− installation of atleast three monitoring wells to define site specific groundwater flow direction and sampling soil and groundwater during this monitoring well installation. − samples must be analyzed for STARS 8260 & 8270 methods & report must include chlorinated compounds − no dewatering events until site−specific groundwater flow direction has defined (to prevent spreading contamination if dewatering points are downgradient to source of contamination) − no concrete/foundation work till full investigation completed − installation of one more monitoring well upgradient (once groundwater flow direction defined) to check any off−site migration − submission of soft copy of vapor barrier & SSDS design − monitoring wells atleast 5 ft below groundwater table − samples from monitoring wells must be taken using Low Sress (low flow) Purging and Sampling procedure (EPA guidance)

− Spill #: 9207015. 971−975 4th Avenue, Brooklyn, NY.

spill reported after found tank failed.

PBS #: 2−297291. site had 48 tanks and were removed in 1994. from spill database, found that NYC School construction authority removed approx. 15,000 cubic yards of contamianted soil and had groundwater contaminated. case closed on 07/13/2006.

WRONG REPORT UPLOADED ON E−DOCS (FIRST FILE IN LIST) <−−−−−−−−−−−− *****

−

− Spill #: 8706481. 987 4th Ave, Brooklyn, NY.

spill reported as gasoline tanks failed a test.

PBS#: 2−157236. site had 14 tanks and were removed in 1990. from spill database, found that groundwater was impacted with gasoline spill and had free product in wells installed on−site a that time. groundwater is at 38 ft bg. case still open.
−

07/05/07−Hiralkumar Patel. visited site on 07/02/07 as found heavy soil and groundwater contamination in neighbour’s property at 129 34th Street, which is auto repair shop. spoke with Mr. Pardus today and asked him to install additional monitoring wells along 34th street (two wells on 34th street along property line: one at each corner and one well along boundry between park and construction site). these wells are just for monitoring purpose, in case any contamination from auto repair area touches the

construction site. also asked Mr. Pardus to provide site addresses for neighbours on south and east side of construction site (assumed upgradient side)

07/16/07−Hiralkumar Patel. received call from Mr. Pardus regarding sample analysis for specific chlorinated compounds. asked Mr. Pardus to run all groundwater samples for compound that was found high (PERC) in previous investigation.

07/23/07−Hiralkumar Patel. received message from Mr. Pardus asking for meeting. spoke with Mr. Pardus and asked him to submit data for review prior to any meeting.

07/24/07−Hiralkumar Patel. received sample analyticals and site map with monitoring well locations, from Mr. Pardus. they installed four wells on site and one on sidewalk along 35th street. found very minor contamination. from monitoring wells, they found groundwater flow in south direction (from site which has heavy groundwater contamination: 129 34th street). monitoring well #1 installed close to area where they found high PERC in groundwater. Mr. Pardus asked for dewatering of site for construction activities. mentioned to Mr. Pardus that as no contamination found in any samples, they can do dewatering but they need permits from city agencies for that. asked Mr. Pardus to install one well in corner of property along park along 34th street (as found heavy soil and groundwater contamination at site 129 34th street). also asked him to monitore well # 4 until it nocked down. asked Mr. Pardus to submit entire report with boring logs, water depths etc.

07/25/07−Hiralkumar Patel. spoke with Mr. Pardus. told him that they can start dewatering from site (based on analytical data). also asked Mr. Pardus to install a permanent monitoring well on sidewalk along 34th street (close to property line between subject site and park) as subject site is exactly downgradient from contamianted site at 129 34th street. this well will be used as monitoring point to see any oil from 129 34th street site hit construction site or not. Mr. Pardus mentioned that they will install vapor barrier and sub−slab system. Mr. Pardus will schedule installation of one well on sidewalk along 34th street.

03/20/08−Hiralkumar Patel. received tank closure report from Shaw environmental. abstract:

− site groundwater was encountered between 16 to 18 ft bg − installed four wells (MW−1, MW−2, MW−4 and MW−5) − no tidal influence noticed in wells MW−1, MW−2 and MW−5, via automatic data logger − groundwater level data from MW−4 shows rise in the water level; cause o fthis water level rise is unknown (no preceipitation or on−site dewatering during or before water level measurement) − direction of groundwater flow from north toward the south and away from the Upper New York Bay; this is opposite of the anticipated direction of groundwater flow based upon the surface topography of the area and the proximity to the Upper New York Bay (0.3 miles northwest) − removed four regulated (petroleum) USTs and one non−regulated (sugar) UST in Mar.−Apr. 2007 − four petroleum tanks removed: one 2000 gal, one 1000 gal, one 5000 gal and one 100 gal − one 1000 gal sugar tank removed − 2000 gal tank was punctured during excvation and then spill reported − 2000 gal UST found to be in fairly good condition with no significant evidence of corrosion − final dimensions of excavation for 2000 gal UST measured approx. 15 ft wide by 20 ft long by 20 ft deep; after collection of endpoint samples, excavation backfilled − 100 gal UST was dicovered immeidately beneath the concrete slab of the former site building − 100 gal UST was found to be old and rusted with large openings − following removal of 100 gal UST, no evidence of release was observed; no impacted material was excavated; one bottom endpoint sample collected after tank removal − 5000 gal UST was abandoned−in−place with concrete − 5000 gal UST found to be slightly corroded but no holes were observed − final dimensions of excavation for 5000 gal UST measured approx. 30 ft wide by 50 ft long by 35 ft deep; after collection of endpoint sidewall samples, excavation backfilled − no endpoint bottom samples collected after 5000 gal tank removal <−−−−−−−−−−−−− − 1000 gal UST was discovered about 5 ft bg and found to be rusted with a large hole where it appears that the weld seperated <−−−−−−− − final dimensions of excavation for 1000 gal UST measured approx. 10 ft wide by 15 ft long by 15 ft deep; after collection of endpoint samples, excavation backfilled − groundwater samples collected from one geoprobe GW−1

and four monitoring wells (MW−1, MW−2, MW−4 and MW−5) − found some SVOC contamination in endpoint soil samples and some VOC contamination in groundwater samples − school design includes a vapor barrier and an active SSDS

06/03/08−Hiralkumar Patel. spoke with Mr. Pardus. he doesn't know about construction status. asked him to submit soft copy of vapor barrier and SSDS design for review by NYS DOH, prior to installation of such.

06/06/08−Hiralkumar Patel. during site visit in neighbourhood, pass through subject site and found few floors already developed at the site. no information available whether vapor barrier and active SSDS were installed or not.

06/17/08−Hiralkumar patel. spoke with Mr. Sherwood. asked him about endpoint bottom sample after removal of 5000 gal tank and design specification of vapor barrier and SSDS.

left message for Mr. Pardus for following:

− submission of design specs of vapor barrier and SSDS − confirmation about installation of vapor barrier and SSDS − clarification for not taking endpoint bottom sample after 5000 gal tank removed

06/23/08−Hiralkumar Patel. left message for Mr. Pardus.

07/09/08−Hiralkuamr Patel. received email from Mr. Sherwood with vapor barrier and SSDS design and clarification about not taking endpoint bottom samples after 5000 gal tank removal. as per Mr. Sherwood, Shaw environmental was not on site to witness the removal of the 5,000 gal UST as this work was overseen by GZA Environmental, the consultant to the general contractor. as per GZA, they have indicated that they initially removed the UST but did not collect confirmatory soil samples because they felt that there were some minor impacted soils that needed to be excavated and knew that the Contractor was coming back to this area to excavate for the building foundation. when contractor returned to the area to excavate for the building foundation, they indicated that they excavated contaminated soils down to the watertable at approximately 18 feet below grade, and therefore could not collect bottom soil samples. in June 2007, Shaw conducted a soil and groundwater investigation at the site. during that investigation, collected two water samples in the southwest corner of the building foundation excavation, immediately below the former location of the 5,000 gallon UST. one sample was collected from a temporary geotechnical well (GW−2) already in place at the Site and the other was collected from standing water (SGW−1) that had pooled in that corner of the Site. no contamiantion found in groundwater samples.

5000 gal UST was removed in Apr. 2007 and groundwater samples were taken in June 2007 after contractor removed soil under water table as part of foundation work.

based on submitted documents till date, case closed.

see Spill #: 0703584 & 0700836 also as reported to same site.

CONTRACTOR DIGGING IN AREA AND HIT FEEDER. SPILL IS JUST ON LAND. LEAK IS ACTIVE.

200184

DEC Investigator Remarks:

200184. Significant Spill Event Notification sent to Lou Oliva, Dan Walsh and Randy Austin: This morning at approximately 1:10 AM a NYCDOT contractor conducting a paving job on Third Avenue in Brooklyn caused a leak from Con Edison’s high pressure 345 kV feeder B−26. The leak occurred at the intersection of 30th St. Initial estimate of leak amount was 2000 gallons, most of which came up through the pavement onto the street. Crews on site bermed the area and the spill is under control, however the leak is still continuing at a high flow rate. This is due to the fact that there is no redundant feeder in this area, therefore the pressure on the feeder has to be maintained. Oil is being directed into a nearby Con Ed manhole, where it is collected and being pumped out by tankers. Thus far approximately 3000 to 4000 gallons has been recovered.

Agencies responding to the incident include NYPD, DEP and OEM, and no initial response was made by DEC during the off−hour period. This morning at approximately 9:00 AM, DER staff [Sam Arakhan] responded to the incident scene and is currently on−scene.

Feeder pipe has been excavated and exposed, and Con Ed is trying to figure how to apply a clamp to stop the leak.

This incident was reported on local TV and radio. (JHO)

Update: 5/24/06 The feeder was punctured by a 2−inch pipe of unknown function. Feeder oil is flowing under pressure through the 2−inch pipe and is being collected by a tanker vacuum hose. An excavation approximately 8 feet by 8 feet has been made to a depth of approximately 5 feet. The feeder line has been exposed at the leak and crews are awaiting construction material to shore the excavation. The repair crew plans to freeze the line with liquid nitrogen in order to install a clamp over the leak. It is anticipated that the leak will be clamped by 1 PM today. PCBs content of the spilled oil was less than 1 ppm. (SKA)

Update 5/25/06 Sam Arakhan visited scene for second time at 1:30 PM on 5/24. The vertical pipe that was leaking was plugged with a broom handle and the valve to the pipe was turned off at the substation; surface cleanup was ongoing. Oil soaked sand, absorbent material and asphalt were being swept and vacuumed into roll−off containers. The 5−inch pipe that was ruptured was a redundant line. Con Edison plans to drain and clean the pipe; it will then be abandoned in place. Con Ed personnel were instructed to take five post−excavation samples in the pit at the point of rupture − samples to be tested for TPH and benzene. (Pictures in eDocs) SKA

see eDocs

Update 6/5/06 The following e−mail was received from Mike Pillig on 6/5/06:

Sam,

I understand you were at the subject leak site on 5/24/06. You had requested that 5 samples be taken (1 on each wall and 1 on the floor) and analyzed for TPH modified 8100. Also, one sample was to be taken and analyzed for total and TCLP benzene. This was completed and the results are attached. In addition, subsequent to your visit, I discovered that DF had migrated into holes in the roadway and spread beneath the base concrete in several location under the BQE. As such, I excavated two areas to a depth of approx. 12−18 . One excavation was 35’ long and tapered in such a way that it was 8’ wide at its widest point. I took floor samples down the center of the excavation every 5’. The second excavation was much smaller (2’ X 8’). I took one floor sample about in the middle. Photos of the excavations you did not see are attached. Based on these results, we should be able to close this spill. Please confirm. Thanks for your help.

Mike

(Post excavation results are satisfactory − analytical results and pictures in eDocs) SKA

spill to paved roadway/clean up complete

DEC Investigator Remarks:

8/22/16: Mahat t/c : DEC Mahat contacted the notifier inquiring about the spill and its nature. He confirmed that the spill has been cleaned and up. Storm Drain, soil, or any other natural resources were not impacted by the spill. A clean up report will be supplied to the Department once it is ready.

8/25/16: Mahat e/c: DEC Mahat received an email update on the spill case. Email:

Mr. Mahat:

I heard from the tow yard today and they hope to get the photos to us today and are having the drums of waste picked up next week. They will forward me the signed manifests once they receive them.

When all of the documents are received I will forward them to your attention.

Sincerely,

Kevin Boyer Transportation Spill Solutions P.O. Box 1067 Athens, GA 30603 (877)−88−SPILL (864) 285−1415 Cell (888) 263−7106 Fax

Based on the email, the spill case will be closed pending generated manifest.

Transferred from Tibbe to Sun.

10/03/2003− Sun− File Review by Sun:

−Quarterly Report Jan 2003 thru March 2003 by EnviroTrac (Jeff Bohlen, 631−471−1500) −On Jan 28, 2003, Verizon's consultant performed the injection of oxygen releasing material (ORM) into the groundwater at the site. A total of 440 pounds of calcium peroxide (IXPER 75C) was injected through a network of 10 boring locations. At each boring, Geoprobe equipment was utilized to disperse approximately 40 to 50 pounds of ORM and a half of a pound of food grade sugar across the uppermost 12−feet of saturated soils. The results of this first quarter groundwater monitoring event indicate a decline in total dissolved BTEX/MTBE concentrations in Monitoring wells MW−2, MW−3, MW−5, MW−8 and MW−B. But, it show a significant increase in total BTEX & total VOCs in MW−4, and did not produce the desired downward trend of dissolved VOCs in groundwater.

−Quarterly Report April 2003 thru June 2003 by EnviroTRac Ltd (Jeff Bohlen, 631−471−1500)− The results of this quarter indicate a decline in total dissolved BTEX/MTBE concentrations in Monitoring Wells MW−1, MW−3, MW−5, MW−7 and MW−B. But, it shows a significant increase in total dissolved BTEX and total VOCs in MW−2, MW−4 and MW−8. The bio remediation using ORM injection into the groundwater is not producing the intended results. DEC intends to ask Verizon to investigate the soil around the 2x2000 gallon gasoline USTs (closed−in−place), and to confirm the groundwater flow direction.

10/07/2003− Sun & Vought visited the Verizon's site and met with John Quatrale of Verizon and Jeff Bohlen of Envirotrac. Based on our discussion, Verizon/Envirotrac will confirm the ground water flow direction in the next quarterly report.

10/17/2003−Sun sent an e−mail to John Quatrale of Verizon (516−292−8166), requesting the following actions be taken: 1) Correct the North arrow direction on Figure 1 of the Quarterly Report, 2) Re−survey the wells and determine the groundwater flow direction, 3) Provide the most recent quarterly report−covering July 2003 through September 2003.

10/30/2003−Sun− File Review by Sun:

−Updated Report−July 2003 through September 2003: The results of the third quarter 2003 groundwater monitoring event indicated a decline in total dissolved VOC concentrations in MW−2 and MW−4, however, the total dissolved VOC concentrations increased in MW−5, MW−8, and MW−B. The hotest spot is on MW−4, which has 28,111 ppb of BTEX (max),and 30,411 ppb of total VOCs(max). MW−2 has

the highest MTBE of 1,300 ppb (max). Per the quarterly report, Verizon may elec to remove the active 4000−gallon underground storage tank (UST) containing gasoline along with the dispenser island and associated piping during the next reporting period.

12/31/2004−File Update by Sun: On April 8th and 9th, 2004, one 4000−gallon gasoline underground storage tank (UST) and the associated dispenser island and piping at the subject site were removed. A total of six post−excavation soil samples were collected. Five of the soil samples were collected from the UST excavation. The soil samples were collected at each sidewall of the UST excavation in addition to the bottom of the UST excavation. On additional soil sample was collected from the area of the dispenser island. Post−excavation soil samples collected from the sidewalls and bottom of the UST excavation and from the area of the dispenser island were below NYSDEC TAGM 4046 Recommended Soil Cleanup Objectives for the VOCs analyzed.

1/3/2005−File Update by Sun: On 12/7/04, the Department approves the remedial system proposed by EnviroTrac dated 11/1/04 for the subject site; specifically, the use of Soil Vapor Extraction/Air Sparging (SVE/AS) remedial system for in−situ remediation of the petroleum contaminated subsurface soil as well as petroleum compounds dissolved in groundwater.

1/5/06: Case reassigned to Andersen.

1/11/06: Reviewed the quarterly report dated 1/10/06. SVE/AS in operation. Samples taken on 9/28/05. Max BTEX 164.2 ppb (MW−4). Max MTBE 178 ppb (MW2).

1/19/06: Reviewed the fourth quarterly 2005 update report. BTEX and MTBE ND in all wells sampled. Approved shutoff of the AS/SVE system.

4/27/06: Meeting with Verizon, NYSDEC, and EnviroTrac. March gw monitoring showed rebounding in one well. Awaiting formal copy of monitoring report.

5/11/06: Received first quarterly 2006. SVE/AS was shut off on 1/19/06. BTEX and MTBE ND in all wells except MWB. An off site source is suspected in MWB. Concentrations in MWB: BTEX 33.6ppb, MTBE ND, Naphthalene 1,770 ppb. The naphthalene concentration in MWB was ND for the last two quarters. Wait another quarter to confirm the napthalene concentration in MWB. Then request off site well to confirm an off−site source. Reopened spill 8910578, failed tank tightness test of fuel oil USTs on upgradient property which was never investigated.

10/11/06: Received april − june 2006 monitoring report. Wells sampled on 6/15/06. Max BTEX 19 ppb (MWB), max MTBE 47 ppb (MW−2). TVOC 1,093 ppb (MWB). High napthalene in MWB may be result of an off−site source. Spill 8910578, directly upgradient, is currently being investigated. The Department approved that groundwater sampling cease while the Department investigates spill 8910578.000

5/24/07: NFA issued.

DEC Investigator Remarks:

3/28/16: Mahat Response: On 3/26/16, DEC Spills staff responded to a reported 1,000 gallon #4 fuel oil. Field Report: Field update on the spill at 341 39th Ave., Brooklyn :

The spill area is on the basement of the industrial/commercial building in Brooklyn. The building has two 5,000 gallon ASTs. The PBS registration of the tanks is 2˜320617. The building use a transfer pump to transfer oil from tank #1 (4,850 gallons− 68) to tank # 2(1,465 gallons− 25) and vice versa. During the transfer, the tank #1 was overfilled causing the spill from the manhole gasket. Approximately 1,000 gallon of oil was spilled. The spill is contained within the secondary containment. Super of the building was advised to monitor the Petro meter level to insure the tank is not leaking other than from the man way gasket. All Boro (retained by Approved oil) is pumping out the oil from the secondary containment. Once the oil is pumped out, an inspection on the tank will be performed. The gasket on the tank will be replaced followed by the pressure test. No vapor and other resources were impacted. Spill is Contain within the secondary containment.

Class: Willing RP − No DEC Field Response − Corrective Action Initiated or Completed by RP or Other Agency

Spill Date	Date Cleanup Ceased	Cause of Spill	Meets Cleanup Standards	Penalty Recommended
03/25/2013		EQUIPMENT FAILURE	NO	NO

Material Spilled	Material Class	Quantity Spilled	Units	Quantity Recovered	Units	Resource(s) Affected
DIELECTRIC FLUID	PETROLEUM	125.00	GALLONS	0.00	GALLONS	

Caller Remarks:

10G per Hour from a feeder pipe. No sewers, or waterways affected. Is contained to manhole

DEC Investigator Remarks:

3/29/2013 − Austin − Con Ed (Rob Duffy) sent an e−mail to me today that indicated that some dielectric fluid from this manhole feeder leak permeated through the wall and impacted adjoining soil − Spill assigned to Duty Officer for 3/25/13 (DeMeo) for following up with Con ED on this investigation − end

7/25/13 − Austin − Received documentation and a narrative via a 7/25/13 e−mail from Rob Duffy of Con Ed Transmissions Operations. Narrative: The leak was discovered inside MH66769 on 3/25/13. The leak was clamped at 10:05 on 3/26/13. The leak was close to the wall on the inside of the manhole and in order to make the proper permanent repair the endwall of the manhole had to be broken out. Some oil was discovered in the soil while excavating outside the manhole in order to break out the endwall. When oily soil was discovered an environmental contractor was brought in to remove the contaminated soil. Five feet of contaminated soil was removed in an 8 feet by 10 feet excavation. This made the excavation a total of 8 feet deep; which was 4 feet below the feeder depth. A floor soil sample was taken and analyzed for TPH modified 8100. The floor sample result was 8,110 PPM which is below the 13,000 PPM remediation standard for dielectric fluid. The permanent repairs were then completed and the manhole wall was reformed and the excavation was backfilled and restored. The manhole was power washed by clean venture The spill was submitted for closure with our quarterly batch submittals.

The final amount reported as released was 1,900 gals of dielectric fluid, most of which was contained in the feeder line vault. the leak was stopped and the vault was cleaned up, as well. − Con Ed contained and cleaned up the spill − See eDocs files for sam=ling diagram, lab results, disposal manifest, and final EMIS report − No further action neeeded − Spill clsoed − end

Caller Remarks:

in moat from cooling plant 1 − cleanup pending

DEC Investigator Remarks:

8/3/12−Vought−Duty desk officer. DEC Piper called and spoke to ERT and spill contained to concrete moat. DEC Piper to perform site visit today. DEC Piper performed site visit and called Vought and confirmed that spill was contained to moat which also contained bluestone. All State Powervac to arrive on site and recover fluid as well as bluestone. Spill may be transferred to DEC Feroze after DEC Piper consultation with RSE.

9/6/12 − Austin − Leak ocurred from cooling plant, and the leak stopped − Con Ed contained and cleaned up the spill − Actual oil spilled was 480 gals. − Equipment to be permannetly repaired, but no longer leaking − See eDocs files for further information − Spill closed − end

Caller Remarks:

CLEAN UP IS PENDING SAMPLE RESULTS. CONTAINED TO MANHOLE. NO TO FIVE QUESTIONS.

200209

DEC Investigator Remarks:

08/15/06 − See e−docs for Con Ed report detailing cleanup and closure. Secondary incident to sp 0602005 feeder leak. Contractor tanker truck with load of cable oil from feeder leak went to Gowanus Substation to pump out sheen and water from manhole. Driver accidentally hit backpressure lever while hose was in manhole, releasing contents of tanker into manhole. Contained in manhole. Even though there is generator knowledge that there are no PCBs in the cable oil, they will test anyway since the condition of the tanker is unknown. See e−docs for additional info. (JHO)

DIELECTRIC FLUID	PETROLEUM	1.00	GALLONS	0.00	GALLONS	SOIL

Caller Remarks:

both above materials spilled from a circulating feeder − number 401−t. 1 gal dielectric onto bluestone − non pcb oil into moat.
diapers and pads placed for clean up and clean up to follow. con ed 137−787 UPDATE @ 2135 HOURS ON 6/20/01 − ALL 100 GALLONS WENT TO BLUE STONE

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY

6/22/01 Visited site with SSO EH&S Pete Sudol and Area Manager Ralph Lasardo. All−State on−site removing contaminated soil. Groundwater appears to have a sheen of oil on top. All−State will remove another 6 off the surface and put containment pool down until further action is determined. Need to have engineer assess how much soil can be removed without compromising structural integrity. Con Ed claims that oil from spill has been recovered and that All−State is now trying to recover oil from historical spills. (KMF)

NOTE: This is the Master Spill Number for Cooling Plant #3. It is to remain open until all repairs on this equipment and remediation are completed. (JHO, 3/10/06)

~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~ e2mis no. 137787 (master):

6/20/01=1715HRS HOFFMAN #20182 S.S.O=REPORTS FOUND APPROX 100 GALLONS OF NON PCB OIL THAT SPILLED FROM C3 CIRCULATING PLANT FDR 41−T INTO MOAT. ALSO 1−GALLON OF OIL SPILLED ONTO BLUESTONE AND CONCRETE. DIAPERS AND PADS WERE PLACED.

LAB RESULT RECEIVED 6/21/01 − 0132. 01−06736. less than 1.0 PPM.
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

06/27/01 13:06 As per P. Sudol Allstate Power Vac on site. Soil inside the circulating plant moat has been vactored into a container. Area outside the circulating plant aganist the the north wall has been excavated out by (6ft x 4ft x 4ft) and approximately 1/2 inch of oil collecting in bottom of excavation. Consultant to be called in to make recommendations on further cleanup.

6/27/01 14:00 Lab analysis of the soils taken from outside the circulating plant indicate the following:

Lab Sequence Number: 01−04368 Description: SOIL−C.P. #3; GOWANUS S/S TPH by GC Method 8100 SAMPLE ID

RESULTS

Inside CP#3 Pump 1

3510 mg/Kg Inside CP#3 Pump 2

11800 mg/Kg Right CP#3 BCK Corner

2170 mg/Kg Right CP#3 Center

1750 mg/Kg Right CP#3 FRNT Corner 3280 mg/Kg

7/27/01 9:50 On 7/26 and 7/27, Allstate Power VAc cleaned the moats and diamond plate floors for CP1 through CP4.

update 7−30−01 0400 hrs chem lab results lsn # 01−07687 less than 1 ppm

4/24/02 8:48 Work Order 0000117378 − GOWANUS CP 3 CHANGEOUT DEFECTIVE PUMP has been completed and is waiting closure.

4/30/02 15:38 Allstate installed a monitoring well.

17−JUN−2002. Mary Moran, Area Planner, reports during inspection, historic contamination was found at CP3. The flooring consists of a removable metal plate over a subfloor. The bluestone was recently removed and replaced, 2 small pools are in place under pumps and marriage roll. This plant is not known to have a concrete moat. The substance is unknown, however it is likely to be identified as dielectric fluid. The source of contamination is unknown. The cause of contamination is unknown. A station remediation plan will be prepared to determine the priority order for addressing this and other historic incidents as per SSO's letter to NYSDEC region II dated February 20, 2002. Housekeeping and maintenance activities, as required, will be documented.

6/26/02 14:00 As per Maximo # 0000117378 on 7/28/01 change of the pump was completed.

~~~~~~~~~~~~~~~~~~~~~~~~~~ e2mis no. 135664 (sub):

LEO.GIRACE 337876 SENIOR SUB STA OPERATOR REPORTS THAT J.LOMBARDI SUB STA SUPERVISOR PERFORMED STATION INSPECTION & FOUND 3 LEAKES ON CIRCULATING PLANT C−3. WHICH FEEDS FEEDER 41. CONNECTING UNION P−2 & RELEIF VALVES 1 & 2, LEAKED ONTO BLUESTONE. APPROX A 1/2 GALLON OF NON PCB DIELECTRIC FLUID. CLEANUP IN PROGRESS WITH OIL ABSORBANT, PADS & SLICKS. BLUESTONE TO BE REMOVED &
~~~~~~~~~~~~~~~~~~~~~~~~~~

REPLACED.

Review of Shift Supervisor station inspection report shows oil leak on Pump #1. Also indicates repairs need to be made on RV1, RV2, EV1, and V4.

7/27/01 10:00 On 7/26 and 7/27 , Allstate Power Vac cleaned the moats and diamond plate floors for CP1 through CP4.

