Forensic Anthropology – Quality Manual	1 of 10	
Title: Equipment Management	Control No. Revision:	
	QM-004	7
Approved by: Forensic Anthropology Director	Effective Date: 5	April 2023

## 1. Policy

Testing equipment and reference materials shall be performance checked and maintained in a way to ensure the accuracy, reliability, and traceability of testing results related to all off. It casework.

#### 2. School

The becedure out seed in this SOP apply to all equipment and reference materials used for a examplation of assework.

### 3. Definitions

Testing Equipment: Testing a mean rable outcome. Testing equipment includes, but is not limited to sliding/spreading caliper osteometric boards, mandibulometers, tape measures, rulers, digital scars, microscopes, and digitizers (three-dimensional coordinate measurement machine system).

Reference Materials: Anthropo gica analysis frequently requires the comparison of unknown case specimen(s) wan known of ance materials. Such items include, but are not limited to, osteological comparative caterials and age casts (e.g., pubic symphysis aging casts). These items are not respected acceptance and as defined by the International Vocabulary of Metrology and thus are not considered accepte reference materials.

<u>Performance Check</u>: An assessment of the performance of terms are equipment relative to the test being performed. The types and nature of performance checks and discussed below.

<u>Reference Standards</u>: Reference standards refer to equipment and to performance check the FAU testing equipment. Reference standards have been calibrated and are traceable to a National Institute of Standards and Technology (NIST) standard.

<u>Calibration:</u> Calibration is the process of determining the relation hip between the realings obtained by a piece of measurement equipment and the applicable atts of some of fined system of measurement. The measuring item's readings are compared to the years of a measurement standard under controlled and specified conditions.

<u>Traceability</u>: An unbroken chain of comparisons to an approved or accepted standard with each metric comparison having stated measurement uncertainties.

<u>Unique Identifying Number</u>: Unique combinations of alpha-numerics assigned by the FAU to testing equipment, reference standards, and select reference materials that are designed to facilitate tracking, documentation, and traceability of that item. A manufacturer's serial number may also serve as a unique identification number.

Forensic Anthropology – Quality Manual	2 of 10	
Title: Equipment Management	Control No. Revision:	
	QM-004	7
Approved by: Forensic Anthropology Director	Effective Date: 5	April 2023

Measurement Uncertainty: The non-negative parameter characterizing the dispersion of the quantity values being attributed to the measurand. This parameter could be a standard deviation or half width of an interval having a stated level of confidence, or a confidence fined by statistical probability.

nd: Quantity intended to be measured.

#### 4. abili

and Me. urement Uncertainty

h. equip ent is performance checked using calibrated reference standards ational Institute of Standards and Technology (NIST) maintained that are traceab standard that have stated ement Uncertainties (see section 6 Performance Checks). Measurements hat fall within the AU accepted parameters (see 6.2 Performance Check Metric Tolerances) should not ffect the overall reported conclusions. As such, Measurement Uncertainty does not apply to FAU casework.

#### Testing Equipment and Leren **Materials Management** 5.

The FAU have suitable and adequate a sipmer to permit all activities to be carried out in a competent and safe manner. Lesting equation and reference materials are located in one of the secure Anthropology Laboratoric within their designated storage areas. An approved list of FAU testing equipmer supplies is located on the Anthropology network drive.

- Selection and Approval of Suppliers: Supplies Plevant to the outcome of inspection 5.1 activities will be purchased through approved su soli FAU sy ers will be selected based on the type of items needed. For reference sandards (i.e. calibrated equipment) an accredited vendor will be selected. For all other supplies s. vant to e outcome of inspection activities, an appropriate vendor that can surely the quired items will be selected. All suppliers selected by the FAU must be applied by CMF urement before any items are purchased.
- Access to and Use of Testing Equipment and Reference Mater 4s: FAU per 5.2 visiting scientists and interns have access and authorization to use sting ecoment. Additionally, the FAU may give authorization to other individuals on a case ase basis.
  - If testing equipment is removed from the FAU's direct control, the piece of equipment will be subject to a performance check upon its return and prior to use on casework (see section 6.1).
- 5.3 Continued Suitability of Testing Equipment and Reference Materials: The FAU ensures the continued suitability of equipment by completing performance checks (see section 6) and preventative maintenance (see section 7).

