# 1. Policy

Testing equipment and reference materials shall be performance checked and maintained in a way to ensure the accuracy, reliability, and traceability of testing results related to all off. It U casework.

### 2. School

The becedure out seed in this SOP apply to all equipment and reference materials used for a examplation of assework.

## 3. Definitions

Testing Equipment: Testing a mean rable outcome. Testing equipment includes, but is not limited to sliding/sp ading caliper osteometric boards, mandibulometer, tape measures, rulers, digital scars, microscopes, and digitizer (three-dimensional coordinate measurement machine system).

Reference Materials: Anthropo gica analysis frequently requires the comparison of unknown case specimen(s) wan known of ance materials. Such items include, but are not limited to, osteological comparative caterials and age casts (e.g., pubic symphysis aging casts). These items are not respected acceptance and as defined by the International Vocabulary of Metrology and thus are not considered accepte reference materials.

<u>Performance Check</u>: An assessment of the performance of terms are equipment relative to the test being performed. The types and nature of performance checks and discussed below.

<u>Reference Standards</u>: Reference standards refer to equipment and to performance check the FAU testing equipment. Reference standards have been calibrated and are traceable to a National Institute of Standards and Technology (NIST) standard.

<u>Calibration:</u> Calibration is the process of determining the relation hip by ween the realings obtained by a piece of measurement equipment and the applicable atts of some of fined system of measurement. The measuring item's readings are compared to the years of a measurement standard under controlled and specified conditions.

<u>Traceability</u>: An unbroken chain of comparisons to an approved or accepted standard with each metric comparison having stated measurement uncertainties.

<u>Unique Identifying Number</u>: Unique combinations of alpha-numerics assigned by the FAU to testing equipment, reference standards, and select reference materials that are designed to facilitate tracking, documentation, and traceability of that item. A manufacturer's serial number may also serve as a unique identification number.

| NYC – OFFICE OF CHIEF MEDICAL EXAMINER      | Page:                 |            |
|---|-----------------------|------------|

| Title: Equipment Management                 | Control No. Revision: |            |
|   | QM-004                | 6          |
| Approved by: Forensic Anthropology Director | Effective Date: 10    | 0 May 2022 |

Measurement Uncertainty: The non-negative parameter characterizing the dispersion of the quantity values being attributed to the measurand. This parameter could be a standard deviation or half width of an interval having a stated level of confidence, or a confidence fined by statistical probability.

nd: Quantity intended to be measured.

#### 4. abili

and Me. urement Uncertainty
he equippent is performance checked using calibrated reference standards that are traceab ational Institute of Standards and Technology (NIST) maintained standard that have stated ement Uncertainties (see section 6 Performance Checks). Measurements hat fall within the AU accepted parameters (see 6.2 Performance Check Metric Tolerances) should not affect the overall reported conclusions. As such, Measurement Uncertainty does not apply to FAU casework.

#### Testing Equipment and Terengerengerengerengerengerengen and Testing Equipment Equipm **Materials Management** 5.

The FAU have suitable and ade ate a sipmer to permit all activities to be carried out in a competent and safe manner. Sesting equation and reference materials are located in one of the secure Anthropology Laboratoric within their designated storage areas. An approved list of FAU testing equipmer supplier is locked on the Anthropology network drive.

- Access to and Use of Testing Equipment and I ference Laterials: FAU personnel, 5.1 the atton to visiting scientists and interns have access and testing equipment. Additionally, the FAU may give authorization to other individu se-by-case basis. on a
  - If testing equipment is removed from the FAU's direct control, e piece of equipment will be subject to a performance check upon its return, ad prior to us sework (see section 6.1).
- 5.2 Continued Suitability of Testing Equipment and Reference aterials: Th ensures the continued suitability of equipment by completing performance ince ch ks (see section 6) and preventative maintenance (see section 7).