Assigned for repair Maximo # 0000099024

~~~~~~~~~~~~~~~~~~~~~~~~~~ e2mis no. 141553 (sub):

2−27−02 17:16HRS L. GIRACE (SSO) REPORTS, FOUND 1/2 PINT OF NON PCB FEEDER OIL ON BLUESTONE COMING FROM COOLING PLANT #3.

As per P. Vieira # 16791, the clean up supervisor, on 2/27/02 from 17:16− 19:00, had N. White # 37673 & R. Neville remove/recover any liquid/solid, used absorbents to remove any residual fluids and removed all visible traces of oil. The men excavated all contaminated soil/ bluestone and placed a drip pan at the source of the leak. Engineering control of placing 50 Gal. Instant containment pool underneath the pump causing the problem. the Maximo work order is 0000158779, also the pump will be monitored and cleaned weekly. Maximo to adress drainage system.

6/21/10 − changed Lead DEC to JMOCONNE (JOC)

8/3 added SSO report and sections as separate document to edocs; need update to emis and maximo − based on latest information, equipment associated with CP3 is still leaking; 2008 report of excavation conducted identifies that post−excavation samples were in excess of cleanup standards. needs additional investigation and remediation. (JOC)

11/22/16 ˇ Austin ˇ This spill report is being transferred from Joe O´Connell to Con Ed Unassigned − end

8/17/17 − Austin − The leaking pump was changed out, according to Maximo # 0000117378, on 6/26/02 − Con Ed initiated excavation on 12/10/08 in the subterranean soil floor vault of Circulating Pump # 3 at the Gowanus Substation. They removed the 12 bluestone layer and excavated down 4 feet to remove the contaminated soil − Post ex sampling showed that the residual contamination still exceeded the 10k action level guidance − Con Ed has indicated that any further excavation would compromise the structural integrity of the equipment and flooring around this sump − There are no sensitive environmental or subterranean receptors in the immediate vicinity of this substation, and the nearest waterway (Upper NY Bay) is at least a city block away from this facility. No further activity is warranted − See document files for further information, including EMIS 137787 Rev. 81, and the 2008 Remediation Summary Report − Spill closed − end

Material Spilled	Material Class	Quantity Spilled	Units	Quantity Recovered	Units	Resource(s) Affected
TRANSFORMER OIL	PETROLEUM	200.00	GALLONS	0.00	GALLONS	SOIL

Caller Remarks:

secondary cables on the transformer malfunctioned failed causing the transformer to leak.there was a delay in reporting it they had to wait for f.d. to put out fire

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT CONED STATES PCB CONCENTRATION ON RECORD AS NON−HAZARDOUS.

9/15/97 e−mail from ERT Lukshides: spill contained on barge.

CON ED E2MIS NOTES

The cause of the fire is unknown and because the fire could not be contained until approx. 3or so the notificaion as delayed to DEC... a small leak ws afound in the transformer. It could not be cleaned off until the transformer was grounded. Approx. 200 gals. of oil spilled into the moat which is primary contaiment,spill rail is secondary and hard boom is third containment.

Update: Feeders 42422 (barge 3) and 42424 (barge 4) tripped. Feeders were re−energized, which faulted resulting in an electrical

fire. Bleed−off valves of transformer banks 3 & 4 melted off resulting in transformer oil leakage into the primary containment area (moat).

DEC Investigator Remarks:

11/5/13−Vought−Received email from DEC Ketani that Jeff: Gregory Mathelier of NYCT just sent me the attached e−mail regarding the spill at the Jackie Gleason depot. This spill is currently unassigned. Also, it can not be made part of the present NYCT Consent Order. Please contact him to talk about this spill. Rafiel Attached to email was another email from NYCT Greg Mathelier (Ph:646−252−3470 Cell:646−879−1970 email:Gergory.Mathelier@nyct.com) that Raphael, This is to inform you that during excavation activities associated with the Apron Paving Repair work at the Jackie Gleason (JKG) Bus Depot strong odors, stained soil and floating product were encountered at a depth of 3' to 8' below grade. It is appropriate to mention that there is a UST, apparently placed in a concrete vault, juxtaposed to the section of the excavated area where contamination was observed. This UST is out−of−service and was not properly closed (water was apparently used to close the tank). There is no record for closure of this UST. The UST & Environmental Remediation Program has requested its Design Consultant to perform proper closure of this UST. D&B has also been requested to provide, under emergency response, preliminary investigation services for the contaminated area (further observations, fingerprinting of product, soil and groundwater sampling) while the excavation is open. At this time, volume of free product and extent of the contaminated soil has not yet be determined. This observation of contamination was not reported to the NYSDEC as a spill. Since there's a spill number (Spill #1306200) currently associated with a release of product in the discharge line trench running beneath the JKG apron and in the general area of the aforementioned excavation, I am proposing that this contamination/release be rolled over the existing Spill Number (Spill #1306200). An SSIWP that will entail the spill associated with the discharge line(s) and the aforementioned excavated area will be submitted to the NYSDEC for review. This site will be discussed further at the next Technical Meeting (11/14/13)Best.

11/5/13−Vought−Called NYCT Mathelier to find out more about field observations in order to determine if site is short term spill or should possibly be routed to DEC Ketani as part of Regional consistency effort to keep one PM in charge of same RP portfolio. Vought spoke to Mathelier and he noted that the original reason for the spill was in relation to a leak from a discharge line of which there are two sets (primary and secondary). The lines are to the dispensers and their are sumps in the apron and their was product on the sumps which came from the broken lines. Purpose of sumps is to provide access to lines and their is no water in sumps. Product in the sumps and not sure if soil was affected, They are doing soil borings along the discharge lines to delinate possible contamination. For all prior spills they followed the requirements of the Consent Order and their consultant was hired to design based on Consent Order.

11/5/13−Vought−Meeting with RSE, DEC Vought and DEC John and spill to be assigned to DEC Ketani as per John who will discuss with

Hussein upon his return to office. Spill temporarily assigned to Vought.

11/14/13 − Raphael Ketani. A meeting took place with Mr. Vought and myself to discuss the status of project management for the site. As I am handling 16 other NYCT bus depot sites, and as another new bus depot spill was just recently assigned to me, I agreed to accept this case and to be the project manager.

From the case notes above, it appears that a full soil and groundwater investigation is needed. I will bring this issue up at the NYCT−DEC monthly progress meeting today.

Staff from the NYCT informed the DEC that the investigation work plan is presently being written. Also, the elevation at the site is about 60 feet.

1/22/14 − Raphael Ketani. I reviewed the NYCT November 2013 Monthly Status Report. Information contained in the report regarding the site consisted of the following:

The contractor tested the fuel lines by pumping diesel fuel through them. Diesel fuel was observed to be leaking into a leak detection manhole from the secondary containment piping and apparently being discharged to surrounding soil. In addition, diesel fuel was observed to be leaking from a vent in the secondary containment piping inside the Depot building.

The existing underground piping associated with the diesel fuel system at the Depot consists of two double−walled lines (primary and secondary) that extend from the pump room adjacent to the USTs to the fuel filter inside the Depot building where the lines extend above grade to the fuel filters. After the filters, the two double−walled lines extend underground to two sets of diesel dispensers.

NYCT retained Franklin to remove the pooled oil from the secondary containment lines and conduct tightness testing on the underground primary and secondary lines. Based upon the results of Franklin´s testing, the underground lines from the pump room adjacent to the tanks to the fuel filters inside the Depot will be replaced by running new double−contained piping through the existing secondary lines (i.e., using the existing secondary lines as ˆsleeves˜). New aboveground piping will be installed inside the Depot building from the fuel filters to the diesel dispensers. The installation of the new underground lines will require excavation at elbows and other bends in the existing piping system to facilitate installation of the new piping within the existing secondary containment ˆsleeves.˜ NYCT CPM requested that D&B (Dvirka & Bartilucci) prepare an SSIWP for NYSDEC−approval to conduct soil screening and sampling during these excavation activities as well as a boring investigation program to delineate the nature and extent of petroleum contamination associated with the spill. A Task Order for development of the SSIWP was submitted to NYCT during the previous reporting period and D&B/NYCT CPM are currently finalizing this Task Order.

A general contractor observed apparent petroleum contamination during a concrete slab repair and replacement project being conducted at the Jackie Gleason Bus Depot. As a result, representatives of NYCT CPM and D&B conducted a site visit on October 9, 2013. The area of the excavation was in the vicinity of the above−referenced diesel lines as well as a UST that reportedly had been previously closed in−place. During the October 9, 2013 site inspection between representatives from D&B and NYCT, the UST was gauged and found to contain water, indicating that it may have been improperly closed. NYCT CPM will task D&B to investigate whether the tank was properly closed, properly close the tank in−place (if determined to be necessary) and investigate the nature and extent of petroleum contamination observed in the excavation areas by the general contractor conducting the concrete slab repair and replacement project. D&B and NYCT are currently finalizing a Task Order for this scope of work.

5/15/14 − Raphael Ketani. A site meeting took place today. In attendance were Gregory Mathelier (cell (646) 765−0336) and Cadecia Josephs of NYCT System Safety, Stephen Taus of Dvirka & Bartilucci (consultant to NYCT System Safety), Hassan Hussein (Environmental Engineer III and head of Unit C in Region 2) and myself. The meeting concerned the two locations where the diesel fuel piping had leaked. One location was in the apron to the bus depot (east side) and the other was inside the northern part of the depot across from the diesel fuel dispensers. The cover to the sump in the apron was removed and one could see a little water with a sheen on it. The oil odors coming from the sump were noticeable, but light. The discussion then revolved around the presence of an abandoned UST next to the CPG (compressed natural gas) fueling station and the closed in place USTs near the diesel fuel pumping facility. It was mentioned that the area around the UST next to the CPG fueling station would be investigated. However, Mr. Taus commented that, owing to the tank's proximity to the fueling building, the removal of the UST may not be possible. Any contaminated soil that may be found will probably be chemically treated. Mr. Mathelier showed Mr. Hussein and I a work plan that had been produced by Dvirka & Bartilucci for doing soil borings along the entire length of the diesel fuel delivery lines from the pumping facility to the locations where the second leak was found. Mr. Taus stated that the boring would continue at each location until clean soil is reached or to the water table (about 60 feet below grade) − whichever comes first. The work plan had a map showing the proposed locations for doing soil borings. I commented that if contaminated soil is found, then step−out soil borings should also be done. Mr. Mathelier and Mr. Taus agreed to do this.

7/17/14 − Raphael Ketani. I reviewed the July 2014 Site Specific Investigation Work Plan dated 7/16/14 for the site. The objective of the plan is to assess the soil and groundwater contamination within the building and in the northeast part of the depot and to assess whether the 4,000 gal. UST next to the Compressed Natural Gas builidng was abandoned properly.

Diesel fuel was found in the leak detection manhole to the east of the depot building. Also, diesel fuel was found to be leaking from the vent in the secondary containment piping at the water separators inside of the depot and south of the dispenser island. On 9/13/13, integrity tests were performed for the underground primary and secondary fuel discharge lines. The lines failed their tests. On 10/9/13, soil contamination was found during the exacavation of the apron east of the depot in close proximity to the 4,000 gal. UST.

Soil borings will be conducted by the direct push method and wells will be installed by auger. A geophysical survey will be conducted before any work takes place in order to find the utilities. A total of 18 borings will be performed along the piping from the UST field to the dispensers inside of the depot. Three borings will be performed next to the 4,000 gal. UST. Borings JGSB−1 to JGSB−17 will be drilled to 15 feet bgs. Borings JGSB−18 to JGSB−21 will be drilled to 20 feet bgs. If contamination is found at the final depths, then the borings will be advanced further to the level of clean soil. Also, additional borings may be performed if contamination is found in order to delineate the area affected. The soil will be sampled every five feet and the samples will be tested via methods 8260 and 8270. PID screening of the samples will take place in the field.

Groundwater flow is to the west. Three wells will be installed southeast of the depot building. Two will be downgradient of the leak detection manhole and one will be upgradient. As the water table is believed to be about 70 feet bgs, the wells will be screened 5 feet above the water table and 10 feet below. Well development will take place 48 hours after well construction. Groundwater sampling will take place 1 week after well development with low flow pumps. The samples will be processed via methods 8260 and 8270. If product is present, then it will be collected.

The concrete slab covering the 4,000 gal. UST will be removed and the tank will be uncovered. If it is found that the tank was not properly abandoned in place, then it will be abandoned in accordance with DEC regulations. The tank will be cleaned out. Then soil samples will be taken below the tank. NYCT does not intend to remove the tank as this would destabilize the CNG building. Instead, the tank will be filled with sand. After all of the work has been completed and the analytical results have been

received, then a closer/investigation report will be submitted to the DEC.

I found the report to be acceptable, except I will strongly recommend to the NYCT that they wait at least a month before sampling the wells in order to allow the disturbed groundwater to leave the area.

7/18/14 − Raphael Ketani. A draft approval letter was submitted to Hassan Hussein, EE III and head of Unit C in Region 2. Mr. Hussein approved the letter and it was sent to the NYCT today.

1/22/15 − Raphael Ketani. I reviewed the Dvirka & Bartilucci 10/10/14 Underground Storage Tank Tank Farm and Driveway Apron Soil Boring Investigation Report. The investigation involved the installation of 3 borings next to the location where one of the valve boxes for the diesel fuel line had contained fuel. The investigation also involved the installation of 6 other soil borings just north of the UST tank farm − making a total of 9 borings. The borings were drilled to 15 or 20 feet bgs. The soil sampling, screening and oversight work was performed during June 9 to June 11, 2014. Red brown to brown sandy soil with fines was encountered. No contamination was found and so the borings were not advanced further. All of the soil samples were completely non−detect for VOCs and SVOCs.

Next, I reviewed the Dvirka & Bartilucci January 2015 Site Specific Investigation Work Plan dated 1/6/15. The purpose of the proposed work is to investigation the presence and extent of any soil and groundwater contamination that is associated with the UST tank farm to the southeast of the depot building. The USTs have been out of service since late 2013. They will be replaced with several larger ASTs. Eighteen (18) borings and 3 groundwater probes will be performed. Soil and groundwater samples will be collected. The borings will take place only around the tank farm and are scheduled to descend to 17 feet, or until the end of contamination is reached. Groundwater is presumed to be at 60 feet bgs. The samples will be analyzed via methods 8260 (VOCs) and 8270 (SVOCs). In addition to the investigation of this tank farm, a concurrent investigation will take place of the large UST near the CNG facility (approved July 2014 SSIWP). A report containing the findings will be submitted sometime afterwards.

I drafted a letter approving the Underground Storage Tank Tank Farm and Driveway Apron Soil Boring Investigation Report and the SSIWP and submitted it to Hassan Hussein, EE III and head of Unit C, for his approval.

1/28/15 − Raphael Ketani. Mr. Hussein approved the letter and it was sent to Gregory Mathelier (Construction Administrator, Capital Management Program, MTA−NYCT) by email and by regular mail.

4/8/15 − Raphael Ketani. I received the following email from Mr. Mathelier:

Investigation activities for Jackie Gleason Bus Depot (Spill No. 1306200). These activities are being performed as per the DEC approved SSIWP for the Jackie Gleason Bus Depot. They started on 3/23/15 and shall be completed on 4/28/15 (with work hours from 7:30AM to 2:30PM, Monday to Friday). To date, the soil borings around the UST Farm have been installed with no evidence of contamination. Geoprobes remain to be installed in the area of the UST Farm to evaluate the groundwater condition around the farm. Investigation activities around the assumed improperly closed UST and the discharge line are next on the schedule.

Later, Mr. Mathelier sent me a followup email:

As you´re aware the investigation activities at the Jackie Gleason Bus Depot consists of three phases: 1) Investigation around the UST Farm to allow for future permanent closure of these USTs (removal or closure−in−place) 2) Closure investigation for what is assumed to be an improperly closed UST along the CNG building 3) Investigation along the fuel discharge line (from the

Manifold Bldg. to the fuel dispenser area inside the depot) (this spill caused the opening of Spill No.1306200 by the NYSDEC)

Investigation activities started with Phase 1 on 3/23/15. To date, the soil borings around the UST Farm have been installed with no evidence of contamination. Geoprobe installation remains to be completed in the area of the UST Farm to evaluate the groundwater condition around the farm. Activities for Phase 1 are still in progress. Phase 2 activities started on 4/6/15 and are scheduled to be completed by 5/5/15 (if the UST is found to be closed improperly, D&B will be tasked to perform proper closure−in−place of the UST under a separate task/work order which may further the completion date for Phase 2). The bulk of the investigation associated with Phase 3 will not take place until the end of this week (4/9/15) and is slated for completion on 4/22/15.

For Phases 2 and 3, work will take place everyday and at times concurrently. It will be your choosing to select a day (days) to visit the site (between today and 5/5/15). Please note that based on this schedule, Phase 3 may be completed before Phase 2. Also please note that the completion date of 4/28/15 mentioned in the previous email shall be revised to 5/5/15. Your name will be listed as a site visitor to facilitate your visit (proper PPE will be required: safety shoes, safety vest and hard hat).

This investigation time frame of 3/23/15 to 5/5/15 does not include the well development, groundwater sampling and well monitoring events scheduled to take place after completion of the investigation activities.

4/9/15 − Raphael Ketani. I made an unannouced site visit today. The purpose for my visit was to see the results of the soil borings that would be conducted next to the closed in place 10,000 gal. UST, which is on the south side and next to the natural gas refueling station. I arrived there and met Paul Barusich, environmental scientist with Dvirka & Bartilucci (516) 364−9890/pbarusich@db−eng.com. His tasks were to observe the hand clearing of the top five feet of the soil, observe soil coring and sample any contaminated soil. Also, present were Cadecia Josephs of the NYCT and drilling staff from AARCO.

The drilling crew chopped through and hand augered the five feet of soil just below the macadam pavement. The first few feet brought up dark sandy soil with a petroleum odor. Mr. Barusich tested the soil with his PID meter and it gave a reading of 0.3 to 0.6 ppm of total volatiles. After this, they encountered a mostly yellow brown sandy soil with a little red tinting. This yellow brown soil didn't have any odors nor any PID hits. Having not found any utilities, the drilling crew set up the geoprobe for doing the borings down to 20 feet below grade.

Two borings were performed at this location, a south boring and a north boring. They were separated by about 8 feet. In both instances, a couple of feet of fined grained, clayey, silty, glaciolacustrine soil was encountered. The soil was light reddish brown with common pebbles of different rock types. This soil was stiff with a massive appearance, but dry. Wetted samples made poor threads suggesting low plasticity. Given the density and slight plasticity of the glaciolacustrine soil, the hydraulic conductivity was estimated to be very low to low. Following this to the total depth of 20 feet was a dense, medium yellow brown sandy soil with some silt. Pebbles were rarely encountered. Though the cores were dense, the soil broke up easily when touched. There was no moisture and the estimated hydraulic conductivity, when considering the soil density alone, was assumed to be moderate to high. Mr. Barusich collected a few soil samples from the top of the sandy soil near where it met the glaciolacustrine soil. No odors were detected in the sandy soil.

Not long after this work was completed, Mr. Mathelier arrived at the site and asked to talk about the soil boring work that had taken place around the tank field at the northeast part of the site. He stated that all of the planned borings had been done. However, they were not able to reach their target depth at a few locations due to refusal at 58 to 60 feet. He said that he thought a large boulder was present at these locations. I explained to Mr. Mathelier that this sounded like a cobble−boulder

layer was present at this horizon. Mr. Mathelier then stated that he had wanted to take a groundwater grab sample, but he didn't know where he could do it given the refusal locations. He added that DER−10 stated the boring locations could not be more than 10 feet from the possible spill source. I told asked him in which direction groundwater was estimated to be flowing. He showed me a map and it depicted a northeast to southwest flow − essentially to the New York City harbor. He then showed me one soil boring location which had been done behind the fuel pump house (between the railyard and the pump house). I told him that since this location is directly downgradient to the direction of flow and since it is only about 20 feet away from the tanks, then it is a good location to drill down and collect a groundwater sample. Mr. Mathelier stated that this would be done. After this, the discussions and my site visit ended.

Later, Mr. Mathelier sent the below email to Mr. Tauss of Dvirka & Bartilucci and carbon copied me:

Please proceed with the installation of a groundwater probe at soil boring JGTB−17, as agreed between NYCT and Raphael Ketani (NYSDEC) during his site visit today at Jackie Gleason Bus Depot. The purpose of this groundwater probe is to collect a groundwater sample downgradient of the UST Tank Farm with respect to regional groundwater flow directions as requested per NYSDEC´s DER−10. The proposed groundwater probe JGGP−01 could not be completed due to subsurface refusal (three other locations have been tested for installation of this downgradient groundwater probe, but could not be completed for the same reason). The groundwater probe at JGTB−17 is to replace JGGP−01.

5/4/15 − Raphael Ketani. I received an email from Mr. Mathelier (718) 613−0029/ cell (646) 879−1970 on 5/1/15 stating that the contractor was having a lot of difficulty installing JGMW−2 and was ultimately unsuccessful. He stated that the problem was the many boulders in the glacial till. Mr. Mathelier asked whether the NYCT could forego installing JGMW−3, which is nearby. I replied today by email stating that the DEC requires that the NYCT find another system for doing soil borings and installing wells. I suggested using augers.

6/15/15 − Raphael Ketani. Mr. Mathelier sent me the following email update on 6/12/15 regarding work at the site along with proposed work plans for installing a recovery well in the 4,000 gal. UST vault and conducting additional soil borings around a formerly excavated area next to the vault:

The potentially improperly closed UST is one of ten(10) 4,000−gallon USTs existing within a UST vault located immediately south of the CNG building, to the east of the Depot building. As previously discussed, the majority of the vault is located beneath the CNG building and is therefore not accessible.

D&B and its subcontractor, The Franklin Company Contractors, Inc. (Franklin), initiated field activities associated with this investigation on June 4, 2015. Several unanticipated field conditions were encountered, resulting in two separate but adjacent work areas, as depicted in the picture attached above and as detailed below:

UST Vault: this area comprises the UST and vault area, as initially detailed in the NYSDEC−approved SSIWP.

Gazebo Excavation: this area comprises a shallow excavation area, previously created by a separate NYCT contractor (Gazebo) as part of a Depot apron repaving/restoration program, immediately adjacent to the south and east walls of the UST vault.

Provided below is a summary of work completed to date as well as a proposed plan to move the overall investigation forward.

UST Vault

Upon removing the top slab of the UST vault, approximately 2 feet of petroleum−impacted soil/gravel was observed on top of the concrete−encased UST within the vault (the majority of the UST was encased in concrete).

The petroleum−impacted soil/gravel was excavated down to the top of the UST/concrete encasement and this material was disposed off−site by Franklin as petroleum−impacted material. All fuel oil piping within the vault was drained, divorced and capped by Franklin. All tank manways were removed and disposed of. Upon accessing the interior of the UST, it was observed that the tank had been previously filled with concrete slurry. As a result, it is assumed that this UST does not require cleaning/closure or further investigation.

However, based upon field observations, a small amount of oily water was observed to be seeping into the excavated portion of the UST vault from the soil/gravel layer existing within the inaccessible portions of the UST vault, located beneath the adjacent CNG building. The majority of the UST vault is beneath the CNG building and is not accessible. It is assumed that conditions similar to those observed within the accessible UST vault (i.e., approximately 2 feet of petroleum−impacted soil/gravel on top of concrete−encased USTs) also exist within the inaccessible portions of the UST vault beneath the CNG building and that storm water infiltrating the UST vault and contacting this impacted material is the source of the oily water observed to be seeping into the excavated portion of the UST vault.

As a result, it is recommended that the perimeter walls of the UST vault be left in−place to act as partial containment walls for any oily water that may accumulate within the UST vault. It is further recommended that an extraction point/monitoring well be installed within the accessible portion of the UST vault prior to backfilling with gravel and restoring the top slab. The extraction point/monitoring well could then be periodically monitored for the presence of water/oil and, if observed, removed via portable pump or vacuum truck. Based upon the results of this monitoring, a determination can be made whether any additional activities are warranted with respect to the UST vault. However, please note that since the majority of the vault is located beneath the CNG building, where compressed natural gas is dispensed for NYCT´s bus fleet, access to and drilling within the remaining portion of the UST vault may not be feasible.

Attached above is a location and detail sketch of the proposed extraction/monitoring well. As the UST vault will effectively act as a large ˆsump˜ containing oil and water seeping out from under the CNG building, the proposed extraction point/monitoring well should be fully screened to allow the vault to be completely emptied, to the extent practical, when extracting from the well.

Gazebo Excavation

During completion of the above−referenced field activities, apparent petroleum contamination was observed in Gazebo´s excavation area outside of the UST vault. It should be noted that this excavation area is a narrow trench extending from the UST vault area into a busy bus traffic lane. D&B´s field representative initially screened the soil within the Gazebo excavation with a photoionization detector (PID) and identified elevated PID readings and petroleum odors.

In order to take advantage of the open Gazebo excavation area while already on−site, Franklin excavated soil within Gazebo´s excavation area to a depth of approximately 4 to 5 feet below grade in an attempt to remediate this identified petroleum contamination. The excavation was limited to a depth of 4 to 5 feet below grade for worker safety and to avoid the need to install sheeting/shoring within this narrow excavation area. In addition, a subsurface utility line was observed within the

trench at approximately 5 feet below grade, limiting the ability to complete further excavation. All soil removed during this excavation was properly disposed off−site as petroleum−impacted material.

Upon reaching a depth of 4 to 5 feet within the Gazebo excavation, petroleum−odors and elevated PID readings were observed within the excavation. A maximum PID reading of 668 ppm was observed at 2 to 3 feet below grade along the south sidewall, and PID readings of between 304 to 315 ppm were observed along the bottom of the excavation at approximately 4 to 5 feet below grade. As the excavation had already reached approximately 4 to 5 feet in depth and soil contamination was still observed at these depths, D&B recommended that work activities be halted and the area be secured so that the horizontal and vertical limits of the contamination could be delineated via a soil boring program. Any further excavation, or possibly an alternate remedial strategy, would then be evaluated based on the results of the soil boring program.

In order to delineate this contamination, D&B is proposing to advance 9 soil borings (JGSB−01A through JGSB−09A) immediately within and surrounding Gazebo´s excavation area, which is further detailed below. However, it should first be noted that, based on the NYSDEC−approved SSIWP, D&B previously advanced 3 soil borings (JGSB−19, JGSB−20 and JGSB−21) and installed 1 monitoring well (JGMW−3) in close proximity to Gazebo´s excavation. These borings were all installed approximately 9 feet from the edge of Gazebo´s excavation to a depth of approximately 20 feet below grade. Visible petroleum impacts and elevated PID readings were not observed at these boring locations and all soil samples collected from these borings meet CP−51 criteria. It should be noted that JGSB−21 was completed as a monitoring well (JGMW−3) and groundwater was observed at approximately 70 feet below grade in this location. Product has not been observed at the water table in this location.

In order to further delineate the contamination observed within the Gazebo excavation, D&B is proposing to install soil borings JGSB−01A through JGSB−09A utilizing a guzzler unit. Soil borings JGSB−01A through JGSB−03A will be installed within Gazebo´s excavation. Soil borings JGSB−04A through JGSB−07A will be installed south of Gazebo´s excavation area between the current edge of excavation and ˆclean˜ soil boring locations JGSB−20 and JGSB−21. Finally, soil borings JGSB−08A and JGSB−09A will be installed east of the current edge of excavation and north of ˆclean˜ soil boring location JGSB−19. A guzzler unit is being proposed for this effort as this is the safest boring technology to be utilized within the open and narrow Gazebo excavation. In addition, installing these several shallow soil borings utilizing a guzzler unit will likely be more efficient and safer than utilizing more conventional drilling technologies, such as direct−push or auger−style technologies, given the difficult drilling conditions known to exist at the site (i.e., gravel, cobbles and several nearby below grade utilities). Attached is a sample location map showing the proposed location of the additional soil borings, as well as the previously completed ˆclean˜ boring locations for reference.

All soil borings will be installed as deep as is safely possible, though it is anticipated that the soil borings will generally reach a depth of approximately 12 to 15 feet below grade. Soil sampling and logging will be completed by hand at approximate 6 to 12−inch intervals while each soil boring is being advanced. Each soil boring will be logged by D&B for geology, inspected for evidence of contamination (e.g., staining or petroleum odors) and screened for organic vapors utilizing a PID. One soil sample will be collected for laboratory analysis from the interval of greatest contamination (i.e., visible staining, odors or PID readings) with a second sample collected at the terminal 2−foot interval. In the event that contamination is identified at the terminal depth of a given soil boring, that soil boring will continue, if feasible, until contamination is no longer present and the second sample will be collected for laboratory analysis from the 2−foot interval where contamination is no longer present. If no visible contamination or significant PID readings are detected in a given soil boring, then one soil sample will be collected for laboratory analysis from the terminal 2−foot interval.

Results from this investigation will be reviewed. Once the contamination is delineated, a plan will be proposed for either

excavating the remaining contamination or pursuing an alternate remedial strategy, depending upon the horizontal and vertical extents of identified soil contamination. In addition, data and reporting associated with these activities will be incorporated into the investigation report for the overall site investigation.
−−−

service tank field on the south side of the site (taken out of service during late 2013). Contaminated soil was found next to the tank vault for the possibly improperly closed UST. Lastly, diesel fuel had leaked from a secondary containment pipe within the depot building. Inspections during September and October of 2013 identified 2 potential areas of contamination − the diesel fuel discharge line and the possibly improperly closed UST next to the CNG building. The primary and secondary fuel discharge lines were tested on September 13, 2013 and failed the integrity tests.

On October 8, 2013, a contractor observed petroleum contamination during excavation activities as part of the driveway apron concrete slab repair project. The site was inspected on October 9, 2013 and it was confirmed that petroleum contaminated soil was present near the possibly improperly closed UST tank vault. According to the available information, all of the USTs in this vault had been closed in place. During October 2013, the one accessible UST was inspected and was found to contain water. Petroleum was also found in 2 leak detection wells south of the vault. On October 31, 2013, an attempt was made to remove all of the liquid in the accessible UST. Also on this date, product was removed from the south leak detection well.

A soil investigation took place involving a total of 26 borings and 3 wells. Soil and groundwater samples were collected where possible and where contamination was identified. A total of 14 borings and 3 wells were installed next to the discharge lines and 12 borings were installed next to the accessible UST. Two feet of petroleum contaminated soil was excavated from the vault and 4 to 5 feet of petroleum contaminated soil was excavated from the Gazebo area next to the vault. All of the field work was completed during April and October of 2015 in accordance with the DEC approved July 2014 SSIWP.

Soil borings JGSB−01 to 03 and 06 to 16 were installed to 15 feet to 20 feet bgs. The soil encountered was light brown glacial till at the top and graded at depth to dark brown till which was followed by reddish brown fine to medium, subangular, sandy till with silt, gravel and cobbles. Soil samples were collected from each boring where contamination was present. Wells JGMW−01 to JGMW−03 (JGSB−21) were installed and only the location of JGMW−03 had contaminated soil (1 to 4 foot interval). JGSB−19 to JGSB−21 were installed to 20 feet below grade and outside the limits of the UST vault. An additional 9 borings were installed (JGSB−01A to JGSB−09A) within and to the south and east of the Gazebo area excavation. The completion depths were 7.5 to 15 feet bgs. Soil samples were collected from each boring.

In consideration of all of the borings and samples, the majority of the contamination was found in the interval from 1 foot to 7.5 feet below grade. A number of samples were entirely non−detect for VOCs. Those samples having contamination generally had results that were below the CP−51 unrestricted residential soil standards. There were a very small number of VOC exceedences and these were only slightly above the standards. JGSB−08 and JGSB−12 (near the fuel discharge lines) had petroleum odors. There were also low PID detections to 21.9 ppm at the locations of JGSB−07, JGSB−08, JGSB−12 and JGSB−13. In the Gazebo area, stains and/or odors were discovered in samples from JGSB−01A to JGSB−03A and JGSB−05A to JGSB−09A. Shallow samples from the southern part of the area had greater staining and odors. PID detections were from non−detect to a high of 399 ppm at the 1 to 3 foot interval from JGSB−07A.

Groundwater was determined to be at 70 feet bgs. JGMW−01 was installed to 70 feet and JGMW−02 and JGMW−03 were installed to 81 feet. All three wells were developed. Repeated attempts to sample JGMW−01 failed as there was never any water in the well. There was no free product in the wells and no signs of staining. The results for the groundwater samples were entirely non−detect for VOCs and SVOCs.

Staff at the NYCT stated that they recommended closing the spill case. The basis for this was the minimal petroleum contamination in the soil, the excavation of the higher soil contamination by trenching outside the tank vault, the excavation of the contaminated soil in the tank vault, the collection of the petroleum contaminated water from the closed UST and the product from

the leak detection well to the south and the absence of product and non−detect analytical results for the groundwater samples.

I approved the report and agreed that the data supported closure of the spill case. I closed the case effective 1/5/16. I sent a Spill Closure Letter to the NYCT.

10/3/16 − Raphael Ketani. I reviewed the Dvirka & Bartilucci Monitoring Well Decommissioning/Abandonment Letter Report dated 9/15/16. Groundwater monitoring wells JGMW−01 to JGMW−03 and one unnamed UST vault extraction well were decommissioned. VOC vapors were detected in JGMW−01 and JGMW−02, but were not significant. The wells were over−drilled and the cuttings were drummed and disposed of. The wells were grouted from the bottom up to within 5 feet of the surface. The risers were removed and grouting continued to within 1 foot of the surface. The former well locations were then restored to grade with concrete.

I approved the report and had no comments.

1/30/17 − Raphael Ketani. I reviewed the June 2016 NYCT Underground Storage Tank Farm Site Characterization Report for the Jackie Gleason Bus Depot dated 6/10/16. The tank farm contains 10 four thousand gallon USTs. An environmental investigation took place at this location during March and April of 2015. A spill closure investigation concerning the leaking fuel lines took place between April and July 2015. The results were included in the December 2015 Investigation/Spill Closure Report.

Sixteen soil borings and two groundwater probes were installed in the tank farm area and vicinity. Eleven borings were installed around the perimeter of the tank farm. Five borings were installed in the vicinity of the below grade fill and discharge piping south of the farm.

Evidence of soil contamination was not seen during the boring and sampling. A trace of sheen was found on the groundwater at JGGP−02. VOCs and SVOCs were not detected in the soil samples.

Groundwater was encountered at 70 feet bgs. Nine low to moderate (less than 1 ppb to 99 ppb) concentration VOCs were detected in the sample from JGGP−02. Four SVOCs were also detected, including 200 ppb of naphthalene. However, VOCs were not detected in groundwater samples collected from nearby monitoring wells.

The NYCT intends to replace the USTs with ASTs in the near future.

Spoke to Anthony Lara on site (cell 646−772−6381)

2/28/2003−Vought−Site visit by Vought on 2/28/2003. Spill caused by misdelivery to wrong address. PTC vacuum truck on−site. Spill came out of rotting fill pipe in alleyway behind buidling and sprayed over approximately 25’ x 7’ plot of soil. Spill also ran down stairwell and into basement of 881 5th Ave. Spill entered hole in concrete of unfinished basement bathroom. One endpoint sample needed in bathroom and three needed in rear alleyway (Vought communicated this to PTC−Isaac Mungra). Fill port cemented by PTC when Vought arrived on−site. For closure NYSDEC requires endpoint samples, analyticals and work invoice. Vought called super (Abe−718−258−6590) and left message stating above requirements.

3/5/2003−Vought−Received message from Mark Tibbe (NYSDEC) that adjacent bus depot complaining of odors. Vought called PTC to find cleanup status. Vought left message for PTC to call back.

3/6/2003−Vought−Spoke with Ray Lara and 30 drums of soil were removed. Endpoints samples will be taken today. PID used to monitor samples. Sending analyticals and disposal manifest to NYSDEC.

4/8/2003−Vought−Received message from Ray Lara. Vought returned call and left message for Ray to return call to NYSDEC.

1/7/04−Vought−Spill transferred from Vought to Austin.

01/27/04 − Sawyer − Spill transferred from Austin to Sawyer.

4/10/08 − Haggerty: reviewed Spill Closure Report prepared by Petroleum Tank Cleaners. The report consisted of 3 soil samples taken from the bottom of the excavation adjacent to the fill pipe where spill occurred. I spoke with Anthony Lara of Petroleum Tank Cleaners to discuss. I explained that this spill will not be closed until a soil sample is taken from the unfinished basement bathroom as Jeff Vought(R2) had previously instructed. He will get the sample and submit results.

6/10/08 − Haggerty: reviewed additional soil sample analyticals from the unfinished basement bathroom . Oil ran down stairs next to fill pipe into this bathroom and drained into a hole in the concrete floor. Anthony Lara (Petroleum Tank Cleaners) stated they collected the sample 2ft below the concrete floor using a hand auger. Analyticals results for 3 excavation bottom samples and the bathroom floor sample meet standards. Spill closed

REPAIRS WILL BE MADE 6/11. CLEAN UP WILL BE DONE BY AMCCO.

DEC Investigator Remarks:

6/10/99 @ 2:20PM CALL STATION # 718 499−8788 PUMPS ARE SLOW SPOKE TO JUNIOR − STAND− IN MANAGER REPAIRS TOMORROW.

11/24/03 Reassigned from Vought to Foley. 12/1/03 Received Feasibility report for Soil Vapor Extraction. 12/3/03 Received Feasibility report for Multi−Phase Extraction.

4/6/04 Received RAP. SVE not an option due to low permeability soils limiting air movement. Multi−phase extraction is best option. LNAPL has consistently been identified since May 2002. Substantial contaminant mass remains in the vadose and saturated zones. Area of concern is located to the west and north of the kiosk building(area of former USTs) from approx 10’bgs to the water table at 20’bgs. This is likely to be the source of continued groundwater contamination. 19 Hg resulted in 90scfm over 43ft radius (ROI) from extraction well MW−3. In depressing water table, air flow and thus volitiliztion and subsequent

extraction of VOCs will be achieved. Average liquid recovery rate of 1.33gpm for GW extraction and 0.04gpm for LNAPL.

Based on 87,088ft3 of soil (radius=43ft, depth=15ft), and an average concentration of 310,255ppb total VOCs, an estimated mass is 2007lbs total VOCs in soil. Based on 0.77ft of LNAPL over 2,826ft2 at an avg porosity of 0.35 and conservative LNAPL saturation of 0.5, the estimated mass of LNAPL is 18,999lbs.

Estimated that the proposed MPE can be installed and running by April 2004 upon approval.

4/7/04 Stip emailed and mailed to C. Wein and A. Lapine for use of multi−phase extraction system.

4/8/04 A. Lapine − trenching to begin as early as next week.

4/28/04 Copy of signed stipulation received with request to extend deadline to 90days from effective date to install multi−phase extraction system.

4/29/04 Stip fully executed by T. Kunkel.

5/7/04 During portfolio meeting it was discussed that this site is under redevelopment. Potential buyers will be building a self−storage facility. Dual phase system installation is in progress. Citgo station adjacent to property(now a Dunkin Donuts).

1Q04− 0.98' LNAPL in MW−1, 1.83' in MW−3 and 1.4' in MW−9. BTEX from ND(MW−11) to 121500ppb(MW−9). MTBE from 12ppb(MW−6) to 36600ppb(MW−8).

2Q04− 0.91' LNAPL in MW−1, 0.89' in MW−3, 0.45' in MW−9, 0.23' in MW−14. BTEX from ND(MW−5,6,11,12) to 90750ppb(MW−13). MTBE from 2ppb(MW−2) to 79200ppb(MW−15).

3Q04− 0.30' LNAPL in MW−1. BTEX from ND(MW−5,6,11,12) to 42520ppb(MW−7). MTBE from 3ppb(MW−6) to 63800ppb(MW−8).

4Q04− 0.75' LNAPL in MW−1. BTEX from ND(MW−11,12) to 9830ppb(MW−7). MTBE from 91ppb(MW−11)to 47900ppb(MW−10).

4/27/05 Portfolio meeting− MPE system running. 5 extraction wells on−site. Currently running 4 of 5 due to the cat−ox treatment being overwhelmed.

11/9/05 Reviewed the quarterly reports dated October 3 and 17,2005. Nine wells were sampled on 1/26/05 and ten on 4/26/05. MPE system operating. 0.38 ft LNAPL in MW1 during first quarter, but no free product present during the second quarter. Max BTEX 48096ppb(MW−1) and max MTBE 32900ppb(MW−10).

11/25/06 3Q05− DTW 16.3−22.75'bgs. BTEX from ND(MW−11) to 55029ppb(MW−1). MTBE from 1ppb(MW−11) to 17800ppb(MW−2).

3/16/06 Met with BP and Delta. Source removed 2002. MPE active. Estimated 14000lbs total VOCs with 2368lbs removed so far.

5/1/06 4Q05 − DTW 15.42−22.35'bgs. BTEX from ND(MW−11, MW−12) to 14106ppb(MW−1). MTBE from 0.4ppb(MW−4) to 8340ppb(MW−2). MW−3,9,13,14,15 were not sampled b/c of system operation.

6/8/2006 − Feng − project reassigned to RJFeng. (RJF)

7/27/2006 − Feng − Quarterly Monitoring Report, 1Q2006, 5/25/2006, submitted by Delta. The site is former BP Station. As of sampling on 1/24/2006, groundwater flows to west−northest at the depth of 15.94' to 22.63' bg. 10 monitoring wells were gauged and sampled. W−1, 8,001 ppb BTEX (8.2J ppb B, 203 ppb T, 1,220 ppb E, 6,570 ppb X), 72.6 ppb MTBE. W−2, 307 ppb BTEX (167 ppb B, 49.2 ppb T, 40.9 ppb E, 50.2 ppb X), 391 ppb MTBE. W−4, BTEX ND, 2.1 ppb MTBE. W−5, BTEX ND, 20.3 ppb MTBE. W−6, BTEX ND, less than 1 ppb MTBE. W−7, 140 ppb BTEX (10.3 ppb B, 5.9 ppb T, 44.5 ppb E, 78.8 ppb X), 514 ppb MTBE. W−8, 13.42 ppb BTEX, 452 ppb MTBE. W−10, 4,236 ppb BTEX (219 ppb B, 1,330 ppb T, 847 ppb E, 1,840 ppb X), 2,780 ppb MTBE. W−11, BTEX ND, 19.2 ppb MTBE. W−12, BTEX ND, 5.5 ppb MTBE. Noted that MPE is running. (RJF)

9/19/2006 − Feng − Meet with Delta, FPM Group and lawyers for current and new owner of the property. The site will be developed as a 4−story hotel and construction will be started sometime in year 2007. There will be no basement. The excavation will be down to 3' to 5' bg for foundation. A siteplan of the proposed area that the future hotel will be occupied was submitted. When the construction starts, MW−4, MW−11 and MW−12 will be destroyed. 3 new monitoring wells will be installed outside the footprint of the building. And the system will be relocated to northeast of the property. During the relocation of the system, DEC requires continue monitoring of groundwater. DEC suggest that during the excavation for re−piping, cover the soil and excavation. FPM Group did 7 test pits within the new hotel footprint area and took soil samples down to 5', no smell, no VOCs detected and no tanks have been found. Vapor barrier will be installed. DEC requires active venting system to be installed too. DEC also requires 2 soil borings include soil and groundwater samples to be collected from the former pump islands within the new building footprint area. (RJF)

1/4/2007 − Feng − 2Q2006, 11/28/2006, by Delta. Groundwater sampled and gauged 5/8/2006. 10/15 monitoring wells. DTW 14.29' to 25.26' bg. Flows west−northwest. No LNAPL. MW−1, 13,064 ppb BTEX, 1,600 ppb MTBE. MW−2, 7,275 ppb BTEX, 4,270 ppb MTBE. MW−4, ND BTEX, 1.7 ppb MTBE. MW−5, 3.89 ppb BTEX, 27 ppb MTBE. MW−6, ND BTEX, 5l1 00b MTBE. MW−7, 3,228 ppb BTEX, 1,910 ppb MTBE. MW−8, 2,237 ppb BTEX, 2,600 ppb MTBE. MW−10, 120 ppb BTEX, 512 ppb MTBE. MW−11, BTEX ND, 49 ppb MTBE. MW−12, ND BTEX, 0.64 ppb MTBE. (RJF)

1/4/2007 − Feng − 3Q2006, 11/20/2006, by Delta. Groundwater sampled and gauged 8/1/2006. 10/15 monitoring wells. DTW 15.23' to 21.74' bg. Flows West−northwest. No LNAPL. MW−1, 1,194 ppb BTEX, 7.5 ppb MTBE. MW−2, 560 ppb BTEX, 734 ppb MTBE. MW−4, ND BTEX, 0.52 ppb MTBE. MW−5, ND BTEX, 4.7 ppb MTBE. MW−6, 25.1 ppb BTEX, 52.7 ppb MTBE. MW−7, 5.91 ppb BTEX, 11.2 ppb MTBE. MW−8, 2.5 ppb BTEX, 91.6 ppb MTBE. MW−10, 5,240 ppb BTEX, 361 ppb MTBE. MW−11, ND BTEX, 0.83 ppb MTBE. MW−12, ND BTEX, 5.5 ppb MTBE. (RJF)

5/11/2007 − Feng − 4Q2006, 3/6/2007. Groundwater sampled and gauged 10/25/2006. 9/15 monitoring wells. DTW 16.19' to 22.19' bg. Flows to north. No LNAPL. MW−1, BTEX ND, 4.6 ppb MTBE. MW−2, 28.7 ppb BTEX, 111 ppb MTBE. MW−4 was not sampled. MW−5, BTEX ND, 1.4 ppb MTBE. MW−6, BTEX ND, 1.3 ppb MTBE. MW−7, 1.8 ppb BTEX, 2.5 ppb MTBE. MW−8, BTEX ND, 51.4 ppb MTBE. MW−10, 33.1 ppb BTEX, 26.1 ppb MTBE. MW−11, BTEX ND, less than 1 ppb MTBE. MW−12, BTEX ND, 7.7 ppb MTBE.

5/11/2007 − Feng − MPE O&M, 1Q2006, 1/9/2007. Influent Air sample 960 mg/m3 BTEX, recovery rate 0.183 lbs/hr. MTBE 57 mg/m3, recovery rate 0.0109 lbs/hr. Total recovered 287 lbs of total BTEX, 15.9 lbs of MTBE and 1,456 lbs of TPH after 422 hours of MPE system operation.

5/11/2007 − Feng − MPE O&M, 2Q2006, 1/9/2007. Influent Air sample 4/7/2006, 802 mg/m3 BTEX, recovery rate 0.171 lbs/hr, MTBE 74.3 mg/m3, recovery rate 0.0159 lbs/hr. Influent air sample 5/2/2006, 693 mg/m3 BTEX, recovery rate 0.122 lbs/hr, MTBE 50.8

mg/m3, recovery rate 0.00894 lbs/hr. Total recovered 319 lbs of total BTEX, 18.3 lbs of MTBE and 1,646 lbs of TPH after 581 hours of MPE system operation.

5/11/2007 − Feng − Reviewed the Comprehensive Environmental Site Assessment Report dated 3/7/2007, and the Exposure Assessment Report dated 3/20/2007, submitted by HydroTech on behalf of Reda Group. Groundwater samples indicated low contamination and no significant receptors of environmental concern were identified within the immediate site vicinity. HydroTech requested spill closure.

The request of spill closure is denied for the reasons: 1) The MPE system is still running and recovering. DEC usually will need 4−8 quarters of monitoring after the remedial system is shutdown to show no rebounds. 2) The monitoring reports (4Q2006) indicated BTEX concentration trend is fluctuating, the downward trend is not stable yet. (RJF)

7/23/2007 − Feng − 1Q2007, 6/13/2007. Groundwater sampled 1/8/2007. 9/15 monitoring wells were sampled. DTW 10.82' to 27' bg. Flows to north. No LNAPL. MW−1, 0.75 ppb BTEX, 4.1 ppb MTBE. MW−2, 356 ppb BTEX, 119 ppb MTBE. MW−4, not accessible. MW−5, ND. MW−6, ND. MW−7, 107 ppb BTEX, 12 ppb MTBE. MW−8, 3.6 ppb BTEX, 27.3 ppb MTBE. MW−10, 0.46 ppb BTEX, less than 1 ppb MTBE. MW−11, BTEX ND, 6.1 ppb MTBE. MW−12, BTEX ND, 4 ppb MTBE. (RJF)

11/13/2007 − Feng − Replied to Yash Saha (HydroTech) inquiry. There is still MPE system running onsite and it is still recovering, and it will need to have 1−2 years of monitoring after the shutdown of the system. So the site is not closing based on this condition.

If the site will be developed. Then a RAP addressing all the remaining contaminaiton (soil, soil gas, gw) will be submitted for approval. The approved RAP will be implemented prior to or during the contruction. (RJF)

12/17/2007 − Feng − 2Q2007, 8/23/2007. Vacant. The monitoring well network was gauged and sampled on 4/5/2007. The site is being remediated via the execution of Multi Phase Extraction events. Remediation events occurs at the site on a regular basis. 9/15 wells were gauged. DTW 17.12' to 21.44' bg. Flows to northwest. No LNAPL. 9/15 monitoring wells were sampled. BTEX range ND to 135 ppb (MW−2). MTBE range ND to 58.1 ppb (MW−2). (RJF)

1/8/2008 − Feng − Mark Robbin (HydroTech, 631−462−5866) called. The site will be developed. RAP with alternative groundwater remediation, soil excavation, and vapor mitigation design(vapor barrier and sub−slab venting system) will be submitted shortly. (RJF)

1/9/2008 − Feng − 3Q2007, 11/26/2007. Vacant. The monitoring well network was gauged and sampled on 7/17/2007. The site is being remediated via the execution of MPE events. 9/17 monitoring wells were gauged. DTW 16.73' to 20.31' bg. Flows to north. No LNAPL. 9 wells were sampled. BTEX range ND to 135 ppb (MW−2). MTBE range ND to 58.1 ppb (MW−2). (RJF)

3/7/2008 − Feng − Reviewed the architectural plans for the new building. The disign for vapor mitigation effort wasn't located. Email to P. Stewart (ACT) for vapor mitigation design and the basement information. (RJF)

3/7/2008 − Feng − Spoke to D. Greffenius (Delta). BP wanted to make sure the developer has enough finance support for the development before they would pull out the existing MPE system. P. Steward (ACT) has informed Delta that they got the demolition permit already. The MPE system would be pulled out in the next few weeks. BP will come up with remedial option for soil management and groundwater treatment. And may conduct EFR events on the MW−3 to remove product for a short term remediation.

(RJF)

3/20/2008 − Feng − eDoc Quarterly Monitoring Report 4Q2007 and 1Q2008. (RJF)

6/16/2008 − Feng − 4Q2008, 2/28/2008, by Delta. Vacant site. The monitoring wells network was gauged and sampled on 10/2/2007. The site is being reemdiated via the execution of MPE events. 10 out of 15 monitoring wells were gauged and sampled. DTW 17.1' to 21.03' bg. Flows to north. No LNAPL. BTEX range ND to 4,326 ppb (MW−2). MTBE range ND to 211 ppb (MW−2).

1Q2008, 3/6/2008, by Delta. Vacant. The monitoring wells network was gauged and sampled on 1/30/2008. The site is being remediated via the execution of the MPE events. 10 monitoring wells were gauged and sampled. DTW 15.54' to 21.1' bg. Flows to north. No LNAPL. BTEX range ND to 824 ppb (MW−2). MTBE range ND to 110 ppb (MW−2). (RJF)

6/18/2008 − Feng − Portfolio meeting with BP and Delta. The MPE system is pulled out and the station building and canopy are removed. Delta is submitting the IRAP within next 3 weeks. BP/Delta will contact Paul Steward (ACT) in preparing the IRAP. (RJF)

11/18/2008 − Meeting with developer, Levenbaum, ACT, Delta and BP (called in). Agreed on: 1) review historical data to where contamination was, what have been remediated, what will be left behind after the construction and what remediation should be planned. 2) make sure the vapor barrier is compatible with hydrocarbon. (RJF)

11/25/2008 − Met with David Greffenius (Delta). Delta reviewed the historical data and calcuated out that the contaminated soil found former SB−3 at 24 feet has been removed. Post excavation samples were taken B−1 to B−7. Lab results indicate soil contamination remains. Delta will excavate more on B−6 and B−7, the two middle sections. Delta will lay the infiltration pipes in the B−1 to B−5 area for future nutrients addtion. 6 soil boring were proposed in the 1−story area and will go down 11 to 16 feet from what it is. Monitoring wells will be installed in the parking lot area. Delta will submit a letter plan for all these. (RJF)

12/3/2008 − Reviewed the memo from In−Line Plastics, LC and the MSDS from Chevron Phillips Chemical Company LP that Paul Steward sent via email regarding the vapor barrier proposed for the new building. The vapor barrier is acceptable. Email to ACT, BP and Delta reminding them the MSDS of the vapor barrier indicating it may react with oxygen and strong oxidazing agents and this should be taken into account when consider post remediation options. (RJF)

12/17/2008 − Spoke with David Greffenius. The infiltration pipes were layed in the B−1 to B−5 sections and vapor barrier installed. Plan to pour foundation next week. The B−6 and B−7 sections were over excavated deeper down and endpoint samples were collected. Lab results are expected in a few days. (RJF)

12/18/2008 − visited the site and met with David Greffenius from Delta. Four schedule 40 PVC pipes were layed beneath the vapor barrier in the 2 sections near the back and the foundation was poured already. Half of the 2 middle sections was poured too. David said the middle 2 sections were over excavated 4−6 feet deeper and endpoint samples were taken, the results shall be back in a few days. 4 soil borings were done in the 1−story area. The portion near 4th Ave has not been excavated yet, but it might started in 3 weeks or 1 month. (RJF)

7/21/2009 − DEC received and reviewed the soil sampling results from the area of the site slated for construction of the one−story building portion. Analytical data indicated no VOCs exceeding criteria. DEC required installation of monitoring wells

to implement groundwater quality monitoring during and post−construction. Site plan with wells location will be submitted shortly. (RJF)

9/30/2009 − email from Delta. attached a PBS registration form for the discovered 12 abandoned USTs.

12/17/2009 − Investigation Work Plan, dated 12/17/2009, by ARCADIS. ARCADIS proposes 2 wells and 1 soil borings in the parking lot, 2 wells at the sidewalk of 26th Street. The utility survey initial resulst indicate that underground utilities beneath the sidewalk along 4th Ave would likely preclude the installation of borings and monitoring wells in that sidewalk.

3/18/2010 − Project Status letter, dated 3/18/2010, by ARCADIS. The Construction schedule has been delayed and that access to the 26th Street sidewalk to install 2 of 3 remaining proposed wells may not be possible until May. ARCADIS requests extension for completion of the site characterization report until 7/2010.

6/12/2010 − email from ARCADIS Mark − during our meeting a couple of weeks ago, you asked us to look into why no soil samples were collected beyond 15 feet (final well depth was 22 feet) at MW−17A. The drillers encountered cobbles from 10 to 15 feet and broke a part on the GeoProbe. A field decision was made to continue to auger to final depth and install the well.

10/29/10: This spill case transferred from R. Feng to J. Kolleeny. − JK

12/15/10: Reviewed Subsurface Hydrocarbon Assessment Rpt by ARCADIS, dated 9/30/10 (in eDocs). Rpt summarizes install'n of addt'l on− and off−site wells with soil & GW sampling. On−site wells MW−16A, MW−17A and MW−18A were installed in Jan. 2010; sidewalk wells MW−19A, MW−20A and MW−21A were installed in August 2010. Significant soil & GW contam were detected in wells MW−16A and MW−18A. Rpt concludes there are residual impacts beneath central & eastern portion of parking lot. Based on results, ARCADIS recommends ongoing quarterly GW monitoring, plus evaluation of remedial technologies, preparation of feasibility study and remedial action plan, and subsequent aggressive, targeted remediation. Due to limited space at site, they anticipate that remediation may involve injection of reagents into monitoring wells and infiltration lines installed under hotel foundation slab during construction. − J. Kolleeny

02/03/11: Reviewed 4th Quarter 2010 GW Monitoring Rpt by ARCADIS dated 1/19/11 (in eDocs). Rpt presents GW data for Oct 2010 showing residual GW contam in two wells: MW−16A had 29,000 ug/L total BTEX (up from 2,830 ug/L tBTEX when last sampled, in May 2010); MW−18A had 769 ug/L tBTEX (down from 3,050 ug/L when last sampled in May 2010). Rpt states that quarterly GW monitoring will continue, with next sampling event in Jan. 2011; also states that RAP is being prepared and will be submitted to DEC by end of Feb. 2011. After reviewing rpt, in late Jan. 2011 I spoke with Andrew Korik of ARCADIS about remedial options, he asked if chem ox injections into well MW−16A (since it's most upgradient contam well) would be acceptable; I said DEC would prefer that they not inject into monitoring well, as this could compromise future GW data from well. Andrew concurred after checking with his technical staff, that injecting into monitoring well is not acceptable. They will see if they can install injection well upgradient of MW−16A, in parking lot ramp; if not, they will explore other options. − JK

04/08/11: Reviewed 1st Quarter 2011 GW Mon & Analysis Rpt by ARCADIS, dated 3/9/11 (in eDocs). Rpt presents results of Jan. 2011 GW sampling, showing well MW−16A had 8,180 ug/L total BTEX (down from 29,000 ug/L (J) in Oct. 2010), MW−18A had 25,000 ug/L tBTEX and 470 ug/L MTBE (up from 769 ug/L and 14 ug/L, resp.), and MW−21A had 1,600 ug/L MTBE (down from 2,400 ug/L in Oct. 2010). Rpt states that quarterly GW mon will continue, and that a RAP is in preparation and will be submitted to DEC in March 2011. − J. Kolleeny

4/11/2011 − Spill transferred back to JFeng.

04/19/11: Reviewed Remedial Action Work Plan for Anaerobic Biological Oxidation, by ARCADIS dated 2/28/11 (in eDocs). RAWP proposes injection of sulfate to address residual GW contam at site, using 3 infiltration galleries installed beneath hotel foundation slab plus 3 new injection wells − one upgrade of well MW−16A in sidewalk along 4th Ave. and 2 on either site of MW−21A, in sidewalk along 25th Street. I sent approval letter (in eDocs) to Jon Armstrong of BP, cc's to Andrew Korik and Gene Choquette of ARCADIS. − J. Kolleeny

5/25/2011 − email from Andy Korik Here is notification that injection wells were installed at 764 4th Ave. Brooklyn. eDoc the report. JF

5/31/2011 − received quarterly report 2Q2011. eDoc. JF

7/12/2011 − Sulfate Injection Well Installation Notification, dated May 25, 2011, by ARCADIS. As per the approved RAWP, 2 sulfate injection wells IW−05 and IW−06 were installed during the week of May 16, 2011. IW−07 was not installed due to the proximity of subway infrasture beneath 4th Ave, the NYMTA would not permit installation of an injection well in the sidewalk along 4th Ave. Injection volumes at the previously installed injection gallery (IW−01 through IW−04) will be adjusted to compensate for the absence of IW−07. They submitted the Inventory of Injection Wells package to EPA on 5/5/2011. Will notify DEC a week prior any field work. JF

7/14/2011 − 2Q2011, 5/31/2011, by ARCADIS. The report summarize some details of the excavation for the development. The majority of the site footprint was over−excavated to approximately 20−25 feet below its previous grade at street level, and all previously existing on−site monitoring wells were destroyed. The northern portion of the site coinciding with the parking garage was backfilled to 8 feet below street level. During the excavation, 12 unregistered 550−gallon USTs were found. These tanks were promptly registered with NYSDEC, closed and removed. Approximately 592 tons of petroleum−impacted soil were excavated and disposed off site as part of the tank removal. A total of approximately 10,000 tons of soil was removed during the development. The developer installed vapor barrier and SSDS. In addition, 4 horizontal injection pipes were installed beneath the building foundation. These injection pipes are connected to vertical risers, which along the west side of the new hotel building.

The wells were gauged on April 4, 2011. NO LNAPL. DTW 12.16' to 20.63' bg. Fluctuation +/− less than one feet. Max BTEX 27,000 ug/L, MTBE 4,100 ug/L (MW−18A). Will continue quarterly monitoring. Remedial injection wells were installed in May and a report will be submitted. JF

5/8/12 − Raphael Ketani. Mr. Korik submitted a proposal to the DEC on 5/1/12 requesting to use sodium nitrate in place of sodium persulfate for treating the groundwater contamination at the site. After review by our technical staff, a number of comments and requests were submitted to me for forwarding to Mr. Korik. I put the comments and requests in a draft letter for the review of Hassan Hussein, EE III at Region 2 DEC.

In brief, the letter approved the use of sodium nitrate and requested bacteria culture information, dosing information, nitrate enriched groundwater management information, that the groundwater must be kept anoxic and a warning regarding the regulated use of sodium nitrate.

Mr. Hussein approved the letter and it was sent out today.

5/30/12 − Raphael Ketani. Earlier, Mr. Korik had sent me an ARCADIS 5/23/12 response letter to the Department's 5/7/12 conditional approval letter regarding the use of sodium nitrate in place of sodium persulfate. I reviewed the response letter which addressed the 7 comments the Department had made. Their responses were as follows:

1) ARCADIS sent a letter dated 2/29/12 to the EPA indicating that they will use sodium nitrate in place of the sodium persulfate. However, they haven't had a response from the EPA.

2) The amounts of sodium nitrate that will be on site will be less than the 400 pound limit. For this site, 180 lbs. of the material will be stored on site at any given time.

3) Dosing information was presented and was deemed appropriate.

4) Quantitative polymerase chain reaction was used to evaluate the presence of Dichloromonas species bacteria.

5) By using appropriate amounts of the sodium nitrate chemical, the nitrate concentrations will be maintained in order to keep the groundwater environment anoxic.

6) The push pull method will be used to extract any groundwater. This method doesn't cause the reorientation of the soil grains which would result in a loss of the efficiency of the injections. They state that there will be minimal groundwater displacement.

7) The nitrate concentrations will decrease in two ways: first, nitrate reducing bacteria and reduced minerals will change the nitrate to nitrite and eventually to nitrogen gas. Secondly, the nitrate will be diluted by the downgradient groundwater. Estimates of the distance traveled by 1000 ppm nitrate groundwater until it becomes 10 ppm nitrate groundwater were included in a table. The nitrate enriched groundwater under the site will have to travel 16 feet in order to reach CP−51 levels.

Later today, a conference call took place between Mr. Korik, other staff from ARCADIS, staff from BP and myself. The proposed use of sodium nitrate was discussed. Specifically, the ARCADIS 5/1/12 sodium nitrate proposal, the Department's comments in our 5/7/12 response letter and the information in the ARCADIS 5/23/12 response letter. I stated that the Department considered that ARCADIS, and thereby BP, had adequately responded to the Department's comments with the exception of item #7, monitoring nitrate concentrations in the groundwater. Mr. Korik explained that, for BP station #05082, there were monitoring wells downgradient of the injection locations. I stated that this was sufficient for monitoring the groundwater.

The ARCADIS 5/23/12 response letter was found to be acceptable with the only comment being that they will have to frequently sample the groundwater in order to be sure that it does not exceed the CP−51 standards. If they find that the standards are exceeded, then they will have to propose a means for managing the excess nitrate. ARCADIS must submit a letter plan with a work schedule by June 29, 2012 for conducting the injections and submitting quarterly groundwater monitoring reports. I drafted a letter for the review of Hassan Hussein, EE III and head of the Hazardous Materials Unit.

5/31/12 − Raphael Ketani. Mr. Hussein approved the letter and it was sent out.

6/19/2012 − meeting with ARCADIS. The downward trend of the groundwater is believed to be associated with the massive soil soil at the site. The owner of the site was reached for possibility of wells installation at the parking garage, but there is a layer of the stone and a impermeable layer, it will be hard to get a well in there. ARCADIS will do the pilot and then design the injection system for approval. 2 quarters of gw sampling to see the gw after the injection. Aim for TOG gw standard until reach

the extent of feasible.

6/26/2012 − Reviewed Supplemental Letter Work Plan for Nitrate Injections, dated 6/19/2012, by ARCADIS. The Work Plan is intended to fulfill the Department´s requirement of specific information (i.e. monitoring, reporting and injection details) regarding the injections as part of the Department´s approval of the proposal to use sodium nitrate to treat the contamination on May 30, 2012. ARCADIS proposes to inject 5,300 gallons, 8,000 gallons, and 5,300 gallons of sodium nitrate solution at a concentration of 0.3% by weight into the injection wells for Site 654, Site 5082, and Site 17782, respectively. A groundwater monitoring program will be implemented subsequent to the application. Approves the Work Plan after discussed with Raphael Ketani. Report by 12/2012.

7/18/2012 − reviewed 1Q2012, 3/27/2012, by ARCADIS. The groundwater was gauged and sampled on 1/24/2012. DTW 11.38 (MW−17A) and 20.20 (MW−21A). NO LNAPL. MW−18A, 340 BTEX, 21 MTBE. MW−21A, BTEX ND, 960 MTBE.

8/27/2012 − site visit and met with Ryan McKinney and his partner. Saw them purging wells, baseline sampling, taking field parameters and mixing the nitrate. 2 bags of calcium nitrate, 50 lbs each, was mixed in the small tank before the the solution was pumped into the large tank mixing with rest of the water. The tanks were outside the building.

9/26/2012 − 2Q2012, 6/22/2012, by ARCADIS. The groundwater was gauged and sampled on April 10, 2012. DTW 12.08 (MW−16A) to 20.70 (MW−21A) below the top of casing. Water table is 0.5 to 1.27 feet lower than last quarter. MW−21A, BTEX ND, 1,100 MTBE. MW−16A, 41 BTEX, 1 MTBE. MW−18A, 3,800 BTEX, 140 MTBE. The next sampling will be in July 2012. ARCADIS plans to condut a pilot injection into MW−18A during the 3rd quarter of 2012.

12/20/2012 − 3Q2012, 10/9/2012, by ARCADIS. The groundwater was sampled on July 16, 2012. DTW 11.74 (MW−16A) to 20.44 (MW−21A). The water table is 0.2 to 0.34 feet higher than the last quarter. NO LNAPL. Flows to northwest at hydraulic gradient of 0.005 feet per foot. Over the period of August 27 to August 30, 2012, approx 8,042 gallons of calcium nitrate solution (200 lbs calcium nitrate and 2.64 lbs of fluorescein dye) were injected into MW−18A. Post−injection response monitoring is on−going and will continue through early November. MW−16A, 240 BTEX. MW−18A, 510 BTEX, 10 MTBE.

5/13/2013 − 4Q2012, 1/16/2013, by ARCADIS. Monitoring was conducted on 10/11/2012. DTW 12.20 (MW−16A) to 20.81 (MW−21A). MW−16A, 3,200 BTEX. MW−18A, 750 BTEX, 37 MTBE. MW−21A, 1,200 MTBE.

1Q2013, 4/16/2013. Monitoring was conducted on 1/14/2013. DTW 12.59 (MW−16A) to 21.13 (MW−21A). MW−16A, 210 BTEX, 33 MTBE. MW−18A, 233J BTEX, 76 MTBE. MW−21A, 1,400 MTBE. The calcium nitrate injection pilot is almost in completion and a report will be presented under separate cover.

8/21/2013 − met with ARCADIS. Rebound of BTEX concentration has been observed. Will do another round of injection of Calcium Nitrate. If not working, then another alternative.

8/13/2014 − A site visit was conducted by J. Vought and J. Feng and met with ARCADIS technician and Peter Reyes, the general manager of the hotel. PID reading survey was conducted from the floor drains, sumps/drain pump−outs, and joints in the perimeter concrete walls and floor. PID readings were zero during the survey, and no odors were observed.

5/27/2015 − Spill history has been reviewed and as per previous discussion with J. Vought on 7/29/2014, spill is closed based on:

1) Source removal has been done. Tanks included (4) 4,000−gallon gasoline USTs and (6) pump islands were removed and a total of 256.88 tons of petroleum impacted soil from UST excavations was transported offsite and disposed. During site development, (12) 550−gallon USTs were removed and 592 tons of impacted soil was removed and disposed.

2) Additional soil excavation was done during the site development activities in 2008. Soil was excavated down to 15 to 25 feet and endpoint samples were collected. Over−excavation was conducted in the B−3, B−6 and B−7 area due to the high level of VOCs concentration at 19−19.5 feet. B−8, B−9, B−10 and B−11 were collected at 21.5−23 feet and the sampling results indicated the removal of the petroleum impacted soil. The sampling results did indicate the detection of VOCs but at levels that do not warrant further concerns.

3) Soil boring installed in the southwest portion of the site, i.e. the one one−story building portion of the hotel and the soil samples show minimal detection. The groundwater in MW−19A and MW−20A which located at the sidewalk of 26th Street show very low level of MTBE and do not warrant further action.

4) Before site development, there was a Multi Phase Extraction System operated from 5/2005 to mid 2007. The MPE removed 1,347 lbs of TPH and treated 6,182 gallons of groundwater.

5) The site has been developed into a 10−story Best Western Hotel with 2−story basement. Vapor barrier and SSDS have been installed to protect the occupants from possible soil vapor exposure.

6) No complaint of soil vapor has been received. A site visit was conducted on 8/13/2014. PID reading survey was conducted from the floor drains, sumps/drain pump−outs, and joints in the perimeter concrete walls and floor. PID readings were zero during the survey, and no odors were observed.

7) Monitoring wells network was re−established onsite and the sidewalk in 2010. In August 2012, 8,042 gallons of calcium nitrate solution were injected into MW−18A. Monitoring of the well network following the injection show downward trend in MW−16A and MW−18A. The data suggest residual contamination would be reduced or attenuated before reaching to the downgradient wells MW−18A and MW−17A via attenuation and source removal and remedy effectiveness.

8) Groundwater flows toward northwest to north and at depth of 20 feet below street level. MW−17A in the downgradient shows very minimal detection of BTEX and MTBE but most of the its monitoring quarters were non−detected which suggested the groundwater plume is contained in the northwest direction. Another sidegradient/downgradient MW−21A never show any detection of BTEX but MTBE. The MTBE concentration shows downward trend which suggested possible natural attenuation has occurred and the effectiveness of the implemented remedy.

9) Inclusion of remaining contamination language in the spill closure letter in case site is redeveloped.

Spill closure letter to BP/ARCADIS. Spill is closed.

A CONTRACTOR DAMAGED A 6INCH DIELECTRIC FEEDER PIPE AND IT SPILLED INTO THE LAND AND INTO A SEWER − CON ED IN PROCESS OF CLEAN UP

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL

Duplicate spill #9514066. Water service was leaking at 214 23rd St. Plumber dug hole − feeder lost pressure, oil is coming up out of ground onto road. some ran into sanitary sewer, Con Ed diverted remainder into nearby manhole. Water service is shut off. Dielectric tankers were used to collect spilled oil. Con Ed is to clamp the feeder ASAP. Analytical results on the oil are due at 2−3 PM. PCB count unknown at this time. Will have cars moved, remove snow, clean street. Current pressure at 5 to 6 psi.

Source of leak identified by Con Ed as a 1 leak in the water service line to 214 23rd St. water leaking from service line agitated sand near feeder, polishing cable finish off. DEP instructed the homeowner that it was their own responsibility to replace the water service line.

Temporary clamp installed by 2:45 PM. Pressure reduced to 0 psi. Permanent weld to be made by midnight crew. PCB results − 4 ppm. (CAE)

2/13/95: Spoke with Joe Oliverto, S&TO − excavated 2−3 feet below feeder, collected 5 samples −to Karel Konrad. 6 recovery well installed by MEG. (CAE)

APPENDIX B SITE NO. 62.

2/23/05 − Draft site investigation work plan, prepared by CDM, submitted for review. (JHO)

5/2/05: Comment letter sent to Con Ed − required modification of QAPP. (SKA)

6/7/05: Revised Final SIWP submitted. (JHO)

6/29/05: SIWP approved. (SKA)

8/2/06: Site Investigation and Remediation Plan submitted. Assigned to Shaun Bollers for review. (JHO)

9/20/06: Based on review of SIRP, no residual contamination from this incident was detected in soil or groundwater. Copy of report and no further action letter contained in eDocs. Close out. (JHO)

THE FOLLOWING CLOSED SPILLS FOR THIS CATEGORY WERE REPORTED BETWEEN 1/8 MILE AND 1/2 MILE FROM THE SUBJECT ADDRESS. THESE SPILLS WERE REPORTED TO BE LESS THAN 100 UNITS IN QUANTITY AND CAUSED BY: EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, VANDALISM OR STORMS. THESE SPILLS ARE NEITHER MAPPED NOR PROFILED IN THIS REPORT.

****

Spill Number (ID): 480836 Spill Date: 02/20/1996

Location: VAULT 2020 SOUTH SIDE 39TH ST AND 51FT WEST OF 2ND AVE
Spill City: BROOKLYN NY

Material Spilled	Quantity Spilled	Units	Pounds	Quantity Released in Water	Units	Casno
OIL, MISC: TRANSFORMER	2.00	GAL	15.00	0.00	UNK	53897628

Potentially Responsible Party (Discharger): CON EDISON
Discharger Address: 128 WEST END AVENUE
NEW YORK NY 10023
Dun and Bradstreet Number: Organization Type: PUBLIC UTLITY

Medium(s) Affected:
Air: F Land: T Water: F Groundwater: F Contained within Fixed Facility: F Other: F
Waterway Affected: STORM DRAIN
Damages Incurred: F Estimated Cost of Property Damage: $0.00

Cause(s):
Transportation Accident: F Equipment Failure: T
Operator Error: F Natural Phenomenon: F
Dumping: F Other Cause: F
Unknown: F
Cause of the incident: UNKNOWN Source of Release: PLANT
Type of Transportation Involved: FIXED FACILITY

Action: LEAK IS STILL ONGOING / OIL DRY IS BEING USED / MATERIAL IS BEING CONTAINED WITHIN THE STRUCTURE, DRAIN IN THE STRUCTURE IS CLOGGED

Description: TRANSFORMER TRANSFORMER / UNKNOWN / HOLES ON THE BOTTOM

Miscellaneous: WILL NOTIFY: EPAII, DEC, DEP NYSDEC CASE# 95-14-818

****

Spill Number (ID): 508459 Spill Date: 09/11/1996

Location: 882 3RD AVE
Spill City: BROOKLYN NY 11232

Material Spilled	Quantity Spilled	Units	Pounds	Quantity Released in Water	Units	Casno

BROMINE	4.00	GAL	103.00	0.00	UNK	53897628

Potentially Responsible Party (Discharger): VIRGINIA DARE
Discharger Address: 882 3RD AVE
BROOKLYN NY 11232
Dun and Bradstreet Number: Organization Type: PRIVATE ENTERPRISE

Medium(s) Affected:
Air: F Land: F Water: F Groundwater: F Contained within Fixed Facility: T Other: F
Waterway Affected:
Damages Incurred: F Estimated Cost of Property Damage: $0.00

Cause(s):
Transportation Accident: F Equipment Failure: F
Operator Error: T Natural Phenomenon: F
Dumping: F Other Cause: F
Unknown: F
Cause of the incident: IMPROPER OPERATION Source of Release: PLANT
Type of Transportation Involved: FIXED FACILITY

Action: PRODUCT NEUTRALIZED WITH SODA ASH / HAZMAT TEAM RECOVERED MATERIAL AND OVERPACKED

Description: BOTTLES OF BROMINE 6TH FLOOR OF THE BUILDING / SPILLED 4 GALLONS OF BROMINE / PUT TOO MUCHWEIGHT ON TOP OF BOTTLES CAUSING THEM TO BREAK

Miscellaneous: EVAC NUMBERS ARE ESTIMATED; ONE OF THE INJURED IN CPU; NYSDEC CASE# 96-07-381

Hazardous waste codes presented in individual Toxic Information Profiles are defined below.

B001 PCB Oil (concentrated) from transformers, capacitors, etc.

B002 Petroleum oil or other liquid containing 50 ppm or greater of PCBs but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

B003 Petroleum oil or other liquid containing 500 ppm or greater of PCBs.

B004 PCB Articles containing 50 ppm or greater of PCBs but less than 500 ppm PCBs excluding, small capacitors. This includes oil filled electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable

B005 PCB Articles containing 500 ppm or greater of PCBs, excluding small capacitors.

B006 PCB Transformers. "PCB Transformers" means any transformer that contains 500 ppm PCB or greater.

B007 Other PCB Wastes including contaminated soil, solids, sludges, clothing, rags, and dredge material.

B009

B010

D001 Solid waste that exhibits the characteristic of ignitability, but is not listed under any other hazardous waste code.

D002 Solid waste that exhibits the characteristic of corrosivity, but is not listed under any other hazardous waste code.

D003 Solid waste that exhibits the characteristic of reactivity, but is not listed under any other hazardous waste code.

D004 Arsenic

D005 Barium

D006 Cadmium

D007 Chromium

D008 Lead

D009 Mercury

D010 Selenium

D011 Silver

D016 2,4−D, (2,4−Dichlorophenoxyacetic acid).

D017 2,4,5−TP Silvex (2,4,5−Trichlorphenoxypropionic acid).

D018 BENZENE

D019 Carbon Tetrachloride

D020 Chlordane

D021 Chlorbenzene

D022 Chloroform

D024 m−Cresol

D027 1,4−Dichlorobenzene

D028 1,2−Dichloroethane

D035 Methyl ethyl ketone

D038 Pyridine

D039 Tetrachloroethylene

D040 Trichlorethylene

F001 The following spent halogenated solvents used in degreasing: Tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1−trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

F002 The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1−trichloroethane, chlorobenzene, 1,1,2−trichloro−1,2,2−trifluoroethane, ortho−dichlorobenzene, trichlorofluoromethane, and 1,1,2−trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

F003 The following spent non−halogenated solvents: Xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n−butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent non−halogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above non−halogenated solvents, and, a total of ten percent or more (by volume) of one or more of those solvents listed

in F001, F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I)*

F005 The following spent non−halogenated solvents: Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2−ethoxyethanol, and 2−nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non−halogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I,T)

F006 Wastewater treatment sludges from electroplating operations except from the following processes: (1) Sulfuric acid anodizing of aluminum; (2) tin plating on carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc−aluminum plating on carbon steel; (5) cleaning/stripping associated with tin, zinc and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum. (T)

F007 Spent cyanide plating bath solutions from electroplating operations. (R, T)

F008 Plating bath residues from the bottom of plating baths from electroplating operations where cyanides are used in the process. (R, T)

F027 Discarded unused formulations containing tri−, tetra−, or pentachlorophenol or discarded unused formulations containing compounds derived from these chlorophenols. (This listing does not include formulations containing Hexachlorophene sythesized from prepurified 2,4,5−trichlorophenol as the sole component.) (H)

F039 Leachate resulting from the treatment, storage, or disposal of wastes classified by more than one waste code under Subpart D, or from a mixture of wastes classified under Subparts C and D of this part. (Leachate resulting from the management of one or more of the following EPA Hazardous Wastes and no other hazardous wastes retains its hazardous waste code(s): F020, F021, F022, F023, F026, F027, and/or F028.) (T)

K078

P001 2H−1−Benzopyran−2−one, 4−hydroxy−3−(3−oxo−1−phenylbutyl)−, & salts, when present concentrations greater than 0.3%

P007 5−(Aminomethyl)−3−isoxazolol

P008 4−Aminopyridine

P012 Arsenic oxide As2O3

P018 Strychnidin−10−one, 2,3−dimethoxy−

P024 Benzenamine, 4−chloro−

P028 Benzene, (chloromethyl)−

P030 Cyanides (soluble cyanide salts), not otherwise specified

P041 Diethyl−p−nitrophenyl phosphate

P042 1,2−Benzenediol, 4−[1−hydroxy−2−(methylamino)ethyl]−, (R)−

P043 Phosphorofluoridic acid, bis(1−methylethyl) ester

P044 Phosphorodithioic acid, O,O−dimethyl S−[2−(methylamino)−2−oxoethyl] ester

P048 2,4−Dinitrophenol

P058 Fluoroacetic acid, sodium salt

P063 Hydrocyanic acid

P071 Methyl parathion

P075 Nicotine, & salts

P076 Nitrogen oxide NO

P077 p−Nitroaniline

P078 Nitrogen dioxide

P081 Nitroglycerine (R)

P087 Osmium oxide OsO4, (T−4)−

P093 Phenylthiourea

P095 Carbonic dichloride

P098 Potassium cyanide K(CN)

P105 Sodium azide

P108 Strychnidin−10−one, & salts

P115 Sulfuric acid, dithallium(1+) salt

P116 Hydrazinecarbothioamide

P119 Ammonium vanadate

P120	Vanadium oxide V2O5
P188	Benzoic acid, 2−hydroxy−, compd. with (3aS−cis)−1,2,3,3a,8, 8a−hexahydro−1,3a,8−trimethylpyrrolo 2,3−b|indol−5−yl methylcarbamate ester (1:1) (OR) Physostigmine salicylate
P204	Physostigmine (OR) Pyrrolo 2,3−b|indol−5−ol, 1,2,3,3a,8,8a−hexahydro−1, 3a,8−trimethyl−methylcarbamate (ester),(3aS−cis)−
P205	'Zinc, bis(dimethylcarbamodithioato−S,S'')−, (OR) Ziram'
U002	2−Propanone (I)
U007	Acrylamide
U010	Mitomycin C
U012	Aniline (I,T)
U021	[1,1−Biphenyl]−4,4−diamine
U027	Propane, 2,2−oxybis[2−chloro−
U028	1,2−Benzenedicarboxylic acid, bis(2−ethylhexyl) ester
U034	Chloral
U044	Chloroform
U047	Naphthalene, 2−chloro−
U050	Chrysene
U053	2−Butenal
U058	2H−1,3,2−Oxazaphosphorin−2−amine, N,N−bis(2−chloroethyl)tetrahydro−, 2−oxide
U059	5,12−Naphthacenedione, 8−acetyl−10−[(3−amino−2,3,6−trideoxy)−alpha−L−lyxo−hexopyranosyl) oxy]−7,8,9,10−tetrahydro−6,8,11−trihydroxy−1−methoxy−, (8S−cis)−
U067	Ethane, 1,2−dibromo−
U069	1,2−Benzenedicarboxylic acid, dibutyl ester
U070	Benzene, 1,2−dichloro−

U071 m−Dichlorobenzene

U072 Benzene, 1,4−dichloro−

U075 Methane, dichlorodifluoro−

U080 Methane, dichloro−

U081 Phenol, 2,4−dichloro−

U088 Diethyl phthalate

U093 p−Dimethylaminoazobenzene

U095 3,3−Dimethylbenzidine

U101 Phenol, 2,4−dimethyl−

U102 Dimethyl phthalate

U103 Dimethyl sulfate

U107 1,2−Benzenedicarboxylic acid, dioctyl ester

U112 Acetic acid ethyl ester (I)

U114 Carbamodithioic acid, 1,2−ethanediylbis−, salts & esters

U117 Ethane, 1,1−oxybis−(I)

U119 Methanesulfonic acid, ethyl ester

U120 Fluoranthene

U121 Trichloromonofluoromethane

U122 Formaldehyde

U123 Formic acid (C,T)

U132 Hexachlorophene

U133 Hydrazine (R,T)

U134 Hydrofluoric acid (C,T)

U135 Hydrogen sulfide

U138 Methane, iodo−

U144 Lead acetate

U147 Maleic anhydride

U151 Mercury

U154 Methanol (I)

U158 4,4−Methylenebis(2−chloroaniline)

U161 Pentanol, 4−methyl−

U162 Methyl methacrylate (I,T)

U165 Naphthalene

U167 1−Naphthalenamine

U168 2−Naphthalenamine

U169 Nitrobenzene (I,T)

U170 p−Nitrophenol

U176 Urea, N−ethyl−N−nitroso−

U177 Urea, N−methyl−N−nitroso−

U182 1,3,5−Trioxane, 2,4,6−trimethyl−

U187 Acetamide, N−(4−ethoxyphenyl)−

U188 Phenol

U190 Phthalic anhydride

U193 1,2−Oxathiolane, 2,2−dioxide

U196	Pyridine
U197	p−Benzoquinone
U201	1,3−Benzenediol
U206	Glucopyranose, 2−deoxy−2−(3−methyl−3−nitrosoureido)−, D−
U210	Tetrachloroethylene
U213	Furan, tetrahydro−(I)
U218	Thioacetamide
U220	Toluene
U221	Benzenediamine, ar−methyl−
U223	Benzene, 1,3−diisocyanatomethyl− (R,T)
U226	Ethane, 1,1,1−trichloro−
U228	Ethene, trichloro−
U236	2,7−Naphthalenedisulfonic acid, 3,3−[(3,3−dimethyl[1,1−biphenyl]−4,4−diyl)bis(azo)bis[5−amino−4−hydroxy]−, tetrasodium salt
U238	Carbamic acid, ethyl ester
U239	Xylene (I)
U246	Cyanogen bromide (CN)Br
U248	Warfarin, & salts, when present at concentrations of 0.3% or less
U249	Zinc phosphide Zn3P2, when present at concentrations of 10% or less
U279	Carbaryl (OR) 1−Naphthalenol, methylcarbamate
U280	Barban

How Toxic Site Locations Are Mapped

Toxics Targeting maps toxic site locations on a digital version of the U. S. Census map or those used by local authorities using addresses and map coordinates provided by site owners/operators or government agencies. In order to allow site locations to be verified independently, the information used to map each site is presented in the first section of each Toxic Site Profile, along with a description of the mapping technique used and any address corrections that were made in order to locate toxic sites with incomplete or inadequate site location information. The mapping process is explained below.

Map Identification Number: 12 Site Name: Acme World Manufacturing, Inc.

Site Address: 55 Main Street Anytown, NY 11797

MAP LOCATION INFORMATION

Site location mapped by:

Address Matching

1) Most toxic sites are mapped by matching addresses provided by site owners/operators or government agencies with locations on a digital version of the street or parcel map. These site locations are identified with the method used to map them.

Note: Some sites have an address match location and a map coordinate location. Both locations are mapped because they can be equally correct.

or Map Coordinate

2) Some toxic sites are located using map coordinates provided by site owners/ operators or government agencies. These site locations are identified "map coordinate." Map coordinates for Toxic Wastewater Discharges, Toxic Release Inventory sites and Major Oil Storage Facilities should be considered suspect.

or Manual Mapping

or Site Visit

3) Incomplete addresses or map coordinates require some site locations to be determined by commercial street maps (manual mapping), site visits, map coordinates from other databases and address location services. Application of any of these methods is identified accordingly.

ADDRESS CHANGE INFORMATION

Revised Street: NO CHANGE

Revised zip code: NO CHANGE

4) Site addresses are sometimes corrected to eliminate obvious errors that prevent sites from being mapped. All address corrections are noted here.

Information Source Guide

Toxics Targeting's Environmental Reports contain government and other information compiled on 21 categories of reported known or potential toxic sites. Each toxic site database is described below with information detailing a) the source of the information, b) the date when each database is covered to and c) when *Toxics Targeting* obtained the information..

1) **National Priority List for Federal Superfund Cleanup:** Toxic sites nominated for cleanup under the Federal Superfund program. Annual compilation of special two-page detailed profiles of NPL sites. Also includes delisted NPL sites.
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.[1]
Data attributes updated from: 9/09/2015. Data obtained by Toxics Targeting: 9/09/2015.
New Facilities updated through: 9/30/2016. Data obtained by Toxics Targeting: 9/30/2016.

2) **Inactive Hazardous Waste Disposal Site Registry:** New York State database that maintains information and aids decision making regarding the investigation and cleanup of toxic sites. The Registry's data includes two-page profiles noting site name, ID number, description, classification, cleanup status, types of cleanup, owner information, types and quantities of contaminants, and assessment of health and environmental problems. Also included are sites that qualify for possible inclusion on the Registry. These Registry Qualifying sites may or may not be on the Site Registry.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]
Data attributes updated through: 10/10/2017. Data obtained by Toxics Targeting: 10/10/2017.
New Facilities updated to: 10/10/2017. Data obtained by Toxics Targeting: 10/10/2017.

3) **Federal & State Corrective Action Activity (CORRACTS):** New York State and Federal databases of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.**

Federal Data Source: U. S. Environmental Protection Agency[1]
Data attributes updated through: 10/17/2017. Data obtained by Toxics Targeting: 10/26/2017.
New facilities updated through: 10/17/2017. Data obtained by Toxics Targeting: 10/26/2017.

State Data Source: New York State Department of Environmental Conservation.[2]
Data attributes updated through: 10/10/2017. Data obtained by Toxics Targeting: 10/10/2017.
New facilities updated through: 10/10/2017. Data obtained by Toxics Targeting: 10/10/2017.

4) **CERCLIS:** Toxic sites listed in the Federal Comprehensive Environmental Response, Compensation and Liability Information System. Includes Active and No Further Remedial Action Planned (NFRAP) sites.
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.[1]
Data attributes updated through: 10/25/2013. Data obtained by Toxics Targeting: 1/07/2014.
New Facilities updated through: 7/17/2017. Data obtained by Toxics Targeting: 8/22/2017.

5) **Brownfield Programs:** NYS & NYC programs for sites that are abandoned, idled or under-used industrial and/or commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.
ASTM required.*

(a) **NYS DEC Brownfield Programs**: Source: New York State Department of Environmental Conservation.[2]
includes: **Brownfield Cleanup Program (BCP), Voluntary Cleanup Program (VCP), and Environmental Restoration Program (ERP)**
