# **EXECUTIVE SUMMARY**

Prepared by the NYC Health Department per the requirements of Local Law 78 of 2023, the inaugural Healthcare Accountability Report provides background information on key healthcare accountability topics, examines the community benefit spending of city's hospitals, and includes detailed analyses of hospital and payer price transparency data as well as city spending on healthcare for employees, retirees, and their dependents. The report establishes baselines for future reporting and identifies data sources and topics for further exploration.

The NYC Health Department is the city's public health agency, with the mission to protect and promote the health of all New Yorkers, working towards a city where all New Yorkers can realize their full health potential regardless of who they are, how old they are, where they come from or what neighborhood they live in. While the NYC Health Department does not have regulatory authority over healthcare – this authority largely rests with the New York State Department of Health – the business practices of healthcare have a significant impact on the health of New Yorkers. Moreover, the City of New York (the City) puts significant public dollars into both public and private non-profit hospitals though budget appropriations, discretionary grants, property tax exemptions, and healthcare coverage for city employees, retirees, and their dependents. With over 1.2 million covered lives, the City's health plan is the largest in the State, about equal to the State's public employee plan, the New York State Health Insurance Program (NYSHIP).

#### State and National Trends

Across the country, the healthcare affordability crisis has reached new extremes. In the NYC Health Department's review of recent literature and policy initiatives, we observed the following features, trends, and economic and health impacts of the national affordability crisis:

- High and rising healthcare spending continues to outpace inflation and wages, generating
  increasing opportunity costs for individuals and households, businesses, and governments
  at all levels.<sup>1</sup> New York State has the highest per capita spending, after Massachusetts.<sup>2</sup>
- Prices not utilization are recognized as the largest driver of increased healthcare spending.<sup>3</sup>
- Hospital care, including inpatient and outpatient services, represent the largest spending category at the state and national level. In recent years, hospital inpatient utilization and spending has decreased while outpatient utilization and spending has increased. This is

largely due to technological advances and vertical consolidation, whereby hospitals and health systems acquire physician practices and other outpatient providers. The prices for outpatient services in a hospital-owned facility tend to be significantly higher than those in facilities that are not owned by a hospital or health system.<sup>4</sup>

- Prices are not correlated with quality. Instead, prices are more often a reflection of a healthcare provider's – and payer's – market power. As healthcare has become increasingly consolidated, prices have risen accordingly.<sup>5</sup>
- The harmful effects of high and rising healthcare costs are overwhelmingly borne by people, often called healthcare consumers in this context, with significant inequities by race and income.<sup>6</sup>
  - Economic effects include lost wages, lost jobs, increased premiums (as a percent of income), increased cost-sharing and out-of-pocket costs (as a percent of income), and medical debt.<sup>7</sup>
  - Health effects include delayed or foregone care, reduced adherence, worse health status, increased mortality.<sup>8</sup>
- The full extent and impact of insurance claims and preauthorization denials is less well-understood, in large part because of a lack of quality data. From what data does exist for commercial claims denials, on average, 25% of all claims are denied.<sup>9</sup>

# Findings for New York City

In the inaugural Healthcare Accountability report and in future reports, we seek to focus on New York City-specific data, to the extent such data are publicly available. The findings included in this report support broader trends. Specifically, the report finds:

# **High and Rising Commercial Prices**

Making the assertion that a price is "high" requires comparison to an average or baseline price. While there is some variation in relative price methodologies, cost containment research has

increasingly focused on commercial prices relative to Medicare prices as Medicare prices incorporate adjustments for case mix, wages, and inflation.<sup>10</sup>

- According to 2022 commercial claims data analyzed by RAND, average commercial prices at New York City's largest healthcare systems ranged from 170% of Medicare (NYC Health + Hospitals) to 403% of Medicare (NYU Langone Health).<sup>11</sup>
- According to price transparency data (Appendix B) analyzed by Turquoise, inpatient prices ranged from 256% to 520% of Medicare while outpatient prices ranged from 348% to 767% of Medicare.<sup>12</sup>
- According to City claims data (Appendix A) analyzed by Milliman, City allowed facility medical spend for Emergency Department visits range from \$2,097 to \$5,376 for a moderate intensity visit (CPT 99284). Such spending is significantly higher than national averages.<sup>13</sup>
- According to City claims data (Appendix A) analyzed by Milliman, outpatient costs are
  increasing more rapidly than inpatient costs. In FY 2022, outpatient costs accounted for
  about 49% of facility spend. By FY 2024, outpatient costs accounted for 53%. This trend
  reflects both a shift in site of care from inpatient to outpatient as well as price increases.

# **Highly Variable Commercial Prices**

The variations in pricing between individual hospitals and/or health systems are extreme and inconsistent. According to city claims data analyzed by Milliman, hospitals that have high prices for inpatient care have moderate prices for outpatient care, and vice versa.

# City Claims Data Findings

The analysis of City claims data (**Appendix A**) does not look at prices, per se, but rather at allowed medical spend (AMS), defined as the total amount of insurer fee-for-service payments for covered medical services.<sup>14</sup>

- The average allowed facility expenditure per admission (medical, surgical and MH/SUD) for the top 10 hospital systems in FY 2024 was \$45,150. At the top of the range are New York-Presbyterian at \$92,727, Montefiore at \$83,573, Westchester Medical at \$74,101, and NYU Langone at \$59,271; Stony Brook is at the bottom at \$36,876.
- AMS for a colonoscopy (CPT 45380) ranges from \$2k to \$9k.
- AMS for a cesarean section (MS-DRG 788) ranges from \$23k to \$48k.
- Hospital systems that are more expensive for inpatient care are moderately priced for outpatient care, and vice versa. For example, NewYork-Presbyterian has the highest

<sup>&</sup>lt;sup>10</sup> Whaley CM, Kerber R, Wang D, Kofner A, Briscombe B. Prices Paid to Hospitals by Private Health Plans: Findings from round 5.1 of an Employer-Led Transparency Initiative. <sup>&</sup>lt;sup>14</sup> Appendix A: City of New York Comprehensive Benefit Program: Facility and Professional Allowed Medical Spend Report.

inpatient costs but moderate outpatient costs, while NYU Langone has moderate inpatient costs but high outpatient costs.

#### Price Transparency Data Findings

The analysis of price transparency data (**Appendix B**) also found significant variability across six commercial plans. <sup>15</sup>

- Of the 12 inpatient codes analyzed, New York-Presbyterian had the highest prices for 11 of these codes, while NYC Health + Hospitals had the lowest prices for 7 of these codes.
- Of the 27 outpatient codes analyzed, New York-Presbyterian had the highest prices for 14 of these codes, and both NYU Langone and Montefiore had the highest prices for 6 of these codes, while NYC Health + Hospitals had the lowest prices for 21 of these codes.
- Prices for a colonoscopy (HCPCS 45378) range from \$940 to \$12k.
- Prices for a cesarean section (MS-DRG 788) range from \$7k to \$58k.
- The price transparency data also demonstrated substantial variation by payer.
  - Average payer prices for a laparoscopic cholecystectomy (HCPCS 47562) range from \$6,400 (HealthFirst) to \$12,800 (Emblem), with a Medicare price of \$6,600.
  - Average payer prices for incision and drainage of a hematoma, seroma, or fluid collection (HCPCS 10140) range from \$1,700 (HealthFirst) to \$5,450 (Anthem), with a Medicare price of \$1,900.

# **High and Rising Healthcare Premiums**

In New York State, average annual premiums for family coverage are the second most expensive in the country behind New Jersey.<sup>16</sup>

- In the **New York-Newark-Jersey City Metro Area**, the average 2023 employee contribution was \$1,927 for individual coverage and \$7,588 for family coverage, while average total premiums were \$9,615 for individual coverage and \$28,189 for family coverage.<sup>17</sup>
- **City expenditures on premiums** for active employees and pre-Medicare retirees was \$9.3 billion in FY 2024, up from \$5.1 billion in FY 2015.
  - For family coverage, annual premium rates for City employees and pre-Medicare retirees were \$31,446 for GHI-CBP and \$27,258 for HIP-HMO in FY 2024, up from \$15,838 and \$17,231, respectively, in FY 2015.
  - For individual coverage, rates were \$11,983 for GHI-CBP and \$11,126 for HIP-HMO in FY 2024, up from \$6,093 and \$7,033, respectively, in FY 2015.

# An Average Community Benefit Spending Rate of 18%

The NYC Department of Health found that a simple community benefit spending calculation using the federally recognized categories fails account for the full picture of community benefit needs and spending, especially in New York City.

- Hospitals with higher cost bases naturally report higher net community benefit expenses, particularly given the inclusions of items like management salaries. Additionally, the administrative burden of community benefit reporting likely has a disproportionate impact on non-profit hospitals with fewer resources.
  - For example, hospitals such as BronxCare, Maimonides, Brooklyn Hospital Center reported below-average community benefit expenses despite having an aboveaverage proportion of Medicaid inpatient discharges.
  - On the other hand, NewYork-Presbyterian (NYP), excluding NYP Methodist and NYP Queens, reported the highest total net community benefit at \$1.8B. This amount is nearly five times the average community benefit amount (\$373M) and nine times the median community benefit amount (\$208M). However, NYP's discharge rate for Medicaid-insured patients account is 29%, significantly below the average NYC non-profit hospital rate of 37%.
- Our analysis does not include NYC Health + Hospitals and SUNY Downstate as public
  hospitals do not have to file IRS Form 990 Schedule H. These hospitals are safety net
  institutions that disproportionately serve the City's low-income (those who may be eligible
  for financial assistance), uninsured, and Medicaid-insured populations, effectively providing
  a "hidden" subsidy to private, non-profit hospitals.
- There is no minimum spending requirement for community benefits nor any requirement that spending be directly tied to the Community Health Needs Assessments or implementation strategy.

#### **High Rates of Commercial Insurance Denials**

Since 2022, health insurance plans in New York have been required to submit quarterly and annual reports to the NY Department of Financial Services (DFS) with data including health care claims received, paid, pended, and denied, by number and dollar value.

- Based on self-reported data submitted to DFS, on average, health insurers statewide denied 25% of claims in full in 2023 for commercial plans.<sup>18</sup>
- The self-reported data also suggest that across lines of business, services billed at higher prices are denied at a disproportionate rate relative to lower priced services.<sup>19</sup>

<sup>&</sup>lt;sup>18</sup> Internal analysis of Health Care Claims Reports. NY Department of Financial Services. https://www.dfs.ny.gov/reports and publications/health care claim reports. Denial rates were calculated based on (claims denied in full plus claims paid in part and denied in part) as a percentage of (claims pended at the end of the prior reporting period plus claims received during the current reporting period minus claims pended at the end of the current reporting period).

<sup>&</sup>lt;sup>19</sup> Internal analysis of Health Care Claims Reports. NY Department of Financial Services. https://www.dfs.ny.gov/reports and publications/health care claim reports.

#### **Data Observations**

- When it comes to price transparency and cost containment efforts, such as those embodied Local Law 78, the lack of an All-Payer Claims Database puts New York State – and, by extension, New York City – at a severe disadvantage. Claims data are considered the gold standard for such analyses.
- The regulatory regime around the federally mandated price transparency data is evolving rapidly. Large questions about accuracy and usefulness remain outstanding (see "Hospital and Payer Price Transparency Data" in this report). The NYC Health Department will follow the latest developments and update our approach accordingly.
- One of the key challenges for aggregating, analyzing, and reporting data for NYC hospitals and health systems is the variation in how different data sources are reported; sometimes, they are reported on a hospital level and, other times, on a system level. This not only makes comparisons difficult but can also obscure important details; on the one hand, individual hospitals — even if they are part of one system — serve distinct populations and have distinct prices and, on the other hand, resources can be allocated across an entire system.

# **HEALTHCARE COSTS & AFFORDABILITY IN NEW YORK CITY**

New York City faces a healthcare affordability crisis. This is not a new phenomenon, nor is it unique to New York City. However, the affordability crisis has grown increasingly acute as the costs of healthcare continue to outpace wages, inflation, and economic growth.<sup>20</sup>

According to national polls, nearly half of U.S. adults say that it is very or somewhat difficult for them to afford their healthcare costs. <sup>21</sup> This burden is inequitably distributed by race (65% of Hispanic and 60% of Black respondents vs. 39% of white respondents), income (69% of respondents with household incomes < \$40,000 vs. 21% of respondents with household incomes > \$90,000), and insurance coverage (85% of respondents without health insurance vs. 47% of respondents with health insurance coverage). <sup>22</sup> The healthcare affordability crisis is part of a broader downward trend in both consumer confidence and patient experience. Gallup's (a multinational analytics and advisory company) most recent annual poll on healthcare quality and coverage found consumer confidence at an all-time, 24-year low: only 44% of respondents rated the quality of U.S. healthcare as excellent or good, while only 28% rated coverage as excellent or good. <sup>23</sup> Satisfaction with the costs of healthcare has also reached an all-time low, with the cost of care named as the most urgent health problem facing the United States. <sup>24</sup>

Like other facets of the city, New York City's healthcare system is immense in its diversity, costs, inequities, and complexity. Key attributes include:

- Largest municipal public healthcare system in the country (NYC Health + Hospitals)
- Largest fully insured employer health plan in the country (NYC Health Benefit Program)
- One of the largest healthcare markets in the country
- One of the most segregated healthcare markets in the country
- Some of the highest prices in the country
- Some of the greatest pricing differences in the country

The NYC Health Department's inaugural Healthcare Accountability Report aims to shed light on key factors driving the healthcare affordability crisis in the city, establishing baselines for future reporting and identifying areas for further exploration. Most notably, this report provides a first-time look at the city's hospital prices, using data drawn from the city's Comprehensive Benefits Program (CBP) and federally mandated price disclosures for hospitals and insurers. The report is produced in compliance with Local Law 78 of 2023.

<sup>24</sup> *Id.* 

#### THE BUSINESS PRATICES OF HEALTHCARE ARE A PUBLIC HEALTH ISSUE

Following the passage of City Council's landmark Healthcare Accountability and Consumer Protection Act (Local Law 78 of 2023), the mayor delegated implementation of the law to the city's public health agency, the NYC Health Department, with the mission to protect and promote the health of all New Yorkers, working towards a city where all New Yorkers can realize their full health potential regardless of who they are, how old they are, where they come from or what neighborhood they live in.

Traditionally, public health and healthcare have been viewed as distinct fields with distinct missions, approaches, data sets, and skill sets. <sup>25</sup> In broad terms, the former tends to focus on community and population-level prevention and health promotion, while the latter focuses on individual-level diagnosis and treatment. <sup>26</sup> Calls to break down silos have increased in recent years, particularly in light of managed care investments in health-related social needs, as well as public health emergencies such as the COVID-19 pandemic. <sup>27</sup> Bridging public health and healthcare has been a central tenant of the strategic plan issued by the NYC Health Department's inaugural Chief Medical Officer. <sup>28</sup> While the push to foster greater integration and coordination between public health and healthcare tends to focus on healthcare delivery, population health management, and data interoperability, questions about healthcare pricing, spending, billing practices, compensation and incentive systems, business entity ownership and management structures, market competition, and fraud have largely remained outside of the purview of public health.

The NYC Health Department explored the public health impacts of the topics enumerated under Local Law 78 of 2023 which may broadly be characterized as the *business practices and behaviors of the healthcare industry*. The healthcare industry includes suppliers (such as device makers and pharmaceutical manufacturers), payers (such as insurance companies), and providers (such as hospitals and healthcare systems). We asked questions such as:

- Is there a strong association of healthcare business practices with the key dimensions of healthcare access – availability, accessibility, accommodation, affordability, and acceptability?
- Is there a strong association with physical and mental health outcomes? Life expectancy?
- Do these patterns occur at a community level? A population level?
- Are these patterns inequitably distributed by race, ethnicity, wealth, neighborhood, and other key demographic factors?

<sup>&</sup>lt;sup>28</sup> Inaugural Chief Medical Officer (CMO) Strategic Plan 2022-23. NYC Department of Health; 2021. https://www.nyc.gov/assets/doh/downloads/pdf/public/chief-medical-officer-strategic-plan.pdf

In short, the NYC Health Department found overwhelming evidence that healthcare business practices and behaviors have a direct impact on community and population health.<sup>29</sup> At the systems level, adverse outcomes include segregated healthcare systems, overcrowded and underfunded safety net institutions, safety net closures, race- and insurance-based discrimination, underinsurance, denials of medically necessary care, and medical debt.<sup>30</sup> At the individual level, adverse outcomes include delayed or foregone care, rationing prescription drugs, tradeoffs with food or housing, debt, stress, and worse health status.<sup>31</sup> Furthermore, these adverse health-related outcomes are inequitably distributed by race and income.<sup>32</sup>

Healthcare prices, which are a central focus of this report, are complex, with multiple layers hidden from public view.<sup>33</sup> In part owing to their opacity and complexity, prices offer a compelling example of applying public health approaches to healthcare business practices.

Prices play a critical role in overall healthcare spending, which is generally understood as prices times utilization.

U.S. healthcare spending per capita (\$14,570) and as a percent of GDP (17.6%) is nearly twice that of comparable countries. ACMS projects that healthcare spending will continue to outpace economic growth, reaching nearly 20% of GDP by 2032. While utilization-related factors — such as an aging population and the COVID-19 pandemic — have contributed to recent growth in healthcare spending, research has consistently identified one factor for its outsized role: prices. Healthcare prices tend to defy the conventional, consumer understanding of pricing dynamics; they do not necessarily correspond to the actual costs of providing a given healthcare service or procedure, nor do they correspond to quality, outcomes, public good, or the frictionless convergence of supply and demand. Prices for the same procedure or service, in the same geographic area, vary widely depending on the provider and the payer. The highest prices are generally found when the provider is affiliated with a hospital (or large hospital system) and the payer is a commercial insurance plan.

The Commercial Determinants of Health framework acknowledges that there are potential benefits and threats to public health of all commercial activity. 40 The challenge for public health is to amplify the health benefits and mitigate the health threats. In the healthcare industry, health-related spending is a vital social good. Hospitals and insurers are essential in promoting public health and heath equity. So how then, does high and rising healthcare spending pose a threat to public health?

