ENVIRONMENTAL ASSESSMENT STATEMENT (EAS) AND SUPPLEMENTAL STUDIES TO THE EAS

Lead Agency:

Department of City Planning 120 Broadway, 31St Floor New York, NY 10271

Prepared for: EMP Capital Group

Prepared by:

Equity Environmental Engineering 500 International Drive, Suite 150 Mount Olive, NJ 07828

June 26, 2020

Grand Avenue and Pacific Street Rezoning

Crown Heights, Brooklyn NY
Block 1125, Lot 1; Block 1133, Lots 7,
10, 11, 12 and part of 13
Brooklyn Community District 8

979 Pacific Street Brooklyn, New York 10027

CEQR Reference No: 19DCP114K

Following certification of the Grand Avenue and Pacific Street Rezoning, the proposed actions were modified by the City Council, changing a portion of the project area from an R7D/C2-4 district to an R7A/C2-4 district and changing the MIH options by removing Option 2, leaving only Option 1. This revised EAS incorporates a revised Negative Declaration and a memorandum describing a modification to the proposed actions and confirming that the conclusions and analysis reflected in the September 2019 EAS have not changed based on the modification. This revised EAS supersedes the EAS issued in September 2019.

TABLE OF CONTENTS

1.0	PROPOSED ACTION	1
1.1	Introduction	1
1.2	Background	1
1.3	Description of Surrounding Area	2
1.4	Description of Affected Area	3
1.5	Description of the Development Site	4

5. Project Description						
The applicant seeks to develop t	he site comprised	of Block 1125,	Lot 1, located at the	northeast corner of Grand Avenue		
and Pacific Street in the Crown H	leights neighborh	ood of Brooklyı	n Community District	8. The site is a vacant corner lot		
that occupies approximately 10,	000 square feet o	f lot area and is	zoned M1-1. The ap	plicant is seeking to rezone a		
portion of Block 1125, encompa	ssing the project s	site, and Depart	ment City Planning s	eeks to include under this rezoning		
an area that is to include a portion	on of Block 1133,	comprising Lots	s 7, 10, 11, and 12, ar	nd part of Lot 13, which is located		
				erlay. In its entirety, the proposed		
rezoning area would comprise a	• • • •		•			
construct a new 9-story building	on Lot 1 with app	proximately 64	dwelling units and 8,4	400 zsf of retail.

EAS SHORT FORM PAGE 3

average household size of 2.13 persons, and two retail employees per 1,000 square feet.					
Does the proposed project create new open space? YES NO If "yes," specify size of project-created open space: sq. ft.					
Has a No-Action scenario been defined for this project that differs from the existing condition? YES NO					
If "yes," see Chapter 2, "Establishing the Analysis Framework" and describe briefly:					
9. Analysis Year CEQR Technical Manual Chapter 2					
ANTICIPATED BUILD YEAR (date the project would be completed and operational): 2024					
ANTICIPATED PERIOD OF CONSTRUCTION IN MONTHS: 18-24					
WOULD THE PROJECT BE IMPLEMENTED IN A SINGLE PHASE? YES NO IF MULTIPLE PHASES, HOW MANY?					
BRIEFLY DESCRIBE PHASES AND CONSTRUCTION SCHEDULE: Assuming standard ULURP process, 18-24 month construction					
schedule for the project site, and an additional 2 years for the projected development site construction.					
10. Predominant Land Use in the Vicinity of the Project (check all that apply)					
RESIDENTIAL MANUFACTURING COMMERCIAL PARK/FOREST/OPEN SPACE OTHER, specify:					

Part II: TECHNICAL ANALYSIS

INSTRUCTIONS: For each of the analysis categories listed in this section, assess the proposed project's impacts based on the thresholds and criteria presented in the CEQR Technical Manual. Check each box that applies.

- If the proposed project can be demonstrated not to meet or exceed the threshold, check the "no" box.
- If the proposed project will meet or exceed the threshold, or if this cannot be determined, check the "yes" box.
- For each "yes" response, provide additional analyses (and, if needed, attach supporting information) based on guidance in the CEQR Technical Manual to determine whether the potential for significant impacts exists. Please note that a "yes" answer does not mean that an EIS must be prepared—it means that more information may be required for the lead agency to make a determination of significance.
- The lead agency, upon reviewing Part II, may require an applicant to provide additional information to support the Short EAS Form. For example, if a question is answered "no," an agency may request a short explanation for this response.

	YES	NO
1. LAND USE, ZONING, AND PUBLIC POLICY: CEQR Technical Manual Chapter 4		
(a) Would the proposed project result in a change in land use different from surrounding land uses?		
(b) Would the proposed project result in a change in zoning different from surrounding zoning?	\boxtimes	
(c) Is there the potential to affect an applicable public policy?		\boxtimes
(d) If "yes," to (a), (b), and/or (c), complete a preliminary assessment and attach.		
(e) Is the project a large, publicly sponsored project?		\boxtimes
o If "yes," complete a PlaNYC assessment and attach.		
(f) Is any part of the directly affected area within the City's Waterfront Revitalization Program boundaries?		\boxtimes
o If "yes," complete the Consistency Assessment Form.		
2. SOCIOECONOMIC CONDITIONS: CEQR Technical Manual Chapter 5		
(a) Would the proposed project:		
Generate a net increase of 200 or more residential units?		\boxtimes
 Generate a net increase of 200,000 or more square feet of commercial space? 		\boxtimes
Directly displace more than 500 residents?		\boxtimes
Directly displace more than 100 employees?		\boxtimes
Affect conditions in a specific industry?		\boxtimes
3. COMMUNITY FACILITIES: CEQR Technical Manual Chapter 6		
(a) Direct Effects		
 Would the project directly eliminate, displace, or alter public or publicly funded community facilities such as educational facilities, libraries, hospitals and other health care facilities, day care centers, police stations, or fire stations? 		\boxtimes
(b) Indirect Effects		
 Child Care Centers: Would the project result in 20 or more eligible children under age 6, based on the number of low or low/moderate income residential units? (See Table 6-1 in <u>Chapter 6</u>) 		\boxtimes
 Libraries: Would the project result in a 5 percent or more increase in the ratio of residential units to library branches? (See Table 6-1 in <u>Chapter 6</u>) 		\boxtimes
 Public Schools: Would the project result in 50 or more elementary or middle school students, or 150 or more high school students based on number of residential units? (See Table 6-1 in <u>Chapter 6</u>) 		
 Health Care Facilities and Fire/Police Protection: Would the project result in the introduction of a sizeable new neighborhood? 		\boxtimes
4. OPEN SPACE: CEQR Technical Manual Chapter 7		
(a) Would the proposed project change or eliminate existing open space?		\boxtimes
(b) Is the project located within an under-served area in the Bronx, Brooklyn, Manhattan, Queens, or Staten Island?		
o If "yes," would the proposed project generate more than 50 additional residents or 125 additional employees?	\boxtimes	
(c) Is the project located within a well-served area in the Bronx, Brooklyn, Manhattan, Queens, or Staten Island?		\boxtimes
o If "yes," would the proposed project generate more than 350 additional residents or 750 additional employees?		
(d) If the project in located an area that is neither under-served nor well-served, would it generate more than 200 additional residents or 500 additional employees?		\boxtimes

	YES	NO
5. SHADOWS: CEQR Technical Manual Chapter 8		
(a) Would the proposed project result in a net height increase of any structure of 50 feet or more?		П
(b) Would the proposed project result in any increase in structure height and be located adjacent to or across the street from a		
sunlight-sensitive resource? 6. HISTORIC AND CHITHRAL RESOURCES: CEOR Technical Manual Chapter 0		
6. HISTORIC AND CULTURAL RESOURCES: CEQR Technical Manual Chapter 9		
(a) Does the proposed project site or an adjacent site contain any architectural and/or archaeological resource that is eligible		
for or has been designated (or is calendared for consideration) as a New York City Landmark, Interior Landmark or Scenic Landmark; that is listed or eligible for listing on the New York State or National Register of Historic Places; or that is within a		
designated or eligible New York City, New York State or National Register Historic District? (See the GIS System for		
Archaeology and National Register to confirm)		
(b) Would the proposed project involve construction resulting in in-ground disturbance to an area not previously excavated?		\boxtimes
(c) If "yes" to either of the above, list any identified architectural and/or archaeological resources and attach supporting informat	ion on	
whether the proposed project would potentially affect any architectural or archeological resources.		
7. URBAN DESIGN AND VISUAL RESOURCES: CEQR Technical Manual Chapter 10		
(a) Would the proposed project introduce a new building, a new building height, or result in any substantial physical alteration		
to the streetscape or public space in the vicinity of the proposed project that is not currently allowed by existing zoning?		ΙШ
(b) Would the proposed project result in obstruction of publicly accessible views to visual resources not currently allowed by		\boxtimes
existing zoning?		
8. NATURAL RESOURCES: CEQR Technical Manual Chapter 11		1
(a) Does the proposed project site or a site adjacent to the project contain natural resources as defined in Section 100 of		\boxtimes
Chapter 11?		
o If "yes," list the resources and attach supporting information on whether the proposed project would affect any of these re	sources.	
(b) Is any part of the directly affected area within the <u>Jamaica Bay Watershed</u> ?		
 If "yes," complete the <u>Jamaica Bay Watershed Form</u>, and submit according to its <u>instructions</u>. 		
9. HAZARDOUS MATERIALS: CEQR Technical Manual Chapter 12		
(a) Would the proposed project allow commercial or residential uses in an area that is currently, or was historically, a	\boxtimes	ПП
manufacturing area that involved hazardous materials?		Ш
(b) Does the proposed project site have existing institutional controls (e.g., (E) designation or Restrictive Declaration) relating to		\boxtimes
hazardous materials that preclude the potential for significant adverse impacts? (c) Would the project require soil disturbance in a manufacturing area or any development on or near a manufacturing area or		
existing/historic facilities listed in Appendix 1 (including nonconforming uses)?		
(d) Would the project result in the development of a site where there is reason to suspect the presence of hazardous materials,		
contamination, illegal dumping or fill, or fill material of unknown origin?		
(e) Would the project result in development on or near a site that has or had underground and/or aboveground storage tanks		
(e.g., gas stations, oil storage facilities, heating oil storage)?		
(f) Would the project result in renovation of interior existing space on a site with the potential for compromised air quality; vapor intrusion from either on-site or off-site sources; or the presence of asbestos, PCBs, mercury or lead-based paint?		\boxtimes
(g) Would the project result in development on or near a site with potential hazardous materials issues such as government-		
listed voluntary cleanup/brownfield site, current or former power generation/transmission facilities, coal gasification or gas		\boxtimes
storage sites, railroad tracks or rights-of-way, or municipal incinerators?		
(h) Has a Phase I Environmental Site Assessment been performed for the site?	\boxtimes	
If "yes," were Recognized Environmental Conditions (RECs) identified? Briefly identify:		X
10. WATER AND SEWER INFRASTRUCTURE: CEQR Technical Manual Chapter 13		
(a) Would the project result in water demand of more than one million gallons per day?		
(b) If the proposed project located in a combined sewer area, would it result in at least 1,000 residential units or 250,000		
square feet or more of commercial space in Manhattan, or at least 400 residential units or 150,000 square feet or more of		\boxtimes
commercial space in the Bronx, Brooklyn, Staten Island, or Queens?	<u> </u>	
(c) If the proposed project located in a <u>separately sewered area</u> , would it result in the same or greater development than the		\boxtimes
amounts listed in Table 13-1 in Chapter 13 ? (d) Would the proposed project involve development on a site that is 5 acres or larger where the amount of impervious surface		$\vdash \equiv$
would increase?		
(e) If the project is located within the <u>Jamaica Bay Watershed</u> or in certain <u>specific drainage areas</u> , including Bronx River, Coney		
Island Creek, Flushing Bay and Creek, Gowanus Canal, Hutchinson River, Newtown Creek, or Westchester Creek, would it		
involve development on a site that is 1 acre or larger where the amount of impervious surface would increase?	ı	1

	ΥE	S	NO
(f) Would the proposed project be located in an area that is partially sewered or currently unsewered?			\boxtimes
(g) Is the project proposing an industrial facility or activity that would contribute industrial discharges to a Wastewater Treatment Plant and/or generate contaminated stormwater in a separate storm sewer system?]	
(h) Would the project involve construction of a new stormwater outfall that requires federal and/or state permits?			\boxtimes
11. SOLID WASTE AND SANITATION SERVICES: CEQR Technical Manual Chapter 14		•	
(a) Using Table 14-1 in Chapter 14, the project's projected operational solid waste generation is estimated to be (pounds per wee	≥k): 7	7,31	L6 =
(277 residents X 17 pounds per week) + (33 employees X 79 pounds per week)			
 Would the proposed project have the potential to generate 100,000 pounds (50 tons) or more of solid waste per week? 			\boxtimes
(b) Would the proposed project involve a reduction in capacity at a solid waste management facility used for refuse or recyclables generated within the City?]	
12. ENERGY: CEQR Technical Manual Chapter 15			
(a) Using energy modeling or Table 15-1 in <u>Chapter 15</u> , the project's projected energy use is estimated to be (annual BTUs): 14,9 (216.3 commercial X 16,507) + (126.7 large residential X 89,540) 3,570,464.1) 15,	182	2.1 =
(b) Would the proposed project affect the transmission or generation of energy?			\boxtimes
13. TRANSPORTATION: CEQR Technical Manual Chapter 16			
(a) Would the proposed project exceed any threshold identified in Table 16-1 in Chapter 16?	\triangleright	1	
(b) If "yes," conduct the screening analyses, attach appropriate back up data as needed for each stage and answer the following q	uesti	ons:	
Would the proposed project result in 50 or more Passenger Car Equivalents (PCEs) per project peak hour?			\boxtimes
If "yes," would the proposed project result in 50 or more vehicle trips per project peak hour at any given intersection? **It should be noted that the lead agency may require further analysis of intersections of concern even when a project generates fewer than 50 vehicles in the peak hour. See Subsection 313 of Chapter 16 for more information.			
Would the proposed project result in more than 200 subway/rail or bus trips per project peak hour?			\boxtimes
If "yes," would the proposed project result, per project peak hour, in 50 or more bus trips on a single line (in one direction) or 200 subway trips per station or line?]	
Would the proposed project result in more than 200 pedestrian trips per project peak hour?	\geq		
If "yes," would the proposed project result in more than 200 pedestrian trips per project peak hour to any given pedestrian or transit element, crosswalk, subway stair, or bus stop?]	\boxtimes
14. AIR QUALITY: CEQR Technical Manual Chapter 17			
(a) Mobile Sources: Would the proposed project result in the conditions outlined in Section 210 in Chapter 17?			\boxtimes
(b) Stationary Sources: Would the proposed project result in the conditions outlined in Section 220 in Chapter 17?	\boxtimes		
 If "yes," would the proposed project exceed the thresholds in Figure 17-3, Stationary Source Screen Graph in <u>Chapter 17</u>? (Attach graph as needed) see attached 			\boxtimes
(c) Does the proposed project involve multiple buildings on the project site?			\boxtimes
(d) Does the proposed project require federal approvals, support, licensing, or permits subject to conformity requirements?			\boxtimes
(e) Does the proposed project site have existing institutional controls (<i>e.g.</i> , (E) designation or Restrictive Declaration) relating to air quality that preclude the potential for significant adverse impacts?]	\boxtimes
15. GREENHOUSE GAS EMISSIONS: CEQR Technical Manual Chapter 18			
(a) Is the proposed project a city capital project or a power generation plant?			\boxtimes
(b) Would the proposed project fundamentally change the City's solid waste management system?			\boxtimes
(c) If "yes" to any of the above, would the project require a GHG emissions assessment based on the guidance in Chapter 18?			
16. NOISE: CEQR Technical Manual Chapter 19			
(a) Would the proposed project generate or reroute vehicular traffic?]	\boxtimes
(b) Would the proposed project introduce new or additional receptors (see Section 124 in <u>Chapter 19</u>) near heavily trafficked roadways, within one horizontal mile of an existing or proposed flight path, or within 1,500 feet of an existing or proposed rail line with a direct line of site to that rail line?	\boxtimes		
(c) Would the proposed project cause a stationary noise source to operate within 1,500 feet of a receptor with a direct line of sight to that receptor or introduce receptors into an area with high ambient stationary noise?]	\boxtimes
(d) Does the proposed project site have existing institutional controls (e.g., (E) designation or Restrictive Declaration) relating to noise that preclude the potential for significant adverse impacts?]	\boxtimes

	YE	S I	NO	
17. PUBLIC HEALTH: CEQR Technical Manual Chapter 20	·			
(a) Based upon the analyses conducted, do any of the following technical areas requir Hazardous Materials; Noise?	e a detailed analysis: Air Quality;			
(b) If "yes," explain why an assessment of public health is or is not warranted based of	-		а	
preliminary analysis, if necessary. No impacts were identified to any of the	ne component elements of Public Health	١.		
18. NEIGHBORHOOD CHARACTER: CEQR Technical Manual Chapter 21				
(a) Based upon the analyses conducted, do any of the following technical areas require and Public Policy; Socioeconomic Conditions; Open Space; Historic and Cultural Res Resources; Shadows; Transportation; Noise?				
(b) If "yes," explain why an assessment of neighborhood character is or is not warran	ted based on the guidance in Chapter 21, "Neigh	borho	od	
Character." Attach a preliminary analysis, if necessary. No significant impact	s would occur to any of the component			
elements of Neighborhood Character.				
19. CONSTRUCTION: CEQR Technical Manual Chapter 22				
(a) Would the project's construction activities involve:				
Construction activities lasting longer than two years?			\boxtimes	
 Construction activities within a Central Business District or along an arterial high 	nway or major thoroughfare?			
 Closing, narrowing, or otherwise impeding traffic, transit, or pedestrian elementroutes, sidewalks, crosswalks, corners, etc.)? 				
 Construction of multiple buildings where there is a potential for on-site recepto build-out? 	rs on buildings completed before the final			
$\circ\hspace{0.1cm}$ The operation of several pieces of diesel equipment in a single location at peak	construction?		\boxtimes	
 Closure of a community facility or disruption in its services? 				
Activities within 400 feet of a historic or cultural resource?				
o Disturbance of a site containing or adjacent to a site containing natural resource	25?]		
 Construction on multiple development sites in the same geographic area, such to construction timelines to overlap or last for more than two years overall? 				
(b) If any boxes are checked "yes," explain why a preliminary construction assessment is or is not warranted based on the guidance in Chapter 22 , "Construction." It should be noted that the nature and extent of any commitment to use the Best Available Technology for construction equipment or Best Management Practices for construction activities should be considered when making this determination. All construction activities would be performed in compliance with relevant DOT and DOB regulations.				
20. APPLICANT'S CERTIFICATION				
I swear or affirm under oath and subject to the penalties for perjury that the info Statement (EAS) is true and accurate to the best of my knowledge and belief, bas with the information described herein and after examination of the pertinent bo have personal knowledge of such information or who have examined pertinent by	sed upon my personal knowledge and famili oks and records and/or after inquiry of pers	arity		
Still under oath, I further swear or affirm that I make this statement in my capacithat seeks the permits, approvals, funding, or other governmental action(s) desc	· · · · · · · · · · · · · · · · · · ·	entity	′

PLEASE NOTE THAT APPLICANTS MAY BE REQUIRED TO SUBSTAN	TIATE RESPONSES IN THIS FORM AT TH	E		
DISCRETION OF THE LEAD AGENCY SO THAT IT MAY SUPPORT IT	S DETERMINATION OF SIGNIFICANCE.			

RE	REVISED* PART III: DETERMINATION OF SIGNIFICANCE					
IN	NSTRUCTIONS: In completing Part III, the lead agency should consult 6 NYCRR 617.7	and 43 RCNY § 6-0	06 (Executi	ve		
Order 91 or 1977, as amended), which contain the State and City criteria for determining significance.						
	1. For each of the impact categories listed below, consider whether the project may have		Poten	•		
	adverse effect on the environment, taking into account its (a) location; (b) probability	y of occurring; (c)	Signifi			
	duration; (d) irreversibility; (e) geographic scope; and (f) magnitude.		Adverse	Impact		
	IMPACT CATEGORY		YES	NO		
	Land Use, Zoning, and Public Policy					
	Socioeconomic Conditions					
	Community Facilities and Services			\boxtimes		
	Open Space			\boxtimes		
	Shadows			\boxtimes		
	Historic and Cultural Resources			\boxtimes		
	Urban Design/Visual Resources					
	Natural Resources			\boxtimes		
	Hazardous Materials					
	Water and Sewer Infrastructure					
	Solid Waste and Sanitation Services			\boxtimes		
	Energy			\boxtimes		
	Transportation					
	Air Quality					
	Greenhouse Gas Emissions			\boxtimes		
	Noise					
	Public Health			\boxtimes		
	Neighborhood Character			\boxtimes		
	Construction			\boxtimes		
	2. Are there any aspects of the project relevant to the determination of whether the pr	-	_	_		
significant impact on the environment, such as combined or cumulative impacts, that were not fully				\bowtie		
	covered by other responses and supporting materials?					
	If there are such impacts, attach an explanation stating whether, as a result of them, have a significant impact on the environment.	the project may

EAS SHORT FORM PAGE 9

REVISED* NEGATIVE DECLARATION

Statement of No Significant Effect

Pursuant to Executive Order 91 of 1977, as amended, and the Rules of Procedure for City Environmental Quality Review, found at Title 62, Chapter 5 of the Rules of the City of New York and 6 NYCRR, Part 617, State Environmental Quality Review, the Department of City Planning, acting on behalf of the City Planning Commission assumed the role of lead agency for the environmental review of the proposed project. Based on a review of information about the project contained in this environmental assessment statement (EAS) and any attachments hereto, which are incorporated by reference herein, the lead agency has determined that the proposed project would not have a significant adverse impact on the environment.

Reasons Supporting this Determination

The above determination is based on information contained in this revised EAS, which that finds the proposed actions sought before the City Planning Commission would have no significant effect on the quality of the environment. Reasons supporting this Determination are noted below.

Hazardous Materials and Noise:

An (E) designation (E-550) for hazardous materials and noise has been incorporated into the proposed actions. Refer to Appendix 1: (E) Designation" attached to this Determination of Significance, for a list of sites affected by the (E) designation and applicable (E) designation requirements. The analysis conducted for hazardous materials and noise conclude that with the (E) designation requirements in place, the proposed actions would not result in significant adverse impacts to hazardous materials and noise.

Land Use, Zoning, and Public Policy:

A Land Use, Zoning and Public Policy analysis is included in this EAS. The Proposed Action involves a Zoning Map Amendment from M1-1 to R7D with a C2-4 commercial overlay and Zoning Text Amendment to Appendix F of the Zoning Resolution to map a new Mandatory Inclusionary Housing area on Block 1125/ Lot 1 (the development site) and Block 1133 / Lot 7, 10, 11, 12, and a portion of Lot 13. Following certification of the rezoning, the proposed actions were modified, changing a portion of the project area from an R7D/C2-4 district to an R7A/C2-4 district and changing the MIH options by removing Option 2, leaving only Option 1. The requested actions would facilitate the development of a new nine-story mixed-use residential development with 64 dwelling units and 8,400 zoning square feet of commercial space. The analysis concludes that no significant adverse impacts related to Land Use, Zoning and Public Policy would result from the proposed actions.

Open Space:

A detailed analysis of the effects of the proposed actions on Open Space was included in this EAS. A significant adverse open space impact may occur if a proposed action would reduce the open space ratio by more than five percent in areas that are currently below the City's median community district open space ratio 1.5 acres per 1,000 residents. In areas that are extremely lacking in open space, a reduction as little as one percent may be considered significant. As a result of the proposed actions, the total residential study area open space ratio would decrease by .5 percent to 0.1048 acres per 1,000 residents. Therefore, the proposed project would not result in a significant adverse impact related to open space.

Urban Design and Visual Resources:

A assessment related to urban design and visual resources is included in the EAS. In the future with the proposed actions, the visual appearance within the primary study area and development site would change; however, this change would not meet the 2014 CEQR Technical Manual threshold for a significant adverse urban design impact in that it would not alter the arrangement, appearance, or functionality of the primary study area such that the alteration would negatively affect a pedestrian's experience of the area. The analysis concludes that the proposed actions would not result in significant adverse impacts to urban design or visual resources.

No other significant effects upon the environment that would require the preparation of a Draft Environmental Impact Statement are foreseeable.

This Negative Declaration has been prepared in accordance with Article 8 of the New York State Environmental Conservation Law (SEQRA). Should you have any questions pertaining to this Negative Declaration, yau may contact Anthony Grande at (718) 780-8271.

^{*}Following certification of the Grand Avenue and Pacific Street Rezoning on September 23, 2019 and the issuance of the original EAS dated September 2019 and negative declaration dated September 23, 2019, the EAS has been revised to reflect a modified zoning district on a portion of the project area and a modified MIH option. This revised negative declaration supersedes the negative declaration issued on September 23, 2019 and reflects revised EAS dated June 26, 2020, which assesses this revision. This modification would not alter the conclusions of the original EAS, which found no significant adverse impacts.

PAGE 11

Determination of Significance Appendix: (E) Designation

To ensure that the proposed actions would not result in significant adverse hazardous materials and noise, and (E) Designation (E-550) will be placed on the development sites as described below:

Hazardous Materials

The (E) Designation requirements for hazardous materials will be placed on Projected Development Site 1 (Block 1125; Lot 1) and Projected Development Site 2 (Block 1133; Lots 7, 10, 11, and 12).

Task 1-Sampling Protocol

The applicant submits to OER, for review and approval, a Phase I of the site along with a soil, groundwater and soil vapor testing protocol, including a description of methods and a site map with all sampling locations clearly and precisely represented. If site sampling is necessary, no sampling should begin until written approval of a protocol is received from OER. The number and location of samples should be selected to adequately characterize the site, specific sources of suspected contamination (i.e., petroleum based contamination and non-petroleum based contamination), and the remainder of the site's condition. The characterization should be complete enough to determine what remediation strategy (if any) is necessary after review of sampling data. Guidelines and criteria for selecting sampling locations and collecting samples are provided by OER upon request.

Task 2-Remediation Determination and Protocol

A written report with findings and a summary of the data must he submitted to OER after completion of the testing phase and laboratory analysis for review and approval. After receiving such results, a determination is made by OER if the results indicate that remediation is necessary. If OER determines that no remediation is necessary, written notice shall be given by OER. If remediation is indicated from test results, a proposed remediation plan must be submitted to OER for review and approval. The applicant must complete such remediation as determined necessary by OER. The applicant should then provide proper documentation that the work has been satisfactorily completed.

A construction-related health and safety plan should be submitted to OER and would be implemented during excavation and construction activities to protect workers and the community from potentially significant adverse impacts associated with contaminated soil, groundwater and/or soil vapor. This plan would be submitted to OER prior to implementation.

CEOR #: 19DCP114K

SEQRA Classification: Unlisted

PAGE 12

Noise

The (E) Designation requirement for noise will be place on the Projected Development Site 1 (Block 1125; Lot 1) and Projected Development Site 2 (Block 1133; Lots 7, 10, 11, and 12) and are as follows:

Block 1125, Lot 1 (Projected Development Site 1): In order to ensure an acceptable interior noise environment, future residential/commercial office uses must provide a closed-window condition with a minimum of 28 dBA window/wall attenuation on all facades to ensure an interior noise level not greater than 45 dBA for residential uses or not greater than 50 dBA for commercial office uses. To maintain a closed-window condition, an alternate means of ventilation must also be provided.

Alternate means of ventilation includes, but is not limited to, air conditioning. Block 133, Lots 7, 10, 11, and 12 (Projected Development Site 2): In order to ensure an acceptable interior noise environment, future residential/commercial office uses must provide a closed-window condition with a minimum of 31 dBA window/wall attenuation on all façades to ensure an interior noise level not greater than 45 dBA for residential uses or not greater than 50 dBA for commercial office uses. To maintain a closed-window condition, an alternate means of ventilation must also be provided. Alternate means of ventilation includes, but is not limited to, air conditioning.

1.0 PROPOSED ACTION

1.1 Introduction

"The Applicant", EMP Capital Group, is seeking a Zoning Map Amendment to rezone a portion of Block 1125 ("Project Area") and Department City Planning (DCP) seeks to include under this rezoning an area that is to include a portion of Block 1133, comprising Lots 7, 10, 11, and 12, and part of Lot 13, which is located directly to the south of the project site, from M1-1 to R7D with a C2-4 commercial overlay. In its entirety, the proposed rezoning area would comprise approximately 21,000 sf.

The proposed R7D zoning district permits residential development with a FAR of up to 5.6 with Inclusionary Housing Designated area bonus. Pursuant to the planned rezoning, the applicant seeks to construct a new 9-story building on Lot 1 with approximately 68 dwelling units and 9,000 sf of retail. A rezoning is a discretionary action subject to the Uniform Land Use Review Procedure (ULURP) and City Environmental Quality Review (CEQR). It is expected that this project will be classified as an "Unlisted Action" under CEQR and will require preparation of an Environmental Assessment Statement (EAS), with DCP serving as the lead agency.

1.2 Background

The Project Area is located at the northwestern edge of the Crown Heights neighborhood. The Department of City Planning has initiated contextual rezoning of nearly all of the residential areas surrounding the existing M1-1 zoning district where the Project Area is located. However, the existing M1-1 zoning district has remained generally unchanged since it was mapped in 1961.

DCP-Initiated Rezoning Actions

In 1994, a large portion of the Crown Heights neighborhood to the west of the Project Area was rezoned as part of the Prospect Heights Rezoning (C 930430 ZMK, effective February 9, 1994). The Prospect Heights Rezoning established contextual zoning districts in a 53-block portion of the neighborhood in the western part of Community District 8 and a portion of Community District 6. It changed the predominantly R6 zoning to R6B, R6A, R7A, and R8X districts with commercial overlays along Washington, Vanderbilt, and Flatbush avenues.

In 2007, much of the area north of Atlantic Avenue was rezoned in the Fort Greene and Clinton Hill rezoning (C 070430ZMK, effective July 25, 2007). The rezoning changed all or portions of 99 blocks from R6, R7-1, R7-2 and M1-1 districts to contextual R5B, R6B, R6A and R7A districts, including an R7A district with a C2-4 overlay along the north side Atlantic Avenue between Classon and Vanderbilt avenues. R7A districts were mapped to create new housing opportunities in areas that could support greater density within contextual zoning districts that establish height limits. In addition, the rezoning established Inclusionary Housing Designated Areas ("IHDA") generally along portions of Fulton Street and Myrtle Avenue and portions of surrounding areas. The Inclusionary Housing program provides incentives for the creation and preservation of affordable housing.

In 2007, the Bedford-Stuyvesant South Rezoning (C 070447 ZMK, effective October 29, 2007), rezoned an approximately 206-block area to the north and east of the Project Area with contextual districts, including R6A, R6B, R7D, C4-5D, and MX-10 (M1-1/R7D) districts, some of

which with commercial overlays. The Bedford-Stuyvesant South Rezoning also made the Inclusionary Housing Program applicable in R7D and C4-5D districts.

In 2013, the area to the south of the Project Area was rezoned as part of the Crown Heights West rezoning (C 130213 ZMK, effective September 24, 2013) that affected an approximately 55-block area in the western part of Crown Heights that mapped contextual R6B, R6A, and R7A districts and commercial overlays. An R7A was mapped on 18 full and partial blocks between St. Johns Place and Eastern Parkway, along Franklin Avenue, and on portions of blocks between Franklin and Classon avenues north of Park Place. The Project Area is northwest of the Dean Street and Classon Avenue boundary of this rezoning. The Crown Heights West rezoning established new IHDAs to incentivize the development of affordable housing.

Private Applications

In 2009, the 470 Vanderbilt Rezoning (C 090441 ZMK, effective September 30, 2009) mapped a C6-3A (R9A equivalent) district on the block bounded by Atlantic Avenue, Fulton Street, Claremont Avenue, and Vanderbilt Avenue to facilitate development of a 376-unit new mixed-use building with ground floor retail.

Most recently, the 1350 Bedford Avenue Rezoning (C 170070 ZMK, effective July 20, 2017) changed an existing R6A zoning district to an R7D district to the east of the Project Area on property at the corner of Bedford Avenue and Pacific Street to facilitate the development of a new nine-story residential building containing approximately 93 units of affordable housing.

M1-1 District Study

In 2015, Community Board 8 issued a resolution requesting that DCP study rezoning of the M1-1 zoned area where the proposed Project Area is located. The resolution stated:

- Whereas a six-block area located in the northwest sector of Crown Heights and bound by Atlantic Avenue, Franklin Avenue, Bergen Street, and Grand Avenue is currently zoned M1-1 (the "M1-1 Zone"); and
- Whereas Community Board 8 finds that: the M1-1 Zone contains many properties that are vacant or otherwise underutilized, and that the current zoning provides little economic incentive for owners to improve such properties so that they can become productive; and
- Whereas adjoining neighborhoods outside the M1-1 Zone are experiencing strong demand for both residential and commercial real estate; and
- Whereas Community Board 8 finds that there yet remains an urgent need for affordable housing and jobs paying a living wage or better to be created within its District.

1.3 Description of Surrounding Area

The Affected Area, located in the Crown Heights neighborhood, within Community District 8 in the Borough of Brooklyn is located within Blocks 1125 and 1133, which is bounded by Atlantic Avenue to the north, Classon Avenue to the east, Dean Street to the south, and Grand Avenue

to the west. Existing land uses within 400' of the Affected Area primarily consist of manufacturing, one- and two-family residences, multi-family residences, mixed commercial and residential buildings, transportation and utility, public facilities and institutions, and vacant land. The manufacturing buildings range from 1 to 3 stories in height. The residential buildings consist of one- and two-family attached and semi-detached houses and multiple family apartment buildings ranging from 1 to 3 stories in height. Pacific Street, which intersects the affected area, contains a mix of residential and commercial/light industrial uses, with residential uses more predominant to the west. North of the Affected Area, along Grand Avenue and Atlantic Avenue, is predominantly residential and commercial buildings. The area south of Pacific Street, one block to the south of the affected area, is predominantly industrial. Further south of the Affected Area, south of Dean Street, the majority of land use is residential.

The Affected Area is within an M1-1 zoning district that extends north to Atlantic Avenue. Areas to the south of the Affected Area are mapped with a variety of medium-density contextual zoning districts including R6A, R6B, and R7A. A further discussion of area zoning is provided in the following Land Use, Zoning, and Public Policy section of this document.

Grand Avenue, to the west of the Affected Area, is a one-way southbound street with one moving lane and curbside parking and loading. Atlantic Avenue, bounding the affected area to the north, is a regional east-west through-street carrying two moving lanes in each direction, as well as curbside parking and loading. Dean Street, bounding the affected area to the south, is a one-way eastbound street with one moving lane, a painted bike lane on its north side, and curbside parking and loading.

The area is well served by transit. The B65 bus connecting Downtown Brooklyn and Crown Heights runs east/west along Dean and Bergen streets. The B25 bus connecting Downtown Brooklyn/DUMBO and Broadway Junction runs east/west along Fulton Street. The B48 bus connecting Lefferts Gardens and Greenpoint and the B45 connecting Downtown Brooklyn and Crown Heights provide north/south bus service. The elevated Franklin Avenue Shuttle operates to the east of the Affected Area. The Franklin Avenue subway station with C and S line service is located at the intersection of Fulton Street and Franklin Avenue to the northeast of the Project Area. In addition, the Long Island Rail Road Nostrand Avenue train station provides commuter rail connections for the Babylon, Far Rockaway, Hempstead, Long Beach, and City Zone lines, which run east into Long Island and west to the Atlantic Terminal station.

1.4 Description of Affected Area

The Affected Area is located in the Crown Heights neighborhood within Brooklyn Community District 8 and consists of Block 1125, Lot 1, and Block 1133, Lots 7, 10, 11, 12, and p/o 13. The Project Area is bounded by Pacific Street to the north, Grand Avenue to the West, Dean Street to the south, and Classon Avenue to the east and is near the borders of Community District 2 and Community District 3, which both have district boundaries running along Atlantic Avenue. Grand Avenue is a southbound, one-way street. Pacific Street is a westbound one-way street. Both are narrow streets at 70 feet wide. Atlantic Avenue, one block to the north, is a major commercial corridor in Brooklyn. It is a wide street at 120 feet.

The Development Site consists of Block 1125, Lot 1. It is an approximately 10,000 square foot unimproved lot used for vehicle parking and equipment storage. It is a corner lot with 100 feet of frontage on Grand Avenue and 100 feet of frontage on Pacific Street. The remaining lots that make up the Affected Area are Block 1133, lots 7, 10, 11, 12, and a 2,000-sf portion of lot 13, which, combined, constitute approximately 11,000 square feet. Lots 10 and 7 are both

vacant; lot 11 has a 3-story multi-family building with 3 units; lot 12 is a boarded-up, vacant multi-family structure with 3 dwelling units; and lot 13 is an operating junkyard.

The Applicant Owned Development Site

Block 1125 Lot 1 is Applicant owned and located at 979 Pacific Street, at the intersection of Grand Avenue and Pacific Street. The site has frontage on both Pacific Street to the south and Grand Avenue to the west. The site has 100 feet of frontage on Pacific Street and 100 feet of frontage on Grand Avenue, with a lot depth of 100 feet. The 10,000 square foot lot is presently vacant.

Non-Applicant Controlled Sites

- Block 1133, Lot 10 has a lot area of 1,375 square feet and is presently vacant.
- Block 1133, Lot 11 (958 Pacific Street) has a lot area of 1,031 square feet and contains a 3-story, 1,425 square foot multi-family apartment building.
- Block 1133, Lot 12 (960 Pacific Street) has a lot area of 1,031 square feet and contains a 3-story, 1,407 square foot boarded-up, vacant multi-family apartment building.
- Block 1133, Lot 7 has a lot area of 5,500 square feet and is presently vacant.
- Block 1133, Lot 13 (962 Pacific Street) has a lot area of 33,415 square feet, is considered vacant land, but is currently operating as a junk yard.

1.5 Description of the Development Site

The Development Site is located at 979 Pacific Street (Block 1125, Lot 1). It consists of an approximately 10,000 square foot corner lot with 100 feet of frontage on Pacific Street and 100 feet of frontage on Grand Avenue, both narrow, 70-foot wide streets. The Development Site is unimproved and was historically used for vehicle storage. The site is currently an unused parking lot. In March 2015 Lots 1, 82, 84, 85, and 86 were combined to create the existing Lot 1.

1.6 Description of Proposed Development

The Applicant Proposes a Zoning Map Amendment of the Affected Area to a mixed-use R7D with a C2-4 overlay. Under the Proposed Action, residential and non-residential uses (commercial) can be developed as-of-right and be located side-by-side or within the same building. The maximum FAR permitted under the Proposed Action is 5.6 for residential and 2.0 for commercial uses.

Pursuant to the Proposed Actions, the Applicant proposes to build, on the Project Site, a new mixed commercial and residential building consisting of one 9-story structure. The structure of the proposed development has a height of 100 feet with a base height of 60 feet. The building would contain approximately 56,000 zoning square feet of floor area (5.6 FAR) or 73,008 gross square feet. The ground floor would contain approximately 8,400 zoning square feet of retail floor area with Use Group 6 commercial that would be occupied by local retail tenants as permitted under the proposed C2-4 overlay, along with necessary residential lobby space. The upper floors would contain approximately 47,600 zoning square feet of residential floor area with up to 64 units (up to 14 MIH units; the applicant would like to map the area with MIH Options 1 and 2). A 30 percent parking requirement for the non-income-restricted units will be waived since 15 spaces would be required as a result of the Proposed Development, and 15 or fewer spaces may be waived. The proposed building would provide 35 bicycle parking spots.

Build Year

2024 factoring the Environmental Approval process and ULURP process of 18 months and an 18- to 24-month construction schedule for the Project Site and an additional 2 years for the Projected Development Site construction.

1.7 Action(s) Necessary to Facilitate the Project

The Project Area is mapped with an M1-1 zoning district that does not permit residential development. The existing M1-1 district has a low maximum FAR and high parking requirement, which do not provide an incentive for new conforming commercial development.

The action necessary to facilitate construction of the Proposed Development is approval of a Zoning Map Amendment (ZM) to rezone the Affected Area from an M1-1 to R7D/C2-4, and a Zoning Text Amendment to map the area for MIH.

1.8 Purpose and Need

The Applicant believes that the proposed rezoning would encourage reinvestment in the Affected Area that has seen no new construction in more than a decade, while multiple new residential and mixed-use buildings have been developed nearby.

The Project Area and surrounding area within the M1-1 district, in The Applicant's opinion, are underutilized and present an opportunity for new mixed-use growth and introducing affordable housing into a zoning district that does not allow any new residential development. The Applicant believes the Project Area is well-suited for such development because it is in close proximity to existing residential districts and to public transit: there are numerous public transportation options for bus and subway service near the Project Area, including four bus lines and the Franklin Avenue subway station with C and S line service located at the intersection of Fulton Street and Franklin Avenue.

It is the Applicant's intent that the proposed rezoning and text amendment would provide new opportunities for affordable and market-rate housing development in an area experiencing population growth and new affordable housing in a rent burdened Community District.

1.9 Analysis Framework

The analysis which follows compares the incremental difference between the proposed and potential development under the proposed action (with-action) and the development which could occur under the existing M1-1 zoning (no-action). This EAS studies the potential for individual and cumulative environmental impacts related to the proposed action occurring in a study area of approximately 400-feet around the rezoning area or (affected area). This environmental assessment considers the potential effects of the proposed action compared to future conditions without the approvals sought by the project sponsor. This analysis framework is described below:

Reasonable Worst-Case Development Scenario

Pursuant to 2014 CEQR Technical Manual methodology, sites may be considered 'soft' if they are built to substantially less than the maximum allowable floor area ratio and are of a sufficient size or could be assembled into a parcel of sufficient size, to support a feasible development.

The minimum size for an economically viable development site is typically considered to be approximately 5,000 square feet. Sites that have recently been developed or redeveloped are considered less likely to be soft, due to the significant recent investment in the current use.

Future Without the Proposed Action

Under the Project Site's existing M1-1 zoning, development of commercial or light industrial uses at up to 1.0 FAR would be permitted in the future without the proposed action. For most uses, one (1) parking space is required for every 300 sf of development under a M1-1 zone per ZT § 44-21. Parking is waived per ZT § 44-23 if the requirement thereby calculated is less than 15 spaces.

The lots that could be redeveloped commercially under the no-action condition make up Projected Development Site 1 and Projected Development Site 2:

Projected Development Site 1—Block 1125, Lot 1 (10,000 sf).

Projected Development Site 2—Block 1133, Lots 7, 10, 11, and 12 (8,937 sf).

