Mr. Andrew Kimball
Industry City
882 3rd Avenue
Brooklyn, NY 11232

Re: **Phase I Environmental Site Assessment (ESA) Update**
Industry City – Buildings 1-10 and 19-26
Brooklyn, NY

Dear Mr. Kimball:

AKRF, Inc. (AKRF) is pleased to submit this update to the October 2012 Phase I ESA of Industry City – Buildings 1-10 and 19-26, Brooklyn, New York (the "Site"). At the time of the current assessment, development on the Site remained largely unchanged and comprised of commercial/warehouse/industrial buildings, associated open space, a power plant and three boiler houses. The Site was occupied by offices, retail stores, warehouses, manufacturing, storage areas, vacant commercial space, woodworking shops, artist studios, a school for the disabled, and open space (areas of landscaping, overgrown vegetation, parking and loading docks). Portions of each building within the Site were unoccupied. The scope of the Update was consistent with industry standards including ASTM E1527-03 and the EPA's All Appropriate Inquiry Rule and included:

- Reviewing a compilation of state and federal databases consistent with databases and search radii of ASTM E1527-13;
- A reconnaissance of the Site and neighboring properties (viewed from public rights-of-way) on December 8, 2017; and
- Summarizing available previous studies completed for the Site.

Regulatory Database Review

Regulatory database information, as shown in Appendix A, was obtained from Toxics Targeting, Inc. of Ithaca, New York. The Introduction of Appendix A includes summaries of the databases searched, their radii around the Site and limitations of the data. The databases searched and associated radii were consistent with American Society for Testing and Materials (ASTM) E1527-13. The December 19, 2017 regulatory database search a few significant changes on-site or in the surrounding area since the 2012 Phase I ESA that would indicate the presence of additional Recognized Environmental Conditions (RECs). To the extent that pertinent additional information was identified, it has been summarized in the Findings section of this report.

Property Description

On December 8, 2017, Matthew Levy and Axel Schwendt of AKRF conducted a reconnaissance of representative first floor and basement areas of the Site, accompanied by Mr. Salvatore Coppola of Industry City, who answered pertinent questions. Neighboring properties were also viewed from public rights-of-way. The weather was partly cloudy and approximately 30°F, the visibility good, and the premises adequately illuminated by natural light.

The Site comprised primarily of warehouse/commercial buildings, associated open space (courtyards, parking lots, loading docks etc.), a power plant and three boiler houses at the time of the reconnaissance.

Previous Studies

The 2012 Phase I ESA was completed for the Site by AKRF and included the findings of a reconnaissance of the Site, an evaluation of readily available historical information, and selected environmental databases and electronic records in accordance with ASTM E1527-05, the earlier ASTM standard for Phase I ESAs applicable at that time. The previous report is provided in Appendix B. The report identified the following:

Recognized Environmental Conditions (RECs)

- Numerous petroleum aboveground storage tanks (ASTs) were observed at the Site, some reportedly managed by Industry City and others managed by tenants. Evidence of staining and/or leakage was observed at various locations beneath the ASTs and/or associated equipment. Of particular note, a leaking fuel oil pump was observed in the eastern side of the basement of Building 5, with saturated oil absorbent material and oil puddles noted beneath the pump, and oil absorbent and puddled oil clogging a nearby floor drain. The saturated oil absorbent and residue was reportedly cleaned up from the basement since the time of AKRF's reconnaissance; photographs of the cleaned-up pump were provided to AKRF.
- Previous groundwater investigations detected low levels of volatile organic compounds (VOCs) indicative of petroleum and chlorinated solvent impact in exceedance of New York State Department of Environmental Conservation (NYSDEC) groundwater quality standards in the eastern portion of the Southern Parcel (no testing was conducted on the Southern Parcel west of First Avenue), with petroleum-related VOCs detected in the former gas station area and chlorinated solvent-related VOCs detected at various locations between First and Second Avenues. The previous investigations also detected VOCs indicative of petroleum contamination in exceedance of NYSDEC groundwater quality standards at one location on the Northern Parcel (south of Building 9). These groundwater concentrations identified a potential for subsurface vapors and thus a potential for vapor encroachment into current or future buildings at the Site.

Other On-Site Environmental Concerns (items outside the scope of ASTM E1527-05 such as ACM, LBP and/or PCBs in building materials or fill/debris)

- Site use included use and storage of chemicals in a variety of light industries, including woodworking, printing, paint manufacturing, box manufacturing, plastics painting, and food flavor manufacturing. Poor housekeeping and evidence of minor spills to the floor were observed in several tenant spaces, mostly in upper floors of the buildings.
- The Site was listed on the following federal or state environmental databases: Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) No Further Remedial Action Planned (NFRAP), Toxic Chemical Release Inventory System (TRIS), Permit Compliance System of Toxic Wastewater Discharge (WWD), Air Discharge Facilities Index (ADF), RCRA Hazardous Waste Generator, Petroleum Bulk Storage (PBS), Chemical Bulk Storage (CBS) and Spills. No open violations or open spills were reported for the Site.

- At least six tanks observed or reported by site interviews at the Site were not registered based on review of NYSDEC database of registered tanks (one approximately 1,000-gallon AST in Building 8, one AST of unknown size and one approximately 275-gallon AST supplying emergency generators in Building 9, one approximately 275-gallon AST in the Power Plant, and two 1,250-gallon ASTs reportedly associated with emergency generators adjacent to the Building 1 and 2 boiler house and behind Building 10). Others appear to be registered inaccurately regarding reported product type and aboveground/underground status. In addition, fill ports noted on the wall of Building 3, south of Building 9 and north of Building 19 suggest the presence of historic underground storage tanks (USTs). Previous studies included a geophysical survey of suspected UST locations at Building 9, Building 19 and at the former filling station. No USTs were detected in these areas, but fill lines were detected running west from the fill port near Building 9 (away from the area included in the survey). NYSDEC registrations for the Site also indicated four closed USTs at the Site. Computerized NYC Fire Department listings identified four 550-gallon gasoline USTs (status unspecified) potentially on-site, three of which were identified as closed based on NYSDEC listings.
- The Site was historically used for industrial purposes. The Northern Parcel has been used for industrial purposes since at least 1926 and included paint manufacturing, printing and a power plant. The Southern Parcel has been used for industrial purposes since at least 1888 and included oil refining, chemical manufacturing, asbestos manufacturing, auto repair, a filling station, printing and rail yard operations. Regulatory databases identified various listings indicating chemical and petroleum storage, closed-status petroleum spills and generation of hazardous waste at the Site. Limited soil and groundwater sampling performed at the Site by others in 2007 and 2008 detected minor concentrations of petroleum, chlorinated solvents and metals, largely consistent with historic fill and areas of industrial use. Limited indoor air quality (IAQ) testing in Building 1 in 2009 identified several VOCs in indoor air, but at concentrations that did not present a hazard to building occupants. The locations of the IAQ testing were not provided to AKRF.
- Building materials likely contain asbestos containing materials (ACM) and lead-based paint. Older transformers on the roofs and in the exterior portions of the Site and fluorescent light ballasts may contain polychlorinated biphenyls (PCBs). Mercury may be present in fluorescent lights, switches and/or thermostats. Staining was noted beneath some rooftop oil-filled transformers. Suspect lead-based paint in poor condition was observed in portions of the Site buildings. Damaged suspect ACM (including boiler insulation, vinyl floor tiles and thermal pipe insulation) were noted in some unoccupied building areas.
- The surrounding area has been mixed-use, including industrial, manufacturing and warehousing purposes, garages, auto repair, rail yard operations, printing facilities and metal shops since at least 1926. Current uses of the surrounding area remain mixed-use and include industrial/manufacturing properties, auto repair and filling stations. Regulatory databases identified various listings indicating chemical and petroleum storage, active and closed-status petroleum spills and generation of hazardous waste in the vicinity of the Site, none of which are documented to have impacted the Site.
- Evidence of water intrusion was noted in many of the Site basements. It was unclear whether the water was rainwater, groundwater, or both.

The 2012 Phase I ESA findings were limited by the following data gaps:

- Results of this investigation were valid as of the dates on which the investigation was performed.
- The reconnaissance included a tour of representative interior building spaces. Portions of some Site buildings were inaccessible due to locked doors, nonfunctional elevators, flooded basements, or tenants unwilling to provide access. Basements were often poorly lit and were illuminated by flashlight.
- Portions of the Site were obscured by stored materials, equipment or soil/debris stockpiles and were not inspected for staining and floor features.
- Knowledge of the Site current and historical use varied between Industry City representatives and only limited interviews were performed. In addition, interviews with Site tenants were limited. As such, available information was restricted regarding the types of chemicals used at the Site, waste disposal methods, and assessment of compliance with the applicable related regulations. Chemicals were used at the Site predominantly by tenants; other than the petroleum storage tanks, the reconnaissance indicated only limited chemical use by Industry City for maintenance purposes.
- The Site and area history review was not conducted in five-year intervals. However, sufficient information about the history was obtained from the available records, and this data gap was not likely to alter the conclusions of the Phase I ESA Report.

2017 Phase I Update Findings

The results of AKRF's 2017 update indicate that no new RECs or other environmental concerns were identified from the previous assessment in 2012. The following significant changes to the Site and surrounding area were noted:

- The Site was used more for food counters/restaurants and retail spaces combined with the industrial than observed during the 2012 site reconnaissance. The Site was occupied by offices, retail stores, warehouses, manufacturing, storage areas, vacant commercial space, woodworking, artist studios, a school for disabled people, and open space (areas of landscaping, overgrown vegetation, parking and loading docks). Portions of each building within the Project Area were unoccupied.
- One VCP site (14CVCP244K) was identified within a ¼-mile radius of the Site. While in close proximity, this VCP site is not expected to have affected the Site based on anticipated groundwater flow direction and the details in the listing.
- One additional State Inactive Hazardous Waste Disposal Site (SHWS) was identified (David Pipe Supply) within a 1-mile radius of the Site. This facility is not expected to have affected the Site based on distance and anticipated groundwater flow direction.
- One additional RCRA Corrective Action Site was identified within a 1-mile radius of the Site. This facility is not expected to have affected the Site based on distance and anticipated groundwater flow direction.
- One additional Solid Waste Facility (SWF) was identified within a one-mile radius of the Site. Based on distance and anticipated groundwater flow direction, the facility is not likely to have affected the Site.
- Two additional Active Tank Test Failures listings were identified within a ½-mile radius of the Site. Based on distance and anticipated groundwater flow direction, these facilities are not likely to have affected the Site.