First, there is the threshold question of, what we are getting in return – is increased spending commensurate with improvements in individual- and population-level health improvements?

The consensus is no.<sup>41</sup> Studies that compare the U.S. healthcare system to those of similar Organization for Economic Cooperation and Development (OECD) countries, find that the United States lags – often, significantly – behind other countries across a range of key health outcomes including infant mortality, maternal mortality, and life expectancy.<sup>42</sup> Indeed, the Commonwealth Fund's most recent *Mirror*, *Mirror* report, which evaluates health system performance for 10 countries across five domains (access to care, care process, administrative efficiency, equity, and health outcomes), is entitled "A Portrait of the Failing U.S. Health System" and ranks the United States last or second-to-last across all domains but one (care process).<sup>43</sup> In brief, we are not achieving high social value for what we are spending on healthcare.

Once we establish that there is not a positive association between increased healthcare spending and improved health outcomes, there is the related question of, where is all of this money going? Estimates of waste in U.S. healthcare spending – that is, money that does not demonstrate any connection to improved health outcomes – range from 15% to 47% (\$735 billion to \$2.3 trillion of current spending). In the U.S's multi-payer system with layers of approvals, denials, and reimbursement schemes, administrative complexity accounts for the largest share of wasteful spending. It identifying sites of inordinate waste has done little to advance meaningful reforms because, ultimately, in the United States, healthcare is a business. He when money does not contribute to health outcomes, it does contribute to bottom lines. At a time when confidence in the U.S. healthcare system is at an all-time low and the costs of care have become increasingly unaffordable for most people, a number of the healthcare industry's largest players – insurance carriers, pharmaceutical companies, and hospitals and health systems – are posting record profits. It is critical that public institutions

dedicated to promoting public health and health equity are able to deploy data, research, and evidence-backed policies to counter the narratives of deep-pocked healthcare interests.

Finally, and perhaps most importantly, is the question of, what are the health harms associated with high and rising healthcare spending? Government (48%) and consumer (27%) dollars account for 75% of U.S. healthcare spending.<sup>48</sup> When healthcare spending continuously outpaces growth in GDP and wages, it comes with opportunity costs; especially for consumers, money spent on a healthcare bill is money that cannot go to housing, food, or education.<sup>49</sup> In theory, health insurance should shield consumers from the direct impacts of high prices, but the reality is that rising healthcare prices are associated with layoffs, lower wages, narrower coverage, and increased premiums, deductibles, copayments, and co-insurance.<sup>50</sup> It is estimated that nearly a quarter of those with health coverage are underinsured – meaning that their coverage does not provide affordable access to care.<sup>51</sup> Across all insurance types, 37% of working-age adults report delaying or skipping needed healthcare or a prescription drug because of cost.<sup>52</sup> This number jumps to 60% for those without insurance.<sup>53</sup>

High and rising prices are also associated with medical debt.<sup>54</sup> Nationwide, an estimated 20 million people have at least \$250 in medical debt.<sup>55</sup> The burden of medical debt is inequitably distributed by race, ethnicity, income, insurance status and health status.<sup>56</sup> Medical debt is associated with a broad range of adverse outcomes, including decreased housing and food security, worse mental and physical health, delayed or forgone care, premature death, and

increased mortality.<sup>57</sup> In New York City, an estimated one million people have at least \$500 in medical debt with inequities by race, income, and insurance status that mirror national trends.<sup>58</sup> The city recently invested \$18 million to relieve over \$2 billion in medical debt for 500,000 New Yorkers on a one-time basis.<sup>59</sup> As part of this program, the NYC Health Department has committed to monitoring the prevalence of medical debt, investigating factors, such as high prices, that are driving medical debt, and supporting policies that seek to eliminate medical debt in the first instance.

# Pursuing Healthcare Accountability on Behalf of All New Yorkers

In implementing Local Law 78 of 2023, the NYC Health Department seeks to apply public health approaches – namely, monitoring, mitigation, and prevention – to the business of healthcare. This work is part of addressing the commercial determinants of health, a pillar of the Citywide Chronic Disease Strategy. <sup>60</sup> The New York City Health Department brings a unique set of tools and perspectives, including local data and insights, public engagement and awareness, regular reporting on community- and population-level health outcomes, and a focus on defining and centering local health needs.

From our perspective, healthcare accountability is not strictly about monitoring whether key healthcare actors – namely hospitals and insurers – are in compliance with state and federal regulations. The New York City Health Department's ultimate goal is affordable, high-quality, equitable and accessible care for *all* New Yorkers.

# The City Does Not Regulate Healthcare

New York City's authority over healthcare is limited. Healthcare regulation and enforcement generally sits with the federal and state governments, spanning an array of administrative agencies at both levels. In New York State, the Department of Health (DOH) has regulatory authority over healthcare facilities, including hospitals, and administers Medicaid, Child Health Plus, and the Essential Plan, while the Department of Financial Services regulates non-ERISA health plans and monitors prescription drug prices. <sup>61</sup> The Education Department establishes licensing standards for healthcare professionals. The Office of the Attorney General – and, in particular, the Health Care, Charities, and Antitrust bureaus – enforces a number of key healthcare laws, notably those that seek to protect healthcare consumers.

<sup>&</sup>lt;sup>60</sup> Addressing Unacceptable Inequities: A Chronic Disease Strategy for New York City. NYC Department of Health; 2025. https://www.nyc.gov/assets/doh/downloads/pdf/about/chronic-disease-strategy-nyc.pdf.

<sup>61</sup> Both the DOH and DFS regulate Qualified Health Plans, while the federal government regulates Medicare and ERISA plans.

Healthcare-related data – along with the authority to collect and publish such data – also generally rests with federal and state governments. Indeed, state-level cost containment initiatives typically draw on data and insights gleaned from their states' All-Payer Claims Databases (APCDs). 62 These databases aggregate medical, pharmacy, and dental claims from both public and private payers and can serve as an invaluable resource for researchers, policymakers, and consumers. 63 Twenty-five states, including New York State, have APCDs that are operational or in early implementation. 64 At this time, access to New York's All-Payer Database (APD) is restricted to DOH users. 65

#### THE INAGURAL HEALTHCARE ACCOUNTABILITY REPORT

This report is the NYC Health Department's first report dedicated to healthcare accountability. As we will publish these reports on an annual basis, this inaugural report provides context about key data sources and topics, establishes reporting baselines, and flags areas for further exploration and analysis. Healthcare accountability is a rapidly evolving field, propelled in no small part by the advent of price transparency data. We anticipate that, in the coming years, new data sources will come online, new consensus opinions will emerge along with best practices, and policymakers at the federal, state, and local levels will pilot new approaches and expand our understanding of what is possible. The NYC Health Department looks forward to updating our approach and reporting accordingly, while remaining focused on key data sources, such as those enumerated below.

# **Hospital and Payer Price Transparency Data**

In 2019 and 2020, the Centers for Medicare & Medicaid Services (CMS) promulgated a series of price transparency regulations. <sup>66</sup> The **Hospital Price Transparency Final Rule** ("HPT rule"), which went into effect on January 1, 2021, requires hospitals to make the following standard charges data publicly available, updated on an annual basis:

- *Gross charge* (the charge for an individual item or service that is reflected on a hospital's chargemaster, absent any discounts);
- Payer-specific negotiated charge (the charge that a hospital has negotiated with a third-party payer for an item, service, or service package);
- *De-identified minimum negotiated charge* (the lowest charge that a hospital has negotiated with all third-party payers for an item or service);
- *De-identified maximum negotiated charge* (the highest charge that a hospital has negotiated with all third-party payers for an item or service); and

• Discounted cash price (the charge that applies to an individual who pays cash, or cash equivalent, for a hospital item or service).<sup>67</sup>

Hospitals must encode all data in a single machine-readable file ("MRF") and affirm that encoded data are true, accurate, and complete. CMS provides an MRF Validation Tool to assist hospitals in meeting MRF formatting requirements. MRFs must be posted on a publicly available website and the standard charges data must be "easily accessible, without barriers." In addition, hospitals must post a "consumer-friendly display" of standard charges for at least 300 "shoppable services" (70 specified by CMS and 230 selected by the hospital). A shoppable service is a routine, non-urgent service that can be scheduled in advance – for example, the CMS-specified shoppable services include MRIs, endoscopies, and blood panels. It is important to note that because the HPT rule only applies to hospitals, it does not include pricing data from other sites of care, such as Ambulatory Surgery Centers (ASCs), urgent care centers, or outpatient professional groups.

Researchers and key stakeholders have repeatedly raised concerns about the hospital price transparency data: incompleteness and inaccuracy, inconsistent reporting of data elements, lack of standardization in reporting episodes of care, limited information about context (e.g., inpatient vs. outpatient setting, professional v. facility chart, or public v. private payer). <sup>73</sup> In 2023, CMS updated the HPT rule to strengthen standardization and enforcement, with new requirements going into effect in 2024 and 2025. <sup>74</sup> While the new requirements address some of the existing concerns, researchers and key stakeholders note that other issues persist, ultimately making apples-to-apples price comparisons more difficult and less accurate. <sup>75</sup>

Compliance with the HPT rule has also lagged.<sup>76</sup> Between 2021 and 2023, CMS conducted compliance reviews of 1,746 hospitals and initiated enforcement actions against 74% of those hospitals for noncompliance.<sup>77</sup> From those enforcement actions, CMS has issued 18 civil

monetary penalties totaling around \$5 million.<sup>78</sup> Yet, third-party and media reports finding high rates of hospital noncompliance have prompted concerns about CMS's enforcement of the HPT rule, yielding two federal audits.<sup>79</sup> In HHS's Office of the Inspector General (OIG) audit, published last, OIG estimated that only 54% of hospitals were in full compliance with the HPT rule and concluded with recommendations to strengthen CMS's monitoring and enforcement.<sup>80</sup> However, the Government Accountability Office (GAO)'s audit, also published last fall, called into question CMS's entire enforcement regime, finding that "CMS does not have assurance that the data hospitals report are sufficiently complete and accurate."<sup>81</sup> Through interviews with 16 key stakeholder organizations and a review of CMS's enforcement to-date, GAO concluded that CMS needed to first conduct an assessment of the completeness and accuracy of reported data and strengthen its enforcement mechanisms accordingly.<sup>82</sup>

**The Transparency in Coverage Final Rule** ("TiC rule"), which was rolled out in stages between 2022 and 2024, is the insurer counterpart to the HPT rule. 83 The TiC rule requires that most group health plans and insurers make the following data publicly available in three separate MRFs, updated on a *monthly* basis:

- 1. *In-network rate file:* rates for all covered items and services provided by in-network providers provider rates<sup>84</sup>
- 2. Out-of-network allowed amount file: out of network allowed amounts (the maximum amount s plan or issuer will pay for a covered item or service furnished by an out-of-network provider) and associated billed charges (the total charges for an item or service billed to a plan or issuer by a provider)<sup>85</sup>
- 3. Prescription drug file (this requirement is currently pending CMS guidance): negotiated rates and historical net prices for prescription drugs furnished by in-network providers or pharmacies.<sup>86</sup>

While HPT data only provide hospital rates, TiC data, because they come from insurers, extend beyond hospitals and includes all sites of care, such as freestanding ambulatory surgery centers (ASCs), imagining centers, urgent care, and professional services. At the same time, as the TiC rule does not apply to publicly-funded plans – such as Medicaid (fee-for-service and managed care), Medicare (Original and Medicare Advantage), CHIP, and Veterans Affairs coverage – these rates are not included in TiC data, but some can be found in the HPT data.<sup>87</sup>

In theory, there should be concordance between the prices reported by hospitals in their MRFs and those reported by insurers in their MRFs. Peer-reviewed research in this area is still emerging, as the TiC data are still relatively new.<sup>88</sup>

The TiC rule also requires that most group health plans and insurers provide their beneficiaries with an online cost estimator with real-time, personalized out-of-pocket cost estimates along with negotiated rates (what the plan will pay the provider). While massive Machine Readable Files are hardly consumer friendly, the patient cost estimators are explicitly designed to make price transparency data accessible, usable, and actionable for the consumer. Ideally, patients can use the estimator to minimize their out-of-pocket costs and optimize other factors, such as convenience and quality. It is important to note that insurers are not bound by the estimates they provide, but they are, however, financially incentivized to achieve "shared savings" with their beneficiaries as such savings can be incorporated into their medical loss ratio (MLR) calculations.

While enforcement of the HPT rule rests with CMS, a handful of states have codified the HPT rule into state law and others have established state-level penalties for noncompliance. <sup>92</sup> In New York, bills requiring the State DOH to post quarterly compliance reports and impose penalties have been introduced in the Assembly during the past two legislative sessions. <sup>93</sup> Enforcement of the TiC rule is primarily split between the federal Department of Labor, which is responsible for group health plans subject to ERISA, and state insurance regulators, which are responsible for state-licensed insurers (insurance companies, HMOs, and other insurance services). <sup>94</sup> Commentators note the paucity of TiC compliance studies, especially when

compared to HPT compliance studies, but observe challenges posed by health insurance fragmentation as well as the lack of federal guidance. 95

Overall, price transparency is a long time coming, but the data are still quite new. New research and use cases are emerging daily. <sup>96</sup> While we have seen a sustained commitment to addressing issues around quality, usability, and enforcement, the greater impact of these data is still unknown. <sup>97</sup> Indeed, health economists have observed that price transparency could lead to "tacit collusion" among providers and increase prices. <sup>98</sup> Low-cost providers would know the maximum price an insurer is willing to pay, effectively creating an elevated benchmark price. <sup>99</sup> Public health has an important role to play in tracking prices over time, and assessing the pricing impacts of various policies, industry practices, and market dynamics.

Despite many of the consumer-centric narratives around price transparency, there is significant evidence that consumers, even those with high-deductible plans, do not shop for health care, or at least not at significant enough levels to shift market dynamics. <sup>100</sup> Moreover, some argue, "consumers" – that is, people who seek better health – should not have to shop for healthcare as they do not have the medical knowledge to guide their own care, nor the healthcare literacy to navigate an overwhelmingly complex system. <sup>101</sup> Price shopping can be viewed as the latest iteration of cost-sharing – a cost containment strategy of shifting increasing costs onto patients via higher copays, deductibles, and coinsurance in order to promote efficiency – which has been found to widen inequities in healthcare access, utilization, and outcomes, often leading to greater healthcare costs. <sup>102</sup>

Cost-Sharing: A Blunt Instrument. <a href="https://link.springer.com/article/10.1007/s11606-023-08108-4">https://link.springer.com/article/10.1007/s11606-023-08108-4</a>; Remler DK, Greene

Price transparency's greatest potential likely lies at the employer and governmental levels. Employers are using price transparency data to renegotiate contracts, redesign benefits, and bring lawsuits against insurance providers and third-party administrators (TPAs). <sup>103</sup> Even while researchers and policy advocates are quick to point out flaws in the existing price transparency data, they also note that many of the most ambitious, systemic healthcare reform policies – in particular, limiting market concentration, implementing public options, or regulating provider prices – are best explored and achieved with high-quality, transparent information on prices. <sup>104</sup>

While the cost containment policy winds are forever shifting, price transparency is likely here to stay. It is an issue that enjoys strong public support, as well as bipartisan support. <sup>105</sup> In recent years, Congress has sought to codify price transparency regulations; the House overwhelmingly passed the Lower Costs, More Transparency Act in 2023 and the Senate subsequently introduced the bipartisan Health Care PRICE Transparency Act 2.0. <sup>106</sup>

The New York City Health Department echoes the sentiment that *accurate* data are necessary for high-quality analyses and evidence-backed policy proposals. We look forward to continuously deepening the understanding of price transparency data – what it is and what it is not, what it can and what it cannot do – in order to yield actionable insights for New Yorkers and engage in broader policy debates.

#### **City Spending on Employee Healthcare**

#### Background

Employer-sponsored insurance is the single largest source of health coverage in the United States, covering an estimated 54% of the population (178.2 million people). Over the past 25 years, increases in the costs of employer-sponsored insurance – and, in particular, the premium and out-of-pocket costs borne by employees – have significantly outpaced increases in wages and inflation. Growing evidence suggests that, indeed, increases in healthcare costs are associated with wage stagnation and job loss, with the greatest effects being felt by low-income and Black and Hispanic households. One recent study found that, between 1988 and 2019, health insurance premiums increased from 8% of compensation to 18% of compensation on average. These increases were larger for Black and Hispanic households (18% and 19% of compensation, respectively) as compared to White households (14% of compensation). In addition, 2019 premiums represented 28% of compensation for lower-income households (20th percentile of earnings), compared to only 4% of families at the 95th percentile of earnings.

Employer-sponsored insurance varies greatly across a range of factors, including benefit design, coverage, regulatory requirements under the ACA and ERISA, network size, the costs paid by the employer versus those paid by the employee, how the employer funds coverage, and how the employer negotiates and procures coverage. While the relative bargaining power of insurers, providers, and employers varies, to some degree, based on the healthcare market of a given region and the size of the employer, employers have traditionally had little bargaining power when it comes to the prices they pay. Most employers are not large enough to counter the power of providers in a given market nor do they have the pricing information they need to effectively evaluate their options, while insurers have little incentive to negotiate with providers as costs can be passed on to employers and their employees. 115

Faced with high and rising healthcare costs, employers are pushing for federal and state price transparency as well as access to their own healthcare claims data. These efforts are largely driven by self-insured employers who effectively pay their employees' health claims directly, thus taking on the financial risks of health coverage and administration. Fully-insured employers, on the other hand, pay a fixed premium to a third-party insurance carrier that assumes the financial risks of health coverage and administration. There are key tradeoffs under each model, but self-insured models tend to be more popular among large businesses (74%) than small (16%) and medium-sized (32%) businesses. Among workers covered by employer-sponsored plans, an estimated 65% are in a self-funded plan.

The differences between self-funded and fully insured plans are often invisible to employees. This is, in part, because self-funded employers often contract with Third-Party Administrators (TPAs) to handle plan administration – enrollment, claims processing, provider network management, etc. – and big-name insurance companies also provide TPA services (sometimes called "administrative services-only" contracts, or ASOs). 120 Likewise, self-funded employers often contract out the management of their prescription drug benefits to Pharmacy Benefit Managers (PBMs).