### 6. Performance Checks

Testing equipment and reference materials that can influence a test result are required to be performance checked. A performance check shall entail the QA Specialist or designee contain the measurements of the testing equipment to another instrument (reference andar) to ascertain if the measurements fall within an acceptable parameter (see 6.2).

When a pieces texting equipment or reference material is placed into circulation for use, an attial of formance check shall be performed and documented. Additionally, the protocol for the reperformance checks and maintenance outlined in this SOP for each specific type of the reperformance checks and maintenance outlined in this SOP for each specific type of the reperformance checks and maintenance outlined in this SOP for each specific type of the reperformance checks and maintenance outlined in this SOP for each specific type of the reperformance checks and maintenance outlined in this SOP for each specific type of the reperformance checks and maintenance outlined in this SOP for each specific type of the reperformance checks and maintenance outlined in this SOP for each specific type of the reperformance checks and maintenance outlined in this SOP for each specific type of the reperformance checks and maintenance outlined in this SOP for each specific type of the reperformance checks and maintenance outlined in this SOP for each specific type of the reperformance checks.

- 6.1 **Types of Performance Checks:** Performance checks that are differentiated by time are described in detail below. Besides amino the nature of performance checks can also vary. For example, a performance check makes a matter of record (e.g., the Quality Assurance (QA) Specialist officially. Some the results of the performance check) or non-record (e.g., unscheduled performance check, pior to ach use).
  - 6.1.1 The timing of performance checks equire for each type of testing equipment and reference material is set by FAU see setion 8, Testing Equipment and Reference Materials for more detail) the following section outlines the different types of performance checks.
    - <u>Initial-use Performance Check:</u> All te projection initial uses of ensure they meet the requirements set by the FAU.
    - <u>Per-use Performance Check</u>: Some testing equipment may need to schecked prior to each use. For example, before using the discipler to take measurements the analyst shall test the digitizer for accuracy by measuring two points in an FAU ruler.
    - <u>Periodic Performance Check:</u> Performance checks conducted on a set interval (e.g., annual, semi-annual) are considered periodic. All testing equipment shall require periodic performance checks.
    - <u>Intermediate Performance Check</u>: A supplementary (i.e., unscheduled) performance check to maintain confidence in the accuracy of a piece of testing equipment or a reference material. Intermediate performance checks are not

NYC – OFFICE OF CHIEF MEDICAL EXAMINER	Page:	
Forensic Anthropology – Quality Manual	4 of 10	
Title: Equipment Management	Control No. Revision:	
	QM-004	7
Approved by: Forensic Anthropology Director	Effective Date: 5	April 2023

required to be recorded and are considered independent from periodic performance checks.

- 6.2 Per in hee Check Metric Tolerances: The accepted tolerances for FAU testing uipment are as follows:
  - Caliras =  $\pm 1$  millimeter
  - $R^*$  rs = 1 millimeter
  - teometric boards =  $\pm 1$  millimeter
  - Dig = 1 millimeter
  - Field ape measures =  $\pm 10$  millimeters
  - Caller kit to meas  $es = \pm 1$  millimeter
  - Milescope  $s = \pm 0.5$  m limeter
  - Mandibu meter length  $\pm 1$  millimeter
  - Mandibut meter angle =  $\pm 1$  tegree
  - Digital scale grap
  - BLK 360 Scanner = 4 0 Vilimeter at distances under 20 meters
  - EinScan Pro 2X 20  $J = \pm 1$  h. Viv. den
- 6.3 **Performance Check Kit:** The performance check kit is comprised of reference standards that are calibrated and traceable to NIST (National Institute of Standards and Technology) or International Systems of Units (SI). The reference standards in the FAU performance check kit includes, but is not limited to, rulers, standards steel sights (100 gram and 50 gram), tape measure, and a precision square. The performance checks.