Given the existing conditions of the project location and immediate area within 400', it is unlikely that these sites would develop under current zoning regulations within the build year. In addition, Block 1125, Lot 1 has been undeveloped and utilized as trailer truck storage intermittently since at least 1996. Block 1133, Lot 10 was improved with a structure as recently as 1996, and it was demolished between then and 2001/2002. Since then, Lot 10 has been used as truck storage. Block 1133, Lot 7 has records of a structure on site dating back to 1935, which appears to have been demolished between 2004 and 2005; the site is now unimproved and is used for truck parking. The multi-family buildings on Lot 11 and 12 were constructed in 1933 and 1931, respectively. Block 1133, Lot 13 was improved with a structure as early as 1924, and the structure was demolished in 1969. Since then, the lot has been used as an operating junkyard and has an active DOB violation for occupancy contrary to that allowed by DOB records.

Future with the Proposed Action

Projected Development Site 1

Block 1125, Lot 1 would be developed per the Applicant's proposed plan as a 60,480 gsf (56,000 zsf) development made up of 50,760 gsf (47,000 zsf) residential space containing 68 dwelling units (14 of which will be affordable—assuming 20% of units per section 2d) and 9,360 gsf (9,000 zsf) for commercial use. The development would be maxed out in terms of available floor area at 5.60 FAR, and for the purposes of RWCDS would be 11 stories or 115 feet max per R7D in an MIH area with a qualifying ground floor per ZQA. No residential parking spaces would be required (15 or fewer spaces exception). No commercial accessory spaces will be required because the total would be fewer than 40. The development would have 1 loading dock and 34 bicycle parking spots. Average unit size would be 691 sf (same as the applicant proposal since it results in a higher density and is more conservative).

Other Affected Sites

The proposed zoning map amendment would affect multiple properties not under the applicant's control. Owners of sites that are currently underdeveloped with respect to the proposed zoning may take advantage of the expanded floor area and uses allowed under the proposed R7D/C2-4

rezoning. Two likely scenarios for the development of the other affected lots are described below.

Projected Development Site 2, Scenario 1

Block 1133, Lots 10, 11, 12, p/o 13, and 7 would be assembled to form a 10,999-sf lot with a 66,522 gsf (61,594 zsf) 11-story, 115-foot residential building with a commercial use first floor. The building would contain 65 dwelling units, 13 of which would be affordable. The residential portion of the building would be 56,544 gsf (52,355 zsf) and the commercial portion would be 9,609 gsf (9,239 zsf). No residential parking spaces would be required (15 or fewer spaces exception). No commercial accessory spaces will be required because the total would be fewer than 40. The average unit size is estimated at 800 sf (differing from The Applicant's proposal, but more in line with market conditions and trends).

Projected Development Site 2, Scenario 2

Block 1133, Lots 10, 11, 12, and 7 would be assembled to form a 8,937-sf lot and the development rights of the rezoned p/o Lot 13 would transfer to the assemblage of Lots 10, 11, 12, and 7. Projected Development Site 2 would then be developed with a 66,522 gsf (61,594 zsf) 11-story, 115-foot residential building with a commercial use first floor. The building would contain 65 dwelling units, 13 of which would be affordable. The residential portion of the building would be 56,544 gsf (52,355 zsf) and the commercial portion would be 9,609 gsf (9,239 zsf). No residential parking spaces would be required (15 or fewer spaces exception). No commercial accessory spaces will be required because the total would be fewer than 40. The average unit size is estimated at 800 sf (differing from The Applicant's proposal, but more in line with market conditions and trends).

The Projected Development Sites are shown in Figure 1.1.

Site-specific aspects of environmental review such as design, noise levels, and air emissions, incremental development under the proposed action, which would be the basis for analysis of density-related aspects of the environment such as traffic, school utilization, and socioeconomic conditions, will be based on the increment between the no-action and with-action condition on the Projected Development Sites 1 & 2. This incremental development would consist of 130 dwelling units; 103 market rate and 27 affordable. The net residential square footage would equal 99,355-zsf or 107,304-gsf and an addition of 18,969-gsf (18,239 zsf) of commercial space. No parking is required in the with-action or no-action scenarios.

The existing, no-action, and with-action conditions on the lots within the Affected Area are presented in the **Table 1.9-1 Incremental Analysis Table.**

Table 1.9-1: RWCDS Incremental Analysis Table

Use	No-Action Condition	With-Action Condition	Increment
Residential ¹	3 DUs 2,832 gsf	133 DUs 107,303 gsf	130 DUs 104,471 gsf
Market Rate (DUs)	3	106	103
Affordable (DUs) ²	0	27	27
Commercial (gsf)	0	18,969	18,969
Residents ³	6	283	277
Workers ⁴	0	36	36

Notes: 'DUs' indicates Dwelling Units; 'gsf' indicates gross square feet

¹ Average Unit Size assumed to be 800 gsf

² Assumed 20 percent of residential floor area is reserved as affordable to households with incomes at or below 80 percent of the AMI

³ Assumes 2.13 persons per residential dwelling unit per Brooklyn Community District 8 Census Data

⁴ Assumes 3 employees per 1,000 SF retail/restaurant

2.0 ENVIRONMENTAL REVIEW

2.1 Land Use, Zoning, and Public Policy

The CEQR Technical Manual recommends procedures for analysis of land use, zoning and public policy to ascertain the impacts of a project on the surrounding area. Land use, zoning and public policy are described in detail below. This section considers existing conditions, development trends, and zoning and other public policies in relation to the Projected Development Site and the surrounding area as well as the larger area in which the proposed actions may have an effect. Because the proposed action would permit development of uses (multiple family residential, commercial) that are not permitted as of right under the Projected Development Site's existing M1-1 zoning, a preliminary assessment of Land Use, Zoning, and Public Policy is provided.

Methodology

Existing land uses were determined by reference to the New York City Zoning and Land Use (Zola) database and PLUTOTM 16v2 shapefiles. These uses were then confirmed through site visits. The evaluation of lots within the 400-foot Study Area were performed with reference to New York City Zoning Maps and the Zoning Resolution of the City of New York and served as the basis for the zoning evaluation of the Future No Action and Future With-Action Conditions. Public Policy research was performed through an evaluation of New York City Department of City Planning (NYCDCP) and other city agencies programs and documentation.

2.1.1 Land Use

The CEQR Technical Manual suggests that a land use, zoning and public policy study area should extend 400 feet from the site of the proposed action. Existing land use patterns of city blocks within approximately 400 feet of the Project Site are presented in **Figure 2.1-1.** The proposed zoning map amendment would affect the following lots: Block 1125, Lot 1 (Project Development site); and Block 1133, Lot 7, 10, 11, 12, and part of Lot 13. Collectively these lots are identified as the Affected Area.

Existing Conditions

Land Use Study Area

The Affected Area is located in the Crown Heights neighborhood, within Community District 8 in the Borough of Brooklyn. Existing land uses within the 400' surrounding area around the Affected Area primarily consist of manufacturing, one- and two-family residences, multi-family residences, mixed commercial and residential buildings, transportation and utility, public facilities and institutions, and vacant land. The manufacturing buildings range from 1 to 3 stories in height. The residential buildings consist of one- and two-family attached and semi-detached houses and multiple family apartment buildings ranging from 1 to 3 stories in height.

Affected Area

The Affected Area is located within Blocks 1125 and 1133, which is bounded by Atlantic Avenue to the north, Classon Avenue to the east, Dean Street to the south, and Grand Avenue to the west. The Affected Area consists of Block 1125, Lot 1 (Project Development site); and Block 1133, Lot 7, 10, 11, 12, and part of Lot 13. The total area of the Affected Area is approximately 21,000 square feet. The Affected Area is shown on **Figure 1.1** of this document

The proposed Zoning Map Amendment would affect the following lots in the Affected Area:

- Block 1125, Lot 1 (505 Grand Avenue; Development Site) has a lot area of 10,000 square feet and is presently vacant.
- Block 1133, Lot 10 has a lot area of 1,375 square feet and is presently vacant.
- Block 1133, Lot 11 (958 Pacific Street) has a lot area of 1,031 square feet and contains a 3-story, 1,425 square foot mulfi-family apartment building.
- Block 1133, Lot 12 (960 Pacific Street) has a lot area of 1,031 square feet and contains a boarded-up, vacant 3-story, 1,407 square foot multi-family apartment building.
- Block 1133, Lot 7 has a lot area of 5,500 square feet and is presently vacant.
- Block 1133, Lot 13 (962 Pacific Street) has a lot area of 33,415 square feet, is considered vacant land, but is currently a junk yard.

Projected Development Site 1

Projected Development Site 1 (Block 1125, Lot 1) is a vacant lot.

Projected Development Site 2

Projected Development Site 2 (Block 1133, Lots 7, 10, 11, 12, and part of 13) consists of two vacant lots (Lots 7 and 10), two lots improved with multi-family buildings (Lots 11 and 12), and a 2,000 sf portion of an operating junkyard (Lot 13).

Table 2.1-1: Land Use Distribution for Brooklyn Community District 8 (2014)

LAND USES	PERCENT OF TOTAL
Residential Uses	
1-2 Family	19.3
Multi-Family	43.2
Mixed Residential/Commercial	<u>8.1</u>
Subtotal of Residential Uses	70.6
Non-Residential Uses	
Commercial / Office	2.7
Industrial	3.5
Transportation/Utility	2.4
Institutions	10.2
Open Space/Recreation	5.4
Parking Facilities	2.4
Vacant Land	2.5
Miscellaneous	<u>0.4</u>
Subtotal of Non-Residential Uses	29.4
TOTAL	100.0

Source: Community District Profiles, New York City Department of City Planning.

Note: Percentages may not add up to 100.0 percent due to rounding.

Analysis

Future No-Action Condition

Land Use Study Area

Existing land use patterns are expected generally to continue in the surrounding area in the future without the proposed action. A zoning map amendment affecting a portion of the block to the east of the Affected Area was adopted on May 8, 2019, which changed the zoning district (Block 1133, Lots 32, 42, 43, 44, 45, 46, 47, 48, 49, 51, 52, and 53) from M1-1 to an R7A/ C2-4 zoning district to facilitate a mixed-use residential and commercial building up to 4.6 FAR and nine stories at 1010 Pacific Street (Block 1133, Lots 32 and 42). Further east of the Affected Area at 1050 Pacific Street a zoning map amendment was adopted on May 8, 2019, which rezoned the eastern portion of Block 1134 from M1-1 to an MX district composed of an R7A/M1-4 (Block 1134, Lots 2, 4, 5, 7-9, 11, 12, 96, 97 and part of 17) to facilitate an eight-story mixed-use development with 103 dwelling units and 15,790 SF of commercial space. There are no other known major land use changes anticipated in the foreseeable future within the land use study area. Any new residential development in surrounding areas would be governed by contextual zoning districts established by the Crown Heights West Rezoning, adopted by the City Council in September 2013.

Affected Area

Given the existing conditions on the project block and residential development within 400 feet, it is unlikely that lots within the affected area will develop. The existing zoning does not permit residential development, and therefore no market rate or affordable housing would be provided in the no-action condition.

Future With-Action Condition

Land Use Study Area

Land use and development patterns in the Land Use Study Area are anticipated to remain unchanged in the future with the proposed action. Any new residential development in the surrounding area would be consistent with the medium-density R7A contextual zoning created for the area by the Crown Heights West Rezoning or the proposed rezoning from M1-1 to an MX District composed of R7A/M1-4 of a portion of Block 1133 to the east of the affected area as discussed previously.

Projected Development Site 1

While the Proposed Development as described above constitutes the applicant's intended use of the Projected Development Site, in order to provide a conservative analysis framework, a development scenario was identified for the site that maximizes building size and height under Mandatory Inclusionary Housing (MIH) and Zoning for Quality and Affordability (ZQA).

Under MIH and ZQA, an 11 story, 115-foot-tall, mixed residential and commercial development with maximum FAR of 5.6 would be permitted. Under the worst-case development scenario, the rezoning would result in a 60,480-gsf (56,000 ZSF) development composed of 50,760-gsf (47,000 ZSF) of residential and 9,360-gsf (9,000 ZSF) of local retail commercial. The building would house 68 units (54 market rate units and 14 affordable units. The development does not meet the required thresholds for parking requirements for commercial or residential uses. No parking spaces are required.

Projected Development Site 2, Scenario 1

Block 1133, Lots 10, 11, 12, p/o 13, and 7 would be assembled to form a 10,999-sf lot with a 66,522 gsf (61,594 zsf) 11-story, 115-foot residential building with a commercial use first floor. The building would contain 65 dwelling units, 13 of which would be affordable. The residential portion of the building would be 56,544 gsf (52,355 zsf) and the commercial portion would be 9,609 gsf (9,239 zsf). No residential parking spaces would be required (15 or fewer spaces exception). No commercial accessory spaces will be required because the total would be fewer than 40. The average unit size is estimated at 800 sf (differing from The Applicant's proposal, but more in line with market conditions and trends).

Projected Development Site 2, Scenario 2

Block 1133, Lots 10, 11, 12, and 7 would be assembled to form a 8,937-sf lot and the development rights of the rezoned p/o Lot 13 would transfer to the assemblage of Lots 10, 11, 12, and 7. Projected Development Site 2 would then be developed with a 66,522 gsf (61,594 zsf) 11-story, 115-foot residential building with a commercial use first floor. The building would contain 65 dwelling units, 13 of which would be affordable. The residential portion of the building would be 56,544 gsf (52,355 zsf) and the commercial portion would be 9,609 gsf (9,239 zsf). No residential parking spaces would be required (15 or fewer spaces exception). No commercial accessory spaces will be required because the total would be fewer than 40. The average unit size is estimated at 800 sf (differing from The Applicant's proposal, but more in line with market conditions and trends).

It is assumed under the Future With-Action Condition, that ground floor development for both Projected Development Sites 1 and 2 would be commercial retail. Commercial retail uses represent a higher return on development investment and are considered more conservative in terms from a CEQR analysis perspective.

Conclusion

The Proposed Rezoning would allow a change in land use that would allow mixed residential and commercial land uses. The surrounding area already contains a large and enduring residential population in mid-rise and high-rise type buildings as well as industrial and commercial land uses. The Proposed Rezoning would allow for the productive redevelopment of the Affected Area with land uses that are similar to the surrounding area and would therefore not result in a significant adverse environmental impact.

2.1.2 Zoning

The CEQR Technical Manual suggests that a land use, zoning and public policy study area should extend 400 feet from the site of the proposed action. Existing zoning districts within approximately 400 feet of the Project Site are presented in **Figure 1-3.** The proposed zoning map amendment would affect the following lots: Block 1125, Lot 1, and Block 1133, Lots 7, 10, 11, 12, and part of 13. Collectively these lots are identified as the Affected Area.

Existing Conditions

Zoning Study Area

The zoning districts within 400 feet of the Affected Area are M1-1, R6B, and R7A. M1-1 is a light manufacturing zone allowing industrial and most commercial uses at 1.0 FAR and certain community facility uses at 2.4 FAR. Height is controlled by sky exposure planes. R6B and R7A are medium density residence districts allowing residential and community facility development.

R6B has a height limit of 50 feet and allows residential and community facility development at 2.0 FAR. R7A has a height limit of 80 feet and allows residential and community facility development at 4.0 FAR.

Midblocks, west of the Affected Area and along Pacific Street and Dean Street, there is an R6B district established by the Crown Heights West Rezoning, adopted by the City Council in September 2013. The R7A district, mapped one block north of the Affected Areas, runs along the north side of Atlantic Avenue and was part of the Fort Greene/Clinton Hill rezoning adopted by the City Council in July 2007.

Floor Area Ratio Zoning Type and Use **Parking** District Group (UG) (FAR) (Required Spaces) Light 1.0 FAR - Manufacturing M1-1 Manufacturing 1.0 FAR – Commercial Varies by Use UGs 4-14, 16, 17 2.4 FAR - Community Facility 50 percent of dwelling units Residential 2.0 – 2.2 FAR for Residential R₆B (waived if 5 or fewer spaces UGs 1-4 2.0 FAR—Community Facility required) 4.0 FAR - Residential (QH) 50 percent of dwelling units Residential R7A 4.60 FAR - Residential (Inclusionary (waived if 15 or fewer spaces UGs 1-4 housing) required) 2.0 FAR—Residential R7A/C2-4 Commercial UGs 4.0 FAR—Commercial 1 per 1,000 SF 4.0 FAR—Community Facility

Table 2.1-2: Summary of Existing Zoning Regulations

Source: Zoning Handbook, New York City Department of City Planning, January 2006

Existing zoning districts in the surrounding area include:

M1-1

The Project Area is within an M1-1 zoning district established in 1961, which extends to the east and west of the Project Area for several blocks generally between Atlantic Avenue to the north and Bergen and Pacific streets to the south. The prevailing built form in the M1-1 district is primarily one- and two-story industrial buildings and open uses, and limited two-, three-, and four-story residential buildings. There are many vacant or underutilized parcels in the M1-1 district.

M1-1 zoning districts permit nearly all industrial uses subject to M1 performance standards. Commercial offices, hotels, and most retail uses are also permitted along with certain community facility uses. In 2017, the Department of City Planning began an environmental review of a proposed zoning text amendment to limit new hotels in M1 districts. New residential use is not permitted within M1-1 districts. The maximum floor area ratio ("FAR") for permitted manufacturing and commercial uses within the M1-1 district is 1.0 and 2.4 for permitted community facility uses. The maximum base height before setback is 30 ft. or two-stories. Off-street parking is required for manufacturing and commercial uses, and for most uses is calculated based on the amount of floor area. In M1-1 districts, the off-street parking requirement may be waived if fewer than 15 spaces are required.

R7A/C2-4

There are R7A/C2-4 zoning districts mapped to the northwest and southwest of the Project Area generally along the north side of Atlantic Avenue and both sides of Fulton Street from Vanderbilt to Classon Avenue. In addition, there is an R7A/C2-4 district mapped to the southeast of the Project Area on 18 full and partial blocks between St. Johns Place and Eastern Parkway, along Franklin Avenue, and on portions of blocks between Franklin and Classon avenues north of Park Place. These areas are within an IHDA, where the Inclusionary Housing program provides zoning incentives for the creation and preservation of affordable housing in conjunction with new development.

R7A contextual districts produce high lot coverage, seven- to nine-story apartment buildings set at or near the street line designed to be compatible with older buildings in medium-density neighborhoods. R7A is a contextual district that allows for new medium-density residential development up to 4.6 FAR in IHDAs and MIH Areas with a maximum base FAR of 3.45, and community facility uses up to 4.0 FAR. The building form requires a street wall of 40 to 75 feet, a setback above the maximum base height, and a maximum building height of up to 95 feet for Inclusionary Housing buildings with a qualifying ground floor. R7A districts require off-street parking for 50 percent of the dwelling units in a building, with an exemption from parking for income-restricted units within the Transit Zone.

The C2-4 commercial overlay permits Use Groups 5 through 9 and 14, allowing commercial development with up to 2.0 FAR. The C2-4 overlay requires one accessory parking space per 1,000 sq. ft. of commercial floor area for general retail or service uses. In C2-4 districts, the off-street parking requirement for commercial uses may be waived if fewer than 40 spaces are required.

R6B

There are R6B zoning districts mapped to the north, southwest, and southeast of the Project Area. The R6B zoning district permits residential uses with a maximum FAR of 2.0, a minimum streetwall height of 30 feet, a maximum streetwall height of 40 feet, and a maximum building height of 50 feet. R6B districts require off-street parking for 50 percent of the dwelling units in a building, with an exemption from parking for incomerestricted units within the Transit Zone and a prohibition on curb cuts on zoning lots that are less than 40 feet in width. The Quality Housing program is mandatory for residential developments.

Affected Area

The Affected Area is zoned M1-1 which permits light industrial and certain commercial uses at 1.0 FAR and certain community facility uses at 2.4 FAR. M1-1 precludes development of market rate and affordable housing.

Projected Development Sites 1 and 2 Both Projected Development Sites are zoned M1-1.

Analysis

Future No-Action Condition

Zoning Study Area

With the exception of the two proposed rezonings of portions of Block 1133 to the east of the affected area discussed previously, no changes to zoning and public policy are anticipated in the future without the proposed action in the surrounding area. Existing zoning patterns would generally remain.

Affected Area

No changes to zoning and public policy are anticipated in the future without the proposed action within the affected area. The affected area would continue to be subject to M1-1 zoning.

Projected Development Sites 1 and 2

The Projected Development Sites would remain zoned M1-1 in the future without the proposed action.

Future With-Action Condition

Zoning Study Area

Other than the previously discussed potential rezonings of a portion of Block 1133 to the east of the Affected Area from M1-1 to R7A/M1-4, no changes to Zoning and Public Policy would occur in the surrounding area in the future with the proposed action. The area within 400 feet of the Affected Area is generally characterized by R7A and R6B medium-density contextual zoning districts. Midblocks, west of the Affected Area and along Pacific Street and Dean Street, there is an R6B district established by the Crown Heights West Rezoning, adopted by the City Council in September 2013. The R7A district, mapped one block north of the Affected Areas, runs along the north side of Atlantic Avenue and was part of the Fort Greene/Clinton Hill rezoning adopted by the City Council in July 2007.

Affected Area - R7D/C2-4

The proposed action would establish an R7D zoning district with a C2-4 overlay within the Affected Area, including on the Projected Development Sites, and would establish the Affected Area as a Mandatory Inclusionary Housing Area. The proposed R7D/C2-4 envelope is consistent with the R7A districts mapped in the area. It would permit medium-density residential development at a maximum FAR of 5.6 for developments with a permanent affordable housing set aside pursuant to the MIH program. The maximum building height is 115 feet after a setback from the base height of up to 95 feet. Buildings must set back above the maximum base height to a depth of 10 feet on a wide street and 15 feet on a narrow street before rising to a maximum of 11 floors. Off-street parking is waived for residential and commercial uses.

On Projected Development Site 1, a worst-case scenario would allow up to 47,000-zsf (50,760 gsf) of residential and 9,000-zsf (9,360 gsf) of commercial uses containing 68 units, of which approximately 14 would be permanently affordable. Under both scenarios for Projected Development Site 2, the Proposed Rezoning would allow 52,355-zsf (56,544 gsf) of residential development and 9,239-zsf (9,609 gsf) of commercial uses containing 65 units, of which approximately 13 would be permanently affordable.

Conclusion

The proposed action would establish a medium-density mixed use residential district that would mandate provision of a substantial amount of affordable housing. This new development would

be consistent with land use in surrounding areas zoned with medium-density R7A and R6B zoning districts that were created by the Crown Heights West Rezoning approved by the City Council in September 2013. The proposed action would extend these residential areas and allow redevelopment of underutilized land for new market rate and affordable housing in an area that is well served by transit as well as local commercial and community facility services. The development resulting from the proposed action would not result in significant adverse impacts; therefore, no further analysis is required.

2.1.3 Public Policy

The project site is not part of, or subject to, an Urban Renewal Plan (URP), adopted community 197-a Plan, Solid Waste Management Plan, Coastal Zone Boundary, Business Improvement District (BID), Industrial Business Zone (IBZ), or the New York City Landmarks Law. The proposed action is also not a large publicly sponsored project, and as such, consistency with the City's PlaNYC 2030 for sustainability is not warranted.

The project area is located in a transit zone – where parking is optional for new affordable units. Additionally, the project area is located in a FRESH Zone, which promotes the establishment and expansion of neighborhood grocery stores in underserved communities by providing zoning and financial incentives.

Also applicable is *Housing New York 2.0*, which expands on the original *Housing New York* Plan from 2014 to create more homes for seniors, help New Yorkers buy a piece of their neighborhoods, build a firewall against displacement, protect affordability at Mitchell-Lama buildings, capitalize on advances in technology and innovative design to expand modular building and micro-units, and unlock the potential of vacant lots.

Conclusion

The Proposed Actions would change zoning designations within the rezoning area and would support the development of new permanently affordable housing, which is consistent with the policies of *Housing New York*. The Project Site is currently a vacant lot, and the Proposed Actions would lead to the development of a mixed-use building with ground floor commercial use. The development of this vacant lot is also in line with the provisions of *Housing New York* 2.0.

In addition to opportunities for medium-density housing development under the MIH program, mapping an R7D/C2-4 district within the Project Area provides opportunities for active, commercial ground floor use. The new zoning district would encourage job creation and provide increased walk-to-work opportunities for a diverse mix of commercial business uses.

The proposed zoning map amendment would thus allow the productive and more intensive reuse of underutilized industrially zoned property. In addition, it would help reknit the urban fabric in the area and better integrate it within the predominately residential portions of the Crown Heights neighborhood surrounding the M1-1 district.

Therefore, significant adverse impacts to land use and zoning are not anticipated and further zoning analysis is not warranted.

2.2 Community Facilities and Services

A community facilities assessment may be necessary if an action could potentially affect the provision of services provided by public or publicly funded community facilities such as schools, hospitals, libraries, day care/Head Start facilities, and fire and police protection. According to the screening levels established in the *CEQR Technical Manual*, there are direct and indirect effects. An assessment of the project's effects on community facilities is generally warranted if:

- a project would add new population to an area that would increase the demand for services and cause potential indirect effects on service delivery. Depending on the size, income characteristics, and age distribution of the new population there may be effects on public or publicly funded schools, libraries, health care facilities, or day care/Head Start facilities.
- a project would physically alter a community facility, whether by displacement of the facility or other physical change. This direct effect triggers the need to assess the service delivery of the facility and the potential effect that the change may have on that service delivery.

Preliminary Screening

Based upon the proposed actions, the Proposed Development and projected induced development sites would add 130 new residential units, 27 of which would be low to moderate income DUs. Based on a preliminary assessment of CEQR thresholds for analysis, as shown in **Table 2.1-1 Community Facilities – Preliminary Assessment of CEQR Thresholds**, this project does not trigger a detailed C*EQR* analysis for public schools, libraries, health care facilities, Publicly Funded Day Care/Head Start Facilities, or Police and Fire Protection services.

Table 2.2-1: Community Facilities-Preliminary Assessment of CEQR Thresholds

Community Facility	Threshold	130 total DUs 27 low to moderate income DUs		Exceeds Criteria Threshold
Public Schools	>50 elementary and			
Elementary School and	middle school	0.24	32	No (Total of 44
Middle School Students	children (combined)	0.09	12	elementary and middle school)
	>150 high school

Care/Head Start Facilities <6 years old	(2014 CEQR Technical Manual, Table 6-1b)		
Fire Protection	Direct Effect		No
Police Protection	Direct Effect		No

Based on the screening above, no further analysis is required for Community Facilities. The Proposed Actions are not expected to result in any adverse impacts to Community Facilities.

2.3 Open Space

Open space is defined as publicly or privately-owned land that is publicly accessible and operates, functions, or is available for leisure, play, or sport, or set aside for the protection and/or enhancement of the natural environment.

Pursuant to Chapter 7, Section 100 of the 2014 CEQR Technical Manual, Open Space Resources are defined as active and/or passive, and may include, but is not limited to, the following:

- Parks operated or managed by the City, State, or Federal governments and include neighborhood and regional parks, beaches, pools, golf courses, boardwalks, playgrounds, ballfields, and recreation centers that are available to the public at no cost or through a nominal fee, as in the case of recreation centers and golf courses;
- Open space designated through regulatory approvals (such as zoning), including large-scale permits that prescribe publicly accessible open space, such as public plazas;
- Outdoor schoolyards if available to the public during non-school hours;
- Publicly-accessible institutional campuses;
- Esplanades;
- Designated greenways, as shown on the City's Bike Map, and defined as multi-use pathways for non-motorized recreation and transportation along natural and manmade linear spaces such as rail and highway rights-of-way, river corridors, and waterfront spaces;
- Landscaped medians with seating;
- Housing complex grounds, if publicly accessible;
- Nature preserves, if publicly accessible;
- Gardens, if publicly accessible;

The CEQR Technical Manual defines the need for an open space assessment if the proposed action would have a direct or indirect effect on open space resources. Direct effects would occur if the proposed action would result in the physical loss of a public open space; change of use of an open space so that it no longer serves the same user population; limit public access to an open space; or cause increased noise or air pollutant emissions, odors, or shadows on public open space that would affect its usefulness, whether temporary or permanent. Indirect effects would occur if the proposed action would result in an increase of population sufficiently large enough to noticeably diminish the ability of an area's open space to serve future population.

Methodology

According to the guidelines of the City's CEQR Technical Manual for analysis of residential development, census tracts with at least half of their geographic area within a one-half mile radius of the development site should comprise the open space study area. Using current population figures, an open space ratio is calculated for both the future no-action and future action scenarios, expressed as the amount of open space acreage per 1,000 user population. Typically, a comparison is made to the median open space ratio, which is 1.50 acres per 1,000 residents, and the city's planning goal of 2.50 acres per 1,000 residents. A reduction in the open space ratio increment of more than 5 percent over future no-action conditions generally warrants

a more detailed analysis, unless the open space ratio is below the citywide average, in which case even a small reduction could be considered significant.

In addition to field surveys, information from the NYC Department of City Planning's Community District Needs Statements, NYC Parks Department website, and U.S. Census data were utilized in preparing the open space analysis.

2.3.1 Preliminary Open Space Assessment

The Proposed Action would result in the total Projected Development of 127,002 gross square feet of development, including 107,304 gsf of residential floor area and 18,969 gsf of commercial floor area. The Proposed Action is projected to result in the development of 130 dwelling units within the Affected Area. Assuming an average occupancy of 2.13 persons based on the average household size within Brooklyn 305 census tract, population introduced as a result of the Proposed Action would be approximately 277 residents. Additionally, the Proposed Action, when compared to the future absence of the Proposed Actions, would introduce a net addition of 36 workers to the area. The affected area is within an area that is underserved by open space, which has an analysis threshold of 50 new residential units or 125 additional employees. The population increment that would result from the proposed action is above the threshold size of 50 new residents and thus warrant an assessment of indirect effects on open space resources.

Study Area Definition

In accordance with the guidelines established in the City's 2014 CEQR Technical Manual, the open space study area is defined to analyze both the nearby open spaces and the population using those open space resources. It is generally defined by a reasonable walking distance that users would travel to reach local open spaces and recreational areas. Pursuant to the 2014 CEQR Technical Manual, the open space study area ("The Study Area") includes all U.S. Census Tracts that have 50 percent or more of their area within a half-mile radius of the Affected Area, as shown in **Figure 2.3-1** below, consisting of the following Census Tracts shown in **Table 2.3-1** below. Using these criteria, the census tracts that have 50% or more of their area within the ½ mile study area are 163, 199, 201, 203, 205, 207, 215, 217, 221, 227, 229, 231, and 305.

Study Area Population

Secondary sources were used to determine the residential and non-residential populations served by the existing open space resources in the study area. Total residential population for the Study area was established using data from the 2012-2016 American Community Survey Census for New York City developed by the Department of City Planning's (DCP) Population Division.

As of 2016, the Study Area had a residential population of 49,206 persons as shown in **Table 2.3-1** below.

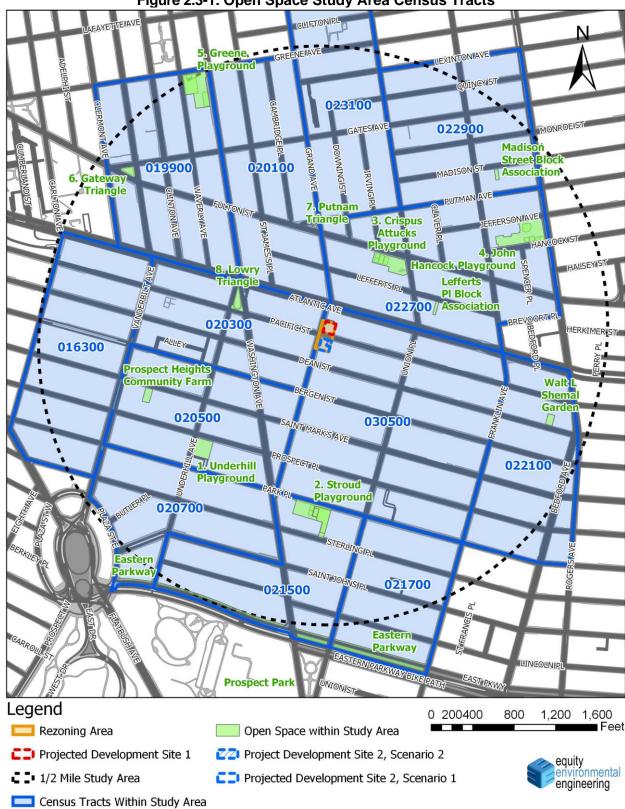

Figure 2.3-1: Open Space Study Area Census Tracts

Table 2.3-1: Study Area Population 2016

Census Tract	Population
163	3,299
199	3,454
201	3,828
203	1,776
205	2,703
207	4,310
215	5,166
217	3,906
221	4,014
227	3,454
229	3,719
231	3,535
305 ¹	6,042
Total	49,206

Existing Condition

A growth rate was calculated to determine a 2018 population for the Study Area by identifying the historic annual growth exhibited in population for the Study Area Census Tracts from 2010 to 2016. This Area experienced a growth of 3,971 residents over the seven-year period from 2010 to 2016 or a growth rate of 8.7 percent or an annual growth rate of 1.2 percent. Forecasting the 2018 population was determined by applying the 1.2 percent annual growth rate to the above 2016 Study Area population of 49,206. Using this approach, the estimated 2018 existing condition population is 50,394.

Future No-Action Condition

An 8-story mixed-use development containing 103 dwelling units was voted on and approved on April 8, 2019, for 1050 Pacific Street; an 11-story mixed use development containing 128 dwelling units was voted on and approved on April 8, 2019, for 1010 Pacific Street; and a 4-story residential development with 26 dwelling units has been proposed for 587 Bergen Street. No other major projects contributing residential development were identified for the Project Area. With the potential addition of 257 dwelling units from the above proposed projects, and factoring in 2.13 residents per dwelling units for the census area, a possible 547 new residents may be added to the study area by the build year of 2024. The Project Area No-Action is assumed to be the 2018 population projected to the 2024 build year with no additional adjustment to the Affected Area population as residential land uses would not be allowed without the Proposed Action. Applying the growth factor of 1.2 percent identified above to the 2018 existing condition a No-Action 2024 population for the Study Area, including the additional 547 new residents from other proposed projects, would be 54,680. **Table 2.3-2** shows the comparative population change from 2010 to 2024.

Future With-Action

¹ Note: Shaded Row indicates Census Tract of the Affected Area

The Study Area With-Action population is the product of the No-Action population of 54,680 plus the With-Action population of 277 residents derived from the 130 units under the reasonable worst-case scenario for a Study Area population of 54,957.

Table 2.3-2: Population in the Study Area through 2024²

Census Tract	2010	2016	2018	Without- Action 2024	With- Action 2024
Total	45,753	49,206	50,394	54,680	54,957

Open Spaces Resources

There are nine open space resources within the Study Area identified in **Table 2.3-3**. There are 5.73 acres of open space resources in the Study area, of these 4.14 are active and 1.59 are passive. The location of these resources as well as community gardens³ present in the Study Area are shown in **Figure 2.3-1**.

² Source: NYC Census Fact Finder

³ In order to provide a more conservative assessment, community gardens and Eastern Parkway were not included in the Open Space Ratio Calculations

Determination of Significance

Existing Condition

The Study Area has 5.73 acres of open space and an existing residential population of 50,394. The open space ratio (OSR) under existing conditions is 1.14 acres per thousand residents.

Prospect Park, a 526-acre park of regional significance, is located just outside a half mile or a ten-minute walk from the Project Site. Further, Eastern Parkway is a two-mile long 63.64-acre greenway located at the southern edge of the study area beginning at Prospect Park. The trail contains bicycle and walking paths as well as benches. In order to provide a conservative analysis, both Prospect Park and Eastern Parkway were excluded from the OSR calculations.

Future No-Action Condition

In the future no-action condition, the population for the Study Area in the 2024 build year is forecasted to be 54,680 and is projected to be served by same 5.73 acres of open space as in the existing condition. With this population, the open space ratio would be .1048 acres per thousand people. This is well below the citywide average of 1.5 acres per thousand people and reflects the area's high population density and lack of large park facilities within a ½-mile radius.

Future With-Action Conditions

The Proposed Action would result in an increase in no-action population of 277 people by the 2024 build year. As noted above, this would increase population in the with-action condition to 54,957. With this small addition to area population, the open space ratio would be .1042 acres per thousand people in the future with-action condition.

Conclusion

Under the existing, no-action and with-action conditions, open space ratio in the area would be well below 1.5 acres per thousand residents, which is the citywide average. By *CEQR Technical Manual* methodology, a decrease in open space ratio in an underserved area that approaches or exceeds 5 percent is generally considered to be a substantial change warranting more detailed analysis. The *CEQR Technical Manual* further states that detailed analysis of open space effects on residents is generally unnecessary if the open space ratio decreases by less than 1 percent. The proposed action would result in a reduction in open space ratio of .5%. Because the proposed action would have a minimal effect on open space ratio of well less than 1%, further assessment is unwarranted, and no significant impacts would occur. Also, as stated above, Prospect Park, a 526-acre regional park, and Eastern Parkway, a 63.64-acre greenway, are located just outside a half-mile radius of the Affected Area, and they provide additional open space resources within a 10-minute walk from the project area. It is anticipated that Prospect Park and Eastern Parkway would serve new residents generated by the project.

2.4 Shadows

The CEQR Technical Manual defines a shadow as the condition that results when a building or other built structure blocks the sunlight that would otherwise directly reach a certain area, space, or feature. An incremental shadow is the additional or new shadow that a building or other built structure resulting from a proposed project would cast on a sunlight-sensitive resource during the year. The sunlight-sensitive resources of concern are those resources that depend on sunlight or for which direct sunlight is necessary to maintain the resource's usability or architectural integrity, including public open space, architectural resources and natural resources. Shadows can have impacts on publicly accessible open spaces or natural features by adversely affecting their use and important landscaping and vegetation. In general, increases in shadow coverage make parks feel darker and colder, affecting the experience of park patrons. Shadows can also have impacts on historic resources whose features are sunlight-sensitive, such as stained-glass windows, by obscuring the features or details, which make the resources significant.

The duration and dimensions of Shadows are determined by the geographic location of the area from which the shadow is cast and the time of day and season. Shadows cast during the morning and evening, when the sun is low in the sky, are longer, while midday shadows are shorter in length. Shadows in winter, when the sun arcs low across the southern sky, are also longer throughout the day than at corresponding times in spring and fall seasons. In summer, the high arc of the sun casts shorter shadows than at any other time of year, and early and late shadows during the summer are cast towards the south than shadows cast in early and late winter months.

The CEQR Technical Manual states that a shadow assessment considers projects that result in new shadows long enough to reach a sunlight-sensitive resource. Therefore, a shadow assessment is warranted only if the project would either result in: (a) new structures (or additions to existing structures including the addition of rooftop mechanical equipment) of 50 feet or more; or, (b) be located adjacent to, or across the street from, a sunlight-sensitive resource. However, a project located adjacent to or across the street from a sunlight-sensitive open space resource (which is not a designated New York City Landmark or listed on the State/National Registers of Historic Places, or eligible for these programs) may not require a detailed shadow assessment if the project's height increase is ten feet or less.

The sunlight-sensitive resources of concern are those resources that depend on sunlight or for which direct sunlight is necessary to maintain the resource's usability or architectural integrity, including public open space, architectural resources and natural resources. In general, shadows on city streets and sidewalks or on other buildings are not considered significant. Some open spaces also contain facilities that are not sensitive to sunlight. These are usually paved such as handball or basketball courts, contain no seating areas and no vegetation, no unusual or historic plantings, or contain only unusual or historic plantings that are shade tolerant. These types of facilities do not need to be analyzed for shadow impacts. Additionally, it is generally not necessary to assess resources located to the south of projected development sites, as shadows cast by the action-generated development would not be cast in the direction of these resources. Furthermore, shadows occurring within one and one-half hour of sunrise or sunset generally are not considered significant in accordance with the *CEQR Technical Manual*.

Methodology

A preliminary analysis of shadows follows the guidelines set forth in the 2014 CEQR Technical Manual for a preliminary assessment (Section 310). According to the 2014 CEQR Technical Manual, a preliminary shadow assessment includes the development of a base map showing the site location in relationship to any sunlight-sensitive resources as per guidelines provided in the 2014 CEQR Technical Manual. Following these guidelines, the longest shadow study area is determined, and a Tier 1 screening assessment is conducted to determine if any sunlight-sensitive resources fall within the study area. If no resources are found, no further analysis would be needed. If sunlight-sensitive resources lay within the longest shadow study area, the next tier of screening assessment should be conducted. This preliminary assessment includes a basic description of the proposed project that would be facilitated by the proposed action in order to determine whether a more detailed assessment would be appropriate.

Analysis

Projected Development Sites 1 and 2 are located on Block 1125 and 1133 in the Crown Heights neighborhood of Brooklyn. The proposed R7D/C2-4 zoning district would allow development of up to 115 feet in height and 11 stories, therefore the shadow analysis would assume a building of this height for both sites. Accordingly, a preliminary assessment of shadows is warranted.

Tier 1 Screening Assessment

Under the Future With-Action condition, Projected Development Site 1 (Block 1125, Lot 1) as well as Projected Development Site 2 (Block 1133, Lots 7, 10, 11, and 12) could be developed with new buildings having a maximum height of 120 feet (115 feet building height plus 5 feet for rooftop mechanical equipment) and the longest action-induced shadow would be approximately 516 ft (120 x 4.3 feet) in length. The first step in a shadow analysis is to determine if there are any sunlight sensitive resources located within a radius of this length. As Figure 2.4-1 shows there are no sunlight sensitive resources within 516 feet of any of the Projected Sites.

Conclusion

As indicated below, the Tier I analysis showed no sunlight sensitive resources within the area. Therefore, no impacts are foreseeable, and no further analysis is necessary.

