All investment strategies have the potential for profit and loss.

Past performance is not a guide to future returns.

## Objective

To produce good long term performance by investing in a committed portfolio of international growth stocks constructed with little regard for the index

## Philosophy

To invest in well-managed businesses which enjoy sustainable competitive advantages, regardless of location or index weight. We do not indulge in short-term trading, and view our long holding periods as a key differentiator in an increasingly short-term marketplace. We conduct our research with a five-year time horizon and have a correspondingly low rate of portfolio turnover, around 20% per annum

## Process

We focus on bottom-up stock research and select companies based on fundamental factors. We are growth investors and invest in companies that have the potential to grow substantially more quickly than the market