- Four additional Active Hazardous Spills listings were identified within a ½-mile radius of the Site. Based on distance and anticipated groundwater flow direction, these facilities are not likely to have affected the Site.
- Thirty-four additional Closed Spills listings were identified within a ½-mile radius of the Site. Based on distance and anticipated groundwater flow direction, these facilities are not likely to have affected the Site.
- Two additional Petroleum Bulk Storage (PBS) listings were identified within a ⅛-mile radius of the Site. While located within close proximity and upgradient of the Site, neither facility has reported spills and are unlikely to have affected the Site.
- Sixty-seven additional RCRA Hazardous Waste Generator listings were identified between the Site and surrounding area. Based on the details provided in the regulatory listings, the majority of the hazardous waste generator listings were related to ConEdison operations and are not likely to have affected the Site.
- One additional Chemical Bulk Storage (CBS) Database listing was identified within a ⅛-mile radius of the Site: Sunset Park Material Recycling Facility was listed 283 feet north of the Site. While close in proximity, the facility is not likely to have affected the Site due to anticipated groundwater flow direction.

Limitations

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the Site, and to identify existing and/or potential environmental issues associated with the Site, including *Recognized Environmental Conditions* as defined in ASTM Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*.

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard, except as noted otherwise in this letter. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the Site at the time of the reconnaissance, as it is based upon the review of readily available records relating to the Site and the surrounding area, as well as a visual reconnaissance of current conditions.

This assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

This report is based on services performed by AKRF professional staff and observation of offices, retail stores, warehouses, manufacturing, storage areas, vacant commercial space, woodworking, artist studios, a school for disabled people, and open space (areas of landscaping, overgrown vegetation, parking and loading docks). Portions of each building within the Project Area were unoccupied.

Sincerely,

Matthew Levy
Environmental Scientist

Axel Schwendt, P.G.
Vice President

APPENDIX A
REGULATORY DATABASE REPORT

TOXICS TARGETING

Phase I
Environmental Database Report

Industry City
Brooklyn, NY 11232

December 19, 2017

Privileged and Confidential.

LIMITED WARRANTY AND DISCLAIMER OF LIABILITY

Who is Covered

This limited warranty is extended by Toxics Targeting, Inc. only to the original purchaser of the accompanying Environmental Report ("Report"). It may not be assigned to any other person.

What is Warranted

Toxics Targeting, Inc. warrants that it uses reasonable care to accurately transcribe the information contained in this Report from the sources from which it is obtained. This limited warranty is in lieu of all other express warranties which might otherwise arise with respect to the Report. No one is authorized to change or add to this limited warranty.

What We Will Do

If during the warranty period there is shown to be a material error in the transcription of the information contained in this Report from the sources from which it was obtained, Toxics Targeting, Inc. shall refund to the original purchaser the full purchase price paid for the Report. The remedy stated above is the exclusive remedy extended to the Purchaser by Toxics Targeting, Inc. for any failure of the Report to conform with this Warranty, or otherwise for breach of this Warranty or any other warranty, whether expressed or implied.

What We Won't Cover

Toxics Targeting, Inc. has not and can not verify the accuracy, correctness or completion of the information contained in this Report. Information is obtained from government agencies, site owners, and other sources, and errors are common in such information. Because Toxics Targeting, Inc. can not control the accuracy of the information contained in this Report, or the uses which may be made of the information, TOXICS TARGETING, INC. DISCLAIMS LIABILITY TO ANYONE FOR ANY EVENTS ARISING OUT OF THE USE OF THE INFORMATION. TOXICS TARGETING, INC. SHALL NOT BE LIABLE FOR ANY DAMAGE CAUSED BY THIS REPORT, WHETHER DIRECT OR INDIRECT, AND WHETHER OR NOT TOXICS TARGETING, INC. HAS BEEN ADVISED OF OR HAS KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES. TOXICS TARGETING, INC. EXPRESSLY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion or limitation may not apply to you.

Period of Warranty

The period of warranty coverage is ninety days from the date of purchase of this Report. There shall be no warranty after the period of coverage. ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR PARTICULAR USE SHALL HAVE NO GREATER DURATION THAN THE PERIOD OF WARRANTY STATED HERE, AND SHALL TERMINATE AUTOMATICALLY UPON THE EXPIRATION OF SUCH PERIOD. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above exclusion or limitation may not apply to you.

PLEASE REFER TO PAGES ONE AND FIVE FOR A DESCRIPTION OF SOME OF THE LIMITATIONS OF THIS ENVIRONMENTAL REPORT.

Introduction

Toxics Targeting has combined environmental database searches, extensive regulatory analysis and sophisticated mapping techniques to produce your *Environmental Report.* It checks for the presence of 25 categories of government-reported toxic sites and provides detailed, up-to-date information on each identified site. The findings of your report are presented in an easy-to-understand format that:

1. ***Maps*** the approximate locations of selected government-reported toxic sites identified on or near a specified target address.

2. ***Estimates*** the distance and direction between the target address and each identified toxic site.

3. ***Reports*** air and water permit non-compliance and other regulatory violations.

4. ***Profiles*** some aspects of the usage, manufacture, storage, handling, transport or disposal of toxic chemicals at individual sites.

5. ***Summarizes*** some potential health effect information and drinking water standards for selected chemicals reported at individual sites.

The Three Sections Of Your Report

The first section highlights your report's findings by summarizing identified sites according to: **a)** distance intervals, **b)** direction, **c)** proximity to the target address and **d)** individual site categories. In addition, the locations of all identified toxic sites are illustrated on individual maps for each radius search distance used in your report. A close-up map illustrates the locations of all identified toxic sites, at the shortest radius search distance used in your report. Finally, a map of tax parcels and a table of selected information about those parcels are included.

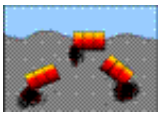
The second section of your report contains *Toxic Site Profiles* that provide detailed information on each identified toxic site. The information in each *Toxic Site Profile* varies according to its source. Some toxic site categories have extensive information and some have limited information. All the information is updated on a regular basis.

The third section of the report contains appendices that identify: **1)** on-site spills reported to the national Emergency Response Notification System (ERNS), **2)** various toxic sites that cannot be mapped due to incomplete or erroneous addresses or other mapping problems, **3)** codes that characterize hazardous wastes reported at various facilities, **4)** methods used to map toxic sites identified in your report and **5)** information sources used in your report.

How to Use Your Report

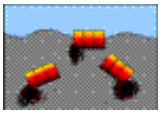
- Check Table One to see the number of identified sites by distance intervals.

- Check Table Two to see identified sites sorted by direction.



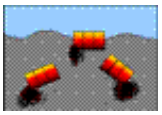
- Check Table Three to see identified sites ranked by proximity to the target address.

- Check Table Four to see identified sites sorted by site categories.



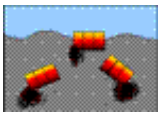
- Use Table Five to get info for the subject parcel and every parcel found on the Tax Parcel Map
- Refer to the various maps to see the locations of identified toxic sites. Refer to the *Toxic Site Profile* and *Appendix* sections for additional information.

Toxic Site Databases Analyzed In Your Report



Search Radius

One-Mile 

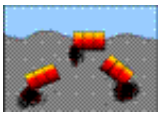


1) ***National Priority List for Federal Superfund Cleanup****:* a listing of sites known to pose environmental or health hazards that are being investigated or cleaned up under the Federal Superfund program.

Half-Mile 

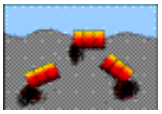
2) ***Delisted National Priority List Sites****:* a listing of NPL sites that have been removed from the National Priority List.

One-Mile 



3) ***New York Inactive Hazardous Waste Disposal Site Registry****:* a state listing of sites that can pose environmental or public health hazards requiring investigation or clean up.

One-Mile 

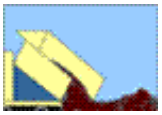


4) ***New York Inactive Hazardous Waste Disposal Site Registry Qualifying****:* a state listing of sites that qualify for possible inclusion to the NYS DEC Inactive Haz. Waste Disposal Site Registry.

One-Mile 

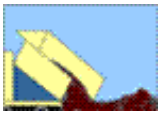
5) ***New York and Federal RCRA Corrective Action Activity (CORRACTS):*** waste facilities with RCRA corrective action activity reported by the USEPA and NYS DEC.

Half-Mile 



6) ***CERCLIS*** (Comprehensive Environmental Response, Compensation and Liability Information System): a federal listing of Non-NFRAP sites that can pose environmental or public health hazards requiring investigation or clean up.

Half-Mile 



7) ***CERCLIS NFRAP:*** a federal listing of CERCLIS sites that have no further remedial action planned.

Half-Mile 

8) ***NYS & NYC Brownfield Program Sites****:* a listing of sites that are abandoned, idled or under-used industrial and commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.

Half-Mile 

9) ***New York Solid Waste Facilities Registry****:* active and inactive landfills, incinerators, transfer stations or other solid waste management facilities.

Half-Mile 

10) ***New York City 1934 Solid Waste Sites****:* a listing of solid waste disposal sites operated by New York City municipal authorities circa 1934.

Half-Mile 

11) ***New York and Federal Hazardous Waste Treatment, Storage or Disposal Facilities****:* sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRIS). Also includes the following database:

- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Half-Mile 

12) ***Toxic Spills: active and inactive or closed*** spills reported to state environmental authorities, including *remediated* and *unremediated* leaking underground storage tanks. This database includes the following categories:

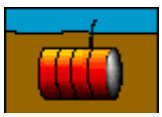
- Tank Failures
- Tank Test Failures
- Unknown Spill Cause or Other Spill Causes
- Miscellaneous Spill Causes

Eighth-Mile 

13) ***New York State Major Oil Storage Facilities****:* sites with more than a 400,000 gallon capacity for storing petroleum products.

Eighth-Mile 

14) ***New York State Petroleum Bulk Storage Facilities****:* sites with more than an 1,100 gallon capacity for storing petroleum products.

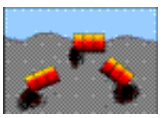


Eighth-Mile 

15) ***New York City Fire Dept Tank Data****:* tank data from 1997.

Eighth-Mile 

16) ***New York and Federal Hazardous Waste Generators and Transporters****:* sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRA). Also includes the following database:



- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Eighth-Mile 

17) ***New York Chemical Bulk Storage Facilities****:* sites storing hazardous substances listed in 6 NYCRR Part 597 in aboveground tanks with capacities of 185 gallons or more and/or underground tanks of any size

Eighth-Mile 

18) ***Historic New York City Utility Sites (1890's to 1940's)****:* power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites.