Data attributes updated through: 10/10/2017. Data obtained by Toxics Targeting: 10/10/2017.
New Facilities updated to: 10/10/2017. Data obtained by Toxics Targeting: 10/10/2017.

(b) **NYC Voluntary Cleanup Program:** Source: NYC Office of Environmental Remediation
Data attributes updated through: 11/30/2015. Data obtained by Toxics Targeting: 12/10/2015.
New Facilities updated to: 11/30/2015. Data obtained by Toxics Targeting: 12/10/2015.

6) **Solid Waste Facilities:** a compilation of the following 2 databases:

(a) **NYS Solid Waste Registry:** which includes, but is not limited to, landfills, incinerators, transfer stations, recycling centers.
ASTM required.* Fannie Mae required.** Source: New York State Dept. of Environmental Conservation.[2]
Data updated to: 4/1/2013. Data obtained by Toxics Targeting: 4/1/2013.

(b) **1934 Solid Waste Disposal Site in New York City:** which includes sites operated by municipal authorities circa 1934. Source: City of New York Department of Sanitation (1984). The Waste Disposal Problem in New York City: A Proposal For Action.

7) **RCRA Hazardous Waste Treatment, Storage or Disposal Facility Databases:**

(a) **Manifest Information:** New York State database of hazardous waste facilities and shipments regulated by the DEC's Division of Environmental Remediation pursuant to NYS Law and the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]

New facilities updated through: 10/30/2017. New facilities obtained by Toxics Targeting: 10/30/2017.
Manifest transactions data updated to: 10/30/2017. Manifest transactions data obtained by Toxics Targeting: 10/30/2017.

(b) **RCRA Notifier & Violations Information:** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency[1]
New facilities updated through: 10/17/2017. Data obtained by Toxics Targeting: 10/26/2017.
Data attributes updated through: 10/17/2017. Data obtained by Toxics Targeting: 10/26/2017.

8) **Spills Information Database:** Spills reported to the DEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from Petroleum Bulk Storage Regulations) or 6 NYCRR Section 595.2 (from Chemical Bulk Storage Regulations). This database includes both *active* and *closed* spills.
ASTM required.* Fannie Mae.** Source: NYS Department of Environmental Conservation.[2]

New spills through: 8/30/2017 New spills data obtained by Toxics Targeting: 8/30/2017
Spill attribute data through: 8/30/2017 Spill attribute data obtained by Toxics Targeting: 8/30/2017

Active spills: paperwork not completed. Closed spills: paperwork completed.
Both active and closed spills may or may not have been cleaned up (see Date Cleanup Ceased in spill profiles).

9) **Major Oil Storage Facilities:** NYS database of facilities licensed pursuant to Article 12 of the Navigation Law, 6NYCRR Parts 610 and 17NYCRR Part 30, such as onshore facilities or vessels, with petroleum storage capacities equal to or greater than four hundred thousand gallons. **Tank & other data withheld by NYSDEC as of 4/1/2002**.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]

Data updated through: 7/1/2016. Data obtained by Toxics Targeting: 7/1/2016.

10) **Petroleum Bulk Storage Facilities:** a compilation of local and state databases of aboveground and underground petroleum storage tank facilities.

(a) **NYS Petroleum Bulk Storage Database:** This includes all New York State counties except Cortland, Nassau, Rockland, Suffolk, and Westchester. ASTM required.* Fannie Mae required.**
Source: NYS Department of Environmental Conservation.[2]
New facilities updated through: 7/1/2016. Data obtained by Toxics Targeting: 7/1/2016.
Tank data updated through: 7/1/2016. Data obtained by Toxics Targeting: 7/1/2016.

(b) **New York City Fire Department Tank Data:** **Data has been withheld by the NYC Fire Dept.**
Source: New York City Fire Department. Data obtained by Toxics Targeting: 2/18/1997

11) **RCRA Hazardous Waste Generators and/or Transporters Databases:**

(a) **Manifest Information:** New York State database of hazardous waste facilities and shipments regulated by the NYS Department of Environmental Conservation's Division of Environmental Remediation pursuant to New York State Law. ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]

New facilities updated through: 10/30/2017. New facilities obtained by Toxics Targeting: 10/30/2017.
Manifest transactions data updated to: 10/30/2017. Manifest transactions data obtained by Toxics Targeting: 10/30/2017.

(b) **RCRA Notifier & Violations Information:** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency[1]

New facilities updated through: 10/17/2017. Data obtained by Toxics Targeting: 10/26/2017.
Data attributes updated through: 10/17/2017. Data obtained by Toxics Targeting: 10/26/2017.

12) **Chemical Bulk Storage Facilities:** New York State database of facilities compiled pursuant to 6NYCRR Part 596 that store regulated substances listed in 6NYCRR Part 597 in aboveground tanks with capacities greater than 185 gallons and /or in underground tanks of any size. **Tank & other data withheld by NYSDEC as of 4/1/2002**.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]
Data updated through: 7/1/2016. Data obtained by Toxics Targeting: 7/1/2016.

13) **Historic New York City Utility Facilities (1898 to 1950):** An inventory of selected power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites identified in various historic documents, maps and annual reports of New York utility companies, including: Sanborn Fire Insurance Maps of NYC (1898-1950); Consolidated Edison Co. Annual Reports (1922-1939); Consolidated Edison Co. Map: "Boroughs of Manhattan and the Bronx Showing Distribution Mains of the New York Edison Co.," (1922); and Consolidated Edison document: "Generating and Annex Stations," (1911).

14) **Hazardous Substance Waste Disposal Site Study:** NYS database of waste disposal sites that may pose threats to public health or the environment, but could not be remediated using monies from the Hazardous Waste Remedial Fund.
Source: New York State Department of Environmental Conservation.[2]
Data updated to: 5/16/2000. Data obtained by Toxics Targeting: 5/16/2000.

15) **Toxic Release Inventory (TRI):** Federal database of manufacturing facilities required under Section 313 of the Federal Emergency Planning and Community Right-to-Know Act to report releases to the air, water and land of any specifically listed toxic chemical. See Fannie Mae requirement** below.
Source: U. S. Environmental Protection Agency.[1] / NYS Department of Environmental Conservation[2]
Data updated through: 3/8/2004. Data obtained by Toxics Targeting: 3/25/2004

16) **Toxic Wastewater Discharges (Permit Compliance System):** Federal database of discharges of wastewater to surface waters and groundwaters. See Fannie Mae requirement** below. Source: U. S. Environmental Protection Agency.[1]
Data updated through: 6/17/2004. Data obtained by Toxics Targeting: 7/19/2004.

17) **Air Discharge Facilities:** EPA AIRS database containing address information on each air emission facility and the type of air pollutant emission it is. Compliance information is also provided on each pollutant as well as the facility itself.
See Fannie Mae requirement** below. Source: U. S. Environmental Protection Agency[1]
Data updated through: 11/24/1999. Data obtained by Toxics Targeting: 1/6/2000

18) **Civil Enforcement & Administrative Docket:** This database is the U. S. EPA's system for tracking administrative and civil judiciary cases filed on behalf of the agency by the Department of Justice. Fannie Mae required.**
Source: U. S. Environmental Protection Agency.[1]
New Sites through: 10/14/1999.
Data updated through: 10/14/1999. Data obtained by Toxics Targeting: 11/18/1999.

19) **New York City Environmental Quality Review (CEQR) – E Designation Sites:** These sites are parcels assigned a special environmental ("E") designation under the CEQR process. E designation requires specific protocols that must be followed. Source: New York City Department of Planning[3]
Data updated through: 7/28/2017. Data obtained by Toxics Targeting: 8/17/2017.

20) **Emergency Response Notification System (ERNS):** Federal database of spills compiled by the Emergency Response Notification System. On-site searches only.
ASTM required.* See Fannie Mae requirement** below. Source: U. S. Environmental Protection Agency.[1]
Data updated through: 1/31/2000. Data obtained by Toxics Targeting: 2/15/2000

21) **Remediation Site Borders:** Remediation site borders reported by NYSDEC.
Source: New York State Department of Environmental Conservation.[2]
Updated through: 4/8/2009. Data obtained by Toxics Targeting: 7/21/2009.

* American Society of Testing Materials: Standard Practice on Environmental Site Assessments: Phase I Environmental Site Assessment Process (E1527-05).

** Fannie Mae's Part X Environmental Hazards Management Procedures specify 1.0 mile searches for "any state or Federal list of hazardous waste sites (e.g. CERCLIS, HWDMS etc.)." Searches for the property and adjacent properties are specified for "chemical manufacturing plants," "obvious high risk neighbors engaging in storing or transporting hazardous waste, chemicals or substances" and "...any documented or visible evidence of dangerous waste handling... (e.g. stressed vegetation, stained soil, open or leaking containers, foul fumes or smells, oily ponds, etc." Searches for property and adjacent properties can include sites up to a quarter mile away (W. Hayward, Director, Multi-Family Business Planning and Control, Fannie Mae, personal communication, 5/94).

APPENDIX B
PREVIOUS REPORT

October 4, 2012

Paul McIntyre, Esq.
Greenberg Traurig, LLP
2700 Two Commerce Square
2001 Market Street
Philadelphia, PA 19103

Re: Phase I Environmental Site Assessment
Industry City – Buildings 1-10 and 19-26, Brooklyn, New York
AKRF Project Number 11605

Dear Mr. McIntyre:

AKRF, Inc. is pleased to submit this Phase I Environmental Site Assessment Report for the above-referenced property. This report includes the findings of a reconnaissance of the property, an evaluation of readily available historical information, and selected environmental databases and electronic records. AKRF, Inc. met the requirements of American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-05 unless noted otherwise in Section 8.0: "Limitations and Data Gaps."

We appreciate the opportunity to provide you with our services. If you should have any questions or comments regarding the enclosed report, please do not hesitate to contact us.

Sincerely,
AKRF, Inc.

Marc S. Godick, LEP
Senior Vice President

Asya Kleyn
Environmental Engineer

Enc.

EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by Greenberg Traurig, LLP to perform a Phase I Environmental Site Assessment (ESA) of an approximately 32-acre Site in Bush Terminal (also known as Industry City) in Brooklyn, New York (the "Site"). The Site consists of two multi-block portions (the Northern and Southern Parcel) and is identified as: Tax Block 679, Lot 1; Block 683, Lot 1; Block 687, Lot 1; Block 691, Lot 1; Block 695, Lots 1, 20 and 43; Block 706, Lots 1, 24 and 101; and Block 710, Lot 1.

The Site is occupied by warehouse/industrial buildings, associated open space (courtyards, loading docks etc.), a power plant and three boiler houses. The Northern Parcel of the Site is bounded by 32nd Street to the north, Third Avenue to the east, 37th Street to the south and Second Avenue to the west, and includes Buildings 1 through 10, a power plant and three boiler houses. The Southern Parcel of the Site is bounded by 39th Street to the north, Second Avenue to the east, 41st Street to the south, and Upper New York Bay to the west, and includes Buildings 19 through 26 and a vacant lot formerly used as a gasoline station.

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. The full Phase I ESA Report should be reviewed for detailed information. Exceptions to, and deletions from, thee ASTM Standard Practice are described in the Phase I ESA. The term "*Recognized Environmental Condition*" means the presence or likely presence of hazardous substances or petroleum at the property, including the ground, groundwater, or surface water at or under the property.

This Phase I ESA revealed evidence of the following known Recognized Environmental Conditions:

- Numerous petroleum aboveground storage tanks (ASTs) were observed at the Site, some reportedly managed by Industry City and others managed by tenants. Evidence of staining and/or leakage was observed at various locations beneath the ASTs and/or associated equipment. Of particular note, a leaking fuel oil pump was observed in the eastern side of the basement of Building 5, with saturated oil absorbent material and oil puddles noted beneath the pump, and oil absorbent and puddled oil clogging a nearby floor drain. The saturated oil absorbent and residue was reportedly cleaned up from the basement since the time of AKRF's reconnaissance; photographs of the cleaned-up pump were provided to AKRF.
- Previous investigations detected low levels of volatile organic compounds (VOCs) indicative of petroleum and chlorinated solvent impact in exceedance of New York State Department of Environmental Conservation (NYSDEC) groundwater quality standards in the eastern portion of the Southern Parcel (no testing was conducted on the Southern Parcel west of First Avenue), with petroleum-related VOCs detected in the former gas station area and chlorinated solvent-related VOCs detected at various locations between First and Second Avenues. The previous investigations also detected VOCs indicative of petroleum contamination in exceedance of NYSDEC groundwater quality standards at one location on the Northern Parcel (south of Building 9).

The Phase I ESA also identified the following potential environmental concerns and regulatory compliance deficiencies outside the scope of ASTM standard E1527-05:

- Current Site use includes use and storage of chemicals in a variety of light industries, including woodworking, printing, paint manufacturing, box manufacturing, plastics painting, and food flavor manufacturing. Poor housekeeping and evidence of minor spills to the floor were observed in several tenant spaces, mostly in upper floors of the buildings.

- The Site is listed on the following federal or state environmental databases: Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) No Further Remedial Action Planned (NFRAP), Toxic Chemical Release Inventory System (TRIS), Permit Compliance System of Toxic Wastewater Discharge (WWD), Air Discharge Facilities Index (ADF), RCRA Hazardous Waste Generator, Petroleum Bulk Storage (PBS), Chemical Bulk Storage (CBS) and Spills. No open violations or open spills were reported for the Site.
- At least six tanks observed or reported by site interviews at the Site were not registered based on review of NYSDEC database of registered tanks (one approximately 1,000-gallon AST in Building 8, one AST of unknown size and one approximately 275-gallon AST supplying emergency generators in Building 9, one approximately 275-gallon AST in the Power Plant, and two 1,250-gallon ASTs reportedly associated with emergency generators adjacent to the Building 1 and 2 boiler house and behind Building 10). Others appear to be registered inaccurately regarding reported product type and aboveground/underground status. In addition, fill ports noted on the wall of Building 3, south of Building 9 and north of Building 19 suggest the presence of historic underground storage tanks (USTs). Previous studies included a geophysical survey of suspected UST locations at Building 9, Building 19 and at the former filling station. No USTs were detected in these areas, but fill lines were detected running west from the fill port near Building 9 (away from the area included in the survey). NYSDEC registrations for the Site also indicated four closed USTs at the Site. Computerized NYC Fire Department listings identified four 550-gallon gasoline USTs (status unspecified) potentially on-site, three of which were identified as closed based on NYSDEC listings.
- The Site has historically been used for industrial purposes. The Northern Parcel has been used for industrial purposes since at least 1926 and included paint manufacturing, printing and a power plant. The Southern Parcel has been used for industrial purposes since at least 1888 and included oil refining, chemical manufacturing, asbestos manufacturing, auto repair, a filling station, printing and rail yard operations. Regulatory databases identified various listings indicating chemical and petroleum storage, closed-status petroleum spills and generation of hazardous waste at the Site. Limited soil and groundwater sampling performed at the Site by others in 2007 and 2008 detected minor concentrations of petroleum, chlorinated solvents and metals, largely consistent with historic fill and areas of industrial use. Limited indoor air quality (IAQ) testing in Building 1 in 2009 identified several VOCs in indoor air, but at concentrations that did not present a hazard to building occupants. The locations of the IAQ testing were not provided to AKRF.
- Building materials likely contain asbestos containing materials (ACM) and lead-based paint. Older transformers on the roofs and in the exterior portions of the Site and fluorescent light ballasts may contain polychlorinated biphenyls (PCBs). Mercury may be present in fluorescent lights, switches and/or thermostats. Staining was noted beneath some rooftop oil-filled transformers. Suspect lead-based paint in poor condition was observed in portions of the Site buildings. Damaged suspect ACM (including boiler insulation, vinyl floor tiles and thermal pipe insulation) were noted in some unoccupied building areas.
- The surrounding area has been mixed-use, including industrial, manufacturing and warehousing purposes, garages, auto repair, rail yard operations, printing facilities and metal shops since at least 1926. Current uses of the surrounding area remain mixed-use and include industrial/manufacturing properties, auto repair and filling stations. Regulatory databases identified various listings indicating chemical and petroleum storage, active and closed-status petroleum spills and generation of hazardous waste in the vicinity of the Site, none of which are documented to have impacted the Site.
- Evidence of water intrusion was noted in many of the Site basements. It was unclear whether the water was rainwater, groundwater, or both.

The Phase I ESA findings were limited by the following data gaps:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- The reconnaissance included a tour of representative interior building spaces. Portions of some Site buildings were inaccessible due to locked doors, nonfunctional elevators, flooded basements, or tenants unwilling to provide access. Basements were often poorly lit and were illuminated by flashlight.
- Portions of the Site were obscured by stored materials, equipment or soil/debris stockpiles and were not inspected for staining and floor features.
- Knowledge of the Site current and historical use varied between Industry City representatives and only limited interviews were performed. In addition, interviews with Site tenants were limited. As such, available information was restricted regarding the types of chemicals used at the Site, waste disposal methods, and assessment of compliance with the applicable related regulations. Chemicals were used at the Site predominantly by tenants; other than the petroleum storage tanks, the reconnaissance indicated only limited chemical use by Industry City for maintenance purposes.
- The Site and area history review was not conducted in five-year intervals. However, sufficient information about the history could be obtained from the available records, and this data gap is not likely to alter the conclusions of this report.

1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by Greenberg Traurig, LLP (GT) to perform a Phase I Environmental Site Assessment (ESA) of a site consisting of two multi-block parcels cumulatively totaling approximately 32 acres in Bush Terminal (also known as Industry City) in Brooklyn, New York (collectively, the "Site"). The Site is also identified as: Tax Block 679, Lot 1; Block 683, Lot 1; Block 687, Lot 1; Block 691, Lot 1; Block 695, Lots 1, 20 and 43; Block 706, Lots 1, 24 and 101; and Block 710, Lot 1.

The Site is occupied by warehouse/industrial buildings, associated open space (courtyards, loading docks etc.), a power plant, and boiler houses. The Northern Parcel of the Site is bounded by 32nd Street to the north, Third Avenue to the east, 37th Street to the south and Second Avenue to the west, and includes Buildings 1 through 10, a power plant and three boiler houses. The Southern Parcel of the Site is bounded by 39th Street to the north, Second Avenue to the east, 41st Street to the south, and Upper New York Bay to the west, and includes Buildings 19 through 26 and a vacant lot formerly used as a gasoline station.

The Site location map is provided as Figure 1, a Site plan showing Block and Lot numbers is provided as Figure 2, and a Site plan showing building numbers is provided as Figure 3.

The scope of services for this assessment was in conformance with ASTM Standard E1527-05 (*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*), based on the USEPA's All Appropriate Inquiry (AAI) rule. Any exceptions to, or deletions from, this practice are described in Section 8.0. The scope included the following:

- Observations of the Site (reconnaissance) to identify potential sources or indications of hazardous substances, including: aboveground storage tanks (ASTs); underground storage tanks (USTs); tank vents and fill ports; transformers and other items that could contain polychlorinated biphenyls (PCBs), drums or areas where hazardous materials were used, stored, or disposed; stained surfaces and soils; stressed vegetation, leaks, odors. In addition, the exterior of neighboring properties were viewed to identify similar concerns.
- Readily available geological and groundwater (hydrogeological) information was evaluated to assist in determining the potential for contamination migration within, from and onto the Site.
- The reconnaissance of the Site included preliminarily identifying visible suspect asbestos-containing materials (ACM) and the potential for lead-based paint. However, no samples were collected or analyzed.
- A state database of radon concentrations was used to determine whether indoor radon levels in the general area (data are by county) generally comply with United States Environmental Protection Agency (USEPA) guidelines.
- Historical land use maps, USGS topographical maps and street directories for the Site were reviewed to evaluate historic land uses.
- The following federal regulatory databases were reviewed to determine the regulatory status of the Site and other properties within the boundaries of Governors Island: National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the Air Discharge Facilities Index (ADF) and the USEPA Civil Enforcement Docket. The federal listing of

facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.

- The following state regulatory databases were reviewed to determine the regulatory status of the Site, adjacent properties, and properties within a predetermined study area; the listings of hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); Brownfield Sites; and Historic Utility Sites.
- A review of NYC Fire Department (obtained as part of the database search) and online Buildings Department records for the Site was conducted to obtain information likely to be pertinent to this assessment.
- Reports documenting previous investigations performed by others were reviewed. A limited subsurface investigation was documented in the Limited Subsurface Investigation Report prepared by EBI Consulting, August 31, 2007, and supplemental groundwater sampling was documented in the Quarterly Groundwater Sampling report prepared by Roux Associates, Inc., December 10, 2008.

2.0 PHYSICAL SITE DESCRIPTION

Mr. Greg Baird, Ms. Kathleen Brunner, Mr. Sean Kenney and Ms. Asya Kleyn of AKRF conducted a reconnaissance of the Site on August 1 and 2, 2012. Mr. Manuel Arboleda, Mr. Manuel Arboleda, Jr. and William, all representatives of the current Site owner (Industry City), provided access to the Site and answered pertinent questions. Mr. Mike Pennella, Director of Operations of Industry City was also available for a brief interview at the beginning of the Site reconnaissance.

On August 1, 2012, the weather was cloudy and rainy and approximately 75-85 ^{o}F. On August 2, 2012, the weather was sunny and approximately 80-90 ^{o}F. The overall visibility at the Site was good, and buildings were generally adequately illuminated, except for basements. Areas not adequately illuminated by natural and/or artificial light (some building interiors) were viewed by flashlight. Portions of each building were not accessible as detailed in Section 8.0. Photographs from the reconnaissance are included in Appendix A.

2.1 General Site Conditions

At the time of the reconnaissance, the Site was occupied by offices, warehouses, manufacturing, woodworking, artist studios, a school for disabled people, and open space (areas of landscaping, overgrown vegetation, parking and loading docks). Portions of each Site building were unoccupied.

Some painted surfaces, potentially including lead-based paint, were noted to be in poor condition (with chipped or flaking paint) in each of the buildings on the Site. Suspect asbestos containing materials (ACM), including thermal pipe insulation, floor tiles, boiler insulation and window caulking were also noted throughout the buildings. Some suspect ACM were noted to be damaged. Numerous transformers, including suspect oil-filled transformers were observed on the roofs of the Site buildings. Elevators in all Site buildings were cable-driven (electrical).

Based on observations during the reconnaissance, the current Site uses included the following:

Block/Lot	Building	Current Site Description
695/1	1	Six-story building with a full basement. Currently occupied by warehouses and offices. The basement was vacant except for an Industry City maintenance workshop with six 55-gallon drums containing lubrication or motor oil. The drums were stored on the floor, with staining noted beneath. The building was heated by a boiler between Buildings 1 and 2.
	Boiler House	Two boilers with two condensate tanks were noted. Staining was visible on most of the floor area beneath the boilers. There was an approximately 6,000-gallon fuel oil vaulted aboveground storage tank (AST) inside the building. No staining was observed beneath the tank. The adjacent emergency generator room was not accessible.
	Exterior	An open courtyard was present between Buildings 1 and 2. Former railroad tracks and platform. A freestanding electrical transformer was noted in the courtyard west of the boiler house.
695/20	2	Six-story building with a full basement. Currently occupied by small art studios, warehouses and a wood shop (reportedly not utilizing staining or other chemicals). The basement was partially vacant, with the remainder occupied by a warehouse. The eastern portion of the basement was not accessible. The building was heated by a boiler between Buildings 1 and 2.
695/43	Exterior	Paved vacant lot used for parking. Above-grade oil fill pipe traversed the lot from a fill port on the 3rd Avenue side, to an AST in the boiler house between Buildings 1 and 2. Minor oil staining was noted on the concrete sidewalk beneath the fill port.
691/1	3	Six-story building with a full basement. Currently occupied by wood shops (reportedly not utilizing staining or other chemicals), offices, warehouses, small art studios, textile businesses (cutting and sewing), a parachute maker (which was not accessible) on the 2nd floor, a handbag manufacturer (which was not accessible) on the third floor, a fabric silk screening business (which was not accessible) on the 2nd floor, and an elevator maintenance business on the third floor with storage of three 55-gallon drums of hydraulic oil. The central portion of the basement was inaccessible and reportedly may contain a warehouse. The southern portion of the basement was occupied by a warehouse. The northern portion of the basement was vacant and contained a vault with an approximately 6,000-gallon fuel oil AST; the oil type was not known. Oil staining was noted on concrete beneath the tank. A fuel tank vent pipe and two fill ports were noted on the south building façade. The building was heated by a boiler between Buildings 3 and 4.
	4	Six-story building with a vacant partial basement in the eastern corner. Currently occupied by retail space on the 1st floor and printing on the 3rd floor with limited access. Also occupied by warehouses, a furniture store, small art studios, a wood shop (reportedly not utilizing staining or other chemicals), textile businesses (cutting and sewing), a printer, a bakery, a lampshade warehouse with a shop and storage of three unlabeled 55-gallon drums, and self-storage facilities under construction. Limited access was available to the printing facility on the 5th floor; however printing presses were noted. A printer on the 3rd floor had one 55-gallon drum of press wash and numerous 1 to 5-gallon sized containers of other chemicals and paints. The building was heated by a boiler between Buildings 3 and 4.
	Boiler House	Two boilers with minimal staining on concrete floor beneath. The boilers were reportedly fueled by the AST noted in Building 3. The adjacent emergency generator room was not accessible.
	Exterior	An open courtyard was present between Buildings 3 and 4. Freestanding electrical transformers were noted west of the boiler house.

Block/Lot	Building	Current Site Description
687/1	5	Six-story building with a partial basement. Currently used as retail, warehouse, office, textile businesses (cutting and sewing), printing, artist paint manufacturing, woodworking, a spill cleanup company, restaurant equipment sales and maintenance, and furniture manufacturing. The artist paint manufacturer (Utrecht) on the 3rd floor had numerous 55-gallon drums of raw materials (such as propylene glycol, cadmium pigment, but largely labeled with trade names), and numerous containers of finished paint, varying in size from small vials packaged on-site to approximately 100-gallon mixing vats. A representative of Utrecht indicated waste was captured and disposed of as needed by Veolia Environmental. A printing company on the 5th floor had numerous 5-gallon buckets and 55-gallon drums of solvents, paints, press wash and unlabeled containers. A representative of the tenant indicated waste is collected in drums for disposal off-site as needed. An approximately 6,000 gallon vaulted #4 fuel oil AST fueling the boiler for Buildings 5 and 6 was observed in the basement. Minor staining was observed beneath the tank. Saturated oil absorbent (such as cat litter) and some small puddles of oil were noted in an approximately 150-square foot area on the floor beneath the oil pump and filter. Oil absorbent with small pools of oil were observed to be clogging a nearby floor drain. The saturated oil absorbent and residue were reportedly cleaned up from the basement since the time of AKRF's reconnaissance; photographs of the cleaned-up pump were provided to AKRF. The building was heated by a boiler between Buildings 5 and 6.
	6	Six-story (plus partial basement) building. Currently used as retail, warehouse, office, textile businesses (cutting and sewing), woodworking, kitchen furniture manufacturing, chocolate making, and guitar manufacturing. Woodworking and furniture manufacturing on the third fourth and fifth floors had one-quart to five-gallon sized containers of adhesive, lacquer, solvents and paint. Paint booths were observed in three of the tenant spaces on the third and fifth floors. The building was heated by a boiler between Buildings 5 and 6.
	Boiler House	Two boilers with minimal staining on concrete floor beneath the boilers were noted. The boilers were fueled by the AST noted in the basement of Building 5. The adjacent emergency generator room was not accessible.
	Exterior	An open courtyard was present between Buildings 5 and 6. Former railroad tracks and platform.
683/1	7	Six-story (plus partial basement) building. Currently used as warehouse, office, textile businesses (cutting and sewing), woodworking and furniture manufacturing. A post office on the first floor in addition to woodworking and furniture manufacturing on the first, third and sixth floors. Containers of adhesive and paint were observed in one-quart to five-gallon sizes.. A locked and inaccessible art studio on the sixth floor had screen printing supplies visible from outside the tenant space. A portion of the basement in the central portion of the building ("B" section) and the entirety of the western section ("C" section) of Building 7 were locked and inaccessible. The building was heated by steam from the power plant west of Building 10.
	8	Six-story (plus partial basement) building. Currently used as warehouse, office, textile businesses (cutting and sewing), woodworking and box manufacturing. A post office was located on the first floor. Box manufacturing on the first floor had adhesives and two 55-gallon drums of hydraulic oil. Cell phone painting operations, with a spray booth, chemical ventilation hood and vacuum plating machine were located on the sixth floor. Several woodworking tenants on the fourth floor were observed to have varnish, staining and adhesive chemicals. Standing water in the basement prevented inspection of the basement; however, an approximately 1,000-gallon AST was observed from the staircase in the central portion of the basement. The building was heated by steam from the power plant west of Building 10.
	Exterior	An open courtyard was present between Buildings 7 and 8. Former railroad tracks and platform.
679/1	9	Six-story (plus partial basement) building, with a small one-story extension on the western side. Currently used as office and art studio space. Observations indicated four apparent ASTs and one potential UST. An approximately 3,000 to 4,000 gallon vaulted AST fueling an emergency generator on the first floor was observed in the basement. Another locked room in the basement had a sign indicating "Diesel Fuel", apparently containing a second tank servicing a second generator observed on the first floor. Each of the two generators on the first floor also had two approximately 275-gallon ASTs, one adjacent to each generator. A fill port labeled "gasoline" was observed in the sidewalk adjacent to the western, one-story portion of Building 9, potentially associated with a UST; however, no other evidence of the tank's current status was observed. The building was heated by steam from the power plant west of Building 10. Freestanding electrical transformers were noted in the basement of Building 9.

Block/Lot	Building	Current Site Description
	10	Twelve-story (plus two basement levels) building. Currently used as office space, art studios, unfinished loft space and a school for people with disabilities. The sub-basement level was inaccessible due to standing water. A tenant space on the first, fifth, sixth and seventh floors, reportedly used for manufacture and warehousing of flavorings and extracts, was inaccessible to inspection except for portions of the first floor loading dock, where 55-gallon drums of propylene glycol, ethyl alcohol, and other raw materials for the flavor manufacturing were stored. The building was heated by steam from the power plant west of Building 10.
	Power Plant	Two story building plus two basement levels. Three boilers installed approximately 30 years ago with a 5,000-gallon condensate tank. The boilers supply steam for heating Buildings 7, 8, 9 and 10. Some staining was noted under the boilers. A backup generator in a separate room had an approximately 275-gallon AST with no evidence of staining. A small workshop and offices were present near the entrance to the main floor. The second level was inaccessible. The basement level had active oil pumps and machinery and some components of a historical high-pressure heating system (piping and two coal furnaces). A noticeable sheen was observed on some standing water in the sub-level, which had limited accessibility. The tank room housed a 20,000-gallon fuel oil AST. There was staining on the floor at both ends of the tank and on the tank itself.
	Exterior	Portions of Lot 1 not occupied by buildings were used for parking and a courtyard. Two generators were observed outside immediately west of Building 10. The southernmost generator reportedly had a 1,250-gallon #2 fuel oil AST in the trailer which also contained the generator. The fuel source for the northernmost generator was not known and could not be discerned. . Freestanding electrical transformers were noted west of Building 10 and east of the Power Plant.
706/1	19	Eight-story building with a vacant partial basement in the eastern corner. Currently occupied by warehouses, textile businesses (cutting and sewing), and a printer. Several floors are vacant. A printing facility located on the fourth floor reportedly used soy- and water based inks and used alcohol and kerosene to wash printing presses. Used press wash materials were collected in 55-gallon drums for disposal by a private contractor. A groundwater monitoring well was noted in a cobblestone-paved area on the north side of the building. A fuel cap was observed in the loading dock on the north side of the building. The building was heated by oil/gas boilers between Buildings 19 and 20.
	20	Eight-story building with partial basements in eastern and western corners. Currently occupied by warehouses and offices. The eastern basement currently occupied by a warehouse, the western basement (not accessible) reportedly also a warehouse. Used printing chemicals were reportedly picked up for disposal by a private contractor. Several floors were vacant. A food flavoring warehouse was located on the western side of the 1st floor. Upper floors and the western basement were not accessed due to elevator malfunction, and were reportedly occupied by warehouses and vacant space. The building was heated by oil/gas boilers between Buildings 19 and 20.
	Interior Loading Area	A rear loading area, mechanical workshop and boiler room were located between Buildings 19 and 20 on the western side of the lot. The area between building 19 and 20 showed evidence of historical rail access. The boiler room contained two 6,000-gallon No. 4 fuel oil ASTs. Fuel oil staining was observed on the concrete below the ASTs.
706/24	21	Two-story vacant building with no basement. The second floor connects to the second floor of Building 24. A historical sign for American Yarn was noted on the building. A fuel oil fuel port and vent pipe were located on the northern façade of the building, with major staining and spilling observed on concrete below the fill port. This may be a fill port for the AST located in adjacent Building 23. The building was heated by oil/gas boilers in Building 23.
	22	Eight-story building with no basement. Currently occupied by warehouses and offices. Access to boiler room located in Building 23. Observation of seven 55-gallon drums labeled “non-hazardous waste” in loading dock. Upper floors were not accessed due to elevator malfunction, and were reportedly occupied by warehouses and a NYC Human Resources Administration office. Building heated by oil/gas boilers in Building 23.

Block/Lot	Building	Current Site Description
	23	Eight-story building with no basement. Currently occupied by warehouses, offices, textile facilities (cutting and sewing) and an HVAC component assembly shop which reportedly does not use refrigerants. The third floor was vacant. Upper floors were not accessed due to elevator malfunction, and were reportedly occupied by warehouses, a NYC Human Resources Administration office, textile facilities and the HVAC shop. Building heated by oil/gas boilers on the south side of the first floor. One, approximately 10,000 to 20,000-gallon fuel oil AST was observed in the boiler room, with a fuel oil-like odor and staining on concrete noted in the tank enclosure.
	24	Eight-story vacant building with no basement. Soil stockpiles were observed on the first floor due to foundation renovations. Part of the 1st floor was not accessed due to soil stockpiles. The upper floors were not accessed due to elevator malfunction. Building heated by oil/gas boilers in Building 23.
	Exterior	Vacant land east of Building 22 was surrounded by chain-link fence and occupied by soil and debris stockpiles from renovation of nearby Industry City buildings. This area was historically used as a gasoline station. A concrete dock west of Building 24 contained soil and debris stockpiles from Building 24 foundation renovations.
706/101	25	One-story food flavoring manufacturing and storage facility with no basement. A chemical-like odor was noted throughout building. Observations included storage of 55-gallon drums of diesel engine oil (one drum), miscellaneous engine oil (18 drums), coolants and antifreeze liquids (4 drums), isopropanol alcohol (two drums), acetic acid (23 drums), spices and chemical flavoring powders. Industrial cooking equipment and manufacturing machinery were noted. Floors in the drum storage area were wet due to rain and could not be inspected for surface staining. A hydraulic lift was observed on the northeast side of the building. The building was heated by oil/gas boilers between Buildings 19 and 20.
710/1	26	Eight-story building with partial basement on the south side. Currently occupied by warehouses and an HVAC equipment assembly shop which reportedly does not utilize refrigerants. The basement contained a preserved fish warehouse and vacant space, with a chemical-like odor noted in the fish warehouse. Several floors were vacant. A floor patch likely related to former railroad tracks was noted on the north side of the first floor. Upper floors were not accessed due to elevator malfunction, and were reportedly occupied by warehouses and the HVAC shop. The building was heated by oil/gas boilers in Building 23.

2.2 Topography and Hydrogeology

Based on U.S. Geological Survey mapping, the highest point of Industry City is located approximately 10 feet above mean sea level. The relatively flat property faces the Upper New York Bay on the northwest side of Brooklyn. The general slope of the surrounding area is northwest toward the Bay Ridge Channel. The dominant soil underneath the Site is classified by New York City Reconnaissance Soil Survey as Pavement and Buildings primarily consisting of urban fill complex with slopes of 0-8 percent. Previous studies of the Site indicate that urban fill materials consisting of mixed soils, ash, and construction debris are known to be present under the Site at thicknesses of up to 8 feet. This urban fill has previously indicated elevated levels of metal and other contaminants. The fill is underlain by sediments including glacial deposits, gravel, clay and crystalline bedrock. Based on USGS mapping, bedrock is expected approximately 200 feet below grade, with depth increasing form north to south.

Previous studies encountered groundwater approximately 6 to 13.5 feet below grade. A December 2008 quarterly groundwater monitoring report indicated groundwater flow to the south-southwest, but noted that this direction was inconsistent with previous quarterly monitoring events (reports for these events were not provided to AKRF). Based on surface topography, groundwater would be expected to flow in a northwesterly direction. Due to the proximity to Upper New York Bay, the groundwater depth and flow direction are likely influenced by historical filling activities, tides, and other factors beyond the scope of this assessment. Groundwater in Brooklyn is not used as a source of potable water (the municipal water supply uses upstate reservoirs).

2.3 Storage Tanks

2.3.1 Underground Storage Tanks (USTs)

Fill ports and vent pipes noted on the Site generally appeared to pertain to observed aboveground storage tanks (ASTs). However, a fill port noted on the wall of Building 3 and a fill port labeled "gasoline" in the sidewalk adjacent to Building 9 did not appear to pertain to known ASTs. A fill port noted north-adjacent to Building 19 may pertain to the ASTs in the Building 19/20 boiler house; however, an apparent access manhole noted near this fill port indicated it may be associated with a UST. Previous studies included a geophysical survey which identified no USTs south of Building 9 or north of Building 19, but which detected fill lines running from the fill port near Building 9 toward Second Avenue (away from the area included in the survey).

Regulatory databases identified five USTs registered with NYSDEC. One listing, for a 6,000-gallon fuel oil UST in Building 5, appeared to pertain to an AST observed in this building rather than a UST. The second listing was for a 36,000-gallon fuel oil UST in the power plant closed some time prior to March 1991; the listing did not specify whether this tank was removed or closed in place. The third listing, for three 550-gallon gasoline USTs closed-in-place in September 1991 at Piers Service, 3901 First Avenue, appear to relate to the historical filling station on the Southern Parcel. Computerized NYC Fire Department listings identified four 550-gallon gasoline USTs (status unspecified) at Piers Service, formerly located at 3901 First Avenue.

Details of on- and off-site USTs are discussed in Section 5.2.3.

2.3.2 Aboveground Storage Tanks (ASTs)

During the reconnaissance, twelve ASTs were observed on the Site as follows:

- One approximately 6,000-gallon AST in the Building 1 and 2 boiler house;
- One approximately 6,000-gallon AST in the basement of Building 3;
- One approximately 6,000-gallon AST in the basement of Building 5;
- One approximately 1,000-gallon AST in the basement of Building 8;
- One approximately 3,000 to 4,000-gallon AST in the basement of Building 9, and two approximately 275-gallon ASTs on the first floor of Building 9 adjacent to two emergency generators;
- One approximately 20,000-gallon AST and one 275-gallon AST in the Power Plant west of Building 10;
- Two approximately 6,000-gallon ASTs in the Building 19 and 20 boiler house; and
- One approximately 10,000 to 20,000-gallon AST on the first floor of Building 23.

Mr. Michael Pennella of Industry City indicated that the three boiler houses serving Buildings 1 and 2, 3 and 4, and 5 and 6 contained one 6,000-gallon No. 4 fuel oil AST each. Industry City boiler house staff also indicated that the ASTs observed in the Building 19 and 20 boiler house and the Building 23 boiler room were fueled by No. 4 fuel oil.

In addition, the following ASTs were not observed directly, but appear to be present based on observations or interviews:

- A locked room labeled "Diesel Fuel", apparently to supply one of two emergency generators noted on the first floor of Building 9;
- Two emergency generators were observed west of Building 10, one fueled by a 1,250-gallon AST according to Mr. Pennella and one presumably fueled by a tank of unknown size; and
- An emergency generator observed adjacent to the Building 1 and 2 boiler house was fueled by a 1,250-gallon AST according to Mr. Pennella.

Based on a combination of observations and interviews, 16 ASTs are believed to be present at the Site. Some of the observed ASTs were registered with NYSDEC as noted in Section 5.2.3. Six observed or reported ASTs were not registered with NYSDEC, as follows:

- One approximately 1,000-gallon AST in observed in the basement of Building 8;
- One AST of unknown size in the basement supplying one of the emergency generators on the first floor of Building 9 and one approximately 275-gallon AST observed on the first floor of Building 9 adjacent to one of the emergency generators;
- One approximately 275-gallon AST observed in the Power Plant; and
- Two 1,250-gallon ASTs reportedly associated with emergency generators adjacent to the Building 1 and 2 boiler house and behind Building 10.

Details of off-Site and on-site ASTs are discussed in Sections 5.2.2 and 5.2.3, respectively.

2.4 Polychlorinated Biphenyls (PCBs)

Until 1979, polychlorinated biphenyls (PCBs), which provided beneficial insulating properties, were manufactured for use in a wide variety of products, primarily in electrical equipment such transformers, capacitors, fluorescent light fixtures (especially ballasts), and voltage regulators, but also in hydraulic fluids and some other products.

Numerous transformers including older single-phase oil-filled transformers, which could potentially contain PCB-containing oil, were observed on the roofs of the Site buildings. Numerous freestanding transformers noted in the courtyards outside several of the buildings and in the basement of Building 9 appeared to be dry-type and are not likely to utilize PCB-containing oil. Previous studies identified leaking PCB-containing transformers on the roofs of several Site buildings. According to Site personnel, older transformers are being gradually phased out as electrical upgrades are necessary and replaced with non-PCB-containing transformers. Reportedly, approximately 18 older transformers remain at 6 locations on building rooftops.

2.5 Lead-Based Paint

Lead-based paint was generally not used inside residential buildings after 1960. After 1977, its use in the interiors of commercial structures was also restricted and its use elsewhere became much less common, but lead-based paint may still sometimes be used outdoors. Lead-based paint can present a hazard, particularly to children and especially when it is in a deteriorating condition.

Based on the building's age, lead-based paint may be present. Some painted surfaces in poor condition (with chipped or flaking paint) were observed throughout the Site. During the reconnaissance, there was no observation of residential occupancy, child care facilities, or other facilities where the extended presence of children would be expected.

Activities (such as renovation or demolition) with the potential to disturb lead-based paint are subject to a variety of requirements, including US Occupational Safety and Health Administration regulation 29 CFR 1926.62 (Lead Exposure in Construction).

2.6 Utilities

The Site was supplied with electricity and natural gas and was connected to the municipal water and sewer system. The on-site Power Plant supplies steam heat to Buildings 7, 8, 9 and 10. The remaining buildings are heated by boilers in each respective area.

2.7 Waste Management and Chemical Handling

Chemical use and storage was observed in portions of the Site, as noted in Section 2.1. These chemicals were generally neatly stored and labeled. Apparent oil-like staining was noted in chemical storage areas in some buildings as noted in Section 2.1, but generally appeared to be surface staining which was not likely to have affected subsurface conditions.

Disposal of general refuse (garbage) is arranged for by Industry City. Industry City representatives indicated that chemical handling and disposal are the responsibility of the individual tenants. Interviews with tenants regarding waste disposal was not feasible in all tenant spaces; however, tenant interviews indicated a private waste disposal firms collect wastes generated by the printing and paint manufacturing businesses in Buildings 5 and 19.

2.8 Radon

Radon is a colorless, odorless gas most commonly produced by the radioactive decay of certain rocks. According to a New York State Department of Health database the average level of radon found in basements in Brooklyn is 1.93 picocuries/liter, below the USEPA recommended action level of 4.0 picocuries/liter.

3.0 ASBESTOS-CONTAINING MATERIALS (ACM)

Asbestos is a name applied to a group of natural minerals, with particularly good fire resistant and insulation properties. In addition to insulation/fireproofing products, it is also commonly found in vinyl flooring, plaster, sheetrock, joint compound, ceiling tiles, roofing materials, gaskets, mastics, caulks and a range of other products. Materials containing more than one percent asbestos are considered asbestos-containing materials (ACM). ACM are classified as friable or non-friable: friable (e.g., most spray-on fireproofing) ACM more readily release asbestos fibers than non-friable ACM (e.g., vinyl flooring and most roofing materials).

Visible suspect ACM were noted during the reconnaissance if they were observed. However, this reconnaissance was not intended to and may not have identified all visible suspect ACM. In addition, suspect ACM may be present in areas not visible during the reconnaissance (e.g., in areas hidden behind walls, under flooring, behind walls, above suspended ceilings, in areas which were inaccessible during the reconnaissance, etc.) The observations made during the reconnaissance do not constitute and cannot substitute for an asbestos survey which is a comprehensive study with laboratory testing. Prior to implementing an activity which could disturb suspect ACM (e.g., renovation or demolition), a NYC-

certified asbestos investigator must inspect the areas and conduct testing, as necessary, to determine whether the activity would disturb ACM. Any such ACM must be removed prior to the activity. There are also requirements that all suspect ACM be maintained in good condition regardless of whether they are to be disturbed by a project.

Based on the age of the buildings, ACM may be present on the Site, and some labels confirming asbestos-containing material were observed. Suspect ACM observed during the reconnaissance included roofing materials, vinyl floor tiles and associated mastic, thermal pipe and duct insulation, window caulk/putty, transite panels and boiler insulation. A tunnel beneath some of the Site buildings, which was not accessed during the site reconnaissance, reportedly also contains known ACM. Industry City staff indicated that previous ACM surveys have been conducted on the Site and an Operations and Maintenance Plan is implemented. Industry City representatives provided copies of NYCDEP Asbestos Control Program (ACP) ACP-5 Forms dated 2010 through 2012 for renovation in various Site areas. ACP-5 Forms indicate that a construction or renovation project would not disturb ACM, or would disturb only minor quantities of ACM. The ACP-5 Forms provided by Industry City indicated that no ACM was present in the work areas.

Prior to implementing an activity which could disturb suspect ACM (e.g., renovation or demolition), a NYC-certified asbestos investigator must inspect the areas and conduct testing, as necessary, to determine whether the activity would disturb ACM. Any such ACM must be removed prior to the activity. There are also requirements that all suspect ACM be maintained in good condition regardless of whether they are to be disturbed by a project. Unless the damaged suspect ACM are known not to contain asbestos, these materials should be sampled for asbestos by appropriately licensed/certified individuals, and any damaged ACM should be removed or repaired in accordance with applicable requirements.

4.0 ADJACENT LAND USE

The off-site portion of Bush Terminal (also known as Industry City) in Brooklyn, New York, was mostly occupied by industrial and commercial uses in addition to a school playground and a gas station. In more detail, the Northern Parcel was adjacent to a parking lot and fleet maintenance building to the north; auto repair, a gasoline station, auto sales, commercial/warehouse properties and playground to the east; and a Costco Warehouse store with an auto tire center to the south; and parking lots to the west.

The Southern Parcel was adjacent to vacant land and a parking lot to the north; a parking lot, auto repair, a roofing business and custom kitchen furniture manufacturer to the east; commercial and retail properties, including a dental office, hardware supply, and beauty supply to the south; and the Upper New York City Bay to the west. An off-site building located between the former gasoline station and Building 19 (Block 706, Lot 20) was indicated by an Industry City representative as a plastics manufacturer.

5.0 SITE HISTORY AND RECORDS REVIEW

5.1 Prior Ownership and Usage

According to interviews, historical uses of the Site buildings were generally similar to the current uses. Interviews with Site personnel indicated historical uses included warehouses, textile facilities (cutting, sewing and manufacturing), printing, wood shops, a picture frame painter, a

bank, an aluminum siding manufacturing, machinery belt manufacturing and furniture manufacturing.

5.1.1 Historical Land Use Maps

Sanborn Insurance maps were provided and reviewed for 1888, 1906, 1926, 1951, 1965, 1978, 1988, 1995, and 2007.

5.1.1.1 On-Site Historical Maps

The Bush Terminal Co. was identified on the Northern Parcel since 1926 and on the Southern Parcel since 1951. Historical uses of the Northern Parcel of the Site have been industrial since at least 1926 and included paint manufacturing, printing, and a power plant. The Southern Parcel has been used for industrial purposes since at least 1888 and included oil refining, chemical manufacturing, asbestos manufacturing, auto repair, a filling station, printing, and rail yard operations. The historical occupants were associated with storage of acids, paints and petroleum. The Northern and Southern Parcels were served by railroads starting in 1888, with railroad access further expanded by 1951. Railroads no longer service the Site buildings.

The majority of the Site was developed with the current structures by 1926. Buildings 1, 25 and 26 were constructed by 1906. Buildings 2-10, 19-22, 24, 26 and the Power Plant were constructed between 1906 and 1926. Building 23 and a filling station were constructed between 1926 and 1951. The filling station was replaced by an auto repair facility by 1995.

Notable Site observations, summarized by Block, included the following:

Block	Year	On-Site Sanborn Map Description
695	1888	Largely vacant with four railroad lines traversing and ending within the block. Two stores were located on Lot 43.
	1906	Vacant on northern half with southern portion occupied by a building labeled Compound, shown at the location of Building 1. Two stores were on Lot 43.
	1926	Buildings 1 and 2 occupied by Bush Terminal Co. and identified as loft buildings (i.e., various manufacturing occupancies). Railroad tracks and a small storage building were located in the open space between Buildings 1 and 2. Two stores and a feed building at the end of a railroad are shown on Lot 43.
	1951	Building conditions remain similar to the 1926 Sanborn map with the following exception: the building in the open space between Buildings 1 and 2 was removed and a building identified as mechanical assembling was added.
	1965	Building conditions remain similar to the 1951 Sanborn map with the exception of a parking garage added on Lot 43.
	1978	Building conditions remain similar to the 1965 Sanborn map.
	1988	Building conditions remain similar to the 1978 Sanborn map.
	1995	Building conditions remain similar to the 1988 Sanborn map.
	2007	Building conditions remain similar to the 1995 Sanborn map.
691	1888	Vacant with one railroad line ending at the center of the block.
	1906	Largely vacant, occupied by two storage sheds at the location of Building 3.
	1926	Buildings 3 and 4 occupied by Bush Terminal Co. and identified as loft buildings (i.e., various manufacturing occupancies). Railroad tracks were located in the open space between Buildings 3 and 4.

Block	Year	On-Site Sanborn Map Description
	1951	Building conditions remain similar to the 1926 Sanborn map.
	1965	Building conditions remain similar to the 1951 Sanborn map.
	1978	Building conditions remain similar to the 1965 Sanborn map.
	1988	Building conditions remain similar to the 1978 Sanborn map.
	1995	Building conditions remain similar to the 1988 Sanborn map.
	2007	Building conditions remain similar to the 1995 Sanborn map.
687	1888	Vacant
	1906	Vacant
	1926	Buildings 5 and 6 occupied by Bush Terminal Co. and identified as loft buildings (i.e., various manufacturing occupancies). Railroad tracks were located in the open space between Buildings 5 and 6.
	1951	Building conditions remain similar to the 1926 Sanborn map.
	1965	Building conditions remain similar to the 1951 Sanborn map.
	1978	Building conditions remain similar to the 1965 Sanborn map.
	1988	Building conditions remain similar to the 1978 Sanborn map.
	1995	Building conditions remain similar to the 1988 Sanborn map.
	2007	Building conditions remain similar to the 1995 Sanborn map.
683	1888	Vacant
	1906	Vacant
	1926	Buildings 7 and 8 occupied by Bush Terminal Co. and identified as loft buildings (i.e., various manufacturing occupancies). Railroad tracks were located in the open space between Buildings 7 and 8.
	1951	Building conditions remain similar to the 1926 Sanborn map.
	1965	Building conditions remain similar to the 1951 Sanborn map.
	1978	Building conditions remain similar to the 1965 Sanborn map.
	1988	Building conditions remain similar to the 1978 Sanborn map.
	1995	Building conditions remain similar to the 1988 Sanborn map with the exception of a building extension added east of Building 7 and 8 identified as a loft and post office.
	2007	Building conditions remain similar to the 1995 Sanborn map.
679	1888	Vacant
	1906	Largely vacant, two buildings labeled Bush Terminal Company are shown at the location of Building 9.
	1926	Buildings 9 and 10 and the Power Plant occupied by Bush Terminal Co., with Buildings 9 and 10 identified as loft buildings (i.e., various manufacturing occupancies). Two gasoline USTs and a garage were shown at the western end of Building 9. Railroad tracks were located in the open space north of Building 9, leading up to Building 10. An ash pocket and a transformer station were identified adjacent to the Power Plant.
	1951	Building conditions remain similar to the 1926 Sanborn map.
	1965	Building conditions remain similar to the 1951 Sanborn map.
	1978	Building conditions remain similar to the 1965 Sanborn map.
	1988	Building conditions remain similar to the 1978 Sanborn map.

Block	Year	On-Site Sanborn Map Description
	1995	Building conditions remain similar to the 1988 Sanborn map, except for removal of two transformers shown on the 1988 map from the transformer station.
	2007	Building conditions remain similar to the 1995 Sanborn map.
706	1888	Occupied by Phenix Chemical Works and H.W. Johns Manufacturing Co., including several acid chambers and acid stills, an acetic acid house, a felt roofing factory, an asbestos factory, paint mills, sulphur burners, vitriol tanks, acid farms and platinum pans. Southeastern portion occupied by Bush & Denslow Manufacturing Company (an oil refinery spanning Blocks 706 and 710), including a crude oil tank, refined oil tanks, bleaching tanks, distillate tanks, agitator tanks, and naphtha tanks.
	1906	Occupied by Brooklyn Rapid Transit Engine and Dynamo Room and H.W. Johns-Manville Manufacturing Co. asbestos factory, which included crude oil tanks, oil and benzene storage, engines and dynamos, a brass foundry, a machine shop, coal storage and 18 boilers. Southeastern portion occupied by Bush Terminal Company buildings (including Building 25), F. S. Sanford Coal Co. and Bush Docks Freight Station with multiple railroad sidings and coal storage.
	1926	Occupied by buildings of the Bush Terminal Co. Buildings 19, 20 and 22 were shown as lofts. A railroad track bisected the Southern Parcel from west to east with railroad sidings terminating at Building 20. Building 25 was shown as a warehouse with 6 boilers. Buildings 21 and 24 were labeled as a service station freight terminal. The location of current Building 23 was vacant land. A gasoline UST was identified north-adjacent to Building 22.
	1951	Occupied by buildings of the Bush Terminal Co. Buildings 19, 20, 22 and railroad tracks were similar to the 1926 map. The northern portion of Building 25 (warehouse and boilers) was demolished. A concrete tunnel was shown connecting Buildings 19 and 20 to the area where Building 26 now exists. Buildings 21, 23 and 24 were shown as lofts. A filling station and a building with no labeled use were shown along 39th Street and east of Building 22. A gasoline tank was identified north-adjacent to Building 22.
	1965	Building conditions remain similar to the 1951 Sanborn map.
	1978	Building conditions remain similar to the 1965 Sanborn map with the exception of a new building shown at the filling station along 39th Street.
	1988	Building conditions remain similar to the 1978 Sanborn map.
	1995	Building conditions remain similar to the 1988 Sanborn map with the exception of replacement of the filling station formerly located along 39th Street with an auto repair shop.
	2007	Building conditions remain similar to the 1995 Sanborn map; however, a gasoline UST was no longer shown north-adjacent to Building 22 and railroad tracks were no longer located at the southeastern corner of Building 20.
710	1888	Occupied by Bush & Denslow Manufacturing Company (an oil refinery spanning Blocks 706 and 710), including bleaching tanks, distillate tanks, agitator tanks, spent acid tanks, naphtha tanks and tar tanks.
	1906	Occupied by two large buildings with no labeled use.
	1926	Occupied by a building at the location of Building 26, labeled as the Holcomb Rubber Co. warehouse. A railroad track bisected the Southern Parcel from west to east, with railroad sidings terminating at Building 20.
	1951	Building conditions remain similar to the 1926 Sanborn map; however, Building 26 was extended and labeled Bush Terminal Co. Railroad tracks were no longer shown between Building 26 and 24.
	1965	Building conditions remain similar to the 1951 Sanborn map.
	1978	Building conditions remain similar to the 1965 Sanborn map.
	1988	Building conditions remain similar to the 1978 Sanborn map.
	1995	Building conditions remain similar to the 1988 Sanborn map.
	2007	Building conditions remain similar to the 1995 Sanborn map.

5.1.1.1 Off-Site Historical Maps

Sanborn Insurance maps were provided and reviewed for 1888, 1906, 1926, 1951, 1965, 1978, 1988, 1995 and 2007. Map coverage for surrounding properties east of the Northern Parcel was limited.

In general, Sanborn maps indicated that properties surrounding both the Northern and Southern Parcels have been used for industrial, manufacturing and warehousing purposes including garages, auto repair, rail yard operations, printing facilities and metal shops since at least 1926.

Sanborn maps indicated the following for adjacent properties:

- By 1888, the visible surrounding properties for the Northern Parcel were shown as mostly vacant land with railroad tracks, a rail track repair shop, and a few multi-story stores. By 1888, surrounding properties for the Southern Parcel were shown as mostly industrial, single-family dwellings, and a few stores and included a coal burner and printing ink manufacturing.
- By 1906, the visible surrounding properties for the Northern Parcel were shown as mostly vacant land with railroad tracks, a rail track repair shop, and a few multi-story stores. By 1906, surrounding properties for the Southern Parcel were shown as vacant, manufacturing, and industrial land with a few single-unit dwellings and stores and included varnish manufacturing and a machine shop.
- By 1926, the visible surrounding properties for the Northern Parcel were shown as being industrial and railroad track-related uses with a few stores, a garage, and single family dwellings. By 1926, surrounding properties for the Southern Parcel were shown as industrial, manufacturing, and warehouse uses and included chemical storage, varnish manufacturing, a machine shop, and garages.
- By 1951, the visible surrounding properties for the Northern Parcel were shown as industrial and railroad track-related uses including a NYC transit station (with a filling station), a coal-powered power house, and a U.S. Naval Department garage. By 1951, surrounding properties for the Southern Parcel were shown as industrial and manufacturing uses including U.S Government property, printing facilities, machine shops, and garages.
- By 1965, the visible surrounding properties for the Northern Parcel were shown as industrial, railroad track-related, and manufacturing uses including a coal-powered power house, a U.S. Naval Department garage and a steel shop. By 1965, surrounding properties for the Southern Parcel was shown as industrial, manufacturing and warehouse uses including a coal pocket/incinerator, metal manufacturing, auto repair, a garage, and a paper/wallpaper production facility. A textile warehouse was identified off-site between Buildings 22 and 19.
- By 1978, the visible surrounding properties for the Northern Parcel were shown as commercial, industrial, and railroad track-related uses including a coal-powered power house and a U.S. Naval Department garage. By 1978, surrounding properties for the Southern Parcel were shown as industrial, manufacturing, and warehouse uses including auto painting, a junk yard, a coal pocket/incinerator, metal manufacturing,

auto repair, a garage, and a paper/wallpaper production facility. A textile warehouse was identified off-site between Buildings 22 and 19.

- By 1988, the visible surrounding properties for the Northern Parcel were shown as being industrial, railroad track-related and parking uses including a coal-powered power house and a U.S. Naval Department garage. By 1988, surrounding properties for the Southern Parcel were shown as industrial, manufacturing and warehouse uses including auto painting, a junk yard, a coal pocket/incinerator, metal manufacturing, auto repair, a garage, and a paper/wallpaper production facility. A textile warehouse was identified off-site between Buildings 22 and 19.
- The 1995 Sanborn Insurance map was partly illegible. By 1995, the visible surrounding properties for the Northern Parcel were shown as industrial, railroad track-related and parking uses including a coal-powered power house and a U.S. Naval Department garage. The visible surrounding properties for the Southern Parcel were shown as industrial, manufacturing and warehouse uses including auto painting, a junk yard, a coal pocket/incinerator, metal manufacturing, auto repair, a garage, and a paper/wallpaper production facility. The former textile warehouse shown between Buildings 22 and 19 on the 1988 map was not labeled.
- By 2007, the visible surrounding properties for the Northern Parcel were shown as industrial, commercial, parking, and warehouse uses including a coal-powered power house, a U.S. Naval Department garage, and a Costco Warehouse store which replaced the railroad tracks. By 2007, surrounding properties for the Southern Parcel were shown as industrial, manufacturing and warehouse uses including auto painting, a junk yard, a coal pocket/incinerator, metal manufacturing, auto repair, a garage, and a paper/wallpaper production facility. The former textile warehouse between Building 22 and 19 remained unlabeled.

5.1.2 Historical Aerial Photographs

Since historical fire insurance maps and USGS topographical maps were available for the Site (and surrounding area) and these maps included information relating to land use, aerial photographs would, most likely, not provide additional useful information relevant to the potential for recognized environmental conditions or other environmental concerns. As such, aerial photographs were not reviewed.

5.1.3 Historic USGS Topographical Maps

AKRF reviewed available historical USGS Topographic Quadrangles for information regarding past uses of the Site. Copies of the historical USGS topographic maps are included in Appendix C. Historic USGS topographic maps were provided and reviewed for 1891, 1900, 1905, 1947, 1955, 1967, and 1981.

Due to the scale and resolution of the maps, it was unclear whether shoreline expansion or grade changes occurred in the vicinity of the Site. Detailed site features were not discernible due to map scale; however, some information was visible. The 1891 map showed piers west of the Site. By 1947, the Site was shown with the current structures, the Northern Parcel was labeled "Bush Terminal," and "No Twin Tank" was noted on or near the Southern Parcel. No significant changes to the configuration of the Site were noted on subsequent maps. A pier was shown west-adjacent to the Site on the 1947-1955 maps, and was demolished by 1967.

5.1.4 Property Tax Files and Zoning Records

Based on NYC Department of City Planning's Primary Land Use Tax Output (PLUTO) information provided by Toxics Targeting, Inc., the Site is zoned as M3-1 (manufacturing district).

5.1.5 Local Street Directories

City Directories prepared by Environmental Data Resource, Inc. (EDR) identified occupants between years 1928 to 2005. City Directory listings contained numerous on-site businesses, the nature of whose operations could not be discerned from the occupant name. Full City Directory listings are included in Appendix F. Tenants of possible environmental concern are listed below:

Block	Notable City Directory Listings
695	1928 Wall Paper, Inc. Co., Havoline Oil Co., Veneer and Panel Co. 1928- 1934 Sherwood Petroleum Co. 1934 Chemical Works 1940 Plywood Co., Chandler Oil Cloth 1949 Gem Electric Co. 1960 Electric Wire and Cable.
691	1928 Blue Ribbon Paper Corp., Chemical Co., Metal Cap Co., Bleaching Co. 1928-1934 Steel Co. 1928-1992 Block Drug Co. 1934 Motor Parts, Paper Products 1960-1965 Paper Goods Co. 1976-1985 Flavors Inc. 1992 Silk Screen 1997-2005 Silk Screen, Fine Carpentry 2005 Sterling Bio Diesel
687	1928 Chemical Co., Windshield Cleaner Co. Baking Powder Co., Automotive Improvements 1928-1934 Rubber Co. 1928-1960 Electronic Batteries Inc. 1934 Printing Press, 1940 Battery Corp. 1940 Plastics Production 1945-1949 Batteries, Chemical Production 1949 Felt Products, Printing 1965-1973 Dryer and Laundry 1970 Printing 1973-1997 Utrecht Colors Paper Convertors 1980 Woodworking, Packing Co. 1985-1992 Printing, Packing Special Ties 1992 Woodworking, Utrecht Artist Paper Manufacturers 1997-2005 Cabinet Makers 1997 Computer Forms 1997-2005 Packing 2000-2005 Printing Inc. 2005 Photo Production
683	1928 Yellow Taxi Cab, Paper Mill 1929 Refrigerators 1965-1970 Metal Cap Co. 2000 Textiles, Printing 2005 Woodworking
679	1960 Metal Cap Co. 1967-1992 Knitting Mill 1976 Paper Products 1992 Publishers

Block	Notable City Directory Listings
706	1928 Meter Co., Chemical Production 1928-1934 Ammonia Co. 1940 Paint and Varnish 1940-1945 Chemical Productions, Service Station 1960-1976 Textile Printers 1960-1975 Color Perspectives 1973 Semone Oil 1976 Urethane Arts 1992 Silk Screen 1992 Woodworking 1994-1997 Printing 1997-2000 Textile Hats Manufacture, Cosmetics 1997-2005 Knits Mills, Flavor Manufacturing
710	No listings of apparent environmental concern.

5.2 Regulatory Review

Regulatory database information, as shown in Appendix D, was obtained from Toxics Targeting, Inc. of Ithaca, New York. The Introduction of Appendix D includes summaries of the databases searched, their radii around the Site and limitations of the data. The databases searched and associated radii were consistent with ASTM E1527-05.

5.2.1 Federal

The federal databases searched included the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the Air Discharge Facilities Index (ADF); and the USEPA Civil Enforcement Docket. The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings. On-site listings are outlined in Section 5.2.3; this section summarizes off-site listings.

National Priority List (NPL)

The NPL is the USEPA's compilation of some sites that probably remedial action under the Superfund Program. NPL sites can pose a significant risk of stigmatizing surrounding properties and thus impacting property values.

One NPL site was identified within a one-mile radius of the Site. This site is not expected to have affected the Site based on distance and anticipated groundwater flow direction.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

CERCLIS is a compilation of sites which the USEPA has investigated, or plans to investigate, pursuant to the Superfund Act of 1980 (CERCLA). As such, some of these sites may ultimately present concerns and others may not (but could still pose a perceived threat, thus affecting property values).

Six listings were identified within a ½-mile radius of the Site. All were assigned a No Further Remedial Action Planned (NFRAP) status. The nearest facility was Bush Terminals - Pier Six, located approximately 510 feet west-southwest of the Southern Parcel, with reported cleanup activities prior to NFRAP status being assigned. This facility may have affected the Site, although the potential for impact is minor based on the anticipated groundwater flow direction.

Based on distance and anticipated groundwater flow direction, the remaining off-site CERCLIS facilities are not likely to have affected the Site.

Emergency Response Notification System (ERNS)

This federal database, compiled by the Emergency Response Notification System, records and stores information on certain reported releases of petroleum and other potentially hazardous substances.

The ERNS database was searched for on-site or potentially on-site listings.

Toxic Chemical Release Inventory System (TRIS)

The TRIS contains information reported by a variety of industries on their annual estimated releases of certain chemicals.

Two TRIS sites were identified within a ⅛-mile radius of the Site. Both listings were for Industrial Finishing Products, located at 214 40th Street, approximately 225 feet east of the Southern Parcel. This facility may have affected the Site.

Permit Compliance System of Toxic Wastewater Discharge (WWD)

This database includes certain sites which discharge wastewater containing potentially hazardous chemicals.

No WWD facilities were reported within a ⅛-mile radius of the Site.

United States Environmental Protection Agency Civil Enforcement Docket

This database tracks civil judiciary cases filed on behalf of the USEPA by the Department of Justice.

One facility was listed in the USEPA's Civil Enforcement Docket within a ⅛-mile radius of the Site, but was not expected to have affected the Site based on listing details.

Air Discharge Facilities Index (ADF)

This federal database includes information on certain air emission sources.

Ten Air Discharge Facilities were identified within a ⅛-mile radius of the Site. These listings included industrial/manufacturing facilities, including a plastics manufacturer west-adjacent to Building 19. Some of these facilities may have affected the Site.

5.2.2 State

The state records reviewed included the listings of hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); Brownfield Sites; and Historic Utility Sites. Off-site database listings are discussed in this section; on-site listings are detailed in Section 5.2.3.

New York SPILLS Database

This database includes releases reported to the NYSDEC, including tank test failures (for USTs only) and tank failures.

Eight closed-status minor releases were reported within utility vaults/manholes on or adjacent to the Site; these spills were reportedly contained within the utility structures. In addition, 26 active and 530 closed-status spills were identified within a ½-mile radius of the Site. Some of these listings may have affected the Site, particularly the following:

- In June 2001, a gasoline tank leak was reported at Show Auto Sales, located at 4001 Second Avenue, approximately 75 feet east of the Southern Parcel. The listing indicated that gasoline and waste oil tanks were removed from this site, and contaminated soil was excavated. Soil and groundwater contamination with gasoline and methyl tert-butyl ether (MTBE), a gasoline additive, was reported. Groundwater was delineated as flowing towards the west or northwest. The listing indicated that contamination appeared not to be migrating off-site. Quarterly groundwater monitoring was being conducted as of March 2012. This listing remains active.
- In April 1997, gasoline-contaminated soil was found during tank removal activities at Bush Terminal, located at 4104 First Avenue, approximately 130 feet west-southwest of the Southern Parcel. The listing indicated that a tank field was present at this site. Based on the presence of soil contamination, NYSDEC requested groundwater testing. This listing remains active.
- A spill was reported during the removal of three leaking No. 2 fuel oil USTs at 990 Third Avenue, approximately 195 feet southwest of the Northern Parcel, in November 1995. No further investigation or remediation was reported. The spill was closed in February 2006 based on a NYSDEC site visit indicating that a new building (Costco) was constructed at this address subsequent to the spill.
- A traffic accident in July 2005 caused a release of approximately 300 gallons of diesel at the intersection of 39th Street and Second Avenue, north-adjacent to the Southern Parcel. Approximately 20 gallons reportedly entered the sewer system. The spill was cleaned up, and the listing was closed.
- In June 2007, gasoline-contaminated soil and groundwater were reported at LL Auto Repair Center, located at 129 34th Street, approximately 165 feet east of the Northern Parcel. USTs and contaminated soil were subsequently removed in 2008. The spill listing was closed based on subsequent soil and groundwater sampling. Groundwater was identified approximately 13 to 14 feet below grade, flowing in a westerly direction.

Resource Conservation and Recovery Act (RCRA) Notifiers Listings

This database lists sites which have filed notification forms regarding hazardous waste activity, including: treatment, storage and disposal facilities (TSDs); small-quantity (SQG) and large-quantity generators (LQG); and transporters regulated under RCRA. The discussion below includes any CORRACTS listings of facilities which are subject to corrective action under RCRA.

No TSD facilities were identified within a ½-mile radius of the Site. Two CORRACTS sites were identified within a one-mile radius of the Site. Based on their distance and the anticipated groundwater flow direction, these facilities are not likely to have affected the Site.

Sixteen RCRA Generator/Transporter listings were identified for utility vaults/manholes on or adjacent to the Site, but are not likely to have affected the Site as any associated releases tend to remain contained within the structures. In addition, 63 Generator/Transporter listings were identified within a ⅛-mile radius of the Site. Some of these off-site listings had the potential to affect the Site based on their location and the nature of waste generated (e.g. solvents).

Chemical Bulk Storage (CBS) Database

The New York CBS is a list of facilities that store regulated non-petroleum substances in aboveground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

One CBS listing with the potential to affect the Site was identified within a ⅛-mile radius of the Site. The listing, for Pyrock Chemical, is located at 214 40th Street, approximately 220 feet east (upgradient) of the Southern Parcel, may have affected the Site based on its proximity and the anticipated groundwater flow direction. This facility is listed on the TRIS database as Industrial Finishing Products with fugitive air releases, solvent/organics recovery and incineration/thermal treatment of various VOCs in 1987, 1988 and 1989. No releases were reported at this address in the NYSDEC SPILLS database.

Solid Waste Facilities (SWF)

This database includes certain landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

Four Solid Waste Facilities were identified within a one-mile radius of the Site. Based on distance and anticipated groundwater flow direction, these facilities are not likely to have affected the Site.

Petroleum Bulk Storage (PBS) Database

This database lists facilities that registered having either aboveground or underground petroleum tanks with total storage exceeding 1,100 gallons. Facilities with more than 400,000 gallons appear on the Major Oil Storage Facilities (MOSF) database.

Thirty-five PBS and New York City Fire Department listings were identified within a ⅛-mile radius of the Site. Based on their location in close proximity and upgradient of the site and spills reported to NYSDEC at some of these facilities, some of these listings may have affected the Site.

State Inactive Hazardous Waste Disposal Site Registry (SHWS)

This program (also known as State Superfund) lists information regarding a variety of sites likely requiring cleanup.

Six State Inactive Hazardous Waste Disposal Sites were reported within a one-mile radius of the Site. These facilities are not expected to have affected the Site based on distance and anticipated groundwater flow direction.

State Hazardous Substance Waste Disposal Site Study (SHSWDS)

This database tracks certain sites that were not listed in SHWS, but may still require investigation and/or cleanup.

Two SHSWDSs were identified within a ½-mile radius of the Site. Based on their distance and listing details, they are not likely to have affected the Site.

Major Oil Storage Facilities (MOSF) Database

These facilities have petroleum storage of 400,000 gallons or more.

No Major Oil Storage Facilities were reported within a ⅛-mile radius of the Site.

Environmental Restoration Program

These sites (which are generally municipally-owned) are receiving New York State funding for site investigation and remediation. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

One ERP site was identified within a ½-mile radius of the Site. Based on its distance and the anticipated groundwater flow direction, this facility is not expected to have affected the Site.

Voluntary Cleanup Program

The Voluntary Cleanup Program is a NYSDEC program for investigation and remediation of (generally) privately-owned sites. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

No VCP sites were identified within a ¼-mile radius of the Site.

Brownfield Cleanup Program

This NYSDEC program is the successor to the Voluntary Cleanup Program. Again, some sites have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

No BCP sites were identified within a ½-mile radius of the Site.

Historic Utility Sites

This is an inventory of certain power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites identified in various historic documents, maps and annual reports from 1898 to 1950.

Two historical utilities were reported within a ⅛ mile of the Site, with both facilities located approximately 340 feet west-southwest of the Southern Parcel. The facilities

were identified as a Brooklyn Edison substation and a Brooklyn Union Gas transformer. Although no spills were reported to NYSDEC a these addresses, based on the close proximity to the Site, and typical environmental history at utility sites, these facilities may have affected the Site.

5.2.3 Summary of Federal and State Database On-Site Listings

The databases detailed in Sections 5.2.1 and 5.2.2 were reviewed for listings on-Site, as summarized below:

Block/Lot	Building	On-Site Database Listings
695/1	1	One WWD listing for Bush Terminal Associates, industrial plating and polishing facility with a permit issued in 1982 (inactive status). Two RCRA Hazardous Waste Generator listings for Industry City Association (ignitable and corrosive waste, PCB-contaminated liquids, spent non-halogenated solvents).
	Boiler House	Emergency generator structure adjacent to the boiler house reportedly contains a 1,250-gallon No. 2 fuel oil tank (not listed in PBS database).
	Exterior	No Listings
695/20	2	One PBS listing for active 6,000-gallon No. 2 fuel oil AST for Industry City Associates (likely the AST observed in the boiler house between Buildings 1 and 2). Site personnel indicated this tank contains No. 4 fuel oil. Two TRIS listings for Alpha Associates Inc./Alpha Coatings for emissions or disposal of isopropyl alcohol, n-butyl alcohol, toluene, xylene, antimony and lead waste, and methyl ethyl ketone in the 1990s. RCRA Hazardous Waste Generator listing for Alpha Coatings Co. (waste not specified). RCRA Hazardous Waste Generator listing for Brooklyn Coatings Inc. (no waste specified) with one RCRA violation in 1988 - returned to compliance.
695/43	Exterior	No Listings
691/1	3	One PBS listing for an active 6,000-gallon No. 2 fuel oil AST for Industry City Associates (observed during the reconnaissance). Site personnel indicated this tank contains No. 4 fuel oil. ADF listing for Brooklyn Coating (permanently closed status). ADF listing for Alpha Associates. ADF listing for Industry City Associates. ADF listing for Décor Furniture Corp. RCRA Hazardous Waste Generator listing for Sentinel Bag & Paper Co. Inc. (ignitable waste, spent halogenated solvents). RCRA Hazardous Waste Generator listing for General Paper Goods (ignitable waste).
	4	Two TRIS listings for Tekni-Plex for emissions and disposal of methyl ethyl ketone, acetone, methyl isobutyl ketone and n-butyl alcohol in the 1990s. ADF listing for Tekni-Plex Inc. (permanently closed status). RCRA Hazardous Waste Generator listing for Tekni-Plex (lead waste, benzene, ignitable waste, spent non-halogenated solvents).
	Boiler House	No Listings
	Exterior	No Listings
687/1	5	One PBS listing for active 6,000-gallon No. 1, 2 or 4 fuel oil UST for Industry City Associates. The reconnaissance noted a 6,000-gallon No. 4 fuel oil AST for the Building 5&6 boiler in the basement of this building (possibly erroneously listed as an UST). ADF listing for Della Packaging Specialties (permanently closed status). RCRA Hazardous Waste Generator listing for Utrecht Manufacturing (cadmium and lead waste, reactive waste), 23 RCRA violations in 2005-2010 - all returned to compliance. RCRA Hazardous Waste Generator listing for Printway Ltd. (ignitable waste).
	6	No Listings
	Boiler House	No Listings
	Exterior	No Listings

Block/Lot	Building	On-Site Database Listings
683/1	7	TRIS listing for Galaxco Inc. with no chemical information provided. ADF listing for Aimwell Products Inc. RCRA Hazardous Waste Generator listing for Romaba Record Corp. (waste not specified).
	8	The reconnaissance identified an approximately 1,000-gallon AST (apparently connected to a boiler) in the basement of this building, which was not identified in the PBS database. Blatchford Base Plant identified as a CERCLIS - NFRAP facility which was archived after preliminary assessment. Blatchford Base Plant also identified as SHSWDS facility suspected to have disposed of sludge; no evidence of disposal was identified.
	Exterior	No Listings
679/1	9	A gasoline tank fill port was observed south of the west side of this building, but a past geophysical survey found no evidence of this tank and the tank was not listed in the PBS database. The reconnaissance observed an approximately 3,000 to 4,000-gallon AST, a locked room apparently containing a diesel tank, and two 275-gallon ASTs (all related to emergency generators) in this building. No tanks were listed for this address in the PBS database; however, two of the tanks appeared to have been listed with AT&T Brooklyn, associated with the Building 10 address as discussed below. It appears that the other two tanks associated with an emergency generator in Building 9 were not registered in the PBS database.
	10	One PBS listing for active 3,000-gallon No. 2 fuel oil AST at Bush Terminal. The reconnaissance observed two emergency generators west of this building; one was reportedly a 1,250-gallon No. 2 fuel oil tank and the other was an unknown fuel type and volume and was managed by a tenant. One of these emergency generators likely uses the 3,000-gallon AST registered to Bush Terminal. One PBS listing for active 2,000-gallon diesel AST and active 200-gallon No. 2 fuel oil AST at AT&T Brooklyn. These tanks were likely those observed in the basement and first floor associated with one of the emergency generators inside Building 9. TRIS listing for Virginia Dare Extract Co. with no chemical information provided. RCRA Hazardous Waste Generator listing for LM Industries Co. (ignitable and corrosive waste, cadmium waste). RCRA Hazardous Waste Generator listing for Virginia Dare (ignitable and corrosive waste, benzo(a)pyrene, cyclohexane, n-butyl alcohol, methyl ethyl ketone, 1,2-ethanediamine, trichloromethane, cadmium waste, choloroform, propanedinitrile), two RCRA violations in 2009 - both returned to compliance. Closed-status spill listing indicating that in 1996, approximately four gallons of bromine spilled from broken bottles and were cleaned up. Closed-status spill reported in 1997 due to release of five gallons of bromine, which was cleaned up.
	Power Plant	One PBS listing for a 36,000-gallon No. 2 fuel oil UST closed some time prior to 1991 (not specified whether removed or closed in place) and an active 20,000-gallon No. 2 fuel oil AST for Industry City Associates. The 20,000-gallon AST was observed during the reconnaissance. Site personnel indicated this tank contains No. 4 fuel oil. The reconnaissance also observed a 275-gallon AST for an emergency generator, which was not listed in the PBS database.
	Exterior	One closed-status spill listing for an empty lot between Second and Third Avenues, near 32nd Street (potentially on the Site). The listing indicated that in 1998, an excavation found closed tanks and a vault with a small quantity of oil on water. Spill listing closed in 2005 due to age and reportedly minor quantity of oil spilled.

Block/Lot	Building	On-Site Database Listings
706/1	19	One PBS listing for two active 6,000-gallon No. 2 fuel oil ASTs for Industry City Associates, likely for the two ASTs located in the boiler house between Buildings 19 and 20. Site personnel indicated these tanks contain No. 4 fuel oil. RCRA Hazardous Waste Generator listing for Fontana Bros. (no waste specified). RCRA Hazardous Waste Generator listing for Chromadyne Corp. (no waste specified). RCRA Hazardous Waste Generator listing for Carlson Inks (no waste specified) with one RCRA violation in 1990 - returned to compliance. Closed-status spill listing reported in 1996, involved a 100-gallon release of No. 4 fuel oil due to a tank overfill. No further information provided. Closed-status spill reported at the intersection of 40th Street and Second Avenue (exact address not provided, potentially on the Site) in 1988, and reportedly involved dumping of approximately 20 gallons of paint solvents into the sewer system by Alaka Chemicals. A closed-status spill reported in 2000 involved a caller reporting an abandoned 55-gallon waste oil drum; a NYSDEC site visit could not locate this drum.