Note: The FAU does not perform calibrations in-hous All a ference standards are externally calibrated at ILAC approved labs.

- 6.3.1 The QA Specialist shall maintain a spreadsheet of all Aference standards at the FAU performance check kit. The spreadsheet can be found at the Anthropology network drive. The following information shall be recorded:
  - Type or name of equipment.
  - Equipment serial number or unique identifying number.
  - Date of calibration and subsequent re-calibrations.
  - Identity of individual or company performing calibration/re-calibration.
- 6.3.2 **Storage and Maintenance**: The performance check kit shall be appropriately stored to avoid loss or damage to the reference standards. Additionally, the performance check kit shall be stored separately from the testing equipment in one of the secure anthropology laboratories.

NYC – OFFICE OF CHIEF MEDICAL EXAMINER	Page:	
Forensic Anthropology – Quality Manual	5 of 10	
Title: Equipment Management	Control No. Revision:	
	QM-004	7
Approved by: Forensic Anthropology Director	Effective Date: 5	April 2023

- 6.3.3 **Reference Standards Certificates**: All hardcopy certificates related to the traceability and calibration of reference standards are appropriately maintained in a designated folder and are scanned and uploaded to the Anthropology network of ve. The QA Specialist is responsible for maintaining calibration and traceability rtificates for all reference standards, where applicable.
- 6.3.4 Re-call rate in: When re-calibration of a reference standard is deemed necessary, the greence standard shall be sent to an external ISO/IEC 17025 accredited lab for callection.
- 6.3.5 **Replacement of the acce Standards**: Most of the reference standards used by the FA are expensive and can be replaced rather than re-calibrated, when needed. If no provided by the manufacturer, a Unique Identifying Number shall be assigned to be new reference standard (see ANTH-001: Evidence Security and Management) All document on related to replaced reference standards (i.e., certificates and the procedure cation numbers) shall be appropriately updated.
- 6.4 **Performance Check Records:** All interpreted periodic performance checks shall be recorded on a Performance Check Log shall. Any actronic documentation shall be saved on the Anthropology network drive. The following information shall be recorded:
  - Type or name of equipment.
  - Equipment serial number or unique identifying number.
  - Date of performance check.
  - Individual performing the performance ch
  - Results of performance check.
  - Reference standard used for performance check acluding unique identifying number, if applicable.
  - Additional notes about performance check, when apprinte.

## 7. Maintenance

The QA Specialist is responsible for completing scheduled prevence maintenance for appropriate testing equipment. The QA Specialist should be notified of uncheduled maintenance needs for malfunctioning or damaged items. The QA is responsible for contacting the appropriate service providers (when applicable) and completing all necessary documentation associated with maintenance.

7.1 **Preventive Maintenance**: Preventive maintenance shall be performed on the appropriate testing equipment, according to a set schedule based either on the manufacturer's recommendations or on the FAU's predetermined schedule. The QA Specialist is

NYC – OFFICE OF CHIEF MEDICAL EXAMINER	Page:	
Forensic Anthropology – Quality Manual	6 of 10	
Title: Equipment Management	Control No. Revision:	
	QM-004	7
Approved by: Forensic Anthropology Director	Effective Date: 5	April 2023

responsible for maintaining a database of all testing equipment that requires preventive maintenance. At a minimum, the following information shall be recorded:

- Serial number or Unique Identifying Number.
  - /pe or name of testing equipment.
- **Prequency** of preventive maintenance.
- 7.1.1 External Violars: If maintenance is performed by an external vendor the FAU will wintain a ppy of the maintenance records provided by the vendor (hardcopy electronic).
- 7.1.2 **Health and Safe Eq. timent:** Certain health and safety equipment (e.g., fume hoods) hall adergo and all maintenance to make sure they are functioning properly and afely.
- 7.1.3 **Computer Phyrams:** The Found shall periodically check for major updates for technical analysis computer begrams that are used during anthropological analyses (e.g., Fordisc).