Half-Mile 

19) ***New York Hazardous Substance Disposal Site Draft Study****:* a state listing of sites contaminated with toxic substances that can pose environmental or public health hazards. These sites were not eligible for state clean up funding programs.

Eighth-Mile 

20) ***Federal Toxic Release Inventory Facilities****:* discharges of selected toxic chemicals to air, land, water or treatment facilities.

Eighth-Mile 

21) ***Federal Air Discharges****:* air pollution point sources monitored by U.S. EPA and/or state and local air regulatory agencies.

Eighth-Mile 

22) ***Federal Permit Compliance System Toxic Wastewater Discharges:*** permitted toxic wastewater discharges.

Eighth-Mile 

23) ***Federal Civil and Administrative Enforcement Docket****:* judiciary cases filed on behalf of the U. S. Environmental Protection Agency by the Department of Justice.

On-site only (250 ft) 

24) ***New York City Environmental Quality Review (CEQR) – E Designation Sites****:* parcels assigned a special environmental ("E") designation under the CEQR process. E designation requires specific protocols that must be followed.

Property only 

25) ***ERNS: Federal Emergency Response Notification System Spills****:* a listing of federally reported spills.

Limitations Of The Information In Your Report

The information presented in your *Environmental Report* has been obtained from various local, state and federal government agencies. Please be aware that: **1)** additional information on individual sites may be available, **2)** newly discovered sites are continually reported and **3)** all map locations are approximate. As a result, this report is intended to be the FIRST STEP in the process of identifying and evaluating possible environmental threats to specific properties and can only serve as a guide for conducting on-site visits or additional, more detailed toxic hazard research.

Toxics Targeting tries to ensure that the information in your report is presented accurately and with minimal alteration. Systematic changes are made to correct obvious address errors in order to allow sites to be mapped. Any address changes that are made are noted in the map information section at the top of each corresponding *Toxic Site Profile*. Some information that has been withheld by government authorities remains included in Toxic Site Profiles and is identified as archival information. Since the information presented in your report is not edited, please be aware that it can contain reporting errors or typographical mistakes made by the site owners/operators or government agencies that produced the information. Also please be aware of some other limitations of the information in your report:

- The digital map used by *Toxics Targeting* is the same one used by the U. S. Census or local authorities in New York City. While the map is generally accurate, no map is perfect. In addition, *Toxics Targeting's* mapping methods estimate where toxic site addresses are located if the address is not specifically designated. FOR THESE REASONS, ALL MAP LOCATIONS OF ADDRESSES AND REPORTED TOXIC SITES SHOULD BE CONSIDERED APPROXIMATE AND SHOULD BE VERIFIED BY ON-SITE VISITS;

- UNDISCOVERED, UNREPORTED OR UNMAPPABLE TOXIC SITES MIGHT NOT BE IDENTIFIED BY THIS REPORT'S CHECK OF 25 TOXIC SITE CATEGORIES. TOXIC SITES REPORTED IN OTHER GOVERNMENT DATABASES MIGHT ALSO EXIST. FOR THESE REASONS, YOUR REPORT MIGHT NOT IDENTIFY ALL THE TOXIC SITES THAT EXIST IN THE AREA IT SEARCHES;

- The appendix of your report contains a listing of sites that could not be mapped due to incomplete or erroneous address information or other mapping problems. This listing includes unmappable toxic sites in the zip codes searched for the report as well as toxic sites without zip codes reported in the same county. IF YOU WOULD LIKE INFORMATION ON ANY OF THE LISTED SITES, PLEASE CONTACT *TOXICS TARGETING AND REFER TO THE SITE ID NUMBER.*

- New York State Department of Environmental Conservation Remediation Site Borders are approximate and may not align with tax parcel boundaries mapped by local authorities or the digital map used by the US Census Bureau. As a result, Remediation Site Borders may overlap parcels that do not involve site remediation activities. Selected parcels also can involve multiple Remediation Site Borders. Refer to individual site profiles for more information. Sites without profiles include potential new sites or sites that have not yet been publicly listed by DEC.

- Some toxic sites identified in your report may be classified as **known hazards**. Most of the toxic sites identified in your report involve **potential hazards** related to the on-site use, manufacture, handling, storage, transport or disposal of toxic chemicals. Some of the toxic sites identified in your report may be the addresses of parties responsible for toxic sites located elsewhere. YOU SHOULD ONLY CONCLUDE THAT TOXIC HAZARDS ACTUALLY EXIST AT A SPECIFIC SITE WHEN GOVERNMENT AUTHORITIES MAKE THAT DETERMINATION OR WHEN THAT CONCLUSION IS FULLY DOCUMENTED BY THE FINDINGS OF AN APPROPRIATE SITE INVESTIGATION UNDERTAKEN BY LICENSED PROFESSIONALS;

- Compass directions and distances are approximate. Compass directions are calculated from the subject property address to the mapped location of each identified toxic site. The compass direction does not necessarily refer to the closest property boundary of an identified toxic site. The compass direction also can vary substantially for toxic sites that are located very close to the subject property address.

- The information presented in your report is a summary of the information that *Toxics Targeting* obtains from government agencies on reported toxic sites. YOU MAY BE ABLE TO OBTAIN ADDITIONAL INFORMATION ABOUT REPORTED SITES WITH THE FREEDOM OF INFORMATION REQUEST FORM LETTERS THAT ARE PROVIDED ON THE INSIDE OF THE BACK COVER.

Section Two: Toxic Site Profiles

The heading of each *Toxic Site Profile* refers to the site's map location and details:

- The facility name, address, city, state, and zip code.
- Any changes that were made to a site's address in order to map its location.
- The site mapping method that was used (see ***How Sites are Located***, at the end of this section for more information).

Toxic Site Profiles summarize information provided by site owners or operators and government agencies regarding various toxic chemical activities reported at each site, such as:

- Whether chemicals were stored, produced, transported, discharged or disposed of.
- The name of chemicals and their Chemical Abstract Series (CAS) numbers.
- The amount of chemicals and the units (gallons/pounds) the chemical was measured in.
- Whether the site or storage tanks at the site are currently active or inactive.
- Special codes used by government agencies to regulate hazardous waste activities at some sites, or a complete description of the codes follows the profiles section.

For selected individual chemicals reported at various toxic sites, some potential health effect summary information appears below the site profile. Each potential health effect summary identifies chemicals by name and by Chemical Abstract Series (CAS) Number. An "x" under each potential health effect heading indicates positive toxicity testing results reported by the National Institute of Occupational Safety and Health's Registry of Toxic Effects of Chemical Substances (RTECS). Some chemicals (mostly appearing in profiles of Hazardous Waste facilities), are reported as mixtures, and RTECS health effect information is only available for individual chemicals. In addition, RTECS only provides information on approximately 100,000 common chemicals. Consequently, the absence of potential health effect summary information for a particular chemical identified in a Toxic Site Profile does not necessarily mean that the chemical does not pose potential health effects.

The Maximum Contaminant Level (MCL) in drinking water allowed for selected chemicals is also noted. In most cases, the only applicable MCL has been set by the New York State Department of Health (NYSDOH). Where NYSDOH has not set an MCL, the federal standard, if one exists, is listed and is marked by an asterisk.

Presented below are column headings that describe the health effect definitions used in RTECS and applicable New York State and federal drinking water standards. Reference sources for information presented in this section are also provided.

ACUTE TOX: **Acute Toxicity**: Short-term exposure to this chemical can cause lethal and non-lethal toxicity effects not included in the following four categories.

TUMOR TOX: **Tumorigenic Toxicity**: The chemical can cause an increase in the incidence of tumors.

MUTAG TOX: **Mutagenic Toxicity**: The chemical can cause genetic alterations that are passed from one generation to the next.

REPRO TOX: **Reproductive Toxicity**: May signify one of the following effects: maternal effects, paternal effects, effects on fertility, effects on the embryo or fetus, specific developmental abnormalities, tumorigenic effects, or effects on the newborn (only positive reproductive effects data for mammalian species are referenced).

IRRIT TOX: **Primary Irritant**: The chemical can cause eye or skin irritation.

MCL: **Drinking Water Standard - Maximum Contaminant Level** (MCL) listed under Drinking Water Supplies, 10 NYCRR Part 5, Subparts 1.51(f),(g), and (h) for NYDOH MCL's and under the Safe Drinking Water Act, 40 CFR 141, Subparts B and G, (* indicates value for total trihalomethanes) for federal MCL's.

Reference Source for Toxicity Information: Registry of Toxic Effects of Chemical Substances (RTECS), NIOSH (on-line database); For further information, contact: NIOSH, 4676 Columbia Parkway, Cincinnati, OH, 45226, 800/35-NIOSH.

Reference Source for Drinking Water Standards: New York State Department of Health, Bureau of Toxic Substances Assessment, 2 University Place, Room 240, Albany, NY 12203, 518/458-6373.

U.S. Environmental Protection Agency, Office of Drinking Water, 401 M St SW, Mailstop WH-556, Washington, DC, 20460, 202/260-5700.

Inactive Hazardous Waste Disposal Site Classifications:

1 -- Causing or presenting an imminent danger of causing irreversible or irreparable damage to the public health or the environment -- immediate action required;
2 -- Significant threat to the public health or environment -- action required;
3 -- Does not Present a significant threat to the environment or public health -- action may be deferred;
4 -- Site properly closed --requires continued management;
5 -- Site properly closed, no evidence of present or potential adverse impact -- no further action required;
2a -- This temporary classification has been assigned to sites where there is inadequate data to assign them to the five classifications specified by law;
A -- Work underway and not yet complete;
P -- Potential Site;
$D_{1, 2, 3}$ -- Delisted Site (1: hazardous waste not found; 2: remediated; 3: consolidated site or site incorrectly listed);
C -- Remediation Complete (formerly D2).

Gowanus Canal
New York
EPA ID#: NYN000206222
EPA REGION 2
Congressional District(s): 07
Kings County - End of 5th Street

NPL LISTING HISTORY
Proposed Date: 4/9/2009
Final Date: 3/4/2010

Site Description
The Gowanus Canal is a 100-foot wide,1.8-mile long canal located in the New York City borough of Brooklyn, Kings County, New York. Connected to Gowanus Bay in Upper New York Bay, the canal borders several residential neighborhoods including Gowanus, Park Slope, Cobble Hill, Carroll Gardens, and Red Hook. The adjacent waterfront is primarily commercial and industrial, currently consisting of concrete plants, warehouses, and parking lots. There are five east-west bridge crossings over the canal, located at Union Street, Carroll Street, Third Street, Ninth Street, and Hamilton Avenue. The Gowanus Expressway and the IND Culver Line of the New York City Subway, an aboveground section of the original Independent Subway System, pass overhead.

