushing Hospital Medical Center | UnitedHealthcare Choice Plus + Huntington Hospital | UnitedHealthcare Choice Plus + Jamaica Hospital Medical Center | UnitedHealthcare Choice Plus + Lenox Hill Hospital | UnitedHealthcare Choice Plus + Long Island Jewish Medical Center | UnitedHealthcare Choice Plus + NYC Health and Hospitals - Harlem | UnitedHealthcare Choice Plus + North Shore University Hospital | UnitedHealthcare Choice Plus + Staten Island University Hospital - North Campus

Payer Data Transformations [TiC+] For the following provider/payer combinations, the rate (percent of charge) comes from the payer MRF percent of charge and the charge comes from the hospital MRF: Anthem NY PPO + Westchester Medical Center

*** Excluded Data (Posted)**

*** Rate Types**

* [HPT] = Data Source from Hospital Price Transparency MRF, [TiC] = Data Source from Payer Price Transparency MRF, [HPT+] = Data Sourced from Hospital Price Transparency MRF but Transformed By Turquoise Logic, [TiC+] = Data Sourced from Payer Price Transparency MRF but Transformed By Turquoise Logic,[I] = Data Source by Transparency Data but Rate was Derived from Imputation

*** Imputation / Transformation Logic**

Imputations [I] For the following code/payer combinations, the rate (RC base per diem) comes from the hospital MRF per diem rate multiplied by the Medicare GLOS (geometric length of stay): Anthem NY PPO + MS-DRG 793

Imputations [I] For the following code/payer combinations, the rate (base rate inferred from hospital data) comes from multiplying an MS-DRG base rate by a CMS weight: Cigna National OAP + MS-DRG 885

Imputations [I] For the following code/payer combinations, the rate (RC family per diem) comes from the hospital MRF per diem rate multiplied by the Medicare GLOS (geometric length of stay): UnitedHealthcare Choice Plus + MS-DRG 794

Payer Data Transformations [TiC+] For the following code/payer combinations, the rate (per diem) comes from the per diem rate from the payer MRF multiplied by the Medicare GLOS (geometric length of stay): EmblemHealth GHI HMO + MS-DRG 794

*** Rate Types**

* [HPT] = Data Source from Hospital Price Transparency MRF, [TiC] = Data Source from Payer Price Transparency MRF, [HPT+] = Data Sourced from Hospital Price Transparency MRF but Transformed By Turquoise Logic, [TiC+] = Data Sourced from Payer Price Transparency MRF but Transformed By Turquoise Logic,[I] = Data Source by Transparency Data but Rate was Derived from Imputation

*** Imputation / Transformation Logic**

Imputations [I] For the following code/payer combinations, the rate (percent of charge) comes from an imputation of a custom code multiplied by the gross charge from the hospital MRF: Cigna National OAP + HCPCS 74018

Imputations [I] For the following code/payer combinations, the rate (OP base rate) comes from payer and hospital data where we inferred the rate from a grouper rate: Aetna Open Access Managed Choice + HCPCS 55700 | UnitedHealthcare Choice Plus + HCPCS 55700

Payer Data Transformations [TiC+] For the following code/payer combinations, the rate (percent of charge) comes from the payer MRF percent of charge and the charge comes from the hospital MRF: Healthfirst NY QHP + HCPCS 10060 | Healthfirst NY QHP + HCPCS 10140 | Healthfirst NY QHP + HCPCS 10160 | Healthfirst NY QHP + HCPCS 19081 | Healthfirst NY QHP + HCPCS 20605 | Healthfirst NY QHP + HCPCS 32555 | Healthfirst NY QHP + HCPCS 47562

Payer Data Transformations [TiC+] For the following code/payer combinations, the rate (per diem) comes from the per diem rate from the payer MRF multiplied by the Medicare GLOS (geometric length of stay): EmblemHealth GHI HMO + HCPCS 10060 | EmblemHealth GHI HMO + HCPCS 70486 | EmblemHealth GHI HMO + HCPCS 70544 | EmblemHealth GHI HMO + HCPCS 71045 | EmblemHealth GHI HMO + HCPCS 73140 | EmblemHealth GHI HMO + HCPCS 74018 | EmblemHealth GHI HMO + HCPCS 74170 | EmblemHealth GHI HMO + HCPCS 95812 | EmblemHealth GHI HMO + HCPCS 96375 | EmblemHealth GHI HMO + HCPCS 99281 | EmblemHealth GHI HMO + HCPCS 99282 | EmblemHealth GHI HMO + HCPCS 99283

