# Chapter 2:

# **Procedural and Analytical Framework**

# A. INTRODUCTION

The proposed project, as described in Chapter 1, "Project Description," would allow the project sponsor to develop the 15 Penn Plaza project site with a commercial office building above a podium base suitable for trading uses, thereby attracting a major corporate tenant or multiple commercial office tenants and accommodating Manhattan's long-term growth. This chapter provides an overview of the environmental review process and a description of the analytical framework used to guide the technical analyses presented in subsequent chapters of this Environmental Impact Statement (EIS).

# **B. ENVIRONMENTAL REVIEW PROCESS**

All state, county, and local government agencies in New York, except the State Legislature and the courts, must comply with the State Environmental Quality Review Act (SEQRA). The City of New York established City Environmental Quality Review (CEQR) regulations in accordance with SEQRA. This <u>Final</u> EIS (FEIS) has been prepared in accordance with the guidelines set forth in the *CEQR Technical Manual*, where applicable. The environmental review process allows decision-makers to systematically consider the environmental effects of a proposed action, to evaluate reasonable alternatives, and to identify measures to mitigate significant adverse environmental effects. The process also facilitates public involvement in the process by providing the opportunity for public comment on the DEIS. The environmental review process is outlined below.

- **Establishing a Lead Agency.** Under CEQR, the "lead agency" is the public entity responsible for conducting the environmental review. Usually, the lead agency is also the entity primarily responsible for carrying out, funding, or approving a proposed action. For the proposed project, the lead agency is the New York City Department of City Planning (DCP).
- **Determination of Significance.** The lead agency's first charge is to determine whether a proposed action might have a significant adverse impact on the environment. To make this determination, an Environmental Assessment Statement (EAS) was prepared. Based on the information contained in the EAS, the lead agency determined that the proposed project could have the potential to result in significant adverse environmental impacts and issued a Positive Declaration on December 19, 2008, initiating the preparation of an EIS.
- Scoping. "Scoping," or creating the scope of work, focuses the environmental impact analyses on the key issues to be studied. In addition to the Positive Declaration, the lead agency issued a Draft Scope of Work for the EIS on December 19, 2008. A public scoping meeting was held for the proposed project on January 27, 2009 at DCP's Specter Hall, 22 Reade Street, New York. Written comments were accepted through February 11, 2009, and a Final Scope of Work, reflecting comments made during scoping, was issued on February 5, 2010.

#### **15 Penn Plaza FEIS**

- **Draft Environmental Impact Statement (DEIS).** The DEIS, prepared in accordance with the Final Scope of Work, is a comprehensive document that systematically considers the expected environmental effects of a proposed action, evaluates reasonable alternatives, and identifies feasible mitigation measures that, to the maximum extent practicable, address the significant adverse environmental impacts of the proposed action. The lead agency reviewed all aspects of the DEIS to determine its adequacy and adherence to the work effort outlined in the Final Scope of Work. Once the lead agency was satisfied that the DEIS was complete for the purposes of public review and comment, it issued a Notice of Completion and circulated the DEIS for review among government agencies and the general public. Circulation of the DEIS marks the beginning of a public review period, during which time a public hearing will be held to solicit comments on the DEIS. <u>The DEIS was certified as complete on February 5, 2010.</u>
- Public Review. Publication of the DEIS and issuance of the Notice of Completion signal the beginning of the public review period. During this time, which must extend for a minimum of 30 days, the public may review and comment on the DEIS, either in writing or at a public hearing convened for the purpose of receiving such comments. When the CEQR process is coordinated with another City process that requires a public hearing, such as Uniform Land Use Review Procedure (ULURP), the hearings may be held jointly. The lead agency must publish a notice of the hearing at least 14 days before it takes place and must accept written comments for at least 10 days following the close of the hearing. All substantive comments received on the DEIS, at the hearing, or during the comment period become part of the CEQR record and will be summarized and responded to in the Final EIS (FEIS). A public hearing on the DEIS was held by the New York City Planning Commission (CPC) at 22 Reade Street on May 26, 2010, and written comments were received during the public comment period, which closed on June 7, 2010. Chapter 28 of this FEIS, "Response to Comments on the Draft Scope of Work and DEIS," summarizes and responds to substantive comments made on the DEIS. Response to comments on the Draft Scope of Work is also included Chapter 28 of this FEIS.
- Final Environmental Impact Statement (FEIS). <u>After</u> the <u>close of the</u> public comment period <u>on</u> the DEIS, an FEIS <u>was</u> prepared. This document includes a summary of, and response to, each substantive comment made about the DEIS. <u>The Notice of Completion for</u> <u>this FEIS was issued on July 2, 2010.</u>
- Statement of Findings. To demonstrate that the responsible public decision-makers have taken a hard look at the environmental consequences of a proposed action, any agency taking a discretionary action regarding an action must adopt a formal set of written findings, reflecting its conclusions about the significant adverse environmental impacts, potential alternatives, and potential mitigation measures. The findings may not be adopted until 10 days after the Notice of Completion has been issued for the FEIS. Once findings are adopted, the lead and involved agencies may take their actions (or take "no action").

