## DATA REPORTING QUALIFIERS

Client: AKRF Inc

Job Number: 460-116807-1

Lab Section	Qualifier	Description
GC/MS VOA		
	B	Compound was found in the blank and sample.
	U	Indicates the analyte was analyzed for but not detected.
	*	LCS or LCSD is outside acceptance limits.
	F1	MS and/or MSD Recovery is outside acceptance limits.
	F2	MS/MSD RPD exceeds control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
GC/MS Semi VOA		
	U	Indicates the analyte was analyzed for but not detected.
	*	LCS or LCSD is outside acceptance limits.
	F1	MS and/or MSD Recovery is outside acceptance limits.
	F2	MS/MSD RPD exceeds control limits
	E	Result exceeded calibration range.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	X	Surrogate is outside control limits
GC Semi VOA		
	U	Indicates the analyte was analyzed for but not detected.
	*	LCS or LCSD is outside acceptance limits.
	F1	MS and/or MSD Recovery is outside acceptance limits.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	X	Surrogate is outside control limits
	p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.

## DATA REPORTING QUALIFIERS

Client: AKRF Inc

Job Number: 460-116807-1

Lab Section	Qualifier	Description
Metals		
	F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL. The data are considered valid because the absolute difference is less than the RL.
	F3	Duplicate RPD exceeds the control limit
	U	Indicates the analyte was analyzed for but not detected.
	F1	MS and/or MSD Recovery is outside acceptance limits.
	4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
	W	PS: Post-digestion spike was outside control limits
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
	V	Serial Dilution exceeds the control limits
General Chemistry		
	U	Indicates the analyte was analyzed for but not detected.
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

- Appendix B - Laboratory Certifications (ELAP)
- Appendix C - Asbestos, Lead, and PCB Laboratory Analyses and Chains of Custody
- Appendix D - Asbestos Sketches

## 1.0 INTRODUCTION

Preliminary limited asbestos-containing materials (ACM), lead-containing paint (LCP) and polychlorinated biphenyls (PCB) caulk surveys were performed on February 15, 16 and 23, 2017 at the four buildings located at 103-107, 143, 145-149, 151-159 West 108<sup>th</sup> Street in New York, New York (the “study area”). Gregory Baird, a New York City-certified Asbestos Investigator, and New York State-certified Lead Risk Assessor of AKRF, Inc. (AKRF), conducted the surveys. AKRF’s asbestos and lead license and worker certifications are included in Appendix A.

At the time of the site inspection, the four buildings were occupied. The scope of services included:

- Inspection of the study area to identify suspect ACM, LCP, and PCB caulk;
- Collection of limited representative samples of suspect ACM;
- Collection of limited representative samples of suspect LCP;
- Collection of limited representative samples of suspect PCB caulk;
- Documentation of sampling locations on a Chain-of-Custody form; and
- Analysis of samples at a New York State Department of Health-approved laboratory.

## 2.0 SURVEY AREA DISCUSSION

The buildings at 103-107, 143, and 151-159 West 108<sup>th</sup> Street were utilized as parking garages and 145-149 West 108<sup>th</sup> Street was utilized as an emergency senior citizen shelter. 103-107 West 108<sup>th</sup> Street consisted of a three-floor parking garage with a partial cellar. 143 West 108<sup>th</sup> Street consisted of a five-floor parking garage with a cellar. 151-159 West 108<sup>th</sup> Street consisted of a four-floor parking garage with a cellar. The parking garages were constructed with concrete floor slabs and masonry foundations. Interior finish materials included drywall ceilings and walls, and vinyl and ceramic floor tiles. 145-149 West 108<sup>th</sup> Street consisted of a five-floor residential building with a cellar. The building was constructed with a concrete floor slab, wood decking and a masonry foundation. Interior finish materials included: drywall ceilings and walls; and vinyl and ceramic floor tiles, hard wood flooring and carpeting. The roofs (roofing materials) of the buildings were not included in this preliminary survey.

## 3.0 ASBESTOS SAMPLING AND ANALYTICAL METHODOLOGY

### 3.1 Sampling Rationale

Prior to demolition, building materials that could contain asbestos, referred to commonly as “suspect asbestos-containing materials,” were sampled in accordance with applicable protocols. Limited destructive sampling was performed using hand tools. Additional suspect materials may be present behind concrete blocks or walls or in other inaccessible areas.

### 3.2 Analytical Methodology

Samples were submitted to Alpha Labs, a New York State Department of Health Environmental Laboratory Approval Program (ELAP)-approved laboratory for analysis (ELAP #11833). Each sample was analyzed using Polarized Light Microscopy (PLM) methods. Materials that were found to contain greater than one percent (>1%) asbestos were identified as positive and classified as asbestos-containing. Other materials, in which either no asbestos was identified or trace amounts were detected (i.e., less than or equal to 1%), were classified as non-asbestos-containing. Samples were analyzed on a “positive-stop” basis, denoted as NA/PS on Table 1, i.e.,

once one sample of a material was determined to be ACM, other samples of the same material were not analyzed.

The PLM method has limitations when Non-Friable Organically Bound Materials (NOB) materials are analyzed. NOB materials that were found to be negative or trace asbestos by PLM methods were also analyzed by Transmission Electron Microscopy (TEM) methods, in accordance with ELAP requirements. Laboratory certifications are included in Appendix B.

## 4.0 ASBESTOS SUMMARY

### 4.1 Sampling Results

A summary of laboratory results of sampled suspect materials is included in Table 1. Analytical data sheets are included in Appendix C.

Notes: NAD=No Asbestos Detected  
NA/PS=Not Analyzed/Positive Stop  
Chrysotile is a type of asbestos fiber  
ACM samples are in bold

#### 4.2 Approximate Totals by Type of ACM

As indicated by the analytical results, floor tiles and associated mastics, window caulk, ceramic tile grout and pipe and pipe elbow insulation were determined to be ACM. Operational transite electrical panels and elevator brake pads could not be sampled and were determined to be Presumed ACM (PACM). The type and estimated quantities of asbestos-containing materials are included in Table 2.

**Table 2**  
**Asbestos Containing Material by Type and Location**  
**103-107, 143, 145-149 and 151-159 West 108<sup>th</sup> Street**  
**New York, NY**

Material	Location	Estimated Quantity
<b>103-107 West 108<sup>th</sup> Street</b>		
Yellow Tile Grout	1 <sup>st</sup> Floor - Bathroom	190 SF
PACM - Transite Electrical Panel	Roof – Mechanical Room	8 SF

## 5.0 LEAD PAINT

### 5.1 Sampling Methodology

Sample collection was performed to identify Lead-Containing Paint (LCP) prior to demolition. Limited representative samples (paint chips) were collected throughout the study area

### 5.2 Analytical Methodology

Samples were submitted to Alpha Labs. Samples were prepared and analyzed by Atomic Absorption Spectrometry (AAS) in accordance with ASTM Method D3335-85A. A summary of the lead testing is included in Table 3. Analytical data sheets are included in Appendix C.

**Table 3**  
**Paint Sampling and Analysis Summary**  
**103-107, 143, 145-149 and 151-159 West 108<sup>th</sup> Street**

159-11L	Black	Brick	Exterior – front	0.07
159-12L	White	Brick	Exterior – front	0.03

Note that lead-based paint or LBP (as distinct from LCP) is defined by the U.S. Environmental Protection Agency (USEPA) as paint that contains greater than or equal to 0.5% [5,000 parts per million (ppm)] lead by dry weight. However, the U.S. Occupational Safety and Health Administration (OSHA) does not define a threshold level of lead in paint that may cause lead exposure above the action level. LCP is thus,

paint that contains any detectable level of lead. All paint throughout the project site buildings shall be considered LCP.

## 6.0 PCB CAULK

### 6.1 Sampling Rationale

Window caulk sampling was performed with the intent to identify polychlorinated biphenyl (PCB)-containing window caulk prior to demolition of the buildings.

### 6.2 Analytical Methodology

Samples were submitted to Test America Laboratories, Inc. Samples were prepared and analyzed by Gas Chromatography in accordance with SW846 Method 8082 and Method 3540C – “Test Methods for Evaluating Solid Waste, Physical/Chemical Methods”. A summary of the PCB testing is included in Table 4. Analytical data sheets are included in Appendix C.

**Table 4**  
**PCB Sampling and Analysis Summary**  
**103-107, 143, 145-149 and 151-159 West 108<sup>th</sup> Street**  
**New York, NY**

Sample Number	Material	Building	Location	PCB Concentration (parts per million)
<b>143 West 108<sup>th</sup> Street</b>				
143-1	Exterior Window Caulk	143	5 <sup>th</sup> Floor - South	ND
143-2	Interior Window Glaze	143	5 <sup>th</sup> Floor - South	ND
143-3	Exterior Window Caulk	143	3 <sup>rd</sup> Floor - North	ND
143-4	Exterior Window Caulk	143	1 <sup>st</sup> Floor Office Window	ND
<b>145-149 West 108<sup>th</sup> Street</b>				
VL-1	Exterior Window Caulk	145-149	1 <sup>st</sup> Floor – Rear	ND
VL-2	Exterior Window Caulk	145-149	5 <sup>th</sup> Floor - Front	ND
<b>151-159 West 108<sup>th</sup> Street</b>				
159-1	Exterior Window Caulk	159	3 <sup>rd</sup> Floor - North	ND
159-2	Exterior Window Caulk	159	4 <sup>th</sup> Floor - South	ND

Note: ND=Analyzed for but not detected

Note that the USEPA defines "PCB Caulk" as caulk that contains PCBs at concentrations of 50 parts per million (ppm) or greater. All caulk samples were non-detect for PCBs.

## 7.0 CONCLUSIONS AND RECOMMENDATIONS

Based upon laboratory analysis of suspect ACMs, floor tiles and associated mastics, ceramic tile grout, window caulk, and pipe and pipe elbow insulation were determined to be ACM. Transite electrical panels and elevator brake pads were not tested but were determined to be PACM. These materials must be removed by a licensed asbestos abatement contractor prior to any disturbance, unless tested and found to be non-ACM. Additional destructive testing must be completed prior to renovation or demolition.

Lead was detected in 38 of 45 paint chip samples. Renovation and demolition activities with the potential to disturb lead-based paint and lead-containing paint must be performed in accordance with the applicable OSHA regulation (OSHA 29 CFR 1926.62-Lead Exposure in Construction). All paint throughout the project site buildings shall be considered LCP.

PCB caulk samples were all non-detect for total PCBs.

## 8.0 LIMITATIONS

Results of this limited investigation are valid as of the dates on which the investigation was performed. The roofs (roofing materials) of all the buildings and roof top mechanical spaces of 143 and 151-159 West 108<sup>th</sup> Street were not included in this survey. The 145-149 emergency senior citizen shelter building was completely occupied at the time of the inspection, therefore, only limited destructive sampling was performed in this building. All roofs, inaccessible, and occupied areas must be surveyed prior to any disturbance or demolition activities.

Additional suspect materials may be present behind walls, below grade, or in other inaccessible areas. This survey report is not an abatement specification and should not be used for specifying removal quantities, methods or techniques.

The findings set forth in this report are strictly limited in scope of the evaluation described herein. The conclusions and recommendations presented in the report are based solely on the services and any limitations described in this report. This report may be based solely or partially on data collected, conducted, and provided by AKRF and/or others. No warranty is expressed or implied by usage of such data. Such data may be included in other investigation reports or documentation. This report is intended for the use solely for West Side Federation of Senior and Supportive Housing. Reliance by third parties on the information and opinions contained herein is strictly prohibited and requires the written consent of AKRF. AKRF accepts no responsibility for damages incurred by third parties for any decisions or actions taken based on this report. This report must be used, interpreted, and presented in its entirety.

Duly Authorized Representative – Michelle Lapin PE:

This license has been issued in accordance with applicable provisions of Article 30 of the Labor Law of New York State and of the New York State Codes, Rules and Regulations (12 NYCRR Part 56). It is subject to suspension or revocation for a (1) serious violation of state, federal or local laws with regard to the conduct of an asbestos project, or (2) demonstrated lack of responsibility in the conduct of any job involving asbestos or asbestos material.

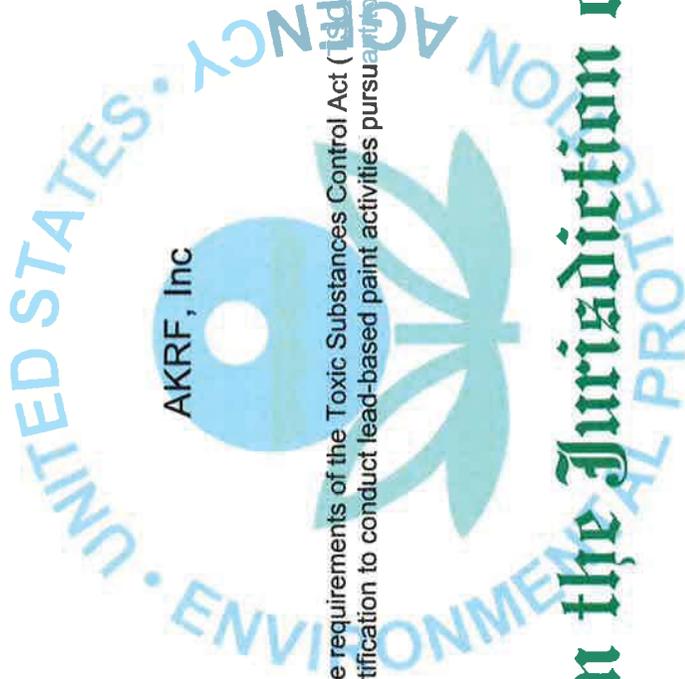

This license is valid only for the contractor named above and this license or a photocopy must be prominently displayed at the asbestos project worksite. This license verifies that all persons employed by the licensee on an asbestos project in New York State have been issued an Asbestos Certificate, appropriate for the type of work they perform, by the New York State Department of Labor.

QC Review / Date: \_\_\_\_\_

D. Molohides, Lab Director

NAD= No Asbestos Detected; NA/PS = Not Analyzed / Positive Stop; Trace = < 1%, CH = Chrysotile, AMO = Amosite, CRO = Crocidolite, ANTH = Anthophyllite, TRE = Tremolite, ACT = Actinolite, FBGL = Fiberglass, CELL = Cellulose, SYNTH = Synthetic fibers, VERM = Vermiculite, WOLL = Wollastonite. Polarized Light Microscopy (PLM) analysis of samples is performed by Method EPA 600/M4-82-020 and ELAP PLM Analysis Protocol 198.1 (friable samples) and protocol 198.6 (NOB samples). Transmission Electron Microscopy (TEM) analysis of samples is performed by Method ELAP TEM Analysis Protocol 198.4. This report includes the identification and quantitation of vermiculite as required by current NYS-DOH ELAP protocols & interim guidance letters. Analytical equipments: Stereobinocular microscopes: Professional Bin (PM #1), Accuscope (Ser# 1200608), Carlsan (Ser# 011418); Polarized Light Microscopes: Olympus BH-2 (Ser #: 214335), Olympus BH-2 (Ser #: 236532). PLM is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing. Samples will be stored for sixty (60) days and then returned to the client upon request. The results relate only to the items calibrated or tested. This report may not be reproduced, except in full, without the written approval of Alpha Labs LLC. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the US Government. This report contains data (bulk asbestos TEM results) that are not covered by the NVLAP accreditation. The liability of Alpha Labs LLC with respect to the services charged shall in no event exceed the amount of the invoice. **(November 1, 2016)**

NAD= No Asbestos Detected; NA/PS = Not Analyzed / Positive Stop; Trace = < 1%, CH = Chrysotile, AMO = Amosite, CRO = Crocidolite, ANTH = Anthophyllite, TRE = Tremolite, ACT = Actinolite, FBGL = Fiberglass, CELL = Cellulose, SYNTH = Synthetic fibers, VERM = Vermiculite, WOLL = Wollastonite. Polarized Light Microscopy (PLM) analysis of samples is performed by Method EPA 600/M4-82-020 and ELAP PLM Analysis Protocol 198.1 (friable samples) and protocol 198.6 (NOB samples). Transmission Electron Microscopy (TEM) analysis of samples is performed by Method ELAP TEM Analysis Protocol 198.4. This report includes the identification and quantitation of vermiculite as required by current NYS-DOH ELAP protocols & interim guidance letters. Analytical equipments: Stereobinocular microscopes: Professional Bin (PM #1), Accuscope (Ser# 1200608), Carlsan (Ser# 011418); Polarized Light Microscopes: Olympus BH-2 (Ser #: 214335), Olympus BH-2 (Ser #: 236532). PLM is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing. Samples will be stored for sixty (60) days and then returned to the client upon request. The results relate only to the items calibrated or tested. This report may not be reproduced, except in full, without the written approval of Alpha Labs LLC. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the US Government. This report contains data (bulk asbestos TEM results) that are not covered by the NVLAP accreditation. The liability of Alpha Labs LLC with respect to the services charged shall in no event exceed the amount of the invoice. **(November 1, 2016)**

NAD= No Asbestos Detected; NA/PS = Not Analyzed / Positive Stop; Trace = < 1%, CH = Chrysotile, AMO = Amosite, CRO = Crocidolite, ANTH = Anthophyllite, TRE = Tremolite, ACT = Actinolite, FBGL = Fiberglass, CELL = Cellulose, SYNTH = Synthetic fibers, VERM = Vermiculite, WOLL = Wollastonite. Polarized Light Microscopy (PLM) analysis of samples is performed by Method EPA 600/M4-82-020 and ELAP PLM Analysis Protocol 198.1 (friable samples) and protocol 198.6 (NOB samples). Transmission Electron Microscopy (TEM) analysis of samples is performed by Method ELAP TEM Analysis Protocol 198.4. This report includes the identification and quantitation of vermiculite as required by current NYS-DOH ELAP protocols & interim guidance letters. Analytical equipments: Stereobinocular microscopes: Professional Bin (PM #1), Accuscope (Ser# 1200608), Carlsan (Ser# 011418); Polarized Light Microscopes: Olympus BH-2 (Ser #: 214335), Olympus BH-2 (Ser #: 236532). PLM is not consistently reliable in detecting asbestos in floor coverings and similar non-friable organically bound materials. Quantitative transmission electron microscopy is currently the only method that can be used to determine if this material can be considered or treated as non-asbestos-containing. Samples will be stored for sixty (60) days and then returned to the client upon request. The results relate only to the items calibrated or tested. This report may not be reproduced, except in full, without the written approval of Alpha Labs LLC. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the US Government. This report contains data (bulk asbestos TEM results) that are not covered by the NVLAP accreditation. The liability of Alpha Labs LLC with respect to the services charged shall in no event exceed the amount of the invoice. (November 1, 2016)

**CERTIFICATION**

I, Michelle Lapin, am a Professional Engineer licensed in the State of New York. I have primary direct responsibility for implementation of the remedial action for the West 108<sup>th</sup> Street Development, located at 103-107 and 143-159 West 108<sup>th</sup> Street, in Manhattan, New York, site number 18CVCP017M

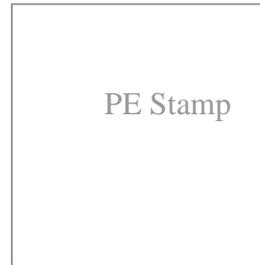

I certify that this Remedial Action Plan (RAP) has a plan for handling, transport and disposal of soil, fill, fluids and other materials removed from the property in accordance with applicable City, State, and Federal laws and regulations. Importation of all soil, fill and other material from off-site will be in accordance with all applicable City, State, and Federal laws and requirements. This RAP has provisions to control nuisances during the remediation and all invasive work, including dust and odor suppression.

## EXECUTIVE SUMMARY

West Side Federation for Senior and Supportive Housing (WSFSSH) has established this plan to remediate two development sites, collectively called West 108<sup>th</sup> Street Development, totaling 37,845-square feet located at 103-107 and 143-159 West 108<sup>th</sup> Street in New York, New York (the Site). A Subsurface (Phase II) Investigation was performed to compile and evaluate data and information necessary to develop this Remedial Action Plan (RAP). The remedial action described in this document achieves the remedial objectives, complies with applicable environmental standards, criteria and guidance and conforms with applicable laws and regulations.

### Site Location and Current Usage

The Site is located in the Upper West Side of New York, New York and is identified as Block 1863, Lots 5, 10, 13, and 26 on the New York City Tax Map. The Site is shown on Figure 1 - Site Location map and Figure 2 - Site Plan. The Site is bordered by: West 108<sup>th</sup> Street, followed by the Booker T Washington Junior High School and a Time Warner Cable garage to the south; residential and commercial buildings, followed by Columbus Avenue to the east; mixed-use retail and residential, followed by Amsterdam Avenue to the west; and residential buildings, followed by West 109<sup>th</sup> Street to the north. The buildings at 103-107, 143, and 151-159 West 108<sup>th</sup> Street are currently utilized as multi-story parking garages, and 145-149 West 108<sup>th</sup> Street is utilized as an emergency senior citizen shelter.

### Summary of Proposed Redevelopment Plan

The Remedial Action to be performed under the RAP is intended to make the Site protective of human health and the environment consistent with the contemplated end use. The proposed redevelopment plan and end use described in this RAP provide the basis for this assessment. However, the Remedial Action contemplated under this RAP may be implemented independently of the proposed redevelopment plan.

The proposed redevelopment plan includes the demolition of the existing structures on the Site and construction of two new 11-story buildings (Buildings 1 and 2) and a rear yard at Building 1. Building 1 (143-159 West 108<sup>th</sup> Street) will contain approximately 80 income-restricted and 115 age-restricted apartments (combination of studios, one, two, and three bedrooms), 110 transitional beds, and 6,400-square feet of community facility space that will likely include a medical clinic serving residents and the community. Building 1 will include a full cellar. Building 2 (103-107 West 108<sup>th</sup> Street) will include approximately 82 income-restricted apartments for seniors. Building 2 will also include a partial cellar. Proposed redevelopment plans are presented in Appendix A.

### Summary of Environmental Findings

1. Surface topography generally slopes down to the east. Based on the U.S. Geological Survey Central Park Quadrangle, the Site lies at an elevation of approximately 90 to 105 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level).

2. Groundwater flows in a generally easterly direction. Groundwater elevation ranges between 84 and 89 feet (North American Vertical Datum of 1988) at the Site.
3. The stratigraphy of the Site, from the ground surface down, consists of up to 7 feet of historic fill comprising sand, silt, brick, and concrete, underlain by native soil consisting of fine to medium sand, silt, followed by weathered bedrock.
4. Depth to apparent bedrock at the Site varies from approximately 5 to 18 feet below cellar grade.
5. Soil/fill samples collected during the RI were compared to NYSDEC Unrestricted Use Soil Cleanup Objectives (Track 1) and Restricted Residential Use Soil Cleanup Objectives (Track 2) as presented in 6NYCRR Part 375-6.8 and CP51. The laboratory analytical results from the soil samples collected during the investigation showed volatile organic compounds (VOCs) were detected in 12 of the 22 soil samples. VOCs including benzene (0.13 milligrams per kilogram (mg/kg)), m,p-xylene (0.41 mg/kg), toluene (0.7 mg/kg) exceeded their Unrestricted Use SCOs. No VOCs were detected at concentrations exceeding the Restricted Residential SCOs.

SVOCs including benzo(a)anthracene (2.2 mg/kg), benzo(a)pyrene (2.4 mg/kg), benzo(b)fluoranthene (3.1 mg/kg), dibenz(a,h)anthracene (0.63 mg/kg), and indeno(1,2,3-c,3)pyrene (2.5 mg/kg). Chrysene (2.3 mg/kg) and benzo(k)fluoranthene (1.1 mg/kg) were detected in soil sample W108-SB-5(0-2) above their respective USCOs, but below their respective RRSCOs. All SVOC detections in the remaining soil samples were detected at concentrations below both the USCOs and RRSCOs.

Several metals were identified and of those, arsenic (max of 18.5 mg/kg), barium (max of 421 mg/kg), copper (max of 88.5 mg/kg), cadmium (max of 6.3 mg/kg), hexavalent chromium (1.9 mg/kg), lead (max. of 1,990 mg/kg), mercury (max. of 0.46 mg/kg), nickel (max. of 38.7 mg/kg), and zinc (max. of 679 mg/kg), exceeded their respective Unrestricted Use SCOs. Arsenic, barium, cadmium and lead also exceeded their respective Restricted Residential Use SCOs.

Up to four pesticides were detected in four of the 22 soil samples. Dieldrin (0.0088 mg/kg), 4,4-DDT (maximum of 0.019 mg/kg), 4,4'-DDD (maximum of 0.0051 mg/kg), 4,4-DDE (at 0.0052 mg/kg) exceeded their respective Unrestricted Use SCOs in 4 of 22 soil samples.

6. Groundwater samples collected during the RI were compared to New York State 6NYCRR Part 703.5 Ambient Water Quality Standard (AWQS). The results of the groundwater sampling showed that one VOC, isopropylbenzene, was detected in W108-MW-4 at a concentration of 17 micrograms per liter ( $\mu\text{g/L}$ ), exceeding the AWQS of 5  $\mu\text{g/L}$ . No other VOCs were detected at concentrations exceeding AWQS.

Seven SVOCs including bis(2-ethylhexyl)phthalate, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene, were detected above their respective AWQS.

Several metals were identified and of those, manganese, magnesium and sodium were detected above their AWQS in dissolved groundwater samples.

- No PCBs or Pesticides were detected in the groundwater samples.
7. Soil vapor samples collected during the RI were compared to the compounds listed in Vapor Intrusion Matrices in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion, dated October 2006 and as revised in May 2017. The results of the soil vapor sampling showed up to 27 VOCs (petroleum related and chlorinated) were detected in the eight samples. VOCs associated with petroleum [including benzene, toluene, ethylbenzene, xylenes (collectively referred to as BTEX), 1,2,4- and 1,3,5-trimethylbenzene, cyclohexane, n-heptane, n-hexane, 4-ethyltoluene, and 2,2,4-trimethylpentane] were detected at concentrations up to 1,400  $\mu\text{g}/\text{m}^3$ . Other solvent-related VOCs [including acetone, chloroform, and methyl ethyl ketone (MEK)] were detected at concentrations up to 73  $\mu\text{g}/\text{m}^3$ . Chlorinated compound, Tetrachloroethene (PCE) was detected in six of the eight soil vapor samples at concentrations of 2.3 to 29 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ). TCE was not detected in any of the soil vapor samples. Low level VOC concentrations were also noted in the ambient air sample. Concentrations of PCE are below the NYSDOH guidance matrix for monitoring. No VOCs were detected above the air guideline values (AGVs) established by the New York State Department of Health (NYSDOH).
  8. The investigation findings identified the presence of petroleum contamination, in both the western (151-159 West 108<sup>th</sup> Street) and eastern (103-107 West 108<sup>th</sup> Street) portions of the Site likely attributed to former on-site uses. New York State Department of Environmental Conservation (NYSDEC) assigned Spill Number 1603624 to 151-159 West 108<sup>th</sup> Street and Spill Number 1603667 to 103-107 West 108<sup>th</sup> Street. While elevated PID readings were observed in the borings located at 143 West 108<sup>th</sup> Street (SB-8, SB-9, and SB-10), no other evidence of petroleum contamination was observed, such as staining, odors, or elevated VOC and SVOC analytical results.

### Summary of the Remedy

The proposed remedial action achieves all of the remedial action goals established for the project. The proposed remedial action is effective in both the short-term and long-term and reduces mobility, toxicity and volume of contaminants and uses standard methods that are well established in the industry.

The proposed remedial action will include the following:

1. A Supplemental Subsurface Investigation will be conducted upon demolition of the Site buildings to delineate petroleum contamination associated with New York State Department of Environmental Conservation (NYSDEC) Spill Numbers 1603624 and 1603667. A Supplemental Phase II Environmental Site Investigation Work Plan (approved by NYSDEC and OER) is provided as Appendix B.
2. Site mobilization involving Site security setup, equipment mobilization, utility mark outs and marking & staking excavation areas.

3. Implementation of storm-water pollution prevention measures in compliance with applicable laws and regulations.
4. Establishment of Site-Specific Soil Cleanup Objectives (SSSCOs) for contaminants of concern.
5. Completion of a Waste Characterization Study prior to excavation activities. Waste characterization soil samples will be collected at a frequency dictated by disposal facility(s).
6. Performance of a Community Air Monitoring Program (CAMP) for particulates and volatile organic compounds (VOCs) compounds.
7. Preparation of a Community Protection Statement and performance of all required NYC VCP Citizen Participation activities according to an approved Citizen Participation Plan.
8. Excavation and off-site disposal of soil/fill exceeding SSSCOs. Portions of the Site will be excavated from grade to bedrock (varies from approximately 2 to 8 ft. below grade). The total quantity of soil/fill expected to be excavated and disposed off-site is approximately 4,500 cubic yards (6,750 tons).
9. Screening of excavated soil/fill during intrusive work for indications of contamination by visual means, odor, and monitoring with a photoionization detector (PID).
10. Management of excavated materials including temporarily stockpiling and segregating in accordance with defined material types and to prevent co-mingling of contaminated material and non-contaminated materials.
11. Removal of underground storage tanks (USTs) in compliance with applicable local, State, and Federal laws and regulations.
12. Performance of a remedial action for the petroleum spill numbers, 1603624 and 1603667 under the NYSDEC Spill program. A separate RAWP addendum may be required by NYSDEC for spill closure.
13. Transportation and off-site disposal of all soil/fill material at permitted facilities in accordance with applicable laws and regulations for handling, transport, and disposal, and this plan. Sampling and analysis of excavated media as required by disposal facilities. Appropriate segregation of excavated media onsite.
14. Collection and analysis of 11 end-point samples to determine the performance of the remedy with respect to attainment of SCOs. End point samples for tank removal and spill remediation will be conducted per NYSDEC guidance contained in DER-10.
15. Construction and maintenance of an engineered composite cover at each building consisting of six inches of concrete building foundation slabs/walls and a two foot clean soil cap in any landscaped areas to prevent human exposure to residual soil/fill remaining under the Site.
16. Submission of a Remedial Action Report (RAR), that describes the remedial activities, that certifies that the remedial requirements have been achieved, and

- describes all Engineering Controls and Institutional Controls (ECs/ICs) to be implemented at the Site, and lists any deviations from this RAP.
17. Installation of a vapor barrier system beneath the buildings' slab and along foundation sidewalls to prevent soil vapor migration into the building. The vapor barrier system will consist of the Stego Wrap<sup>®</sup> 20-mil vapor barrier or an OER-approved equivalent. All welds, seams and penetrations will be properly sealed to prevent preferential pathways for vapor migration. The vapor barrier system is an Engineering Control for the remedial action. The remedial engineer will certify in the RAR that the vapor barrier system was designed and properly installed to mitigate soil vapor migration into the building.
  18. Performance of all activities required for the remedial action, including permitting requirements and pretreatment requirements, in compliance with applicable laws and regulations.
  19. Submission of an approved Site Management Plan (SMP) in the RAR for long-term management of residual contamination, including plans for operation, maintenance, monitoring, inspection and certification of Engineering and Institutional Controls and reporting at a specified frequency.
  20. Recording of a Declaration of Covenants and Restrictions that includes a listing of Engineering Controls and Institutional Controls and a requirement that management of these controls must be in compliance with an approved SMP. Institutional Controls will include prohibition of the following: (1) vegetable gardening and farming; (2) use of groundwater without treatment rendering it safe for the intended use; (3) disturbance of residual contaminated material unless it is conducted in accordance with the SMP; and (4) higher level of land usage without OER-approval.

## COMMUNITY PROTECTION STATEMENT

The NYC Office of Environmental Remediation (OER) provides governmental oversight for the cleanup of contaminated property in NYC. This Remedial Action Work Plan (“cleanup plan”) describes the findings of prior environmental studies, shows the location of identified contamination at the site, and describes the plans to clean up the site to protect public health and the environment.

This cleanup plan provides a very high level of protection for neighboring communities and also includes many other elements that address common community concerns, such as community air monitoring, odor, dust and noise controls, hours of operation, good housekeeping and cleanliness, truck management and routing, and opportunities for community participation. The purpose of this Community Protection Statement is to explain these community protection measures in non-technical language to simplify community review.

### **Project Information:**

- Site Name: West 108<sup>th</sup> Street Development
- Site Address: 103-107 and 143-159 West 108<sup>th</sup> Street
- OER Project Number(s): 16TMP0258Q

### **Project Contacts:**

- OER Project Manager: Taylor Hard, 212-788-8841
- Site Project Manager: Deborah Shapiro, 646-388-9544
- Site Safety Officer: Elizabeth Matamoros, 914-922-2397
- Online Document Repository:  
<http://www.nyc.gov/html/oer/html/repository/RManhattan.shtml>

**Remedial Investigation and Cleanup Plan:**

Under the oversight of the NYC OER, a thorough study of this Site (called a remedial investigation) has been performed to identify past property usage, to sample and test soils, groundwater and soil vapor, and to identify contaminant sources present on the Site. The cleanup plan has been designed to address all contaminant sources that have been identified during the study of this Site.

**Identification of Sensitive Land Uses:**

Prior to selecting a cleanup, the neighborhood was evaluated to identify sensitive land uses nearby, such as schools, day care facilities, hospitals and residential areas. The cleanup program was then tailored to address the special conditions of this community.

**Qualitative Human Health Exposure Assessment:**

An important part of the cleanup planning for the Site is a study to find all of the ways that people might come in contact with contaminants at the Site now or in the future. This study is called a Qualitative Human Health Exposure Assessment (QHHEA). A QHHEA was performed for this project. This assessment has considered all known contamination at the Site and evaluated the potential for people to come in contact with this contamination. All identified public exposures will be addressed under this cleanup plan.

**Health and Safety Plan:**

This cleanup plan includes a Construction Health and Safety Plan (CHASP) that is designed to protect community residents and on-Site workers. The elements of this RAWP are in compliance with applicable safety requirements of the United States Occupational Safety and Health Administration (OSHA). This RAWP includes many protective elements including those discussed below.

**Site Safety Coordinator:**

This project has a designated Site safety coordinator to implement the CHASP. The safety coordinator maintains an emergency contact sheet and protocol for management of emergencies. The Site safety coordinator is identified at the beginning of this Community Protection Statement.

**Worker Training:**

Workers participating in cleanup of contaminated material on this project are required to be trained in a 40-hour hazardous waste operators training course and to take annual refresher training. This pertains to workers performing specific tasks including removing contaminated material and installing cleanup systems in contaminated areas.

**Community Air Monitoring Plan:**

Community air monitoring will be performed during this cleanup project to ensure that the community is properly protected from contaminants, dust and odors. Air samples will be tested in accordance with a detailed plan called the Community Air Monitoring Plan or CAMP. Results will be regularly reported to the NYC Office of Environmental Remediation. This cleanup plan also has a plan to address any unforeseen problems that might occur during the cleanup (called a 'Contingency Plan').

**Odor, Dust and Noise Control:**

This cleanup plan includes actions for odor and dust control. These actions are designed to prevent off-Site odor and dust nuisances and includes steps to be taken if nuisances are detected. Generally, dust is managed by application of physical covers and by water sprays. Odors are controlled by limiting the area of open excavations, physical covers, spray foams and by a series of other actions (called operational measures). The project is also required to comply with applicable NYC noise control standards. If you observe problems in these areas, please contact the onsite Project Manager or NYC Office of Environmental Remediation Project Manager listed on the first page of this Community Protection Statement document.

**Quality Assurance:**

This cleanup plan requires that evidence be provided to illustrate that all cleanup work required under the plan has been completed properly. This evidence will be summarized in the final report, called the Remedial Action Report. This report will be submitted to the NYC Office of Environmental Remediation and will be thoroughly reviewed.

**Stormwater Management:**

To limit the potential for soil erosion and discharge, this cleanup plan has provisions for stormwater management. The main elements of the stormwater management include physical barriers such as tarp covers and erosion fencing, and a program for frequent inspection.

**Hours of Operation:**

The hours for operation of cleanup will comply with the NYC Department of Buildings construction code requirements or according to specific variances issued by that agency. For this cleanup project, the hours of operation will conform to requirements of the NYC Department of Buildings.

**Signage:**

While the cleanup is in progress, a placard will be prominently posted at the main entrance of the Site with a laminated project Fact Sheet that states that the project is in the NYC Voluntary Cleanup Program and provides project contact names and numbers, and a link to the document repository where project documents can be viewed.

**Complaint Management:**

The contractor performing this cleanup is required to address all complaints. If you have any complaints, you can call the facility Project Manager or the NYC Office of Environmental Remediation Project Manager listed on the first page of this Community Protection Statement document, or call 311 and mention the Site is in the NYC Voluntary Cleanup Program.

**Utility Mark-outs:**

To promote safety during excavation in this cleanup, the contractor is required to first identify all utilities and must perform all excavation and construction work in compliance with NYC Department of Buildings regulations.

**Soil and Liquid Disposal:**

All soil and liquid material removed from the Site as part of the cleanup will be transported and disposed of in accordance with all applicable City, State and Federal regulations, and required permits will be obtained.

**Soil Chemical Testing and Screening:**

All excavations will be supervised by a trained and properly qualified environmental professional. In addition to extensive sampling and chemical testing of soils on the Site, excavated soil will be screened continuously using hand-held instruments, by sight, and by smell to ensure proper material handling and management, and community protection.

**Stockpile Management:**

Soil stockpiles will be kept covered with tarps to prevent dust, odor and erosion. Stockpiles will be frequently inspected. Damaged tarp covers will be promptly replaced. Stockpiles will be protected with silt fences. Hay bales will be used, as needed, to protect storm water catch basins and other discharge points.

**Trucks and Covers:**

Loaded trucks leaving the Site will be covered in compliance with applicable laws and regulations to prevent dust and odor. Trucks will be properly recorded in logs and records and placarded in compliance with applicable City, State and Federal laws, including those of the New York State Department of Transportation. If loads contain wet material that can leak, truck liners will be used. All transport of materials will be performed by licensed truckers and in compliance with applicable laws and regulations.

**Imported Material:**

All fill materials proposed to be brought onto the Site will comply with rules outlined in this cleanup plan and will be inspected and approved by a qualified worker located on the Site. Waste materials will not be brought onto the Site. Trucks entering the Site with imported clean materials will be covered in compliance with applicable laws and regulations.

**Equipment Decontamination:**

All equipment used for cleanup work will be inspected and washed, if needed, before it leaves the Site. Trucks will be cleaned at a truck inspection station on the Site before leaving.

**Housekeeping:**

Locations where trucks enter or leave the Site will be inspected every day and cleaned regularly to ensure that they are free of dirt and other materials from the Site.

**Truck Routing:**

Truck routes have been selected to: (a) limit transport through residential areas and nearby sensitive properties; (b) maximize use of city-mapped truck routes; (c) limit total distance to major highways; (d) promote safety in entry to highways; (e) promote overall safety in trucking; and (f) minimize off-Site line-ups (queuing) of trucks entering the Site. Operators of loaded trucks leaving the Site will be instructed not to stop or idle in the local neighborhood.

**Final Report:**

The results of all cleanup work will be fully documented in a final report (called the Remedial Action Report) that will be available for public review online. A link to the online document repository and the public library with Internet access nearest the Site are listed on the first page of this Community Protection Statement document

**Long-Term Site Management:**

If long-term protection is needed after the cleanup is complete, the property owner will be required to comply with an ongoing Site Management Plan that calls for continued inspection of protective controls, such as Site covers. The Site Management Plan is evaluated and approved by the NYC Office of Environmental Remediation. Requirements that the property owner must comply with are defined either in the property's deed or established through a city environmental designation registered with the Department of Buildings. A certification of continued protectiveness of the cleanup will be required from time to time to show that the approved cleanup is still effective.

## REMEDIAL ACTION PLAN

### 1.0 SITE BACKGROUND

This Remedial Action Plan (RAP) and site-specific Construction Health and Safety Plan (CHASP) have been developed for two development sites, collectively called the West 108<sup>th</sup> Street Development located at 103-107 and 143-159 West 108<sup>th</sup> Street in the Upper West Side of New York, New York (the Site). This project has been assigned project number 16TMP0258Q by the New York City (NYC) Office of Environmental Remediation (OER). This RAP describes the remediation and/or mitigation activities to be implemented at the Site in coordination with OER to facilitate enrollment into the OER Volunteer Cleanup Program (VCP). The site-specific CHASP (Appendix C) addresses site-specific hazards, identified contaminants of concern and safety requirements associated with remediation and mitigation activities in accordance with American Society for Testing and Materials (ASTM) and Occupational Safety and Health Administration (OSHA) guidelines.

#### 1.1 Site Location and Current Usage

The Site is located in the Upper West Side of New York, New York and is identified as Block 1863, Lots 5, 10, 13, and 26 on the New York City Tax Map. Figure 1 is a Site location map and Figure 2 is the Site Plan. The buildings at 103-107, 143, and 151-159 West 108<sup>th</sup> Street are currently utilized as multi-story parking garages, and 145-149 West 108<sup>th</sup> Street is utilized as an emergency senior citizen shelter.

#### 1.2 Proposed Redevelopment Plan

The Remedial Action to be performed under the RAP is intended to make the Site protective of human health and the environment consistent with the contemplated end use. The proposed redevelopment plan and end use described in this RAP provide the basis for this assessment. However, the Remedial Action contemplated under this RAP may be implemented independently of the proposed redevelopment plan.

The proposed redevelopment plan includes the demolition of the existing structures on the Site and construction of two new 11-story buildings (Buildings 1 and 2) and a rear yard at Building 1. Building 1 (143-159 West 108<sup>th</sup> Street) will contain approximately 80 income-restricted and 115 age-restricted apartments (combination of studios, one, two, and three bedrooms), 110 transitional beds, and 6,400-square feet of community facility space that will likely include a medical clinic serving residents and the community. Building 1 will include a full cellar. Building 2 (103-107 West 108<sup>th</sup> Street) will include approximately 82 income-restricted apartments for seniors. Building 2 will also include a partial cellar. Proposed redevelopment plans are presented in Appendix A.

#### 1.3 Description of Surrounding Property

The Site is bordered by: West 108<sup>th</sup> Street, followed by Booker T Washington Junior High School and a Time Warner Cable garage to the south; residential and commercial buildings, followed by Columbus Avenue to the east; mixed-use retail and residential, followed by Amsterdam Avenue to the west; and residential buildings, followed by West 109<sup>th</sup> Street to the north. A public park is located between the 103 West 108<sup>th</sup> Street and

143 West 108<sup>th</sup> Street portions of the Site. The greater surrounding area is predominantly commercial and residential, with numerous new commercial and/or residential buildings under construction. Figure 3 shows the surrounding land usage.

## **1.4 Site Investigation**

A Site Investigation was performed and the results are documented in a companion document called “*Phase II Environmental Site Investigation Report, 103-107 and 143-159 West 108<sup>th</sup> Street, New York, NY,*” dated September 2016, revised January 2017 (SIR). The following activities were performed as part of the investigation.

### **1.4.1 Summary of Past Uses of Site and Areas of Concern**

Based on a Phase I Environmental Site Assessment (ESA) conducted by AKRF in October 2015, the Site was occupied prior to 1902 by dwellings at 143-159 West 108<sup>th</sup> Street, and a paints and storage building at 103-107 West 108<sup>th</sup> Street. The historical buildings were demolished at various times between 1902 and 1920, with the exception of the building at 145 West 108<sup>th</sup> Street, which was demolished around 1980. The current buildings were constructed by 1951.