These contracting arrangements mean that, even if self-funded employers are paying employee claims directly in the financial sense, they are not actually processing claims. And, in many instances, employers are not even able to access their claims data because of restrictive TPA contracting provisions. <sup>121</sup> Such "gag clause" provisions have been the target of recent federal and New York State legislation. <sup>122</sup>

<sup>122</sup> Consolidated Appropriations Act of 2021. Pub. Law 116-260 (2020); Hospital Equity and Affordability Legislation (HEAL Act). N.Y. Ins. Law § 3217-b (o)(1) (2022). Employers, however, are still struggling to access claims data. See Hansard S. Employers Still Struggle to Access Insurers' Health Cost Data. Bloomberg Law. Published February 22, 2024. https://news.bloomberglaw.com/daily-labor-report/employers-still-struggle-to-access-insurers-health-cost-data.

The importance of ensuring that employers can access their claims data has been heightened by the high and rising costs of care. First, there has been increased scrutiny of the fiduciary duties of employers regulated under ERISA (note: the New York City Health Benefits Program is *not* covered by ERISA). When employees contribute to their health insurance through payroll deductions, this creates a fiduciary relationship with their employers in which employers have a legal responsibility to act "solely in the interest of plan participants and their beneficiaries and with the exclusive purpose of providing benefits to them." In addition, employers must carry out their duties "prudently" and pay "only reasonable plan expenses." The past year alone has seen a handful of high-profile lawsuits in which employees of large companies have sued their employers, alleging breach of fiduciary duty — in these cases, for PBM contracts that include excessive prices and fees. 126

At the same time, employers have found that the claims analyses provided by insurers and TPAs are inadequate and, likely, biased. <sup>127</sup> Employers have sought access to their claims data directly in order to conduct independent, high-quality analyses. <sup>128</sup> Some employers have also opted to share their deidentified claims data with researchers who have then used their findings to support broader, public conversations around cost containment efforts. <sup>129</sup>

# Claims Data vs. Price Transparency Data

Employer claims data may be distinguished from price transparency data in two important respects: 1) it includes utilization and 2) it includes what was actually paid by the employer after a claim was fully adjudicated (in this way, claims data can be thought of as "the receipts"). Claims data, Hospital Price Transparency data, and Transparency in Coverage data each serve a distinct but useful function, as illustrated in the following table.

**Table 1:** Comparing Hospital Price Transparency Data, Transparency in Coverage data, and Claims Data

Data Type	Included	Not Included	Strengths	Weaknesses
Hospital Price Transparency (HPT)	Reported by hospital (inpatient and outpatient services): 1. gross charges 2. discounted cash prices 3. negotiated prices 4. min and max negotiated amounts Updated annually	Utilization data  Professional services, ambulatory surgery centers	- Captures commercial, Medicare Advantage and Medicaid Managed Care	- Self-reported - Just hospital data - Low compliance among hospitals
Transparency in Coverage (TiC)	Cover self-funded, fully insured and non-federal government health plans/groups. must publish rates for all covered items and services by provider:  1. In-network rates  2. OON allowed amounts  Updated monthly	Utilization data  Medicaid FFS, Medicaid Managed Care, Original Medicare, Medicare Advantage, CHIP	- Broader array of information than HPT - Greater compliance than HPT	- Self-reported - Large volume of data requires significant computing power - Limited accuracy for bundled services - A lot of "noise" and "zombie codes" (providers listed for procedures they clearly don't perform)
Claims data, via employers or All Payer Claims Databases (APCDs)	Actual paid amounts (after care) as well as volume of care (number and dates of procedures)	Detail found in electronic medical records such as blood pressure measurements, time of day	*Current gold standard*  - Utilization data (addresses "zombie" codes and indicates relative importance of prices and providers) - Validated - Generalizable	Delays in claims adjudication make data less timely  Not all states have APCDs  APCDs do not include non-ERISA plans

# The City's Healthcare Benefit Programs

The City of New York (the City) currently spends over \$11 billion a year providing various health benefits for approximately 1.2 million employees, retirees, and dependents through multiple programs from which its members can choose. As required by the New York City Administrative Code, certain health plans are available to employees, retirees and their dependents at no premium cost. 130

The City's benefit programs are extensive and complex, providing coverage through multiple vendors. Benefits are determined in collective bargaining with the Municipal Labor Committee (MLC).

The predominant medical program for actives and pre-Medicare retirees is a Preferred Provider Organization (PPO) program that covers approximately 75% of the City's active and pre-Medicare retiree population. Known as the Comprehensive Benefits Plan ("CBP"), the program offers hospital coverage through Anthem Blue Cross and medical coverage through Emblem Health. Another 20% of the City's actives and pre-Medicare retirees are enrolled in the HIP HMO plan administered by Emblem Health, while the remaining 5% are in other insured arrangements. Additionally, approximately 260,000 retirees are enrolled in traditional Medicare Supplemental and Medicare Advantage plans.

Prescription drugs are covered by multiple programs. The City contributes approximately \$1 billion a year to various union welfare funds and most of them cover prescription drugs as well as other programs not provided directly by the City, such as dental and vision plans. Union welfare funds have their own Pharmacy Benefit Manager (PBM) contracts and benefit plans, and do not report their costs to the City. If a welfare fund does not pay for prescription drugs, members may purchase an optional rider from Emblem Health for prescription drug coverage at their own expense. Preventive drugs mandated by the Affordable Care Act (ACA) and New York State are covered by the various medical plans. In addition, coverage for injectable and chemotherapy drugs for all active and pre-Medicare retirees is provided by the PICA program, which has historically been funded and administered separately by the City-MLC Joint Health Insurance Stabilization Fund, and administered by Express Scripts. Accordingly, while there are some data for some prescription drugs, as well as the separate PICA costs and welfare fund contributions, a complete analysis of prescription drug spending is not feasible. Medical devices and Durable Medical Equipment (DME) are also covered under each of the various medical plans; while total costs are not reportable, in the CBP plan DME is less than .03% of the City's health and welfare fund spend.

<sup>&</sup>lt;sup>130</sup> N.Y.C. Admin. Code § 12-126.

# **DATA, ANALYSIS, & REPORTING**

In assessing potential data sources for this report, the New York City Health Department sought the following attributes:

- → Publicly available: All reporting requirements under Local Law 78 are qualified by the phrase "to the extent publicly available." The New York City Health Department interprets this to mean data that are not privately-owned and held and, preferably, data that are collected, analyzed, and reported by the government or data whose disclosure is compelled by the government. The city's claims data posed the greatest challenge on this count as it is not, strictly speaking, publicly available. However, there are strong, public interest arguments to be made for understanding the prices the city pays for healthcare and we are pleased to include an analysis of city claims data in the inaugural report.

  While data may be publicly available, it does not mean that such data is accessible to the public. The New York City Health Department's role is to aggregate, report, and analyze otherwise opaque, though publicly available, data to make it more accessible and actionable.
- → City-level: The NYC Health Department is committed to collecting, analyzing, and reporting city-level data to produce novel insights and policies that advance the health of New Yorkers. As most healthcare-related data are collected at the state and federal levels, it is important that such data can be disaggregated at the city level and include a sufficient New York City sample.
- → High-quality: The NYC Health Department has rigorous standards for data analysis and public reporting. Some of the key healthcare accountability data sources, notably the Hospital Price Transparency data and Transparency in Coverage data, raise concerns around completeness, accuracy, and independence (as detailed in the previous section). The New York City Health Department has weighed these concerns against the strong public interest in understanding and analyzing the available data, in part as a means to strengthen pricing, cost, and affordability data and its usefulness. Given the importance of this topic and its potential role in guiding individual healthcare decisions and billions of public and private dollars, the New York City Health Department seeks to provide context, commentary, and disclaimers when feasible.

This section includes reporting and analyses for the following key data sources, per Local Law 78 of 2023 (codified as New York City Charter § 20-q).

1. City employee claims data. <sup>131</sup> Milliman's analysis, per the requirements of Local Law 78, is included in its entirety. Milliman currently receives detailed claims data for the Comprehensive Benefits Plan (CBP) from Anthem Blue Cross and Emblem Health. Those data were used to compile the information for this report and represents about 75% of the lives covered for hospital and medical claims. Though Emblem Health recently reversed course about making HIP HMO (representing an additional 20% of covered lives) data available for this report, the data were not received in time for inclusion in this report. Future reports will include the HIP HMO data, which will account for 95% of the City's claims

27

<sup>&</sup>lt;sup>131</sup> N.Y.C .Charter § 20-q (c)(2), (d)(1).

data. The other 5% represents people enrolled in insured plans for which we do not receive claims data because it includes other clients.

The data used for this analysis was restricted to the covered members who were not eligible for Medicare, and based on eligibility data from July 1, 2021 through June 30, 2024 and claims data paid from July 1, 2021 through June 30, 2024 with run out through September 30, 2024. Unless otherwise stated, exhibits and tables reflect claims data from July 1, 2023 through June 30, 2024 (Fiscal Year 2024) with run out through September 30, 2024. Although Local Law 78 provides that the analysis of City claims data shall benchmark the price of the most common hospital procedures to Medicare rates, the Milliman report does not include such analysis because Anthem Blue Cross would not agree to release such data for publication, on the basis that it is not "publicly available."

2. Hospital Price Transparency data and Transparency in Coverage data. <sup>132</sup> The NYC Health Department has contracted with Turquoise Health to store, manage, and clean Hospital Price Transparency and Transparency in Coverage data for New York City. Turquoise Health is also providing subject matter expertise and produced the price transparency analysis for the inaugural report. That analysis is included in its entirety.

**Note:** The Local Law 78 reporting requirements include, "to the extent publicly available, a summary of each hospital's and each major insurance provider's or other payer's [sic] pricing transparency requirements pursuant to state and federal law." As detailed in the previous section, enforcement authority of the Hospital Price Transparency rule and Transparency in Coverage rule sits with the federal and state governments. New York City does not have the authority to determine whether a hospital or insurance provider is in compliance with federal price transparency regulations.

For hospital compliance, CMS provides an Online Validator tool that allows anyone to upload a hospital's Machine-Readable File and determine if it meets HPT formatting and standardization requirements. <sup>134</sup> However, the Machine-Readable File formatting requirements are only one portion of the HPT rule and Validator cannot be used to certify that a hospital is in full regulatory compliance.

- 3. Hospital community benefit spending and service. 135 The New York City Health Department reviewed the following data for NYC hospitals: IRS Form 990 Schedule H filings, Community Health Needs Assessments, Community Service Plans, discharges via the Statewide Planning and Research Cooperative System (SPARCS), and Medicare Cost Reports via the Hospital Cost Tool. Portions of these data have been aggregated and/or analyzed.
- **4. Insurer data.** <sup>136</sup> The NYC Department of Health reviewed the following data for insurance providers and/or payers operating in New York State: SEC Form 10-k filings, proxy statement filings, IRS Form 990 filings, and Department of Financial Services Health Care Claims Reports. Portions of this data have been aggregated.
- **5. Miscellaneous costs of care data.** <sup>137</sup> OLR reviewed the city's healthcare expenditures and, in particular, premium costs over time. Reporting city expenditures on pharmaceuticals and

medical devices is not possible because of the way the city covers these benefits – largely, through contributions to union welfare funds. The NYC Health Department also reviewed federal Medical Expenditure Panel Survey Insurance/Employer Component (MEPS-IC) data for broader, regional trends on healthcare premium costs. While Transparency in Coverage pharmaceutical pricing data should provide city-level insights on pharmaceutical prices, such data is not available at this time due to lack of federal regulatory guidance.

A significant challenge in aggregating, analyzing, and reporting data for NYC hospitals and health systems is the inconsistency in data reporting. Hospitals use different identification numbers and reporting structures—whether at the individual hospital, system, or subsystem level—depending on the data source and purpose. This fragmentation makes it difficult to create a unified dataset and obscures variations at the individual hospital level. For example, certain trends may be occurring at one hospital, but if a hospital ID represents three hospitals, it becomes challenging to distinguish differences between them. **Table 2** summarizes data sources, identifiers, and limitations.

For example, for NYC hospitals, NYU Langone reports data to New York State's Statewide Planning and Research Cooperation System (SPARCS) under three distinct Permanent Facility Identifiers (PFIs) and to CMS using three distinct CMS Certification Numbers (CCNs) but submits one Form 990 filing to the IRS. In the pricing analyses contained in this report, NYU Langone hospitals are reported individually in the price transparency report prepared by Turquoise but are grouped under the umbrella of "NYU Langone Hospitals" in the City claims analysis prepared by Milliman. Mount Sinai Health System, on the other hand, reports to SPARCS using seven distinct PFIs, to CMS using five distinct CCNs, and to the IRS with four Form 990 filings. In the pricing analyses contained in this report, prices are reported for four distinct Sinai hospitals in the price transparency report prepared by Turquoise and utilization is reported for four distinct hospitals in the City claims report prepared by Milliman.

Table 2: Data sources, identifiers, and limitations

Data Source	Hospital/System ID	LL78 Use	Limitation
Statewide Planning and Research Cooperative System (SPARCS) Public SPARCS Inpatient Discharges	PFI Permanent Facility Identifier (PFI), providing the most granular hospital-level detail.	Inpatient discharges	Publicly available data is limited to inpatient discharges (2022). Emergency room and outpatient (limited) data, are accessible internally, may be incorporated in future reports.
National Academy for State Health Policy (NASHP)	CCN CMS Certification Number (CCN), which can represent multiple facilities.	Medicare Cost Report	Reported data are not audited.

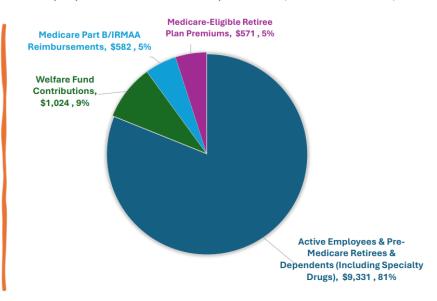

Claims data via Milliman (75% of the City's active employees and pre-Medicare retirees' claims)	CCN Data reports can lack full system coverage, as some hospital systems CCN IDs are not included (e.g., NYU).	City of New York Comprehensive Benefit Program: Facility and Professional Allowed Medical Spend Report	Facilities with over \$5 million in annual allowed medical spend between fiscal years 2022 and 2024 only.
Hospital Price Transparency and Transparency-in- Coverage Data via Turquoise Health	CCN	Price transparency data	Pricing data reported on 12 MS-DRG and 27 HCPCS codes for a defined set of hospitals and payers.
IRS 990 Schedule H	Employer identification number (EIN) Hospital systems filed Form 990 either as a single form or multiple forms.	Community benefits spending, compensation	Only includes non-profit hospitals.

#### 1. CITY EXPENDITURES ON EMPLOYEE HEALTHCARE AND EMPLOYEE CLAIMS DATA ANALYSIS

City spending on employee, retiree, and dependent healthcare totaled \$11.5 billion for fiscal year 2024, with 81% (\$9.33 billion) going to active employee and pre-Medicare retirees and their dependents. See **Figure 1**, below, for a full breakdown across the following categories: active employees & pre-Medicare retirees & dependents, welfare fund contributes, Medicare Part B/IRMAA reimbursements, and Medicare-eligible retiree plan premiums.

Figure 1: FY24 Healthcare Costs for Employees, Retirees, and Dependents (value in millions)

FY 24 Healthcare Costs for City Employees, Retirees, and Dependents Totaling \$11.5B (Pie Chart Values in Millions)

#### Notes:

- The data presented on these slides is sourced from the City's Health Benefits Program, including analyses based on contract counts and rates.
- These figures represent gross expenditures and do not account for additional funding or adjustments.
- Variations between this report and the Milliman report are due to differences in data sources and parameters.
   Welfare fund contributions extrapolated to all covered entities based on available OLR data.

The Mayor's Office of Labor Relations (OLR), which is responsible for managing employee benefits for the city's employees, dependents, and retirees, contracted with the actuarial and consulting firm Milliman to conduct an analysis of allowed medical (facility and professional) spend for the portion of its actives, pre-Medicare retirees and their dependents (collectively "members") in the Comprehensive Benefits Plan (CBP). That analysis (45 pages) is included in its entirety in **Appendix A**.

#### 2. HOSPITAL AND INSURER PRICE TRANSPARENCY

The NYC Department of Health contracted with the price transparency vendor Turquoise Health to conduct an analysis of price transparency data for New York City hospitals. That analysis (X pages) is included in its entirety in **Appendix B**.

# 3. HOSPITAL FINANCIAL AND COMMUNITY BENEFIT DATA ANALYSIS

#### Internal Revenue Service Form 990 and Community Benefit Spending

New York State law prohibits for-profit ownership of hospitals, which means that hospitals in the state are either public (e.g., NYC Health + Hospitals and State University of New York) or non-profit. Non-profit hospitals must file Internal Revenue Service (IRS) Form 990 on an annual basis. The form can be filed for an individual hospital facility or for multiple hospitals that form part of, or an entire, hospital system. It is unclear how health systems determine whether to report individual or consolidated financial information. Completed forms are publicly available through the IRS and sites such as ProPublica and Community Benefit Insight.

As part of the 990, non-profit hospitals must also fill out a hospital-specific form called Schedule H, which details a hospital's community benefit activities and spending. The IRS Instructions for Schedule H include definitions for all spending categories. Yey spending categories under Part I include:

- Financial Assistance at cost: "sometimes referred to as charity care...includes free or
  discounted health services provided to persons who meet the organization's criteria for
  financial assistance and are unable to pay;"
- Medicaid: used to demonstrate "unreimbursed Medicaid costs," which reflect the gap between care costs and reimbursements received for "individuals and families with low incomes and resources;"
- Costs of other means tested government programs: "government-sponsored health programs where eligibility for benefits or coverage is determined by income or assets;"
- Community health improvement services and community benefit operations: "Activities
  associated with conducting community health needs assessments, community benefit
  program administration, and the organization's activities associated with fundraising or
  grant writing for community benefit programs;"
- Health professions education: "educational programs that result in a degree, a certificate, or training necessary to be licensed to practice as a health professional;"
- Subsidized health services: "clinical services provided despite a financial loss to the organization;"
- Research: "any study or investigation the goal of which is to generate increased generalizable knowledge made available to the public;"
- Cash and in-kind contributions: "contributions made by the organization to health care organizations and other community groups."