The Gowanus Canal was built to allow access for industrial needs by bulkheading and dredging a tidal creek and wetland that had previously been fished for oysters. After its completion in the 1860s, the canal quickly became one of the nation's busiest industrial waterways, home to heavy industry including gas works (i.e., manufactured gas plants), coal yards, cement makers, soap makers, tanneries, paint and ink factories, machine shops, chemical plants, and oil refineries. It was also the repository of untreated industrial wastes, raw sewage, and surface water runoff for decades, causing it

to become one of New York's most polluted waterways. Although much of the industrial activity along the canal has stopped, high contaminant levels remain in the sediments. Despite the ongoing pollution problems, some city dwellers currently use the Gowanus Canal for recreational purposes, such as canoeing and diving, while others catch fish for consumption.

The canal is part of the New York-New Jersey Estuary, which the EPA has designated an Estuary of National Significance.

Threat and Contaminants
Numerous sampling events have shown the sediments in the Gowanus Canal to be contaminated with a variety of pollutants, including polycyclic aromatic hydrocarbons (PAHs), volatile organic contaminants (VOCs), polychlorinated biphenyls (PCBs), pesticides, and metals. PAH concentrations were found to be as high as 45,000 milligrams per kilogram (4.5%) and the contamination was found to traverse the entire length of the canal. Many of the detected contaminants are known carcinogens. The contaminated sediments pose an immediate risk to the fishery located just downstream of the canal in Gowanus Bay. This fishery is well documented, and fish caught there are used as food.

Cleanup Approach
The site wil be addressed in one stage˙a long-term remedial phase focusing on the cleanup of the entire site.

Response Action Status:

The Canal has been heavily contaminated throughout its existence. No environmental remediation has been undertaken to date.

PRP-performed efforts are currently underway, under New York State authorities, at three former Manufactured Gas Plants (MGPs) located along the Gowanus Canal, which are believed to be sources of much of the Polyaromatic hydrocarbon (PAH) contamination in the canal--the former Fulton MGP site; Former Citizens Gas Works MGP site (a.k.a. Carroll Gardens/Public Place); and former Metropolitan Gas Light Company MGP site. National Grid is the PRP for the MGP sites.

In April 2009, the EPA proposed to put the Gowanus Canal on the National Priorities List (NPL). While the community and many elected officials supported the listing, the City of New York and some development interests did not. New York City proposed an alternate approach which would have depended heavily on the assumption of long-term Congressional funding to Corps of Engineers (COE). After consulting extensively with the many stakeholders who expressed interest in the future of the Gowanus Canal and the surrounding area, the EPA determined that a Superfund designation was the best path to a clean up of this heavily contaminated and long neglected urban waterway. The site was listed on the NPL on March 4, 2010.

The EPA, in conjunction with New York City and National Grid, performed supplemental field work to characterize the nature and extent of contamination in the Canal, determine the human health and ecological risks from exposure to contamination in the canal, identify the sources of contamination to the Canal, including ongoing sources of contamination that need to be addressed so that a sustainable remedy can be developed and implemented, and determine the physical and chemical characteristics of the Canal that will influence the development, evaluation, and selection of cleanup alternatives. This work, which supplemented previous studies that have been carried out by the COE and National Grid, included a bathymetric (underwater depth) study, sediment sampling, monitoring well installation, groundwater, surface water, air, sediment, and fish tissue sampling, sewer system sampling, and an investigation of hundreds of pipes that lead to the Canal. A remedial investigation (RI) report was released to the public on February 2, 2011 and a public meeting was held on February 23, 2011 to discuss the results of the study. A feasibility study (FS) was initiated in spring 2011 to develop and evaluate remedial alternatives for mitigating human and ecological risk in canal. The FS report was released to

the public on December 30, 2011. An informational public meeting was held on January 24, 2012; nearly 200 people were in attendance.

On December 27, 2012, the EPA released a Proposed Plan describing its proposed remedy for the site. The Proposed Plan recommends removing all of the contaminated sediment that has accumulated as a result of industrial and sewer discharges from the bottom of the canal by dredging. The dredged areas would then be capped. The EPA also recommends controls to prevent combined sewer overflows and other land-based sources of contamination from compromising the cleanup. On January 23, 2013 and January 24, 2013, the EPA conducted public meetings at Public School 58 (the Carroll School) and the Joseph Miccio Community Center, respectively, to present the Proposed Plan for the site, including the preferred remedy, and respond to questions and comments from the approximately 200 attendees at the January 23, 2012 meeting and 100 attendees at the January 24, 2012 meeting. Follow up meetings were held with the Citizens' Advisory Group on February 11, 2013 and the Red Hook community on February 13, 2013 to discuss in more detail the specifics of the Proposed Plan and to answer additional questions from the community. The public comment period concluded on April 27, 2013. The EPA selected a remedy for the site on September 27, 2013. The remedy includes dredging of contaminated sediments, capping residual contamination and source controls, including combined sewer overflow retention tanks.

A number of potentially responsible parties, including New York City and National Grid, are performing the design of the selected remedy under unilateral administrative orders.

Site Facts:
As the canal bisects heavily populated communities, there has been broad support to remedy the contamination of the water-way. Mayor Bloomberg highlighted environmental concerns about the Canal in his environmental blueprint, "PlaNYC 2030." There is intense public interest in the Canal and the cleanup plan. A Community Advisory Group has been formed with over 55 members representing a wide range of stakeholders including residents, environmental groups, business groups and developers.

Notice and information request letters were sent to more than 20 parties, including New York City and National Grid.

Cleanup Progress
Contaminated soils have been removed from the former Metropolitan Gas Light Company MGP site. Investigatory work is currently underway at the former Citizens Gas Works MGP site. The New York State Department of Environmental Conservation released a Proposed Remedial Action Plan identifying its preferred remedy for former Fulton MGP site on April 3, 2015. A public meeting was held on April 16, 2015. The document is currently under review by the public. The primary components of the preferred remedy are the construction of a sealed wall along the western shoreline of the Gowanus Canal and the removal of any coal tar that accumulates behind it. Excavation of contamination at the site would occur as the properties are redeveloped.

The City built a "Flushing Tunnel" in 1911 to replace the stagnant water in the canal with fresh, oxygen-rich water that would improve water quality. The tunnel worked until the 1960s, when mechanical failure caused it to shut down and the canal became polluted and stagnant again. The Flushing Tunnel operated until the mid-1960s, when it fell into disrepair. The Flushing Tunnel was rehabilitated and reactivated in 1999 by the New York City Department of Environmental Protection (NYCDEP). In 2010, the Flushing Tunnel was shut down by NYCDEP to perform facility improvements. This effort includes the installation of more efficient pumping systems, which will increase the volume of water by approximately 40 percent under a peak design flow. Completion of the effort is anticipated by September 2014. The reconstruction of the Gowanus Wastewater

Pump Station, which began in February 2010, will increase the pumping capacity to deliver sewage to the Red Hook wastewater treatment plant. All of these ongoing improvements are projected to decrease the overall discharge to the entire canal by approximately 34 percent.

ADDRESS:

HAZARDOUS WASTE DISPOSAL PERIOD: from mid 1974 to 1978

SITE DESCRIPTION:
The site is located along the Upper New York Bay, in the Sunset Park Section of Brooklyn, in the western part of Kings County, New York. The site borders an access road referred to as Marginal Street (which parallels 1st Avenue), between 45th and 50th Street. The land immediately adjacent to the site is used for commercial and industrial purposes, although residential housing areas are present within approximately 1,500 to 2,000 feet of the site. The 17.3-acre site includes approximately 14 acres of urban land that was created by landfilling between four piers that were part of the former Bush Terminal warehouse complex. The remaining pier structures are dilapidated and extend 600 to 800 feet into the Bay from the existing fill areas. The site is currently fenced to prevent public access. The total landfill area is approximately 14 acres in size. Partial filling between two piers (Piers 3 and 4) has resulted in the presence of two ponded areas in the northeastern portion of the site. While most of the landfilled areas are covered with grasses or barren soils, the westernmost fill area between Piers 2 and 3 supports an area of mature trees (referred to as the existing wooded area). Debris piles are present in some areas, especially along the edge of the site bordering Marginal Road. The Site Investigation (SI)was conducted between May 1999 and May 2001. The field activities and findings of the investigation are described in the SI report. Additional studies were conducted between March and July 2002 to support the evaluation of remedial alternatives and are described in the Remedial Alternatives Report (RAR). This site is being tracked under the Environmental Restoration Program (ERP) as site number B00031-2.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
LEAD	UNKNOWN
CHROMIUM	UNKNOWN
ARSENIC	UNKNOWN
PYRENE	UNKNOWN
ANTHRACENE	UNKNOWN
BENZ(A)ANTHRACENE	UNKNOWN
BENZO(B)FLUORANTHENE	UNKNOWN
BENZO(A)PYRENE	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
The primary contaminants of concern at the site (in groundwater, soils and sediments) that exceed their SCGs are semivolatile organic compounds (SVOCs) and inorganics (metals). VOCs, the pesticide 4,4-DDT, and PCBs were also detected at levels exceeding SCGs, but to a much lesser extent than the SVOCs and metals.

Sampling has revealed contravention of groundwater standards by 23 organic chemicals and 12 metals. It has been determined that no significant threat exists to the environment. While groundwater quality at the site has been impacted, it is unlikely that

surface water quality criteria will be exceeded when groundwater discharges to the Bay, due to the low rates of groundwater discharge and the relatively low concentrations of contaminants in groundwater. Therefore, groundwater is not expected to present a potential environmental impact.

ASSESSMENT OF HEALTH PROBLEMS:
The area is served by public water, therefore, exposure to contaminated groundwater is unlikely. There is a potential for direct contact expsoure with contaminated surface soil. However, a clean soil cover over the site and landfill gas control measures will minimize the potential for exposures to future park users. Site access is currently restricted by a fence minimizing the potential for exposure.

New York, NY 10038-3940

OWNER(S) DURING DISPOSAL:

OPERATOR(S) DURING DISPOSAL:

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
The Site is located in the Gowanus section of Brooklyn in a zoned manufacturing area. The site was formerly used by Moore McCormack Lines, a steamship company (dates of occupancy unknown). Subsequently, Continental Terminals used the pier shed to store and distribute cocoa beans into the late 1990s. The shed was removed and the pier was then used by American Warehousing for vehicle storage. The Site also contains a garage that was used for vehicle maintenance. The Site was recently paved. The northern portion of the Site is used for storage of sea containers by the New York City Police Department, and a small electric power generating station operated by the New York Power Authority occupies the south part of the Site.