	20	RCRA Hazardous Waste Generator listing for FGP/Bush Terminals (spent cyanide bath solutions from electroplating). RCRA Hazardous Waste Generator listing for Phoenix Lighting Fixture Co. Inc. (lead waste, spent halogenated solvents, spent cyanide bath solutions from electroplating, trichloroethene). RCRA Hazardous Waste Generator listing for Fulton Ferry Liquidators Inc. (ignitable waste, cadmium waste). RCRA Hazardous Waste Generator listing for Empire Electric Co. (spent non-halogenated solvents). RCRA Hazardous Waste Generator listing for NYC Department of Finance (ignitable waste).
	Interior Loading Area	No Listings
706/24	21	No Listings
	22	No Listings
	23	CBS listing for Interdynamics, Inc. with four, 3,000- to 7,000-gallon dichlorodifluoromethane ASTs (closed and converted to non-regulated use), not observed during the reconnaissance. TRIS listing for Interdynamics, Inc. with air emissions of dichlorodifluoromethane and 1,1,1-trichloroethane in the 1990s. PBS listing for an active 12,000-gallon No. 4 fuel oil AST for Industry City Associates (observed in this building's boiler room). Site personnel identified the tank as 20,000 gallons in volume. RCRA Hazardous Waste Generator listing for NYC Human Resource Administration Print Shop (waste not specified). Two RCRA Hazardous Waste Generator listings for Interdynamics Inc. (ignitable and corrosive waste, silver waste, spent halogenated and non-halogenated solvents). Closed-status spill reported in 1994, reportedly involved unknown petroleum dumped in front of the building from a drum. No further information provided.
	24	No Listings
	Exterior	Potentially on-site PBS listing for three closed in place 550-gallon gasoline USTs for Piers Service, 3901 1st Avenue. These USTs were listed as closed in-place in 1991. Potentially on-site NYC Fire Department listing for four 550-gallon gasoline tanks for Piers Service.
706/101	25	No Listings
710/1	26	TRIS listing for Arthur Matney Co. for emissions or disposal of acetone in the 1980s and 1990s. RCRA Hazardous Waste Generator listing for B&R Import Co. (waste not specified). RCRA Hazardous Waste Generator listing for Elco Toy Co. (waste not specified). RCRA Hazardous Waste Generator listing for Arthur Matney Cosmetics (ignitable waste, spent non-halogenated solvents, mercury waste) with three RCRA violations in 1999-2003 - all returned to compliance.

5.2.4 Local

Records available online from the New York City Buildings and Fire Departments were viewed for the Site. Buildings Department records were reviewed in the on-line Buildings Information System. The Fire Department records were obtained by Toxics Targeting, Inc. as part of the regulatory database search. Since the records typically address a multitude of issues, the review focused on items likely to relate to the potential

presence of hazardous materials, e.g., petroleum tank installation applications and permits, and records indicating prior uses. Copies of pertinent information are included in Appendix E (Buildings Department Records) and Appendix D (Fire Department Records).

Buildings Department

Computerized New York City Buildings Department records indicated the installation of rooftop generators and a sixth-floor spray booth in Building 1 in 2002 and 2006, respectively. An illegal spray booth was reported on the fourth floor of Building 2 in 2009. Additional applications for spray booth installation were filed in 2003, 2004, and 2009 in Buildings 5 and 6, and in 1998, 2002, and 2008 in Buildings 7 and 8. An elevator oil leak and elevator hoist machine lead seal and cleanliness violations were reported in 2008 in Building 1. No additional records related to potential environmental issues were reviewed for the remainder of the Site.

Fire Department

The New York City Fire Department Tanks database was searched regarding past or current motor vehicle fuel and heating oil tank listings within a ⅛-mile radius of the Site. One potentially on-site listing on Block 706, Lot 24 (former gasoline station) and 11 off-site listings were identified, as discussed above in Sections 5.2.2 and 5.2.3.

5.2.5 Additional Environmental Record Sources

To enhance the search, ASTM requires that additional local records be checked when, in judgment of the environmental professional, such records are: 1) reasonably ascertainable; 2) useful, accurate and complete in light of the objective of the records review; and 3) are obtained in initial ESAs. These records include:

- Local Brownfields Lists
- Local Lists of Landfill/solid waste disposal sites
- Local Lists of Hazardous Waste/Contaminated Sites
- Local Lists of Registered Tanks
- Local Land Records (for activity use limitations)
- Records of emergency release reports
- Records of contaminated public wells

Sources for these records include:

- Department of Heath/Environmental Division
- Fire Department
- Building Permit/Inspection Department
- Local/Regional Pollution Control Agency
- Local/Regional Water Quality Agency
- Local Electric Utility (for PCB records)

In AKRF's judgment, no such additional local records meeting the ASTM criteria are pertinent for the Site.

6.0 USER-PROVIDED INFORMATION

The Phase I ESA was performed as part of due diligence prior to a potential purchase of the Site and potentially, addition of new tenants and potential limited redevelopment in the future. The Phase I ESA was performed at the request of Greenberg Traurig, LLP (GT).

6.1 Site Personnel Interviews

GT arranged access to the Site. Industry City representatives were present during the Site reconnaissance. During the reconnaissance, informal questions regarding the history and use of the Site were asked of Industry City representatives present during the Site reconnaissance; however, knowledge levels varied. In general, information provided by Industry City representatives was consistent with the on-site observations and past uses identified based on historical sources.

Lists of building tenants provided by Industry City indicated the following uses with known or potential chemical use and/or storage: Inkjet Textile Printing LLC. in the Building 2 basement (not observed during the reconnaissance); Imperial Elevator Co. on the third floor of Building 3 (observed during the reconnaissance); Gross Printing Inc. on the third floor of Building 4 (observed during the reconnaissance); Utrecht Linens on the third floor of Building 5 (observed to be a paint manufacturer during the reconnaissance); 3N Printing Inc. on the fifth floor of Building 5 (observed during the reconnaissance) and on the fifth floor of Building 6 (not observed during the reconnaissance); Virginia Dare Extract Co. Inc. on the second, fifth floors and sixth floors of Building 9 and the first, fifth, sixth and seventh floors of Building 10 (not observed during the reconnaissance, reportedly a flavoring and extract factory and warehouse, listed in regulatory TRIS and RCRA databases); and Owl Plastics Inc. on the third floor of Building 10 (not observed during the reconnaissance).

7.0 PREVIOUS STUDIES

GT provided copies of previous studies of the Site, including a July 2007 Phase I Environmental Site Assessment and an August 2007 Limited Subsurface Investigation (both prepared by EBI Consulting), a December 2008 Quarterly Groundwater Sampling report for Buildings 19-26, prepared by Roux Associates, Inc., and a May 2009 letter report summarizing indoor air quality (IAQ) testing in Building 1, conducted by Roux Associates for Industry City Associates.

Based on the previous studies, the Site was historically occupied by an asbestos products manufacturer, an oil refinery with 18 bulk ASTs, and a chemical manufacturer prior to current improvements. Associated with these historical uses were oil and benzene tanks, a filling station, an auto repair facility, an ash pit, and a transformer station. Since the construction of the current buildings, these buildings have been occupied by numerous industrial and manufacturing tenants. A historical filling station located on 39th Street, adjacent to Building 25, was constructed prior to 1951. The Limited Subsurface Investigation identified volatile organic compounds (VOCs) associated with gasoline in soils at the location of the former filling station and at the location of a suspected gasoline UST south of Building 9, and gasoline-related VOCs were identified in exceedance of NYSDEC groundwater quality standards in groundwater at the location of the former gasoline UST near Building 9. VOCs associated with gasoline and

chlorinated solvents were identified in exceedance of NYSDEC groundwater quality standards in groundwater in the eastern portion of the Southern Parcel (no testing was conducted on the Southern Parcel west of First Avenue) during the Limited Subsurface Investigation and the December 2008 quarterly groundwater sampling; the 2008 report indicated that prior quarterly sampling had taken place, but the prior quarterly sampling reports were not provided to AKRF. The groundwater sampling on the Southern Parcel identified petroleum-related VOCs in the former gas station area and chlorinated solvent-related VOCs at various locations between First and Second Avenues. Site soils contained elevated concentrations of certain semi-volatile organic compounds (SVOCs) and metals, which are typical for urban fill materials and/or representative of Site background conditions. No PCBs were detected in any soil or groundwater samples submitted for analysis. A ground-penetrating radar (GPR) survey conducted at suspected UST locations south of Building 9, north of Building 19 and at the former filling station as part of the Limited Subsurface Investigation did not identify any existing USTs in these areas.

The May 2009 IAQ report indicated that six indoor air samples and two background air samples (one indoor and one outdoor) were collected at unspecified locations in Building 1 and analyzed for VOCs. The letter noted that the sampling was conducted in response to concerns about air quality in a space occupied by Health Plus. During AKRF"s reconnaissance, Health Plus offices were located on portions of the buildings second, fourth and fifth floors. The 2009 sampling may have been conducted on those floors and may not be representative of air quality on the lowest occupied level of the building (the first floor), which has greater potential for vapor intrusion compared to upper floors. The report indicated that the VOCs isopropyl alcohol, acetone and toluene were detected at concentrations below their respective Occupational Safety and Health Administration (OSHA) Permissible Exposure Limits (PELs), the maximum exposure limits per work day as set by OSHA. These VOCs were detected in both indoor and outdoor air samples, although the outdoor concentrations were lower. The letter also indicated that the U.S. General Services Administration provided Industry City with findings of an IAQ report from an independent consultant (not provided to AKRF), which reportedly also detected VOCs at concentrations below OSHA PELs, indicating that the space was safe for continued Health Plus occupancy.

Approximately 58 transformers were noted on Site rooftops and in the basement of one building. The 2007 Phase I ESA indicated that approximately 25% of the transformers were labeled regarding PCB content (PCB containing or non-PCB containing), while others were not labeled. Approximately 25% of the transformers were noted to be active. Surface oil staining was noted during EBI's reconnaissance in the Power Plant, on a concrete sidewalk near a fill pipe in front of Buildings 5 and 6, on the basement floor of Building 6, on a concrete sidewalk beneath a fill pipe in front of Building 3, in the boiler house between Buildings 19 and 20, and under the fill port outside Building 21.

Suspect ACM were identified on the Site, and were observed to be in good condition with the exception of thermal pipe insulation. The 2007 Phase I ESA indicated that the observed suspect ACM did not pose a significant environmental threat to the occupants of the Site.

Detailed environmental concerns identified by the previous studies are summarized below as follows:

Location	Previous Studies Findings
Building 1	Observation of significant moisture and some water pooling in the basement. Surface oil staining on a concrete floor beneath the boiler and fuel pump in the boiler house between Buildings 1 and 2. Additional surface staining was noted on the concrete floor beneath 55-gallon drums stored in the basement, which contained motor oil for elevator motors.
Building 2	Observation of significant moisture and some water pooling in the basement.
Building 3	Observation of significant moisture and some water pooling in basement. Surface oil staining on concrete sidewalk beneath a fill pipe for an AST in the building.
Building 4	Observation of significant moisture and some water pooling in basement.

Location	Previous Studies Findings
Building 5	Surface oil staining on a concrete sidewalk beneath a fill pipe in front of Buildings 5 and 6.
Building 6	Surface oil staining on a concrete sidewalk beneath a fill pipe in front of Buildings 5 and 6. Additional staining noted on a concrete floor in the basement of the building beneath the No. 4 fuel oil pump.
Building 8	Extensive flooding and pooling of water in the basement of the building in the space operated by National Packaging Co (cardboard box manufacturer). Significant oily staining, sheens and oily sludge were observed on the floor beneath equipment on the first floor and in the basement. Several 55-gallon drums apparently containing lubricating oil for compressors were stored in the flooded basement with no secondary containment. Oily staining was observed around the drums and extensive amounts of debris were also observed in the basement. Approximately 400 square feet of stained gravel were observed adjacent to Building 8.
Building 9	Visual evidence (a roadbox/fill port labeled "gasoline") suggested that one or more inactive USTs may exist near the northwestern end of Building 9. Gasoline-contaminated soil and groundwater were detected in the vicinity of the suspect former USTs at the northern end of Building 9. Gasoline tanks were historically located within the building footprint along the western wall. A GPR investigation indicated no evidence of USTs in the vicinity of the fill port.
Building 19	A suspect fill port and a manhole cover indicating evidence of a suspect UST were observed north-adjacent to Building 19. Surface oil staining was noted on concrete floor beneath a fill pipe for an AST in the Building 19/20 boiler house. Groundwater sampling between Buildings 19 and 20 identified solvent-related VOC (primarily trichloroethene [TCE]).
Buildings 19-26	Five groundwater monitoring wells were sampled, with laboratory analysis indicated petroleum and solvent-related VOCs above NYSDEC standards.
Building 20	Groundwater sampling between Buildings 19 and 20 identified solvent-related VOC (primarily TCE).
Building 21	Surface oil staining on asphalt pavement beneath an exterior AST fill port.
Building 25	Three abandoned 55-gallon drums (one labeled 15W40 motor oil), an open bucket of apparent motor oil and an approximately 25-square foot area of stained soil between Building 25 and the former filling station. Debris, trash and solid waste (wood, metal, plastic and paper) deposited east of the building.

Soil and groundwater samples were collected in the vicinity of the larger areas of concern and found only minimally elevated contaminant (VOCs, SVOCs and metals) concentrations in soil and elevated VOC concentrations in selected groundwater samples. There were gaps in the information gathered as follows:

- No borings were completed in the vicinity of the Power Plant, including the locations of a 20,000-gallon fuel oil AST, closed 36,000-gallon fuel oil UST, historical ash pocket, and transformers. One boring was attempted in the vicinity of the Power Plant but could not be completed due to obstructions.
- No shallow soil was evaluated. A truck-mounted vacuum was used to remove the first six feet of soil at each boring for utility clearance.
- The soil samples analyzed were composited, generally over a four-foot sampling interval. Compositing of soil represents average conditions and does not permit the detection of any pockets of potentially higher levels of contamination.
- The previous subsurface investigations did not include an assessment of the potential for soil vapor intrusion.

8.0 LIMITATIONS AND DATA GAPS

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-05 at the time it was performed, with the following limitations:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- The reconnaissance included a tour of representative interior building spaces. Portions of some Site buildings were inaccessible due to locked doors, nonfunctional elevators, or tenants unwilling to provide access, as summarized below in Section 8.1. The inaccessible areas included the three emergency generators adjacent to the boiler houses for Buildings 1 and 2, 3 and 4, and 5 and 6, which reportedly contained ASTs, as well as a room labeled "diesel fuel" in the basement of Building 9.
- Portions of the Site were obscured by stored materials, equipment, soil/debris stockpiles and limited lighting and could not be inspected for staining and floor features.
- Owner and tenant interviews and user provided information were limited. Knowledge of Site history varied between Industry City representatives; the historical use information provided in the interviews may thus be incomplete. Interviews with Site tenants were extremely limited, which limited the available information regarding the types of chemicals used at the Site, waste disposal methods, and assessment of compliance with the applicable regulations for disposal of hazardous waste.
- The Site and area history review was not conducted in five-year intervals. However, sufficient information about the history could be obtained from the available records, and this data gap is not likely to alter the conclusions of this report.

8.1 Detailed On-Site Limitations and Data Gaps

Block/Lot	Building	On-Site Limitations and Data Gaps
695/1	1	Several office spaces in Building 1 were locked or had tenants unwilling to provide access.
	Boiler House	Emergency generator room was not accessible.
	Exterior	NA
695/20	2	The majority of the artist studios in Building 2 were locked and inaccessible. The eastern portion of the basement was not accessible.
695/43	Exterior	NA
691/1	3	A silk screening business and a parachute maker on the second floor were unwilling to provide access. The majority of the artist studios in Building 3 were locked and inaccessible. The central portion of the basement was inaccessible and reportedly may contain a warehouse.
	4	The majority of the artist studios in Building 4 were locked and inaccessible. The printing facility on the third floor provided limited access.
	Boiler House	Emergency generator room was not accessible.
	Exterior	NA
687/1	5	Several tenant spaces on the 2nd floor, 4th floor and 6th floor were locked and inaccessible.
	6	Tenant spaces on the 6th floor and 4th floor of Building 6 were locked and inaccessible (reportedly empty space, and spaces containing art studio and art storage).
	Boiler House	Emergency generator room was not accessible.
	Exterior	NA
683/1	7	A portion of the basement in the central portion of the building Section B was locked and inaccessible. The entirety of the Section C of building was locked and/or inaccessible due to elevator malfunction. A tenant space on the 6th floor of the Section A was locked and inaccessible.

Block/Lot	Building	On-Site Limitations and Data Gaps
	8	The basement was inaccessible due to standing water and poor lighting. A tenant space on the 3rd floor was locked and inaccessible (reportedly a furniture warehouse). Tenant spaces on the 5th and 6th floors were also locked and inaccessible.
	Exterior	NA
679/1	9	Basement and 1st floor in Section A and part of Section B were inaccessible.
	10	Subbasement level was inaccessible due to standing water. Several office spaces in Building 10 were locked or had tenants unwilling to provide access, including tenant space on first, fifth, sixth and seventh floors which were reportedly used by Virgina Dare for manufacturing and warehousing of flavorings and extracts.
	Power Plant	The second level of the power plant was inaccessible. Access to some areas of the subbasement level was restricted by standing water.
	Exterior	NA
706/1	19	NA
	20	Upper floors and the western basement were not accessed due to elevator malfunction, and were reportedly occupied by warehouses and vacant space.
	Interior Loading Area	NA
706/24	21	NA
	22	Upper floors were not accessed due to elevator malfunction, and were reportedly occupied by warehouses and a NYC Human Resources Administration office.
	23	Upper floors were not accessed due to elevator malfunction, and were reportedly occupied by warehouses, a NYC Human Resources Administration office, textile facilities and the HVAC shop.
	24	Soil stockpiles observed on the first floor due to foundation renovations; part of the first floor was not accessed due to soil stockpiles. The upper floors were not accessed due to elevator malfunction.
	Exterior	NA
706/101	25	NA
710/1	26	NA

9.0 CONCLUSIONS

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, this practice are described in Section 8.0. The term "Recognized Environmental Condition" means the presence or likely presence of hazardous substances or petroleum at the site, including the ground, groundwater, or surface water at or under the site.

The Site is occupied by warehouse/industrial buildings, associated open space (courtyards, loading docks etc.), a power plant and boiler houses. The Northern Parcel of the Site is bounded by 32nd Street to the north, Third Avenue to the east, 37th Street to the south and Second Avenue to the west, and includes Buildings 1 through 10, a power plant and three boiler houses. The Southern Parcel of the Site is bounded by 39th Street to the north, Second Avenue to the east, 41st Street to the south, and Upper New York Bay to the west, and includes Buildings 19 through 26 and a vacant lot formerly used as a gasoline station.

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. The full Phase I ESA Report should be reviewed for detailed information. Exceptions to, and deletions from, thee ASTM Standard Practice are described in the Phase I ESA. The term "*Recognized Environmental Condition*" means the presence or likely presence of hazardous substances or petroleum at the property, including the ground, groundwater, or surface water at or under the property.

This Phase I ESA revealed evidence of the following known Recognized Environmental Conditions:

- Numerous petroleum aboveground storage tanks (ASTs) were observed at the Site, some reportedly managed by Industry City and others managed by tenants. Evidence of staining and/or leakage was observed at various locations beneath the ASTs and/or associated equipment. Of particular note, a leaking fuel oil pump was observed in the eastern side of the basement of Building 5, with saturated oil absorbent material and oil puddles noted beneath the pump, and oil absorbent and puddled oil clogging a nearby floor drain. The saturated oil absorbent and residue was reportedly cleaned up from the basement since the time of AKRF's reconnaissance; photographs of the cleaned-up pump were provided to AKRF.
- Previous investigations detected low levels of volatile organic compounds (VOCs) indicative of petroleum and chlorinated solvent impact in exceedance of New York State Department of Environmental Conservation (NYSDEC) groundwater quality standards in the eastern portion of the Southern Parcel (no testing was conducted on the Southern Parcel west of First Avenue), with petroleum-related VOCs detected in the former gas station area and chlorinated solvent-related VOCs detected at various locations between First and Second Avenues. The previous investigations also detected VOCs indicative of petroleum contamination in exceedance of NYSDEC groundwater quality standards at one location on the Northern Parcel (south of Building 9).

The Phase I ESA also identified the following potential environmental concerns and regulatory compliance deficiencies outside the scope of ASTM standard E1527-05:

- Current Site use includes use and storage of chemicals in a variety of light industries, including woodworking, printing, paint manufacturing, box manufacturing, plastics painting, and food flavor manufacturing. Poor housekeeping and evidence of minor spills to the floor were observed in several tenant spaces, mostly in upper floors of the buildings.

- The Site is listed on the following federal or state environmental databases: Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) No Further Remedial Action Planned (NFRAP), Toxic Chemical Release Inventory System (TRIS), Permit Compliance System of Toxic Wastewater Discharge (WWD), Air Discharge Facilities Index (ADF), RCRA Hazardous Waste Generator, Petroleum Bulk Storage (PBS), Chemical Bulk Storage (CBS) and Spills. No open violations or open spills were reported for the Site.
- At least six tanks observed or reported by site interviews at the Site were not registered based on review of NYSDEC database of registered tanks (one approximately 1,000-gallon AST in Building 8, one AST of unknown size and one approximately 275-gallon AST supplying emergency generators in Building 9, one approximately 275-gallon AST in the Power Plant, and two 1,250-gallon ASTs reportedly associated with emergency generators adjacent to the Building 1 and 2 boiler house and behind Building 10). Others appear to be registered inaccurately regarding reported product type and aboveground/underground status. In addition, fill ports noted on the wall of Building 3, south of Building 9 and north of Building 19 suggest the presence of historic underground storage tanks (USTs). Previous studies included a geophysical survey of suspected UST locations at Building 9, Building 19 and at the former filling station. No USTs were detected in these areas, but fill lines were detected running west from the fill port near Building 9 (away from the area included in the survey). NYSDEC registrations for the Site also indicated four closed USTs at the Site. Computerized NYC Fire Department listings identified four 550-gallon gasoline USTs (status unspecified) potentially on-site, three of which were identified as closed based on NYSDEC listings.
- The Site has historically been used for industrial purposes. The Northern Parcel has been used for industrial purposes since at least 1926 and included paint manufacturing, printing and a power plant. The Southern Parcel has been used for industrial purposes since at least 1888 and included oil refining, chemical manufacturing, asbestos manufacturing, auto repair, a filling station, printing and rail yard operations. Regulatory databases identified various listings indicating chemical and petroleum storage, closed-status petroleum spills and generation of hazardous waste at the Site. Limited soil and groundwater sampling performed at the Site by others in 2007 and 2008 detected minor concentrations of petroleum, chlorinated solvents and metals, largely consistent with historic fill and areas of industrial use. Limited indoor air quality (IAQ) testing in Building 1 in 2009 identified several VOCs in indoor air, but at concentrations that did not present a hazard to building occupants. The locations of the IAQ testing were not provided to AKRF.
- Building materials likely contain asbestos containing materials (ACM) and lead-based paint. Older transformers on the roofs and in the exterior portions of the Site and fluorescent light ballasts may contain polychlorinated biphenyls (PCBs). Mercury may be present in fluorescent lights, switches and/or thermostats. Staining was noted beneath some rooftop oil-filled transformers. Suspect lead-based paint in poor condition was observed in portions of the Site buildings. Damaged suspect ACM (including boiler insulation, vinyl floor tiles and thermal pipe insulation) were noted in some unoccupied building areas.
- The surrounding area has been mixed-use, including industrial, manufacturing and warehousing purposes, garages, auto repair, rail yard operations, printing facilities and metal shops since at least 1926. Current uses of the surrounding area remain mixed-use and include industrial/manufacturing properties, auto repair and filling stations. Regulatory databases identified various listings indicating chemical and petroleum storage, active and closed-status petroleum spills and generation of hazardous waste in the vicinity of the Site, none of which are documented to have impacted the Site.
- Evidence of water intrusion was noted in many of the Site basements. It was unclear whether the water was rainwater, groundwater, or both.

The Phase I ESA findings were limited by the following data gaps:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- The reconnaissance included a tour of representative interior building spaces. Portions of some Site buildings were inaccessible due to locked doors, nonfunctional elevators, flooded basements, or tenants unwilling to provide access. Basements were often poorly lit and were illuminated by flashlight.
- Portions of the Site were obscured by stored materials, equipment or soil/debris stockpiles and were not inspected for staining and floor features.
- Knowledge of the Site current and historical use varied between Industry City representatives and only limited interviews were performed. In addition, interviews with Site tenants were limited. As such, available information was restricted regarding the types of chemicals used at the Site, waste disposal methods, and assessment of compliance with the applicable related regulations. Chemicals were used at the Site predominantly by tenants; other than the petroleum storage tanks, the reconnaissance indicated only limited chemical use by Industry City for maintenance purposes.
- The Site and area history review was not conducted in five-year intervals. However, sufficient information about the history could be obtained from the available records, and this data gap is not likely to alter the conclusions of this report.

10.0 SIGNATURE PAGE

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

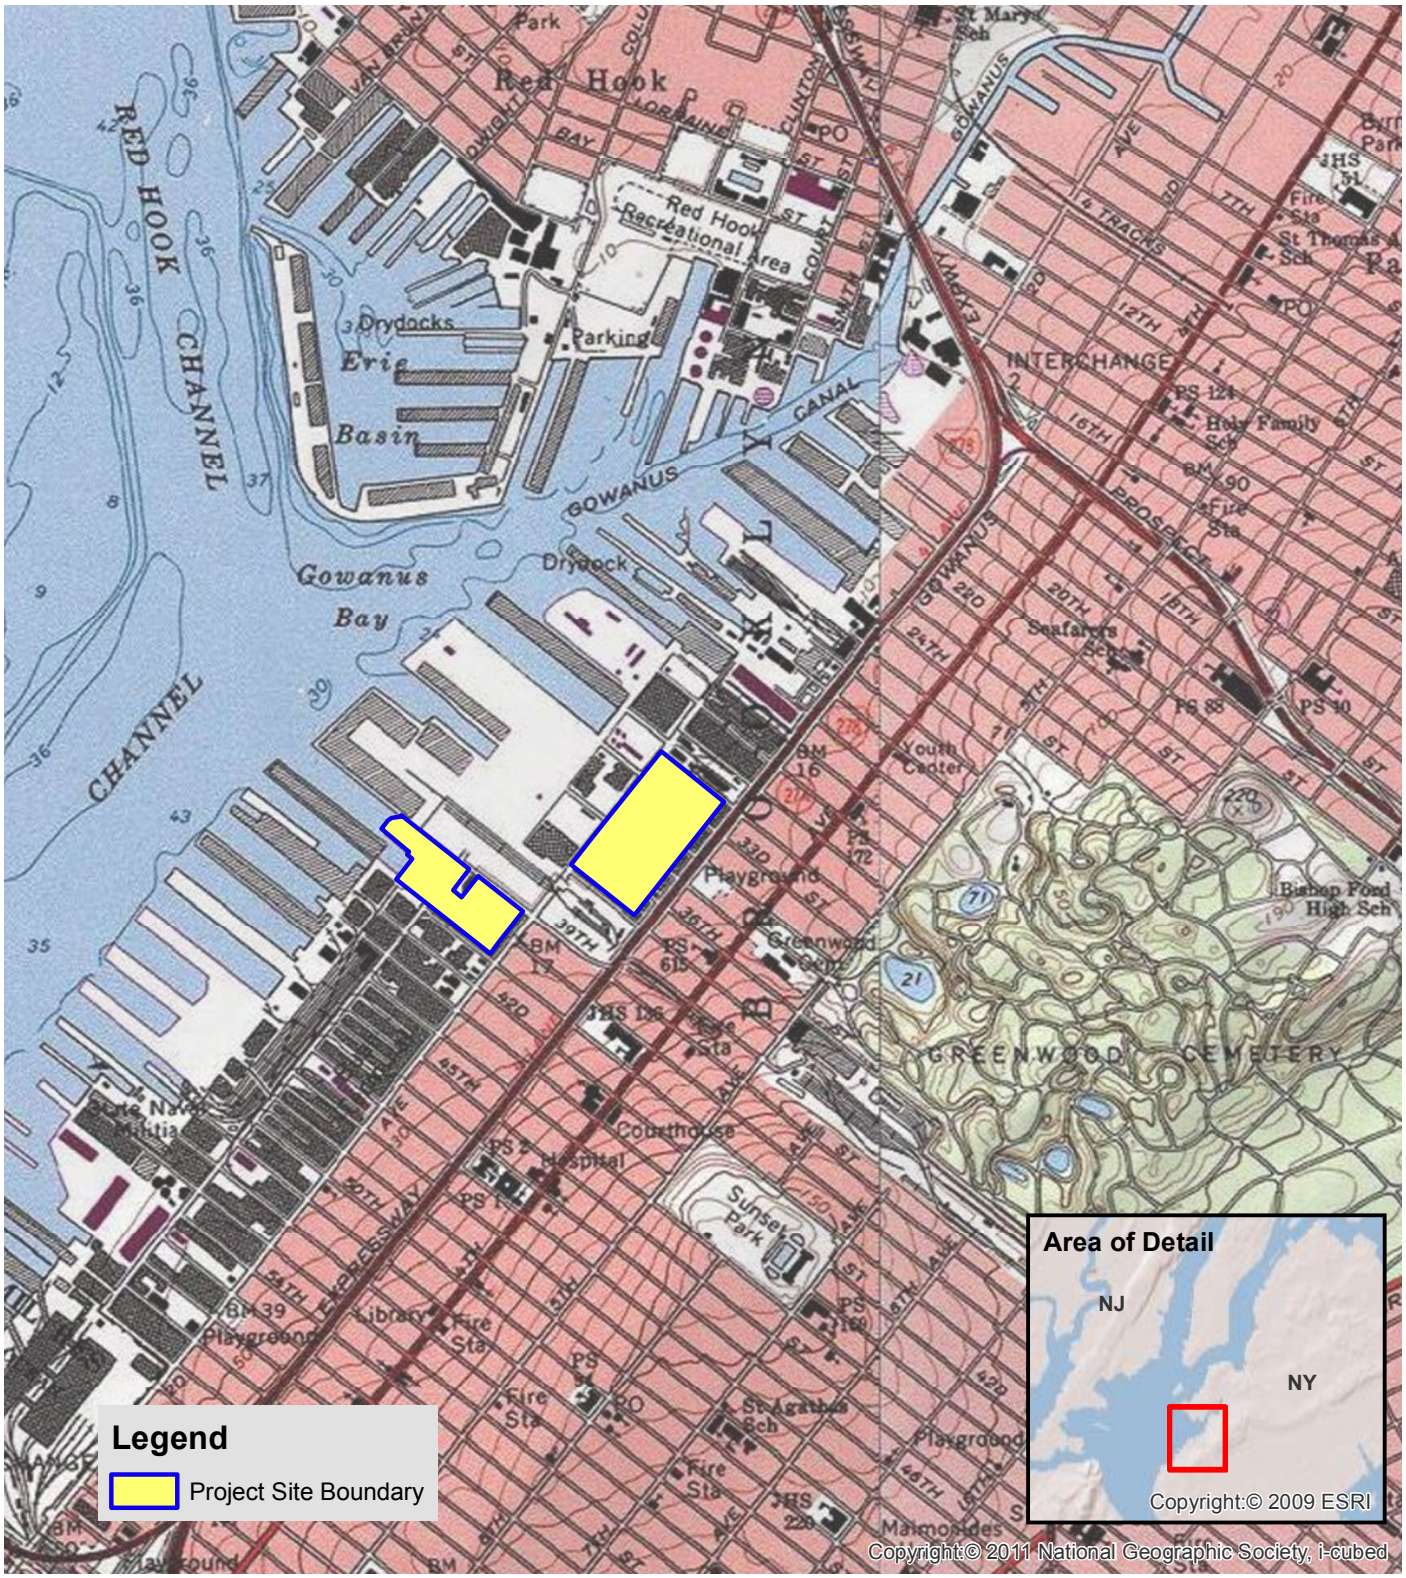
I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the site for which the assessment was performed. I have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.

Marc S. Godick, LEP
Senior Vice President

11.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the property, and to identify existing and/or potential environmental problems associated with the property including *Recognized Environmental Conditions* as defined in ASTM Standard E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*.

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard, except as noted otherwise in Section 8.0. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the property at the time of the reconnaissance, as it is based upon the review of readily available records relating to both the property and the surrounding area, as well as a visual reconnaissance of current conditions.



This Phase I Environmental Site Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF, Inc. professional staff and observation of the property and its surroundings. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and reconnaissance have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than Greenberg Traurig, LLP and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or grossly negligent or willful acts or omissions.

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

APPENDIX D
REGULATORY RECORDS REVIEW

TOXICS TARGETING

Phase I
Environmental Database Report

Industry City
Brooklyn, NY 11232

August 07, 2012

Privileged and Confidential.

LIMITED WARRANTY AND DISCLAIMER OF LIABILITY

Who is Covered

This limited warranty is extended by Toxics Targeting, Inc. only to the original purchaser of the accompanying Environmental Report ("Report"). It may not be assigned to any other person.

What is Warranted

Toxics Targeting, Inc. warrants that it uses reasonable care to accurately transcribe the information contained in this Report from the sources from which it is obtained. This limited warranty is in lieu of all other express warranties which might otherwise arise with respect to the Report. No one is authorized to change or add to this limited warranty.

What We Will Do

If during the warranty period there is shown to be a material error in the transcription of the information contained in this Report from the sources from which it was obtained, Toxics Targeting, Inc. shall refund to the original purchaser the full purchase price paid for the Report. The remedy stated above is the exclusive remedy extended to the Purchaser by Toxics Targeting, Inc. for any failure of the Report to conform with this Warranty, or otherwise for breach of this Warranty or any other warranty, whether expressed or implied.

What We Won't Cover

Toxics Targeting, Inc. has not and can not verify the accuracy, correctness or completion of the information contained in this Report. Information is obtained from government agencies, site owners, and other sources, and errors are common in such information. Because Toxics Targeting, Inc. can not control the accuracy of the information contained in this Report, or the uses which may be made of the information, TOXICS TARGETING, INC. DISCLAIMS LIABILITY TO ANYONE FOR ANY EVENTS ARISING OUT OF THE USE OF THE INFORMATION. TOXICS TARGETING, INC. SHALL NOT BE LIABLE FOR ANY DAMAGE CAUSED BY THIS REPORT, WHETHER DIRECT OR INDIRECT, AND WHETHER OR NOT TOXICS TARGETING, INC. HAS BEEN ADVISED OF OR HAS KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES. TOXICS TARGETING, INC. EXPRESSLY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion or limitation may not apply to you.

Period of Warranty

The period of warranty coverage is ninety days from the date of purchase of this Report. There shall be no warranty after the period of coverage. ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR PARTICULAR USE SHALL HAVE NO GREATER DURATION THAN THE PERIOD OF WARRANTY STATED HERE, AND SHALL TERMINATE AUTOMATICALLY UPON THE EXPIRATION OF SUCH PERIOD. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above exclusion or limitation may not apply to you.

PLEASE REFER TO PAGES ONE AND FIVE FOR A DESCRIPTION OF SOME OF THE LIMITATIONS OF THIS ENVIRONMENTAL REPORT.

- *Hazardous Waste Codes*
- *Information Source Guide*

© Toxics Targeting, Inc. 2012

Introduction

Toxics Targeting has combined environmental database searches, extensive regulatory analysis and sophisticated mapping techniques to produce your *Environmental Report.* It checks for the presence of 25 categories of government-reported toxic sites and provides detailed, up-to-date information on each identified site. The findings of your report are presented in an easy-to-understand format that:

1. ***Maps*** the approximate locations of selected government-reported toxic sites identified on or near a specified target address.

2. ***Estimates*** the distance and direction between the target address and each identified toxic site.

3. ***Reports*** air and water permit non-compliance and other regulatory violations.

4. ***Profiles*** some aspects of the usage, manufacture, storage, handling, transport or disposal of toxic chemicals at individual sites.

5. ***Summarizes*** some potential health effect information and drinking water standards for selected chemicals reported at individual sites.

The Three Sections Of Your Report

The first section highlights your report's findings by summarizing identified sites according to: **a)** distance intervals, **b)** direction, **c)** proximity to the target address and **d)** individual site categories. In addition, the locations of all identified toxic sites are illustrated on individual maps for each radius search distance used in your report. A close-up map illustrates the locations of all identified toxic sites, at the shortest radius search distance used in your report. Finally, a map of tax parcels and a table of selected information about those parcels are included.

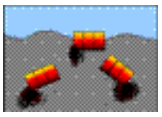
The second section of your report contains *Toxic Site Profiles* that provide detailed information on each identified toxic site. The information in each *Toxic Site Profile* varies according to its source. Some toxic site categories have extensive information and some have limited information. All the information is updated on a regular basis.

The third section of the report contains appendices that identify: **1)** on-site spills reported to the national Emergency Response Notification System (ERNS), **2)** various toxic sites that cannot be mapped due to incomplete or erroneous addresses or other mapping problems, **3)** codes that characterize hazardous wastes reported at various facilities, **4)** methods used to map toxic sites identified in your report and **5)** information sources used in your report.

How to Use Your Report

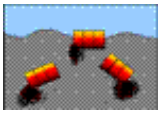
- Check Table One to see the number of identified sites by distance intervals.

- Check Table Two to see identified sites sorted by direction.



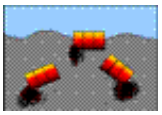
- Check Table Three to see identified sites ranked by proximity to the target address.

- Check Table Four to see identified sites sorted by site categories.



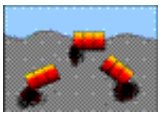
- Use Table Five to get info for the subject parcel and every parcel found on the Tax Parcel Map
- Refer to the various maps to see the locations of identified toxic sites. Refer to the *Toxic Site Profile* and *Appendix* sections for additional information.

Toxic Site Databases Analyzed In Your Report



Search Radius

One-Mile 

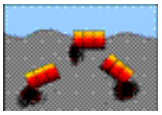


1) ***National Priority List for Federal Superfund Cleanup****:* a listing of sites known to pose environmental or health hazards that are being investigated or cleaned up under the Federal Superfund program.

Half-Mile 

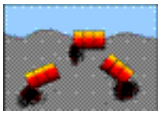
2) ***Delisted National Priority List Sites****:* a listing of NPL sites that have been removed from the National Priority List.

One-Mile 



3) ***New York Inactive Hazardous Waste Disposal Site Registry****:* a state listing of sites that can pose environmental or public health hazards requiring investigation or clean up.

One-Mile 

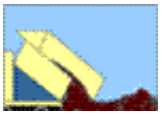


4) ***New York Inactive Hazardous Waste Disposal Site Registry Qualifying****:* a state listing of sites that qualify for possible inclusion to the NYDEC Inactive Haz. Waste Disposal Site Registry.

One-Mile 

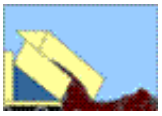
5) ***RCRA Corrective Action Activity (CORRACTS):*** waste facilities with RCRA corrective action activity reported by the USEPA.

Half-Mile 



6) ***CERCLIS*** (Comprehensive Environmental Response, Compensation and Liability Information System): a federal listing of Non-NFRAP sites that can pose environmental or public health hazards requiring investigation or clean up.

Half-Mile 



7) ***CERCLIS NFRAP:*** a federal listing of CERCLIS sites that have no further remedial action planned.

Half-Mile 

8) ***New York State Brownfield Cleanup Sites****:* a listing of sites that are abandoned, idled or under-used industrial and commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.

Half-Mile 

9) ***New York Solid Waste Facilities Registry****:* active and inactive landfills, incinerators, transfer stations or other solid waste management facilities.

Half-Mile 

10) ***New York City 1934 Solid Waste Sites****:* a listing of solid waste disposal sites operated by New York City municipal authorities circa 1934.

Half-Mile 

11) ***New York and Federal Hazardous Waste Treatment, Storage or Disposal Facilities****:* sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRIS). Also includes the following database:

- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Half-Mile 

12) ***Toxic Spills: active and inactive or closed*** spills reported to state environmental authorities, including *remediated* and *unremediated* leaking underground storage tanks. This database includes the following categories:

- Tank Failures
- Tank Test Failures
- Unknown Spill Cause or Other Spill Causes
- Miscellaneous Spill Causes

Eighth-Mile 

13) ***New York State Major Oil Storage Facilities****:* sites with more than a 400,000 gallon capacity for storing petroleum products.

Eighth-Mile 

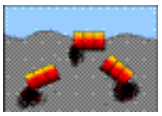
14) ***New York State Petroleum Bulk Storage Facilities****:* sites with more than an 1,100 gallon capacity for storing petroleum products.

Eighth-Mile 

15) ***New York City Fire Dept Tank Data****:* tank data from 1997.

Eighth-Mile 

16) ***New York and Federal Hazardous Waste Generators and Transporters****:* sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRA). Also includes the following database:



- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Eighth-Mile 

17) ***New York Chemical Bulk Storage Facilities****:* sites storing hazardous substances listed in 6 NYCRR Part 597 in aboveground tanks with capacities of 185 gallons or more and/or underground tanks of any size

Eighth-Mile 

18) ***Historic New York City Utility Sites (1890's to 1940's)****:* power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites.

Half-Mile 

19) ***New York Hazardous Substance Disposal Site Draft Study****:* a state listing of sites contaminated with toxic substances that can pose environmental or public health hazards. These sites were not eligible for state clean up funding programs.

Eighth-Mile 

20) ***Federal Toxic Release Inventory Facilities****:* discharges of selected toxic chemicals to air, land, water or treatment facilities.

Eighth-Mile 

21) ***Federal Air Discharges****:* air pollution point sources monitored by U.S. EPA and/or state and local air regulatory agencies.

Eighth-Mile 

22) ***Federal Permit Compliance System Toxic Wastewater Discharges:*** permitted toxic wastewater discharges.

Eighth-Mile 

23) ***Federal Civil and Administrative Enforcement Docket****:* judiciary cases filed on behalf of the U. S. Environmental Protection Agency by the Department of Justice.

On-site only (250 ft) 

24) ***New York City Environmental Quality Review (CEQR) – E Designation Sites****:* parcels assigned a special environmental ("E") designation under the CEQR process. E designation requires specific protocols that must be followed.

Property only 

25) ***ERNS: Federal Emergency Response Notification System Spills****:* a listing of federally reported spills.

Limitations Of The Information In Your Report

The information presented in your *Environmental Report* has been obtained from various local, state and federal government agencies. Please be aware that: **1)** additional information on individual sites may be available, **2)** newly discovered sites are continually reported and **3)** all map locations are approximate. As a result, this report is intended to be the FIRST STEP in the process of identifying and evaluating possible environmental threats to specific properties and can only serve as a guide for conducting on-site visits or additional, more detailed toxic hazard research.

Toxics Targeting tries to ensure that the information in your report is presented accurately and with minimal alteration. Systematic changes are made to correct obvious address errors in order to allow sites to be mapped. Any address changes that are made are noted in the map information section at the top of each corresponding *Toxic Site Profile*. Some information that has been withheld by government authorities remains included in Toxic Site Profiles and is identified as archival information. Since the information presented in your report is not edited, please be aware that it can contain reporting errors or typographical mistakes made by the site owners/operators or government agencies that produced the information. Also please be aware of some other limitations of the information in your report:

- The digital map used by *Toxics Targeting* is the same one used by the U. S. Census or local authorities in New York City. While the map is generally accurate, no map is perfect. In addition, *Toxics Targeting's* mapping methods estimate where toxic site addresses are located if the address is not specifically designated. FOR THESE REASONS, ALL MAP LOCATIONS OF ADDRESSES AND REPORTED TOXIC SITES SHOULD BE CONSIDERED APPROXIMATE AND SHOULD BE VERIFIED BY ON-SITE VISITS;

- UNDISCOVERED, UNREPORTED OR UNMAPPABLE TOXIC SITES MIGHT NOT BE IDENTIFIED BY THIS REPORT'S CHECK OF 25 TOXIC SITE CATEGORIES. TOXIC SITES REPORTED IN OTHER GOVERNMENT DATABASES MIGHT ALSO EXIST. FOR THESE REASONS, YOUR REPORT MIGHT NOT IDENTIFY ALL THE TOXIC SITES THAT EXIST IN THE AREA IT SEARCHES;

- The appendix of your report contains a listing of sites that could not be mapped due to incomplete or erroneous address information or other mapping problems. This listing includes unmappable toxic sites in the zip codes searched for the report as well as toxic sites without zip codes reported in the same county. IF YOU WOULD LIKE INFORMATION ON ANY OF THE LISTED SITES, PLEASE CONTACT *TOXICS TARGETING AND REFER TO THE SITE ID NUMBER.*

- New York State Department of Environmental Conservation Remediation Site Borders are approximate and may not align with tax parcel boundaries mapped by local authorities or the digital map used by the US Census Bureau. As a result, Remediation Site Borders may overlap parcels that do not involve site remediation activities. Selected parcels also can involve multiple Remediation Site Borders. Refer to individual site profiles for more information. Sites without profiles include potential new sites or sites that have not yet been publicly listed by DEC.

- Some toxic sites identified in your report may be classified as **known hazards**. Most of the toxic sites identified in your report involve **potential hazards** related to the on-site use, manufacture, handling, storage, transport or disposal of toxic chemicals. Some of the toxic sites identified in your report may be the addresses of parties responsible for toxic sites located elsewhere. YOU SHOULD ONLY CONCLUDE THAT TOXIC HAZARDS ACTUALLY EXIST AT A SPECIFIC SITE WHEN GOVERNMENT AUTHORITIES MAKE THAT DETERMINATION OR WHEN THAT CONCLUSION IS FULLY DOCUMENTED BY THE FINDINGS OF AN APPROPRIATE SITE INVESTIGATION UNDERTAKEN BY LICENSED PROFESSIONALS;

- Compass directions and distances are approximate. Compass directions are calculated from the subject property address to the mapped location of each identified toxic site. The compass direction does not necessarily refer to the closest property boundary of an identified toxic site. The compass direction also can vary substantially for toxic sites that are located very close to the subject property address.

- The information presented in your report is a summary of the information that *Toxics Targeting* obtains from government agencies on reported toxic sites. YOU MAY BE ABLE TO OBTAIN ADDITIONAL INFORMATION ABOUT REPORTED SITES WITH THE FREEDOM OF INFORMATION REQUEST FORM LETTERS THAT ARE PROVIDED ON THE INSIDE OF THE BACK COVER.

Section Two: Toxic Site Profiles

The heading of each *Toxic Site Profile* refers to the site's map location and details:

- The facility name, address, city, state, and zip code.
- Any changes that were made to a site's address in order to map its location.
- The site mapping method that was used (see ***How Sites are Located***, at the end of this section for more information).

Toxic Site Profiles summarize information provided by site owners or operators and government agencies regarding various toxic chemical activities reported at each site, such as:

- Whether chemicals were stored, produced, transported, discharged or disposed of.
- The name of chemicals and their Chemical Abstract Series (CAS) numbers.
- The amount of chemicals and the units (gallons/pounds) the chemical was measured in.
- Whether the site or storage tanks at the site are currently active or inactive.
- Special codes used by government agencies to regulate hazardous waste activities at some sites, or a complete description of the codes follows the profiles section.

For selected individual chemicals reported at various toxic sites, some potential health effect summary information appears below the site profile. Each potential health effect summary identifies chemicals by name and by Chemical Abstract Series (CAS) Number. An "x" under each potential health effect heading indicates positive toxicity testing results reported by the National Institute of Occupational Safety and Health's Registry of Toxic Effects of Chemical Substances (RTECS). Some chemicals (mostly appearing in profiles of Hazardous Waste facilities), are reported as mixtures, and RTECS health effect information is only available for individual chemicals. In addition, RTECS only provides information on approximately 100,000 common chemicals. Consequently, the absence of potential health effect summary information for a particular chemical identified in a Toxic Site Profile does not necessarily mean that the chemical does not pose potential health effects.

The Maximum Contaminant Level (MCL) in drinking water allowed for selected chemicals is also noted. In most cases, the only applicable MCL has been set by the New York State Department of Health (NYSDOH). Where NYSDOH has not set an MCL, the federal standard, if one exists, is listed and is marked by an asterisk.

Presented below are column headings that describe the health effect definitions used in RTECS and applicable New York State and federal drinking water standards. Reference sources for information presented in this section are also provided.

ACUTE TOX: **Acute Toxicity**: Short-term exposure to this chemical can cause lethal and non-lethal toxicity effects not included in the following four categories.

TUMOR TOX: **Tumorigenic Toxicity**: The chemical can cause an increase in the incidence of tumors.

MUTAG TOX: **Mutagenic Toxicity**: The chemical can cause genetic alterations that are passed from one generation to the next.

REPRO TOX: **Reproductive Toxicity**: May signify one of the following effects: maternal effects, paternal effects, effects on fertility, effects on the embryo or fetus, specific developmental abnormalities, tumorigenic effects, or effects on the newborn (only positive reproductive effects data for mammalian species are referenced).

IRRIT TOX: **Primary Irritant**: The chemical can cause eye or skin irritation.

MCL: **Drinking Water Standard - Maximum Contaminant Level** (MCL) listed under Drinking Water Supplies, 10 NYCRR Part 5, Subparts 1.51(f),(g), and (h) for NYDOH MCL's and under the Safe Drinking Water Act, 40 CFR 141, Subparts B and G, (* indicates value for total trihalomethanes) for federal MCL's.

Reference Source for Toxicity Information: Registry of Toxic Effects of Chemical Substances (RTECS), NIOSH (on-line database); For further information, contact: NIOSH, 4676 Columbia Parkway, Cincinnati, OH, 45226, 800/35-NIOSH.

Reference Source for Drinking Water Standards: New York State Department of Health, Bureau of Toxic Substances Assessment, 2 University Place, Room 240, Albany, NY 12203, 518/458-6373.

U.S. Environmental Protection Agency, Office of Drinking Water, 401 M St SW, Mailstop WH-556, Washington, DC, 20460, 202/260-5700.

Inactive Hazardous Waste Disposal Site Classifications:

1 -- Causing or presenting an imminent danger of causing irreversible or irreparable damage to the public health or the environment -- immediate action required;
2 -- Significant threat to the public health or environment -- action required;
3 -- Does not Present a significant threat to the environment or public health -- action may be deferred;
4 -- Site properly closed --requires continued management;
5 -- Site properly closed, no evidence of present or potential adverse impact -- no further action required;
2a -- This temporary classification has been assigned to sites where there is inadequate data to assign them to the five classifications specified by law;
A -- Work underway and not yet complete;
P -- Potential Site;
$D_{1, 2, 3}$ -- Delisted Site (1: hazardous waste not found; 2: remediated; 3: consolidated site or site incorrectly listed);
C -- Remediation Complete (formerly D2).

Gowanus Canal
New York
EPA ID#: NYN000206222
EPA REGION 2
Congressional District(s): 08,11,12
Kings County - End of 5th Street

NPL LISTING HISTORY
Proposed Date: 4/9/2009
Final Date: 3/4/2010

Site Description
The Gowanus Canal is a 100-foot wide,1.8-mile long canal located in the New York City borough of Brooklyn, Kings County, New York. Connected to Gowanus Bay in Upper New York Bay, the canal borders several residential neighborhoods including Gowanus, Park Slope, Cobble Hill, Carroll Gardens, and Red Hook. The adjacent waterfront is primarily commercial and industrial, currently consisting of concrete plants, warehouses, and parking lots. There are five east-west bridge crossings over the canal, located at Union Street, Carroll Street, Third Street, Ninth Street, and Hamilton Avenue. The Gowanus Expressway and the IND Culver Line of the New York City Subway, an aboveground section of the original Independent Subway System, pass overhead.

The Gowanus Canal was built to allow access for industrial needs by bulkheading and dredging a tidal creek and wetland that had previously been fished for oysters. After its completion in the 1860s, the canal quickly became one of the nation's busiest industrial waterways, home to heavy industry including gas works (i.e., manufactured gas plants), coal yards, cement makers, soap makers, tanneries, paint and ink factories, machine shops, chemical plants, and oil refineries. It was also the repository of untreated industrial wastes, raw sewage, and surface water runoff for decades, causing it to become one of New York's most polluted waterways. Although much of the industrial activity along the canal has stopped,

high contaminant levels remain in the sediments. Despite the ongoing pollution problems, some city dwellers currently use the Gowanus Canal for recreational purposes, such as canoeing and diving, while others catch fish for consumption.

The City built a "Flushing Tunnel" in 1911 to replace the stagnant water in the canal with fresh, oxygen-rich water that would improve water quality. The tunnel worked until the 1960s, when mechanical failure caused it to shut down and the canal became polluted and stagnant again. The city's Department of Environmental Protection subsequently restored the Flushing Tunnel. The tunnel operates 24 hours a day, seven days a week, bringing fresh water into the canal.

The canal is part of the New York-New Jersey Estuary, which EPA has designated an Estuary of National Significance.

Threat and Contaminants
Numerous sampling events have shown the sediments in the Gowanus Canal to be contaminated with a variety of pollutants, including polycyclic aromatic hydrocarbons (PAHs), volatile organic contaminants (VOCs), polychlorinated biphenyls (PCBs), pesticides, and metals. PAH concentrations were found to be as high as 45,000 milligrams per kilogram (4.5%) and the contamination was found to traverse the entire length of the canal. Many of the detected contaminants are known carcinogens. The contaminated sediments pose an immediate risk to the fishery located just downstream of the canal in Gowanus Bay. This fishery is well documented, and fish caught there are used as food.

Cleanup Approach
The site wil be addressed in one stage˙a long-term remedial phase focusing on the cleanup of the entire site.

Response Action Status:
The Canal has been heavily contaminated throughout its existence. No environmental remediation has been undertaken to date.

PRP-performed efforts are currently underway, under New York State authorities, at three former Manufactured Gas Plants (MGPs) located along the Gowanus Canal, which are believed to be sources of much of the Polyaromatic hydrocarbon (PAH) contamination in the canal--the former Fulton MGP site; Former Citizens Gas Works MGP site (a.k.a. Carroll Gardens/Public Place); and former Metropolitan Gas Light Company MGP site. National Grid is the PRP for the MGP sites.

In April 2009, EPA proposed to put the Gowanus Canal on the National Priorities List (NPL). While the community and many elected officials supported the listing, the City of New York and some development interests did not. New York City proposed an alternate approach which would have depended heavily on the assumption of long-term Congressional funding to Corps of Engineers (COE). After consulting extensively with the many stakeholders who expressed interest in the future of the Gowanus Canal and the surrounding area, EPA determined that a Superfund designation was the best path to a clean up of this heavily contaminated and long neglected urban waterway. The site was listed on the NPL on March 4, 2010.

EPA, in conjunction with New York City and National Grid, performed supplemental field work to characterize the nature and extent of contamination in the Canal, determine the human health and ecological risks from exposure to contamination in the canal, identify the sources of contamination to the Canal, including ongoing sources of contamination that need to be addressed so that a sustainable remedy can be developed and implemented, and determine the physical and chemical characteristics of the Canal that will influence the development, evaluation, and selection of cleanup alternatives. This

work, which supplemented previous studies that have been carried out by the COE and National Grid, included a bathymetric (underwater depth) study, sediment sampling, monitoring well installation, groundwater, surface water, air, sediment, and fish tissue sampling, sewer system sampling, and an investigation of hundreds of pipes that lead to the Canal. A remedial investigation report was released to the public on February 2, 2011 and a public meeting was held on February 23, 2011 to discuss the results of the study. A feasibility study (FS) was initiated in spring 2011 to develop and evaluate remedial alternatives for mitigating human and ecological risk in canal. The FS report was released to the public on December 30, 2011. An informational public meeting was held on January 24, 2012.; nearly 200 people were in attendance. It is anticipated that EPA will select a remedy to address the contamination in the Canal in late calendar year 2012.

Site Facts:
As the canal bisects heavily populated communities, there has been broad support to remedy the contamination of the waterway. Mayor Bloomberg highlighted environmental concerns about the Canal in his environmental blueprint, "PlaNYC 2030." There is intense public interest in the Canal and the cleanup plan. A Community Advisory Group has been formed with over 55 members representing a wide range of stakeholders including residents, environmental groups, business groups and developers.

EPA is actively searching for PRPs. Notice and information request letters have been sent to more than 20 parties, including New York City and National Grid. Administrative Orders of Consent were signed with National Grid and New York City in April 2010 to perform groundwater investigation work on their respective properties under EPA's oversight.

Cleanup Progress
Investigatory work is underway at the former Fulton MGP and Former Citizens Gas Works MGP and contaminated soils have been removed from the former Metropolitan Gas Light Company MGP.

An FS was released to the public on December 30, 2011. It is anticipated that EPA will select a remedy to address the contamination in the Canal in late calendar year 2012.

SITE DESCRIPTION:
The site is located along the Upper New York Bay, in the Sunset Park Section of Brooklyn, in the western part of Kings County, New York. The site borders an access road referred to as Marginal Street (which parallels 1st Avenue), between 45th and 50th Street. The land immediately adjacent to the site is used for commercial and industrial purposes, although residential housing areas are present within approximately 1,500 to 2,000 feet of the site.

The 17.3-acre site includes approximately 14 acres of urban land that was created by landfilling between four piers that were part of the former Bush Terminal warehouse complex. The remaining pier structures are dilapidated and extend 600 to 800 feet into the Bay from the existing fill areas. The site is currently fenced to prevent public access.

The total landfill area is approximately 14 acres in size. Partial filling between two piers (Piers 3 and 4) has resulted in the presence of two ponded areas in the northeastern portion of the site. While most of the landfilled areas are covered with grasses or barren soils, the westernmost fill area between Piers 2 and 3 supports an area of mature trees (referred to as the existing wooded area). Debris piles are present in some areas, especially along the edge of the site bordering Marginal Road.

The Site Investigation (SI)was conducted between May 1999 and May 2001. The field activities and findings of the investigation are described in the SI report. Additional studies were conducted between March and July 2002 to support the evaluation of remedial alternatives and are described in the Remedial Alternatives Report (RAR).

This site is being tracked under the Environmental Restoration Program (ERP) as site number B00031-2.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
LEAD	UNKNOWN
CHROMIUM	UNKNOWN
ARSENIC	UNKNOWN
PYRENE	UNKNOWN
ANTHRACENE	UNKNOWN
BENZ(A)ANTHRACENE	UNKNOWN
BENZO(B)FLUORANTHENE	UNKNOWN
BENZO(A)PYRENE	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

The primary contaminants of concern at the site (in groundwater, soils and sediments) that exceed their SCGs are semivolatile organic compounds (SVOCs) and inorganics (metals). VOCs, the pesticide 4,4-DDT, and PCBs were also detected at levels exceeding SCGs, but to a much lesser extent than the SVOCs and metals.

Sampling has revealed contravention of groundwater standards by 23 organic chemicals and 12 metals. It has been determined that no significant threat exists to the environment.

While groundwater quality at the site has been impacted, it is unlikely that surface water quality criteria will be exceeded when groundwater discharges to the Bay, due to the low rates of groundwater discharge and the relatively low concentrations of contaminants in groundwater. Therefore, groundwater is not expected to present a potential environmental impact.

ASSESSMENT OF HEALTH PROBLEMS:

The area is served by public water, therefore, exposure to contaminated groundwater is unlikely. There is a potential for direct contact expsoure with contaminated surface soil. However, a clean soil cover over the site and landfill gas control measures will minimize the potential for exposures to future park users. Site access is currently restricted by a fence minimizing the potential for exposure.

BROOKLYN, NY

NAME: Empire Electric Company
ADDRESS: 5200 1st Avenue
Brooklyn, NY 11232

SITE DESCRIPTION:
Location: The Empire Electric Company site is located at 5200 1st Avenue in Brooklyn, New York on the southwest corner of 52nd Street and 1st Avenue.

Site Features: The site contains a deteriorated, vacant, red brick building that covers the entire site. The site consists of a 100 ft x 240 ft parcel (Section 1, Block 803, Lot 9). Directly adjacent to northwest of the Site is a 100 ft x 140 ft parcel (Block 803, Lot 6) that contains a contiguous structure scheduled to remain. This building shares a common wall and adjoining steel truss roofing structure with the Empire Electric building.

Current Zoning/Use(s): The Empire Electric building is vacant and inactive. The area is primarily industrial in nature, with a potato chip manufacturing plant (Utz), a New York City Department of Sanitation vehicle maintenance and storage building, an overnight courier (DHL), the former BUG - Kings County Works manufactured gas plant site, and the waterfront (Bush Terminal docks) in the general vicinity.

Historical Use(s): The building was constructed in 1892 by the Brooklyn City Railroad Company for use as a power plant for the municipally owned trolley system. The building was used for electrical generation until the 1930s when the trolley system was abandoned. The facility was conveyed to the city of New York in 1940. In 1951, the property was sold and subdivided the parcel into two lots (Lot 9 and Lot 6). On 5 September 1951, Lot 9 was sold. Empire Electric operated on Lot 9, the eastern two-thirds of the building, from 1951 to December 1986 when the property was once again sold.

Site Investigations and Remedial Actions: Historical investigations at the site have documented the presence of widespread PCB impacts throughout the structure. Significant polychlorinated biphenyl (PCB) contamination of Lot 9 was identified at the time of the building sale in 1986 and a private party partial cleanup was conducted. On 28 February 1989, the NYSDEC listed the site as a Class 2 site on the New York State Registry of Inactive Hazardous Waste Sites (The Registry). In 1993, the NYSDEC collected and analyzed shallow soil samples from outside the building along 52nd Street for PCBs. The data indicated the presence of PCBs above the NYSDEC surface soil cleanup guidelines. Beginning in March 2004 the NYSDEC completed a Remedial Investigation (RI)/Feasibility Study at the Site. During the RI the NYSDEC concluded that building demolition was required to complete the RI. Additional site investigations were performed in 2009 to better characterize contamination extent.

NYSDEC has concluded that building demolition is required to complete the RI at the site. Demolition and off-site disposal of the building structure and foundation will be completed as an IRM.

The building has been secured and emptied of accumulated garbage and a IRM design investigation was completed in 2009. The remedial design to complete demolition of the buildings was completed in Spring 2010.

Site Geology and Hydrogeology: The Site, situated approximately 1,200 feet from the Upper New York Bay at the western end of the borough of Brooklyn, in New York City, is topographically relatively flat. The elevation of the Site is approximately 16 feet above mean sea level (msl), sloping gradually up from the Hudson River. Site soil directly beneath the building consists primarily of fill and debris materials, underlain by sand and gravel, and beneath these layers, bedrock. The water table beneath the Site occurs at a depth of approximately 17 to 21 feet below ground surface (bgs). Regional groundwater flow direction is to the west, toward the Upper New York Bay. The depth to bedrock is unknown, but is likely greater than 100 feet bgs.

Surface drainage generally follows the topography, and flow is northwest along 52nd Street toward the Upper New York Bay. Storm water drains are present along 52nd Street and First Avenue. Surface run-off collects in these drains and then flows directly into the Upper New York Bay.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
PCBS	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

The site presents a significant environmental threat due to the ongoing releases from source areas in soil beneath the building into groundwater.

Based upon investigations conducted to date, the primary contaminant of concern are PCBs. Results of the building material sample analysis indicate that PCB concentrations in excess of 50 ppm, the TSCA definition of PCB hazardous waste are present in 35 percent of the analyzed samples. Sixty percent of the concrete slab in the main floor area and 80 percent of the concrete floor slab in the basement area are classed as hazardous according to the TSCA definition of hazardous waste for total PCBs (above 50 ppm). The grease/oil samples collected in the basement exceeded the TSCA criteria of 50 ppm total PCBs and is present on nearly 70 percent of brick pillar surfaces. Fifty-two of the 165 building material samples collected and analyzed contained levels of PCB contamination ranging from 51 ppm to 33,000 ppm.

Soil samples collected by the NYSDEC in 1993 and during the PSA beneath the basement floor exceeded the NYSDEC recommended soil clean-up objective for PCBs in soil at depths less than 2 ft of 1 ppm, as well as the criteria for soils at depths greater than 2 ft of 10 ppm. Two of these soil samples also exceeded the TSCA definition of hazardous waste.

ASSESSMENT OF HEALTH PROBLEMS:

The floors, walls and the soil beneath the basement floor of the dilapidated on-site building are contaminated with significant levels of PCBs. Building entrances have been sealed with concrete block to prevent homeless people from living in the building and being exposured to PCBs. Testing results for upgradient and downgradient groundwater samples collected during the PSA

indicate the presence of volatile organic compounds above standards for public drinking water supplies. However, exposure to the contaminated groundwater is unlikely since public water serves the area. Indoor air contamination from volatile organic compounds in the groundwater is a potential exposure pathway that will be evaluated during the upcoming investigation.

HAZARDOUS WASTE DISPOSAL PERIOD: from 1974 to 1979

SITE DESCRIPTION:
This site is located in a commercial/industrial area within 70 feet of the Gowanus Canal, which empties into the Gowanus Bay of the New York Harbor. Approximately 10,000 people live within a half-mile radius of the site. The potable water supply for the area is the New York City reservoir system. Infor-mation received in a letter dated November 24, 1982, from the Brooklyn District Attorney's Office, indicates hazardous wastes were disposed of at the foot of 17th and 18th streets, off Hamilton Ave. in Brooklyn. The piers at the end of these streets behind Jetro Foods were filled in from 1974 to 1979. It is alleged that also over this period of time (1974 - 1979), hazardous wastes were regularly spread on the landfill during the night. Field work for the Phase II State Superfund investigation was completed, in 1989, to address the possibility of soil and groundwater contamination from on- site activities and to determine whether hazardous wastes had been released to the environment. The Phase II Investigation had five test borings drilled onsite, three of these were converted into monitoring wells. One well contained 1,2 dichlorobenzene at low concentrations. A supplemental site investigation workplan by the NYSDEC was approved in December, 1992; fieldwork was completed in spring of 1993. A review of additional information with supporting documentation provided by the PRP indicates that we are unable to pinpoint the source of contamination. Based on this, the site will be delisted for lack of documented disposal of hazardous waste.

SITE OWNER/OPERATOR INFORMATION:
CURRENT OWNER(S):
NAME.....:
ADDRESS..:

SITE DESCRIPTION:
Location - The Kings County Manufactured Gas Plant (MGP) site is comprised of two contiguous parcels of land located on the east bank of the Bay Ridge Channel of the Upper New York Bay in Brooklyn, Kings County. The parcels are identified as 5400 1st Avenue and 5600 1st Avenue. The site is on the west side of 1st Avenue, near 54th Street.

Site Features - The site is currently used for commercial/industrial purposes with warehouse buildings, a fuel oil storage facility and a power-generating station. The area between the buildings and other infrastructure is paved.

Current Zoning/Use - The site is currently active and is zoned for industrial use. The surrounding parcels are currently used for a combination of both commercial and industrial uses.

Historical Use(s) - The former MGP operated from 1904 until 1951. By 1970 all former MGP structures had been removed except for four fuel oil tanks and one gas holder that was converted into a fuel oil tank. In 1976 three meat distribution buildings were added to the property, which still exist today. At this time the fuel oil tanks and a power generating station were being operated by Con Edison. There are numerous spills relating to this activity on the site. One of the results of these spills was the installation of recovery wells for the collection of light non-aqueous phase liquid (LNAPL). These wells are currently being sampled on an annual basis.

Operable Units - The site is being managed as a single operable unit.

Site Geology and Hydrogeology - Insufficient information at this time.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
COAL TAR	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
Nature and Extent of Contamination - Based on previous investigations, there are both VOCs (BTEX) and SVOCs (PAHs) from numerous petroleum spills at the property. These contaminants are present in both soil and groundwater.

There is insufficient data to determine the extent of impacts from the former Manufactured Gas Plant (MGP) operations. A Site Characterization is planned.

Special Resources Threatened - There is insufficient data to determine the impacts to the adjacent waterway from the former MGP operations.

ASSESSMENT OF HEALTH PROBLEMS:
The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review.

PROJECT COMPLETIONS:
None reported

NAME OF SITE: Gowanus Canal Site
STREET ADDRESS: Gowanus Canal TOWN: New York City
CITY: Brooklyn, NY ZIP: 11217 COUNTY: Kings

SITE TYPE: Dump- Structure- Lagoon- Landfill- Treatment Pond-X ESTIMATED SIZE: 20 Acres

INSTITUTIONAL/ENGINEERING CONTROLS:
None reported

CROSS REFERENCES:
None reported

SITE OWNER/OPERATOR INFORMATION:
CURRENT OWNER(S):
NAME: NYC Law Department Owner Type: PRP - Class 2 HazSubs
ADDRESS: 100 Church Street
New York, NY 10007

SITE DESCRIPTION:
Site Description

The Gowanus Canal is a man-made navigational waterway in southeastern Brooklyn, Kings County NY. Nearly the entire canal is bounded by "hard" urban shorelines in the form of bulkheads, moorings, and retaining walls. The site definition includes only the canal and its attached barge slips, totaling slightly over 1.5 linear miles of waterway. Averaging 100 feet in width, the open water area defined as the site totals approximately 1,000,000 square feet or 29 acres.

The canal also serves as a storm water drain for the surrounding area. Currently, approximately six square miles of highly urbanized land drains into the canal. Sanitary sewers no longer discharge directly; however, numerous combined sewer overflows (CSO) continue to discharge to the canal during storm events. Industrial discharges from a wide variety of industrial processes were also historically routed to the canal, via private discharge pipes or the municipal sewers.

Stagnant water conditions have plagued the canal since its initial construction. To combat this, a "flushing tunnel" at the north end of the canal was constructed in 1911 to divert water from the Buttermilk Channel to maintain flow through the canal to Gowanus Bay. Operation of the flushing system has had numerous problems resulting in lengthy periods during which it was inoperable. Significant upgrades to this system are scheduled over the next few years to increase the volume of water flushing the canal .

Site History

Prior to European settlement, this area formed a large tidal marsh, drained by Gowanus Creek and surrounded by higher ground to the west (present-day Carroll Gardens) and east (present-day Park Slope). In the mid 1800s, the Canal was constructed, more or less along the alignment of Gowanus Creek, by straightening and deepening the stream channel and dumping the excavated materials

behind rows of timber piles along the shoreline. Combined with other urban filling activities in the surrounding area, the result was a large area of reclaimed land with a dendritic, dead-end canal providing barge access through the middle. The canal offered barge access far inland into Brooklyn, effectively increasing Brooklyn's available tidewater frontage for water-borne commerce. Development of the area was rapid, and by 1869, the layout of the canal and the local street network were essentially complete.

Long term decline of the local manufacturing economy has led to a marked decrease in commercial use of the Canal, with only a handful of petroleum distributors and concrete batch plants as regular users. Roughly the northern half no longer hosts barge movements as a result of siltation due to the significant CSOs which discharge street waste and sewage solids. The canal has not been dredged in several decades, consequently, substantial amounts of sediment have been deposited in upstream areas, and water depths approach zero at low tide. The sediment consists largely of solids settled from stormwater and CSO discharges. Presumably, industrial discharges to the canal have diminished in line with the de-industrialization of the surrounding neighborhood, although this is difficult to verify directly due to a lack of historical records for comparison.

The site was listed on the NPL on March 2, 2010. The listing applies only to the canal itself. Upland sites remain under DEC management.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
MERCURY	UNKNOWN
COPPER	UNKNOWN
PCB-AROCLOR 1242	UNKNOWN
COAL TAR PITCH VOLATILES	UNKNOWN
LEAD	UNKNOWN
DDE	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Water quality issues have plagued the Gowanus Canal almost since its construction. Tidal flushing is largely ineffective due to the length, narrowness, and circuitous layout of the canal channel. Operation of the flushing tunnel has improved the situation during the years when flushing was being conducted; however, the current tunnel requires significant upgrades and is likely to be off-line for a year or more as the upgrades are performed. The canal is currently classified by NYSDEC as Class SD water body, acknowledging that natural or man-made conditions limit attainment of higher standards. Even the SD standards are not currently met. Oily sheens are common on the water surface during low tides, dissolved oxygen levels are low and surface contamination has been identified.

Sediment quality is also low. Ongoing CSO discharges have resulted in extensive deposits of settled solids, particularly in the more sheltered areas near the upper end. Some parts of the canal bottom are exposed at low tide. Another particularly important contributor to sediment quality problems is the presence of three former manufactured gas plant (MGP sites) along the length of the canal. Although all three MGPs have been closed for decades, coal tar-impacted sediments have been identified at numerous locations along the length of the canal. The three MGPs are all covered by cleanup agreements with NYSDEC, and are at various stages of investigation,remedy selection and implementation.

The Fulton Works, immediately east of the canal at its northern extremity, is in the Remedial Investigation process.

The Carroll Gardens site (also widely known as Public Place) is in the Brownfield Cleanup Program, and is slated for remediation and redevelopment as a mixed commercial/residential project.

The former Metropolitan works, immediately south of the 9th Street bridge, was partially redeveloped under a Voluntary Cleanup Agreement in 2002-2003. However, more work remains to be done-part of the MGP facility lies beneath an active retail building. A Remedial Investigation began in March 2010.

Numerous oil storage and handling facilities, asphalt plants,manufacturing facilities and chemical, paint, fertilizer and plastic manufacturers have, or continue to, operate along the canal.

ASSESSMENT OF HEALTH PROBLEMS:

People using the canal for recreational purposes such as swimming and boating may come into direct contact with chemical contaminants and harmful biological organisms. People should avoid any activity that would result in swallowing or accidentally ingesting Canal water. Additionally, people using the canal for any purposes should wash their hands or shower after contacting the water, especially before eating and at the end of the day. Those people who are considering eating fish and shellfish caught in the Canal should follow the NYSDOH consumption advisory for fish and shellfish taken from the Upper Bay of New York Harbor. This advisory specifically includes:

* The NYSDOH recommends that women of childbearing age and children under the age of 15 not eat any fish from the Canal.
* Other people should eat no gizzard shad, white perch and crab hepatopancreas and crab cooking liquid. Also, other people should eat no more than one meal per month of American eel, Atlantic needlefish, bluefish, rainbow smelt and striped bass.
* People should eat no more than one (1/2 pound) meal per week of all other fish species except blue crab meat (six crabs per week).

CURRENT OWNER(S):
NAME: VIP Builders LLC Owner Type: PRP - Class 2 HazSubs
Christopher Jett
ADDRESS: 400 Broome Street
11th Floor
New York, NY 10013

SITE DESCRIPTION:
Location:
The site is located at 688-700 Court Street within the Red Hook Industrial area of Brooklyn. The site is located southwest of

the Court Street and Halleck Street intersection.

Site Features:
At one point, the main site features included 19 buildings, five designated tank farms and a wastewater pretreatment system. However, the site has been substantially decommissioned.

Current Zoning/Use(s):
The site is zoned for industrial use, but is currently mostly unoccupied. Some light manufacturing (stone countertops) takes place on site. The surrounding parcels are currently used for a combination of commercial, light industrial and recreational uses. The site is bordered immediately to the east by Court Street, Brooklyn Union Gas and Spentonbush Red Star Companies, to the west by Clinton Street and American Import Export Trucking and to the south by Bryant Street and Hess Oil Company. A recreational park (Red Hook Recreational) is located immediately to the north of the site.

Historical Use(s)
Milliken Brothers Iron Works occupied the southwestern portion of the site in 1904. The remaining property was occupied by Barrett plant from 1904 to 1949 for the manufacturing of tar paper. In 1939 John F. McKenna, Inc. Lumber Yard, Marine Canvas Supply Corporation and John Menton Boiler Maker occupied the site. The site remained a lumberyard and marine canvas supply business until approximately 1958, when manufacturing at the site began. Historic manufacturing processes at the site include production of metallic-organic soaps and salts, phosphates and epoxy plasticizers. A hot-oil system, that used PCB containing oil, was part of the manufacturing process.

Contamination at the site appears related to several historic operations, including materials handling from the tar paper operation and the various manufacturing processes, as well as releases to the environment from the hot oil system.

Site Geology and Hydrogeology:
The site was formed by backfilling the marsh and waterfront areas of the Gowanus Canal in the late 1800s through the early 1900s. Fill material consisting of fine to coarse sand-sized particles with varying amounts of silt and miscellaneous debris (ash, slag, coal, wood, brick, concrete, etc.) was observed across the site from ground surface to a depth of 12 ft. Underlying the fill materials, a clay layer was encountered with lateral continuity across the site. This layer (former base of the Gowanus Canal) acts as a low permeability barrier between the overlying fill and the underlying water-bearing zone located within the glacial deposits beneath the site.

Based on the manmade coastline (rip-rap, pile sheeting), well gauging data and the generalized hydrogeological cross-sections, a horizontal and somewhat radial (north, northwest, west, southwest, south) pathway for groundwater flow exists. Depth to water beneath the site has ranged from 2.0 ft to 9.0-ft bgs over the course of investigation. Groundwater beneath the site does not appear to be tidally influenced.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
BENZENE	UNKNOWN
TOLUENE	UNKNOWN
ACETONE	UNKNOWN
NAPHTHALENE	UNKNOWN

PHENOL	UNKNOWN
POLYCHLORINATED BIPHENYLS (PCB)	UNKNOWN
XYLENE (MIXED)	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
Nature and Extent of Contamination:
Based on investigations conducted to date, the primary contaminants of concern at the site include petroleum related compounds, phenolic compounds, and PCBs.

BTEX is found in soil from the ground surface to the water table throughout a significant portion of the site. Xylenes were detected at concentrations up to 560 ppm (UUSCO of 1.6 ppm); benzene was detected as high as 5.3 ppm (UUSCO of 0.06 ppm.) The highest concentrations of xylenes are located at the east side of building 14 and north of building 19. The SVOCs phenol; 2,4-dichlorophenol and naphthalene are found in soil from the ground surface to the water table throughout the center of the site. SVOCs, carcinogenic PAHs and metals related to historic fill are found throughout the site. Carcinogenic PAHs (up to 100 ppm) and metals (4370 ppm for lead; 1420 ppm for Barium and 305 ppm for cadmium) were detected well above UUSCOs. PCBs are found in soil at concentrations as high as 320 ppm. PCB contamination is located near buildings 13 and 14 in the north and northwestern part of the property where the hot oil system was located and operated.

Contaminated soil is a source of groundwater contamination. Benzene is found in groundwater above the groundwater standard of 1 ppb at concentrations as high as 3,400 ppb. SVOCs in soil from the use of tar in the manufacturing of tar paper are of a source of groundwater contamination. For example, naphthalene is found in groundwater as high as 5,500 ppb (groundwater standard 10 ppb.)

Non-aqueous phase material, in the form of tar and less viscous oil, is found in the environment.

ASSESSMENT OF HEALTH PROBLEMS:
Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. However, people could come into contact with contaminants if they dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion to occur in the existing buildings will be investigated.

ADDRESS: 110 WILLIAM STREET, 7TH FLOOR
NEW YORK, NY 10038

SITE DESCRIPTION:
The site is located along the Upper New York Bay, in the Sunset Park Section of Brooklyn, in the western part of Kings County, New York. The site borders an access road referred to as Marginal Street (which parallels 1st Avenue), between 45th and 50th Street. The land immediately adjacent to the site is used for commercial and industrial purposes, although residential housing areas are present within approximately 1,500 to 2,000 feet of the site.

The 17.3-acre site includes approximately 14 acres of urban land that was created by landfilling between four piers that were part of the former Bush Terminal warehouse complex. The remaining pier structures are dilapidated and extend 600 to 800 feet into the Bay from the existing fill areas. The site is currently fenced to prevent public access.

Partial filling between two piers (Piers 3 and 4) has resulted in the presence of two ponded areas in the northeastern portion of the site. While most of the landfilled areas are covered with grasses or barren soils, the westernmost fill area between Piers 2 and 3 supports an area of mature trees (referred to as the "existing wooded area"). Debris piles are present in some areas, especially along the edge of the site bordering Marginal Road.

The Site Investigation (SI) was conducted between May 1999 and May 2001. The field activities and findings of the investigation are described in the SI report. Additional studies were conducted between March and July 2002 to support the evaluation of remedial alternatives and are described in the Remedial Alternatives Report (RAR). The Record of Decision presenting selected remedy was finalized in March 2004.

The City’s Application for Remedial Grant was received in the end of March 2005. The Draft Scoping Document for Remedial Design Work Plan was submitted on December 9, 2005. The NYSDEC Commissioner approved Remedial Application in January 2006. The NYC Economic Development Corporation has prepared a detailed design for the proposed remedy. The design, plans and specifications regarding remedial construction were approved in January 2009.

Remedial construction commenced in August 2009. It is expected to be complete by October 2011. At the end of remedial construction NYC Parks is scheduled to begin landscaping activities under a separate contract with the eventual end use comprising both active and passive recreation for residents of the surrounding Sunset Park community and beyond.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
LEAD	UNKNOWN
CADMIUM	UNKNOWN
ARSENIC	UNKNOWN

BENZ(A)ANTHRACENE	UNKNOWN
BENZO(A)PYRENE	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

The primary categories of contaminants of concern at the site (in groundwater, soils and sediments) that exceed their respective Standards, Criteria and Guidance are semivolatile organic compounds (SVOCs) and inorganics (metals). VOCs, the pesticide 4,4-DDT, and PCBs were also detected at levels exceeding SCGs, but to a much lesser extent than the SVOCs and metals.

While groundwater quality at the site has been lightly impacted, it is unlikely that surface water quality criteria will be exceeded when groundwater discharges to Gowanus Bay, due to the low rates of groundwater discharge and the relatively low concentrations of contaminants in groundwater. Therefore, groundwater is not expected to present a potential environmental impact. It has also been determined that no significant threat exists to the environment.

Remedial Construction commenced in August 2009. It includes the following:

* Removal of contaminated soil in some areas;
* Placement of a two foot soil cover over the landfill to prevent exposures to surface soils and underlying waste materials, except in the existing wooded area where a six-inch soil cover will be provided to minimize exposures while retaining the existing mature trees;
* Landfill gas management to control landfill gas migration, and landfill gas monitoring to ensure that unsafe conditions do not develop in the future;
* Implementation of a Community Air Monitoring Plan (CAMP);
* Implementation of dust suppression measures; and
* Excavation and covering of shallow pond area sediments, filling and covering of deeper pond area sediments, and shoreline stabilization to minimize potential ecological exposures to contaminated sediments.

Remedial construction ongoing and is expected to be complete by the end of October 2011.

ASSESSMENT OF HEALTH PROBLEMS:

The area is served by public water, therefore, exposure to contaminated groundwater is unlikely. There is a potential for direct contact expsoure with contaminated surface soil. However, a clean soil cover over the site and landfill gas control measures will minimize the potential for exposures to future park users. Site access is currently restricted by a fence minimizing the potential for exposure.

HAZARDOUS MATERIAL SPILLS INTRODUCTION

The Hazardous Material Spills in this section are divided into eight spill cause groupings. These include:

Active Spills Section: Spills with incomplete paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

1) Tank Failures
2) Tank Test Failures
3) Unknown Spill Cause or Other Spill Cause Hazardous Spills
4) Miscellanous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, and Vandalism.

Closed Status Spills Section: Spills with completed paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

5) Tank Failures
6) Tank Test Failures
7) Unknown Spill Cause or Other Spill Cause Hazardous Spills
8) Miscellanous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, and Vandalism.

All spills within each spill cause category are presented in order of proximity to the subject site address.

Please note that spills reported within 0.25 mile (or one−eighth mile in New York City) are mapped and profiled.

Between 0.25 mile (or one−eighth mile in New York City) and 0.5 mile, only the following spills are mapped and profiled:

* Tank Failures;

* Tank Test Failures;

* Unknown Spill Cause or Other Spill Cause;

* Spills greater than 100 units of quantity; and

* Spills reported in the NYSDEC Fall 1998 MTBE Survey.

A table at the end of each section presents a listing of reported Miscellanous Spills with less than 100 units located between 0.25 mile (or one−eighth mile in Manhattan) and 0.5 mile. These spills are neither mapped nor profiled.

NO ACTIVE TANK FAILURES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS

ACTIVE TANK TEST FAILURES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS

Please Note: * − Compass directions can vary substantially for sites located very close to the subject property address.

Caller Remarks:

(2) 550 GALLON SYSTEM FAILED AIR PRESSURE TEST, NYCFD & OWNER NOTIIFED

DEC Investigator Remarks:

3/4/2003: CLOSED DUE TO LACK OF ANY RECENT INFO − DOES NOT MEET ANY CLEANUP REQUIREMENTS.

5/18/06: Case reopened because high napthalene found in downgradient MW8 on Verizon property. Assessment required letter sent, due back 7/18/06. PBS # 2−603597

5/31/06: Spoke to Commodore Manufacturing. He will send documents regarding legal closure of tanks three years ago.

6/5/06: Received letter with documentation that Action Environmental closed in place a 35,000 gallon heating oil tank that was previously abandoned in place. The tank was noted to have been "properly abandoned" in the late 1940's.

8/11/06: Spoke with Kevin O'Connor. Two 35,000 gallon USTs were abandoned in place. A third tank was found to be formerly abandoned in place with sand. All three tanks were in parrallel. Soil testing may have been completed by a different company. Contact owner for additional information. Called Abraham Damast (718−788−2600), he was not in the office.

8/21/06: Called Abraham Damast, the line was busy.

