

Postcard templates

Quick Tips

- ✓ Make sure all fonts are downloaded on your computer
- ✓ Only use preset type styles (see paragraph and character styles)
- ✓ Remember to update location names and times
- ✓ Print at 100% scale
- ✓ Only use preset color styles (see color palette)
- ✓ Add your logo to the 'logo' layer

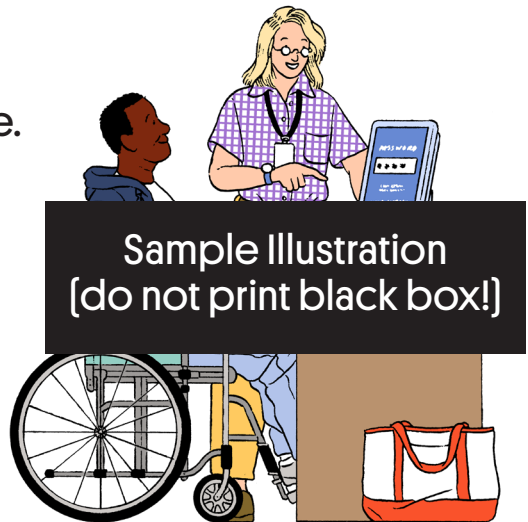

How to protect your passwords

Staying safe online starts with good digital habits. Here is how to keep your devices and information secure.

Use strong, unique passwords for each of your accounts. Different passwords mean that if someone gets into one of your accounts, they cannot use that stolen password to access your other accounts.

How to avoid scams online

Think carefully about what you're clicking on, and take steps to protect your personal information.

Don't click on ads or emails that promise free money, prizes, or discounts. If it seems too good to be true, it probably is! Banks and utilities will never ask for payment or account details through email.

Keep your devices up to date

Protect your personal information by regularly updating your devices' software.

Updates improve the security and performance of your device. You can turn on automatic updates so that as soon as an update is available, your device will automatically download and install it.

How to avoid spam

You don't have to deal with spam including unwanted communications like unsolicited calls or messages, robocalls, and fake emails.

Visit donotcall.gov and add your number to the national Do Not Call Registry. If you get unwanted marketing emails, scroll to the bottom and click "Unsubscribe." (It is often hidden using a very small font size.)