#### 6. **Performance Checks**

Testing equipment and reference materials that can influence a test result are required to be performance checked. A performance check shall entail the OA Specialist, or designee comparing the measurements of the testing equipment to another instrument (reference standard) to ascertain if the measurements fall within an acceptable parameter (see 6.2).

| NYC – OFFICE OF CHIEF MEDICAL EXAMINER      | Page:                 |            |
|---|-----------------------|------------|
| Forensic Anthropology – Quality Manual      | 3 of 9                |            |
| Title: Equipment Management                 | Control No. Revision: |            |
|   | QM-004                | 6          |
| Approved by: Forensic Anthropology Director | Effective Date: 10    | 0 May 2022 |

When a piece of testing equipment or reference material is placed into circulation for use, an initial performance check shall be performed and documented. Additionally, the protocol for future performance checks and maintenance outlined in this SOP for each specific type of testing equipment or reference material shall be followed (see section 7, uipment and Reference Materials).

- 6.1 Types of Performance Checks: Performance checks that are differentiated by time are described in chail a low. Besides timing, the nature of performance checks can also vary. For tamp's a performance check may be a matter of record (e.g., the Quality Assurance (QA) Section of the performance check) or non-record (e.g., this chedular commance check prior to each use).
  - 6.1.1 The tining of ariormance thecks required for each type of testing equipment and reference material is set of the FAU (see section 8, Testing Equipment and Reference Materials for more detail). The following section outlines the different types of performance checks.
    - <u>Initial-use Performance Ch. k:</u> All sting equipment and reference materials shall be performance checked from to initial use to ensure they meet the requirements set by the FAU
    - <u>Per-use Performance Check</u>: Sore testing quipment may need to be checked prior to each use. For example, before using the digitizer to take measurements the analyst should test the digitizer for a curacy limit measuring two points on an FAU reference ruler.
    - <u>Periodic Performance Check:</u> Performance check can ducted as a set interval (e.g., annual, semi-annual) are considered periodic. All a ting equipment shall require periodic performance checks.
    - <u>Intermediate Performance Check</u>: A supplementary ce., unschedled) performance check to maintain confidence in the accuracy of a piece of esting equipment or a reference material. Intermediate performance check are not required to be recorded and are considered independent from periodic performance checks.
- 6.2 **Performance Check Metric Tolerances:** The accepted tolerances for FAU testing equipment are as follows:
  - Calipers =  $\pm 1$  millimeter
  - Rulers =  $\pm 1$  millimeter

| NYC – OFFICE OF CHIEF MEDICAL EXAMINER      | Page:                 |            |
|---|-----------------------|------------|
| Forensic Anthropology – Quality Manual      | 4 of 9                |            |
| Title: Equipment Management                 | Control No. Revision: |            |
|   | QM-004                | 6          |
| Approved by: Forensic Anthropology Director | Effective Date: 10    | 0 May 2022 |

- Osteometric boards =  $\pm 1$  millimeter
- Digitizer =  $\pm 1$  millimeter
- Tape measures =  $\pm 10$  millimeters
- $\bigcirc$  Microscopes =  $\pm 0.5$  millimeter
- Mandibulometer length =  $\pm 1$  millimeter
- Mandibulometer angle =  $\pm 1$  degree
- Digital cales =  $\pm 1$  gram
- 6.3 **Per true to Check Let:** The performance check kit is comprised of reference standards that are alibrate and aceable to NIST (National Institute of Standards and Technology) or International systems of Units (SI). The reference standards in the FAU performance check kit includes, but it not have does not rulers, stainless steel weights (100 gram and 50 gram), and a specific square. The performance check kit shall only be used for the purposes of performance checks.

Note: The FAU does not perform alibrations in-house. All reference standards are externally calibrated at ILAC approximately labs.