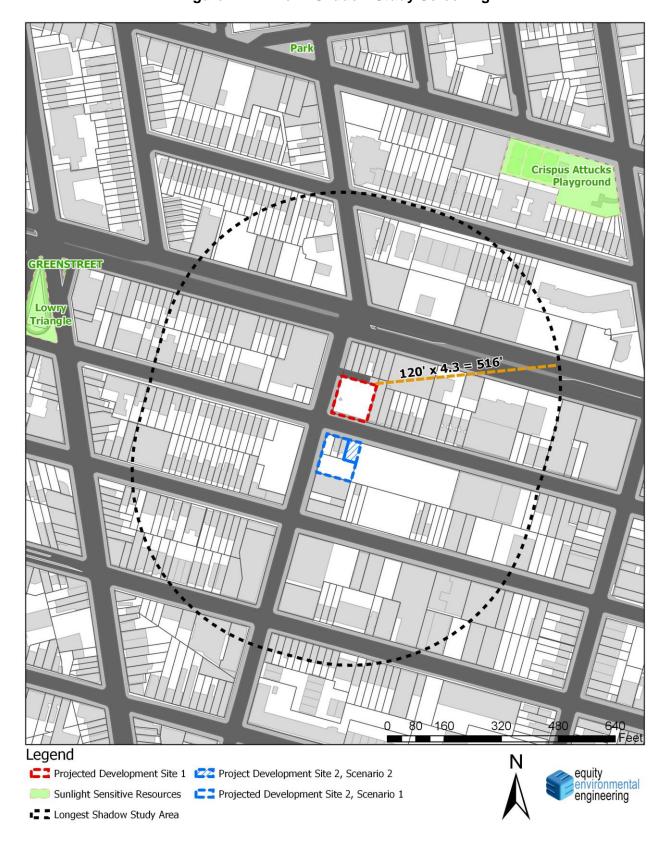

Figure 2.4-1: Tier 1 Shadow Study Screening

2.5 Historic and Cultural Resources

An assessment of historic and cultural resources is usually necessary for projects that are located in close proximity to historic or landmark structures or districts, or for projects that require in-ground disturbance, unless such disturbance occurs in an area that has been formerly excavated, according to the CEQR Technical Manual.

The term "historic resources" defines districts, buildings, structures, sites, and objects of historical, aesthetic, cultural, architectural and archaeological importance. In assessing both historic and cultural resources, the findings of the appropriate city, state, and federal agencies are consulted. Historic resources include: the New York City Landmarks Preservation Commission (LPC) designated landmarks, interior landmarks, scenic landmarks, and historic districts; locations being considered for landmark status by the LPC; properties/districts listed on, or formally determined eligible for, inclusion on the State and/or National Register (S/NR) of Historic Places; locations recommended by the New York State Board for Listings on the State and/or National Register of Historic Places and National Historic Landmarks.

2.5.1 Architectural Resources

Per CEQR Technical Manual guidelines, impacts on historic resources are considered on those sites affected by the proposed action and in the area surrounding identified development sites. The historic resources study area is therefore defined as the project site plus an approximately 400-foot radius around the proposed action area.

To determine whether the projected development has the potential to affect nearby off-site historic or architectural resources, the study area was screened for historic and architectural resources. The LPC was contacted for their initial review of the project's potential to impact nearby historic and cultural resources, and by letter dated November 13, 2018, indicating that the Study Area does not contain any sites of buildings of known architectural or archeological significance (see Appendix A).

2.5.2 Cultural and Archaeological Resources

Unlike the architectural evaluation of a study area that extends beyond the footprint of a project's block and lot lines, the analysis of potential and/or projected impacts to archaeological resources is controlled by the actual footprint of the limits of soil disturbance. Archeological resources are physical remains, usually subsurface, of the prehistoric and historic periods such as burials, foundations, artifacts, wells and privies. The CEQR Technical Manual requires a detailed evaluation of a project's potential effect on the archeological resources if it would potentially result in an in-ground disturbance to an area not previously excavated.

The proposed action would result in new in-ground construction on the Projected Development Site and the Potential Development Sites. As noted, the LPC was contacted for their initial review of the project's potential to impact nearby historic and cultural resources, and a response was received on November 13, 2018 (see Appendix A). The LPC has indicated that no cultural resource, architectural or archaeological significance is associated with the Study Area. Therefore, significant adverse impacts to archaeological resources are not expected because of the proposed action, and further analysis is not warranted.

2.6 Urban Design and Visual Resources

According to the CEQR Technical Manual, urban design is the totality of components that may affect a pedestrian's experience of public space. Elements that play an important role in the pedestrian's experience include streets, buildings, visual resources, open space, and natural features, as well as wind as it relates to channelization and downwash pressure from tall buildings. Pursuant to the 2014 CEQR Technical Manual, an assessment of Urban Design may be warranted when a Proposed Action may affect one or more of the elements that contribute to the pedestrian experience of an area, specifically the arrangement, appearance, and functionality of the built environment.

The proposed rezoning of the Affected Area from M1-1 to R7D/C2-4 would alter permitted use, bulk, and height within the Affected Area. Therefore, further analysis is warranted. The differences between existing and proposed zoning, with regards to those aspects of zoning affecting urban design, are presented in the following **Table 2.6-1**

	No-Action	With-Action
Zoning	M1-1	R7D/C2-4
Permitted Uses	Manufacturing, commercial, community facility	Residential, commercial, community facility, manufacturing
Maximum FAR	1.0 manufacturing and commercial, 2.4 community facility	5.6 residential (with mandatory inclusionary housing) 4.2 community facility 2.0 commercial
Maximum Height	30' perimeter height, max. height controlled by sky exposure plane	115' max. height with qualifying ground floor

Table 2.6-1: No-Action and With-Action Zoning Controls

Existing Conditions

The study area is located in the Crown Heights North neighborhood of Brooklyn. A ground level photograph map key is provided at the end of the EAS short form, with ground-level photographs of the projected development site and the immediate surrounding area.

The area's predominant land uses are of manufacturing, one- and two-family residences, multifamily residences, mixed commercial and residential buildings, and vacant land and open parking lots. Because of this diversity of use and form, there is no unity of built form in the area. The manufacturing buildings range from 1 to 3 stories in height. The multi-story industrial loft buildings have high floor to ceiling heights, so that they are significantly taller than a typical four-story residential building. The residential buildings range from 2 to 9 stories in height and consist of one- and two-family attached and semi-detached houses and multi-story apartment buildings. Most buildings within the Study Area are arranged regular (parallel) with respect to their lot placement. Buildings within the area are generally built out to their lot lines.

The street grid is regular. Pacific Street, Grand Avenue, and Dean Street are one-way streets with a single moving lane and curbside parking and loading. Traffic on Pacific Street is westbound, southbound on Grand Avenue, and traffic on Dean Street is eastbound. Classon Avenue is a one-way northbound street with one moving lane. One block to the north of the affected area,

Atlantic Avenue is a major east-west thoroughfare with two to three moving lanes in each direction. East of the subject block the Franklin Avenue Shuttle subway line operates on elevated tracks.

There are a few streetscape elements within the study area. Along Pacific St in the immediate vicinity of the Project Area, there are a few scattered trees on a decayed streetscape with erupted and uneven sidewalks, scattered non-pedestrian oriented lighting, a fenced-in active junkyard, and little in the way of visual interest. Then, to the west, Pacific Street transitions into a residential neighborhood with quality tree-lined streets, sidewalks in good repair, and a mix of high end four- to five-story residential buildings and three-story row homes. Grand Avenue, running north to south along the western border of the Affected Area, features a mix of unimproved lots, vacant buildings, and parking facilities before reaching the intersection of Dean Street and Grand Avenue, which features a three-story mixed use commercial and residential building and a six-story school which provide quality architecture. Dean Street east of Grand Avenue is lined with parking facilities and junkyards and a decaying streetscape, with a single bench outside of the public school. To the west of Grand Avenue, Dean Street transitions into a residential neighborhood with a quality assemblage of trees and an architectural style that creates a sense of place. No other notable streetscape elements (e.g. benches), lighting, or any form of pocket parks are located within the study area.

The street hierarchy of the study area includes several different functional classifications. Atlantic Avenue is classified as a Principal Arterial Roadway under the Surface Transportation Program, while Dean Street, Bergen Street, and Underhill Avenue are classified as Major Collector Roadways. Classon Avenue to the east and Washington Avenue to the west are both minor collectors. All other roadways in the study area are classified as local. The affected area is shown in the following aerial photograph.

Future Without the Proposed Action

In the future without the proposed action, the Projected Development Site 1 and 2 are not expected to redevelop.

A proposal to rezone a portion of Block 1133, to the east of the Affected Area, was voted on and approved on April 8, 2019, and will allow development of a new 10-story mixed residential and community facility building at 1010 Pacific Street, approximately 300 feet to the east.

It is expected that while tenants within the Study Area's office, manufacturing, retail, and other buildings may change, the overall use of these buildings would remain the same, and any physical changes to buildings in the Study Area would comply with designated zoning regulations and other surrounding districts. No significant changes to the area's urban character are anticipated. No changes to the area's views to the adjacent parks and open spaces are also expected.

Future With the Proposed Action

Projected Development 1:

Pursuant to the Proposed Actions the applicant-owned property (Block 1125, Lot 1, "Projected Development Site 1") would be developed under a RWCDS with a 115-foot, 11-story mixed-use building totaling 60,480-gsf or 56,000-zsf with 50,760-gsf or 47,000-zsf of residential floor area. The building would contain 68 dwelling units and approximately 9,720 gross square feet (9,000 zoning square feet) of UG 6 ground floor commercial space. Twenty (20) percent of the

residential floor area, or 14 of the proposed 68 units, would be designated for inclusionary housing units. A loading dock and 34 bicycle parking spots would be included in the development.

Projected Development Site 2, Scenario 1

Block 1133, Lots 10, 11, 12, p/o 13, and 7 would be assembled to form a 10,999-sf lot with a 66,522 gsf (61,594 zsf) 11-story, 115-foot residential building with a commercial use first floor. The building would contain 65 dwelling units, 13 of which would be affordable. The residential portion of the building would be 56,544 gsf (52,355 zsf) and the commercial portion would be 9,609 gsf (9,239 zsf). No residential parking spaces would be required (15 or fewer spaces exception). No commercial accessory spaces will be required because the total would be fewer than 40. The average unit size is estimated at 800 sf (differing from The Applicant's proposal, but more in line with market conditions and trends).

Projected Development Site 2, Scenario 2

Block 1133, Lots 10, 11, 12, and 7 would be assembled to form a 8,937-sf lot and the development rights of the rezoned p/o Lot 13 would transfer to the assemblage of Lots 10, 11, 12, and 7. Projected Development Site 2 would then be developed with a 66,522 gsf (61,594 zsf) 11-story, 115-foot residential building with a commercial use first floor. The building would contain 65 dwelling units, 13 of which would be affordable. The residential portion of the building would be 56,544 gsf (52,355 zsf) and the commercial portion would be 9,609 gsf (9,239 zsf). No residential parking spaces would be required (15 or fewer spaces exception). No commercial accessory spaces will be required because the total would be fewer than 40. The average unit size is estimated at 800 sf (differing from The Applicant's proposal, but more in line with market conditions and trends).

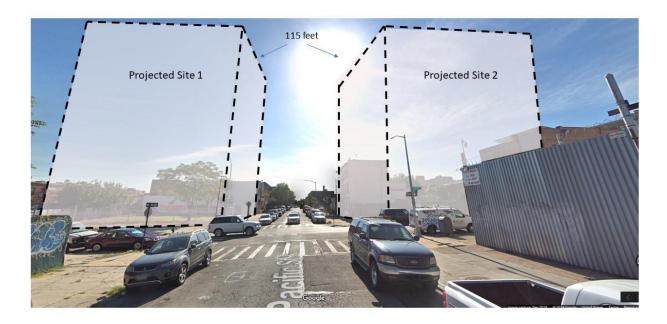

Conclusion

The development that would occur under the proposed action would not have an adverse impact on the area's urban design elements. It would allow development of new multi-story buildings on the Projected Development Sites and potential development height of up to 11 stories and 115 feet in height. This new development would be consistent with the surrounding area's built form although at a greater height and scale. It would not result in buildings which are substantially different in height, bulk, scale and/or use than the component of the area's built form consisting of multi-story residential buildings. It would not affect street hierarchy, streetwall, curb cuts or pedestrian activity. As illustrated in the attached enclosed renderings showing the proposed and projected buildings and surrounding development, the proposed action would result in development that can provide context and a sense of place in an area of transition.

2.7 Hazardous Materials

According to the CEQR Technical Manual, the potential for significant impacts from hazardous materials can occur when: (a) hazardous material exists on a site, and (b) an action would increase pathways to their exposure, or (c) an action would introduce new activities or processes using hazardous materials.

Methodology

The hazardous materials assessment begins with a Phase 1 ESA, which is a qualitative evaluation of the environmental conditions present at a site, based on a review of available information site observations, and interviews. Pursuant to the 2014 CEQR Technical Manual, the Phase 1 ESA is conducted in accordance with the standards established by the current ASTM Phase 1 ESA Standard and includes research and field observations to determine whether the site may contain contamination from either past or present activities on the site or as a result of activities on adjacent or nearby properties. If a potential REC is identified during this assessment, then building any subsurface investigations are usually conducted as part of a Phase II ESA to confirm the presence and extent of the contamination.

Analysis

Projected Development Site 1, Block 1125, Lot 1, is Applicant owned and located at 979 Pacific Street, at the intersection of Grand Avenue and Pacific Street. The 10,000 square foot lot is presently vacant.

Projected Development Site 2

- Block 1133, Lot 10 has a lot area of 1,375 square feet and is presently vacant.
- Block 1133, Lot 11 (958 Pacific Street) has a lot area of 1,031 square feet and contains a 3-story, 1,425 square foot multi-family apartment building.
- Block 1133, Lot 12 (960 Pacific Street) has a lot area of 1,031 square feet and contains a 3-story, 1,407 square foot boarded-up, vacant multi-family apartment building.
- Block 1133, Lot 7 has a lot area of 5,500 square feet and is presently vacant.
- Block 1133, Lot 13 (962 Pacific Street) has a lot area of 33,415 square feet, is considered vacant land, but is currently operating as a junk yard. 2,062 SF of this lot is within the proposed rezoning area.

The proposed rezoning would allow for residential and commercial uses to be built in a historic manufacturing area. Accordingly, a Phase I Environmental Site Assessment (ESA) was conducted for the Project Site by Equity Environmental Engineering (EEE). A copy of this report is included as an Attachment. This Phase I ESA will be reviewed by the Department of Environmental Protection.

The purpose of a Phase I ESA is to determine whether any type of environmental hazard exists within or adjacent to the project site. Environmental hazards may include, but are not be limited to, hazardous/toxic wastes or raw chemicals stored, dumped, or spilled on the site, underground and above ground storage of petroleum or hazardous materials; asbestos within the building materials/structures; and identification of potential off-site sources of hazardous waste contamination, such as industrial facilities adjacent to the subject property.

Recognized Environmental Conditions (RECs) are defined as the presence or likely presence of any hazardous substances or petroleum products under conditions that indicate an existing release, past release, or a material threat of a release into structures on the property or into the ground, groundwater or surface waters of the property. De minimis RECs are those that do not present a threat to health or the environment and would not be the subject of an enforcement action by a government agency. All RECs, excluding de minimis RECs will be considered in the Phase I.

EEE has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13. The following conditions were observed:

- The subject property is comprised of 10,000 sq. ft of land and is currently undeveloped and covered with vegetation, gravel, and patches of concrete.
- RECs Equity found no RECs associated with the property.
- HRECs Equity found no HRECs associated with the property.
- CRECs Equity found no CRECs associated with this property.
- VECs Based on the evidence provided in the database report and knowledge of the subject property, it is Equity's conclusion that a Vapor Encroachment Condition (VEC) cannot be ruled out.

The following conditions were identified for the surrounding area:

- According to Sanborn History Maps, a filling station was present at 941 Atlantic Avenue (at the intersection of Atlantic Avenue and Grand Avenue) about 250 feet to the northwest of the subject property between 1965 and 1977.
- Based on Environmental Database Reports (EDR), multiple environmental spills, historical manufacturing uses, and fuel filling stations were identified in the area.

Phase I ESA Recommendations

Prior to any future development of the Property that involves subsurface disturbance, a subsurface (Phase II) investigation is recommended prior to such activities to determine if vapor mitigation and/or additional remediation is warranted for the future use of the Property.

Phase II Remedial Investigation Workplan

Because a VEC could not be ruled out, a Phase II Remedial Investigation Workplan (RIWP) and a Site-Specific Health and Safety Plan (HASP) were prepared by EEE on September 19, 2018. An investigation of soil, soil vapor, and groundwater will be performed to properly characterize the site for potential environmental impacts from historic on-site/off-site uses, operations, etc. The sampling procedures of this investigation will be performed in accordance with the NYSDEC Technical Guidance for Site Investigation and Remediation DER-10.

Six (6) test borings will be completed at the site and three (3) temporary monitoring wells and five (5) soil-gas points will be installed. The borings will be installed to the water table or approximately 30 feet below the proposed excavation depth, whichever comes first. The proposed maximum depth of excavation is 15 feet. Two (2) soil samples will be collected from each boring if possible.

A Phase II Site Investigation Report (SIR) will be prepared for the subject property based on the results of the completed scope of work. The document will summarize the methodologies used during the field activities, observations, any deviations from the proposed scope of work, conclusions based on the observations and analytical data, and recommendations, for additional work, if necessary. The sampling data will be quantitatively compared to appropriate DEC guidelines and standards. Soils will be compared to the DEC NYCRR Part 375-6 Remedial Program Soil Cleanup Objectives (SCOs); unrestricted and restricted use. Groundwater results will be compared to the DEC Class GA water quality standards in the Technical & Operational Guidance Series (TOGS). The Soil Gas results will be compared to the applicable 2006 Guidance for Evaluation Soil Vapor Intrusion in the State of NY. If remedial action is required, a Remedial Action Plan (RAP) will be prepared and submitted for review and approval by the appropriate regulatory agencies.

Conclusion

Based on the findings of the Phase 1 ESA, no RECs, HRECs, or CRECs were identified related to the subject property, nor does environmental data sources indicate current or historical issues of present concern related to any other properties within the Affected Area. Based on EDR reports, a VEC cannot be ruled out. The Phase I ESA, Phase II RIWP, and HASP will be submitted for review to the Department of Environmental Protection. Should any remediation be warranted, The Applicant commits to perform the necessary mitigation in order to ensure that construction and occupancy of the site does not result in significant adverse impacts related to hazardous materials.

E-Designation E-550

The (E) Designation for hazardous materials will be placed on Projected Development Site 1 (Block 1125; Lot 1) and Projected Development Site 2 (Block 1133; Lots 7, 10, 11, and 12). The text for (E) Designation E-550 related to hazardous materials is as follows:

Task 1-Sampling Protocol

The applicant submits to OER, for review and approval, a Phase I of the site along with a soil, groundwater and soil vapor testing protocol, including a description of methods and a site map with all sampling locations clearly and precisely represented. If site sampling is necessary, no sampling should begin until written approval of a protocol is received from OER. The number and location of samples should be selected to adequately characterize the site, specific sources of suspected contamination (i.e., petroleum based contamination and non-petroleum based contamination), and the remainder of the site's condition. The characterization should be complete enough to determine what remediation strategy (if any) is necessary after review of sampling data. Guidelines and criteria for selecting sampling locations and collecting samples are provided by OER upon request.

Task 2-Remediation Determination and Protocol

A written report with findings and a summary of the data must he submitted to OER after completion of the testing phase and laboratory analysis for review and approval. After receiving such results, a determination is made by OER if the results indicate that remediation is necessary. If OER determines that no remediation is necessary, written notice shall be given by OER.

submitted to OER for review and approval. The applicant must complete such remediation as determined necessary by OER. The applicant should then provide proper documentation that the work has been satisfactorily completed.

A construction-related health and safety plan should be submitted to OER and would be implemented during excavation and construction activities to protect workers and the community from potentially significant adverse impacts associated with contaminated soil, groundwater and/or soil vapor. This plan would be submitted to OER prior to implementation.

With this (E) designation in place, no significant adverse impacts related to hazardous materials are expected, and no further analysis is warranted.

2.8 Transportation

Pursuant to CEQR Technical Manual methodology, a transportation assessment may be necessary when a proposed action would alter the transportation network by closing, opening, or realigning an element of the transportation system such as a roadway, pedestrian way, or transit route, or if it would generate new trips on the transportation network. The objective of the transportation analyses is to determine whether a proposed project may have a potential significant impact on traffic operations and mobility, public transportation facilities and services, pedestrian elements and flow, safety of all roadway users (pedestrians, bicyclists and vehicles), on- and off-street parking, or goods movement.

Methodology

The CEQR Technical Manual states that a preliminary trip generation assessment should be prepared to determine whether a quantified analysis of any technical areas of the transportation system is necessary. Except in unusual circumstances, a further quantified analysis would typically not be needed for a technical area if the proposed development would result in fewer than the following increments:

- 50 peak hour vehicle trips;
- 200 peak hour subway/rail or bus transit riders (or 50 bus trips in a single direction on a single route during a peak hour); or
- 200 peak hour pedestrian trips.

The CEQR Technical Manual also states that if the threshold for traffic is surpassed, a parking assessment may also be warranted. This chapter assesses the potential for project—generated vehicle, transit, and pedestrian trips to affect the local transportation network, as well as an assessment of transportation safety in the study area.

Analysis

Future No-Action Scenario

In the future without the proposed action, the Projected Development Site 1 and 2 are not expected to redevelop.

A proposal to rezone a portion of Block 1133, to the east of the Affected Area, was voted on and approved on April 8, 2019, and will allow development of a new 10-story mixed residential and community facility building at 1010 Pacific Street, approximately 300 feet to the east.

Future With-Action Scenario

Projected Development 1:

Pursuant to the Proposed Actions the applicant-owned property (Block 1125, Lot 1, "Projected Development Site 1") would be developed under a RWCDS with a 115-foot, 11-story mixed-use building totaling 60,480-gsf or 56,000-zsf with 50,760-gsf or 47,000-zsf of residential floor area. The building would contain 68 dwelling units and approximately 9,720 gross square feet (9,000 zoning square feet) of UG 6 ground floor commercial space. Twenty (20) percent of the residential floor area, or 14 of the proposed 68 units, would be designated for inclusionary

housing units. A loading dock and 34 bicycle parking spots would be included in the development.

Projected Development 2:

Pursuant to the Proposed Actions, Block 1133, Lots 7, 10, 11, and 12 (Projected Development Site 2) could be redeveloped with an 11-story, 115-foot high, 54,051-gross square foot (50,047 zoning square foot) mixed-use commercial/residential building. The building could contain an FAR of 5.6: 4.76 residential FAR or 45,943 gross square feet (42,540 zsf) of residential floor area and 0.84 commercial FAR or 8,108 gross square feet (7,507 zsf) of commercial floor area. The building would contain a total of 53 units, 11 of which would be affordable. Parking for commercial and residential uses would be waived.

Total Induced and Net Development within the Affected Area

In total, under the Proposed Rezoning-Future Build Scenario – the net induced development of Project Development 1 and Projected Development 2 would consist of the addition of 104,471 gsf of residential floor area (130 dwelling units), an additional 18,969 gsf of local commercial floor area, and no new parking spaces.

Preliminary Trip Generation Screening

Based on the Affected Area's location, it is within Traffic Zone 2. According to Table 16-1 of the 2014 CEQR Technical Manual, a residential development of greater than 200 residential units, 15,000 square feet of local retail, 20,000 gsf of regional retail, or 10,000 gsf of restaurants typically warrants further assessment of the potential for adverse effects on Transportation. A weighted average was used to determine the need for a preliminary trip generation assessment. Based on the increment of 18,969 gsf of local retail (1.26) and 130 residential units (.65), the weighted average is 1.91. A preliminary trip generation assessment is required.

Level 1 Screening Assessment

A Level 1 trip generation screening assessment was conducted to estimate the number of person and vehicle trips by mode that could be generated by the Proposed Actions. If any of the thresholds described in the *CEQR Technical Manual* are exceeded then a Level 2 screening may be warranted.

Transportation Planning Factors

The transportation planning factors used to forecast travel demand for the projected land uses are summarized below in **Table 2.8-1.** The trip generation rates, temporal distributions, modal splits, vehicle occupancies, and truck trip factors are primarily based on *CEQR Technical Manual* factors, 2017 ACS journey-to-work data, and factors developed for recent and applicable environmental reviews.

Pedestrian Threshold	200	200	200	200
Vehicular Trip- Ends	20	48	33	31
Vehicular Threshold	50	50	50	50

Trip Generation Threshold

Based on **Table 2.9-3** above, the Proposed Action would result in greater than 200 peak hour incremental project-generated pedestrian trip-ends during the Midday, PM and Saturday peak hours. Therefore, a Tier 2 pedestrian trip assignment is required.

Tier 2 Pedestrian Assignment to the Local Network

Study Area

A quarter-mile study area, which represents a five-minute walk from the point of origin to the point of destination or secondary transfer point (i.e., bus stop or subway station) is identified in the figure below.

Residential Assumptions

In order to identify destination points for the proposed residential pedestrian trips, U.S. Census Bureau American Community Survey 2006-2010 Census Transportation Planning Package Part 3 Journey to Work (JTW) data was reviewed for Census Tract 305 (the subject census tract). The JTW data indicated the following commuting flows for the subject census tract:

- Queens 4%
- Brooklyn 38%
- The Bronx 1%
- Manhattan 57%

Of the 38% of residents who commute to Brooklyn from Census Tract 305, 65% commute to the south, 10% to the north, 15% to the west, and 10% to the east.

Local Retail Assumptions

For the local retail component, pedestrian trips were assumed to be evenly dispersed, as people travel throughout the area for restaurants, shopping, or errands.

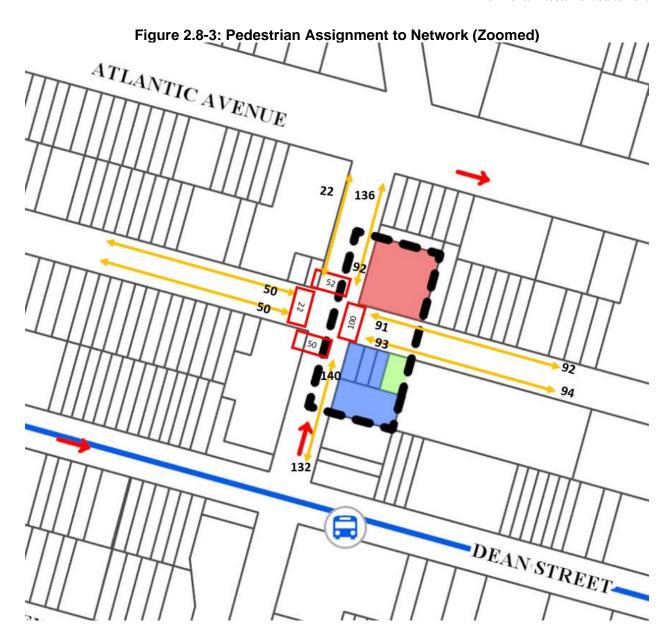

Assessment

According to the *CEQR Technical Manual*, projected pedestrian volume increases of less than 200 pedestrians per hour at any sidewalk, crosswalk, or intersection corner would not typically be considered a significant impact and would not require a detailed analysis.

Public transit routes and stops are shown below in **Figure 2.8-2.** As shown below in **Figure 2.8-3**, there would be no increase in pedestrian volume in exceedance of the 200 pedestrians per hour threshold, and a detailed analysis is not required.

2.9 Air Quality

Ambient air quality describes pollutant levels in the surrounding environment to which the public has access. To assess potential health hazards due to ambient air quality, the impact of air pollutants emitted by motor vehicles (mobile source) and by fixed facilities (stationary source) are analyzed, where the effects of both the proposed project on ambient air quality and the ambient air quality effect on the proposed project are considered. The analysis frame work, as mandated by the State Environmental Review Act, follows the New York City Environmental Quality Review 2014 Technical Manual (CEQR TM). The potential air quality impacts of the following emissions are estimated following the procedures and methodologies prescribed in the CEQR TM:

- The potential for changes in vehicular travel associated with proposed development activities to result in significant mobile source (vehicular related) air quality impacts.
- The potential for an atypical (e.g., not at-grade) source of vehicular pollutants to significantly impact the proposed development.
- The potential for emissions from the heating, ventilation and air conditioning (HVAC) systems of the proposed development to significantly impact nearby planned and/or existing land uses.
- The potential for air toxic emissions released from existing industrial facilities to significantly impact the proposed development.
- The potential for significant air quality impacts from the emissions of facilities that require Prevention of Significant Deterioration permits (Title V), and facilities which require a state facility permit to significantly impact the proposed development.
- The potential for facilities' malodorous emissions to unreasonably interfere with the proposed project's occupant's comfortable enjoyment of life or their property.

The Development Sites

The Project Area is located in the Crown Heights neighborhood of Brooklyn, Community District 8, and is comprised of Block 1125, Lot 1, and Block 1133, Lots 7, 10, 11, and 12. Projected Development Site 1 is the Applicant owned property. The proposed rezoning would facilitate mixed-use, predominantly residential buildings. The Development Sites Reasonable Worst-Case Development Scenarios (RWCDS) were considered for the air quality analysis. The RWCDS would facilitate the construction of 11-story, 115 feet tall buildings. Table 2.9-1 summarizes the Projected Development Sites.

Table 2.9-1: The RW	CDS of the Developm	ent Sites on Block Ti	125 and 1133.

Site ID	Block/Lot	Building Height (ft.)	Gross Floor Area (gsf)	No. of Parking Spaces	
Projected Development Site 1	1125/1	115	60,480	0	
Projected Development Site 2	1133/7, 10, 11, 12	115	66,522	0	

For the purpose of the air quality analysis, the Development Sites (mixed-use buildings, predominantly residential and each building contains commercial retail space) boilers' heat inputs assumed residential uses as a conservative measure (residential use consumes more fuel per floor area than other uses). In addition, each building's HVAC system would operate on natural gas.

2.9.1 Methodology & Standards

Air Pollutants and Applicable Standards/Guidelines

National Air Quality Standards

The U.S. Environmental Protection Agency (EPA) has identified six pollutants, known as criteria pollutants which are being of concern nationwide, and established threshold concentration based upon adverse effect on human health. The six pollutants and their characteristics are:

- Carbon Monoxide (CO) is mainly produced by motor vehicles from the incomplete combustion of gasoline. The impact of CO on the ambient air is analyzed next to roadways, intersections, parking lots, and parking garages vents as these locations are the most affected.
- Nitrogen Dioxide (NO₂) is a main concern related to the burning of natural gas. Emitted NOx from the burning of fossil fuel gradually convert to NO₂ in a chemical reaction that is affected by ozone concentration and the presence of sunlight. In a micro scale analysis, buildings HVAC systems are analyzed for NO₂ impact.
- Ozone (O₃) is formed by chemical reaction between hydrocarbons and nitrogen oxides and its impact is analyzed on a regional scale by monitoring stations.
- Lead (Pb) in the ambient air is monitored on a regional level. In a project scale analysis, impact due to Lead concentration levels are analyzed if a new source, such as lead smelters, is introduced into the environment or if a project is located next to a lead emitter.
- Particulate Matter emissions are associated with both stationary sources and mobile sources. Two sizes of particulate matters are analyzed: Inhalable Particles (PM₁₀) and Fine Particulate Matter (PM_{2.5}), where the subscript number refers to the diameter of the particulate matter in micrometers.
- Sulfur Dioxide (SO₂) emission is principally associated with stationary sources that use oil or coal as the fossil fuel for the equipment. These fuels contain sulfur that bond to oxygen atoms in the burning process.

As required by the Clean Air Act, National Ambient Air Quality Standards (NAAQS) have been established for the criteria pollutants by EPA, and New York State has adopted the NAAQS as the State ambient air quality standards. The NO₂ and PM_{2.5} standards— the criteria pollutants of main concern for HVAC systems fueled by natural gas—together with their health-related averaging periods are presented in **Table 2.9-2**.

Table 2.9-2: National And New York States Ambient Air Quality.

Pollutant	Averaging Period	National and State Standards	
NO	Maximum 1-Hour Concentration	0.10 ppm (188 μg/m³)	
NO ₂	Annual Arithmetic Average	0.053 ppm (100 µg/m³)	
	24-Hour Concentration	35 μg/m³	
PM _{2.5}	Average of 3 Consecutive Annual Means	12 μg/m³	

NO₂ NAAQS

Nitrogen oxide (NO_x) emissions from gas combustion consist predominantly of nitric oxide (NO) at the source. The NO_x in these emissions are then gradually converted to NO_2 , which is the pollutant of concern, in the atmosphere (in the presence of ozone and sunlight as these emissions travel downwind of a source).

The 1-hour NO_2 NAAQS standard of 0.100 ppm (188 ug/m³) is the 3-year average of the 98^{th} percentile of daily maximum 1-hour average concentrations in a year. For determining compliance with this standard, the EPA has developed a modeling approach for estimating 1-hour NO_2 concentrations that is comprised of three tiers: Tier 1, the most conservative approach, assumes a full (100%) conversion of NO_x to NO_2 ; Tier 2 applies a conservative ambient NOx/NO_2 ratio of 80% to the NO_x estimated concentrations; and Tier 3, which is the most precise approach, employs AERMOD's PVMRM module. The PVMRM accounts for the chemical transformation of NO emitted from the stack to NO_2 within the source plume using hourly ozone background concentrations. When Tier 3 is utilized, AERMOD generates 8^{th} highest daily maximum 1-hour NO_2 concentrations or total 1-hour NO_2 concentrations if hourly NO_2 background concentrations are added within the model.

Per the *CEQR TM*, a Tier 1 approach is initially applied, followed by a Tier 2 application of NOx/NO₂ ratio of 80% to the NOx modeled concentration to determine whether violation of the NAAQS is likely to occur. A less conservative Tier 3 approach is then applied if exceedances of the 1-hour NO₂ NAAQS were estimated.

New York State Standards

As mentioned, New York State has adopted the national standard, NAAQS. In addition, the New York State Department of Environmental Conservation (NYSDEC) has established guidelines for maximum allowable concentration of "noncriteria pollutants," which are potentially toxic or carcinogenic pollutants. The maximum allowable guidelines set a maximum 1-hour and annual averaging time concentrations and are published in the DAR-1 AGC/SGC Table, where AGC/SGC refers to Annual and Short-term Guideline Concentrations. The most recent DAR-1 guidelines were created on July 14, 2016.

NYSDEC also regulates pollutants that produce discomfort due to odors, where significant discomfort is evaluated on quantity, characteristic or duration.

NYC Interim Guidelines

In addition to the NAAQS, the *CEQR TM* requires that projects subject to CEQR apply a PM_{2.5} significant impact criteria (based on concentration increments). These criteria are named *de minimis* and they are more stringent than the NAAQS, as the *de minimis* concentrations set a maximum increase of pollutant concentration that is below the national standard. If the estimated impacts of a proposed project are less than the *de minimis* criteria, the impacts are not considered to be significant. As outlined in the *CEQR TM*, PM_{2.5} significant impacts are evaluated as follow:

- Predicted 24-hour maximum PM_{2.5} concentration increase of more than half the difference between the 24-hour background concentration and the 24-hour standard; or
- Predicted annual average PM_{2.5} concentration increments greater than 0.3 μg/m³ at any receptor location for stationary sources.

Background Concentrations

Determination of significant impact criteria is evaluated by adding the background concentrations at the nearest NYSDEC monitoring station to the concentrations of criteria pollutants in the ambient air of the Development Sites.

Background concentrations of NO₂ and PM_{2.5}—the criteria pollutants of main concern for HVAC systems fueled by natural gas—were obtained from the NYSDEC's annual report for 2016 at the nearest monitoring stations. Table 2.9-3-3 shows the background concentrations.

Table 2.9-3: Background Concentrations at the Nearest Monitoring Stations (NYSDEC 2016 Report).

Pollutant	Averaging Period	Background Concentration	Monitoring Station	
NO_2	Maximum 1-Hour Concentration	120.9 μg/m ³	Queens College	
	Annual Arithmetic Average	33.0 μg/m ³	Queens College	
	24-Hour Concentration	20.5 μg/m ³		
PM _{2.5}	Average of 3 Consecutive Annual Means	8.6 μg/m³	JHS 126	

The *de minimis* criteria for PM_{2.5} was evaluated as described in the NYC Interim Guidelines. The concentrations increments are presented below:

- 24-hour PM_{2.5} 7.25 μg/m³
- Annual PM_{2.5} 0.3 μg/m³

2.9.2 Analysis

Mobile Sources

Projects may result in significant mobile source impacts when they create mobile sources of pollutants, change traffic patterns, or add new uses near mobile sources of pollutants. Per CEQR guidelines, a detailed analysis is conducted to predict whether the Proposed Actions could potentially have a significant adverse air quality impact if certain threshold criteria are met or exceeded, while proposed projects that do not meet or exceed the threshold criteria (screen out) are not expected to have a mobile source impact. Projects that require a detailed analysis model the ambient air CO and PM₁₀/PM_{2.5} concentrations—the mobile source pollutants of concern—and compare the modeled concentrations with the applicable air quality standard.

Mobile Source Screen

Project-Generated Traffic

Per the *CEQR TM*, localized increases in CO and PM_{2.5} levels may result from increased vehicular traffic volumes and changed traffic patterns in the study area as a consequence of the proposed development. As such, screening analyses for CO and PM_{2.5} were carried out to determine whether the project-generated traffic has the potential to cause significant impact. Projected development under the proposed action is below threshold levels requiring further transportation analysis. Therefore, the proposed action does not have the potential for adverse impacts related to mobile source air emissions.

Parking Garage

Based on CEQR recommendations, the maximum capacities of parking garages are evaluated with a threshold criterion to predict whether the potential impacts associated with mobile source emissions are significant. The threshold criteria level, per CEQR guidelines, is 85 off-street parking spaces. If the threshold is met or exceeded, a detailed analysis is warranted. As seen in Table 2.9-1, the Proposed Actions would add no parking spaces, which does not exceed the threshold criterion. Therefore, no detailed air quality analysis is required, and no significant mobile source air quality impacts are expected as a result of the parking facilities.

Stationary Sources

According to CEQR, an action can result in stationary source air quality impacts when it creates new stationary sources of pollutants-such as emission stacks for industrial plants, hospitals, or other large institutional uses, or even building boilers- that can affect surrounding uses, or when they introduce sensitive uses near existing (or planned future) emissions stacks, and the new uses might be affected by the emissions from the stack.

Project HVAC Systems Analysis

The HVAC analysis considers the potential for emissions from the HVAC systems of the proposed developments to significantly impact existing land uses (project-on-existing) within 400 feet, and the potential of each or all of the proposed developments to significantly impact each other (project-on-project).

As outlined in the *CEQR TM*, the analysis of buildings' HVAC systems follows stationary sources methodology, and based on CEQR guidelines, a preliminary screening analysis is to be conducted as a first step to predict whether the potential impacts of the heat and hot water system boiler emissions can be significant. This CEQR screening procedure is applicable to buildings that are not less than 30 feet from the nearest building of similar or greater height. Otherwise, a detailed dispersion analysis is required.

The anticipated development within the proposed rezoning area would consist of two buildings. Each of the two buildings would be equipped with its own separate natural gas fueled heat and hot water system.

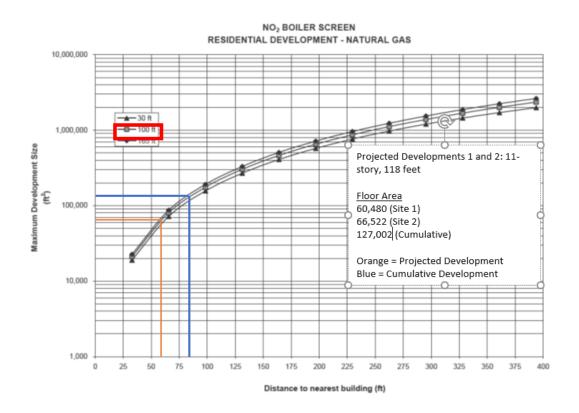

As previously mentioned, the screening analysis is only applicable to a single smokestack, and this CEQR screening procedure is applicable to buildings that are not less than 30 feet from the nearest building of similar or greater height. **Table 2.9-4** shows the screening analyses framework and results and **Figure 2.9-1** shows the screening.

Table 2.9-4: Screening Analysis Results

Source Building Site ID	Gross Square Footage	Screen Distance (ft.)	Receiving Building (Site ID or Block/Lot)	Receiving Building Distance (ft.)	Pass/ Fail
Projected Development Site 1	60,480	65	Projected Development Site 2	70	Pass
Projected Development Site 2	66,522	65	Projected Development Site 1	70	Pass
Development Sites (Cumulative)	127,002	80	Existing Land use (1149/18)	400	Pass

Screening analysis is only applicable to a single smokestack. However, for purpose of a cumulative analysis, emissions from multiple stacks could be combined in a single stack situated as close as possible to the receiving building. As such, the project-on-existing screening analysis was conducted. Per *CEQR TM*, the CEQR nomograph depicted on Figure 17-7 of the *CEQR TM* for a 100-foot stack height was applied (as the 100 feet curve height is closest to but not higher than any of the proposed stacks heights, as the CEQR screening procedure requires). This nomograph depicts the size of the development versus distance below which the potential impact can occur and provides a conservative estimate of the threshold distance. **Figure 2.9-1** shows the screening analysis.

Figure 2.9-1: The Development Sites Minimum Distance - HVAC Screen Nomograph.

The screening analysis nomograph shows that a detailed analysis would be required for any existing land uses that are 118 feet or taller and at a distance of less than 65 feet from a Projected Development Site. No buildings of that height are within 65 feet of either Development Site. The Development Sites themselves would be 70 feet from each other, and no project-on-project analysis is required.

The screening analysis also shows that, for cumulative impacts, detailed analysis would be required for any existing land uses that are 118 feet or taller and at a distance of less than 80 feet from both Projected Development Sites. A review of existing land uses within 400 feet of the Development Sites shows that the nearest building of similar or greater height is the 14-story, 145 feet tall building, located at 880 Bergen Street (Block 1149, Lot 18), which is approximately 1,000 feet south of the Projected Development Site 2.

Therefore, the Projected Development Sites pass the screening analysis regarding their potential impact on each other and existing land uses that are at least 118 feet or taller.

Industrial Emissions

A search of potential industrial sites was performed to identify any NYC DEP Air Quality Permits issued within 400 feet of the Affected Area. This Study Area and uses preliminarily identified as

manufacturing or industrial based on NYCDCP MAPPLUTO database are identified in Figure 2.9-3. This search was performed to determine if hazardous air toxics would have the potential to impact the proposed development.

While 13 sites were identified as potentially manufacturing or industrial in nature, these uses were screened further using Google and in field assessment on multiple occasions – the latest on June 4th, 2018. Table 2.9-7 shows the 13 properties within approximately 400 feet that were screened as potentially industrial or manufacturing sites – these sites were further reviewed for reviewed for permit activity and the actual use currently present at the site. As shown in Table 2.9-7, only 2 sites (those highlighted) were determined to have industrial or manufacturing type uses and only one of these has an active DEP industrial permit. However, all 13 of these sites were then screened with DEP for industrial permits through a request on June 28, 2018.