Additional historic uses of the Site included an automobile repair facility at 103-107 West 108<sup>th</sup> Street from approximately 1979 to 2005 and a Cadillac Service Station at 143 West 108<sup>th</sup> Street in 1951. It is also possible that vehicle maintenance activities were conducted at 151-159 West 108<sup>th</sup> Street since its construction in 1925. Petroleum storage tanks were identified on historic maps at three of the four lots: two gasoline storage tanks at 103-107 West 108<sup>th</sup> Street in 1951, three 550-gallon buried gasoline tanks at 143 West 108<sup>th</sup> Street between 1951 and 2005, and four 550-gallon gasoline tanks at 151-159 West 108<sup>th</sup> Street between 1951 and 2005.

The following were considered Areas of Concern (AOCs) for the Phase II Site Investigation:

1. Underground storage tanks (USTs) identified on historic maps and aboveground storage tanks (ASTs) observed during reconnaissance;
2. A sump with an unconfirmed discharge point, hydraulic lifts, additional tanks beneath the cellar floor, and/or where the vehicle maintenance may have been performed;
3. Potential undocumented discharge(s) of chemical and/or material storage;
4. Activities from the surrounding area that historically included factories, Consolidated Edison Substations, auto repair, and garages with gasoline USTs that may have impacted the Site subsurface; and
5. Historic fill associated with potential buried debris from former on-Site structures.

### **1.4.2 Summary of the Work Performed Under the Site Investigation**

AKRF performed the following scope of work at the Site in July 2016:

- Conducted a Site inspection to identify AOCs and physical obstructions (i.e., structures, buildings, etc.);
- Conducted a geophysical survey and utility mark-outs;
- Advanced 17 soil borings throughout the Site and collected 22 soil samples from the borings for chemical analysis;
- Installed eight temporary soil vapor monitoring points throughout the Site and collected eight soil vapor samples from the points and an ambient air sample for chemical analysis; and
- Installed three permanent groundwater monitoring wells in the cellars throughout the Site and collected a groundwater sample from each well for chemical analysis.

### 1.4.3 Summary of Environmental Findings

1. Surface topography generally slopes down to the east. Based on the U.S. Geological Survey Central Park Quadrangle, the Site lies at an elevation of approximately 90 to 105 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level).
2. Groundwater flows in a generally easterly direction. Groundwater elevation ranges between 84 and 89 feet (North American Vertical Datum of 1988) at the Site.
3. The stratigraphy of the Site, from the ground surface down, consists of up to 7 feet of historic fill comprising sand, silt, brick, and concrete, underlain by native soil consisting of fine to medium sand, silt, followed by weathered bedrock.
4. Depth to apparent bedrock at the Site varies from approximately 5 to 18 feet below cellar grade.
5. Soil/fill samples collected during the RI were compared to NYSDEC Unrestricted Use Soil Cleanup Objectives (Track 1) and Restricted Residential Use Soil Cleanup Objectives (Track 2) as presented in 6NYCRR Part 375-6.8 and CP-51. The laboratory analytical results from the soil samples collected during the investigation showed volatile organic compounds (VOCs) were detected in 12 of the 22 soil samples, including two blind duplicates, two trip blanks and the two associated aqueous field blanks. The VOCs 1,2-dichlorobenzene, 1,2-dichloroethane, acetone, carbon disulfide, cyclohexane, ethylbenzene, isopropylbenzene, and o-xylene were detected in one or more of the soil samples. Benzene was detected at an estimated concentration of 0.13 milligrams per kilogram (mg/kg) in soil sample W108-SB-2(0-2), which is slightly above its Unrestricted Soil Cleanup Objective (USCO) of 0.06 mg/kg, but below its Restricted Residential Soil Cleanup Objective (RRSCO) of 4.8 mg/kg. M,p-xylene was detected in two soil samples at concentrations of 0.41 mg/kg in W108-SB-2(0-2) and 0.35 mg/kg in W108-SB-2(3-4), slightly

above its USCO of 0.26 mg/kg but well below its RRSCO of 100 mg/kg. Toluene exceeded its USCO of 0.7 mg/kg in W108-SB-2(0-2), at a concentration of 1.5 mg/kg, but was well below its RRSCO of 100 mg/kg. No VOCs were detected at concentrations exceeding the RRSCOs.

Up to 18 semi-volatile organic compounds (SVOCs) were detected in all 22 soil samples with a maximum total SVOC concentration of 28 mg/kg in W108-SB-5 (0-2), located in the garden area adjacent to 145-149 West 108<sup>th</sup> Street. SVOCs exceeding USCOs and RRSCOs were detected in soil sample W108-SB-5(0-2), including benzo(a)anthracene (2.2 mg/kg), benzo(a)pyrene (2.4 mg/kg), benzo(b)fluoranthene (3.1 mg/kg), dibenz(a,h)anthracene (0.63 mg/kg), and indeno(1,2,3-c,3)pyrene (2.5 mg/kg). Chrysene (2.3 mg/kg) and benzo(k)fluoranthene (1.1 mg/kg) were detected in soil sample W108-SB-5(0-2) above their respective USCOs, but below their respective RRSCOs. All SVOC detections in the remaining soil samples were detected at concentrations below both the USCOs and RRSCOs.

A review of the analytical results indicates that up to 22 of the 23 target analyte list (TAL) metals analyzed were detected in all 22 soil samples analyzed. Nine metals, including arsenic (max of 18.5 mg/kg), barium (max of 421 mg/kg), copper (max of 88.5 mg/kg), cadmium (max of 6.3 mg/kg), hexavalent chromium (1.9 mg/kg in W108-SB-12 (0-2)), lead (max. of 1,990 mg/kg), mercury (max. of 0.46 mg/kg), nickel (max. of 38.7 mg/kg), and zinc (max. of 679 mg/kg), exceeded their respective USCOs. Concentrations of metals exceeding RRSCOs included arsenic in W108-SB-1(5-7) at a concentration of 18.5 mg/kg (the RRSCO is 16 mg/kg); barium in W108-SB-5(0-2) at a concentration of 421 mg/kg (RRSCO is 400 mg/kg); cadmium in W108-SB-12(0-2) at a concentration of 6.3 mg/kg (RRSCO is 4.3 mg/kg); and lead in W108-SB-5(0-2) and W108-SB-12(0-2) at concentrations of 456 mg/kg and 1,990 mg/kg (RRSCO is 400 mg/kg), respectively.

Up to four pesticides were detected in four of the 22 soil samples. Dieldrin exceeded the USCO in W108-SB-5(0-2) at an estimated concentration of 0.0088 mg/kg (USCO is 0.005 mg/kg). P,P'-DDT exceeded its USCO in three samples [W108-SB-5(0-2), W108-SB-5(8-10), W108-SB-12(0-2)] with a maximum concentration of 0.019 mg/kg (USCO is 0.0033 mg/kg). P,P'-DDD exceeded its USCO in three samples [W108-SB-1(0-2), W108-SB-5(0-2), W108-SB-12(0-2)] with a maximum estimated concentration of 0.0051 mg/kg (USCO is 0.0033 mg/kg). P,P'-DDE exceeded its USCO with an estimated concentration of 0.0052 mg/kg (USCO is 0.0033 mg/kg) in W108-SB-5 (0-2). No pesticides exceeded their respective RRSCOs in any samples. There was one polychlorinated biphenyl (PCB) detected, Aroclor 1260, at an estimated concentration of 0.057 mg/kg in W108-12(0-2), which was below the USCO and RRSCO for total PCBs. Soil concentrations above USCOs and/or RRSCOs are shown on Figure 4.

6. The results of the groundwater sampling showed that one VOC, isopropylbenzene, was detected in W108-MW-4 at a concentration of 17 micrograms per liter ( $\mu\text{g/L}$ ), exceeding the Ambient Water Quality Standard (AWQS) of 5  $\mu\text{g/L}$ . The results of the groundwater sampling indicated no other VOCs were detected at concentrations exceeding AWQS.

Six SVOCs, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene, were detected at estimated concentrations of 0.10  $\mu\text{g/L}$ , 0.069  $\mu\text{g/L}$ , 0.20  $\mu\text{g/L}$ , 0.74  $\mu\text{g/L}$ , 0.11J  $\mu\text{g/L}$ , and 0.079  $\mu\text{g/L}$ , respectively, above their respective AWQS in groundwater sample W108-MW-6 located in the cellar of 145-149 West 108<sup>th</sup> Street. Bis(2-ethylhexyl)phthalate was detected at estimated concentrations of 17  $\mu\text{g/L}$ , 7.6  $\mu\text{g/L}$ , and 14  $\mu\text{g/L}$  in W108-MW-4, W108-MW-6, and W108-MW-8, respectively, which exceeded its AWQS of 5  $\mu\text{g/L}$ . Chrysene was detected in W108-MW-8 at a concentration of 0.037  $\mu\text{g/L}$ , which exceeds the AWQS of 0.002  $\mu\text{g/L}$ .

The metals manganese and sodium were detected above the AWQS in all three dissolved samples. Magnesium was also detected above the AWQS in dissolved sample W108-MW-8. These metals are typical of groundwater quality in Manhattan.

No PCBs or Pesticides were detected in the groundwater samples.

Groundwater concentrations above NYSDEC AWQS are shown on Figure 5.

7. Soil vapor samples collected during the RI were compared to the compounds listed in Vapor Intrusion Matrices in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion, dated October 2006 and as revised in May 2017. The results of the soil vapor sampling showed up to 27 VOCs were detected in the eight samples. No VOCs were detected above the air guideline values (AGVs) established by the New York State Department of Health (NYSDOH). Tetrachloroethene (PCE) was detected in six of the eight soil vapor samples at concentrations of 2.3 to 29 micrograms per cubic meter ( $\mu\text{g/m}^3$ ), below the AGV of 30  $\mu\text{g/m}^3$ . TCE was not detected in any of the soil vapor samples. VOCs associated with petroleum [including benzene, toluene, ethylbenzene, xylenes (collectively referred to as BTEX), 1,2,4- and 1,3,5-trimethylbenzene, cyclohexane, n-heptane, n-hexane, 4-ethyltoluene, and 2,2,4-trimethylpentane] were detected at concentrations up to 1,400  $\mu\text{g/m}^3$ . Other solvent-related VOCs [including acetone, chloroform, and methyl ethyl ketone (MEK)] were detected at concentrations up to 73  $\mu\text{g/m}^3$ . Low level VOC concentrations were also noted in the ambient air sample.

Soil vapor and ambient air detections are shown on Figure 6.

8. The investigation findings identified the presence of petroleum contamination, in both the western (151-159 West 108<sup>th</sup> Street) and eastern (103-107 West 108<sup>th</sup> Street) portions of the Site likely attributed to former on-site uses. As petroleum stained soil and photoionization detector (PID) readings were observed, the New York State Department of Environmental Conservation (NYSDEC) was notified and Spill Numbers 1603624 and 1603667 were assigned to 151-159 West 108<sup>th</sup> Street and 103-107 West 108<sup>th</sup> Street, respectively. While elevated PID readings were observed in the borings located at 143 West 108<sup>th</sup> Street (SB-8, SB-9, and SB-10), no other evidence of petroleum contamination was observed, such as staining, odors, or elevated VOC and SVOC analytical results.

For more detailed results, consult the SIR (Site Investigation Report).

## 2.0 REMEDIAL ACTION OBJECTIVES

Based on the results of the Phase II Site Investigation, the following Remedial Action Objectives (RAOs) have been identified for this Site:

### (a) Soil

- Prevent direct contact with contaminated soil.
- Prevent exposure to contaminants volatilizing from contaminated soil.
- Prevent migration of contaminants that would result in groundwater contamination.

### (b) Groundwater

- Remove contaminant sources causing impact to groundwater.
- Prevent direct exposure to contaminated groundwater.
- Prevent exposure to contaminants volatilizing from contaminated groundwater.

### (c) Soil Vapor

- Prevent exposure to contaminants in soil vapor.
- Prevent migration of soil vapor into dwelling and other occupied structures.

Remedial and mitigation measures described herein will be performed in accordance with applicable laws and regulations, and the site-specific CHASP. This remedy is protective of public health and/or the environment for the intended use.

### 3.0 DESCRIPTION OF REMEDIAL ACTION PLAN

#### 3.1 Evaluation of Remedial Alternatives

The goal of the remedy selection process is to select a remedy that is protective of human health and the environment taking into consideration the current, intended and reasonably anticipated future use of the Site. The remedy selection process begins by establishing RAOs for media in which chemical constituents were found in exceedance of applicable standards, criteria and guidance values (SCGs). A remedy is then developed based on the following nine criteria:

- Protection of human health and the environment;
- Compliance with SCGs;
- Short-term effectiveness and impacts;
- Long-term effectiveness and permanence;
- Reduction of toxicity, mobility, and/or volume of contaminated material;
- Implementability;
- Cost effectiveness;
- Community acceptance; and
- Land use.

The following is a detailed description of the alternatives analysis and remedy selection to address impacted media at the Site. As required, a minimum of two remedial alternatives (including a Track 1 scenario) were evaluated, as follows:

##### **Alternative 1:**

- Selection of NYSDEC 6NYCRR Part 375 USCOs (Track 1) Soil Cleanup Objectives (SCOs);
- Removal of all soil/fill exceeding Track 1 USCOs throughout the Site. Based on the results of the Phase II Site Investigation, it is expected that this alternative would require excavation of all material across the entire Site to bedrock (approximately 5 to 18 feet below cellar grade), including any petroleum storage tanks, fill ports, and vent lines. If soil is not excavated to bedrock and remains in place, post-excavation endpoint samples would be collected to confirm achievement of Track 1 SCOs.
- The RAO for soil vapor will be achieved through source removal. The project will also include installation of a vapor barrier beneath the cellar foundation and behind foundation sidewalls of the new building as part of new development and will act as an additional protective measure.
- Groundwater RAOs will be achieved through source removal.

##### **Alternative 2:**

- Establishment of Track 4 Site-Specific SCOs (SSSCOs);
- Removal of all soil/fill exceeding Track 4 SSSCOs including all petroleum-contaminated soil across the Site. Based on the results of the Phase II Site Investigation, this alternative would be achieved by excavating soil/fill to the proposed development excavation depth (approximately 3 feet below the current buildings' foundation) across the Site with additional excavation in areas where petroleum contaminated soil is present, petroleum storage tanks, and associated fill ports and vent pipes, where encountered.
- Installation of a vapor barrier beneath the cellar foundation and behind foundation sidewalls of the new building, as an Engineering Control (EC), to prevent potential exposures from soil vapor.
- Placement of a cover system over the entire Site, as an EC, to prevent exposure to remaining soil/fill. The cover system will consist of the buildings' concrete slabs and a clean soil cap with a minimum of 2 feet for the landscaped areas located in the rear of the buildings.
- Placement of a deed notice to record the ECs/ICs on the deed to ensure that future owners of the Site continue to comply with the SMP, as required.
- Establishment of use restrictions including prohibitions on the use of groundwater from the Site; prohibitions of sensitive Site uses, such as in-ground farming or vegetable gardening, to prevent future exposure pathways; and prohibition of a higher level of land use without OER approval.
- Establishment of an approved Site Management Plan (SMP) to ensure long-term management of these Engineering Controls and Institutional Controls (ECs/ICs) including the performance of periodic inspections and certification that the controls are performing as they were intended.

### 3.2 Balancing Criteria

#### 3.2.1 Compliance with Standards, Criteria and Guidance (SCGs)

This evaluation criterion assesses the ability of the alternative to achieve applicable standards, criteria and guidance.

Alternative 1 would achieve compliance with the remedial goals, chemical-specific SCGs and RAOs for soil by removing all soil above Track 1 USCOS including closure of Spill Numbers 1603624 and 1603667.

Alternative 2 would achieve compliance with the remedial goals, chemical-specific SCGs and RAOs for soil by removing all soil above Track 4 SSSCOs and closure of Spill Numbers 1603624 and 1603667.

Health and safety measures contained in the CHASP (Appendix C) will be implemented during excavation activities to ensure protection of workers and the public. For both alternatives, focused attention on means and methods employed during the remedial action would ensure that handling and management of

contaminated material would be in compliance with applicable SCGs. These measures will protect on-site workers and the surrounding community from exposure to Site-related contaminants.

### **3.2.2 Short-term Effectiveness and Impacts**

This evaluation criterion assesses the effects of the alternative during the construction and implementation phase until RAOs are met. Under this criterion, alternatives are evaluated with respect to their effects on public health and the environment during implementation of the remedial action, including protection of the community, environmental impacts, time until RAOs are achieved, and protection of workers during remedial actions.

Both Alternatives 1 and 2 have similar short-term effectiveness during their respective implementations, as each requires excavation of soil. Both alternatives would result in short-term dust generation impacts associated with excavation, handling, load out of materials, and truck traffic. Short-term impacts could potentially be higher for Alternative 1 if excavation of greater amounts of soil is encountered below the excavation depth of the proposed buildings and landscaped areas. However, focused attention to means and methods during the remedial action during a Track 1 removal action, including community air monitoring and appropriate truck routing, would minimize or negate the overall impact of these activities.

An additional short-term adverse impact and risk to the community associated with both remedial alternatives is increased truck traffic. Truck traffic will be routed on the most direct course using major thoroughfares where possible and flag persons will be used to protect pedestrians at Site entrances and exits. Truck traffic would be greater for Alternative 1 than for Alternative 2 due to the greater amount of soil that would be excavated and disposed of off-site.

The effects of these potential adverse impacts to the community, workers and the environment would be minimized through implementation of corresponding control plans including a CHASP, a Community Air Monitoring Plan (CAMP) and a Soil/Materials Management Plan (SMMP), during all on-site soil disturbance activities and would minimize the release of contaminants into the environment. Both alternatives provide short-term effectiveness in protecting the surrounding community by decreasing the risk of contact with on-site contaminants. Construction workers operating under appropriate management procedures and a CHASP would be protected from on-site contaminants [personal protective equipment (PPE) would be worn consistent with the documented risks within the respective work zones].

### **3.2.3 Long-term Effectiveness and Permanence**

This evaluation criterion addresses the results of a remedial action in terms of its permanence and quantity/nature of waste or residual contamination remaining at the Site after response objectives have been met, such as permanence of the

remedial alternative, magnitude of remaining contamination, and adequacy of controls to manage contaminant residuals that may remain at the Site.

Alternative 1 would achieve long-term effectiveness and permanence related to on-Site contamination by permanently removing all impacted soil/fill above Track 1 USCOS and removal of all fill ports, USTs, lifts, and associated piping.

Alternative 2 would provide long-term effectiveness by removing all USTs, fill ports, associated piping, and all associated petroleum-contaminated soil plus any soil/fill above Track 4 SSSCOs. To prevent exposure to any residual contamination, a vapor barrier and cover system would be installed across the Site, and use restrictions would be maintained.

Both alternatives would result in removal of soil contamination exceeding their respective SCOs, providing the highest level, most effective and permanent remedy over the long-term with respect to a remedy for contaminated soil, which will eliminate any migration to groundwater. Potential sources of groundwater contamination will also be eliminated as part of the remedy. In addition, petroleum Spill Numbers 1603624 and 1603667 would be closed.

#### **3.2.4 Reduction of Toxicity, Mobility, or Volume of Contaminated Material**

This evaluation criterion assesses the remedial alternative's use of remedial technologies that permanently and significantly reduce toxicity, mobility, or volume of contaminants as their principal element. The following is the hierarchy of source removal and control measures that are to be used to remediate a Site, ranked from most preferable to least preferable: removal and/or treatment, containment, elimination of exposure and treatment of source at the point of exposure. It is preferred to use treatment or removal to eliminate contaminants at a Site, reduce the total mass of toxic contaminants, cause irreversible reduction in contaminants mobility, or reduce of total volume of contaminated media.

Alternative 1 will permanently eliminate the toxicity, mobility, and volume of contaminants from on-site soil by removing all soil in excess of Track 1 USCOS and removal of all USTs, fill ports, and associated piping.

Alternative 2 would remove all USTs, fill ports, associated piping, and any associated petroleum contaminated soil plus any soil/fill above the Track 4 SSSCOs.

Based on the anticipated excavation depth for Alternative 2, Alternative 1 would remove a greater total mass of contaminants from the Site.

#### **3.2.5 Implementability**

This evaluation criterion addresses the technical and administrative feasibility of implementing an alternative and the availability of various services and materials required during its implementation, including technical feasibility of construction and operation, reliability of the selected technology, ease of undertaking remedial action, monitoring considerations, administrative feasibility (e.g. obtaining permits for remedial activities), and availability of services and materials.

The techniques, materials and equipment to implement both remedial Alternatives 1 and 2 are readily available and have been proven effective in remediating the contaminants associated with the Site. They use standard materials and services that are well established. The reliability of each remedy is also high. There are no special difficulties associated with any of the activities proposed.

### **3.2.6 Cost Effectiveness**

This evaluation criterion addresses the cost of alternatives, including capital costs (such as construction costs, equipment costs, and disposal costs, engineering expenses) and site management costs (costs incurred after remedial construction is complete) necessary to ensure the continued effectiveness of a remedial action.

Since it is anticipated that soil/fill would need to be excavated to bedrock to meet the Track 1 SCOs, the costs associated with Alternative 1 would be higher than Alternative 2. Additional costs would include installation of additional shoring/underpinning, disposal of additional soil, end point sampling (if necessary), and import of clean soil for backfill. However, long-term operation and maintenance costs for Alternative 2 are likely higher than Alternative 1 based on implementation of a SMP as part of Alternative 2.

The remedial plan creates an approach that combines the remedial action with the redevelopment of the Site, including the construction of the building foundation and subgrade structures. The remedial plan is also cost effective in that it will take into consideration the selection of the closest and most appropriate disposal facilities to reduce transportation and disposal costs during the excavation of historic fill and other soils during the redevelopment of the Site.

### **3.2.7 Community Acceptance**

This evaluation criterion addresses community opinion and support for the remedial action. Observations here will be supplemented by public comment received on the RAP.

It is our understanding that community input on the proposed project has been received at local community board meetings. Based on the overall goals of the remedial program, it not anticipated that the community will oppose the proposed remedy; however, the community may express adverse opinions to the proposed development. As this RAP is subject to public review under the NYC VCP, the public will be provided the opportunity to provide input on the remedial alternatives and the selected remedy. This public comment will be considered by OER prior to approval of this plan. The Citizen Participation Plan for the project is provided in Appendix D.

### **3.2.8 Land Use**

This evaluation criterion addresses the proposed use of the Site. This evaluation has considered reasonably anticipated future uses of the Site and takes into account: current use and historical and/or recent development patterns; applicable zoning laws and maps; NYS Department of State's Brownfield Opportunity

Areas (BOA) pursuant to section 970-r of the general municipal law; applicable land use plans; proximity to real property currently used for residential use, and to commercial, industrial, agricultural, and/or recreational areas; environmental justice impacts, Federal or State land use designations; population growth patterns and projections; accessibility to existing infrastructure; proximity of the Site to important cultural resources and natural resources, potential vulnerability of groundwater to contamination that might emanate from the Site, proximity to flood plains, geography and geology; and current ICs applicable to the Site.

The current, intended, and reasonably anticipated future land use of the Site and its surroundings are compatible with the selected remedy. The proposed future use of the Site includes community and residential uses. Proposed development plans are presented in Appendix A.

Following remediation for Alternative 2, the Site will meet the Track 4 SSSCOs, which are appropriate for its planned residential use and both NYSDEC Spill Numbers 1603624 and 1603667 will be closed. Following remediation for Alternative 1, the Site will meet the Track 1 USCOs, which are appropriate for its planned residential use, and for any future use at the Site. The reasonably anticipated future use of the Site and its surroundings will be documented by the applicant in the NYC VCP application, and will include the following:

The proposed redevelopment of the Site is not compatible with its current zoning; however, the Site is currently undergoing a rezoning action under NYC's Uniform Land Use Review Procedure (ULURP). ULURP approval will be received prior to start of development construction. The surrounding area is developed primarily with residential and commercial properties. The proposed development would create much needed affordable and senior housing, new employment opportunities, living space, and economic and fiscal benefits to the City and State in the form of economic revitalization and tax revenue.

For both Alternatives 1 and 2, temporary short-term project impacts are being mitigated through implementation of a HASP/CAMP and nuisance controls and truck traffic controls during remedial activities.

The Site is not in close proximity to important cultural resources, including Federal or State historic or heritage sites or Native American religious sites, natural resources, waterways, wildlife refuges, wetlands, or critical habitats of endangered or threatened species, but is located across the street from Booker T Washington Middle School (M.S. 54M). Building 1 is across from school fields and the school building is located across West 108<sup>th</sup> Street from Building 2. The Site is located in an urban area with limited proximity to fish or wildlife. Both alternatives would prevent any potential exposure pathways of contaminant migration affecting sensitive receptors or fish or wildlife. Municipal water supply wells are not present in this part of City; therefore, groundwater from the Site cannot affect municipal water supply wells or recharge areas. The Site does not lie in a Federal Emergency Management Agency (FEMA)-designated flood plain.

Both alternatives are equally protective of natural resources and cultural resources.

Improvements in the current environmental condition of the Site achieved by both alternatives are also consistent with the City's goals for cleanup of contaminated land and bringing such properties into productive reuse.

### 3.2.9 Sustainability of the Remedial Action

This criterion evaluates the overall sustainability of the remedial action alternatives and the degree to which sustainable means are employed to implement the remedial action including those that take into consideration NYC's sustainability goals defined in *PlaNYC: A Greener, Greater New York*. Sustainability goals may include: maximizing the recycling and reuse of non-virgin materials; reducing the consumption of virgin and non-renewable resources; minimizing energy consumption and greenhouse gas emissions; improving energy efficiency; and promotion of the use of native vegetation and enhancing biodiversity during landscaping associated with Site development.

While Alternative 2 would potentially result in lower energy usage based on reducing the volume of material transported off-site, both remedial alternatives are comparable with respect to the opportunity to achieve sustainable remedial action. The remedial plan would take into consideration the shortest trucking routes during off-site disposal of historic fill and other soils, which would reduce greenhouse gas emissions and conserve energy used to fuel trucks. The New York City Clean Soil Bank program may be utilized for import of native soil. To the extent practicable, energy efficient building materials, appliances, and equipment will be utilized to complete the development. A complete list of green remedial activities considered as part of the NYC VCP is included in the Sustainability Statement, included as Appendix E.

### 3.3 Selection of the Preferred Remedy

The preferred remedy for the Site is Alternative 2, Track 4 SSSCOs. Since new development requires excavation to the new cellar grade (8 feet below sidewalk surface, 0 to 5 feet below current cellar depth as shown on Figure 7), a Track 1 Alternative is not feasible without additional excavation to bedrock (up to 20 feet below sidewalk grade).

The Alternative 2 remedy will remove all tanks, lines, fill ports, and any associated petroleum contaminated soil encountered, closure of Spill Numbers 1603624 and 1603667, and all soil/fill exceeding Track 4 SSSCOs throughout the Site, which will be confirmed with post-excavation sampling where soil is left in place. If soil/fill containing analytes at concentrations above Track 4 SSSCOs is still present at the base or walls of the excavation after removal of all soil required for construction of the new buildings' cellar level and slab are complete, additional excavation would be performed to the extent feasible to ensure complete removal of soil/ fill that does not meet Track 4 SSSCOs.

ECs will also be implemented under the Alternative 2 remedy. A composite cover system including concrete slabs, foundation walls, vapor barrier membrane beneath the entire

building footprints, and a two-foot clean soil cap in the rear landscaped areas would be installed throughout the Site.

ICs will be imposed on the Site (including prohibitions on any use higher than Restricted Residential, e.g. the use of groundwater from the Site; prohibitions of restricted Site uses, such as farming or vegetable gardening, to prevent future exposure pathways; and prohibition of a higher level of land use without OER approval). Deed restrictions will be placed on the Site.

### **3.4 Summary of Preferred Remedial Action**

The proposed remedial plan achieves all of the remedial action goals established for the project. The proposed remedial action is effective in both the short-term and long-term and reduces mobility, toxicity and volume of contaminants and uses standard methods that are well established in the industry.

The proposed remedial action will include the following:

1. A Supplemental Subsurface Investigation will be conducted upon demolition of the Site buildings to delineate petroleum contamination associated with New York State Department of Environmental Conservation (NYSDEC) Spill Numbers 1603624 and 1603667. A Supplemental Phase II Environmental Site Investigation Work Plan (approved by NYSDEC and OER) is provided as Appendix B.
2. Site mobilization involving Site security setup, equipment mobilization, utility mark outs and marking & staking excavation areas.
3. Implementation of storm-water pollution prevention measures in compliance with applicable laws and regulations.
4. Establishment of Site-Specific Soil Cleanup Objectives (SSSCOs) for contaminants of concern.
5. Completion of a Waste Characterization Study prior to excavation activities. Waste characterization soil samples will be collected at a frequency dictated by disposal facility(s).
6. Performance of a Community Air Monitoring Program (CAMP) for particulates and volatile organic compounds (VOCs) compounds.
7. Preparation of a Community Protection Statement and performance of all required NYC VCP Citizen Participation activities according to an approved Citizen Participation Plan.
8. Excavation and off-site disposal of soil/fill exceeding SSSCOs. Portions of the Site will be excavated from grade to bedrock (varies from approximately 2 to 8 ft. below grade). The total quantity of soil/fill expected to be excavated and disposed off-site is approximately 4,500 cubic yards (6,750 tons).
9. Screening of excavated soil/fill during intrusive work for indications of contamination by visual means, odor, and monitoring with a photoionization detector (PID).

10. Management of excavated materials including temporarily stockpiling and segregating in accordance with defined material types and to prevent co-mingling of contaminated material and non-contaminated materials.
11. Removal of underground storage tanks (USTs) in compliance with applicable local, State, and Federal laws and regulations.
12. Performance of a remedial action for the petroleum spill numbers, 1603624 and 1603667 under the NYSDEC Spill program. A separate RAWP addendum may be required by NYSDEC for spill closure.
13. Transportation and off-site disposal of all soil/fill material at permitted facilities in accordance with applicable laws and regulations for handling, transport, and disposal, and this plan. Sampling and analysis of excavated media as required by disposal facilities. Appropriate segregation of excavated media onsite.
14. Collection and analysis of 11 end-point samples to determine the performance of the remedy with respect to attainment of SCOs. End point samples for tank removal and spill remediation will be conducted per NYSDEC guidance contained in DER-10.
15. Construction and maintenance of an engineered composite cover at each building consisting of six inches of concrete building foundation slabs/walls and a two foot clean soil cap in any landscaped areas to prevent human exposure to residual soil/fill remaining under the Site.
16. Submission of a Remedial Action Report (RAR), that describes the remedial activities, that certifies that the remedial requirements have been achieved, and describes all Engineering Controls and Institutional Controls (ECs/ICs) to be implemented at the Site, and lists any deviations from this RAP.
17. Installation of a vapor barrier system beneath the buildings' slab and along foundation sidewalls to prevent soil vapor migration into the building. The vapor barrier system will consist of the Stego Wrap<sup>®</sup> 20-mil vapor barrier or an OER-approved equivalent. All welds, seams and penetrations will be properly sealed to prevent preferential pathways for vapor migration. The vapor barrier system is an Engineering Control for the remedial action. The remedial engineer will certify in the RAR that the vapor barrier system was designed and properly installed to mitigate soil vapor migration into the building.
18. Performance of all activities required for the remedial action, including permitting requirements and pretreatment requirements, in compliance with applicable laws and regulations.
19. Submission of an approved Site Management Plan (SMP) in the RAR for long-term management of residual contamination, including plans for operation, maintenance, monitoring, inspection and certification of Engineering and Institutional Controls and reporting at a specified frequency.
20. Recording of a Declaration of Covenants and Restrictions that includes a listing of Engineering Controls and Institutional Controls and a requirement that management of these controls must be in compliance with an approved SMP. Institutional Controls

will include prohibition of the following: (1) vegetable gardening and farming; (2) use of groundwater without treatment rendering it safe for the intended use; (3) disturbance of residual contaminated material unless it is conducted in accordance with the SMP; and (4) higher level of land usage without OER-approval.

### 3.4.1 Summary of Preferred Remedial Action

Track 4 SSSCOs are proposed for the remedy proposed under this RAP. The SCOs for this Site will be NYSDEC Part 375 Section 6.8 Restricted Residential Use SCOs as modified for the following SSSCOs:

Contaminant	SSSCOs
VOCs	RRSCOs and protection of gw standards for isopropylbenzene
Total SVOCs	250 ppm
Arsenic	23 ppm
Lead	1,000 ppm
Barium	600 ppm
Cadmium	10 ppm

ppm = parts per million

Soil and materials management on-Site and off-site, including excavation, handling and disposal, will be conducted in accordance with the Soil/Materials Management Plan (SMMP) in Appendix F. The location of planned excavations is shown on Figure 7.

Discrete contaminant sources (such as petroleum contaminated soil and any additional hotspots) identified during the remedial action will be identified by GPS or surveyed. This information will be provided in the RAR.

### 3.4.2 Soil/Fill Removal Quantities

Excavation is expected to extend up to approximately 8 feet below grade at the location of the proposed buildings. The total quantity of soil/fill expected to be excavated and disposed off-site is approximately 4,500 cubic yards. An estimated site excavation plan is shown on Figure 7.

The proposed disposal locations for Site-derived contaminated materials will be determined after the requisite waste characterization sampling is conducted. Disposal facilities will be reported to OER when they are identified and prior to the start of remedial action.

### 3.4.3 End-point Sampling

Eleven endpoint samples will be collected in areas where excavation does not extend to bedrock. The samples collected during the Supplemental Phase II

Environmental Site Investigation Work Plan (included in Appendix B) will serve as additional end-point samples for the remediation. Soil samples will be inspected for evidence of contamination (e.g., odors, staining), screened for the presence of volatile organics with a PID equipped with a 10.6 electron volt (eV) lamp. The PID will be calibrated in accordance with manufacturer's recommendations prior to sampling.

The endpoint soil samples will be analyzed for the following:

- VOCs by EPA Method 8260;
- SVOCs by EPA Method 8270; and
- The metals arsenic, barium, cadmium, and lead.

A New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Program (ELAP)-certified laboratory will be used for all sample analyses. All laboratory analytical data will be tabulated in the RAR and will include all data including non-detects and applicable standards and/or guidance values.

If either light non-aqueous phase liquid (LNAPL) and/or dense non-aqueous phase liquid (DNAPL) are detected, appropriate samples will be collected for characterization and "fingerprint analysis" and required regulatory reporting (i.e., spills hotline) (if any) will be performed.

#### **3.4.4 Quality Assurance/Quality Control**

The fundamental quality assurance (QA) objective with respect to accuracy, precision, and sensitivity of analysis for laboratory analytical data is to achieve the quality control (QC) acceptance of the analytical protocol. The accuracy, precision and completeness requirements will be addressed by the laboratory for all data generated.

One blind duplicate sample for every 20 samples collected will be submitted to the approved laboratory for analysis of the same parameters as the parent sample.

Samples will be collected in accordance with the following procedures:

- Record sample observations (e.g., evidence of contamination, PID readings, soil classification) in a field log book.
- Collect an aliquot of soil or groundwater using dedicated or disposable plastic sample spoon or sample bailer and place in laboratory-supplied sample jars.
- Seal and label the sample jars as described below and place in a chilled cooler.

#### **Decontamination Procedures**

To avoid contamination and cross-contamination of samples, only dedicated or disposable sampling equipment may be used to collect these samples. All non-disposable equipment involved in field sampling must be decontaminated before

being brought to the sampling location, and must be properly decontaminated after use.

#### Sample Identification

All samples will be consistently identified in all field documentation, chain-of-custody documents and laboratory reports using an alpha-numeric or alpha-alpha code. For endpoint soil samples, the alpha prefix will be “EP” followed by numbers as indicated on Figure 8.

For stockpiled soil, if samples are necessary, the alpha prefix will be “SP” and the numbers following the alpha prefix will correspond to excavated stockpiles, beginning with “1, 2, 3...etc.” For example, the first sample collected from the first stockpile will be labeled “SP-1-1” and the first sample collected from the second stockpile will be labeled “SP-2-1.”

#### Sample Labeling and Shipping

All sample containers will be labeled with the following information:

- Site identification
- Sample identification
- Date and time of collection
- Analysis(es) to be performed
- Sampler’s initials

Once the samples are collected and labeled, they will be placed in chilled coolers and stored in a cool area away from direct sunlight to await shipment to the laboratory. Soil samples will be shipped to the laboratory at a frequency that will not result in an exceedance of applicable holding times for sample methods. At the start and end of each workday, field personnel will add ice to the coolers as needed.

The samples will be prepared for shipment by placing each sample jar in a sealable plastic bag, then wrapping each bag in bubble wrap to prevent breakage, adding freezer packs and/or fresh ice in sealable plastic bags and the chain-of-custody form. Samples will be shipped overnight (e.g., Federal Express) or transported by a laboratory courier. All coolers shipped to the laboratory will be sealed with mailing tape and a chain-of-custody seal to ensure that the coolers remain sealed during delivery.

#### Sample Custody

Field personnel will be responsible for maintaining the sample coolers in a secured location until they are picked up and/or sent to the laboratory. The record of possession of samples from the time they are obtained in the field to the time they are delivered to the laboratory or shipped off-site will be documented on chain-of-custody forms. The chain-of-custody forms will contain the following information: project name; names of sampling personnel; sample number; date

and time of collection and matrix; and signatures of individuals involved in sample transfer, and the dates and times of transfers. Laboratory personnel will note the condition of the custody seal and sample containers at sample check-in.

#### Documentation

A sample log book will be maintained. The following information, at a minimum, will be recorded to the log:

- Sample identification number
- Sample location
- Field observations
- Sample type
- Analyses
- Date/time of collection
- Collector's name
- Sample procedures and equipment utilized
- Date sent to laboratory/name of laboratory
- Copies of site drawings indicating stockpile numbers and locations

#### **3.4.5 Import and Reuse of Soils**

Import of soil onto the Site and reuse of soil already on-site will be performed in conformance with the SMMP in Appendix F. Imported soil will meet the lower of:

- Restricted Residential SCOs; and
- Groundwater Protection Standards in Part 375-6.8.

It is anticipated that approximately 200 cubic yards of soil will be imported for the landscaped areas in the rear yard.

### **4.0 QUALITATIVE HUMAN HEALTH EXPOSURE ASSESSMENT (QHHEA)**

The objective of the qualitative exposure assessment is to identify potential receptors and pathways for human exposure to the contaminants of concern (COC) that are present at, or migrating from, the Site. The identification of exposure pathways describes the route that the COC takes to travel from the source to the receptor. An identified pathway indicates that the potential for exposure exists; it does not imply that exposures actually occur.

The Phase II Investigation, as described in the Phase II Investigation Report, is sufficient to complete a QHHEA. The QHHEA was performed to determine whether the Site poses an existing or future health hazard to the Site's exposed or potentially exposed population. The sampling data from the Remedial Investigation (RI) was evaluated to determine whether there is any health risk by characterizing the exposure setting, identifying exposure pathways, and evaluating contaminant fate and transport. This QHHEA was prepared in accordance with

Appendix 3B and Section 3.3 (b) 8 of the NYSDEC Draft DER-10 Technical Guidance for Site Investigation and Remediation.

#### 4.1 Contaminants of Concern (COCs) in Respective Media

Based on the results of the Subsurface (Phase II) Investigation, the COCs are:

##### Soil:

Several VOCs were identified, but did not exceed their RRSCOs.

The SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene were detected above their respective RRSCOs.

The metals arsenic, barium, cadmium, and lead, were detected above their respective RRSCOs.

Several pesticides were identified, but did not exceed their RRSCOs.

##### Groundwater:

The VOC isopropylbenzene (cumene) was detected at a concentration above its respective AWQS.

The SVOCs benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, bis(2-ethylhexyl)phthalate, chrysene, and indeno(1,2,3-c,d)pyrene were detected at concentrations above their respective AWQSs.

Dissolved magnesium, manganese and sodium were detected at concentrations above their respective AWQSs.

##### Soil Vapor:

Petroleum related and chlorinated VOC compounds were detected at low levels..

#### 4.2 Potential Routes of Exposure

The five elements of an exposure pathway are:

1. The source of contamination;
2. The environmental media and transport mechanisms;
3. The point of exposure;
4. The route of exposure; and
5. The receptor population.

These elements of an exposure pathway may be based on past, present, or future events. An exposure pathway is considered complete when all five elements of an exposure pathway are documented. A potential exposure pathway exists when any one or more of the five elements comprising an exposure pathway cannot be documented. An exposure pathway may be eliminated from further evaluation when any one of the five elements comprising an exposure pathway has not existed in the past, does not exist in the present, and will never exist in the future.

### 4.3 Exposure Route

An exposure route is the mechanism by which a receptor comes into contact with a chemical. Three potential primary routes exist by which chemicals can enter the body:

1. Ingestion of water, fill, and/or soil;
2. Inhalation of vapors and/or particulates; and
3. Dermal contact with water, fill, soil, and/or building materials.

### 4.4 Potential Receptors

Currently, the buildings at 103-107, 143, and 151-159 West 108<sup>th</sup> Street are utilized as parking garages and 145-149 West 108<sup>th</sup> Street as an emergency senior citizen shelter. The area immediately surrounding the Site is predominantly residential and commercial in nature. The proposed future use of the Site is residential with community space on the ground floor.

On-site Receptors: Potential on-site receptors include adult residents of the senior shelter, employees of the shelter and garages, customers of the garages, and visitors.

During redevelopment of the Site, the on-site potential sensitive receptors will include construction workers and inspectors. Once the Site is redeveloped, the on-site potential sensitive receptors will include: adult and child residents, maintenance staff, and community patrons.

Off-site Receptors: Potential off-site receptors within a 0.25-mile radius of the Site include: adult and child residents, commercial and construction workers, students, pedestrians, trespassers, and cyclists, based on the following:

- Commercial Businesses – existing and future
- Residential Buildings – existing and future
- Building Construction/Renovation – existing and future
- Pedestrians, Trespassers, Cyclists – existing and future
- Schools – existing and future

### 4.5 Existence of Human Health Exposure Pathways

This evaluation consists of the following components: contaminant source; contaminant release and transport mechanism; point of exposure; route of exposure; and receptor population.

On-site Existing Conditions: There is a potential exposure pathway from dermal contact by residents and staff with soil/fill in the side yard at 145-149 West 108<sup>th</sup> Street, and in the rear yards of 143-159 West 108<sup>th</sup> Streets. There is an existing potential exposure pathway from VOCs in soil vapor to enter into the building as a result of any basement floor or lower wall openings/cracks.

Off-site Existing Conditions: There is an existing potential exposure pathway from VOCs in soil vapor to enter into the adjoining buildings as a result of any basement floor or lower wall openings/cracks. The indoor air quality at the adjoining properties may be

susceptible to contamination from subsurface vapor intrusion attributable to VOCs emitted from the Site. The potential receptors from such a migration pathway into the building would be to off-site construction and commercial workers, and adult and child residents. The primary route of exposure would be inhalation. There is also a potential exposure pathway from any dust emanating from the Site to off-site pedestrians, visitors, cyclists, and adult and child residents.

**On-site Future Conditions:** Once redevelopment activities begin, there will be a potential exposure pathway from construction workers coming into direct contact with surface and subsurface soils as a result of construction and excavation activities. If the redevelopment plans include dewatering, there will be a potential exposure pathway from the groundwater to on-site construction workers. On-site construction workers could potentially inhale or have dermal contact with any soil/fill that is saturated with contaminated groundwater, vapors off-gassing from the groundwater, and/or the contaminated groundwater itself.