#### COORDINATION WITH OTHER REVIEW PROCESSES

The CEQR environmental process is intended to provide decision-makers with an understanding of the environmental consequences of actions undertaken by an agency. Often, the environmental review process is integrated and coordinated with other decision-making processes utilized by government agencies. For the proposed 15 Penn Plaza project, the one key public process essential in implementing the project is ULURP. The City's ULURP, mandated by Sections 197-c and 197-d of the City Charter, requires the City Planning Commission (CPC) to review applications affecting the land use of the city. ULURP is a standardized procedure for the review of applications affecting land use by the CPC and the public.

# SUMMARY OF ACTIONS SUBJECT TO ULURP

Sections 197-c and 197-d of the City Charter set forth the specific land use actions by the CPC that are subject to ULURP. For the 15 Penn Plaza project, the following of the proposed actions described in Chapter 1, "Project Description," are subject to ULURP:

- Zoning Map Amendment. Zoning map amendment to rezone C6-4.5 (MiD) zoning district to C6-6 (MiD) zoning district.
- Special Permits. Special permit to ZR Sections 81-066 and 81-254 to modify bulk regulations and Mandatory District Plan Elements (e.g., pedestrian circulation space, streetwall continuity, retail continuity, and location of a major building entrance). Special permit pursuant to Sections 81-541 and 74-634 of the Zoning Resolution for a floor area bonus of up to 20 percent of the basic maximum floor area ratio permitted on the zoning lot in exchange for a Subway Station and Rail Mass Transit Facility Improvement.

The zoning text amendments described in Chapter 1, "Project Description," are not subject to ULURP but are subject to the same public review process. Although applications for zoning text amendments are not subject to the ULURP time period, the proposed zoning text amendment will be reviewed concurrently with the actions subject to ULURP.

## PUBLIC REVIEW UNDER ULURP

ULURP is a process specially designed to allow public review of a proposed action at four levels: the Community Board, the Borough President, and (if applicable) Borough Board, the City Planning Commission, and the City Council. The procedure sets time limits for review at each stage to ensure a maximum total review period of approximately seven months. For a zoning text amendment, a non-ULURP public review process does not have any time limits associated with it. However, it is expected that the non-ULURP text amendment would move through this process simultaneously with the ULURP zoning map amendment.

The ULURP process begins with a certification by CPC that the ULURP application is complete. If the particular application is subject to environmental review (see above), a Negative Declaration, Conditional Negative Declaration, or a Notice of Completion of a DEIS must be issued before an application can be certified.

The application is then forwarded to the Community Board (Manhattan Community Board 5 for the proposed project), which has 60 days in which to review and discuss the proposal, hold public hearings, and adopt recommendations regarding the application. Once this step is complete, the Borough President reviews the application for up to 30 days.

CPC must hold a public hearing and approve, approve with modifications, or disapprove the application within 60 days of the expiration of the Borough President's review period. For projects for which a Draft Environmental Impact Statement has been prepared, the public hearing is a joint ULURP/CEQR public hearing (the record for commenting remains open for 10 days after the hearing to receive written comments). <u>A public hearing on the DEIS was held by CPC at 22</u>

<u>Reade Street on May 26, 2010.</u> Comments made at the DEIS public hearing are incorporated into an FEIS; the FEIS must be completed at least 10 days before CPC makes its decision on the application. CPC may approve, approve with modifications, or deny the application.

The next step in the ULURP process is review by the City Council. The City Council does not automatically review all ULURP actions that are approved by CPC. Zoning map changes and zoning text changes (not subject to ULURP) must be reviewed by City Council; the Council may elect to review certain other actions. The City Council has 50 days to review the application and during this time must hold a public hearing on the action and approve, approve with modifications, or deny the application. If the Council proposes a modification to the proposed action, the ULURP review process stops for 15 days, providing time for a CPC determination on whether the modification is within the scope of the environmental review and ULURP review. If it is, then the Council may proceed with the modification; if not, then the Council may only vote on the action as approved by CPC. Following the Council's vote, the Mayor has 5 days in which to veto the Council's action. The City Council may override the mayoral veto within 10 days.