Some fields are optional, including the number of activities or programs and the number of persons served. Most New York City (NYC) hospitals did not report this information in 2023, the last year of available information.

<sup>&</sup>lt;sup>138</sup> 2024 Instructions for Schedule H. IRS. <a href="https://www.irs.gov/pub/irs-pdf/i990sh.pdf">https://www.irs.gov/pub/irs-pdf/i990sh.pdf</a>. <sup>139</sup> Id.

There is also limited context for these categories – for example, what comprises "community health improvement services" or what portion of the Medicaid loss is made up of patient care costs versus non-patient care costs. Additional detail on this spending would improve the transparency and usefulness of the information.

Part II ("Community Building Activities") includes additional activities that the hospital "engaged in during the tax year to protect or improve the community's health or safety" that aren't included elsewhere, such as rehabilitating housing and working to improve the environment. 140

Consolidated data on community benefit spending and activities of NYC hospitals, of which net community benefit expense is the most useful for analysis, can be found in **Appendix C**.

# **Community Health Reports**

The Affordable Care Act (ACA) established additional requirements for non-profit hospitals to strengthen the provision of community benefits. <sup>141</sup> Hospitals must adopt Financial Assistance Policies (FAPs) that meet threshold federal requirements and undertake Community Health Needs Assessments (CHNAs) every three years. <sup>142</sup> CHNAS must "[t]ake into account input from persons who represent the broad interests of the community served by the hospital facility, including those with special knowledge of or expertise in public health" and be made widely available to the public. <sup>143</sup> In addition, hospitals must adopt implementation strategies to meet the community health needs identified in their CHNAs. <sup>144</sup>

New York State has enacted these ACA provisions into state law. The Hospital Financial Assistance Law requires that hospitals establish financial assistance programs and provide discounted care to low-income patients as a condition for participating in the Indigent Care Pool, a state program that helps hospitals offset the cost of uncompensated care. Hospitals must provide clear information about eligibility criteria, application procedures, and the availability of discounted or free care, and this needs to be communicated through conspicuous postings, patient bills, and during the intake and registration process. The goal is to ensure that patients are aware of and can access financial aid to reduce the burden of medical expenses.

New York's Community Service Plan Law requires that hospitals develop Community Service Plans (CSPs) to meet community needs, provide charity care and improve access for underserved populations. <sup>146</sup> Like the CHNA process, the CSP process must incorporate feedback from the communities served regarding the hospital's performance and service priorities. In

<sup>&</sup>lt;sup>140</sup> Id.

<sup>&</sup>lt;sup>141</sup> Requirements for 501(c)(3) Hospitals Under the Affordable Care Act – Section 501(r). IRS. <a href="https://www.irs.gov/charities-non-profits/charitable-organizations/requirements-for-501c3-hospitals-under-the-affordable-care-act-section-501r">https://www.irs.gov/charities-non-profits/charitable-organizations/requirements-for-501c3-hospitals-under-the-affordable-care-act-section-501r</a>.

<sup>&</sup>lt;sup>145</sup> N.Y. Pub. Health Law § 2807-k(9-a).

<sup>&</sup>lt;sup>146</sup> N.Y. Pub. Health § 2803-I.

cases where a hospital is part of larger systems, the system may choose to prepare a single, consolidated CHNA and CSP, provided it adequately addresses the distinct needs of each hospital's service area. Most hospitals combine reporting of its CHNA and CSP in the same document.

The State Department of Health's Office of Public Health Practice promotes policies and strategies that address community health priorities and coordinates the state's community health improvement plan, also known as the Prevention Agenda. Hospitals must demonstrate that the priorities outlined in their CHNA and CSPs align with those in the Prevention Agenda. The Office's resources also include an overview of the state's requirements for Community Health Assessment (CHA) and Community Health Improvement Plan (CHIP) reports, which are required to be prepared by local health departments. CHNAs, CHAs, CHIPs and CSPs all inform one another and a summary of those plans and their relationship to one another is included in the table below.

**Table 3:** Comparing Community Health Assessments, Community Health Improvement Plans, and Community Service Plans

Report	Purpose	Key Points	Report Interaction	NYS Monitoring
Community Health Assessment (CHA) (like the CHNA)	Assess local health needs, disparities, and priorities.	<ul> <li>Focuses on data collection and analysis</li> <li>Identifies priority areas</li> </ul>	Informs the Community Health Improvement Plan (CHIP).	Assessed for alignment with state priorities.
Community Health Improvement Plan (CHIP)	Implement evidence-based strategies addressing CHA priorities.	<ul> <li>Outlines         evidence-         based         interventions</li> <li>Focuses on         reducing         disparities</li> </ul>	Builds on CHA findings and aligns with CSPs.	Evaluated through outcome metrics and state reviews.
Community Service Plan (CSP)	Document hospital efforts to improve community health.	<ul> <li>Meets IRS         requirements         for tax-         exempt         hospitals</li> <li>Demonstrates         Community         Benefit         activities</li> </ul>	Aligns with CHA and CHIP for collaborative impact.	Monitored through mandatory reporting and financial reviews.

<sup>147</sup> Office of Public Health Practice. New York State Department of Health. <a href="https://health.ny.gov/statistics/chac/aboutus.htm">https://health.ny.gov/statistics/chac/aboutus.htm</a>.

Health Improvement Plan.

Implementation of New York State's new, 2025-2030 Prevention Agenda will begin March 1, 2025. 148 Hospitals must submit their 2025-2027 CHAs and CSPs, demonstrating alignment with the new Prevention Agenda's priorities, by December 2025. The New York City Health Department looks forward to integrating the new Prevention Agenda priorities, along with HealthyNYC goals, into monitoring and reporting under this section of the annual report. Links to NYC hospital CHNAs and CSPs are available in **Appendix D**.

# Key Takeaways on NYC Hospital Community Benefit Spending

In 2022, 27 NYC hospital systems filed Form 990. This does not include the twelve public hospital systems (eleven NYC Health + Hospitals (H+H) facilities and one State University of New York (SUNY) hospital), that are not required to file Form 990. As such, the community benefit spending data from 990s only provides a partial picture of the true community benefit activities of the hospitals located within NYC. The public hospitals, along with a small number of other non-profit hospitals, serve as the city's safety-net institutions for low-income and Medicaid populations. These hospitals provide a "hidden" subsidy to the other NYC hospitals because of their disproportionate service to those who are Medicaid-insured or uninsured.

In evaluating hospital community benefit spending and activities, the New York City Health Department has supplemented data from NYC hospital 990s, CHNAs, and CSPs with inpatient discharge data from the Statewide Planning and Research Cooperative System (SPARCS). SPARCS goes beyond dollars spent and provides important context about patient volume and about payer mix (the percentage of patients covered by different types of insurance, most notably public versus private payers). A payer mix analysis of SPARCS data is included in **Appendix E**.

According to SPARCS data, the total number of inpatient discharges in 2022 was 950,967 across 58 hospitals, including both public and private hospitals. Patients insured through Medicaid accounted for the largest share of discharges at 39%, followed by those insured by Medicare at 36%, and those with private insurance at 23% (Table 3). Dual-eligible patients accounted for 17% of all discharges, with Medicare as the primary payer and Medicaid as secondary coverage.

<sup>&</sup>lt;sup>148</sup> Prevention Agenda 2025-2030: New York State Health Improvement Plan NYS Public Health and Health Planning Council. New York State Department of Health (Presentation). September 12, 2024.

Table 4: Inpatient Discharges by Primary Payer Type, 2022

Inpatient discharges 2022	NYC Total	%
Total Inpatient Discharges	950,967	100%
Medicaid	373,003	39%
Medicare	329,378	35%
Private	227,074	24%
Self-pay	11,597	1.2%
Other	9,915	1.0%

<u>Sources:</u> New York State Department of Health, Statewide Planning and Research Cooperative System (SPARCS), <u>Hospital Inpatient Discharges (SPARCS De-Identified)</u>, <u>2022.</u> Notes: To see the full list of inpatient discharge data for all hospitals, see **Appendix E**.

While academic medical centers (AMCs) and affiliated hospitals had, in aggregate, the largest number of total discharges as well as Medicaid discharges, their proportion of Medicaid discharges relative to their overall volume is lower than both the NYC average and non-academic medical center hospitals. Specifically, the Medicaid discharge rate for the twelve public hospitals (11 NYC Health + Hospitals and SUNY Downstate) is 58%, significantly higher than the 39% city average. Non-profit hospitals that are not affiliated with academic medical centers have a Medicaid discharge rate of 53%. AMCs and affiliated hospitals, however, have an average Medicaid discharge rate of 30%. This illustrates that public hospitals and non-AMC affiliated hospitals serve as safety net institutions for NYC (see **Table 4**).

Table 5: All inpatient and Medicaid Discharges by Hospital Type, 2022

Hospital Type	Total Inpatient Discharges 2022	Medicaid Discharges	% Medicaid
Affiliated w/Private Academic Medical	608,065	183,058	30%
Center			
Private, Non-Affiliated	171.065	90,510	53%
Public (City or State)	171,837	9,9435	58%
Grand Total	950,967	373,003	39%

<u>Sources:</u> New York State Department of Health, Statewide Planning and Research
Cooperative System (SPARCS), <u>Hospital Inpatient Discharges (SPARCS De-Identified)</u>, <u>2022.</u>
<u>Notes:</u> To see the full list of inpatient discharge data for all hospitals, see **Appendix E**.

### **Calculation of Community Benefit Contribution**

To calculate net community benefit expense, a hospital that is required to file a Form 990 adds up the direct costs associated with all community benefit activities, including salaries, supplies, and other program-specific expenses, as well as a portion of indirect costs, such as facility usage and administrative overhead, that can be allocated to these activities. The hospital then calculates any revenue generated from community benefit activities, including both reimbursement for services and distribution from government sources (e.g., disproportionate share payments) and subtracts that revenue from the direct costs, resulting in its net expense.

direct costs of community benefit activities – revenue generated from those activities = net community benefit expense

Within this formula, it is important to note that *hospitals with higher cost bases naturally report higher net community benefit expenses*. Compensation costs, which account for 66.7% of hospital employer costs according to data released by the Bureau of Labor Statistics, drive the cost structure of the typical hospital or hospital system and, thus, their net community benefit expense. Compensation includes payment to individuals for direct patient care as well as compensation for hospital system executives and administrators. Compensation of hospital CEOs has grown quickly in the last two decades, increasing 92% among leaders of more than twenty major non-profit medical centers between 2005 and 2015. Appendix F includes the salaries of all Chief Executive Officers (CEOs) of private hospitals and health systems located within NYC, as reported on their 990s. Including compensation from related organizations, NYC hospital and health system CEO salaries range from \$607,000 to \$22 million.

Just as high-cost bases can drive up net community benefit, low-cost bases can drive down net community expenses. While public hospitals are not required to calculate their net community benefit expense, the existing formula could, paradoxically, yield a net community benefit lower than that of AMCs or even close to zero. <sup>151</sup> This would not be an accurate representation of the benefit provided by public hospitals, which serve as essential safety nets.

Indeed, the effectiveness of using community benefit spending as a measure of investment in community – and the methods for calculating it – is a subject of significant national debate. First, quantifying community benefit activities can be both expensive and time-consuming (community benefit operations is, itself, a community benefit category). The administrative burden of community benefit reporting has a disproportionate impact on private non-profit hospitals with fewer resources. Others note that there is no minimum spending requirement

<sup>&</sup>lt;sup>152</sup> See, e.g., US House of Representatives, Subcommittee on Oversight of the Committee on Ways and Means. Hearing on Tax-Exempt Hospitals and the Community Benefit Standard. April 26, 2023. <a href="https://gop-waysandmeans.house.gov/wp-content/uploads/2024/02/04.26.23-OS-Transcript.pdf">https://gop-waysandmeans.house.gov/wp-content/uploads/2024/02/04.26.23-OS-Transcript.pdf</a>,

for community benefits nor any requirement that spending be directly tied to the CHNA or implementation strategy. 153

Recently, national debates have focused on the relationship between the tax benefits provided to non-profit hospitals as compared to their community benefit spending. <sup>154</sup> The Lown Institute has developed its own methodology to calculate "meaningful" community benefit spending, which excludes the categories of research, training, and Medicaid shortfall, arguing that they are "important and generally valuable, but do not have a direct and meaningful impact on communities." <sup>155</sup> In 2022, the Lown Institute published a report that looked at 21 private non-profit hospitals in New York City, comparing their meaningful community benefit spending to the value of their tax benefits. <sup>156</sup> Across these 21 hospitals, Lown found that total tax benefits outweighed total meaningful community benefit spending, estimating that this resulted in a "fair share deficit" of \$435 million. <sup>157</sup>

The American Hospital Association (AHA) refutes the Lown Institute's methodology and offers its own. In their 2023 community benefit spending report, the AHA includes all of the categories enumerated on Schedule H of the 990, while also including Medicare shortfall (the difference between what hospitals receive and spend on serving Medicare patients) and bad debt (amounts owed by patients who qualified for financial assistance). The Greater New York Hospital Association also recently released its own community benefit spending report, following a methodology similar to that of AHA. 158

**Table 5** summarizes the total expenses, net community benefit expenses, and the percentage of these expenses relative to total expenses for all NYC hospitals or systems that filed a Form 990 in 2022. The table also includes the percentage of Medicaid discharges, based on SPARCS inpatient discharge data from 2022. Comprehensive Schedule H data for NYC hospital systems, including total community benefit expenses and direct offsetting revenue, is provided in **Appendix C**. Detailed inpatient discharge data, including the number of Medicaid, Self-pay, and Medicare discharges for these non-profit hospitals, is also available in **Appendix E**.

New York Presbyterian (NYP), excluding NYP Methodist and NYP Queens, reported the highest total net community benefit expense at \$1.8B. New York Presbyterian is one of the largest health systems in NYC based on 2022 SPARCS inpatient discharges. This amount is nearly five times the NYC average community benefit expense (\$373M) and nine times the median community benefit expense (\$208M). Nearly half of NYP's reported community benefits are

<sup>&</sup>lt;sup>159</sup> Excluding one research institution and one hospital focused on providing hospice care.

related to total financial assistance and means-tested government programs, primarily driven by the cost to serve Medicaid patients. However, NYP's discharge rate for Medicaid-insured patients account is 29%, significantly below the average NYC non-profit hospital rate of 37%.

In addition, despite the substantial community benefit expense dollar amount reported by NYP, this figured represent 21% of NYP's total expenses. While this percentage is higher than the NYC non-profit hospital average of 18%, other hospitals allocate a significantly larger portion of their total expenses to net community benefit spending: One Brooklyn Health System/Brookdale Hospital Medical Center (29%), Flushing Hospital Medical Center (27%), and Jamaica Hospital Medical Center (27%).

Table 5. IRS 990: Total Expenses, Net Community Benefits, and Percent of Total Expense by Hospital/System 2022

Sources: Community Benefit Insight 2022). Return of organization exempt from income tax [Form 990]. New York State Department of Health, Statewide Planning and Research Cooperative System (SPARCS), Hospital Inpatient Discharges (SPARCS De-Identified), 2022.

Notes: Most hospitals follow the calendar year (January-December), with exceptions like NYP Brooklyn Methodist (January-October) and NYU Langone hospitals (September-August). This table only includes non-profit hospitals in NYC. Calvary Hospital (hospice/palliative care hospital) & Rockefeller University Hospital (research hospital) were excluded from NYC hospitals that filed a 990 form in 2022. Facility-level inpatient data was used, with some hospitals aggregated for Medicaid percentage calculations to match hospital Form 990 filings, as some filings include multiple facilities. To see the full list of 990 community benefits, total expenses, community reports, and inpatient discharge data, see Appendices A-D.

### Other Sources of Publicly Available Financial Information

#### **Audited Financial Statements**

Audited financial statements are considered the "gold standard" of financial reporting. Non-profit hospitals with public debt are required to disclose quarterly and audited annual financial statements. However, audited financial statements are not standardized across systems making comparison difficult. The New York City Health Department has initiated a review of all audited hospital system financial statements available in the New York City service area and subsequent reports will include more information related to relevant financial metrics. A significant issue identified in our initial analysis is that, of the 25 hospitals reviewed, nine were evaluated to be a going concern, which indicates that their audit identified substantial doubt about their ability to meet their financial obligations and continue operating for the foreseeable future.

Unsurprisingly, many of these hospitals are considered critically important to the safety net system. Future analysis will include the association between commercial to Medicare prices, Medicaid payer share, profitability and cash on hand. 160

## Medicare Cost Reports and the Hospital Cost Tool

Medicare Cost Reports (MCRs) are available through CMS. Organizations like National Academy for State Health Policy (NASHP), through its Hospital Cost Tool, and the Employers' Forum of Indiana through its Sage Transparency Tool, facilitate accessing and analyzing this information. These reports are not audited and are submitted by an individual hospital, not by the health system as a whole. The Institutional Cost Report (ICR) is mandated by New York State and, while it does contain some of the same information reported in the MCR, additional information is required by NYS to support setting Medicaid rates and forming reimbursement policies. Like the MCR, the ICR is not audited.

Both the Sage Transparency Tool and the Hospital Cost Tool are new and important sources of clear and accessible information about hospital finances. However, AHA criticizes the Hospital Cost Tool as inaccurate, dated, and inconsistent, particularly in its calculation of a hospital's "break-even" point. <sup>162</sup> NASHP defines commercial break even as the "reimbursement rate a hospital needs to receive from commercial payers to cover all of its expenses for hospital inpatient and outpatient services, without profit," and its analysis indicates that many hospitals are charging far in excess of that. <sup>163</sup> The New York City Health Department intends to evaluate NASHP's commercial break-even methodology to understand its application to the NYC market.

<sup>&</sup>lt;sup>163</sup> Understanding NASHP's Hospital Cost Tool: Commercial Breakeven. NASP. Published March 28, 2022. <a href="https://nashp.org/commercial-breakeven">https://nashp.org/commercial-breakeven</a>.