Note: A list of the computer programs was by the FAU during anthropological analyses is located in the Equipment I of document on the Anthropology network drive.

7.2 **Corrective Maintenance**: When any testing equipment or carence materials fail to meet the performance check requirements, it shall be seen out prvice and labeled appropriately to avoid inadvertent use. Only after the item(s) we such ssfully passed a performance check may it be returned to service. Any complete corrective maintenance shall be recorded in the appropriate maintenance records.

If testing equipment, reference materials or reference standard are dame of or otherwise rendered unserviceable (e.g., stained, illegible, and/or presenting in unprofes onal appearance), the items shall be disposed of, and new ones ordered.

- 7.2.1 **Defective Equipment:** The QA Specialist will review all FAU casework that used defective equipment since the last performance check. Casework will be reviewed to determine if the defective equipment impacted the test results, and if so, the appropriate corrective action will be taken.
- 7.2.2 Replacement of Laboratory Equipment and Reference Materials: For testing equipment and reference materials that can be replaced, rather than undergo

NYC – OFFICE OF CHIEF MEDICAL EXAMINER	Page:	
Forensic Anthropology – Quality Manual	7 of 10	
Title: Equipment Management	Control No. Revision:	
	QM-004	7
Approved by: Forensic Anthropology Director	Effective Date: 5	April 2023

corrective maintenance, the equipment shall be removed from circulation and disposed of in an appropriate manner.

7.2.3 **Computer Software:** Any issues with computer software programs shall be referred to the OCME IT department or appropriate external vendor for support or placement.

## 8. Test g Equi del and Reference Materials

All stings stipment ad reference materials shall be stored in such a manner to prevent oss or change

## 8.1 **Testing Equip**ent

<u>Calipers</u>: Calipers are abject to a annual performance check, wherein a NIST certified ruler is used to theck the accuracy of the caliper's measurements.

<u>Mandibulometer</u>: The pandibulometer's subject to an annual performance check using the same process as described. Calify for length measurements and via a precision square for the angle measurement companient.

Osteometric Board: The osteometric boards are select to an annual performance check using the same process as the calipers

<u>Tape Measures</u>: Tape measures are subject to an a hual performance, wherein a NIST certified tape measure or a NIST certified ruler used to measurements.

Rulers: Rulers used in testing are subject to a one time and use" corded metric performance check prior to being released for general var. Ruler do not need periodic maintenance and/or performance checks.

<u>Digitizer</u>: The digitizer is subject to an annual performance check, where A a NIST collified ruler is used to check the accuracy of the digitizer's measurements at the same panner, the digitizer is subject to per-use performance checks when used to take measurements on casework.

<u>Microscope</u>: The FAU microscopes are maintained by the OCME's Pathology Department through an annual contract service, which includes necessary cleaning and maintenance. Microscopes in use are subject to an annual performance check. Additionally, prior to taking photographs and/or measurements, analysts shall ensure that the scale and magnification settings are accurate.

Forensic Anthropology – Quality Manual	8 of 10	
Title: Equipment Management	Control No. Revision:	
	QM-004	7
Approved by: Forensic Anthropology Director	Effective Date: 5	April 2023

<u>Digital Scales</u>: All analytical scales are electronically self-adjusting. The analyst may electronically adjust the scale at any time following the instructions outlined in the user's manual. The digital scales are subject to an annual performance check, wherein one of the Reference Standard weights (100 gram or 50 gram weight) is used to check the scales according

<u>Eh. Sc. Pro 2X 1920 Scanner (EinScan)</u>: The EinScan, 3D scanner is subject to an annual performance acces, wherein the calibration process is completed in the EinScan scanner soft are. To softwar program saves the most current calibration information which is always table, hen the program is open.