Once the redevelopment of the Site has been completed (assuming no remediation) there will be a potential exposure pathway to adult and child residents, maintenance staff, and commercial workers from the inhalation of any potential off-gassing of VOC vapors from the subsurface. The VOC vapors could migrate from residual compounds in the soil and/or groundwater and enter the building through any cracks or openings in the foundation. There will also be a potential exposure pathway from dermal contact, inhalation, or ingestion of surface soil/fill in any landscaped or non-capped areas by adult and child residents, visitors, and trespassers.

**Off-site Future Conditions:** Once redevelopment of the Site has been completed (assuming no remediation), there is a potential exposure pathway from soil vapor emanating from the subsurface to enter into the adjoining buildings as a result of any basement floor or lower wall openings/cracks. The indoor air quality at the adjoining properties would be susceptible to contamination from subsurface vapor intrusion. Off-site commercial workers and adult or child residents could potentially inhale these vapors. There will also be a potential exposure pathway from any particulates emanating from the Site from uncapped landscaped areas to off-site pedestrians, visitors, cyclists, and adult and child residents.

#### **4.6 Overall Human Health Exposure Assessment**

Since the accessible areas of the Site are entirely capped with concrete and asphalt, there are limited on-site exposure pathways. There is a potential exposure pathway from dermal contact by residents and staff with soil/fill in the side yard at 145-149 West 108<sup>th</sup> Street, and in the rear yards of 143-159 West 108<sup>th</sup> Street. There is an existing potential exposure pathway from VOCs in soil vapor to enter into the buildings as a result of any basement floor or lower wall openings/cracks.

Once redevelopment activities begin, there will be a potential exposure pathway from contaminated surface soil/fill to construction workers as these workers could potentially ingest, inhale, or have dermal contact with any exposed contaminated fill or soil. If redevelopment plans include dewatering, there will be an additional potential exposure

pathway as workers could potentially inhale or have dermal contact with the contaminated groundwater.

Without remediation, once redevelopment of the Site has been completed, there will be a potential exposure pathway from the potential off-gassing of residual organic vapors in the soil and/or groundwater to adult and child residents, maintenance staff, visitors, and commercial workers through cracks or openings in the foundations of the new building and surrounding buildings. There will also be a potential exposure pathway from dermal contact, inhalation, or ingestion of surface soil in any landscaped or non-capped areas by adult and child residents, visitors, and trespassers.

Based on the results of the QHHEA, an OER-approved Remedial Action Plan (RAP) should be implemented during construction of the proposed Site building to ensure that the potential exposure pathways identified do not become complete. The RAP should address the contaminated soil/fill at the Site and the implementation of certain engineering and/or institutional controls.

## 5.0 ENGINEERING CONTROLS

The proposed remedy will achieve Track 4 SSSCOs. ECs will be employed as part of the remedial action to address residual contamination remaining at the Site. The Site has two primary Engineering Control Systems. These are:

- Site cover system, consisting of concrete building slabs, foundation walls, concrete pathways, and clean soil cap; and
- Vapor barrier.

### 5.1 Site Cover System

Exposure to residual soil/fill will be prevented by a site cover system built across the entirety of the Site (building slabs, foundation walls, concrete pathways and clean soil cap), as shown on Figure 9. The concrete buildings' slabs will be underlain by a vapor barrier as discussed in Section 5.2. Any uncapped landscaped areas or permeable pavement will be capped by minimum two-feet of clean soil, which will be underlain by a demarcation barrier (i.e. orange snow fence). Figure 9 shows the typical design and location of each remedial cover type used on this Site.

The site cover system is a permanent EC for the Site. The system will be inspected and reported at specified intervals as required by this RAP and the SMP. A Soil Management Plan will be included in the SMP and will outline the procedures to be followed in the event that the site cover system and underlying residual soil/fill is disturbed after the remedial action is complete. Maintenance of this site cover system will be described in the SMP in the RAR.

### 5.2 Vapor Barrier

Migration of soil vapor will be mitigated with a combination of buildings' slabs and vapor barrier. The vapor barrier will be installed beneath the new buildings' slabs and outside of below-grade foundation sidewalls. The barrier will consist of a Stego Wrap®

20-mil vapor barrier or an OER-approved equivalent. The barrier will be installed in accordance with the manufacturer's specifications, including those for sealing penetrations. Proof of installation will be included in the Professional Engineer (P.E.)-certified RAR.

At a minimum, field quality control of the integrity of the vapor barrier installation will include:

- The sealing of all penetrations per the manufacturer's specifications to ensure a single membrane layer;
- Notifying the manufacturer or third-party certifying inspector of the vapor barrier installation in sufficient time to allow for inspection of substrates and membranes; and
- Sufficient site visits by the membrane manufacturer or third-party certifying inspector to provide certification of proper installation.

The vapor barrier manufacturer specifications are provided in Appendix G.

### 5.3 Institutional Controls

ICs have been incorporated in this remedial action to manage residual soil/fill and other media and render the Site protective of public health and the environment. Long-term employment of ECs/ICs will be implemented under a site-specific SMP that will be included in the RAR.

ICs for this remedial action are:

- Recording of an OER-approved Declaration of Covenant and Restrictions (DCR) with the City Register or county clerk, as appropriate. The DCR will include a description of all ECs and ICs, will summarize the requirements of the SMP, and will note that the property owner and property owner's successors and assigns must comply with the DCR and the approved SMP. The recorded DCR will be submitted in the Remedial Action Report. The DCR will be recorded prior to OER issuance of the Notice of Completion
- Submittal of a SMP in the RAR for approval by OER that provides procedures for appropriate operation, maintenance, monitoring, inspection, reporting and certification of ECs. The SMP will require that the property owner and property owner's successors and assigns will submit to OER a periodic written statement that certifies that: (1) controls employed at the Site are unchanged from the previous certification or that any changes to the controls were approved by OER; and, (2) nothing has occurred that impairs the ability of the controls to protect public health and environment or that constitute a violation or failure to comply with the SMP. OER retains the right to enter the Site in order to evaluate the continued maintenance of any controls. This certification shall be submitted at a frequency to be determined by OER in the SMP and will comply with RCNY §43-1407(1)(3);
- Vegetable gardens and farming on the Site are prohibited in contact with residual soil materials;

- Use of groundwater underlying the Site is prohibited without treatment rendering it safe for its intended use;
- All future activities on the Site that will disturb residual material must be conducted pursuant to the soil management provisions in an approved SMP; and
- The Site will be used for residential use and will not be used for a higher level of use without prior approval by OER.

#### **5.4 Site Management Plan**

Site Management is the last phase of remediation and begins with the approval of the RAR and issuance of the Notice of Completion (NOC) for the Remedial Action. The SMP describes appropriate methods and procedures to ensure implementation of all ECs and ICs that are required by this RAP. The SMP is submitted as part of the RAR but will be written in a manner that allows its use as an independent document. Site Management continues until terminated in writing by OER. The property owner is responsible to ensure that all Site Management responsibilities defined in the SMP are implemented.

The SMP will provide a detailed description of the procedures required to manage residual soil/fill left in place following completion of the remedial action in accordance with the Voluntary Cleanup Agreement with OER. This includes a plan for: (1) implementation of ECs and ICs; (2) operation and maintenance of ECs; (3) inspection and certification of ECs; and (4) reporting.

Site management activities, reporting, and EC/IC certification will be scheduled by OER on a periodic basis to be established in the SMP and will be subject to review and modification by OER. The SMP will be based on a calendar year and certification reports will be due for submission to OER by March 31 of the year following the reporting period.

## 6.0 REMEDIAL ACTION MANAGEMENT

### 6.1 Project Organization and Oversight

Principal personnel who will participate in the remedial action include:

Michelle Lapin, PE	AKRF Remedial Engineer
Marc Godick, LEP	AKRF Principal and Project Director
Deborah Shapiro, QEP	AKRF Project Manager and Qualified Environmental Professional
Kenneth Wiles	AKRF Alternate Project Manager
Elizabeth Matamoros	AKRF Field Team Leader and Environmental Site Safety Officer

The Professional Engineer for this project is Michelle Lapin (New York State Professional Engineer #073934-1).

### 6.2 Site Security

Site access will be controlled by locked gated entrances to the fenced site.

### 6.3 Work Hours

The hours for operation of remedial construction will be from 7:00 AM to 4:00 PM. These hours conform to the New York City Department of Buildings construction code requirements.

### 6.4 Construction Health and Safety Plan

The site-specific Construction Health and Safety Plan (CHASP) is included in Appendix C. The Site Safety Coordinator will be Elizabeth Matamoros. Remedial work performed under this RAP will be in full compliance with applicable health and safety laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements. Confined space entry, if any, will comply with OSHA requirements and industry standards and will address potential risks. The parties performing the remedial construction work will ensure that performance of work is in compliance with the CHASP and applicable laws and regulations. The CHASP pertains to remedial and invasive work performed at the Site until the issuance of the Notice of Satisfaction.

All field personnel involved in remedial activities will participate in training required under 29 CFR 1910.120, including 40-hour hazardous waste operator training and annual 8-hour refresher training. The Site Safety Officer will be responsible for maintaining workers training records.

Personnel entering any exclusion zone will be trained in the provisions of the CHASP and be required to sign a CHASP acknowledgment. Site-specific training will be provided to field personnel. Additional safety training may be added depending on the tasks performed. Emergency telephone numbers will be posted at the site location before

any remedial work begins. A safety meeting will be conducted before each shift begins. Topics to be discussed include task hazards and protective measures (physical, chemical, environmental); emergency procedures; PPE levels and other relevant safety topics. Meetings will be documented in a log book or specific form.

An emergency contact sheet with names and phone numbers is included in the CHASP. That document will define the specific project contacts for use in case of emergency.

## **6.5 Community Air Monitoring Plan**

Real-time air monitoring for VOCs and particulate levels at the perimeter of the exclusion zone or work area will be performed. Continuous monitoring will be performed for all ground intrusive activities and during the handling of contaminated or potentially contaminated media. Ground intrusive activities include, but are not limited to, soil/waste excavation and handling, test pit excavation or trenching, and the installation of soil borings or monitoring wells.

Continuous monitoring for VOCs and particulate levels during all soil disturbance activities including CAMP stations both upwind and downwind of activities, and a CAMP station on the southern (West 108<sup>th</sup> Street) Site boundary across from the school. Periodic monitoring for VOCs will be performed during non-intrusive activities such as the collection of soil samples. Periodic monitoring during sample collection, for instance, will consist of taking a reading upon arrival at a sample location, monitoring while opening a well cap or overturning soil, monitoring during well baling/purging, and taking a reading prior to leaving a sample location. Depending upon the proximity of potentially exposed individuals, continuous monitoring may be performed during sampling activities. Examples of such situations include groundwater sampling at wells on the curb of a busy urban street, in the midst of a public park, or adjacent to a school or residence. Exceedances of action levels observed during performance of the CAMP will be reported to the OER Project Manager and included in the Daily Report.

### **6.5.1 VOC Monitoring, Response Levels, and Actions**

In accordance with the Generic CAMP, VOCs will be monitored at the downwind perimeter of the immediate work area (i.e., the exclusion zone) on a continuous basis during invasive work. Upwind concentrations will be measured at the start of each workday and periodically thereafter to establish background conditions. In addition, concentrations will be measured at the West 108<sup>th</sup> Street Site boundary. The monitoring work will be performed using equipment appropriate to measure the types of contaminants known or suspected to be present. The equipment will be calibrated at least daily for the contaminant(s) of concern or for an appropriate surrogate. The equipment will be capable of calculating 15-minute running average concentrations, which will be compared to the levels specified below.

- If the ambient air concentration of total organic vapors at the downwind perimeter of the work area or exclusion zone exceeds 5 parts per million (ppm) above background for the 15-minute average, work activities will be temporarily halted and monitoring continued. If the total organic vapor

level readily decreases (per instantaneous readings) below 5 ppm over background, work activities will resume with continued monitoring.

- If total organic vapor levels at the downwind perimeter of the work area or exclusion zone persist at levels in excess of 5 ppm over background but less than 25 ppm, work activities will be halted, the source of vapors identified, corrective actions taken to abate emissions, and monitoring continued. After these steps, work activities will resume provided that the total organic vapor level 200 feet downwind of the exclusion zone or half the distance to the nearest potential receptor or residential/commercial structure, whichever is less—but in no case less than 20 feet—is below 5 ppm over background for the 15-minute average.
- If the organic vapor level is above 25 ppm at the perimeter of the work area, activities will be shutdown.

All 15-minute readings must be recorded and be available for OER personnel to review. Instantaneous readings, if any, used for decision purposes will also be recorded.

### **6.5.2 Particulate Monitoring, Response Levels, and Actions**

In accordance with the generic CAMP, particulate concentrations will be monitored continuously at the upwind and downwind perimeters of the exclusion zone and along the West 108<sup>th</sup> Street Site boundary at temporary particulate monitoring stations. The particulate monitoring will be performed using real-time monitoring equipment capable of measuring particulate matter less than 10 micrometers in size (PM-10) and capable of integrating over a period of 15 minutes (or less) for comparison to the airborne particulate action level. The equipment will be equipped with an audible alarm to indicate exceedance of the action level. In addition, fugitive dust migration will be visually assessed during all work activities.

- If the downwind PM-10 particulate level is 100 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ) greater than background (upwind perimeter) for the 15-minute period or if airborne dust is observed leaving the work area, then dust suppression techniques will be employed. Work will continue with dust suppression techniques provided that downwind PM-10 particulate levels do not exceed  $150 \mu\text{g}/\text{m}^3$  above the upwind level and provided that no visible dust is migrating from the work area.
- If, after implementation of dust suppression techniques, downwind PM-10 particulate levels are greater than  $150 \mu\text{g}/\text{m}^3$  above the upwind level, work will be stopped and a re-evaluation of activities initiated. Work will resume provided that dust suppression measures and other controls are successful in reducing the downwind PM-10 particulate concentration to within  $150 \mu\text{g}/\text{m}^3$  of the upwind level and in preventing visible dust migration.

All readings will be recorded and be available for OER personnel to review.

## **6.6 Agency Approvals**

All permits or government approvals required for remediation and construction have been or will be obtained prior to the start of remediation and construction. Acceptance of this RAP by OER does not constitute satisfaction of these requirements and will not be a substitute for any required permit.

## **6.7 Site Preparation**

### **6.7.1 Pre-Construction Meeting**

OER will be invited to attend a pre-construction meeting at the Site with all parties involved in the remedial process (e.g. General Contractor, foundation/earthwork contractors, etc.) prior to the start of remedial construction activities.

### **6.7.2 Mobilization**

Mobilization will be conducted as necessary for each phase of work at the Site. Mobilization includes field personnel orientation, equipment mobilization (including securing all sampling equipment needed for the field investigation), marking/staking sampling locations and utility mark-outs. Each field team member will attend an orientation meeting to become familiar with the general operation of the Site, health and safety requirements, and field procedures.

### **6.7.3 Utility Marker Layouts, Easement Layouts**

The presence of utilities and easements on the Site will be fully investigated prior to the performance of invasive work such as excavation or drilling under this plan by using, at a minimum, the One-Call System (811). Underground utilities may pose an electrocution, explosion, or other hazard during excavation or drilling activities. All invasive activities will be performed in compliance with applicable laws and regulations to assure safety. Utility companies and other responsible authorities will be contacted to locate and mark the locations, and a copy of the Markout Ticket will be retained by the contractor prior to the start of drilling, excavation, or other invasive subsurface operations. Overhead utilities may also be present within the anticipated work zones. Electrical hazards associated with drilling in the vicinity of overhead utilities will be prevented by maintaining a safe distance between overhead power lines and drill rig masts.

Proper safety and protective measures pertaining to utilities and easements, and compliance with all laws and regulations will be employed during invasive and other work contemplated under this RAP. The integrity and safety of on-Site and off-site structures will be maintained during all invasive, excavation or other remedial activity performed under the RAP.

### **6.7.4 Dewatering**

Dewatering is not anticipated, however, any dewatering that is required should be performed in accordance with NYCDEP requirements for discharge to

sanitary/combined sewers. Additional groundwater testing and possibly pre-treatment will likely be necessary to comply with NYCDEP requirements.

#### **6.7.5 Equipment and Material Staging**

Equipment and materials will be stored and staged in a manner that complies with applicable laws and regulations. The location of proposed equipment and material staging areas, truck inspection station, stockpile areas, and other pertinent remedial management features will be determined based on the final construction scheme.

#### **6.7.6 Stabilized Construction Entrance**

Steps will be taken to ensure that trucks departing the Site will not track soil, fill, or debris off-site. Such actions may include use of cleaned asphalt or concrete roads or use of stone or other aggregate-based egress paths between the truck inspection station and the property exit. Measures will be taken to ensure that adjacent roadways will be kept clean of project related soils, fill and debris.

#### **6.7.7 Truck Inspection Station**

An outbound-truck inspection station will be set up close to the Site exit. Before exiting the Site, trucks will be required to stop at the truck inspection station and will be examined for evidence of contaminated soil on the undercarriage, body, and wheels. Soil and debris will be removed. Brooms, shovels and potable water will be utilized for the removal of soil from vehicles and equipment, as necessary.

#### **6.7.8 Extreme Storm Preparedness and Response Contingency Plan**

Damage from flooding or storm surge can include dislocation of soil and stockpiled materials, dislocation of site structures and construction materials and equipment, and dislocation of support of excavation structures. Damage from wind during an extreme storm event can create unsafe or unstable structures, damage safety structures and cause downed power lines creating dangerous Site conditions and loss of power. In the event of emergency conditions caused by an extreme storm event, the enrollee will undertake the following steps for Site preparedness prior to the event and response after the event.

#### **6.7.9 Storm Preparedness**

Preparations in advance of an extreme storm event will include the following, to the extent practicable: containerized hazardous materials and fuels will be removed from the Site; loose materials will be secured to prevent dislocation and blowing by wind or water; heavy equipment such as excavators and generators will be removed from holes, trenches and depressions on the Site to high ground or removed from the Site; an inventory of the Site with photographs will be performed to establish conditions for the Site and equipment prior to the event; stockpile covers for soil and fill will be secured by adding weights such as sandbags for added security and worn or ripped stockpile covers will be replaced with competent covers; stockpiled hazardous wastes will be removed from the

Site; and stormwater management systems will be inspected and fortified, including, as necessary: clean and reposition silt fences and hay bales, clean storm sewer filters and traps, and secure and protect pumps and hosing.

#### **6.7.10 Storm Response**

At the conclusion of an extreme storm event, as soon as it is safe to access the Site, a complete inspection of the Site will be performed. A Site inspection report will be submitted to OER at the completion of site inspection and after the Site security is assessed. Site conditions will be compared to the inventory of Site conditions and material performed prior to the storm event and significant differences will be noted. Damage from storm conditions that result in acute public safety threats, such as downed power lines or imminent collapse of buildings, structures or equipment will be reported to public safety authorities via appropriate means such as calling 911. Petroleum spills will be reported to NYSDEC within 2 hours of identification and consistent with State regulations. Emergency and spill conditions will also be reported to OER. Public safety structures, such as construction security fences will be repaired promptly to eliminate public safety threats. Debris will be collected and removed. Dewatering will be performed in compliance with existing laws and regulations and consistent with emergency notifications, if any, from proper authorities. Eroded areas of soil including unsafe slopes will be stabilized and fortified. Dislocated materials will be collected and appropriately managed. Support of excavation structure will be inspected and fortified as necessary. Impacted stockpiles will be contained and damaged stockpile covers will be replaced. Stormwater control systems and structures will be inspected and maintained as necessary. If soil or fill materials are discharged off site to adjacent properties, property owners and OER will be notified and corrective measure plan designed to remove and clean dislocated material will be submitted to OER and implemented following approval by OER and granting of Site access by the Site owner. Impacted off-site areas may require characterization based on Site conditions, at the discretion of OER. If on-Site petroleum spills are identified, personnel under the direction of a qualified environmental professional will determine the nature and extent of the spill and report to NYSDEC's spill hotline at 800-457-7362. If the source of the spill is ongoing and can be identified, it should be stopped, if this can be done safely. Potential hazards will be addressed immediately, consistent with guidance issued by NYSDEC.

#### **6.7.11 Storm Response Reporting**

A Site inspection report will be submitted to OER at the completion of Site inspection. An inspection report established by OER is available on OER's website ([www.nyc.gov/oer](http://www.nyc.gov/oer)) and will be used for this purpose. Site conditions will be compared to the inventory of Site conditions and material performed prior to the storm event and significant differences will be noted. The Site inspection report will be sent to the OER Project Manager and will include the Site name, address, tax block and lot, Site primary and alternate contact name and phone

number. Damage and soil release assessment will include: whether the project had stockpiles; whether stockpiles were damaged; photographs of damage and notice of plan for repair; report of whether soil from the Site was relocated and whether any of the soil left the Site; estimates of the volume of soil that left the Site, nature of impact, and photographs; description of erosion damage; description of equipment damage; description of damage to the remedial program or the construction program, such as damage to the support of excavation; presence of on-site or off-site exposure pathways caused by the storm; presence of petroleum or other spills and status of spill reporting to NYSDEC; description of corrective actions; and schedule for corrective actions. This report should be completed and submitted to OER Project Manager with photographs within 24 hours of the time of safe entry to the Site after the storm event.

## 6.8 Traffic Control

Drivers of trucks leaving the Site with soil/fill will be instructed to proceed without stopping in the vicinity of the Site to the extent practicable to prevent neighborhood impacts. The planned route on local roads for trucks leaving the Site is shown on Figure 10.

## 6.9 Demobilization

Demobilization will include:

- As necessary, restoration of temporary access areas and areas that may have been disturbed to accommodate support areas (e.g., staging areas, decontamination areas, storage areas, temporary water management areas, and access areas);
- Removal of sediment from erosion control measures and truck wash and disposal of materials in accordance with applicable laws and regulations;
- Equipment decontamination, and;
- General refuse disposal.

Equipment will be decontaminated and demobilized at the completion of all field activities. Investigation equipment and large equipment (e.g., soil excavators) will be washed at the truck inspection station as necessary. In addition, all investigation and remediation derived waste will be appropriately disposed.

## 6.10 Reporting and Record Keeping

### 6.10.1 Daily Reports

Daily reports, providing a general summary of activities for each day of *active remedial work*, will be emailed to the OER Project Manager by the end of the following day. Those reports will include:

- Project number and statement of the activities and an update of progress made and locations of work performed;
- Quantities of material imported and exported from the Site;

- Status of on-site soil/fill stockpiles;
- A summary of all citizen complaints, with relevant details (basis of complaint; actions taken; etc.);
- A summary of CAMP excursions, if any;
- Photograph of notable Site conditions and activities.

The frequency of the reporting period may be revised in consultation with the OER Project Manager based on planned project tasks. Daily email reports are not intended to be the primary mode of communication for notification to OER of emergencies (accidents, spills), requests for changes to the RAP or other sensitive or time critical information. However, such information will be included in the daily reports. Emergency conditions and changes to the RAP will be communicated directly to the OER Project Manager by personal communication. As the Site construction is planned in two phases, the address of activities will be clearly stated on all reports. Daily reports will be included as an appendix in the RAR.

#### **6.10.2 Record Keeping and Photo-Documentation**

Job-site record keeping for all remedial work will be performed. These records will be maintained on-site during the project and will be available for inspection by OER staff. Representative photographs will be taken of the Site prior to any remedial activities and during major remedial activities to illustrate remedial program elements and contaminant source areas. Photographs will be submitted at the completion of the project in the RAR in digital format (i.e., jpeg files).

#### **6.11 Complaint Management**

All complaints from citizens will be promptly reported to OER. Complaints will be addressed and outcomes will also be reported to OER in daily reports. Notices to OER will include the nature of the complaint, the party providing the complaint, and the actions taken to resolve any problems.

#### **6.12 Deviations from the Remedial Action Plan**

All changes to the RAP will be reported to the OER Project Manager and will be documented in daily reports and reported in the RAR. The process to be followed if there are any deviations from the RAP will include a request for approval for the change from OER noting the following:

- Reasons for deviating from the approved RAP;
- Effect of the deviations on overall remedy; and
- Determination that the remedial action with the deviation(s) is protective of public health and the environment.

## 7.0 REMEDIAL ACTION REPORT

A RAR will be submitted to OER following implementation of the remedial action defined in this RAP. The RAR will document that the remedial work required under this RAP has been completed and has been performed in compliance with this plan. The RAR will include:

- Information required by this RAP;
- As-built drawings for all constructed remedial elements, required certifications, manifests and other written and photographic documentation of remedial work performed under this remedy;
- Site Management Plan;
- Description of any changes in the remedial action from the elements provided in this RAP and associated design documents;
- Tabular summary of all end point sampling results and all material characterization results, Quality Assurance/Quality Control (QA/QC) results for end-point sampling, and other sampling and chemical analysis performed as part of the remedial action;
- Test results or other evidence demonstrating that remedial systems are functioning properly;
- Account of the source area locations and characteristics of all contaminated material removed from the Site including a map showing source areas;
- Account of the disposal destination of all contaminated material removed from the Site. Documentation associated with disposal of all material will include transportation and disposal records, and letters approving receipt of the material;
- Account of the origin and required chemical quality testing for material imported onto the Site; and
- Reports and supporting material will be submitted in digital form.

### Remedial Action Report Certification

The following certification will appear in front of the Executive Summary of the RAR. The certification will include the following statements:

*I, Michelle Lapin, am currently a professional engineer licensed by the State of New York. I had primary direct responsibility for implementation of the remedial program for the 103-107 and 143-159 West 108<sup>th</sup> Street Site #16TMP0258Q.*

*I certify that the OER-approved Remedial Action Plan dated month day year and Stipulations in a letter dated month day, year; if any were implemented and that all requirements in those documents have been substantively complied with. I certify that contaminated soil, fill,*

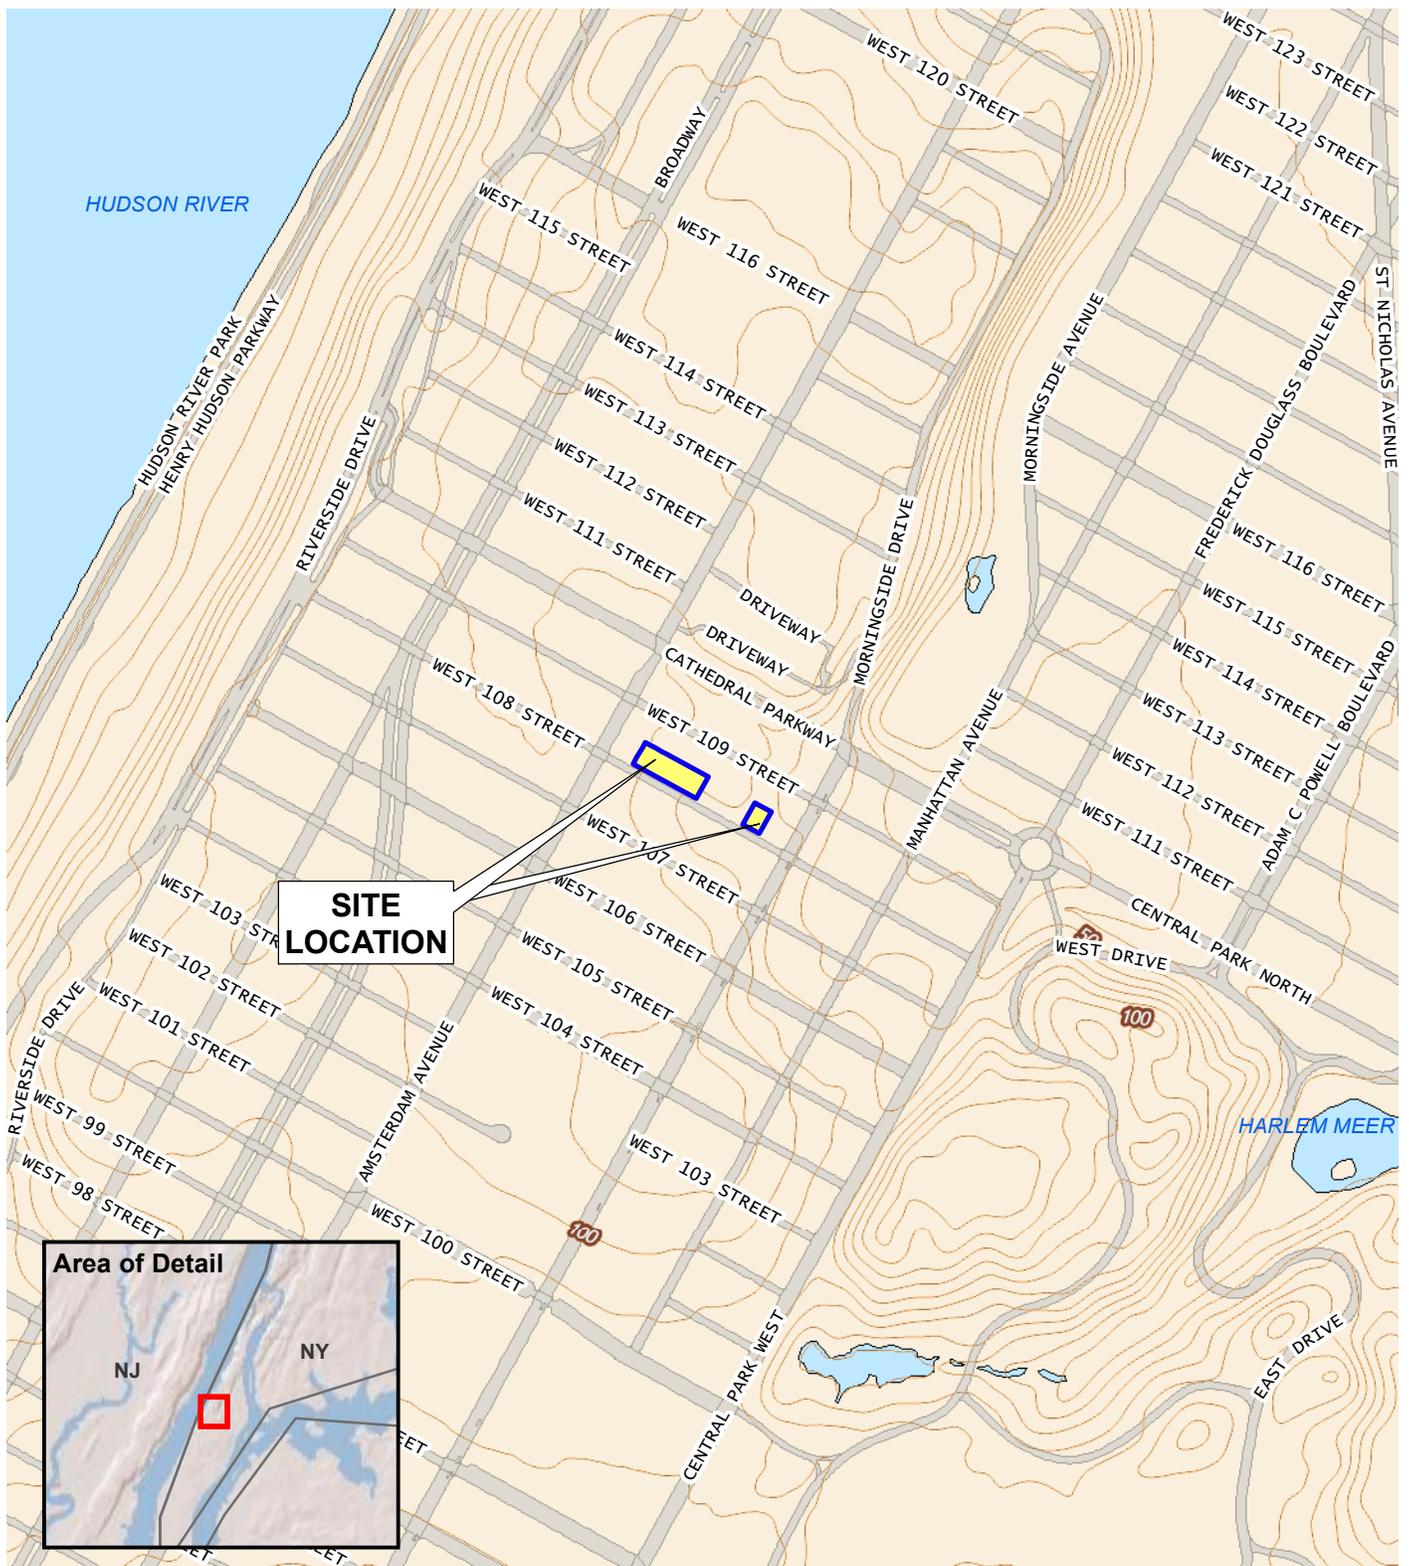

*liquids or other material from the property were taken to facilities licensed to accept this material in full compliance with applicable laws and regulations.*

## 8.0 SCHEDULE

The construction and remediation timeline have not been determined at this time. A schedule will be provided to OER at a later date.

VICINITY MAP

**108th STREET**  
(60' WIDE R.O.W.)  
ONE WAY TRAFFIC  
(ASPHALT ROADWAY)

- NOTES:**
- PROPERTY SHOWN AS LOT 5:10:13:17 26/BLOCK 1863 AS SHOWN ON THE NEW YORK CITY DIGITAL TAX MAP OF THE BOROUGH OF MANHATTAN, COUNTY OF NEW YORK.
  - AREA = 60,552 SQUARE FEET OR 1.3905 ACRES (LOT 5= 12,615 SQ FT, LOT 10= 7,569 SQ FT, LOT 13= 10,092 SQ FT, LOT 17= 22,707 SQ FT AND LOT 26= 7,569 SQ FT).
  - LOCATION OF UNDERGROUND UTILITIES ARE APPROXIMATE. LOCATIONS AND SIZES ARE BASED ON UTILITY MARKINGS ABOVE GROUND STRUCTURES THAT WERE VISIBLE AND ACCESSIBLE IN THE FIELD AND THE MAPS AS LISTED IN THE REFERENCE AVAILABLE AT THE TIME OF THIS SURVEY. AVAILABLE AS-BUILT PLANS AND UTILITY MARKINGS DO NOT ENSURE MAPPING OF ALL UNDERGROUND UTILITIES AND STRUCTURES. BE FORE ANY CAUTION IS TO BE GIVEN ALL UNDERGROUND UTILITIES SHOULD BE VERIFIED AS TO THEIR LOCATION, SIZE AND TYPE BY THE PROPERTY UTILITY COMPANIES. CONTROL POINT ASSOCIATES, INC. DOES NOT GUARANTEE THE UTILITIES SHOWN COMPRISE ALL UNDERGROUND UTILITIES IN THE AREA EITHER IN SERVICE OR ABANDONED.
  - THIS PLAN IS BASED ON INFORMATION PROVIDED BY A SURVEY PREPARED IN THE FIELD BY CONTROL POINT ASSOCIATES, INC. AND OTHER REFERENCE MATERIAL AS LISTED HEREIN.
  - THIS SURVEY WAS PREPARED WITHOUT THE BENEFIT OF A TITLE REPORT AND IS SUBJECT TO THE RESTRICTIONS, COVENANTS AND/OR EASEMENTS THAT MAY BE CONTAINED THEREIN.
  - BY GRATIC PLOTTING ONLY PROPERTY IS LOCATED IN FLOOD HAZARD ZONE (AS AS DETERMINED TO BE Q-TS) TO THE 0.2% ANNUAL CHANCE FLOODPLAIN PER F.F. 02.
  - ELEVATIONS REFER TO THE NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD 88) WHICH IS 1.68 FEET BELOW THE BOROUGH OF MANHATTAN HIGH WATER ELEVATIONS ARE BASED UPON R.F. BM 7268 @ ELEV. 105.82 (BOROUGH OF MANHATTAN HIGH WATER DATUM) REPORTED TO BE 1.68 FEET ABOVE MEAN SEA LEVEL AT SANDY HOOK (NGVD 1929) CONVERTED TO NAVD 88 VIA VERTICAL CONVERSION.
  - TO CONVERT TO BOROUGH OF MANHATTAN HIGH WATER DATUMS SUBTRACT 1.68 FEET FROM THE ELEVATIONS LISTED TO CONVERT TO NGVD 1929 ADD 1.07 FEET TO THE ELEVATIONS LISTED.
  - THE OFFSETS SHOWN ARE NOT TO BE USED FOR THE CONSTRUCTION OF ANY STRUCTURE. FINISH PERMANENT ADDITION.
  - THE WORKER IS TO BE AWARE OF NATURAL STRAINS OR WATER COURSES VISIBLE AT THE TIME OF THE FIELD SURVEY.
  - THE EXISTENCE OF UNDERGROUND STORAGE TANKS/STANS IF ANY WAS NOT KNOWN AT THE TIME OF THE FIELD SURVEY.
  - DO NOT SOLICIT CONCERNS CONCERNING NO LONGER PROVIDED MAPPING OF UNDERGROUND ELECTRIC AND GAS LINES.

A. LANDSCAPE GENERAL NOTES

1. A. DO NOT SCALE DRAWINGS. CONSULT THE LANDSCAPE ARCHITECT FOR ANSWERS TO ALL QUESTIONS REGARDING DIMENSIONS. THE CONTRACTOR IS ADVISED THAT THIS INFORMATION IS DIAGNOSTIC AND NOT NECESSARILY COMPLETE.

B. THE CONTRACTOR IS ADVISED THAT ALL UTILITY INFORMATION INDICATED HEREIN AND/OR AVAILABLE FROM AGENCIES, PRIVATE UTILITIES AND/OR THE OWNER MAY NOT BE COMPLETE.

2. A. EXISTING CONDITIONS HAVE BEEN PROVIDED BY DATNER ARCHITECTS, 1385 BROADWAY, 15TH FLOOR, NEW YORK, NY 10018

B. ALL EXISTING CONDITIONS INFORMATION SHOWN IS FOR REFERENCE ONLY. THE CONTRACTOR IS RESPONSIBLE FOR VERIFYING ALL EXISTING CONDITIONS. THE ARCHITECT/LANDSCAPE ARCHITECT ASSUMES NO RESPONSIBILITY FOR THE SURVEY INFORMATION SHOWN.

3. PRIOR TO COMMENCEMENT OF THE WORK, THE CONTRACTOR SHALL VERIFY STATUS OF EXISTING UTILITIES WITHIN THE PROJECT AREA AS REQUIRED BY LOCAL LAW. ALL COMMUNICATIONS AND COORDINATION MEETINGS RELATIVE TO THE PROJECT BETWEEN THE CONTRACTOR AND ANY AGENCY, UTILITY COMPANY OR ORGANIZATION WILL BE CONDUCTED AND/OR APPROVED BY WFSSSH. THE CONTRACTOR SHALL RECEIVE NOTIFICATION OF ANY MEETINGS AND COPIES OF ANY AND ALL MINUTES OR COMMUNICATIONS AS A RESULT OF THESE COMMUNICATIONS OR COORDINATION MEETINGS.

4. THE CONTRACTOR SHALL COORDINATE ALL WORK WITH WFSSSH AND PRIVATE UTILITY COMPANIES AND THE CITY AGENCIES AS REQUIRED FOR THE EXPEDITIOUS EXECUTION OF WORK.

5. IT IS THE CONTRACTOR'S RESPONSIBILITY TO FAMILIARIZE HIMSELF WITH ALL THE EXISTING FIELD CONDITIONS ADJACENT TO THE SITE INCLUDING BUT NOT LIMITED TO ALL STRUCTURES, UTILITIES, FENCES, PAVEMENTS, ETC. THROUGHOUT THE DURATION OF THE WORK. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO PROTECT AND MAINTAIN ALL EXISTING CONDITIONS ADJACENT TO THE SITE, OR AS INDICATED ON CONTRACT DRAWINGS. IN THE EVENT THE CONTRACTOR'S OPERATIONS RESULT IN DAMAGE TO EXISTING CONDITIONS ADJACENT TO THE SITE OR CONDITIONS INDICATED TO REMAIN ON CONTRACT DRAWINGS, THE CONTRACTOR SHALL REPAIR AND CORRECT ALL DAMAGES TO THE SATISFACTION OF WFSSSH AT NO EXTRA COST.

6. CHANGES IN THE WORK: ALL REQUESTS FOR CHANGES AND/OR SUBSTITUTIONS IN THE WORK SHALL BE MADE IN WRITING TO THE LANDSCAPE ARCHITECT. A COPY OF ALL SUCH REQUESTS SHALL BE SENT TO WFSSSH.

7. THE CONTRACTOR SHALL STUDY THE INTERRELATIONSHIP OF ALL THE VARIOUS ELEMENTS OF CONSTRUCTION SHOWN ON THE CONTRACT DRAWINGS AND DESCRIBED IN THE PROJECT SPECIFICATIONS AND BULLETINS, AND SHALL COORDINATE HIS CONSTRUCTION OPERATIONS ACCORDINGLY. ANY CONFLICTS WHICH MAY BECOME APPARENT FROM THE COORDINATION STUDY SHALL BE IMMEDIATELY BROUGHT TO THE ATTENTION OF THE LANDSCAPE ARCHITECT.

8. ALL NEW AND EXISTING INLETS AND CONNECTIONS WITHIN THE LIMITS OF THIS CONTRACT ARE TO BE CLEANED, FLUSHED, AND OTHERWISE MADE OPERABLE TO THE SATISFACTION OF WFSSSH AND ARE TO BE INCLUDED IN LUMP-SUM BID.

9. PRIOR TO COMMENCEMENT OF THE WORK, THE CONTRACTOR SHALL BRING CONDITIONS WHICH CONFLICT WITH PROPOSED SITE CONSTRUCTION TO THE ATTENTION OF THE LANDSCAPE ARCHITECT AND WFSSSH.

10. ANY COST CAUSED BY DEFECTIVE OR ILL-TIMED WORK, IMPROPER SCHEDULING OR DELINQUENT ORDERING SHALL BE BORNE BY THE CONTRACTOR.

11. ALL CITY AGENCIES HAVING JURISDICTION, NAMELY, DEPARTMENT OF BUILDINGS AND APPROVALS OF OTHERS REQUIRED, AS WELL AS PRIVATE UTILITY COMPANIES MUST BE OBTAINED PRIOR TO ACCEPTANCE OF THE PROJECT BY WFSSSH.

12. ALL MECHANICAL EQUIPMENT, CONCEALED WATER AND GAS VALVES, ETC., TO REMAIN UNLESS OTHERWISE SPECIFICALLY NOTED.

13. MINOR DETAILS NOT USUALLY SHOWN OR SPECIFIED BUT NECESSARY FOR PROPER CONSTRUCTION OF ANY PART OF THE WORK SHALL BE INCLUDED AS IF THEY WERE INDICATED ON THE DRAWINGS.

14. AT ALL TIMES, THE SITE SHALL BE KEPT NEAT AND KEPT FREE OF DEBRIS LEFT FROM ALL CONSTRUCTION OPERATIONS. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO PRESERVE AND PROTECT ALL WORK FINISHED OR IN PROGRESS, AND TO PROTECT THE PUBLIC FROM ANY INJURY THAT MAY OCCUR AS A RESULT OF THE SITE BEING ACCESSIBLE DURING PROJECT CONSTRUCTION.

15. UNLESS OTHERWISE NOTED, DETAILED DRAWINGS AND PART PLANS SHALL HAVE PRECEDENCE OVER LAYOUT DRAWINGS (I.E. SITE PLAN) FOR ACCURACY OF INFORMATION.

16. SUBMITTALS A. ALL SUBMITTALS REQUIRING THE LANDSCAPE ARCHITECT'S APPROVAL SHALL BE TRANSMITTED (5 COPIES ARE REQUIRED) DIRECTLY TO THE LANDSCAPE ARCHITECT. THE CONTRACTOR SHALL SUBMIT SHOP DRAWINGS OF ALL FABRICATED ELEMENTS. SUBMITTAL REQUIREMENTS ARE GENERALLY INDICATED IN THE GENERAL SPECIFICATIONS.