Immediately northwest of the Site is Upper New York Bay/Gowanus Canal, immediately northeast is industrial/manufacturing, and immediately southeast are commercial and office buildings. The Site is approximately 98,010 square feet (2.2 acres) in size and is occupied by the NY Power Authority as well as the storage area for sea containers for NYPD. The nearest residential units are 0.12 miles (approx. 650 feet) to the east-southeast. There are no records of Petroleum Bulk Storage or Chemical Bulk Storage on the site. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites.

CONFIRMED HAZARDOUS WASTE DISPOSED:
None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
Based upon investigations conducted to date, the primary contaminants of concern at the site include mercury, lead and copper.

In July 2009, following discovery of petroleum contaminated soil during excavation to support repairs to the Site?s bulkhead, three test pits were excavated to determine the extent of the petroleum impacts. A total of seven sidewall soil samples and one grab groundwater sample were collected from the test pits. One sample was also collected for waste classification from the stockpiled soil excavated from the initial excavation and the test pits. Sidewall samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, PCBs, pesticides and Total Petroleum Hydrocarbons. The composite waste classification sample was analyzed for TCLP parameters as well. The following contaminants with maximum concentrations were observed in soil: 17 ppm mercury; 1,100 ppm lead; and 330 ppm copper. The Part 375 Industrial Use Soil Cleanup Objectives (SCOs) have been exceeded for mercury, and the Part 375 Commercial Use SCOs have been exceeded for lead and copper. Groundwater samples were all below applicable Groundwater Standards for VOCs and SVOCs, but were not analyzed for metals.

Depth to groundwater is approximately 9-15’ below grade and is likely influenced by tidal action due to the immediately adjacent Gowanus Bay. Site characterization is required to evaluate the presence or absence of hazardous waste on the site, and to collect data sufficient to determine if the site poses a significant threat to public health or the environment. The site did not qualify for addition to the Registry of Inactive Hazardous Waste Disposal Sites.

Brooklyn, NY 11220

HAZARDOUS WASTE DISPOSAL PERIOD: from 1950 to 1985

SITE DESCRIPTION:
Location: The Empire Electric Company site is located at 5200 1st Avenue in Brooklyn, New York on the southwest corner of 52nd

Street and 1st Avenue.

Site Features: The site contains a deteriorated, vacant, red brick building that covers the entire site. The site consists of a 100 ft x 240 ft parcel (Section 1, Block 803, Lot 9). Directly adjacent to northwest of the Site is a 100 ft x 140 ft parcel (Block 803, Lot 6) that contains a contiguous structure scheduled to remain. This building shares a common wall and adjoining steel truss roofing structure with the Empire Electric building. Current Zoning/Use(s): The Empire Electric building is vacant and inactive. The area is primarily industrial in nature, with a potato chip manufacturing plant (Utz), a New York City Department of Sanitation vehicle maintenance and storage building, an overnight courier (DHL), the former BUG - Kings County Works manufactured gas plant site, and the waterfront (Bush Terminal docks) in the general vicinity. Historical Use(s): The building was constructed in 1892 by the Brooklyn City Railroad Company for use as a power plant for the municipally owned trolley system. The building was used for electrical generation until the 1930s when the trolley system was abandoned. The facility was conveyed to the city of New York in 1940. In 1951, the property was sold and subdivided the parcel into two lots (Lot 9 and Lot 6). On 5 September 1951, Lot 9 was sold. Empire Electric operated on Lot 9, the eastern two-thirds of the building, from 1951 to December 1986 when the property was once again sold. During at least some of this time period, activities within the building included rehabilitation of electrical transformers.

Site Geology and Hydrogeology: The Site, situated approximately 1,200 feet from the Upper New York Bay at the western end of the borough of Brooklyn, in New York City, is topographically relatively flat. The elevation of the Site is approximately 16 feet above mean sea level (msl), sloping gradually up from the Hudson River. Site soil directly beneath the building consists primarily of fill and debris materials, underlain by sand and gravel, and beneath these layers, bedrock. The water table beneath the Site occurs at a depth of approximately 17 to 21 feet below ground surface (bgs). Regional groundwater flow direction is to the west, toward the Upper New York Bay. The depth to bedrock is unknown, but is likely greater than 100 feet bgs. Surface drainage generally follows the topography, and flow is northwest along 52nd Street toward the Upper New York Bay. Storm water drains are present along 52nd Street and First Avenue. Surface run-off collects in these drains and then flows directly into the Upper New York Bay.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
PCBS	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Based upon investigations conducted to date, the primary contaminant of concern are PCBs. Building material contained PCB concentrations in excess of 50 ppm, the TSCA definition of PCB hazardous waste, in 35 percent of the analyzed samples. Based on sample analysis, 60 percent of the concrete slab on the main floor and 80 percent of the concrete slab in the basement area exceed this criteria and are therefore classified as a TSCA hazardous waste. Grease/oil samples collected from building material in the basement also exceeded the TSCA criteria of 50 ppm total PCBs and is present on nearly 70 percent of brick pillar surfaces. Fifty-two of the 165 building material samples collected and analyzed contained levels of PCB contamination ranging from 51 ppm to 33,000 ppm. Soil samples from beneath the basement floor exceeded the 1ppm surface/10ppm subsurface criteria historically used to assess PCB contamination in soil. Two of these soil samples also exceeded the TSCA definition of hazardous waste. The site presents a significant environmental threat due to the potential for PCB releases from source areas both within and beneath the building.

ASSESSMENT OF HEALTH PROBLEMS:

The floors, walls and the soil beneath the basement floor of the dilapidated on-site building are contaminated with significant levels of PCBs. Building entrances have been sealed with concrete block to prevent homeless people from living in the building and being exposured to PCBs. Testing results for upgradient and downgradient groundwater samples collected during the PSA indicate the presence of volatile organic compounds above standards for public drinking water supplies. However, exposure to the contaminated groundwater is unlikely since public water serves the area. Indoor air contamination from volatile organic compounds in the groundwater is a potential exposure pathway that will be evaluated during the upcoming investigation.

INACTIVE HAZARDOUS WASTE DISPOSAL SITE INFORMATION

SITE CODE: 224249
CLASSIFICATION CODE: P REGION: 2 DEC ID: 535697
CLASSIFICATION CODE DESCRIPTION:
Potential site

NAME OF SITE: Former E.W. Bliss Projectiles
STREET ADDRESS: 29 53rd Street TOWN: New York City
CITY: Brooklyn ZIP: 11232 COUNTY: Kings

ESTIMATED SIZE: 0.7 Acre
SITE TYPE: Dump- Structure- Lagoon- Landfill- Treatment Pond-

INSTITUTIONAL/ENGINEERING CONTROLS:
None reported

CROSS REFERENCES:
None reported

SITE OWNER/OPERATOR/REPOSITORY INFORMATION:
CURRENT OWNER(S):
NAME: Clem Properties Inc. Owner Type: Corporate or Commercial
Frank Clemente
ADDRESS: 29 53rd Street
Brooklyn, NY 11232

OWNER(S) DURING DISPOSAL:

OPERATOR(S) DURING DISPOSAL:
NAME: Clem Properties Inc. Operator Type: Corporate or Commercial
ADDRESS: 29 53rd Street
Brooklyn, NY 11232

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
Location: The subject property is located at 29 53rd Street in the Borough of Brooklyn, Kings County, NY in an urban area. The subject property consists of about 0.7 acres designated as tax block 803, Lot 41.

Site Features: The site currently contains a one-story warehouse-style building which occupies the entire property.

Current Zoning/Use(s): The site is currently zoned as M3-1 (industrial and manufacturing district) and is used as a storage and distribution facility for packaged dry snacks. Historical Use(s): Since 1977 the Site has been occupied by Clem Snacks. A mechanic shop containing hydraulic lifts was noted to be located in the southeastern portion of the building from 1977 to 2004. Historically the site was utilized mainly for industrial purposes, including the E.W. Bliss projectile Department, paper warehouse and metal product manufacture from 1906 to 1977. Two crude oil tanks were depicted adjoining the southwestern side of the subject building on the 1926 to 1942 Sanborn maps.

Site Geology and Hydrogeology: Soil borings conducted in 2013 identified sand and silt beneath the one-foot thick concrete building slab. Some gravel, brick and concrete fragments were observed in the boring down to 20 feet below grade; this debris represents fill material. Groundwater is present at a depth of approximately 12 feet below grade. The groundwater beneath the subject property is expected to be tidally influenced, and generally flowing to the west towards Gowanus Bay, which is located approximately 400 feet west of the site.

CONFIRMED HAZARDOUS WASTE DISPOSED:
None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
Nature and Extent of Contamination: The following information was obtained from two separate Phase II reports prepared for the site in 2012 and 2013. Soil - Borings identified evidence of petroleum non-aqueous phase liquid (NAPL) at the water table in at least 6 on-site boring locations. Volatile organic compounds (VOCs) were found including tetrachloroethylene (PCE) at a maximum concentration of 7.7 parts per million (ppm), trichloroethylene (TCE) at a maximum concentration of 12 ppm, and cis-1,2-dichloroethene (cis-1,2-DCE) at a maximum concentration of 18.2 ppm.

Groundwater - VOCs were detected in temporary wells on-site, including: PCE at a maximum concentration of 62 parts per billion (ppb); TCE up to 78 ppb; and cis-1,2-DCE up to 33 ppb.

Soil Vapor - No soil vapor data has been collected to date.

ASSESSMENT OF HEALTH PROBLEMS:
As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

PROJECT COMPLETIONS:
None reported

SITE DESCRIPTION:
Site Description The Gowanus Canal is a man-made navigational waterway in southeastern Brooklyn, Kings County NY. Nearly the entire canal is bounded by "hard" urban shorelines in the form of bulkheads, moorings, and retaining walls. The site definition includes only the canal and its attached barge slips, totaling slightly over 1.5 linear miles of waterway.

Averaging 100 feet in width, the open water area defined as the site totals approximately 1,000,000 square feet or 29 acres.

The canal also serves as a storm water drain for the surrounding area.

Currently, approximately six square miles of highly urbanized land drains into the canal. Sanitary sewers no longer discharge directly; however, numerous combined sewer overflows (CSO) continue to discharge to the canal during storm events. Industrial discharges from a wide variety of industrial processes were also historically routed to the canal, via private discharge pipes or the municipal sewers.