Beyond the break-even point, the Hospital Cost Tool allows users to examine changes in hospital financial performance, as reported by the hospitals via their MCRs, over time.

The following charts were created using the Hospital Price Tool.

Figure 2: Operating Profit per Adjusted Discharge for New York City's Largest Hospital Systems

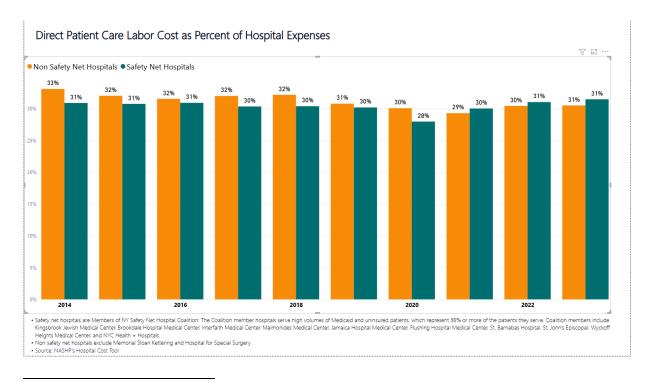

*Notes:* The Hospital Cost Tool calculates adjusted patient discharges to account for both inpatient and outpatient volume. The above chart shows that large academic medical centers (NYU Langone, Presbyterian, Northwell Health, Montefiore, Mount Sinai) have a higher and more consistently positive operating profit per patient discharge, while hospitals that serve a higher proportion of the city's Medicaid-insured and uninsured patients show more variation in their operating profit per discharge.

The following charts show the changes over time in expense allocation for three of the five expense categories as defined by NASHP, some of which relate to providing care while others do not, where we noted diverging changes over time. The expense categories used by NASHP are <sup>164</sup>:

- Capital related costs
- Direct patient care related costs
- Additional operating expense not related to patient care: These are defined as hospital
  expenses (inclusive of all services) minus hospital operating costs. These expenses are not
  related to hospital patient care and not eligible for reimbursement per Medicare federal
  regulations, sometimes referred to as Medicare Disallowed Costs. Per the CMS Provider
  Reimbursement Manual, Medicare Disallowed Costs can include elements like unnecessary
  service, luxury items, political and lobbying activities.<sup>165</sup>
- Labor costs other than direct patient care labor: These are defined as hospital operating labor costs for overhead labor, management and administrative labor, and home office and affiliates labor. Included in hospital operating costs.
- Other hospital operating costs: These are defined as Hospital Operating Costs minus
  Hospital Operating Labor Costs and Capital Related Costs. These include costs incurred in
  general service cost centers, inpatient routine service cost centers, ancillary service cost
  centers, outpatient service cost centers, and other reimbursable cost centers. Examples
  include costs for supplies, rent, pharmacy, social services, small equipment, maintenance,
  housekeeping, cafeteria, laundry, administrative, etc.

<sup>•</sup> Safety net hospitals are Members of NY Safety Net Hospital Coalition: The Coalition member hospitals serve high volumes of Medicaid and uninsured patients, which represent 36% or more of the patients they serve. Coalition members include Kingsbrook Jewish Medical Center Brookdale Hospital Medical Center. Interfaith Medical Center, Maimonides Medical Center, Jamaica Hospital Medical Center. Flushing Hospital Medical Center. St. Barnabas Hospital, St. John's Episcopal, Wyckoff Heights Medical Center, and NYC Health + Hospitals.

Non safety net hospitals evoluble Memorial Sloan Kettering and Hospital for Special Surgery

Source: NASHP's Hospital Cost Tool

Notes: The above charts compare hospitals that are members of New York City's Safety Net Coalition to other hospitals in the NYC market. Between 2014 and 2023, direct patient care

Source: NASHP's Hospital Cost Tool

labor costs increased as a percentage of expenses in the safety net hospitals but decreased in the non-safety net hospitals. Additionally, while labor costs associated with management salaries (labor costs other than direct patient care) as a percentage of expenses stayed the same in the safety net hospitals, it increased in the non-safety net hospitals. Similarly, additional operating expenses not related to patient care also increased over time as a percentage of expenses in non-safety net hospitals. These last two observations are relevant to the understanding of net community benefits, because, as discussed above, those expenses *not* associated with patient care are all included in the inflation of the calculation of value to the community.

### 4. INSURER DATA

### Profit Margins, Employee Headcounts, Overhead Costs, and Executive Salaries and Bonuses

In compiling data on insurance company profit margins, employee headcounts, overhead costs, and executive salaries and bonuses, the New York City Health Department reviewed SEC Form 10-K and proxy statement filings for for-profit insurers and Form 990 for non-profit insurers. While there is not one source of information on health plans that serve New York City, we selected the following insurance companies based on several sources detailing availability of coverage and market share in New York City: UnitedHealth Group, Elevance Health Inc., CVS Health, Healthfirst, MetroPlus Health Plan Inc., Health Insurance Plan of Greater New York (EmblemHealth), Centene Corporation, the Cigna Group, MVP Health Care Inc, Oscar Health Inc., and Molina Healthcare, Inc. 166

Profit margins, employee headcounts, overhead costs, and executive salaries and bonuses may be found in **Appendix G**.

### Insurance Denial Rates

High-quality, comprehensive data on health insurance claims denials is notoriously nonexistent. At the federal level, the Affordable Care Act (ACA) gave regulators broad authority to require that insurers publicly report data related to claims denials. At this time, however, CMS only collects denials data from Qualified Health Plans (QHPs) sold on the federal marketplace (Healthcare.gov), which represent less than 10% of people who are privately insured. Analyses of available data on QHPs have found that, on average, insurers deny 20%

<sup>&</sup>lt;sup>166</sup>Plans included based on information available through sources including Policy Reporter, National Association of Insurance Commissioners, NY Department of Financial Services, and NY State of Health.

<sup>&</sup>lt;sup>167</sup> Fields R. How Often Do Health Insurers Say No to Patients? No One Knows. *ProPublica*. Published June 28, 2023. https://www.propublica.org/article/how-often-do-health-insurers-deny-patients-claims.

<sup>&</sup>lt;sup>168</sup> Patient Protection and Affordable Care Act § 1311(e)(3).

<sup>&</sup>lt;sup>169</sup> Fields R. How Often Do Health Insurers Say No to Patients? No One Knows. *ProPublica*. Published June 28, 2023. https://www.propublica.org/article/how-often-do-health-insurers-deny-patients-claims.

of all claims.<sup>170</sup> Yet, commentators note that the existing data poses significant quality issues and have called its accuracy into question.<sup>171</sup>

At the state level in New York, health insurers must submit Health Care Claims Reports to the Department of Financial Service on a quarterly and annual basis. <sup>172</sup> Reports must include health care claims received, paid, pended, and denied, by number and dollar value. <sup>173</sup> This information must be provided in the aggregate and separated by health provider category, and must be broken down by the insurer's major lines of business. <sup>174</sup> The Health Care Claims Reports requirement is still relatively new – the first reports were posted in May, 2022 – but the data in these reports are consistent with broader trends for insurer claims denials. First, DFS only has regulatory authority over non-ERISA plans – at this time insurers are reporting across lines of business including commercial, Essential Plan, Child Health Plus, Medicaid Managed Care, and Unknown Coverage. <sup>175</sup> Second, DFS posts reports directly from insurers and does not review them for accuracy. The data contains extreme values and inconsistencies, raising further quality concerns.

Nevertheless, it is important to include these data as they are publicly available and greater attention to insurance denials is critical to advancing healthcare accountability. For all insurers that reported data, the average rate of claims denied in full was 25% for commercial plans. <sup>176</sup>

**Figure 4** shows the total number of claims paid and denied in full by major insurers in New York State. This illustrates the quantity of claims denied in full by New York insurers in 2023 across lines of business and for all reasons for claim denial. 178

**Figure 5** shows the percentage of claims denied in full for major New York City insurers based on self-reported data, both by number of claims and dollar value of claims relative to total billed charges, across lines of business. <sup>179</sup> For almost all insurers, the dollar value of denied claims as a percentage of total billed charges is notably higher than the volume of claims denied in full as a percentage of total number of claims submitted. This suggests that more expensive services are denied at a disproportionate rate.

### 5. MISCELLANEOUS CONSUMER COSTS OF CARE DATA

This section looks at the prices of (1) pharmaceuticals, (2) insurance premiums, and (3) medical devices and their impact on city healthcare expenditures and consumer out-of-pocket costs, to the extent such data is publicly available. Out-of-pocket costs are typically understood to include the amount individuals spend on cost-sharing (which includes copays, deductibles, and coinsurance, for example), care that is not covered by their health plans, and spending by individuals who are uninsured. Premiums are not considered part of out-of-pocket spending. 181

# **Pharmaceutical Pricing**

<u>City's Healthcare Costs:</u> Given the complex patchwork of prescription drug coverage for city employees and the various entities responsible for that coverage, a complete analysis of prescription drug spending is not feasible.

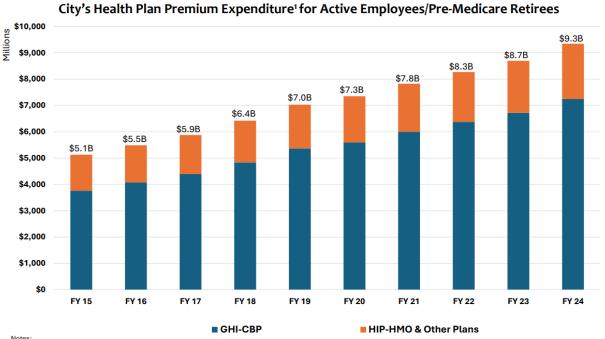

<u>Consumer Out-of-Pocket Costs:</u> Pharmaceutical pricing under the Transparency in Coverage (TiC) rule is currently in a regulatory grey area as the federal government had initially delayed enforcement and has yet to put out guidance. The New York City Health Department will be tracking developments on TiC pharmaceutical pricing data with its vendor and will analyze data as it becomes available.

<sup>&</sup>lt;sup>180</sup> Cox C, Ortaliza J, Wager E, Amin K. Health Care Costs and Affordability. KFF. Published May 28, 2024. <a href="https://www.kff.org/health-policy-101-health-care-costs-and-affordability">https://www.kff.org/health-policy-101-health-care-costs-and-affordability</a>.

### **Premiums**

City's healthcare costs: City expenditures on premiums for city employees are reflected in the charts below. 182

Figure 6: City's Health Plan Premium Expenditures for Active Employees/Pre-Medicare Retirees

The expenditures are calculated at the payment rate, incorporating all City agencies & covered entities, based on a counts times rates analysis.
 Variations between this report and the Milliman report are due to differences in data sources and parameters.

DFS has the authority to disapprove an insurer's request to increase premium rates, or to demand modification "if it is unreasonable, excessive, inadequate or unfairly discriminatory." <sup>187</sup> DFS makes such determinations based on various factors, with the goal of approving "the lowest rate possible while preserving the financial solvency of the insurer." <sup>188</sup> New Yorkers can submit comments regarding premium increases by their plan. <sup>189</sup>

The future of Advanced Premium Tax Credits—currently set to expire at the end of 2025—will also have implications for individual spending on premiums, as well as for health care access, affordability, and equity more broadly. 190191192

# 1. Background and Purpose

The City of New York (the City) provides comprehensive health benefits for over 1.2 million employees, retirees, and their dependents through multiple health benefit programs from which its members can choose. The City's health benefit programs are extensive and provide coverage through multiple vendors. Benefits are the subject of collective bargaining with the city's labor unions (collectively, the Municipal Labor Committee).

The City is expected to spend \$9.1B on health insurance for its active employees, retirees and their dependents in its fiscal year ending June 30, 2025<sup>1</sup>. The predominant medical program for active employees and pre-Medicare retirees is a Preferred Provider Organization (PPO), which covers approximately 75% of the City's active employees and pre-Medicare retirees and their dependents. Known as the Comprehensive Benefits Plan (CBP), the program offers most facility coverage through Elevance Health (referred to as Anthem Blue Cross throughout this report) and the remaining coverage through Emblem Health. In addition to the PPO, approximately 20% of the City's active employees and pre-Medicare retirees are enrolled in the HIP Health Maintenance Organization (HMO) plan administered by Emblem Health, with the remaining 5% enrolled in other smaller, community-based insured arrangements. Additionally, approximately 260,000 Medicare-eligible retirees and their dependents are enrolled in a traditional PPO plan that wraps Medicare Part A and B coverage (i.e., the GHI/ Anthem Senior Care Plan) or in Medicare Advantage plans.

Prescription drug benefits for City employees, retirees, and their dependents are covered by multiple programs. The City Comptroller reported<sup>2</sup> contributions of \$1.1 billion in 2024 to various union-sponsored welfare funds (the report reflects the Mayoral agencies, Department of Education and City University of NY junior colleges), most of which cover prescription drugs as well as other benefits not covered by the City such as dental and vision coverage. Each of these union welfare funds is independent from the City, with distinct plan designs and contractual arrangements, and they do not report their costs to provide benefit coverage to the City. City members who do not have access to a union prescription drug plan may purchase an optional rider for coverage at their own expense. Preventive drugs mandated by the Patient Protection and Affordable Care Act (ACA) and the State of New York are covered by the various medical plans. In addition, coverage for injectable and chemotherapy drugs for all active employees and pre-Medicare retirees is provided by the PICA program<sup>3</sup>. Accordingly, while there is some data for some prescription drugs included in the City's total medical cost used for this report, prescription drugs are generally excluded from this analysis. A complete analysis of prescription drug costs would require gathering the separate PICA and union welfare fund claim experience.

Milliman receives detailed claim data for the CBP from Anthem Blue Cross and Emblem Health to support the City in managing its health care benefit plans. That data was used to compile the information for this report and represents about 75% of the City's spend on hospital and medical claims. HIP HMO claims data for active, pre-Medicare retirees and their dependents was requested from Emblem, which agreed to provide this data to Milliman, but it has not been received in time to be included in this report. Future reports are expected to include the HIP HMO data and thus will cover approximately 95% of the City's medical claims data. The remaining 5% of medical claims data is for individuals enrolled in fully insured community rated plans, where it is not feasible to separate the City's experience.

On June 8, 2023, the New York City Council passed a bill "to increase health care and hospital price transparency"<sup>4</sup>, with the goal of increasing access to healthcare services for New Yorkers. Entitled the Healthcare Accountability & Consumer Protection Act (the "Act"), this legislation establishes the Office of Healthcare System Strategy and Accountability (OHA) to provide information on health care expenditures in New York and a website showing prices for procedures at hospitals throughout New York City. As part of the Act, OHA would also report on insurance and pharmaceutical pricing, as well as monitor the amount of money the City is spending on healthcare services. This local law, referred to as Local Law 78, was effective February 22, 2024. This report is provided to comply with the City's requirements under Local Law 78 for the CBP. As noted above, the City data included in this report is for the CBP; data for the HIP HMO will be provided in the future.

<sup>&</sup>lt;sup>4</sup> Mayor Adams Signs Legislation Increasing Health Care Pricing Transparency | City of New York

# 2. Executive Summary

The City's fiscal year (FY) 2024 allowed medical (facility and professional) spend for the portion of its actives, pre-Medicare retirees and their dependents (collectively "members") in the Comprehensive Benefit Plan (CBP) was approximately \$5.66 billion. This spend has consistently increased over the prior three fiscal years.

Allowed medical spend is the total amount of fee-for-service payments for covered medical services including the amount that the plan pays, the patient pays, and any other payer pays for covered services. Provider bonus, capitation, and risk sharing payments are not included. Carrier / plan administrative costs are not included. Prescription drug cost and utilization (i.e., retail and mail order pharmacy) are not included in this analysis.

The FY2024 allowed medical spend on a per member per year (PMPY) basis is \$7,524. Both the total allowed and allowed PMPY have increased over the three FYs included in the study, with an annualized growth of 1.3% in total allowed and 1.6% in the allowed PMPY. Figure A shows these results.

Figure A: City Allowed Medical Spend by Fiscal Year<sup>5</sup> - CBP Only

Fis	scal Year	Average Members	Total Allowed Medical Spend (\$B)	Total Allowed Spend PMPY	% Facility
	2022	757,074	\$5.513	\$7,282	56.4%
	2023	743,939	\$5.577	\$7,497	58.0%
	2024	752,448	\$5.661	\$7,524	58.3%

Growth rates				
2023/2022	-1.7%	1.2%	2.9%	1.6%
2024/2023	1.1%	1.5%	0.4%	0.3%
Average	-0.3%	1.3%	1.6%	1.0%

The percent of total spend for facility claims (services in a hospital inpatient or outpatient setting) has grown by 1% annually over the period between FY 2022 and FY 2024 (from 56.4% to 58.3% of total allowed). The City's PMPY allowed medical cost increases vary by place of service, with inpatient and professional allowed medical spend remaining essentially flat, and outpatient costs increasing by 6.4% per year as shown below in Figure B.

Figure B: City Allowed Medical Spend PMPY by Fiscal Year and Major Service Category

		Α	Allowed Medical Spend PMPY							
Fiscal Year	Average Members	Inpatient Facility	Outpatient Facility	Professional /Other	Total	% Facility				
2022	757,074	\$2,074	\$2,036	\$3,172	\$7,282	56.4%				
2023	743,939	\$2,109	\$2,239	\$3,149	\$7,497	58.0%				
2024	752,448	\$2,082	\$2,307	\$3,134	\$7,524	58.3%				

Growt	h rates
-------	---------

2023/2022	-1.7%	1.7%	10.0%	-0.7%	2.9%	1.6%
2024/2023	1.1%	-1.3%	3.0%	-0.5%	0.4%	0.3%
Average	-0.3%	0.2%	6.4%	-0.6%	1.6%	1.0%

<sup>&</sup>lt;sup>5</sup> Based on medical claims data from July 1, 2021 through June 30, 2024 with run out through September 30, 2024. The City's fiscal year ends on June 30 of each year (e.g., June 30, 2024 for fiscal year 2024).