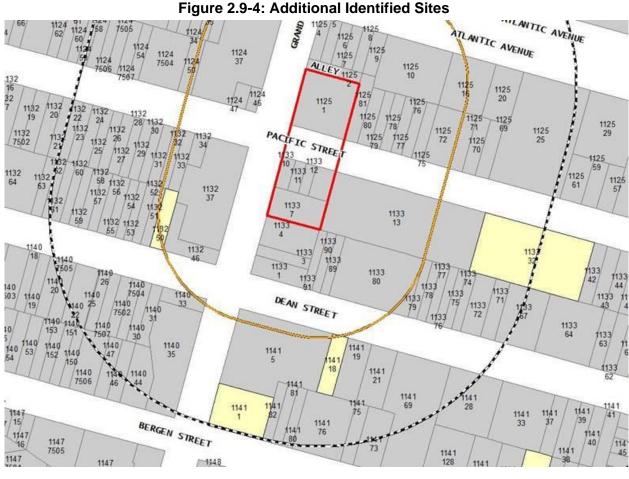

On July 3, 2018, DEP responded to the permit inquiry for the sites – identifying a total of three industrial type permits issued for two sites within the 400-foot study area. This search concurred with the original findings and provided the permits for review.

Table 2.9-7: Industrial Sites within 400 feet of Affected Area

Site Key #	Block	Lot	Address	Owner Name	Actual Use	Permit
1	1132	50	831 DEAN STREET	831 DEAN ST LLC	Pranayama Art – Industrial Spray Booth / Woodworking	PB005111/PB008611

Figure 2.9-3: Potential Industrial and Manufacturing Uses within the 400-Foot Study Area

Per DEP, only two sites; 1 and 4 above were identified as being as having relevant industrial permitting activity within the Study Area. Of these, only 1 at 831 Dean Street (identified as Site 1 in above Table and Figure) has an active Industrial Permit. However, two sites are discussed as they all have a history of/ or currently are operating with industrial or manufacturing activities.

DEP Identified Site at 1010 Pacific Avenue is located 430-feet to the east of the Affected Area. Although DEP and CATS database indicate that this site previously was issued an Industrial Permit – for Paint Spray Booth and Woodworking uses in 2007 – the building is currently vacant as confirmed with owner representation and field visit which has been photographically documented. As there are no active industrial or manufacturing uses present that could pose a risk to the Proposed Project - this site does not pose a risk of potential significant impact to the Proposed Rezoning Area.

Site 1, Pranyama Art at 831 Dean Street Street (Block 1132, Lot 50) is located approximately 140 feet to the southwest of the Rezoning Area. This business designs and manufactures picture/art frames. This site has an active industrial permit for spray booth operations and woodworking (this permit is contained the Appendix to this EAS). Per the permit details – the spray facility uses active emissions controls filter for VOCs. This is a modern permit updated in 2017 for a facility with state-of-the-art filters with 95% control efficiency for pigment. A

comparison of estimated emission calculations identified in the permit application was performed versus NYC DEC DAR-1 guidelines and none of the emissions for each of the applicant sprays appears to be beyond these guideline thresholds. The facility is completely enclosed with no outdoor emissions uses and given appropriate use of the spray booth for application of paint and finishes to frames – which is located more than 140 feet from the edge of the Proposed Development, this location would not pose a potential impact to development within the Rezoning Area. This site also has an active industrial permit for woodworking operations (this permit is contained in the Appendix to this EAS). Per the permit details – the woodworking facility uses active dust collection units with a 99% percent control efficiency for wood fines. A comparison of estimated emission calculations identified in the permit application was performed versus NYC DEC DAR-1 guidelines and the emissions for wood fines do not appear to be beyond these guideline thresholds. Three pieces of equipment are vented to a stack with a height of 25°. The equipment is filtered for wood fines as described above. The stack is located approximately 180° from the Rezoning Area and with a 99% control efficiency, this location would not pose a potential impact to development within the Rezoning Area.

DCP identified three other DEP permits within 400 feet of the Development Site: PA008596 on Block 1141, Lot 18 (site visit indicated that this operation has since closed) and PB406803, PB426303 on Block 1141, Lot 1.

Further analysis of the operation at Block 1141, Lot 18 is not warranted.

G&B Collision Center

The G&B Collision Center has DEP processing permits for auto paint spraying in a spray booth and a preparation station where cars are sanded in preparation for painting. The facility is located on the north-east corner of Bergan Street and Grand Avenue. The distance between the facility and the Project Area (lot to lot distance) is 320 feet.

Spray Booth Emissions (PB406803)

Per PB406803, the industrial spray booth operates a maximum of 6 hours per day, 250 days per year, and a maximum of 0.5 gallon of paint are sprayed in an hour and 750 gallons are sprayed annually. The contaminants listed in the certificate are solids (NY identification number NY079-00-0) and solvents (NY identification number NY998-00-0). The solids emissions are reduced by a fiber glass filter with an 80 percent control efficiency. The chemical mixture collectively identified as solvents, VOCs, was not provided in the certificate. Per the DEP processing permit PB406803, the spray booth's stack is 21 feet above grade, 6 feet above the roof. The stack is 30-in in diameter, its volumetric flow rate is 11,000 cubic foot per minute, and its exit temperature is 160-degree Fahrenheit. **Table 2.9-7** shows the spray booth emissions rates specified in permit PB406803.

Table 2.9-7. G&B Collision Center – Contaminants Emissions Rates by Group as Listed in PB406803

Contaminant	Control Efficiency (Percent)	Emission Rate (lb/hr)	Emission Rate (lb/yr)
Solids (NY079-00-0)	80	0.065	97.6
Solvents (NY998-00-0)	0	3.1	4650

Conventional coatings—paints, varnishes, lacquers, sealers, stains, and water thinned paints—comprises of compounds grouped into solids and volatile organic compounds (VOCs), which are mostly solvents. The coatings contain 30 to 85 percent solvents by volume and this amount

is regulated by the EPA and NYSDEC. Per NYCDEP guidance and as outlined in the EPA AP-42, the analysis assumes that all VOCs are emitted. Each VOC contaminant is analyzed with the SGC/AGC guideline concentration. Particulates are fluid or solids particles grouped together. Per NYSDEC DAR-1, particulates are collectively analyzed with the more stringent concentration guideline. These two groups, VOC and particulates, are discussed here:

Emissions of solids are analyzed as PM_{10} and $PM_{2.5}$. The particle size distribution was obtained from the EPA AP-42, *Appendix B1*, *Page B.1-12*, *Particle Size Distribution Data and Sized Emission Factors for Selected Sources, Table 4.2.2.8 Automobile and Light-Duty Track Surface Coating Operations, Automobile Spray Booths*. The solids 1-hour emission rate was adjusted to daily average (24-hour) emission rate by using the number of hours per day the spray booth is active. **Table 2.9-8** shows the PM_{10} and $PM_{2.5}$ emission rates and the daily activity rate.

Table 2.9-8. PM₁₀/PM_{2.5} Emission Rates - G&B Collision Center Spray-Painting PB406803

Contaminant	inant Emission Rate		Emission Rate Fraction of		Emission Rate	
Jointailliant				Particle Size	Short-term	Annual
	(lb/hr)	(hr/day)	(lb/yr)	(Percent)	(g/s)	(g/s)
PM _{2.5}	0.065	6	6 97.6	28.6	7.21E-04	4.01E-04
PM ₁₀	0.065	065 6		46.7	1.18E-03	6.56E-04

The mixture of different chemicals, identified collectively as VOC, have no guideline values in the NYSDEC DAR-1 database. The mixture comprises of compounds of varying toxicities. As the composition of the coating substance was not included in the operational permit, a representative composition by percent weight was agreed by DCP, in guidance with DEP, as shown in Table 2.9-9. The G&B Collision Center 1-hour and annual VOC emissions were used to calculate the chemicals emissions rates. The ingredients that make up the representative paint, along with their Chemical Abstract Service (CAS) number, by percent weight, and the hourly and annual emission rates are presented in **Table 2.9-9**.

Table 2.9-9. VOC Emissions Rates - G&B Collision Center PB406803

Contominant name	CACNE	Percent	1-Hour		Annual	
Contaminant name	CAS No.	Weight	lb/hr	g/s	lb/yr	g/s
Acetone	67-64-1	43%	1.33E+00	1.68E-01	1999.5	2.88E-02

Toluene	108-88-3	10%	3.10E-01	3.91E-02	465.0	6.69E-03
Xylene	1330-20-7	10%	3.10E-01	3.91E-02	465.0	6.69E-03

Preparation Station Emissions (PB426303)

Per the DEP processing permit PB426303, the preparation station's stack is 21 feet above grade, 6 feet above the roof. The stack is 24-in in diameter, its volumetric flow rate is 7,983 cubic foot per minute, and its exit temperature is 75-degree Fahrenheit. Per PB426303, the preparation station operates a maximum of 4 hours per day, 250 days per year. However, the

contaminant annual emission rate was based on an 8 hour per day activity rate. The contaminants listed in the certificate are particulates (NY identification number NY075-00-0). The particulates emissions are reduced by a fiber glass filter with a 90 percent control efficiency. The contaminant associated with installation PB426303 is PM₁₀ particulates. **Table 2.9-10** shows the emission rates associated with installation PB426303.

Table 2.9-10. PM₁₀ Emission Rates - G&B Collision Center Preparation station PB426303

	Control Efficiency	Permitted Emission			Emission Rate	
Contaminant	(Percent)	Rate		Short-term	Annual	
	(i crocity	(lb/hr)	(hr/day)	(lb/yr)	(g/s)	(g/s)
PM ₁₀	90	0.02	8	40	8.40E-03	5.75E-04

Pranayama Art

The Pranayama Art has DEP processing permits for paint spraying in a spray booth and operation of woodworking equipment. The facility is located on the south side of Dean Street and approximately 120 feet west of Grand Avenue. The distance between the facility and the Project Area (lot to lot distance) is 180 feet.

Spray Booth Emissions (PB005111)

Per PB005111, the industrial spray booth operates a maximum of 8 hours per day, 200 days per year. The contaminants listed in the certificate are pigments (NY identification number NY075-00-0) and five specific noncriteria pollutants. The solids emissions are reduced by a fiberglass filter with a 95 percent control efficiency. Per the DEP processing permit PB005111, the spray booth's stack is 30 feet above grade, 6 feet above the roof. The stack is 34-in in diameter, its volumetric flow rate is 9,600 cubic foot per minute, and its exit temperature is 70-degree Fahrenheit. **Table 2.9-11** shows the spray booth emissions rates specified in permit PB005111.

Table 2.9-11. Pranayama Art – Contaminants Emissions Rates as Listed in PB005111

Contaminant (1)	CAS No. (2)	Control Efficiency (Percent)	Emission Rate (lb/hr)	Emission Rate (lb/yr)
Pigments (NY075-00-0)		95	0.02	32
N-Butyl Acetate	123-86-4	0	0.27	432
Butoxyethanol, 2	111-76-2	0	0.09	144
Methyl Ethyl Ketone	78-93-3	0	0.59	944
Methyl Isobutyl Ketone	108-10-1	0	0.64	1024
Xylene, M, O & P Mixture	1330-20-5 ⁽³⁾	0	0.22	352

- 1. Contaminant name from the NYSDEC Dar-1 manual.
- 2. CAS number from the DEP certificate PB005111.
- 3. Assumed Xylene CAS No. 1330-20-7.

A review of the NYSDEC Dar-1 shows no pollutant for CAS No. 1330-20-5. Therefore, the pollutant was assumed to be Xylene, M, O & P Mixture, CAS No. 1330-20-7.

Conventional coatings—paints, varnishes, lacquers, sealers, stains, and water thinned paints—comprises of compounds grouped into solids and volatile organic compounds (VOCs), which are mostly solvents. The coatings contain 30 to 85 percent solvents by volume and this amount is regulated by the EPA and NYSDEC. Per NYCDEP guidance and as outlined in the EPA AP-42, the analysis assumes that all VOCs are emitted (except where a VOC control equipment is in use). Each VOC contaminant is analyzed with the SGC/AGC guideline concentration.

Particulates are fluid or solids particles grouped together. Per NYSDEC DAR-1, particulates are collectively analyzed with the more stringent concentration guideline. These two groups, VOC and particulates, are discussed here:

Emissions of solids are analyzed as PM₁₀. The solids 1-hour emission rate was adjusted to daily average (24-hour) emission rate by using the number of hours per day the spray booth is active. The daily averaged emission rate was calculated to be 0.001 pound per hour.

Woodworking Equipment (PB008611)

Per the DEP processing permit PB008611, three emission points (EP 2, 3. 4) are associated with the woodworking processing activity. Emissions of the various woodworking equipment are controlled by bag house type filters (fabric filters), which emit indoor. The filters control efficiencies are 99.9 percent. The total emission from these control devices are 0.001 pound per hour, 0.16 pound per year. The processing activity is 8 hours per day, 200 days per year. The contaminant listed in the certificate is wood fines, NY identification number NY075-00-0. The wood fines, which is particulates, 1-hour emission rate was adjusted to daily average (24-hour) emission rate by using the number of hours per day the spray booth is active. The daily averaged emission rate was calculated to be 0.0003 pound per hour.

The wood fines are particulates, which were analyzed as PM₁₀ and PM_{2.5} combined. The particle size distribution of 32.1 percent and 14.3 percent of PM₁₀/PM_{2.5}, respectively, were obtained from the EPA *AP-42*, *Appendix B1*, *Page B-1.48*, *Particle Size Distribution Data and Sized Emission Factors for Selected Sources, Table Woodworking Waste Collection Operations: Belt Sander Hood Exhaust Cyclone*. The emission rates are displayed in **Table 2.9-12**.

Table 2.9-12. PM₁₀/PM_{2.5} Daily Averaged Emission Rate from the Woodworking Equipment

Contaminant	Fmission Rate		Emission Rate Fraction of		Emission rate			
		on reaco	Particle Size	Shor	t-term	Anı	nual	
	(lb/hr)	(lb/yr)	Percent	(lb/hr)	(g/s)	(lb/yr)	(g/s)	
PM _{2.5}	0.0003	0.16	14.3	4.77E-05	6.01E-06	2.29E-02	3.29E-07	
PM ₁₀			32.1	1.07E-04	1.35E-05	5.14E-02	7.39E-07	

Air Dispersion Analysis CEQR Screening Analysis

For estimating potential impacts from a single industrial emission source of toxic air pollutants, the *CEQR Technical Manual* recommends using a screening procedure as a first step in the analysis. This procedure uses pre-tabulated pollutant concentrations values based on a generic emission rate of 1 gram per second. The pollutants concentrations are specified in the *CEQR Technical Manual* Table 17-3, "Industrial Source Screen," for the applicable averaging time periods. This approach, which can be used to estimate maximum short-terms and annual average concentrations values at various distances (from 30 to 400 feet) from a single emission source, was utilized to assess the potential impacts from the G&B Collision Center and the Pranayama Art emissions. Impact concentration from each emission source were cumulatively added to predict the combined impact concentrations.

The distance between the G&B Collision Center and the project area is 320 feet; The distance between the Pranayama Art and the project area is 1800 feet. The CEQR pre-tabulated

concentrations corresponding to distances less than or equal to the measured distances were utilized. The pre-tabulated concentrations are displayed in **Table 2.9-13**.

Table 2.9-13. The CEQR Technical Manual Table 17-3 Industrial Source Screen Pre-Tabulated Concentrations

Facility Name	Distance from Source (ft) Actual/ CEQR Distance	1-Hour (µg/m³)	24-Hour (µg/m³)	Annual (µg/m³)
G&B Collision Center	320/ 300	1,891	594	84
Pranayama Art	180 / 165	4702	1643	236

The screening analysis results of the criteria pollutants PM₁₀ and PM_{2.5} are displayed in **Table 2.9-14**, where both the independent impact concentration from each facility and the cumulative impact concentrations are shown.

Table 2.9-14. Criteria Pollutants Dispersion Analysis Results

Criteria Pollutant	Threshold Standard	Predicted Concentration (µg/m³)	Background Concentration (µg/m³)	Total Concentration (µg/m³)	Threshold Criteria (μg/m³)
	G	&B Collision Cent	ter (PB426303, PB4	06803)	
PM ₁₀ 24-Hour	NAAQS	1.2	35	36.2	150
PM _{2.5} 24-Hour	de minimis	0.43	N.A.	0.43	7.25
PM _{2.5} Annual	de minimis	0.034	N.A.	0.034	0.3
		Pranayama Art	(PB005111, PB0086	11)	
PM ₁₀ 24-Hour	NAAQS	0.2	35	35.2	150
PM _{2.5} 24-Hour	de minimis	0.01	N.A.	0.01	7.25
PM _{2.5} Annual	de minimis	0.0001	N.A.	0.0001	0.3
Cumulative Impact Concentration					
PM ₁₀ 24-Hour	NAAQS	1.4	35	36.4	150
PM _{2.5} 24-Hour	de minimis	0.44	N.A.	0.44	7.25
PM _{2.5} Annual	de minimis	0.03	N.A.	0.03	0.3

As seen in **Table 2.9-14**, the PM_{10} concentrations are within the NAAQS and the $PM_{2.5}$ concentrations do not exceed the NYC *de minimis*.

The predicted concentrations of each chemical were compared with the NYSDEC SGC/AGC guidelines. The results of the noncriteria pollutants air dispersion analysis is displayed in **Table 2.9-15**.

Xylene, M, O & P Mixture (2)	1330-20-7 (1)	130.34	22000.0	1.19	100.0	

- 1. Analyzed as Xylene 1330-20-7.
- 2. These pollutants are emitted from both facilities.

As seen in **Table 2.9-15**, all the pollutants concentrations are within the SGC/AGC guidelines. Three pollutants are emitted from both facilities. As such, the combined impact concentrations of these pollutants were evaluated. **Table 2.9-16** shows the cumulative noncriteria pollutants results.

Table 2.9-16. Noncriteria Pollutants Dispersion Analysis Results

	CACNA	1-Hour	SGC	Annual	AGC
Contaminant name	CAS No.	(µg/m³)	(µg/m³)	(µg/m³)	(µg/m³)
Acetone	67-64-1	317.6	180000.0	2.4	30000.0
Aromatic Petroleum Distillate	64742-94-5	73.9		0.6	100.0
Butane	106-97-8	81.2	238000.0	0.6	
Ethanol	64-17-5	14.8		0.1	45000.0
Ethyl 3-Ethoxypropionate	763-69-9	66.5	140.0	0.5	64.0
Ethylbenzene	100-41-4	36.9		0.3	1000.0
Methyl Ethyl Ketone	78-93-3	408.6	13000.0	3.7	5000.0
N-Butyl Acetate	123-86-4	196.9	95000.0	1.7	17000.0
Propane	74-98-6	81.2		0.6	43000.0
Stoddard Solvent	8052-41-3	73.9		0.6	900.0
Toluene	108-88-3	73.9	37000.0	0.6	5000.0
Xylene	1330-20-7	204.2	22000.0	1.8	100.0
Butoxyethanol, 2	111-76-2	53.3	14000.0	0.5	1600.0
Methyl Isobutyl Ketone	108-10-1	379.2	31000.0	3.5	3000.0

As seen in Table 2.9-16, all the pollutants concentrations are within the SGC/AGC guidelines.

Conclusion

As presented in the analysis, the pollutants' predicted concentrations do not exceed the AGC/SGC standards, and the criteria pollutants' concentrations do not exceed the NAAQS or *de minimis* guidelines. Therefore, no significant adverse air quality impacts are predicted to the proposed project from the G&B Collision Center facility and the Pranayama Art facilities.

2.10 Noise

According to the 2014 CEQR Technical Manual, a Noise Analysis may be required if the project would (1) generate any mobile or stationary sources of noise; and/or (2) be located in an area with existing high ambient noise levels. If the proposed project is located in areas with high ambient noise levels, which typically include those near highly-trafficked thoroughfares, airports, rail, or other loud activities, further noise analysis may be warranted to determine the attenuation measures that are appropriate for the proposed project.

2.10.1 Methodology

Noise is defined as any unwanted sound, and sound is defined as any air pressure variation that the human ear can detect. Human beings can detect a large range of sound pressures ranging from 20 to 20 million micropascals, but only those air-pressure variations occurring within a set of frequencies are experienced as sound. Air-pressure changes that occur between 20 and 20,000 times a second, stated as units of Hertz (Hz), are registered as sound.

In terms of hearing, humans are less sensitive to low frequencies (<250 Hz) than mid-frequencies (500-1,000 Hz). Humans are most sensitive to frequencies in the 1,000 to 5,000 Hz range. Since ambient noise contains many different frequencies all mixed together, measures of human response to noise assign more weight to frequencies in this range. This is known as the A- weighted sound level.

Noise is measured in sound pressure level (SPL), which is converted to a decibel scale. The decibel is a relative measure of the sound level pressure with respect to a standardized reference quantity. Decibels on the A-weighted scale are termed "dB(A)." The A-weighted scale is used for evaluating the effects of noise in the environment because it most closely approximates the response of the human ear. On this scale, the threshold of discomfort is 120 dB(A), and the threshold of pain is about 140 dB(A). **Table 2.10-1** shows the range of noise levels for a variety of indoor and outdoor noise levels.

Because the scale is logarithmic, a relative increase of 10 decibels represents a sound pressure level that is 10 times higher. However, humans do not perceive a 10 dB(A) increase as 10 times louder; they perceive it as twice as loud. The following are typical human perceptions of dB(A) relative to changes in noise level:

- 3 dB(A) change is the threshold of change detectable by the human ear;
- 5 dB(A) change is readily noticeable; and
- 10 dB(A) increase is perceived as a doubling of the noise level.

The CEQR Technical Manual recommends an analysis of two principal types of noise sources: mobile sources; and stationary sources. Both types of noise sources are examined in the following sections.

2.10.2 Analysis

Mobile Sources

Mobile noise sources are those which move in relation to receptors. The mobile source screening analysis addresses potential noise impacts associated with vehicular traffic generated by the Proposed Action.

Per the CEQR Technical Manual, if existing passenger car equivalent (PCE) values are increased by 100 percent or more due to a Proposed Action, a detailed analysis is generally performed. No significant adverse mobile source noise impacts due to vehicular traffic are anticipated because of the Proposed Action as it does not increase existing passenger equivalent values by more than 100 percent.

As discussed in the CEQR Technical Manual, if the proposed project is located in areas with high ambient noise levels, which typically include those near heavily-traveled thoroughfares, airports, exposed rail, or other loud activities. Accordingly, ambient noise levels were measured at the proposed development site to provide an assessment of the potential for ambient noise to have a significant adverse effect on future residents of the proposed development.

The CEQR Technical Manual provides noise exposure guidelines in terms of Leq and L10 for the maximum amount of allowable noise under existing regulations. Leq is the continuous equivalent sound level. The sound energy from the fluctuating sound pressure levels is averaged over time to create a single number to describe the mean energy or intensity level. High noise levels during a measurement period will have greater effect on the Leq than low noise levels. The Leq has an advantage over other descriptors because Leq values from different noise sources can be added and subtracted to determine cumulative noise levels. In comparison, L10 is the SPL exceeded 10 percent of the time. Similar descriptors include the L50, L01, and L90 values.

Table 2.10-1 Sound Pressure Level & Loudness of Typical Noises in Indoor & Outdoor Environments

Noise		Typical Sou	ırces	Relative
Level dB(A)	Subjective Impression	Outdoor	Indoor	Loudness (Human Response)
120-130	Uncomfortably Loud	Air raid siren at 50 feet (threshold of pain)	Oxygen torch	32 times as loud
110-120	Uncomfortably Loud	Turbo-fan aircraft at take-off power at 200 feet	Riveting machine Rock band	16 times as loud
100-110	Uncomfortably Loud	Jackhammer at 3 feet		8 times as loud
90-100	Very Loud	Gas lawn mower at 3 feet Subway train at 30 feet Train whistle at crossing Wood chipper shredding trees Chain saw cutting trees at 10 feet	Newspaper press	4 times as loud
80-90	Very Loud	Passing freight train at 30 feet Steamroller at 30 feet Leaf blower at 5 feet Power lawn mower at 5 feet	Food blender Milling machine Garbage disposal Crowd noise at sports event	2 times as loud
70-80	Moderately Loud	NJ Turnpike at 50 feet Truck idling at 30 feet	Loud stereo Vacuum cleaner	Reference loudness (70

		Traffic in downtown urban area	Food blender	dB(A))
60-70	Moderately Loud	Residential air conditioner at 100 feet Gas lawn mower at 100 feet Waves breaking on beach at 65 feet	Cash register Dishwasher Theater lobby Normal speech at 3 feet	2 times as loud
50-60	Quiet	Large transformers at 100 feet Traffic in suburban area	Living room with TV on Classroom Business office Dehumidifier Normal speech at 10 feet	1/4 as loud
40-50	Quiet	Bird calls Trees rustling Crickets Water flowing in brook	Folding clothes Using computer	1/8 as loud
30-40	Very quiet		Walking on carpet Clock ticking in adjacent room	1/16 as loud
20-30	Very quiet		Bedroom at night	1/32 as loud
10-20	Extremely quiet		Broadcast and recording studio	
0-10	Threshold of Hearing			

Sources: Noise Assessment Guidelines Technical Background, by Theodore J. Schultz, Bolt Beranek and Newman, Inc., prepared for the US Department of Housing and Urban Development, Office of Research and Technology, Washington, D.C., undated; Sandstone Environmental Associates, Inc.; Highway Noise Fundamentals, prepared by the Federal Highway Administration, US Department of Transportation, September 1980; Handbook of Environmental Acoustics, by James P. Cowan, Van Nostrand Reinhold, 1994.

<u>Assessment Basis</u>

Based on the reasonable worst-case development scenario, the proposed project would result in new residential and commercial development at the Project Site and Potential Development Site. Without the proposed action, the sites would likely not be redeveloped.

Development under the proposed action would not generate or reroute significant volumes of vehicular traffic and would not result in a doubling of vehicular traffic. Additionally, the proposed uses are not significant stationary noise generation sources. Therefore, the proposed action's potential to generate noise does not require further assessment.

Because the proposed action would permit residential occupancy of sites within 1,500 feet of an elevated train, an assessment of the potential for ambient noise levels to result in adverse impacts on building occupants was performed.

Affected Area

The proposed action would allow for redevelopment of the Project Site (Projected Development Site 1) for a mixed residential and commercial use building. Additionally, mixed residential and commercial development may occur on the Projected Development Site 2, Block 1133, Lots 7, 10, 11, and 12. The Project Site is a vacant, unimproved lot with southern frontage on Pacific Street, western frontage on Grand Avenue, residing on a block bounded by Atlantic Avenue to the North and by Classon Avenue to the east. The Projected Development Site 2 is located at the northeast corner of Pacific Street and Grand Avenue. The Franklin Avenue Shuttle elevated tracks are located approximately 1,400 feet to the east of the Affected Area. Train and vehicular traffic are the predominant sources of noise, and therefore the proposed development warrants

an assessment of the potential for adverse effects on project occupants from ambient noise. The proposed redevelopment would not create a significant noise generator. Additionally, project-generated traffic would not double vehicular traffic on nearby roadways, and therefore would not result in a perceptible increase in vehicular noise. This noise assessment is limited to an assessment of ambient noise that could adversely affect occupants of the development.

Pacific Street is a one-way westbound street with one moving lane. Grand Avenue is a one-way southbound street with one moving lane. Atlantic Avenue is a two-way, east-west roadway with six moving lanes. The intersection of Grand Avenue with Atlantic Avenue is controlled by a traffic light. The area in which the subject property is located consists primarily of industrial-use manufacturing warehouses, residential buildings, and vacant lots.

Measurement Location and Equipment

Because the predominant noise source in the area of the proposed project is vehicular and train traffic, noise monitoring was conducted during peak vehicular travel periods, 07:30 am - 09:00 am, 12:00 pm - 1:30 pm, and 4:30 pm - 6:00 pm. Noise monitoring was conducted using a Type 1 Casella CEL-63X sound meter, with wind screen. The monitor was placed on a tripod at a height of approximately three feet above the ground, away from any other surfaces. The monitor was calibrated prior to and following each monitoring session. Heavy commercial truck and elevated subway train traffic constitute a worst-case condition for noise at the Project Site (Projected Development Site 1) and Projected Development Site 2.

Noise monitoring was performed to document ambient noise levels at Projected Development Site 1 and Projected Development Site 2. Measurements for the project were performed at four different locations, all on May 31, 2018, except one additional Saturday measurement on June 8th, 2019. Traffic volumes and vehicle classification were documented during the noise monitoring. The sound meter was calibrated before and after each monitoring session.

Readings were conducted at the following four locations:

- 20-minute readings were conducted on Pacific Street adjacent to Projected Development Site 1
- 20-minute readings were conducted on Pacific Street adjacent to Projected Development Site 2
- One-hour readings were conducted on Grand Avenue adjacent to Projected Development Site 1 to account for the Principal Arterial Roadway Atlantic Avenue
- One-hour readings were conducted on Grand Avenue adjacent to Projected Development Site 2 to account for the Principal Arterial Roadway Atlantic Avenue
- One-hour reading during midday along Grand Avenue adjacent to Projected Development Site 2 to characterize Saturday noise generated by the used bus sales operation (same as location 2 noted below)

Figure 2.10-1 maps the noise monitoring locations above and **Figures 2.10-2** through **2.10-5** show pictures of the monitoring locations.

Figure 2.10-4: Pacific Street (noise monitoring location #3); Direction Facing South

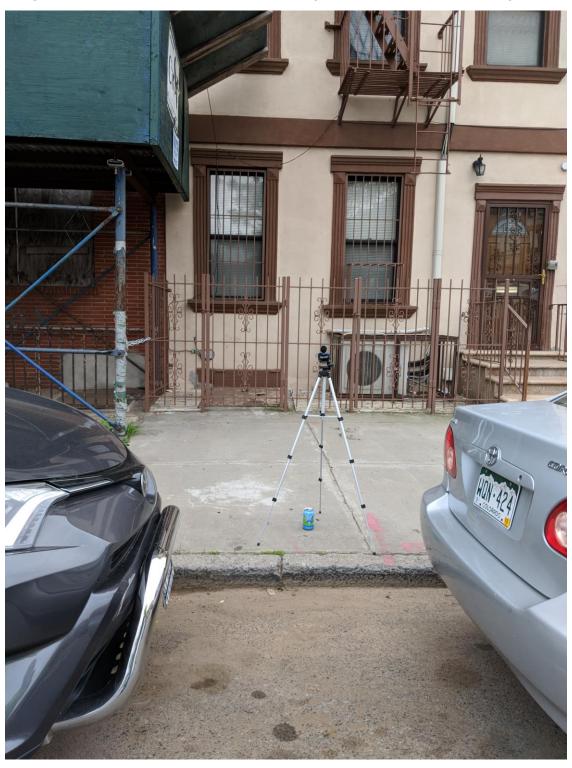

Figure 2.10-5: Pacific Street (noise monitoring location #4); Direction Facing North

Existing Conditions

Based on the noise measurements taken at Projected Development Sites 1 and 2, the predominant sources of noise in the area are commercial vehicular traffic and elevated subway train traffic. The volume of vehicular traffic, and its corresponding level of noise, is moderate to heavy on both Pacific Street and Grand Avenue. **Table 2.10-2** contains the results for the measurements taken at the monitoring locations.

Conclusions

The 2014 CEQR Technical Manual Table 19-2 contains noise exposure guidelines. For a proposed residential and commercial mixed-use development, an L10 of between 65 and 70 dB(A) is identified as marginally acceptable general external exposure. The highest recorded L10 at the Grand Avenue frontage of the Project Site (monitoring location #1) was 68 during the evening one-hour period, but the highest Leq recorded at the Grand Avenue frontage of the Project Site (monitoring location #1) was 71.3, and so the Leq will be used for attenuation purposes. The highest recorded L10 at the Grand Avenue frontage of Projected Development Site 2 (monitoring location #2) was 74.0 during the AM-peak one-hour period. The highest recorded L10 at the Pacific Street frontage of the Project Site (monitoring location #3) was 67.5 dB during the morning 20-minute period. The highest recorded L10 at the Pacific Street frontage of Projected Development Site 2 (monitoring location #4) was 67.0 during the morning 20-minute period. The highest recorded L10 at the Grand Avenue frontage of Projected Development Site 2 (monitoring location #2) during the Saturday midday period was 66.0.

An attenuation of 28 dB(A) would be required for Projected Development Site 1 (Applicant-owned site). For the Grand Avenue frontage of Projected Development Site 2, **31** dB(A) of attenuation would be required. With this level of attenuation, there would be no adverse impacts related to noise.

E-Designation

To preclude the potential for significant adverse impacts related to noise, an (E) designation, E-550, would be incorporated into the rezoning proposal for Block 1125, Lot 1 (Projected Development Site 1) and Block 1133, Lots 7, 10, 11, and 12 (Projected Development Site 2). The text for the (E) designation, E-550, is as follows:

Block 1125, Lot 1 (Projected Development Site 1): In order to ensure an acceptable interior noise environment, future residential/commercial office uses must provide a closed-window condition with a minimum of 28 dBA window/wall attenuation on all facades to ensure an interior noise level not greater than 45 dBA for residential uses or not greater than 50 dBA for commercial office uses. To maintain a closed-window condition, an alternate means of ventilation must also be provided. Alternate means of ventilation includes, but is not limited to, air conditioning.

Block 1133, Lots 7, 10, 11, and 12 (Projected Development Site 2): In order to ensure an acceptable interior noise environment, future residential/commercial office uses must provide a closed-window condition with a minimum of 31 dBA window/wall attenuation on all façades to ensure an interior noise level not greater than 45 dBA for residential uses or not greater than 50 dBA for commercial office uses. To maintain a closed-window condition, an alternate means of ventilation must also be provided. Alternate means of ventilation includes, but is not limited to, air conditioning.

2.11 Public Health

According to the 2014 CEQR Technical Manual, Public health is the organized effort of society to protect and improve the health and well-being of the population through monitoring; assessment and surveillance; health promotion; prevention of disease, injury, disorder, disability and premature death; and reducing inequalities in health status. The goal of CEQR with respect to public health is to determine whether adverse impacts on public health may occur as a result of a proposed project, and if so, to identify measures to mitigate such effects.

Pursuant to 2014 CEQR Technical Manual methodology, for most proposed projects, a public health analysis is not necessary. Where no significant unmitigated adverse impact is found in other CEQR analysis areas, such as air quality, water quality, hazardous materials, or noise, no public health analysis is warranted. If, however, an unmitigated significant adverse impact is identified in other CEQR analysis areas, such as air quality, water quality, hazardous materials, or noise, the lead agency may determine that a public health assessment is warranted for that specific technical area.

Based on the analyses presented in this report, the proposed action does not have the potential for significant unmitigated impacts to any of the constituent elements of public health. Therefore, no further analysis of public health is warranted.

2.12 Neighborhood Character

According to the 2014 CEQR Technical Manual, in a neighborhood character assessment under CEQR, one considers how elements of the environment combine to create the context and feeling of a neighborhood and how a project may affect that context and feeling. An assessment of neighborhood character is generally needed when a proposed project has the potential to result in significant adverse impacts in any technical area presented below, or when the project may have moderate effects on several of the elements that define a neighborhood's character.

A Neighborhood Character assessment is appropriate when a project has the potential to result in any significant impacts in the following areas:

- A. Land Use, Zoning, and Public Policy;
- B. Socioeconomic Conditions;
- c. Open Space;
- D. Historic and Cultural Resources;
- E. Urban Design and Visual Resources;
- F. Shadows;
- G. Transportation; or
- H. Noise.

Based on the analyses conducted previously, the proposed action would not result in significant impacts to any of the constituent elements of neighborhood character. Therefore, no further analysis is warranted and no impacts related to neighborhood character are anticipated.

2.13 Construction

According to the 2014 CEQR Technical Manual, construction activities, although temporary in nature, can sometimes result in significant adverse impacts. A project's construction activities may affect a number of technical areas analyzed for the operational period, such as air quality, noise, and traffic; therefore, a construction assessment relies to a significant extent on the methodologies and resulting information gathered in the analyses of these technical areas.

The following considerations are used to determine whether further analysis of a project's construction activities is needed for any technical area.

Transportation

A transportation analysis of construction activities is predicated upon the duration, intensity, complexity, and/or location of construction activity. Analysis of the effects of construction activities on transportation is often not required, as many projects do not generate enough construction traffic to warrant such analysis. An analysis should consider a number of factors before determining whether a preliminary assessment of the effect of construction on transportation is needed. These factors include whether the construction would be located in a Central Business District or along an arterial or major thoroughfare, whether any closures or narrowing of moving or parking lanes or pedestrian facilities would be located in an area with high pedestrian activity or near sensitive land uses such as schools, hospitals, or parks, and whether the project would involve construction on multiple development sites in the same geographic area such that there is the potential for several construction timelines to overlap, and last for more than two years overall.

The proposed development would not affect major traffic routes. There would be no construction activity within a Central Business District or on an arterial or major thoroughfare. The proposed development would occur in an area that experiences moderate pedestrian activity and does not contain sensitive land uses such as schools, hospitals or parks. While two development sites have been identified, cumulative development on these sites is not expected to overlap and last for more than two years overall.

Air Quality and Noise

According to the CEQR Technical Manual, an assessment of air quality and noise for construction activities is likely not warranted if the project's construction activities:

- Are considered short-term (less than two years);
- · Are not located near sensitive receptors; and
- Do not involve construction of multiple buildings where there is a potential for on-site receptors on buildings to be completed before the final build-out.

The proposed action would not result in construction activities lasting longer than two years and would not result in construction near sensitive receptors. Build out and occupancy of development sites is expected to occur in such a way that occupancy of on-site receptors would not occur prior to final build out of a site.

Historic and Cultural Resources

The area does not possess architectural or archaeological resources. Therefore, construction activity does not have the potential for adverse impacts.

Hazardous Materials

As discussed elsewhere in this document, a Phase I ESA, Phase II RIWP, and HASP have been prepared for the Project Site and are under review by the Department of Environmental Protection. If the potential for site contamination is identified, further investigation and remediation would be provided to ensure that construction and occupancy of action-induced development does not result in significant adverse impacts related to hazardous materials.

Natural Resources

The proposed action would result in redevelopment within a fully urbanized area that does not provide habitat for any rare or endangered plant or animal species. Construction activities would not have the potential for adverse impacts to natural resources.

Open Space, Socioeconomic Conditions, Community Facilities, Land Use And Public Policy, Neighborhood Character, And Infrastructure

According to the CEQR Technical Manual, a preliminary construction assessment is generally not needed for these technical areas unless the following are true:

- The construction activities are considered "long-term" (more than 2 years); or
- Short-term construction activities would directly affect a technical area, such as impeding the operation of a community facility (e.g., result in the closing of a community health clinic for a period of a month(s)).

Since none of these situations would occur, the proposed action does not have the potential for significant adverse impacts related to construction activity.

Robert L. Jackson Managing Director

Certification:

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in 40 CFR Part 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Robert L. Jackson - Managing Director

2.0 EXECUTIVE SUMMARY

2.1 Subject Property Description

The Subject Property is located at 505 Grand Avenue and consists of Tax Block 1125 / Lots 1 and 2. It contains a combined lot area of 12,000 square feet and is located on the southern end of the block between Atlantic Avenue and Pacific Street. Lot 1 is undeveloped and covered with vegetation, gravel, and patches of concrete. Lot 2 is undeveloped and covered with concrete.

The USGS Site Location Plan and Property Boundary figure are located in Appendix A. Site Photographs are located in Appendix B.

2.2 Data Gaps

Equity did not identify any significant data gaps that would affect its ability to identify Recognized Environmental Conditions (RECs) associated with the Subject Property.

2.4 Recommendations

Recognized Environmental Conditions (RECs) are defined as the presence or likely presence of any hazardous substances or petroleum products under conditions that indicate an existing release, past release or a material threat of a release into structures on the properties or the ground, groundwater, or surface waters of the properties. Historic Recognized Environmental Conditions (HRECs) are RECs previously remediated to government standards. De minimis RECs are those that do not present a threat to health or the environment and would not be the subject of an enforcement action by a government agency. Controlled Recognized Environmental Conditions (CRECs) are RECs that are under some form of institutional and/or engineering control. A Vapor Encroachment Condition (VEC) is the presence or likely presence of chemical of concern vapors in the subsurface of the target property caused by the release of vapors from contaminated soil and/or groundwater either on or near the target property. All RECs and VECs are discussed below.

RECs: Equity found no RECs associated with the Subject Property.

HRECs: Equity found no HRECs associated with the Subject Property.

2.4 Recommendations (continued)

CRECs: Equity found no CRECs associated with the Subject Property.

<u>VECs:</u> Based on the historic uses of the Subject Property and the current and historic uses of the surrounding properties, a Vapor Encroachment Condition (VEC) cannot be ruled out.

3.0 INTRODUCTION

3.1 Purpose

The purpose of the Phase I Environmental Site Assessment (ESA) was to evaluate the current and historical conditions of the Subject Property in an effort to identify recognized environmental conditions in connection with the Subject Property.

A recognized environmental condition is defined by ASTM as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property due to release to the environment; under conditions indicative of a release to the environment; or conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions. The identification of recognized environmental conditions in connection with the subject property may impose an environmental liability on owners or operators of the site, reduce the value of the site, or restrict the use or marketability of the site, and therefore, further investigation may be warranted to evaluate the scope and extent of potential environmental liabilities.

3.2 Scope of Work

The Phase I ESA conducted at the Subject Property was in general accordance with ASTM Standard E 1527-13 and included the following:

- · Review of previous environmental site assessments;
- · Records review;
- Interviews with regulatory officials and personnel associated with the subject and adjoining properties;
- A site visit; and
- Evaluation of information and preparation of the report provided herein.

Typically, a Phase I ESA does not include sampling or testing of air, soil, groundwater, surface water, or building materials. These activities would be carried out in a Phase II ESA, if required. For this Phase I ESA, no additions to the ASTM E 1527-13 standard were made.

3.3 Significant Assumptions

Equity has prepared this Phase I ESA report in accordance with the contractual scope of work, using reasonable efforts to attempt to identify RECs. The conclusions presented in this report are based solely on visual observations, readily available records, interviews, and other secondary sources, which are assumed accurate unless otherwise noted. Equity does not warrant the accuracy or completeness of the information provided by secondary sources. Equity does not warrant that contamination that may exist on the site has been discovered, that the site is suitable for any particular purpose, or that the site is clear and free of liability. This report is intended for use in its entirety. No excerpts may be taken to be representative of the findings of this assessment. Opinions and recommendations presented in this report apply to the site conditions and features, as they existed at the time of the site visit, and those reasonably foreseeable. They cannot necessarily apply to conditions and features of which Equity is unaware and has not had an opportunity to evaluate.

3.4 Limitations and Exceptions

Along with all of the limitations set forth in various sections of the ASTM E 1527-13 protocol, the accuracy and completeness of this report may be limited by the following: access limitations, physical obstructions to observations, outstanding information requests, and historical data source failure.