17. THE SHOP DRAWINGS SUBMITTED BY THE CONTRACTOR SHALL SHOW ALL FASTENING DEVICES AND LOCATIONS COMPLETE WITH FASTENINGS TO ALL FOUNDATION WALLS AND PAVEMENTS. THE SHOP DRAWINGS SHALL PROVIDE SUFFICIENT DETAIL TO ALLOW THE LANDSCAPE ARCHITECT TO REVIEW AND APPROVE THE SYSTEM AND PIECES.

18. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO GUARANTEE ANY AND ALL ANCHORING SYSTEMS FOR ALL WORK.

19. EXPANSION JOINTS SHALL BE PROVIDED AND INSTALLED AT ALL INTERFACES OF ADJACENT SURFACES, VERTICAL AND HORIZONTAL SURFACES, GRADE CHANGES, AND AS INDICATED ON DRAWINGS. ALL EXPANSION JOINTS SHALL BE CALKED TO A MINIMUM OF 1/2 INCH BELOW FINISHED GRADE. THE CONTRACTOR SHALL INDICATE PROPOSED LOCATIONS ON ALL APPLICABLE SHOP DRAWINGS SUBMITTED FOR APPROVAL.

20. THE CONTRACTOR SHALL PROVIDE AND MAINTAIN SAFE ACCESS TO ALL BUILDING ENTRANCES AT ALL TIMES DURING THE CONSTRUCTION PERIOD.

21. PAVEMENT SYSTEM SHALL MEET (ADJACENT) ALTERNATE MATERIAL PAVEMENTS FLUSH. THE CONTRACTOR SHALL VERIFY THE EXISTING GRADES AND THEIR RELATIONSHIP WITH THE PROPOSED GRADES. WFSSSH SHALL BE NOTIFIED IF THERE ARE ANY DISCREPANCIES IN THE ELEVATIONS. ADJUSTMENTS SHALL BE MADE AS NECESSARY AND SHALL BE APPROVED BY THE OWNER PRIOR TO CONSTRUCTION.

22. EXISTING DRAINS/WALK COVERS, ETC. SHALL BE ADJUSTED AS NECESSARY IN AREAS WHERE PROPOSED WORK ARE TO BE INSTALLED.

23. CONCRETE CURBS/FOOTINGS FOR ALL FENCING AND WALLS SHALL BROGE OVER ANY EXISTING DRAIN INLETS AND UTILITIES AND SHALL BE BROUGHT TO THE ATTENTION OF WFSSSH AND THE LANDSCAPE ARCHITECT.

24. CONTRACTOR SHALL SUPPLY WFSSSH WITH MANUFACTURER'S SHOP DRAWINGS AND INSTALLATION DRAWINGS PRIOR TO THE INSTALLATION OF ANY SPECIFIED ITEM.

25. CONTRACTOR IS REQUIRED TO OBTAIN ALL DEPARTMENT OF BUILDINGS PERMITS FOR ANY WORK UNDER THIS CONTRACT.

B. DEMOLITION AND REMOVALS 1. THE CONTRACTOR IS RESPONSIBLE FOR COORDINATION BETWEEN THE EXISTING CONDITIONS AND THE LANDSCAPE PLAN IN PREPARING BIDS AND EXECUTING WORK.

2. IT IS THE CONTRACTOR'S RESPONSIBILITY TO PRESERVE AND PROTECT ALL EXISTING FACILITIES NOT SPECIFICALLY STATED FOR REMOVAL WITHIN THE WORK AREA.

3. IT IS THE CONTRACTOR'S RESPONSIBILITY TO LOCATE AND VERIFY ELEVATIONS OF ALL UTILITY/MECHANICAL STRUCTURES, AND UTILITY LINES. IT IS THE CONTRACTOR'S RESPONSIBILITY TO PROTECT THE UTILITY/MECHANICAL LINES AND CONDUITS/PIPES DURING REMOVALS AND CONSTRUCTION. DAMAGE TO UTILITIES SHALL BE REPAIRED AT THE CONTRACTOR'S EXPENSE SUBJECT TO LANDSCAPE ARCHITECT AND WFSSSH.

4. THE CONTRACTOR SHALL, AS PART OF HIS CONTRACTUAL OBLIGATIONS, REMOVE AS DIRECTED, ALL BALLAST AGGREGATE AND OTHER ENCROACHMENTS THAT INTERFERE WITH LANDSCAPE WORK.

5. ALL REMOVED MATERIAL NOT STATED FOR REUSE SHALL BE REMOVED FROM THE SITE AND SHALL NOT BE MIXED WITH NEW FILL OR GRAVEL TO BE BROUGHT ON SITE.

6. REMOVE ALL EXISTING RUBBLE, DEBRIS, AND ENCROACHMENT FROM THE SITE AND DISPOSE OF LEGALLY. EVIDENCE OF LEGAL DISPOSAL SHALL BE GIVEN BY THE CONTRACTOR TO LANDSCAPE ARCHITECT AND THE WFSSSH APPROVAL.

7. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY AS PART OF THIS CONTRACT TO DETERMINE THE MOST APPROPRIATE METHOD OF REMOVALS OF EXCAVATED AND/OR DEMOLITION MATERIALS FROM THE SITE WITHIN THE CONTRACT LIMIT. REMOVALS, WHETHER BY MACHINE OR BY HAND, SHALL BE INCLUDED IN THE CONTRACTOR'S PROPOSAL. STRIP EXISTING BALLAST AGGREGATE IN AREAS OF CONSTRUCTION AND STOCKPILE FOR FUTURE RE-USE, AS MAY BE REQUIRED, AND IF APPROVED BY LANDSCAPE ARCHITECT.

8. SPICES, ANCHORAGES, HOOKS AND

C. WATER SUPPLY/MAINTENANCE WORK 1. THE CONTRACTOR SHALL LOCATE ALL EXISTING VALVE BOXES WITHIN THE CONTRACT LIMIT LINES AND SHALL INDICATE THEM IN THE FIELD TO THE SATISFACTION OF THE LANDSCAPE ARCHITECT. FURTHERMORE, THE CONTRACTOR'S ATTENTION IS DIRECTED TO THE FACT THAT HE WILL BE RESPONSIBLE FOR THE REPAIRMENT AND RESETING OF ALL VALVE BOXES NOT STATED FOR REMOVAL WHICH ARE DAMAGED OR DISTURBED AS A RESULT OF HIS OPERATIONS, OR AS REQUIRED BY THE NEW WORK, SUBJECT TO APPROVAL OF THE LANDSCAPE ARCHITECT.

2. ALL EXISTING DRAIN AND WATER SUPPLY CONNECTIONS SHOULD BE CONTINUOUSLY MAINTAINED DURING CONSTRUCTION OF ANY WATER LINES. IF ANY HOUSE CONNECTION MUST BE DISCONNECTED FOR CONSTRUCTION PURPOSES, FLOW MUST BE MAINTAINED BY PLUMBING OR OTHER SUITABLE MEANS AS DIRECTED BY THE LANDSCAPE ARCHITECT, AND IN SUCH A MANNER THAT NO BACK-UPLS OCCUR. ANY AND ALL EXISTING HOUSE CONNECTIONS OR OTHER SEWER APPURTENANCES WHICH ARE TO REMAIN AND WHICH MUST BE DISTURBED FOR CONSTRUCTION PURPOSES SHALL BE RESTORED TO THEIR PRESENT CONNECTIONS AFTER COMPLETION OF THE WORK SUBJECT TO APPROVAL OF LANDSCAPE ARCHITECT AND THE WFSSSH. ANY DAMAGE DONE AS A RESULT OF THE WORK SHALL BE REPAIRED AT NO COST TO WFSSSH.

3. CONTRACTOR SHALL PROVIDE AN IRRIGATION SYSTEM INCLUSIVE OF ALL REQUIRED COMPONENTS AND INSTALLATION FOR A FULLY FUNCTIONAL AUTOMATIC IRRIGATION SYSTEM AT ALL PLANTED AREAS, AND IN FREE STANDING PLANTERS, AND SHALL BE INCLUDED AS PART OF THE BASE BID.

D. DRAINAGE WORK 1. ALL PROPOSED DRAINAGE WORK SHALL BE DONE IN CONFORMANCE WITH THE LATEST STANDARDS OF THE DEPARTMENT OF BUILDINGS.

2. ALL AREA DRAINS WITHIN THE CONTRACT LIMITS SHALL BE ADJUSTED AS NECESSARY, SO THAT THEY WILL BE OPERATIONAL AND ACCESSIBLE.

3. ANY DAMAGE TO EXISTING AREA DRAINS, AND CONNECTIONS CAUSED BY THE CONTRACTOR'S WORK SHALL BE REPAIRED OR REPLACED BY THE CONTRACTOR, AT NO COST TO WFSSSH, SUBJECT TO THE APPROVAL OF LANDSCAPE ARCHITECT AND WFSSSH.

4. ALL EXISTING AREA DRAINS AND CONNECTIONS WITHIN THE LIMITS OF THIS CONTRACT AND CONTIGUOUS ARE TO BE CLEANED OUT, REPAIRED, AND OTHERWISE MADE OPERABLE TO THE SATISFACTION OF THE LANDSCAPE ARCHITECT.

5. ALL CAST IN PLACE CONCRETE SHALL BE CONTROLLED CONCRETE HAVING A MINIMUM COMPRESSIVE STRENGTH OF 4,000 PSI AT 28 DAYS UNLESS OTHERWISE NOTED.

6. ALL REINFORCING STEEL SHALL BE REFORMED NEW BULLET STEEL CONFORMING WITH THE REQUIREMENTS OF ASTM A615, GRADE 60, CURRENT EDITION.

7. SPICES FOR REINFORCING STEEL SHALL BE STAGGERED WHERE POSSIBLE AND LOCATED SO TO LEAST IMPAIR THE STRENGTH OF THE MEMBER.

8. SPICES, ANCHORAGES, HOOKS AND

REINFORCING DETAILS SHALL CONFORM WITH THE REQUIREMENTS OF ACI 318 UNLESS OTHERWISE NOTED.

9. ALL HARDWARE SHALL BE IN ACCORDANCE WITH ASTM STANDARDS.

10. ALL WELDING SHALL BE PERFORMED USING E7018 LOW HYDROGEN ELECTRODES IN ACCORDANCE WITH AMERICAN WELDING SOCIETY.

F. LIGHTING 1. REFER TO ARCHITECTURAL LIGHTING SPECIFICATIONS.

G. IRRIGATION 1. AN IRRIGATION SYSTEM INCLUSIVE OF ALL REQUIRED COMPONENTS AND INSTALLATION FOR A FULLY FUNCTIONAL AUTOMATIC IRRIGATION SYSTEM AT ALL PLANTED AREAS SHALL BE INCLUDED AS PART OF THE BASE BID.

2. SYSTEM SHALL BE INSTALLED BY A WATER SENSE CERTIFIED PROFESSIONAL AND UTILIZE SMART IRRIGATION CONTROLS AND DESIGN.

3. SUBMIT SHOP DRAWING FOR APPROVAL.

RESPONSIBILITY CLAUSE PRIOR TO SUBMITTING A BID, EACH CONTRACTOR SHALL VISIT THE SITE OF THE PROPOSED WORK TO FULLY ACQUAINT HIMSELF WITH THE CONDITIONS AS THEY EXIST. HE SHALL ACCEPT THE CONDITIONS AS THEY EXIST. HE SHALL INCLUDE ALL WORK SHOWN, SPECIFIED AND IMPLIED IN THE DRAWINGS AND SPECIFICATIONS IN HIS BID TO DO A COMPLETE JOB TO THE SATISFACTION OF WFSSSH, 316 DOUGLAS STREET, 2ND FLOOR, BROOKLYN, NEW YORK 11217 (OWNER). OWNER DOES NOT ASSUME RESPONSIBILITY FOR THE ACCURACY OF LAYOUTS AND OTHER DATA SHOWN ON THE DRAWINGS. THE CONTRACTOR SHALL VERIFY ALL MEASUREMENTS, LAYOUTS AND THE EXACT CONDITIONS OF THE SITE. THE CONTRACTOR SHALL ACCEPT FULL RESPONSIBILITY FOR THE PROPER PROTECTION OF EXISTING STRUCTURES, PARTICULARLY EXISTING MECHANICAL EQUIPMENT, BALLAST AGGREGATE, WALLS AND INSULATION WHICH ARE TO REMAIN DURING CONSTRUCTION AND FOR THE LIFE OF THE CONTRACT. ANY STRUCTURES FOUND TO BE DAMAGED DURING CONSTRUCTION SHALL BE REPAIRED OR REPLACED AT THE DISCRETION OF THE OWNER'S INSPECTOR TO THE COMPLETE SATISFACTION OF THE OWNER AND AT THE CONTRACTOR'S SOLE EXPENSE.

**MAY 2017**

## **Introduction**

This Supplemental Phase II Investigation Work Plan has been developed for two development sites, collectively called West 108<sup>th</sup> Street Development, located at 103-107 West 108<sup>th</sup> Street and 143-159 West 108<sup>th</sup> Street in the Upper West Side of Manhattan (see Figure 1). The following work scope has been developed in response to the Phase II Investigation findings (September 2016, revised January 2017), a NYC Office of Environmental Remediation (OER) meeting in December 2016, and communication with New York State Department of Environmental Conservation (NYSDEC) regarding Spill Numbers 1603624 and 1603667.

## **Site Location, Current Use, and Proposed Development Plan**

The Site is identified as Block 1863, Lots 5, 10, 13, and 26. Currently, the buildings at 103-107, 143, and 151-159 West 108<sup>th</sup> Street are utilized as multi-story parking garages, and 145-149 West 108<sup>th</sup> Street is an emergency senior citizen shelter. The proposed redevelopment plan includes the demolition of the existing structures on the Site and construction of two new 11-story buildings (Buildings 1 and 2) and a rear yard at Building 1. Building 1 (143-159 West 108<sup>th</sup> Street) will contain approximately 80 income-restricted and 115 age-restricted apartments (combination of studios, one, two, and three bedrooms), 110 transitional beds, and 6,400-square feet of community facility space that will likely include a medical clinic serving residents and the community. Building 1 will include a full cellar. Building 2, (103-107 West 108<sup>th</sup> Street) will include approximately 82 income-restricted apartments for seniors. Building 2 will also include a partial cellar.

## **Phase I ESA Summary**

The Phase I Environmental Site Assessment (ESA) (AKRF, October 2015), identified the following:

- Potential underground storage tanks (USTs) and former aboveground storage tanks (ASTs) were noted as follows:
  - 103-107 West 108<sup>th</sup> Street – Historical Sanborn maps identified two gas tanks at 103-107 West 108<sup>th</sup> Street in 1951. A decommissioned 275-gallon AST with no associated piping was noted in the partial cellar of the 103-107 West 108<sup>th</sup> Street building. No record of its closure, removal, or regulatory status was available.
  - 143 West 108<sup>th</sup> Street - Historical Sanborn maps identified three 550-gallon buried gasoline tanks at 143 West 108<sup>th</sup> Street between 1951 and 2005. The operator, indicated fill ports were previously located in the middle of the first floor leading to the cellar of each building.
  - 145-149 West 108<sup>th</sup> Street – Department of Buildings (DOB) records identified an oil burner permit dated 1958.
  - 151-159 West 108<sup>th</sup> Street - Historical Sanborn maps identified four 550-gallon gasoline tanks at 151-159 West 108<sup>th</sup> Street between 1951 and 2005. During reconnaissance, gauges for four tanks were observed. The operator indicated fill ports were previously located in the middle of the first floor leading to the cellar of each building.
- Historical records indicated former uses of the existing buildings included an automobile repair facility at 103-107 West 108<sup>th</sup> Street and a Cadillac Service Station at 143 West 108<sup>th</sup> Street. Based on Sanborn Maps and interviews, there is also potential for prior use as vehicle maintenance at 151-159 West 108<sup>th</sup> Street. In addition to the tanks mentioned above, additional tanks and hydraulic lifts may also be present beneath the cellar floor or where the vehicle maintained may have been performed.
- Chemical and material storage noted during inspections included: propane and concrete at 143 West 108<sup>th</sup> Street; plastic drums, bags, and smaller containers of paint, ammonia, floor stripper, floor finish, salt, and soaps at 145-149 West 108<sup>th</sup> Street; and bags of concrete, five gallon containers of silicone

coating and paint, and propane tanks stored on the roof, as well as a 55-gallon drum of unknown material with some oily residue at the top in the cellar of 151-159 West 108<sup>th</sup> Street. Based on the observed storage and uses, undocumented discharges may have affected subsurface conditions at the Site.

- A sump with an unconfirmed discharge point was observed in the cellar of the 143 West 108<sup>th</sup> Street building in the southeastern portion of the Site.
- The surrounding area historically included factories, Consolidated Edison substations, auto repair, and garages with gasoline USTs.
- Potential buried debris from former on-site structures that could contain historic fill of unknown origin and/or abandoned USTs.

### **Geotechnical Investigation Summary**

A Geotechnical Investigation was conducted by GZA GeoEnvironmental of New York and the findings were summarized in a report dated July 2016.

The results indicated that groundwater was encountered at varying depths generally between approximately 8 to 9 feet below grade surface (bgs), and it was noted that groundwater elevations likely were perched on bedrock. Bedrock was encountered between approximately 8 to 22 feet below grade in the study, generally described as fractured mica schist. Bedrock was overlain by weathered bedrock followed by sand and silt material. Fill materials were noted above native material and generally included sand with some gravel, asphalt, concrete, and brick fragments.

### **Phase II Environmental Site Investigation Summary**

A Phase II Environmental Site Investigation was conducted by AKRF in July 2016 and the findings were summarized in a report dated September 2016 (revised January 2017).

1. Based on the U.S. Geological Survey Central Park Quadrangle, the Site lies at an elevation ranging from approximately 90 to 105 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level) sloping slightly down toward the east.
2. Groundwater flow is generally easterly beneath the Site, and groundwater elevation ranged between 84 and 89 feet (North American Vertical Datum of 1988) at the Site.
3. Depth to apparent bedrock at the Site varied from approximately 5 to 22 feet below cellar grade.
4. The stratigraphy of the Site, from the surface down, consists of up to 7 feet of historic fill comprising sand, silt, brick, and concrete, underlain by native soil consisting of fine to medium sand, silt, followed by weathered bedrock.
5. The results of the soil sampling completed during the investigation showed volatile organic compounds (VOCs) were detected in 12 of the 22 soil samples, and in two blind duplicates, two trip blanks, and the two associated aqueous field blanks. The VOCs 1,2-dichlorobenzene, 1,2-dichloroethane, acetone, carbon disulfide, cyclohexane, ethylbenzene, isopropylbenzene, and o-xylene were detected in one or more of the soil samples. Benzene was detected at an estimated concentration of 0.13 milligrams per kilogram (mg/kg) in W108-SB-2(0-2), which is slightly above its NYSDEC Unrestricted Soil Cleanup Objective (USCO) of 0.06 mg/kg, but below its Restricted Residential Soil Cleanup Objective (RRSCO) of 4.8 mg/kg. M,p-xylene exceeded its USCO in two soil samples at concentrations of 0.41 mg/kg in W108-SB-2(0-2) and 0.35 mg/kg in W108-SB-2(3-4), slightly above its USCO of 0.26 mg/kg but well below its RRSCO of 100 mg/kg. Toluene exceeded its USCO of 0.7 mg/kg in W108-SB-2(0-2), at a concentration of 1.5 mg/kg, but was well below its RRSCO of 100 mg/kg. No VOCs were detected at concentrations exceeding the RRSCOs.

Up to 18 semi-volatile organic compounds (SVOCs) were detected in all 22 soil samples with a maximum total SVOC concentration of 28 mg/kg in W108-SB-5 (0-2), located in the garden area adjacent to 145-149 West 108<sup>th</sup> Street. SVOCs exceeding the USCOs and RRSCOs were detected in soil sample W108-SB-5(0-2), including benzo(a)anthracene (2.2 mg/kg), benzo(a)pyrene (2.4 mg/kg), benzo(b)fluoranthene (3.1 mg/kg), dibenz(a,h)anthracene (0.63 mg/kg), and indeno(1,2,3-c,3')pyrene (2.5 mg/kg). Chrysene (2.3 mg/kg) and benzo(k)fluoranthene (1.1 mg/kg) were detected in soil sample W108-SB-5(0-2) above their respective USCOs, but below their respective RRSCOs. All SVOC detections in the remaining soil samples were at concentrations below both the USCOs and RRSCOs.

A review of the analytical results indicates that up to 22 of the 23 Target Analyte List (TAL) metals analyzed were detected in all 22 soil samples analyzed. Nine metals, including arsenic (max of 18.5 mg/kg), barium (max of 421 mg/kg), copper (max of 88.5 mg/kg), cadmium (max of 6.3 mg/kg), hexavalent chromium (1.9 mg/kg in W108-SB-12 (0-2)), lead (max. of 1,990 mg/kg), mercury (max. of 0.46 mg/kg), nickel (max. of 38.7 mg/kg), and zinc (max. of 679 mg/kg), exceeded their respective USCOs. Concentrations of metals exceeding RRSCOs included arsenic in W108-SB-1(5-7) at a concentration of 18.5 mg/kg (the RRSCO is 16 mg/kg); barium in W108-SB-5(0-2) at a concentration of 421 mg/kg (RRSCO is 400 mg/kg); cadmium in W108-SB-12(0-2) at a concentration of 6.3 mg/kg (RRSCO is 4.3 mg/kg); and lead in W108-SB-5(0-2) and W108-SB-12(0-2) at concentrations of 456 mg/kg and 1,990 mg/kg (RRSCO is 400 mg/kg), respectively.

Up to four pesticides were detected in four of the 22 soil samples. Dieldrin exceeded the USCO in W108-SB-5(0-2) at an estimated concentration of 0.0088 mg/kg (USCO is 0.005 mg/kg). P,P'-DDT exceeded its USCO in three samples [W108-SB-5(0-2), W108-SB-5(8-10), W108-SB-12(0-2)] with a maximum concentration of 0.019 mg/kg (USCO is 0.0033 mg/kg). P,P'-DDD exceeded its USCO in three samples [W108-SB-1(0-2), W108-SB-5(0-2), W108-SB-12(0-2)] with a maximum estimated concentration of 0.0051 mg/kg (USCO is 0.0033 mg/kg). P,P'-DDE exceeded its USCO with an estimated concentration of 0.0052 mg/kg (USCO is 0.0033 mg/kg) in W108-SB-5 (0-2). No pesticides exceeded their respective RRSCOs in any samples. There were no detections of polychlorinated biphenyls (PCBs), with the exception of an estimated concentration of 0.057 mg/kg in W108-12(0-2), which is below the USCO and RRSCO for PCBs.

6. The results of the groundwater sampling showed that one VOC, isopropylbenzene, was detected in W108-MW-4 at a concentration of 17 micrograms per liter ( $\mu\text{g/L}$ ), exceeding the Ambient Water Quality Standard (AWQS) of 5  $\mu\text{g/L}$ . The results of the groundwater sampling indicated no other VOCs were detected at concentrations exceeding AWQS.

Six SVOCs, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene, were detected at estimated concentrations of 0.10  $\mu\text{g/L}$ , 0.069  $\mu\text{g/L}$ , 0.20  $\mu\text{g/L}$ , 0.74  $\mu\text{g/L}$ , 0.11  $\mu\text{g/L}$ , and 0.079  $\mu\text{g/L}$  respectively, above their respective AWQS in groundwater sample W108-MW-6, located in the cellar of 145-149 West 108<sup>th</sup> Street. Bis(2-ethylhexyl)phthalate was detected at estimated concentrations of 17  $\mu\text{g/L}$ , 7.6  $\mu\text{g/L}$ , and 14  $\mu\text{g/L}$  in W108-MW-4, W108-MW-6, and W108-MW-8, respectively, which exceeded its AWQS of 5  $\mu\text{g/L}$ . Chrysene was detected in W108-MW-8 at a concentration of 0.037  $\mu\text{g/L}$ , which exceeds the AWQS of 0.002  $\mu\text{g/L}$ .

The metals manganese and sodium were detected above the AWQS in all three dissolved samples. Magnesium was also detected above the AWQS in dissolved sample W108-MW-8. These metals are indicative of groundwater quality in Manhattan.

No PCBs or pesticides were detected in the groundwater samples.

7. The results of the soil vapor sampling showed up to 27 VOCs were detected in the 8 samples. No VOCs were detected above the air guideline values (AGVs) established by the New York State Department of Health (NYSDOH). Tetrachloroethylene (PCE) was detected in six of the eight soil vapor samples at concentrations of 2.3 to 29 micrograms per cubic meter ( $\mu\text{g/m}^3$ ), below the AGV of

30  $\mu\text{g}/\text{m}^3$ . Trichloroethylene (TCE) was not detected in any of the soil vapor samples. VOCs associated with petroleum [including benzene, toluene, ethylbenzene, xylenes (collectively referred to as BTEX), 1,2,4- and 1,3,5-trimethylbenzene, cyclohexane, n-heptane, n-hexane, 4-ethyltoluene, and 2,2,4-trimethylpentane] were detected at concentrations up to 1,400  $\mu\text{g}/\text{m}^3$ . Other solvent-related VOCs [including acetone, chloroform, and methyl ethyl ketone (MEK)] were detected at concentrations up to 73  $\mu\text{g}/\text{m}^3$ . Low level VOC concentrations were also noted in the ambient air sample.

8. The investigation findings identified the presence of petroleum contamination, in both the western portion of the Site (151-159 West 108<sup>th</sup> Street) and the eastern portion of the Site (103-107 West 108<sup>th</sup> Street) likely attributed to former on-site uses. Based on the observation of petroleum stained soil and high photoionization detector (PID) readings, the NYSDEC was notified and Spill Numbers 1603624 and 1603667 were assigned to 151-159 West 108<sup>th</sup> Street and 103-107 West 108<sup>th</sup> Street, respectively. While elevated PID readings were observed at the borings located at 143 West 108<sup>th</sup> Street (SB-8, SB-9, and SB-10), no other evidence of petroleum contamination was observed such as staining, odors, or elevated VOC and SVOC analytical results.

### **Phase II Investigation Work Scope**

A Supplemental Phase II Investigation will be performed to further investigate petroleum-contaminated soil identified during the initial Phase II ESI. Four soil borings will be advanced at the Site at the locations shown on Figure 1. Each boring will be advanced to refusal on bedrock, expected between 5 and 20 feet below sidewalk grade. Each sampling location will be accurately measured to fixed benchmarks (i.e., select properly lines, adjacent structures, etc.) or by a precision handheld global positioning system (GPS) that is capable of coordinating a fixed point with within +/- 1 foot. The sampling procedures of this investigation will be performed in accordance with the NYSDEC Technical Guidance for Site Investigation and Remediation DER-10.

### **Soil Sampling**

A geologist/engineer/Qualified Environmental Professional (QEP) will screen the soil samples during borehole advancement for organic vapors with a PID and evaluate visual and olfactory impacts prior to collecting environmental samples. All field work will be recorded in a field log. A direct-push Geoprobe<sup>®</sup> unit will be used. A discrete (grab) surface soil sample (from the 0 to 2 feet bgs interval) will be collected from each soil boring for laboratory analysis. A second sample will be collected from the proposed excavation depth, approximately 10 feet below sidewalk grade (for a total of 8 soil samples). An additional soil sample may be collected from the soil boring(s) if elevated PID readings and/or visual and olfactory observations are noted during borehole advancement.

### **Sample Analysis**

Soil samples will be submitted to a New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Program (ELAP)-certified laboratory for the following analysis:

- VOCs by EPA Method 8260; and
- SVOCs by EPA Method 8270.

If either light non-aqueous phase liquid (LNAPL) and/or dense non-aqueous phase liquid (DNAPL) are detected, appropriate samples will be collected for characterization and “fingerprint analysis” and required regulatory reporting (i.e., NYSDEC spills hotline) will be performed.

### **Quality Assurance/Quality Control Procedures**

Quality assurance/quality control (QA/QC) procedures will be used to provide performance information with regard to accuracy, precision, sensitivity, representation, completeness, and comparability associated with the sampling and analysis for this investigation. Field QA/QC procedures will be used (1) to document that samples are representative of actual conditions at the Site and (2) identify possible cross-contamination from field activities or sample transit. Laboratory QA/QC procedures and analyses will be used to demonstrate whether analytical results have been biased either by interfering compounds in the sample matrix, or by laboratory techniques that may have introduced systematic or random errors to the analytical process. One field blank and one trip blank will be submitted to the laboratory for QA/QC purposes. QA/QC samples (field and trip blank) will be analyzed at an ELAP-certified laboratory.

### **Investigation Derived Waste**

Soil cuttings may be backfilled within the borehole that generated them to within 24 inches of the surface unless:

- Free product or grossly contaminated soil are present in the cuttings;
- The borehole has penetrated an aquitard, aquiclude or other confining layer; or extends significantly into bedrock;
- Backfilling the borehole with cuttings will create a significant path for vertical movement of contaminants. Soil additives (bentonite) may be added to the cuttings to reduce permeability; or
- The soil cannot fit into the borehole.

Those soil cuttings needing to be managed on-site will be containerized in properly labeled department of transportation (DOT) approved 55-gallon drums for future off-Site disposal at a permitted facility. All boreholes which require drill cuttings disposal would ultimately be filled with bentonite chips (hydrated) and asphalt/concrete capping. Disposable sampling equipment including, spoons, gloves, bags, paper towels, etc. that came in contact with environmental media will be double bagged and disposed as municipal trash in a facility trash dumpster as non-hazardous trash.

### **Reporting**

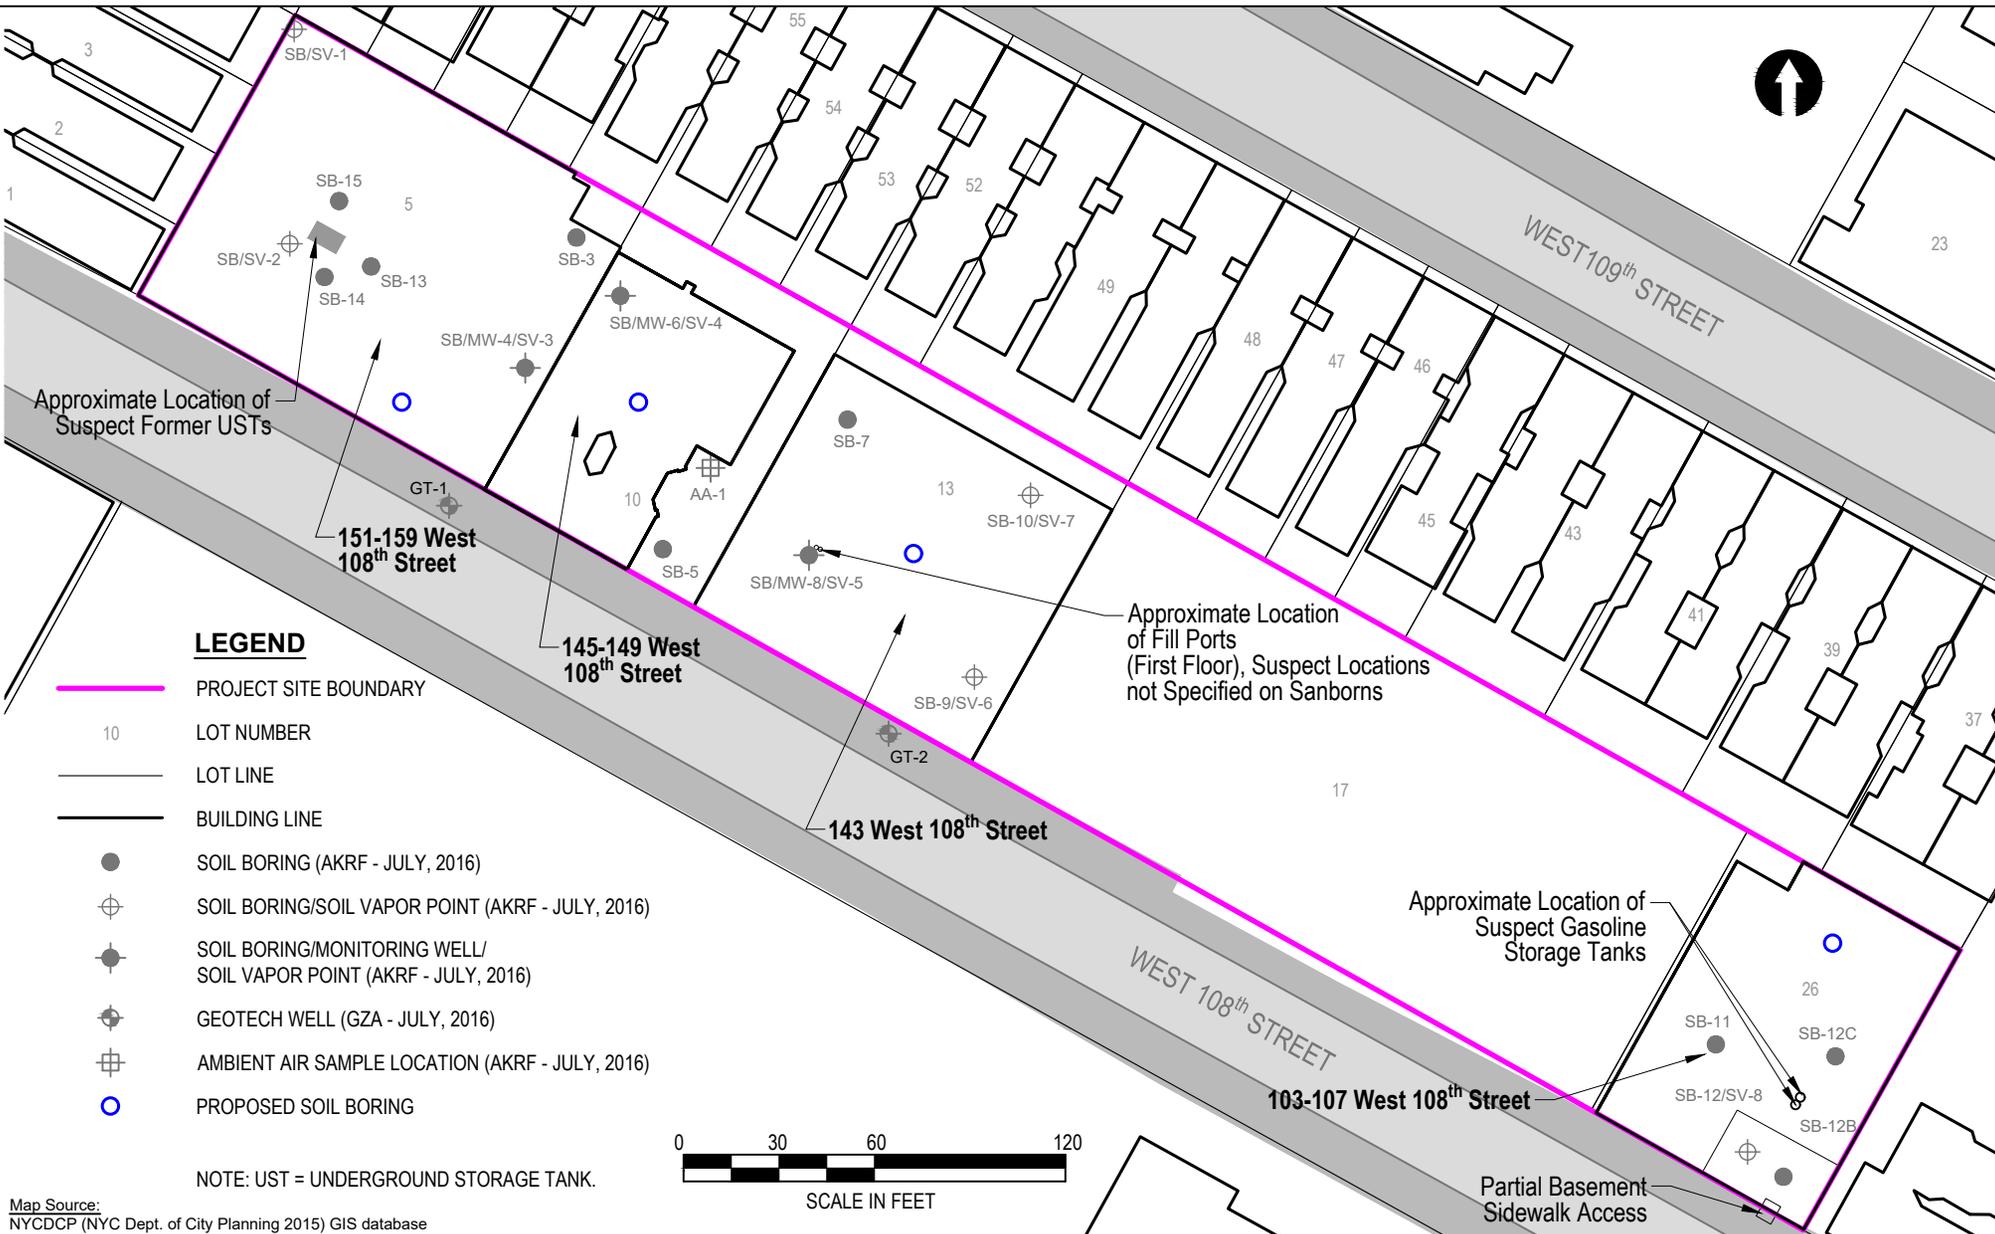

A Supplemental Phase II Environmental Site Investigation Report will be prepared following completion of the field activities and receipt of the laboratory data. The report will provide detailed summaries of the investigative findings. Soil analytical results will be compared to the NYSDEC Part 375-6.8(a) Unrestricted Used Soil Cleanup Objectives, appropriate Part 375-6.8(b) Restricted Soil Cleanup Objectives and NYSDEC Part 703 Groundwater Quality Standards (GQS) (class GA) or Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS). The report will include an updated sampling plan, spider diagrams, analytical data tables for all reported constituent compounds (including non-detectable concentrations) and additional remedial recommendations, if any.

### **Investigation HASP**

An Occupational Safety and Health Administration (OSHA) compliant Health and Safety Plan (HASP) that meets all OSHA Hazardous Waste Operations and Emergency Response (HAZWOPER) requirements that was prepared for the Remedial Action Plan (RAP) will be adhered to during the Supplemental Phase II to protect worker safety. The Site Safety Coordinator will ensure full compliance of the HASP in accordance with applicable health and safety laws and regulations. All field personnel involved in investigation activities will participate in training required under OSHA HAZWOPER 29 CFR 1910.120, including 40-hour hazardous waste operator training and annual 8-hour refresher training. Emergency telephone numbers will be posted at the Site location before any work begins. A safety meeting will be conducted before each shift begins. Topics to be discussed include task hazards and protective measures (physical, chemical, environmental); emergency procedures; personal protective

equipment (PPE) levels and other relevant safety topics including a highlighted route map to the nearest hospital/emergency room. Meetings will be documented in a log book or specific form. Potential on-site chemicals of concern include VOCs and SVOCs. Information fact sheets and/or summary tables for each contaminant group are included in the HASP. A copy of this HASP will be on-site during each sampling event.

## 1.0 PURPOSE

This Construction Health and Safety Plan (CHASP) was prepared for two development sites collectively called the West 108<sup>th</sup> Street Development, located at 103-107 and 143-159 West 108<sup>th</sup> Street in New York, NY (“the Site”). The legal definition of the Site is Tax Block 1863, Lots 5, 10, 13, and 26. A location map is provided as Figure 1.

The purpose of this CHASP is to assign responsibilities, establish personnel protection standards and mandatory safety practices and procedures, and provide for contingencies that may arise during construction at the Site. The CHASP is intended to minimize health and safety risks resulting from the known or potential presence of subsurface hazardous materials.

This plan is not designed to address geotechnical, mechanical, or general construction safety concerns, nor to supersede or replace any Occupational Safety and Health Administration (OSHA) regulation and/or local and state construction codes or regulations.

## 2.0 APPLICABILITY

Work subject to this CHASP includes all activities that disturb the existing soil on-site. The contractors and their subcontractors involved in the construction project will provide a copy of this CHASP to their employees whose work involves any potential exposure to on-site soil, and will complete all work in accordance with this CHASP.

## 3.0 SITE DESCRIPTION

### 3.1 General Information

The approximate 37,845-square foot Site consists of two discontinuous parcels separated by a public park. The buildings at 103-107, 143, and 151-159 West 108<sup>th</sup> Street are currently being utilized as parking garages, and 145-149 West 108<sup>th</sup> Street is an emergency senior citizen shelter. The surface topography was observed to slope down toward the east. Based on the U.S. Geological Survey Central Park Quadrangle map, the Property slopes from approximately 105 to 90 feet above the North American Datum of 1983 (an approximation of mean sea level).

Soil at the Site generally consists of historic fill comprising sand, silt, brick, and concrete, underlain by native soil consisting of fine to medium sand, silt, followed by weathered bedrock. Assumed bedrock was encountered during AKRF’s Phase II Environmental Site Investigation in July 2016 between 5 and 22 feet below the current cellar grade. Groundwater elevation ranged between 84 and 89 feet (North American Vertical Datum of 1988) at the Site, and flowed in a generally easterly direction. Groundwater in Manhattan is not used as a source of potable water.

### 3.2 Hazard Potential

The hazard potential was evaluated based on the findings of the *Phase I Environmental Site Assessment, 103-107 and 143-159 West 108<sup>th</sup> Street, New York, NY, AKRF, Inc., October 2015 and Phase II Environmental Site Investigation Report, 103-107 and 143-159 West 108<sup>th</sup> Street, New York, NY, AKRF, Inc., September 2016, Revised January 2017 (SIR)*.

AKRF, Inc. (AKRF) performed a Phase I Environmental Site Assessment (ESA) in October 2015 in accordance with ASTM Standard E1527-13, Standard Practice for Environmental Site

Assessments: Phase I Environmental Site Assessment Practice. A summary of the assessment findings is presented below:

- Potential underground storage tanks (USTs) and former aboveground storage tanks (ASTs) were noted as follows:
  - 103-107 West 108<sup>th</sup> Street – Historical Sanborn maps identified two gas tanks at 103-107 West 108<sup>th</sup> Street in 1951. A decommissioned 275-gallon AST with no associated piping was noted in the partial cellar of the 103-107 West 108<sup>th</sup> Street building. No record of its closure, removal, or regulatory status was available.
  - 143 West 108<sup>th</sup> Street - Historical Sanborn maps identified three 550-gallon buried gasoline tanks at 143 West 108<sup>th</sup> Street between 1951 and 2005. The operator indicated fill ports were previously located in the middle of the first floor leading to the cellar of each building.
  - 145-149 West 108<sup>th</sup> Street – DOB records identified an oil burner permit dated 1958.
  - 151-159 West 108<sup>th</sup> Street - Historical Sanborn maps identified four 550-gallon gasoline tanks at 151-159 West 108<sup>th</sup> Street between 1951 and 2005. During Site reconnaissance, gauges for four tanks were observed. The operator indicated the fill ports were previously located in the middle of the first floor leading to the cellar of each building.
- Historical records indicated former uses of the existing buildings included an automobile repair facility at 103-107 West 108<sup>th</sup> Street and a Cadillac Service Station at 143 West 108<sup>th</sup> Street. Based on Sanborn Maps and interviews, there is also potential for prior use as vehicle maintenance at 151-159 West 108<sup>th</sup> Street. In addition to the tanks mentioned above, additional tanks and hydraulic lifts may also be present beneath the cellar floor or where the vehicle maintained may have been performed.
- Chemical and material storage noted during inspections included: propane and concrete at 143 West 108<sup>th</sup> Street; plastic drums, bags, and smaller containers of paint, ammonia, floor stripper, floor finish, salt, and soaps at 145-149 West 108<sup>th</sup> Street; and bags of concrete, five gallon containers of silicone coating and paint, and propane tanks stored on the roof, as well as a 55-gallon drum of unknown material with some oily residue at the top in the cellar of 151-159 West 108<sup>th</sup> Street. Based on the observed storage and uses, undocumented discharges may have affected subsurface conditions at the Site.
- A sump with an unconfirmed discharge point was observed in the cellar of the 143 West 108<sup>th</sup> Street building in the southeastern portion of the Site.
- The surrounding area historically included factories, Consolidated Edison substations, auto repair, and garages with gasoline USTs.
- Potential buried debris from former on-site structures that could contain historic fill of unknown origin and/or abandoned USTs.
- Based on the age of the buildings, window caulking, fluorescent lighting fixtures and electrical equipment in these buildings may utilize polychlorinated biphenyl (PCB)-containing components. Fluorescent lights may contain mercury. The hydraulic building elevator at 145-147 West 108<sup>th</sup> Street and current and former hydraulic lifts at 143 West 108<sup>th</sup> Street and 151-159 West 108<sup>th</sup> Street and may utilize PCB-containing oil.