<u>Leica BLK360 Scanner (260)</u>: The BLK360 scanner is subject to an annual performance queck, referein a sun is created and measurements from the scan are compared to measurements taken them the reference standard tape measure.

### 8.2 Reference Material

<u>Casts</u>: Cast materials are <u>spected</u> an annual performance check to ensure that there is no visible damage.

<u>Photographic Scales</u>: Photographic scales are subject only to the "initial-use" performance check for general adequacy by the QA pecial prior general use. These materials do not need periodic maintenance or performance checks

Osteological Comparative Material: Osteological comparative material is subject to periodic performance check once per accreditation and. The reformance check will entail visual inspection of storage bags and boxes for damage, form lawling, or improper storage. The osteological comparative reference materials are grouped tax nomically and are not required to have unique identifying numbers.

### 9. Documentation

Performance checks, maintenance, and other records for testing expendent, reflected materials, and performance check kit reference standards shall be properly maintained by the QA Specialist. The following records shall be maintained with a most procedute information:

- Inventory of testing equipment, reference materials, and performance check kit reference standards.
- Calibration, maintenance, and performance check records (refer to sections 6 and 7 for more detail).

## 11. Revi on His y

R.V.	JÂl	SUMMARY OF CHANGES
0	1 Febr	New document.
1	18 October 2018	10: Added definitions for Measurement uncertainty and Measurement Una trainty" – adjusted the clause numbering to account for this addition thoughout the entire document.  5.0: Added a statement that an approved list of FAU testing equal to attempt the content of the Anthropology share we.  6.0: Added the following statement: "A performance check shall enter the Or Specialist, or designee comparing the measurements of the testing equipment to another instrument (reference standard) to ascertain if the measurements fall within an acceptable parameter (**).6.2).  6.2: Changed the clause to study specific accepted metric tolerances for all type of testing a specific accepted metric tolerances for all type of testing a specific accepted will be reviewed to determine if the defective equipments ince the last performance speck. Conswork will be reviewed to determine if the defective equipment since the last performance speck. Conswork will be reviewed to determine if the defective equipment acceptable acceptable acceptable acceptable. Replacement of Laboratory Equipment and Referent Materials and Computer Software shifted down to 7.2, and 26.5, respectively.  Changed section 10. to references and made revision history section 11.
2	12 February 2019	Minor correction: Clause 6.1 was incorrectly stated as 6. Updated the clause number.
3	28 February 2020	Updated the header effective date (previously was incorrected enter as 12 February 2018 instead of 2019). Also, minor editorial changes including corrected clause numbers under section 6.3.

NYC – OFFICE OF CHIEF MEDICAL EXAMINER	Page:	
Forensic Anthropology – Quality Manual	10 of 10	
Title: Equipment Management	Control No. Revision:	
	QM-004	7
Approved by: Forensic Anthropology Director	Effective Date: 5 April 2023	

REV.	DATE	SUMMARY OF CHANGES
4	1 March 2021	Removed the phrase "if possible" in the first sentence of clause 6.3.4.  Made several minor edits to the wording of clause 8.1 and updated the "Microscope" section to include a statement about annual performance checks.
	14 March 2022	Made minor editorial edits to the document and edited the last sentence in the microscope section for clause 8.1.
6	10 lay_022	Edited clause 6.3.1 by removing bullet point "Due date for replacement or re-calibration" and editing bullet point "Date of calibration" to "Date of calibration and subsequent re-calibrations.  Lited clause 6.3.4: re-calibration of reference standards now will be recheduled as needed and not required per accreditation cycl
7	5 April 2023	Created a rew clause 5.1 covering selection and approval of supplier or supplies relevant to the outcome of inspection activities.  Add a stement to clause 7.1.3 indicating that computer ograms in lists on the FAU Equipment Log.  Added metric prerance for the EinScan and BLK scanners.  Added the inScan of BLA scanner to clause 8.1.  Remove redund a stater ints under clause 8.1.  Made minor emorial charges throughout the document.