*** Imputation / Transformation Logic**

Imputations [I] For the following code/payer combinations, the rate (OP base rate) comes from payer and hospital data where we inferred the rate from a grouper rate: Aetna Open Access Managed Choice + HCPCS 55700 | UnitedHealthcare Choice Plus + HCPCS 55700

Imputations [I] For the following code/payer combinations, the rate (percent of charge) comes from an imputation of a custom code multiplied by the gross charge from the hospital MRF: Cigna National OAP + HCPCS 20605 | Cigna National OAP + HCPCS 45378 | Cigna National OAP + HCPCS 74018

Payer Data Transformations [TiC+] For the following code/payer combinations, the rate (per diem) comes from the per diem rate from the payer MRF multiplied by the Medicare GLOS (geometric length of stay): EmblemHealth GHI HMO + HCPCS 10060 | EmblemHealth GHI HMO + HCPCS 70486 | EmblemHealth GHI HMO + HCPCS 70544 | EmblemHealth GHI HMO + HCPCS 71045 | EmblemHealth GHI HMO + HCPCS 73140 | EmblemHealth GHI HMO + HCPCS 74018 | EmblemHealth GHI HMO + HCPCS 74170 | EmblemHealth GHI HMO + HCPCS 95812 | EmblemHealth GHI HMO + HCPCS 96375 | EmblemHealth GHI HMO + HCPCS 99281 | EmblemHealth GHI HMO + HCPCS 99282 | EmblemHealth GHI HMO + HCPCS 99283

*** Excluded Data (Posted)**

*** Rate Types**

* [HPT] = Data Source from Hospital Price Transparency MRF, [TiC] = Data Source from Payer Price Transparency MRF, [HPT+] = Data Sourced from Hospital Price Transparency MRF but Transformed By Turquoise Logic, [TiC+] = Data Sourced from Payer Price Transparency MRF but Transformed By Turquoise Logic,[I] = Data Source by Transparency Data but Rate was Derived from Imputation

*** Imputation / Transformation Logic**

Imputations [I] For the following code/payer combinations, the rate (percent of charge) comes from an imputation of a custom code multiplied by the gross charge from the hospital MRF: Cigna National OAP + HCPCS 20605 | Cigna National OAP + HCPCS 74018

Imputations [I] For the following code/payer combinations, the rate (OP base rate) comes from payer and hospital data where we inferred the rate from a grouper rate: Aetna Open Access Managed Choice + HCPCS 55700 | UnitedHealthcare Choice Plus + HCPCS 55700

Payer Data Transformations [TiC+] For the following code/payer combinations, the rate (percent of charge) comes from the payer MRF percent of charge and the charge comes from the hospital MRF: Healthfirst NY QHP + HCPCS 10060 | Healthfirst NY QHP + HCPCS 10140 | Healthfirst NY QHP + HCPCS 10160 | Healthfirst NY QHP + HCPCS 19081 | Healthfirst NY QHP + HCPCS 20605 | Healthfirst NY QHP + HCPCS 32555 | Healthfirst NY QHP + HCPCS 47562

Payer Data Transformations [TiC+] For the following code/payer combinations, the rate (per diem) comes from the per diem rate from the payer MRF multiplied by the Medicare GLOS (geometric length of stay): EmblemHealth GHI HMO + HCPCS 10060 | EmblemHealth GHI HMO + HCPCS 70486 | EmblemHealth GHI HMO + HCPCS 70544 | EmblemHealth GHI HMO + HCPCS 71045 | EmblemHealth GHI HMO + HCPCS 73140 | EmblemHealth GHI HMO + HCPCS 74018 | EmblemHealth GHI HMO + HCPCS 74170 | EmblemHealth GHI HMO + HCPCS 95812 | EmblemHealth GHI HMO + HCPCS 96375 | EmblemHealth GHI HMO + HCPCS 99281 | EmblemHealth GHI HMO + HCPCS 99282 | EmblemHealth GHI HMO + HCPCS 99283