Three health systems - Northwell Health (23%), New York Presbyterian (15%) and NYU Langone Health (14%) account for approximately 51% of the City's total facility allowed medical spend in FY2024<sup>6</sup>. Figure C provides the allowed facility spend for FY2024 for the top ten hospital systems.

Figure C: City Facility Allowed Medical Spend by Hospital System (FY2024)

	Allowe Inpatient	d Medical Spen Outpatient	d (\$M)	% of Total
System Name	Facility	Facility	Total	Allowed
Northwell Health	\$394.4	\$364.6	\$759.1	23%
New York Presbyterian	\$328.4	\$157.2	\$485.6	15%
NYU Langone Health	\$187.7	\$256.0	\$443.7	13%
Memorial Sloan Kettering	\$34.0	\$187.0	\$221.0	7%

Montefiore Health System	\$123.9	\$88.1	\$212.0	6%
Catholic Health Services (CHS) (formerly LIHN)	\$36.8	\$48.8	\$85.6	3%
Hospital for Special Surgery	\$12.7	\$59.6	\$72.3	2%
Westchester Medical Center Health Network	\$26.7	\$10.9	\$37.5	1%
Stony Brook	\$14.1	\$20.8	\$34.9	1%
Other / Independent / Out of Area	\$300.1	\$437.6	\$737.8	22%
Total	\$1,566.8	\$1,736.0	\$3,302.8	100%

The City's allowed medical spend per admit varies by facility, as does the type of admissions that occur at each system, We reviewed the costs per admit and number of admissions with and without maternity and newborn claims because maternity costs are typically lower on average than other inpatient admissions, and the number of deliveries at hospitals varies and can impact the average allowed medical spend per admit. Note that we include costs associated with Mental Health/Substance Use Disorder services (MH/SUD). Figure D shows the FY 2024 allowed medical spend per admit separately for maternity and newborn claims, all other claims, and in total.

<sup>&</sup>lt;sup>6</sup> Note that the health system volume percentages in Figure C are rounded. Using the unrounded values, the top three total 51%.

Figure D: City Inpatient Allowed Facility Medical Spend per Admit by Hospital System – Separately for Maternity and Newborn and All Other (FY2024; Sorted By Total Allowed Spend)

			t	Maternity and Newborn			Medical, Surgical, and MH/SU

<sup>\*</sup>Note: Some system names are abbreviated in Figure D.

Our analysis also looks at the allowed medical spend by procedure for the top 20 inpatient, outpatient and professional services. Detail is provided in Section V. Consistent with the allowed medical spend per admission, the variation among the top 10 hospital systems for the top 20 MS-DRGs (Medical Severity Diagnosis-Related Groups, a classification system used by the Centers for Medicare and Medicaid Services to categorize and reimburse providers for services) can be significant. Figure E below provides the top 20 MS-DRGs determined by volume for the City with the average and maximum allowed spend per admit, and the ratio of the maximum to the average. As shown below and in Exhibit V-A, the ratio of the maximum and average costs varies by admission type with vaginal and caesarian deliveries 42% to 65% more expensive than average for the highest cost major acute care facilities.

Note that our analysis only provides average allowed medical spend for facilities with 25 services in the category to help ensure statistical credibility.

Figure E: City Inpatient Allowed Facility Medical Spend per Admit For the Top 20 MS-DRG Codes (FY2024; Sorted By Total Admissions)

MS-		Allowed	Medical Spend	Per Admit
DRG	Description	Average	Maximum	Max/Avg
795	Normal Newborn	\$8,854	\$12,213	1.38
807	Vaginal Delivery without Sterilization or D&C without CC/MCC	\$20,807	\$30,508	1.47
794	Neonate with Other Significant Problems	\$14,211	\$44,089	3.10
897	Alcohol, Drug Abuse or Dependence without Rehabilitation Therapy without MCC	\$7,149	Masked	n/a

787	Cesarean Section without Sterilization with CC	\$39,431	\$58,117	1.47
806	Vaginal Delivery without Sterilization or D&C with CC	\$25,415	\$35,971	1.42
621	O.R. Procedures for Obesity without CC/MCC	\$46,418	\$71,716	1.55
871	Septicemia or Severe Sepsis without MV >96 Hours with MCC	\$68,844	\$136,342	1.98
392	Esophagitis, Gastroenteritis and Miscellaneous Digestive Disorders without MCC	\$14,726	\$18,157	1.23
872	Septicemia or Severe Sepsis without MV >96 Hours without MCC	\$32,510	\$50,800	1.56
101	Seizures without MCC	\$28,664	\$34,052	1.19
793	Full Term Neonate with Major Problems	\$47,254	\$67,563	1.43
202	Bronchitis and Asthma with CC/MCC	\$29,764	\$50,448	1.69
786	Cesarean Section without Sterilization with MCC	\$57,570	\$85,346	1.48
203	Bronchitis and Asthma without CC/MCC	\$17,048	\$28,747	1.69
603	Cellulitis without MCC	\$21,484	\$22,101	1.03
812	Red Blood Cell Disorders without MCC	\$24,845	\$31,399	1.26
805	Vaginal Delivery without Sterilization or D&C with MCC	\$32,892	\$39,093	1.19

Figure F below provides one of the main emergency department CPTs (Current Procedural Terminology, a system created by the American Medical Association to define and bill medical procedures) with the average allowed medical spend per visit provided for the top 5 hospitals. There is major variation in allowed medical spend per visit across the hospitals for the same CPT code. For example, in FY2024 a level four ER visit (CPT 99284) at Long Island Jewish Medical Center is 33% higher cost than average and at the NYU Langone Hospitals is 109% higher than average.

Figure F: City Outpatient Allowed Facility Medical Spend per Visit by Hospital for Emergency Department Visit CPTs (FY2024)

		Average Allowed Medical Spend per Visit					
СРТ	Description	Average	NYU Langone Hospitals	New York- Presbyterian Hospital	Long Island Jewish Medical Center	Staten Island University Hospital	North Shore University Hospital
99284	Emergency Dept Visit Mod MDM	\$2,571	\$5,376	\$2,097	\$3,415	\$3,285	\$3,487

Note: MDM refers to Medical Decision Making.

# 3. Results

Milliman currently receives eligibility and detailed claim data for the CBP from the City's two vendors: Anthem Blue Cross and Emblem Health. This analysis is based on eligibility data from July 1, 2021 through June 30, 2024 and medical claims data from July 1, 2021 through June 30, 2024 with run out through September 30, 2024. The analysis is restricted to the covered members who were not eligible for Medicare. Many exhibits and tables reflect only FY2024 results: July 1, 2023 through June 30, 2024.

#### SECTION I: ALLOWED MEDICAL SPEND BY FISCAL YEAR, MAJOR SERVICE CATEGORY, AND AGE BAND

Exhibit I-A shows allowed medical spend per member per year (PMPY) amounts by fiscal year (FY) and major service category. Figure I-A summaries the results. As shown below and in Exhibit I-A, the majority of the City's allowed medical spend is for facility services (inpatient and outpatient), and the facility percentage of total increased from 56.4% in FY 2022 to 58.3% in 2024.

Figure I-A: Allowed Medical Spend Per Member Per Year by FY and Major Category of Service

		A				
Fiscal Year	Average Members	Inpatient Facility	Outpatient Facility	Professional / Other	Total	% Facility
2022	757,074	\$2,074	\$2,036	\$3,172	\$7,282	56.4%
2023	743,939	\$2,109	\$2,239	\$3,149	\$7,497	58.0%
2024	752,448	\$2,082	\$2,307	\$3,134	\$7,524	58.3%

Growth rates											
2023/2022	-1.7%	1.7%	10.0%	-0.7%	2.9%	1.6%					
2024/2023	1.1%	-1.3%	3.0%	-0.5%	0.4%	0.3%					
Average	-0.3%	0.2%	6.4%	-0.6%	1.6%	1.0%					

Exhibit I-B shows allowed medical spend by fiscal year, major service category, and member age band (note that this distribution includes employees over age 65 and still actively at work for whom the City pays primary). Allowed medical spend PMPYs generally increase as age band increases, with the exception of the 0-1 and 70+ age bands. The 0-1 and older age bands have higher utilization of inpatient services. Professional service utilization is highest with younger age bands.

Exhibit I-C shows allowed medical spend by fiscal year for all professional services in total and separately for durable medical equipment (DME) services.

### SECTION II: ALLOWED FACILITY MEDICAL SPEND BY HOSPITAL SYSTEM

Exhibit II-A shows allowed medical spend totals by system, hospital, major service category, and fiscal year. We have limited the facilities shown in the exhibit to facilities with over \$5M in annual allowed medical spend between fiscal years 2022 and 2024 – any facilities below this threshold or outside the core CBP service area are mapped to "Other Providers" in the facility and system listing. Figure II-A below shows the fiscal year 2024 allowed medical spend by the top 10 hospital systems and all others.

Figure II-A: Allowed Facility Medical Spend Totals by Major Category of Service, Hospital System (FY2024)

	Allowed	Allowed Medical Spend (\$M)			
System Name	Inpatient Facility	Outpatient Facility	Total	% of Total Allowed	
Northwell Health	\$394.4	\$364.6	\$759.1	23%	
New York Presbyterian	\$328.4	\$157.2	\$485.6	15%	
NYU Langone Health	\$187.7	\$256.0	\$443.7	13%	
Memorial Sloan Kettering	\$34.0	\$187.0	\$221.0	7%	
Mount Sinai Health System	\$108.0	\$105.2	\$213.2	6%	
Montefiore Health System	\$123.9	\$88.1	\$212.0	6%	
Catholic Health Services (CHS) (formerly LIHN)	\$36.8	\$48.8	\$85.6	3%	
Hospital for Special Surgery	\$12.7	\$59.6	\$72.3	2%	
Westchester Medical Center Health Network	\$26.7	\$10.9	\$37.5	1%	
Stony Brook	\$14.1	\$20.8	\$34.9	1%	
Other / Independent / Out of Area	\$300.1	\$437.6	\$737.8	22%	
Total	\$1,566.8	\$1,736.0	\$3,302.8	100%	

Figure II-B shows the total allowed medical spend by system and fiscal year, including the fiscal year growth rates.

Figure II-B: Allowed Facility Medical Spend Totals by Hospital System and Fiscal Year

	Allowed	Medical Spe	Allowed Medical Spend Growth Rate		
System Name	2022	2023	2024	2023/2022	2024/2023
Northwell Health	\$718.6	\$709.5	\$759.1	-1.3%	7.0%
New York Presbyterian	\$407.1	\$459.9	\$485.6	13.0%	5.6%
NYU Langone Health	\$398.8	\$441.8	\$443.7	10.8%	0.4%
Memorial Sloan Kettering	\$200.7	\$235.0	\$221.0	17.1%	-6.0%
Mount Sinai Health System	\$216.4	\$220.6	\$213.2	1.9%	-3.4%
Montefiore Health System	\$203.7	\$186.9	\$212.0	-8.3%	13.5%
Catholic Health Services (CHS) (formerly LIHN)	\$98.1	\$95.3	\$85.6	-2.9%	-10.2%
Hospital for Special Surgery	\$51.7	\$62.8	\$72.3	21.3%	15.3%
Westchester Medical Center Health Network	\$36.9	\$37.9	\$37.5	2.9%	-1.1%
Stony Brook	\$35.3	\$35.5	\$34.9	0.4%	-1.6%
Other / Independent / Out of Area	\$744.2	\$749.6	\$737.8	0.7%	-1.6%
Total	\$3,111.5	\$3,234.8	\$3,302.8	4.0%	2.1%

Exhibit II-B shows inpatient utilization metrics by system, hospital, and fiscal year. Utilization metrics include the number of admissions (admits), days, and average length of stay. This exhibit can be useful to compare the City's inpatient average length of stay, and allowed medical spend per admit across hospitals and hospital system and fiscal year. Exhibit II-C shows the same information excluding maternity and newborn admissions.

### SECTION III: ALLOWED MEDICAL SPEND BY PROVIDER REGION

Exhibit III shows allowed medical spend by provider region, major service category, and fiscal year. Appendix 1 contains a mapping of county to provider region – other regions and out-of-state providers are mapped to "All Other Regions." Both New York City and the Mid-Hudon region facility allowed medical spend trends were higher than the overall trend for the fiscal years in the analysis (Figure III-B).

As shown in Figure III-A below, facility costs are the majority of the spend for the New York City and Long Island regions as well as overall.

Figure III-A: City Allowed Medical Spend by Provider Region (FY2024)

	Allowed Medical Spend (\$M)								
Provider Region	Inpatient Facility	Outpatient Facility	Professional / Other	Total	% Facility				
New York City	\$968.8	\$1,109.5	\$1,092.0	\$3,170.3	65.6%				
Long Island	\$358.0	\$347.1	\$627.4	\$1,332.4	52.9%				
Mid-Hudson	\$96.0	\$105.3	\$275.9	\$477.2	42.2%				
All Other Regions	\$144.1	\$174.1	\$362.9	\$681.1	46.7%				
Total	\$1,566.8	\$1,736.0	\$2,358.2	\$5,661.1	58.3%				

Figure III-B below shows the growth rate by region and FY. Allowed spending growth is highest for New York City providers.

Figure III-B: City Allowed Medical Spend by Provider Region (FY2022 - FY2024)

	Allowed	Medical Sp	end (\$M)	Allowed N	ledical Spen Rate	d Growth
Provider Region	2022 2023 2024			2023/2022	2024/2023	Average
New York City	\$3,005.0	\$3,095.8	\$3,170.3	3.0%	2.4%	2.7%
Long Island	\$1,329.4	\$1,303.9	\$1,332.4	-1.9%	2.2%	0.1%
Mid-Hudson	\$460.7	\$464.3	\$477.2	0.8%	2.8%	1.8%
All Other Regions	\$718.2	\$713.3	\$681.1	-0.7%	-4.5%	-2.6%
Total	\$5,513.3	\$5,577.3	\$5,661.1	1.2%	1.5%	1.3%

#### SECTION IV: AVERAGE ALLOWED MEDICAL SPEND PER PROCEDURE FOR TOP PROCEDURES

Our analysis reports the top 20 services for inpatient facility, outpatient facility, and professional/other. For inpatient, we use MS-DRGs (Exhibit IV-A), reporting the top 20 by both allowed medical spend volume and admit count. Ten of the top 20 DRGs by allowed medical spend (9 by admissions) were related to birth and newborn charges, while other services with high allowed or admit volumes included septicemia, obesity surgery, infection or parasitic diseases.

The top 20 services using outpatient CPTs (Exhibit IV-B), are reported by both allowed medical spend volume and record count. The top 3 CPTs by allowed medical spend were related to emergency department visits, while other services with high allowed volumes included chemotherapy, colonoscopies and biopsies. By record count, the top services include therapeutic exercises, blood tests, and emergency department visits. We show the average Medicare APC (Ambulatory Payment Classification) weight per unit as a case-mix measure.

The top 20 services using professional CPTs (Exhibit IV-C) are reported by both allowed medical spend volume and record count. Five of the top six CPTs by allowed medical spend were related to office visits, while other services with high allowed volumes included therapy, screenings, behavioral health visits and a few inpatient services. The top services by record count are similar.

Exhibit IV-D contains two tables of utilization and allowed spend metrics for fiscal year 2024 for the top 20 DME CPT codes by allowed volume and the top 20 DME CPT codes by record count, respectively.

# SECTION V: AVERAGE ALLOWED MEDICAL SPEND PER PROCEDURE BY FACILITY FOR TOP PROCEDURES

Exhibit V-A provides the City's average allowed by facility for the top 10 facilities and top 20 inpatient MS-DRG. We only show the facility averages when at least 25 services were performed. The average allowed per admission varies by facility, with more variation for some MS-DRGs than others. Exhibit V-B provides comparable information for outpatient services. Again, there is a wide range of allowed amounts for certain CPT codes.

Exhibit V-A contains two tables of allowed medical spend per admit by hospital for fiscal year 2024 for the top 20 MS-DRGs by allowed volume and the top 20 MS-DRGs by admit count, respectively. We have included the results across all hospitals as well as the top 10 hospitals by allowed volume over fiscal years 2022 through 2024. We have blinded results for any facility that had below 25 admits for the given DRG.

Exhibit V-B contains two tables allowed medical spend per record by hospital for fiscal year 2024 for the top 20 outpatient CPT codes by allowed volume and the top 20 outpatient CPT codes by record count, respectively. We have included the results across all hospitals as well as the top 10 hospitals by allowed volume over fiscal years 2022 through 2024. We have blinded results for any facility that had below 25 records for the given CPT.

Exhibit V-C contains utilization and allowed spend metrics by facility for fiscal year 2024 for the top 20 MS-DRGs by admit count, respectively. We have included the results across all hospitals as well as the top 10 hospitals by allowed volume over fiscal years 2022 through 2024. We have blinded results for any facility that had below 25 admits for the given DRG.

# 4. Methodology

Our analysis uses historical medical claims data to assess prices. We define prices to be the full allowed amount that providers may collect for a given service inclusive of the amount reimbursed by the health plan and any member paid amounts such as copayments, coinsurance, and deductibles. The results presented here reflect the City employee health plan's facility and professional prices from the medical claims data for the City employees and their covered dependents. Individuals with Medicare coverage are excluded from the analysis.

The per member per year (PMPY) views reflect the total allowed prices in the given fiscal year on a per member basis.

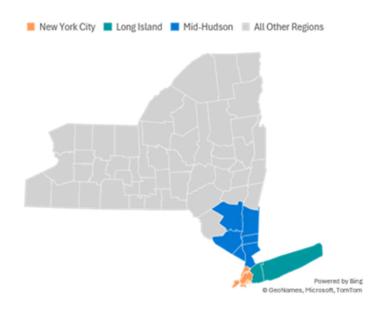

For inpatient admissions, we show allowed medical spend per admission averages by facility and by MS-DRG. Similarly, we show average medical spend per unit by CPT for outpatient facility services. These amounts only include the facility cost associated with the service and exclude professional costs. For professional and DME, we show the average allowed medical spend per unit by CPT. For DME, we show modifiers for new equipment (NU), used equipment (UE), and rental equipment (RR). Claims are excluded from the average allowed medical spend analysis when the City's health plan is not the primary payer and when the patient has Medicare coverage.