8/25/06: Left message with Abraham Damast's secretary to see if he has additional information regarding the tank removal/abandonment.

9/27/06: Sent letter to Abraham Damast requiring sampling results from the abandonment which occurred in September 2004.

10/11/06: Downgradient Verizon site Spill 9108899, located directly downgradient of Commodore manufacturing, was closed, although their upgradient well MW8 still shows high napthalene contamination from an unknown upgradient source. Include Verizon's well MW8 in possible future sampling of this plume.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "MACCABE"
Reassigned from DEC Sigona on August 4, 2003, as per Letter from P. David Smith, Bureau Director, Remedial Bureau B.

On June 29, 2000, DEC (Sigona) along with Handex (Hoashi, Tonn, and DeVoe) conducted a site visit at Former Mobil S/S, 987 4th Avenue, Brooklyn, which is currently occupied by a Taco Bell. According toe Handex (Tonn) Mobil delivered a shipment of gasoline to the USTs which were partially decommissioned in 1988.

Fenely & Nicol performed an investigation in 1988, and prepared a report in December 1989. Fenely and Nicol recovered approximately 250 gallons using a pump and treatment system.

GTI became involved in 1992, and installed a groundwater sparging system to treat the remaining dissolved phased at the site. There were however, sporadic signs of free product over the years.

There were at least 10−12 wells at the site in the previous investigations. Currently, there are only four groundwater monitoring wells, and four sparging wells. There is also a vapor extraction system at the site. A Stipulation Agreement was issued by DEC on July 7, 1995.

The site is directly adjacent to a Subway which runs underneath 4th Avenue. There was no indications from Handex that the subway lines have ever been impacted.

The vapor from the SVES was shut down in 1998, and was teated with carbon. DEC (O'Dowd) requested a test of the vapor from the

sparge wells. In September 1999, Handex found 11,000 ppb total BTEX in SP−2 and 2,900 ppb BTEX in SP−3 and nd in SP1 and SP4. MTBE was relatively low.

In November 1999, Handex found 3 feet of floating product in MW21 and has monitored on semi−annual basis only. The wells were last sampled in June 2000.

Since November 1999 performed 3 vacuum truck visits and recovered free product, gaged for free product before and after each visit.

Handex is not sure what the source of the free product in Well No. 21. Handex will continue to submit a semi−annual report which will be due in August 2000. Handex plans to conduct a soil investigation in Sept 2000. Handex will send the plan to DEC for review and approval.

Meanwhile, the system will be shut down until Handex can determine the proximity of the contamination. The depth of groundwater is 38 feet below grade.

4/27/10 − M. MacCabe − current status. Reinstallation of AS/SVE system has been completed except for connection to the power grid. Soil and GW were sampled when AS/SVE wells were constructed. Soil and GW contamination remain on−site. 5/21/10 − no activities this month.

6/23/10 − M. MacCabe − no activities this month.

7/26/10 − M.MacCabe − The quarterly site status update report was received.

9/29/10 − M. MacCabe − The quarterly site status update report showed no changes in groundwater concentrations.

10/27/10 − M. MacCabe − Electrical work was conducted on the AS/SVE system in preparation for hook up to the power grid.

11/24/10 − M. MacCabe − The quarterly site status update report was received. Groundwater concentrations generally remain constant.

3/01/11 − M. MacCabe − The SVE component of the on−site remedial system was placed on−line on 12/29/10 then back off line on 1/10/11. The quarterly site status update report was received. Groundwater concentrations generally remain constant.

3/28/11 − M. MacCabe − The AS/SVE system is expected to go back on line in early April.

4/25/11 − M.MacCabe − Maintenance of the AS/SVE system was conducted in late April. This included change out of the carbon filter for the SVE effluent stack.

6/28/11 − M. MacCabe − The quarterly site status update report was received. The consultant estimates that four pounds of total BTEX and 26 pounds of total volatile petroleum hydrocarbons were removed with the SVE/AS system by the end of 2010.

7/05/11 − M. MacCabe − Periodic O&M was conducted and carbon filter was changed.

8/29/11 − M. MacCabe − Periodic O&M was conducted and the carbon filter was changed in August. The August site status update report states that approximately 10.6 lbs of BTEX and 64.9 lbs of total volatile petroleum hydrocarbons have been removed from the subsurface since the rebuilt AS/SVE system went on line in December 2010.

The AS/SVE system was temporarily shut down in anticipation of hurricane Irene.

9/12/11 − M. MacCabe − Periodic O&M was conducted and the carbon filter was changed in September.

12/20/11 − M. MacCabe − The quarterly report was received. The consultant states that approximately 18.72 pounds of total BTEX and approximately 93.77
pounds of total volatile petroleum hydrocarbons (TVPH) were recovered by the SVE/AS system during the entire operation period. However, the groundwater data are inconclusive.

12/27/11 − M. MacCabe − Effective January 1, 2012, the consultant working for ExxonMobil on this project will change from Kleinfelder to Groundwater and Environmental Services (GES).

2/29/12 − M. MacCabe − Staff met with representatives of ExxonMobil and GES on February 28 to discuss modifications to the AS/SVE system to improve its efficiency. Modifications of the system consist of installing a larger compressor and cycling the system to just two of the seven vapor extraction points at one time.

5/11/12 − M. MacCabe − The quarterly site status update report covering the last quarter of 2011 and the first quarter of 2012 saw received. Weekly O&M was conducted about once every two weeks. The AS and SVE points have been cycled to allow for larger flow rates in different areas. The data show continued decreases in BTEX concentration in on−site groundwater.

NYSDEC FALL 1998 MTBE SURVEY INFORMATION FOR 8706481

Maximum MTBE concentration: 607.0 PPB Current MTBE concentration: 239.0 PPB
BTEX offsite: No

		Unknown	0.00	UNKNOWN

Caller Remarks:

TANK−TEST FAILURE. ISOLATE, REPAIR, AND RE−TEST.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"
This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004.

04/27/05− Bureau B, unassigned, due to low priority. Transferred from R−2.

12/20/06− reassigned to Chris Milack, Central Office (Milack)

12/29/06− Groundwater investigation work plan approved. Plan calls for sampling of 3 wells on property that were previously installed for the investigation of spill #93−05122. (Milack)

5/24/07− GW investigation report was received 5/18/07. Two wells were samplled, one well was dry. Both wells had concentrations of MTBE that exceeded standards. Consultant will be submitting an additional investigation WP. Quarterly sampling will continue.

7/2/08 − Haggerty: assumed project management from Chris Milack

9/19/08 − Haggerty: approved SI workplan

11/25/08 − Haggerty: SI workplan altered due to the presence of oil−cooled high pressure gas mains along 24th Street. See email and revised figure in edocs

4/20/09 − Haggerty: approved SIR with the following comments:

1. Add Tertiary Butyl Alcohol (TBA) to the groundwater sampling protocol.

2. The 12 abandoned 550gal tanks must be removed as well as the former dispenser areas. Provide a UST Removal work plan within 60 days of the receipt of this email.

3. I agree with waiting 2 quarters before further groundwater delineation, if any, is performed.

6/19/09 − Haggerty: had conference call with Ken Drake from ExxonMobil and Kleinfelder. ExxonMobil states they are not willing to remove the tanks because there is an issue of who owns the tanks. They will gather more information and get back to me. PM forwarded this spill to Scott Owens (OGC) for follow−up

May 2010 − Due to various underground utilities, off−site delineation is proving to be difficult. PM instructed Mobil to get access to a property across 24th Street to install a MW. This appears to be our only option of delineation at this time. Discontinued EFT events due to poor recovery, really tight soil

July 2010 − EM granted access to off−site location to complete delineation

August 2010 − Offsite well well installed 8/3

February 2011 − offsite well show high levels of gasoline contamination (20,000ppb BTEX) but little MTBE. On−site contamination predominately MTBE

June 2011 − SSUR overdue

July 2011 − reviewed SSUR. EM continues to only propose continued gw sampling when the site obviously needs active remediation. Left message with Jackie Fawcett, EM, to discuss

August 2011 − sent email requiring ExxonMobil to submit a Pilot Test work plan to address both soil and groundwater contamination within 45 days (due 9/17/11)

Sept. 2011 − approved Feasibility study work plan for SVE/AS

January 2012 − EM switched consultant's to GES. SVE/AS pilot test failed, not viable. Heavy BTEX dissolved concentrations encountered in new wells (50,000+ppb)

February 2012 − discussing the site on 2/28/12 when EM and GES come to Albany. My conceptual model changed since the new gw data came in

April 2012 − EM's SVE pilot test was a complete failure based on the lithology. Tank/line removal, over−excavation is the only fiable solution to source removal. EM states they won't remove the tanks becuase some were sold to the owner. PM needs assistance from OGC

Caller Remarks:

CALLER RESPONDED TO ABOVE LOCATION TO PERFORM TESTING FOR A TEST

UPGRADE. TEST REVEAL SOIL CONTAMINATION. FURTHER TESTING TO

BE DONE AS WELL AS EXCAVATION AT SITE. NO CALL BACK REQUESTED.

DEC Investigator Remarks:

8/5/99 mtg: Initial approach will be to attempt High Vac on wells #3 & #4. If later testing shows little effect, 3 additional wells on the sidewalk will be installed and a more aggressive remediation plan will be prepared by EnviroTrac.

11/18/2002 Waste Oil tank was previously removed, end points for this excavation show SVOC exceed TAGM. On going SVE project.

06/16/03 Spoke to Ed Russo of Envirotrac. Hess is considering buying this property from Shell. Rommel

9/16/03 Meeting notes: continue running SVE.

12/2/03 Reassigned from Sangesland to Foley. Update report received. In 12/02, Shell ceased operations at site. All USTs were removed and site is vacant. SVE/AS system is currently off pending electric. Groundwater sampled 10/13/03. BTEX range is <4.0ppb(MW−10) to 16144ppb(MW−4). MTBE range is 3.3ppb(MW−3) to 1180ppb(MW−1). No product was detected during this period. Depth to water is 22−24'. Flow is southeast.

Sensitive receptors: houses and apt buildings with basements. Elementary school located north of site, across 30th St.

SVE/AS system will be reactivated and monthly system sampling will continue.

3/18/04 Received update report from NES. BTEX range <4ppb(MW−10) to 15037ppm(MW−4). MTBE from 3ppm(MW−3) to 1150ppm(MW−1).

6/8/04 Received update report (NES, 6/8/04). BTEX ranged from ND(MW−10) to 18982ppb(MW−4). MTBE ranged from ND(MW−3) to 1220ppb(MW−1). System off pending electric.

6/23/04 Spoke to Tom Bosshard, Envirotrac. Hess will be buying property. Shell to continue remediation.

9/9/04 Received update report. BTEX ranged from 3.6ppb(MW−9) to 19270ppb(MW−2). MTBE ranged from ND(MW−3, MW−6) to 621ppb(MW−1). System off pending electric.

11/23/04 Meeting held with M. Schneck, NES and R. Rule, Shell. SVE/AS has been off for an extended period of time. Had electric issues when divested. Expect electric and system back on within one month.

3/7/05 Update report received. Hess commenced with site redevlopment in 9/04 and is now operating as Hess. Approx 1953tons of suspected petroleum impacted soils were excavated. NES has secured a new electric service and the existing SVE system was reactivated on 1/13/05. A previously undocumented 550gal waste oil UST was discovered and removed. Sidewall and bottom wall samples had PAHs above cleanup objectives.

2/1/06 SVE/AS operating and levels decreasing. Historically GW flow to the SE. Will resurvey. DEC wells in front of apartment building, with DEC−1 increasing.

6/7/06 − Obligado − Transferred from Foley to Obligado.

2/9/07 − Obligado − Review 4Q06 Monitoring Report. 6 onsite and 2 offsite wells sampled on 12/19/06. DTW 22.67 to 24.38 ft. No

LNAPL. BTEX 3.38 to 13652 ppb (MW4). MTBE ND to 32.7 ppb (MW4). AS/SVE not operation in December due to temporary disruptin of electrical service. Con Ed indicated electric will be restored in January 2007. Sysetm O&M sampling on 10/30/06 and 11/13/06. Max effluent benzene at 2.20 mg/m3 which is below most conservative STIP MOU value of 5.272 mg/m3.

10/5/07 − Obligado − REview 1Q07 monitoring report. During Jan 12 adn 31 AS/SVE OM&M visits, GES was unable to get system running. ON Feb 9, GES repaired electrical problems and restarted the system. On March 1, gugaed and sampled 8 monitoring wells. MW4 had LNAPL with thickness of 0.01 ft. BTEX was 2.82 to 6126 ug/L (MW8). MTBE was 5.44 to 16.6 ug/L (MW3). The system uptime during this period was 54%.

2Q07 report. ON JUne 5, 2007 8 wells were sampled. GW depth is 20 to 23 ft and flow is to south. BTEX from ND to 10,097 ug/L (MW4), MTBE is from ND to 19 ug/L (MW9). The system uptime during this period was 91% for SVe and 75% for AS. As sparge system exhibited some problems due to high temp alarm. Proposes installation of 2 wells in vicinity of MW2 which could not be located. Sent email approval of the well installations.

11/5/07 − Obligado − Email from Heather Cloud − "As discussed on the phone, I would like to temporarily shut down the SVE/AS system at 833 4th Avenue in Brooklyn. During the past couple of visits, it has come to our attention that the blower is worn and will need to be replaced. Since we are scheduled to install additional delineation wells on the northern portion of the property (scheduled for November 19−20), and there is the potential that
we will need to expand the system (based upon the results of the well install), I am requesting approval to temporarily shut down the system until we can further evaluate the need for system modifications (potentially upgrading the equipment) and/or expansion.

If it determined that system modifications and/or expansion is necessary, we will prepare a work plan outlining the system modifications and submit it to you for your approval. If an expansion of the system is not necessary, we will replace the blower based upon the existing conditions and re−start the system."

12/19/07 − Obligado − Review 3Q07 report. 0&M peformed bimonthly on AS/SVE ssystem. On each visit the system was down. SVE system run time is 85%, AS system run time is 32%. Benzene emmissions were below STIP Guidance. BTEX range from ND to 8,280 ug/L. Proposes to install 2 wells MW13 and MW14 on northern portion of property.

5/6/08 − Obligado − Review 4Q07 report. In November 2007, GES temporarily shut down the system to perform system modifications. In December 27, 5 soil boiings were advanced. Saturated zone impacts remain on site between 22 and 30 ft bgs. 2 monitoring wells were installed (MW12 and MW13) to a depth of 30 ft bgs. GW sampled on December 31, 2007. No Lnapl detected. BTEX range from ND to 10,246 ug/L (MW4). MTBE range from ND to 15.2 ug/L (MW8). Soil impacts at SB1 (28−30 ft) is 1,086,400 ug/m3.

Review 1Q08 report. BTEX Range from ND to 7711 ug/L (MW4). MTBE from ND to 15.6 ug/L (MW8). LNAPL not detected. Proposes replacing SVE blower and reactivated SVE/AS systems and continued O&M.

10/24/08 − Obligado − review System Modificaiton Workplan. It proposes installing 4 additional onsite wells and 1 off−site well. Also proposes overdrilling some ineffective AS/SVE wells and installing separate SVE and AS wells.

10/31/08 − Obligado − Approved workplan. Sent approval letter to Heather Cloud via email.

2/24/09 − Obligado − Meeting with GES, Shell, DEC. They are having problems doing additional work do to NYC MTA permitting issues with adjacent subway.

11/9/09 − Obligado − Meeting with Shell, DEC, GES. System modifications completed and start up scheduled for December 2009.

4/13/10 − Obligado − I completed my review of a Site Status Update Report, which documented the remedial system upgrade activites and the installation of 3 additional delineation wells. The plume appears to be adequately delineated. I sent an approval letter for the investigation to Heather Cloud via email with a cc to Rob Rule.

8/25/10 − Obligado − Meeting with Shell/GES/DEC. They will continue to operate the onsite SVE−AS system. − Mark Tibbe to provide information on spills in the area with regards to the installation of offsite wells MW−8, MW−9 and MW−10. − Obtain a spills report for the area to evaluate historical spills at surrounding properties.

12/22/10 − Obligado − Review 3Q10 report. System experiencing mechanical issues. The system was down twice in July and once in August. The run time was only 41 percent for SVE and 13 percent for the AS. They plan to replace/repair the blower and the heat exchanger. Since the system was upgraded and restarted in 2009, there has been a significan increase in recovery, estimated at almost 3000 lbs of hydrocarbons in the past year.

3/15/11 − Obligado − 4th qtr report 2010 BTEx at 5,432 ug/L. NO system OMM samples were collected. No effluent PID readings were collected. An estimated 3,451 lbs of hydrocarbons recovered during this period. I emailed Christopher Guale requiring data to confirm the system is operating within permitted limits.

MTBE (METHYL−TERT−BUTYL ETHER)	HAZARDOUS MATERIAL	0	UNKNOWN	0	UNKNOWN	

Caller Remarks:

REMOVING OLD TANK & GROUND AREA. IT SMELLS BAD. PUTTING SOIL INTO WASTE. THEY WILL ANALYZE & PROCEDE FROM THERE. NO CALL BACK.

DEC Investigator Remarks:

10/10/95: This is additional information about material spilled from the translation of the old spill file: CONTAMINATED SOIL.

1/8/04 Reassigned from Zhitomirsky to K Foley. (KMF)
2/25/04 Met with B. Beck, National Environmental. He will provide UST closure report.

9/29/04 Met with B. Cohen(Certilman Balin Attorneys), B. Beck(Consultant, National Env.) with J. Rommel and L. Oliva. B. Beck to provide either a copy of the UST closure report or a site assessment by 2/11/05.

3/15/05 Received Subsurface Investigation Report prepared by National Env.
Site has been a gas station since at least the late 1950s or early 60s. The site has been owned by 3072 Cropsey Ave Corp. and operated by an independent dealer since the early 1970s.

Currently the station has (4) 4000gal gas tanks that were installed in 1994.

DTW is estimated at 65'bgs. Three sampling locations (B1,B2,B3) were selected adjacent to the suspected source area in the vicinity of the existing USTs. Termination depth was approx 12'bgs. Soil obtained at each location exhibited staining and petroleum odor. The probe met refusal at approx 28'bgs. A soil sample was obtained at the interval just above refusal(no staining/odors noted at 28'bgs). A soil sample was also collected from B2 and B3 from the depth of the existing tanks(12'bgs). They exhibited a slight petroleum odor. Refusal was encountered at 44'bgs. Soil samples were also collected at 44'bgs(no staining/odors noted at 44'bgs).

With the exception of MTBE, no VOCs were noted above objectives in the deeper samples. Several VOCs were present above objectives in each of the shallow samples (12−16'bgs). Among the highest concentrations noted m&p xylenes in B−1 (12−16') at 400,855ppb and 1,3,5−trimethylbenzene in B−2 and B−3(12−16') at 45,061ppb and 52,099ppb, respectively. In addition, MTBE was noted in every sample at concentrations up to 19,607ppb (B−3,12−16').

3/16/05 Required at least three monitoring wells be installed in the vicinity of the USTs. Summary report due 5/16/05.

2/2/06: Sent Bruce an email asking for status of mw installation and report.

3/13/06: Received a letter from Bruce Beck stating that they are currently soliciting quotes for drilling.

5/19/06: Consent order meeting with Wolf scheduled for June 2 at 11am.

6/8/06: Meeting with NYSDEC, Barry Cohen (Wolf's attorney's) and Bruce Beck (Wolf's consultant) regarding the consent order.

7/10/06: Emailed Bruce Beck to set up a meeting to discuss deliverables required for consent order.

8/6/07: Wolf consent order signed on 7/27/07. Investigation report due on 9/25/07. Spoke to Tracy Wall of NEMA, a workplan may be submitted.

8/7/07: Sent letter indicating a workplan is due 90 days after effective date of order − 10/27/07.

3/4/08: Conditionally approved workplan. Workplan proposed the installation of three wells. Required that a fourth well be installed to the west of the tankfield. ISR due on 5/4/08.

3/20/08 − Carlson: Meeting with Bruce Beck. Bruce Beck indicated wells will be installed next week, if they receive the necessary permit.

5/20/08 − Carlson: Emailed Bruce Beck regarding overdue Remedial Investigation Report.

5/22/08 − Carlson: Received email from Bruce Beck:"The rock driller broke down with his equipment on−site for the second time two weeks ago but is planning to return late this week
or early next week. Drilling conditions is very tough and as wells need to be 60− 70 feet deep it has not been an easy job. Additionally we are having difficulty with locations as utilities could not give us clearance for two of the locations. We are still exploring options for locations and will get back to you within the next couple of days."

7/7/08 − Carlson: The Department received a report dated June 30, 2008. The report indicated that well installation was not completed "due to the high expense to install the monitoring wells" with an air rotary rig. The report states that two soil samples were collected, but the soil sampling data, laboratory analytical data, and soil manifests were not included in the report. Sent email requiring that Wolf/NEMA resubmit the report with these items.

7/9/08 − Carlson: Received email from Bruce Beck. He will resubmit the report.

8/4/08 − Carlson: Reviewed revised sites status letter dated 7/21/08. Monitoring wells were not installed because water was not encoutered, depth to water is greater than 80 ft. Two samples were collected during soil boring at location MW1. VOCs were ND. Report recommends use of SVE. Received hard copy of report, it is dated July, 17, 2008, while the electronic copy is dated 7/21/08.

8/19/08 − Carlson: Meeting with Bruce Beck and Tracy Wall of NEMA.

9/11/08 − Carlson: Issued letter requiring soil and groundwater delineation workplan by 10/13/08.

11/14/08 − Carlson: Received delineation workplan.

11/19/08 − Carlson: Meeting with NEMA. Revised workplan required by 11/30/08.

12/1/08 − Carlson: Received revised workplan.

12/3/08 − Carlson: Reviewed revised workplan. Samples must be collected from the borehole instead of from the drill cuttings. Borings should be completed two two split−spoons below the maximum depth of contamination, instead of to 58 ft. Revised workplan required.

1/15/09 − Carlson: Received revised workplan. Borings must be completed to at least 10 feet below the maximum depth of contamination. Revised workplan required.

1/22/09 − Carlson: Received revised workplan. Issued approval letter.

4/29/09 − Carlson: Met with Bruce Beck. Work has not been started at this site yet. Spoke to DEC Urda regarding violation.

DEC Urda issued letter.

5/4/09 − Carlson: Extension for RIR to 5/22/09.

6/24/09 − Carlson: Reviewed Investigation Report. One monitoring well installed. Impact found in well. Delineation workplan required for additional groundwater delineaton, due 7/24/09.

8/7/09 − Carlson: Reviewed Investigation Work Plan. Two wells proposed. A third proposed well location is required in location B−3. Email Tracy Wall − Revised work plan due in 30 days.

9/24/09 − Carlson: Received quarterly report. MW1 sampled on 8/21/09. BTEX 393, MTBE 17,000 ppb. Revised work plan was not received.

11/1/09 − Carlson: Received email from Tracy Wall − they are obtaining a permit to install off−site well, looking into feasibility of installing well at B−3 location (may be too close to tanks).

11/18/2010 − Carlson: Meeting with Bruce Beck. Review case file internally.

2/17/2010 − Carlson: Meeting with Bruce Beck. Revised work plan required as per 8/7/09 email.

3/2/2010 − Carlson: Issued letter requiring revised work plan by 4/2/2010 (as per 8/7/2009 email).

4/22/2010 − Carlson: Reviewed update report. Approved extension to 5/2/2010 for IP submittal.

5/3/2010 − Carlson: Received email with Revised Investigation Work Plan and FOIL Request for Jackie Gleason Bus Depot. Well installation to the west of the USTS not possible because drilling may damage tanks/piping. Two well locations on the northern portion of property were proposed. Requested delay to implement work plan until after FOIL request is received. FOIL request fowarded to FOIL Officer.

5/11/2010 − Carlson: Received FOIL request for spill 9905769, fowarded to R. Leung;

6/4/2010 − Carlson: DEC Tibbe replied to 5/3/10 email − is there another method of drilling (besides sonic drilling) that will be less likely to damage utilities. How was existing well MW1 installed?

7/16/2010 − Carlson: Reviewed March 2010 − May 2010 Quarterly Monitoring Report. Wells sampled on May 17, 2010. MTBE concentration 8,900 ppb.

4/8/11 − Obligado − I received and reviewed an Investigation Work Plna. The plan proposes to install 3 additional wells at the site and advance 10 soil borings and collect soil and ground water samples. A report will be submitted within 60 days. I sent an email approval for the plan to Impact with cc to Wolf.

7/20/11 − Obligado − Meeting with DEC Obligado and O'Connell, Kevin Kleaka and Christine Camaradella of IMpact Enviromental, and Barry Cohen on behalf of Wolf. We discussed the results of the investigation. Significant MTBE impacts detected. They wanted to sample an additional round before submitting additional investation work plan.

9/26/11 − Obligado − The Investigation Report documented the installation of 3 additional wells. 64000 ug/L MTBE detected in MW2. 10,000 ug/L MTBE detected in MW4, and 9970 BTEX in MTBE. I spoke with Christine Camaradella over the phone. They said that in the most recent sampling they had questionable results. MW2 decreased to 4000 ug/L and MW4 increased to 30,000 ug/L. She wants to resample the wells in October prior to submitting an additional delineation workplan. I said that was ok.

1/12/12 − Carlson: Reviewed file. Investigation Report dated 7/14/11 documented the installation of 9 soil probes. Six soil probes were installed to 25 ft bg. Three soil probes were installed to 70 feet below grade, and were completed as monitoring wells. Many VOCs were detected, but all were below standard. Groundwater impact is present in all monitoring wells. An update report was submitted on 9/27/11. Monitoring wells were sampled on 8/30/11. Wells to be sampled in fourth quarter 2011 and then a work plan for additional investigation to be submitted. When will fourth quarter update report be submitted?

Meeting held on 1/30/2012 with Christine Camardella and Kevin Kleaka of Impact Environmental, Barry Cohen of Certilman Balin, and Carlson, Kolleeny and Urda of NYSDEC. Impact expressed concern that they are not the source. They will review historic files and potential off−site sources. Off−site delineation work plan, and results of off−site source investigation to be submitted in April 2012.000

3/16/2012 − Carlson: Reviewed update report dated 1/27/2012. Significant dissolved MTBE concentrations.

historical spill − −1 gallon − found machine under subfloor & it is likely to be dielectic fluid − ref #143479

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "RODRIGUEZ"
e2mis no. 143−479:

21−JUN−2002 @ 08:30Hrs.

Mary Moran, Area Planner, reports during inspection, historic contamination was found at PH 2. The flooring consists of a removable metal plate over a subfloor. By visual inspection there appears to be water with a sheen underneath the sub floor. The quantity released is unknown, however for reporting purposes the volume has been entered as −1 gallon. This plant is known to have a concrete moat. The substance is unknown, however it is likely to be identified as dielectric fluid. The source of contamination is unknown. The cause of contamination is unknown. There is no active fire/smoke at this time. Release to sewer/waterway is not verified at this time. No private property has been affected. A station remediation plan will be prepared to determine the priority order for addressing this and other historic incidents as per SSO's letter to NYSDEC region II dated February 20, 2002. Housekeeping and maintenance activities, as required, will be documented.

6/21/10 − changed Lead DEC to JMOCONNE (JOC)

CALLER DOING WORK AROUND TANKS FOUND CONTAMINATED SOIL AROUND TOP OF TANKS

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHITOMIRSKY"

Spill # 9603371 and 9611806 are consolidated with this spill in consultation with Alex. The site is currently under remediation by LiRo Engineers. − II (02/24/05).

4/20/2005 AZ reviewed a Monitoring Report for this site received on February 23, 2005. The report presents remedial system performance and groundwater monitoring data. The report states that based on the site monitoring data, the MPE system is effectively treating contamination. However, free product persists at MW−8. LiRo recommends that all extraction wells with the exception of extraction well EW−11 be turned off in order to increase the effectiveness on MW−8. The Department concured with this proposal. In addition, LiRo recommends using a vacuum truck to remove the remaining product from MW−8. The Department disagreed with this proposal. The site has an MPE system which, with the only remaining pumping well, should be capable of removing the remaining contamination. If no progress is achieved by the remedial system modification, other remedial options might be explored.AZ

6/1/2005 Reviewed a Monitoring Report and a letter with remedial system recommendations dated May 19, 2005. The report presented remedial system performance and groundwater monitoring data. The data show that free product persists at well MW−8. In the letter LiRo proposed to perform IRM visits twice a month for the next two months, discontinue semi−annual soil monitoring, and change the groundwater sampling schedule from quarterly to semi−annual. The Department concured with these proposals. Also, LiRo recommended shutting down the remediation system. The Department disagreed with this proposal. The site has an MPE system which, with the only remaining pumping well, should be capable of addressing the remaining contamination. The system should be modified to focus on removing the remaining free product. Possible modifications could include (but are not limited to) redevelopment of well MW−8 or conversion of MW−8 into an extraction well. A letter was issued. AZ

7/14/2005 Reviewed a Remediation System Shutdown Recommendation. The report stated that based on the site monitoring data, free product was detected in a limited area around MW−8 only. NYCDDC proposed to shutdown the MPE system and to conduct more rounds of IRM, followed by installing a passive skimmer to remove any remaining residual product from MW−8. This proposal is approved. The effectiveness of IRM performance should be evaluated in a quarter. The Department reserved the right to have the system back

on if the proposed alternative remediation method is not producing satisfactory results within a reasonable time frame.AZ

12/29/2005 Reviewed a Monitoring Report for this site received on November 3, 2005. The report states that based on the site monitoring data, free product was detected around MW−8 only. LiRo proposed to shutdown the MPE system and to conduct more rounds of IRM. This proposal is approved. The effectiveness of IRM performance should be evaluated in a quarter. The Department reserves the right to have the system back on if the proposed alternative remediation method is not producing satisfactory results within a reasonable time frame. AZ

1/12/2006 Spill moved from Priority 1 category to Priority 2 Category as per J.Kolleeny request. Free product is still present. AZ

5/9/2006 Reviewed a Monitoring Report for this site for the period of November 2005 − December 2005 received on April 17, 2006. The report states that based on the site monitoring data, free product was detected around MW−8 (0.40'). LiRo discontnued monitoring and operating this system in December 2005. AZ

8/7/2006 Reviewed Quarterly Groundwater Monitoring Data Report by Greyhawk/ROUX received in July 2006. Free product has been sporadically observed in MW−8. Recommended quarterly gw monitoring, sampling only of MW−8, conduct a soil boring program to delineate the extent of free product near MW−8 9(6 borings), perform quarterly gauging of all wells and free product recovery in MW−8. AZ

6−5−2007 Reviewed Monitoring Data Report by Greyhawk/ROUX received on January 31 2007. On July 14, 2005, the DEC approved the conditional shutdown of the MPE system. Significant VOC contamination was detected in 7−MW−−08 (431 ppb). Soil contamination is up to 283,700 ppb.
E−mail was sent to DDC/Roux/Greyhawk:
Significant VOC contamination was detected in 7−MW−−08 (431 ppb). SVOCs were not detected in any wells in the current quarter except for very low in 7−MW−07. No free phase was detected in MW−8 allowing this well to be sampled for the first time. Free phase product was observed in 7−MW−08 (0.03') on July 12, 2006. Sheen was observed in this well in August 2006. Roux proposed permanently shut down and decommission the MPE system, remove SVOCs from monitoring program, reduce gauging frequency to quarterly and perform soil sampling.
DEC approve the proposed soil sampling plan. Monitoring wells MW−12, MW−08, MW−03 and MW−10 could be removed from the groundwater sampling program. MW−07 and MW−08 should be sampled for SVOCs. The rest of the wells do not have to be tested for SVOCs. Gauging could be reduced to quarterly. MPE system should remain intact. AZ

2−4−2008 Discussed the site with Brian Morrissey. A hot spot exists around monitoring well 7−MW−08 which was confirmed by three wells advanced in July 2007. Soil samples were contaminated at the depth of 15−17 feet (around 35,000 ppb of total VOC in soil). Groundwater grab samples taken from these borings showed some groundwater contamination (concentrations around 315 ppb of total VOC). Also, more groundwater monitoring wells maybe warranted at this location. I suggested resuming MPE system activities in this part of the site or partial hot spot excavation. Roux will get back to me to further discuss the site. AZ

2−6−2008 An e−mail was sent to Roux/DDC/Greyhawk:"I have reviewed a semi−annual report for the above site. Also, the site was discussed in a conference call with you and Andy Ledins. In July 2007 three additional soil borings were advanced to determine the cause for the intermittent free product detected in well 7− MW−08. The investigation showed that a plume exists in the vicinity of monitoring well 7−MW−08. Soil samples were contaminated at the depth of 15−17 feet (around 35,000 ppb of total VOCs). Groundwater grab samples, which were collected from these borings, indicated groundwater contamination (concentrations

around 315 ppb of total VOCs). Based on these findings, I disagree with the Roux's statement that "soil contamination at the site has been remediated." I reject Roux's proposal to shut down permanently and decommission the existing MPE system. Roux stated that they will collect the groundwater data to support a petition for no further no action. At this stage of remediation petition for no further action will not be supported by NYSDEC. Additional groundwater well(s) should be installed in proximity to well 7− MW−08. Contaminated soil and groundwater plume around well 7− MW−08 should be addressed. Possible remediation options could include hot spot soil excavation or modification and re−start of the MPE system. Roux should perform a site visit and submit investigation and remediation proposals to NYSDEC. Monitoring wells MW−01, 7−MW−−05R, MW−06 and 7−MW−11 could be removed from the monitoring program. Well 7−MW−07 could be removed from SVOCs sampling but should be sampled for VOCs. Monitoring well 7−MW−08 should be sampled for VOCs and SVOCs." AZ

10−29−2008 Reviewed semi−annual report for July 2007 − June 2008 dated Aug. 4, 2008. Contacted Brian Morrissey and discussed the site. The MPE system is in disrepair. On July 30 and 31, 2008, Roux drilled 3 borings. RXSB−02 exhibited 73,900 PPB of total VOCs in soil. RXSB−1 had 315 ppb total dissolved VOC in groundwater − grab sample. Wells requested by DEC were not installed due to the presence of a subsurface slab. On May 16, 2008, free phase was discovered in 7−MW−08 (0.2') and 7−MW−09 (0.08'). Roux recommended Bioremediation. DEC rejected this proposal and suggested addressing free phase product and soil contamination. E−mail was sent to Roux/Greyhawk/DDC/V.B.: "As per our discussion of the above site, Roux will proceed with the installation of an additional groundwater monitoring well, utilities and structures allowing. Its tentative location is near EW−10. Extraction well EW−11 should be redeveloped and sampled, if feasible. Additional remedial proposals addressing contaminated soil and free phase product will be submitted by Roux within next four weeks." AZ

11−26−2008 Discussed the site with Brian Morrissey. Free phase was encountered in 3 wells thickness − 05',0.08' and 0.2'. Soil is heavily contaminated. Brian proposed EFR for the time being. I concurred but stated that a dual phase system is needed to address free phase product and soil contamination. Bio can not be applied at the site at this time due to the presence of the free phase. AZ

6−22−09 An e−mail was sent to B. Morrissey, Fatemeh Ashkan and V. Brevdo:" I have reviewed semi−annual monitoring report dated March 19, 2009 for the above site. Free phase product intermittently detected in MW−08, MW−09, and EW−11. The product was identified as lubrication oil. A waste oil tank located east of wells with free product may be a potential source. Soil is heavily contaminated at the site. Waste oil tank and associated piping should be tightness tested ASAP. A monitoring well should be installed in the approximate location of RXSB−01 to monitor free product plume. Proposal to implement enhanced Bioremediation injections is rejected due to the presence of the free phase product. Enhanced Fluid Recovery should be performed on wells containing free product. Well gauging and reporting should be performed quarterly. A remedial strategy should be developed to address free phase and soil contamination." AZ

4−1−2011 Received a semi−annual report from LiRo dated December 2010. The waste oil tank was tested and passed on December 2, 2009. The following e−mail was sent to LiRo/V. Brevdo/F. Ashkan:
"Dear Steve,
I have reviewed a Site Turn−Over Report and Semi−Annual Report dated December 30, 2010. The report indicated that there are discrepancies between PBS registry and previous reports and current findings. The size, locations and material stored should be confirmed for tanks Nos: 005, 011 and 012. Corrected information should be submitted to the PBS Section.
Three USTs are closed in place at the site. These tanks should be excavated, if feasible. All contaminated material should be removed and post excavation samples taken.
LiRo recommended that the location of tank 72 should determined and confirmed. This recommendation is approved. Recommendation for tightness testing on the motor oil UST is approved. Monthly EFR events are approved.

Free phase product was found in several wells. LiRo recommended Installation of two soil borings and three wells. This proposal is approved. Limited soil hot spot excavation is recommended near wells RXMW−01, 7−MW−08 and EW−11, if feasible. Area of the excavation should be confirmed after additional investigation is performed." AZ

9−8−11 Reviewed a semi−annual monitoring report for the period of Sept. 2010 through Feb. 2011. Free phase is present in four wells. Only one VOC was detected above the NYSDEC TOGs in 7−MW−07. An e−mail was sent to S. Frank/F. Ashkan and V.Brevdo: "Steve,As we have discussed, tanks #76 and #77 should be tightness tested. Also, LiRo should evaluate feasibility of hot spot excavation in the contaminated area."AZ

2−10−2012 The product thickness in 7−MW−16 ranged from 0.02 to 0.8’ in June and July well gauging. LiRo will gauge newly identified well 7−MW−02. EFR activities will be continued for five wells. LiRo Will evaluate installation of a product skimmer belt in well EW−11. The following e−mail was sent to S. Frank:"Steve, LiRo proposed eliminating monitoring well 7−MW−07 from the monitoring schedule. This well must monitored as an downgradient well. Also, LiRo proposed eliminating SVOC analysis for on well 7−MW−08. I concur with this proposal.
Sincerely." AZ

TANK LEAKING − TEST BORING

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHITOMIRSKY"
4−20−2005 Reviewed a Monitoring Report for the above referenced site. The report presented remedial system performance and groundwater monitoring data. The report stated that based on the site monitoring data, the MPE system is effectively treating contamination. However, free product persists at MW−8. LiRo recommended that all extraction wells with the exception of extraction well EW−11 be turned off in order to increase the effectiveness on MW−8. The Department concured with this proposal. In addition, LiRo recommended using a vacuum truck to remove the remaining product from MW−8. The Department disagreed with this proposal. The site has an MPE system which, with the only remaining pumping well, should be capable of removing the remaining contamination. If no progress is achieved by the remedial system modification, other remedial options might be explored.AZ

12/29/2005 Reviewed a Monitoring Report for this site received on November 3, 2005. The report states that based on the site monitoring data, free product was detected around MW−8 only. LiRo proposed to shutdown the MPE system and to conduct more rounds of IRM. This proposal is approved. The effectiveness of IRM performance should be evaluated in a quarter. The Department reserves the right to have the system back on if the proposed alternative remediation method is not producing satisfactory results within a reasonable time frame. AZ

1/12/2006 The site was transferred from P1 (Priority 1) category to P2(Priority 2) category site as per J. Kolleney's request. AZ

5/9/2006 Reviewed a Monitoring Report for this site received on April 17, 2006. The report states that based on the site monitoring data, free product was detected around MW−8 (0.40'). LiRo discontnued monitoring and operating this system in December 2005. AZ

6/08/2006 At the meeting with DDC/Greyhawk/Roux on 5/23/2006 CM informed DEC that the system is shut down. Free phase should be delineated and addressed (DEC). Depth to gw is 15'−16'. DDC/Greyhawk should check 2,000 gal fuel tank testing results and maybe test the tank. AZ

7/31/2006 Reviewed Work Plan dated July 6, 2006, and received on July 10, 2006. The Work Plan was dicussed with Jon K. The plan cannot be approved at this point since it lacks essential information. Existing soil data must accompany the plan and must be plotted on the site map. Soil and groundwater plume maps must be included in the Work Plan. A short description of the site status and groundwater flow direction should be shown on the plan. A brief description of the remediation system, if any, current contamination levels, performed remedial activities and status of the tanks at the site should be included in the work plan. Upon submission of hard copies with this information, this work plan will be reviewed again. The information listed above has been routinely submitted by other consultants in their work plans. An e−mail with these comments was sent to Wendy Shen (Roux). AZ

6−5−2007 Reviewed Monitoring Data Report by Greyhawk/ROUX received on January 31 2007. On July 14, 2005, the DEC approved the conditional shutdown of the MPE system. Significant VOC contamination was detected in 7−MW−−08 (431 ppb). Soil contamination is up to 283,700 ppb.

E−mail was sent to DDC/Roux/Greyhawk:
Significant VOC contamination was detected in 7−MW−−08 (431 ppb). SVOCs were not detected in any wells in the current quarter except for very low in 7−MW−07. No free phase was detected in MW−8 allowing this well to be sampled for the first time. Free phase product was observed in 7−MW−08 (0.03') on July 12, 2006. Sheen was observed in this well in August 2006. Roux proposed permanently shut down and decommission the MPE system, remove SVOCs from monitoring program, reduce gauging frequency to quarterly and perform soil sampling.
DEC approve the proposed soil sampling plan. Monitoring wells MW−12, MW−08, MW−03 and MW−10 could be removed from the groundwater sampling program. MW−07 and MW−08 should be sampled for SVOCs. The rest of the wells do not have to be tested for SVOCs. Gauging could be reduced to quarterly. MPE system should remain intact. AZ

2−6−2007 An e−mail was sent to Roux/DDC/Greyhawk:"I have reviewed a semi−annual report for the above site. Also, the site was discussed in a conference call with you and Andy Ledins. In July 2007 three additional soil borings were advanced to determine the cause for the intermittent free product detected in well 7− MW−08. The investigation showed that a plume exists in the vicinity of monitoring well 7−MW−08. Soil samples were contaminated at the depth of 15−17 feet (around 35,000 ppb of total VOCs). Groundwater grab samples, which were collected from these borings, indicated groundwater contamination (concentrations around 315 ppb of total VOCs). Based on these findings, I disagree with the Roux's statement that "soil contamination at the site has been remediated." I reject Roux's proposal to shut down permanently and decommission the existing MPE system. Roux stated that they will collect the groundwater data to support a petition for no further no action. At this stage of remediation petition for no further action will not be supported by NYSDEC. Additional groundwater well(s) should be installed in proximity to well 7− MW−08. Contaminated soil and groundwater plume around well 7− MW−08 should be addressed. Possible remediation options could include hot spot soil excavation or modification and re−start of the MPE system. Roux should perform a site visit and submit investigation and remediation proposals to NYSDEC. Monitoring wells MW−01, 7−MW−−05R, MW−06 and 7−MW−11 could be removed from the monitoring program. Well 7−MW−07 could be removed from SVOCs sampling but should be sampled for VOCs. Monitoring well 7−MW−08 should be sampled for VOCs and SVOCs." AZ

10−29−2008 An e−mail was sent to Roux/Greyhawk/DDC/V.B.: "There is a spill record related to a leaking waste oil tank at the above site. This spill should be investigated and remediated. Please, submit an investigative report with the remedial proposals." AZ

6−22−09 An e−mail was sent to Brian Morrissey/V. Brevdo/Fatemeh Ashkan: "There is a spill record related to a leaking waste oil tank at the above site. This spill should be investigated and remediated. Please, submit an investigative report with the remedial proposals for this spill." AZ

9−8−2011 Discussed over the phone this spill with S. Frank. Free product that was encountered in monitoring wells was identified by fingerprint analyses as lube oil. The source of this spill is probably a 1000 gal waste oil tank. I requested that LiRo investigate this spill. LirO will look into it. AZ

2−13−2012 LiRo proposed testing of waste oil fill port. Also, a standing water test be performed at the waste oil fill port to determine if the fitting at the fill port is compromised. These recommendations will be implemented. AZ

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIPPLE"
8/00 transferred from tomasello to tipple

see also 9108033, 9313792, 9505109, 9705158, 9814652. MCT

2/19/2002 Tipple found this spill inadvertantly closed out in this database today and immediately re−opened it. This is currently one of the region's most active remediations today.

8/23/05 − Raphael Ketani. Case transferred to Jeff Vought.

09/02/2005 − Transferred to Mark Tibbe.

11/12/10 − spill re−assigned from Tibbe to Joe O'Connell

9/29/11 − Raphael Ketani. Case transferred from O'Connell to Ketani.

12/21/11 − Raphael Ketani. I reactivated the spill/PIN case. There are 5 other associated cases, but only #9108033 has any documentation. All of these cases have been closed and referred back to this one. There are 3 full file draws with documentation. However, very little of it has been e−doc'd.

The case started when oil (diesel fuel) was found to be dripping onto the R Line subway platform under 4th Avenue and between 25th Street and 26th Street, Brooklyn. The oil had also drained from the platform and onto the tracks. The DEC was notified by the NYCTA about the spill. The FDNY responded and put down absorbent sand. The date of the spill is 7/19/93. However, it wasn't called in until 7/24/93.

A fingerprint analysis indicated that the oil was a mix of weathered diesel and/or #2 oil between 10 and 15 years old. The pool of oil was initially estimated to be greater than 100,000 gals. and was mostly being held in place by the subway wall. However, subsequent DEC contractors have indicated that the oil pool is much smaller. The recovery system was extensively damaged during the construction of the Dunkin Donuts. Mobile Hi−Vacs were used to collect the oil. Bright red #2 oil was detected entering the pool of oil from upgradient. So it is believed that there is an ongoing source of unknown origin. Recent excavation beneath the surface of the site revealed that the soil is free of diesel with only minor gasoline contamination. The sources of the #2 oil may be a warehouse that is directly upgradient or other locations. A knee wall was installed on the subway platform to catch the seepage, but is sometimes overwhelmed during rain events.

The source was eventually traced to the Eagle Service Station at 737 4th Avenue, Brooklyn, 11232. The site is owned by Ralph and Susan Guarino. Mr. Guarino bought the property during 1987. Though the new tanks that were installed by Mr. Guarino were not believed to be the source. The source was believed to be the old diesel tanks that were in existence when MOBIL owned the site up until 1987. Initially, Mr. Guarino was cooperative with the DEC contractors regarding the spill investigation.

According to an August 5, 2001 NY Daily News article, Ralph and Susan Guarino were determined to be the responsible parties. Mr. Guarino was an FBI informant. He twice turned off the recovery system, which resulted in diesel leaking onto the platform. He threatened to pour concrete down the monitoring wells and for 8 months prevented remediation staff from coming onto his property

to do their work. Eventually in 1999, the Attorney General went to court to get an emergency injunction against Mr. Guarino to prevent him from interfering. In 1999, Mr. Guarino agreed to let the remediation staff onto his property. The gas station was demolished and the site is now a Dunkin Donuts.

According to the September 26, 2001 Second Demand Letter, Susan Guarino (128 Maitland Avenue, Altamonte Springs, FL, 32701−4902) is being held liable by the AG's office for $1,924,150.68. Though, $2,121,183 had been spent on the project by the DEC up to 2002.

One of the previous DEC case managers, Mark Tibbe, sent me an e−mail regarding the history of the spill case. He wrote that nothing significant happened between 2001 and 2011. The DEC contractors were monitoring and bailing wells because the recovery system wasn't working. It was too old to repair and replacing it was too expensive. The subway was being monitored to make sure that product wasn't showing up. In the early 2000s there wasn't much product, but it showed up again. It was believed that the former service station was the primary source and that there was a fresh source of #2 oil.

Later, I found the latest site report. It was written by Environmental Assessment and Remediations. The report was dated August 18, 2006 and covered the period from January 2006 to June 2006. Groundwater was generally found at 22 feet below grade. It was believed that the subway tunnel was affecting groundwater flow. The groundwater was moving through a layer of glacial till and outwash sediments. The outwash sediments contained sand and gravel. Discontinuous thin clay lenses were also present. During 2001, several wells showed increasing amounts of product. On 4/24/01, red oil appeared in well MW10A. Wells MW82, MW90, MW32B, and MW13A also had red oil at this time. At this time, MW9 showed signs of dark oil with sludge. There were several oil tanks in the neighborhood. The tank at 220 25th Street was a 2,500 gal. #2 oil UST. The system was tested and found to be sound. The property at 225 25th Street had a 10,000 gal. #6 oil AST. One private building at 228 25th Street had a 275 gal. oil tank, but nothing else was known. There was a 1,000 gal. UST at 217 25th Street, directly upgradient from the site, but it was never investigated. From 2002 and 2004, EAR continued to maintain the remediation system. In 2004, EAR received permission from the DEC to abandon 17 wells that weren't providing useful data. The wells were abandoned from April to June of 2004. Throughout 2005, EAR continued to maintain the remediation system. During August 2005, renovations were made to the subway oil containment system. Weekly visits were made and spent absorbent was removed and replaced. The wells continued to be monitored on a weekly basis. On April 20, 2006, the recovery system was shut down to see how much product would appear. The recovery system remained off during the reporting period. Wells MW9, MW10, MW13, MW13A, MW23, MW23A, MW31, MW32B and MW82 showed a rebound of product. From January to April, a total of 26.99 gals. of liquids were recovered from all of the wells during. Product thickness on 6/22/06 was much less than 1 foot in the wells that were exhibiting oil.

12/22/11 − Raphael Ketani. Today I spoke to Dave Lorthioir of EnviroTrac (631) 924−3001, the DEC's consultant, regarding the project. He said that they have been monitoring and bailing wells on a weekly basis. However, they only deal with the wells in and immediately around the site. The water table is high right now and they haven't seen any product. However, in the spring of 2011, there had been a good amount of product. Before EnviroTrac took over the project a few years ago, they spoke to the previous DEC consultants. These consultants told them that there hadn't been any oil in the subway for some time. Mr. Lorthioir said that EnviroTrac hadn't seen oil in the subway, either. A report will be sent to the DEC soon.

Later, Mr. Lorthioir sent me the 2011 groundwater monitoring data tables. Very few of the wells had shows of oil. Wells MW−8, MW−8A, MW−9 and MW−31 all had periods of from 2 to 7 consecutive months during which there were weekly shows of oil during 2011. A small number of other wells had sporadic shows of oil consisting of about several weeks during which oil was seen, but the weeks were not consecutive. Wells MW−8, MW−8A, MW−9 and MW−31 are all in the southern corner of the Dunkin Donuts property. MW−9 is directly over a rectangular figure in the well location diagram. Wells MW−40 and MW−41 were abandoned earlier. According to the case notes, seventeen wells were abandoned some time ago.

Mr. Lorthioir also included a DRAFT 10/29/10 Status Report for the site. The report covered the years 2009 to 2010. I reviewed the report. The data inside showed that the same wells that showed oil in 2011 had oil during 2009 and 2010. There were also some other wells that had oil shows in and around the Dunkin Donuts store.

1/4/12 − Raphael Ketani. I received CAP 31 for EnviroTrac. The bill is DC2023.01−32 for the period 10/31/11 to 11/27/11. The date of the invoice is 12/13/11. The work consisted of project management, project coordination, generate internal work order, revise internal work order, prepare for monitoring event, travel to and from site, calls to technician at site, gauge 36 wells, bail product by hand, update product recovery tables and enter data, use of low value equipment, light duty vehicle and sonic probe, purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

1/30/12 − Raphael Ketani. I received CAP 32 for EnviroTrac. The bill is DC2023.01−33 for the period 11/28/11 to 1/1/12. The date of the invoice is 1/16/12. The work consisted of project management, review data from last monitoring event, generate internal work order, revise internal work order, prepare for monitoring event, project management communication with DEC, calls to technician at site, decontaminate equipment, gauge 34 wells, bail product by hand, update product recovery tables and enter data, use of low value equipment, light duty vehicle and sonic probe, travel to and from site, purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

2/21/12 − Raphael Ketani. I received CAP 33 for EnviroTrac. The bill is DC2023.01−34 for the period 1/2/11 to 1/29/12. The date of the invoice is 2/13/12. The work consisted of project management and coordination, prepare internal work order, do budget projections, project management communication with DEC, travel to and from site, calls to technician at site, well gauging and product recovery, tabulate gauging data from December 30, 2011 field activities, review and tabulate gauging and product recovery data from field activities during January 12, 2012, use of low value equipment, light duty vehicle and sonic probe, purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

4/10/12 − Raphael Ketani. I received CAP 35 for EnviroTrac. The bill is DC2023.01−35 for the period 2/1/12 to 2/26/12. The date of the invoice is 3/15/12. The work consisted of project coordination. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

HISTORICAL TANK LEAK. SOME CONTAMINATION WHEN REMOVING TANK. CONTAMINATED SOIL WAS FOUND. APPROXIMATELY A BUCKET FULL OF OIL WAS FOUND.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "M TIBBE"
09/25/95: NO RECORD OF WHO HANDLED THIS ON HARD COPY − ASSIGNED TO KOON TO REASSIGN TO STAFF FOR FOLLOWUP AND ASSIGNMENT TO CURRENT PRIMARY, IF NECESSARY.

02/18/04 − TRANSFERED FROM TANG TO TIBBE.

3/24/06 Diaz − Next steps required − review file, track down contacts.

Spill transferred back to R−2

3/7/08 − Austin − Assigned to Ketani for further investigation − end

8/18/08 − Raphael Ketani. The case is being prepared for transfer due to a case realignment within the unit. I didn't have a chance to reactivate this case nor investigate it before the case realignment. The case file and any E−docs should be reviewed. The ownership should be investigated. A CSL needs to be sent to the owner(s).

10/27/11 − Austin − Spill Transferred from Ahmed to Vought − end

06/18/09−HRAHMED−Erica Hogan of Singer Environmental (718 437 9600) called to discuss about the requirements of DEC to close the

spill. Ahmed will get back to Erica that after reviewing the two reports stored in eDocs. The information of the owner of the property is:
Boris Motovich
Alternative addresses:
4901 − 4907 1st Ave, Brooklyn, NY
101 − 135 50th St, Brooklyn, NY
Lot Size Approx. 230’ x 200’

06/30/09−HRAHMED− Spoke to Simon of Singer Environmental (718 437 9600). As per some photographs of an old report submitted by Law Environmental dated 11/28/1995, one UST was pulled out and one picture is showing petroleum impacted soil in the excavation. The Nov 1995 contains only partial analytical data for soil and groundwater analysis.

ACTIVE HAZARDOUS SPILLS − MISC. SPILL CAUSES − EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, AND VANDALISM − IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS.
All spills mapped and profiled within 1/8 mile. Between 1/8 mile and 1/2 mile search radius, spills reported to be greater than 100 units and spills reported in the NYSDEC Fall 1998 MTBE Survey are mapped and profiled. Spills reported to be less than 100 units are listed in a table at the end of this section.

Please Note: * − Compass directions can vary substantially for sites located very close to the subject property address.

Caller Remarks:

CALLER STATES THERE IS A FORMER GASOLINE STATION AND NOW IT IS DISCOVERED THAT THERE IS GAS LEAK FROM ONE OF THE TANKS. 20 YDS OF SOIL HAVE BEEN STOCK PILED SO FAR. ALL SOIL IS GOING TO BE REMOVED

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"
This spill case was reassigned from DEC (Sigona) to Rommel on

01/07/2004.

06/05/2001 Zhao contacted Rick Spadalik at 1:45pm. 6 (550 gal) gasoline tanks and 1 (550 gal) waste oil tank were pulled out yesterday and found contamination soil which has been stock piled. Tanks were encased in concrete with concrete pad at bottom of tanks. American Environmental will possibly perform site assessment and will clean up site. At this time, DEC did not receive tank removal notification.

09/20/2001 Tank closure report from AEAC was received on 08/31.

10/15/2005 Called Russel Cararo (718−499−2121) but did not receive callback. Talked with Dan Hershberger at American Envt'l − he said that no further work was done at site by American Envt'l after tank removal. − Bishop

10/30/06 Reassigned from Bishop to Sun. (MS)

12/18/06 Sun sent letter to Russel Cascardo (4001 2nd Ave Inc.) at 4001 2nd Ave, Brooklyn, on 12/14/06 requiring that the following be submitted to the NYSDEC by 1/14/07:

"To rectify this problem, a letter report asserting a cause of the release and summarizing the cleanup activities, observations, post−excavation sampling results (if necessary), and also including contaminated material disposal manifests or any other documentation (i.e. invoices, bills, etc.) of cleanup activities must be submitted to this office by January 14th, 2007, referencing the spill case number (see above) and the site address." (JS/MS)

3/1/07: Second letter sent (same as above) to be submitted by 4/2/07. (JS/MS)

8/6/07: All letters are being returned. Will try ACRIS to identify RP and address and if not successful, will visit the site. (JS/MS)

8/14/07: Sun/Sellberg sent another letter to Russel Cascardo (4001 2nd Ave Inc.) at P.O. Box 200825, Brooklyn, on 8/13/07 requiring the same as above be submitted to the NYSDEC by 9/17/07. This address was found on public property documents found on ACRIS website as well as Property Shark. (JS/MS)

9/18/07: Mr. Cascardo hand delivered TCR. Slight exceedences in soil samples however, no GW sample was collected even though it was noted to have a slight petrol−like odor. Will require collection of GW sample from within middle of former tank excavation area. (JS/MS)

9/28/07: Mr Cascardo believes that a sample had been collected during a seperate field inspection. MS said he had 2 weeks to submit documentation proving this. If he cannot locate report, he understands he will have to conduct another sampling event. (JS/MS)

04/07/08: 2nd SIR letter send. Due 5/2/308. (JS/MM)

05/05/08: Zeb Youngman from PW Grosser called to notify the Department that PWG would be the consultant. Waiting for signed proposal and payment from Cascardo. (JS/MM)

06/18/08: Reviewing Subsurface Investigation/Spill Closure report. 3 MTBE hot spots (JS/MM)

07/02/08: Install 3 additional MW, implement groundwater monitoring program for a minimum of at least one year. (JS/MM)

08/05/08: Transferred to Kolleeny/Mandac. − JK

10/15/08: PWGrosser was not given permission to install additional wells by owner (JK/MM)

01/06/09: Spoke with Z. Youngman (PWGC), no work conducted on−site. Still needs permission from RP to move forward. Will need to send RP a letter. (JK/KG).

01/07/09: Letter sent to Russell Cascardo requesting work plan for supplemental subsurface investigation (3 wells to be installed and quarterly GW monitoring program implemented). SSIWP due 02/06/09. Letter sent via certified/return receipt mail. Return receipt rec'd (letter signed for on 1/12/09). (JK/KG)

01/12/09: Rec'd phone call from Zeb Youngman stating he had been given permission from RP to proceed with work. PWGC will submit the work plan. Four monitoring wells will be installed; 2 in the former UST area, 1 upgradient and 1 downgradient of the former USTs. (JK/KG)

01/20/09: Rec'd Monitoring Well Installation / Groundwater Monitoring Work Plan dated 01/19/09 from PWGC − under review. (JK/KG)

01/21/09: Work Plan reviewed. The scope of work includes installation of four monitoring wells, a groundwater elevation survey, collection of groundwater samples quarterly for one year, and submission of quarterly groundwater monitoring reports to NYSDEC. The work plan was approved with one modification; soil samples from each well location must be collected and submitted for analysis of VOCs. Approval letter mailed to RP and emailed to PWGC. The first QMR is due 3/27/09.(JK/KG)

02/23/09: On 1/27/09 rec'd phone call from Youngman stating well installation was scheduled for 2/4/09. (JK/KG)

03/11/09: Rec'd Monitoring Well Installation/First Quarter Groundwater Monitoring Report dated 03/10/09 prepared by PWGC. Under review. (JK/KG)

03/12/09: Four monitoring wells were installed on 2/4/09. Groundwater samples were collected on 2/27/09. Monitoring well MW−2 revealed soil and groundwater contamination. Letter sent to Russell Cascardo approving PWGC's recommendation to continue with quarterly monitoring and reporting. If contamination levels do not decline significantly after 2 additional monitoring events a proposal for an active remedial approach will be necessary.
Soil:
MW−1, MW−3, MW−4: All VOCs non−detect or below RSCOs
MW−2: 1,2,4−Trimethylbenzene 24,300 ug/kg, 1,3,5−Trimethylbenzene 6,970 ug/kg, m&p xylene 9,400 ug/kg, n−propylbenzene 2,230 ug/kg
Groundwater:

MW−1: MTBE (33.2 ug/L)
MW−2: Total VOCs (6,465.5 ug/L), Benzene (96.3 ug/L), Ethylbenzene (1,190 ug/L), m&p−Xylene (4,000 ug/L),
MW−3: MTBE (30.2 ug/L)
MW−4: MTBE (1.17 ug/L)
(JK/KG)

05/19/09; Rec'd a message from Zeb Youngman stating that the next quarterly monitoring event will be performed next week.
(JK/KG)

06/15/09: Rec'd Second Quarter Groundwater Monitoring Report dated 6/15/09 from PW Grosser. MW−1, 2, 3, and 4 were sampled on 5/26/09. Groundwater flow direction is to the west. Text states it is easterly, although the site plan and contours indicated it is to the west. Notified PWGC of discrepancy.
Groundwater:
MW−1: Total VOCs (46.5 ug/L), MTBE (21.2 ug/L), Benzene (1 ug/L), m&p−Xylene (24.3 ug/L)
MW−2: Total VOCs (5,057 ug/L), Benzene (165 ug/L), Ethylbenzene (1,629 ug/L), m&p−Xylene (2,340 ug/L)
MW−3: MTBE 40.5 ug/L
MW−4: All VOCs non−detect
(JK/KG)

06/17/09: Rec'd hard copy of QMR as well as pdf of report with correction to the groundwater flow direction on page 2. Groundwater flow is westerly. (JK/KG)

08/27/09: Rec'd Third Quarter Groundwater Monitoring Report dated 8/26/09 from PW Grosser. MW−1, 2, 3, and 4 were sampled on 8/21/09. PW Grosser recommends continued quarterly monitoring and reporting.

Groundwater:
MW−1: Total VOCs (28.8 ug/L), MTBE (28 ug/L)
MW−2: Total VOCs (2,259 ug/L), Benzene (111 ug/L), Ethylbenzene (1,020 ug/L), m&p−Xylene (642 ug/L)
MW−3: MTBE 140 ug/L
MW−4: 1,2,4−Trimethylbenzene (1.01 ug/L)

This site should be re−evaluated for closure or further action after next QMR is submitted. Work plan submitted in 01/2009 approved quarterly monitoring for one year. (JK/KG)

11/3/09 Spill case transferred from J. Kolleeny to J.A. Maisonave. − JAM

11/4/09 Spoke to Zeb Youngman. He will submit latest GW monitoring results. − JAM

12/15/09 Reviewed Fourth Quarter Groundwater Monitoring Rpt submitted by P.W Grosser Consulting (PWGC) dated December 3, 2009. Four on−site monitoring wells were sampled on Nov. 23, 2009. Sample results show total VOC concentration of 1,250 ug/L in MW−2 (decrease in Total VOCs in well MW−2 for 4th round in a row), MTBE concentrations of 18ug/L and 170ug/L in wells MW−1 and MW−3, respectively, and VOCs were below the detection limit in well MW−4 for the fourth round in a row. MW−4 is the most downgradient well, directly downgradient from well MW−2. PWGC states that the contamination seems to be localized to the former UST area around MW−2 and is not migrating off−site. The area is primarily industrial and there is very little exposure risk. They

requested spill closure. Report uploaded to eDocs.

I issued a letter today stating that the spill cannot be closed at this time and that one more round of groundwater sampling should be conducted. If contaminant levels continue to decline, PWGC should perform a sensitive receptor survey to demonstrate that the residual contamination poses no threat to human health or the environment. If contaminant levels increase, then additional remedial action may be required. Letter uploaded to eDocs. − JAM

2/23/10 Received a call from Zeb Youngman yesterday. He emailed me the lab data for the last monitoring event, which showed an increase in VOC concentrations (double) in well MW−2. I issued an email and suggested that groundwater monitoring continue and a remedy should be proposed to expedite spill closure. A groundwater monitoring report will be submitted. − JAM

6/9/10 Reviewed the 1st and 2nd Quarter Groundwater Monitoring Reports submitted by P.W Grosser Consulting (PWGC) dated Feb 22, 2010 and May 28, 2010, respectively. Groundwater monitoring was conducted on February 16, 2010 and May 21, 2010. Total VOCs in well MW−2 increased from 1250ug/L in November 2009 to 2523ug/L in February 2010 to 3319ug/L in May 2010. Wells MW−1 and MW−3 have MTBE with concentrations of 5ug/L and 55ug/L, respectively. Well MW−4, which is located directly down−gradient of well MW−2, had ND levels of VOCs.

PWG recommend performing one more round of groundwater sampling and if VOC concentrations increase, then the will propose either chemical oxidation or enhanced bioremediation by injecting ORC. Reports are uploaded to eDocs. − JAM

8/26/10 Reviewed 3rd Quarter Groundwater Monitoring Rpt submitted by P.W Grosser Consulting (PWGC) dated Aug 23, 2010. Groundwater monitoring was conducted on Aug 20, 2010. Total VOCs in well MW−2 decreased slightly from 3,319 ug/L in May 2010 to 3,027 ug/L in Aug 2010. Wells MW−1 and MW−3 showed increase in MTBE with concentrations of 35 ug/L and 373 ug/L, resp. Well MW−4, which is located directly down−gradient of well MW−2, had ND levels of VOCs.

PWG recommend continuing groundwater sampling. Reports are uploaded to eDocs. − JAM

12/03/10: This spill case transferred from J. Maisonave to J. Kolleeny. Changed spill priority rank to P2, since GW monitoring is being performed. Received hard copy of 4th Quarter 2010 GW Mon Rpt by PW Grosser, dated 11/30/10; sent an email to Zeb Youngman of PWG requesting pdf file of rpt; he sent pdf file by email same day, in eDocs. Will review. − JK

01/04/11: Reviewed GW Monitoring Rpt − Fourth Quarter 2010 by PW Grosser Consulting, dated 11/30/10, received 12/3/10 (in eDocs). Rpt presents results of Nov. 2010 GW sampling event showing decreases in contam in several wells: MW−2 had total VOCs of 1,203 ug/L, down from 3,027 ug/L in Aug. 2010; MW−3 had 286 ug/L tVOCs, down from 373 ug/L in Aug. 2010; MW−1 had 25 ug/L tVOCs, down from 35 ug/L in Aug. 2010. Well down−gradient of worst well (MW−2), MW−4, had only minor exceedance for xylene (6 ug/L). PW Grosser recommends spill closure. I sent letter (in eDocs) to Mr. Russell Cascardo (Fleetrecovery@yahoo.com), cc to Zeb Youngman of PW Grosser, saying spill cannot be closed yet, requesting one or two more sampling events of wells MW−2 and MW−4 to confirm downward trend toward levels acceptable for closure. − JK

03/01/11: Reviewed GW Monitoring Rpt − 1st Quarter 2011 by PW Grosser Consulting, dated 2/22/11 (in eDocs). Rpt presents results of GW samples collected on 2/16/11 from wells MW−2 and MW−4, as requested in my 1/4/11 letter. Data show MW−2 had 1,193 ug/L total VOCs, down slightly from 1,203 ug/L in Nov. 2010; MW−4 was ND. PW Grosser notes that contam is not migrating off−site, and requests spill closure. I sent email (in eDocs) to Mr. Russell Cascardo, cc to Zeb Youngman of PW Grosser, stating that although contam levels appear stable and not migrating, overall levels are too high for spill closure; said DEC requires that GW

monitoring (i.e., sampling of MW−2 & MW−4, gauging of all wells) continue until contam levels decrease toward concentrations appropriate for spill closure, and said if contam does not decline further by natural attenuation, some remedial action may be needed. − J. Kolleeny

06/01/11: Received & reviewed GW Monitoring Rpt − 2nd Quarter 2011 by PW Grosser Consulting, dated 5/31/11 (in eDocs). Rpt presents resulkts of GW gauging/sampling on 5/23/11, showing increases in contam in wells MW−2 and MW−3: MW−2 had 2,462 ug/L total VOCs (up from 1,193 ug/L in Feb. 2011) and MW−3 had 769 ug/L tVOCs (up from 286 ug/L when last sampled in Nov. 2010). PW Grosser recommended continued quarterly monitoring of wells MW−2 & MW−4 to document decreasing trend in VOC concentrations and obtain spill closure. I sent email (in eDocs) to RP, Russell Cascardo, stating that quarterly gauging of all 4 site wells and quarterly sampling of MW−2, MW−3 and MW−4, should continue, noting that fluctuating VOC levels may indicate presence of residual soil contam acting as ongoing source, and that if VOC levels remain elevated or increase, remedial action may be needed to move spill toward closure. − JK

12/09/11: Sent email to Zeb Youngman of PW Grosser: "Hi Zeb, I was wondering if you have any updated information regarding this spill site? Was 3rd quarter 2011 GW sampling performed? Please let me know." Zeb sent reply: "3rd quarter was not performed. I had spoken to property owner in July about potential chemox/ORC injections to close spill file. He told me to hold off on everything." I then sent email to Mr. Russell Cascardo of Fleet Recovery (RP), cc to Zeb Youngman: "Dear Mr. Cascardo: In reviewing my files, I realized that I have not received a monitoring rpt for 3rd quarter of 2011 for this spill site. I contacted consultant who had been working on this project (P.W. Grosser) and was informed that all work at site has been discontinued, at your direction. As I explained in email below, sent on June 1, 2011, latest available GW data for site show levels of dissolved contamination that are too high for spill closure, and data over last several sampling events do not demonstrate a clear downward trend in contaminant levels indicative of ongoing natural attenuation processes that might bring about timely spill closure. Addt'l GW monitoring is required, and if contaminant levels do not decrease, remedial actions may be necessary to expedite cleanup of spill case. DEC requires that GW monitoring (sampling and gauging of wells) resume immediately and that a rpt with up−to−date GW quality data be submitted by no later than Jan. 13, 2012. Rpt should include recommendations for further action as appropriate, based on data. Failure to comply with this requirement may result in referral of this spill case to our Office of General Counsel to initiate an enforcement action. Please confirm your receipt of this email, and feel free to contact me if you have any questions." Later that day, received email from RP, Russell Cascardo: "Thank you for update, there must be a mix up, I never told anyone at that company to stop testing, I will notify them on Monday to start testing again, thank you. − JK

12/13/11: Received email from Zeb Youngman of P.W. Grosser: "Jon, I have spoke with Mr. Cascardo and there had been some miscommunication on my end. We will resume monitoring program immediately." − J. Kolleeny

01/09/12: On 1/3/12, received email from Derek Ersbak of P.W. Grosser with attached pdf file of GW Monitoring Rpt for December 2011 (in eDocs). December 2011 GW data show total VOCs in well MW−2 decreased from 2,462 ug/L in May 2011 to 1,246 ug/L. GW flow map shows more northerly flow direction than previous rpts, which showed GW flow to NW. Rpt recommends spill closure. I sent email to Zeb Youngman of P.W. Grosser, cc's to Russell Cascardo of Fleet Recovery (RP) and Derek Ersbak of P.W. Grosser: "I've looked over GW Monitoring Rpt for Dec. 2011 for this site. Rpt notes that total VOCs in well MW−2 (only well with significant residual GW impacts) decreased from 2,462 ug/L in May 2011 to 1,246 ug/L in Dec. 2011. Rpt says that based on "continuing downward trend" of VOCs in MW−2 and fact that there are no impacts in down−gradient well MW−4, P.W. Grosser recommends spill closure. I am glad to see decrease in well MW−2, but I don't agree that this represents "continuing downward trend." It's true that Dec. 2011 result was lower than May 2011 result, but samples for two events before May 2011 event, collected in Nov. 2010 and Feb. 2011, both had total VOCs of ~1,200 ug/L. In fact, latest result of 1,246 ug/L (Dec. 2011) can be seen as return to levels seen in Nov. 2009, when total VOCs in MW−2 were 1,250 ug/L. In other words, it seems to me that contamination in MW−2 has

"plateau−ed" at ~1,200 ug/L, with occasional spikes up to 2,000−3,000 ug/L. I consider total VOCs of 1,200 ug/L to be too high to consider spill closure, especially in absence of clear downward trend. Also, GW flow contours for latest sampling event do not show MW−4 as being directly down−gradient of MW−2, but suggest potential gap in down−gradient well coverage, since MW−4 is northwest of MW−2 but latest contours indicate GW flow more directly to north. I have following suggestions for helping to move this spill case toward closure:

1. For next sampling event, re−develop well MW−2 before collecting samples and see if result is lower.

2. Apply chemical oxidant to area of MW−2 using several temporary injection points advanced immediately up−gradient of well, and continue GW monitoring to see if there is improvement.

3. Excavate well MW−2 and soil in its immediate vicinity (with collection of post−ex end−point soil samples), to remove potential residual soil contam which is keeping VOC levels in that well elevated, then backfill area, replace well and conduct follow−up monitoring to see if there is improvement.

It's my understanding that, although significant amount of contam soil was dug out at time of UST removal at site, GW contam was observed during tank pull (sheen and odors), but no actual GW remediation has been performed to date. Therefore, it may be appropriate to consider implementing suggestion 2 or 3. Of course, I am open to other remedial recommendations you might have. Feel free to contact me with any questions or comments." − J. Kolleeny

03/26/12: On 3/20/12, received CD with GW Mon Rpt for March 2012 by P.W. Grosser Consulting, Inc., dated 3/19/12 (in eDocs). Rpt presents GW data for 3/2/12 sampling event, plus historical data. March 2012 results show contaminant levels in worst well, MW−2, decreased significantly, with 254 ug/L total VOCs (down from 1,246 ug/L in Dec. 2011). Well MW−3 had 173 ug/L tVOCs (up from ND in Dec. 2011, but below 769 ug/L in May 2011 and 286 ug/L in Nov. 2010. Down−gradient well MW−4 was ND, consistent with earlier rounds showing ND or only traces of VOCs. PW Grosser concludes that GW contam is not migrating off−site and will naturally degrade over time. They recommend one more round of GW sampling in June 2012 to confirm that contaminant levels are remaining stable and confined to site, and suggest that request for spill closure be reconsidered based on results of June 2012 sampling.
On 3/26/12, I sent email (in eDocs) to RP, Russell Cascardo, cc's to Derek Ersbak, James Rhodes and Bryan Devaux of PW Grosser, agreeing with this recommendation. − J. Kolleeny

SPILL CASE TRANSFERRED TO I. ISLAM

6/1/05− SSIP and Addendum to SSIP were submitted by Ballard Engg. back in 1998. Soil samples from soil borings (mostly within 4' bgs) exceeded NYSDEC guidance values for VOCs, SVOCs and some TCLP metals, and Ballard Engg. recommended for installing three GW monitoring wells around the tank field as well. Subsequently, Shaw Envtl.& PMS Costn. Mgmt. took over the site and reviewed the DDC files under FOIL request in Jan/05. In a letter, dt. May 25/05 Shaw Envtl. stated the site history from FOIL review, requested DDC for a copy of SSIP prepared by Ballard Engg. and concluded for a site inspection, installation of monitoring wells, gauging the wells, monitoring for free−phase and sampling for the TAGM 4046 target list of VOCs and SVOCs. In fact, Shaw Envtl. & PMS so far did nothing physically at this site. However, talked to Mr. Jerry Aliberti, Proj. Mgr. at NYCDDC and advised for resuming further investigation at the site for both soil and GW in the light of Ballard's recommendation asap.− II.

07/31/06: Transferred to S.Kraszewski. − SK

10/27/06 Spill case transferred from S. Kraszewski to J. Maisonave. − JAM

11−10−2010 The spill was transferred from J. Maisonave to Alex Zhitomirsky, as per V. Brevdo/J. Kolleeny. AZ

10−20−2011 Reviewed Site Specific Investigation Plan submitted in Septemebr 2011. The plan suggested installation of 3 monitoring wells and 3 monitoring norings. The following e−mail was sent to S. Frank, V. Brevdo and F. Ashkan:

"Dear Steve,

I have reviewed the Site Specific Investigation Plan (SSIP) for this site submitted in September 2011. The following changes should be made in the plan:

1. All borings should be finished as wells.
2. Borings should be advanced near fuel dispensers, fill ports and lines.
3. Existing tank inventory should match the existing PBS records. If there are any discrepancies they should be corrected. Correct information should be submitted to the DEC PBS Section.
3. If contamination is found, LiRo should study the feasibility of the tanks removal.

Modified SSIP should be implemented without delay.

The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on− and off−site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work."

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHITOMIRSKY"
TRANSFERRED FROM Y.KRIMGOLD.

10−12−2005 SVE and pump and treat systems are operated at the site. SVE system is extracting significant concentrations from the vadose zone. AZ

1/13/2006 Reviewed system report. Analytical results showed total VOcs concentrations in air samples at 550 ppb and 44.7 ppb in lst sampling events. AZ

4−17−2006 Reviewed system report received in November 2006. Analytical results showed total VOcs concentrations in air samples at 1,832 ppb suggesting that SVE system continues to extract contaminants. URS recommended continuation of the groundwater extraction and treatment system. Groundwater sampling was performed. All wells except one showed exceedances ranging from 127 ppb to 19,100 ppb. Contaminant concentrations increased in wells MW−6,7,8,11 and 12. The average total VOC concentration increased from 6,297 ppb to 7,417 ppb. AZ

12/08/2006 Reviewed monitoring report dated September 22, 2006 and received on September 27, 2006. This report covers April − June 2006. On January 1, 2006 Greyhawk was assigned responsibility for this site. The site has SVE and GWET systems. VOCs were detected in all nine monitoring wells with concentrations ranging from 30 ppb to 14,700 ppb in MW−06. concentrations increased in two monitoring wells MW−01 and MW−08. It appears that the SVE system is not functioning efficiently as evidenced by relatively low VOC mass removal and restricted wellhead vacuum− 0.001" to 0.052" water column. The carbon unit should be replaced. Relatively low pumping rate limits the capture zone of 3 pumping wells. An increase in pumping rates would expand the size of the capture zone and might improve effectiveness of the SVE system. Significant VOC contamination persist in 7 of the 9 monitoring wells.

Roux suggested continue quarterly gw monitoring, verify depth and condition of the ventilation wells, collect samples from MW−3

which was previously removed from the sampling program but is located very close to two other wells with significant VOC concentrations. Evaluate methods to optimize SVE and GWET systems. DEC concurred. AZ

4/26/2007 Reviewed monitoring report for the period of July − September 2006, dated December 15, 2006, and received on December 21, 2006, and report for the period of October − December 2006, dated April 11, 2007, and received on April 26, 2007. October − December 2006 Report stated that the SVE system is approaching asymptotic levels. Vacuum levels in four observation wells are low − 0.01"−0.04", GWET system has low pumping rate which limits the capture zone of of the three extraction wells. Roux stated that increase in pumping rates would expand the size of the capture zone and might also improve the effectiveness of the SVE system. The site has significant VOC concentrations ranging from 2,252 ppb to 71, 110 ppb. Significant increase in concentration was observed in MW−10 from 9,010 to 71,100 of total VOC. In the previous report dated December 21, 2006, Roux recommended investigation and evaluation of the extraction wells conditions, evaluation of the feasibility of improving GWET system and optimization of the SVE system operation. However, these recommendations were not fulfilled. In the report dated April 11, 2007, Roux listed as upcoming tasks evaluation of the conditions of extraction wells, SVE and GWET systems optimization. These tasks should be performed without delay. Pumping rates and vacuum levels in remedial systems must be increased. Performance of the SVE and GWET systems should be improved and systems modified, if necessary. Submitted work plan for the proposed soil sampling is approved. The following e−mail was sent to DDC/ROUX/Greyhawk: "I have reviewed monitoring report for the period of October − December 2006, dated April 11, 2006, for this site. Vacuum levels in four observation wells of the SVE system are very low (0.01"−0.04"). GWET system has low pumping rate which limits the capture zone of the three extraction wells. Roux stated that increase in pumping rates would expand the size of the capture zone and might also improve the effectiveness of the SVE system. The site has significant VOC concentrations in groundwater (up to 71, 100 ppb of total VOC in well MW−10). Significant increase in total VOC concentrations was observed in MW−10 (from 9,010 ppb to 71,100 ppb). In the previous report dated December 21, 2006, Roux recommended investigation and evaluation of the extraction wells conditions, evaluation of the feasibility of improving GWET system and optimization of the SVE system operation. However, these recommendations were not fulfilled. In the report dated April 11, 2007, Roux listed as upcoming tasks evaluation of the conditions of extraction wells, SVE and GWET systems optimization. These tasks should be performed without delay. Pumping rates and vacuum levels in remedial systems must be increased. Performance of the SVE and GWET systems should be improved and the systems modified, if necessary. Submitted work plan for the proposed soil sampling is approved." AZ

1−22−2008 Reviewed January − September 2007 Report submitted on November 13, 2007. GWET is ineffective due to the restricted pumping rates. The SVE and GWET systems are not operating efficiently. Sheen was detected in MW−04 and MW−06 in April 2007. Soil investigation was performed in July− August 2007. The highest VOC concentrations in soil were detected in RXSB−04 75,000 ppb at 0 to 2 feet bls. RXSB−01 − 49,400 ppb of total VOC at 23−25 feet bls. MW−06 contained 9,980 ppb of total VOCs, MW−10−5,220 ppb of total VOCs. MW−02 was destroyed. Roux proposed shutting down SVE and GWET systems, implement enhanced bioremediation. Contacted Brian Morrissey. The site requires hydraulic control over migrating groundwater plume. Proposals for a new groundwater treatment system are required ASAP. Brian will get back to me with a timetable. AZ

1−23−2008 Conference call with Brian Morrissey and Andy Leddins. Bioremediation as main remediation strategy is rejected by DEC since the plume must be hydraulically controlled. I requested plume delineation along 29th street and establishing of hydraulic control over the groundwater plume. Roux will install delineation wells within next two weeks, perform high vac test and confirmation studies of DPE system within next three to four weeks. After the studies are completed a DPE system will be installed. Permo OX Plus injection will be performed along Th Street as an IRM simultaneously with constructing a DPE system. Timely quarterly should be submitted for this site. AZ

7−22−2008 Reviewed January − October 2007 through March 2008 Report submitted on April 21, 2008. The quarterly report submittal

was significantly delayed. The SVE and GWET systems are not operating efficiently and high level residual soil and groundwater (up to 11,790 ppb of the total VOCs) contamination remains at the site. DEC requested installation of two additional monitoring wells to delineate offsite extent of groundwater contamination in January 2008 but the wells have yet to be installed. DEC requested and Greyhawk/Roux concurred that high vac test and confirmation studies of DPE system should be performed. The test has not been conducted and the DPE system has not been installed.

The remedial progress at the site is unsatisfactory. Quarterly Monitoring Reports should be submitted on time. DPE system should be installed, delineation wells and needed testing performed without delay. A timetable for the above activities should be submitted to DEC within a week. An e−mail describing the above requests was sent to DDC/Greyhawk/Roux/V.B. AZ

7−3−2008 Received an e−mail from Brian Morrissey/site update: "1.The 2 offsite wells (RXMW−01 and RXMW−02) were installed and developed in late June/early July. The well casings and building corners will be mapped by a licensed surveyor on Friday, July 25th.
2.Groundwater levels in on−site and off−site monitoring wells were gauged during the week on July 14th. 3.Groundwater samples were collected during the week on July 14th. We expect to see preliminary results during the first week of August. 4. We reviewed soil data from prior CMs and further evaluated subsurface conditions (contaminant levels in clay/silt areas). 5.We conducted a 2nd round of vacuum testing and vapor sampling on July 9th. 6.ADT installed 10 injection wells in late June/early July. Well development activities were completed during the week on July 7th. 7.PermeOx Plus injections commenced on July 21st (as an interim remedial measure). 8.Soil samples were collected for laboratory analyses during
installation of the monitoring wells and injection wells. Samples at intervals with elevated PID readings were also sent for petroleum identification. Upon receipt of the results of the vapor sampling and soil analyses, Greyhawk and Roux Associates will develop the plan for modifying the existing remedial systems. Due to the priority status of this site, I will contact you at that time to discuss future remedial actions and a timetable." AZ

6−16−2009 "I have reviewed a Monitoring Report dated March 19−2009 for the above site for the period of April 2008 through January 2009. According to the report, URS recommended excavating the isolated area of shallow soil contamination around MW−02. Apparently, this excavation has not been performed. In 2007 VOCs were detected in soil shallow zone (0'−2') at concentrations up to 75,000 ppb. The SVE and GWET systems are not operating efficiently.
Groundwater and soil contamination remains at the site. Free phase product was detected on January 12, 2008 in RXMW−06 and identified as a mixture of gasoline and No.2 fuel (diesel). One round of bioremediation injection was performed on July 21, 2008. Post−injection monitoring has not been performed.
The contamination has migrated off−site in a northerly direction to the other side of 29th Street. However, VOCs were non−detect in two off−site wells (MW−13 and MW−14) installed at DEC request.
Roux proposed modification of the SVE system by applying full vacuum to one or two extraction wells and using packers. This proposal is approved. On−site 1,000 gallon emergency generator diesel UST and onsite heating oil tanks should be tested without delay in order to determine a source of contamination at the site. DEC has not received results of the post−injection monitoring. These results should be submitted to DEC without delay. GWET or DPE system modification/installation plans should be submitted to DEC. Remediation recovery system (GWET or DPE) should be capable of capturing the contaminant plume and preventing off−site migration. Working groundwater recovery system should be installed at the site. Additional bioremediation injection could be used only as interim remedial measure." AZ

10−21−2010 The site was discussed at October 19, 2010, meeting with DDC/LIRO. The SVE system has not been modified and currently shut off. 1,000 gal emergency generator tank was not located by Roux. 8,000 heating oil tank should be tested. Shallow excavation should performed as it was discussed at the meeting. LiRo will develop low flow multi well groundwater remedial

system. Geoprobe borings will be performed prior to the excavation. I called S. Frank on October 21, 2010, to confirm investigation details. Design report will be submitted in November 2010. AZ

10−25−2010 E−mail from S. Frank/ Liro:" Alex,
Thanks for your call on the 72nd precinct site status following up our discussion from the quarterly meeting on October 19, 2010. Just to make sure I didn't miss anything, we discussed the following:
1 − You asked that the shallow excavation work near MW−02 that Roux/NYSDEC worked out, should be implemented. I advised you that we had recommended sampling at that location to confirm that contamination is still present.
2 − You asked that we implement modifications to the SVE system (i.e., packers and applying full vacuum to 1 or 2 wells) that Roux had recommended.
3 − You asked about the status 1,000−gallon diesel tank for the emergency generator. I advised you that Roux reported that they could not find the tank.
4 − You requested the status of tank testing for the 8,000 gallon heating oil tank. I found the tank tightness test report from August 2009 and have attached it." AZ

10−4−2010 An e−mail was sent to LiRo/V.Brevdo/F.Ashkan:"Dear Steve,