Stagnant water conditions have plagued the canal since its initial construction. To combat this, a "flushing tunnel" at the north end of the canal was constructed in 1911 to divert water from the Buttermilk Channel to maintain flow through the canal to Gowanus Bay. Operation of the flushing system has had numerous problems resulting in lengthy periods during which it was inoperable. Significant upgrades to this system are scheduled over the next few years to increase the volume of water flushing the canal. Currently the flushing tunnel has been de-activated to facillitate its upgrade and an qxygenation system has been installed at the upper end of the canal. The first of three new tunnel pumps was brought back on line in Jan 2014, and the remaining two are slated for start up in April.

Site History

Prior to European settlement, this area formed a large tidal marsh, drained by Gowanus Creek and surrounded by higher ground to the west (present-day Carroll Gardens) and east (present-day Park Slope).

In the mid 1800s, the Canal was constructed, more or less along the alignment of Gowanus Creek, by straightening and deepening the stream channel and dumping the excavated materials behind rows of timber piles along the shoreline. Combined with other urban filling activities in the surrounding area, the result was a large area of reclaimed land with a dendritic, dead-end canal providing barge access through the middle. The canal offered barge access far inland into Brooklyn, effectively increasing Brooklyn’s available tidewater frontage for water-borne commerce. Development of the area was rapid, and by 1869, the layout of the canal and the local street network were essentially complete. Long term decline of the local manufacturing economy has led to a marked decrease in commercial use of the Canal, with only a handful of petroleum distributors and concrete batch plants as

regular users. Roughly the northern half no longer hosts barge movements as a result of siltation due to the significant CSOs which discharge street waste and sewage solids. The canal has not been dredged in several decades, consequently, substantial amounts of sediment have been deposited in upstream areas, and water depths approach zero at low tide. The sediment consists largely of solids settled from stormwater and CSO discharges. Presumably, industrial discharges to the canal have diminished in line with the de-industrialization of the surrounding neighborhood, although this is difficult to verify directly due to a lack of historical records for comparison.

CONFIRMED HAZARDOUS WASTE DISPOSED:

COPPER	UNKNOWN
PCB-AROCLOR 1242	UNKNOWN
COAL TAR PITCH VOLATILES	UNKNOWN
LEAD	UNKNOWN
DDE	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Water quality issues have plagued the Gowanus Canal almost since its construction. Tidal flushing is largely ineffective due to the length, narrowness, and circuitous layout of the canal channel. Operation of the flushing tunnel has improved the situation during the years when flushing was being conducted; however, the current tunnel requires significant upgrades and is likely to be off-line for a year or more as the upgrades are performed. The canal is currently classified by NYSDEC as Class SD water body, acknowledging that natural or man-made conditions limit attainment of higher standards. Even the SD standards are not currently met. Oily sheens are common on the water surface during low tides, dissolved oxygen levels are low and surface contamination has been identified. Sediment quality is also low. Ongoing CSO discharges have resulted in extensive deposits of settled solids, particularly in the more sheltered areas near the upper end. Some parts of the canal bottom are exposed at low tide. Another particularly important contributor to sediment quality problems is the presence of three former manufactured gas plant (MGP sites) along the length of the canal. Although all three MGPs have been closed for decades, coal tar-impacted sediments have been identified at numerous locations along the length of the canal. The three MGPs are all covered by cleanup agreements with NYSDEC, and are at various stages of investigation,remedy selection and implementation.

The Fulton Works, immediately east of the canal at its northern extremity, is in the Remedial Investigation process.

The Carroll Gardens site (also widely known as Public Place) is in the Brownfield Cleanup Program, and is slated for remediation and redevelopment as a mixed commercial/residential project.

The former Metropolitan works, immediately south of the 9th Street bridge, was partially redeveloped under a Voluntary Cleanup Agreement in 2002-2003. However, more work remains to be done-part of the MGP facility lies beneath an active retail building. A Remedial Investigation began in March 2010.

Numerous oil storage and handling facilities, asphalt plants,manufacturing facilities and chemical, paint, fertilizer and plastic manufacturers have, or continue to, operate along the canal.

ASSESSMENT OF HEALTH PROBLEMS:
People using the canal for recreational purposes such as swimming and boating may come into direct contact with chemical contaminants and harmful biological organisms. People should avoid any activity that would result in swallowing or accidentally ingesting Canal water. Additionally, people using the canal for any purposes should wash their hands or shower after contacting the water, especially before eating and at the end of the day. Those people who are considering eating fish and shellfish caught in the Canal should follow the NYSDOH consumption advisory for fish and shellfish taken from the Upper Bay of New York Harbor. This advisory specifically includes: * The NYSDOH recommends that women of childbearing age and children under the age of 15 not eat any fish from the Canal.

* Other people should eat no gizzard shad, white perch and crab hepatopancreas and crab cooking liquid. Also, other people should eat no more than one meal per month of American eel, Atlantic needlefish, bluefish, rainbow smelt and striped bass.

* People should eat no more than one (1/2 pound) meal per week of all other fish species except blue crab meat (six crabs per week).

SITE OWNER/OPERATOR/REPOSITORY INFORMATION:
None reported

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
Location - The Kings County Manufactured Gas Plant (MGP) site is comprised of two contiguous parcels of land located on the east bank of the Bay Ridge Channel of the Upper New York Bay in Brooklyn, Kings County. The parcels are identified as 5400 1st Avenue and 5600 1st Avenue. The site is on the west side of 1st Avenue, near 54th Street.

Site Features - The site is currently used for commercial/industrial purposes with warehouse buildings, a fuel oil storage facility and a power-generating station. The area between the buildings and other infrastructure is paved.

Current Zoning/Use - The site is currently active and is zoned for industrial use. The surrounding parcels are currently used for a combination of both commercial and industrial uses. Past Use of the Site - The former MGP operated from 1904 until 1951. By 1970 all former MGP structures had been removed except for four fuel oil tanks and one gas holder that was converted into a fuel oil tank. In 1976 three meat distribution buildings were added to the property, which still exist today. At this time the fuel oil tanks and a power generating station were being operated by Con Edison. There are numerous spills relating to this activity on the site. One of the results of these spills was the installation of recovery wells for the collection of light non-aqueous phase liquid (LNAPL). These wells are currently being sampled on an annual basis. Site Geology and Hydrogeology - Fill material was encountered up to approximately 18 feet below ground surface. Fill material consists of fine to coarse sand with some silt, brick, metal fragments, concrete, cobbles and some clay. Underlying the fill was glacial outwash, fine to coarse gravel. Bedrock in the area is expected to be approximately 225 feet below ground surface. Groundwater is found at depths of 8 to 25 feet below ground surface and is tidally influenced. The groundwater flow direction is to the west.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
COAL TAR	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
Prior to Remediation- Based on previous investigations, there are both VOCs (BTEX) and SVOCs (PAHs) from numerous petroleum spills at the property, as well as from past MGP operations. These contaminants are present in both soil and groundwater. Additional site characterization field work is planned for the Spring/Summer of 2017.

ASSESSMENT OF HEALTH PROBLEMS:
The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review.

PROJECT COMPLETIONS:

HAZARDOUS WASTE DISPOSAL PERIOD: from 1974 to 1979

SITE DESCRIPTION:

This site is located in a commercial/industrial area within 70 feet of the Gowanus Canal, which empties into the Gowanus Bay of the New York Harbor. Approximately 10,000 people live within a half-mile radius of the site. The potable water supply for the area is the New York City reservoir system. Infor-mation received in a letter dated November 24, 1982, from the Brooklyn District Attorney's Office, indicates hazardous wastes were disposed of at the foot of 17th and 18th streets, off Hamilton Ave. in Brooklyn. The piers at the end of these streets behind Jetro Foods were filled in from 1974 to 1979. It is alleged that also over this period of time (1974 - 1979), hazardous wastes were regularly spread on the landfill during the night. Field work for the Phase II State Superfund investigation was completed, in 1989, to address the possibility of soil and groundwater contamination from on- site activities and to determine whether hazardous wastes had been released to the environment. The Phase II Investigation had five test borings drilled onsite, three of these were converted into monitoring wells. One well contained 1,2 dichlorobenzene at low concentrations. A supplemental site investigation workplan by the NYSDEC was approved in December, 1992; fieldwork was completed in spring of 1993. A review of additional information with supporting documentation provided by the PRP indicates that we are unable to pinpoint the source of contamination. Based on this, the site will be delisted for lack of documented disposal of hazardous waste.

CONFIRMED HAZARDOUS WASTE DISPOSED:

None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

There are no environmental problems associated with the disposal of hazardous waste at this site.

ASSESSMENT OF HEALTH PROBLEMS:

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
Location:
The site is located at 688-700 Court Street within the Red Hook Industrial area of Brooklyn. The site is located southwest of the Court Street and Halleck Street intersection.

Site Features:

At one point, the main site features included 19 buildings, five designated tank farms and a wastewater pretreatment system. However, the site has been substantially decommissioned.

Current Zoning/Use(s):
The site is zoned for industrial use, but is currently mostly unoccupied. The surrounding parcels are currently used for a combination of commercial, light industrial and recreational uses. The site is bordered immediately to the east by Court Street, Brooklyn Union Gas and Spentonbush Red Star Companies, to the west by Clinton Street and American Import Export Trucking and to the south by Bryant Street and Hess Oil Company. A recreational park (Red Hook Recreational) is located immediately to the north of the site.

Past Use of the Site:
Milliken Brothers Iron Works occupied the southwestern portion of the site in 1904. The remaining property was occupied by Barrett plant from 1904 to 1949 for the manufacturing of tar paper. In 1939 John F. McKenna, Inc. Lumber Yard, Marine Canvas Supply Corporation and John Menton Boiler Maker occupied the site. The site remained a lumberyard and marine canvas supply business until approximately 1958, when manufacturing at the site began. Historic manufacturing processes at the site include production of metallic-organic soaps and salts, phosphates and epoxy plasticizers. A hot-oil system, that used PCB containing oil, was part of the manufacturing process.

Contamination at the site appears related to several historic operations, including materials handling from the tar paper operation and the various manufacturing processes, as well as releases to the environment from the hot oil system.

Site Geology and Hydrogeology:
The site was formed by backfilling the marsh and waterfront areas of the Gowanus Canal in the late 1800s through the early 1900s. Fill material consisting of fine to coarse sand-sized particles with varying amounts of silt and miscellaneous debris (ash, slag, coal, wood, brick, concrete, etc.) was observed across the site from ground surface to a depth of 12 ft. Underlying the fill materials, a clay layer was encountered with lateral continuity across the site. This layer (former base of the Gowanus Canal) acts as a low permeability barrier between the overlying fill and the underlying water-bearing zone located within the glacial deposits beneath the site.