NYU Langone Hospital - Brooklyn

*** Rate Types**

* [HPT] = Data Source from Hospital Price Transparency MRF, [TiC] = Data Source from Payer Price Transparency MRF, [HPT+] = Data Sourced from Hospital Price Transparency MRF but Transformed By Turquoise Logic, [TiC+] = Data Sourced from Payer Price Transparency MRF but Transformed By Turquoise Logic,[I] = Data Source by Transparency Data but Rate was Derived from Imputation

*** Imputation / Transformation Logic**

Hospital Data Transformations [HPT+] For the following code/payer combinations, the rate (per diem) comes from the hospital MRF per diem rate multiplied by the Medicare GLOS (geometric length of stay): Anthem NY PPO + MS-DRG 793 | Anthem NY PPO + MS-DRG 794 | Cigna National OAP + MS-DRG 794 | UnitedHealthcare Choice Plus + MS-DRG 795

Imputations [I] For the following code/payer combinations, the rate (percent of charge) comes from an imputation of a custom code multiplied by the gross charge from the hospital MRF: Cigna National OAP + HCPCS 10060 | Cigna National OAP + HCPCS 10160

*** Excluded Data (Posted)**

The following providers posted MRF rates for this specific payer/service combination, but the data was excluded due to failing to meet inclusion criteria

*** Rate Types**

* [HPT] = Data Source from Hospital Price Transparency MRF, [TiC] = Data Source from Payer Price Transparency MRF, [HPT+] = Data Sourced from Hospital Price Transparency MRF but Transformed By Turquoise Logic, [TiC+] = Data Sourced from Payer Price Transparency MRF but Transformed By Turquoise Logic,[I] = Data Source by Transparency Data but Rate was Derived from Imputation

*** Imputation / Transformation Logic**

Imputations [I] For the following code/payer combinations, the rate (percent of charge) comes from an imputation of a custom code multiplied by the gross charge from the hospital MRF: Cigna National OAP + HCPCS 96375

Imputations [I] For the following code/payer combinations, the rate (negotiated) comes from an imputation of a custom code: UnitedHealthcare Choice Plus + HCPCS 99283 | UnitedHealthcare Choice Plus + HCPCS 99284 | UnitedHealthcare Choice Plus + HCPCS 99285

Payer Data Transformations [TiC+] For the following code/payer combinations, the rate (per diem) comes from the per diem rate from the payer MRF multiplied by the Medicare GLOS (geometric length of stay): EmblemHealth GHI HMO + HCPCS 93650

*** Rate Types**

* [HPT] = Data Source from Hospital Price Transparency MRF, [TiC] = Data Source from Payer Price Transparency MRF, [HPT+] = Data Sourced from Hospital Price Transparency MRF but Transformed By Turquoise Logic, [TiC+] = Data Sourced from Payer Price Transparency MRF but Transformed By Turquoise Logic,[I] = Data Source by Transparency Data but Rate was Derived from Imputation

*** Imputation / Transformation Logic**

Imputations [I] For the following code/payer combinations, the rate (base rate inferred from hospital data) comes from multiplying an MS-DRG base rate by a CMS weight: Cigna National OAP + MS-DRG 885

Imputations [I] For the following code/payer combinations, the rate (OP base rate) comes from payer and hospital data where we inferred the rate from a grouper rate: UnitedHealthcare Choice Plus + HCPCS 55700

Imputations [I] For the following code/payer combinations, the rate (percent of charge) comes from an imputation of a custom code multiplied by the gross charge from the hospital MRF: Cigna National OAP + HCPCS 10060 | Cigna National OAP + HCPCS 10140 | Cigna National OAP + HCPCS 10160 | Cigna National OAP + HCPCS 19081 | Cigna National OAP + HCPCS 20605 | Cigna National OAP + HCPCS 32555 | Cigna National OAP + HCPCS 45378 | Cigna National OAP + HCPCS 49083 | Cigna National OAP + HCPCS 78014 | Cigna National OAP + HCPCS 93653 | Cigna National OAP + HCPCS 95812 | Cigna National OAP + HCPCS 96375 | Cigna National OAP + HCPCS 99281 | Cigna National OAP + HCPCS 99282 | Cigna National OAP + HCPCS 99283 | Cigna National OAP + HCPCS 99284 | Cigna National OAP + HCPCS 99285