It should be noted that this assessment did not include a review or audit of operational environmental compliance issues, or of any environmental management systems (EMS) that may exist on the property. Where required, the documents listed in Appendices A and E were used as reference material for the completion of the Phase I ESA. Some of the information presented in this report was provided through existing documents and interviews. Although attempts were made, whenever possible, to obtain a minimum of two confirmatory sources of information, Equity in certain instances has been required to assume that the information provided is accurate.

The information and conclusions contained in this report are based upon work undertaken by trained professional and technical staff in accordance with generally accepted engineering and scientific practices current at the time the work was performed. The conclusions and recommendations presented represent the best judgment of Equity based on the data obtained from the work. Due to the nature of investigation and the limited data available, Equity cannot warrant

3.4 Limitations and Exceptions (continued)

against undiscovered environmental liabilities. Conclusions and recommendations presented in this report should not be construed as legal advice.

Should additional information become available which differs significantly from our understanding of conditions presented in this report, we request that this information is brought to our attention so that we may reassess the conclusions provided herein.

3.5 Deviations

There were no deviations made during this Phase I ESA.

3.6 Special Terms and Conditions

Authorization to perform this assessment was given by the client on September 5th, 2018. Instructions as to the location of the property, access, and an explanation of the property and facilities to be assessed were provided by Mr. Elie Pariente of EMP Capital Group.

3.7 Reliance

This report has been prepared for the sole benefit of the EMP Capital Group. The report may not be relied upon by any other person or entity without the express written consent of Equity and the client.

4.0 SITE DESCRIPTION

4.1 Location and Legal Description

The Subject Property consists of approximately 12,000 square feet and is located at 505 Grand Avenue within the Crown Heights neighborhood in Brooklyn, New York. The Subject Property, known as Tax Block 1125 / Lots 1 and 2, is located within an M1-1 zoning district. M1 districts are often buffers between M2 or M3 districts and adjacent residential or commercial districts. M1 districts typically include light industrial uses, such as woodworking shops, repair shops, and wholesale service and storage facilities.

4.2 Activity/Use Limitations

There are no known activity or use limitations on the Subject Property located at 505 Grand Avenue, Brooklyn, New York.

4.3 Site and Vicinity Description

The Subject Property consists of approximately 12,000 square feet and is undeveloped. The ground surface on Block 1125 / Lot 1 consists of vegetation, gravel, and concrete patches. The ground surface on Block 1125 / Lot 2 consists of concrete. The Subject Property can be accessed from the south on Pacific Street and from the west on Grand Avenue. The area surrounding the Subject Property contains primarily commercial and industrial uses including a construction storage yard and scrap yard across Pacific Street and bus parking across Grand Avenue.

4.4 Current Use of Property

The Subject Property is entirely undeveloped. Lot 2 portion of The Subject Property is used as tenant parking for the commercial stores fronting Atlantic Avenue.

4.5 Description of Structures and Other Improvements

The Subject Property is entirely undeveloped.

4.6 Adjoining Property Information

During the vicinity reconnaissance, Equity observed the following land use on properties in the immediate vicinity of the Subject Property:

North: Commercial stores that front Atlantic Avenue

East: Global Strongman Gym

South: Construction Storage and a Scrap Yard across Pacific Street

West: A vacant lot and bus parking across Grand Avenue

5.0 USER PROVIDED INFORMATION

5.1 Specialized Knowledge

Equity has no specialized knowledge of the Subject Property outside of the research which was conducted and reported as part of this report.

5.2 Valuation Reduction for Environmental Issues

Equity has not been provided with an appraisal for the subject property. It is unknown if the information in this report affected the value of the Subject Property in the current transaction or in former transactions.

5.3 Owner, Property Manager, and Occupant Information

No written or verbal communication with the property owner revealed any information which suggested that there are currently or historically any recognized environmental conditions associated with the subject property.

5.4 Reason For Performing Phase I ESA

The purpose of this Phase I Environmental Site Assessment (ESA) was to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E 1527-13) in connection with the Subject Property. The Phase I ESA is being conducted as part of environmental due diligence.

6.0 RECORDS REVIEW

6.1 Standard Environmental Records Sources

Equity contracted Environmental Data Resources, Inc. (EDR) to conduct a search of Federal and State databases containing known and suspected sites of environmental contamination. The number of listed sites identified within the approximate minimum search distance (AMSD) from the Federal and State environmental records database listings specified in ASTM Standard E 1527-13 are summarized in the following table. Detailed information for sites identified within the AMSDs is provided below, along with an opinion about the significance of the listing to the analysis of recognized environmental conditions in connection with the subject property. Copies of the EDR research data and a description of the databases are included in Appendix D of this report.

The Target Property (TP) for this database search was 505 Grand Avenue Block 1125 / Lots 1 and 2. The NR designation on the table stands for "Not Requested" at this search distance.

Map Findings Summary

Database	Target Property	Search Distance (Miles)	< 1/8	1/8 - 1/4	1/4 - 1/2	1/2 - 1	> 1	Total Plotted

NY SHWS		1	0	0	0	1	NR	1

6.2 Additional Environmental Record Sources

Equity reviewed a previous 2013 Phase I Environmental Audit by J.E. Activities Construction Managers Inc, as well as soil boring logs conducted by D.K. Drilling of NY, Inc. in 2014. It is our understanding that these soil borings were conducted by the previous owner in anticipation of building construction. These additional environmental record sources are provided in Appendix H.

6.3 General Site Setting

The Subject Property consists of approximately 12,000 square feet and is undeveloped. The ground surface on Block 1125 / Lot 1 consists of vegetation, gravel, and concrete patches. The ground surface on Block 1125 / Lot 2 consists of concrete. The Subject Property can be accessed from the south on Pacific Street and from the west on Grand Avenue. The area surrounding the Subject Property contains primarily commercial and industrial uses including a construction storage yard and scrap yard across Pacific Street and bus parking across Grand Avenue.

6.3.1 Topography

Based on a review of the USGS 7.5' 2013 Brooklyn Topographic Map for the site area, the Subject Property lies at approximately 85' above sea level and groundwater is inferred to flow to the west towards the East River, which is approximately 2.4 miles from the Subject Property.

6.3.2 Surface Water Bodies

The nearest surface water body is Prospect Park Lake which is approximately 1.6 miles from The Subject Property.

6.3.3 Geology and Hydrology

Based on the soil survey maps published by the USDA Soil Conservation Service (1994) and information provided in the EDR Report, the subsurface soils expected at the site include Urban Land, which is variable in texture and does not qualify as hydric soil. Urban land soils are those which have lost original characteristics due to human activity (construction, development, demolition, debris, etc.). The geologic age identification of the rock at the Subject Property is the Stratified Sequence, and the rock-stratigraphic units are made up of the Mesozoic Era, Cretaceous System, Upper Cretaceous Series (Code uK).

The Subject Property is located within the 3604970063B FEMA Flood Plain Panel. Groundwater is inferred to flow to the west from the Subject Property. No settling ponds, lagoons, surface impoundments, wetlands, or natural catch basins were observed at the Subject Property during the site reconnaissance.

6.4 Historical Use

6.4.1 Historical Summary

Historical information identifying the past site use was obtained from a variety of sources as detailed in Appendix C. This report includes; City Directories, Aerial Photographs, Sanborn Fire Insurance Maps, and Topographic Maps.

6.4.2 Title Records

Equity was not provided land title records as part of this assessment.

6.4.3 City Directories

Business directories including city, cross-reference, and telephone directories were reviewed for the years spanning 1928 through 2014. The following were listed for 505 Grand Avenue:

1934 - Romano Anna R Tel Operator, Ramano Jos Auto Mechanic

1965 - Dmytryk Theo

1970 - 1973 - Dmytryk Louis J

The City Directories are provided in Appendix C.

6.4.4 Aerial Photos

Equity reviewed a total of fifteen aerial photographs spannings from 1924 through 2017. The Subject Property as depicted in the 2006 - 2013 aerial photographs appears to be vehicle storage. The Subject Property appears to be developed from 1924 through 1984. No other discernable information was obtained from these photographs. The aerial photographs are provided in Appendix C.

6.4.5 Sanborn/Historical Maps

Equity reviewed a total of thirty-five (35) Sanborn Fire Insurance Maps from 1887 to 2007. The table below summarizes the observations made based on the maps provided by EDR. The Sanborn maps are located in Appendix C.

6.4.6 Historical Topographic Maps

Equity reviewed a total of nine (9) historical topographic maps from 1897 to 2013. No discernable information could be obtained from these maps. The topographic maps are provided in Appendix C.

6.4.7 Other Environmental Reports

Equity reviewed a previous 2013 Phase I Environmental Audit by J.E. Activities Construction Managers Inc as well as soil boring logs conducted by D.K. Drilling of NY, Inc. in 2014. It is our understanding that these soil borings were conducted by the previous owner in anticipation of building construction. The additional environmental reports are provided in Appendix H

6.4.8 Building Department Records

According to the New York City Department of Buildings (DOB) website, a demolition permit was filed in 1955.

6.5 Environmental Liens and Activity/Use Limitations

There are no known liens and/or activity use limitation on the Subject Property.

7.0 SITE RECONNAISSANCE

7.1 Methodology and Limiting Conditions

The site reconnaissance was conducted on September 5th, 2018, by Gene Bove, Project Scientist with Equity, accompanied by Elie Pariente of EMP Capital Group. Weather conditions at the time of the site reconnaissance were 90 degrees Fahrenheit. The visual reconnaissance consisted of observing the boundaries of the property and systematically transversing the site to provide an overlapping field of view, wherever possible. Photographs of pertinent site features identified during the site reconnaissance are included in Appendix B.

7.2 General Site Setting

The Subject Property consists of approximately 12,000 square feet and is undeveloped. The ground surface on Block 1125 / Lot 1 consists of vegetation, gravel, and concrete patches. The ground surface on Block 1125 / Lot 2 consists of concrete. The Subject Property can be accessed from the south on Pacific Street and from the west on Grand Avenue. The area surrounding the Subject Property contains primarily commercial and industrial uses including a construction storage yard and scrap yard across Pacific Street and bus parking across Grand Avenue.

7.3 Site Visit Findings

7.3.1 Hazardous Substances

No hazardous substances were observed during the site reconnaissance.

7.3.2 Petroleum Products

No petroleum products were observed during the site reconnaissance.

7.3.3 USTs

No underground storage tanks (USTs) were observed during the site reconnaissance.

7.3.4 ASTs

No aboveground storage tanks (ASTs) were observed during the site reconnaissance.

7.3.5 Other Suspect Containers

No suspect containers were observed during the site reconnaissance.

7.3.6 Equipment Likely to Contain PCBs

No equipment likely to contain PCBs were observed during the site reconnaissance.

7.3.7 Interior Staining/Corrosion

No interior staining or corrosion was observed during the site reconnaissance.

7.3.8 Discharge Features

No discharge features were observed during the site reconnaissance.

7.3.9 Pits, Ponds, And Lagoons

No pits, ponds, or lagoons were observed during the site reconnaissance.

7.3.10 Solid Waste Dumping/Landfills

No solid waste dumping or landfills were observed during the site reconnaissance.

7.3.11 Stained Soil/Stressed Vegetation

No stained soil or stressed vegetation was observed during the site reconnaissance.

7.3.12 Wells

No wells or record of potable wells were observed during the site reconnaissance.

8.0 INTERVIEWS

The site inspection was conducted with Mr. Elie Pariente of EMP Capital. Mr. Pariente did not provide any new information about the site.

OPINIONS

Information Missing - enter data or select from Default Language.

CONCLUSIONS

Recognized Environmental Conditions (RECs) are defined as the presence or likely presence of any hazardous substances or petroleum products under conditions that indicate an existing release, past release or a material threat of a release into structures on the properties or the ground, groundwater, or surface waters of the properties. Historic Recognized Environmental Conditions (HRECs) are RECs previously remediated to government standards. De minimis RECs are those that do not present a threat to health or the environment and would not be the subject of an enforcement action by a government agency. Controlled Recognized Environmental Conditions (CRECs) are RECs that are under some form of institutional and/or engineering control. A Vapor Encroachment Condition (VEC) is the presence or likely presence of chemical of concern vapors in the subsurface of the target property caused by the release of vapors from contaminated soil and/or groundwater either on or near the target property. All RECs and VECs are discussed below.

RECs: Equity found no RECs associated with the Subject Property.

HRECs: Equity found no HRECs associated with the Subject Property.

CRECs: Equity found no CRECs associated with the Subject Property.

<u>VECs:</u> Based on the historic uses of the Subject Property and the current and historic uses of the surrounding properties, a Vapor Encroachment Condition (VEC) cannot be ruled out.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Equity Env. Engineering LLC were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:		Coordinates:	Coordinates:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 200 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Equity Env. Engineering LLC were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 05/18/2018 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity

generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 8 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 4 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 08/09/2018 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 08/09/2018 has revealed that there are 36 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 13 NY UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there are 122 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 7 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

D000 Waste code: Not Defined Waste name:

Waste code:

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET. WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110004370065

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "11/4/2015: Rashad Duty Desk Spoke to DEP HAZMAT, he indicated caller

stated there has been waste oil dumping into the nearby sewer. DEP HAZMAT indicated that this was wash water which was most likely used

to clean kitchen appliances. The reported site is a wholesale appliance provider for restaurants, it is not an actual restaurant. DEP HAZMAT also indicated that caller said this is an ongoing issue and happens weekly. DEP is investigating impact to sewer system and

further looking into this issue. 1006 Atlantic Avenue has an

alternate address of 998-1006 Atlantic Avenue. No PBS registration or additional spill reports were found. Spill will be closed as per DEP

investigation. "

Remarks: "Waste oil being dumped from the basement of the business and into

the municipal sewer. Caller actually witnessed the dumping after his

office received a complaint of the activity."

DEC Memo: "11/5/15-Zhune responded to this spill. Met DEP hazmat-Jeremia and

Elon Lebovich (the owner's representative). As per Mr. Lebovich the owner bought the building eight month ago. Water was leaking in the basement for years. They hired a cleaning company to pump out the water from the basement. This company was pumping out the water with oil to the street. DEP hazmat-David was in the site on 11/4/2015 and stopped the pumping out. He saw water with oil on the street. He called Mr. Lebovich and instructed him to hire an environmental company. Mr. Lebovich hired ABC Tank. At the time that I inspected the site. I observed a tank with the top cut. There was water with oil all over the floor of the basement and water with oil along the curbside. A catch basin was also impacted. ABC pumped out the water with oil from the basement, they also cleaned the curbside and the

Direction Distance

Elevation Site Database(s) EPA ID Number

UNKNOWN BUILDING (Continued)

S118263230

EDR ID Number

catch basin. They will come back today to complete the clean up. Mr. Lebovich also said the plumber will remove the tank. 2/3/16-Donna Vieni from ABC Tank Repair & Lining, Inc. emailed the spill closure report dated 2/3/16. The letter stated ABC Tank Repair & Lining, Inc was contracted to assist the owner and /or management company in obtaining a spill closure for the spill case # 1508180. ABC Tank assumes the oil spill was caused due to negligence of others. A mixture of oil and water was being pumped out of the tank and tank room. All product was being pumped into buckets and/or drums located on the exterior of the building. due to the heavy rains, the product in the buckets and/or drums overflowed allowing the product to run into the street, along the curb and into the sewer catch basin. 1. ABC Tank pumped out product from the tank room, boiler room, along the curbside and sewer catch basin in the street. The tank room and boiler room was pressure washed. 2. ABC Tank pumped out, cleaned & removed (1) 1080 gallon AST from the site. A copy of the NYC Fire Department affidavit is attached for your files. 3. ABC dug out all contaminated soil/debris from the affected areas \$ placed in drums for proper disposal. A copy of the disposal manifest is attached for your files. Based on the above information this spill is closed."

Remarks: "tank leaked in basement - property owner pumped out and onto street

- oil went down sewer - 3rd party report from DEP"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo:
 "8/15/20

"8/15/2012 TTF Spill Case transferred to DEC Tim DeMeo. 12/27/2012 -Sangesland spoke to Charlie from Environmental Business Co. Problem was with a 550 gal buried waste oil tank. Property was being sold, buyer ran a tank test and it failed. Later RP did a Phase 2 soil borings around the tank and they were clean. Another company did Another Phase 2 soil borings around the tank again and they also came up clean. Charlie from Environmental Business Co. will send an e-mail to DeMeo showing all the data and requesting a closure 1/16/13 TJD File review. Property owner is requesting closure of spill originally reported as a tank test failure associated with a 550 UST - currently storing waste oil at a vehicle repair facility. Owner of the property has performed a subsurface investigation as part of a planned redevelopment (mixed use - commercial/residential) of this property. Laboratory results of collected samples reveal exceedances to RSCO for SVOC's and metals in several samples. UST which failed tightness testing remains at site - it is unclear if the tank is in service based upon the documentation submitted. Owner's consultant current proposal includes request for spill closure followed by removal and managemnent of contaminated soils during redevelopment activities at this site and an unspecified later date. Consultant further recommends to owner that in lieu of the potentially costly tasks of conducting a required site assesment in accordance with applicable DEC regulations the tank should be removed and replaced with an aboveground tank. Owner of property has failed to provide DEC with passing tightness test associated with UST. Additionally, the owner's consultant recommends removal of contaminated soils identified during sub-surface investigation and removal of UST following the closure of open spill file. Based upon documentation submitted spill is not currently elidgible for closure. 4/4/13 TJD File review. In April 2011 Prestige Environmental performed (3) borings around in service 550 UST (Waste Oil) - no VOC's or SVOC's were identified which exceed RSCO, however tank had previously been tightness tested and failed (gross failure). In November 2012, Environmental Business Consultants (EBC) performed a second round of sampling (2 borings) around the in service waste oil tank with similar findings - no RSCO exceedances. A closure request was submitted to DEC - as the tank remains in service DEC required a second tightness test as the initial test performed on 4/12/11 failed. A second attempt at testing UST failed on 2/7/13, reported that vent pipe could not be located or isolated to perform test. The owner proceeded with a tank abandonment on 2/21/13 at which time (2) holes were cut in tank bottom following the removal of 400 gallons of product/sludge. Soil samples were then collected from directly beneath tank for laboratory analysis - all target analytes are reported below CP-51 and Part 375 allowable concentrations. An affadavid of proper abandonment has been provided by EBC as part of closure report dated 3/7/13. Based upon above investigation the reported spill associated with 550 waste oil tank is closed. All other environmental conditions identified during previous investigations, primarily consisting of minor elevated concentrations of SVOC's and metals attributed by current and previous consultants, are to be properly managed during redevelopment of property in coordination with and under direct oversight of NYC Office of Environmental Remediation. No further action is required at this time. "

Remarks:

"Caller reporting a tank test failure."

will commence at the site. Should you have any questions or comments regarding the site, please contact me. Sincerely, David B. Oloke Sr. Geologist ALPHA-HYDRO ENVIRONMENTAL 1503 WAVE AVENUE MEDFORD, NY 11763 PHONE: 631.448.1862; FAX: 631.714.5273 E-mail: doloke@alphahydroenvironmental.com Excavation of the impacted soil has been schedule for first guarter of 2016. DEC is waiting for a closure report. Obligado - 3-2-16- Obligado - I received a call Zach Schreiber from OER. He wanted to clarify language from the Soil contamination letter. Santosh was out of the office so I offered assistance. He wanted to confirm that groundwater samples were required only if encountered during the excavation, and I indicated that yes that was what the letter stated. Groundwater is estimated to be 70 ft bgs. 10/6/2016: Rashad Spill will be reassigned to DEC Omar from DEC Mahat. 10/7/2016: Rashad No documents found in D2. Brief review of RIR is follows; building is currently vacant, proposed redevelopment plan consists of 7-story residential apartment building with a full cellar. Prior uses include auto wheel alignment shop and mixed residential commercial. The former hydraulic lift area located within the building is the primary area of concern. No groundwater monitoring wells could be installed, soil samples and soil vapor samples were collected. Depth to groundwater is about 70 feet, groundwater flow is generally east to west. No VOCs were detected above standards, only SVOCs were detected above standards. Soil vapor samples were also collected and had elevated concentrations. Brief summary of RAWP is as follows; Excavation to a depth of about 12 feet below grade. The rear yard will be excavated to a depth of 6 feet. Removal of USTs if encountered, collection of end point samples. Construction of engineered composite layer, installation of vapor barrier system which consists of 20 mill vapor barrier and installation of passive SSDS. 1/10/17-Vought-Spill reassigned to Lakahani as per RSE. Vought received email from OER Chawla with cc to OER Brooks/Schrieber that Jeff: We are working with developer for above site and want to coordinate remediation activities with DEC. Please let me know who is handling this spill at your end. Thanks, Vought replied with cc to all including Lakhani that Shaminder, We are currently working on reassigning Rashad's cases, however, the above spill will be assigned to Pratik Lakahani and I will be working with him on it. You can reach Pratik directly, if needed, at 718-482-4038. I was reviewing Rashad's notes on the spill and as per his last remarks: No documents found in D2. Brief review of RIR is follows; building is currently vacant, proposed redevelopment plan consists of 7-story residential apartment building with a full cellar. Prior uses include auto wheel alignment shop and mixed residential commercial. The former hydraulic lift area located within the building is the primary area of concern. No groundwater monitoring wells could be installed, soil samples and soil vapor samples were collected. Depth to groundwater is about 70 feet, groundwater flow is generally east to west. No VOCs were detected above standards, only SVOCs were detected above standards. Soil vapor samples were also collected and had elevated concentrations. Brief summary of RAWP is as follows; Excavation to a depth of about 12 feet below grade. The rear yard will be excavated to a depth of 6 feet. Removal of USTs if encountered, collection of end point samples. Construction of engineered composite layer, installation of vapor barrier system which consists of 20 mill vapor barrier and installation of passive SSDS. Questions for you, Zach and Anna: -What is the current development status of the site? - As a passive SSDS is

Site

EDR ID Number

EPA ID Number

proposed, is the site in NYCOER BCP and will NYCDOH review of the passive SSDS design be performed? If it is E-designated and we are not too late, we may need our expeditious contacts at NYSDOH review the SSDS designs after we review the soil vapor results. -Can you please send us all available reports so that Pratik and I may review them and respond accordingly?-If not in the reports, what is the specific use of the basement for the new building? Thanks! 01/11/17 -Lakhani There are no other spills and no PBS for the property at 925-927 Atlantic Ave. The owner of the property is: Edward Robinson 370 Lexington Ave, Suite 908 New York, NY 10017 Atlantic Upreal, LLC. 308 Malcolm X Boulevard Brooklyn, NY 11233 DEC Vought sent an email to OER Shaminder, OER Anna Brooks, and OER PM Zachariah Schreiber on 01/10/17 informing that DEC Lakhani will be assigned the spill. OER Brooks responded with stating that the current development status of the site is ready to begin excavation once all OER approvals are met. The site is enrolled in the NYCOER BCP. OER Brooks included an NYCDOH letter that approved a 20-mil vapor barrier under the building slab along with the foundation sidewalls, capping the rear yard with two (2) feet of clean soil, and installing a passive SSDS. She also included a link to OER's document repository (http://www.nyc.gov/html/oer/html/repository/RBrooklyn.shtml) which holds all available reports for the site. The basement will be used primarily for mechanical spaces. DEC Vought emailed on 01/11/17 to confirm whether the basement will be used by residents for other purposes such as a gym, storage, etc. OER Brooks responds stating that she believes the basement will be used for mechanical spaces and potentially storage. The project team will be sending OER an updated project plan. OER Chawla responded informing that OER conducted a pre-construction meeting yesterday with development team. The consultant indicated to them that they will be submitting a spill closure report to the DEC after remediation. File Review: Remedial Investigation Report (Alpha-Hydro Environmental, 04/2016) - The proposed redevelopment plan for the site consists of new 7-story building with a full cellar. The building footprint will be 3,030 SF. The building will have 21 new residential units - (19 single level apartments & 2 duplex apartments). The two 1st floor duplex apartments will each have access to lower levels located in the cellar. The building will have a 569 SF communal exercise room located on the 1st floor. The subject property consisted of two separate lots from 1887 1934 and was improved with four-story store buildings. During 1950 2007, the Sanborn Map identified the subject property as an auto wheel alignment shop. The City Directory Abstract for the subject property indicates that 925 Atlantic Avenue over the years had multiple tenants which included Sica Wheel Alignment Corp (1965 2013), Atlantic Wheel & Rim Co. Inc.(1949 1960) and was a mixed use residential and commercial property during 1934. The former hydraulic lift area located within the building is considered an area of concern based on work performed on 10/23/15. During the removal of the hydraulic lifts, it was discovered that one of the hydraulic tanks may have leaked. After the work performed under the remedial investigation was completed, the following was found: 1) groundwater is approx. 70' bg 2)groundwater flow is generally from east to west 3) No VOCs above unrestricted use SCOs 4)Several SVOCs were detected and exceeded unrestricted use SCOs 5) Soil vapor sample results indicated petroleum related VOCs at a low concentration 6) Four (4) groundwater wells were unsuccessfully installed because of encounter with refusal. The site was historically utilized as an auto

repair/wheel alignment shop. A total of ten soil samples and one duplicate soil sample was collected for chemical analysis: benzo(a)anthracene 19900ppb (SP-1, 0-2'bg), benzo(a)pyrene 5420ppb (SP-1, 0-2'bg), benzo(b)fluoranthene 6460ppb (SP-1, 0-2'bg), benzo(k)fluoranthene 8670ppb (SP-1, 0-2'bg), chrysene 18400ppb (SP-1, 0-2'bg), dibenzo(a, h)anthracene 1530ppb (SP-1, 0-2'bg), ideno(1,2,3-cd)pyrene 2850ppb (SP-1, 0-2'bg), ideno(1,2,3-cd)pyrene 2200ppb (SP-2, 0-2'bg), dibenzo(a,h)anthracene 1030ppb (SP-2, 0-2'bg), chrysene 6870ppb (SP-2, 0-2'bg), benzo(k)fluoranthene 1970ppb (SP-2, 0-2'bg), benzo(b)fluoranthene 1590ppb (SP-2, 0-2'bg), benzo(a)pyrene 1720ppb (SP-2, 0-2'bg), benzo(a)anthracene 3030ppb (SP-2, 0-2'bg), benzo(a)anthracene 6160ppb (SP-3, 0-2'bg), benzo(a)pyrene 1410ppb (SP-3, 0-2'bg), benzo(b)fluoranthene 1740 (SP-3, 0-2'bg), benzo(k)fluoranthene 1940ppb (SP-3, 0-2'bg), chrysene 3930 (SP-3, 0-2'bg), ideno(1,2,3-cd)pyrene 804ppb (SP-3, 0-2'bg), benzo(a)anthracene 1670ppb (SP-4, 0-2'bg), chrysene 1740ppb (SP-4, 0-2'bg). Three (3) soil vapor samples were taken: 1,2,4-trimethylbenzene 10 ug/m³ (SV-1), ethylbenzene 12 ug/m³ (SV-1), PCE 99 ug/m³ (SV-1), toluene 56 ug/m³ (SV-1), 1,3,5-trimethylbenzene 3 ug/m^3(SV-1), 2-butanone ug/m^3 (SV-1), acetone 120ug/m³ (SV-1), carbon disulfide 5.5 ug/m³ (SV-1), o-xylene 15 ug/m^3(SV-1), p,m-xylene 37 ug/m^3(SV-1), benzene 110 ug/m^3 (SV-2), ethylbenzene 11 ug/m³ (SV-2), PCE 19 ug/m³ (SV-2), toluene 71 ug/m³ (SV-2), p,m-xylene 17 ug/m³(SV-2), o-xylene 8.1 ug/m^3(SV-2), carbon disulfide 4.4 ug/m^3(SV-2), acetone 110 ug/m^3(SV-2), 2-butanone 12 ug/m^3(SV-2), 1,2,4-trimethylbenzene 5 ug/m³(SV-2), 1,2,4-trimethylbenzene 5.7 ug/m³(SV-3). Remedial Action Work Plan (Alpha-Hydro Environmental, 04/2016) - Surrounding property includes: North: 500 Grand Avenue, adjacent property (Block 2018, Lot 7501) Developed as multi-family walkup building. South: 970 Atlantic Avenue, opposite side of the Street (Block 1124, Lot 34) Developed as mixed residential and commercial buildings East: 929 933 Atlantic Avenue, adjacent property (Block 2018, Lot 54, 55 & 56) Vacant lot (former auto glass repair shop). West: 923 Atlantic Avenue, adjacent property (Block 2018, lot 59) Developed as one story commercial building and utilized as restaurant equipment sale and repair shop. The proposed remedial action will consist of: 1)excavation of contaminated soil encountered in the vicinity of the former hydraulic lift area will be performed prior to excavation and removal of soil/fill 2)Screening of excavated soil/fill during intrusive work for indications of contamination by visual means, odor, and monitoring with a PID 3)Removal of underground storage tanks (USTs) (if encountered) and closure of petroleum spills (if evidence of a spill/leak is encountered during Site excavation) in compliance with applicable local, State and Federal laws and regulations 4)Collection and analysis of end-point samples 5)Installation of a vapor barrier system below the concrete slab of the building as well as behind foundation walls of the proposed building 6)Construction and maintenance of an engineered composite cover consisting of 6 thick concrete building slab to prevent human exposure to residual soil/fill remaining under the Site 7)Submission of an approved Site Management Plan. Six (6) endpoint samples will be collected and analyzed. 02:30 PM: Spoke to NYCDOH Nathan with DEC Vought about concerns of a passive SDSS given the concentrations of tetrachloroethene, etc. Nathan stated that the NYSDOH allows a passive system to kept as long as it can be proved that it is sufficient. The following email was sent to NYCDOH Nathan along with

RIR, RAWP, and DOH letter: Nathan, As discussed today, via teleconference that included you, Jeff and I, attached to this email is the Remedial Investigation Report, the Remedial Action Work Plan, and the DOH Comment Letter. I ve also included a short summary of both reports: Remedial Investigation Report: The building is currently vacant and has no known current or historical tanks as per our database. Proposed redevelopment plans consists of a 7-story residential apartment building with a full cellar. The two 1st floor duplex apartments will each have access to lower levels located in the cellar. The building will have a 569 SF communal exercise room located on the 1st floor. Prior uses of the property include auto wheel alignment shop and mixed residential commercial. The former hydraulic lift area located within the building is the primary area of concern. During the removal of the hydraulic lifts, it was discovered that one of the hydraulic tanks may have leaked. No groundwater monitoring wells could be installed, soil samples and soil vapor samples were collected. Depth to groundwater is about 70 feet, groundwater flow is generally east to west. With respect to soil sample analyses, no VOCs were detected above standards, only SVOCs were detected above standards. Soil vapor samples were also collected and had elevated concentrations. Data tables are on pages 38 44. The Department has no further concerns about the soil and any possible groundwater contamination. Remedial Action Work Plan: Excavation to a depth of about 12 feet below grade. The rear yard will be excavated to a depth of 6 feet. Removal of USTs if encountered, collection of end point samples. Six (6) endpoint samples will be collected and analyzed. Construction of engineered composite layer, installation of vapor barrier system which consists of 20 mil vapor barrier and installation of passive SSDS. The attached NYCDOH letter notes that NYCDOH understood the plan to install a passive sub-slab depressurization system without any further comment or follow up indoor air sampling to determine whether the SSDS should be made passive or active. In previous site that the DEC has worked on with NYCDOH, we have always required confirmation of the effectiveness of the SSDS. We would appreciate any assistance or guidance that you may provide. 1/19/17-Vought-Assisting DEC Lakhani with spill as he is on extended vacation. Vought/Lakhani received email from NYSDOH Walz on 1/19/17 that Pratik, Based on my review of the Phase II RIR and the RAWP for this site, I offer the following. Due to the fact that chlorinated compounds were detected in the on-site soil vapor, a passive sub-slab depressurization system (SSDS) and a vapor barrier were proposed to be included in the plans for redevelopment. Based on this information, I recommend that soil vapor sampling implants be installed through the slab to be representative of the building footprint. The soil vapor implants will allow collection of soil vapor samples; based on the results of these samples, in conjunction with indoor and outdoor air sample results, a determination can be made whether activation of the SSDS is warranted. Additionally, if the SSDS is made active, the implants can be used to determine the pressure differential between the sub-slab and indoor conditions and verify proper operation. A soil vapor intrusion investigation work plan should be developed and submitted to the DEC and DOH for review.BTW I spoke with Maureen Little yesterday afternoon and ran this past her and she was fine with the recommendations. She stated that her dept. doesn t approve any of these plans, only comments on them as needed. Any questions. please give me a call. 1/19/17-Vought-Sent letter to OER Brooks with

EDR ID Number

EPA ID Number

cc to NYSDOH Walz/Hughes, DEC Lakhani, OER Chawla, NYCDOH D'Andrea/Little that Anna, Pratik is currently out of the office on vacation so I am assisting him on the above spill. Many thanks again for all of the reports you sent as well as your quick responses. We reviewed all of the documents and noted a PCE concentration in soil vapor of 99ug/m3 which is either in the Monitor or Mitigate range as per the NYSDOH Soil Vapor/Indoor Air Matrix. The RAWP review letter from NYCDOH that you sent noted that the remedy was understood to include & installing a passive sub-slab depressurization system, however, there was no mention of a follow-up SVI study to determine whether the system remained passive or was need to be made active. Performance of a follow-up SVI study is something usually done on Spill sites with soil vapor concerns where a passive SSDS is proposed. The RIR also noted that The proposed redevelopment plan for the site consists of new 7-story building with a full cellar. The building footprint will be 3,030 SF. The building will have 21 new residential units - (19 single level apartments & 2 duplex apartments). The two 1st floor duplex apartments will each have access to lower levels located in the cellar. As such we forwarded the reports and information to NYSDOH for review and their resulting email is below. The DEC, in consultation with NYSDOH, recommends that soil vapor implants be installed in the foundation and requires that a soil vapor intrusion investigation work plan be submitted for review and approval. To facilitate the drafting, review, and approval process, you may want to talk to Shaminder about another DEC/OER Site (1496-150 Wooster Street) for which such a SVI work plan was approved after review by DEC and NYSDOH. We also look forward to submission of the final development plans as you noted in your email dated 1/11/17. If you need the above conveyed via a formal letter to the responsible party or parties, please let us know and feel free to call me as well if you wish to discuss, Thanks! 1/24/17-Vought-Copied on email from OER Chawla to Alphahydro Environmental David Oloke email:doloke@alphahydroenvironmental.com) with cc to all parties that David: Please review emails below from State DEC and State DOH. Due to elevated PCE in soil vapor, DOH is requiring soil vapor intrusion study after buildings are completed. Please address these requirements in the STIP letter that you are finalizing. Please call Anna, Zach or myself if you want to discuss this further. Thanks, 02/03/17 - Lakhani The following email was sent by OER Anna Brooks: Dear Pratik and Jeff, In regards to Spill #1507933/OER VCP site 925 Atlantic Avenue, Alpha-Hydro Environmental is proposing to excavate the spill area and take endpoint samples before beginning the rest of the excavation onsite. Based on the revised plans, the excavation scope has changed from the one originally approved in the RAWP (the proposed cellar has become smaller and reserved for mechanical and utility uses). The revised draft plans submitted to OER by the developer are attached for your review. The project team is submitting a RAWP addendum as a Revised Stip letter to reflect the changes. We have no reason to object to the proposed start of excavation / remediation. However, when we communicate to the development team that OER has no objections to the start of remediation, we will reiterate that the extent of excavation and contaminant removal must be approved by DEC prior to determining that remediation has been sufficiently completed. We will also communicate that DEC must be notified prior to excavation start where any spill-related soils may be disturbed. Please confirm that this path forward is acceptable to you. Thanks, Anna DEC Lakhani forwarded OER

Brooks' email to NYSDOH Nathan Walz to check if there is any objection to excavation as it may affect an SVI study. Nathan responded saying I say go forward with the excavation and sampling. OER Brooks sent an email to Alpha Hydro Environmental David giving permission to excavate the spill area and take samples. 03/09/17 -Lakhani Revised Stipulation Letter (Alpha-Hydro Environmental, 02/21/17) - Collection and analysis of five (5) endpoint samples from the bottom of the excavation to evaluate the performance of the remedy with respect to attainment of Track 4 SCOs. These endpoint samples do not exclude any endpoint sampling required by DEC to determine that the extent of excavation and contaminant removal and remediation has been sufficiently completed. A 20-mil vapor barrier will be installed beneath the structure's slab and along foundation sidewalls. An engineered composite site cover will be placed over the entire footprint of the building. Installation of a passive SSDS consisting of a network of horizontal pipe set in the middle of a gas permeable layer immediately beneath the building slab and vapor barrier system. Soil vapor implants will be installed in the foundation and a soil vapor intrusion investigation work plan will be submitted to the DEC for review and approval. The two (2) apartment units on the first floor will have private access to the landscaped rear yard area. They will no longer have access to the cellar. The cellar will be used for mechanical purposes and storage spac for the building residents. The entire footprint of the building area will be excavated to a depth of approx. 10'bg for development purposes. Emailed OER Brooks regarding an update for the site. She informed that excavation activities had begun as of 03/03/17. DEC Lakhani responded reminding OER of the necessary SVI study that must take place after the excavation to determine whether a passive SSDS is sufficient. 03/10/17 - Lakhani Daily Report from 03/03/17 revealed that digging began in section A1 - where approx. 175 cu. yds. of contaminated soils were removed via live loads. On 03/06/17, digging began in section WC-1, WC-2, and WC-3 where approx. 257 cu. yds. of contaminated soils were removed via live load. On 03/07/17, digging began in section WC-1, WC-2, WC-3, and WC-HL where approx. 214.28 cu. yds. of contaminated soils were removed via live load. 03/27/17 -Lakhani Daily report from 03/08/17 revealed that the former hydraulic lift area was excavated 15' long, 10' wide, and 12'bgs. Five (5) endpoint soil samples were obtained to be analyzed. Four (4) sidewall samples were obtained at 7'bg and one bottom sample was obtained at 12'bg. Approx. 28.57 cy. yds or contaminated soil was generated. Daily report from 03/09/17 revealed that the WC-N excavation was 5-12'. The excavation maintains a 45-degree slope throughout the entire excavation. 03/28/17 - Lakhani According to the daily report from 03/24/17, endpoint samples at various locations at 925/929 Atlantic Avenue are planned to be taken on 03/27/17. 04/07/17 -Lakhani Daily Report dated 03/29/17 indicates that eight (8) soil samples were collected at depths between 10' and 12'bg and transported to the laboratory for analyses. Daily Report dated 03/31/17 indicates that a total of sixteen (16) trucks were loaded with soil for offsite disposal. Soils were removed from the WC-N and WC-S portion of the 929 Atlantic Ave. Daily Report dated 04/03/17 indicates that a total of nine (9) trucks were loaded with soil for offsite disposal. Soils were removed from the WC-W and WC-S portions. 04/12/17 - Lakhani Alpha-Hydro Environmental David Oloke emailed asking for a template for the SVI. DEC Lakhani responded informing David that all air sampling that is done for the SVI must be

EDR ID Number

EPA ID Number

performed in accordance with NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York. The NYSDOH guidance manual was attached to the email. SVI should include thorough information regarding: 1) sub-slab vapor sampling, 2) indoor air sampling, 3) ambient air sampling, and an 4) evaluation of air sample analytical results. 04/14/17 - Lakhani DEC Lakhani sent the following email to Alpha-Hydro Environmental David Oloke: David, Glad I could help! I was reviewing the Stipulation Letter and the sixth requirement calls for the collection and analysis of five (5) end-point samples from the bottom of the excavation to evaluate the performance of the remedy with respect to attainment of Track 4 SCOs. A map indicating end-point sampling locations is attached in Appendix 5. Samples will be analyzed for contaminants of concern VOCs, SVOCs, Metals, PCBs, and Pesticides. I would like to notify you that as per CP-51 Guidance, NYSDEC Spills, as a goal, uses Track 1 SCOs (unrestricted use) for spill closure. We also as per CP-51, we may consider using other SCOs as well. For the above referenced spill, the Department will be comparing results to unrestricted standards. If you have any further questions, please let me know. 04/18/17 - Lakhani Soil was proposed for reuse at the site and has been characterized as historic fill, non-hazardous material consisting of fine grain sand and silt mixed with red bricks and rock fragments. Soils from A4, B2, B3, and B4 were proposed for reuse. VOCs were non-detect for samples taken from these areas. Though PCB impacted soils within the former hydraulic lift area was excavated and removed the sidewall samples results showed no detection of PCBs, however residual soils impacted with PCBs appears to remain within the A3 grid area and will need to be removed and confirmatory endpoint will be obtained for analyses. 04/25/17 - Lakhani According to the 04/24/17 Daily Report, there will be ten (10) endpoint samples that will be taken from across the site in addition to the five (5) endpoint samples collected from the former hydraulic lift area. Furthermore, five (5) more hot spot endpoint sample location will be collected. Two (2) post excavation soil vapor samples will also be collected and analyzed. 04/28/17 -Lakhani OER Anna Brooks emailed to inform that endpoint samples have been received. In addition, the soil vapor endpoint samples indicated a level of PCE at 300 ug/m3. File Review: 925-927 Atlantic Avenue -Post Excavation Endpoint Sample Results (Alpha-Hydro Environmental, 04/2017) - The post excavation confirmatory endpoint analytical results were compared to Unrestricted Use SCOs and Restricted Residential Use SCOs. VOCs and SVOCs were non detect for all endpoint samples (EP-1 - EP-6). Post excavation soil gas results are as follow: 1,2,4-trimethylbenzene 57 ug/m3(PSV1), 1,2,4-trimethylbenzene 43 ug/m3(PSV2), 1,3,5-trimethylbenzene 13 ug/m3(PSV1), 1,3,5-trimethylbenzene 9.5 ug/m3(PSV2), acetone 110 ug/m3(PSV1), acetone 160 ug/m3(PSV2), ethylbenzene 18 ug/m3(PSV1), ethylbenzene 13 ug/m3(PSV2), o-xylene 27 ug/m3(PSV1), o-xylene 19 ug/m3(PSV2), p/m-xylene 95 ug/m3(PSV1), p/m-xylene 68 ug/m3(PSV2), PCE 300 ug/m3(PSV1), PCE 17 ug/m3(PSV2), toluene 49 ug/m3(PSV1), toluene 39 ug/m3(PSV2). Analyticals uploaded to D2. As per the NYSDOH, the concentrations of PCE in the soil vapor call for either no further action, monitoring, or mitigation. 05/02/17 - Lakhani DEC Lakhani spoke to NYSDOH Nathan Walz who informed that the site at 925-927 Atlantic Ave does not require an SSDS after further excavation was completed and soil vapor sampling showed that maximum concentration of PCE was 17 ug/m3. The NYSDOH air guidance value for PCE is 30 ug/m3. DEC Lakhani also spoke to OER Anna Brooks who confirmed that

the adjacent property to 925-927 Atlantic Ave, 929 Atlantic Ave, is another OER site owned by the same individual who owns 925-927 Atlantic Ave. However, both properties are being redeveloped separately as both will be unique and different buildings. The property owner of both sites had excavated both sites simultaneously to save money. It is on 929 Atlantic Ave where the 300 ug/m3 PCE was detected in the PSV1 soil vapor sample. 929 Atlantic Ave has neither an open nor closed spill. Adjacent to 929 Atlantic Ave is a Sunoco Gas Station that does not have an spills associated with it. Post Excavation Sample Results fro 929 Atlantic Avenue, Brooklyn NY (04/21/17) - The first set of post excavation endpoint soil samples were collected on 04/10/17. The second set of soil samples were collected on 04/14/17 at deeper depths to determine whether contaminant concentration in the first set of samples will decrease. EP-1, EP-4, HEP-N, HEP-S, HEP-E, HEP-W & HEP-B were within the proposed footprint of the building. The remaining two are located in the rear yard. EP-1 and EP-4 were taken between 14' and 15'. EP-2 and EP-3 were taken between 2' and 3'. EP-4 was also taken at 15'-16'. There were no VOC exceedances in any of the samples. HEP samples were taken to a depth of 16' to 18' and portrayed no VOC exceedances. 05/31/17 - Lakhani Alpha Hydro Environmental David Oloke emailed permits/certificates for a mining company located in NJ. Imported material will consist of virgin rock, not RCA - stone dust/structural fill material. 06/29/17 - Lakhani Petition for NYSDEC Spill Closure (Alpha-Hydro Environmental, 06/12/17) - Following the removal of the hydraulic lifts and associated hydraulic tanks, the impacted soils within the excavation was left in place until soil removal for site development commenced. Soils removed at 0'-5' from the hydraulic lift was performed. Later soils removed at 5'-12' from the hydraulic lift area was performed. Approx. 185.53 tons of contaminated soil was removed from the former hydraulic lift area. Five (5) endpoint samples were obtained from the excavation. The analytical results were compared to unrestricted use SCOs. A review of the results showed that all targeted PCBs were none detect and below unrestricted use SCOs and restricted use SCOs. DEC Lakhani confirmed SSDS plans with OER Brooks. OER Brooks sent the following email: Following up from the phone calls this afternoon, I would like to confirm that an active SSDS and vapor barrier will be installed for 925 Atlantic Avenue and 929 Atlantic Avenue. For the system, differential pressure testing should be done upon installation. I would also like to confirm that the schedule for the site is for next week to begin pile capping and foundation work. 06/30/17 - Lakhani OER Brooks has finally confirmed that OER is requiring a passive SSDS on 925-927 Atlantic Ave. An active SSDS will be installed at 929 Atlantic Ave. AKRF David called to determine whether there are any specific specs for the differential pressure testing of the SSDS. All requirements have been met for 925-927 Atlantic Ave. Spill has been remediated. Spill is closed. DEC Requires: 1)Submission of a Soil Vapor Instrusion Study Work Plan to DEC and NYSDOH Walz for review as per email from NYSDOH Walz dated 1/19/16 and as per Vought's email dated 1/19/17. 2)Submission of an updated development plan as per OER Brooks email dated 1/11/17"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Spiller Name: KIJANA

Spiller Company: G & B COLLISION Spiller Address: 569 GRAND AVE

Spiller Company: 999

Contact Name: MARK SALAMACK

DEC Memo: "5/11/09 - Austin - Spoke with Mark Salmanack - he indicated that he

rec'd acall from and inspected the site in question. Apparently, something dislodged the saddle pipe between two- 275 gal. above ground tanks, causing a spill of oil (Mark was not really sure how much) onto the floor. He didn't see any drains on the floor when he inspected the site. The co-owner, Kajana (618-623-1520, 718-230-9793) elected not to use Mark's company for the repair/cleanup. Will need follow up wit Kajanato determine status and action being taken - end 5/11/2009 - Sangesland spoke to Jamie at G&B Auto Collision

(718-230-9793) He said they had a spill and called Lorco Oil Company (908-820-8800) to do the cleanup. Sangesland spoke to Gene at Lorco and he said he KNOWS NOTING about a cleanup. Several calls back and forth - no straight answer if there was or was not a cleanup. - Need a site visit. 05/18/09-HRAHMED-Responded to the site. Met with the owner Kijana. Lorco oil put speedy dry and cleaned up the spill on the basement floor. They stopped the leak. This case is closed. "

Remarks: "CALLER STATES THAT SOMETHING WAS DROPPED ON THE PIPES THAT JOIN 2

275 GALLON TANK TOGETHER ABOUT 45 GALLONS SPILLED TO THE CONCRETE

BASEMENT FLOOR. CLEAN UP STATUS IS UNK."

Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

DEC Memo:

"sent TTF letter to: Prospect Heights Realty & Mgt LLC 199 Lee Ave. Brooklyn, NY 11211-8036 12/19/05 Feroze. Spill is transferred from Ketani to Feroze. 12/23/05 Feroze . Called Marlin Joseph of Petrolium Tanks Clenars and left a message for him to inform DEC about tank test. 02/02/06. Feroze talked with Mr. Vincent 718-783-8911. Building super MR. Trevor is available on the same number from 6:00 AP to 2:00 PM. They have repair the pipe system & will submit those documen to DEC soon. On 11/21/05 they test the tank and it passed. PBS of this spill is # 2-402230. 02/03/06. Mr. Vincent called and give me the address of building management ie. Ms. Olive Acole, Advanced Management. 26 Court Street New York 11242. Ph: 718-852-5310. A message is left for her. 02/24/06, Feroze talke with Ms. Olive Acole, Advanced Management. 26 Court Street New York 11242. On 02/27/06 she will fax me the documents by 03/09/06 03/15/06. Spill is transferred from Feroze to Kumer Patel. 03/16/06-Hiralkumar Patel. Received copy of tank test results in fax. test failed. Left message for Olive at Advanced Management. 05/16/06-Hiralkumar Patel. Left message for Olive at Advanced. Spoke to Marlin and he will call back once he reach to office with more information. 05/30/06-Hiralkumar Patel. Searched in pbs records. they found tank tight. based on available information, case closed."

DEC Memo: "DEC P

"DEC Piper contacted resident at 2am 12/9/06- Resident was just getting to sleep after petro was there. Piper followed up at 7 am.

Oil was outside and some was inside. Petro placed speedy dry down and gave owner name of three contractors. Piper responded due to lack of info. Piper arrived on site and oil was present outside. Owner had left??? No answer. Piper was able to contact Petro through 1800 oil heat. As per rep., a delivery was made on Friday though was stopped due to a broken fill line. Piper asked to speak with manager Pauola Kuzack. Piper explained that spill occured during a delivery and was not cleaned up properly. Petro had left a mess and did not clean.

Piper asked if this was normal practice. PAuola said no and would have someone clean up spill, and make repairs thereafter. Piper

will clean spill and owner required to pay for repairs. Piper to follow up on Monday. 12/11/06- DEC Piper phoned Petro. As per Joe at Petro, spill was not cleaned by Petro since they did not make a delivery. SJ Fuel made a delivery next door that Friday and may have delivered to wrong address. Piper contacted SJ Fuel and stated that I can do a fingerprint analysis on the two tanks and it would be a lot easier for everyone if SJ cleaned the small surface spill. Piper was in neigborhood that afternoon and surfacespill was already cleaned by

contacted owner via cell who was at appointment? and stated Petro

This case is closed. '

Remarks: "Caller reports unk oil company overfilled the tank. Spill was in the

basement of the residence. Caller was given 3 cleanup company names."

owner. Owner still has to make repairs to vent. and notified Petro.

Date form received by agency: 01/01/2006

Site name: TARMAC AUTO BODY CENTER INC

Classification: Not a generator, verified

Date form received by agency: 08/01/2001

Site name: TARMAC AUTO BODY CENTER INC

Classification: Conditionally Exempt Small Quantity Generator

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

corrective action activities required under NCNA.

DEC Memo: "e2mis no. 156133: 11/5/04 11:20 HRS ENV OPS C. LUGO #03594 ENV OPS

> REPORTS FINDING APPROX 1 PT OF UNKNOWN OIL ON APPROX 5 GAL OF WATER IN V4724. THIS WAS FOUND WHILE ATTEMPTING TO CLEAN STRUCTURE FOR BQE WHO WAS THERE TO REPLACE A SUMP PUMP ON ACCT#C3275. THE SOURCE AND CAUSE OF THE SPILL IS UNKNOWN. THERE WERE NO SUBSTANTIAL CRACKS IN THE STRUCTURE AND THE STANDING WATER HAD NO MOVEMENT. THERE DID NOT APPEAR TO BE ANY SEWER CONNECTIONS AND THERE IS A CONCRETE SUMP. ENV STOP TAG# 45119 WAS PLACED AND ONE LIQUID SAMPLE TAKEN ON E PRIORITY FOR PCB ANALYSIS ON CHAIN OF CUSTODY# DD11404. HISTORICAL RECORDS INDICATE PCB 1PPM DATED 11/29/01. THE BQE CREW ON LOCATION WAS ADVISED TO PRESSURE TEST THE UNIT. CLEANUP IS PENDING LAB RESULTS. UPDATE 11/5/04 12:59 HRS BQE J. GUARDARRAMA REPORTS THE UNIT PASSED THE PRESSURE TEST. Lab Sequence Number: 04-09232-001 TOTAL PCB: 83 ppm Saturday, November 06, 2004 9:12 PM An Environmental Crew made up of A. Gladowski, R. Vega and R. Esponda completed the cleanup of VS 4724 on 6 Nov 04. The structure was double washed with 5 gal. Biogen 760, 5 gal. of Biogen 715 and 5 gal. bulldog. 110 gal. of liquid were removed via Astoria >50 tanker. Three drums of debris were removed and brought to 3rd Ave Yard via the 'one trip rule'. The sump was

found cemented. Environmental stop tag # 45119 was pulled from the

structure."

DEC Region: 2 DER Facility ID: 443497

DEC Memo: "10/29/13- Zhune spoke to Christopher Steel 718-624-4842. He said

they put a new boiler. They coverted to gas/oil. The tank failed the test with a dry leak. They will perform isolation test. Last test was in 2008. As per Christopher there is no oil spill. 01/03/14- Mark From Petroleum Tank Cleaner emailed the tank test results dated 12/26/13. As per Mark the tank was not conected to the boiler and that was the only reason that it failed. Apparently they were going to interruptible service and someone disconnected the line from the boiler and allowed to fail. Those lines were reconnected. it has been

restested and it passed the test. As per Mark there is no

contamination. The Test result in eDos. Based on the information from

Petroleum Tank Cleaner the spill is closed."

Remarks: "Location is a drug treatment center. No known loss of product."

DEC Memo: "8/17/2011 Sangesland spoke to Chris at ABC Tank. 5,000 gal UST that

has not been used for 8+ years. Owner wants to abandon it. Failed a tank test causing this spill report to be filed (TTF). Sangesland told ABC to take a soil sample through the bottom of the tank and send in closure report. Tank will be abandoned in place per PBS requirements. 9/13/2011 Sangesland reviewed a tank closure report which analyzed 5 soil samples taken under/adjacent to the existing buried tank. (Report is attached in eDocs). 4 of the soil samples

were well below CP51 Recommended Soil Cleanup Objectives. 1 sample had some minor SVOC exceedances in the Benzos but the case is OK to

close out."

locate the tanks, investigate subsurface, find out what/if there has been a release/ properly register existing tanks/ remediate if necessary. 12/05 - Follow up needed with new owners to confirm additional investigation underway. 3/18/13- Zhune spoke to Bob Urban from Protest Enterprise. He said he will check the file and call back with the information regarding the Two tanks that failed the test. 3/19/13- Bob Urban from Protest called. He said on July 24, 2000 they tested two tanks at the hospital one 2000-gallons and one 3000-gallons both failed the test. the 3000-gallons failed the test with a gross dry leak and the 2000-gallons show no indication. He said we were hired for another company (Coastal Combustion) 516-352-5156. PBS # 2-347647 9/14/15-Donna Vieni from ABC Tank sent the following email On August 11, 2000 ABC Tank disconnected the union on the manhole cover and installed gasket, nuts & bolts on (1) 2000 gallon fuel storage tank,. August 14, 2000- A tightness test was performed on (1) 3000 gallon & (1) 2000 gallon fuel oil storage tank. According to our records, both tanks has been deemed Pass . There is no hard copies of the tank test results on file at the office of ABC Tank. Based on the above information there is minimum possibility for subsurface release for both tanks (2000-gallon AST and 3000-gallon AST. As per the above notes the 3000-gallon failed the test with a gross dry leak due to the manhole which was repair. If no further documentation or orvet evidence exits regarding the TTF being bonafide indication of a petroleum release to administratively close the spill. Spill Close."

Remarks: "tank 2 also failed (2000 gals) -- hospital notified."

> New York City Record Added Date: 08/21/2015 Record Updated Date: 06/11/2018

Update By: **MJKOMORO** Site Description:

Location: The site is located in an urban area in the Clinton Hill neighborhood of Brooklyn and is bounded by Atlantic Avenue to the south, Clinton Ave to the east, Vanderbilt Ave to the west, and multiple-family residential buildings to the north. Site Features: The site is occupied by three automotive related businesses, two restaurants and one vacant tenant space. The unit at 809 813 Atlantic Avenue contains a partial cellar that is accessible via trap door on the Atlantic Avenue sidewalk. An exterior patio area is located on the southeastern portion of the property. The site occupies 2 tax lots forming an "L-shaped" area of about 23,080 square feet that faces Atlantic Avenue. Current Zoning and Land Use: The site is located in an R7A residential district with a C2-4 commercial overlay, within an Inclusionary Housing Designated Area. It is currently used for commercial purposes. Past Use of the Site: The western lot (lot 1) was previously developed with residential and retail buildings. Past uses included a plumber/carpenter shop (1887-1950) and an automotive service facility (1938-1969). A car wash was present by 1977 and is still in use. The eastern lot (lot 59), along Atlantic Avenue, housed commercial tenants beginning in the 1930s. These included a paint and oil company, auto repair facilities, and a gas station. By the 1940's, the lot was occupied by three auto repair facilities, and the gas station, which remained until 1979. A bar and restaurant have occupied the eastern portion of the lot along Clinton Avenue from 2010 to present. A set of six underground petroleum tanks were removed from the site in 2004 in the area of the former gas station. At that time, the soil was sampled and no exceedances were noted. The area was filled with clean material. Site Geology and Hydrogeology: The Site's subsurface consists of a layer of fill material extending to a depth of up to 13 feet below ground surface (ft bgs) on (eastern) lot 59 and up to 23 ft bgs on (western) lot 1. The fill consists of fine to medium sand with variable amounts of gravel, brick, concrete, and coal ash in the western section of the site, and fine to medium sand with varying amounts of gravel in the eastern section. Native soil has not been encountered during investigation. The area by bedrock is of the Hartland formation, and is comprised of interbedded granulite, schist and amphibolite. The top of bedrock is greater than 50 ft bgs. Depth to groundwater at a nearby site is approximately 30 feet bgs. Groundwater beneath the site is expected to flow towards the west. Regionally, groundwater is assumed to flow in a northwesterly direction toward the East River, which is approximately 1.5 miles northwest of the site.

Env Problem: Nature and Extent of Contamination: Prelminary sampling was conducted

in 2015 and 2016. Results are described below: Soil- The primary concern at this site is metals, such as lead, barium and mercury in soil. The highest value was lead in soil at 4000 ppm, at a depth of 1-2 feet below an existing slab. The restricted residential soil cleanup objective for lead is 400 ppm. Data does not indicate any off-site impacts related to this site. Groundwater- Due to depth and access restrictions, no groundwater samples have been obtained at this site to date. Characterization of groundwater will be pursued during the next stage of the investigation. Soil Vapor - Three soil vapor samples were collected for volatile organic compounds. Slightly elevated levels of petroleum related volatiles were identified. For chlorinated compounds, the highest sample contained 60 micrograms per cubic meter of tetrachloroethylene (PCE), a common dry-cleaning chemical. Data does not indicate any off-site impacts related to this

Health Problem: Information submitted with the BCP application regarding the

conditions at the site are currently under review and will be revised

as additional information becomes available.

Contact Name: MATTHEW CARROLL

DEC Memo: "Flem Lee Shue,646-841-3100. Matthew Carroll. Custodian noticed drip

from temp boiler. Turned off line, Speedy dry placed down. Spill to concrete. Borings will be conducted. DEC Piper recieved letter report. Spill has been partially cleaned. A cracked filter on the temp burner located in a trailer was the cause. It spilled to the trailer and dripped onto pavers. Three was also an uncovered 5 gal pail of oil next to tank that was displaced by rainwater. Speedy dry was placed down and picked up. 5/17/10= DEC Piper spoke with DREW PArdus. Additional work has been comleted though soil samples were never taken. Drew will schedule sampling and notify me. 3/10/11-

DECPiper received closure request. Soil samples revealed VOC's below tagm and SVOCs slightly above. The SVOC were consistent troughout and

believe to be derived from urban fill. Based on work to date, this

spill is closed. see edocs if warranted."

Remarks: "Caller reporting a spill of approx 20 galoons of #2 fuel to

concrete, possibly soil. Clean up pending."

Contact Name: BOB KANAPARTHI

DEC Memo: "T/C: DEC Mahat contacted Mr. Kanaparthi inquiring more about the

remediation of the site. An email address was provided in oder to receive a progress report on the case. DEC IS WAITING ON A REPORT. 10/22/14: Mahat DEC Mahat received an email from the Mr. Kanaparthi explaining the current status of the case, Email goes like this: Per you request, please see the following status for spill# 1407344 at Public School 3K At the direction of the New York City School Construction Authority, our consultant Divirka and Bartilucci Consulting Engineers (D&B) performed a soil sampling program on October 13, 2014 at P.S. 3 located at 50 Jefferson Avenue, Brooklyn, New York. This work was conducted to support the closure of two

underground storage tanks as part of a proposed heating plant upgrade

Direction Distance Elevation

at Public School 3K. Soil samples collected from borings around the perimeter of the tanks indicated visual and PID impacts at the elevation of the tank invert (approximately 18-23 feet bgs). Analytical results from the soil sampling program are pending from the laboratory. Following receipt of the analytical data a report will be prepared describing the nature and extent of the contamination and will provide recommendations for closure. The report will be submitted to NYSDEC. Concurrently, NYCSCA will be proceeding with the preparation of a bid package to include plans and specifications for the proper closure of these tanks and closeout of the spill. It has been reported that these tanks have not been used in approximately 30 years. Also, during the site inspection by D&B, the tanks were observed to be filled with sand. Therefore, it is unlikely that this is an on-going release. Please feel free to contact me if you have any questions Thank you Steve Goldberg NYCSCA IEH Division 718-752-5022 DEC is waiting for laboratory analysis and a complete report. 12/17/14: Mahat A complete report has been submitted to the Department for a review. It has been uploaded on D2 for a reference. Collected end point samples are below CP 51 guidance standard. The potential source has been reomoved from the site. Futher excavation and remedial activities are not practical due to structural limits. Based on the report, any further investigation is not warrented by the Department. Hence, the spill case will be closed on the DEC database. "

Remarks:

"Phase 2 results from soil sample. Indications of what appears to be #6 oil. Samples were located in soil borings in the area of 2 7500G abandoned USTs."

DEC Region: 2 DER Facility ID: 464975

DEC Memo:

"7/16/15: J.Kann - called Chris Quintana who informed me that this was a dry leak. They are excavating around the tank. A temporary tank has been set up on site. He will forward the owner information. The tank was a 1080 gallon fuel oil tank. 7/17/15: Called Chris again to get the site owner's name. He did not respond, left a message. 7/20/15: J.Kann - received call back from Chris the owner is Jay Arno and his cell number is 347-563-1301. 7/22/15: J.Kann - spoke with Mr. Arno who indicated that the tank was repaired and contaminated soils removed. He said that endpoints samples were collected and that a tank retest was in the process of being done. I confirmed that he was the owner of 479 Clinton Avenue and his mailing address is: Jay Arno Downtown 2502 Avenue U Brooklyn, NY 11229 Informed the owner that the project Manager is Tim DeMeo and emailed him Tim's contact info at jay@downtownclothingstore.com. Placed spill in Tim's name because he was the responder on July 16, 2015. Added Spill/Owner info the TTF Mail Merge file. 9/15/15: As per Jeff, I contacted a consultant named Emily on 9/8/15 at 973-255-7526 who had left him a message regarding this spill. She did not answer and I left her a message. To date she has not called me back. 9/29/15 TJD File review. All Boro Tank has submitted a closure report detailing remedial activities at this property. Following a failed tank tightness test of a 1080 FO UST the tank was emptied, uncovered, cleaned and inspected. Contractor reports (2) pin holes were located approximately centerline of the UST - rolled 1/4 steel sheeting was welded in place to repair tank. Following repairs the fill and vent lines were replaced and the full tank system was reported to have been tested and passed. A total of (21) drums of petroleum contaminated soils were excavated and transported offsite under manifest for disposal. Endpoint samples were collected prior to backfill - all target analytes were within acceptable concentrations. All documentation has been uploaded to DECDOCS. No further action is required. Spill closed."

Remarks: "investigation, repair, retest pending"

DEC Memo: "8/1/95 Northland Marketing Corp. (Joseph Macchia) submitted corrective action plan. 8/7/95 Macchia informed DEC that borings were

performed and to contact Walter Berninger at (516) 588-2251. Walter received info for Fenley & Nichol borings. Will mail 4 boring logs and associated lab analysis. No map indicating locations.

Investigation most probably performed in conjuction with tank test failure and in vicinity of tanks & piping. 8/11/95 Received boring

logs from F&N 1/2/89 completed due to TTF. 8/15/95 J. Rommel and K. O'Dowd conducted PBS inspection. Unregistered tanks in leased portion of property (minimum 3). Product in stick manhole for Regular U/L. Apparent antifreeze and transmission fluid surface spills. Apparent recurring spill by diesel pump island. 6 vent lines and 4 tanks. Concrete in very poor condition-increased possibility for surface spills to leach into subsurface. Could not ID location of F&N 12/89 borings. Leasing portion of property since 8/7/95. 8/21/95 DEC approved CAP. CAP to be implemented within 10 days of receipt. An investigation plan will be submitted within 15 days. 9/29/95 DEC sent Northland comments on Investigation Plan. 12/4/95 As per W. Berninger. BEI on site today with air rotary rig. Down 35' and did

not encounter GW. Maybe caused by hot air injected (maybe within

EPA ID Number

water table but can't tell). Rethinking approach. 12/6/95 Down hole hammer got stuck, formation caved in. Propose to case top 20' and drill deeper. Air rotary to break rubble and then switch to hollow-stem auger(small diameter). 1/30/96 S. Muller, BEI, called to report 2 wells were installed last week. DTW 68'bgs. Boring near Atlantic clean. He determined that groundwater flow direction probably NNW. He wants to gain access into fenced area. 2 more wells are planned for installation. 1/31/96 On site during installation. 4/15/96 MW-1 Pet. Odor 70', 5.5ppm HNU soil, 3392ppb gw MW-2 Clean, 1.8ppm HNU soil, 1134ppb gw MW-3 27.4ppm HNU soil, 25,436ppb gw BEI recommends additional MWs to define plume and confirm its origin. As per C. Nalbone, flying Citgo flag. Singh (Citygas) operating/testing. Spill 9614595 reported 3/13/97 for product in wells and odor complaints. J. Rommel/K. O'Dowd Notes: 3/20/97 Spoke to Manager of Wendy's, Rommel Smith. Vapor problem during deliveries, especially in women's bathroom. Floor drain in office did not show readings with Crocon. Stated there's usually a delay between delivery and when vapors start. Singh and L. Macchia on site. Checked 3 wells with bailer. S. Muller's sonic tap - 3.875 product detected in MW-3. Required that weekly monitoring and bailing visits start immediately and that DEC be present during first visit. Continue delineation as previously required. Schedule to take readings at Wendy's during next delivery. (Appears to be same situation as Cooper Ave. Singh's delivery trucks not properly using stage II vapor recovery.) Wendy's manager says theres a delay of about 2 weeks but deliveries every week?? 3/31/97 Site visit with S. Muller, BEI, and Singh, Citygas. Macchia did not show. Checked 3 MWs. No product in any. MW-3 strong gas odor. No vapor complaints from Wendy's since last visit. Northland must perform investigation of entire site. Singh states Northland owns carwash, Wendy's and Citgo property. 3/31/97 DEC sent requirements of Northland. Investigation Plan due 4/15/97. 4/2/97 Site visit, K. O'Dowd & J. Rommel. Witnessed delivery of 2400gal regular and 400gal premium. Checked Wendy's electrical circuit board bathroom and office drain/house trap. No vapors detected. Wendy's at 1125 Atlantic Ave (718-622-1381). Savoy car wash at 1119 Atlantic Ave (718-622-7429). Thieved 3 MWs. No product. Need to sample wells for dissolved. Odor in all wells is of a new release. Strongest downgradient. Wendy's has an unusually large Brooklyn Union Gas meter in back. Vapors possibly travelling through electrical conduits. Located upsidedown J sanitary vent in back of Wendy's. Where does sewer leave Wendy's? Savoy car wash has a GW pump in front of bay area to supplement city water supply when very busy. Supposedly, they have a LI Well permit, but were unable to present it. He did not know pumping rate. Overflow from wash area discharges to sewer. 4/24/96 Received Subsurface Investigation Report(BEI, 4/15/96) for spill #8808500. MW-1 and MW-2 were installed to 78'bgs and MW-3 to 76'bgs. Total BTEX 3392ppb, 1134ppb and 25,436 respectively. 7/23/96 DEC requires additional delineation. 11/6/97 Berninger requested weekly groundwater monitoring stop. Reply sent 11/25/97 denying request. 8/26/98 DEC approves Investigation Plan (Impact, 8/12/98). 9/24/98 Spill #9807751 reported as UST line failure. 12/98-1/99 Three additional monitoring wells(MW-4, MW-5, MW-6) installed. 2gal water/product was bailed from MW-4 (5.3 LNAPL). 3/10/99 Impact Environmental reports MW-3 and MW-4 observed with 0.13' and 0.74' LNAPL respectively. An automated free product recovery system being considered, 8/19/99 Impact reports a new Mobil station being constructed and all USTs and system components removed. 10/22/99 UST

EPA ID Number

Closure Report submitted (Impact, 10/20/99). 21 USTs removed. 3 X 4000gal gasoline tanks removed from the north area(concrete encased). 9 X 750gal tanks were removed from the south area(concrete encased). 2 X 3000gal, 1 X 1000gal gas USTs in south area were observed to be abandoned and filled with concrete. 5 X 100gal empty tanks removed from the south area. 1 X 1000gal fuel oil tank removed from area 3. Endpoint samples show VOC/SVOC concentrations above soil cleanup guidance in all three excavations. Removed 3200 tons of contaminated soil. All wells destroyed and replaced. Report recommends remediation. Quarterly monitoring reports received 7/24/01, 12/5/01, 8/27/02, 1/15/04 prepared by Impact. 6/13/01, 7/18/01 EFR events for MW-3, MW-4, MW-5. 30gal LNAPL was recovered during each event. The recovery system is a compact skimming system used in conjuction with the SVES. Wells were on monthly product recovery schedule. The remediation system that was installed on the property consists of two soil vapor extraction well clusters(SVE-1/MW-5, SVE-2/MW-3), one monitoring well (MW-4) and two blowers. Screens of SVE wells are set at different levels through vadose and saturated zones. The SVES is manifolded to operate each well cluster independent of the other. (Startup date unknown). 3/10/04 Received 1Q04 monitoring report. MW-3, MW-4 and MW-5 are hottest. MW-6, across Bedford Ave is the edge of the plume. Upgradient wells Mw-1 and MW-2 are clean. May need to install well downgradient/north of MW-4 but appears plume migration is minimal. GW direction varies. Monthly monitoring for LNAPL. SVE effluent is below benzene emission limit(250cfm, 20' stack). 6/18/04 Received 2Q2004 monitoring report. BTEX ranged from ND(MW-1, MW-2, MW-6) to 22526ppb(MW-4). MTBE ranged from ND(MW-1, MW-2, MW6) to 95ppb(MW-5). 6/21/04 Received addendum to approved RAP. Three air sparge wells will be installed to approx 78'bgs, with 2' of screen, connected to 1 pipe. A 3HP compressor is expected to provide approx 8-10CFM at 10psi to each sparge well. Air sparge pilot testing will be conducted to verify pressure, flow and equipment size assumptions. The existing SVE system consists of two SVE well clusters, one well MW-4 that is connected to the SVE system and two blower units. Each blower is capable of inducing airflow of 125cfm at approx 60 of water for a total flow of 250cfm. Startup testing will be done upon completion of upgrade activities. SVES & Sparge vacuums, pressures and radii of influence will be measured to ensure vapor capture and sparge system efficacy. Following startup, the system will be monitored weekly for one month to assure proper system operation. 6/30/04 Meeting with Spartan Petroleum and Impact Environmental. Previously an Exxon. Impact plans on system modification. Asked them to confirm the well screen was above the water table and water is where it was last year. Proposing to sparge. March 2003 was the last time free product was detected. Dissolved now. 200tons of contaminated soil was removed. 9/15/04 Received 3Q2004 monitoring report. BTEX ranged from ND(MW-1,2,6) to 8180ppb(MW-4). MTBE ranged from ND(MW-1,2,6) to 644ppb(MW-4). 2/8/05 Received 4Q04 monitoring report. BTEX ranged from ND(MW-1,2) to 7527ppb(MW-4). MTBE ranged from ND(MW-1,2,3) to less than 100ppb(MW-5, diluted). 7/7/05 Received 1Q05 monitoring report. BTEX ranged from ND(MW-1,2) to 5650ppb(MW-5). MTBE was ND in all wells. Estimated 454lbs of hydrocarbons recovered. 8/9/05 STIP effective. 9/28/05 Received 2Q05 and 3Q05 monitoring reports. 2Q05- results from 5/23/05 - BTEX ranged from ND(MW-1,2) to 6448ppb(MW-5/SVE-1). Max MTBE at 3ppb in MW-1. As of 8/2/05, estimated 594lbs of hydrocarbons recovered, 3Q05- results from 8/2/05- BTEX ranged from ND(MW-1,2,6) to 5290ppb(MW-5/SVE-1). 4Q05 -

results from 11/14/05 - BTEX ranged from ND(MW-1,2) to 4953ppb(MW-5/SVE-1). 3/30/06 1Q06 - results from 2/15/06 - BTEX from 70ppb(MW-6) to 3590ppb(SVE-1/MW-5). 6/30/06 DEC lead transferred from K. Foley to J.A. Maisonave. - JAM 11/14/06 Reviewed Quarterly Monitoring Report for 2nd Qtr 2006, submitted by Impact Env. Total VOCs in groundwater ranged from ND to 6760 ug/L in well MW-5. The system is operating in compliance. Reviewed Quarterly Monitoring Report for 3rd Qtr 2006, submitted by Impact Env. Total VOCs in groundwater ranged from ND to 6630 ug/L in well MW-3. The system is operating in compliance. - JAM 3/21/07 Reviewed Quarterly Monitoring Report for 4th Qtr 2006, submitted by Impact Env. Total VOCs in groundwater ranged from ND to 4683 ug/L in well MW-5. The system is operating in compliance. - JAM 6/14/07 Reviewed Quarterly Monitoring Report for 1st Qtr 2007, submitted by Impact Env. Total VOCs in groundwater ranged from ND to 4799 ug/L in well MW-5. The system is operating in compliance. - JAM 11/26/07 Reviewed Quarterly Monitoring Rpt for 2nd Qtr 2007, submitted by Impact Envt'l. Total VOCs in GW ranged from ND to 3833 ug/L in well MW-3. System is operating in compliance. Reviewed Quarterly Monitoring Rpt for 3rd Qtr 2007, submitted by Impact Envt'l. Total VOCs in GW ranged from ND to 3279 ug/L in well MW-5. System is operating in compliance. I called Hal Benjamin at Impact Envt'l and requested that influent and effluent air streams be sampled and analyzed for VOCs. He said he will discuss with RP and get back to me. - JAM 02/09/11: This spill case transferred from J. Maisonave to J. Kolleeny. - JK 01/09/12: Reviewed 2nd Quarter 2011 monitoring rpt by Impact Envt'l (in eDocs), dated 8/10/11 (CD submitted 10/10/11). Results of 5/27/11 GW sampling event show MW-8 had 6,444 ug/L total VOCs (up from ND in Feb. 2011). Rpt says PID screening of AS/SVE system vapor discharge shows discharge in compliance with benzene limit. - J. Kolleeny 02/24/12: Reviewed 3rd Quarter 2011 mon rpt by Impact Envt'l (in eDocs), dated 12/30/11. GW samples collected on 9/12/11 showed low to moderate levels of dissolved-phase contam in wells MW-4 & MW-6; however, MW-5 and MW-8 were dry and could not be sampled. Rpt says PID screening of AS/SVE system vapor discharge shows discharge in compliance with benzene limit. - JK 03/09/12: I closed spill case 0912321 for waste oil UST at this site. Sent spill closure letter via email to Mr. Harvinder Singh of Bolla EM Realty LLC, stating: Dear Mr. Singh: Please see attached spill closure letter regarding spill case 0912321. A hard copy of this letter will not be forwarded. As noted in letter, spill no. 8808500, for gasoline-related contamination at site, remains open. All monitoring, vapor extraction and air sparging wells at site should remain open for ongoing monitoring and remediation of contamination related to that spill. Feel free to contact me if you have any questions. - J. Kolleeny 02/13/13: On 2/12/13, I sent email to Hal Benjamin of Impact Envt'l, cc's to Kevin Kleaka and Michael Bluight also of Impact: Hal, I haven't received any monitoring rpts for this site since 3rd quarter 2011 rpt; I think I had some discussions with either you or Kevin Keaka regarding work done at site by Exxon-Mobil's consultant (Kleinfelder), and fact that their site plans differed considerably from Impact Envt'l's site plans. But I never heard back from Impact after that. Can you please provide an update on this spill site, and/or let me know who is now project manager for Impact? After sending email, received phone call from Michael Bluight of Impact, who said he is now PM and that they are finishing up monitoring rpts for 4th atr 2011 and all 4 atrs of 2012. with sampling of wells installed by Impact and also wells installed

by Kleinfelder. He sent follow-up email: Jon, I will be taking over as project manager for this site. I am currently finalizing QMR rpts for Site. Said final rpts will include sampling results from: 4th qtr 2011 (sampled 12/13/11) 1st qtr 2012 (sampled 2/14/12) 2nd qtr 2012 (sampled 6/27/12) 3rd qtr 2012 (sampled 10/5/12) 4th qtr 2012 (sampled 12/28/12) As per our conversation, GW samples were collected during 2nd, 3rd and 4th quarters of 2012, from wells in current monitoring network, and from on-site monitoring wells installed by Kleinfelder East, Inc. during its 2010 Phase II Envt'l Site Assessment work. An annual GW monitoring rpt for 2012, consolidating data obtained from all four quarters in 2012, can be constructed and submitted to NYSDEC in lieu of four separate rpts, if preferred. Please call me if you have any questions and/or concerns. On 2/13/13, I sent email reply: Michael, Thanks for your response, it was nice speaking with you yesterday. Please send a separate rpt for 4th Quarter of 2011, but I like your suggestion of sending one annual rpt for 2012 consolidating data for four quarters of 2012. However, let's return to quarterly monitoring rpts for 2013. Most importantly, rpt for 2012 should include evaluation of remedial progress and recommendations for further actions to move this spill case toward closure. - J. Kolleeny 03/27/13: On 3/25/13, received Quarterly Monitoring Rpt for 4th Quarter 2011 and GW Mon Rpt - 2012 Annual Rpt by Impact Envt'l, both dated 3/21/13 (both in eDocs). On 3/27/13. received email from Michael Bluight of Impact: Jon, we are having a few problems with our UPS overnight service as of late& just wanted to make sure you received hard copy (with electronic copy on CD) of rpts for this site? 1st quarter [2013] GW monitoring / sampling event is scheduled to be performed within next 5 to 7 business days. I sent email reply if rpt(s) include any recommendations that require DEC response. Michael sent reply: For Atlantic Avenue, we will still continue monitoring and operating remedial system as before. Only revision was incorporation of certain monitoring wells installed by Kleinfelder during a phase II investigation a few years back and deletion of existing wells in profile, located on western side of Site. Majority of detections in GW samples and identified location of dissolved phase in GW, is located on eastern side of Site. I listed our proposed revised monitoring network in conclusions section of 2012 annual rpt. Please call me if you have any questions and or concerns with rpt information and thank again for your assistance. -JK 04/03/13: Received email from Michael Bluight of Impact Envt'l: Jon, just a follow-up for 1143 Atlantic Avenue, Brooklyn, NY. We were planning to conduct next quarterly sampling round tomorrow at site. As per your below correspondence, we recommended revising GW monitoring network to consist of wells: MW-1, MW-4, MW-5, MW-8, MW-E, MW-G and MW-H. We will gauge ALL site wells (helps tighten up GW contour map). Is this recommended revision OK? Thanks as always for your assistance with this project and please call me if you have any questions and/or concerns. I sent email reply: Michael, I've quickly looked over 4th quarter 2011 monitoring rpt and 2012 annual monitoring rpt for this site, and wells you've listed are approved for sampling, but in addition to those wells, I'd like you to also include well MW-6. Well MW-6 helps provide off-site delineation, and had 196 ug/L total BTEX when last sampled in December 2012. Not a very high result, but evidence of an off-site impact that should continue to be monitored. I also want to reserve right to request that other wells be added back into monitoring program, if there are reasons to do so. Please let me know if you have any questions or

comments. - J. Kolleeny 04/03/13: Completed review of QMR for 4th Quarter 2011 by Impact Envt'l, dated 3/21/13 (in eDocs). Rpt states that SVE/AS system is operating, recovering hydrocarbons, and that PID screening of vapor effluent indicates benzene is in compliance with discharge limit. GW sampling in Dec. 2011 shows significant impact in well MW-3, with 2,677 ug/L total BTEX (was reportedly ND for BTEX when sampled in May and Sept. 2011, but had 2,940 ug/L tBTEX in Sept. 2009); off-site well MW-6 had 123 ug/L tBTEX (down from 415 ug/L in Sept. 2011). Several important wells were not sampled, e.g., MW-5 and MW-8, nor were any of wells installed by Kleinfelder as part of Phase II Assmt sampled. Rpt states that Impact will attempt to recondition wells MW-5 and MW-8 so they can be sampled in future monitoring events. - JK 04/04/13: Reviewed GW Mon Rpt 2012 Annual Rpt by Impact Envt'l, dated 3/21/13 (in eDocs). Rpt presents data for all four quarters of 2012. On-site AS/SVE system operated throughout period; PID screening indicates effluent was in compliance with benzene discharge limit. GW samples were collected from usual wells in Feb. 2012, and from most of those wells plus wells installed by Kleinfelder in June, October and December 2012. Overall, data show significant GW impacts in wells MW-3, which had 2,730 ug/L total BTEX in Feb. 2012, up from 2,677 ug/L in Dec. 2011 (not sampled in 2nd, 3rd & 4th quarters of 2012); well MW-G, which had 920 ug/L tBTEX in June 2012, 1,190 ug/L in Oct, 2012 and 3,100 ug/L in Dec, 2012 (had 4,794 ug/L tBTEX when sampled in June 2010); and well MW-H, which had 6,050 ug/L tBTEX in June 2012, 3,110 ug/L in Oct. 2012 and 910 ug/L in Dec. 2012. Off-site well MW-6 had 196 ug/L tBTEX in Dec. 2012. Wells MW-5 and MW-8 were not sampled during 2012. Rpt proposes revised well network for quarterly monitoring, comprising wells MW-1, MW-4, MW-5, MW-8, MW-E, MW-G and MW-H (Impact will attempt to recondition wells MW-5 and MW-8 for sampling). As noted above, I sent email on 4/3/13 approving these wells for sampling but adding well MW-6 to monitor off-site impacts and stating that DEC reserves right to add back other wells as needed. Operation and monitoring of SVE/AS system and quarterly GW monitoring will continue, with 1st quarter 2013 GW sampling event expected to occur in late March 2013. - J. Kolleeny 03/18/14: Reviewed 2013 Semi-Annual GW Monitoring Rpt dated 11/20/13, by Impact Envt'l, received by email from Julianna de la Fuente of Impact on 12/2/13 (in eDocs). Results of GW sampling in April & June 2013 (i.e., 1st & 2nd quarters 2013) showed well MW-4 had 171 ug/L total BTEX in April 2013 (up from 1 ug/L in Dec. 2012), and had 20 ug/L tBTEX in June 2013; well MW-6 had 546 ug/L tBTEX in April 2013 (up from 196 ug/L in Dec. 2013) and 475 ug/L tBTEX in June 2013; well MW-G had 2,190 ug/L tBTEX in April 2013 (down from 3,100 ug/L in Dec. 2012) and 560 ug/L tBTEX in June 2013; well MW-H had 1,799 ug/L tBTEX in April 2013 (up from 910 ug/L in Dec. 2013) and 2,840 ug/L in June 2013. Well MW-3 has been damaged and could not be accessed for sampling in April/June 2013, but well MW-H is very close by; wells MW-5 and MW-8 were dry and could not be sampled in April/June 2013. Based on data, Impacts recommends continuing with quarterly GW monitoring/sampling from agreed-upon well network. - J. Kolleeny 08/15/14: Reviewed Semi-Annual GW Mon Rpt for 3rd & 4th Quarters 2013 by Impact Envt'l, dated 4/11/14 (in DecDocs). Results of GW sampling in Sept. & Dec. 2013 showed only significant GW impacts in well MW-G, which had 1,499 ug/L total BTEX in Sept. 2013 (up from 560 ug/L in June 2013) and increased to 1,910 ug/L tBTEX in Dec. 2013: and well MW-H. which had 2.594 ug/L tBTEX in Sept. 2013 (down from 2,840 ug/L in June 2013), and decreased to 761 ug/L tBTEX