I have reviewed Quarterly and Site Turn−Over Status Report with the proposals dated August 3, 2010. The report provides very detailed information and comprehensive analysis of the site status. According to the report, the SVE/GWET system is down since 2008. Roux conducted packer tests and recommended SVE system modifications. Groundwater contamination appears to have migrated off−site northeast across 29th Street. Roux performed two rounds of PermeOx injection after which VOC concentrations slightly decreased in groundwater. Heavy soil contamination and relatively high dissolved groundwater contamination exist at the site. There are four USTs closed in place.

Based on the above, DEC requires the following:

Actual USTs information should be reconciled with the Petroleum Bulk Storage (PBS) records and changes filed with the PBS section. I suggest that the tanks closed in place should be excavated, utilities and structures permitting. SVE/GWET system should be restarted. SVE portion of the system should be modified. Modifications should be based on the Roux's pilot test results. Hot spot excavation of soil should be performed around wells IP−09 and MW−02. Investigation of the piping associated with the former gasoline UST and the trench drain system should be performed. If additional soil investigation for the purpose of excavation is needed, it should be performed without delay. Additional rounds of in−situ chemical oxidation should be discontinued pending soil excavation and restart of the remedial system. The pump test is approved and should be performed if needed. Wells MW−05 and MW−15 should be added to the monitoring program. SVOC analysis of ground water could be performed, if LiRo considers it necessary. 600 gallon waste oil UST should be located.

A detailed work plan with the implementation schedule should be submitted to DEC no later than in 30 days." AZ

3−1−2011 Remedial Action Plan submitted on Dec. 1, 2010 was reviewed. The following e−mail was sent to S. Frank/ F. Ashkan/ V. Brevdo: "Dear Steve,I have reviewed the Remedial Action Plan for the above site. A proposed excavation is approved. The excavation should include area around MW−07. The area of the excavation should be extended north, if feasible, to cover the contaminant plume. Tanks closed in place and associated piping should be excavated. Post excavation samples should be taken. Proposed GWET system should be modified to encompass contamination migrated across 29th Street. Contamination should be remediated on−site and off−site. SVE pilot test is approved. GWET system and SVE system should be developed after the excavation

is performed and a monitoring round confirms the exact boundaries of contamination.
The Responsible Party and Contractors are responsible for the safe execution of the Work Plan." AZ

3−29−2011 Reviewed quarterly monitoring report dated Dec. 14, 2011. Well RXMW−05 was converted to injection but, nevertheless, sampled. Total VOC concentrations ranged from 73 ppb to 16,213 ppb. The pump test was conducted but on Sept. 2010, and indicated a limited flow capacity. Bioremediation sample results do not indicate a reduction of contaminate concentrations due to the bio−injections that were completed by Roux in July 2008 and September 2009. The results of the packer test were inconclusive. Soil contamination is present along the northern portion of the building and along 2nd St. (north side) extending 8' below the water table. MW−07 exhibit a significant increase in total VOCs. AZ

6−30−2011 Reviewed quarterly monitoring report dated March 1, 2011. Excavation in the vicinity of IP−09 and a former fill port is planned. Installation of SVE wells is scheduled. I contacted S. Frank and requested to repeat GPR test to locate closed in place tanks. GWET is being designed. The site has gross dissolved petroleum contamination (up to 18,634 ppb of total VOCs). This is the LiRo's highest priority site. AZ

10−25−2011 At the meeting with LiRo in−situ chemical oxidation (ISCO) pilot test described in a report dated October 13, 2011, was approved. An ISCO pilot plan will be prepared and submitted to DEC for review. AZ

10−25−2011 The following email was sent to S. Frank/F. Ashkan/V. Brevdo:"Steve,
You can request a FOIL information for sp.#0907094 and Langan's report related to this spill. The report stated that the source of the contamination at the site is 72nd Precinct." AZ

1−30−2012 Reviewed QMR and in−situ chemical oxidation pilot test work plan dated November 14, 2011. Second GPR survey was scheduled for November 2012. ISCO Pilot Test approved by DEC approved by DEC at October 25, 2011, meeting will be implemented. Two additional monitoring wells will be installed west/northwest of destroyed well MW−02. This area was previously inaccessible due to the SVE/GWET system trailer. Wells RXMW−02, RXMW−04 and RXMW−05 will be replaced. AZ

Caller Remarks:

both above materials spilled from a circulating feeder − number 401−t. 1 gal dielectric onto bluestone − non pcb oil into moat.
diapers and pads placed for clean up and clean up to follow. con ed 137−787 UPDATE @ 2135 HOURS ON 6/20/01 − ALL 100 GALLONS WENT TO BLUE STONE

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"

6/22/01
Visited site with SSO EH&S Pete Sudol and Area Manager Ralph Lasardo. All−State on−site removing contaminated soil. Groundwater appears to have a sheen of oil on top. All−State will remove another 6" off the surface and put containment pool down until further action is determined. Need to have engineer assess how much soil can be removed without compromising structural integrity. Con Ed claims that oil from spill has been recovered and that All−State is now trying to recover oil from historical spills. (KMF)

NOTE: This is the "Master Spill Number" for Cooling Plant #3. It is to remain open until all repairs on this equipment and remediation are completed. (JHO, 3/10/06)

4/24/02 8:48
Work Order "0000117378"−"GOWANUS CP 3 CHANGEOUT DEFECTIVE PUMP" has been completed and is waiting closure.

4/30/02 15:38
Allstate installed a monitoring well.

17−JUN−2002.
Mary Moran, Area Planner, reports during inspection, historic contamination was found at CP3. The flooring consists of a removable metal plate over a subfloor. The bluestone was recently removed and replaced, 2 small pools are in place under pumps and marriage roll. This plant is not known to have a concrete moat. The substance is unknown, however it is likely to be identified as dielectric fluid. The source of contamination is unknown. The cause of contamination is unknown. A station remediation plan will be prepared to determine the priority order for addressing this and other historic incidents as per SSO's letter to NYSDEC region II dated February 20, 2002. Housekeeping and maintenance activities, as required, will be documented.

6/26/02 14:00
As per Maximo # 0000117378 on 7/28/01 change of the pump was completed.

DEC Investigator Remarks:

6/10/99 @ 2:20PM CALL STATION # 718 499−8788 PUMPS ARE SLOW SPOKE TO JUNIOR − STAND− IN MANAGER REPAIRS TOMORROW.

11/24/03 Reassigned from Vought to Foley.
12/1/03 Received Feasibility report for Soil Vapor Extraction.
12/3/03 Received Feasibility report for Multi−Phase Extraction.

4/6/04 Received RAP. SVE not an option due to low permeability soils limiting air movement. Multi−phase extraction is best option. LNAPL has consistently been identified since May 2002. Substantial contaminant mass remains in the vadose and saturated zones. Area of concern is located to the west and north of the kiosk building(area of former USTs) from approx 10’bgs to the water table at 20’bgs. This is likely to be the source of continued groundwater contamination. 19"Hg resulted in 90scfm over 43ft radius (ROI) from extraction well MW−3. In depressing water table, air flow and thus volitiliztion and subsequent extraction of VOCs will be achieved. Average liquid recovery rate of 1.33gpm for GW extraction and 0.04gpm for LNAPL.

Based on 87,088ft3 of soil (radius=43ft, depth=15ft), and an average concentration of 310,255ppb total VOCs, an estimated mass is 2007lbs total VOCs in soil. Based on 0.77ft of LNAPL over 2,826ft2 at an avg porosity of 0.35 and conservative LNAPL saturation of 0.5, the estimated mass of LNAPL is 18,999lbs.

Estimated that the proposed MPE can be installed and running by April 2004 upon approval.

4/7/04 Stip emailed and mailed to C. Wein and A. Lapine for use of multi−phase extraction system.

4/8/04 A. Lapine − trenching to begin as early as next week.

4/28/04 Copy of signed stipulation received with request to extend deadline to 90days from effective date to install multi−phase extraction system.

4/29/04 Stip fully executed by T. Kunkel.

5/7/04 During portfolio meeting it was discussed that this site is under redevelopment. Potential buyers will be building a self−storage facility. Dual phase system installation is in progress. Citgo station adjacent to property(now a Dunkin Donuts).

1Q04− 0.98' LNAPL in MW−1, 1.83' in MW−3 and 1.4' in MW−9. BTEX from ND(MW−11) to 121500ppb(MW−9). MTBE from 12ppb(MW−6) to 36600ppb(MW−8).

2Q04− 0.91' LNAPL in MW−1, 0.89' in MW−3, 0.45' in MW−9, 0.23' in MW−14. BTEX from ND(MW−5,6,11,12) to 90750ppb(MW−13). MTBE from 2ppb(MW−2) to 79200ppb(MW−15).

3Q04− 0.30' LNAPL in MW−1. BTEX from ND(MW−5,6,11,12) to 42520ppb(MW−7). MTBE from 3ppb(MW−6) to 63800ppb(MW−8).

4Q04− 0.75' LNAPL in MW−1. BTEX from ND(MW−11,12) to 9830ppb(MW−7). MTBE from 91ppb(MW−11)to 47900ppb(MW−10).

4/27/05 Portfolio meeting− MPE system running. 5 extraction wells on−site. Currently running 4 of 5 due to the cat−ox treatment being overwhelmed.

11/9/05 Reviewed the quarterly reports dated October 3 and 17,2005. Nine wells were sampled on 1/26/05 and ten on 4/26/05. MPE system operating. 0.38 ft LNAPL in MW1 during first quarter, but no free product present during the second quarter. Max BTEX 48096ppb(MW−1) and max MTBE 32900ppb(MW−10).

11/25/06 3Q05− DTW 16.3−22.75'bgs. BTEX from ND(MW−11) to 55029ppb(MW−1). MTBE from 1ppb(MW−11) to 17800ppb(MW−2).

3/16/06 Met with BP and Delta. Source removed 2002. MPE active. Estimated 14000lbs total VOCs with 2368lbs removed so far.

5/1/06 4Q05 − DTW 15.42−22.35'bgs. BTEX from ND(MW−11, MW−12) to 14106ppb(MW−1). MTBE from 0.4ppb(MW−4) to 8340ppb(MW−2). MW−3,9,13,14,15 were not sampled b/c of system operation.

6/8/2006 − Feng − project reassigned to RJFeng. (RJF)

7/27/2006 − Feng − Quarterly Monitoring Report, 1Q2006, 5/25/2006, submitted by Delta. The site is former BP Station. As of sampling on 1/24/2006, groundwater flows to west−northest at the depth of 15.94' to 22.63' bg. 10 monitoring wells were gauged and sampled. W−1, 8,001 ppb BTEX (8.2J ppb B, 203 ppb T, 1,220 ppb E, 6,570 ppb X), 72.6 ppb MTBE. W−2, 307 ppb BTEX (167 ppb B, 49.2 ppb T, 40.9 ppb E, 50.2 ppb X), 391 ppb MTBE. W−4, BTEX ND, 2.1 ppb MTBE. W−5, BTEX ND, 20.3 ppb MTBE. W−6, BTEX ND, <1 ppb MTBE. W−7, 140 ppb BTEX (10.3 ppb B, 5.9 ppb T, 44.5 ppb E, 78.8 ppb X), 514 ppb MTBE. W−8, 13.42 ppb BTEX, 452 ppb MTBE. W−10, 4,236 ppb BTEX (219 ppb B, 1,330 ppb T, 847 ppb E, 1,840 ppb X), 2,780 ppb MTBE. W−11, BTEX ND, 19.2 ppb MTBE. W−12, BTEX ND, 5.5 ppb MTBE. Noted that MPE is running. (RJF)

9/19/2006 − Feng − Meet with Delta, FPM Group and lawyers for current and new owner of the property. The site will be developed

as a 4−story hotel and construction will be started sometime in year 2007. There will be no basement. The excavation will be down to 3' to 5' bg for foundation. A siteplan of the proposed area that the future hotel will be occupied was submitted. When the construction starts, MW−4, MW−11 and MW−12 will be destroyed. 3 new monitoring wells will be installed outside the footprint of the building. And the system will be relocated to northeast of the property. During the relocation of the system, DEC requires continue monitoring of groundwater. DEC suggest that during the excavation for re−piping, cover the soil and excavation. FPM Group did 7 test pits within the new hotel footprint area and took soil samples down to 5', no smell, no VOCs detected and no tanks have been found. Vapor barrier will be installed. DEC requires active venting system to be installed too. DEC also requires 2 soil borings include soil and groundwater samples to be collected from the former pump islands within the new building footprint area. (RJF)

1/4/2007 − Feng − 2Q2006, 11/28/2006, by Delta. Groundwater sampled and gauged 5/8/2006. 10/15 monitoring wells. DTW 14.29' to 25.26' bg. Flows west−northwest. No LNAPL. MW−1, 13,064 ppb BTEX, 1,600 ppb MTBE. MW−2, 7,275 ppb BTEX, 4,270 ppb MTBE. MW−4, ND BTEX, 1.7 ppb MTBE. MW−5, 3.89 ppb BTEX, 27 ppb MTBE. MW−6, ND BTEX, 5l1 00b MTBE. MW−7, 3,228 ppb BTEX, 1,910 ppb MTBE. MW−8, 2,237 ppb BTEX, 2,600 ppb MTBE. MW−10, 120 ppb BTEX, 512 ppb MTBE. MW−11, BTEX ND, 49 ppb MTBE. MW−12, ND BTEX, 0.64 ppb MTBE. (RJF)

1/4/2007 − Feng − 3Q2006, 11/20/2006, by Delta. Groundwater sampled and gauged 8/1/2006. 10/15 monitoring wells. DTW 15.23' to 21.74' bg. Flows West−northwest. No LNAPL. MW−1, 1,194 ppb BTEX, 7.5 ppb MTBE. MW−2, 560 ppb BTEX, 734 ppb MTBE. MW−4, ND BTEX, 0.52 ppb MTBE. MW−5, ND BTEX, 4.7 ppb MTBE. MW−6, 25.1 ppb BTEX, 52.7 ppb MTBE. MW−7, 5.91 ppb BTEX, 11.2 ppb MTBE. MW−8, 2.5 ppb BTEX, 91.6 ppb MTBE. MW−10, 5,240 ppb BTEX, 361 ppb MTBE. MW−11, ND BTEX, 0.83 ppb MTBE. MW−12, ND BTEX, 5.5 ppb MTBE. (RJF)

5/11/2007 − Feng − 4Q2006, 3/6/2007. Groundwater sampled and gauged 10/25/2006. 9/15 monitoring wells. DTW 16.19' to 22.19' bg. Flows to north. No LNAPL. MW−1, BTEX ND, 4.6 ppb MTBE. MW−2, 28.7 ppb BTEX, 111 ppb MTBE. MW−4 was not sampled. MW−5, BTEX ND, 1.4 ppb MTBE. MW−6, BTEX ND, 1.3 ppb MTBE. MW−7, 1.8 ppb BTEX, 2.5 ppb MTBE. MW−8, BTEX ND, 51.4 ppb MTBE. MW−10, 33.1 ppb BTEX, 26.1 ppb MTBE. MW−11, BTEX ND, <1 ppb MTBE. MW−12, BTEX ND, 7.7 ppb MTBE.

5/11/2007 − Feng − MPE O&M, 1Q2006, 1/9/2007. Influent Air sample 960 mg/m3 BTEX, recovery rate 0.183 lbs/hr. MTBE 57 mg/m3, recovery rate 0.0109 lbs/hr. Total recovered 287 lbs of total BTEX, 15.9 lbs of MTBE and 1,456 lbs of TPH after 422 hours of MPE system operation.

5/11/2007 − Feng − MPE O&M, 2Q2006, 1/9/2007. Influent Air sample 4/7/2006, 802 mg/m3 BTEX, recovery rate 0.171 lbs/hr, MTBE 74.3 mg/m3, recovery rate 0.0159 lbs/hr. Influent air sample 5/2/2006, 693 mg/m3 BTEX, recovery rate 0.122 lbs/hr, MTBE 50.8 mg/m3, recovery rate 0.00894 lbs/hr. Total recovered 319 lbs of total BTEX, 18.3 lbs of MTBE and 1,646 lbs of TPH after 581 hours of MPE system operation.

5/11/2007 − Feng − Reviewed the Comprehensive Environmental Site Assessment Report dated 3/7/2007, and the Exposure Assessment Report dated 3/20/2007, submitted by HydroTech on behalf of Reda Group. Groundwater samples indicated low contamination and no significant receptors of environmental concern were identified within the immediate site vicinity. HydroTech requested spill closure.

The request of spill closure is denied for the reasons: 1) The MPE system is still running and recovering. DEC usually will need 4−8 quarters of monitoring after the remedial system is shutdown to show no rebounds. 2) The monitoring reports (4Q2006) indicated BTEX concentration trend is fluctuating, the downward trend is not stable yet. (RJF)

7/23/2007 − Feng − 1Q2007, 6/13/2007. Groundwater sampled 1/8/2007. 9/15 monitoring wells were sampled. DTW 10.82' to 27' bg. Flows to north. No LNAPL. MW−1, 0.75 ppb BTEX, 4.1 ppb MTBE. MW−2, 356 ppb BTEX, 119 ppb MTBE. MW−4, not accessible. MW−5, ND. MW−6, ND. MW−7, 107 ppb BTEX, 12 ppb MTBE. MW−8, 3.6 ppb BTEX, 27.3 ppb MTBE. MW−10, 0.46 ppb BTEX, <1 ppb MTBE. MW−11, BTEX ND, 6.1 ppb MTBE. MW−12, BTEX ND, 4 ppb MTBE. (RJF)

11/13/2007 − Feng − Replied to Yash Saha (HydroTech) inquiry. There is still MPE system running onsite and it is still recovering, and it will need to have 1−2 years of monitoring after the shutdown of the system. So the site is not closing based on this condition.

If the site will be developed. Then a RAP addressing all the remaining contaminaiton (soil, soil gas, gw) will be submitted for approval. The approved RAP will be implemented prior to or during the contruction. (RJF)

12/17/2007 − Feng − 2Q2007, 8/23/2007. Vacant. The monitoring well network was gauged and sampled on 4/5/2007. The site is being remediated via the execution of Multi Phase Extraction events. Remediation events occurs at the site on a regular basis. 9/15 wells were gauged. DTW 17.12' to 21.44' bg. Flows to northwest. No LNAPL. 9/15 monitoring wells were sampled. BTEX range ND to 135 ppb (MW−2). MTBE range ND to 58.1 ppb (MW−2). (RJF)

1/8/2008 − Feng − Mark Robbin (HydroTech, 631−462−5866) called. The site will be developed. RAP with alternative groundwater remediation, soil excavation, and vapor mitigation design(vapor barrier and sub−slab venting system) will be submitted shortly. (RJF)

1/9/2008 − Feng − 3Q2007, 11/26/2007. Vacant. The monitoring well network was gauged and sampled on 7/17/2007. The site is being remediated via the execution of MPE events. 9/17 monitoring wells were gauged. DTW 16.73' to 20.31' bg. Flows to north. No LNAPL. 9 wells were sampled. BTEX range ND to 135 ppb (MW−2). MTBE range ND to 58.1 ppb (MW−2). (RJF)

3/7/2008 − Feng − Reviewed the architectural plans for the new building. The disign for vapor mitigation effort wasn't located. Email to P. Stewart (ACT) for vapor mitigation design and the basement information. (RJF)

3/7/2008 − Feng − Spoke to D. Greffenius (Delta). BP wanted to make sure the developer has enough finance support for the development before they would pull out the existing MPE system. P. Steward (ACT) has informed Delta that they got the demolition permit already. The MPE system would be pulled out in the next few weeks. BP will come up with remedial option for soil management and groundwater treatment. And may conduct EFR events on the MW−3 to remove product for a short term remediation. (RJF)

3/20/2008 − Feng − eDoc Quarterly Monitoring Report 4Q2007 and 1Q2008. (RJF)

6/16/2008 − Feng − 4Q2008, 2/28/2008, by Delta. Vacant site. The monitoring wells network was gauged and sampled on 10/2/2007. The site is being reemdiated via the execution of MPE events. 10 out of 15 monitoring wells were gauged and sampled. DTW 17.1' to 21.03' bg. Flows to north. No LNAPL. BTEX range ND to 4,326 ppb (MW−2). MTBE range ND to 211 ppb (MW−2).

1Q2008, 3/6/2008, by Delta. Vacant. The monitoring wells network was gauged and sampled on 1/30/2008. The site is being remediated via the execution of the MPE events. 10 monitoring wells were gauged and sampled. DTW 15.54' to 21.1' bg. Flows to north. No LNAPL. BTEX range ND to 824 ppb (MW−2). MTBE range ND to 110 ppb (MW−2). (RJF)

6/18/2008 − Feng − Portfolio meeting with BP and Delta. The MPE system is pulled out and the station building and canopy are removed. Delta is submitting the IRAP within next 3 weeks. BP/Delta will contact Paul Steward (ACT) in preparing the IRAP. (RJF)

11/18/2008 − Meeting with developer, Levenbaum, ACT, Delta and BP (called in). Agreed on: 1) review historical data to where contamination was, what have been remediated, what will be left behind after the construction and what remediation should be planned. 2) make sure the vapor barrier is compatible with hydrocarbon. (RJF)

11/25/2008 − Met with David Greffenius (Delta). Delta reviewed the historical data and calcuated out that the contaminated soil found former SB−3 at 24 feet has been removed. Post excavation samples were taken B−1 to B−7. Lab results indicate soil contamination remains. Delta will excavate more on B−6 and B−7, the two middle sections. Delta will lay the infiltration pipes in the B−1 to B−5 area for future nutrients addtion. 6 soil boring were proposed in the 1−story area and will go down 11 to 16 feet from what it is. Monitoring wells will be installed in the parking lot area. Delta will submit a letter plan for all these. (RJF)

12/3/2008 − Reviewed the memo from In−Line Plastics, LC and the MSDS from Chevron Phillips Chemical Company LP that Paul Steward sent via email regarding the vapor barrier proposed for the new building. The vapor barrier is acceptable. Email to ACT, BP and Delta reminding them the MSDS of the vapor barrier indicating it may react with oxygen and strong oxidazing agents and this should be taken into account when consider post remediation options. (RJF)

12/17/2008 − Spoke with David Greffenius. The infiltration pipes were layed in the B−1 to B−5 sections and vapor barrier installed. Plan to pour foundation next week. The B−6 and B−7 sections were over excavated deeper down and endpoint samples were collected. Lab results are expected in a few days. (RJF)

12/18/2008 − visited the site and met with David Greffenius from Delta. Four schedule 40 PVC pipes were layed beneath the vapor barrier in the 2 sections near the back and the foundation was poured already. Half of the 2 middle sections was poured too. David said the middle 2 sections were over excavated 4−6 feet deeper and endpoint samples were taken, the results shall be back in a few days. 4 soil borings were done in the 1−story area. The portion near 4th Ave has not been excavated yet, but it might started in 3 weeks or 1 month. (RJF)

7/21/2009 − DEC received and reviewed the soil sampling results from the area of the site slated for construction of the one−story building portion. Analytical data indicated no VOCs exceeding criteria. DEC required installation of monitoring wells to implement groundwater quality monitoring during and post−construction. Site plan with wells location will be submitted shortly. (RJF)

9/30/2009 − email from Delta. attached a PBS registration form for the discovered 12 abandoned USTs.

12/17/2009 − Investigation Work Plan, dated 12/17/2009, by ARCADIS. ARCADIS proposes 2 wells and 1 soil borings in the parking lot, 2 wells at the sidewalk of 26th Street. The utility survey initial resulst indicate that underground utilities beneath the sidewalk along 4th Ave would likely preclude the installation of borings and monitoring wells in that sidewalk.

3/18/2010 − Project Status letter, dated 3/18/2010, by ARCADIS. The Construction schedule has been delayed and that access to the 26th Street sidewalk to install 2 of 3 remaining proposed wells may not be possible until May. ARCADIS requests extension

for completion of the site characterization report until 7/2010.

6/12/2010 − email from ARCADIS "Mark − during our meeting a couple of weeks ago, you asked us to look into why no soil samples were collected beyond 15 feet (final well depth was 22 feet) at MW−17A. The drillers encountered cobbles from 10 to 15 feet and broke a part on the GeoProbe. A field decision was made to continue to auger to final depth and install the well."

10/29/10: This spill case transferred from R. Feng to J. Kolleeny. − JK

12/15/10: Reviewed Subsurface Hydrocarbon Assessment Rpt by ARCADIS, dated 9/30/10 (in eDocs). Rpt summarizes install'n of addt'l on− and off−site wells with soil & GW sampling. On−site wells MW−16A, MW−17A and MW−18A were installed in Jan. 2010; sidewalk wells MW−19A, MW−20A and MW−21A were installed in August 2010. Significant soil & GW contam were detected in wells MW−16A and MW−18A. Rpt concludes there are residual impacts beneath central & eastern portion of parking lot. Based on results, ARCADIS recommends ongoing quarterly GW monitoring, plus evaluation of remedial technologies, preparation of feasibility study and remedial action plan, and subsequent aggressive, targeted remediation. Due to limited space at site, they anticipate that remediation may involve injection of reagents into monitoring wells and infiltration lines installed under hotel foundation slab during construction. − J. Kolleeny

02/03/11: Reviewed 4th Quarter 2010 GW Monitoring Rpt by ARCADIS dated 1/19/11 (in eDocs). Rpt presents GW data for Oct 2010 showing residual GW contam in two wells: MW−16A had 29,000 ug/L total BTEX (up from 2,830 ug/L tBTEX when last sampled, in May 2010); MW−18A had 769 ug/L tBTEX (down from 3,050 ug/L when last sampled in May 2010). Rpt states that quarterly GW monitoring will continue, with next sampling event in Jan. 2011; also states that RAP is being prepared and will be submitted to DEC by end of Feb. 2011. After reviewing rpt, in late Jan. 2011 I spoke with Andrew Korik of ARCADIS about remedial options, he asked if chem ox injections into well MW−16A (since it's most upgradient contam well) would be acceptable; I said DEC would prefer that they not inject into monitoring well, as this could compromise future GW data from well. Andrew concurred after checking with his technical staff, that injecting into monitoring well is not acceptable. They will see if they can install injection well upgradient of MW−16A, in parking lot ramp; if not, they will explore other options. − JK

04/08/11: Reviewed 1st Quarter 2011 GW Mon & Analysis Rpt by ARCADIS, dated 3/9/11 (in eDocs). Rpt presents results of Jan. 2011 GW sampling, showing well MW−16A had 8,180 ug/L total BTEX (down from 29,000 ug/L (J) in Oct. 2010), MW−18A had 25,000 ug/L tBTEX and 470 ug/L MTBE (up from 769 ug/L and 14 ug/L, resp.), and MW−21A had 1,600 ug/L MTBE (down from 2,400 ug/L in Oct. 2010). Rpt states that quarterly GW mon will continue, and that a RAP is in preparation and will be submitted to DEC in March 2011. − J. Kolleeny

4/11/2011 − Spill transferred back to JFeng.

04/19/11: Reviewed Remedial Action Work Plan for Anaerobic Biological Oxidation, by ARCADIS dated 2/28/11 (in eDocs). RAWP proposes injection of sulfate to address residual GW contam at site, using 3 infiltration galleries installed beneath hotel foundation slab plus 3 new injection wells − one upgrade of well MW−16A in sidewalk along 4th Ave. and 2 on either site of MW−21A, in sidewalk along 25th Street. I sent approval letter (in eDocs) to Jon Armstrong of BP, cc's to Andrew Korik and Gene Choquette of ARCADIS. − J. Kolleeny

5/25/2011 − email from Andy Korik "Here is notification that injection wells were installed at 764 4th Ave. Brooklyn." eDoc the report. JF

5/31/2011 − received quarterly report 2Q2011. eDoc. JF

7/12/2011 − Sulfate Injection Well Installation Notification, dated May 25, 2011, by ARCADIS. As per the approved RAWP, 2 sulfate injection wells IW−05 and IW−06 were installed during the week of May 16, 2011. IW−07 was not installed due to the proximity of subway infrasture beneath 4th Ave, the NYMTA would not permit installation of an injection well in the sidewalk along 4th Ave. Injection volumes at the previously installed injection gallery (IW−01 through IW−04) will be adjusted to compensate for the absence of IW−07. They submitted the Inventory of Injection Wells package to EPA on 5/5/2011. Will notify DEC a week prior any field work. JF

7/14/2011 − 2Q2011, 5/31/2011, by ARCADIS. The report summarize some details of the excavation for the development. The majority of the site footprint was over−excavated to approximately 20−25 feet below its previous grade at street level, and all previously existing on−site monitoring wells were destroyed. The northern portion of the site coinciding with the parking garage was backfilled to 8 feet below street level. During the excavation, 12 unregistered 550−gallon USTs were found. These tanks were promptly registered with NYSDEC, closed and removed. Approximately 592 tons of petroleum−impacted soil were excavated and disposed off site as part of the tank removal. A total of approximately 10,000 tons of soil was removed during the development. The developer installed vapor barrier and SSDS. In addition, 4 horizontal injection pipes were installed beneath the building foundation. These injection pipes are connected to vertical risers, which along the west side of the new hotel building. The wells were gauged on April 4, 2011. NO LNAPL. DTW 12.16' to 20.63' bg. Fluctuation +/− less than one feet. Max BTEX 27,000 ug/L, MTBE 4,100 ug/L (MW−18A). Will continue quarterly monitoring. Remedial injection wells were installed in May and a report will be submitted. JF

5/8/12 − Raphael Ketani. Mr. Korik submitted a proposal to the DEC on 5/1/12 requesting to use sodium nitrate in place of sodium persulfate for treating the groundwater contamination at the site. After review by our technical staff, a number of comments and requests were submitted to me for forwarding to Mr. Korik. I put the comments and requests in a draft letter for the review of Hassan Hussein, EE III at Region 2 DEC.

In brief, the letter approved the use of sodium nitrate and requested bacteria culture information, dosing information, nitrate enriched groundwater management information, that the groundwater must be kept anoxic and a warning regarding the regulated use of sodium nitrate.

Mr. Hussein approved the letter and it was sent out today.

5/30/12 − Raphael Ketani. Earlier, Mr. Korik had sent me an ARCADIS 5/23/12 response letter to the Department's 5/7/12 conditional approval letter regarding the use of sodium nitrate in place of sodium persulfate. I reviewed the response letter which addressed the 7 comments the Department had made. Their responses were as follows:

1) ARCADIS sent a letter dated 2/29/12 to the EPA indicating that they will use sodium nitrate in place of the sodium persulfate. However, they haven't had a response from the EPA.

2) The amounts of sodium nitrate that will be on site will be less than the 400 pound limit. For this site, 180 lbs. of the material will be stored on site at any given time.

3) Dosing information was presented and was deemed appropriate.

4) Quantitative polymerase chain reaction was used to evaluate the presence of Dichloromonas species bacteria.

5) By using appropriate amounts of the sodium nitrate chemical, the nitrate concentrations will be maintained in order to keep the groundwater environment anoxic.

6) The "push pull" method will be used to extract any groundwater. This method doesn't cause the reorientation of the soil grains which would result in a loss of the efficiency of the injections. They state that there will be minimal groundwater displacement.

7) The nitrate concentrations will decrease in two ways: first, nitrate reducing bacteria and reduced minerals will change the nitrate to nitrite and eventually to nitrogen gas. Secondly, the nitrate will be diluted by the downgradient groundwater. Estimates of the distance traveled by 1000 ppm nitrate groundwater until it becomes 10 ppm nitrate groundwater were included in a table. The nitrate enriched groundwater under the site will have to travel 16 feet in order to reach CP−51 levels.

Later today, a conference call took place between Mr. Korik, other staff from ARCADIS, staff from BP and myself. The proposed use of sodium nitrate was discussed. Specifically, the ARCADIS 5/1/12 sodium nitrate proposal, the Department's comments in our 5/7/12 response letter and the information in the ARCADIS 5/23/12 response letter. I stated that the Department considered that ARCADIS, and thereby BP, had adequately responded to the Department's comments with the exception of item #7, monitoring nitrate concentrations in the groundwater. Mr. Korik explained that, for BP station #05082, there were monitoring wells downgradient of the injection locations. I stated that this was sufficient for monitoring the groundwater.

The ARCADIS 5/23/12 response letter was found to be acceptable with the only comment being that they will have to frequently sample the groundwater in order to be sure that it does not exceed the CP−51 standards. If they find that the standards are exceeded, then they will have to propose a means for managing the excess nitrate. ARCADIS must submit a letter plan with a work schedule by June 29, 2012 for conducting the injections and submitting quarterly groundwater monitoring reports. I drafted a letter for the review of Hassan Hussein, EE III and head of the Hazardous Materials Unit.

5/31/12 − Raphael Ketani. Mr. Hussein approved the letter and it was sent out.

THE FOLLOWING ACTIVE SPILLS FOR THIS CATEGORY WERE REPORTED BETWEEN 1/8 MILE AND 1/2 MILE SEARCH RADIUS FROM THE SUBJECT ADDRESS. THESE SPILLS WERE REPORTED TO BE LESS THAN 100 UNITS IN QUANTITY AND CAUSED BY: EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, OR VANDALISM. THESE SPILLS ARE NEITHER MAPPED NOR PROFILED IN THIS REPORT.

10/03/2003− Sun− File Review by Sun:

−Quarterly Report Jan 2003 thru March 2003 by EnviroTrac (Jeff Bohlen, 631−471−1500) −On Jan 28, 2003, Verizon's consultant performed the injection of oxygen releasing material (ORM) into the groundwater at the site. A total of 440 pounds of calcium peroxide (IXPER 75C) was injected through a network of 10 boring locations. At each boring, Geoprobe equipment was utilized to disperse approximately 40 to 50 pounds of ORM and a half of a pound of food grade sugar across the uppermost 12−feet of saturated soils. The results of this first quarter groundwater monitoring event indicate a decline in total dissolved BTEX/MTBE concentrations in Monitoring wells MW−2, MW−3, MW−5, MW−8 and MW−B. But, it show a significant increase in total BTEX & total VOCs in MW−4, and did not produce the desired downward trend of dissolved VOCs in groundwater.

−Quarterly Report April 2003 thru June 2003 by EnviroTRac Ltd (Jeff Bohlen, 631−471−1500)− The results of this quarter indicate a decline in total dissolved BTEX/MTBE concentrations in Monitoring Wells MW−1, MW−3, MW−5, MW−7 and MW−B. But, it shows a significant increase in total dissolved BTEX and total VOCs in MW−2, MW−4 and MW−8. The bio remediation using ORM injection into the groundwater is not producing the intended results. DEC intends to ask Verizon to investigate the soil around the 2x2000 gallon gasoline USTs (closed−in−place), and to confirm the groundwater flow direction.

10/07/2003− Sun & Vought visited the Verizon's site and met with John Quatrale of Verizon and Jeff Bohlen of Envirotrac. Based on our discussion, Verizon/Envirotrac will confirm the ground water flow direction in the next quarterly report.

10/17/2003−Sun sent an e−mail to John Quatrale of Verizon (516−292−8166), requesting the following actions be taken: 1) Correct the North arrow direction on Figure 1 of the Quarterly Report, 2) Re−survey the wells and determine the groundwater flow direction, 3) Provide the most recent quarterly report−covering July 2003 through September 2003.

10/30/2003−Sun− File Review by Sun:

−Updated Report−July 2003 through September 2003: The results of the third quarter 2003 groundwater monitoring event indicated a decline in total dissolved VOC concentrations in MW−2 and MW−4, however, the total dissolved VOC concentrations increased in MW−5, MW−8, and MW−B. The hotest spot is on MW−4, which has 28,111 ppb of BTEX (max),and 30,411 ppb of total VOCs(max). MW−2 has

the highest MTBE of 1,300 ppb (max). Per the quarterly report, Verizon may elec to remove the active 4000−gallon underground storage tank (UST) containing gasoline along with the dispenser island and associated piping during the next reporting period.

12/31/2004−File Update by Sun: On April 8th and 9th, 2004, one 4000−gallon gasoline underground storage tank (UST) and the associated dispenser island and piping at the subject site were removed. A total of six post−excavation soil samples were collected. Five of the soil samples were collected from the UST excavation. The soil samples were collected at each sidewall of the UST excavation in addition to the bottom of the UST excavation. On additional soil sample was collected from the area of the dispenser island. Post−excavation soil samples collected from the sidewalls and bottom of the UST excavation and from the area of the dispenser island were below NYSDEC TAGM 4046 Recommended Soil Cleanup Objectives for the VOCs analyzed.

1/3/2005−File Update by Sun: On 12/7/04, the Department approves the remedial system proposed by EnviroTrac dated 11/1/04 for the subject site; specifically, the use of Soil Vapor Extraction/Air Sparging (SVE/AS) remedial system for in−situ remediation of the petroleum contaminated subsurface soil as well as petroleum compounds dissolved in groundwater.

1/5/06: Case reassigned to Andersen.

1/11/06: Reviewed the quarterly report dated 1/10/06. SVE/AS in operation. Samples taken on 9/28/05. Max BTEX 164.2 ppb (MW−4). Max MTBE 178 ppb (MW2).

1/19/06: Reviewed the fourth quarterly 2005 update report. BTEX and MTBE ND in all wells sampled. Approved shutoff of the AS/SVE system.

4/27/06: Meeting with Verizon, NYSDEC, and EnviroTrac. March gw monitoring showed rebounding in one well. Awaiting formal copy of monitoring report.

5/11/06: Received first quarterly 2006. SVE/AS was shut off on 1/19/06. BTEX and MTBE ND in all wells except MWB. An off site source is suspected in MWB. Concentrations in MWB: BTEX 33.6ppb, MTBE ND, Naphthalene 1,770 ppb. The naphthalene concentration in MWB was ND for the last two quarters. Wait another quarter to confirm the napthalene concentration in MWB. Then request off site well to confirm an off−site source. Reopened spill 8910578, failed tank tightness test of fuel oil USTs on upgradient property which was never investigated.

10/11/06: Received april − june 2006 monitoring report. Wells sampled on 6/15/06. Max BTEX 19 ppb (MWB), max MTBE 47 ppb (MW−2). TVOC 1,093 ppb (MWB). High napthalene in MWB may be result of an off−site source. Spill 8910578, directly upgradient, is currently being investigated. The Department approved that groundwater sampling cease while the Department investigates spill 8910578.000

5/24/07: NFA issued.

CONTAMINATION FOUND WHEN REMOVING TANKS ABOVE TANKS. 3 550 GAL TANKS

DEC Investigator Remarks:

November 16, 2005, Durnin: On about January 17, 1995, the Greenwood Cemetery removed 3 existing 550 gallon & 1 existing 4000 gallon motor fuel storage tanks & related pumps. They were replaced with 1 new 1000 gallon & 1 new 4000 gallon motor fuel storage tanks and 2 new BSA approved pumps on a concrete island with related piping and controls. Both tanks are Double−Walled Fiberglass. The 1000 gallon tank is for diesel. Nicholas Vislocky obtained a permit to do this work on July 25, 1994. Based on this information and that less than a liter of petroleum was apparently spilled, this spill is closed.

TRANSFERRD FROM ODOWD TO ROMMEL.

1/10/2006 − Haggerty − Leigh Gutterman from NYC School Construction (718−472−8502) is locating necessary reports. She is requesting another week to find them

7/13/2006 − Haggerty − Leigh Gutterman from NYC School Construction mailed closure report on June 7, 2006. The report essentially is the original from 13 years ago. NYC School Construction included new groundwater samples (March 2006) to hopefully provide proof the site has been remediated. In 1993, 44 UST's were removed along with 15,000 cubic yards of petroleum contaminated soil which were properly disposed of. Due to the N,R subway running underneath 4th Avenue to the west of the property, excavation was restricted. All accessible soil was excavated. Post−excavation soil samples contain VOC's and SVOC's above TAGM mostly in the area adjacent to 4th Avenue. However, the time passed since the soil samples were taken as well as the fact that the recent groundwater samples are below TAGM, DEC has decided to close the spill.

oil company deleivered fuel here two days ago and then customer called last night abnd said they were out of fuel: cross over split:

DEC Investigator Remarks:

3/24/06 − Raphael Ketani. I finally made contact with someone at the super's phone at (718) 851−1328. I had been trying since yesterday. Maria, a maintenance worker there, answered and said that Ms. Ohanna wasn't in, but would be back in the afternoon. I asked her if there were any odors in the building and she said she didn't smell anything. I asked her about the oil spill and she said she wasn't aware of any oil spill or any problems with the heat. I asked Maria where I can send a letter that would reach Ms. Ohanna. She said to send it to P.O. Box 200289, Brooklyn, 11220. I told her that I will make a site visit at 2PM and that I wanted access to the basement. She said that she will let Ms. Ohanna know.

I made the site visit. The odors were very strong (22 ppm) in the area of the twin 275 gallon tanks. However, there was only a slight indication that anything had ever spilled due to the absorbent sand on the floor below the front of the tanks. Ms. Ohana said that the service guy from Edward T. Miner Fuel Co. had stepped on a valve to one of the tanks and broke it. Later, I spoke to Mr. Chris Paulsen of the E.T. Miner Fuel Co. He said that there had been a leak from a broken cross over pipe and his crew had been over to repair it. He added that two days before, the tanks had held a large quantity of oil, but later they were dry. He suspected a 300 gal. loss.

4/24/06 − Raphael Ketani. I contacted Ms. Ohanna. I asked her what was the status of the cleanup. She said that her husband cleaned up all of the absorbent material and there is no odor. I told her I wanted to check and see for myself. She said that would be alright and she will call me with a date and time this week that would be good for her for a site visit.

5/17/06 − Raphael Ketani. I called Ms. Ohana and made an appointment for a site visit on 5/22 at 10:30AM.

5/22/06 − Raphael Ketani. I made a site visit at 10:15AM today. Ms. Ohana showed me that the oil company had come to her basement, cleaned up the spent Speedi Dri and had cemented over the floor under and around the tanks. I still detected 3900 ppb of volatiles with the PID. I told her that, to start, at least several soil borings and soil samplings have to be done around the tanks − and then maybe bioremediation. She said she has no money to do the work. I explained to her to contact either the oil company's or her own insurance to possibly get them to hire someone. She said she will try.

5/23/06 − Raphael Ketani. I received a call from Ms. Ohana. She said that she had all of the oil system piping replaced because her new oil company told her that E.T. Miner Fuel didn't do the job right and that the oil was still leaking out. She asked me to take a look at the pipes and close the case. She said she has no money to do the borings. I told her that the issue wasn't the pipes, but the estimated 300 gals. of oil that leaked into the ground below the tanks. I asked her for the phone number of E.T. Miner Fuel (718) 439−5066 and spoke to Karen at Miner Fuel. She passed me to Christopher of Miner Fuel. He explained that he tried to work with her, but she didn't want to pay for an investigation and remediation.

5/24/06 − Raphael Ketani. I called Ms. Ohana and talked to her about having one soil sample taken above the water table, instead of a series of borings and samples. I told her the sample needs to be taken to find out if her oil spill reached the water table. I gave her a list of contractors over the phone without prefering anyone. She said she was willing to do this and that she will

get back to me when she finds a contractor.

5/25/06 − Raphael Ketani. I received a message from Ms. Ohana and returned her call. She said she contacted an environmental company from the list I had given her regarding doing one soil boring and taking one soil sample. She said they wanted $3000. She said she doesn't have "that kind of money" and that I am driving her out of business. She claimed she may have to take out a loan and she needs the money to fix up her building. She asked that I come to her building one more time with the PID. She said I will not find any odors now as she and her husband have used ammonia and the deoderant powder and have cleaned everything up. I tried to explain to her, though she didn't seem to grasp the idea, that the issue is oil in the ground, not vapors. I told her I still needed one soil sample and to call Eastmond & Son who, I told her, were willing to give her a good price. I asked her whether she will call Eastmond, but she didn't respond to my question. She asked whether she can have her husband do the drilling and take the sample themselves to a laboratory. I told her that wouldn't be satisfactory as it has to be a sample taken with clean sampling equipment. I told her to call Eastmond, but she seemed to be more agitated. With that, she hung up the phone.

5/26/06 − Raphael Ketani. I sent a letter to Ms. Ohana explaining what she needs to do as the next step in the spill investigation and that the state will do the work if she doesn't and back bill her.

6/5/06 − Raphael Ketani. Received a call from Dennis Femia of NYC HPD (718) 802−4506. He asked what the situation in the building's basement was and what happened with the oil. I told him and he said Ms. Ohana takes his "Section 8" clients so he will try to help her.

I spoke to Mr. Mungra of Eastmond after this. He said he will do one boring tomorrow in her basement. He will go down 4 feet and take a sample. If it's clean he'll stop if it's dirty he'll try at 6 feet down and then maybe 8 feet.

7/5/06 − Raphael Ketani. I left a message for Isaac of Eastmond (718) 378−3000 to call me regarding the results of the soil boring.

7/18/06 − Raphael Ketani. I spoke to Isaac of Eastmond. He said that he has the soil sample analytical results. He said he will FAC them to me.

7/20/06 − Raphael Ketani. I tried calling Isaac, but could only leave a message on his cell phone (646) 879−6703.

7/26/06 − Raphael Ketani. I received a FAX today from Isaac of Eastmond with the analytical results for the one soil boring that was taken. There were no VOC hits, and the SVOC hits were either below TAGM or just slightly above it. Based upon this document and the documents in the record, I am closing this case.

8/17/06 − Raphael Ketani. Ms. Ohanna called up to inquire as to whether the spill case was closed. I told her it was. She asked for a DEC letter stating that the spill case is closed. I sent her one today.

RESULTS FROM SOIL TEST SHOW CONTAMINATION − SUSPECTED TANK FAILURE

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHITOMIRSKY"

The spill is closed in consultation with Alex to consolidate with spill # 9614638. The site is currently under remediation by LiRo Engineers. −II (02/24/05).

4/20/2005 AZ reviewed a Monitoring Report for this site received on February 23, 2005. The report presents remedial system performance and groundwater monitoring data. The report states that based on the site monitoring data, the MPE system is effectively treating contamination. However, free product persists at MW−8. LiRo recommends that all extraction wells with the exception of extraction well EW−11 be turned off in order to increase the effectiveness on MW−8. The Department concured with this proposal. In addition, LiRo recommends using a vacuum truck to remove the remaining product from MW−8. The Department disagreed with this proposal. The site has an MPE system which, with the only remaining pumping well, should be capable of removing the remaining contamination. If no progress is achieved by the remedial system modification, other remedial options might be explored.AZ

12/29/2005 Reviewed a Monitoring Report for this site received on November 3, 2005. The report states that based on the site monitoring data, free product was detected around MW−8 only. LiRo proposed to shutdown the MPE system and to conduct more rounds of IRM. This proposal is approved. The effectiveness of IRM performance should be evaluated in a quarter. The Department reserves the right to have the system back on if the proposed alternative remediation method is not producing satisfactory results within a reasonable time frame. AZ

5/9/2006 Reviewed a Monitoring Report for this site received on April 17, 2006. The report states that based on the site monitoring data, free product was detected around MW−8 (0.40'). LiRo discontnued monitoring and operating this system in December 2005. AZ

DIESEL	PETROLEUM	0	GALLONS	0	GALLONS	SOIL

Caller Remarks:

PBS No: 2−456128
SOIL WAS FOUND A FOOT ABOVE THE CASING ON THE TANK, THIS TANK WAS PREVIOUSLY ABANDONDED. THERE MAY BE AN OPEN SPILL ON THIS LOCATION. THERE IS SOIL CONTAMINATION, SAMPLES WILL BE TAKEN

DEC Investigator Remarks:

need to find proper address to send CSL to Sanitation Dept.
03/21/06 Sharif Rahman− A CSL was sent to
NYC DEPT. OF SANITATION
125 Worth Street, Room # 823B
New York, NY 10013
Attn: G. Carannante, Deputy Chief Of Facilities
04/06/06 Sharif Rahman− I spoke with Joe Dimaggio @ 631−844−1540 who told me they had been retained to remove four abandoned tanks(2000 gal.each) and installed a 2500 gallon new diesel tank.They came across contamination by the side wall and on top of the tank. The bottom of the tank excavation did not reveal any contamination. A report will be sent to DEC sharif.
Active remediation site for Spill cases 9614638 & 9611002.
07/20/06 Rahman− Left a messege to Joe Dimaggio's voice mail regarding the report.
11/10/06 Rahman− EnviroTrac Ltd. was retained to oversee the removal of three 2000 gallon diesel UST and one 2000 gallon gasoline UST.USTs were previously abandoned with concrete slurry. This concrete was broken up and removed from the tank prior to removal.USTs were found to be in good condition; no holes or pitting.A total of 20.17 tons of petroleum impacted soil was removed from the excavation.A total of 15 end point samples were taken from the excavation and analyzed for VOC/SVOCs.VOC/SVOCs are either non detect or below TAGM limit.Additionally, no contamination was identified beneath the dispenser island.Lab analytical, photographs of the removal event, waste manifest are on eDOCs. NFA required.

DEC Investigator Remarks:

4/1/08 bf: Called Harry Gelb (718)788−2600. He is not sure of why tank failed. he believes it may have been caused when the driveway was repaved. I confirmed mailing contact and address. Mr. Damast is owner of the building. Told him he can register both tanks for 2−608583 and 2−608582 under one registration since they are on same property. Address for site location for 2−608582 is incorrect and is the mailing address. I told him this needs to be corrected. Sent ttf letter to:
Abraham Damast
3913 2nd Ave. Realty LLC
4312 2nd Avenue
Brooklyn, NY 11232

09/05/08−Hiralkumar Patel. received call from Isaac from Eastmond. he mentioned that they did isolation test and found tank, fill line and supply/return lines tight. they found problem in vent pipe. asked Isaac to submit isolation test result.

9/8/2008 Isaac submitted a writeup listing the work done and there was no contamination found. Tank was closed in place. See attached eDocs report.

Caller Remarks:

TANK TEST FAILURE ON 1,500 GALLON UST

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIPPLE"
Site is a 2 Family house in Brooklyn.

DEC Sigona sent notice regarding the tank test failure on May 16, 2003.

4/23/2004 Sangesland −another TTF letter sent today

4/30/2004 Sangesland spoke to property owner Margie Alimonda. She said Bayside was hired to close out the buried 1500 gal tank and install a 550 in her garage.

Sangesland spoke to Fred Caputo at Bayside (718−946−4000). He said the whole job was contracted out to AL Eastmond. Eastmond was to close out the tank, install the new tank and take care of the PBS paperwork.

11/8/05 Spoke to Margie Alimonda she said Bayside filled in the below ground tank and installed several above ground tanks. She said Bayside was to send in the paperwork. Spoke with a Margie at Bayside now Petco she had no record of work. Gave me name of Phil Tanella their installer in the area of the spill. I callled Tanella and left a message. J Lister

11/9/05 Spoke to employee of Al Eastmond (718−378−7000)who left a message for Renee. JL

Open Issues:

1) Review of DEC database shows no PBS was ever filed (for a 1500 gal tank). − Question if this really was a 1500 gal tank on a 2 Family house in Brooklyn.

2) Apparently no soil boring samples were taken. Tank was just closed out and left.

09/6/06− Zhune sent TTF letter to:
Fred Alimonda
357 40th Street
Brooklyn, NY 11233

Margie Alimonda called to say that she will fax a copy of letter from Eastmond & Sons, Fuel Oil Tank Cleaning. Zhune got the fax but it was not visible. She will send it by mail.

Zhune. Margie sent a visible job ticket from A.L.Eastmond. Eastmond close the underground tank. They filled it with sand. They installed 2(275) gallons AST in the basement. Petro tested the tank and failed.

09/02/09−Randy Austin and Zhune review the case and found no evidence that will indicate of petroleum release. Other than that tank test failure. Since tank fail test are no presumption not prove of spill. Therefore spil has been closed.

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHITOMIRSKY"
9/24/03 TIPPLE SENT DOCUMENTATION REQUEST.TRANSFERRED FROM TIPPLE TO ZHITOMIRSKY

7−22−2005 Reviewed Annual Monitoring Report for the above referenced site. The report presented groundwater monitoring data. The data showed that all site wells except well MW−4 have shown two or more consecutive samples with no detections for STARS list compounds. LiRo recommended sealing the existing well MW−4 and replacing the well at a location approximately 30 feet to the southeast which is not prone to surficial water accumulation and not used for equipment storage. Also, LiRo recommended to discontinue sampling at the wells which have shown two consecutive non−detect samples. The Department concured with these proposals.AZ

2/8/06 − LIRO petition DEC for site closure in Dec. 2005. DEC requested a sensitive receptor survey (SRS). An SRS was submitted on 1/9/2006. DEC reviewed the SRS and no sensitive receptor is identified. There is one well on site that still have high level of MTBE. No other contaminant detected in the same well. This is likely off−site or surface water corss−contamination. Site closed after review of SRS. − KST.

CATCHING BUBBLES DURING TEST WHICH INDICATED A WET LEAK

DEC Investigator Remarks:

07/25/11−Hiralkumar Patel.
5:05 PM:− spoke with Chris. he mentioned that they tested tank system around 3 PM and found wet leak. he spoke with property owner and informed him about product removal from the tank. as owner is working to get gas line, he refused to pump out tank. site has 2,000 gal UST in courtyard, on right side of the building. Chris mentioned that tank had about 600 gal in it during testing.
5:11 PM:− spoke with Mr. Schwimmer, property owner. informed him that the tank must be pumped out tonight. he will talk to ABC tank.
6:42 PM:− received call from Chris. he mentioned that tank has been pumped out. they will install temp tank tomorrow.

07/26/11−Hiralkumar Patel.
11:38 AM:− spoke with Chris. asked him about current status. he mentioned that fill port was plugged with red cloth. he mentioned

that tank is located in courtyard on right side of the building and tank top is about 5−6 ft below courtyard surface. courtyard is about 12 ft wide. he will send proposal for tank cleanout and investigation. he mentioned that owner refused to install temp tank as he applied for emergency permit to install natural gas line.

1:30 PM:− spoke with Mr. Schwimmer. informed him that the department requires soil (and groundwater, if applicable) investigation around the tank system. asked him about status of temp tank. he mentioned that he got all permits and will have gas supply availabe tomorrow morning. suggest him to have temporary tank installed to provide hot water to buiding residents. he mentioned that he has informed his tenants about new gas line installation tomorrow morning and he doesn't want to spend money for temporary tank. asked him to seal the fill port to prevent misdelivery. informed him that the tank must not be abandoned until approved by the department.

email: yms2047@aol.com

alternate addresses: none
PBS #: 2−253006. as per PBS record, the site has 2,000 gal #2 oil UST. the PBS registration expired on 08/06/2007.
other spill #: 9813577. spill was reported on 02/05/1999 due to tank test failure. case was closed in Mar. 2003 due to nature/extent of spill report.

3:50 PM:− sent CSL to Mr. Schwimmer requiring PBS renewal (form submitted by 08/10/11) and soil delineation around the tank system (report due on 08/31/11). letter emailed to Mr. Schwimmer and Donna (ABC Tank).

08/04/11−Hiralkumar Patel.
3:41 PM:− received call from Chris. they were hired for tank cleaning/inspection and investigation. ABC tank will clean the tank and will do visual inspection to find out leak area. he also mentioned that owner has decided to abandone the tank. as tank will be abandoned, asked him to drill through tank bottom and sidewalls to collect soil samples at least three feet beyond the tank surface. informed him that tank must not be abandoned until the department reviews the soil samples results. asked Chris to call to schedule a site inspection, once they expose the tank.

08/09/11−Hiralkumar Patel.
11:03 AM:− received call from Chris. they cleaned the tank. he requested a site visit. scheduled a site visit at 3:30 PM on 08/11/11.

08/11/11−Hiralkumar Patel.
3:35 PM:− visited site. met ABC crew at the site. inspected tank area. tank is located in 12 ft wide courtyard between the subject site and adjacent building at 536 40th street. fill port is located in 4 ft wide alleway and it is located behind the locked gate. found stockpile of contaminated soil in courtyard. this soil was removed from top of tank. found water in tank (half full). no sheen or oil droplets found on water. tank top is about 2 ft below grade. found old abandoned fill port on sidewalk.
3:51 PM:− spoke with Chris. he mentioned that tank is 12 ft long and 64 inch in diameter. based on observation during the site

visit, asked him for following:
− removal of stockpiled soil in courtyard
− further excavation of soil from tank top until expose the tank sides (as suspecting more contamination on tank top)
− total of six soil samples via borings through tank: two borings through each side of tank and two borings through tank bottom
− collection (and analysis) of soil samples at least two ft beyond tank wall and two ft below tank bottom

08/17/11−Hiralkumar Patel.
12:56 PM:− received call from Chris. they finished removing soil from tank top. he mentioned that entire tank is full of rain water and no oil sheen or droplets observed on water. he suspect that wet leak noticed during tank test could be water bubbles from pipe joints on tank top. he requested a site visit. scheduled a site visit at 3:30 PM today.
3:35 PM:− visited site. met Chris and Mr. Schwimmer. inspected tank area. entire tank and 6 inches above tank was filled with water. no sheen or product observed on water. tank was holding water. Chris mentioned that no holes were found during tank cleaning.

based on available information and observations during site visits, case closed.

refer to spill # 9813577 also.

SAMPLES RETURNED CONTAMINATED, GROUNDWATER AND SOIL:'

DEC Investigator Remarks:

06/29/07−Hiralkumar Patel. spoke with Mr. Stewart. asked him to send analytical data and site map with sampling locations. Mr. Stewart mentioned that bank hired them to do Phase II investigation as owner applied for refinance. during GPR survey they found concrete patch on site, but no underground anomalies. Mr. Stewart collected water sample from borings, but no monitoring wells

installed at site.

PBS #: 2−608193. site has one 250 gal waste oil AST.

Paul P. Stewart, President
Advanced Cleaniup Technologies, Inc.
Ph, (631) 293−4992 Ext. 12
Fax (631) 293−4986
email: PaulStewart@advancedcleanuptech.com

received soil/groundwater analytical data with site map from Mr. Stewart. they took four soil and four groundwater sample from four borings.

some of high values in soil analyticals:

	SB−3	SB−4
	5 − 7 ft	9 ft
Naphthalene	50,200	
Xylene	360,000	2,612
1,2,4−Trimethylbenzen	309,000	
Ethylbenzene	55,500	
Toluene	50,700	

some of high values in groundwater analyticals:

	TW−01	TW−02	TW−03	TW−04
Benzene	1,620	14,400		451
Xylene	1,440	29,960		2,336
1,2,4−Trimethylbenzene	673	6,900		782
Naphthalene	187			1,720
Ethylbenzene	5,920			522
Toluene	51,300			1,650

analytical results shows high contamiantion in soil at boring SB−3 and in groundwater at TW−3 and TW−4. these both borings done close to waste oil tank and concrete patch observed on site.

07/02/07−Hiralkumar Patel. spoke with Mr. Mar at auto shop. Mr. Mar ownes this property since 1992 and have no knowledge of any USTs at site.

Timothy L. Mar
LL Auto Repair Inc.
129 34th Street
Brooklyn NY 11232
Ph. (718) 369−2311
FAx (718) 369−2310
email: timothy.mar@verizon.net

alternate addresses: 129−133 34th Street, 909 3rd Avenue

07/03/07−Hiralkumar Patel. visited site on 07/02/07. met Peter at site. site has five hydraulic lifts. four of these lifts are aboveground and one lift is underground. Peter is running auto repair shop at the site for about 15 years and never used underground hydraulic lift. as per Peter, there is underground hydraulic oil tank near lift. Peter also mentioned that they had heating oil AST in basement, but was removed when they started business and currently building is running on gas heating system. this site is in industrial/residential neighbourhood.

based on general observations and site location, groundwater flow could be in west direction.

important sites near subject site (129 34th Street):

1. Playground across 34th street on southwest side

2. 170 34th Street: NYC School Construction Site. this site is next to playground and in south to subject site. currently school site has been excavated to 16 ft bg and preparing for building footings. during construction activities, found benzene (58 ppb) in groundwater at school site. based on general observations, school site is about 50 ft crossgradient.

3. 143 34th Street. Spiro's Auto Repair Shop. this auto shop is on east side of suject site (upgradient from LL Auto repair with assumed groundwater flow direction) spoke with Mr. Spiro (718−369−0558). he has one underground waste oil tank (no PBS record found). this auto repair shop is exactly in front of school site. Mr. Spiro mentioned that building owner installed existing waste oil tank about five years ago and Mr. Spiro running business for three years now. no PBS registration found at site. sent email to Jacob and Brian regarding unregistered waste oil tank at repair shop.

4. 149 34th Street. Blue Diamond Fuel Co. site is on east side of suject site (east of Spiro's auto shop also). fuel company is in front of shcool site. spoke with manager at fuel company and as per him, there are no oil tanks at site.

5. 891 3rd Ave. A−One Car & Truck Repair. site is on north side of subject site (cross gradient) (PBS #: 2−610159)

6. 889 3rd Ave. Getty station across 33rd Street across A−One Car repair shop (north of subject site) (PBS #: 2−600483). found one open spill (9814914). spill reported as found oil on concrete dur to poor housekeeping.

07/05/07−Hiralkumar Patel. sent letter to Mr. Mar requiring tightness test, phase I investigation, soil and groundwater delineation and endpoint samples. letter emailed to Mr. Mar and Mr. Stewart.

07/10/07−Hiralkumar Patel. received message from Scott (908−296−2696) from Safety clean, who been hired by site owner. spoke with Scott. he will call back with owner to discuss what needs to be done.

07/12/07−Hiralkumar Patel. received call from Scott. he asked what needs to be done. explained to Scott that the Department requires immediate testing of underground tank and soil/groundwater delineation.
spoke with Mr. Mar and informed him to do tank test immediately and asked to submit tank test result by end of July 13, 2007. if tank fails a test, then tank has to be emptied out by end of July 14, 2007. Mr. Mar will call Safety Clean for tank test.

07/13/07−Hiralkumar Patel. received call from Mr. Munroe. he has been hired by Mr. Mar for required investigation and remediation work. Mr. Munroe asked to extend deadline for tank test. explained to Mr. Munroe site has heavy soil and groundwater contamination and it has underground tank, which was not in use for about 15 years (as per owner), the department required immediately testing. the department can approve his request to test tank system on July 16, only if oil be removed from tank by end of today.

Dr. Norman Munroe
Astem Labotaries Inc.
PH. (305) 348−3556 (O)
(917) 497−0190 (C)
Fax (305) 388−1469
email: munroen@fiu.edu

spoke with Mr. Mar. asked him to either empty out tank or do tank test by end of today. he agreed and will contact his consultant.

07/19/07−Hiralkumar Patel. spoke with Mr. Mar. they have tested tank and is waiting for result from consultant. asked Mr. Mar to submit tank test result with copy of contract for required investigation/remediation work.

07/23/07−Hiralkumar Patel. received fax from Dry As a Bone INc. they did hydraulic oil tank test and found tank system tight.
08/14/07−Hiralkumar Patel. received message from Mr. Mar (on 07/31/07). spoke with Mr. Mar. he hired contractor and has removed some contaminated soil. Mr. Mar will contact his contractor and ask him to call.

received call from Mr. Munroe. they started excavation and found two tanks in ground. and suspecting third one also. they found little oil in first tank and second tank was filled with concrete. currently they have excavated to 10 ft bg and found no groundwater. no odor complaints. asked Mr. Munroe to monitore excavation for any vapor issue.

08/20/07−Hiralkumar Patel. visited site. met Mr. Mar. observed excavated pit in area where hydraulic oil tank was. no odors noticed at site. till now no work has started regarding groundwater delineation.

08/24/07−Hiralkumar Patel. sent email to Mr. Munroe to send updates on investigation.
spoke with Mark (718−926−8809), Mr. Munroe's assistant at site. Mark mentioned that they are installing wells and doing further excavation in tank area.

10/09/07−Hiralkumar Patel. left message for Mark. spoke with Mr. Mar. Mr. Mar will ask Mr. Munroe to call with updates. received call from Mr. Munroe. he is preparing tank closure report and will submit soon. they haven't took any groundwater samples from well that they installed. they will take groundwater sample on 10/11/07.

10/31/07−Hiralkumar Patel. spoke with Mr. Munroe. he is preparing report and will submit by end of Nov. 9, 2007.

11/29/07−Hiralkumar Patel. spoke with Mr. Munroe. he was out of office and will submit report by Dec. 7, 2007.

01/17/08−Hiralkumar Patel. spoke with Mr. Mar. asked him to submit report by Jan. 25, 2008.
01/29/08−Hiralkumar Patel. received report from Mr. Munroe. abstract:

− removed two 550 gal USTs that were previously filled with concrete and one 25 gal hydraulic fluid UST
− soil from entire tank field (164.24 tons and 30 cubic yard of concrete) was excavated until no detectable odor was obtained
− excavated area back−filled with clean soil
− haven't excavated soil from fill box area as it was located on the sidewalk
− three 2 inch wells (25 ft deep with 20 ft screened section) were installed
− depth of groundwater at site ranged from 13.2 to 13.75 ft bg <−−−−−−−−−
− groundwater was determined to be flowing in westerly direction <−−−−−−−−−
− five endpoint soil samples were taken from tank field excavation area (sidewall samples taken from depth 8−10 ft bg)
− six soil samples were taken from borings for monitoring wells (two soil samples from each boring)
− three groundwater samples collected
− no contaminated found in any soil samples
− only one groundwater sample from well MW−3 found contaminated
− monitoring well (MW−3) located in the vicinity of the tank field and directly around the fill box area on the sidewalk found mostly contaminated; soil samples from this well area found non−contaminated
− no floating product found in any monitoring wells
− sheen was observed in water sample from MW−3

01/30/08−Hiralkumar Patel. spoke with Mr. Munroe. excavation bottom was about 12 ft bg. no groundwater encountered in excavation. asked Mr. Munroe for groundwater samples from previous excavation area and one from area inside building across overhead gate; on downgradient side of previous tank field. also asked to vacuum out MW−3. sent email to Mr. Munroe and Mr. Mar with same requirements.

02/08/08−Hiralkumar Patel. received email from Mr. Munroe with proposed well location map. MW−4 will be installed in previous tank field area. Mr. Munroe proposed to install MW−5 near overhead door close to office inside building. sent email to Munroe asking to move MW−5 location close to foundation wall along excavation area and close to mechanic bays area. left message for Mr. Munroe. asked to resubmit updated map.
spoke with Mr. Mar and asked him to move MW−5. he will ask Mr. Munroe to call.
received call from Mr. Munroe. asked him to move MW−5 location close to foundation wall towards mechanic bays area.

received revised site map including proposed well locations.

03/25/08−Hiralkumar Patel. spoke with Mr. Munroe. they installed well and collected samples. waiting for sample analyticals. will submit report by April 15, 2008.

04/30/08−Hiralkumar Patel. spoke with Mr. Munroe. he mentioned that lab received samples with higher temperature and out of acceptable limit. asked Mr. Munroe to resample wells and asked to submit report by 05/23/08.

left message for Mr. Mar to submit report by 05/23/08.

05/06/08−Hiralkumar Patel. received call Mr. Mar. asked him to submit report by 05/30/08.

05/23/08−Hiralkumar Patel. received message from Mr. Munroe. he mentioned that groundwater sample taken from recently installed well was left outside of lab by driver and then sample lost from there. Mr. Munroe didn't mentioned about resampling of well.

left message for Mr. Mar.

received call from Mr. Mar. asked him to submit complete report by 05/30/08 as required earlier to avoid any legal actions.

06/02/08−Hiralkumar Patel. received report from Mr. Munroe. abstract:

− two additional monitoring wells (MW−4 and MW−5) installed (25 ft deep with 20 ft screen)
− MW−4 was installed in the center of excavation from which tanks removed and MW−5 was installed in the north−eastern corner of property
− water samples were collected from wells MW−3, MW−4 and MW−5
− no contamination found in any samples

based on submitted reports, case closed. NFA sent to Mr. Mar. letter emailed to Mr. Mar and Mr. Munroe.

Caller Remarks:

CALLER STATES GAS STATION IS VERY DIRTY − ALWAYS HAS OPEN BARRELLS OF OIL AND OIL IS ALWAYS SPILL ON PAVEMENT AND LEFT THERE.

CALLER STATES WHEN IT RAINS, ITS VERY SLIPPERY DUE TO THE SPILLAGE BEING LEFT THERE.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SUN"
03/16/1999 mmm: INSPECTED STATION AS A RESULT OF CALL. FOUND NO EVIDENCE OF OIL DISCHARGE ONTO GROUND DUE TO POOR HOUSEKEEPING. SITE HAD 12x550 MOTOR FUEL TANKS REMOVED IN 95. WILL ASK FOR SITE ASSESSMENT. CURRENT CONTROLS ON TANKS, HIGH LEVEL ALARM AND LEAK DETECTOR WERE OFF AND NOT FUNCTIONING DAY OF INSPECTION.

3/17/1999 mmm: CALLED CHEEMA RESIDENCE − LEFT MESSAGE. CHEEMA CALLED BACK − TOLD HIM LEAK DETECTOR, HIGH LEVEL AND STAGE II NOT WORKING AND ASKED HIM TO SEND ME A REPORT FOR TANK CLOSURES. CHEEMA STATED HE WOULD HAVE MAINTENANCE CO. TAKE CARE OF TANK PROBLEMS. COPY OF PBS INSPECTION GIVEN TO P. HUANG.

1/2/2004 Reassigned from Mulqueen to Sun.

12/16/2005 − Feng − Reassigned from Sun to Feng as per Sun. (RJF)

10/30/06 Reassigned from Tang to Sun. (JS/MS)

11/17/06 Sun sent Tank Closure Request letter certified mail to Gurpal Cheema (916 Lawrence Court) registered owner of station at 889 Third Ave, Brooklyn on 11/17/06, requiring the following to be received by December 17, 2006:
1. Tank closure assessment report.
2. Locations of tank and/or line test failure.
3. Subsurface investigation report, including current and historical soil and groundwater analysis.
4. Surrounding property sketch: A surrounding property sketch including property layout and usage must be submitted to NYSDEC. (JS/MS)

2/8/07: As above letter was retuned as unclaimed, a second letter was sent to site address, attention Mr. Lal Singh, requiring that the same as above be submitted by 3/23/07. (JS/MS)

6/4/07: Site visit by JS and MS done on 5/31/07. Above letter was hand delivered to gas attendent, and signature confirming receipt was obtained. On 6/4/07 contact was made with Gurpal Cheema (516)474−6030 (wife's name is Kora). Mr Cheema said that Gordan Supply performed tank closure and site assessment activities, including soil analysis. He will contact company and have them send report to DEC by 6/15/07. (JS/MS)

7/25/07: Contact established. Owner does not speak English and wife is currently looking for TCR documents. (JS/MS)

8/29/07: MS called Kora, left message asking why documents had not been submitted and to call back DEC ASAP or legal action would be taken. (JS/MS)

11/19/07: Gordon Supply supposedly visited site and will need additional visit before preparing a work plan. Cheema's cell# is 516.474.6030. (JS/MS)

12/14/07: Gordon Supply supposedly just folded. MS faxed list of recommended consultants to Cheema today at Fax# 516.782.0125.

(JS/MS)

12/20/07: Tried faxing on 12/18,19,20/07. Fax number given is not working. MS left message with Cheema to call back asap. (JS/MS)

4/11/08: Called Kora, has list from MS, knows to let consultant know to contact DEC for details (JS/MM)

7/7/08: No report received as of yet. 2nd TCR letter or refer to legal (JS/MM)

08/05/08: Transferred to Kolleeny/Mandac. − JK

10/15/08: Still no response. SIWP or SIR is overdue. Refer to OGC (JK/MM)

01/07/09: Final letter for TCR or site assessment sent to Lal Singh via certified/return receipt mail. Refer to legal if documents are not received by 03/09/09. (JK/KG)

1/12/09: Return receipt for 1/7/09 letter rec'd (letter signed for on 1/9/09). (JK/KG)

04/16/09: No documents rec'd. Called and spoke to Kora Cheema (516−474−6030). I told her the spill was still open and we have not received any documents. She thought the spill was closed. I told her we need a tank closure assessment report or a work plan for a subsurface investigation with soil and groundwater samples. She said the company that performed the tank closure is out of business and she would hire a company to do the investigation. I told her I would re−send the letter that was sent in January with the requirements. (JK/KG)

4/20/09: Letter sent to Gurpal Cheema requiring a tank closure assessment report or subsurface investigation report be submitted. If such reports were not previoulsy prepared a work plan for a soil and groundwater investigation must be submitted by 5/22/09. (JK/KG)

05/11/09: Rec'd phone message from Kal Gil of EG&R Environmental on 5/8/09 (732−226−3201). Left message for him on 5/11/09. (JK/KG)

05/20/09: Spoke to Kal Gil and he said he can't find any records indicating the location of the former tank grave. The owner has an idea of the location, but is not sure. He was sure that the current tanks are not in the same location as the tanks removed in 1995. I told him to conduct soil borings where they beleive the former tanks were and at the perimeter of the property. Also, if the location of remote fill ports (if there were any) and dispenser islands is known, soil borings should be conducted in those locations as well.
Kal Gil requested a two week extension to submit the work plan. The extension was granted and the new deadline is June 5, 2009. (JK/KG)

06/16/09: Spoke to Gurpal Cheema and informed him that the work plan has not been submitted. He said he would call the consultant. (JK/KG)

06/17/09: Kal Gil called and said the work plan would be submitted by 6/23/09. (JK/KG)

07/02/09: Kal Gil called and said the work plan will be submitted today. (JK/KG)

07/07/09: Rec'd pdf of Soil and Groundwater Investigation Work Plan dated 7/6/09. Under review. (JK/KG)

07/13/09: Work Plan proposes installation of soil borings and temporary monitoring wells, collection of soil and groundwater samples, and submission of a summary report to NYSDEC. The work plan was approved with the following modifications. A groundwater sample should be collected at SB−7 and soil must be sampled continuously and screened with a PID. The soil sample with the highest PID reading and deepest dry sample should be submitted for laboratory analysis. An investigation summary report is due 9/18/09. (JK/KG)

08/10/09: Kal Gil called and said site work had not been scheduled and was waiting for the RP to contact him to perform the investigation. Called Gurpal Cheema to remind him that the report was due next month and the work plan needs to be implemented. (JK/KG)

09/03/09: Spoke to Kal Gil. He said he spoke to Cheema recently and is still waiting for the proposal to be signed before initiating any site work. (JK/KG)

09/23/09: Spoke to Kal Gil and he said Cheema has signed the proposal and he needs to schedule the site work. (JK/KG)

09/30/09: Follow up with RP and Gil. The investigation report is past due. A request for an extension of the deadline should be submitted. (JK/KG)

10/16/09: On 10/7/09, spoke with consultant Kal Gill, asked why investigation has not been performed yet, pointing out that summary rpt is long past due. He said he had to get approval from client, and then had difficulty getting driller. I asked him to send email explaining this and requesting deadline extension for summary rpt. On 10/8/09, received email from Kal: "As per our discussions yesterday, we have been trying to expedite field work at 889 3rd Ave., Brooklyn. We received approval from our client on Sept. 3, '09 to proceed with work. Immediately, we contacted drilling companies to arrange for soil borings. Because of highly urban nature of surroundings and presence of numerous subsurface utility lines and over hanging electricals, many drillers refused to conduct drilling. Finally, we have lined up a driller to proceed with soil borings. We have scheduled drilling for Oct. 9th, to conduct soil borings and GW sampling as per approved work plan. At this time, we anticipate that we will be able to submit RI report on or before Nov. 15th. As we discussed this morning, soil and GW samples will be analyzed for NYStars list gasoline and fuel oil including MTBE. Thank you for your cooperation." On 10/16/09, I sent email to RP Mr. Gurpal Cheema: "On Oct. 7, '09 I received an email from your consultant, EG & R Envt'l, explaining reasons why approved investig work plan for site has not yet been implemented and why required investig summary rpt was not submitted to NYSDEC by deadline of Sept. 18, '09. Your consultant Mr. Kal Gil requests an extension of deadline for submission of rpt until Nov, 15, '09. Request to extend deadline for submission of investig summary rpt is approved. New deadline is Nov. 15, '09. Please be advised that failure to comply with this deadline may result of referral of this spill case to our Office of General Counsel to initiate formal enforcement proceedings against you. Feel free to contact me if you have any questions." − J. Kolleeny

11/03/2009: This spill case was transferred to A. Doronova. − AD

12/17/2009: Summary report is due. Called and left a message to Mr. Gill. AD

12/18/2009: Received a phone call from Mr. Gill. He told me that investigation was performed at the site, and that a summary report was prepared. The site owner did not review the report yet. Mr. Gill will call back on Tuesday December 22, 2009 regarding

the report submission date. AD

01/22/2010: Received an e−copy of the Soil and Groundwater Investigation report. DL to eDocs. AD

02/02/2010: Received a hard copy of the report. Will review. AD

04/14/2010: Reviewed the report. It states that investigation was performed at the site on October 9, 2009. EG&R advanced a total of seven soil borings around the former USTs field, followed by collection of soil samples. Fields PID readings were ND, so soil samples were collected just before the water table in each soil boring. None of the VOCs or SVOCs compounds analyzed were detected in any of the soil samples. Also, three GW samples were collected from the locations: SB−1, SB−4 and SB−7. Only Benzene was detected in SB−7 at a concentration of − 7 ppb. Because of very low concentration of Benzene on one sample and its biodegradability, EG&R recommend no further actions for this spill case. AD

04/22/2010: Discussed closure of this spill with J. Kolleeny of DEC. Based on the data, in was decided that case should be closed. AD

04/27/2010: Spill case is closed. AD

CALLER REPORTING A SPILL OF MATERIAL FROM AN UNK SOURCE CONED#132283 SAMPLES TAKEN CLEAN UP PENDING LAB RESULTS NO CALLBACK NECESSARY ON 150 GAL OF WATER

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"
Con Ed e2mis Notes:

7/10/00 On location to remove transformer. 1gal unknown oil on 150gal water. Historical records from 4/24/99 show 46ppm PCB. Pressure testing.

Transformer does not hold pressure and is below minimum. Cleanup to be done as 50−499ppm. Transformer reads 445gal. Tanker pumped 455gal.

Water is entering V2905 from adjacent vault V3471 from a hole at bottom of structure which had been capped but came off.

Sample returned 66ppm PCB. Found a drain in structure. No signs of oil in drain. Cemented drain.

CLeanup completed by double washing with slix. Liquids removed by tanker, solids by barrels. Leaking transformer was removed.

CONDUCTING TEST PITS AND FOUND UNDERGROUND STORAGE TANK THAT HAS LEAKED:

DEC Investigator Remarks:

Sangesland spoke to Sharissa Singh with GEO Environmental (917−335−0687)

School Construction Administration (SCA) owns the lot and has hired Demattis Construction to build a new school on the site.
Once a problem with old tanks & contamination was found, SCA hired Shaw Environmental to take care of the remediation project.
Shaw Environmental main NYC office: 212−290−6000 − unknown who at Shaw is working this project. Call the main number and ask for whoever is working on NYC School Construction Administration projects.

7/2/07 − Raphael Ketani. I tried to contact Lee Gutterman of the School Construction Authority (SCA) (718) 472−8502 regarding the site. She is in charge of health and environmental issues for the SCA. I also tried to contact Bob Kanaparthi of the SCA (one of her assistants) (718) 472−8620. Both people were away from their desks. So I left messages.

07/05/07−Hiralkumar Patel. another spill reported at same site (spill #: 0613263). during construction at school site, NYC SCA

has excavated entire site to about 16 ft depth and removed all old tanks and contaminated soil. case closed. refer to spill #: 613263.000

#6 FUEL OIL	PETROLEUM	500.00	GALLONS	0.00	GALLONS	SOIL

Caller Remarks:

CALLER STATES THAT THEY ARE STILL INVESTIGATING WHAT HAPPENED: ANTHONY IS TEH CONTACT ON THE SCENE, FROM PERTOLUEM TANK : IT IS INSIDE AND OUTSIDE THE BUILDING:

DEC Investigator Remarks:

03/22/05−Sharif// Sharif and Mr. Sawyer responded to the site.About 4000 gallons of #6 oil came out of vent line and top of the tank while the pump to the boiler was replaced and being tested.Oil had been contained in the secondary container(vault). Vent is located out of the building at the backside where about 20'by 20' open area adjacent to couple of abandoned railroad track line is impacted by the oil. Oil spreaded over one of the track of about 10 ft in length.Petrolium Tank Cleaners(PTC) has been called in to do the clean up. NYC Transit, Office of System Safety(Josephina Volyn/Richel Kron, 718−243−4581, Fax: 718−243−4309) has been notified of their property impact.
04/06/05−SR// PTC excavated the rail track, took sample, backfill soon with supervision from NYC Transit. Open lot between building and the track has been field screened. Contamination found.Property owner Mr. Merhige was contacted for revised work plan including tank vault and open lot.

9/8/05−Vought−File review as per DEC Austin due to inquiry by Rachel Kron (NYC Transit 646−252−5773). Spill out of vent pipe and also into tank room.

Letter from DEC Rahman to Commercial Realty Co (11 East 26th Street, 11th Floor attn: Richard Merhige)−3/23/05. Letter sent requiring: 1)excavation of all oil impacted soil and debris including railroad track area 2)removal of oil from secondary containment vault 3)submission of soil sampling results.

Scope of Work from Petroleum Tank Cleaners PTC(Anthony Lara 718−624−4842)−4/5/05. Scope of work includes: 1)product removal from vaults.

Soil analyticals from PTC−5/24/05. Water analyticals show no TAGM Soil Cleanup Objective exceedences except for minor PAH's attributable to fill material.

Letter from PTC (Lara) to DEC Rahman−6/27/05. "PTC has removed all contaminated soil and debris from the vault, and as you agreed what was acceptable PTC has addressed any remaining contamination via the application of Biosolve biormediation accelerant to the soil beneath the existing vault floor". "PTC plans to begin installing a new concrete floor as early as 7/6/05."

9/8/05−Vought−Called Rachel (646−252−5773) and left message with outstanding requirements: 1)endpoint soil samples from track excavation 2)site plan and locations of endpoint sampling. Vought called Commercial Realty (Richard Merhige 212−947−7500) and he tried to call Rachel who has not returned call. PTC still cleaning out second tank room. PTC collected soil samples from outside and two 20' foot containers were generated from soil excavation. Jerry Sobel will be contact for next seven weeks as Richard will be going on vacation. Vought left message for PTC to return call with status of soil excavation and endpoint sampling.
10.19.05 Sharif− I spoke with Anthony of PTC, 646−772−7180 who informed me they made formal request to NYCT's property to do geoprobe investigation. NYCT holding them regarding some insurance coverage issues which will possibly be simplified as they are working on it. NYCT is supposed to getback to PTC by this week. I'll call NYCT next week about their approval.

12/15/05 Sun reassigned from Rahman to Foley.

1/3/2005 − Feng − File reviewed by Feng and summarized:

1) some samples were collected the boiler room with site plan provided, but did not indicated out whether soil or groundwater samples. High SVOCs.

2) Track area inpacted, and removed the contaminated soil. DEC has been requested 1)endpoint soil samples from track excavation 2)site plan and locations of endpoint sampling. Nono were submitted on file.

3) DEC Rahman has assisted PTC to access the NYCT property and do the sampling.

Wait for sampling result report.

05/09/06 − spoke to Mr. Bob Lamirata of PTC, 718−624−2185. He said he will take care of disposing the contaminated soil pile at the site in a few days. I will find out more of the subsurface contamination. − KST

6/15/06 − Bob Lamirata of PTC called and advised that contaminated soil pile has been removed. Will fax end−point sampling results. − KST

6/26/06 − PTC sent in the report which only has the lab results, no write−up. The results look clean. Called Bob Lamirta and told him that DEC needs a report summarizing the contamination and the actions taken by the RP OR PTC in cleaning up the spill. Liz Deluca called and will be at the site on June 27, assessing the spill. She will call me to report if additional work is needed. − KST

11/9/06 − NYCT has not call to request additional cleanup work. Spill closed. − KST

UNKNOWN PETROLEUM	PETROLEUM	0	UNKNOWN	0	UNKNOWN	SURFACE WATER

Caller Remarks:

Caller advised the containment for oil on a barge had a small leak and a sheen had started to form. The leak has been fixed and booms have been deployed. The barge is located in Gowanus Bay.

DEC Investigator Remarks:

Sangesland spoke to Dan Lachman at US PowerGen. He said there was a fuel barge docked at the facility. Around the top of the barge is a rain water "curb" or "containment wall" which directs rainwater hitting the barge through an oil/water separator before going over the side of the vessel. There was a break in this curb and some of the rainwater (with oily residue) went directly into the Gowanus Bay and made a sheen. The curb on the boat has been repaired (re−welded) and booms/absorbant has been put in the water around the sheen.

DEC WAS ALREADY ON SITE − UST REMOVALS BEING DONE ON SITE − SPILLAGE FOUND AROUND TANKS AND PUMPS

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KOLLEENY"
TRANSFERRED TO I. ISLAM
4/27/05− The site is under remediation by O'Brien−Kreitzberg (OBK). Reviewed the quarterly monitoring report (Oct.−Dec./04). There are only 2 groundwater monitoring wells (MW−B−04 & MW−D−05)under quarterly sampling. Sampling results from well MW−B−04 exhibited no exceedances of VOCs and SVOCs in three consecutive events and as such will be dropped from monitoring. The other monitoring well was not accessible during last two sampling events due to construction materials being stored over the well. However, effort is being made for sampling this well in the forthcoming quarterly event. No Free Product was observed in any of the monitoring wells.− II

7/6/05− Reviewed the monitoring report dt. May 24, 2005 where URS has presented the latest (Mar./05)GW sampling compliant results from the lone monitoring well MW−D−05 and requested for the Spill Closure . Based on the presented data and URS's request, the spill case is closed and NFA letter issued. − II.

LAWRENCE CARR AMUSEMENT COMPANY PH# 917−653−3168 LARRY CARR
CALLER REPORTS ONLY A STAIN LEFT ON PAVEMENT AT PUBLIC SCHOOL #24 UPON ARRIVAL TO SPILL.

DEC Investigator Remarks:

7/7/2006 Sangeland spoke w/ Ray Lara of PTC. Ray stated that one 20’ diameter and one 10’ diameter stian that is sheening was present. PTC gave estimate though was not hired and was told by Alan Weiner that they were going to hire a guy with a power washer and wash it into the drain.

Piper spoke w/ Don Iaccarino from the school. 917.440.7067 office− 718.832.8720. As per him approximately 50 gal of hydraulic oil was left on the asphalt when they left in one location. There are other areas also affected with up to 20 gal in that location. They didn’t do much to clean it.
DEC Piper called Alan 347.671.2482 who is director of amusement company. Owner, Larry Carr 917.653.3168. PO Box 83, Wintersville, GA 30683−0083
Piper asked what is being done. Al stated that PTC bid was very high and that he was going w/ AJ Pressure Washing. 718.256.1214. to clean it up.
Piper called Anthony at AJ Press. He stated that he was asked to provide an estimate to provide pressure washing of area. Piper explained that the water generated would have to be vacced up and disposed of properly. Anthony stated that he will use a shop vac to collect the water and dispose of it properly. It might take a while for him to figure out how. Piper thanked him and ended conversation.
Piper called Alan Weiner and stated that AJ PW is unacceptable for the cleanup requirements. Piper stated that he could fax a list of contractors to him for his use in finding a contractor who can do this other than PTC. Alan stated he will call me back with a fax number.
7/10/06− DEC Piper left message for Alan to call back. DEC Piper spoke w/ Don at school. There was nothing done over the weekend.
DEC Piper responded to site. Upon arrival, Piper met w/ Robert (custodial)and its was observed that multiple large stains were present on basket ball court area. Tire marks smeared throughout court. Some staining observed entering storm drain on northwest side of property. Piper photodocumented site. Piper spoke w/ Principal of School Christina Fuentes in her office regarding spill. As per her, the canival lasted from June 212 to July 3. During their stay the carnival was very dirty, un responsive and un professional. (blocked fire exits, sidewalk and harrassed women.) Principal Fuentes #.718.832.9366. Alan Weiner has been uncooperative w/ School and has given them runaround since they left. Spill was called in by PTC 4 days after they had left.
DEC Piper mailed letter to LAwrence Carr Amusements adn faxed copy to Alan Weiner at 718.642.2861
7/12/06− DEC Piper spoke w/ Al;an Weiner regarding cleanup. As per him, he will be receiving estimates today and will inform me

as to whne work will commence.
DECP iper phoned Joe gallager w/ NYS Dept of LAbor, Health and Safety Div. 518.457.2131, regarding Amusement CO. HE is well aware of the type of Operation and has discontinued permitting for this Company. Joe stated " He is one of the worst operators on record". However since city is not state juristiction, he operates within city limits. Joe forwarded me to City Ride Inspector, Jim Waters, 212.566.5539. Piper left message requesting callback and info.

07/13/06−Vought−Called Weiner for udpate on contractor as per DEC Piper. Vought called Weiner and he contacted four companies and only one returned call with high price as per Weiner. Weiner told Vought that he would call back by the end of the day with a contractor. Vought explained that if call was not received and ECO would be sent to the Carnival's current location(Northern Blvd and Junction Blvd).

07/14/06−Vought−Received message from Weiner and returned call and left message to return call. Vought received call from Weiner and he nobody has called him back, he will call back this morning with name of contractor.

07/17/06−Vought−Received message from Weiner on 7/14 that he had received estimates from PTC, Eastmond and ABC and was awaiting estimate from Tradewinds. Weiner willing to fax DEC copy of estimates. Vought referred case back to DEC Piper.

Piper spoke w/ Alan weiner, he will have Eastmond come and power wash affected area.

Piper confirmed w. Eastmond that pwer washing was done. Piper spoke w. Principal Fuentes to confirm. As per her, work was done though it is still bad. Piper resonded to site to inspect. Heavy stains still existed.
DEC Piper required Carr AMusemnets to deal affected area.

DEC Piper made numerous attemts to caontact ALan to perform sealing.

9/13/06− DEC Piper spoke w. Don from school. aS per him, Don Merlo of Fuel Division inspercted and had PTC cleaners perform additional cleaning of area w/ more effective eqipment. As per son it is much better and school is more pleased. School may resurface in short while. Fuel spill is cleaned. Closed.

Caller Remarks:

Above material reporting leaking between above location and Gowanus substation. Boats have been dispatched and are searching for leak.

Con ED #149276.

DEC Investigator Remarks:

7/14/03 ERT David Duke − Leak on feeder 25 (between Goethals and Gowanus Substations) was detected by USI leak detection system. Leak rate of 10gal/hr. Two Kens Marine boats left docks at 0945hrs with a 40min ETA. One to Goethals and one to Gowanus. Currently ebb tide. Feeder 25 is 345kV. This feeder is old and therefore is already injected with PFT tracer gas. PFT vans are tracing gas in streets. ERT will call with updated info. (KMF)

