Get Your Updated COVID-19 Booster and Flu Shot Today!

Flu shots and the new COVID-19 vaccine booster are recommended right now. Flu shots are available for people age 6 months and older, and the new COVID-19 booster, designed to protect against the new omicron subvariants, is available for people age 5 and older. If you received your most recent COVID-19 vaccine dose at least two months ago, now is the time to get boosted.

Can I get the new COVID-19 booster at the same time as my flu shot?
Yes. You can get them at the same time or separately. The important thing is to get both vaccines soon. COVID-19 and the flu virus will be spreading at the same time this fall and winter. Both shots help decrease your risk of needing medical care.

Can I get the new COVID-19 booster if I recently had COVID-19?
Yes, but consider waiting three months after you had COVID-19. You may want to get your booster sooner if you or a loved one are at higher risk of exposure to or severe illness from COVID-19. Talk to your health care provider if you have questions.

If you do not have a provider, call 311 to get connected to care. Care is provided in New York City regardless of immigration status, insurance or ability to pay.

Which COVID-19 booster should I get?
You can get the updated Pfizer booster (if you are age 5 or older) or the updated Moderna booster (if you are age 6 or older), regardless of the brand you received previously.

Get your new COVID-19 booster and flu shot today! To find a vaccination site, visit nyc.gov/vaccinefinder or call 877-VAX-4NYC (877-829-4692). For more information, visit nyc.gov/health/covidvaccine or nyc.gov/health/flu.