Based on the manmade coastline (rip-rap, pile sheeting), well gauging data and the generalized hydrogeological cross-sections, a horizontal and somewhat radial (north, northwest, west, southwest, south) pathway for groundwater flow exists. Depth to water beneath the site has ranged from 2.0 ft to 9.0-ft bgs over the course of investigation. Groundwater beneath the site does not appear to be tidally influenced.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
BENZENE	UNKNOWN
TOLUENE	UNKNOWN
ACETONE	UNKNOWN
NAPHTHALENE	UNKNOWN
PHENOL	UNKNOWN
POLYCHLORINATED BIPHENYLS (PCB)	UNKNOWN
XYLENE (MIXED)	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
Nature and Extent of Contamination:
Based on investigations conducted to date, the primary contaminants of concern at the site include petroleum related compounds, phenolic compounds, and PCBs.

BTEX is found in soil from the ground surface to the water table throughout a significant portion of the site. Xylenes were detected at concentrations up to 560 ppm (UUSCO of 1.6 ppm); benzene was detected as high as 5.3 ppm (UUSCO of 0.06 ppm.) The highest concentrations of xylenes are located at the east side of building 14 and north of building 19. The SVOCs phenol; 2,4-dichlorophenol and naphthalene are found in soil from the ground surface to the water table throughout the center of the site. SVOCs, carcinogenic PAHs and metals related to historic fill are found throughout the site. Carcinogenic PAHs (up to 100 ppm) and metals (4370 ppm for lead; 1420 ppm for Barium and 305 ppm for cadmium) were detected well above UUSCOs. PCBs are found in soil at concentrations as high as 320 ppm. PCB contamination is located near buildings 13 and 14 in the north and northwestern part of the property where the hot oil system was located and operated.

Contaminated soil is a source of groundwater contamination. Benzene is found in groundwater above the groundwater standard of 1 ppb at concentrations as high as 3,400 ppb. SVOCs in soil from the use of tar in the manufacturing of tar paper are of a source of groundwater contamination. For example, naphthalene is found in groundwater as high as 5,500 ppb (groundwater standard 10 ppb.)

Non-aqueous phase material, in the form of tar and less viscous oil, is found in the environment.

ASSESSMENT OF HEALTH PROBLEMS:
Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. However, people could come into contact with contaminants if they dig below the ground surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential for soil vapor intrusion to occur in the existing buildings will be investigated.

CLASSIFICATION CODE: P REGION: 2 DEC ID: 498440
CLASSIFICATION CODE DESCRIPTION:
Potential site

NAME OF SITE: 643 Court St.
STREET ADDRESS: 643 Court St. TOWN: New York City
CITY: Brooklyn ZIP: 11231 COUNTY: Kings

ESTIMATED SIZE: 1.377 Acres

SITE TYPE: Dump- Structure- Lagoon- Landfill- Treatment Pond-

INSTITUTIONAL/ENGINEERING CONTROLS:
None reported

CROSS REFERENCES:
None reported

SITE OWNER/OPERATOR/REPOSITORY INFORMATION:
CURRENT OWNER(S):
NAME: Red Hook Realty Co. (LLC) Owner Type: Corporate or Commercial
David Weinberger
ADDRESS: 88 Mineola Ave.
PO Box 1356
Roslyn Heights, NY 11577

OWNER(S) DURING DISPOSAL:

OPERATOR(S) DURING DISPOSAL:
NAME: National Grid
Richard Schmitz
ADDRESS:
NY

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
Location: The site is located in the Red Hook section of Brooklyn, in the City of New York. The site is listed as Block 494, Lot 1 and is located on the south east corner of Court St. and Halleck St. in close proximity to the Gowanus Canal.

Site Features: The site is currently a parking lot with a small building near the middle of the site occupying approximately 1/8th of the property acreage. Current Use: The site is currently leased from Red Hook Realty Co. by National Grid who is using the site as a parking lot for their service vehicles.

Historical Use: The property was used for tar paper manufacturing as depicted in the 1886 Sanborn map which shows tar pitch storage areas on the corners of Smith St./Halleck St. and Court St./Halleck St.

Site Geology and Hydrogeology: Based on geological information at an adjacent site, the groundwater at this property is anticipated to be less than 5 feet bgs. Groundwater flow is anticipated to flow radially from the Gowanus Canal traveling north, northwest, west, southwest, and south. To the south and west of the site, the coastline is lined with sheet piling and to the east of the site, where groundwater enters, the coastline is lined with rip rap. The groundwater is likely saline due to its proximity to the canal. Much of this area is reclaimed water front property with fill material anticipated to exist from 0 to 12 feet bgs. A gray colored, low permeability clayey layer (former base of the Gowanus Canal) is also anticipated to exist beneath

the fill material with a thickness of approximately 8 feet.

CONFIRMED HAZARDOUS WASTE DISPOSED:
None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
This site has had several instances over the last decade of tar seeping out of the ground, getting cleaned up, and reappearing some time later. Further investigation is required to determine the nature and extent of tar beneath the surface.

ASSESSMENT OF HEALTH PROBLEMS:
As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

PROJECT COMPLETIONS:
None reported

The New York State Department of Environmental Conservation has not publicly updated the following fields since 2003:

OWNER(S) DURING DISPOSAL:

OPERATOR(S) DURING DISPOSAL:

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
Location: The site is located in the Red Hook section of Brooklyn, in the City of New York. The site consists of two parcels listed as Block 492, Lots 15 (628 Smith Street) and Block 492, Lot 20 (182 Sigourney Street) on NYC tax maps. The site is at the intersections of Halleck Street, Smith Street and Sigourney Streets. The site is approximately 200-300 feet west of the Gowanus Canal. Site Features: The site is primarily covered with a multi-story brick building with courtyard parking accessible from

Sigourney Street. Current Zoning and Land Use: The current site use is not known but appears to be occupied with commercial and/or industrial operations. Historical Use: The property was used for tar paper manufacturing. A 1904 Sanborn Insurance Map depicts coal tar products, asphalt tanks and various oil tanks (including a 14,000-gallon underground tank). The Sanborn Map indicates that this property was operated by Barrett Manufacturing Company. Site Geology and Hydrogeology: Based on geological information at an adjacent site, the groundwater at this property is anticipated to be approximately 5 feet bgs. Groundwater flow is anticipated to flow toward the Gowanus Canal traveling east and/or southeast. The groundwater is likely saline due to its proximity to the canal. Much of this area is reclaimed water front property with fill material anticipated to exist from 0 to 12 feet bgs. A gray colored, low permeability clayey layer (former base of the Gowanus Canal) is also anticipated beneath the fill material with a thickness varying up to eight feet.

CONFIRMED HAZARDOUS WASTE DISPOSED:
None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
Investigations at adjacent properties indicate tar-like source material, light non-aqueous phase liquid (LNAPL) and petroleum VOCs are present in the soil and at the soil/groundwater interface. Downgradient and to the east of this potential site is the Red Hook Smith Street Brownfield Cleanup Program (volunteer) site (C224163) where tar-like material, metals, VOCs and SVOCs were identified. West of this potential site is the 633 Court St. (Chemtura #224146) site and the Red Hook Smith Recreation Area; tar-like material has been identified in each of these locations. A portion of the Red Hook Smith Street BCP and the 633 Court Street (Chemtura) property were both previously part of the former Barrett Manufacturing property. To the south is a State Superfund P-site (224196) where tar boils have been identified on site, which was initially Mica Roofing Company. Investigation of this site is warranted.

ASSESSMENT OF HEALTH PROBLEMS:
As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

OPERATOR(S) DURING DISPOSAL:

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:

Location: The site is located at 633 Court Street, Kings County, Brooklyn, New York. The facility is located within the Red Hook Industrial area of Brooklyn. The Site is located to the northeast of the Court Street and Halleck Street intersection. The site is immediately bordered to the south by Halleck Street and a National Grid truck facility, to the north by a carting and storage company and to the east by an office and storage building areas. A recreational park (Red Hook Smith Recreational Park) is located directly across Court Street to the west of the site. Additionally, an oil terminal (formerly Hess Oil Company and currently Buckeye) is located approximately one block to the south of the site.

Site Features: The entire site is completely developed and covered with two connected buildings and a concrete slab. These buildings were formerly used for plant operations. Current Zoning and Land Use: The site is currently active, and is zoned for industrial use. Several tenants occupy the site including a wholesale food and food product supply warehouse and offices. The surrounding parcels are currently used for a combination of commercial, light industrial, utility right-of-ways and recreational purposes. The nearest residential area is less than 0.5 miles to the north, however, the park is zoned as residential.

Past Use of the Site: In 1904 the site was used for the manufacturing of tar paper. The site was owned by Barrett Manufacturing Company (a predecessor company to Honeywell International, Inc.). Tar tanks, storage tanks, stills, a pitch shed and an oil house were located on-site. In the 1940s Doran Manganese Bronze Company, Inc. Foundry & Machine Shop occupied the site. In the 1940s to 1950s, Argus Chemical Laboratory (Argus) purchased and operated on the site (subsequently purchased by Witco in the early 1960s). Under Argus and Witco ownership, the plant produced metallic-organic soaps and salts, barium stearates, phosphites and epoxy plasticizers. During the 1950s and 1960s, aluminum paste was produced in a process on the roof of one of the buildings. This production ceased in the late 1950s to early 1960s and all plant operations were moved to a parcel of land located to the southwest of the 688 Site. The laboratory and offices remained at the 633 Site until approximately 1990 when these functions were moved to 688 Court Street. Site Geology and Hydrogeology: The site is reclaimed water front along the East River in a heavily industrialize area. Fill material was observed across the site from 0 to 12 ft bgs. The fill material consisted primarily of fine to coarse sand-sized particles with varying amounts of silt and miscellaneous debris (ash, slag, coal, wood, brick, concrete, etc.). Underlying the fill materials, a silt-clay layer was encountered and in turn underlain continuously by Lake Flushing. A clayey layer, a layer of low permeability, has lateral continuity across the site. This layer (former base of the Gowanus Canal) is gray in color and has a minimum average thickness of approximately 8.0 ft. Due to its' lateral continuity beneath the site, the silt-clay layer acts as a low permeability barrier between the overlying fill and the underlying water-bearing zone located within the glacial deposits beneath the site. Based on the manmade coastline (rip-rap, pile sheeting), well gauging data and the generalized hydrogeological cross-sections; varying depths of the silt-clay layer (former base of the Gowanus Canal) have created variable groundwater flow directions with a net flow toward the Gowanus Canal. To the south and west of the site, the coastline is lined with sheet piling. To the east of the site the coastline is lined with riprap. The water table underlying the site occurs within the fill and native material. Depth to water beneath the site has ranged from 2.0 ft to 9.0-ft below ground surface (bgs) over the course of the investigation. Based on the tidal study, water level measurements (high, low and intermediate tide) the site does not appear to be tidally-influenced.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY

BENZENE	UNKNOWN
XYLENE (MIXED)	UNKNOWN
MERCURY	UNKNOWN
BENZO(A)PYRENE	UNKNOWN
TOLUENE	UNKNOWN
VINYL CHLORIDE	UNKNOWN
BARIUM	UNKNOWN
ACETONE	UNKNOWN
PHENOL	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Nature and Extent of Contamination: Based on investigations conducted to date, the primary contaminants of concern at the site include toluene, ethylbenzene, xylene, semi-volatile organic compounds (SVOCs)/polycyclic aromatic hydrocarbons (PAHs), phenol, and metals.