~~~~~~~~~~~~~~~~~~
E2MIS 149276

14−Jul−2003 @ 09:08 hours Leak committee convened and declares leak on Feeder 25. Leak declared due to U.S.I. leak detection system alarm indicating a 1000 gallon loss at a 10 gallon per hour rate.Underground Transmission and Gas Corrosion inspecting manholes and structures along feeder run. Chem Lab patrolling run of feeder with P.F.T. vans.Substation Operations inspecting all associated equipment.Feeder runs between the Goethals S/S and the Gowanus S/S. Feeder crosses the Narrows between Brooklyn and Staten Island. E.R.T. notified and Boat requested to patrol waterways at 09:25 hours.No fire or smoke involved. No waterways involved at this time.

DEC# . TO sent out 4 crews to begin manhole inspections. CGO sent out one crew to begin inspections in Staten Island. 2 PFT vans sent out to run feeder route. At 13:20 TO crews found dielectric fluid leak in MH66769 on 43rd St and 3rd Ave, Brooklyn. Liquid
~~~~~~~~~~~~~~~~~~

level is up to feeder pipe and movement can be seen by pipe entrance to manhole. Con Ed tanker dispatched, Clean Harbors notified to respond, Safeway notified to respond, chem lab notified to respond. CSD notified that leak was found.

Manhole was pumped out and temporary clamp was installed at 18:20 7/14/03. Manhole wall broken out and custom barrel fabricated on 11−7 shift 7/15/03. Chem lab reported 03−5801 <1.0ppm PCB.
2 Con Ed tankers were used to pump out the manhole. On 7/15/03 after settling the tankers were dipped to quantify the oil: 1st tanker had 767 gallons of dielectric fluid and 2766 gallons of water. 2nd tanker had 700 gallons of dielectric fluid and 80 gallons of water.

J. O'Connell 27858 of Transmission Operations reported that A. Rodriquez of NYSDEC and S. Martin of ERT requested on 07−15−03 that samples from the excavation be taken under the feeder.

USi reports that 1035 gallons were lost as per the leak detection system.

Update: July 24, 2003
At the request of Abraham Rodriquez of the NYSDEC, on July 15th soil samples were taken in the excavation north of manhole 66769, under feeder 25. Samples were analyized for dielectric fluid by method 8100, benzene, and PCBs. The results are summarized below:

Parameter	Results
Benzene	<0.0054 ppm
Dielectric Fluid (by method 8100)	165 ppm
PCBs	< 1ppm

On 7/25/03 Abraham Rodriguez of NYSDEC approved the above sample results and gave his OK to backfill the excavation.

sample taken clean up pending 135204

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

The following DEC Investigator Remarks were available prior to 1/1/2002:

CON ED E2MIS REPORT 1−24−01
Approx. 1gal. unknown oil on 100gal. water. This is a new Transformer, it will be tested. No fire/smoke in structure, no sump or sewer connection. liquid seems contained, no substantial cracks visible. No environmental impact. Only oil filled equipment in structure is transformer and cable. Liquid sample taken, cleanup pending sample results.

2005hrs.
LSN 01−0075
<1ppm

1−26−01 1900hrs.
Cleanup reported completed, tag removed. A cemented sump was found. Incident closed.
Structure was double washed with slix. Liquids were removed by tanker and soilds by vactor.

Caller Remarks:

500 yards of contaminated soil removed

DEC Investigator Remarks:

8/11/06 − Bill Raven re−sampled the soil at the suspected contaminated area and the results show no TCLP Lead failure. Spill closed. − KST

5/25/06 − Reviewed the sampling results from Hygenetics who is working for Mr. Bill Raven of Grainger (847)535−0661. Accroding to the soil borings and analytical results, there is no petroleum release. However, there were 2 TCLP Lead failure. Told Mr. Raven that he needs to resample the 2 spots with the Lead failure, and hot spot removal might be needed.

Mr. Raven said that Grainger has plan to expand the building to area of concern. They will be sampling the area again for TCLP Lead in the next month or two, and will be digging up the area within 3 months. Told him that if the next sample confirms Lead failure, he needs to consider the soil as haz. waste for excavation and disposal. − KST

3/10/06, Dyber: Oversaw endpoint sampling at site. Next Step: Review Report when it arrives.

1/11/06, Dyber: Received work plan for endpoint samples from Hygienetics. Left message with Brendan Quealy (630−353−4480) to talk about TCLP test.

11/2/05, Dyber: Bill Raven (847−535−0661) has asked Hygenetics to prepare a scope of work for taking endpoint samples.

9/13/05, Dyber: Reviewed documentation from Grainger and spoke with Bill Raven. There was no documentation on endpoint sampling for the UST removal. Also, the other excavations may not have been deep enough to remove all of the contaminated soil.

8/31/05, Dyber: Bill Raven called and said I will receive records next week.

8/10/05, Dyber: Received message from Bill Raven at Grainger headquarters (847−535−0661). Left message for him.

7/28/05, Dyber: Phil Laterza, Branch Manager, will try to find reports and get back to me.

149−157 29th Street
Brooklyn, NY 11232(sr)

10/14/09 Spoke with Mike Burke at Langan Engineering. Investigation was done on behalf of a potential purchaser, School Construction Authority. VOC concentration are elevated in ground water. Langan will forward summary report in two weeks.(sr)

08/15/11 Phase II report in edocs. The site consists of 12,000 sq ft lot that is improved with a one story warehouse building that spans the entire lot.The purpose of this investigation was to determine if the site was suitable as a potential propety acquisition for a new school facility. During the investigation, petroleum odor was observed in ground water samples on the southern portion of the site.The site consists of 12000 sq ft lot with a one story brick and concrete warehouse building that spans the entire lot. The investigation included a geophysical survey and soil and ground water samples from eleven soil borings

and six temp monitoring wells through out the site.NYCSCA decided not to pursue this site for potential school facility. Ground water at 21 ft bgs.Field indication of contamination in soil samples were not observed.VOCs and SVOCs were below 6 NYCRR Part 375−6 unrestricted use soil clean up objectives(SCOs)in soil samples.The investigation did not reveal an obvious source of petroleum contamination in ground water on site.VOCs in ground water are not too high in concentration. An active spill 9515879 is located at the 72nd precinct of NYPD, which is immediately south of this site(across 29th street).The spill 9515879 originated from a leaking gasoline tank system and is currently undergoing remediation. NYCSCA decided not to persue this site for potential acquisition. (sr)

TRANSFORMER OIL	PETROLEUM	100.00	GALLONS	0.00	GALLONS	SOIL

Caller Remarks:

100 gal of oil found in the manhole − sample taken clean up pending

it is possible that a sewer is involved − area outside of structure and the grading also has oil around it − call back at 22 :52
there is definately a sewer involved −nrc has been notified − update 1/19/01 @ 2307 hrs determined to be 100 gals of transformer oil in the manhole, but it did spray about 10’ out of the grading and approx 5gals entered the sewer − in process of cleaning it now

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"
DEC INSPECTOR’S NOTES

Cleanup completed on 1−22−01 Transformer was decon and removed from structure 1−22−01 (DEP was notified ref# 259053).

CON ED E2MIS REPORT 1−19−01

While on location for inspection of feeder #8B84 found a possible blown hamer head and 100gals. o funknown oil that had spilled out of TM255. TM grating wet with unknown oil, sewer grating wet with unknown oil, also concrete and asphalt. TM may contain soil/water. Private property may be affected. Cannot very sump or pump in TM. Engineering records indicate TM 255 is sewered, liquid sample to be taken from source. Historical records indicate 10ppm.

22:22hrs. Tanker ordered.

23:00hrs. Approx. 5gal. unknown oil sprayed onto sidewalk and sewer.

01−20−01 :0023hrs.

Chris Hass of DEP issued commisioners order.

1:46hrs.

Andrew Kelly of DEP also gave a commisioner order.

03:25hrs.

Visual inspection of catch basin indicates no sign of escaped oil.

4:35hrs

Tanker filled up while draining structure..

4:55hrs.

Clean Harbors was called .

Tanker removed 400gals. of liquid wate from structure. Street ws double washed.

1725hrs.

Dip sticked transformer, approx. 40gals.of oil was released from transformer.

Delay in cleanup due to secondary to be denergized. Adjacent sewers checked, no visible sign of oil found, but double washed anyway. All solids removed from structure. remainder to be removed after transformer is removed. Found drains cemented but recemented to seal any gaps in sump.

2100hrs.

Transformer drained and sample taken.

Structure makes water.

LSN 01−00627 2ppm

Chris hass of DEP was notified of fresh water leak in structure. He will contact his office to handle it.

1655hrs.

Found no noise in hydrant or main. The sewer which is located in the nec of TM on stret is backed up. They will refer this job to the Sewer Crew to flush out and clean the line tonight.

1−22−01 100hrs.

fresh water leak has been resolved by DEP during the midnight shift. No tanker necessary to complete this cleanup as of this time.

1230

Transformer decontaminated and removed from structure.

1440hrs. Cleanup complete, no sump but there was a sealed drain in structure, tag removed.

Structure was double washed with slix. Solids were removed using diapers and coagulent. Incident is closed.

J. DELAROSA #19655 MECH A ENV OPS REPORTS FINDING APPROX 1 QT OF UNKNOWN OIL ON APPROX 100 GALS OF WATER IN M49287. NO SEWERS, WATERWAYS, OR PRIVATE PROPERTY AFFECTED. THE
SOURCE AND CAUSE OF THE SPILL IS UNKNOWN, HOWEVER THERE IS A BLOWN JOINT IN THE STRUCTURE. THERE WERE NO SUBSTANTIAL CRACKS IN THE STRUCTURE AND THE STANDING WATER HAD NO MOVEMENT. THE EXISTENCE OF ANY SEWER CONNECTIONS, SUMPS, OR DRAINS COULD NOT BE VERIFIED AT THIS TIME. ENV STOP TAG# 46866 WAS PLACED AND ONE LIQUID SAMPLE TAKEN CLEANUP WILL BEGIN USING THE VACTOR AND THEN WAITING FOR LAB RESULTS.

UPDATE 7−20−05 14:15HRS AS PER A. WALKER, J. DELAROSA ENV OPS CONTAMINATED VACTOR TRUCK 60571,
REMOVED BOTH SOLID DEBRIS. DOUBLE WASHED STRUCTURE, WILL CHECK DIRT SUMP AT ANOTHER TIME. ALSO ALL LIQUIDS WERE REMOVED. VACTOR WILL REMAIN ON LOCATION UNTIL RESULTS COME BACK.

7/20/05 2100HRS LAB RESULT RETURNED < 1.PPM LSN−05−07437−001

7/21/05 0200HRS
Update for F/O 444 40 St. (Inc #159877):
MH 49287 made water prior to UG working in the hole. 100 gals. of water were taken out of the structure by Astoria Tanker. Results of the structure came back as < 1 PPM PCB, and as a Water Grab. Because this result came back as a Water result, the directive was made to take another sample of the sludge in the vactor for PCB and a note was made on the sample request to "sample as a solid, do not extract oil." Because this incident is pending sample results, MH 49287 and Vactor 60571 will be treated as 50−499 until results of this last sample is received. Vactor 60571 will remain on location until these final sample results are received.

7/21/2005 07:52 HRS. −− RECEIVED PCB RESULTS < 1.0 PPM, LAB SEQ # 05−07472−001,
MATRIX: SOLID GRAB, DESCRIPTION: SLUDGE FROM VACTOR 60571.

7/21/2005 10:55 HRS. −− BROOKLYN ENV OPS. O/S A. WALKER REPORTS HE INSPECTED VACTOR 60571 AND FOUND NO FREE FLOWING OIL IN VEHICLE. TRUCK WILL BE DUMPED. −− W.W. #17344 −−

8/02/2005 13:13 HRS. −− D. BANKHEAD OF BROOKLYN ENV OPS REPORTS HE & J. CUADRADO DOUBLE WASHED STRUCTURE, FOUND SUMP SEALED AND REMOVED ENV STOP TAG 46866. CLEANUP COMPLETE AS OF THIS TIME. BKLYN ENV OPS O/S E. WILLIAMS WAS NOTIFIED. −− W.W. #17344 −−

CON ED #121129 REACTOR R18 LEAKING CLEAN UP TODAY BEING TREATED AS 50−499 PPM PCB.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ENGELHARDT"
DEC Inspector Notes:

Foley inspected equipment on 7/31/01. Appeared that repairs were completed by applying epoxy. No visible leaks.

Con Ed e2mis Notes:

11/9/98 4oz dielectric fluid leaked from reactor R18 onto concrete pad. To be cleaned as 50−499ppm PCB. PCB count is 1ppm ,as per Mary Moran.

1/22/99 During field visit, Mary Moran reported that cleanup was completed on 1/6/99. Sample results indicate PCB count of 2ppm.

7/27/01 As per visual inspection , CT Pod looks repaired and there is no leak.

WHILE DIGGING A TRENCH OIL AND SOIL MIXTURE UNCOVERED; CONTAINE, CLEAN UP PENDING TEST RESULTS; REF #208226

DEC Investigator Remarks:

02/20/08 − See eDocs for Con Ed report detailing cleanup and closure.

9/26/07: e−mail to Con Ed (Pete Sudol): "Have you collected any samples to ID the material? What was the location of the trench (i.e., relative to what equipment, etc.)?" (JHO)

10/2/07: Sudol called to give update/clarification. Crew was excavating to install a siamese connection and encountered stained soil with odor (no free product). They dug down about 4 to 5 feet to clean soil, but no post−excavation samples were collected. Sudol said excavation was still open − told him to collect post−exc samples. He will submit results with revised emis report. (JHO)

10/15/07: Spill submitted for closure by Con Edison with no sample results. Request rejected, with following comment: "Final entry in Corrective Action section states 'As per request by J O'Connell of NYSDEC, post excavation samples for TPH will be taken of soil in open excavation where any discoloration of soil is present.' Were any samples collected? Results? (JHO)

Caller Remarks:

spill is at the substation − near a reactor − spill to bluestone only − not sure of exact source − − no sewers, water, smoke or fire

con ed #142201

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"
Con Ed e2mis #142201:

10−APR−2002 @ 14:50 Hrs.

Mary Moran, Area Planner, reports during Substation inspection historic contamination was found on bluestone around Reactor 6. By visual inspection the surface layer of the bluestone appears to be less than 10% stained/discolored. There is no active fire/smoke at this time. Release to sewer/waterway is not verified at this time. The substance is unknown, however it is likely to be identified as dielectric fluid. The quantity released is unknown, however for reporting purposes the volume has been entered as 1 gallon. The source of contamination is unknown. The cause of contamination is unknown. No private property has been affected. A station remediation plan will be prepared to determine the priority order for addressing this and other historic incidents as per SSO's letter to NYSDEC dated February 20, 2002. Housekeeping and maintenance activities, as required, will be documented.

C. Koehler 84220

UPDATE 12/27/04 1330 Hours
As part of the historic housekeeping program, the bluestone around R6 was remediated. A new moat has been installed around the unit as part of the SPCC
program for 2004. Since there are no active leaks on this bank, this incident will be submitted for closure to NYSDEC.

5 gals of product on 1500 gals water − sample taken clean up pending availability of tanker − con ed 140024 − no fire or smoke no sewers or waterways

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"
Con Ed e2mis Notes:

10/30/01 5gal dielectric fluid and 1500gal water in manhole. Found while searching for leak on feeder 25. Chem Lab will be notified to take samples. The source of the leak is unknown at this time. Further inspection will be completed after manhole is pumped. Tag no. 048−0198 was hung.

Event Involved Material History and Event Detail Description was changed from dielectric fluid to unknown oil. They are looking for a leak but are not sure of the source at this time.

Astoria tanker removed 1500gal liquids from structure. Clean Harbors cleaned structure by double washing. Liquids and solids were removed. PCB count 15ppm.

Leak update: USi leak detection system showed 7.5gph on 10/30/01. USi contacted to review data and confirm. Flow meter and tank level readings being taken. USi called S&TE and confirmed that there was no leak. There was a modeling error due to the fact that fdr 26 was out of service on the weekend. The leak search was called off.

UPDATE − 05−SEP−2001 09:52 HRS. LSN# 01−08790 , SAMPLE TYPE: OIL, AROCLOR: 1260, RESULT: < 1. PPM.

10/22/01 17:52

As per the clean up supervisor P. Vieira # 16791, clean harbors came in on 09/04/01 from 07:10 to 23:00 and removed/recovered any liquid/solids, also removed all traces of visible oils. The solid/liquid waste was vacuumed out, cleaned and any additional liquid was removed again. The waste genereated was solid and approximately 150 gallons. The operator noticed approximately 4 oz of oil in 150 gallons of water which was contained in the moat.

04/23/02

Under maximo work order 0000126713 the source of the, the water leak, was repaired by replacing the float device. This also covers incident # 139228 which was called in on aug 31,2002 and pertains to the same incident. The incident may be closed.

17−JUN−2002.

Mary Moran, Area Planner, reports during inspection, historic contamination was found at C4. The flooring consists of a welded metal plate over a sub floor−however. Soiled bluestone was recently removed, however marriage roll is in place on bluestone and 2 small pools are in place underneath pumps. This plant is not known to have a concrete moat. The substance is unknown, however it is likely to be identified as dielectric fluid. The source of contamination is unknown. The cause of contamination is

unknown. A station remediation plan will be prepared to determine the priority order for addressing this and other historic incidents as per SSO's letter to NYSDEC region II dated February 20, 2002. Housekeeping and maintenance activities, as required, will be documented.

8/26/02

The June 17, 2002 update above will be transferred to e2mis incident # 141551 − due to the fact that the DEC officially closed this incident on May 6, 2002 and therefore the update should never have been entered. The stop date and resolved date have been entered and the status has been changed to CLOSE. No additional updates will be entered in this incident.

~~~~~~~~~~~~~~~~
e2mis no. 138564:

7/30/01=1430HRS SSO GIRACE #37876.REPORTS FOUND APPROX 3/4 GALLON OF NONE PCB OIL ON AN AREA 1−FOOT SQUARE.OF BLUE STONE THAT SPILLED FROM CIRCULATING PLANT #3 FROM FDR 41. NO SAMPLE OR TAG PLACED. MAINT.CREW IN PROGRESS OF CLEANUP AND WILL REPLACE BLUE STONE.

7/30/01−−1630HRS MR GIRACE REPORTS CLEANUP COMPLETED BLUESTONE REPLACED AND PLACED IN DRUM.

8/9/2001− 1255 hrs. There are no repairs required as the spill was the result of an error. The containment bucket was tipped over. Incident can be closed.

UPDATE 1/27/04
Incident was a returned close out request from the NYSDEC. As stated prior, the spill containment bucket had spilled over. The containment bucket is kept underneath one of the pumps as a precautionary measure. The leak originates from a mechanical seal on the pump that is designed to leak, so this type of preventive measure is commonly placed in case there is a drip from out of the containment tray that is built on to the pump.

Category: Known petroleum or hazardous material release with minimal potential for fire/explosion (indoors or outdoors), drinking water contamination, or releases to surface waters.
Class: Willing RP − No DEC Field Response − Corrective Action Initiated or Completed by RP or Other Agency

Spill Date	Date Cleanup Ceased	Cause of Spill	Meets Cleanup Standards	Penalty Recommended
10/21/2000		UNKNOWN	NO	NO

Material Spilled	Material Class	Quantity Spilled	Units	Quantity Recovered	Units	Resource(s) Affected
UNKNOWN PETROLEUM	PETROLEUM	1.00	GALLONS	0.00	GALLONS	SOIL

Caller Remarks:

discovered 1/2 pint on top of 400 gallons of water.

con ed #134045

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "FOLEY"
E2MIS Notes:

Found approximately 1/2 pint of unknown oil on 400 gallons of water in manhole 70609. No sewers or waterways affected. Sample taken.

10/22/00 Update: Results returned <1ppm PCB.

10/23/00 Update: Cleanup completed by Flush employee by double washing structure with slix. Liquids were removed by tanker, and solids were removed by vactor. No leaking equipment was found.

Caller Remarks:

WHILE BORING HOLES IN SOIL SPILL INITIALLY DISCOVERED ON 11−23−98

VENDOR DID NOT NOTIFY CON EDISON UNTIL 12−04−98 AT 10−45AM

SAMPLES TAKEN. CON ED #121707

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ENGELHARDT"
12/7/98: Spoke with Christine Kovari (Con Ed SSO) − Phase II investigation for 2 purposes:

1) divestiture

2) to confirm underground pipe which was source of Appendix B spills − may be some type of drainage conduit. Pipe was plugged up at discharge end. Con Ed has no idea what pipe is or where it comes from.

Phase II consisted of 6 borings along raodway and in vicinity of pipe. Two borings closest to entrance gate − found sheen in one. Three additional soil borings hit concrete refusal at 3 feet bg − they think it is the bulkhead structure. Don't know where to go from here.

Also putting in perimeter borings on adjacent substation property to see if anything is migrating off substation. Took one VOA groundwater sample from area where sheen was encountered in boring, but sample is likely to be rejected by lab due to suspended sediment. (JHO)

3/21/02: Draft Site Investigation Report dated May 4, 1999 found no evidence of soil or groundwater contamination related to historic use, storage or spillage of petroleum at the site. A well was installed at the SB−5 location − no free product was noted in a number of gauging events. (JHO)

LUBE OIL	PETROLEUM	0	GALLONS	0	GALLONS	SURFACE WATER

Caller Remarks:

caller stated rain has washed oil from deck.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"
8/21 − JHO RESPONDED WITH AVERY TOM OF CON ED. BILGE AREA OF TWO FLOATING GAS TURBINES OVERFLOWED DUE TO HEAVY RAINS. OIL/WATER SEPARATOR COULD NOT HANDLE THE VOLUME. BILGE WATER LEAKED FROM FOUR SPOTS: TWO ON EACH BARGE. COAST GUARD RESPONDED EARLY IN THE MORNING, ISSUED FINDINGS AND RECOMMENDATIONS TO MAKE REPAIRS TO FLANGE WELDS ON THE BARGES. ACCORDING TO CON ED, CONTRACTOR (S&D) TO PUMP DOWN WATER LEVEL IN BILGE TO ALLOW WELDERS TO WORK ON WELDS. SILVER SHEEN IS CONTAINED WITHIN BOOMED AREA, ALTHOUGH COAST GUARD REPORTED THAT A SHEEN WAS VISIBLE IN GOWANUS BAY − IT COULD BE ATTRIBUTED TO ANOTHER SOURCE. IMPACT TO WATER APPEARS MINIMAL.

Caller Remarks:

LIGHT OIL BUBBLING UP FROM BOTTOM OF CANAL. DRIVERS ENROUTE TO INVESTIGATE FURTHER. 10’X10’ SHEEN. ABSORBANT BOOM IN PLACE.
NRC ALSO NOTIFIED. FURTHER TO FOLLOW.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O’CONNELL"
1/18/96: Glen Katz spoke with Ron Santapaola, Con Ed − sheen between barges, boom in place. Sheen dissipated as of 1425 hrs.
Divers are to investigate futher, will inspect barge for source. Divers en route as of 1425 hrs.

UPDATE: divers found no source but collected sample for analysis possibly from sheen.

1/24/9, Engelhardt notes: Call from Lisa Primeggia, Con Ed − divers inspected bottom of canal, saw nothing. Avery Tom is Con Ed Environmental Affairs person assigned to case. Note: this "burping" up of oil occurred last on 11/27/95 (see spill #9510745).
Call Al Fillipi, Con ed to find out if this happens a lot.

3/21/02: Information provided by Orion Power New York indicates

this storm drain was sealed on or about July1, 1996. No

recurrences of sheen emanating from the storm drain have been

noted since then. (JHO)

Material Spilled	Material Class	Quantity Spilled	Units	Quantity Recovered	Units	Resource(s) Affected
#2 FUEL OIL	PETROLEUM	150.00	GALLONS	0.00	GALLONS	SEWER

Caller Remarks:

tank was being filled − is a roof unit and 100 − 150 gals of oil were spilled in the filling process

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIBBE"

06/13/05: A heating contractor, Roy Kay, Inc., was modifying the roof top heating units to operate on duel fuel. While bleeding the lines of air, the operation was left unattended and an unknown amount of heating oil was released to the roof and apparently impacted a roof drain leading to a NYCDEP sewer. It is unsure how much was lost because of an unexplained inventory descrepency. At the time of the spill, both boilers were turned off but the facilities Dravo unit (another type of heating unit) and water heater were still active. Also, in order to bleed the roof top lines, an unknown amount of product was pumped off and most likely removed by the contractor; yet there was a descrepency of 242 gallons.

Also, the contractor did not inform NYCT or make notification to DEC of the spill at the time it happened. The contractor attempted to perform the cleanup without telling anyone. Once discovered, NYCT hired an emergency response contractor to remove all of the contaminated debris already generated by the heating contractor and to finish the remaining cleanup. This did not allow NYCT to accurately determine the extent of the spill, nor the possible amount lost.

The tank is and was at that time, a double walled fiberglass tank with interstitial monitoring and double walled piping with leak monitoring sump sensors. There is no record of any alarms from the intersttial or sumps sensors and no report of a loss of product in any of the log books.

It would appear that the tank was not leaking but that product was being with drawn from the tank for several reason and that the product was no accounted for.

CON ED SPILL #120842.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ENGELHARDT"
E2MIS 120842

On October 27, 1998, approx 10:00 am J Browne, 78774, CCI and J Tranchina, 79186, CCI was doing surveying for installation of cathodic protection in manhole 74514, feeder 41 when they discovered approx 20 gallons of dielectric fluid and approx 9000 gallons of water. Manhole was taggen, no. 2987. All contained in manhole. No injuries or outside impact. No sewer or waterway affected. Treating oil as 50−499ppm. A call to Chem Lab is being made to make the necessary

arrangements for samples to be taken. Base on Lab Results arrangements will be made to clean−up within 48 hours.

Called CIG, spoke with A Constantine, 00131 at 10:34

Dept/Facility

SMALL OIL SPILL Con Edison Incident No. 120842_____

CLEANUP CHECKLIST NYSDEC Spill No. _____

Name of person completing checklist: B BYRNE, SUPERVISOR, 54151

Con Edison Operating Department responsible for spill cleanup:

(1) A small oil spill is a spill of oil containing less than 50 ppm PCBs that does not meet the criteria for a de minimis spill and satisfies either of the following

conditions:

? It is totally contained in an impervious structure, such as a manhole, vault, or moat, or

? It meets all of the following criteria:

− No sewer or waterway is affected, and

− No private property is affected, and

− No personal injuries are involved, and

− Cleanup is completed within 72 hours of the spill discovery, and

− Less than 50 gallons of oil, petroleum product of any kind, or dielectric fluid is spilled.

(2) Material spilled/discovered:

0 Oil (type); PCB concentration: less than 50 ppm; known / unknown.

Environmental Detailed Incident Report

0 Dielectric fluid; PCB concentration: less than 50 ppm; known / unknown.

If unknown PCB concentration, was sample collected? 0 Yes 0 No

(3) Sample submitted for analysis? 0 Yes Sample ID No. 0 No

For what parameters? 0 PCB 0 Benzene 0 Other Parameters

Copy of chain of custody form attached? 0 Yes 0 No

(4) Amount spilled/discovered: If leak/spill is continuing, rate

(5) When was spill discovered? Date Time

(6) Location of spill. (Be as precise as possible. Include cross streets, manhole numbers, equipment box numbers, etc., as appropriate.)

0 Sketch attached

(7) Source/cause of spill. (Be as precise as possible. Include equipment numbers, if possible.)

0 Unknown

(8) Description of area affected by spill (include dimensions as appropriate)

(9) Containment/Cleanup Activities (per GEI 2.11, 2.13, 2.16, 3.2, or 3.3) 0 Sketches attached.

0 Tightened valve.

0 Placed drip plan.

0 Sealed leak.

0 Blocked nearby sewers/drains with spill kits.

X Removed/recovered liquid/solids.

0 Used absorbents to remove residual fluids.

0 Removed contaminated vegetation.

X Removed visible traces of oil.

X Washed stained areas.

0 Excavated contaminated soil, bluestone.

0 Other

0 See attached contractor report.

(10) Identify who performed cleanup:

0 Con Edison personnel/department? F ACOSTA, 15856, SPLICER

0 Name of contractor CLEAN HARBORS INC.

0 Contractor report attached.

(11) Cleanup completed on Date 10/28/98 Time* 7−3 SHIFT

*Note: If the cleanup is completed more than 72 hours after the spill was discovered, the spill is a large oil spill.