- 6.3.1 The QA Specialist shall maintain pread that of all reference standards in the FAU performance check kit. The spread sect on be found on the Anthropology network drive. The following cormation shall be recorded:
  - Type or name of equipment
  - Equipment serial number or unique i entifying the
  - Date of calibration and subsequent -calibrations.
  - Identity of individual or company, corming call attacked-calibration.
- 6.3.2 **Storage and Maintenance**: The performance check kit would be appropriately stored to avoid loss or damage to the reference standard. Additionally, the performance check kit shall be stored separately from the testing experience in one of the secure anthropology laboratories.
- 6.3.3 **Reference Standards Certificates**: All certificates related to be traceablely and calibration of reference standards are maintained in a designated stored in one of the secure Anthropology lab spaces. The QA Specialist is responsible for maintaining calibration and traceability certificates for all reference standards, where applicable.
- 6.3.4 **Re-calibration**: When re-calibration of a reference standard is deemed necessary, the reference standard should be sent to an external ISO/IEC 17025 accredited lab for re-calibration.

| NYC – OFFICE OF CHIEF MEDICAL EXAMINER      | Page:                 |            |

| Title: Equipment Management                 | Control No. Revision: |            |
|   | QM-004                | 6          |
| Approved by: Forensic Anthropology Director | Effective Date: 10    | ) May 2022 |

- 6.3.5 Replacement of Reference Standards: Most of the reference standards used by the FAU are inexpensive and shall be replaced rather than re-calibrated, when needed. All certificates for calibration and traceability for the new ruler shall replace the older rulers' certificates. Additionally, a new Unique Identifying Member shall be assigned to the new reference standard (e.g., ANTH-001: widence Security and Management). All documentation related to replaced eference tandards (i.e., certificates and unique identification numbers) shall be approximate, updated.
- 6.4 **Performance Sheck Jecords:** All initial and periodic performance checks shall be recorded on a P produce Check Log sheet. Any electronic documentation shall be saved on the Anthrop ogy networks. The following information shall be recorded:
  - Type of lame equipmen
  - Equipment s dal number of unique identifying number.
  - Date of performance check.
  - Identity of inda idual performing the performance check.
  - Results of performance ch
  - Reference standard use for parformace check, including unique identifying number, if applicable.
  - Additional notes about performance check when appropriate.

## 7. Maintenance

The QA Specialist is responsible for completing scheduled preventive maintenance for appropriate testing equipment. The QA Specialist shorts of notified of unscheduled maintenance needs for malfunctioning or damage mems. The QA is responsible for contacting the appropriate service providers (when applied le) and completing all necessary documentation associated with maintenance.

- 7.1 **Preventive Maintenance**: Preventive maintenance shall be exformed on a appropriate testing equipment, according to a set schedule based either on the manufacturer's recommendations or on the FAU's predetermined schedule. The QA Specialst is responsible for maintaining a database of all testing equipment that requires presentive maintenance. At a minimum, the following information should be recorded:
  - Serial number or Unique Identifying Number.
  - Type or name of testing equipment.
  - Frequency of preventive maintenance.
  - 7.1.2 **External Vendors:** If maintenance is performed by an external vendor the FAU will maintain a copy of the maintenance records provided by the vendor (hardcopy or electronic).

| NYC – OFFICE OF CHIEF MEDICAL EXAMINER      | Page:                 |            |
|---|-----------------------|------------|
| Forensic Anthropology – Quality Manual      | 6 of 9                |            |
| Title: Equipment Management                 | Control No. Revision: |            |
|   | QM-004                | 6          |
| Approved by: Forensic Anthropology Director | Effective Date: 10    | ) May 2022 |

- 7.1.3 **Health and Safety Equipment:** Certain health and safety equipment (e.g., fume hoods) shall undergo annual maintenance to make sure they are functioning properly and safely.
  - .4 **computer Software:** The FAU should periodically check for major updates of computer of tware programs that are used during anthropological analyses (e.g., Fordige).
- 7.2 Correct to Manutena be: When any testing equipment or reference materials fail to meet the performance of requirements, it shall be taken out of service and labeled appropriately to void in the taken. Only after the item(s) has been properly calibrated and passes a performance check may it be returned to service. Any completed corrective maintenance shall be ecorded in the appropriate maintenance records.
  - 7.2.1 **Defective Equipment:** The Opposition will review all FAU casework that used defective equipment sance to tast performance check. Casework will be reviewed to determine if the defective equipment impacted the test results, and if so, the appropriate corrective ection will be seen.
  - 7.2.2 Replacement of Laboratory Luipm L and Reference Materials: For testing equipment and reference materials that can be replaced, rather than undergo corrective maintenance, the equipment shall be removed from circulation and disposed of in an appropriate manner.
  - 7.2.3 **Computer Software:** Any issues with computer so ware cograms shall be referred to the OCME IT department or appropriate as all vends for support or replacement.