S102560459

in Dec. 2013. Wells MW-5 and MW-9 were dry and could not be sampled. I sent email to Juliana de la Fuente of Impact, cc to Kevin Keaka of Impact, asking if Impact ever tried to recondition wells MW-5 & MW-8 as stated in an earlier rpt, noting that it's important to sample these wells, which have had high VOC levels in past, and that if wells cannot be reconditioned, they may have to be reinstalled to greater depth to hit GW. I also asked that GW data tables in future rpts include line for total VOCs in addition to total BTEX. - J. Kolleeny 01/22/15: Received phone call from Kevin Kleaka of Impact Envt'l, asking if he could meet with me on 1/28/15 to discuss improvements in GW quality and possibility of shutting down SVE system at site. I agreed to meet on 1/28/15; Kevin sent site map and GW data table with recent sampling data. I asked if he had any SVE system vapor recovery data, he sent table with data from PID screening of system's vapor recovery. Site plan and data tables in DecDocs as brief. - J. Kolleeny 01/28/15: Met with Kevin Kleaka of Impact Envt'l to discuss site. GW data for 4 quarters of 2014 show all wells being sampled below 1,000 ug/L total BTEX, except for well MW-H which had 1,386 ug/L tBTEX on 9/16/14 (but decreased to 798 ug/L tBTEX in Dec. 2014). These wells also show fairly consistent decreasing trends over time. However, well well MW-5 had 1,093 ug/L tBTEX when last sampled in Sept. 2009 and well MW-8 had 3,427 ug/L tBTEX when last sampled in May 2011, but sampling of these wells was discontinued because they have gone dry. According to Kevin, depth to water at site is ~80 ft. PID screening of SVE system vapor recovery shows mainly low PID readings for past several yrs, with temporary increases in first half of 2014 - went from 3 ppm in Dec. 2013 to 127 ppm in Jan. 2014, 21.5 ppm in Feb. 2014, 59.6 ppm in March 2014, 25.8 ppm in May 2014, 16.0 ppm in June 2014, then settled back to single digitsin July 2014 and was only 0.5 ppm in Dec. 2014. Based on decreasing GW contam levels & trends and low hydrocarbon vapor recovery of system, Impact is proposing shutting down system and considering site for spill closure. I asked that system be pulsed, that a vapor influent sample be collected for lab analysis, and that another round of GW sampling of selected wells be performed to confirm levels and trends, and that if data support closure in their view, they include risk assessment/sensitive receptor evaluation for residual impacts in report requesting closure. They agreed to these requests. Afterward, Kevin sent follow-up email to summarize discussion at meeting: Jonathan - Thank you again for meeting with me today regarding this site. As discussed, below is a brief summary of tasks we agreed to complete for 1st quarter [2015] pursuant toward closure of spill. 1. A system influent sample will be collected and analyzed for VOCs by TO-14 during next site visit. 2. Remedial system will be pulsed during first quarter. Pulsing will include effluent readings with a PID for possible rebound . 3. Next quarterly GW sampling event for 1st Qtr (likely in March) will only include wells MW-H, MW-4, MW-E and MW-G. DTW readings will be recorded from all on-site wells during above GW sampling event for purpose of providing current GW flow direction. If system shutdown/pulsing doesn t show any significant recovery of residual contamination and next GW sampling data is consistent with and/or lower than existing data set, we will be requesting closure of spill inclusive of a risk assessment. Thank you, please advise if you have any comments based on above points. I wrote back: Kevin, It was nice meeting with you today. My only comment on your summary of today s discussion is that I was thinking that system influent sample for TO-14 analysis should

Site

MAP FINDINGS

Database(s)

EDR ID Number EPA ID Number

EXXONMOBIL (Continued)

S102560459

be taken when pulsing system, i.e., after system has been down for a while and then re-started, which would presumably be maximum hydrocarbon recovery one is likely to see from system at this point. If you think this doesn t make sense, please let me know. Another option (though more expensive) would be to collect a vapor sample for lab analysis during next site visit, as you ve stated below, and then collect one more TO-14 sample after pulsing system off and back on (as I suggested above), which would allow a direct comparison of pre-pulsing and post-pulsing hydrocarbon recovery. Kevin replied: Thanks Jonathan - We will collect an influent sample both before system is shut down for pulsing and at end of 1st gtr (likely when we collect GW samples) after a few cycles of pulsing. I agree this will be useful for comparison purposes. - JK 10/20/15: Reviewed Closure Request Rpt by Impact Envt'l dated 9/21/15 (in DecDocs). Rpt summarizes past investigative and remedial actions at site, presents recent & historical GW sample data and system operational data, plus includes risk assessment/sensitive receptor survey in support of spill closure request. Rpt states that total of 21 USTs were removed from site in 1999, and ~3,200 tons of petroleum-impacted soil were excavated and removed. An SVE system was installed in 2000; VEFR events were performed on several wells in 2001-2002, recovering ~325 gals of LNAPL; no LNAPL has been observed in site wells since 2003. In 2004, system was upgraded to include air sparging. As requested by DEC, remedial system was pulsed by alternately being shut down & restarted in Feb. and March 2015; vapor influent samples collected before shutdown and after re-start showed no significant increase in hydrocarbon recovery (in fact, neither sample had significant VOCs), suggesting system has reached limit of effectiveness. GW data for March and June 2015 showed well MW-4 had 23 ug/L total VOCs in March 2015 (down from 909 ug/L in Dec. 2014; had 11 ug/L tVOCs in Sept. 2014) and had 56 ug/L tVOCs in June 2015; well MW-E had 782 ug/L tVOCs in March 2015 (up from 69 ug/L in Dec. 2014) and had 225 ug/L tVOCs in June 2015; well MW-G had 709 ug/L tVOCs in March 2015 (down from 1,552 ug/L in Dec. 2014) and had 1,627 ug/L tVOCs in June 2015; well MW-H had 3,940 ug/L tVOCs in March 2014 (up from 1,065 ug/L in Dec. 2014) and had 1,713 ug/L tVOCs in June 2015. Well MW-3 was found to be damaged and was replaced by well MW-H; wells MW-5 and MW-8 have been dry since 2013, and other wells were dropped from monitoring program due to low or ND levels of VOCs. Impact Envt'l concludes that altho VOC levels remain somewhat elevated in wells MW-G and MW-h, both wells show decreasing trends over time. Depth to water at site is more than 60 ft, and GW flow, altho it has varied over time, has been to N or NW since 2013 and wells down-gradient from MW-G and MW-H show impacts in those wells are limited in extent and not migrating. Rpt states that site is likely to remain a gas station. Receptor analysis concludes that altho some residual soil & GW impacts remain at site, considering that bulk of contaminated soil was excavated, AS/SVE system operated on-site for years and had virtually no hydrocarbon recovery towards end of operation, and depth to GW is more than 60 ft, residual impacts are not likely to pose a threat to public health or environment. Based on remedial actions performed and data presented, I closed spill case and sent closure letter (in DecDocs) by email to Mr. Hank Alpert of Spartan Petroleum, Inc. (hank@spartanpetro.com), with cc's to Julianna de la Fuente and Kevin Kleaka of Impact Envt'l. - J. Kolleeny"

DEC Memo:

"02/25/10-Vought-Off hours responder. Called Kleinfelder (Sondra Malek Ph:(631) 218-0612) and left message to return call to DEC. Spill assigned to DEC Rahman as site is part of ExxonMobil portfolio review and possible closure or transfer to Albany if necessary. 09/14/10-Farrell-CD File review requested by S. Rahman. Spill closure request for Spill #09-12321 & 09-12250 by (Kleinfelder East,

Inc.-Joel Adrian/Alex Wirth-(845)-567-6530) July 8, 2010 SAR prepared

by (Kleinfelder East, Inc.-Lisa Messinger/Laurie Smith-(631)-218-0612) May 25, 2010 for ExxonMobil Environmental Services Company, Fairfax, VA. Location of interest: ExxonMobil Station No.12141 (17-TJ8) 1143 Atlantic Avenue Brooklyn, NY KEI (listed above) evaluated recognized environmental conditions (REC) conducted in 12/08 by KEI. Active retail petroleum fuel station with convenience store. A grassy area, a car wash driveway, & further a church (north), Bedford Avenue followed by Quizit Motor Sports, Inc. and an inactive gas station (Gaseteria) (east), Atlantic Avenue and a US Army Armory beyond (south), & a car wash (west). Ground surface elevation is about 75 above sea level, groundwater found at depths of 11.67-67.92 bgs, north and east flow determined. Two tank field observation wells are monitoring points, located at the corners of the tank field. KEI (above) reported ten (10) Federal water-supply wells within 1 mile of the property, one (1) private non-potable well within 300 ft of the property, & one (1) private water well within 1000 ft of the property. REC s include 2 current 12,000-gal gasoline USTs with piping and dispensing units, one (1) current 8,000-gal diesel UST, ten (10) current dry wells utilized for surface storm water drainage, a historical record of gasoline sales and automobile service since the 1930s, and potential impact from several surrounding off-site properties. The property has been indicated to have had 21 USTs removed from site in 1999. Seven (7) previous spill cases have been noted: #8808500 assigned to CITGO/Spartan Petroleum (Follow-up indication of contaminated soil and groundwater from determined air pressure test fail on 4,000 gal UST in 1989. This case remains open and active.). Case #8903335, #9614595, #0111876, #0507954, and #0800461 have all been closed (no description listed), #0513211 (discharge of 20 gal of gasoline from motor vehicle striking MPD) opened 2/16/06 closed 3/20/06, & the Spill numbers listed above are open currently due to elevated PID measurements & discovery of a UST in the northeastern portion of the property (included water and several inches of petroleum; also sampled 3/20/10). ERI began Phase II ESA on 1/13/10 with site-wide GPR survey. Five of twelve (5) soil borings were advanced, (5) monitoring wells were installed, and (1) combined soil boring/monitoring well was established beginning on 2/15/10. Results of soil sample analysis included: VOC detect above NYSDEC RSCO in MW-H: Xylenes(63.5ppmppm), Naph(46.3ppm), 1.2.4-TMB(294ppm), & 1.3.5-TMB(92.3ppm) SVOC detect above NYDEC RSCO: MW-A Benz(a)anth(1.65ppm), Benz(a)pyr(1.7ppm), Benz(b)fluor(1.47ppm),

Site

MAP FINDINGS

Database(s)

EDR ID Number EPA ID Number

EXXONMOBIL (Continued)

S102560459

Benz(k)fluor(0.85ppm), Chrysene(1.61ppm), & Dibenz(a,h)anth(.528ppm) MW-F - Benz(a)anth(1.11ppm), Benz(a)pyr(1.06ppm), Benz(b)fluor(.753ppm), Benz(k)fluor(0.74ppm), Chrysene(1.06ppm), & Dibenz(a,h)anth(.314ppm) High levels of Barium & Lead also detected On 4/8/2010 groundwater samples were collected and analyzed. The two (2) tank field observation wells & one monitoring well (TF1, TF2, & MW-2) were gauged on 4/8/2010 as well. They were all dry with no presence of LPH. Free-phase product was found in the abandoned UST (above). Results of groundwater sample analysis included (existing wells MW-1 MW-4 were also sampled): VOC detect above NYSDEC cleanup level in MW-1, MW-E, MW-G, & MW-H: MW-1: Toluene(9.9ppb), EthBenz(442ppb), Xylenes(1850ppb), IPB(33.3ppb), Naph(170ppb), n-PB(111ppb), 1,2,4TMB(1210ppb), 1,3,5TMB(173ppb) MW-E: Toluene(143ppb), EthBenz(85.6ppb), Xylenes(2030ppb), IPB(16.8ppb), Naph(100ppb), n-PB(111ppb), 1,2,4TMB(710ppb), 1,3,5TMB(239ppb) MW-G: Toluene(39.6ppb), EthBenz(669ppb), Xylenes(4090ppb), IPB(91.5ppb), Naph(596ppb), n-PB(249ppb), 1,2,4TMB(3030ppb), 1,3,5TMB(796ppb) MW-H: Toluene(55.4ppb), EthBenz(239ppb), Xylenes(2940ppb), IPB(48.4ppb), Naph(338ppb), n-PB(122ppb), 1,2,4TMB(2530ppb), 1,3,5TMB(725ppb) PID MW-B at 68-69 bgs (1,740ppm) PID MW-H at 67 bgs (940ppm) PID MW-K at 67 bgs (940ppm) PID SB-C/MW-E at 68-69 bgs (1,740ppm) Reviewer Recommendations: 1) Further remediation is need at the four locations directly above due to the PID readings and their downgradient position 2) The abandoned UST will have to be purged and removed to confirm that it isn t a source of the contamination at the surrounding borings/wells. If a different process is warranted at this time, then that procedure should be undertaken 3) Surrounding groundwater flow needs to be determined to indicate if off-site sources are contributing environmental factors 10/26/2010: Site transferred from Region 2 to Central Office (Remedial Bureau B, Section C) for management. 11/9/2010: Based on document review and conversations with Region 2 personnel familiar with the case (Kolleeny and Maisonave), the abandoned UST noted under this spill is related to an earlier spill number (88-08500, assigned to CITGO/Spartan Petroleum). This historic spill is currently being addressed under a STIP, and is being managed in Region 2. Therefore, it is recommended that this spill be transferred back to Region 2 for management. (Harrington) 08/17/11: This spill case transferred from J. Maisonave to J. Kolleeny. I was contacted by Jessica Kruczek of ARCADIS regarding plans to close this UST (which is suspected to have been a waste oil or heating oil UST based on small size). She forwarded an email she had sent to Joseph Maisonave of DEC (currently on extended leave): Mr. Maisonave, After identifying locations of utilities at site in advance of UST removal, we are requesting to abandon UST in place rather than remove it. Please see attached Figures (2 & 3) [in eDocs as drawing] for locations of utilities relative to UST location (marked as abandoned; we were already preparing for rpt). Please note that there is an unidentified utility within 1 ft of tank, an active water line and AS/SVE components within 2.75 ft, and active sewer and gas lines less than 9 ft from UST. In addition, there is a retaining wall within 3 ft. This makes for a very difficult and potentially dangerous removal. Please advise. After getting Joe M's auto reply, Jessica contacted me, stating that, altho they wanted to remove UST, due to proximity of tank to utilities, components of AS/SVE system, and retaining wall, they prefer to close UST in place. I said that's ok, but they should advance 3 or 4 borings as close as possible to tank, down to 15 ft or

Map ID MAP FINDINGS
Direction

EXXONMOBIL (Continued)

S102560459

EDR ID Number

so, to collect soil samples and evaluate any possible release from tank. I mentioned that site is being remediated under sp8808500, consultant Impact Envt'l, and Jessica said she would contact Impact and coordinate closure activities with them. She will send email confirming closure sampling plan and schedule. - J. Kolleeny 10/17/11: Sent email to Jessica Kruczek of ARCADIS requesting site update. She called back and said UST was abandoned in place during Sept. 2011, two closure borings were drilled, but in trying to drill 3rd boring, they hit an unmarked gas line and stopped. She said results of soil samples from two borings showed only traces of one VOC (toluene) and several PAHs. They will forward rpt with request for spill closure in several weeks. - J. Kolleeny 10/25/11: On 10/24/11, received UST Abandonment Rpt by ARCADIS (in eDocs). Will review. - JK 12/23/11: Completed review of 10/24/11 UST Abandonment Rpt by ARCADIS. Rpt summarizes UST abandonment activities in Sept. 2011. Top of former waste oil tank was exposed; tank contained mixture of product/water (suggesting tank was tight). Tank was vacuumed out, cut open and cleaned. Three borings were attempted, but only two were successfully advanced to target depth (3rd boring hit an unmarked gas line). Soil data showed no significant soil contam. No boring logs included in rpt; I contacted Jessica Kruczik of ARCADIS and requested boring logs. - J. Kolleeny 01/05/12: Received soil boring logs from ARCADIS via email from Jessica Kruczik on 12/29/11 (in eDocs). Logs show two borings extended to 15 ft bgs, no PID readings detected. - JK 03/09/12: In February 2012, I contacted Hal Benjamin and Kevin Klaeka of Impact Envt'l, they are addressing spill no. 8808500 at this site, using AS/SVE to remediate gasoline-related soil and GW contam. I told them I intended to close this spill; Kevin brought to my attention a Kleinfelder Phase II rpt done for site (in eDocs for closed spill no. 0912250). That rpt shows wells not shown in Impacts monitoring rpts; one such well, MW-G, has significant GW contam and is located not far from closed-in-place waste oil UST. I contacted Jessical Kruczik of ARCADIS to discuss whether contam in this well could be related to waste oil UST. She noted that tank had been tight, with no sign of pipes going in/out that could have leaked, and that GW data show high levels of gasoline-related compounds, unlikely to have been generated by release from a waste oil UST. In any case, she noted that Impact is contracted to perform remediation of site, ARCADIS was only responsible for tank closure and soil delineation. Based on available data, I agree that waste oil UST is not likely source of GW contam at site. Closed spill and issued closure letter (in eDocs) to RP. Harvinder Singh of Bolla EM Realty LLC, cc's to Paul Pingile of Bolla, Jessica Kruczik of ARCADIS. - JK"

Remarks:

DEC Memo: "Report in edocs. 09/14/10-Farrell-CD File review requested by S.

Rahman. Spill closure request for Spill #09-12321 & 09-12250 by (Kleinfelder East, Inc.-Joel Adrian/Alex Wirth-(845)-567-6530) July 8, 2010 SAR prepared by (Kleinfelder East, Inc.-Lisa Messinger/Laurie Smith-(631)-218-0612) May 25, 2010 for ExxonMobil Environmental Services Company, Fairfax, VA. Location of interest: ExxonMobil Station No.12141 (17-TJ8) 1143 Atlantic Avenue Brooklyn, NY KEI (listed above) evaluated recognized environmental conditions (REC) conducted in 12/08 by KEI. Active retail petroleum fuel station with convenience store. A grassy area, a car wash driveway, & further a church (north), Bedford Avenue followed by Quizit Motor Sports, Inc. and an inactive gas station (Gaseteria) (east), Atlantic Avenue and a US Army Armory beyond (south), & a car wash (west). Ground surface elevation is about 75 above sea level, groundwater found at depths of 11.67-67.92 bgs, north and east flow determined. Two tank field observation wells are monitoring points, located at the corners of the tank field. KEI (above) reported ten (10) Federal water-supply wells within 1 mile of the property, one (1) private non-potable well within 300 ft of the property, & one (1) private water well within 1000 ft of the property. REC s include (2) current 12,000 gal gasoline USTs with piping and dispensing units, one (1) current 8,000

gal diesel UST, ten (10) current dry wells utilized for surface storm

water drainage, a historical record of gasoline sales and automobile service since the 1930 s, and potential impact from several surrounding off-site properties . The property has been indicated to have had (21) USTs removed from the site in 1999. Seven (7) previous spill cases have been noted: #8808500 assigned to CITGO/Spartan Petroleum (Follow-up indication of contaminated soil and groundwater from determined air pressure test fail on 4,000 gal UST in 1989. This case remains open and active.). Case #8903335, #9614595, #0111876, #0507954, and #0800461 have all been closed (no description listed), #0513211 (discharge of 20 gal of gasoline from motor vehicle striking MPD) opened 2/16/06 closed 3/20/06, & the Spill numbers listed above are open currently due to elevated PID measurements & discovery of a UST in the northeastern portion of the property (included water and several inches of petroleum; also sampled 3/20/10). ERI began Phase II ESA on 1/13/10 with site-wide GPR survey. Five of twelve (5) soil borings were advanced, (5) monitoring wells were installed, and (1) combined soil boring/monitoring well was established beginning on 2/15/10. Results of soil sample analysis included: VOC detect above NYSDEC RSCO in MW-H: Xylenes(63.5ppmppm), Naph(46.3ppm), 1,2,4-TMB(294ppm), & 1,3,5-TMB(92.3ppm) SVOC detect above NYDEC RSCO: MW-A Benz(a)anth(1.65ppm), Benz(a)pyr(1.7ppm), Benz(b)fluor(1.47ppm), Benz(k)fluor(0.85ppm), Chrysene(1.61ppm), & Dibenz(a,h)anth(.528ppm) MW-F - Benz(a)anth(1.11ppm), Benz(a)pyr(1.06ppm), Benz(b)fluor(.753ppm), Benz(k)fluor(0.74ppm), Chrysene(1.06ppm), & Dibenz(a,h)anth(.314ppm) High levels of Barium & Lead also detected On 4/8/2010 groundwater samples were collected and analyzed. The two (2) tank field observation wells & one monitoring well (TF1, TF2, & MW-2) were gauged on 4/8/2010 as well. They were all dry with no presence of LPH. Free-phase product was found in the abandoned UST (above). Results of groundwater sample analysis included (existing wells MW-1 MW-4 were also sampled): VOC detect above NYSDEC cleanup level in MW-1, MW-E, MW-G, & MW-H: MW-1: Toluene(9.9ppb). EthBenz(442ppb), Xylenes(1850ppb), IPB(33.3ppb), Naph(170ppb), n-PB(111ppb), 1,2,4TMB(1210ppb), 1,3,5TMB(173ppb) MW-E: Toluene(143ppb), EthBenz(85.6ppb), Xylenes(2030ppb), IPB(16.8ppb), Naph(100ppb), n-PB(111ppb), 1,2,4TMB(710ppb), 1,3,5TMB(239ppb) MW-G: Toluene(39.6ppb), EthBenz(669ppb), Xylenes(4090ppb), IPB(91.5ppb), Naph(596ppb), n-PB(249ppb), 1,2,4TMB(3030ppb), 1,3,5TMB(796ppb) MW-H: Toluene(55.4ppb), EthBenz(239ppb), Xylenes(2940ppb), IPB(48.4ppb), Naph(338ppb), n-PB(122ppb), 1,2,4TMB(2530ppb), 1,3,5TMB(725ppb) PID MW-B at 68-69 bgs (1,740ppm) PID MW-H at 67 bgs (940ppm) PID MW-K at 67 bgs (940ppm) PID SB-C/MW-E at 68-69 bgs (1,740ppm) Reviewer Recommendations: 1) Further remediation is need at the four locations directly above due to the PID readings and their downgradient position 2) The abandoned UST will have to be purged and removed to confirm that it isn t a source of the contamination at the surrounding borings/wells. If a different process is warranted at this time, then that procedure should be undertaken 3) Surrounding groundwater flow needs to be determined to indicate if off-site sources are contributing environmental factors 10/26/2010: Site transferred from Region 2 to Central Office (Remedial Bureau B, Section C) for management. 11/9/2010: Based on document review and conversations with Region 2 personnel familiar with the case (Kolleeny and Maisonave), the contamination noted under this spill is consistent with an earlier spill number (88-08500, assigned to CITGO/Spartan Petroleum). This historic spill is currently being addressed under a STIP, and is being managed in Region 2. Therefore,

Database(s)

. Waste code: D000
. Waste name: Not Defined

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: F001

. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING:

TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED

FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE

SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE,

METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE,

CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND

1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND

SPENT SOLVENT MIXTURES.

Waste code: F003

. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL

ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT
MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT
NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS
CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED
SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR

MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT

MIXTURES.

Waste code: F005

. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL

KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE,

2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF

THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/13/2018 Source: EPA Date Data Arrived at EDR: 05/30/2018 Telephone: N/A Date Made Active in Reports: 06/22/2018

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Data Release Frequency: Varies

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

Next Scheduled EDR Contact: 11/26/2018 Data Release Frequency: Semi-Annually

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Elevation: 85 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 5940597 BROOKLYN, NY

Version Date: 2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

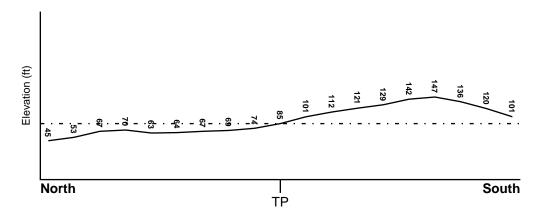

TOPOGRAPHIC INFORMATION

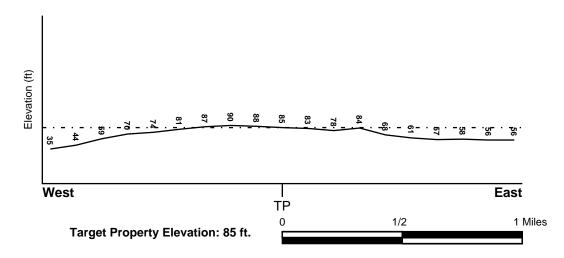

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

BROOKLYN YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION

MAP ID FROM TP GROUNDWATER FLOW

Not Reported

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOLOGIC AGE IDENTIFICATION

Era: Mesozoic Category: Stratified Sequence

System: Cretaceous Upper Cretaceous

Code: uK (decoded above as Era, System & Series)

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

Soil Layer Information									
	Boundary Classification								
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00		

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam

loamy sand sandy loam fine sandy loam

Surficial Soil Types: silt loam

loamy sand sandy loam fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock

very gravelly - loamy sand

stratified sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: A review of the SEMS list, as provided by EDR, and dated 05/18/2018 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

GEOCHECK®-PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

505 GRAND AVENUE 505 GRAND AVENUE BROOKLYN, NY 11238

TARGET PROPERTY COORDINATES

Latitude (North): 40.680024 - 40° 40′ 48.09″ Longitude (West): 73.961249 - 73° 57′ 40.50″

Universal Tranverse Mercator: Zone 18 UTM X (Meters): 587784.8 UTM Y (Meters): 4503545.0

Elevation: 85 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 5940597 BROOKLYN, NY

Version Date: 2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

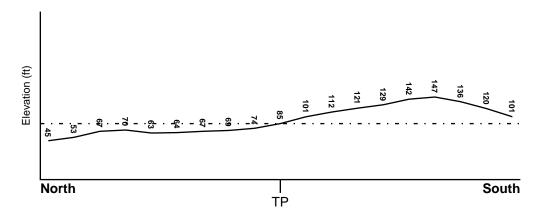

TOPOGRAPHIC INFORMATION

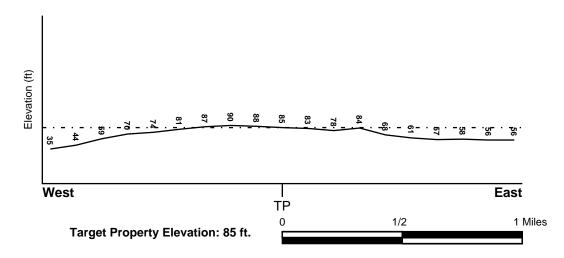

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property **FEMA Source Type** 3604970063B FEMA Q3 Flood data Additional Panels in search area: **FEMA Source Type** 3604970203F FEMA FIRM Flood data 3604970204F FEMA FIRM Flood data FEMA FIRM Flood data 3604970211F 3604970064B FEMA Q3 Flood data 3604970073B FEMA Q3 Flood data 3604970074B FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

BROOKLYN YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION

MAP ID FROM TP GROUNDWATER FLOW

Not Reported

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOLOGIC AGE IDENTIFICATION

Era: Mesozoic Category: Stratified Sequence

System: Cretaceous Upper Cretaceous

Code: uK (decoded above as Era, System & Series)

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

Soil Layer Information								
Boundary Classification								
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)	
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00	

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam

loamy sand sandy loam fine sandy loam

Surficial Soil Types: silt loam

loamy sand sandy loam fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock

very gravelly - loamy sand

stratified sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Qualifications

equity environmental engineering

500 International Drive, Suite 150, Mount Olive, NJ 07828

Experience Summary

Mr. Bove is a Project Scientist with 6 years of professional experience. His experience includes over 4 years in residential site remediation where he has participated in numerous UST closures, several site investigations, and operation and maintenance of groundwater treatment units. As a Project Scientist Mr.Bove has successfully completed Phase I Environmental Site Assessments, Site Investigations, Remedial Investigations, and Receptor Evaluations. Mr.Bove has also provided construction management for soil/groundwater remediation. The above work was performed in accordance with the New Jersey Department of environmental Protection (NJDEP) and under the direct supervision of a Licensed Site Remediation Professional (LSRP).

Years of Experience:

6 years

tions

Education

B.S. Environmental Science, Centenary University A.S. Business Administration, Sussex County Community College

Special Training

NJDEP Underground Storage Tanks 40-hour OSHA Course 8-hour OSHA Refresher 10-hour OSHA Construction Safety First Aid/CPR FEMA IS-00100.b Introduction to Incident Command System ICS-100 FEMA IS-00200.b ICS for Single Resources and Initial Action Incident ICS-200

2017 - Present Equity Environmental Engineering, LLC, Project Scientist. As a Project Sci-

entist with Equity Environmental Engineering, Gene Bove has performed numerous field operation activities such as soil and groundwater sampling activities, performing construction oversight, soil gas and vapor intrusion sampling activities, and performing site inspections. Mr. Bove has completed Phase I Environmental Site Assessments, and Phase II Site/Remedial Investigations.

FEMA IS-00102.c Preparing for Federal Disaster

FEMA IS-00700.a National Incident Manage-

Vapor Intrusion in NJ: New Technical Guidance

Operations: FEMA Response Partners

ment System (NIMS)

Primary Experience

Specifically, Mr. Bove has completed various ASTM 1527-13 compliant Phase I Environmental Site Assessments. The work associated included site inspections, reviewing of historic records, and compiling of Phase I ESA Reports.

Mr. Bove participates in the remedial investigation and remedial action for residential, commercial and industrial sites in New Jersey and New York. Mr. Bove has participated in the groundwater sampling associated with Light Non-Aqueous Phase Liquid (LNAPL) and Dense Non-Aqueous Phase Liquid (DNAPL) delineation and participated in the Vapor Intrusion Investigation associated with the sites contaminants.

Mr. Bove has provided project management in various Noise Monitoring projects in New York, New York.

Mr. Bove is proficient in Geographic Information Systems (GIS). He has completed figures for Environmental Assessment Statements, LSRP sites, and various other New York and New Jersey

projects. Specifically, he has completed shadow analysis studies and groundwater contour mapping.

2016-2017 Boswell Engineering, Environmental Scientist. As an Environmental Scientist with Boswell Engineering Gene Bove has performed numerous field operation activities such as soil and groundwater sampling activities, including lowflow sampling techniques, performing landfill operation and maintenance, performing construction oversight, and performing site inspections. Mr. Bove has completed Phase I Environmental Site Assessments, Site Investigations, Remedial Investigations, and Receptor Evaluations.

Specifically, Mr. Bove conducted monthly site inspections and quarterly sampling events for the Former PJP Landfill, Jersey City, New Jersey. As part of the requisite annual monitoring program, he conducted monthly site inspections, monthly Dense Non-Aqueous Phase Liquid (DNAPL) recovery from one of the site's monitoring wells in accordance with NJDEP site specific requirements. Mr. Bove performed quarterly sampling vents for groundwater, surface water, sediment, and landfill gas in accordance with the site's Operation and Maintenance (O&M) Plan. The findings and results were reported to both NJDEP and US EPA.

Mr. Bove performed a Site Investigation and Remedial Investigation for the Garfield Department of Public Works located in Garfield, New Jersey. This site had various gasoline and fuel oil tanks removed in the 1990's and had a remedial excavation performed. Over the following 15 years, groundwater was sampled and soil borings were installed. Mr. Bove prepared the SI report, including a Receptor Evaluation, which was signed off by the projects LSRP and submitted to the state. Remedial Investigation work included soil and groundwater contamination delineation. This included soil borings and soil sampling, temporary well point installation and groundwater sampling, and

monitoring well sampling and groundwater sampling. Mr. Bove prepared the RI report, including a Classification Exemption Area/Well Restriction Area (CEA/WRA).

Mr. Bove conducted a Site Investigation at 55 Woodbine Avenue in Bergenfield, New Jersey. Mr. Bove developed a sampling plan for the AOC's identified in a previous Phase I ESA. The site was previously a machine shop. The site investigation included soil borings, monitoring well installations, and groundwater sampling to determine the source of the chlorinated solvent contamination. Mr. Bove subsequently completed a Site Investigation Report that was signed off by the projects LSRP.

2012-2016 Above Environmental Services, Field Technician. As Field Technician with Above Environmental Services, Gene Bove has participated in numerous UST closures. Mr. Bove has participated in field operation activities including soil and groundwater sampling events, operation and maintenance of groundwater treatment systems, site inspections, and site investigations.

Robert L. Jackson, P.E.

equity environmental engineering

500 International Drive, Suite 150, Mount Olive, NJ 07828

Experience Summary

Mr. Jackson is an Environmental Engineer and with over 32 years of professional experience that includes program/project management, site characterization and remediation, due diligence, and regulatory compliance. He is well versed in multiple regulatory programs and has worked primarily in New Jersey, New York and Pennsylvania.

Years of Experience:

33 years

Six Sigma Plus Green Belt Certification – Honeywell International Inc.

Memberships

New Jersey Environmental Business Council – Regulatory Committee
Morris County Chamber of Commerce

Primary Experience

2013 – Present: Equity Environmental Engineering, LLC. Managing Director. As a partner in the firm, Mr. Jackson continues to manage a variety of projects including site investigation and remedial design and remedial action, and preparation and certification of DPCC and SPCC Plans, for sites in New Jersey and New York. He has successfully executed project in New York City in conjunction with the Board of Standards and Appeals (BSA), Housing Preservation & Development (HPD), NYC Department of Environmental Protection (DEP), NYC Mayor's Office of Environmental Remediation (MOER), New York City Housing Authority (NYCHA), and the New York State Department of Environmental Conservation (DEC).

Mr, Jackson has prepared and/or implemented Phase II Remedial Investigation Workplans, Remedial Action Work Plans, Stipulation Letters, and Site Management Plans. He has completed the design of Soil Excavation Plans, Vapor Barriers and Sub-slab Depressurization and Soil Vapor Extraction Systems. Mr. Jackson has coordinated and provided Construction Oversight services and prepared the required Closure and Construction Closure Reports for these projects.

2005 – 2013: Equity Environmental Engineering, LLC. Sr. Project Manager. Mr. Jackson manages projects as follow:

Managed projects site/remedial investigation project under the LSRP program several of which were given Response Action Outcomes (RAOs). These projects were for both industrial and private clients primarily involving release from USTs.

Assistant Project Manager for a cancer cluster exposure assessment in Northeastern Pennsylvania for the Center for Disease Control/Agency for Toxic Substances and Disease Registry (CDC/ASTDR). The project included the assimilation and review of historical data for the study area to attempt to determine the environmental factors associated with the high rate of Polycythemia Vera, blood disorder.

Coordinated the efforts of three subcontractors to assess potential air and hydrogeological sources of contamination that may cause the disease.

Complete a Hazard Operations (HAZOP) study for a commercial facility in Rahway, NJ. The study evaluated the various operations, the probable hazards and non-compliance with applicable federal, state, and local regulations, and how they are addressed by the firm. Issues of non-compliance and methods to correct them are detailed in the project report.

Managed the Phase II site investigation of two properties that were on or adjacent to former Manufactured Gas Plants (MGP) in NYC. Assisted in the development of the Site Management Plans for each site to ensure that MGP contaminated soils would or were properly handled. Also assisted in the review of potential disposal sites for excess soils based on the proposed development of each site. Both projects required close coordination with the architects and remediation contractors.

Evaluated the potential remedial costs for the future development of a commercial property in Brooklyn, NY. This involved the compilation and review of site superfund documents, discussions with the current case manager and various vendors for remediation, demolition, etc. A technical memorandum was prepared for the cost evaluation.

Conducted Phase I Environmental Site Assessments (ESAs) and Phase II Site Investigations throughout the five New York City boroughs for industrial and residential properties for private clients. Completed Environmental Site Assessment Statements (EAS) and Environmental Assessment Forms (US Dept. of Health and Human Services) for sites in New York City under multiple development scenarios including zoning amendments, bulk variances, etc.

Conducted Preliminary Site Assessments in accordance with NJDEP and NJ Division of Children and Family Services requirements for day care facilities in New Jersey.

Conducted Property Condition Assessments for two PBM Graphics facilities in North Carolina. The PCAs evaluated the facility structure and parking, HVAC and electrical systems, architectural amenities, security and fire suppression systems, pollution prevention systems and any environmental related activities ongoing. Repair and/or replacement costs were evaluated as part of the project.

Conducted value engineering studies for the Woodbridge Housing Authority and a New York City brownfield site. Provided recommendations to address outstanding issues.

Evaluated proposed waste to energy plant environmental issues including permitting, waste stream analysis, environmental justice, etc. Implemented ASTM protocol for municipal solid waste sampling and analysis.

Provide bi-monthly Pennsylvania regulatory updates for the New Jersey Environmental Business Council.

Conducted nationwide regulatory compliance audits for a confidential spirits manufacturing company. These audits were conducted to look in depth at specific aspects of the facility operations rather than a comprehensive regulatory audit. Provided temporary, onsite environmental compliance support for their Breinigsville, PA facility while they conducted a search for a full-time employee. Duties included conducting routine facility inspections, completing revisions of the facility emergency response plans, updating the residual waste documentation, making a determination on their hazardous waste generator status, etc.

For the same client, Mr. Jackson performed onsite services as the acting Environmental Risk Manager focusing on maintaining or bringing into compliance environmental activities at their Lehigh, Pennsylvania facility. Mr. Jackson worked full time onsite 2-3 days per week.

Designed an in-door air remediation system for the removal of VOCs at several industrial facilities in New York and New Jersey. The design included of the use of radon mitigation equipment to evacuate sub-slab VOC vapors which were migrating into the basement above the slab.

Conducted an assessment of an office building potable water supply following a propylene glycol leak into the distribution system.

Provided construction management for the remediation of the Cragston Landfill in Highland Park,

New York. The remediation was to install an engineered cap over the former garbage landfill. The oversight included inspection of the liner installation, soil cover compaction, and drainage feature design and construction.

Conducted site inspections and provided engineer's certification for DPCC/DCR and SPCC plans for multiple industrial facilities in New Jersey and Delaware.

Prepare the engineering portion of deed notices for several properties associated with Honeywell chrome sites in Hudson County. Worked to establish a one-call type system for sites along the Bayonne Pipeline. Coordinated waste disposal for these sites.

Serve as Team Leader for the Honeywell Study Area 7 (SA7) Treatability Team focusing on the implementation of the pilot study phase of the program. The pilot program expanded to include additional testing with new reagents. Duties included assisting in the development of the scope of the pilot test program, contracting appropriate technology vendors, coordinating activities with the SA7 Implementation Team and onsite staff, and serving as the onsite construction supervisor for implementation of the pilot test activities. Participate in the development of cost estimates for full scale implementation of specific pilot tests that were successful.

2000-2005 Parsons: Team Leader. Mr. Jackson Served as Team Leader for the Honeywell Study Area 7 Treatability (SA7) Team to investigate the treatment of Chromium Ore Processing Residue (COPR). The Team was chartered to study the mechanisms for COPR heaving and release of hexavalent chromium not only for the SA7 site but, for multiple sites in New Jersey and Maryland. This highly significant research and development project included the coordination of approximately 12 contractors and academic entities managing various portions of the \$4 million investigation. Duties included providing direction for the project, managing budget and schedule. maintaining the flow of critical information throughout the team, review of various interim and final reports, and applicable technology review.

Resident Contract (Project) Engineer for approximately 20 sites within Honeywell's Corporate

Remediation and Evaluation Services (RES) department. Located at Honeywell's corporate headquarters in Morristown, New Jersey on a 40hour pre-week basis. Activities have included general support for Honeywell Project Managers for projects in multiple states under state regulatory lead, U.S. EPA lead or joint oversight situations. Projects have also been performed under various types of administrative/consent orders and voluntary programs.

RI/FS activities for Honeywell included coordinating and overseeing work on sites of varying size and land use with a wide range of contaminants of concern including VOCs, SVOCs, PCBs, TPH, metals, LNAPL and DNAPL in all media. Investigations have included biota sampling, NAPL fingerprinting, rapid optical screening tool (ROSTtm) testing, tidal studies, and vibracore sampling of sediments.

Remedial Design activities for Honeywell have included landfill cap designs (RCRA and TSCA) based on state and/or EPA requirements, groundwater treatment plants for contaminated groundwater and leachate, and a conceptual design for a containment disposal facility (CDF) for contaminated sediment.

Remedial Action for Honeywell has included the installation and operation of several pump and treat groundwater systems, successful development and implementation of natural attenuation proposals for groundwater, installation and operation of a soil vapor extraction (SVE) system, in-situ chemical oxidation of SVOCs and soil stabilization, and building demolition.

Became Honeywell Six Sigma Plus – Green Belt certified. The team I participated on was responsible for developing and implementing a new process to better identify potentially applicable remedial technologies prior to initiating a feasibility study for a site.

Participated as a member of the Honeywell Peer Review Team. The team was developed and the process implemented to provide in-house reviews of projects in various stages of progress up to construction. The reviews focused on remedial investigations, feasibility studies, remedial actions, etc. The reviews resulted in an action item list of things for the project team to investigate that could potentially reduce project capital costs, liability, O&M costs, shorten the duration of remedial actions, etc. Program resulted in the savings

of over \$1 million because of a mid-course correction suggested during the project's peer review. On another project, potential savings in cost and time were realized as a result of a better understanding of mixed waste (chemical and radioactive) rules and requirements.

Project Engineer for the development, implementation, and oversight of soil erosion controls for consolidation and capping of the Sharkey Landfill in Parsippany, New Jersey. The project involved working with the design engineer, construction contractor, and county soil erosion control office to provide appropriate erosion control and stabilization measures during the landfill work.

Served as the New Jersey Federal Business Development coordinator from approximately September 2000 through March 2002. Established contacts at Dept. of Defense (DoD) facilities in New Jersey and conducted business development activities to procure military contracts.

Mr. Jackson served as the Engineering Group Manager for the Parsons Somerset, New Jersey office for approximately 5 months. Responsible for assigning staff to various projects, maintaining staff utilization goals, mentoring junior staff, conducting staff evaluations and coordinating with other Parsons office group managers.

1990-2000: CH2M HILL Project Manager. Managed numerous site and remedial investigations in New Jersey, Pennsylvania, New York, and Connecticut involving all media for a variety of situations resulting from spills, underground storage tank leaks, the discharge of mixed waste material, etc. Duties included managing all aspects of the project; budgeting, staffing, scheduling, client relationship building, preparing project documents and reports, coordination with NJDEP, etc. Projects were completed under consent orders, memorandum of agreements, and at risk. Investigations have resulted in the implementation of Declaration of Environmental Restrictions (DER) and Classification Exemption Areas (CEA). Numerous sites were brought to closure (no further action) in New Jersey.

Site Manager for Superfund remedial investigations in US EPA Region III under the Alternative Remedial

Contracting Service (ARCS) program. Duties included coordinating all aspects of the project, including the stringent contracting and laboratory requirements of the ARCS program. Projects were in Pennsylvania and involved a former plating operation that resulted in chromium contamination of soil and groundwater up to 20% chrome is certain areas; and lithium, chromium and mercury contamination at another site.

Prepared RCRA closure cost estimates that were deemed appropriate for the actual closure plan by the NJDEP for a precious metals manufacturer. The plan included sufficient detail in explaining the various closure steps that the NJDEP accepted it as a formal closure plan as well as cost estimate.