# C. FRAMEWORK FOR ENVIRONMENTAL ANALYSES

## SCOPE OF ENVIRONMENTAL ANALYSES

As set forth in the Positive Declaration, the lead agency has determined that the 15 Penn Plaza project may result in one or more significant adverse environmental impacts and, thus, preparation of this EIS is required. In general, this document uses methodologies and follows the guidelines set forth in the 2001 *CEQR Technical Manual*, where applicable. Subsequent to the publication of the DEIS, the City released the 2010 *City Environmental Quality Review (CEQR) Technical Manual* (May 17, 2010), which updates the methodologies and criteria set forth in the 2001 *CEQR Technical Manual*. The analyses within this FEIS have been assessed in accordance with the 2001 *CEQR Technical Manual*, except for those technical areas where the 2010 CEQR methodologies would result in potentially more conservative project-related impacts. In particular, the air quality analysis has been revised to include an assessment of mobile source PM<sub>2.5</sub> emissions pursuant to the 2010 CEQR methodologies.

As detailed in the Final Scope of Work, a number of analysis areas have been screened during scoping, as follows.

## COMMUNITY FACILITIES AND SERVICES

The *CEQR Technical Manual* defines community facilities as public or publicly funded facilities, including schools, health care, day care, libraries, and fire and police protection services. Direct effects may occur when a proposed project physically alters or displaces a community facility. Indirect effect may result from increases in population that place additional demands on community facility service delivery.

The *CEQR Technical Manual* provides thresholds that can help make an initial determination of whether a detailed analysis is necessary to determine potential impacts. The proposed project would not directly affect a community facility, nor would it introduce a residential population; <u>as such, it would not exceed any of the thresholds requiring a detailed analysis of community facilities.</u> Therefore, an analysis of community facilities was not warranted.

## WATERFRONT REVITALIZATION PROGRAM

Actions that are located within the designated boundaries of New York City's Coastal Zone are subject to an assessment for consistency with the City's Local Waterfront Revitalization Program (WRP). The WRP includes several policy objectives that prioritize the development of water-dependent and water-enhancing uses on Coastal Zone properties, mandate public access to the waterfront, offer construction guidelines for flood zones, and address the maintenance of water quality. The development site is not located within the Coastal Zone. Therefore, the proposed project does not need to be evaluated for consistency with the WRP.

# ANALYSIS YEAR

## **OPERATIONAL ANALYSIS**

An EIS analyzes the effects of a proposed action on its environmental setting. Since development pursuant to the proposed actions, if approved, would take place in the future, the environmental setting is not the current environment but the environment as it would exist at the completion of the proposed project in the future. Therefore, future conditions must be projected. This prediction is made for a particular year, generally known as the "analysis year" or the "Build year," which is the year when a proposed action would be substantially operational. It is assumed that the proposed 15 Penn Plaza project would be completed by 2014. Thus, 2014 has been selected as the analysis year for the proposed actions. Conditions in the future with the proposed project have been evaluated against the No Action condition for this analysis year.

## CONSTRUCTION ANALYSIS

The proposed project would be constructed over an approximately four-year construction period, which would include demolition of the existing hotel on the development site and construction of the proposed building. The subway improvements would also be constructed within this timeframe.

The EIS examines construction activities over the anticipated construction schedule.

## **DEFINITION OF STUDY AREAS**

For each technical area in which impacts may occur, a study area is defined for analysis. This is the geographic area likely to be affected by the proposed actions for a given technical area, or the area in which impacts of that type could occur. Appropriate study areas differ depending on the type of impact being analyzed. For most technical areas, a <sup>1</sup>/<sub>2</sub>-mile study area is used in this EIS. For certain analyses, such as traffic, it is appropriate to use primary and secondary study areas. The methods and study areas for addressing impacts are discussed in the individual technical analyses sections.

## **DEFINING BASELINE CONDITIONS**

## EXISTING CONDITIONS

This EIS provides a description of "existing conditions" for 2008 and assessments of future conditions without the proposed development ("No Action condition") and with the proposed development ("the future with the proposed project"). The assessment of existing conditions establishes a baseline—not against which the proposed development is measured, but from which future conditions can be projected. The prediction of future conditions begins with an assessment of existing conditions because these can be measured and observed. Generally, existing conditions are evaluated for the

#### **15 Penn Plaza FEIS**

study areas and time periods most likely to be affected by the proposed project. For example, the existing traffic conditions are analyzed during the time periods when the greatest numbers of new vehicular, pedestrian, and transit trips to and from the project site are projected to occur.

#### DEFINITION OF FUTURE WITHOUT THE PROPOSED PROJECT

Using the existing conditions as a baseline, conditions expected in the future without the proposed project are then evaluated. This is done taking into consideration changes that are known or expected to be in place by the future analysis year (in this case, 2014), independent of the proposed actions. The future without the proposed project (the "No Action" condition) is the baseline condition against which the effects of the proposed actions can be measured.