Facility claims are identified as claims billed by a hospital, skilled nursing facility, dialysis facility, ambulatory surgical center, or other type of facility. As shown in the summaries of allowed medical spend by facility, the City's facility allowed medical spend is predominately for hospital claims. Inpatient facility claims are identified as claims with room and board charges. Claims for inpatient admissions that originate in a hospital emergency room are assigned to inpatient facility. In general, claims performed in an off-campus outpatient department that are billed by a hospital are assigned to the billing hospital in the *by facility* views presented in this report. In some exhibits facility claims are aggregated by the hospital billing identifier and by the hospital system. Some hospitals have multiple campuses assigned to the hospital billing identifier, for example 330214 - NYU Langone Hospitals includes multiple locations in the New York City area.

Non-facility claims are assigned to professional/other and include the professional fees associated with physician services rendered in a hospital setting as well as an office setting.

Appendix 1 shows the county to geographic region mapping. The figure below shows a graphical view of the geographic regions. Areas outside of New York State are assigned to "other". Appendix 2 lists the hospital systems and facilities shown in the report. We limited the facilities shown in the report to facilities with over \$5M in annual allowed medical spend between fiscal years 2022 and 2024. Any facilities below this threshold or outside the core CBP service area are mapped to "Other Providers" in the facility and system listing and excluded from Appendix 2.

### FIGURE: GEOGRAPHIC REGION DEFINITIONS

# 5. Limitations and Considerations

Milliman prepared this report for the City of New York on behalf of its Employee Benefits Program, to support the requirements under Local Law 78 for the CBP. This report is intended for the City's review and discussion purposes only. It should not be used for any other purpose.

This material has been prepared solely for the use and benefit of the City of New York and its Employee Benefits Program. Milliman acknowledges that the report will be provided to the Office of Healthcare System Strategy and Accountability, who will include the report in the documents it provides to the New York City Council. Milliman does not intend to benefit, and assumes no duty or liability to, any third-party recipient of its work. This report should be reviewed in its entirety, and any third party recipients should engage qualified professionals for advice appropriate to their own specific needs.

This analysis is based on historical data and may not reflect current and future financial relationships. Emerging experience should be monitored and updates made as appropriate. The report present averages, and significant variation may exist within the data underlying these averages. Some of the figures and exhibits reflect different time periods and may not be directly comparable.

In preparing this information, we relied on Local Law 78, data from the City and its health plan providers Elevance and Emblem Health, and data and reference materials published by CMS. We accepted this information without audit but reviewed the information for general reasonableness. If the data or information relied upon is inaccurate or incomplete, the information in this material will be likewise inaccurate or incomplete.

Models used in the preparation of our analysis were applied consistent with their intended use. We have reviewed the models, including their inputs, calculations, and outputs for consistency, reasonableness, and appropriateness to the intended purpose and in compliance with generally accepted actuarial practice and relevant actuarial standards of practice (ASOP). The models, including all input, calculations, and output may not be appropriate for any other purpose.

Guidelines issued by the American Academy of Actuaries require actuaries to include their professional qualifications in all actuarial communications. Charlie Mills and Suzanne Taranto are members of the American Academy of Actuaries, and they meet the qualification standards for performing the analyses in this report.

# Appendix 1: Region Definitions

### **New York City**

- Bronx County
- Kings County
- New York County
- Queens County
- Richmond County

### Long Island

- Nassau County
- Suffolk County

### Mid-Hudson

- Dutchess County
- Orange County
- Putnam County
- Rockland County
- Ulster County
- Westchester County

### **All Other Regions**

- Albany County
- Allegany County
- Broome County
- Cattaraugus County
- Cayuga County
- Chautauqua County
- Chemung County
- Chenango County
- Clinton County
- Columbia County
- Cortland County
- Delaware County
- Erie County
- Essex County
- Franklin County

- Fulton County
- Genesee County
- Greene County
- Hamilton County
- Herkimer County
- Jefferson County
- Lewis County
- Livingston County
- Madison County
- Monroe County
- Montgomery County
- Niagara County
- Oneida County
- Onondaga County
- Ontario County
- Orleans County
- Oswego County
- Otsego County
- Rensselaer County
- Saint Lawrence County
- Saratoga County
- Schenectady County
- Schoharie County
- Schuyler County
- Seneca County
- Steuben County
- Sullivan County
- Tioga County
- Tompkins County
- Warren County
- Washington County
- Wayne County
- Wyoming County
- Yates County
- All out-of-state counties

# Appendix 2: Hospital Systems and Facilities

### **Bon Secours Charity Health System**

Good Samaritan Hospital of Suffern

### Catholic Health Services (CHS) (formerly LIHN)

- Good Samaritan University Hospital
- Mercy Hospital
- St. Francis Hospital, Roslyn
- St. Joseph Hospital

#### **Garnet Health System**

Garnet Health Medical Center

### **Hospital for Special Surgery**

Hospital for Special Surgery

### Independent

- Brooklyn Hospital Center Downtown Campus
- Maimonides Medical Center
- Richmond University Medical Center

### **Memorial Sloan Kettering**

Memorial Sloan Kettering Cancer Center

### **Montefiore Health System**

- Montefiore Medical Center
- Montefiore Nyack Hospital
- St. Luke's Cornwall Hospital
- White Plains Hospital Center

### Mount Sinai Health System

- Mount Sinai Beth Israel
- Mount Sinai Hospital
- Mount Sinai South Nassau
- Mount Sinai West

### **NYC Health & Hospitals Corporation (HHC)**

- Bellevue Hospital Center
- Jacobi Medical Center
- Kings County Hospital Center

### **NYU Langone Health**

NYU Langone Hospitals

### **New York Presbyterian**

- New York-Presbyterian Brooklyn Methodist Hospital
- New York-Presbyterian Hospital
- New York-Presbyterian Hudson Valley Hospital
- New York-Presbyterian Queens

#### **Northwell Health**

- Huntington Hospital
- Lenox Hill Hospital
- Long Island Jewish Medical Center
- Mather Hospital of Port Jefferson
- North Shore University Hospital
- Northern Westchester Hospital
- Phelps Hospital
- Plainview Hospital
- South Shore University Hospital
- Staten Island University Hospital

### **Nuvance Health (formerly Health Quest)**

Vassar Brothers Medical Center

### **Stony Brook**

13

Stony Brook University Hospital

#### Westchester Medical Center Health Network

Westchester Medical Center

Milliman is among the world's largest providers of actuarial, risk management, and technology solutions. Our consulting and advanced analytics capabilities encompass healthcare, property & casualty insurance, life insurance and financial services, and employee benefits. Founded in 1947, Milliman is an independent firm with offices in major cities around the globe.

### Appendix 3 City of New York Comprehensive Benefits Plan Glossary

Term	Definition
	Total amount of fee-for-service payments for covered medical services including the amount that the plan pays, the patient pays, and any other payer pays for
	covered services. Provider bonus, capitation, and risk sharing payments are not included. Carrier / plan administrative costs are not included. Prescription drug
Allowed	cost and utilization (i.e., retail and mail order pharmacy) are not included in this analysis.
Capitation	A payment model in which healthcare providers are paid a fixed amount of money per patient per month/year in advance for the delivery of healthcare services.
Coordination of Benefits	Total amount of fee-for-service payments for covered medical services including the amount that any other payer pays.
Dependent	Covered dependent of a City of New York employee.
Employee	City of New York employee covered under the medical plan.
	In the context of this report a facility refers to a hospital, ambulatory surgical center (ASC), dialysis center, or other type of facility that bills for medical services
Facility	separately from the physician or other professional performing the service.
Fee for Service (FFS)	A payment model in which healthcare providers are paid for each service they perform, such as a visit or procedure.
Hospital ID	CMS hospital identifier, specifically the CMS Certification Number (CCN).
Member	Enrollees in a health plan or program. Includes both employee enrollees and their spouses/dependents.
	Total amount of fee-for-service payments for covered medical services including the amount that the plan pays. Provider bonus, capitation, and risk sharing
Paid Amount	payments are not included.
Patient Pay Amount	Total amount of fee-for-service payments for covered medical services including the amount that the patient pays.
Per Member Per Year (PMPY)	The average cost of care for each member of a health plan on an annual basis.
Professional	In the context of this report a professional refers to physicians and other health care professionals who bill for medical services.
Specialty	The area of medicine in which the provider has education and expertise.

#### Notes:

The fiscal year starts July 1 and ends June 30 of the year. E.g., 2022 is July 1, 2021 through June 30, 2022. Facility Name "New York Presbyterian" includes the following campuses:

- Weill Cornell Medical Center

- Columbia University Irving Medical Center

- Westchester Cancer Center

Facility Name "NYU Langone Hospitals" includes the following campuses:

- Tisch Hospital

NYU Langone Hospital Long Island
 Perlmutter Cancer Center

- NYU Langone Hospital Brooklyn

# 2025 New York City Hospital Price Transparency Report

turquoise.health

## Introduction

The objective of this report is to examine how hospitals across New York City are reimbursed by commercial payers for healthcare services. Historically, such analyses have been limited by the lack of publicly available pricing data. However, the advent of price transparency regulations has provided a new opportunity to systematically evaluate hospital payment structures.

While transparency data offers significant advantages in facilitating comparative analyses, it also presents methodological challenges that require careful interpretation. In this paper, we outline our analytical framework for assessing how payers reimburse hospitals and health systems, define key analytical perspectives ("skews") used in the evaluation, and discuss the nuances of working with price transparency data to ensure accuracy and fidelity. Our findings are presented by payer, providing insights into relative reimbursement patterns across systems. Additionally, we include the underlying rate data—organized by service, hospital, and payer—to enable direct examination of the pricing structures at the individual billing code level.

#### **Disclaimer**

The negotiated rates presented in this analysis reflect the contracted reimbursement amounts between payers and providers for specific, explicit billing codes. These rates represent the agreed-upon payment for particular services or procedures as defined by the payer-provider contract. However, these rates do not necessarily correspond to the total amount a patient may be responsible for paying for a service / episode.

In practice, the actual cost incurred by a patient can be influenced by multiple additional factors. Many services involve not only the facility fee associated with the hospital but also professional fees for physicians, anesthesiologists, radiologists, or other healthcare providers involved in the patient's care. Additionally, ancillary services such as laboratory tests, imaging, and pharmaceuticals may be billed separately and may not be reflected in the negotiated rate for a specific procedure or service.

Furthermore, patient responsibility is determined by the terms of their individual health insurance plan, including deductible obligations, copayments, and coinsurance requirements. As a result, the negotiated rate between a payer and a provider should not be interpreted as a direct representation of out-of-pocket costs for a patient. Anyone seeking an accurate estimate of their financial responsibility should consult their insurer or healthcare provider for a detailed breakdown of applicable charges.

# Methodology & Considerations

#### **Overview**

This study analyzed a selection of payers, hospitals, and billing codes to assess reimbursement trends and pricing structures. A targeted set of codes—comprising 12 inpatient Medicare Severity-Diagnosis Related Groups (MS-DRGs) and 27 outpatient Healthcare Common Procedure Coding System (HCPCS) codes—was used to represent a cross-section of services that are both highly utilized and potentially shoppable. While this approach captures key service categories, it does not encompass the full spectrum of hospital services, introducing potential limitations in representativeness.

To do so, four distinct analytical frameworks were used:

- (1) Rate Availability Assessment: The proportion of codes with available reimbursement data was evaluated, acknowledging that data gaps may arise due to variations in reporting methodologies.
- (2) Contract Methodology Analysis: The study examined the contractual structures underlying reimbursement rates, recognizing that heterogeneous contracting mechanisms complicate direct comparisons. This analysis identified the subset of rates that were methodologically comparable.

- (3) Market Relativity Comparison: Hospitals were benchmarked within their respective systems and payer settings to determine whether their rates, on average, were above or below the cohort market average for the selected services.
- (4) Medicare Relativity Comparison: The relative reimbursement levels of hospital systems were evaluated in terms of their average percentage of Medicare rates, providing insight into the extent to which commercial payments deviate from Medicare benchmarks.

These methodologies—benchmarking against Medicare rates and commercial market averages—are widely recognized as standard evaluation practices.

The transparency data used in this report is based on what was publicly available as of January 31, 2025.

#### **Methodology / Considerations**

#### Data Gathering, Inclusion & Cleaning

This analysis focuses on extracting and comparing negotiated rates for specific inpatient and outpatient institutional billing codes. The selected codes represent a mix of highly utilized services and elective procedures that are considered consumer-shoppable. Our primary data source for these negotiated rates is the machine-readable files (MRFs) published by hospitals, which are mandated to include payer-specific reimbursement information. However, in cases where hospital data was incomplete or unavailable, we supplemented our dataset with rates extracted from payer-published MRFs.

#### <u>Data Availability and Challenges in Rate</u> <u>Extraction</u>

The accuracy and completeness of hospital-reported data present several challenges. While our methodology seeks to identify explicit billing codes tied to specific services, not all hospitals provide complete commercial negotiated rates for each payer. Missing rates may arise due to several factors: (1) the hospital may have omitted the rate from its reporting, either as an example of non-compliance or an unintentional omission; (2) the hospital may not be in-network with the given payer - meaning a rate does not exist; or (3) the hospital may have reported negotiated rates for some billing codes but not those targeted in our analysis.

Additionally, certain services may be reimbursed through alternative contractual qualifiers rather than the explicit billing codes we sought. For example, some payers, such as HealthFirst, utilize APR-DRGs instead of MS-DRGs for inpatient services, meaning that while an APR-DRG rate may be present in the data, the corresponding MS-DRG rate might not be explicitly listed. Similarly, for complex emergency department visits, such as those billed under HCPCS 99285, some contracts do not reference this CPT code directly but instead use a revenue code (e.g., 450) to indicate reimbursement. These variations introduce ambiguity in rate reporting and necessitate careful interpretation of the data.

Further complicating rate extraction is the treatment of soft-coded outpatient CPTs, which are not always explicitly defined in hospital MRFs. Unlike fixed chargemaster rates, soft-coded procedures are assigned at the time of billing based on clinical documentation, payer guidelines, and coding rules. This means that for many outpatient services, there is no predefined, hospital-listed rate, making it difficult to establish direct comparability across hospitals. Similarly, inpatient DRG-based reimbursement structures do not always align with chargemaster-based pricing, contributing to inconsistencies in the available data.

#### **Network Selection**

We focused on the broadest and most open-access networks available for each of the major payers included in this analysis. These networks are generally associated with PPO or EPO products, which are generally the products covering the most individuals, and offering the widest provider access. Specifically, for Aetna, we examined the Open Access network; for Cigna, we focused on the Open Access Plus (OAP) network; for UnitedHealthcare, we considered the Choice Plus PPO network; for Emblem, we considered the GHI PPO network; and for Anthem/Empire, we analyzed the Preferred Provider network. HealthFirst differed from the other payers in that our focus was on capturing its exchange product, specifically its Qualified Health Plan (QHP). A key methodological challenge in this analysis was that hospitals do not always explicitly post these specific payer product names in their publicly available pricing files. While some hospitals provide detailed breakdowns, others use more generalized categories such as "Commercial" or "All Commercial." In these cases, we assumed that the broad commercial contract between the hospital and the payer encompasses the targeted network. This assumption introduces a degree of uncertainty, as it is possible that certain rates labeled as "Commercial" may not align precisely with the intended PPO or EPO network.

To enhance the accuracy of our dataset, we systematically excluded non-commercial plans. With the exception of HealthFirst, we also removed QHP/Exchange plans to ensure that our comparisons remained focused on broad commercial networks. Additionally, we excluded NY Essential Plans from our dataset, as these products do not align with the scope of our analysis.

Despite these efforts, an inherent limitation of this approach is the potential for discrepancies between the rates we display and the actual negotiated rates for the respective payer networks and products. In cases where hospitals do not provide granular details on their contracts, our displayed rates may not precisely reflect the exact reimbursement structure for the intended network. This limitation underscores the importance of interpreting the results with an understanding of the underlying data constraints.

#### Outlier Identification and Data Integrity Controls

To maintain data integrity and prevent distortion due to extreme values, we applied systematic logic to identify and remove outliers. Outlier detection was based on two key benchmarks: (1) market-based claim allowable data and (2) Medicare reimbursement rates.

Using claims allowable benchmarks derived from the New York market, we excluded any rate that fell below 25% of the market 5th percentile for a given service or exceeded 250% of the 95th percentile. Additionally, we implemented Medicare-based thresholds, removing any rate that was less than 50% of Medicare or greater than 10,000% of Medicare. These measures ensured that our analysis was not unduly influenced by anomalous or potentially erroneous reported rates. By combining strict rate selection criteria, supplementary data sourcing, and robust outlier detection methodologies, our analysis aims to provide the most accurate and reliable assessment of payer-provider negotiated rates while acknowledging the inherent limitations of the available data.

### Rate Standardization and Handling of Different Contract Methodologies

Whenever possible, our aim was to establish a nominal dollar amount for each billing code, ensuring that our dataset reflects a standardized rate format across different payer-provider agreements. However, in achieving this goal, we adhered to strict criteria to prevent erroneous imputations. Since hospital-payer contracts utilize diverse rate-setting mechanisms, we carefully applied structured methodologies to convert non-dollar rate formats into meaningful values while preserving data integrity.

#### Variability in Contracting and Rate Methodologies

Hospital-payer contracts can employ a variety of reimbursement structures, each with distinct implications for rate reporting. Within hospital-published machine-readable files (MRFs), negotiated rates may be explicitly listed as dollar amounts or represented as percentage-based values relative to billed charges. The primary contract methodologies observed in these data include:

- Case Rate A fixed, pre-negotiated payment covering all facility-related costs for a specific episode of care. This methodology is commonly applied to inpatient MS-DRGs and outpatient surgical groupers, where reimbursement is determined per case rather than per service.
- Fee Schedule A structured fixed-price model in which each billed service is assigned a specific reimbursement amount. Fee schedules are particularly prevalent in outpatient care and are often benchmarked against the Medicare Fee Schedule, serving as a reference point for commercial contracts.
- Per Diem A daily rate structure in which the hospital is reimbursed a fixed amount per inpatient day. While most common in acute inpatient admissions, per diem rates can also apply in certain outpatient settings (e.g., dialysis services).