Based on the Phase I ESA findings, AKRF prepared and submitted a Phase II Environmental Site Investigation Work Plan (Work Plan) and Health and Safety Plan (HASP) to United States Environmental Protection Administration (USEPA). The Phase II Environmental Site Investigation included a plan for the collection and laboratory analysis of subsurface (soil, soil vapor, and groundwater) samples. The Work Plan was approved by USEPA in June 2016.

AKRF conducted a Phase II investigation at the Site in July 2016. The Phase II Environmental Site Investigation included the advancement of 17 borings with the collection and analysis of 22 soil samples, the installation of three groundwater monitoring wells, and the collection of a groundwater sample from each, and the installation of eight soil vapor points with the collection of a sub-slab soil vapor sample from each, and the collection of one ambient air sample. A geophysical survey was conducted prior to advancement of the borings. The following is a summary of the findings:

- No anomalies were identified by the geophysical survey.
- Subsurface materials consisted primarily of historic fill (sand, silt, asphalt, brick, ceramic, paper, plastic and concrete). The historic fill layer was underlain in some areas by apparently native soil of fine to medium sand, silt, clay, gravel, and weathered bedrock. Suspect contamination (e.g., PID readings, staining, and odors) was observed in borings SB-1, SB-2, SB-4, SB-13, SB-14, and SB-15 within the cellar of the parking garage at 151-159 West 108<sup>th</sup> Street; SB-8, SB-9, and SB-10 within the cellar of the parking garage at 143 West 108<sup>th</sup> Street; and in SB-12B within the partial cellar at 103-107 West 108<sup>th</sup> Street.
- Three volatile organic compounds (VOCs) (benzene, m,p-xylene, and toluene) were detected above their respective Unrestricted Use Soil Cleanup Objectives (USCOs) in up to two samples, and no VOCs were detected at concentrations exceeding the Restricted Residential Soil Cleanup Objectives (RRSCOs). No polychlorinated biphenyls (PCBs) were detected in the soil samples exceeding the applicable USCOs or RRSCOs. Up to 18 semi-volatile organic compounds (SVOCs) were detected in all 22 soil samples with a maximum total SVOC concentration of 28 mg/kg in W108-SB-5(0-2), located in the garden area adjacent to 145-149 West 108<sup>th</sup> Street. SVOCs exceeding the USCOs and RRSCOs were detected in soil sample W108-SB-5(0-2), including benzo(a)anthracene (2.2 mg/kg), benzo(a)pyrene (2.4 mg/kg), benzo(b)fluoranthene, dibenz(a,h)anthracene, and indeno(1,2,3-c,3)pyrene. Chrysene and benzo(k)fluoranthene were detected in soil sample W108-SB-5(0-2) above their respective USCOs, but below their respective RRSCOs. All SVOC detections in the remaining soil samples were at concentrations below both the USCOs and RRSCOs. Nine metals, including arsenic, barium, copper, cadmium, hexavalent chromium, lead, mercury, nickel, and zinc, exceeded their respective USCOs. Metals detected exceeding RRSCOs in up to two samples included arsenic, barium, cadmium, and lead. Up to four pesticides were detected in four of the 22 soil samples. Four (dieldrin, P,P'-DDT, P,P'-DDD, and P,P'-DDE) exceeded their respective USCOs in up to two samples. No pesticides exceeded their respective RRSCOs in any samples. There were no detections of PCBs, with the exception of an estimated concentration of 0.057 mg/kg in W108-12(0-2), which is below the USCO and RRSCO for PCBs. Results are most likely attributable to fill material and weathered petroleum observed in the vicinity of the reported spills.
- The investigation findings identified the presence of petroleum contamination, in both the western portion of the Site (151-159 West 108<sup>th</sup> Street) and the eastern portion of the Site (103-107 West 108<sup>th</sup> Street) likely attributed to former on-site uses. Stained soil and high photoionization detector (PID) readings were observed, and the New York State Department

of Environmental Conservation (NYSDEC) was notified and Spill Numbers 1603624 and 1603667 were assigned to 151-159 West 108<sup>th</sup> Street and 103-107 West 108<sup>th</sup> Street, respectively. While elevated PID readings were observed in the borings located at 143 West 108<sup>th</sup> Street (SB-8, SB-9, and SB-10), no other evidence of petroleum contamination was observed, such as staining, odors, or elevated VOC and SVOC analytical results.

- The results of the groundwater sampling showed that one VOC, isopropylbenzene, was detected in W108-MW-4 at a concentration of 17 micrograms per liter ( $\mu\text{g/L}$ ), exceeding the Ambient Water Quality Standard (AWQS) of 5  $\mu\text{g/L}$ . The results of the groundwater sampling indicated no other VOCs were detected at concentrations exceeding AWQS. Six SVOCs, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene, were detected at estimated concentrations of 0.10  $\mu\text{g/L}$ , 0.069  $\mu\text{g/L}$ , 0.20  $\mu\text{g/L}$ , 0.74  $\mu\text{g/L}$ , 0.11  $\mu\text{g/L}$ , and 0.079  $\mu\text{g/L}$  respectively, above their respective AWQS in groundwater sample, W108-MW-6 located in the cellar of 145-149 West 108<sup>th</sup> Street. Bis(2-ethylhexyl)phthalate was detected at estimated concentrations of 17  $\mu\text{g/L}$ , 7.6  $\mu\text{g/L}$ , and 14  $\mu\text{g/L}$  in W108-MW-4, W108-MW-6, and W108-MW-8, respectively, which exceeded its AWQS of 5  $\mu\text{g/L}$ . Chrysene was detected in W108-MW-8 at a concentration of 0.037  $\mu\text{g/L}$ , which exceeds the AWQS of 0.002  $\mu\text{g/L}$ . The metals manganese and sodium were detected above the AWQS in all three dissolved samples. Magnesium was also detected above the AWQS in dissolved sample W108-MW-8. These metals are indicative of groundwater quality in Manhattan. No PCBs or Pesticides were detected in the groundwater samples.
- Up to 27 VOCs were detected in the soil vapor samples. No VOCs were detected above the air guideline values (AGVs) established by the New York State Department of Health (NYSDOH). PCE was detected in six of the eight soil vapor samples at concentrations of 2.3 to 29 micrograms per cubic meter ( $\mu\text{g/m}^3$ ), below the AGV of 30  $\mu\text{g/m}^3$ . TCE was not detected in any of the soil vapor samples. VOCs associated with petroleum [including benzene, toluene, ethylbenzene, xylenes (collectively referred to as BTEX), 1,2,4- and 1,3,5-trimethylbenzene, cyclohexane, n-heptane, n-hexane, 4-ethyltoluene, and 2,2,4-trimethylpentane] were detected at concentrations up to 1,400  $\mu\text{g/m}^3$ . Other solvent-related VOCs [including acetone, chloroform, and methyl ethyl ketone (MEK)] were detected at concentrations up to 73  $\mu\text{g/m}^3$ . Low level VOC concentrations were also noted in the ambient air sample.

### 3.3 Hazard Evaluation

The most likely routes of exposure are breathing of volatile and semi-volatile compounds or particulate-laden air released during soil disturbing activities, dermal contact, and accidental ingestion. Appendix A includes specific health effects from chemicals present or potentially present on-site. Although some of the chemicals of concern listed in the sections below were not detected during the subsurface investigation, they are included here as a precaution. The remaining sections of this CHASP address procedures (including training, air monitoring, work practices and emergency response) to reduce the potential for unnecessary and unacceptable exposure to these contaminants.

The potential adverse health effects from these detected contaminants are diverse. Many of these compounds are known or suspected to result in chronic illness from long-term exposures. However, due to the limited nature of the proposed construction, only acute effects are a potential concern.

This CHASP addresses potential environmental hazards from the presence of hazardous materials. It is not intended to address the normal hazards of construction work, which are separately covered by OSHA regulations and/or local and state construction codes and regulations.

### 3.3.1 Hazards of Concern

### 3.3.4 Chemicals of Concern

Chemicals	REL/PEL/STEL (ppm)	Health Hazards
Benzene	REL = 0.1 ppm PEL = 1 ppm STEL = 5 ppm	Irritation eyes, skin, nose, respiratory system; dizziness; headache, nausea, staggered gait; anorexia, lassitude, dermatitis; bone marrow depression, potential occupational carcinogen.
Toluene	REL = 100 ppm PEL = 200 ppm STEL = 300 ppm	Irritation eyes, nose; lassitude, confusion, euphoria, dizziness, headache; dilated pupils, lacrimation (discharge of tears); anxiety, muscle fatigue, insomnia; paresthesia (skin tingling or numbness); dermatitis; liver, kidney damage.

Chemicals	REL/PEL/STEL (ppm)	Health Hazards
Ethylbenzene	REL = 100 ppm PEL = 100 ppm	Irritation eyes, skin, mucous membrane; headache; dermatitis; narcosis, coma.
Xylenes	REL = 100 ppm PEL = 100 ppm	Irritation eyes, skin, nose, throat; dizziness, excitement, drowsiness, poor coordination, staggering gait; corneal vacuolization; anorexia, nausea, vomiting, abdominal pain; dermatitis.
Fuel Oil	REL = 350 mg/m <sup>3</sup> PEL = 400 ppm	Nausea, irritation – eyes, hypertension, headache, light-headedness, loss of appetite, poor coordination; long-term exposure – kidney damage, blood clotting problems; potential carcinogen.
Polycyclic Aromatic Hydrocarbons (PAHs)	PEL = 5 mg/m <sup>3</sup>	Harmful effects to skin, bodily fluids, and ability to fight disease, reproductive problems; [potential occupational carcinogen].
Arsenic	REL= 0.002 mg/m <sup>3</sup> PEL= 0.01 mg/m <sup>3</sup>	Ulceration of nasal septum, dermatitis, gastrointestinal disturbances, peripheral neuropathy, respiratory irritation, hyperpigmentation of skin; potential occupational carcinogen.
Barium	REL= 0.5 mg/m <sup>3</sup> PEL= 0.5 mg/m <sup>3</sup>	Irritation eyes, skin, upper respiratory system; skin burns; gastroenteritis; muscle spasm; slow pulse, extrasystoles; hypokalemia.
Cadmium	PEL= 0.005 mg/m <sup>3</sup>	Pulmonary edema, breathing difficulty, cough, chest tightness, headache; chills, muscle aches; nausea, vomiting, diarrhea; loss of smell, emphysema, proteinuria, mild anemia.
Lead	REL=0.1 mg/m <sup>3</sup> PEL=0.05 mg/m <sup>3</sup>	Weakness, lassitude, insomnia; facial pallor, pale eye, anorexia, low-weight, malnutrition, constipation, abdominal pain, colic; anemia; gingival lead line; tremors, paralysis wrists and ankles; encephalopathy; kidney disease; irritation eyes; hypotension.
Comments: REL = NIOSH Recommended Exposure Limit PEL = OSHA Permissible Exposure Limit STEL = OSHA Short Term Exposure Limit		

#### 4.0 HEALTH AND SAFETY OFFICER

The contractor or engineer will designate one of its personnel as the Site Safety Officer (SSO). The SSO will be a competent person responsible for the implementation of this plan. The SSO will have completed a 40-hour training course (updated by an annual refresher) that meets OSHA requirements of 29 CFR Part 1910, Occupational Safety and Health Standards. The SSO has stop-work authorization, which he/she will execute on his/her determination of an imminent safety hazard, emergency situation, or other potentially dangerous situation. If the SSO must be absent from the Site, he/she will designate a suitably qualified replacement that is familiar with the CHASP.

#### 5.0 TRAINING

All those who enter the work area while intrusive activities are being performed must recognize and understand the potential hazards to health and safety. All construction personnel upon entering the Site must attend a brief training meeting, its purpose being to:

- Make workers aware of the potential hazards they may encounter;
- Instruct workers on how to identify potential hazards,
- Provide the knowledge and skills necessary for them to perform the work with minimal risk to health and safety;
- Make workers aware of the purpose and limitations of safety equipment; and

- Ensure that they can safely avoid or escape from emergencies.

Each member of the construction crew will be instructed in these objectives before he/she goes onto the Site. Construction personnel will be responsible for identifying potential hazards in the work zone. The SSO or other suitably trained individual will be responsible for conducting the training program. Others who enter the Site must be accompanied by a suitably-trained construction worker.

## **6.0 GENERAL WORK PRACTICES**

To protect the health and safety of the field personnel, all field personnel will adhere to the guidelines listed below during activities involving subsurface disturbance in contaminated areas.

- Eating, drinking, chewing gum or tobacco, and smoking are prohibited, except in designated areas on the Site. These areas will be designated by the SSO.
- Workers must wash their hands and face thoroughly on leaving the work area and before eating, drinking, or any other such activity. The workers should shower as soon as possible after leaving the Site.
- Contact with contaminated or suspected surfaces should be avoided.
- The buddy system should always be used; each buddy should watch for signs of fatigue, exposure, and heat stress.

## **7.0 PERSONAL PROTECTIVE EQUIPMENT & AIR MONITORING**

### **7.1 Personal Protective Equipment**

The personal protective equipment (PPE) required for various kinds of site investigation tasks are based on 29 CFR 1910.120, Hazardous Waste Operations and Emergency Response, Appendix C, “General Description and Discussion of the Levels of Protection and Protective Gear.”

During the implementation of air monitoring, if deemed appropriate by the SSO, site personnel will wear, at a minimum, Level D personal protective equipment. The protection will be based on the air monitoring described in Section 7.2.

## Level of Protection Summary

LEVEL OF PROTECTION & PPE	1 – Excavation	2 – Other Earth Moving Activities
<b>Level D</b> (×) Steel Toe Shoes (×) Hard Hat (×) Work Gloves (×) Safety Glasses ( ) Face Shield (×) Ear Plugs (within 25 ft of excavator) (×) Latex Gloves	Yes	Yes
Level D – Modified <i>(in addition to Level D)</i> (×) Tyvek Coveralls (×) Nitrile Gloves ( ) Overboots ( ) Saranex Coveralls	As Necessary	As Necessary
<b>Level C (in addition to Level D – Modified)</b> (×) Half-Face Respirator & Safety Glasses OR (×) Full Face Respirator ( ) Full-Face PAPR ( ) Particulate Cartridge ( ) Organic Cartridge (×) Dual Organic/Particulate Cartridge	If PID > 10 ppm (breathing zone)	If PID > 10 ppm (breathing zone)
Comments: Cartridges to be changed out at least once per shift unless warranted beforehand (e.g., more difficult to breathe or any odors detected). PID = Photoionization Detector      ppm = Parts Per Million		

## 7.2 Work Zone Air Monitoring

Monitoring with a particulate air monitor will be conducted during excavation and other earth moving activities. Real time air monitoring will be performed with a PID during sampling and excavation work in areas. Measurements would be taken prior to commencement of work and continuously during the work. Continuous monitoring for VOCs and particulate levels during all soil disturbance activities including CAMP stations both upwind and downwind of activities, and a CAMP station on the southern (West 108<sup>th</sup> Street) Site boundary across from the school. Periodic monitoring for VOCs will be performed during non-intrusive activities such as the collection of soil samples. Periodic monitoring during sample collection, for instance, will consist of taking a reading upon arrival at a sample location, monitoring while opening a well cap or overturning soil, monitoring during well baling/purging, and taking a reading prior to leaving a sample location. Depending upon the proximity of potentially exposed individuals, continuous monitoring may be performed during sampling activities. Measurements will be made as close to the workers as practicable and at the breathing height of the workers. The SSO will set up the equipment and confirm that it is working properly. His/her designee may oversee the air measurements during the day. The initial measurement for the day will be performed before the start of work and will establish the background level for that day. The final measurement for the day will be performed after the end of work. The action levels and required responses are listed in the following table:

**Action Levels and Required Safety Response Actions**

<b>Instrument</b>	<b>Task to be Monitored</b>	<b>Action Level</b>	<b>Response Action</b>
PID (Minirae 2000 or equivalent)	Soil excavation, tank removal, soil sampling	Less than 10 ppm in breathing zone.	Level D or D-Modified
		Between 10 and 20 ppm	Level C
		More than 20 ppm	Stop work. Resume work when readings are less than 20 ppm.
Particulate monitor (MIE 1000 Personal DataRam or equivalent)	Soil excavation, tank removal, soil sampling	Less than 5 $\mu\text{g}/\text{m}^3$	Level D
		Between 5 $\mu\text{g}/\text{m}^3$ and 150 $\mu\text{g}/\text{m}^3$	Level C. Apply dust suppression measures. If < 2.5 $\mu\text{g}/\text{m}^3$ , resume work using Level D. Otherwise, use Level C.
		Above 150 $\mu\text{g}/\text{m}^3$	Stop work. Apply additional dust suppression measures. Resume work when less than 150 $\mu\text{g}/\text{m}^3$ .

Notes: PID = Photoionization Detector ppm = Parts Per Million,  $\mu\text{g}/\text{m}^3$  = micrograms per cubic meter

Field personnel will be trained in the proper operation of all field instruments at the start of the field program. Instruction manuals for the equipment will be on file at the Site for referencing proper operation, maintenance and calibration procedures.

The equipment will be calibrated according to manufacturer specifications at the start of each day of fieldwork. If an instrument fails calibration, the project manager will be contacted immediately to obtain a replacement instrument and arrange for repairs. A calibration log will be maintained to record the date of each calibration, any failure to calibrate and corrective actions taken. The PID will be calibrated each day using 100 parts per million (ppm) isobutylene standard gas.

### 7.3 Community Air Monitoring Plan

Community air monitoring will be conducted during all intrusive Site activities in compliance with the New York State Department of Health (NYSDOH) Generic Community Air Monitoring Plan (CAMP). Real-time air monitoring for volatile compounds and particulates at the perimeter of the exclusion zone will be performed as described below.

#### VOC Monitoring

Periodic monitoring for VOCs will be conducted during non-intrusive activities such as the collection of excavation soil endpoint samples using hand-held roving equipment. Periodic monitoring may include obtaining measurements upon arrival at a location and upon leaving the location.

Continuous monitoring for VOCs will be conducted during all ground intrusive activities, including excavation and tank removal (if encountered). Upwind concentrations will be measured at the start of each workday and periodically thereafter to establish background concentrations. VOCs will be monitored continuously at the upwind and downwind perimeter of the exclusion

zone and on West 108<sup>th</sup> Street across from the school. Monitoring will be conducted with a PID equipped with a 10.6 eV lamp capable of calculating 15-minute running average concentrations. The following actions will be taken based on organic vapor levels measured:

- If total organic vapor levels exceed 5 ppm above background for the 15-minute average at the exclusion zone perimeter, work activities will be temporarily halted and monitoring continued. If levels readily decrease (per instantaneous readings) below 5 ppm above background, work activities will resume with continued monitoring.
- If total organic vapor levels at the downwind perimeter of the exclusion zone persist at levels in excess of 5 ppm above background but less than 25 ppm, work activities will be halted, the source of vapors identified, corrective actions taken to abate emissions, and monitoring continued. After these steps, work activities will resume provided that the total organic vapor level 200 feet downwind of the hot zone or half the distance to the nearest potential receptor or residential/commercial structure, whichever is less – but in no case less than 20 feet – is below 5 ppm above background for the 15-minute average.
- If the total organic vapor level is above 25 ppm at the perimeter of the exclusion zone, activities will be shutdown.

More frequent intervals of monitoring will be conducted if required as determined by the SSO. All PID readings will be recorded and available for NYSDEC and NYSDOH personnel to review. Instantaneous readings, if any, will also be recorded.

#### Dust Monitoring

Continuous monitoring for particulates will be conducted during all ground intrusive activities, which will involve the measurement of respirable dust. Community air monitoring for dust particulates will be conducted using a MIE 1000 Personal DataRam or equivalent to measure the concentration of airborne respirable particulates less than 10 micrometers in size (PM<sub>10</sub>). The dust monitor will be capable of calculating 15-minute running average concentrations and equipped with an audible alarm to indicate exceedance of action levels. An inspection of the monitoring stations will be conducted on at least an hourly basis. Background readings and any readings that trigger response actions will be recorded in the project logbook, which will be available on-site for NYSDOH and/or NYSDEC review. If the downwind particulate concentrations are greater than 100 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ) above background (upwind concentrations), and no other obvious source is apparent, then it will be assumed that the elevated particulate concentrations are a result of Site activities. In such instances, dust suppression measures will be implemented and monitoring will be continued. Work will be allowed to continue with dust suppression if downwind particulate levels do not exceed  $150 \mu\text{g}/\text{m}^3$  above the background (upwind concentration) and provided that no visible dust is migrating from the work area. If particulate levels persist at  $150 \mu\text{g}/\text{m}^3$  above the background, work must be stopped until dust suppression measures bring particulate levels to below  $150 \mu\text{g}/\text{m}^3$  above background.

#### Major Vapor Emission Response Plan

If any organic levels greater than 5 ppm over background are identified 200 feet downwind from the work site, or half the distance to the nearest residential or commercial property, whichever is less, all work activities must be halted or vapor controls must be implemented.

If, following the cessation of the work activities, or as the result of an emergency, organic levels persist above 5 ppm above background 200 feet downwind or half the distance to the nearest residential or commercial property from the exclusion zone, then the air quality must be

monitored within 20 feet of the perimeter of the nearest residential or commercial structure (20 Foot Zone).

If either of the following criteria is exceeded in the 20 Foot Zone, then the Major Vapor Emission Response Plan shall automatically be implemented.

- Sustained organic vapor levels approaching 1 ppm above background for a period of more than 30 minutes, or
- Organic vapor levels greater than 5 ppm above background for any time period.

Upon activation, the following activities shall be undertaken as part of the Major Vapor Emission Response Plan:

- The NYCOER, NYSDOH, and local police authorities will be immediately contacted by the SSO and advised of the situation;
- Frequent air monitoring will be conducted at 30-minute intervals within the 20 Foot Zone. If two successive readings below action levels are measured, air monitoring may be halted or modified by the Site Health and Safety Officer; and
- All Emergency contacts will go into effect as appropriate.

All readings will be recorded and be available for NYSDEC and NYSDOH personnel to review.

## **8.0 DECONTAMINATION PROCEDURES**

### **8.1 Personnel Decontamination**

Personnel decontamination (decon), if deemed necessary by the SSO, will take place in a designated decontamination area. This area will be delineated during each stage of work. Personnel decontamination will consist of the following steps:

- Soap and potable water wash and potable water rinse of gloves;
- Coverall removal (if applicable);
- Glove removal;
- Disposable clothing removal; and
- Field wash of hands and face.

### **8.2 Sampling Equipment Decontamination**

Any non-disposable sampling equipment for confirmatory sampling or other equipment that is in contact with contaminated materials will be decontaminated in accordance with the following procedure:

- Double wash with solution of Simple Green<sup>®</sup> and clean tap water;
- Double rinse with clean tap water;
- Rinse with clean distilled water; and
- Allow equipment to air dry.

### 8.3 Heavy Equipment Decontamination

If heavy equipment comes in contact with contaminated materials, it will be decontaminated prior to being relocated to a clean area or leaving the Site. A designated decontamination pad will be constructed, where soil, dust, or oil will be washed off the exterior, undercarriage, and wheels or tracks of the equipment. Wash water will be collected for treatment and/or disposal.

## 9.0 EMERGENCY RESPONSE

### 9.1 Emergency Procedures

In the event that an emergency develops at the Site, the procedures delineated herein are to be immediately followed. Emergency conditions are considered to exist if:

- Any member of the field crew is involved in an accident or experiences any adverse effects or symptoms of exposure while on-site.
- A condition is discovered that suggests the existence of a situation creating a higher health hazard than anticipated.
- A spill of oil or other hazardous materials.

General emergency procedures and specific procedures for personal injury and chemical exposure are described below. In the event of an accident or emergency, an Incident Report form should be filled out and placed in the project file. An example Incident Report form is provided in Appendix C. Information on emergency hand signals is provided in Appendix D.

#### 9.1.1 Chemical Exposure

If a member of the field crew demonstrates symptoms of chemical exposure the procedures outlined below should be followed:

- Another team member (buddy) should remove the individual from the immediate area of contamination. The buddy should communicate to the SSO (via voice and hand signals) of the chemical exposure. The SSO should contact the appropriate emergency response agency.
- Precautions should be taken to avoid exposure of other individuals to the chemical.
- If the chemical is on the individual's clothing, the chemical should be neutralized or removed if it is safe to do so.
- If the chemical has contacted the skin, the skin should be washed with copious amounts of water.
- In case of eye contact, an emergency eye wash should be used. Eyes should be washed for at least 15 minutes.
- All chemical exposure incidents must be reported in writing to the Project Manager. The SSO is responsible for completing the Incident Report Form.

#### 9.1.2 Personal Injury

In case of personal injury at the Site, the following procedures should be followed:

- Another team member (buddy) should signal the SSO that an injury has occurred.

- A field team member trained in first aid can administer treatment to an injured worker.
- If deemed necessary, the victim should then be transported to the nearest hospital or medical center. If necessary, an ambulance should be called to transport the victim.
- The SSO is responsible for making certain that an Incident Report Form is completed. This form is to be submitted to the AKRF Health and Safety Officer. Follow-up action should be taken to correct the situation that caused the accident.
- Any incident (near miss, Site damage, first aid, medical treatment, etc.) must be reported.

A first-aid kit, eye-wash, and blood-borne pathogens kit will be kept on-site during the field activities.

### **9.1.3 Evacuation Procedures**

- The SSO will initiate evacuation procedures by signaling to leave the Site or containment structure.
- All personnel in the work area should evacuate the area and meet in the common designated area.
- All personnel suspected to be in or near the contract work area should be accounted for and the whereabouts or missing persons determined immediately.
- The SSO will then give further instruction.

### **9.1.4 Procedures Implemented in the Event of a Major Fire, Explosion, or Emergency**

- Notify the paramedics and/or fire department, as necessary;
- Signal the evacuation procedure previously outlined and implement the entire procedure;
- Isolate the area;
- Stay upwind of any fire;
- Keep the area surrounding the problem source clear after the incident occurs; and
- Complete accident report for and distribute to appropriate personnel.

### **9.1.5 Spill Response**

All personnel must take every precaution to minimize the potential for spills during Site operations. Any spill will be reported immediately to the SSO. The SSO will then determine and report any required spills to the NYCDEP and/or NYSDEC Hotlines. Spill control apparatus (sorberent materials) will be located on-site. All materials used for the cleanup of spills will be containerized and labeled separately from other wastes. The SSO, in consultation with the Project Manager, will determine if additional spill response measures are required.

## **9.2 Hospital Directions**

The **Mount Sinai St. Luke's Hospital** is located at 1111 Amsterdam Ave, New York, NY 10025, as shown on Figure 2.

**Hospital Information and Directions**

<b>Hospital Name:</b>	Mount Sinai St. Luke's Hospital
<b>Phone Number:</b>	212-523-4000
<b>Address/Location:</b>	<i>Emergency Room:</i> 1111 Amsterdam Ave, New York, NY 10025
<b>Directions:</b>	<ol style="list-style-type: none"> <li>1. Head EAST on <i>West 108<sup>th</sup> Street</i> toward Columbus Avenue.</li> <li>2. Turn Right onto <i>Columbus Avenue</i>.</li> <li>3. **APPENDIX A**  
**POTENTIAL HEALTH EFFECTS FROM ON-SITE CONTAMINANTS**

This fact sheet answers the most frequently asked health questions (FAQs) about arsenic. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**HIGHLIGHTS: Exposure to higher than average levels of arsenic occurs mostly in the workplace, near hazardous waste sites, or in areas with high natural levels. At high levels, inorganic arsenic can cause death. Exposure to lower levels for a long time can cause a discoloration of the skin and the appearance of small corns or warts. Arsenic has been found at 1,014 of the 1,598 National Priority List sites identified by the Environmental Protection Agency (EPA).**

### What is arsenic?

Arsenic is a naturally occurring element widely distributed in the earth's crust. In the environment, arsenic is combined with oxygen, chlorine, and sulfur to form inorganic arsenic compounds. Arsenic in animals and plants combines with carbon and hydrogen to form organic arsenic compounds.

Inorganic arsenic compounds are mainly used to preserve wood. Organic arsenic compounds are used as pesticides, primarily on cotton plants.

### What happens to arsenic when it enters the environment?

- Arsenic cannot be destroyed in the environment. It can only change its form.
- Arsenic in air will settle to the ground or is washed out of the air by rain.
- Many arsenic compounds can dissolve in water.
- Fish and shellfish can accumulate arsenic, but the arsenic in fish is mostly in a form that is not harmful.

### How might I be exposed to arsenic?

- Eating food, drinking water, or breathing air containing arsenic.
- Breathing contaminated workplace air.
- Breathing sawdust or burning smoke from wood treated with arsenic.
- Living near uncontrolled hazardous waste sites containing arsenic.
- Living in areas with unusually high natural levels of arsenic in rock.

### How can arsenic affect my health?

Breathing high levels of inorganic arsenic can give you a sore throat or irritated lungs. Ingesting high levels of inorganic arsenic can result in death. Lower levels of arsenic can cause nausea and vomiting, decreased production of red and white blood cells, abnormal heart rhythm, damage to blood vessels, and a sensation of "pins and needles" in hands and feet.

Ingesting or breathing low levels of inorganic arsenic for a long time can cause a darkening of the skin and the

ToxFAQs™ Internet address is <http://www.atsdr.cdc.gov/toxfaq.html>

appearance of small “corns” or “warts” on the palms, soles, and torso.

Skin contact with inorganic arsenic may cause redness and swelling.

Organic arsenic compounds are less toxic than inorganic arsenic compounds. Exposure to high levels of some organic arsenic compounds may cause similar effects as inorganic arsenic.

### How likely is arsenic to cause cancer?

Several studies have shown that inorganic arsenic can increase the risk of lung cancer, skin cancer, bladder cancer, liver cancer, kidney cancer, and prostate cancer. The World Health Organization (WHO), the Department of Health and Human Services (DHHS), and the EPA have determined that inorganic arsenic is a human carcinogen.

### How can arsenic affect children?

We do not know if exposure to arsenic will result in birth defects or other developmental effects in people. Birth defects have been observed in animals exposed to inorganic arsenic.

It is likely that health effects seen in children exposed to high amounts of arsenic will be similar to the effects seen in adults.

### How can families reduce the risk of exposure to arsenic?

- If you use arsenic-treated wood in home projects, you should wear dust masks, gloves, and protective clothing to decrease exposure to sawdust.
- If you live in an area with high levels of arsenic in water or soil, you should use cleaner sources of water and limit contact with soil.

### Is there a medical test to show whether I've been exposed to arsenic?

There are tests to measure the level of arsenic in blood, urine, hair, or fingernails. The urine test is the most reliable test for arsenic exposure within the last few days. Tests on hair and fingernails can measure exposure to high levels of arsenic over the past 6-12 months. These tests can determine if you have been exposed to above-average levels of arsenic. They cannot predict how the arsenic levels in your body will affect your health.

### Has the federal government made recommendations to protect human health?

EPA has set limits on the amount of arsenic that industrial sources can release to the environment and has restricted or canceled many uses of arsenic in pesticides. EPA has set a limit of 0.01 parts per million (ppm) for arsenic in drinking water.

The Occupational Safety and Health Administration has set limits of 10 µg arsenic per cubic meter of workplace air (10 µg/m<sup>3</sup>) for 8 hour shifts and 40 hour work weeks.

### Source of Information

Agency for Toxic Substances and Disease Registry (ATSDR). 2000. Toxicological Profile for Arsenic. Atlanta, GA: U.S. Department of Health and Human Services, Public Health Service.

**Where can I get more information?** For more information, contact the Agency for Toxic Substances and Disease Registry, Division of Toxicology, 1600 Clifton Road NE, Mailstop F-32, Atlanta, GA 30333. Phone: 1-888-422-8737, FAX: 770-488-4178. ToxFAQs™ Internet address is <http://www.atsdr.cdc.gov/toxfaq.html>. ATSDR can tell you where to find occupational and environmental health clinics. Their specialists can recognize, evaluate, and treat illnesses resulting from exposure to hazardous substances. You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

This fact sheet answers the most frequently asked health questions (FAQs) about barium and barium compounds. For more information, call the ATSDR Information Center at 1-800-232-4636. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It is important you understand this information because these substances may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**HIGHLIGHTS:** Exposure to barium occurs mostly in the workplace or from drinking contaminated water. Ingesting drinking water containing levels of barium above the EPA drinking water guidelines for relatively short periods of time can cause gastrointestinal disturbances and muscle weakness. Ingesting high levels for a long time can damage the kidneys. Barium and barium compounds have been found in at least 798 of the 1,684 National Priority List sites identified by the Environmental Protection Agency (EPA).

### What is barium?

Barium is a silvery-white metal which exists in nature only in ores containing mixtures of elements. It combines with other chemicals such as sulfur or carbon and oxygen to form barium compounds.

Barium compounds are used by the oil and gas industries to make drilling muds. Drilling muds make it easier to drill through rock by keeping the drill bit lubricated. They are also used to make paint, bricks, ceramics, glass, and rubber.

Barium sulfate is sometimes used by doctors to perform medical tests and to take x-rays of the gastrointestinal tract.

### What happens to barium when it enters the environment?

- Barium gets into the air during the mining, refining, and production of barium compounds, and from the burning of coal and oil.
- The length of time that barium will last in air, land, water, or sediments depends on the form of barium released.
- Barium compounds, such as barium sulfate and barium carbonate, which do not dissolve well in water, can last a long time in the environment.

Barium compounds, such as barium chloride, barium nitrate, or barium hydroxide, that dissolve easily in water usually do not last in these forms for a long time in the environment. The barium in these compounds that is dissolved in water quickly combines with sulfate or carbonate that are naturally found in water and become the longer lasting forms (barium sulfate and barium carbonate).

Fish and aquatic organisms can accumulate barium.

### How might I be exposed to barium?

- Ingesting small amounts present in your food and water or breathing air containing very low levels of barium.
- Living in areas with unusually high natural levels of barium in the drinking water.
- Working in a job that involves barium production or use.
- Living or working near waste sites where barium has been disposed of.

### How can barium affect my health?

The health effects of the different barium compounds depend on how well the compound dissolves in water or in the stomach contents. Barium compounds that do not dissolve well, such as barium sulfate, are not generally harmful.

ToxFAQs™ Internet address is <http://www.atsdr.cdc.gov/toxfaq.html>

Barium has been found to potentially cause gastrointestinal disturbances and muscular weakness when people are exposed to it at levels above the EPA drinking water standards for relatively short periods of time. Some people who eat or drink amounts of barium above background levels found in food and water for a short period may experience vomiting, abdominal cramps, diarrhea, difficulties in breathing, increased or decreased blood pressure, numbness around the face, and muscle weakness. Eating or drinking very large amounts of barium compounds that easily dissolve can cause changes in heart rhythm or paralysis and possibly death. Animals that drank barium over long periods had damage to the kidneys, decreases in body weight, and some died.

### How likely is barium to cause cancer?

The Department of Health and Human Services (DHHS) and the International Agency for Research on Cancer (IARC) have not classified barium as to its carcinogenicity. The EPA has determined that barium is not likely to be carcinogenic to humans following ingestion and that there is insufficient information to determine whether it will be carcinogenic to humans following inhalation exposure.

### How can barium affect children?

We do not know whether children will be more or less sensitive than adults to barium toxicity. A study in rats that swallowed barium found a decrease in newborn body weight; we do not know if a similar effect would be seen in humans.

### How can families reduce the risks of exposure to barium?

The greatest potential source of barium exposure is through food and drinking water. However, the amount of barium in foods and drinking water are typically too low to be of concern.

### Is there a medical test to determine whether I've been exposed to barium?

There is no routine medical test to determine whether you have been exposed to barium. Doctors can measure barium in body tissues and fluids, such as bones, blood, urine, and feces, using very complex instruments. These tests cannot be used to predict the extent of the exposure or potential health effects.

The geometric mean barium level measured in the U.S. general population aged 6 and older is reported by the Centers for Disease Control and Prevention (CDC) as 1.44 µg/g creatinine (measured in urine).

### Has the federal government made recommendations to protect human health?

The EPA has set a limit of 2.0 milligrams of barium per liter of drinking water (2.0 mg/L), which is the same as 2 ppm.

The Occupational Safety and Health Administration (OSHA) has set Permissible Exposure Limits (PELs) of 0.5 milligrams of soluble barium compounds per cubic meter of workplace air (0.5 mg/m<sup>3</sup>) for 8 hour shifts and 40 hour work weeks. The OSHA limits for barium sulfate dust are 15 mg/m<sup>3</sup> of total dust and 5 mg/m<sup>3</sup> for respirable fraction.

The National Institute for Occupational Safety and Health (NIOSH) has set Recommended Exposure Limits (RELs) of 0.5 mg/m<sup>3</sup> for soluble barium compounds. The NIOSH has set RELs of 10 mg/m<sup>3</sup> (total dust) for barium sulfate and 5 mg/m<sup>3</sup> (respirable fraction).

This fact sheet answers the most frequently asked health questions (FAQs) about benzene. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. This information is important because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**HIGHLIGHTS: Benzene is a widely used chemical formed from both natural processes and human activities. Breathing benzene can cause drowsiness, dizziness, and unconsciousness; long-term benzene exposure causes effects on the bone marrow and can cause anemia and leukemia. Benzene has been found in at least 813 of the 1,430 National Priorities List sites identified by the Environmental Protection Agency (EPA).**

## What is benzene?

(Pronounced bĕn'zĕn')

Benzene is a colorless liquid with a sweet odor. It evaporates into the air very quickly and dissolves slightly in water. It is highly flammable and is formed from both natural processes and human activities.

Benzene is widely used in the United States; it ranks in the top 20 chemicals for production volume. Some industries use benzene to make other chemicals which are used to make plastics, resins, and nylon and synthetic fibers. Benzene is also used to make some types of rubbers, lubricants, dyes, detergents, drugs, and pesticides. Natural sources of benzene include volcanoes and forest fires. Benzene is also a natural part of crude oil, gasoline, and cigarette smoke.

## What happens to benzene when it enters the environment?

- Industrial processes are the main source of benzene in the environment.
- Benzene can pass into the air from water and soil.
- It reacts with other chemicals in the air and breaks down within a few days.
- Benzene in the air can attach to rain or snow and be carried back down to the ground.

- It breaks down more slowly in water and soil, and can pass through the soil into underground water.
- Benzene does not build up in plants or animals.

## How might I be exposed to benzene?

- Outdoor air contains low levels of benzene from tobacco smoke, automobile service stations, exhaust from motor vehicles, and industrial emissions.
- Indoor air generally contains higher levels of benzene from products that contain it such as glues, paints, furniture wax, and detergents.
- Air around hazardous waste sites or gas stations will contain higher levels of benzene.
- Leakage from underground storage tanks or from hazardous waste sites containing benzene can result in benzene contamination of well water.
- People working in industries that make or use benzene may be exposed to the highest levels of it.
- A major source of benzene exposures is tobacco smoke.

## How can benzene affect my health?

Breathing very high levels of benzene can result in death, while high levels can cause drowsiness, dizziness, rapid heart rate, headaches, tremors, confusion, and unconsciousness. Eating or drinking foods containing high levels of benzene can cause vomiting, irritation of the stomach, dizziness, sleepiness, convulsions, rapid heart rate, and death.

ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

The major effect of benzene from long-term (365 days or longer) exposure is on the blood. Benzene causes harmful effects on the bone marrow and can cause a decrease in red blood cells leading to anemia. It can also cause excessive bleeding and can affect the immune system, increasing the chance for infection.

Some women who breathed high levels of benzene for many months had irregular menstrual periods and a decrease in the size of their ovaries. It is not known whether benzene exposure affects the developing fetus in pregnant women or fertility in men.

Animal studies have shown low birth weights, delayed bone formation, and bone marrow damage when pregnant animals breathed benzene.

### **How likely is benzene to cause cancer?**

The Department of Health and Human Services (DHHS) has determined that benzene is a known human carcinogen. Long-term exposure to high levels of benzene in the air can cause leukemia, cancer of the blood-forming organs.

### **Is there a medical test to show whether I've been exposed to benzene?**

Several tests can show if you have been exposed to benzene. There is test for measuring benzene in the breath; this test must be done shortly after exposure. Benzene can also be measured in the blood, however, since benzene disappears rapidly from the blood, measurements are accurate only for recent exposures.

In the body, benzene is converted to products called metabolites. Certain metabolites can be measured in the urine. However, this test must be done shortly after exposure and is not a reliable indicator of how much benzene you have been exposed to, since the metabolites may be present in urine from other sources.

### **Has the federal government made recommendations to protect human health?**

The EPA has set the maximum permissible level of benzene in drinking water at 0.005 milligrams per liter (0.005 mg/L). The EPA requires that spills or accidental releases into the environment of 10 pounds or more of benzene be reported to the EPA.

The Occupational Safety and Health Administration (OSHA) has set a permissible exposure limit of 1 part of benzene per million parts of air (1 ppm) in the workplace during an 8-hour workday, 40-hour workweek.

### **Glossary**

Anemia: A decreased ability of the blood to transport oxygen.

Carcinogen: A substance with the ability to cause cancer.

CAS: Chemical Abstracts Service.

Chromosomes: Parts of the cells responsible for the development of hereditary characteristics.

Metabolites: Breakdown products of chemicals.

Milligram (mg): One thousandth of a gram.

Pesticide: A substance that kills pests.

You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

**This fact sheet answers the most frequently asked health questions (FAQs) about cadmium. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.**

**HIGHLIGHTS: Exposure to cadmium happens mostly in the workplace where cadmium products are made. The general population is exposed from breathing cigarette smoke or eating cadmium contaminated foods. Cadmium damages the lungs, can cause kidney disease, and may irritate the digestive tract. This substance has been found in at least 776 of the 1,467 National Priorities List sites identified by the Environmental Protection Agency (EPA).**

## What is cadmium?

(Pronounced kăd'mē-əm)

Cadmium is a natural element in the earth's crust. It is usually found as a mineral combined with other elements such as oxygen (cadmium oxide), chlorine (cadmium chloride), or sulfur (cadmium sulfate, cadmium sulfide).

All soils and rocks, including coal and mineral fertilizers, contain some cadmium. Most cadmium used in the United States is extracted during the production of other metals like zinc, lead, and copper. Cadmium does not corrode easily and has many uses, including batteries, pigments, metal coatings, and plastics.