This EIS analyzes and incorporates other projects expected to be completed that would affect conditions in any of the relevant study areas in 2014. The future baseline in all technical chapters—the No Action condition—assumes that none of the proposed discretionary approvals would be adopted. Development in the No Action condition would be limited to those projects that are developed independently of the proposed actions.

#### Development Site

As described in Chapter 1, "Project Description," if the proposed actions are not approved, the project sponsor will develop the 15 Penn Plaza site with a No Action building. The No Action building will consist of approximately 1.6 million gross square feet (gsf) (1.15 million zoning square feet [zsf]) of which approximately 1.3 million gsf will be office use, 40,600 gsf will be retail use, 202,000 gsf will be mechanical space, and 35,438 gsf will be lobby area and amenity space. Accessory parking for up to 100 vehicles would be located below grade.

#### Study Area and Known Developments

Future development projects that have been announced, are in an approval process, or are under construction and proposals for rezoning and public policy initiatives likely to be built <u>or implemented</u> by 2014 without the proposed actions, are presented in **Tables 2-1 and 2-2** and shown in **Figure 2-1**. The EIS analyzes the cumulative impacts of other projects expected to be complete by 2014 that will affect conditions in any of the relevant study areas.

As noted above, different study areas are used for different analyses (see "Definition of Study Areas" above); for each analysis, those development projects and future initiatives that fall within the respective study area were assumed as part of the future no action condition. Each chapter includes a discussion of the future conditions assumed for that analysis. The analyses of the No Action condition for some technical areas, such as traffic, add a background growth factor as a further conservative measure to account for a general increase in activity unrelated to known projects in addition to anticipated future projects.

## DEFINING THE ACTION FOR ENVIRONMENTAL ANALYSIS

In considering the potential environmental impacts of the proposed actions, this EIS analyzes either of the two building programs as defined in Chapter 1, "Project Description,"—the Single-Tenant Office Scenario or the Multi-Tenant Office Scenario—depending on which scenario would result in the greater potential impact. For example, the scenario that would result in the highest employment is analyzed for its effect on open space ratios. Where appropriate (e.g., shadows), the EIS assesses the potential for impacts associated with each scenario. As stated in Chapter 1, "Project Description," in the Multi-Tenant Office Scenario, up to 211,941 sf of this

	o the o	completion of these projects.		

In addition, because the land use actions for the proposed project would involve amendments to the New York City Zoning Resolution that could affect more than just the project site, a conceptual analysis of the impacts of the amendments is provided in Chapter 27, "Conceptual Analysis of the Proposed Text Amendment." This analysis identifies other sites that could benefit enough from the amendments to induce development or redevelopment that might not otherwise have occurred, and presents a generic impact analysis of such development.

#### MITIGATION

CEQR requires that any significant adverse impacts identified in the EIS be minimized or avoided to the fullest extent practicable. In the DEIS, options for mitigation <u>were</u> presented for public review and discussion, without the lead agency having selected those that will be implemented. Where no practicable mitigation is available, the EIS must disclose the potential for unmitigated significant adverse impacts.

Where significant adverse impacts from the proposed project have been identified in this FEIS, specific mitigation measures to minimize or eliminate the significant adverse impacts have been defined and evaluated. Where necessary, measures to further mitigate significant adverse impacts were refined and evaluated between the DEIS and FEIS. This FEIS includes a description of all practicable mitigation measures to be implemented with the proposed project in Chapter 22, "Mitigation."

#### ALTERNATIVES

CEQR and SEQRA require that a description and evaluation of the range of reasonable alternatives to the action be included in an EIS at a level of detail sufficient to allow a comparative assessment of the alternatives to a proposed action. Alternatives and the rationale behind their selection are important in the disclosure of environmental effects of a proposed action. Alternatives provide options to the proposed action and a framework for comparison of potential impacts and project objectives. If the environmental assessment and consideration of alternatives identify a feasible alternative that eliminates or minimizes adverse impacts while substantially meeting the project goals and objectives, the lead agency considers whether to adopt that alternative as the proposed action.

CEQR/SEQRA requires consideration of a "no action alternative," which evaluates environmental conditions that are likely to occur in the No Action condition. The No Action Alternative is analyzed throughout the EIS as the future without the proposed project. In addition to the No Action Alternative, the EIS considers an alternative that reduces or avoids significant impacts and an alternative that assesses the feasibility of on-site distributed power systems. The EIS also considers an alternative that assesses a different mix of uses on the development site—the Hotel-Residential Alternative. Because this alternative contains a different mix of uses than the proposed project, certain analysis areas that were screened during scoping for the proposed project (see above) warrant analysis for this alternative (e.g., community facilities) and are therefore provided in Chapter 24, "Alternatives."