Project Engineer and construction manager for the modification and upgrade of underground storage tanks at several locations within Newark Liberty International Airport for Continental Airlines. Duties included onsite management of demolition and construction activities, soil sampling, completion of UST modification reports for the NJDEP, and coordination with the New York/New Jersey Port Authority.

Transition Coordinator for Lockheed Martin Missiles and Space plant closure in West Windsor, New Jersey. Located at facility on a 40-hour per week basis for 14 months. The facility was approximately 750,000 square feet and had over 3,000 employees. Responsibilities terminating included permits, conducting **ISRA** activities. coordinating decontamination of the facility and facility equipment prior to reassignment, sale, or disposal, coordinating disposal of hazardous and non-hazardous wastes generated at the facility. Duties also included conducting Phase I ESAs, health and safety training courses, and acting as onsite safety coordinator. The transition/closure was completed on time and under budget while setting an industry record of approximately four (4) million man-hours worked without a lost work day.

Managed and participated in environmental compliance auditing for electric utilities, the petroleum industry, and for the United States Postal Service.

Project included auditing up to 14 different regulatory programs as well as client specific policies and practices. Developed self-sustaining compliance

calendars for Koch Industries, a petroleum industry client.

Participated in Phase I Environmental Site Assessments for numerous national clients at multiple sites. Site assessments included both Phase I and phase II efforts in the United States and Canada for industrial clients done in accordance with the applicable ASTM standards.

Developed and modified SPCC plans for Koch Industries bulk oil storage terminals in New Jersey.

Environmental planning efforts have included preparing sections of various Environmental Assessments (EA) for Jet Blue Airlines and US Airways for projects subject to the National Environmental Protection Act (NEPA). The work for Jet Blue was to assist them in getting their initial permits to operate at Kennedy International Airport. US Airways was planning a major expansion at the Pittsburgh Airport which required major environmental planning. Evaluated current and future impacts relating to wastewater, storm water run-off, airplane de-icing run-off, solid and hazardous waste, and residual waste program.

Reviewed EAs prepared for United States military under the Base Realignment and Closure (BRAC) Program, and prepared employee trip reductions programs for the United States Postal Service to help meet air quality standards in non-attainment areas in New Jersey.

Served as the New Jersey office regulatory coordinator. This required disseminating pertinent regulatory information throughout the northeast region of CH2M HILL, participating in regional and national regulatory practice conference calls, fielding questions regarding various regulatory programs or directing staff to other appropriate staff, and participating in regulatory reviews for projects in the planning stages.

1987–1990: Massachusetts Water Resources Authority. Mr. Jackson worked as project engineer Strategized, planned, and implemented an \$8 million facility planning study to determine the most cost-effective control mechanism for the Combined Sewer Overflow (CSO) Program in the greater metropolitan Boston area. Oversaw and directed the efforts of consulting firms

maintaining project schedules and budgets and coordinating with local, state, and federal regulatory agencies. Evaluated various CSO control technologies including dry weather overflow mechanisms and best management practices. Conducted public presentations regarding the CSO project to local neighborhood organizations and elected public officials.

Conducted industrial wastewater inspections throughout the MWRA service area of 43 communities surrounding Boston. Prepared follow-up reports with recommendations for appropriate wastewater sampling or enforcement actions. Initiated a program to promote recycling and waste minimization primarily focused on the metal finishing industry.

1985–1987: U.S. EPA, Region I, Boston, MA

Staff Engineer. Provided oversight for site remediation projects to ensure compliance with various orders for remediation issued by EPA Region I. Assisted in the authorization of the state of Maine's RCRA program. Reviewed and approved RCRA Part B Treatment, Storage, and Disposal (TSD) permit applications for industrial and military facilities.

Served as the acting Federal Facilities Coordinator for the hazardous waste management group within the Waste Management Division of EPA Region I.

227 Route 206, Suite 6, Flanders, NJ 07836

Experience Summary

Mr. Jackson is an Environmental Engineer and with over 28 years of professional experience that includes program/project management, site characterization and remediation, due diligence, and regulatory compliance. He is well versed in multiple regulatory programs and has worked primarily in New Jersey, New York and Pennsylvania.

Years of Experience:

28 years

Education

B.S. Civil and Environmental Engineering, 1984, Cornell University, Ithaca, NY

Special Training

NJDEP Site Remediation Basics NJDEP Underground Storage Tanks 40-hour OSHA Course 8-hour OSHA Refresher First Aid/CPR

Registrations

Professional Engineer, New Jersey # GE40276 Professional Engineer, Pennsylvania #PE073492 Subsurface Evaluator, New Jersey #0025012 Six Sigma Plus Green Belt Certification – Honeywell International Inc,

Memberships

New Jersey Environmental Business Council – Regulatory Committee Society of American Military Engineers

Primary Experience

2005 – Present Equity Environmental Engineering, LLC. Senior Project Manager. Mr. Jackson manages projects as follow:

Managed projects site/remedial investigation project under the LSRP program several of which were given Response Action Outcomes (RAOs). These projects were for both industrial and private clients primarily involving release from USTs.

Assistant Project Manager for a cancer cluster exposure assessment in Northeastern Pennsylvania for the Center for Disease Control/Agency for Toxic Substances and Disease Registry (CDC/ATSDR). The project included the assimilation and review of historical data for the study area to attempt to determine the environmental factors associated with the high rate of Polycythemia Vera, blood disorder. Coordinated the efforts of three subcontractors to assess potential air and hydrogeological sources of contamination that may cause the disease.

Complete a Hazard Operations (HAZOP) study for a commercial facility in Rahway, NJ. The study evaluated the various operations, the probable hazards and non-compliance with applicable federal, state, and local regulations, and how they are addressed by the firm. Issues of non-compliance and methods to correct them are detailed in the project report.

Managed the Phase II site investigation of two properties that were on or adjacent to former Manufactured Gas Plants (MGP) in NYC. Assisted in the development of the Site Management Plans for each site to ensure that MGP contaminated soils would or were properly handled. Also assisted in the review of potential disposal sites for excess soils based on the proposed development of each site. Both projects required close

coordination with the architects and remediation contractors.

Evaluated the potential remedial costs for the future development of a commercial property in Brooklyn, NY. This involved the compilation and review of site superfund documents, discussions with the current case manager and various vendors for remediation, demolition, etc. A technical memorandum was prepared for the cost evaluation.

Conducted Phase I Environmental Site Assessments (ESAs) and Phase II Site Investigations throughout the five New York City boroughs for industrial and residential properties for private clients. Completed Environmental Site Assessment Statements (EAS) and Environmental Assessment Forms (US Dept. of Health and Human Services) for sites in New York City under multiple development scenarios including zoning amendments, bulk variances, etc.

Conducted Preliminary Site Assessments in accordance with NJDEP and NJ Division of Children and Family Services requirements for day care facilities in New Jersey.

Conducted Property Condition Assessments for two PBM Graphics facilities in North Carolina. The PCAs evaluated the facility structure and parking, HVAC and electrical systems, architectural amenities, security and fire suppression systems, pollution prevention systems and any environmental related activities ongoing. Repair and/or replacement costs were evaluated as part of the project.

Conducted value engineering studies for the Woodbridge Housing Authority and a New York City brownfield site. Provided recommendations to address outstanding issues.

Evaluated proposed waste to energy plant environmental issues including permitting, waste stream analysis, environmental justice, etc. Implemented ASTM protocol for municipal solid waste sampling and analysis.

Provide bi-monthly Pennsylvania regulatory updates for the New Jersey Environmental Business Council.

Conducted nationwide regulatory compliance audits for a confidential spirits manufacturing company. These audits were conducted to look in depth at specific aspects of the facility operations rather than a comprehensive regulatory audit. Provided temporary, onsite environmental compliance support for their Breinigsville, PA facility while they conducted a search for a full time employee. Duties included conducting routine facility inspections, completing revisions of the facility emergency response plans, updating the residual waste documentation, making a determination on their hazardous waste generator status, etc.

For the same client, Mr. Jackson performed onsite services as the acting Environmental Risk Manager focusing on maintaining or bringing into compliance environmental activities at their Lehigh, Pennsylvania facility. Mr. Jackson worked full time onsite 2-3 days per week.

Designed an in-door air remediation system for the removal of VOCs at several industrial facilities in New York and New Jersey. The design included of the use of radon mitigation equipment to evacuate sub-slab VOC vapors which were migrating into the basement above the slab.

Conducted an assessment of an office building potable water supply following a propylene glycol leak into the distribution system.

Provided construction management for the remediation of the Cragston Landfill in Highland Park, New York. The remediation was to install an engineered cap over the former garbage landfill. The oversight included inspection of the liner installation, soil cover compaction, and drainage feature design and construction.

Conducted site inspections and provided engineer's certification for DPCC/DCR and SPCC plans for multiple industrial facilities in New Jersey and Delaware.

Prepare the engineering portion of deed notices for several properties associated with Honeywell chrome sites in Hudson County. Worked to establish a one-call type system for sites along the Bayonne Pipeline. Coordinated waste disposal for these sites.

Serve as Team Leader for the Honeywell Study Area 7 (SA7) Treatability Team focusing on the implementation of the pilot study phase of the program. The pilot program expanded to include additional testing with new reagents. Duties included assisting in the development of the scope of the pilot test program, contracting appropriate technology vendors, coordinating activities with the SA7 Implementation Team and onsite staff, and serving as the onsite construction supervisor for implementation of the pilot test activities. Participate in the development of cost estimates for full scale implementation of specific pilot tests that were successful.

2000-2005 Team Leader. Mr. Parsons. Jackson Served as Team Leader for the Honeywell Study Area 7 Treatability (SA7) Team to investigate the treatment of Chromium Ore Processing Residue (COPR). The Team was chartered to study the mechanisms for COPR heaving and release of hexavalent chromium not only for the SA7 site but, for multiple sites in New Jersey and Maryland. This highly significant research and development project included the coordination of approximately 12 contractors and academic entities managing various portions of the \$4 million investigation. Duties included providing direction for the project, managing budget and schedule, maintaining the flow of critical information throughout the team, review of various interim and final reports, and applicable technology review.

Resident Contract (Project) Engineer for approximately 20 sites within Honeywell's Corporate Remediation and Evaluation Services (RES) department. Located at Honeywell's corporate headquarters in Morristown, New Jersey on a 40-hour pre week basis. Activities have included general support for Honeywell Project Managers for projects in multiple states under state regulatory lead, U.S. EPA lead or joint oversight situations. Projects have also been performed under various types of administrative/consent orders and voluntary programs.

RI/FS activities for Honeywell included coordinating and overseeing work on sites of varying size and land use with a wide range of contaminants of concern including VOCs, SVOCs, PCBs, TPH, metals, LNAPL and DNAPL in all media. Investigations have included biota sampling, NAPL fingerprinting, rapid optical screening tool (ROSTtm) testing, tidal studies, and vibracore sampling of sediments.

Remedial Design activities for Honeywell have included landfill cap designs (RCRA and TSCA) based on state and/or EPA requirements, groundwater treatment plants for contaminated groundwater and leachate, and a conceptual design for a containment disposal facility (CDF) for contaminated sediment.

Remedial Action for Honeywell has included the installation and operation of several pump and treat groundwater systems, successful development and implementation of natural attenuation proposals for groundwater, installation and operation of a soil vapor extraction (SVE) system, insitu chemical oxidation of SVOCs and soil stabilization, and building demolition.

Became Honeywell Six Sigma Plus – Green Belt certified. The team I participated on was responsible for developing and implementing a new

process to better identify potentially applicable remedial technologies prior to initiating a feasibility study for a site.

Participated as a member of the Honeywell Peer Review Team. The team was developed and the process implemented to provide in-house reviews of projects in various stages of progress up to construction. The reviews focused on remedial investigations, feasibility studies, remedial actions, etc. The reviews resulted in an action item list of things for the project team to investigate that could potentially reduce project capital costs, liability, O&M costs, shorten the duration of remedial actions, etc. Program resulted in the savings of over \$1 million because of a mid course correction suggested during the project's peer review. On another project, potential savings in cost and time were realized as a result of a better understanding of mixed waste (chemical and radioactive) rules and requirements.

Project Engineer for the development, implementation, and oversight of soil erosion controls for consolidation and capping of the Sharkey Landfill in Parsippany, New Jersey. The project involved working with the design engineer, construction contractor, and county soil erosion control office to provide appropriate erosion control and stabilization measures during the landfill work.

Served as the New Jersey Federal Business Development coordinator from approximately September 2000 through March 2002. Established contacts at DoD facilities in New Jersey and conducted business development activities to procure military contracts.

Mr. Jackson served as the Engineering Group Manager for the Parsons Somerset, New Jersey office for approximately 5 months. Responsible for assigning staff to various projects, maintaining staff utilization goals, mentoring junior staff, conducting staff evaluations and coordinating with other Parsons office group managers.

1990-2000 CH2M HILL. Project Manager

Managed numerous site and remedial investigations in New Jersey, Pennsylvania, New York, and Connecticut involving all media for a variety of situations resulting from spills, underground storage tank leaks, the discharge of mixed waste material, etc. Duties included managing all aspects of the project; budgeting, staffing, scheduling, client relationship building, preparing project documents and reports, coordination with NJDEP, etc. Projects were completed under consent orders, memorandum of agreements, and at risk. Investigations have resulted in the implementation of Declaration of Environmental Restrictions (DER) and Classification Exemption Areas (CEA). Numerous sites were brought to closure (no further action) in New Jersey.

Site Manager for Superfund remedial investigations in US EPA Region III under the Alternative Remedial Contracting Service (ARCS) program. Duties included coordinating all aspects of the project, including the stringent contracting and laboratory requirements of the ARCS program. Projects were in Pennsylvania and involved a former plating operation that resulted in chromium contamination of soil and groundwater up to 20% chrome is certain areas; and lithium, chromium and mercury contamination at another site.

Prepared RCRA closure cost estimates that were deemed appropriate for the actual closure plan by the NJDEP for a precious metals manufacturer. The plan included sufficient detail in explaining the various closure steps that the NJDEP accepted it as a formal closure plan as well as cost estimate.

Project Engineer and construction manager for the modification and upgrade of underground storage tanks at several locations within Newark Liberty International Airport for Continental Airlines. Duties included onsite management of demolition and construction activities, soil sampling, completion of UST modification reports for the NJDEP, and coordination with the New York/New Jersey Port Authority.

Transition Coordinator for Lockheed Martin Missiles and Space plant closure in West Windsor, New Jersey. Located at facility on a 40hour per week basis for 14 months. The facility was approximately 750,000 square feet and had over 3,000 employees. Responsibilities included terminating permits, conducting ISRA activities, coordinating decontamination of the facility and facility equipment prior to reassignment, sale, or disposal, and coordinating disposal of hazardous and non-hazardous wastes generated at the facility. Duties also included conducting Phase I ESAs, health and safety training courses, and acting as onsite safety coordinator. The transition/closure was completed on time and under budget while setting an industry record of approximately four (4) million man-hours worked without a lost work day.

Managed and participated in environmental compliance auditing for electric utilities, the petroleum industry, and for the United States Postal Service. Project included auditing up to 14 different regulatory programs as well as client specific policies and practices. Developed self sustaining compliance calendars for Koch Industries, a petroleum industry client.

Participated in Phase I Environmental Site Assessments for numerous national clients at multiple sites. Site assessments included both Phase I and phase II efforts in the United States and Canada for industrial clients done in accordance with the applicable ASTM standards.

Developed and modified SPCC plans for Koch Industries bulk oil storage terminals in New Jersey.

Environmental planning efforts have included preparing sections of various Environmental Assessments (EA) for Jet Blue Airlines and US Airways for projects subject to the National Environmental Protection Act (NEPA). The work for Jet Blue was to assist them in getting their initial permits to operate at Kennedy International Airport. US Airways was planning a major expansion at the Pittsburgh Airport which required major environmental planning. Evaluated current and future impacts relating to wastewater, stormwater run-off, airplane de-icing run-off, solid and hazardous waste, and residual waste program.

Reviewed EAs prepared for United States military under the Base Realignment and Closure (BRAC) Program, and prepared employee trip reductions programs for the United States Postal Service to help meet air quality standards in non-attainment areas in New Jersey.

Served as the New Jersey office regulatory coordinator. This required disseminating pertinent regulatory information throughout the northeast region of CH2M HILL, participating in regional and national regulatory practice conference calls, fielding questions regarding various regulatory programs or directing staff to other appropriate staff, and participating in regulatory reviews for projects in the planning stages.

1987–1990 Massachusetts Water Resources Authority

Mr. Jackson worked as project engineer Strategized, planned, and implemented an \$8 million facilities planning study to determine the most cost-effective control mechanism for the Combined Sewer Overflow (CSO) Program in the greater metropolitan Boston area. Oversaw and directed the efforts of consulting firms maintaining project schedules and budgets and coordinating with local, state, and federal regulatory agencies. Evaluated various CSO control technologies including dry weather overflow mechanisms and best management practices. Conducted public presentations regarding the CSO project to local neighborhood organizations and elected public officials.

Conducted industrial wastewater inspections throughout the MWRA service area of 43 communities surrounding Boston. Prepared follow-up reports with recommendations for appropriate wastewater sampling or enforcement actions. Initiated a program to promote recycling and waste minimization primarily focused on the metal finishing industry.

1985–1987 U.S. EPA, Region I, Boston, MA Staff Engineer

Provided oversight for site remediation projects to ensure compliance with various orders for remediation issued by EPA Region I. Assisted in the authorization of the state of Maine's RCRA program. Reviewed and approved RCRA Part B Treatment, Storage, and Disposal (TSD) permit applications for industrial and military facilities.

Served as the acting Federal Facilities Coordinator for the hazardous waste management group within the Waste Management Division of EPA Region I.

PHASE ONE ENVIRONMENTAL AUDIT OF 977-9-83-85 Pacific St./505 Grand St.

Kings County Brooklyn New York

NEW YORK STATE

For Meier Family Partnership

BY AL SHEEN, CEO

June 10 2013

EXECUTIVE SUMMARY

SUBJECT

J.E. Activities CM was retained as an environmental inspector by Meier Family Partnership and performed a Phase One environmental site assessment at 977-9-83-85 Pacific Street and 505 Grand Street in Kings County towards analysis of a future development. The site is located in the residential and light commercial use area of the county known as lower Park Slope. For decades the 979 and 505 properties were used as residential multiple dwellings. From 1927 until after World War II, the 977 Pacific lot aka 513 Grand was used as a dance hall but by 1949 a light fixture factory came in. The main environmentally sensitive nearby industries are automotive repairs and utility facilities. Manholes and service boxes managed by Con Edison and NYNEX and LIRR have potential to emit toxic substances. Hazardous generators are at NYCHA, Con Edison and LIRR substation sites nearby. There is a federal CERCLIS site more than one quarter of a mile away. There are hazardous generators in use along Atlantic Avenue business.

PURPOSE

The purpose of a Phase I environmental audit is to inquire about previous ownership and use consistent with good commercial practices as outlined in CERCLA 42 USC 960135B. The assessment describes the location and the environmental elements at that location. The audit intends to identify situations where past release of future releases of hazardous substances can harm the property.

FINDINGS

J.E. performed a Phase I environmental audit in conformance with the scope and limitations of ASTM practices at the specified property. Any exception to this practice is noted in the limitations section x2.2.3. If friable asbestos was present as per NYC Dept. Buildings and NYC Dept. of Environmental Protection form ACP 7 it would be noted. Also, non-friable asbestos usually present on roofs is not applicable to this site. Lead paint that typically exists on sills, casing and baseboard is relevant to residential entities but not to our site that went through a demolition. Lead paint on the cast iron radiators and fire escapes and exposed steam risers can not be removed even if sandblasted is significant but not applicable here. The block's history did not show waste water backup making the installation of a simple check valve or flappers or backflow preventor necessary.

Contamination sources were examined by reviewing governmental records within a full mile radius of our site. There are neighbors within one quarter of a mile with hazardous environmental histories that are always a concern. Hazardous waste generators run by utilities or various business along Atlantic Avenue are nearby. A visual investigation did not reveal stressed vegetation or ground discoloration or chemical waste residues. This assessment has revealed evidence of a recognized environmental hazards affiliated with this property; a solid waste large transfer station on Grand Avenue, historical air discharges from prior neighbor All State Tanks at 963 Pacific, federal watch at Ulano Corp. at 601 Bergen and most significantly a site history of a light factory.

X2.1 SUMMARY

This environmental assessment was performed in June 10 2013 at 977-9-83-85 Pacific Street and 505 Grand Street. The site is in a mixed use district with small multiple dwellings nearby. Our site's block represents low to moderate mixed use traffic. The area is experiencing a growth of residential use and a stabilization of retail at the expense of light industry. Housing value has outpaced the inflation rate before this past year. Retail tends not to be congregated but

present nearby. The major businesses in the area that are environmentally sensitive are utility and automotive related. Public entities like the Long Island Railroad and Con Edison have substations, generators or service boxes nearby as do private auto service stations. The generators can emit pcbs or petroleum like substances. The neighboring multiple dwellings have petroleum bulk storage oil tanks. The biggest concern are the generators on Atlantic Avenue by Atlantic Armature, LIRR, Pep Boys. There were air discharges years past from All State Tanks at neighboring 963 Pacific Street that created a civil enforcement site. A solid waste facility handling sludge exists at 563 Grand Avenue. The 963 lot has been vacant for a long time. The 979 lot via Dept. Finance as well as an old Sanborn map shows a garage gas station that no other entity supports.

X2.2 INTRODUCTION

A thorough environmental investigation of the lots at 977-9-83-85 Pacific Street and 505 Grand Street in Kings County New York was performed on June 10 2013. The reason for this inspection was to provide required information for a Phase I environmental hazard audit precedent to a buyer financing for development.

X2.21 PURPOSE

In making this report; on site observations, investigations and interviews of available technical data and records were performed. The site was visited to identify any possible visible signs of contamination. The lots were surveyed. Activity of all nearby businesses was reviewed on that visit. Con Edison and NYNEX manholes and utility substations above and below ground. Further concern was shown over the activity of the gas stations and other Atlantic Avenue automotive related firms nearby.

X2.2.2 TERMS AND CONDITIONS

This assessment substantially follows the American Society of Testing and Materials standards as designated in their E1527-05 publication. We use the format, appendix and definitions from the Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

X2.2.3 LIMITATIONS OF ASSESSMENTS

This report should be used solely as a guide to the possible presence of toxic materials at the site based on visuals and research at the time of inspection. We -3 - are not responsible for items not seen or changed after the inspection. For example, we are not able to access every area of every nearby automotive facility for the presence of hidden tanks. We cannot be responsible to access automotive stations, Con Edison facilities, manhole covers, underground utility activity in manholes, dry cleaners, housing projects or nearby companies. This assessment is solely for the use of the owner and financing institutions. Therefore, J.E. Activities CM Inc. is not responsible for conclusions opinions and recommendations made by third parties based on data in this report. It gives current conditions a neutral rating based on this audit's type of review. We do recommend that monies from the seller be held in escrow upon a closing for the seller to provide borings or the fund the buyer to do so.

X2.2.4 Conditions and Methodology Used

This audit involves historical research into the site usage via interviews and a visit to the Kings County Office of the Assessor. A field visit to the property was made to determine the presence of toxic or hazardous materials. We check libraries, building departments, tax maps, atlases, land maps, aerial photographs, waste spill records, compliancy records, demolition permits, underground tank and fuel oil permits, and topographical maps. We call on the U.S. Environmental Protection Agency Regional Emergency and Remedial Response Division for the monthly updated Kings County list of CERCLIS hazardous waste sites. We call on the NY State Department of Environmental Conservation in Albany for the location and status of inactive hazardous waste areas. During the site visit, we identify any wetlands, site wells and surface waters. We further identify the type of toxic substances by checking business manifests and product invoices if applicable. In summary, the Phase One environmental audit methodology for lenders contains a chronological review of historical records concerning the property and its surrounding area. A site reconnaissance walk through was made to identify the possible presence of asbestos containing material in accordance with AHERA standards, lead based paint, contaminated drinking water, indoor air pollution, fire hazards, leaking underground storage tanks, PCB indications, radon, soil or ground water contamination, perchlorenethylene and urea formaldehyde.

X2.3 SITE DESCRIPTION

X2.31 LOCATION AND LEGAL DESCRIPTION

There are local commercial establishments nearby our sites including below ground utility facilities which are publicly monitored entities and sites affilitated with multinational publicly conscious corporations. Our site is within good distances of a bus line and a train station. There is good access to public transportation in this moderate density county use district. The physiography of the area has influenced the regional pattern of development, urbanization and transportation. The lots had a four family home with stores and a three family residence decades ago. It was also a dance hall until after World War II when a light fixture factory appeared.

X2.32 SITE AND VICINITY CHARACTERISTICS

There is no close proximity to any pre-existing northwest or southeast dipping mapped faults that may be reactivated. There is no proximity to sensitive ecological areas such as wetlands or flood plains such as the Harlem River. Another example of this would be the Paerdegat Basin affecting the Canarsie area of Brooklyn or similiar to the Long Island Sound affecting northern Bronx and the lower Westchester County area. Slope failures such as massive rock avalanche, rockfalls, soil slumps or earth flows are not nearby. No shallow hazards of any landfills were observed on or adjacent to our property.

X2.3.3 DESCRIPTIONS OF STRUCTURES AND IMPROVEMENTS ON SITE

Sanborn maps a residence for decades. The NYC Finance Dept. tax division and a Sanborn map showed a gas station on one lot but no other governmental entity matched that

record. We believe but cannot verify that 979 was only a garage.

X2.3.4 REPORTS BY USER

No knowledge of environmental liens by user. No user specialized experience.

X2.3.5 CURRENT USES OF THE PROPERTY

We are dealing with a predominantly mixed used area in general residential blocks. Air emissions at the properties are through chimneys, vents, or doors. There were some visible central air conditioning units on most nearby roofs. The neighboring buildings could have a central system installed but first they would need roof steel to hold hvac machinery in place. Water supply to the area is municipal. Solid waste was trashed in cans and removed on an orderly basis publicly. There were neighboring sites with waste disposal via incineration or landfill but they were typically greater than one half mile away. There is no current PCB contaminated equipment in service at our site. Older transformers, which may have contained PCB's in transformer dielectic fluid were not seen operating on our site. Older fluorescent lights with decade old ballasts common in cellars was not applicable to our site. Vermin infestation at the site was possible but not obvious. There is no evidence of non-friable asbestos containing material typically found on an underlying roof. Friable acm was not evident on pipe lagging and on tanks. No evidence was found for the existence of unique fill ports. Neither foam board nor corkboard was found on our site. No urea formaldehyde foam insulation was seen on the sites since such foam insulation is present in newer buildings. There was no manufacturer on site of pesticides or self application other than private exterminators servicing the sites throughout the decades. Hazardous, fugitive or vehicle air emissions are not visible despite generators at other buildings nearby. There are generators at the Atlantic Armature firm and LIRR substation and Pep Boys shop all along Atlantic Avenue. There is no evidence of unusual vegetation on our lots. The neighboring multiple dwellings with large oil tanks is typical. There is no

browns field and a super fund less than one quarter of a mile away. A solid waste facility is within a half of a mile away on Grand Avenue.

X2.3.6 PAST USES OF THE PROPERTY

The lots have been used for small residential operations specifically a four family with stores and a three family dwelling. There is a record of manufacturing or industrial storage at the site starting with a light fixture factory legally filed for in 1949. There were no leases available to review with our special interest focused on any type of a dry cleaners rental. Sanborn maps and city planning index maps were viewed for the subject property and nearby area. The attached environmental maps in the addendum identify the potential hazardous waste sites within a one mile radius. None of these research tools indicate any significant changes in the past few decades. The open air of a lot decades ago provided enough ventilation to transfer air out if substances with noxious fumes were ever stored. Therefore, the history of the site does not reveal a possible use of large amounts of hazardous or toxic material. However, the potential use of mercury and benzene associated with the light fixtures is a concern. Our site examination and research of the hydrological data did reveal grounds to believe that the property was used for activities involving toxics.

X2.3.7 ADJOINING PROPERTIES

There was air discharge from the Allstate Tanks at 963 Pacific Street and NYCHA on chemical storage at the pool. There are hazardous waste generators on from LIRR substations, Atlantic Armature, and Pep Boys at Atlantic Avenue. Also, there are under ground and pole utility boxes as well as Con Edison, NYCHA and NYNEX have generators nearby. Auto facilities tend to its own generator and oil waste issues. We are always on the look out for own Con Edison and LIRR facilities, underground utilities, various automotive garages and the dry cleaners with the possible use of tanks, petroleum bulk storage and air discharge. Manholes run by Con Ed or NYNEX have been linked to petroleum and raw sewage spills. Some utility sites have emitted lead or petroleum or dielectic fluid but are well monitored by governmental entities like the Public Service Commission. Hazardous generators at NYCHA, NYNEX, Con Edison, and LIRR are publicly monitored too.

X2.3.8 MAP

The attached maps in our addendum relate to the records review.

X2.4 RECORDS REVIEW

The New York State Department of Environmental Conservation did not have our site on its hazardous watch list. The US EPA Kings County CERCLIS list did not cite our address. Our sites are not included on any federal or applicable State site lists related to inactive hazardous waste disposal sites, landfill or solid waste facilities, and chemical bulk storage sites. There was one significant site on the CERCLIS watch list less than one half mile away; Ulano Corp. at 601 Bergen Street. Also, less than half full mile away, there were no significant sites on the Resource Recovery Hazardous Waste Treatment list. There are no sites on the national priority list within one half mile. There are no major oil storage facilities nearby. Also, there is no brownsfield inside one half mile. There is no NY State inactive hazardous waste disposal sites within one half mile of our building. Leaking tanks in the area relate to heating fuel or petroleum which is very common. There is no known immediate impact to our site.

GX2.6 FINDINGS AND CONCLUSIONS

Concern has to be given to the general site conditions, any asbestos containing material, lead paint, fire hazards, and sewage backups.

Use of oil: There were no signs of serious oil stains or unusual vegetation due to use of oil decades ago. There are no seismetic lot cracks indicating oil seepage. Empty oil drums did not exist. No evidence of unusual oil smells. However, the light fixture factory had use of large tanks as per DOB records.

Asbestos: At the time of inspection, pipe lagging with potential containment of asbestos substances on the elbows and fittings did not exist and the site did not have non-friable asbestos containing material in tar at the roofing. This acm count is solely an estimate useful for

management planning purposes. In most buildings, the vinyl floor tile and linoleum may have traces of acm in the mastic as does older underlying roof paper in the tar and flashing. We try to sample typical window caulking, masonry material and floor tile. Governmental entities like the New York City Dept. of Environmental Protection under Directive 1-87 consider such substances non-friable. Also, a site having less than 25 linear feet of acm is not considered an asbestos project during construction.

Radon: The site has no radon. No buildings were erected on rock eliminating the site from the radon mode. Radon is a radioactive gas which occurs in nature due to the natural breakdown or radioactive decay of radium and uranium. It can be found in high concentrations in soils and rocks containing uranium, granite, shale, phosphate and pitchblende. In outdoor air, radon is diluted to such low concentrations that it does not present a hazard. However, radon gas can enter a building by passing through small spaces in the soil and rock on which the building was constructed. If the building is too well insulated, radon can accumulate to levels high enough to cause a health risk. Nevertheless, 977-9-83-85 Pacific and 505 Grand Street are well ventilated because they are open lots.

Lead: Typically, we are concerned with lead paint tracings in the baseboard, door casings, window sills and decorative moldings because lead paint is found on the sills, casings in apartment units and public halls. It is of most concern on wood products that get painted over. Our site has no ornate door casings and wall moldings. Cast iron radiators, exposed steam risers, and fire escapes maintain the lead paint undercoating despite very common removal method including sandblasting. In summary it is not applicable to our site. - 7 -Neighbors: The neighbors with leaking tanks and uncommon air discharges did not represent an immediate problem due to their distance, minor operations or public monitoring. Air discharge from hazardous waste generators is common and not chemical related. Spills and discharges and bulk storage at the Con Ed facilities are subject to federal government review and at utilities or the Public Service Commission. Any automotive service station like the nearby Atlantic Avenue sites may use or have used compressed gases for burning as do auto repair shops. These firms typically utilize acetylene and oxygen. All tanks and cylinders used for storage of such were designed to withstand a pressure of 1,200 pounds to the square inch without rupture and withstand a pressure of at least 550 pounds to the square inch without exhibiting strain beyond the point of usefulness. Typically, these tanks and cylinders are chain locked at night in a secured area with gauges off. Most automotive stations are linked to a corporation that must maintain a positive public image.

RECOMMENDATIONS

The manufacture of metal light fixtures on the 977 lot with use of oil prior to the 3 family usage decades ago means that borings should be taken to test for mercury and benzene on the 977 lot. Even though no other governmental entity besides the tax department indicated a gas station on another lot, borings should be made for benzene presence there as well. Also, there is a light stain on site from parked cars which the borings can explore as well. The neighbors causing concern are the LIRR, automotive stations, and the utilities with their underground operations and large generators but they are subject to strict public monitoring. We are concerned with the large transfer station at Grand Avenue but this is monitored by both the City

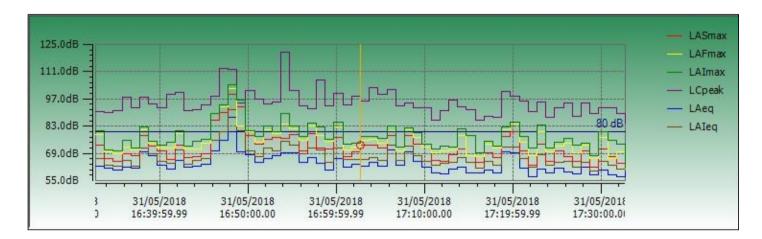

and the State with regular inspections. The CERCLIS site is already on the federal watch list on Bergen Street 2,410 feet away which is a good distance away. The All State Tanks at 963 Pacific is already on the civil enforcement docket despite its presence no longer applicable. There is nothing a buyer or owner refinancing can do about such neighbors except to report obvious odd smells and air discharges.

Al Sheen, CEO NYC DEP Asbestos Investigator, NYS Environmental Inspector

Attached are the permit applications I found. Cancelled and boilers agree with what you found but I am not sending them. I am guessing that PB041607 will eventually be cancelled. It is also filed as 1010 Pacific street with same block and lot that you have.

Subject: [From Vwall: Warning UNSCANNABLE Unable to Scan]505 Grand Street

Good Morning Gerry,

Please see the attached correspondence requesting a review of sites within 400 feet of 505 Grand Street that we have identified as potential industrial or manufacturing sites. We are requesting your assistance in obtaining copies of the industrial air permits that may exist for those properties surrounding the site. The attached letter and figure describes the request in further detail. We are only requesting Industrial Permits, you do not need to provide any information on boilers. Please let me know if you have any questions.

Thank you!

Appendix F: Transportation Data

Appendix G: Technical Memorandum

Grand Avenue and Pacific Street Rezoning

CEQR No. 19DCP114K

ULURP No. 190256ZMK; N1900257ZRK

Technical Memorandum

July 2020

This memorandum summarizes the potential environmental effects of the City Council Modification to the original proposed zoning map amendment and zoning text amendment that was previously analyzed in the September 2019 *Grand Avenue and Pacific Street Rezoning Environmental Assessment Statement (EAS)*. The Proposed Actions that were analyzed in the EAS and certified by the Department of City Planning were 1) a zoning map amendment to rezone Block 1133, Lots 7, 10, 11, and 12, and an approximately 5,500 SF portion of Lot 13; and Block 1125, Lot 1 from the existing M1-1 zoning district to a R7D/C2-4 zoning district; and 2) a zoning text amendment to map an area coterminous with the rezoning area as a Mandatory Inclusionary Housing Area (MIH), Options 1 and 2. The Proposed Actions are located within Brooklyn Community District 8, and would introduce mixed-use growth in close proximity to existing residential districts and public transit. The Proposed Actions would also introduce residential uses to the rezoning area.

The City Council Modification would alter the new zoning district on the non-Applicant-owned lots (Block 1133, Lots 7, 10, 11, 12, and 13) from the originally proposed R7D/C2-4 district to an R7A/C2-4 district. The modification would also remove Option 2 from the MIH options mapped within the area.

The Modification would not affect the Applicant's proposal on Block 1125, Lot 1.

Block 1133, Lots 7, 10, 11, 12, and p/o Lot 13, identified as Projected Development Site 2 in the EAS, would be affected (zoned R7A instead of R7D)—the maximum permitted FAR would be reduced from 5.60 to 4.60, and the maximum building height would be reduced from 115 feet tall to 95 feet tall. The site consists of 10,999 SF across the 5 separate lots: Lots 10, 13, and 7 are all vacant, unimproved lots; Lot 11 is improved with a 3-story, 1,425 GSF residential building containing 3 dwelling units; and Lot 12 is improved with a vacant 3-story, 1,407 GSF residential building. The EAS analyzed a Future With-Action Scenario where the lots would combine and be improved with a 66,522 (61,594 ZSF; 5.60 FAR) mixed-use commercial and residential building with 9,609 GSF of ground floor local retail uses, 65 dwelling units (13 of which would be permanently set aside as affordable) and no parking spaces. Within an R7A district, however, a reasonable worst-case development on Projected Development Site 2 would be a 9-story, 95-foot-tall mixed-use building with 54,273 GSF (50,595 ZSF; 4.60 FAR). The building could contain 44,664 GSF of residential uses, with 53 dwelling units (10 of which would be permanently set aside as affordable), and the same 9,609 GSF ground floor local retail.

The result of the Modification is 12 fewer dwelling units (3 fewer affordable units) and a building that is 20 feet shorter than what was analyzed in the EAS. In the technical sections listed below the EAS analysis was more conservative than the new modified scenario because of larger bulk and building height; the removal of MIH Option 2 would not impact any CEQR technical area as

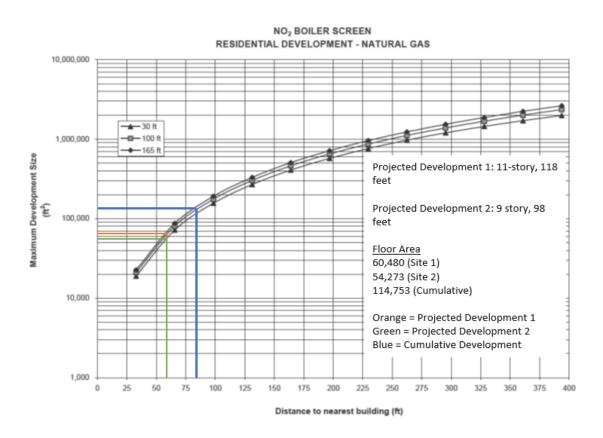

a CEQR analysis assumes 20 percent permanently affordable units. Therefore, the Modification would not affect the analysis or screening included in the EAS for land use, zoning, and public policy; community facilities; open space; shadows; historic and cultural resources; urban design and visual resources; hazardous materials; transportation; or noise as summarized below.

- Land Use, Zoning, and Public Policy: The change from an R7D district to R7A district on Projected Development Site 2 would not affect land uses, zoning, or applicable public policies on Lots 7, 10, 11, 12, and p/o 13, and would not affect existing or potential land uses, zoning, or public policies within the remainder of the rezoning area.
- Community Facilities: Fewer dwelling units would be added to the rezoning area in the modified scenario, and the Proposed Actions would add fewer than 50 combined elementary and middle school students, and fewer than 150 high school students, that are the thresholds for additional analysis. The modified scenario would not affect Community Facilities.
- Open Space: The EAS analyzed open space impacts assuming an additional 283 residents would be added to the study area and found that no impacts would occur. The modified scenario would instead add 258 residents to the study area, and therefore there would be no impacts on Open Space within the study area.
- Shadows: The modified scenario would reduce the height of the building on Projected Development Site 2 from 115 feet tall to 95 feet tall, thereby reducing the extent of shadows cast by the building from what was originally analyzed in the EAS. Therefore, the modified scenario would not affect Shadows.
- **Historic and Cultural Resources:** No impacts were identified in the EAS for Historic and Cultural Resources, and the Modification would not alter these findings.
- Urban Design and Visual Resources: The modified scenario would reduce permitted bulk and height on Projected Development Site 2, thereby resulting in less potential to obstruct any publicly accessible views to visual resources. The EAS identified no impacts to Urban Design and Visual Resources, and a reduction in bulk and height would not affect this finding.
- Hazardous Materials: Changing the zoning designation on Projected Development Site 2 would not affect the analysis or screening included in the EAS as development is still projected to occur and all findings from the EAS are still relevant and accurate.
- **Transportation:** The EAS analyzed a more conservative development scenario and screened out of the need to prepare a detailed analysis. The reduction in development in the modified scenario would not affect the analysis or screening included in the EAS.
- Noise: Changing the zoning designation on Projected Development Site 2 would not
 affect the analysis or screening included in the EAS as development of the same uses is
 still projected to occur and all findings from the EAS are still applicable.

The EAS screened air quality stationary sources by measuring potential impacts from two buildings, each at 115 feet in height. A new nomograph screening is warranted as a result of the

Modification, as the building height and reduction in square footage could change the screening analysis findings. The nomograph and screening analysis results table below indicates that the reduction in height and gross square footage in the modified scenario would not have any adverse impacts on air quality.

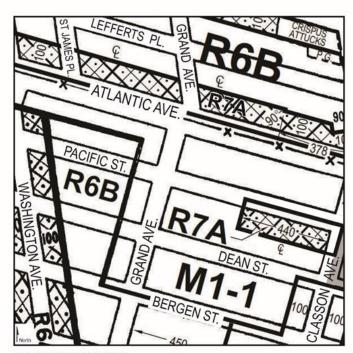

Revised Nomograph Screening

Revised Screening Analysis Results

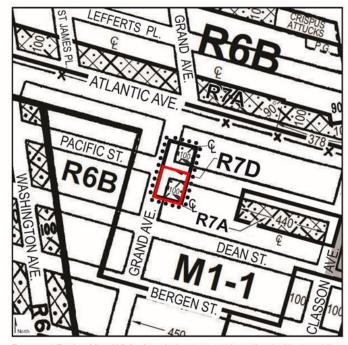

Source Building Site ID	Gross Square Footage	Screen Distance (ft.)	Receiving Building (Site ID or Block/Lot)	Receiving Building Distance (ft.)	Pass/ Fail
Projected Development Site 1	60,480	65	Projected Development Site 2	70	Pass
Projected Development Site 2	54,273	60	Projected Development Site 1	70	Pass
Development Sites (Cumulative)	114,753	80	Existing Land use (1149/18)	400	Pass

Zoning Change Map

Current Zoning Map (16c)