## What happens to cadmium when it enters the environment?

- Cadmium enters air from mining, industry, and burning coal and household wastes.
- Cadmium particles in air can travel long distances before falling to the ground or water.
- It enters water and soil from waste disposal and spills or leaks at hazardous waste sites.
- It binds strongly to soil particles.
- Some cadmium dissolves in water.

- It doesn't break down in the environment, but can change forms.
- Fish, plants, and animals take up cadmium from the environment.
- Cadmium stays in the body a very long time and can build up from many years of exposure to low levels.

## How might I be exposed to cadmium?

- Breathing contaminated workplace air (battery manufacturing, metal soldering or welding).
- Eating foods containing it; low levels in all foods (highest in shellfish, liver, and kidney meats).
- Breathing cadmium in cigarette smoke (doubles the average daily intake).
- Drinking contaminated water.
- Breathing contaminated air near the burning of fossil fuels or municipal waste.

## How can cadmium affect my health?

Breathing high levels of cadmium severely damages the lungs and can cause death. Eating food or drinking water with very high levels severely irritates the stomach, leading to vomiting and diarrhea. Long-term exposure to lower levels of cadmium in air, food, or water leads to a buildup of cadmium in the kidneys and possible kidney disease.

ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

Other long-term effects are lung damage and fragile bones. Animals given cadmium in food or water had high blood pressure, iron-poor blood, liver disease, and nerve or brain damage.

We don't know if humans get any of these diseases from eating or drinking cadmium. Skin contact with cadmium is not known to cause health effects in humans or animals.

### How likely is cadmium to cause cancer?

The Department of Health and Human Services (DHHS) has determined that cadmium and cadmium compounds may reasonably be anticipated to be carcinogens.

### How can cadmium affect children?

The health effects in children are expected to be similar to those in adults (kidney, lung and intestinal damage).

We don't know if cadmium causes birth defects in people. Cadmium does not readily go from a pregnant woman's body into the developing child, but some portion can cross the placenta. It can also be found in breast milk. The babies of animals exposed to high levels of cadmium during pregnancy had changes in behavior and learning ability. Cadmium may also affect birth weight and the skeleton in developing animals.

Animal studies also indicate that more cadmium is absorbed into the body if the diet is low in calcium, protein, or iron, or is high in fat. A few studies show that younger animals absorb more cadmium and are more likely to lose bone and bone strength than adults.

### How can families reduce the risk of exposure to cadmium?

In the home, store substances that contain cadmium safely, and keep nickel-cadmium batteries out of reach of young

children. If you work with cadmium, use all safety precautions to avoid carrying cadmium-containing dust home from work on your clothing, skin, hair, or tools.

A balanced diet can reduce the amount of cadmium taken into the body from food and drink.

### Is there a medical test to show whether I've been exposed to cadmium?

Tests are available in some medical laboratories that measure cadmium in blood, urine, hair, or nails. Blood levels show recent exposure to cadmium, and urine levels show both recent and earlier exposure. The reliability of tests for cadmium levels in hair or nails is unknown.

### Has the federal government made recommendations to protect human health?

The EPA has set a limit of 5 parts of cadmium per billion parts of drinking water (5 ppb). EPA doesn't allow cadmium in pesticides.

The Food and Drug Administration (FDA) limits the amount of cadmium in food colors to 15 parts per million (15 ppm).

The Occupational Safety and Health Administration (OSHA) limits workplace air to 100 micrograms cadmium per cubic meter (100  $\mu\text{g}/\text{m}^3$ ) as cadmium fumes and 200  $\mu\text{g}/\text{m}^3$  as cadmium dust.

This fact sheet answers the most frequently asked health questions (FAQs) about chromium. For more information, call the ATSDR Information Center at 1-800-232-4636. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It is important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**HIGHLIGHTS:** Exposure to chromium occurs from ingesting contaminated food or drinking water or breathing contaminated workplace air. Chromium(VI) at high levels can damage the nose and cause cancer. Ingesting high levels of chromium(VI) may result in anemia or damage to the stomach or intestines. Chromium(III) is an essential nutrient. Chromium has been found in at least 1,127 of the 1,669 National Priorities List sites identified by the Environmental Protection Agency (EPA).

### What is chromium?

Chromium is a naturally occurring element found in rocks, animals, plants, and soil. It can exist in several different forms. Depending on the form it takes, it can be a liquid, solid, or gas. The most common forms are chromium(0), chromium(III), and chromium(VI). No taste or odor is associated with chromium compounds.

The metal chromium, which is the chromium(0) form, is used for making steel. Chromium(VI) and chromium(III) are used for chrome plating, dyes and pigments, leather tanning, and wood preserving.

### What happens to chromium when it enters the environment?

- Chromium can be found in air, soil, and water after release from the manufacture, use, and disposal of chromium-based products, and during the manufacturing process.
- Chromium does not usually remain in the atmosphere, but is deposited into the soil and water.
- Chromium can easily change from one form to another in water and soil, depending on the conditions present.
- Fish do not accumulate much chromium in their bodies from water.

### How might I be exposed to chromium?

- Eating food containing chromium(III).

- Breathing contaminated workplace air or skin contact during use in the workplace.
- Drinking contaminated well water.
- Living near uncontrolled hazardous waste sites containing chromium or industries that use chromium.

### How can chromium affect my health?

Chromium(III) is an essential nutrient that helps the body use sugar, protein, and fat.

Breathing high levels of chromium(VI) can cause irritation to the lining of the nose, nose ulcers, runny nose, and breathing problems, such as asthma, cough, shortness of breath, or wheezing. The concentrations of chromium in air that can cause these effects may be different for different types of chromium compounds, with effects occurring at much lower concentrations for chromium(VI) compared to chromium(III).

The main health problems seen in animals following ingestion of chromium(VI) compounds are irritation and ulcers in the stomach and small intestine and anemia. Chromium(III) compounds are much less toxic and do not appear to cause these problems.

Sperm damage and damage to the male reproductive system have also been seen in laboratory animals exposed to chromium(VI).

ToxFAQs™ Internet address is <http://www.atsdr.cdc.gov/toxfaq.html>

Skin contact with certain chromium(VI) compounds can cause skin ulcers. Some people are extremely sensitive to chromium(VI) or chromium(III). Allergic reactions consisting of severe redness and swelling of the skin have been noted.

### How likely is chromium to cause cancer?

The Department of Health and Human Services (DHHS), the International Agency for Research on Cancer (IARC), and the EPA have determined that chromium(VI) compounds are known human carcinogens. In workers, inhalation of chromium(VI) has been shown to cause lung cancer. Chromium(VI) also causes lung cancer in animals. An increase in stomach tumors was observed in humans and animals exposed to chromium(VI) in drinking water.

### How can chromium affect children?

It is likely that health effects seen in children exposed to high amounts of chromium will be similar to the effects seen in adults.

We do not know if exposure to chromium will result in birth defects or other developmental effects in people. Some developmental effects have been observed in animals exposed to chromium(VI).

### How can families reduce the risks of exposure to chromium?

- Children should avoid playing in soils near uncontrolled hazardous waste sites where chromium may have been discarded.
- Chromium is a component of tobacco smoke. Avoid smoking in enclosed spaces like inside the home or car in order to limit exposure to children and other family members.
- Although chromium(III) is an essential nutrient, you should avoid excessive use of dietary supplements containing chromium.

### Is there a medical test to determine whether I've been exposed to chromium?

Since chromium(III) is an essential element and naturally occurs in food, there will always be some level of chromium in your body. Chromium can be measured in hair, urine, and blood.

Higher than normal levels of chromium in blood or urine may indicate that a person has been exposed to chromium. However, increases in blood and urine chromium levels cannot be used to predict the kind of health effects that might develop from that exposure.

### Has the federal government made recommendations to protect human health?

The EPA has determined that exposure to chromium in drinking water at concentrations of 1 mg/L for up to 10 days is not expected to cause any adverse effects in a child.

The FDA has determined that the chromium concentration in bottled drinking water should not exceed 1 mg/L.

The Occupational Health and Safety Administration (OSHA) has limited workers' exposure to an average of 0.0005 mg/m<sup>3</sup> chromium(VI), 0.5 mg/m<sup>3</sup> chromium(III), and 1.0 mg/m<sup>3</sup> chromium(0) for an 8-hour workday, 40-hour workweek.

This fact sheet answers the most frequently asked health questions (FAQs) about copper. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It is important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**HIGHLIGHTS: Copper is a reddish metal that occurs naturally in the environment. It also occurs naturally in plants and animals. Low levels of copper are essential for maintaining good health. High levels can cause harmful effects such as irritation of the nose, mouth and eyes, vomiting, diarrhea, stomach cramps, and nausea. Copper has been found in at least 884 of the 1,613 National Priorities List sites identified by the Environmental Protection Agency (EPA).**

#### What is copper?

Copper is a reddish metal that occurs naturally in rocks, soil, water, and air. Copper also occurs naturally in plants and animals.

Metallic copper can be easily molded or shaped. Metallic copper can be found in the U.S. penny, electrical wiring, and some water pipes. Metallic copper is also found in mixtures (called alloys) with other metals such as brass and bronze. Copper is also found as part of other compounds forming salts. Copper salts occur naturally, but are also manufactured. The most common copper salt is copper sulfate. Most copper compounds are blue-green in color. Copper compounds are commonly used in agriculture to treat plant diseases like mildew, for water treatment and, as preservatives for wood, leather, and fabrics.

#### What happens to copper when it enters the environment?

- Copper can enter the environment from the mining of copper and other metals and from factories that make or use metallic copper or copper compounds.
- It can also enter the environment through domestic waste water, combustion of fossil fuels and wastes, wood production, phosphate fertilizer production, and natural sources (e.g., windblown dust from soils, volcanoes, decaying vegetation, forest fires, and sea spray).
- Copper in soil strongly attaches to organic material and minerals.

- Copper that dissolves in water becomes rapidly bound to particles suspended in the water.
- Copper does not typically enter groundwater.
- Copper carried by particles emitted from smelters and ore processing plants is carried back to the ground by gravity or in rain or snow.
- Copper does not break down in the environment.

#### How might I be exposed to copper?

- Breathing air, drinking water, eating food, and by skin contact with soil, water, or other copper-containing substances.
- Some copper in the environment can be taken up by plants and animals.
- Higher exposure may occur if your water is corrosive and you have copper plumbing and brass water fixtures.  You may be exposed to higher amounts of copper if you drink water or swim in lakes or reservoirs recently treated with copper to control algae or receive cooling water from a power plant that may have high amounts of dissolved copper.
- Using some garden products (e.g., fungicides) to control plant diseases.
- Living near bronze and brass production facilities may expose you to higher copper levels in soil.
- You may breathe copper-containing dust or have skin contact if you work in the industry of mining copper or

ToxFAQs™ Internet address is <http://www.atsdr.cdc.gov/toxfaq.html>

processing the ore. You may breathe high levels if you grind or weld copper metal.

### How can copper affect my health?

Copper is essential for good health, but high amounts can be harmful. Long-term exposure to copper dust can irritate your nose, mouth, and eyes, and cause headaches, dizziness, nausea, and diarrhea.

Drinking water with higher than normal levels of copper may cause vomiting, diarrhea, stomach cramps, and nausea. Intentionally high intakes of copper can cause liver and kidney damage and even death.

### How likely is copper to cause cancer?

We do not know whether copper can cause cancer in humans. The EPA has determined that copper is not classifiable as to carcinogenicity.

### How can copper affect children?

Exposure to high levels of copper will result in the same type of effects in children and adults. Studies in animals suggest that the young children may have more severe effects than adults; we do not know if this would also be true in humans. There is a very small percentage of infants and children who are unusually sensitive to copper.

We do not know if copper can cause birth defects or other developmental effects in humans. Studies in animals suggest that ingestion of high levels of copper may cause a decrease in fetal growth.

### How can families reduce the risk of exposure to copper?

- The greatest potential source of copper exposure is through drinking water, especially in water that is first drawn in the morning after sitting in copper pipes and brass faucets overnight.
- To reduce exposure, run the water for at least 15-30 seconds before using it.
- If you are exposed to copper at work, you may carry

copper home on your skin, clothes, or tools. You can avoid this by showering, and changing clothing before leaving work, and your work clothes should be kept separate from other clothes and laundered separately.

### Is there a medical test to show whether I've been exposed to copper?

Copper is normally found in all tissues of the body, blood, urine, feces, hair, and nails. High levels of copper in these samples can show that you have been exposed to higher than normal levels of copper. Tests to measure copper levels in the body are not routinely available at the doctor's office because they require special equipment. These tests cannot tell the extent of exposure or whether you will experience harmful effects.

### Has the federal government made recommendations to protect human health?

The EPA has determined that drinking water should not contain more than 1.3 milligrams of copper per liter of water (1.3 mg/L).

The Occupational Safety and Health Administration (OSHA) has set a limit of 0.1 mg per cubic meter (0.1 mg/m<sup>3</sup>) of copper fumes (vapor generated from heating copper) and 1 mg/m<sup>3</sup> of copper dusts (fine metallic copper particles) and mists (aerosol of soluble copper) in workroom air during an 8-hour work shift, 40-hour workweek.

The Food and Nutrition Board of the Institute of Medicine recommends dietary allowances (RDAs) of 340 micrograms (340 µg) of copper per day for children aged 1-3 years, 440 µg/day for children aged 4-8 years, 700 µg/day for children aged 9-13 years, 890 µg/day for children aged 14-18 years, and 900 µg/day for adults.

Their specialists can recognize, evaluate, and treat illnesses resulting from exposure to hazardous substances. You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

This fact sheet answers the most frequently asked health questions (FAQs) about DDT, DDE, and DDD. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It is important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**HIGHLIGHTS:** Exposure to DDT, DDE, and DDD occurs mostly from eating foods containing small amounts of these compounds, particularly meat, fish and poultry. High levels of DDT can affect the nervous system causing excitability, tremors and seizures. In women, DDE can cause a reduction in the duration of lactation and an increased chance of having a premature baby. DDT, DDE, and DDD have been found in at least 441 of the 1,613 National Priorities List sites identified by the Environmental Protection Agency (EPA).

### What are DDT, DDE, and DDD?

DDT (dichlorodiphenyltrichloroethane) is a pesticide once widely used to control insects in agriculture and insects that carry diseases such as malaria. DDT is a white, crystalline solid with no odor or taste. Its use in the U.S. was banned in 1972 because of damage to wildlife, but is still used in some countries.

DDE (dichlorodiphenyldichloroethylene) and DDD (dichlorodiphenyldichloroethane) are chemicals similar to DDT that contaminate commercial DDT preparations. DDE has no commercial use. DDD was also used to kill pests, but its use has also been banned. One form of DDD has been used medically to treat cancer of the adrenal gland.

### What happens to DDT, DDE, and DDD when they enter the environment?

- DDT entered the environment when it was used as a pesticide; it still enters the environment due to current use in other countries.
- DDE enters the environment as contaminant or breakdown product of DDT; DDD also enters the environment as a breakdown product of DDT.
- DDT, DDE, and DDD in air are rapidly broken down by sunlight. Half of what's in air breaks down within 2 days.
- They stick strongly to soil; most DDT in soil is broken down slowly to DDE and DDD by microorganisms; half the DDT in soil will break down in 2-15 years, depending on the type of soil.

- Only a small amount will go through the soil into groundwater; they do not dissolve easily in water.
- DDT, and especially DDE, build up in plants and in fatty tissues of fish, birds, and other animals.

### How might I be exposed to DDT, DDE, and DDD?

- Eating contaminated foods, such as root and leafy vegetables, fatty meat, fish, and poultry, but levels are very low.
- Eating contaminated imported foods from countries that still allow the use of DDT to control pests.
- Breathing contaminated air or drinking contaminated water near waste sites and landfills that may contain higher levels of these chemicals.
- Infants fed on breast milk from mothers who have been exposed.
- Breathing or swallowing soil particles near waste sites or landfills that contain these chemicals.

### How can DDT, DDE, and DDD affect my health?

DDT affects the nervous system. People who accidentally swallowed large amounts of DDT became excitable and had tremors and seizures. These effects went away after the exposure stopped. No effects were seen in people who took small daily doses of DDT by capsule for 18 months. A study in humans showed that women who had high amounts of a form of DDE in their breast milk were unable to

**ToxFAQs™ Internet address is <http://www.atsdr.cdc.gov/toxfaq.html>**

breast feed their babies for as long as women who had little DDE in the breast milk. Another study in humans showed that women who had high amounts of DDE in breast milk had an increased chance of having premature babies. In animals, short-term exposure to large amounts of DDT in food affected the nervous system, while long-term exposure to smaller amounts affected the liver. Also in animals, short-term oral exposure to small amounts of DDT or its breakdown products may also have harmful effects on reproduction.

### How likely are DDT, DDE, and DDD to cause cancer?

Studies in DDT-exposed workers did not show increases in cancer. Studies in animals given DDT with the food have shown that DDT can cause liver cancer. The Department of Health and Human Services (DHHS) determined that DDT may reasonably be anticipated to be a human carcinogen. The International Agency for Research on Cancer (IARC) determined that DDT may possibly cause cancer in humans. The EPA determined that DDT, DDE, and DDD are probable human carcinogens.

### How can DDT, DDE, and DDD affect children?

There are no studies on the health effects of children exposed to DDT, DDE, or DDD. We can assume that children exposed to large amounts of DDT will have health effects similar to the effects seen in adults. However, we do not know whether children differ from adults in their susceptibility to these substances.

There is no evidence that DDT, DDE, or DDD cause birth defects in people. A study showed that teenage boys whose mothers had higher DDE amounts in the blood when they were pregnant were taller than those whose mothers had lower DDE levels. However, a different study found the opposite in preteen girls. The reason for the discrepancy between these studies is unknown.

Studies in rats have shown that DDT and DDE can mimic the action of natural hormones and in this way affect the development of the reproductive and nervous systems. Puberty was delayed in male rats given high amounts of DDE as juveniles. This could possibly happen in humans.

A study in mice showed that exposure to DDT during the first weeks of life may cause neurobehavioral problems later in life.

### How can families reduce the risk of exposure to DDT, DDE, and DDE?

- Most families will be exposed to DDT by eating food or drinking liquids contaminated with small amounts of DDT.
- Cooking will reduce the amount of DDT in fish.
- Washing fruit and vegetables will remove most DDT from their surface.
- Follow health advisories that tell you about consumption of fish and wildlife caught in contaminated areas.

### Is there a medical test to show whether I've been exposed to DDT, DDE, and DDD?

Laboratory tests can detect DDT, DDE, and DDD in fat, blood, urine, semen, and breast milk. These tests may show low, moderate, or excessive exposure to these compounds, but cannot tell the exact amount you were exposed to, or whether you will experience adverse effects. These tests are not routinely available at the doctor's office because they require special equipment.

### Has the federal government made recommendations to protect human health?

The Occupational Safety and Health Administration (OSHA) sets a limit of 1 milligram of DDT per cubic meter of air (1 mg/m<sup>3</sup>) in the workplace for an 8-hour shift, 40-hour workweek.

The Food and Drug Administration (FDA) has set limits for DDT, DDE, and DDD in foodstuff at or above which the agency will take legal action to remove the products from the market.

Their specialists can recognize, evaluate, and treat illnesses resulting from exposure to hazardous substances. You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

This fact sheet answers the most frequently asked health questions (FAQs) about ethylbenzene. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**HIGHLIGHTS:** Ethylbenzene is a colorless liquid found in a number of products including gasoline and paints. Breathing very high levels can cause dizziness and throat and eye irritation. Ethylbenzene has been found in at least 731 of the 1,467 National Priorities List sites identified by the Environmental Protection Agency (EPA).

### What is ethylbenzene?

(Pronounced ěth' əl bĕn' zĕn')

Ethylbenzene is a colorless, flammable liquid that smells like gasoline. It is found in natural products such as coal tar and petroleum and is also found in manufactured products such as inks, insecticides, and paints.

Ethylbenzene is used primarily to make another chemical, styrene. Other uses include as a solvent, in fuels, and to make other chemicals.

### What happens to ethylbenzene when it enters the environment?

- Ethylbenzene moves easily into the air from water and soil.
- It takes about 3 days for ethylbenzene to be broken down in air into other chemicals.
- Ethylbenzene may be released to water from industrial discharges or leaking underground storage tanks.
- In surface water, ethylbenzene breaks down by reacting with other chemicals found naturally in water.
- In soil, it is broken down by soil bacteria.

### How might I be exposed to ethylbenzene?

- Breathing air containing ethylbenzene, particularly in areas near factories or highways.
- Drinking contaminated tap water.
- Working in an industry where ethylbenzene is used or made.
- Using products containing it, such as gasoline, carpet glues, varnishes, and paints.

### How can ethylbenzene affect my health?

Limited information is available on the effects of ethylbenzene on people's health. The available information shows dizziness, throat and eye irritation, tightening of the chest, and a burning sensation in the eyes of people exposed to high levels of ethylbenzene in air.

Animals studies have shown effects on the nervous system, liver, kidneys, and eyes from breathing ethylbenzene in air.

### How likely is ethylbenzene to cause cancer?

The EPA has determined that ethylbenzene is not classified as to human carcinogenicity.

ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

No studies in people have shown that ethylbenzene exposure can result in cancer. Two available animal studies suggest that ethylbenzene may cause tumors.

### How can ethylbenzene affect children?

Children may be exposed to ethylbenzene through inhalation of consumer products, including gasoline, paints, inks, pesticides, and carpet glue. We do not know whether children are more sensitive to the effects of ethylbenzene than adults.

It is not known whether ethylbenzene can affect the development of the human fetus. Animal studies have shown that when pregnant animals were exposed to ethylbenzene in air, their babies had an increased number of birth defects.

### How can families reduce the risk of exposure to ethylbenzene?

Exposure to ethylbenzene vapors from household products and newly installed carpeting can be minimized by using adequate ventilation.

Household chemicals should be stored out of reach of children to prevent accidental poisoning. Always store household chemicals in their original containers; never store them in containers children would find attractive to eat or drink from, such as old soda bottles. Gasoline should be stored in a gasoline can with a locked cap.

Sometimes older children sniff household chemicals, including ethylbenzene, in an attempt to get high. Talk with your children about the dangers of sniffing chemicals.

### Is there a medical test to show whether I've been exposed to ethylbenzene?

Ethylbenzene is found in the blood, urine, breath, and

some body tissues of exposed people. The most common way to test for ethylbenzene is in the urine. This test measures substances formed by the breakdown of ethylbenzene. This test needs to be done within a few hours after exposure occurs, because the substances leave the body very quickly.

These tests can show you were exposed to ethylbenzene, but cannot predict the kind of health effects that might occur.

### Has the federal government made recommendations to protect human health?

The EPA has set a maximum contaminant level of 0.7 milligrams of ethylbenzene per liter of drinking water (0.7 mg/L).

The EPA requires that spills or accidental releases into the environment of 1,000 pounds or more of ethylbenzene be reported to the EPA.

The Occupational Safety and Health Administration (OSHA) has set an occupational exposure limit of 100 parts of ethylbenzene per million parts of air (100 ppm) for an 8-hour workday, 40-hour workweek.

This fact sheet answers the most frequently asked health questions (FAQs) about fuel oils. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**SUMMARY: Fuel oils are liquid mixtures produced from petroleum, and their use mostly involves burning them as fuels. Drinking or breathing fuel oils may cause nausea or nervous system effects. However, exposure under normal use conditions is not likely to be harmful. Fuel oils have been found in at least 26 of the 1,430 National Priorities List sites identified by the Environmental Protection Agency (EPA).**

## What are fuel oils?

(Pronounced fyoo'el oilz)

Fuel oils are a variety of yellowish to light brown liquid mixtures that come from crude petroleum. Some chemicals found in fuel oils may evaporate easily, while others may more easily dissolve in water.

Fuel oils are produced by different petroleum refining processes, depending on their intended uses. Fuel oils may be used as fuel for engines, lamps, heaters, furnaces, and stoves, or as solvents.

Some commonly found fuel oils include kerosene, diesel fuel, jet fuel, range oil, and home heating oil. These fuel oils differ from one another by their hydrocarbon compositions, boiling point ranges, chemical additives, and uses.

## What happens to fuel oils when they enter the environment?

- Some chemicals found in fuel oils may evaporate into the air from open containers or contaminated soil or water.
- Some chemicals found in fuel oils may dissolve in water after spills to surface waters or leaks from underground storage tanks.

- Some chemicals found in fuel oils may stick to particles in water, which will eventually cause them to settle to the bottom sediment.
- Some of the chemicals found in fuel oils may be broken down slowly in air, water, and soil by sunlight or small organisms.
- Some of the chemicals found in fuel oils may build up significantly in plants and animals.

## How might I be exposed to fuel oils?

- Using a home kerosene heater or stove, or using fuel oils at work.
- Breathing air in home or building basements that has been contaminated with fuel oil vapors entering from the soil.
- Drinking or swimming in water that has been contaminated with fuel oils from a spill or a leaking underground storage tank.
- Touching soil contaminated with fuel oils.
- Using fuel oils to wash paint or grease from skin or equipment.

## How can fuel oils affect my health?

Little information is available about the health effects that may be caused by fuel oils. People who use kerosene

ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

stoves for cooking do not seem to have any health problems related to their exposure.

Breathing some fuel oils for short periods may cause nausea, eye irritation, increased blood pressure, headache, lightheadedness, loss of appetite, poor coordination, and difficulty concentrating. Breathing diesel fuel vapors for long periods may cause kidney damage and lower your blood's ability to clot.

Drinking small amounts of kerosene may cause vomiting, diarrhea, coughing, stomach swelling and cramps, drowsiness, restlessness, painful breathing, irritability, and unconsciousness. Drinking large amounts of kerosene may cause convulsions, coma, or death. Skin contact with kerosene for short periods may cause itchy, red, sore, or peeling skin.

### How likely are fuel oils to cause cancer?

The International Agency for Research on Cancer (IARC) has determined that some fuel oils (heavy) may possibly cause cancer in humans, but for other fuel oils (light) there is not enough information to make a determination. IARC has also determined that occupational exposures to fuel oils during petroleum refining are probably carcinogenic in humans.

Some studies with mice have suggested that repeated contact with fuel oils may cause liver or skin cancer. However, other mouse studies have found this not to be the case. No studies are available in other animals or in people on the carcinogenic effects of fuel oils.

### Is there a medical test to show whether I've been exposed to fuel oils?

There is no medical test that shows if you have been exposed to fuel oils. Tests are available to determine if some of

the chemicals commonly found in fuel oils are in your blood. However, the presence of these chemicals in blood may not necessarily mean that you have been exposed to fuel oils.

### Has the federal government made recommendations to protect human health?

The Occupational Safety and Health Administration (OSHA) and the Air Force Office of Safety and Health (AFOSH) have set a permissible exposure level (PEL) of 400 parts of petroleum distillates per million parts of air (400 ppm) for an 8-hour workday, 40-hour workweek.

The National Institute for Occupational Safety and Health (NIOSH) recommends that average workplace air levels not exceed 350 milligrams of petroleum distillates per cubic meter of air (350 mg/m<sup>3</sup>) for a 40-hour workweek.

The Department of Transportation (DOT) lists fuel oils as hazardous materials and, therefore, regulates their transportation.

### Glossary

Carcinogenic: Able to cause cancer.

CAS: Chemical Abstracts Service.

Evaporate: To change into a vapor or a gas.

Hydrocarbon: Any compound made up of hydrogen and carbon.

Milligram (mg): One thousandth of a gram.

ppm: Parts per million.

Sediment: Mud and debris that have settled to the bottom of a body of water.

### References

Agency for Toxic Substances and Disease Registry (ATSDR). 1995. Toxicological profile for fuel oils. Atlanta, GA: U.S. Department of Health and Human Services, Public Health Service.

**Where can I get more information?** For more information, contact the Agency for Toxic Substances and Disease Registry, Division of Toxicology, 1600 Clifton Road NE, Mailstop E-29, Atlanta, GA 30333. Phone: 1-888-422-8737, FAX: 404-498-0093. ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html> ATSDR can tell you where to find occupational and environmental health clinics. You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

This fact sheet answers the most frequently asked health questions (FAQs) about lead. For more information, call the ATSDR Information Center at 1-800-232-4636. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It is important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**HIGHLIGHTS:** Exposure to lead can happen from breathing workplace air or dust, eating contaminated foods, or drinking contaminated water. Children can be exposed from eating lead-based paint chips or playing in contaminated soil. Lead can damage the nervous system, kidneys, and reproductive system. Lead has been found in at least 1,272 of the 1,684 National Priority List sites identified by the Environmental Protection Agency (EPA).

### What is lead?

Lead is a naturally occurring bluish-gray metal found in small amounts in the earth's crust. Lead can be found in all parts of our environment. Much of it comes from human activities including burning fossil fuels, mining, and manufacturing.

Lead has many different uses. It is used in the production of batteries, ammunition, metal products (solder and pipes), and devices to shield X-rays. Because of health concerns, lead from paints and ceramic products, caulking, and pipe solder has been dramatically reduced in recent years. The use of lead as an additive to gasoline was banned in 1996 in the United States.

### What happens to lead when it enters the environment?

- Lead itself does not break down, but lead compounds are changed by sunlight, air, and water.
- When lead is released to the air, it may travel long distances before settling to the ground.
- Once lead falls onto soil, it usually sticks to soil particles.
- Movement of lead from soil into groundwater will depend on the type of lead compound and the characteristics of the soil.

### How might I be exposed to lead?

- Eating food or drinking water that contains lead. Water pipes in some older homes may contain lead solder. Lead can leach out into the water.

- Spending time in areas where lead-based paints have been used and are deteriorating. Deteriorating lead paint can contribute to lead dust.

- Working in a job where lead is used or engaging in certain hobbies in which lead is used, such as making stained glass.

- Using health-care products or folk remedies that contain lead.

### How can lead affect my health?

The effects of lead are the same whether it enters the body through breathing or swallowing. Lead can affect almost every organ and system in your body. The main target for lead toxicity is the nervous system, both in adults and children. Long-term exposure of adults can result in decreased performance in some tests that measure functions of the nervous system. It may also cause weakness in fingers, wrists, or ankles. Lead exposure also causes small increases in blood pressure, particularly in middle-aged and older people and can cause anemia. Exposure to high lead levels can severely damage the brain and kidneys in adults or children and ultimately cause death. In pregnant women, high levels of exposure to lead may cause miscarriage. High-level exposure in men can damage the organs responsible for sperm production.

### How likely is lead to cause cancer?

We have no conclusive proof that lead causes cancer in humans. Kidney tumors have developed in rats and mice that had been given large doses of some kind of lead compounds. The Department of Health and Human Services

ToxFAQs™ Internet address is <http://www.atsdr.cdc.gov/toxfaq.html>

(DHHS) has determined that lead and lead compounds are reasonably anticipated to be human carcinogens and the EPA has determined that lead is a probable human carcinogen. The International Agency for Research on Cancer (IARC) has determined that inorganic lead is probably carcinogenic to humans and that there is insufficient information to determine whether organic lead compounds will cause cancer in humans.

### How can lead affect children?

Small children can be exposed by eating lead-based paint chips, chewing on objects painted with lead-based paint, or swallowing house dust or soil that contains lead.

Children are more vulnerable to lead poisoning than adults. A child who swallows large amounts of lead may develop blood anemia, severe stomachache, muscle weakness, and brain damage. If a child swallows smaller amounts of lead, much less severe effects on blood and brain function may occur. Even at much lower levels of exposure, lead can affect a child's mental and physical growth.

Exposure to lead is more dangerous for young and unborn children. Unborn children can be exposed to lead through their mothers. Harmful effects include premature births, smaller babies, decreased mental ability in the infant, learning difficulties, and reduced growth in young children. These effects are more common if the mother or baby was exposed to high levels of lead. Some of these effects may persist beyond childhood.

### How can families reduce the risks of exposure to lead?

- Avoid exposure to sources of lead.
- Do not allow children to chew on mouth surfaces that may have been painted with lead-based paint.
- If you have a water lead problem, run or flush water that has been standing overnight before drinking or cooking with it.
- Some types of paints and pigments that are used as make-up or hair coloring contain lead. Keep these kinds of products away from children
- If your home contains lead-based paint or you live in an area contaminated with lead, wash children's hands and faces

often to remove lead dusts and soil, and regularly clean the house of dust and tracked in soil.

### Is there a medical test to determine whether I've been exposed to lead?

A blood test is available to measure the amount of lead in your blood and to estimate the amount of your recent exposure to lead. Blood tests are commonly used to screen children for lead poisoning. Lead in teeth or bones can be measured by X-ray techniques, but these methods are not widely available. Exposure to lead also can be evaluated by measuring erythrocyte protoporphyrin (EP) in blood samples. EP is a part of red blood cells known to increase when the amount of lead in the blood is high. However, the EP level is not sensitive enough to identify children with elevated blood lead levels below about 25 micrograms per deciliter ( $\mu\text{g}/\text{dL}$ ). These tests usually require special analytical equipment that is not available in a doctor's office. However, your doctor can draw blood samples and send them to appropriate laboratories for analysis.

### Has the federal government made recommendations to protect human health?

The Centers for Disease Control and Prevention (CDC) recommends that states test children at ages 1 and 2 years. Children should be tested at ages 3–6 years if they have never been tested for lead, if they receive services from public assistance programs for the poor such as Medicaid or the Supplemental Food Program for Women, Infants, and Children, if they live in a building or frequently visit a house built before 1950; if they visit a home (house or apartment) built before 1978 that has been recently remodeled; and/or if they have a brother, sister, or playmate who has had lead poisoning. CDC considers a blood lead level of 10  $\mu\text{g}/\text{dL}$  to be a level of concern for children.

EPA limits lead in drinking water to 15  $\mu\text{g}$  per liter.

**Where can I get more information?** For more information, contact the Agency for Toxic Substances and Disease Registry, Division of Toxicology and Environmental Medicine, 1600 Clifton Road NE, Mailstop F-32, Atlanta, GA 30333. Phone: 1-800-232-4636, FAX: 770-488-4178. ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>. ATSDR can tell you where to find occupational and environmental health clinics. Their specialists can recognize, evaluate, and treat illnesses resulting from exposure to hazardous substances. You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

**This fact sheet answers the most frequently asked health questions (FAQs) about mercury. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.**

**HIGHLIGHTS: Exposure to mercury occurs from breathing contaminated air, ingesting contaminated water and food, and having dental and medical treatments. Mercury, at high levels, may damage the brain, kidneys, and developing fetus. This chemical has been found in at least 714 of 1,467 National Priorities List sites identified by the Environmental Protection Agency.**

### What is mercury?

(Pronounced mŭr/kyə-rē)

Mercury is a naturally occurring metal which has several forms. The metallic mercury is a shiny, silver-white, odorless liquid. If heated, it is a colorless, odorless gas.

Mercury combines with other elements, such as chlorine, sulfur, or oxygen, to form inorganic mercury compounds or "salts," which are usually white powders or crystals. Mercury also combines with carbon to make organic mercury compounds. The most common one, methylmercury, is produced mainly by microscopic organisms in the water and soil. More mercury in the environment can increase the amounts of methylmercury that these small organisms make.

Metallic mercury is used to produce chlorine gas and caustic soda, and is also used in thermometers, dental fillings, and batteries. Mercury salts are sometimes used in skin lightening creams and as antiseptic creams and ointments.

### What happens to mercury when it enters the environment?

- Inorganic mercury (metallic mercury and inorganic mercury compounds) enters the air from mining ore deposits, burning coal and waste, and from manufacturing plants.
- It enters the water or soil from natural deposits, disposal of wastes, and volcanic activity.

- Methylmercury may be formed in water and soil by small organisms called bacteria.
- Methylmercury builds up in the tissues of fish. Larger and older fish tend to have the highest levels of mercury.

### How might I be exposed to mercury?

- Eating fish or shellfish contaminated with methylmercury.
- Breathing vapors in air from spills, incinerators, and industries that burn mercury-containing fuels.
- Release of mercury from dental work and medical treatments.
- Breathing contaminated workplace air or skin contact during use in the workplace (dental, health services, chemical, and other industries that use mercury).
- Practicing rituals that include mercury.

### How can mercury affect my health?

The nervous system is very sensitive to all forms of mercury. Methylmercury and metallic mercury vapors are more harmful than other forms, because more mercury in these forms reaches the brain. Exposure to high levels of metallic, inorganic, or organic mercury can permanently damage the brain, kidneys, and developing fetus. Effects on brain functioning may result in irritability, shyness, tremors, changes in vision or hearing, and memory problems.

Short-term exposure to high levels of metallic mercury vapors may cause effects including lung damage, nausea,

ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

vomiting, diarrhea, increases in blood pressure or heart rate, skin rashes, and eye irritation.

### How likely is mercury to cause cancer?

There are inadequate human cancer data available for all forms of mercury. Mercuric chloride has caused increases in several types of tumors in rats and mice, and methylmercury has caused kidney tumors in male mice. The EPA has determined that mercuric chloride and methylmercury are possible human carcinogens.

### How can mercury affect children?

Very young children are more sensitive to mercury than adults. Mercury in the mother's body passes to the fetus and may accumulate there. It can also pass to a nursing infant through breast milk. However, the benefits of breast feeding may be greater than the possible adverse effects of mercury in breast milk.

Mercury's harmful effects that may be passed from the mother to the fetus include brain damage, mental retardation, incoordination, blindness, seizures, and inability to speak. Children poisoned by mercury may develop problems of their nervous and digestive systems, and kidney damage.

### How can families reduce the risk of exposure to mercury?

Carefully handle and dispose of products that contain mercury, such as thermometers or fluorescent light bulbs. Do not vacuum up spilled mercury, because it will vaporize and increase exposure. If a large amount of mercury has been spilled, contact your health department. Teach children not to play with shiny, silver liquids.

Properly dispose of older medicines that contain mercury. Keep all mercury-containing medicines away from children.

Pregnant women and children should keep away from

rooms where liquid mercury has been used.

Learn about wildlife and fish advisories in your area from your public health or natural resources department.

### Is there a medical test to show whether I've been exposed to mercury?

Tests are available to measure mercury levels in the body. Blood or urine samples are used to test for exposure to metallic mercury and to inorganic forms of mercury. Mercury in whole blood or in scalp hair is measured to determine exposure to methylmercury. Your doctor can take samples and send them to a testing laboratory.

### Has the federal government made recommendations to protect human health?

The EPA has set a limit of 2 parts of mercury per billion parts of drinking water (2 ppb).

The Food and Drug Administration (FDA) has set a maximum permissible level of 1 part of methylmercury in a million parts of seafood (1 ppm).

The Occupational Safety and Health Administration (OSHA) has set limits of 0.1 milligram of organic mercury per cubic meter of workplace air (0.1 mg/m<sup>3</sup>) and 0.05 mg/m<sup>3</sup> of metallic mercury vapor for 8-hour shifts and 40-hour work weeks.

Phone: 1-888-422-8737, FAX: 770-488-4178. ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html> ATSDR can tell you where to find occupational and environmental health clinics. Their specialists can recognize, evaluate, and treat illnesses resulting from exposure to hazardous substances. You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

This fact sheet answers the most frequently asked health questions (FAQs) about nickel. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. This information is important because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**HIGHLIGHTS:** Nickel is a hard, silvery-white metal used to make stainless steel and other metal alloys. Skin effects are the most common effects in people who are sensitive to nickel. Workers who breathed very large amounts of nickel compounds have developed lung and nasal sinus cancers. Nickel has been found in at least 709 of the 1,430 National Priorities List sites identified by the Environmental Protection Agency (EPA).

### What is nickel?

(Pronounced nĭk'əl)

Nickel is a very abundant element. In the environment, it is found primarily combined with oxygen (oxides) or sulfur (sulfides). It is found in all soils and is emitted from volcanos.

Pure nickel is a hard, silvery-white metal that is combined with other metals to form mixtures called alloys. Some of the metals that nickel can be alloyed with are iron, copper, chromium, and zinc. These alloys are used in the making of metal coins and jewelry and in industry for making metal items.

Nickel compounds are also used for nickel plating, to color ceramics, to make some batteries, and as substances known as catalysts that increase the rate of chemical reactions. Nickel and its compounds have no characteristic odor or taste.

### What happens to nickel when it enters the environment?

- Small nickel particles in the air settle to the ground or are taken out of the air in rain.
- Much of the nickel in the environment is found with soil and sediments because nickel attaches to particles that contain iron or manganese, which are often present in soil and sediments.

- Nickel does not appear to collect in fish, plants, or animals used for food.

### How might I be exposed to nickel?

- By breathing air or smoking tobacco containing nickel.
- By eating food containing nickel, which is the major source of exposure for most people.
- By drinking water which contains small amounts of nickel.
- By handling coins and touching other metals containing nickel, such as jewelry.

### How can nickel affect my health?

Nickel is required to maintain health in animals. A small amount of nickel is probably essential for humans, although a lack of nickel has not been found to affect the health of humans.

The most common adverse health effect of nickel in humans is an allergic reaction. People can become sensitive to nickel when jewelry or other things containing it are in direct contact with the skin. Once a person is sensitized to nickel, further contact with it will produce a reaction. The most common reaction is a skin rash at the site of contact.

Less frequently, some people who are sensitive to nickel

ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

have asthma attacks following exposure to nickel. People who are sensitive to nickel have reactions when it is in contact with the skin, and some sensitized persons react when they eat nickel in food, drink it in water, or breathe dust containing it.

Lung effects, including chronic bronchitis and reduced lung function, have been observed in workers who breathed large amounts of nickel. Current levels of nickel in workplace air are much lower than in the past, and today few workers show symptoms of nickel exposure.

People who are not sensitive to it must eat very large amounts of nickel to show adverse health effects. Workers who accidentally drank water containing very high levels of nickel (100,000 times more than in normal drinking water) had stomachaches and effects on their blood and kidneys.

Animal studies show that breathing high levels of nickel compounds may result in inflammation of the respiratory tract. Eating or drinking large amounts of nickel has been reported to cause lung disease in dogs and rats and to affect the stomach, blood, liver, kidneys, immune system, and reproduction and development in rats and mice.

### How likely is nickel to cause cancer?

The Department of Health and Human Services (DHHS) has determined that nickel and certain nickel compounds may reasonably be anticipated to be carcinogens. Cancers of the lung and nasal sinus have resulted when workers breathed dust containing high levels of nickel compounds while working in nickel refineries or nickel processing plants.

When rats and mice breathed nickel compounds for a lifetime, nickel compounds that were hard to dissolve caused cancer, while a soluble nickel compound did not cause cancer.

### Is there a medical test to show whether I've been exposed to nickel?

Measurements of the amount of nickel in your blood, feces, and urine can be used to estimate your exposure to nickel. These measurements are most useful if the type of nickel compound you have been exposed to is known. However, these tests cannot predict whether you will experience any health effects.

### Has the federal government made recommendations to protect human health?

The EPA recommends that children drink water containing no more than 0.04 milligrams of nickel per liter of water (0.04 mg/L) for 1-10 days of exposure.

The Occupational Safety and Health Administration (OSHA) has set an occupational exposure limit of 1 milligram of nickel per cubic meter of air (1 mg/m<sup>3</sup>) for an 8-hour workday, 40-hour workweek.

### Glossary

Carcinogen: A substance with the ability to cause cancer.

CAS: Chemical Abstracts Service.

Milligram (mg): One thousandth of a gram.

Sediments: Mud and debris that have settled to the bottom of a body of water.

Soluble: Dissolves in water.