*** Rate Types**

* [HPT] = Data Source from Hospital Price Transparency MRF, [TiC] = Data Source from Payer Price Transparency MRF, [HPT+] = Data Sourced from Hospital Price Transparency MRF but Transformed By Turquoise Logic, [TiC+] = Data Sourced from Payer Price Transparency MRF but Transformed By Turquoise Logic,[I] = Data Source by Transparency Data but Rate was Derived from Imputation

*** Imputation / Transformation Logic**

Hospital Data Transformations [HPT+] For the following code/payer combinations, the rate (per diem) comes from the hospital MRF per diem rate multiplied by the Medicare GLOS (geometric length of stay): UnitedHealthcare Choice Plus + HCPCS 95812 | UnitedHealthcare Choice Plus + HCPCS 96375 | UnitedHealthcare Choice Plus + MS-DRG 795

Imputations [I] For the following code/payer combinations, the rate (percent of charge) comes from an imputation of a custom code multiplied by the gross charge from the hospital MRF: Cigna National OAP + HCPCS 10060 | Cigna National OAP + HCPCS 10140 | Cigna National OAP + HCPCS 10160 | Cigna National OAP + HCPCS 19081 | Cigna National OAP + HCPCS 20605 | Cigna National OAP + HCPCS 32555 | Cigna National OAP + HCPCS 45378 | Cigna National OAP + HCPCS 47562 | Cigna National OAP + HCPCS 49083 | Cigna National OAP + HCPCS 92928 | Cigna National OAP + HCPCS 93650 | Cigna National OAP + HCPCS 93653 | Cigna National OAP + HCPCS 95812 | Cigna National OAP + HCPCS 96375 | Cigna National OAP + HCPCS 99281 | Cigna National OAP + HCPCS 99282 | Cigna National OAP + HCPCS 99283 | Cigna National OAP + HCPCS 99284 | Cigna National OAP + HCPCS 99285

* [HPT] = Data Source from Hospital Price Transparency MRF, [TiC] = Data Source from Payer Price Transparency MRF, [HPT+] = Data Sourced from Hospital Price Transparency MRF but Transformed By Turquoise Logic, [TiC+] = Data Sourced from Payer Price Transparency MRF but Transformed By Turquoise Logic,[I] = Data Source by Transparency Data but Rate was Derived from Imputation

*** Imputation / Transformation Logic**

Imputations [I] For the following code/payer combinations, the rate (base rate inferred from hospital data) comes from multiplying an MS-DRG base rate by a CMS weight: Cigna National OAP + MS-DRG 885

Imputations [I] For the following code/payer combinations, the rate (OP base rate) comes from payer and hospital data where we inferred the rate from a grouper rate: Aetna Open Access Managed Choice + HCPCS 55700

Imputations [I] For the following code/payer combinations, the rate (percent of charge) comes from an imputation of a custom code multiplied by the gross charge from the hospital MRF: Cigna National OAP + HCPCS 47562 | Cigna National OAP + HCPCS 93650 | Cigna National OAP + HCPCS 93653 | Cigna National OAP + HCPCS 95812

Payer Data Transformations [TiC+] For the following code/payer combinations, the rate (per diem) comes from the per diem rate from the payer MRF multiplied by the Medicare GLOS (geometric length of stay): EmblemHealth GHI HMO + HCPCS 10060 | EmblemHealth GHI HMO + HCPCS 70486 | EmblemHealth GHI HMO + HCPCS 71045 | EmblemHealth GHI HMO + HCPCS 73140 | EmblemHealth GHI HMO + HCPCS 74018 | EmblemHealth GHI HMO + HCPCS 95812 | EmblemHealth GHI HMO + HCPCS 96375 | EmblemHealth GHI HMO + MS-DRG 795

*** Excluded Data (Posted)**

The following providers posted MRF rates for this specific payer/service combination, but the data was excluded due to failing to meet inclusion criteria

