

What's Going On Here?

The ESCR team is starting work on the flood protection system in this area, including the floodgates crossing the FDR Drive and floodwalls on both sides of the roadway. The rendering to the right shows the floodgates in operation.

Because this work requires some excavations in the roadway, it can be disruptive and loud. We are required to perform many of these activities at night to minimize traffic disruptions. We apologize for the disturbance.

Several floodgates north of E. 15th Street have already been installed under ESCR, including one shown to the right at E. 23rd Street. This project will protect residents, businesses, and utilities from flooding. Thank you for your patience as we install this critical infrastructure!

Rendering of E. 13th St. floodgate deployed during storm condition

This work is part of the ESCR project's Project Area 1 contract, SANDRESM1.