This fact sheet answers the most frequently asked health questions (FAQs) about polycyclic aromatic hydrocarbons (PAHs). For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. This information is important because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**SUMMARY: Exposure to polycyclic aromatic hydrocarbons usually occurs by breathing air contaminated by wild fires or coal tar, or by eating foods that have been grilled. PAHs have been found in at least 600 of the 1,430 National Priorities List sites identified by the Environmental Protection Agency (EPA).**

## What are polycyclic aromatic hydrocarbons?

(Pronounced pŏl'ī-sī'klīk ār'ə-măt'īk hī'drə-kar'bənz)

Polycyclic aromatic hydrocarbons (PAHs) are a group of over 100 different chemicals that are formed during the incomplete burning of coal, oil and gas, garbage, or other organic substances like tobacco or charbroiled meat. PAHs are usually found as a mixture containing two or more of these compounds, such as soot.

Some PAHs are manufactured. These pure PAHs usually exist as colorless, white, or pale yellow-green solids. PAHs are found in coal tar, crude oil, creosote, and roofing tar, but a few are used in medicines or to make dyes, plastics, and pesticides.

## What happens to PAHs when they enter the environment?

- PAHs enter the air mostly as releases from volcanoes, forest fires, burning coal, and automobile exhaust.
- PAHs can occur in air attached to dust particles.
- Some PAH particles can readily evaporate into the air from soil or surface waters.
- PAHs can break down by reacting with sunlight and other chemicals in the air, over a period of days to weeks.

- PAHs enter water through discharges from industrial and wastewater treatment plants.
- Most PAHs do not dissolve easily in water. They stick to solid particles and settle to the bottoms of lakes or rivers.
- Microorganisms can break down PAHs in soil or water after a period of weeks to months.
- In soils, PAHs are most likely to stick tightly to particles; certain PAHs move through soil to contaminate underground water.
- PAH contents of plants and animals may be much higher than PAH contents of soil or water in which they live.

## How might I be exposed to PAHs?

- Breathing air containing PAHs in the workplace of coking, coal-tar, and asphalt production plants; smoke-houses; and municipal trash incineration facilities.
- Breathing air containing PAHs from cigarette smoke, wood smoke, vehicle exhausts, asphalt roads, or agricultural burn smoke.
- Coming in contact with air, water, or soil near hazardous waste sites.
- Eating grilled or charred meats; contaminated cereals, flour, bread, vegetables, fruits, meats; and processed or pickled foods.
- Drinking contaminated water or cow's milk.

ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

- ❑ Nursing infants of mothers living near hazardous waste sites may be exposed to PAHs through their mother's milk.

### How can PAHs affect my health?

Mice that were fed high levels of one PAH during pregnancy had difficulty reproducing and so did their offspring. These offspring also had higher rates of birth defects and lower body weights. It is not known whether these effects occur in people.

Animal studies have also shown that PAHs can cause harmful effects on the skin, body fluids, and ability to fight disease after both short- and long-term exposure. But these effects have not been seen in people.

### How likely are PAHs to cause cancer?

The Department of Health and Human Services (DHHS) has determined that some PAHs may reasonably be expected to be carcinogens.

Some people who have breathed or touched mixtures of PAHs and other chemicals for long periods of time have developed cancer. Some PAHs have caused cancer in laboratory animals when they breathed air containing them (lung cancer), ingested them in food (stomach cancer), or had them applied to their skin (skin cancer).

### Is there a medical test to show whether I've been exposed to PAHs?

In the body, PAHs are changed into chemicals that can attach to substances within the body. There are special tests that can detect PAHs attached to these substances in body tissues or blood. However, these tests cannot tell whether any

health effects will occur or find out the extent or source of your exposure to the PAHs. The tests aren't usually available in your doctor's office because special equipment is needed to conduct them.

### Has the federal government made recommendations to protect human health?

The Occupational Safety and Health Administration (OSHA) has set a limit of 0.2 milligrams of PAHs per cubic meter of air ( $0.2 \text{ mg/m}^3$ ). The OSHA Permissible Exposure Limit (PEL) for mineral oil mist that contains PAHs is  $5 \text{ mg/m}^3$  averaged over an 8-hour exposure period.

The National Institute for Occupational Safety and Health (NIOSH) recommends that the average workplace air levels for coal tar products not exceed  $0.1 \text{ mg/m}^3$  for a 10-hour workday, within a 40-hour workweek. There are other limits for workplace exposure for things that contain PAHs, such as coal, coal tar, and mineral oil.

### Glossary

Carcinogen: A substance that can cause cancer.

Ingest: Take food or drink into your body.

This fact sheet answers the most frequently asked health questions (FAQs) about polychlorinated biphenyls. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**HIGHLIGHTS:** Polychlorinated biphenyls (PCBs) are a mixture of individual chemicals which are no longer produced in the United States, but are still found in the environment. Health effects that have been associated with exposure to PCBs include acne-like skin conditions in adults and neurobehavioral and immunological changes in children. PCBs are known to cause cancer in animals. PCBs have been found in at least 500 of the 1,598 National Priorities List sites identified by the Environmental Protection Agency (EPA).

### What are polychlorinated biphenyls?

Polychlorinated biphenyls are mixtures of up to 209 individual chlorinated compounds (known as congeners). There are no known natural sources of PCBs. PCBs are either oily liquids or solids that are colorless to light yellow. Some PCBs can exist as a vapor in air. PCBs have no known smell or taste. Many commercial PCB mixtures are known in the U.S. by the trade name Aroclor.

PCBs have been used as coolants and lubricants in transformers, capacitors, and other electrical equipment because they don't burn easily and are good insulators. The manufacture of PCBs was stopped in the U.S. in 1977 because of evidence they build up in the environment and can cause harmful health effects. Products made before 1977 that may contain PCBs include old fluorescent lighting fixtures and electrical devices containing PCB capacitors, and old microscope and hydraulic oils.

### What happens to PCBs when they enter the environment?

- PCBs entered the air, water, and soil during their manufacture, use, and disposal; from accidental spills and leaks during their transport; and from leaks or fires in products containing PCBs.
- PCBs can still be released to the environment from hazardous waste sites; illegal or improper disposal of industrial wastes and consumer products; leaks from old electrical transformers containing PCBs; and burning of some wastes in incinerators.
- PCBs do not readily break down in the environment and thus may remain there for very long periods of time. PCBs can travel long distances in the air and be deposited in areas far away from where they were released. In water, a small amount of PCBs may remain dissolved, but most stick to organic particles and bottom sediments. PCBs also bind strongly to soil.
- PCBs are taken up by small organisms and fish in water. They are also taken up by other animals that eat these

aquatic animals as food. PCBs accumulate in fish and marine mammals, reaching levels that may be many thousands of times higher than in water.

### How might I be exposed to PCBs?

- Using old fluorescent lighting fixtures and electrical devices and appliances, such as television sets and refrigerators, that were made 30 or more years ago. These items may leak small amounts of PCBs into the air when they get hot during operation, and could be a source of skin exposure.
- Eating contaminated food. The main dietary sources of PCBs are fish (especially sportfish caught in contaminated lakes or rivers), meat, and dairy products.
- Breathing air near hazardous waste sites and drinking contaminated well water.
- In the workplace during repair and maintenance of PCB transformers; accidents, fires or spills involving transformers, fluorescent lights, and other old electrical devices; and disposal of PCB materials.

### How can PCBs affect my health?

The most commonly observed health effects in people exposed to large amounts of PCBs are skin conditions such as acne and rashes. Studies in exposed workers have shown changes in blood and urine that may indicate liver damage. PCB exposures in the general population are not likely to result in skin and liver effects. Most of the studies of health effects of PCBs in the general population examined children of mothers who were exposed to PCBs.

Animals that ate food containing large amounts of PCBs for short periods of time had mild liver damage and some died. Animals that ate smaller amounts of PCBs in food over several weeks or months developed various kinds of health effects, including anemia; acne-like skin conditions; and liver, stomach, and thyroid gland injuries. Other effects

ToxFAQs™ Internet address is <http://www.atsdr.cdc.gov/toxfaq.html>

of PCBs in animals include changes in the immune system, behavioral alterations, and impaired reproduction. PCBs are not known to cause birth defects.

#### How likely are PCBs to cause cancer?

Few studies of workers indicate that PCBs were associated with certain kinds of cancer in humans, such as cancer of the liver and biliary tract. Rats that ate food containing high levels of PCBs for two years developed liver cancer. The Department of Health and Human Services (DHHS) has concluded that PCBs may reasonably be anticipated to be carcinogens. The EPA and the International Agency for Research on Cancer (IARC) have determined that PCBs are probably carcinogenic to humans.

#### How can PCBs affect children?

Women who were exposed to relatively high levels of PCBs in the workplace or ate large amounts of fish contaminated with PCBs had babies that weighed slightly less than babies from women who did not have these exposures. Babies born to women who ate PCB-contaminated fish also showed abnormal responses in tests of infant behavior. Some of these behaviors, such as problems with motor skills and a decrease in short-term memory, lasted for several years. Other studies suggest that the immune system was affected in children born to and nursed by mothers exposed to increased levels of PCBs. There are no reports of structural birth defects caused by exposure to PCBs or of health effects of PCBs in older children. The most likely way infants will be exposed to PCBs is from breast milk. Transplacental transfers of PCBs were also reported. In most cases, the benefits of breastfeeding outweigh any risks from exposure to PCBs in mother's milk.

#### How can families reduce the risk of exposure to PCBs?

- You and your children may be exposed to PCBs by eating fish or wildlife caught from contaminated locations. Certain states, Native American tribes, and U.S. territories have issued advisories to warn people about PCB-contaminated fish and fish-eating wildlife. You can reduce your family's exposure to PCBs by obeying these advisories.
- Children should be told not play with old appliances,

electrical equipment, or transformers, since they may contain PCBs.

- Children should be discouraged from playing in the dirt near hazardous waste sites and in areas where there was a transformer fire. Children should also be discouraged from eating dirt and putting dirty hands, toys or other objects in their mouths, and should wash hands frequently.
- If you are exposed to PCBs in the workplace it is possible to carry them home on your clothes, body, or tools. If this is the case, you should shower and change clothing before leaving work, and your work clothes should be kept separate from other clothes and laundered separately.

#### Is there a medical test to show whether I've been exposed to PCBs?

Tests exist to measure levels of PCBs in your blood, body fat, and breast milk, but these are not routinely conducted. Most people normally have low levels of PCBs in their body because nearly everyone has been environmentally exposed to PCBs. The tests can show if your PCB levels are elevated, which would indicate past exposure to above-normal levels of PCBs, but cannot determine when or how long you were exposed or whether you will develop health effects.

#### Has the federal government made recommendations to protect human health?

The EPA has set a limit of 0.0005 milligrams of PCBs per liter of drinking water (0.0005 mg/L). Discharges, spills or accidental releases of 1 pound or more of PCBs into the environment must be reported to the EPA. The Food and Drug Administration (FDA) requires that infant foods, eggs, milk and other dairy products, fish and shellfish, poultry and red meat contain no more than 0.2-3 parts of PCBs per million parts (0.2-3 ppm) of food. Many states have established fish and wildlife consumption advisories for PCBs.

This fact sheet answers the most frequently asked health questions (FAQs) about toluene. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**HIGHLIGHTS:** Exposure to toluene occurs from breathing contaminated workplace air, in automobile exhaust, some consumer products paints, paint thinners, fingernail polish, lacquers, and adhesives. Toluene affects the nervous system. Toluene has been found at 959 of the 1,591 National Priority List sites identified by the Environmental Protection Agency

### What is toluene?

Toluene is a clear, colorless liquid with a distinctive smell. Toluene occurs naturally in crude oil and in the tolu tree. It is also produced in the process of making gasoline and other fuels from crude oil and making coke from coal.

Toluene is used in making paints, paint thinners, fingernail polish, lacquers, adhesives, and rubber and in some printing and leather tanning processes.

### What happens to toluene when it enters the environment?

Toluene enters the environment when you use materials that contain it. It can also enter surface water and groundwater from spills of solvents and petroleum products as well as from leaking underground storage tanks at gasoline stations and other facilities.

When toluene-containing products are placed in landfills or waste disposal sites, the toluene can enter the soil or water near the waste site.

Toluene does not usually stay in the environment long.

Toluene does not concentrate or buildup to high levels in animals.

### How might I be exposed to toluene?

Breathing contaminated workplace air or automobile exhaust.

Working with gasoline, kerosene, heating oil, paints, and lacquers.

Drinking contaminated well-water.

Living near uncontrolled hazardous waste sites containing toluene products.

### How can toluene affect my health?

Toluene may affect the nervous system. Low to moderate levels can cause tiredness, confusion, weakness, drunken-type actions, memory loss, nausea, loss of appetite, and

**ToxFAQs™ Internet address is <http://www.atsdr.cdc.gov/toxfaq.html>**

hearing and color vision loss. These symptoms usually disappear when exposure is stopped.

Inhaling High levels of toluene in a short time can make you feel light-headed, dizzy, or sleepy. It can also cause unconsciousness, and even death.

High levels of toluene may affect your kidneys.

### **How likely is toluene to cause cancer?**

Studies in humans and animals generally indicate that toluene does not cause cancer.

The EPA has determined that the carcinogenicity of toluene can not be classified.

### **How can toluene affect children?**

It is likely that health effects seen in children exposed to toluene will be similar to the effects seen in adults. Some studies in animals suggest that babies may be more sensitive than adults.

Breathing very high levels of toluene during pregnancy can result in children with birth defects and retard mental abilities, and growth. We do not know if toluene harms the unborn child if the mother is exposed to low levels of toluene during pregnancy.

### **How can families reduce the risk of exposure to toluene?**

- Use toluene-containing products in well-ventilated areas.

- When not in use, toluene-containing products should be tightly covered to prevent evaporation into the air.

### **Is there a medical test to show whether I've been exposed to toluene?**

There are tests to measure the level of toluene or its breakdown products in exhaled air, urine, and blood. To determine if you have been exposed to toluene, your urine or blood must be checked within 12 hours of exposure. Several other chemicals are also changed into the same breakdown products as toluene, so some of these tests are not specific for toluene.

### **Has the federal government made recommendations to protect human health?**

EPA has set a limit of 1 milligram per liter of drinking water (1 mg/L).

Discharges, releases, or spills of more than 1,000 pounds of toluene must be reported to the National Response Center.

The Occupational Safety and Health Administration has set a limit of 200 parts toluene per million of workplace air (200 ppm).

This fact sheet answers the most frequently asked health questions (FAQs) about xylene. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**SUMMARY: Exposure to xylene occurs in the workplace and when you use paint, gasoline, paint thinners and other products that contain it. People who breathe high levels may have dizziness, confusion, and a change in their sense of balance. This substance has been found in at least 658 of the 1,430 National Priorities List sites identified by the Environmental Protection Agency (EPA).**

## What is xylene?

(Pronounced zī'lēn)

Xylene is a colorless, sweet-smelling liquid that catches on fire easily. It occurs naturally in petroleum and coal tar and is formed during forest fires. You can smell xylene in air at 0.08–3.7 parts of xylene per million parts of air (ppm) and begin to taste it in water at 0.53–1.8 ppm.

Chemical industries produce xylene from petroleum. It's one of the top 30 chemicals produced in the United States in terms of volume.

Xylene is used as a solvent and in the printing, rubber, and leather industries. It is also used as a cleaning agent, a thinner for paint, and in paints and varnishes. It is found in small amounts in airplane fuel and gasoline.

## What happens to xylene when it enters the environment?

- Xylene has been found in waste sites and landfills when discarded as used solvent, or in varnish, paint, or paint thinners.
- It evaporates quickly from the soil and surface water into the air.

- In the air, it is broken down by sunlight into other less harmful chemicals.
- It is broken down by microorganisms in soil and water.
- Only a small amount of it builds up in fish, shellfish, plants, and animals living in xylene-contaminated water.

## How might I be exposed to xylene?

- Breathing xylene in workplace air or in automobile exhaust.
- Breathing contaminated air.
- Touching gasoline, paint, paint removers, varnish, shellac, and rust preventatives that contain it.
- Breathing cigarette smoke that has small amounts of xylene in it.
- Drinking contaminated water or breathing air near waste sites and landfills that contain xylene.
- The amount of xylene in food is likely to be low.

## How can xylene affect my health?

Xylene affects the brain. High levels from exposure for short periods (14 days or less) or long periods (more than 1 year) can cause headaches, lack of muscle coordination, dizziness, confusion, and changes in one's sense of balance. Exposure of

ToxFAQs Internet home page via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

people to high levels of xylene for short periods can also cause irritation of the skin, eyes, nose, and throat; difficulty in breathing; problems with the lungs; delayed reaction time; memory difficulties; stomach discomfort; and possibly changes in the liver and kidneys. It can cause unconsciousness and even death at very high levels.

Studies of unborn animals indicate that high concentrations of xylene may cause increased numbers of deaths, and delayed growth and development. In many instances, these same concentrations also cause damage to the mothers. We do not know if xylene harms the unborn child if the mother is exposed to low levels of xylene during pregnancy.

### How likely is xylene to cause cancer?

The International Agency for Research on Cancer (IARC) has determined that xylene is not classifiable as to its carcinogenicity in humans.

Human and animal studies have not shown xylene to be carcinogenic, but these studies are not conclusive and do not provide enough information to conclude that xylene does not cause cancer.

### Is there a medical test to show whether I've been exposed to xylene?

Laboratory tests can detect xylene or its breakdown products in exhaled air, blood, or urine. There is a high degree of agreement between the levels of exposure to xylene and the levels of xylene breakdown products in the urine. However, a urine sample must be provided very soon after exposure ends because xylene quickly leaves the body. These tests are not routinely available at your doctor's office.

### Has the federal government made recommendations to protect human health?

The EPA has set a limit of 10 ppm of xylene in drinking water.

The EPA requires that spills or accidental releases of xylenes into the environment of 1,000 pounds or more must be reported.

The Occupational Safety and Health Administration (OSHA) has set a maximum level of 100 ppm xylene in workplace air for an 8-hour workday, 40-hour workweek.

The National Institute for Occupational Safety and Health (NIOSH) and the American Conference of Governmental Industrial Hygienists (ACGIH) also recommend exposure limits of 100 ppm in workplace air.

NIOSH has recommended that 900 ppm of xylene be considered immediately dangerous to life or health. This is the exposure level of a chemical that is likely to cause permanent health problems or death.

### Glossary

Evaporate: To change from a liquid into a vapor or a gas.

Carcinogenic: Having the ability to cause cancer.

CAS: Chemical Abstracts Service.

ppm: Parts per million.

Solvent: A liquid that can dissolve other substances.

This fact sheet answers the most frequently asked health questions (FAQs) about zinc. For more information, call the ATSDR Information Center at 1-888-422-8737. This fact sheet is one in a series of summaries about hazardous substances and their health effects. It's important you understand this information because this substance may harm you. The effects of exposure to any hazardous substance depend on the dose, the duration, how you are exposed, personal traits and habits, and whether other chemicals are present.

**SUMMARY:** Exposure to high levels of zinc occurs mostly from eating food, drinking water, or breathing workplace air that is contaminated. Exposure to large amounts of zinc can be harmful. However, zinc is an essential element for our bodies, so too little zinc can also be harmful. This chemical has been found in at least 801 of 1,416 National Priorities List sites identified by the Environmental Protection Agency.

## What is zinc?

(Pronounced zīngk)

Zinc is one of the most common elements in the earth's crust. It's found in air, soil, and water, and is present in all foods. Pure zinc is a bluish-white shiny metal.

Zinc has many commercial uses as coatings to prevent rust, in dry cell batteries, and mixed with other metals to make alloys like brass and bronze. A zinc and copper alloy is used to make pennies in the United States.

Zinc combines with other elements to form zinc compounds. Common zinc compounds found at hazardous waste sites include zinc chloride, zinc oxide, zinc sulfate, and zinc sulfide. Zinc compounds are widely used in industry to make paint, rubber, dye, wood preservatives, and ointments.

## What happens to zinc when it enters the environment?

- Some is released into the environment by natural processes, but most comes from activities of people like mining, steel production, coal burning, and burning of waste.
- It attaches to soil, sediments, and dust particles in the air.
- Rain and snow remove zinc dust particles from the air.

- Zinc compounds can move into the groundwater and into lakes, streams, and rivers.
- Most of the zinc in soil stays bound to soil particles.
- It builds up in fish and other organisms, but it doesn't build up in plants.

## How might I be exposed to zinc?

- Ingesting small amounts present in your food and water.
- Drinking contaminated water near manufacturing or waste sites.
- Drinking contaminated water or a beverage that has been stored in metal containers or flows through pipes that have been coated with zinc to resist rust.
- Eating too many dietary supplements that contain zinc.
- Breathing zinc particles in the air at manufacturing sites.

## How can zinc affect my health?

Zinc is an essential element in our diet. **Too** little zinc can cause health problems, but too much zinc is also harmful.

The recommended dietary allowance (RDA) for zinc is 15 milligrams a day for men (15 mg/day); 12 mg/day for women; 10 mg/day for children; and 5 mg/day for infants. Not enough zinc in your diet can result in a loss of appetite, a decreased sense of taste and smell, slow wound healing and

ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html>

skin sores, or a damaged immune system. Young men who don't get enough zinc may have poorly developed sex organs and slow growth. If a pregnant woman doesn't get enough zinc, her babies may have growth retardation.

Too much zinc, however, can also be damaging to your health. Harmful health effects generally begin at levels from 10-15 times the RDA (in the 100 to 250 mg/day range). Eating large amounts of zinc, even for a short time, can cause stomach cramps, nausea, and vomiting. Taken longer, it can cause anemia, pancreas damage, and lower levels of high density lipoprotein cholesterol (the good form of cholesterol).

Breathing large amounts of zinc (as dust or fumes) can cause a specific short-term disease called metal fume fever. This is believed to be an immune response affecting the lungs and body temperature. We do not know the long-term effects of breathing high levels of zinc.

It is not known if high levels of zinc affect human reproduction or cause birth defects. Rats that were fed large amounts of zinc became infertile or had smaller babies. Irritation was also observed on the skin of rabbits, guinea pigs, and mice when exposed to some zinc compounds. Skin irritation will probably occur in people.

### How likely is zinc to cause cancer?

The Department of Health and Human Services, the International Agency for Research on Cancer, and the Environmental Protection Agency (EPA) have not classified zinc for carcinogenicity.

### Is there a medical test to show whether I've been exposed to zinc?

Zinc can be measured in your blood or feces. This can tell you how much zinc you have been exposed to. Zinc can

also be measured in urine, saliva, and hair. The amount of zinc in your hair tells us something about long-term exposure, but the relationship between levels in your hair and the amount that you were exposed to is not clear. These tests are not routinely performed at doctors' offices, but your doctor can take samples and send them to a testing laboratory.

### Has the federal government made recommendations to protect human health?

EPA recommends that there be no more than 5 parts of zinc in 1 million parts of drinking water (5 ppm) because of taste. EPA also requires that releases of more than 1,000 (or in some cases 5,000) pounds of zinc or its compounds into the environment be reported.

The Occupational Safety and Health Administration (OSHA) has set a maximum concentration limit for zinc chloride fumes in workplace air of 1 milligram of zinc per cubic meter of air (1 mg/m<sup>3</sup>) for an 8-hour workday over a 40-hour work week and 5 mg/m<sup>3</sup> for zinc oxide fumes. The National Institute for Occupational Safety and Health (NIOSH) has set the same standards for up to a 10-hour workday over a 40-hour workweek.

### Glossary

Anemia: A decreased ability of the blood to transport oxygen.  
Carcinogenicity: Ability to cause cancer.  
Milligram (mg): One thousandth of a gram.

Agency for Toxic Substances and Disease Registry (ATSDR). 1994. Toxicological profile for zinc. Atlanta, GA: U.S. Department of Health and Human Services, Public Health Service.

**Where can I get more information?** For more information, contact the Agency for Toxic Substances and Disease Registry, Division of Toxicology, 1600 Clifton Road NE, Mailstop F-32, Atlanta, GA 30333. Phone: 1-888-422-8737, FAX: 770-488-4178. ToxFAQs Internet address via WWW is <http://www.atsdr.cdc.gov/toxfaq.html> ATSDR can tell you where to find occupational and environmental health clinics. Their specialists can recognize, evaluate, and treat illnesses resulting from exposure to hazardous substances. You can also contact your community or state health or environmental quality department if you have any more questions or concerns.

**APPENDIX B**  
**WEST NILE VIRUS/St. LOUIS ENCEPHALITIS PREVENTION**

## WEST NILE VIRUS/ST. LOUIS ENCEPHALITIS PREVENTION

The following section is based upon information provided by the Centers for Disease Control (CDC) Division of Vector-Borne Infectious Diseases. Symptoms of West Nile Virus include fever, headache, and body aches, occasionally with skin rash and swollen lymph glands, with most infections being mild. More severe infection may be marked by headache, high fever, neck stiffness, stupor, disorientation, coma, tremors, convulsions, muscle weakness, paralysis, and, rarely, death. Most infections of St. Louis encephalitis are mild without apparent symptoms other than fever with headache. More severe infection is marked by headache, high fever, neck stiffness, stupor, disorientation, coma, tremors, occasional convulsions (especially infants) and spastic (but rarely flaccid) paralysis. The only way to avoid infection of West Nile Virus and St. Louis encephalitis is to avoid mosquito bites. To reduce the chance of mosquito contact:

- Stay indoors at dawn, dusk, and in the early evening.
- Wear long-sleeved shirts and long pants whenever you are outdoors.
- Spray clothing with repellents containing permethrin or DEET (N, N-diethyl-meta-toluamide), since mosquitoes may bite through thin clothing.
- Apply insect repellent sparingly to exposed skin. An effective repellent will contain 35% DEET. DEET in high concentrations (greater than 35%) provides no additional protection.
- Repellents may irritate the eyes and mouth.
- Whenever you use an insecticide or insect repellent, be sure to read and follow the manufacturer's directions for use, as printed on the product.

**APPENDIX D**  
**EMERGENCY HAND SIGNALS**

## EMERGENCY SIGNALS

In most cases, field personnel will carry portable radios for communication. If this is the case, a transmission that indicates an emergency will take priority over all other transmissions. All other site radios will yield the frequency to the emergency transmissions.

Where radio communications is not available, the following air-horn and/or hand signals will be used:

### EMERGENCY HAND SIGNALS

**OUT OF AIR, CAN'T BREATHE!**

**Hand gripping throat**

**LEAVE AREA IMMEDIATELY,  
NO DEBATE!**

**(No Picture) Grip partner's wrist or place both hands around waist**

**NEED ASSISTANCE!**

**Hands on top of head**

**OKAY! – I'M ALL RIGHT!  
- I UNDERSTAND!**

**Thumbs up**

**NO! - NEGATIVE!**

**Thumbs down**

**APPENDIX D**  
**CITIZEN PARTICIPATION PLAN**

## APPENDIX D CITIZEN PARTICIPATION PLAN

The NYC Office of Environmental Remediation (OER) and West Side Federation for Senior and Supportive Housing (WSFSSH) have established this Citizen Participation Plan because the opportunity for citizen participation is an important component of the NYC Voluntary Cleanup Program. This Citizen Participation Plan describes how information about the project will be disseminated to the Community during the remedial process. As part of its obligations under the NYC VCP, WSFSSH will maintain a repository for project documents and provide public notice at specified times throughout the remedial program. This Plan also takes into account potential environmental justice concerns in the community that surrounds the project Site. Under this Citizen Participation Plan, project documents and work plans are made available to the public in a timely manner. Public comment on work plans is strongly encouraged during public comment periods. Work plans are not approved by OER until public comment periods have expired and all comments are formally reviewed. An explanation of cleanup plans in the form of a public meeting or informational session is available upon request to OER's Project Manager assigned to this Site, Taylor Hard, and can be contacted at (212) 788-7426.

**Project Contact List.** OER has established a Site Contact List for this project to provide public notices in the form of fact sheets to interested members of the Community. Communications will include updates on important information relating to the progress of the cleanup program at the Site as well as to request public comments on the cleanup plan. The Project Contact List includes owners and occupants of adjacent buildings and homes, principal administrators of nearby schools, hospitals and day care centers, the public water supplier that serves the area, established document repositories, the representative Community Board, City Council members, other elected representatives and any local Brownfield Opportunity Area (BOA) grantee organizations. Any member of the public or organization will be added to the Site Contact List on request. A copy of the Site Contact List is maintained by OER's Project Manager. If you would like to be added to the Project Contact List, contact NYC OER at (212) 788-8841 or by email at [brownfields@cityhall.nyc.gov](mailto:brownfields@cityhall.nyc.gov).

**Repositories.** A document repository is maintained in the nearest public library that maintains evening and weekend hours. This document repository is intended to house, for community review, all principal documents generated during the cleanup program including Remedial Investigation plans and reports, Remedial Action plans and reports, and all public notices and fact sheets produced during the lifetime of the remedial project. WSFSSH will inspect the repositories to ensure that they are fully populated with project information. The repository for this project is:

New York Public Library – Bloomingdale Library  
150 West 100<sup>th</sup> St, New York, NY 10025  
(212) 222-8030

Repository Hours of Operation:

Mon, Tues, Wed, Thurs – 11 am to 7 pm; Fri, Sat – 10 am to 5 pm; Sun – Closed

**Digital Documentation.** OER strongly encourages the use of digital documents in repositories as a means of minimizing paper use while also increasing convenience in access and ease of use.

**Identify Issues of Public Concern.** It is our understanding that community input on the proposed project has been received at local Community Board meetings. Based on the overall goals of the remedial program, it is not anticipated that the community will oppose the proposed remedy; however, the community may express adverse opinions to the proposed development. As this RAP is subject to a public review under the NYC VCP and the public will be provided the opportunity to provide input on the remedial alternatives and the selected remedy. This public comment will be considered by OER prior to approval of this plan.

**Public Notice and Public Comment.** Public notice to all members of the Project Contact List is required at three major steps during the performance of the cleanup program (listed below) and at other points that may be required by OER. Notices will include Fact Sheets with descriptive project summaries, updates on recent and upcoming project activities, repository information, and important phone and email contact information. All notices will be prepared by WSFSSH, reviewed and approved by OER prior to distribution and mailed by WSFSSH. Public comment is solicited in public notices for all work plans developed under the NYC Voluntary Cleanup Program. Final review of all work plans by OER will consider all public comments. Approval will not be granted until the public comment period has been completed.

**Citizen Participation Milestones.** Public notice and public comment activities occur at several steps during a typical NYC VCP project. These steps include:

- Public Notice of the availability of the Remedial Investigation Report (RIR) and Remedial Action Plan (RAP) and a 30-day public comment period on the RAP.

Public notice in the form of a Fact Sheet is sent to all parties listed on the Site Contact List announcing the availability of the RIR and RAP and the initiation of a 30-day public comment period on the RAP. The Fact Sheet summarizes the findings of the RIR and provides details of the RAP. The public comment period will be extended an additional 15 days upon public request. A public meeting or informational session will be conducted by OER upon request.

- Public Notice announcing the approval of the RAP and the start of remediation.

Public notice in the form of a Fact Sheet is sent to all parties listed on the Site Contact List announcing the approval of the Remedial Action Plan and the start of remediation.

- Public Notice in the form of a Fact Sheet is sent to all parties listed on the Site Contact List announcing the completion of remediation, providing a list of all Institutional and Engineering Controls implemented for to the Site and announcing the issuance of the Notice of Completion.

**APPENDIX E**  
**SUSTAINABILITY STATEMENT**

## APPENDIX E SUSTAINABILITY STATEMENT

This Sustainability Statement documents sustainable activities and green remediation efforts planned under this remedial action.

**Reuse of Clean, Recyclable Materials.** Reuse of clean, locally-derived recyclable materials reduces consumption of non-renewable virgin resources and can provide energy savings and greenhouse gas reduction.

An estimate of the quantity (in tons) of clean, non-virgin materials (reported by type of material) reused under this plan will be quantified and reported in the Remedial Action Report (RAR).

**Reduce Consumption of Virgin and Non-Renewable Resources.** Reduced consumption of virgin and non-renewable resources lowers the overall environmental impact of the project on the region by conserving these resources.

An estimate of the quantity (in tons) of virgin and non-renewable resources, the use of which will be avoided under this plan, will be quantified and reported in the RAR.

**Reduced Energy Consumption and Promotion of Greater Energy Efficiency.** Reduced energy consumption lowers greenhouse gas emissions, improves local air quality, lessens in-city power generation requirements, can lower traffic congestion, and provides substantial cost savings.

Best efforts will be made to quantify energy efficiencies achieved during the remediation and will be reported in the RAR. Where energy savings cannot be easily quantified, a gross indicator of the amount of energy saved or the means by which energy savings was achieved will be reported.

The project has been entered in NYSERDA's Multifamily Performance Program (MPP) for New Construction (Version 5). The building will employ a variety of energy saving and energy efficient measures. Software will be used to model the building's energy use to verify the performance target of minimum 15% energy cost savings.

The following energy conservation measures are being considered for the planned development:

- Gas-fired condensing boilers for domestic hot water
- Variable frequency devices (VFDs) and premium efficiency motors on fans and pumps where applicable
- Energy Star appliances
- Carbon monoxide (CO) sensor in garage to control exhaust ventilation
- High efficiency LED lights in the corridors, garage, and back of house with high efficiency fluorescents in the apartments
- High efficiency exterior lighting
- Energy Star certified light fixtures
- Occupancy sensors in corridors, public spaces, and stairs

**Recontamination Control.** Recontamination after cleanup and redevelopment is completed undermines the value of work performed, may result in a Site that is less protective of public health or the environment, and may necessitate additional cleanup work later or impede future redevelopment. Recontamination can arise from future releases that occur within the property or by influx of contamination from off-site.

Measures to limit the potential for recontamination include capping of residual fill materials with building foundations, the use of a vapor barrier to limit the migration of soil vapor contamination, and leaving groundwater cutoff elements from support of excavation and dewatering control (including interlocking sheet piling, tangent piles and concrete retention piers) in place. An estimate of the area of the Site that utilizes recontamination controls under this plan will be reported in the RAR in square feet.

**Stormwater Retention.** Stormwater retention improves water quality by lowering the rate of combined stormwater and sewer discharges to NYC's sewage treatment plants during periods of precipitation, and reduces the volume of untreated influent to local surface waters.

An estimate of the enhanced storm-water retention capability of the redevelopment project will be included in the RAR.

**Linkage with Green Building.** Green buildings provide a multitude of benefits to the city across a broad range of areas, such as reduction of energy consumption, conservation of resources, and reduction in toxic materials use.

The number of Green Buildings that are associated with this brownfield redevelopment Site will be reported in the RAR. The total square footage of green building space created as a function of this brownfield redevelopment will be quantified for residential and commercial uses.

**Paperless Brownfield Cleanup Program.** West Side Federation for Senior and Supportive Housing (WSFSSH) is participating in OER's Paperless Brownfield Cleanup Program. Under this program, submission of electronic documents will replace submission of hard copies for the review of project documents, communications and milestone reports.

**Low-Energy Project Management Program.** WSFSSH is participating in OER's low-energy project management program. Under this program, whenever possible, meetings are held using remote communication technologies, such as videoconferencing and teleconferencing to reduce energy consumption and traffic congestion associated with personal transportation.

**Trees and Plantings.** Trees and other plantings provide habitat and add to NYC's environmental quality in a wide variety of ways. Native plant species and native habitat provide optimal support to local fauna, promote local biodiversity, and require less maintenance. Landscaping is planned in the rear of the Site, as part of on-Site development native plant species will be utilized whenever possible. Additionally, trees will be planted in tree pits in the sidewalks along West 108<sup>th</sup> Street.

**APPENDIX F**  
**SOIL/MATERIALS MANAGEMENT PLAN**

## **APPENDIX F**

### **Article II. SOIL/MATERIALS MANAGEMENT PLAN**

#### **1.1 Soil Screening Methods**

Visual, olfactory, and photoionization detector (PID) soil screening and assessment will be performed under the supervision of a Qualified Environmental Professional (QEP) and will be reported in the Remedial Action Report (RAR). Soil screening will be performed during invasive work performed during the remedy and development phases prior to issuance of the Notice of Satisfaction.

#### **1.2 Stockpile Methods**

Excavated soil from suspected areas of contamination (e.g., hot spots, USTs, drains, etc.) will be stockpiled separately and will be segregated from clean soil and construction materials. Stockpiles will be used only when necessary and will be removed as soon as practicable. While stockpiles are in place, they will be inspected daily, and before and after every storm event. Results of inspections will be recorded in a logbook and maintained at the Site and available for inspection by OER. Excavated soils will be stockpiled on, at minimum, double layers of 8-mil minimum sheeting, will be kept covered at all times with appropriately anchored plastic tarps, and will be routinely inspected. Broken or ripped tarps will be promptly replaced.

All stockpile activities will be compliant with applicable laws and regulations. Soil stockpile areas will be appropriately graded to control run-off in accordance with applicable laws and regulations. Stockpiles of excavated soils and other materials shall be located at least of 50 feet from the property boundaries, where possible. Hay bales or equivalent will surround soil stockpiles except for areas where access by equipment is required. Silt fencing and hay bales will be used as needed near catch basins, surface waters and other discharge points.

#### **1.3 Characterization of Excavated Materials**

Soil/fill or other excavated media that is transported off-site for disposal will be sampled in a manner required by the receiving facility, and in compliance with applicable laws and regulations. Soils proposed for reuse on-site will be managed as defined in this plan.

#### **1.4 Materials Excavation, Load-Out and Departure**

The Professional Engineer (PE)/QEP overseeing the remedial action will:

- oversee remedial work and the excavation and load-out of excavated material;
- ensure that there is a party responsible for the safe execution of invasive and other work performed under this work plan;
- ensure that Site development activities and development-related grading cuts will not interfere with, or otherwise impair or compromise the remedial activities proposed in this RAP;
- ensure that the presence of utilities and easements on the Site has been investigated and that any identified risks from work proposed under this plan are properly addressed by appropriate parties;
- ensure that all loaded outbound trucks are inspected and cleaned if necessary before leaving the Site; and

- ensure that all egress points for truck and equipment transport from the Site will be kept clean of Site-derived materials during Site remediation.

Locations where vehicles exit the Site shall be inspected daily for evidence of soil tracking off premises. Cleaning of the adjacent streets will be performed as needed to maintain a clean condition with respect to Site-derived materials.

Open and uncontrolled mechanical processing of historical fill and contaminated soil on-Site will not be performed without prior OER approval.

### **1.5 Off-Site Materials Transport**

Loaded vehicles leaving the Site will comply with all applicable materials transportation requirements (including appropriate covering, manifests, and placards) in accordance with applicable laws and regulations, including use of licensed haulers in accordance with 6 NYCRR Part 364. If loads contain wet material capable of causing leakage from trucks, truck liners will be used. Queuing of trucks will be performed on-site, when possible, to minimize off-site disturbance. Off-site queuing will be minimized.

Outbound truck transport routes are provided as Figure 10 of the RAP. This routing takes into account the following factors: (a) limiting transport through residential areas and past sensitive sites; (b) use of mapped truck routes; (c) minimizing off-site queuing of trucks entering the facility; (d) limiting total distance to major highways; (e) promoting safety in access to highways; and (f) overall safety in transport. To the extent possible, all trucks loaded with Site materials will travel from the Site using these truck routes. Trucks will not stop or idle in the neighborhood after leaving the project Site.

### **1.6 Materials Disposal Off-Site**

The following documentation will be established and reported by the PE/QEP for each disposal destination used in this project to document that the disposal of regulated material exported from the Site conforms with applicable laws and regulations: (1) a letter from the PE/QEP or Applicant to each disposal facility describing the material to be disposed and requesting written acceptance of the material. This letter will state that material to be disposed is regulated material generated at an environmental remediation Site in New York under a governmental remediation program. The letter will provide the project identity and the name and phone number of the PE/QEP or Applicant. The letter will include as an attachment a summary of all chemical data for the material being transported; and (2) a letter from each disposal facility stating it is in receipt of the correspondence (1, above) and is approved to accept the material. These documents will be included in the RAR.

The RAR will include an itemized account of the destination of all material removed from the Site during this remedial action. Documentation associated with disposal of all material will include records and approvals for receipt of the material. This information will be presented in the RCR.

All impacted soil/fill or other waste excavated and removed from the Site will be managed as regulated material and will be disposed in accordance with applicable laws and regulations. Historic fill and contaminated soils taken off-site will be handled as solid waste and will not be disposed at a Part 360-16 Registration Facility (also known as a Soil Recycling Facility).

Waste characterization will be performed for off-site disposal in a manner required by the receiving facility and in conformance with its applicable permits. Waste characterization sampling and analytical methods, sampling frequency, analytical results and QA/QC will be reported in the RAR. A manifest system for off-site transportation of exported materials will be employed. Manifest information will be reported in the RAR. Hazardous wastes derived from on-

Site will be stored, transported, and disposed of in compliance with applicable laws and regulations.

### **1.7 Materials Reuse On-Site**

Soil and fill that is derived from the Site that meets the soil cleanup objectives established in this plan may be reused on-site. The soil cleanup objectives for on-site reuse are listed in the RAP. "Reuse on-site" means material that is excavated during the remedy or development, does not leave the property, and is relocated within the same property and on comparable soil/fill material, and addressed pursuant to ECs. The PE/QEP will ensure that reused materials are segregated from other materials to be exported from the Site and that procedures defined for material reuse in this RAP are followed. It is presently unknown if material will be reused on-site, as limited excavation is proposed.

Organic matter (wood, roots, stumps, etc.) or other waste derived from clearing and grubbing of the Site will not be buried on-site. Soil or fill excavated from the Site for grading or other purposes will not be reused within a cover soil layer or within landscaping berms.

### **1.8 Demarcation**

After completion of petroleum-contaminated soil removal and any other invasive remedial activities, and prior to backfilling, the top of the residual soil/fill will be defined by one of three methods: (1) placement of a demarcation layer. The demarcation layer will consist of geosynthetic fencing or equivalent material to be placed on the surface of residual soil/fill to provide an observable reference layer. A description or map of the approximate depth of the demarcation layer will be provided in the RAR; or (2) a land survey of the top elevation of residual soil/fill before the placement of cover soils, pavement and associated sub-soils, or other materials or structures or, (3) all materials beneath the approved cover will be considered impacted and subject to site management after the remedy is complete. Demarcation may be established by one or any combination of these three methods. As appropriate, a map showing the method of demarcation for the Site and all associated documentation will be presented in the RAR. This demarcation will constitute the top of the site management horizon.

### **1.9 Import of Backfill Soil from Off-Site Sources**

This Section presents the requirements for imported fill materials to be used below the cover layer and within the clean soil cover layer. All imported soils will meet OER-approved backfill and cover soil quality objectives for this Site. The backfill and cover soil quality objectives are listed in the RAP.

A process will be established to evaluate sources of backfill and cover soil to be imported to the Site, and will include an examination of source location, current and historical use(s), and any applicable documentation. Material from industrial sites, spill sites, environmental remediation sites or other potentially contaminated sites will not be imported to the Site.

The following potential sources may be used pending attainment of backfill and cover soil quality objectives:

- Clean soil from construction projects at non-industrial sites in compliance with applicable laws and regulations;
- Clean soil from roadway or other transportation-related projects in compliance with applicable laws and regulations; and
- Clean recycled concrete aggregate (RCA) from facilities permitted or registered by the regulations of New York State Department of Environmental Conservation (NYSDEC).

All materials received for import to the Site will be approved by a PE/QEP and will be in compliance with provisions in this RAP. The RAR will report the source of the fill, evidence that an inspection was performed on the source, chemical sampling results, frequency of testing, and a Site map indicating the locations where backfill or soil cover was placed.