EmblemHealth GHI HMO + HCPCS 20605 | EmblemHealth GHI HMO + HCPCS 55700 | EmblemHealth GHI HMO + HCPCS 70544 | EmblemHealth GHI HMO + HCPCS 70553 | Aetna Open Access Managed Choice + HCPCS 71045 | UnitedHealthcare Choice Plus + HCPCS 71045 | Aetna Open Access Managed Choice + HCPCS 73140 | UnitedHealthcare Choice Plus + HCPCS 73140 | Aetna Open Access Managed Choice + HCPCS 74018 | UnitedHealthcare Choice Plus + HCPCS 74018 | UnitedHealthcare Choice Plus + HCPCS 78014 | Aetna Open Access Managed Choice + HCPCS 93653 | UnitedHealthcare Choice Plus + HCPCS 96375 | EmblemHealth GHI HMO + HCPCS 99285 | UnitedHealthcare Choice Plus + MS-DRG 101 | UnitedHealthcare Choice Plus + MS-DRG 603 | UnitedHealthcare Choice Plus + MS-DRG 788 | EmblemHealth GHI HMO + MS-DRG 793 | UnitedHealthcare Choice Plus + MS-DRG 794 | Aetna Open Access Managed Choice + MS-DRG 795 | UnitedHealthcare Choice Plus + MS-DRG 795 | UnitedHealthcare Choice Plus + MS-DRG 807 | UnitedHealthcare Choice Plus + MS-DRG 872 | UnitedHealthcare Choice Plus + MS-DRG 885

*** Rate Types**

* [HPT] = Data Source from Hospital Price Transparency MRF, [TiC] = Data Source from Payer Price Transparency MRF, [HPT+] = Data Sourced from Hospital Price Transparency MRF but Transformed By Turquoise Logic, [TiC+] = Data Sourced from Payer Price Transparency MRF but Transformed By Turquoise Logic,[I] = Data Source by Transparency Data but Rate was Derived from Imputation

*** Imputation / Transformation Logic**

Imputations [I] For the following code/payer combinations, the rate (base rate inferred from hospital data) comes from multiplying an MS-DRG base rate by a CMS weight: Cigna National OAP + MS-DRG 885

Imputations [I] For the following code/payer combinations, the rate (percent of charge) comes from an imputation of a custom code multiplied by the gross charge from the hospital MRF: Cigna National OAP + HCPCS 10140 | Cigna National OAP + HCPCS 19081 | Cigna National OAP + HCPCS 96375

Imputations [I] For the following code/payer combinations, the rate (RC base per diem) comes from the hospital MRF per diem rate multiplied by the Medicare GLOS (geometric length of stay): EmblemHealth GHI HMO + MS-DRG 101 | UnitedHealthcare Choice Plus + MS-DRG 101 | EmblemHealth GHI HMO + MS-DRG 203 | UnitedHealthcare Choice Plus + MS-DRG 203 | EmblemHealth GHI HMO + MS-DRG 392 | UnitedHealthcare Choice Plus + MS-DRG 392 | EmblemHealth GHI HMO + MS-DRG 603 | UnitedHealthcare Choice Plus + MS-DRG 603 | EmblemHealth GHI HMO + MS-DRG 788 | UnitedHealthcare Choice Plus + MS-DRG 788 | EmblemHealth GHI HMO + MS-DRG 794 | EmblemHealth GHI HMO + MS-DRG 795 | EmblemHealth GHI HMO + MS-DRG 807 | UnitedHealthcare Choice Plus + MS-DRG 807 | EmblemHealth GHI HMO + MS-DRG 872 | UnitedHealthcare Choice Plus + MS-DRG 872 | EmblemHealth GHI HMO + MS-DRG 885

Payer Data Transformations [TiC+] For the following code/payer combinations, the rate (per diem) comes from the per diem rate from the payer MRF multiplied by the Medicare GLOS (geometric length of stay): UnitedHealthcare Choice Plus + MS-DRG 793 | UnitedHealthcare Choice Plus + MS-DRG 794 | UnitedHealthcare Choice Plus + MS-DRG 795

Payer Data Transformations [TiC+] For the following code/payer combinations, the rate (percent of charge) comes from the payer MRF percent of charge and the charge comes from the hospital MRF: Healthfirst NY QHP + HCPCS 10060 | Healthfirst NY QHP + HCPCS 10140 | Healthfirst NY QHP + HCPCS 10160 | Healthfirst NY QHP + HCPCS 19081 | Healthfirst NY QHP + HCPCS 20605 | Healthfirst NY QHP + HCPCS 32555 | Healthfirst NY QHP + HCPCS 71045

*** Excluded Data (Posted)**