## 8. Testing Equipment and Reference Materials

All testing equipment and reference materials shall be stored in such a nanner to p vent loss or damage.

## 8.1 **Testing Equipment**

<u>Calipers</u>: Calipers are subject to an annual performance check by the QA Specialist, wherein a NIST certified ruler is used to check the accuracy of the caliper's measurements.

<u>Mandibulometer</u>: The mandibulometer is performance checked by the QA Specialist annually using the same process as described for calipers for length measurements and via a precision square for the angle measurement component.

| NYC – OFFICE OF CHIEF MEDICAL EXAMINER      | Page:                 |            |
|---|-----------------------|------------|
| Forensic Anthropology – Quality Manual      | 7 of 9                |            |
| Title: Equipment Management                 | Control No. Revision: |            |
|   | QM-004                | 6          |
| Approved by: Forensic Anthropology Director | Effective Date: 10    | 0 May 2022 |

Osteometric Board: The osteometric boards are performance checked annually by the QA Specialist using the same process as the calipers.

<u>Tape Measures</u>: Tape measures are performance checked annually by the QA Specialist, when a NIST certified tape measure is used to check the accuracy of the measurements. The tape neasure fails to pass a performance check or is damaged it shall be replaced with an arrapriate table measure.

Rules: Ryes used a testing are subject to a one time "initial-use" recorded metric performance can ck by the QA Specialist prior to being released for general use. Rulers do not need period to antenance and/or performance checks. If damaged or otherwise rendered unser peable, the control of the should be disposed of and new ones ordered.

<u>Digitizer</u>: The digitizer is subject an annual performance check by the QA Specialist, wherein a NIST critified ruler is used to check the accuracy of the digitizer's measurements. In the time manner, the digitizer is subject to per-use performance checks when used to take measurements. On the contract of a sework.

Microscope: The FAU microscopes are in its med by the OCME's Pathology Department through an annual contract service, which include necessary cleaning and maintenance. Microscopes in use are subject to an annual renormance check. Additionally, prior to taking photographs and/or measurements analysts hould ensure that the scale and magnification settings are accurate.

<u>Digital Scales</u>: All analytical scales are electronically self-adjuster. The analyst may electronically adjust the scale at any time following the instructions on fined in the user's manual. The QA Specialist shall electronically adjust the scale at leconductal performance check using the appropriate standard weight annually (10% gram of 0 gram weight).

## 8.2 **Reference Materials**

<u>Casts</u>: Cast materials are subjected to an annual performance check to asure that there is no visible damage.

<u>Photographic Scales</u>: Photographic scales are subject only to the initial deformance check for general adequacy by the QA Specialist prior to general use. These materials do not need periodic maintenance or performance checks. If damaged or otherwise rendered unserviceable (e.g., stained, illegible, and/or presenting an unprofessional appearance), the items should be disposed of and new ones ordered.

Osteological Comparative Material: Osteological comparative material is subject to periodic performance check once per accreditation cycle. The performance check will entail visual inspection of storage bags and boxes for damage, worn labeling, or improper

| Approved by: Forensic Anthropology Director | Effective Date: 1 | 0 May 2022 |

storage. The osteological comparative reference materials are grouped taxonomically and are not required to have unique identifying numbers.

## 9. Documentation

Performance checks, maintenance, and other records for testing equipment, reference raterial, and performance check kit reference standards shall be properly maintained by the 2. Specialist. The following records shall be maintained with the most up-to-date information:

- Inversely of testing equipment, reference materials, and performance check kit eren stand ds.
- Calibrat In, Caintenance, and performance check records (refer to sections 6 and 7 for more letail).