(12) Con Edison personnel directing cleanup F ACOSTA, SPLICER 15856

GASOLINE	PETROLEUM	0	GALLONS	0	GALLONS	SEWER

Caller Remarks:

caller states there is a strong odor of gas in bldg − smell is coming into bldg through sewer vent − unk source

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

The following DEC Investigator Remarks were available prior to 1/1/2002:

DEC (Sigona) investigated complaint on 2/18/2000, and arrived at 2 :45 P.M. DEC contacted DEP (Cosmos) who said gasoline odor was confined to room where sprinkler system was located, possibly a floor drain. DEP inspected the surrounding sewers and could not pin point any source of pet vapors. DEC confirmened that there were no gasoline vapors. Recommended that 5−20 gallons of water placed into drain to prevent vapors from entering building through trap. left site at 3 :00 P.M.

Caller Remarks:

Caller advised that unknown substance in garbage truck hopper will be drained at the transfer station to empty out unknown substance.

DEC Investigator Remarks:

DEC Piper spoke with FDNY Hazmat. A garbage truck crew was irritated by an unkown liquid/ gas when the truck compacted the garbage. Truck was escorted back to facility where it was dumped out and investigated for the cause. They only dicovered a acidic hit on litmus. It was decided that the substance was muriatic acid. There was only approx 1/2 gal of total liquids on pavement and was not the unknown. Garbage will be picked up and disposed of as requlars solid waste. closed.

DEC Investigator Remarks:

8/6/2009 Steve Morse from Louis Berger is working on behalf of the NY City Economic Development Corp.
Area has been excavated, material stockpiled and endpoint samples taken.
They will test the samples and forward a report to DEC for review.

08/25/09−Hiralkumar Patel.
11:46 AM:− received message from Joe Nelson from Louis Berger. they are preparing closure report and will submit soon.

09/08/09−Hiralkumar Patel.
2:02 PM:− spoke with Sean at Louis Berger. he was on vacation and will check with his staff. will call back.
3:26 PM:− received call from Sean. report will be submitted before end of this week. he will be out of office, so asked to contact Steve Morse (212−612−7923) if have any questions regarding report.

09/14/09−Hiralkumar Patel. received report from Sean (at 5:54 PM on 09/11/09). abstract:

− encountered petroleum impacted soil and groundwater during excavation in support of repair work to be performed on the bulkhead bordering the site and upper New York bay
− approx. 5 gal of unknown petroleum product were encountered and the point of release was noted near the southeastern wall of the excavation <−−−−−−−

− collected water sample from excavation for fingerprint analysis and analysis revealed that the spill was comprised of a combination of motor oil and hydraulic fluids
− petroleum did not appear to extend into the upper new york bay; however as a precautionary measure, a containment boom was deployed along the bulkhead
− to delineation contamination, excavated three adjacent test pits near the point of release
− in total, the test pits measured approx. 40 ft long (east to west) by 12 ft wide (north to south) by 12 ft deep
− approx. 40 tons of contaminated soil was removed
− collected 7 soil samples from along the side walls of the test pits, 1 standing water sample from bottom of test pit and 1 composite waste classification sample from stockpiled soil
− sidewall samples were analyzed for VOCs, SVOCs, metals, PCBs, pesticides and TPH; water sample was analyzed for VOCs and SVOCs; composite sample from stockpile was analyzed for VOCs, SVOCs, metals and PCBs via TCLP method and for TPH
− soil samples collected indicated the presence of non−native fill material throughout the existing bulkhead; miscellaneous debris in form of wood, concrete, scrap metal and brick fragments were noted throughout
− soil classified as non−hazardous urban fill was reused as backfill material and was planned to be capped by a new, asphalt parking lot
− high SVOCs (few compounds), mercury, lead and TPH found in all soil samples

SVOC values in soil (ppb):

−−−−−−−−−−−−−−−−−−−−−−SS−1−−−−SS−2−−−−SS−3−−−−SS−4−−−−SS−5−−−−SS−6−−−−SS−7−−−−−limit

discussed with DEC Austin. he asked for Phase I report.

2:33 PM:− left message for Mr. Morse at Louis Berger.
2:41 PM:− left message for Ms. Zias at NYC EDC.

NYC Economic Development Corp.
110 William Street, 16th Floor
New York, NY 10038−3940

Attn.: Kay Zias
PH. (212) 312−3752
email: kzias@nycedc.com

2:52 PM:− received call from Ms. Zias. she mentioned that Maritime Group has leased this property from them and site was being used for shipping purposes or ship making. site was empty for last couple of years and will be used for parking lot only by NYPD. Ms. Zias will send email with summary of historical use of the site.

discussed with DEC Austin. based on site location, historical use and future use, he will talk to DEC Jane for possible transfer in haz. waste unit.

3:51 PM:− received email from Ms. Zias with site history. site was originally used by Moore McCormack Lines, a steamship company. Continental Terminals used the piershed to store and distrbute cocoa beans into the late 1990s. the pier was torn down then used by American Warehousing for vehicle storage. the site does contain a garage that was used for vehicle maintance.

09/29/09−Hiralkumar Patel.
4:05 PM:− received message from Ms. Zias inquiring status.

10/01/09−Hiralkumar Patel.
1:42 PM:− left message for Ms. Zias and informed her that case may be transferred to another unit due to heavy metals.

discussed with DEC Jane and DEC Austin. due to heavy metals, Austin asked to set up conference call with DEC Bob Cozzy.

11/20/09−Hiralkumar Patel.
11:30 AM:− left message for DEC Cozzy.

7/30/10−Vought−Site transferred from DEC Patel to DEC Vought and DEC Vought with project transferred to Section A for further investigaiton and possible remediation due to presence of high heavy metals. Complete file review by Vought for purposes of further site classification:

See also closed spills #0307230 and 0010628 for Gowanus Power Plant immediately adjacent to site and operated by NY Power Authority. Both closed spill remarks noted elevated heavy metals. Closed spill #0010628 shows soil concentrations up to: 1043ppm lead, 2.28ppm mercury, 166ppm copper and 4869ppm zinc. Site also has alternate addresses as 106−112 23rd Street and 109−111 23rd Street as per Property Shark.

Final Spill Closure Report (Louis Berger−Sean McGonigal Ph:212−612−7900x1397 Fax:212−361−4341)−9/11/09. Spill opened due to discovery of petroleum contaminated soil during excavation activities to repair a bulkhead. Commercial properties to the north and south and Gowannus Expressway to the east. Five gallons of unknown petroleum found and "point of release was noted near the southeastern wall of the excavation". NYC Economic Development Corporation (EDC)Daniel Zarrilli was notified. Two samples of "petroleum impacted standing water in the excavation" were collected for fingerprinting and analysis showed spill was combination of motor oil and hydraulic fluids. No visual evidence of oil in Bay beyond Bulkhead however boom deployed as precautionary. Free product recovered from groundwater using absorbent pads. Three test pits installed adjacent to petroleum excavation for delineation purposes. Contaminted soil based on visual evaluation was separated from impacted soil (160 tons of non impcted soil and 40 tons of impacted soil. Seven sidewall soil samples were collected from the test pit and one bottom groundwater sample was

collected. No sidewalls however collected from northern portion of excavation. Soil analyticals show no VOC exceedences of either TAGM 4046 or Part 375 Unrestricted SCO's. Soil analyticals for SVOCs PAH's show up 4.6ppm benzo(a)anthracene, 4ppm benzo(a)pyrene, 4.8ppm benzo(b)fluoranthene, 4.8ppm chrysene and .81ppm benzo(a)anthracene. PAH exceedences of TAGM and Part 375 noted in all soil borings. Metal analyticals show up to 36ppm aresenic, 3.2ppm cadmium, 52ppm chromium, 330ppm copper, 1,100ppm lead, 17ppm mercury, 890ppm zinc. Note most contaminated samples diluted by 100 times in laboratory. Former site uses as per notes above 9/14/09 site used for former ship building and cocoa bean shipping. Report attributes elevated SVOC's to "contaminants in urban fill material". Groundwater analytical shows non−detect for VOCs and SVOCs. "....wood, concrete, scrap metal and brick debris were noted in both the soil stockpiles and the sidewalls of the test pit". Report maintains that excavated soils may be exempt from solid waste regulations due to benfecial use as per 6 NYCRR 360−1.15b8 and that "soils can be used as backfill material at the Site in areas with potentially similar materials and contaminants. Therefore, soil classified as non−hazardous urban fill was reused as backfill material and was planned to be capped by a new asphalt parking lot. The proposed end use is an open air paved parking lot for use by the NYPD." Approximately 40 tons of soil were removed and five 55−gallon drums filled with absorbent pads were removed from the site. Report request No Further Action.

8/5/10−Vought−Reviewed above results with DEC O'Connell and P−Site Memo will be issued and SC CO offered.

8/11/10−Vought−Left message with Zias to return call with confirmation of block and lot and owner of property and to discuss P−Site process and possible SC CO use. Vought received callback from and spoke to Zias and she noted that site was capped with concrete in preparation for NYPD Parking Lot. Zias was unsure of current status of site. Zias was familiar with BCP Program and noted she thought that P−Site process not needed as site is being used for industrial purposes and no redevelopment is planned. Vought noted that initial thoughts were that industrial use has to be approved by DEC via Haz Waste Program and that possible easements required as well. Vought confirmed this with DEC O'Connell and sent email to Zias with avaialable times for conference call.

8/12/10−Vought received reply from Zias and conference call scheduled for 8/13 at 12:30pm. Vought received confirmation from O'Connell to send out P−Site Memo despite conference all scheduled for tomorrow. P−Site Memo sent by Vought. Vought received call from and spoke to Zias who indicated that site owner was NYC Department of Citywide Admisitration Services (DCAS) and EDC was property manager.

8/13/10−Vought−Conference call with O'Connell and EDC Zias. Discussion included applicability of P−Site designation. Zias agreed to meeting to discuss SC CO which will be in early September as per O'Connell and will also include DEC Legal, NYC Legal and DCAS. Also discussed possibilty of not listing site and completing remedy under IRM via SMP including easement.

8/13/10−Vought−Received email from EDC Zias with attachments of DCAS and NYPD Property Transfer Documents. Vought will send email to EDC Zias around 9/1 to schedule SC CO meeting. Vought reviewed attachment and added to E−docs. Document review:

Letter from NYPD Deputy Inspector (Thomas Pellegrino) to EDC Andrew Alper−9/23/04. NYPD wishes to obtain city owned vacant lot to "store sea containers at the site". Request for approval by EDC.

Letter from NYC Dept of Small Business Services Deputy Commissoiner(DSBS−Andrew Schwartz) to DCAS Deputy Commissioner Lori Fierstein − 4/25/06. DSBS hereby transfers management of a portion of the above referenced property to DCAS.

Letter from DCAS Martha Hirst to NYC Commissioner of Small Business Services (Robert Walsh)−
7/14/06. DCAS received letter from Deputy Commissioner "surrendering the subject property for assignment to the Police Department

(NYPD) for storage of sea containers. Attached map has area of transfer. "Accordingly, DCAS accepts the surrender of the referenced property and simultaneously assigns jurisdiction and management to NYPD. The assignment is effective immediately. With this assignment, DCAS relinquishes all associated rights and responsibilities".

8/23/10−Vought−Sent request for Site Code to DEC Barrie with block/lot, acreage and lat/long.

8/24/10−Vought−Confirmed P−Site status with DEC Cozzy due to Hg concentrations adjacent to Gowannus Bay.

8/25/10−Vought−This spill adminstrative closed and referred to open Remediation #C224143.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"
11/18/99 12:10

Spoke to Tasha at DEP

She indicated that a sewer manhole blew at 10:57

11/18/99 12:15

Albert Gorden from DEP called.

The FDNY responded and took readings.

By the time the city got there, there were no more obvious vapors in the manhole and they weren't getting any hits on the LEL meter. They are attributing the incident to a one−time dumping and are inspecting area service stations. They do not feel it is associated with the DEC PIN job.

11/18/99 12:17

Attempted to call Kieth Williams (DEP who inspected site) on his cell phone 917−769−0859.

2/13/2003 − Austin, As per directive to closeout spills with no recent history, closed out.

SPILL EAST OF TRENCH CONSTRUCTION SITE NEAR THE ABOVE LOCATION ON AN UN MAPPED STREET REQ DEC REP TO CALL HE WILL EXPLAIN SITUATION ON HAND

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"

****This spill is associated with Spill # 0010628 *****

Sangesland spoke with Gene Grilli of DMJM Harris (718−369−3262)

He is a general contractor hired by NYCDEP to reroute a sewer line near the corner of 3rd Ave and 23rd St in Brooklyn.

Right now the existing sewer line travels northwest along 23rd st out to the Gowanas Canal. The New York Power Authority is putting in a new gas turbine power station in the area between 3rd Ave and the Gowanas Canal. The new plant will be over the existing sewer line, therefore the sewer line is being moved.

Problem came up when the contractor started excavations to install the new lines. The fill material was very poor quality. At a depth of 8' to 10', oil started coming into the hole from historical contamination. Contaminted soil has been staged by the contractor and will be dealt with by either DEP or NYPA.

By Oct 17th, and oil/water separator and a carbon filtration system will be installed on the dewatering system to take care of both oil and lead in the groundwater. These were regulations that were put in place earlier by DEC Permits when the power plant was proposed.

Mr. Grilli will be getting back in contact with the DEC when the site work has been completed.

4/13/2004 Sangesland spoke with Mr Grilli. He said a tremendous amount of soil was removed from the site and shipped to a plant in Buffalo. There is additional soil staged on the site ready for removal. When the work is done he will prepare a short report (memo) and forward it to the DEC for case closure.

3/6/2006 No report was ever submitted to the DEC, but the power plant is complete and the area has been resurfaced. There is no "source" on the site and much of the "historical" contaminated material has been removed.

While the DEC assumes that the area still has some remaining historical contamination, this spill case has been closed out.

#2 FUEL OIL	PETROLEUM	0	GALLONS	0	GALLONS	SOIL

Caller Remarks:

GZA Environmental, hired by NYS Power Authority to make soil borings on City owned property − found oil contamination in soil borings.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"
12/21/2000 − NYC Power Authority hired GZA to conduct soil borings on a piece of property they are considering buying or taking over from the city. Borings indicate a contamination problem on the site.

Any contaminated soil removed during borings has been drummed and manifested by GZA.

Owner of property is New York City.

Contact is: Daniel Kurtz, Executive VP of NYC Economic Development Corporation. 10 Williams St, NY, NY 10038

(212−312−3800)

12/21/2000 Sangesland spoke with Daniel Kurtz. Discussed the problem of contamination on the site. Mr. Kurtz will contact NYPA to try to get a copy of the GZA report. Sangesland told Mr. Kurtz that his office needs to define what the problem is, delineate the contamination and develop a remediation for the site.

1/2/2001 Sangesland left a message with Mr. Kurtz again requesting an update on the cleanup status.

3/06 − Received several files with information from NYPA. Next step will depend on review of new information received.

4/2/09 − Austin − Transferred from Needs Reassignment to Patel for further work to remediate and close − end

06/08/09−Hiralkumar Patel. found disposal manifests and lab data in old file. only SVOC analyticals and metal analyticals available. looks like samples were taken from soil pile for waste characterization. no information about sampling results based on which this case was reported.

08/04/09−Hiralkumar Patel.
3:30 PM:− visited area. found power plant along water side at the end of 23rd street. commercial buildings around the site.

08/05/09−Hiralkumar Patel.
10:08 AM:− left message for Mr. Kahabka (914−681−6308) at NYPA.
11:36 AM:− received call from Mr. Kahabka. he has sent letter to project manager in Albany in 2003 with other documents (including Phase II). asked him to send all available documents along with new building footing depth.

08/07/09−Hiralkumar Patel.
2:51 PM:− received copy of Phase II report from Mr. Kahabka. no VOC contamination found in soil samples. only few SVOCs and some

metals found in shallow soil which was removed during construction.

based on submitted documents, case closed.

08/31/2005 − Feng − Transferred from Vought to Feng.

11/1/2005 − Feng − Tank Closure Report, 12/3/1999. On 9/7−9/1999, Tyree performed removal activity for following tanks: (6)550−gallon gasoline concrete encased, good/no holes. (1) 4,000−gallon gasoline concrete encased, good/no holes. (1) 4,000−gallon diesel concrete encased, good/no holes. Soil excavated to 10' bg, no groundwater encountered. 7 soil endpoint samples were taken. Soil samples, S1 (7'), S5 (10'), S6 (13'), S7 (13') found very high contamination. 862.60 tons of impacted soil was disposed.

1/25/2006 − Feng − File reviewed again. Letter on 3/8/2001, Joseph Sica from GettyBurg Service Station requested a "closure"

letter because the property was in the process selling the site. Since high VOCs in soil endpoint samples, groundwater samples will be needed. The site has a new owner now. Sent letter to Scott Hanley (Getty Marketing) and Sam Shen (C&L Pioneer Enterprise) requesting 1) delineation of soil and groundwater contamination, 2) surrounding properties sketch, due 4/5/2006. CC to Shawn Healey and Paul Hatcher (Tyree). (RJF)

2/2/2006 − Feng − Call from Paula Chan (C&L Pioneer), stating that gas station was sold from Getty to Joe (an Italian guy) and then to C&L. The site is vacant now and plan for development. The site is on top of the hill (7th Ave of Brooklyn), groundwater might be very deep. She mentioned that Getty installed new tanks after removing the 6 (550−gallon) tanks in 1999, and C&L removed all the tanks and did endpoint samples and found clean soil. Will send the Tank Closure Report. (RJF)

2/14/2006 − Feng − Received and reviewed the Site Plan and the Lab report sent by C&L Pioneer. The 4,000−gallon, 6,000−gallon and 8,000−gallon USTs were removed and 7 soil endpoint samples were taken. Soil analyticals show low VOCs concentration, but some SVOCs presented. (RJF)

3/17/2006 − Feng − Email from Shawn Healey saying that they are going to conduct soil and groundwater investigation on 3/27/2006 to 3/29/2006. Inform Glen Liu, lawyer representing C&L Pioneer (fax 718−492−5371) this coming activity. (RJF)

3/30/2006 − Feng − Sam from C&L called and said he kept the gate opened but nobody from Tyree showed up. Contacted Shawn Healey and he mentioned they had problems with their dirller. Reschedule to 4/21/−4/23/2006.

4/4/2006 − Feng − Called from Glen Liu and stated that C&L would start ground breaking this month, and they got all the permits for construction. But they will hold up one week for Tyree to do the investigation. (RJF)

4/5/2006 − Feng − Sent letter to developer recommened do not proceed construction until an RAP approved by DEC and warning the developer would be jointly liable for remediation of soil and groundwater contamination. cc to Shawn Healey and Glen Liu. Glen Liu called and he would advise the developer to hold up the construction and asked for a specific date that Tyree would do the investigation. Tyree schedule it on 4/11−4/12. (RJF)

4/6/2006 − Feng − Requested the workplan from Tyree. (RJF)

4/10/2006 − Feng − Received siteplan with the sampling location on. Tyree proposed 4 soil/groundwater samples. DEC added two more soil/groundwater samples in addition to the four Tyree proposed, one from the former tank field where the highest endpoint samples found during the tank closure in 12/1999, and one from the former pump island. Emailed siteplan to Shawn Healey. (RJF)

4/11/2006 − Feng − Email from Shawn Healey "We attempted to install 6 soil borings, we had refusal at every boring. Refusal ranged from 20’ to 30’ bls, never encountering groundwater.
The site will be fully excavated tomorrow. We will attempt to collect samples at the bottom of the excavation. If these samples come back clean, we may be able to rule out there being groundwater contamination." "It appears they are excavating 10−12 feet bls. Out of six borings only one showed deflection on the PID. We did collect one sample from two different borings. (sample depth 25’ to 30’ bls)."

4/13/2006 − Feng − Sam Chen returned call and saying that they are installing the vapor barrier beneath the foundation. C&L has excavated part of the property already. Sam Chen agreed to wait for the lab result before construction. Feng emailed the DOH link for vapor barrier requirement to Sam Chen and asked him to check with his architect to make sure the one they designed is

vapor barrier and will be installed properly. Feng also suggested don't pour the foundation before we know what's beneath the site. (RJF)

5/10/2006 − Feng − Subsurface Investigation Report, 4/2006, submitted by Tyree. On 4/11/2006, Tyree attempted 6 borings on site within the vicinity of the former USTs. All were refused at various deths. Groundwater was not encountered. SB−1A, refused at 19'. SB−1B, refused at 19'. SB−2, refused at 30', sample collected at 24'−28' and lab analyticals show low. SB−3, refused at 30', sample collected at 24'−28' and lab results show low. SB−4, refused at 24'. and SB−6, refused at 15'. Tyree also collect soil samples from the sidewalls of the excavation in the eastern portion of the property. Samples from Southwest and East wall show high C−18 and C−20. Southwest wall, 20,600 ppb Benzo(a)anthracene, 21,600 ppb Chrysene, 18,200 ppb Benzo(b)fluoranthene, 15,800 ppb Benzo(k)fluoranthene, 18,800 ppb Benzo(a)pyrene, 1,780 ppb Dibenzo(a,h)anthracene. East wall, 21,100ppb Benzo(a)anthracene, 21,700 ppb Chrysene, 18,000 ppb Benzo(b)fluoranthene, 15,200 ppb Benzo(k)fluoranthene, 19,500 ppb Benzo(a)pyrene, 2,670 ppb Dibenzo(a,h)anthracene.

Further excavation is warranted in the southwest and east. Soil samples will be required upon finish excavation. (RJF)

5/15/2006 − Feng − FOIL requst for Tyree's Site Investigation report, dated 4/2006. from Glen Liu (C&L's lawyer). Fax him the FOIL form (212−226−0835). (RJF)

5/15/2006 − Feng − Received FOIL request and gave the form to Robert Leung for FOIL #. Email Glen Liu the pdf file. (RJF)

6/1/2006 − Feng − Call from Glen Liu state that the foundation was poured in part of the property. The former tanks area hasn't touched yet. (RJF)

6/2/2006 − Feng − Stipulation Agreement sent to both Getty Marketing and C&L Pioneer. DEC also request to have a meeting with both RP's. STIP due 6/23/2006. (RJF)

6/7/2006 − Feng − Call from Glen Liu stating that the site is ready to sample. I inform Shawn Healey from Tyree.

6/8/2006 − Feng − Email from Shawn Healey stating that they have approval from Getty Marketing to collect samples. Will be onsite either today or tomorrow. (RJF)

6/9/2006 − Feng − Site visite conducted by DEC staff Sun and Feng. The footing was constructed in the east portion of the property. Soil was excavating in the former tank area. Called Sam Chen requiring construction detail and signing the STIP sent previously. (RJF)

6/27/2006 − Feng − Called the architect who work for C&L for the construction detail. Sent the FOIL form to Glen Liu and remind him that DEC is still waiting for the construction detail and the STIP. (RJF)

6/28/2006 − Feng − Email from Glen Liu and stating that they want to know the investigation result before he can advise his client on the STIP. (RJF)

6/29/2006 − Feng − Updated Subsurface Investigation Report, 6/28/2006. Tyree collected 3 sidewall soil samples (about 5' bg) and 1 bottom sample (10' bg) from the excavation in the west portion of the property. No VOCs detected in the samples, but some SVOCs exceedance. Called Shawn Healey, soil excavation has been extended further to the sidewalk than as the time when first

round of endpoint samples were taken in May 2006. Discussed with Joe Sun, installation of vapor barrier would be required. (RJF)

6/30/2006 − Feng − Received the construction detail and subslab design from the developer's architect. 4 mil of vapor barrier is proposed to be install between the gravel layer and the concrete slab and will extend to the foundation wall. Called architect and developer and required a thicker vapor barrier. (RJF)

7/14/2006 − Feng − Received construction drawing from the developer's architect. 8 mil vapor barrier extend to foundation wall is proposed. Approved the vapor barrier.
Spill closed for the reasons of: 1) no VOCs detected in endpoint samples, only SVOCs exceedance. 2) further site excavation has been done, which would remove the contaminated soil found during the first round of endpoint samples and no further excavation would be possible. 3) the water table is greater than 30' bg, 6 attempts to collect groundwater has been made and all got refusal. Soil sample collected in 24'−28' showed non−detected or low contamination, so groundwater is assumed to be not contaminated. 5) installation of vapor barrier. NFA issued to Getty Marketing and C&L. (RJF)

CLOSED STATUS HAZARDOUS SPILLS − MISC. SPILL CAUSES − EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, AND VANDALISM − IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS.
All spills mapped and profiled within 1/8 mile. Between 1/8 mile and 1/2 mile search radius, spills reported to be greater than 100 units and spills reported in the NYSDEC Fall 1998 MTBE Survey are mapped and profiled. Spills reported to be less than 100 units are listed in a table at the end of this section.

Please Note: * − Compass directions can vary substantially for sites located very close to the subject property address.

unable to reach a GSA contact. Possible remediation under 94−07229.

Previous note by RDDECAND on 3/15/06

Spill transferred back to R−2

3/5/08 − Austin − Assigned to Ketani for further investigation − end

3/13/08 − Raphael Ketani. I began working on the case. Spill number 93−12153 was monitored by a former spills worker, Kerri O'Dowd. She didn't put in any case notes into the database. The spill was a 200 gal. overfill. It happened because someone had the wrong tank size. DEP was contacted at 10:30AM and GSA arrived at 2:15PM. Sand and Speedi Dri were applied to the spill. The case was closed on 1/15/94. The site address is 850 3rd Avenue, Brklyn. (29 St. & 3rd Ave.).

Case 94−07229 was managed by Kerri O'Dowd. There were no case notes. Contaminated soil was discovered and was being removed as it was being excavated. She closed the case on 3/29/95.

3/17/08 − Raphael Ketani. A copy of the original August 1993 Site Characterization Report was found in the file cabinet. It was produced by Woodward−Clyde Consultants, Inc. It was prepared for Rose, Beaton & Rose, Architects and Engineers, 81 Main Street, Brooklyn (212) 926−2878/(212) 594−2118.

According to the soil analytical tables in the report, there was no significant contamination. Table 4−2 for the groundwater samples didn't list any significant contamination, either. There was a fold out site map which showed the locations of the six formerly active tanks.

The PBS case is #2−601672. It shows that six tanks were closed in place on either 8/1/94 or 9/1/94. Four other tanks were installed on 9/1/94. Tank #7 is in service and tanks #8 to #10 are temporarily out of service.

A note in the file that I did find said that there were records in the open file section of the storage area downstairs. I checked the file storage room, but found nothing. I also asked around in the Division of Environmental Remediation, but no one had heard of the case for the site.

I checked the E−docs and found the following:

The E−docs contained a transmittal letter dated 8/10/93 stating that this was the second revision of th Site Characterization Report. An estimated 2050 cu. yds of soil will be excavated and an additional 450 cu. yds. of oil contaminated soil. Tanks #3 and #4 are scheduled to be removed, along with an 1100 gal. tank. Two 20,000 gal. tanks will be abandoned in place. Groundwater remediation is not necessary based upon the analytical results. A second round of groundwater sampling will take place August 1993.000

The parties involved are: Woodward−Clyde Consultants (212) 594−2118
Roy Feinzig (914) 682−4895, Rose, Beaton & Rose, Architects and Engineers, 81 Main Street, White Plains, NY, 10601
Charles Evans (718) 330−7474, Federal Building Manager, General Services Administration, Public Buildings Service, Contract Section, 26 Federal Plaza, rm. 1611, NY, 10278; GS0wP94CUC0055

A 10/4/93 E−doc note from Ms. O'Dowd states that they will install 3 new USTs. There are 6 USTs on site: 5 fuel oil (4 20,000 gal. tanks, 1 1100 gal. tank); 1 20,000 gal. gas tank. Groundwater is at 5.5' to 8.5' below grade. Nine soil borings will be done and 5 monitoring wells will be installed. MW−3G is in the area for the new UST. Groundwater is at 6' and dewatering will have to take place in order to install the new tank. USTs #3 and #4 are impacted. Fuel contaminated soil will have to be removed.

A 8/9/93 E−doc note from Ms. O'Dowd states that MW−1 has no VOC hits
MW−2 has less than 5 ppb
MW−3G has hexane 5.8 ppb, ethylbenzene <50 ppb, xylene ,50 ppb
MW−6 has 3 ppb of hexane
MW−9 has no VOCs

There was a 10/18/94 letter from Environmental Data Consultants to the GSA requesting well installation locations and regarding the NYCFD and NYC Building Department violations. Environmental Data Consultants, Inc., 55 Alder Street, Ste 2, South Yonkers, NY, 10701, (914) 968−1508. Dewatering took place to install the new tanks, but a SPDES permit wasn't needed as the discharge rate was below the permit lower limit and the water wasn't contaminated. Soil samples need to be taken at all of the closed tanks and the PBS record needs to be updated.

The 9/6/94 E−doc note states that there is 2" to 3" of oil in MW−3G. USTs #3 to #5 are to be removed. Wells MW−3 and MW−6 need to be replaced as they were destroyed. Many of the hits in Table 1 of the analyses summary table also appear in the blanks. So these analytes can be negated.

I tried to contact Charles Evans, but the phone number was not in service. I tried to reach Environmental Data Consultants, but

the phone number was not in service. I tried to reach Rose, Beaton & Rose, but the phone number belonged to another company. I tried to reach Woodward−Clyde, but the phone number belonged to another company.

3/18/08 − Raphael Ketani. I found a later case from 1999 for the same site − #9908767. It involves the test failure of three 30,000 gal. tanks. Contact people were listed on the spill report. They are: Steve Ferman (718) 340−5268, at the site; John Harris (718) 965−5147 of the General Services Administration; and Tom Burke (212) 264−0800 of the General Services Administration, Technical Services, 26 Federal Plaza, rm. 1611, NY.

I tried to contact Mr. Burke, but could only leave a message. I tried to contact Mr. Harris, but no one picked up. I tried to contact Mr. Ferman, but the number was no longer in service.

William (Bill) De Nyse (de−nice), Senior Industrial Hygienist, (212) 264−0506 called to ask what DEC had in the way of reports and documentation for the spill case. I told him we had the August 1993 Site Characterization Report that was produced by Woodward−Clyde, a Second Revision SCR and some small letters. He asked that DEC provide him the reports as he doesn't have them. He added that he was the contact person at the GSA and that he will try to help get the case closed. Mr. De Nyse asked what should happen if he can't find the closure reports. I told him that DEC will ask that a new investigation take place. I made copies of the reports and sent them to him.

4/11/08 − Raphael Ketani. I tried to contact Mr. De Nyse, but could only leave a message. His phone greeting said that he will be out until 4/21/08. I will try him then.

6/10/08 − Raphael Ketani. I tried to contact Mr. De Nyse, but could only leave a message.

I got ahold of Mr. Burke. He said that right now they are putting the contract out for bid. He said it will take some time in order to get a contractor lined up and get the investigation started. I told him to keep me updated. He added that Mr. De Nyse is the point of contact.

6/12/08 − Raphael Ketani. Mr. De Nyse called back. He said he is the regional engineer and the project is now being handled by a field (local) engineer at the site. The person is Rashid Mattoo (718) 254−7141 at 10 Metro Tech, Brklyn. Mr. De Nyse said that Mr. Mattoo is the contact person from now on. He added that right now they are trying to get funding to do the investigation. They have a scope of work, also.

8/12/08 − Raphael Ketani. I tried to contact Mr. Mattoo regarding the site investigation, but could only leave a message.

Mr. Burke called me back. He said that the contractor has been chosen and they expect to go to contract next week. He added that they will start in a week or two.

8/18/08 − Raphael Ketani. The case is being prepared for transfer due to a case realignment within the unit. The new case manager should probably call Mr. Mattoo or Mr. De Nyse in a week or two to find out the status of the investigation.

School under construction; underground tank was hit. Tank was emptied and removed, as well as contaminated soil. Area was backfilled and end point sample was taken from excavation.

DEC Investigator Remarks:

03/12/07−Hiralkumar Patel. spoke with Mr. Sharma. they were hired by contractor who is working at school construction site. site owned by NYC shcool authority. during construction activities, they hit underground tank and punched hole in it. as per Mr. Sharma, tank was about 1000 gal capacity and had about 800 gal diesel in it. spill started about 7:30 am and Mr. Sharma reached with crew for cleanup about 10 am. they have removed underground diesel tank and removed associated contaminated soil. they dug about two ft below tank invert. excavation was backfilled with five endpoint sample taken. asked Mr. Sharma to submit site plan with sampling locations, disposal manifests and sample analyticals.

03/27/07−Hiralkumar Patel. received call from Amy Fonpana (845−492−3178). they are preaparing closure report and will send by 04/15/07.

04/24/07−Hiralkumar Patel. spoke with Ms. Fonpana. they are still waiting for some disposal manifests and other documents. she will send report soon.

06/19/07−Hiralkumar Patel. left message for Ms. Fonpana.
06/26/07−Hiralkumar Patel. received message from Ms. Fonpana. they are still working on−site and waiting for some documents. will send report once they get all documents.

06/27/07−Hiralkumar Patel. Mr. Sharma reported another spill at same site. (new spill #: 0703584). they did borings on property along 34th street and found soil and groundwater contamination. Mr. Sharma mentioned that site had multiple tanks. asked Mr.

Sharma to send all analytical data (for all samples done on−site till date) and detailed scaled site map with all sampling locations, tank locations and associated lines. also asked Mr. Sharma to send copy of phase I and phase II reports.

06/28/07−Hiralkumar Patel. meet Bob Kanaparthi and Drew Pardus from NYC SCA and Michael Sherwood from Shaw environmental. Mr. Sherwood mentioned that school construction site is combination of two sites known as large parcel and small parcel. received phase I and Phase II reports from Mr. Sherwood.

abstract of Phase I:

− the site is located in mixed commercial/residential area on the corner of 4th ave and 35th street
− previous occupants of the site included private residences, a stationer, tool manufacturing facility, a garage and candy manufacturing.
− large parcel of site had 5000 gal tank and history of spills (9210902, 9605304, 9211737)
− site is approx. 20 ft above mean sea level
− BASED ON phase II investigations conducted by Weston for the McDonalds restaurant site located at 968 4th ave, the depth of groundwater is approx. 37 ft bg and groundwater flow direction is to the northeast. <−−−−−−−−−−−
− major spill sites in neighbourhood:
1. Greenwood Cemetery (Spill #s: 8710384, 8710694, 8902953, 9413808). all spill closed
2. Jackie Gleason Bus Depot (Spill #s: 9106350, 9507015, 9705882, 9803068, 9902851, 9908589, 0211807, 0402205, 0413523, 0702197)
3. 971−975 4th ave (spill #: 9207015). groundwater contamination reported <−−−−−−
4. Mobile service station, 89−14 4th ave (Spill #s: 0430002, 0330037, 8302631) reported groundwater contamination <−−−−−−−−−−
5. 987 4th AVe (spill #: 8706481). found groundwater contamination.

abstract of Phase II report:

− proposed design for school includes construction to a depth of approx. 18 ft bg
− depth of groundwater was found to range from between 14 and 24 ft bg
− total of 13 soil samples (LPB−1 to LPB−8, SPB−2,5,6,7 and 8) and 7 groundwater samples (LPB−1W, 5W and 8W, SPB−5,6,7 and 8)were collected for analysis
− found heavy Tricholorethene (160,000 ppb) contamination in groundwater sample SPB−5 <−−−−−−
− as found heavy TCE contamination in groundwater sample, did suplemental phase II
− collected two soil sample from two borings (close to previous boring location SPB−5) and three groundwater sample from same two borings on−site and four groundwater sample from two off−site borings
− also took 6 sub−slab soil−gas samples, because of heavy TCE contamination
− found no contamination in any soil, groundwater or soil−gas samples during supplemental phase II investigation

Drew Pardus
NYC SCA
Ph. (718) 752−5036 (O)
(646) 577−8280 (C)

during meeting Mr. Kanaparthi mentioned following:
− entire site has been excavated to depth of 16 ft and groundwater is about two more feet deeper than existing excavation bottom.
− during excavation, they removed total of five USTs (one 2000 gal fuel oil/diesel tank, one 1000 gal sugary mix tank, one 5000 gal tank, one 100 gal tank and one 1000 gal tank).
− found contaminated soil around some tanks and has been removed
− endpoint samples taken from contaminated zones
− currently footing work for proposed building is going on at site
− during construction found sheen on groundwater and gasoline odor
− took groundwater samples from two different locations
− found minor benzene (58 ppb) contamination in groundwate sample GW−1, along 35th street <−−−
− there will be two elevator pits, partially merged in groundwater
− to work on elevator pit, they need to dewater those areas
− due to high concentration of TCE in groundwater sample during first set of sampling, they will put vapor barrier and active SSDS under BASEMENT floor

asked Mr. Pardus to do following:

− installation of atleast three monitoring wells to define site specific groundwater flow direction and sampling soil and groundwater during this monitoring well installation.
− samples must be analyzed for STARS 8260 & 8270 methods & report must include chlorinated compounds
− no dewatering events until site−specific groundwater flow direction has defined (to prevent spreading contamination if dewatering points are downgradient to source of contamination)
− no concrete/foundation work till full investigation completed
− installation of one more monitoring well upgradient (once groundwater flow direction defined) to check any off−site migration
− submission of soft copy of vapor barrier & SSDS design
− monitoring wells atleast 5 ft below groundwater table
− samples from monitoring wells must be taken using Low Sress (low flow) Purging and Sampling procedure (EPA guidance)

−−*−

removed approx. 15,000 cubic yards of contamianted soil and had groundwater contaminated. case closed on 07/13/2006.

WRONG REPORT UPLOADED ON E−DOCS (FIRST FILE IN LIST) <−−−−−−−−−−−− *****

−

−
Spill #: 8706481. 987 4th Ave, Brooklyn, NY.

spill reported as gasoline tanks failed a test.

PBS#: 2−157236. site had 14 tanks and were removed in 1990. from spill database, found that groundwater was impacted with gasoline spill and had free product in wells installed on−site a that time. groundwater is at 38 ft bg. case still open.
−

07/05/07−Hiralkumar Patel. visited site on 07/02/07 as found heavy soil and groundwater contamination in neighbour's property at 129 34th Street, which is auto repair shop. spoke with Mr. Pardus today and asked him to install additional monitoring wells along 34th street (two wells on 34th street along property line: one at each corner and one well along boundry between park and construction site). these wells are just for monitoring purpose, in case any contamination from auto repair area touches the construction site. also asked Mr. Pardus to provide site addresses for neighbours on south and east side of construction site (assumed upgradient side)

07/16/07−Hiralkumar Patel. received call from Mr. Pardus regarding sample analysis for specific chlorinated compounds. asked Mr. Pardus to run all groundwater samples for compound that was found high (PERC) in previous investigation.

07/23/07−Hiralkumar Patel. received message from Mr. Pardus asking for meeting. spoke with Mr. Pardus and asked him to submit data for review prior to any meeting.

07/24/07−Hiralkumar Patel. received sample analyticals and site map with monitoring well locations, from Mr. Pardus. they installed four wells on site and one on sidewalk along 35th street. found very minor contamination. from monitoring wells, they found groundwater flow in south direction (from site which has heavy groundwater contamination: 129 34th street). monitoring well #1 installed close to area where they found high PERC in groundwater. Mr. Pardus asked for dewatering of site for construction activities. mentioned to Mr. Pardus that as no contamination found in any samples, they can do dewatering but they need permits from city agencies for that. asked Mr. Pardus to install one well in corner of property along park along 34th street (as found heavy soil and groundwater contamination at site 129 34th street). also asked him to monitore well # 4 until it nocked down. asked Mr. Pardus to submit entire report with boring logs, water depths etc.

07/25/07−Hiralkumar Patel. spoke with Mr. Pardus. told him that they can start dewatering from site (based on analytical data). also asked Mr. Pardus to install a permanent monitoring well on sidewalk along 34th street (close to property line between subject site and park) as subject site is exactly downgradient from contamianted site at 129 34th street. this well will be used as monitoring point to see any oil from 129 34th street site hit construction site or not. Mr. Pardus mentioned that they will install vapor barrier and sub−slab system. Mr. Pardus will schedule installation of one well on sidewalk along 34th street.

03/20/08−Hiralkumar Patel. received tank closure report from Shaw environmental. abstract:

− site groundwater was encountered between 16 to 18 ft bg
− installed four wells (MW−1, MW−2, MW−4 and MW−5)
− no tidal influence noticed in wells MW−1, MW−2 and MW−5, via automatic data logger
− groundwater level data from MW−4 shows rise in the water level; cause o fthis water level rise is unknown (no preceipitation or on−site dewatering during or before water level measurement)
− direction of groundwater flow from north toward the south and away from the Upper New York Bay; this is opposite of the anticipated direction of groundwater flow based upon the surface topography of the area and the proximity to the Upper New York Bay (0.3 miles northwest)
− removed four regulated (petroleum) USTs and one non−regulated (sugar) UST in Mar.−Apr. 2007
− four petroleum tanks removed: one 2000 gal, one 1000 gal, one 5000 gal and one 100 gal
− one 1000 gal sugar tank removed
− 2000 gal tank was punctured during excvation and then spill reported
− 2000 gal UST found to be in fairly good condition with no significant evidence of corrosion
− final dimensions of excavation for 2000 gal UST measured approx. 15 ft wide by 20 ft long by 20 ft deep; after collection of endpoint samples, excavation backfilled
− 100 gal UST was dicovered immeidately beneath the concrete slab of the former site building
− 100 gal UST was found to be old and rusted with large openings
− following removal of 100 gal UST, no evidence of release was observed; no impacted material was excavated; one bottom endpoint sample collected after tank removal
− 5000 gal UST was abandoned−in−place with concrete
− 5000 gal UST found to be slightly corroded but no holes were observed
− final dimensions of excavation for 5000 gal UST measured approx. 30 ft wide by 50 ft long by 35 ft deep; after collection of endpoint sidewall samples, excavation backfilled
− no endpoint bottom samples collected after 5000 gal tank removal <−−−−−−−−−−−−−
− 1000 gal UST was discovered about 5 ft bg and found to be rusted with a large hole where it appears that the weld seperated <−−−−−−−
− final dimensions of excavation for 1000 gal UST measured approx. 10 ft wide by 15 ft long by 15 ft deep; after collection of endpoint samples, excavation backfilled
− groundwater samples collected from one geoprobe GW−1 and four monitoring wells (MW−1, MW−2, MW−4 and MW−5)
− found some SVOC contamination in endpoint soil samples and some VOC contamination in groundwater samples
− school design includes a vapor barrier and an active SSDS

06/03/08−Hiralkumar Patel. spoke with Mr. Pardus. he doesn’t know about construction status. asked him to submit soft copy of vapor barrier and SSDS design for review by NYS DOH, prior to installation of such.

06/06/08−Hiralkumar Patel. during site visit in neighbourhood, pass through subject site and found few floors already developed at the site. no information available whether vapor barrier and active SSDS were installed or not.

06/17/08−Hiralkumar patel. spoke with Mr. Sherwood. asked him about endpoint bottom sample after removal of 5000 gal tank and design specification of vapor barrier and SSDS.

left message for Mr. Pardus for following:

− submission of design specs of vapor barrier and SSDS
− confirmation about installation of vapor barrier and SSDS
− clarification for not taking endpoint bottom sample after 5000 gal tank removed

06/23/08−Hiralkumar Patel. left message for Mr. Pardus.

07/09/08−Hiralkuamr Patel. received email from Mr. Sherwood with vapor barrier and SSDS design and clarification about not taking endpoint bottom samples after 5000 gal tank removal. as per Mr. Sherwood, Shaw environmental was not on site to witness the removal of the 5,000 gal UST as this work was overseen by GZA Environmental, the consultant to the general contractor. as per GZA, they have indicated that they initially removed the UST but did not collect confirmatory soil samples because they felt that there were some minor impacted soils that needed to be excavated and knew that the Contractor was coming back to this area to excavate for the building foundation. when contractor returned to the area to excavate for the building foundation, they indicated that they excavated contaminated soils down to the watertable at approximately 18 feet below grade, and therefore could not collect
bottom soil samples. in June 2007, Shaw conducted a soil and groundwater investigation at the site. during that investigation, collected two water samples in the southwest corner of the building foundation excavation, immediately below the former location of the 5,000 gallon UST. one sample was collected from a temporary geotechnical well (GW−2) already in place at the Site and the other was collected from standing water (SGW−1) that had pooled in that corner of the Site. no contamiantion found in groundwater samples.

5000 gal UST was removed in Apr. 2007 and groundwater samples were taken in June 2007 after contractor removed soil under water table as part of foundation work.

based on submitted documents till date, case closed.

see Spill #: 0703584 & 0700836 also as reported to same site.

CONTRACTOR DIGGING IN AREA AND HIT FEEDER. SPILL IS JUST ON LAND. LEAK IS ACTIVE. 200184

DEC Investigator Remarks:

200184. Significant Spill Event Notification sent to Lou Oliva, Dan Walsh and Randy Austin:
"This morning at approximately 1:10 AM a NYCDOT contractor conducting a paving job on Third Avenue in Brooklyn caused a leak from Con Edison’s high pressure 345 kV feeder B−26. The leak occurred at the intersection of 30th St. Initial estimate of leak amount was 2000 gallons, most of which came up through the pavement onto the street. Crews on site bermed the area and the spill is under control, however the leak is still continuing at a high flow rate. This is due to the fact that there is no redundant feeder in this area, therefore the pressure on the feeder has to be maintained. Oil is being directed into a nearby Con Ed manhole, where it is collected and being pumped out by tankers. Thus far approximately 3000 to 4000 gallons has been recovered.

Agencies responding to the incident include NYPD, DEP and OEM, and no initial response was made by DEC during the off−hour period. This morning at approximately 9:00 AM, DER staff [Sam Arakhan] responded to the incident scene and is currently on−scene.

Feeder pipe has been excavated and exposed, and Con Ed is trying to figure how to apply a clamp to stop the leak.

This incident was reported on local TV and radio." (JHO)

Update:
5/24/06
The feeder was punctured by a 2−inch pipe of unknown function. Feeder oil is flowing under pressure through the 2−inch pipe and is being collected by a tanker vacuum hose. An excavation approximately 8 feet by 8 feet has been made to a depth of approximately 5 feet. The feeder line has been exposed at the leak and crews are awaiting construction material to shore the excavation. The repair crew plans to freeze the line with liquid nitrogen in order to install a clamp over the leak. It is anticipated that the leak will be clamped by 1 PM today. PCBs content of the spilled oil was less than 1 ppm. (SKA)

Update
5/25/06
Sam Arakhan visited scene for second time at 1:30 PM on 5/24. The vertical pipe that was leaking was plugged with a broom handle and the valve to the pipe was turned off at the substation; surface cleanup was ongoing. Oil soaked sand, absorbent material and asphalt were being swept and vacuumed into roll−off containers. The 5−inch pipe that was ruptured was a redundant line. Con Edison plans to drain and clean the pipe; it will then be abandoned in place. Con Ed personnel were instructed to take five post−excavation samples in the pit at the point of rupture − samples to be tested for TPH and benzene. (Pictures in eDocs) SKA

see eDocs

Update 6/5/06
The following e−mail was received from Mike Pillig on 6/5/06:

Sam,

I understand you were at the subject leak site on 5/24/06. You had requested that 5 samples be taken (1 on each wall and 1 on the floor) and analyzed for TPH modified 8100. Also, one sample was to be taken and analyzed for total and TCLP benzene. This was completed and the results are attached. In addition, subsequent to your visit, I discovered that DF had migrated into "holes" in the roadway and spread beneath the base concrete in several location under the BQE. As such, I excavated two areas to a depth of approx. 12−18". One excavation was 35' long and tapered in such a way that it was 8' wide at its widest point. I took floor samples down the center of the excavation every 5'. The second excavation was much smaller (2' X 8'). I took one floor sample about in the middle. Photos of the excavations you did not see are attached. Based on these results, we should be able to close this spill. Please confirm. Thanks for your help.

Mike

(Post excavation results are satisfactory − analytical results and pictures in eDocs) SKA

CLEAN UP IS PENDING SAMPLE RESULTS. CONTAINED TO MANHOLE. NO TO FIVE QUESTIONS. 200209

DEC Investigator Remarks:

08/15/06 − See e−docs for Con Ed report detailing cleanup and closure.

Secondary incident to sp 0602005 feeder leak. Contractor tanker truck with load of cable oil from feeder leak went to Gowanus Substation to pump out sheen and water from manhole. Driver accidentally hit backpressure lever while hose was in manhole, releasing contents of tanker into manhole. Contained in manhole. Even though there is generator knowledge that there are no PCBs in the cable oil, they will test anyway since the condition of the tanker is unknown. See e−docs for additional info. (JHO)

Caller Remarks:

secondary cables on the transformer malfunctioned failed causing the transformer to leak.there was a delay in reporting it they had to wait for f.d. to put out fire

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ENGELHARDT"
CONED STATES PCB CONCENTRATION ON RECORD AS NON−HAZARDOUS.

9/15/97 e−mail from ERT Lukshides:

spill contained on barge.

CON ED E2MIS NOTES

The cause of the fire is unknown and because the fire could not be contained until approx. 3or so the notificaion as delayed to DEC... a small leak ws afound in the transformer. It could not be cleaned off until the transformer was grounded. Approx. 200 gals. of oil spilled into the moat which is primary contaiment,spill rail is secondary and hard boom is third containment.

Update: Feeders 42422 (barge 3) and 42424 (barge 4) tripped. Feeders were re−energized, which faulted resulting in an electrical fire. Bleed−off valves of transformer banks 3 & 4 melted off resulting in transformer oil leakage into the primary containment area (moat).

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SAWYER"
02/28/03 Rommel Office Duty

Spoke to Anthony Lara on site (cell 646−772−6381)

2/28/2003−Vought−Site visit by Vought on 2/28/2003. Spill caused by misdelivery to wrong address. PTC vacuum truck on−site. Spill came out of rotting fill pipe in alleyway behind buidling and sprayed over approximately 25' x 7' plot of soil. Spill also ran down stairwell and into basement of 881 5th Ave. Spill entered hole in concrete of unfinished basement bathroom. One endpoint sample needed in bathroom and three needed in rear alleyway (Vought communicated this to PTC−Isaac Mungra). Fill port cemented by PTC when Vought arrived on−site. For closure NYSDEC requires endpoint samples, analyticals and work invoice. Vought called super (Abe−718−258−6590) and left message stating above requirements.

3/5/2003−Vought−Received message from Mark Tibbe (NYSDEC) that adjacent bus depot complaining of odors. Vought called PTC to find cleanup status. Vought left message for PTC to call back.

3/6/2003−Vought−Spoke with Ray Lara and 30 drums of soil were removed. Endpoints samples will be taken today. PID used to monitor samples. Sending analyticals and disposal manifest to NYSDEC.

4/8/2003−Vought−Received message from Ray Lara. Vought returned call and left message for Ray to return call to NYSDEC.

1/7/04−Vought−Spill transferred from Vought to Austin.

01/27/04 − Sawyer − Spill transferred from Austin to Sawyer.

4/10/08 − Haggerty: reviewed Spill Closure Report prepared by Petroleum Tank Cleaners. The report consisted of 3 soil samples taken from the bottom of the excavation adjacent to the fill pipe where spill occurred. I spoke with Anthony Lara of Petroleum Tank Cleaners to discuss. I explained that this spill will not be closed until a soil sample is taken from the unfinished basement bathroom as Jeff Vought(R2) had previously instructed. He will get the sample and submit results.

6/10/08 − Haggerty: reviewed additional soil sample analyticals from the "unfinished basement bathroom". Oil ran down stairs next to fill pipe into this bathroom and drained into a hole in the concrete floor. Anthony Lara (Petroleum Tank Cleaners) stated they collected the sample 2ft below the concrete floor using a hand auger. Analyticals results for 3 excavation bottom samples and the bathroom floor sample meet standards. Spill closed

Caller Remarks:

A CONTRACTOR DAMAGED A 6INCH DIELECTRIC FEEDER PIPE AND IT SPILLED INTO THE LAND AND INTO A SEWER − CON ED IN PROCESS OF CLEAN UP

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"

Duplicate spill #9514066. Water service was leaking at 214 23rd St. Plumber dug hole − feeder lost pressure, oil is coming up out of ground onto road. some ran into sanitary sewer, Con Ed diverted remainder into nearby manhole. Water service is shut off. Dielectric tankers were used to collect spilled oil. Con Ed is to clamp the feeder ASAP. Analytical results on the oil are due at 2−3 PM. PCB count unknown at this time. Will have cars moved, remove snow, clean street. Current pressure at 5 to 6 psi.

Source of leak identified by Con Ed as a 1" leak in the water service line to 214 23rd St. water leaking from service line agitated sand near feeder, polishing cable finish off. DEP instructed the homeowner that it was their own responsibility to replace the water service line.

Temporary clamp installed by 2:45 PM. Pressure reduced to 0 psi. Permanent weld to be made by midnight crew. PCB results − 4 ppm. (CAE)

2/13/95: Spoke with Joe Oliverto, S&TO − excavated 2−3 feet below feeder, collected 5 samples −to Karel Konrad. 6" recovery well installed by MEG. (CAE)

APPENDIX B SITE NO. 62.

2/23/05 − Draft site investigation work plan, prepared by CDM, submitted for review. (JHO)

5/2/05: Comment letter sent to Con Ed − required modification of QAPP. (SKA)

6/7/05: Revised Final SIWP submitted. (JHO)

6/29/05: SIWP approved. (SKA)

8/2/06: Site Investigation and Remediation Plan submitted. Assigned to Shaun Bollers for review. (JHO)

9/20/06: Based on review of SIRP, no residual contamination from this incident was detected in soil or groundwater. Copy of report and no further action letter contained in eDocs. Close out. (JHO)

THE FOLLOWING CLOSED SPILLS FOR THIS CATEGORY WERE REPORTED BETWEEN 1/8 MILE AND 1/2 MILE FROM THE SUBJECT ADDRESS. THESE SPILLS WERE REPORTED TO BE LESS THAN 100 UNITS IN QUANTITY AND CAUSED BY: EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, OR VANDALISM. THESE SPILLS ARE NEITHER MAPPED NOR PROFILED IN THIS REPORT.

Hazardous waste codes presented in individual Toxic Information Profiles are defined below.

B002 Petroleum oil or other liquid containing 50 ppm or greater of PCBs but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

B003 Petroleum oil or other liquid containing 500 ppm or greater of PCBs.

B004 PCB Articles containing 50 ppm or greater of PCBs but less than 500 ppm PCBs excluding, small capacitors. This includes oil filled electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable

B005 PCB Articles containing 500 ppm or greater of PCBs, excluding small capacitors.

B006 PCB Transformers. "PCB Transformers" means any transformer that contains 500 ppm PCB or greater.

B007 Other PCB Wastes including contaminated soil, solids, sludges, clothing, rags, and dredge material.

B009

B010

D001 Solid waste that exhibits the characteristic of ignitability, but is not listed under any other hazardous waste code.

D002 Solid waste that exhibits the characteristic of corrosivity, but is not listed under any other hazardous waste code.

D003 Solid waste that exhibits the characteristic of reactivity, but is not listed under any other hazardous waste code.

D004 Arsenic

D005 Barium

D006 Cadmium

D007 Chromium

D008 Lead

D009 Mercury

D011 Silver

D018 BENZENE

D022 Chloroform

D035 Methyl ethyl ketone

D039 Tetrachloroethylene

F001 The following spent halogenated solvents used in degreasing: Tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1−trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

F002 The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1−trichloroethane, chlorobenzene, 1,1,2−trichloro−1,2,2−trifluoroethane, ortho−dichlorobenzene, trichlorofluoromethane, and 1,1,2−trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)

F003 The following spent non−halogenated solvents: Xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n−butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent non−halogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above non−halogenated solvents, and, a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I)*

F005 The following spent non−halogenated solvents: Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2−ethoxyethanol, and 2−nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non−halogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I,T)

F007 Spent cyanide plating bath solutions from electroplating operations. (R, T)

K078

P044 Phosphorodithioic acid, O,O−dimethyl S−[2−(methylamino)−2−oxoethyl] ester

P071 Methyl parathion

P075 Nicotine, & salts

P081 Nitroglycerine (R)

P098 Potassium cyanide K(CN)

P105 Sodium azide

P120 Vanadium oxide V2O5

U002 Acetone (I)

U007 2−Propenamide

U075 Dichlorodifluoromethane

U080 Methane, dichloro−

U122 Formaldehyde

U123 Formic acid (C,T)

U132 Phenol, 2,2−methylenebis[3,4,6−trichloro−

U134 Hydrogen fluoride (C,T)

U144 Acetic acid, lead(2+) salt

U151 Mercury

U154 Methyl alcohol (I)

U161 Pentanol, 4−methyl−

U188 Phenol

U190 Phthalic anhydride

U196 Pyridine

U210 Ethene, tetrachloro−

U213 Tetrahydrofuran (I)

U228 Ethene, trichloro−

U239 Xylene (I)

U246 Cyanogen bromide (CN)Br

How Toxic Site Locations Are Mapped

Toxics Targeting maps toxic site locations on a digital version of the U. S. Census map or those used by local authorities using addresses and map coordinates provided by site owners/operators or government agencies. In order to allow site locations to be verified independently, the information used to map each site is presented in the first section of each Toxic Site Profile, along with a description of the mapping technique used and any address corrections that were made in order to locate toxic sites with incomplete or inadequate site location information. The mapping process is explained below.

Map Identification Number: 12 Site Name: Acme World Manufacturing, Inc.

Site Address: 55 Main Street Anytown, NY 11797

MAP LOCATION INFORMATION

Site location mapped by:

Address Matching

1) Most toxic sites are mapped by matching addresses provided by site owners/operators or government agencies with locations on a digital version of the street or parcel map. These site locations are identified with the method used to map them.

Note: Some sites have an address match location and a map coordinate location. Both locations are mapped because they can be equally correct.

or Map Coordinate

2) Some toxic sites are located using map coordinates provided by site owners/ operators or government agencies. These site locations are identified "map coordinate." Map coordinates for Toxic Wastewater Discharges, Toxic Release Inventory sites and Major Oil Storage Facilities should be considered suspect.

or Manual Mapping

or Site Visit

3) Incomplete addresses or map coordinates require some site locations to be determined by commercial street maps (manual mapping), site visits, map coordinates from other databases and address location services. Application of any of these methods is identified accordingly.

ADDRESS CHANGE INFORMATION

Revised Street: NO CHANGE

Revised zip code: NO CHANGE

4) Site addresses are sometimes corrected to eliminate obvious errors that prevent sites from being mapped. All address corrections are noted here.

Information Source Guide

Toxics Targeting's Environmental Reports contain government and other information compiled on 21 categories of reported known or potential toxic sites. Each toxic site database is described below with information detailing a) the source of the information, b) the date when each database is covered to and c) when *Toxics Targeting* obtained the information..

1) **National Priority List for Federal Superfund Cleanup:** Toxic sites nominated for cleanup under the Federal Superfund program. Annual compilation of special two-page detailed profiles of NPL sites. Also includes delisted NPL sites.
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.[1]
Data attributes updated from: 7/20/2012. Data obtained by Toxics Targeting: 7/20/2012.
New Facilities updated through: 7/20/2012. Data obtained by Toxics Targeting: 7/20/2012.

2) **Inactive Hazardous Waste Disposal Site Registry:** New York State database that maintains information and aids decision making regarding the investigation and cleanup of toxic sites. The Registry's data includes two-page profiles noting site name, ID number, description, classification, cleanup status, types of cleanup, owner information, types and quantities of contaminants, and assessment of health and environmental problems. Also included are sites that qualify for possible inclusion on the Registry. These Registry Qualifying sites may or may not be on the Site Registry.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]
Data attributes updated through: 6/19/2012. Data obtained by Toxics Targeting: 6/19/2012.
New Facilities updated to: 6/19/2012. Data obtained by Toxics Targeting: 6/19/2012.

3) **Corrective Action Activity (CORRACTS):** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency[1]
Data attributes updated through: 5/9/2012. Data obtained by Toxics Targeting: 6/4/2012.
New facilities updated through: 5/9/2012. Data obtained by Toxics Targeting: 6/4/2012.

4) **CERCLIS:** Toxic sites listed in the Federal Comprehensive Environmental Response, Compensation and Liability Information System. Includes Active and No Further Remedial Action Planned (NFRAP) sites.
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency.[1]
Data attributes updated through: 11/28/2011. Data obtained by Toxics Targeting: 12/21/2011.
New Facilities updated through: 11/28/2011. Data obtained by Toxics Targeting: 12/21/2011.

5) **Brownfield Programs:** NYS programs for sites that are abandoned, idled or under-used industrial and/or commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.
ASTM required.* Source: New York State Department of Environmental Conservation.[2]
Data attributes updated through: 6/19/2012. Data obtained by Toxics Targeting: 6/19/2012.
New Facilities updated to: 6/19/2012. Data obtained by Toxics Targeting: 6/19/2012.

(a) **Brownfield Cleanup Program (BCP)**
(b) **Voluntary Cleanup Program (VCP)**
(c) **Environmental Restoration Program (ERP)**

6) **Solid Waste Facilities:** a compilation of the following 2 databases:

(a) **NYS Solid Waste Registry:** which includes, but is not limited to, landfills, incinerators, transfer stations, recycling centers.
ASTM required.* Fannie Mae required.** Source: New York State Dept. of Environmental Conservation.[2]
Data updated to: 12/31/2001. Data obtained by Toxics Targeting: 3/16/2002.

(b) **1934 Solid Waste Disposal Site in New York City:** which includes sites operated by municipal authorities circa 1934. Source: City of New York Department of Sanitation (1984). The Waste Disposal Problem in New York City: A Proposal For Action.

7) **RCRA Hazardous Waste Treatment, Storage or Disposal Facility Databases:**

(a) **Manifest Information:** New York State database of hazardous waste facilities and shipments regulated by the DEC's Bureau of Hazardous Waste Facility Compliance pursuant to NYS Law and the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]

New facilities updated through: 3/31/2012. New facilities obtained by Toxics Targeting: 6/7/2012.
Manifest transactions data updated to: 3/31/2012. Manifest transactions data obtained by Toxics Targeting: 6/7/2012.

(b) **RCRA Notifier & Violations Information:** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency[1]
New facilities updated through: 5/9/2012. Data obtained by Toxics Targeting: 6/4/2012.
Data attributes updated through: 5/9/2012. Data obtained by Toxics Targeting: 6/4/2012.

8) **Spills Information Database:** Spills reported to the DEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from Petroleum Bulk Storage Regulations) or 6 NYCRR Section 595.2 (from Chemical Bulk Storage Regulations). This database includes both *active* and *closed* spills.
ASTM required.* Fannie Mae.** Source: NYS Department of Environmental Conservation.[2]

New spills through: 6/17/2012 New spills data obtained by Toxics Targeting: 6/17/2012
Spill attribute data through: 6/17/2012 Spill attribute data obtained by Toxics Targeting: 6/17/2012

Active spills: paperwork not completed. Closed spills: paperwork completed.
Both active and closed spills may or may not have been cleaned up (see Date Cleanup Ceased in spill profiles).

9) **Major Oil Storage Facilities:** NYS database of facilities licensed pursuant to Article 12 of the Navigation Law, 6NYCRR Parts 610 and 17NYCRR Part 30, such as onshore facilities or vessels, with petroleum storage capacities equal to or greater than four hundred thousand gallons. **Tank & other data withheld by NYSDEC as of 4/1/2002**.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]

Data updated through: 6/4/2012. Data obtained by Toxics Targeting: 6/4/2012.

10) **Petroleum Bulk Storage Facilities:** a compilation of local and state databases of aboveground and underground petroleum storage tank facilities.

(a) **NYS Petroleum Bulk Storage Database:** This includes all New York State counties except Cortland, Nassau, Rockland, Suffolk, and Westchester. ASTM required.* Fannie Mae required.**
Source: NYS Department of Environmental Conservation.[2]
New facilities updated through: 6/4/2012. Data obtained by Toxics Targeting: 6/4/2012.
Tank data updated through: 6/4/2012. Data obtained by Toxics Targeting: 6/4/2012.

(b) **New York City Fire Department Tank Data:** **Data has been withheld by the NYC Fire Dept.**
Source: New York City Fire Department. Data obtained by Toxics Targeting: 2/18/1997

11) **RCRA Hazardous Waste Generators and/or Transporters Databases:**

(a) **Manifest Information:** New York State database of hazardous waste facilities and shipments regulated by the NYS Department of Environmental Conservation's Bureau of Hazardous Waste Facility Compliance pursuant to New York State Law.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]

New facilities updated through: 3/31/2012 . New facilities obtained by Toxics Targeting: 6/7/2012.
Manifest transactions data updated to: 3/31/2012. Manifest transactions data obtained by Toxics Targeting: 6/7/2012.

(b) **RCRA Notifier & Violations Information:** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).
ASTM required.* Fannie Mae required.** Source: U. S. Environmental Protection Agency[1]

New facilities updated through: 5/9/2012. Data obtained by Toxics Targeting: 6/4/2012.
Data attributes updated through: 5/9/2012. Data obtained by Toxics Targeting: 6/4/2012.

12) **Chemical Bulk Storage Facilities:** New York State database of facilities compiled pursuant to 6NYCRR Part 596 that store regulated substances listed in 6NYCRR Part 597 in aboveground tanks with capacities greater than 185 gallons and /or in underground tanks of any size. **Tank & other data withheld by NYSDEC as of 4/1/2002**.
ASTM required.* Fannie Mae required.** Source: New York State Department of Environmental Conservation.[2]
Data updated through: 6/4/2012. Data obtained by Toxics Targeting: 6/4/2012.

13) **Historic New York City Utility Facilities (1898 to 1950):** An inventory of selected power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites identified in various historic documents, maps and annual reports of New York utility companies, including: Sanborn Fire Insurance Maps of NYC (1898-1950); Consolidated Edison Co. Annual Reports (1922-1939); Consolidated Edison Co. Map: "Boroughs of Manhattan and the Bronx Showing Distribution Mains of the New York Edison Co.," (1922); and Consolidated Edison document: "Generating and Annex Stations," (1911).

14) **Hazardous Substance Waste Disposal Site Study:** NYS database of waste disposal sites that may pose threats to public health or the environment, but could not be remediated using monies from the Hazardous Waste Remedial Fund.
Source: New York State Department of Environmental Conservation.[2]
Data updated to: 5/16/2000. Data obtained by Toxics Targeting: 5/16/2000.

15) **Toxic Release Inventory (TRI):** Federal database of manufacturing facilities required under Section 313 of the Federal Emergency Planning and Community Right-to-Know Act to report releases to the air, water and land of any specifically listed toxic chemical. See Fannie Mae requirement** below.
Source: U. S. Environmental Protection Agency.[1] / NYS Department of Environmental Conservation[2]
Data updated through: 3/8/2004. Data obtained by Toxics Targeting: 3/25/2004

16) **Toxic Wastewater Discharges (Permit Compliance System):** Federal database of discharges of wastewater to surface waters and groundwaters. See Fannie Mae requirement** below. Source: U. S. Environmental Protection Agency.[1]
Data updated through: 6/17/2004. Data obtained by Toxics Targeting: 7/19/2004.

17) **Air Discharge Facilities:** EPA AIRS database containing address information on each air emission facility and the type of air pollutant emission it is. Compliance information is also provided on each pollutant as well as the facility itself.
See Fannie Mae requirement** below. Source: U. S. Environmental Protection Agency[1]
Data updated through: 11/24/1999. Data obtained by Toxics Targeting: 1/6/2000

18) **Civil Enforcement & Administrative Docket:** This database is the U. S. EPA's system for tracking administrative and civil judiciary cases filed on behalf of the agency by the Department of Justice. Fannie Mae required.**
Source: U. S. Environmental Protection Agency.[1]
New Sites through: 10/14/1999.
Data updated through: 10/14/1999. Data obtained by Toxics Targeting: 11/18/1999.

19) **New York City Environmental Quality Review (CEQR) – E Designation Sites:** These sites are parcels assigned a special environmental ("E") designation under the CEQR process. E designation requires specific protocols that must be followed. Source: New York City Department of Planning[3]
Data updated through: 6/21/2012. Data obtained by Toxics Targeting: 7/2/2012

20) **Emergency Response Notification System (ERNS):** Federal database of spills compiled by the Emergency Response Notification System. On-site searches only.
ASTM required.* See Fannie Mae requirement** below. Source: U. S. Environmental Protection Agency.[1]
Data updated through: 1/31/2000. Data obtained by Toxics Targeting: 2/15/2000

21) **Remediation Site Borders:** Remediation site borders reported by NYSDEC.
Source: New York State Department of Environmental Conservation.[2]
Updated through: 4/8/2009. Data obtained by Toxics Targeting: 7/21/2009.

* American Society of Testing Materials: Standard Practice on Environmental Site Assessments: Phase I Environmental Site Assessment Process (E1527-05).

** Fannie Mae's Part X Environmental Hazards Management Procedures specify 1.0 mile searches for "any state or Federal list of hazardous waste sites (e.g. CERCLIS, HWDMS etc.)." Searches for the property and adjacent properties are specified for "chemical manufacturing plants," "obvious high risk neighbors engaging in storing or transporting hazardous waste, chemicals or substances" and "...any documented or visible evidence of dangerous waste handling... (e.g. stressed vegetation, stained soil, open or leaking containers, foul fumes or smells, oily ponds, etc." Searches for property and adjacent properties can include sites up to a quarter mile away (W. Hayward, Director, Multi-Family Business Planning and Control, Fannie Mae, personal communication, 5/94).

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2005. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 601 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2005. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 702 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.