### **1.9.1 Source Screening and Testing**

Inspection of imported fill material will include visual, olfactory and photoionization detector (PID) screening for evidence of contamination. Materials imported to the Site will be subject to inspection, as follows:

- Trucks with imported fill material will be in compliance with applicable laws and regulations and will enter the Site at designated locations;
- The PE/QEP is responsible to ensure that every truck load of imported material is inspected for evidence of contamination; and
- Fill material will be free of solid waste including pavement materials, debris, stumps, roots, and other organic matter, as well as ashes, oil, perishables or foreign matter.

Composite samples of imported material will be taken at a minimum frequency of one sample for every 500 cubic yards of material. Once it is determined that the fill material meets imported backfill or cover soil chemical requirements and is non-hazardous, and lacks petroleum contamination, the material will be loaded onto trucks for delivery to the Site.

RCA will be imported from facilities permitted or registered by NYSDEC. Facilities will be identified in the RAR. A PE/QEP is responsible to ensure that the facility is compliant with 6NYCRR Part 360 registration and permitting requirements for the period of acquisition of RCA. RCA imported from compliant facilities will not require additional testing, unless required by NYSDEC under its terms for operation of the facility. RCA imported to the Site must be derived from recognizable and uncontaminated concrete. RCA material is not acceptable for, and will not be used as cover material.

### **1.10 Fluids Management**

All liquids to be removed from the Site, including dewatering fluids, will be handled, transported and disposed in accordance with applicable laws and regulations. Liquids discharged into the New York City sewer system will receive prior approval by New York City Department of Environmental Protection (NYCDEP). The NYCDEP regulates discharges to the New York City sewers under Title 15, Rules of the City of New York Chapter 19. Discharge to the New York City sewer system will require an authorization and sampling data demonstrating that the groundwater meets the City's discharge criteria. The dewatering fluid will be pretreated as necessary to meet the NYCDEP discharge criteria. If discharge to the City sewer system is not appropriate, the dewatering fluids will be managed by transportation and disposal at an off-site treatment facility.

Discharge of water generated during remedial construction to surface waters (i.e. a stream or river) is prohibited without a SPDES permit issued by NYSDEC.

### **1.11 Stormwater Pollution Prevention**

Applicable laws and regulations pertaining to storm-water pollution prevention will be addressed during the remedial program. Erosion and sediment control measures identified in this RAP (silt fences and barriers, and hay bale checks) will be installed around the entire perimeter of the remedial construction area and inspected once a week and after every storm event to ensure that

they are operating appropriately. Discharge locations will be inspected to determine whether erosion control measures are effective in preventing significant impacts to receptors. Results of inspections will be recorded in a logbook and maintained at the Site and available for inspection by OER. All necessary repairs shall be made immediately. Accumulated sediments will be removed as required to keep the barrier and hay bale check functional. Undercutting or erosion of the silt fence anchor will be repaired immediately with appropriate backfill materials. Manufacturer's recommendations will be followed for replacing silt fencing damaged due to weathering.

## **1.12 Contingency Plan**

This contingency plan is developed for the remedial construction to address the discovery of unknown structures or contaminated media during excavation. Identification of unknown contamination source areas during invasive Site work will be promptly communicated to OER's Project Manager. Petroleum spills will be reported to the NYSDEC Spill Hotline. These findings will be included in the daily report. If previously unidentified contaminant sources are found during on-site remedial excavation or development-related excavation, sampling will be performed on contaminated source material and surrounding soils and reported to OER. Chemical analytical testing will be performed for Full List volatiles and semi-volatiles, pesticides/polychlorinated biphenyls (PCBs), and target analyte list (TAL) metals, as appropriate.

## **1.13 Odor, Dust and Nuisance Control**

### **1.13.1 Odor Control**

All necessary means will be employed to prevent on- and off-site odor nuisances. At a minimum, procedures will include: (a) limiting the area of open excavations; (b) shrouding open excavations with tarps and other covers; and (c) use of foams to cover exposed odorous soils. If odors develop and cannot otherwise be controlled, additional means to eliminate odor nuisances will include: (d) direct load-out of soils to trucks for off-site disposal; and (e) use of chemical odorants in spray or misting systems.

This odor control plan is capable of controlling emissions of nuisance odors. If nuisance odors are identified, work will be halted and the source of odors will be identified and corrected. Work will not resume until all nuisance odors have been abated. OER will be notified of all odor complaint events. Implementation of all odor controls, including halt of work, will be the responsibility of the PE/QEP's certifying the RAR.

### **1.13.2 Dust Control**

Dust management during invasive on-site work will include, at a minimum:

- Use of a dedicated water spray methodology for roads, excavation areas and stockpiles.
- Use of properly anchored tarps to cover stockpiles.
- Exercise extra care during dry and high-wind periods.
- Use of gravel or RCA on egress and other roadways to provide a clean and dust-free road surface.

This dust control plan is capable of controlling emissions of dust. If nuisance dust emissions are identified, work will be halted and the source of dusts will be identified and corrected. Work will not resume until all nuisance dust emissions have been abated. OER will be notified of all dust complaint events. Implementation of all dust controls, including halt of work, will be the responsibility of the PE/QEP's responsible for certifying the RAR.

### **1.13.3 Other Nuisances**

Noise control will be exercised during the remedial program. All remedial work will conform, at a minimum, to NYC noise control standards.

Rodent control will be provided, during Site clearing and grubbing, and during the remedial program, as necessary, to prevent nuisances.

### **1.14 Import of Clean Cover**

Approximately 200 cubic yards of soil are anticipated to be imported to the Site for use as clean cover. All imported soil will be uncontaminated, clean soil that meets the lesser of the appropriate NYSDEC 6 NYCRR Part 375-6.8(a) Restricted Residential Use SCOs and the NYSDEC 6 NYCRR Part 375-6.8 groundwater protection SCOs.

If necessary, imported uncontaminated, clean soil cover will be from an approved source/facility and will be evaluated by the PE/QEP to ensure:

That a segregated stockpile for imported soil is properly maintained at the source and will not be comingled with any other material prior to importing and grading the clean soil material at the Site;

That the material does not include any solid waste, including construction and demolition material, as it's prohibited;

That screening for evidence of contamination by visual, olfactory and PID soil screening practices prior to testing at the source as well as upon importing to the Site for grading is completed; and

That a maximum five-part composite sample will be collected from the segregated stockpile at the source at a minimum frequency of one sample per 250 cubic yards and analyzed for the following Full List parameters:

- VOCs by EPA Method 8260C (rev. 2006)
- SVOCs by EPA Method 8270D (rev. 2007)
- Pesticides by EPA Method 8081B (rev. 2000)
- PCBs by EPA Method 8082A (rev. 2000)
- TAL Metals by EPA Method 6010C (rev. 2007)

Upon receipt of the segregated stockpile analytical results collected at the source, a Clean Soil Sampling Report will be submitted to OER for review/approval prior to importing. The report will include the following:

Summary of number of samples collected and analyzed, tabulated data and comparison to the selected Site Use SCOs;

- Analytical data sheets and chain of custody documentation;
- Summary of number of tons (number cubic yards);
- Photographs from the segregated stockpile at the source with sample point locations identified;
- An affidavit from the source/facility on company letterhead stating that the segregated stockpile for number tons (number cubic yards) has been properly maintained at the source and complies with the requirements listed above; and

- A copy of source/facility NYSDEC permit.

A highly visible demarcation barrier (i.e. orange geo-synthetic material or equivalent) will be installed beneath the clean soil/fill surface cover. Upon importing and grading the OER approved clean soil cover for number tons (number cubic yards) on top of a highly visible demarcation barrier, the following documentation will be presented in the Final Remedial Closure Report:

Copies of purchase invoices;

Truck transportation slips from the source to the Site;

Confirmation of number tons (number cubic yards) of OER approved clean soil cover material imported and graded at the site on top of highly visible demarcation barrier;

Site plan depicting all areas where the OER approved clean soil cover has been placed; and

Photographs documenting the importing and grading of the OER approved clean soil cover across the site with the underlying highly visible demarcation barrier (i.e. orange geo-synthetic material or equivalent).

**APPENDIX G**  
**MANUFACTURER SPECIFICATIONS FOR VAPOR BARRIER**

# Stego® Wrap 20-Mil Vapor Barrier

STEGO INDUSTRIES, LLC

**Vapor Retarders**  
**07 26 00, 03 30 00**

## 1. Product Name

**Stego Wrap 20-Mil Vapor Barrier**

## 2. Manufacturer

Stego Industries, LLC  
216 Avenida Fabricante, Suite 101  
San Clemente, CA 92672  
Sales, Technical Assistance  
Ph: (877) 464-7834  
Fx: (949) 257-4113  
www.stegoindustries.com

## 3. Product Description

USES: Stego Wrap 20-Mil Vapor Barrier is used as a below-slab vapor barrier, and as a protection course for below grade waterproofing applications.

COMPOSITION: Stego Wrap 20-Mil Vapor Barrier is a multi-layer plastic extrusion manufactured with only the highest grade of prime, virgin, polyolefin resins.

### ENVIRONMENTAL FACTORS:

Stego Wrap 20-Mil Vapor Barrier can be used in systems for the control of soil gases (radon, methane), soil poisons (oil by-products) and sulfates.

## 5. Installation

UNDER SLAB: Unroll Stego Wrap 20-Mil Vapor Barrier over an aggregate, sand or tamped earth base. Overlap all seams a minimum of six inches and tape using Stego Tape or Crete Claw® Tape. All penetrations must be sealed using a combination of Stego Wrap and Stego accessories.

For additional information, please refer to Stego's complete installation instructions.

## 6. Availability & Cost

Stego Wrap 20-Mil Vapor Barrier is available nationally via building supply distributors. For current cost information, contact your local Stego Wrap distributor or Stego Industries' sales department.

## 7. Warranty

Stego Industries, LLC believes to the best of its knowledge, that specifications and recommendations herein are

accurate and reliable. However, since site conditions are not within its control, Stego Industries does not guarantee results from the use of the information provided and disclaims all liability from any loss or damage. No warranty, express or implied, is given as to the merchantability, fitness for a particular purpose, or otherwise with respect to the products referred to.

## 8. Maintenance

None required.

## 9. Technical Services

Technical advice, custom CAD drawings, and additional information can be obtained by contacting Stego Industries' technical assistance department or via the website.

## 4. Technical Data

**TABLE 1: PHYSICAL PROPERTIES OF STEGO WRAP 20-MIL VAPOR BARRIER**

PROPERTY	TEST	RESULTS
Under Slab Vapor Retarders	ASTM E 1745 Class A, B & C – Standard Specification for Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs	Exceeds Class A, B & C
Water Vapor Permeance	ASTM F 1249 – Test Method for Water Vapor Transmission Rate Through Plastic Film and Sheeting Using a Modulated Infrared Sensor	0.0071 perms
Puncture Resistance	ASTM D 1709 – Test Methods for Impact Resistance of Plastic Film by Free-Falling Dart Method	3500+ grams*
Tensile Strength	ASTM D 882 – Test Method for Tensile Properties of Thin Plastic Sheeting	97.7 lbf/in.
Permeance After Conditioning (ASTM E 1745 Sections 7.1.2 - 7.1.5)	ASTM E 154 Section 8, F 1249 – Permeance after wetting, drying, and soaking ASTM E 154 Section 11, F 1249 – Permeance after heat conditioning ASTM E 154 Section 12, F 1249 – Permeance after low temperature conditioning ASTM E 154 Section 13, F 1249 – Permeance after soil organism exposure	0.0088 perms 0.0081 perms 0.0084 perms 0.0077 perms
Thickness	ACI 302.1R-04 – Minimum Thickness (10 mils)	20 mils
Roll Dimensions		14 ft. wide x 105 ft. long or 1,470 ft <sup>2</sup>
Roll Weight		140 lbs.

Note: perm unit = grains/(ft<sup>2</sup> \*hr\* in.Hg)

\* The material maxed out the testing equipment and did not fail at 3746 grams.

## PART 1

# STEGO WRAP VAPOR BARRIER/RETARDER INSTALLATION INSTRUCTIONS

**IMPORTANT:** Please read these installation instructions completely, prior to beginning any Stego Wrap installation. The following installation instructions are based on ASTM E 1643 - Standard Practice for Selection, Design, Installation, and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs. If project specifications call for compliance with ASTM E 1643, then be sure to review the specific installation sections outlined in the standard along with the techniques referenced in these instructions.

FIGURE 1: UNDER-SLAB INSTALLATION

## UNDER-SLAB INSTRUCTIONS:

1. Stego Wrap can be installed over an aggregate, sand, or tamped earth base. It is not necessary to have a cushion layer or sand base, as Stego Wrap is tough enough to withstand rugged construction environments.
2. Unroll Stego Wrap over the area where the slab is to be placed. Stego Wrap should completely cover the concrete placement area. All joints/seams both lateral and butt should be overlapped a minimum of six inches and taped using Stego Tape.

**NOTE:** The area of adhesion should be free from dust, dirt, moisture, and frost to allow maximum adhesion of the pressure-sensitive tape.

3. ASTM E 1643 requires sealing the perimeter of the slab. *Extend vapor retarder over footings and seal to foundation wall, grade beam, or slab at an elevation consistent with the top of the slab or terminate at impediments such as waterstops or dowels.* Consult the structural engineer of record before proceeding.

## SEAL TO SLAB AT PERIMETER:\*

**NOTE:** Clean the surface of Stego Wrap to ensure that the area of adhesion is free from dust, dirt, moisture, and frost to allow maximum adhesion of the pressure-sensitive adhesive.

- a. Install Crete Claw® on the entire perimeter edge of Stego Wrap.
- b. Prior to the placement of concrete, ensure that the top of Crete Claw is free of dirt, debris, or mud to maximize the bond to the concrete.

## STEGO LABOR SAVER!

This method not only complies with ASTM E 1643, but it also:

- reduces labor compared to other perimeter sealing techniques.
- can be used even without an existing wall or footing, unlike alternatives.

FIGURE 2a: SEAL TO SLAB AT PERIMETER

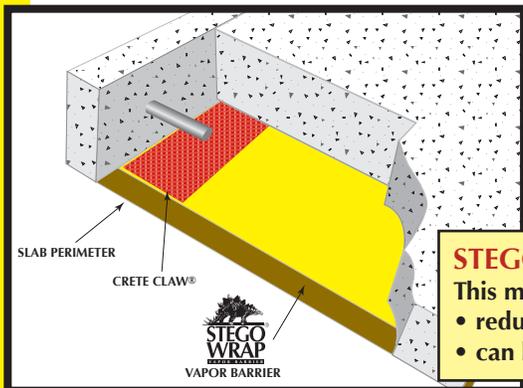

FIGURE 2b: SEAL TO PERIMETER WALL

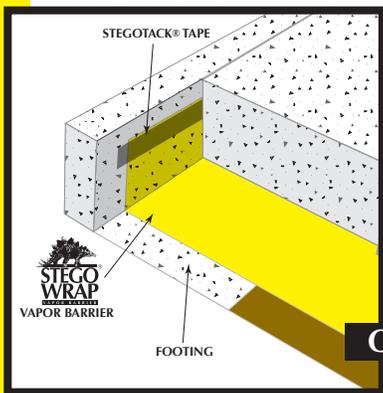

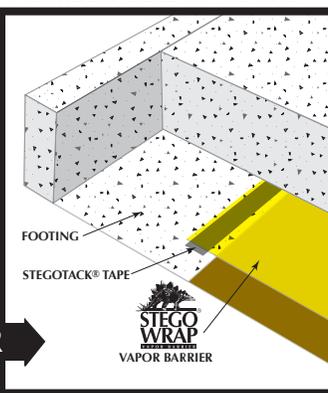

FIGURE 2c: SEAL TO FOOTING

## OR SEAL TO PERIMETER WALL OR FOOTING WITH STEGOTACK® TAPE:\*

- a. Make sure area of adhesion is free of dust, dirt, debris, moisture, and frost to allow maximum adhesion.
- b. Remove release liner on one side and stick to desired surface.
- c. When ready to apply Stego Wrap, remove the exposed release liner and press Stego Wrap firmly against StegoTack Tape to secure.

\* If ASTM E 1643 is specified, consult with project architect and structural engineer to determine which perimeter seal technique should be employed for the project.

**NOTE:** Stego Industries, LLC's ("Stego") installation instructions are based on ASTM E 1643 - Standard Practice for Selection, Design, Installation, and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs. These instructions are meant to be used as a guide, and do not take into account specific job site situations. Consult local building codes and regulations along with the building owner or owner's representative before proceeding. If you have any questions regarding the above mentioned installation instructions or Stego products, please call us at 877-464-7834 for technical assistance. While Stego employees and representatives may provide technical assistance regarding the utility of a specific installation practice or Stego product, they are not authorized to make final design decisions.

- In the event that Stego Wrap is damaged during or after installation, repairs must be made. Stego Tape can be used to repair small holes in the material. For larger holes, cut a piece of Stego Wrap to a size and shape that covers any damage by a minimum overlap of six inches in all directions. Clean all adhesion areas of dust, dirt, moisture, and frost. Tape down all edges using Stego Tape (see figure 3, Sealing Damaged Areas).

**FIGURE 3: SEALING DAMAGED AREAS**

- IMPORTANT: ALL PENETRATIONS MUST BE SEALED.** All pipe, ducting, rebar, wire penetrations and block outs should be sealed using Stego Wrap, Stego Tape and/or Stego Mastic (see figure 4a, Pipe Penetration Sealing).

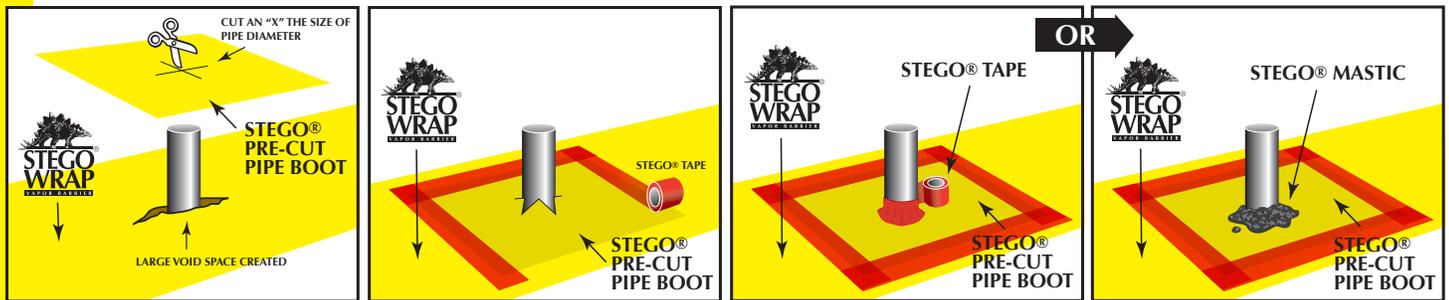

**FIGURE 4a: PIPE PENETRATION SEALING**

**STEGO WRAP PIPE PENETRATION REPAIR DETAIL:**

- Install Stego Wrap around pipe penetrations by slitting/cutting material as needed. Try to minimize the void space created.
- If Stego Wrap is close to pipe and void space is minimized then seal around pipe penetration with Stego Tape and/or Stego Mastic. **[See Figure 4a]**
- If detail patch is needed to minimize void space around penetration, then cut a detail patch to a size and shape that creates a six inch overlap on all edges around the void space at the base of the pipe. Stego Pre-Cut Pipe Boots are also available to speed up the installation.
- Cut an "X" the size of the pipe diameter in the center of the pipe boot and slide tightly over pipe.
- Tape down all sides of the pipe boot with Stego Tape.
- Seal around the base of the pipe using Stego Tape and/or Stego Mastic. **[See Figure 4b]**

**FIGURE 4b: DETAIL PATCH FOR PIPE PENETRATION SEALING**

**FIGURE 5: MULTIPLE PIPE PENETRATION SEALING**

**MULTIPLE PIPE PENETRATION SEALING:**

Multiple pipe penetrations in close proximity and very small pipes may be sealed using Stego Wrap and Stego Mastic for ease of installation (see figure 5, Multiple Pipe Penetration Sealing).

**NOTE:** Stego Industries, LLC's ("Stego") installation instructions are based on ASTM E 1643 - *Standard Practice for Selection, Design, Installation, and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs*. These instructions are meant to be used as a guide, and do not take into account specific job site situations. Consult local building codes and regulations along with the building owner or owner's representative before proceeding. If you have any questions regarding the above mentioned installation instructions or Stego products, please call us at 877-464-7834 for technical assistance. While Stego employees and representatives may provide technical assistance regarding the utility of a specific installation practice or Stego product, they are not authorized to make final design decisions.

## PART 2

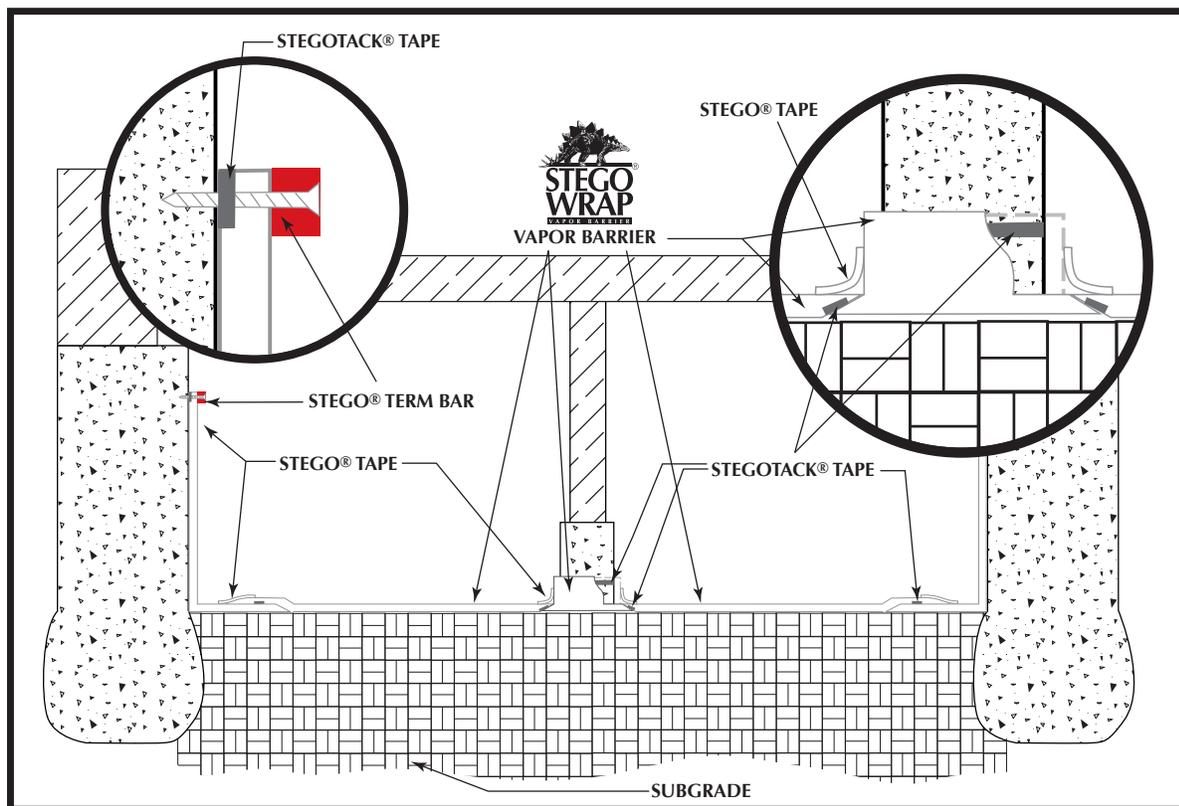

# STEGO WRAP VAPOR BARRIER/RETARDER INSTALLATION INSTRUCTIONS

### CRAWL SPACE INSTALLATION INSTRUCTIONS:

1. Turn Stego Wrap up the foundation wall to a minimum height of six inches above the outside/exterior grade or in compliance with local building codes and terminate with Stego Term Bar. To form a complete seal, apply StegoTack Tape or a layer of Stego Mastic to the foundation wall prior to installing Stego Term Bar. Allow one hour for Stego Mastic to cure prior to installing Stego Term Bar.
2. Seal Stego Wrap around all penetrations and columns using Stego Tape, StegoTack Tape, and/or Stego Mastic.
3. Place Stego Wrap directly over the crawl space floor. If rigid insulation is to be used, install Stego Wrap prior to insulation (under insulation and between the foundation wall and insulation).
4. Overlap seams a minimum of six inches and seal with Stego Tape. Some codes require a minimum of a twelve inch overlap. Check appropriate codes prior to installation.

FIGURE 6: CRAWL SPACE INSTALLATION

NOTE: Stego Wrap Vapor Barrier and Stego Tape are both available in white (as shown in illustration above).

### INSTALLATION TIP:

1. For a cleaner look and to prevent against tenting of Stego Wrap at the foundation wall/foundation floor intersection, consider mechanically fastening Stego Wrap to base of foundation wall in addition to the above mentioned wall termination.

**NOTE:** Stego Industries, LLC's ("Stego") installation instructions are based on ASTM E 1643 - *Standard Practice for Selection, Design, Installation, and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs*. These instructions are meant to be used as a guide, and do not take into account specific job site situations. Consult local building codes and regulations along with the building owner or owner's representative before proceeding. If you have any questions regarding the above mentioned installation instructions or Stego products, please call us at 877-464-7834 for technical assistance. While Stego employees and representatives may provide technical assistance regarding the utility of a specific installation practice or Stego product, they are not authorized to make final design decisions.

# STEGO® WRAP VAPOR BARRIER

ASTM E 1745 Class A-B-C Compliant

## STEGO® WRAP VAPOR BARRIER

is made with our proven trade secret blend of prime virgin resins and additives. Stego Wrap Vapor Barrier is an ASTM E 1745 Class A Vapor Barrier (Below 0.01 perms). We focus on producing a product that will maintain its extremely low permeance for the life of a building. The protection of Stego Wrap Vapor Barrier provides the flexibility to change flooring types and overall building use without worrying about below-slab moisture vapor.

### FEATURES & BENEFITS

**Unsurpassed Permeance Characteristics**

**Life of the Building Protection**

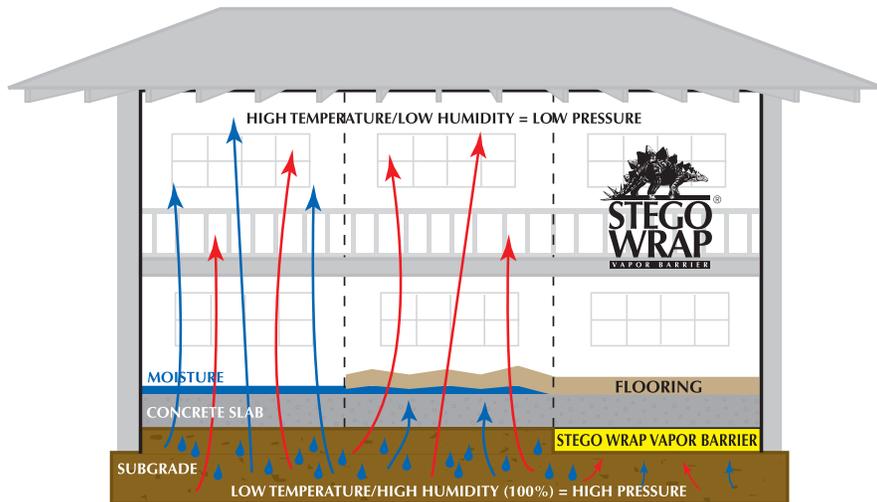

**Exceptional Tear and Puncture Resistance**

**Easy, Reliable Installation**

**Competitively Priced**

**Available Nationwide**

**Local Support**

→ RADON GAS      → MOISTURE

*Regardless of the location of the water table, humidity below concrete slabs approximates 100%. Typical below slab vapor pressure is more than twice that of building interiors at room temperature, creating vapor drive from the substrate, up through the slab, and into the building.*

## THE STEGO® ADVANTAGES

### SUPERIOR DEFENSE Against Floor Failures:

Experts say "the need for a vapor barrier (as opposed to a vapor retarder) is becoming increasingly clear." Concrete Construction Magazine, August 2003, p.18.

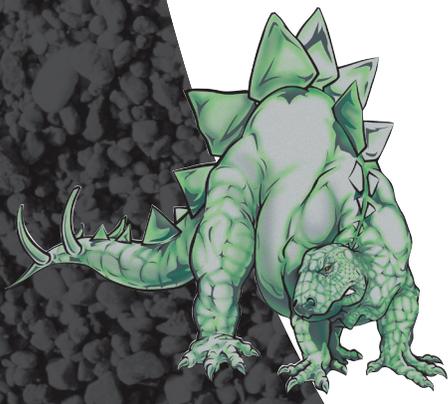

Infiltration of moisture through concrete slabs is a major building defect liability. Stego Wrap Vapor Barrier has an extremely low permeance preventing water vapor, soil gases (i.e. Radon), alkaline salts and soil sulfates from compromising the integrity of the building envelope and leading to serious problems with the concrete slab, floor coverings and indoor air quality. Stego Wrap Vapor Barrier is the best protection against these costly failures.

### MOLD PREVENTION:

Mold needs three things to survive: moisture, sustained temperature (between 50° and 122° F), and a food source (dust, drywall, etc.). In any given building environment, contractors can only control one of these variables: moisture. Mold spores are present in 100% of building interiors. If moisture is allowed into your building environment, mold can and will grow. Toxic molds like Stachybotrys can be fatal for nearly 5% of people (Institute of Medicine 1993), and cause a variety of serious health problems in others. Several recent well-publicized cases involving toxic mold have resulted in multimillion-dollar insurance settlements. Many of the nation's leading Insurance companies have severely limited or removed coverage for mold claims fearing that these claims will bankrupt their companies. Now more than ever, it is critically important that extra attention be paid to preventing the intrusion of moisture vapor from your below-slab environment. Stego Wrap Vapor Barrier offers the level of protection that many architects are now seeking and is considered to be inexpensive insurance against these costly failures.

### LONGEVITY AND STRENGTH:

Stego Wrap Vapor Barrier is NOT made with recycled materials and will not degrade. Prime, virgin resins are the key. Molecules within Stego Wrap "interlock" to provide strength, durability and unprecedented resistance to moisture vapor and radon gas. Stego Wrap's puncture resistance is excellent. Stego Wrap will not tear, crack, flake, snag or puncture, even when 18,000 lb. laser-screed machines are driving directly across the barrier (see the reverse side for Stego Wrap Vapor Barrier's specifications).

# Stego® Mastic

STEGO INDUSTRIES, LLC

**Vapor Retarders**  
**07 26 00, 03 30 00**

**1. Product Name**  
**Stego Mastic**

**2. Manufacturer**

Stego Industries, LLC  
216 Avenida Fabricante, Suite 101  
San Clemente, CA 92672  
Sales, Technical Assistance  
Ph: (877) 464-7834  
Fx: (949) 257-4113  
www.stegoindustries.com

**3. Product Description**

**USES:** Stego Mastic is designed to be used as a waterproofing and vapor retardant membrane for use in conjunction with Stego Wrap 10-mil and 15-mil Vapor Retarder/Barrier. Stego Mastic can be used as an alternate to boots for pipe penetrations in Stego Wrap Vapor Barrier. Stego Mastic can also be used as a primary waterproofing for below grade walls.  
**COMPOSITION:** Stego Mastic is a medium-viscosity, water-based, polymer-modified anionic bituminous/asphalt emulsion, which exhibits bonding, elongation and waterproofing characteristics.  
**SIZE:** Stego Mastic comes in five-gallon buckets.

**4. Technical Data**

**APPLICABLE STANDARDS:**

American Society for Testing and Materials (ASTM)

- ASTM D 412 Standard Test Method for Vulcanized Rubber and Thermoplastic Elastomers - Tension
- ASTM E 154 Standard Test Methods for Water Vapor Retarders Used in Contact with Earth under Concrete Slabs, on Walls, or as Ground Cover
- ASTM G 23 Practice for Operating Light-Exposure Apparatus (Carbon-Arc Type) With and Without Water for Exposure of Nonmetallic Materials (Withdrawn 2000)
- ASTM E 96 Standard Test Methods for Water Vapor Transmission of Materials
- ASTM D 751 Standard Test Methods for Coated Fabrics
- ASTM D 1434 Standard Test Method for Determining Gas Permeability Characteristics of Plastic Film and Sheeting

- ASTM C 836 Standard Specification for High Solids Content, Cold Liquid-Applied Elastomeric Waterproofing Membrane for Use with Separate Wearing Course.
- ASTM E 1643 Standard Practice for Installation of Water Vapor Retarders Used in Contact with Earth or Granular Fill under Concrete Slabs.

**5. Installation**

**PREPARATION:**

- A test application simulating the project environment should always be done prior to final usage of Stego Mastic.
- All Surfaces should be dry and free of loose materials, oils and other contaminants. The surfaces should be cleaned in the same fashion as the test surface in order to ensure proper results.
- Store above 40°F

**PENETRATIONS:**

For small pipe and rebar penetrations in Stego Wrap Vapor Barrier cut Stego Wrap just big enough for the penetration. Liberally apply Stego Mastic around the penetration to keep the integrity of the membrane intact. Stego Mastic can be applied by brush, roller, or sprayer.

**NOTES:** 1) For larger penetrations or wide cut-outs of Stego Wrap, use Stego Wrap and Stego Red Polyethylene Tape to repair and seal. 2) Solvent-based products should not be applied over this product.

**CLEANING:**

Clean all tools with kerosene and/or oil-based cleaners.

**6. Availability & Cost**

Stego Mastic is available nationally via building supply distributors. For current cost information, contact your local Stego distributor or Stego Industries' sales department.

**7. Warranty**

Stego Industries, LLC believes to the best of its knowledge, that specifications and recommendations herein are accurate and reliable. However, since site conditions are not within its control, Stego Industries does not guarantee results from the use of the information provided and disclaims all liability from any loss or damage. No warranty, express or implied, is given as to the merchantability, fitness for a particular purpose, or otherwise with respect to the products referred to.

**8. Maintenance**

None required.

**9. Technical Services**

Technical advice, custom CAD drawings, and additional information can be obtained by contacting Stego Industries' technical assistance department or by visiting the website.

**10. Filing Systems**

**TABLE 1: PHYSICAL PROPERTIES OF STEGO MASTIC**

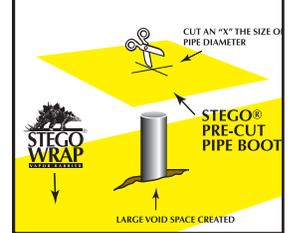

Property and Test	Stego Mastic
Tensile/Elongation, ASTM D 412	32 psi / 3860%
Resistance to Decay, ASTM E 154	9% perm loss
Accelerated Aging, ASTM G 23	No Effect
Permeance, ASTM E 96	0.17 Perms
Hydrostatic Water Pressure, ASTM D 751	28 psi
Methane Transmission Rate, ASTM D 1434	0
Adhesion to Concrete & Masonry, ASTM C 836	7 lbf./in.
Hardness, ASTM C 836	85
Crack Bridging, ASTM C 836	No Cracking
Low Temp Flexibility, ASTM C 836	No Cracking at -20°C
<b>Resistance to Acids:</b>	
Acetic	30%
Sulfuric and Hydrochloric	15%
<b>Temperature Effect:</b>	
Stable	248°F
Flexible	13°F

Note: perm unit = grains/(ft<sup>2</sup> \*hr\* in.Hg)

# Stego® Pre-Cut Pipe Boots

STEGO INDUSTRIES, LLC

**Vapor Retarders**  
**07 26 00, 03 30 00**

## 1. Product Name

**Stego Pre-Cut Pipe Boots**

## 2. Manufacturer

Stego Industries, LLC  
 216 Avenida Fabricante, Suite 101  
 San Clemente, CA 92672  
 Sales, Technical Assistance  
 Ph: (877) 464-7834  
 Fx: (949) 257-4113  
 www.stegoindustries.com

## 3. Product Description

USES: Stego Pre-Cut Pipe Boots are used to seal around permanent penetrations in Stego Wrap.

COMPOSITION: Stego Pre-Cut Pipe Boots are made from Stego Wrap Vapor Barrier (15-mil), and therefore are manufactured from only the highest grade of prime, virgin, polyolefin resins.

SIZE: Stego Pre-Cut Pipe Boots are 18" by 18" and 15 mils thick. Stego Pre-Cut Pipe Boots ship 10 packs of 25 in a case (250 boots per case).

## 5. Installation

UNDER SLAB: Cut an "X" the size of the pipe diameter in the center of the Pre-Cut Pipe Boot and slide tightly over pipe. Tape all sides of the pipe boot with Stego Tape. Seal around the base of the pipe using Stego tape and/or Stego Mastic.

## 6. Availability & Cost

Stego Pre-Cut Pipe Boots are available nationally through our network of building supply distributors. For current cost information, contact your local Stego Wrap distributor or Stego Industries' Sales Representative.

## 7. Warranty

Stego Industries, LLC believes to the best of its knowledge, that specifications and recommendations herein are accurate and reliable. However, since site conditions are not within its control, Stego Industries does not guarantee results from the use of the information provided and disclaims all liability

from any loss or damage. No warranty, express or implied, is given as to the merchantability, fitness for a particular purpose, or otherwise with respect to the products referred to.

## 8. Maintenance

None required.

## 9. Technical Services

Technical advice, custom CAD drawings, and additional information can be obtained by contacting Stego Industries' technical assistance department or via the website. [www.stegoindustries.com](http://www.stegoindustries.com)

## 4. Technical Data

**TABLE 1: PHYSICAL PROPERTIES OF STEGO PRE-CUT PIPE BOOTS**

PROPERTY	TEST	RESULTS
Under Slab Vapor Retarders	ASTM E 1745 Class A, B & C – Standard Specification for Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs	Exceeds Class A, B & C
Water Vapor Permeance	ASTM F 1249 – Test Method for Water Vapor Transmission Rate Through Plastic Film and Sheeting Using a Modulated Infrared Sensor	0.0084 perms *0.0035 WVTR
Puncture Resistance	ASTM D 1709 – Test Methods for Impact Resistance of Plastic Film by Free-Falling Dart Method	2326 grams
Tensile Strength	ASTM D 882 – Test Method for Tensile Properties of Thin Plastic Sheeting	79.6 lbf/in.
Permeance After Conditioning (ASTM E 1745 Sections 7.1.2 - 7.1.5)	ASTM E 154 Section 8, F 1249 – Permeance after wetting, drying, and soaking ASTM E 154 Section 11, F 1249 – Permeance after heat conditioning ASTM E 154 Section 12, F 1249 – Permeance after low temperature conditioning ASTM E 154 Section 13, F 1249 – Permeance after soil organism exposure	0.0091 perms 0.0092 perms 0.0089 perms 0.0092 perms
Thickness	ACI 302.1R-04 – Minimum Thickness (10 mils)	15 mils
Pipe Boot Dimensions		18" x 18"

Note: perm unit = grains/(ft<sup>2</sup> \*hr\* in.Hg) \* WVTR = Water Vapor Transmission Rate

# Stego® Term Bar

STEGO INDUSTRIES, LLC

**Vapor Retarders**  
**07 26 00, 03 30 00**

### 1. Product Name

**Stego Term Bar**

### 2. Manufacturer

Stego Industries, LLC  
 216 Avenida Fabricante, Suite 101  
 San Clemente, CA 92672  
 Sales, Technical Assistance  
 Ph: (877) 464-7834  
 Fx: (949) 257-4113  
[www.stegoindustries.com](http://www.stegoindustries.com)

### 3. Product Description

**USES:** Stego Term Bar is a semi-flexible plastic termination bar used for mechanically securing Stego Wrap or other materials to concrete, masonry, or wood.

**COMPOSITION:** Stego Term Bar is made from post-industrial recycled PVC.

### 5. Installation

**UNDER SLAB:** Nail through Stego Term Bar and Stego Wrap to secure material as needed. If the beveled edge is facing

the wall, a pocket/lip is created for mastic/sealant to be used if required. Pre-drilled nail holes are provided every 6 inches for ease of installation.

To cut Stego Term Bar, score with a utility knife or wire snips. Stego Term Bar can be bent back and forth and then broken at desired locations as well.

Stego Term Bar is flexible enough to bend around corners and contours in the wall for easy installation.

### 6. Availability & Cost

Stego Term Bar is available nationally through our network of building supply distributors. For current cost information, contact your local Stego Wrap distributor or Stego Industries' Sales Representative.

### 7. Warranty

Stego Industries, LLC believes to the best of its knowledge, that specifications

and recommendations herein are accurate and reliable. However, since site conditions are not within its control, Stego Industries does not guarantee results from the use of the information provided and disclaims all liability from any loss or damage. No warranty, express or implied, is given as to the merchantability, fitness for a particular purpose, or otherwise with respect to the products referred to.

### 8. Maintenance

Store above 60°F. Term Bar will become less flexible at lower temperatures.

### 9. Technical Services

Technical advice, custom CAD drawings, and additional information can be obtained by contacting Stego Industries' technical assistance department or via the website. [www.stegoindustries.com](http://www.stegoindustries.com)

# StegoTack™ Tape

STEGO INDUSTRIES, LLC

**Vapor Retarders**  
**07 26 00, 03 30 00**

## 1. Product Name

**StegoTack™ Tape**

## 2. Manufacturer

Stego Industries, LLC  
216 Avenida Fabricante, Suite 101  
San Clemente, CA 92672  
Sales, Technical Assistance  
Ph: (877) 464-7834  
Fx: (949) 257-4113  
www.stegoindustries.com

## 3. Product Description

**USES:** StegoTack Tape is a double-sided adhesive strip used to bond and seal Stego Wrap to concrete, masonry, wood, metal, and other surfaces. StegoTack is a flexible and moldable material to allow for a variety of applications and installations.

**COMPOSITION:** StegoTack Tape is made from a blend of synthetic rubber and resins. StegoTack already has primer in the adhesive, so additional primer is typically not necessary.

**SIZE:** StegoTack Tape is 2 inches wide and 50 feet long. StegoTack Tape ships 12 rolls in a case.

## 5. Installation

**TO WALLS:** Make sure the area of adhesion is free of dust, dirt, debris, moisture, and frost to allow maximum adhesion. Remove release liner on one side and stick to desired surface. When ready to apply Stego Wrap, remove the exposed release liner and press Stego Wrap firmly against StegoTack Tape to secure.

**TO FOOTINGS:** Make sure the area of adhesion is free of dust, dirt, debris, moisture, and frost to allow maximum adhesion. Remove release liner on one side and stick to desired surface. When ready to apply Stego Wrap, remove the exposed release liner and press Stego Wrap firmly against StegoTack Tape to secure.

Cut StegoTack Tape using a utility knife or scissors. Cut StegoTack Tape before removing the release liner for easier cutting. Install StegoTack Tape between 40°F and 110°F. For additional information please refer to Stego's complete installation instructions.

## 6. Availability & Cost

StegoTack Tape is available nationally through our network of building

supply distributors. For current cost information, contact your local Stego Wrap distributor or Stego Industries' Sales Representative.

## 7. Warranty

Stego Industries, LLC believes to the best of its knowledge, that specifications and recommendations herein are accurate and reliable. However, since site conditions are not within its control, Stego Industries does not guarantee results from the use of the information provided and disclaims all liability from any loss or damage. No warranty, express or implied, is given as to the merchantability, fitness for a particular purpose, or otherwise with respect to the products referred to.

## 8. Maintenance

For longer adhesive life, store in dry, temperate area.

## 9. Technical Services

Technical advice, custom CAD drawings, and additional information can be obtained by contacting Stego Industries' technical assistance department or via the website. [www.stegoindustries.com](http://www.stegoindustries.com)