(list continued on next page)

- Percent of Billed Charges Under this methodology, hospitals are reimbursed as a percentage of their gross billed charges rather than a fixed fee. This approach can introduce significant variability, as final payments are dependent on hospital chargemaster pricing, which is not standardized.
- Other The Centers for Medicare & Medicaid Services (CMS) allows for an "Other" classification when a hospital's reimbursement methodology does not fit within the predefined contract types. This category encompasses various alternative payment models.

Beyond these primary contract types, additional contractual provisions can further modify reimbursement amounts, including stop-loss clauses, not-to-exceed limits, lesser-of provisions, and outlier adjustments. These elements are often difficult to capture within the transparency data and are therefore not explicitly accounted for in this analysis.

#### <u>Standardizing Rates: Conversion to Nominal Dollar</u> Values

To ensure comparability across different rate structures, we applied the following methodology to extract and calculate dollar-denominated rates:

- For Case Rates, Fee Schedules, and "Other" methodologies:
  - If a negotiated rate was published as a dollar amount, it was directly incorporated into our dataset.
- For Case Rates, Fee Schedules, Percent of Billed Charges, and "Other" methodologies where only a percentage value was provided:
  - If the file included both a percentage-based rate and a corresponding gross charge, we multiplied the percentage value by the gross charge to calculate a dollar-based reimbursement amount.
  - If the gross charge was not available, we reported the percentage value as-is while clearly indicating that it represents a percentage of billed charges rather than a fixed payment.

- · For Per Diem Rates:
  - Per diem rates were only included if explicitly reported as a dollar amount.
  - To enable aggregation and comparison with other inpatient rates (e.g., MS-DRGs), we multiplied per diem rates by the Medicare Average Length of Stay (ALOS) to approximate a total episode-of-care cost.

### <u>Handling Claims-Based Estimated Allowed</u> Amounts

In some cases, hospitals are unable to report a negotiated rate for a given service because the rate either does not exist or cannot be accurately captured within the MRF schema. In such instances, hospitals are required to report a claims-based estimated allowed amount, which reflects the typical reimbursement the hospital receives for the service based on historical claims data.

It is important to distinguish these estimated allowed amounts from negotiated rates, as they do not necessarily reflect contracted reimbursement terms. Additionally, hospitals are subject to patient privacy constraints that may limit the number of estimated allowed amounts reported, particularly for low-volume services. Consequently, while estimated allowed amounts provide useful insights into typical payment patterns, they should not be interpreted as precise contractual reimbursement rates.

By applying these rigorous methodologies, our analysis ensures consistency in the presentation of negotiated rates while acknowledging the inherent complexities and limitations of payer-provider reimbursement structures.

#### Summary of Findings, Special Considerations in <u>Aggregations</u>

In addition to the aforementioned considerations related to the data powering the Summary of Findings / Underlying Data sections, it is important to note additional considerations related to our methodology in creating the Summary of Findings.

#### (1) Normalization of Medicare Rates

Given significant variability in facility-adjusted Medicare rates across the New York City market, a standardized "market average Medicare rate" was employed. This approach ensures consistency in comparisons across hospitals by using an aggregate reference rather than facility-specific Medicare rates.

#### (2) Exclusion of Certain Payment Structures

Only rates structured as fee schedules or case rates were included in the cohort and Medicare comparisons. Per diem rates and percentage-ofcharge arrangements were excluded unless the latter could be directly compared to billed charges.

#### (3) Equal Weighting of Hospitals Within Systems

Hospital systems were assessed without weighting adjustments based on factors such as net patient revenue or bed count. While some systems operate under unified contractual structures, which may mitigate the impact of this limitation, each hospital was treated as an independent entity within the analysis.

#### (4) Equal Weighting of Codes Across Settings

No utilization-based weighting was applied when aggregating results across inpatient and outpatient settings. Each code within the selected categories was assigned equal significance in the analysis.

This methodological framework facilitates a structured evaluation of hospital pricing and reimbursement patterns while acknowledging the inherent limitations in data availability, contract heterogeneity, and weighting considerations

## Summary of Findings, Payer Specific

## Aetna Open Access

A review of Aetna's negotiated rates data indicates broad representation across hospitals in New York City. The data suggests that Aetna has established contracts utilizing MS-DRGs and HCPCs as the primary coding mechanisms for inpatient and outpatient services. A majority of rates were expressed in dollar values, facilitating comparative analyses.

When benchmarked against market Medicare rates, Montefiore Medical Center and NewYork-Presbyterian demonstrated the most competitive inpatient reimbursement rates. A similar trend was observed in the outpatient category, where NYU Langone also exhibited favorable pricing. These findings remained consistent when compared to commercial market cohort rates, with the aforementioned three health systems maintaining the most advantageous reimbursement structures.

Conversely, NYC Health & Hospitals exhibited lower negotiated rates across all categories. Relative to Medicare rates, their reimbursement levels were subdued, and when assessed against commercial market cohort rates, they trailed by approximately 20% for inpatient services and 50% for outpatient services.

\*Payer: Aetna

# **Anthem**Preferred Provider

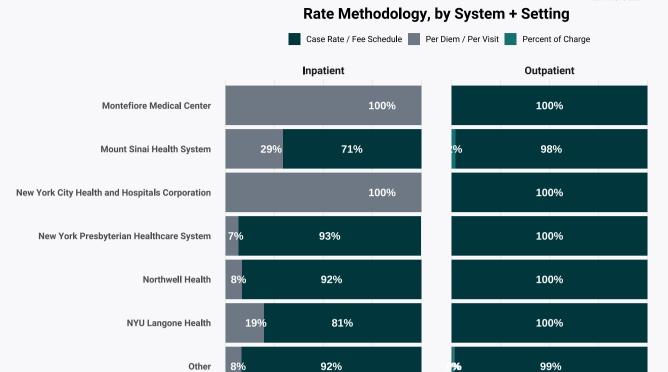

An analysis of Anthem's negotiated rates data revealed inconsistent inpatient coverage, with limited available rates for certain systems, particularly NYC Health + Hospitals and Montefiore. The inpatient data exhibited a mix of coding structures, suggesting variability in contract frameworks across different hospital systems. While this issue was less pronounced on the outpatient side, some gaps persisted.

These data gaps hindered the completeness of comparative analyses against Medicare and commercial market cohort rates. However, among available data, NewYork-Presbyterian and NYU Langone demonstrated the most favorable reimbursement rates across both inpatient and outpatient services when benchmarked against market Medicare averages. Montefiore also ranked highly in the outpatient category.

When comparing against broader market (non-Medicare) rates, NewYork-Presbyterian emerged as the most competitive system, maintaining the most advantageous negotiated pricing.

#### System Average Relativity to Anthem Market Average - Outpatie

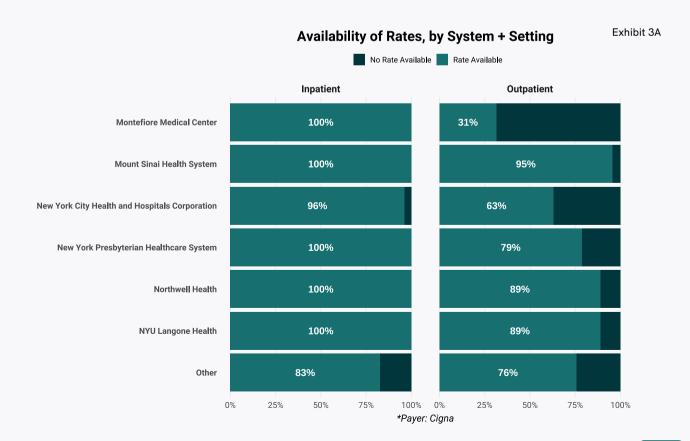

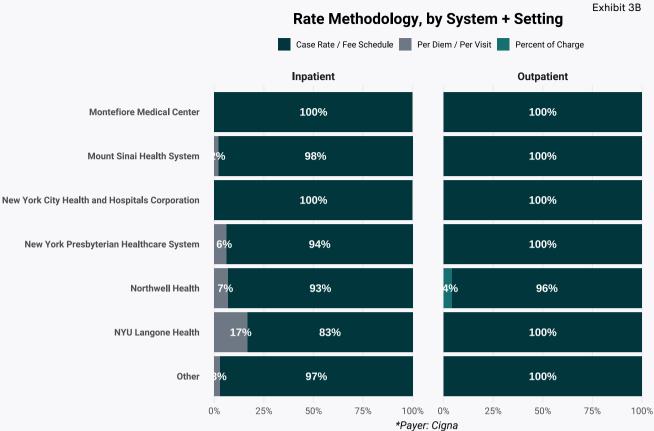

## Cigna Open Access Plus

An evaluation of Cigna's negotiated rates data indicated strong overall representation. On the inpatient side, most MS-DRGs were available, while the outpatient data was largely complete, with the exception of Montefiore. The rate methodologies were well-structured for analysis, as most rates were expressed in dollar values, facilitating direct comparisons.

A key finding was the tighter distribution of Medicare relativities across hospital systems, in contrast to the greater variability observed with other payers. NYC Health + Hospitals ranked lowest in Medicare inpatient relativity but performed at a mid-tier level for outpatient services. However, when assessed against the commercial market cohort (excluding Medicare), NYC Health + Hospitals lagged behind most systems, with Mount Sinai being the only other outlier. This suggests that, relative to both Medicare benchmarks and the broader commercial market, NYC Health + Hospitals underperforms in its negotiated rates with Cigna.

NewYork-Presbyterian consistently achieved the most favorable reimbursement rates, surpassing market averages by 60% for inpatient services and 42% for outpatient services, suggesting its position as the most competitively priced system.

# Emblem GHI PPO

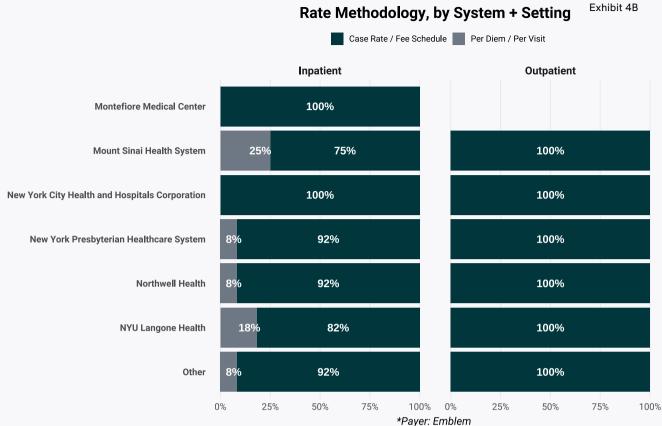

An assessment of Emblem's negotiated rates data revealed relatively limited coverage compared to other payers. Montefiore, in particular, exhibited poor representation across both inpatient and outpatient services, though some data was available. This suggests that only a subset of codes was reported in their machine-readable file or payer data attestation. While outpatient coverage was not comprehensive, it remained sufficient for analysis.

For the reported rates, most were expressed in dollar values, which facilitated aggregation and comparative analysis. Among the available inpatient data, Montefiore's negotiated rates were significantly higher than market Medicare averages, surpassing all other systems.

In the outpatient category, Northwell, NYU Langone, and NewYork-Presbyterian exhibited closely aligned negotiated rates relative to Medicare, with a relatively tight distribution across systems. However, when benchmarked against broader commercial market cohort rates, NewYork-Presbyterian once again emerged as the dominant system, securing the highest negotiated rates for both inpatient and outpatient services.

NYC Health + Hospitals lags behind peer systems, maintaining lower negotiated rates across all comparisons.

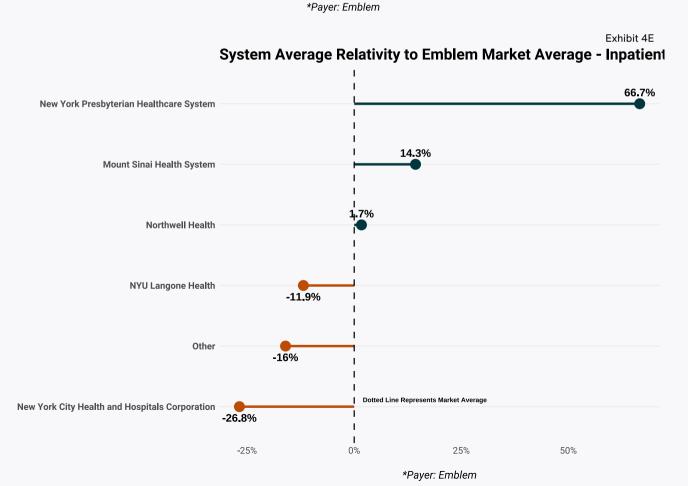

\*\*This visual represents the breakdown of methodology only in cases where a rate was available.

### **Emblem, Continued**

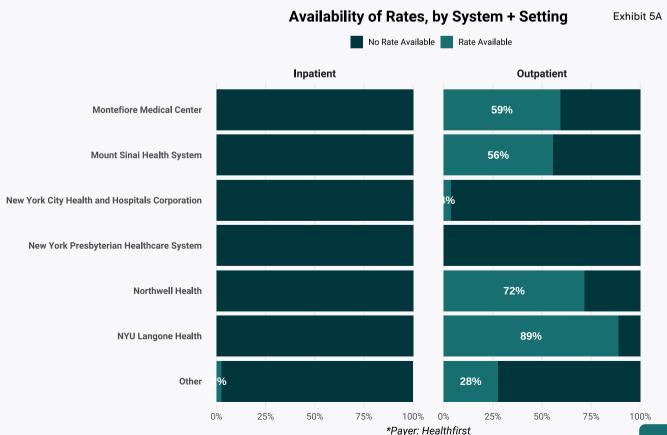

# HealthFirst QHP

HealthFirst was incorporated into this analysis due to its significant market presence and influence within the healthcare landscape. Notably, its inclusion was distinct, as it was the only payer for which the study examined the Qualified Health Plan (QHP) offered through the exchange.

Despite the expectation of comprehensive rate data, the availability of rates for HealthFirst was exceptionally low, as illustrated in Figure 5A. However, this limitation was not attributable to a lack of rate disclosures by hospitals. Instead, the observed data gaps stemmed from the specific coding frameworks utilized in hospital postings (refer to the methodology section for further details).

A key finding was that many hospitals reported rates using All Patient Refined Diagnosis-Related Groups (APR-DRGs) rather than Medicare Severity Diagnosis-Related Groups (MS-DRGs). This pattern suggests that APR-DRGs serve as the primary mechanism for inpatient reimbursement within HealthFirst's contracted arrangements. Consequently, due to the inconsistency in rate structures and coding methods, a comprehensive summary analysis was not conducted for HealthFirst, diverging from the approach used for other payers.

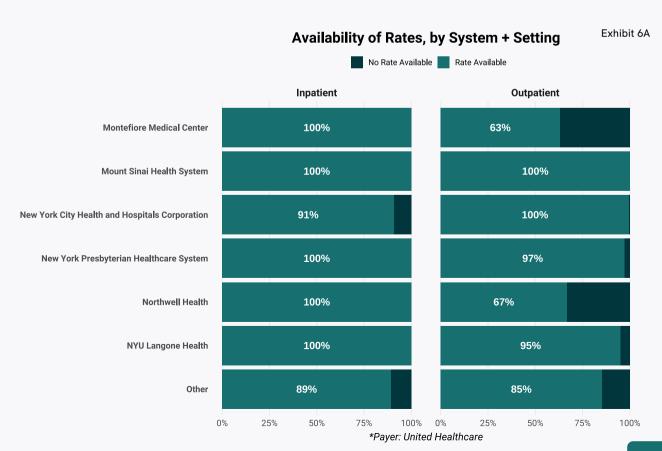

## **United Healthcare**

#### **Choice Plus**

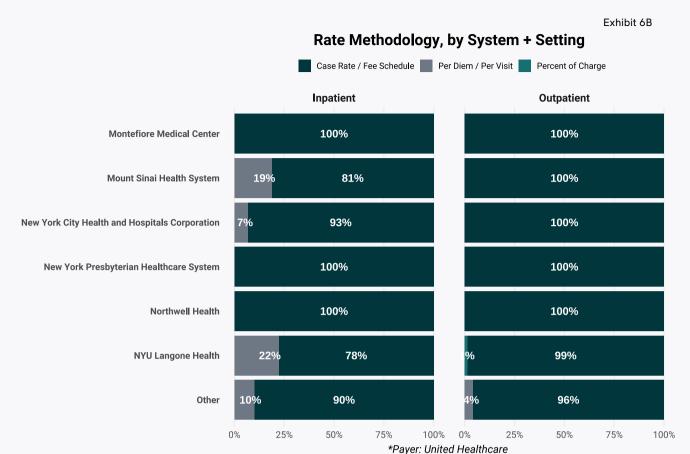

An evaluation of UnitedHealthcare's negotiated rates data showed strong representation across hospitals in New York City. The data suggests that UnitedHealthcare contracts utilize MS-DRGs and HCPCs as the primary coding mechanisms for inpatient and outpatient services. Most reported rates were expressed in dollar values, which facilitated comparative analysis.

When benchmarked against Medicare rates, NewYork-Presbyterian and Mount Sinai secured the highest inpatient reimbursement rates, with Presbyterian maintaining a notable lead. In the outpatient category, Montefiore commanded the highest rates, followed by NYU Langone and NewYork-Presbyterian in the next top positions.

This ranking structure remained relatively consistent when shifting the comparison to commercial cohort market rates rather than Medicare benchmarks. NYC Health + Hospitals ranked in the middle of the distribution for inpatient services but fell significantly behind peer institutions in the outpatient category.

Source: Community Benefit Insight (2022). Return of organization exempt from income tax [Form 990].

Notes: CEO total compensation (Schedule J, Part II, Column E) is combined for CEOs overseeing multiple hospitals within a system.

Going concern was added based on audit reports compiled and flagged by ProPublica and indicates substantial doubt about an organization's ability to meet financial obligations and continue operating for the foreseeable future. Calvary Hospital (hospice/palliative care hospital) & Rockefeller University Hospital (research hospital) were excluded from NYC hospitals that filed a 990 form in 2022.