Soil: The VOCs toluene, ethylbenzene and xylene are found in soil from the surface to the water table. Benzene is found at 13 parts per million (ppm) at the center of the site and at 15 ppm at southern boundary of the site. This contamination is above the groundwater protection soil cleanup objective (SCO) of 0.06 parts per million (ppm) for benzene. PAHs are found throughout site soil. Benzo(a)pyrene is found in concentrations up to 62 ppm which is above the protection of groundwater SCO of 22 ppm. Metals are found throughout site soil. Lead was as high as 618 ppm, barium was found up to 590 ppm, cadmium was found up to 340 ppm, arsenic was found as high as 14.6 ppm and mercury was found as high as 2.4 ppm.

Groundwater: Toluene, ethylbenze, xylene, naphthalene and benzene are found in groundwater at concentrations up to 240, 300, 530, 3,000 and 48 parts per billion (ppb), respectively which are all above the groundwater standards of 5, 5, 5, 10 and 1 ppb, respectively. SVOCs pyrene and naphthalene are found in groundwater at concentrations up to 200 and 6,400 ppb, respectively, which are above the groundwater guidance values of 50 and 10 ppb, respectively. Soil Vapor: Two rounds of sub-slab soil vapor sampling were performed. Based on the results DOH indicated that no further sampling or mitigation would be required.

ASSESSMENT OF HEALTH PROBLEMS:

Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may

move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sampling indicates soil vapor intrusion is not a concern for existing on-site buildings. An evaluation of the potential for soil vapor intrusion is recommended for any future on-site buildings. Surrounding properties are in various cleanup programs and the potential for soil vapor intrusion at those sites will be evaluated separately.

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
See site C224163

Location:

The 45,400 square foot site is located at 627-641 Smith Street in the Borough of Brooklyn, Kings County, NY in an urban area.

Site Features:

The Site currently consists of a vacant 1-story warehouse and an asphalt-paved parking lot. The site warehouse is connected to the warehouse on the lot to the south.

Current Zoning/Use(s): The site is currently zoned as M3-1 (manufacturing).

Historical Use(s): The Site was occupied by Barrett Manufacturing Company, Storage and Shipping in the early 1900s. Later, Colonial Sand and Stone Company occupied the site in the 1950s. Black Diamond Cargo Line and Pittston Stevedoring Storage occupied the Site from the early 1960?s to the 1990s. The original occupant, Barrett Manufacturing, utilized nine coal tar storage tanks and two gasoline underground storage tanks (USTs) as part of their production of coal tar and roofing material. Additionally, Barrett Manufacturing operations occupied the entire city block west of the site (Block 492). Block 492 currently consists of three Lots: Lot 1, Lot 15, Lot 20. Block 492, Lot 1 is a State Superfund Site: Chemtura 633 Court Street ID No. 224146.

Site Geology and Hydrogeology: Soil borings conducted between 2005 and 2012 indicate there are alternating layers of sand and dense clay. Two to four separate aquifers are present at the site, separated by clay confining layers. Groundwater is present at a depth of 2 ? 4 feet below grade.

CONFIRMED HAZARDOUS WASTE DISPOSED:
None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
See site C224163

Nature and Extent of Contamination:

Soil ? Coal tar related VOCs and SVOCs are present above Unrestricted Use SCOs. These include naphthalene (7,700 mg/kg), benzo(a)anthracene (280 mg/kg), benzo(a)pyrene (250 mg/kg), and benzo(b)fluoranthene (190 mg/kg). Contaminated soil is present on-site in the vicinity of the former tar storage tanks, and extends to the eastern property boundary, which is bordered by the Gowanus Canal. Additionally, the area of contaminated soil extends off-site to the south, and upgradient to the west. High soil VOCs and SVOCs upgradient and adjacent to Block 492 indicate that Block 492 may be a source of coal tar related VOCs and SVOCs.

Groundwater ? VOCs and SVOCs are present above Class GA Standard in twenty monitoring wells. The groundwater plume has not been delineated to the south or to the west.VOC and SVOC contamination extends to the eastern property boundary, which is bordered by the Gowanus Canal. Napthalene is present at a concentration of up to 17,000 ug/l. Benzene is present at a maximum concentration of 11,000 ug/l. Toluene is present at a concentration of up to 7,300 ug/l.

Soil Vapor ? Soil vapor samples have not been collected.

Significant Threat: No evaluation has been made thus far to determine if the contaminants represent an environmental significant threat.

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
The Brooklyn Military Ocean Terminal Site is located in an urban portion of the Borough of Brooklyn, Kings County, NY. The site is in the Sunset Park section of Brooklyn on 2nd Ave. between 58th Street and 64th Street. The main site features include several large buildings and piers surrounded by parking areas, roadways and Upper Bay.

The site is currently owned and operated by the City of New York, which has leased the on-site buildings and piers for office space, warehouse space, and industrial manufacturing. The surrounding parcels are currently used for a combination of commercial, light industrial, and residential. The nearest residential area is adjacent to the site across 2nd Avenue. The site was previousely owned by the U.S. Army. Prior uses that appear to have led to site contamination include the storage of 55-gallon drums of unknown materials and several broken bags of NaOH. In the early 1990's the U.S. Army Corp of Engineers removed the broken bags of NaOH, 55-gallons drums and buried USTs. No further action is anticipated for this site.

CONFIRMED HAZARDOUS WASTE DISPOSED:
None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
The primary contaminants of concern at the site known to exist were bags of NaOH, 55-gallon drums of various liquids and

suspected BTEX products. Preliminary site assessment indicate that potential soil and groundwater contamination could have existed from spilled 55-gallon drums of waste and bags of NaOH. However, there was no known exceedances of standards, criteria and guidance. The 55-gallon drums of waste, bags of NaOH, underground storage tanks and contaminated soil have been removed. The site does not present a significant threat to human health or the environment.

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
This facility is being tracked because it once held status as a RCRA interim status facility. DEC is currently evaluating whether there is any need for additional environmental investigation at this facility.

CONFIRMED HAZARDOUS WASTE DISPOSED:
None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:
It has not been determined whether any environmental releases of concern have occurred at this facility.

ASSESSMENT OF HEALTH PROBLEMS:
As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

PROJECT COMPLETIONS:
None reported

APPLICANT REQUESTOR(S):

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
Location: The site is located at 688-700 Court Street within the Red Hook Industrial area of Brooklyn. The site is located southwest of the Court Street and Halleck Street intersection. Site Features: The site is relatively flat and mostly covered with blacktop and concrete. A small area in the southeast corner has a soil cover. Several previously decommissioned site buildings were either removed or rehabilitated without the Department's approval. The site is occupied by several tenants including a garbage hauling company, a motor coach repair facility, an electronics distribution warehouse, a commercial laundry repair business, a stone cutting business and a sheet metal fabricator. The dual-phase extraction remedial system is not

operational. The site is surrounded with a concrete wall of varying height. Current Zoning and Land Use: The site is zoned for industrial use, though its current use is commercial and industrial. The surrounding parcels are currently used for a combination of commercial, light industrial and recreational uses. The site is bordered immediately to the east by Court Street, National Grid and Spentonbush Red Star Companies, to the west by Clinton Street and American Import Export Trucking and to the south by Bryant Street and a Buckeye, LLC oil terminal. A recreational park (Red Hook Recreational) is located immediately to the north of the site.

Past Use of the Site: Milliken Brothers Iron Works occupied the southwestern portion of the site in 1904. In 1939 John F. McKenna, Inc. Lumber Yard, Marine Canvas Supply Corporation and John Menton Boiler Maker occupied the site. The site remained a lumberyard and marine canvas supply business until approximately 1958, when manufacturing at the site began. Historic manufacturing processes at the site include production of metallic-organic soaps and salts, phosphates and epoxy plasticizers. A hot-oil system, that used PCB containing oil, was part of the manufacturing process.

Contamination at the site appears related to several historic operations, including materials handling from the chemical manufacturing processes, as well as releases to the environment from the hot oil system.

Site Geology and Hydrogeology: The site was formed by backfilling the marsh and waterfront areas of the Gowanus Canal in the late 1800s through the early 1900s. Fill material consisting of fine to coarse sand-sized particles with varying amounts of silt and miscellaneous debris (ash, slag, coal, wood, brick, concrete, etc.) was observed across the site from ground surface to a depth of 12 ft. A clay layer of unkown thickness or continuity was encountered beneath the fill material. This layer is presumed to be the former base of the Gowanus Canal. The effectiveness of this layer as a low-permeability barrier between the overlying fill and the underlying water-bearing zone located within the glacial deposits beneath the site is unknown. Based on the manmade coastline (rip-rap, pile sheeting), well gauging data and the generalized hydrogeological cross-sections, a horizontal and somewhat radial (north, northwest, west, southwest, south) pathway for groundwater flow exists. Depth to water beneath the site has ranged from 2.0 ft to 9.0-ft bgs over the course of investigation. Groundwater beneath the site is minimally influenced by the tide. Groundwater flow is radial with a high point in the central part of the site.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
BENZENE	UNKNOWN
TOLUENE	UNKNOWN
ACETONE	UNKNOWN
NAPHTHALENE	UNKNOWN
PHENOL	UNKNOWN
POLYCHLORINATED BIPHENYLS (PCB)	UNKNOWN
XYLENE (MIXED)	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Nature and Extent of Contamination: Based on investigations conducted to date, the primary contaminants of concern at the site include petroleum related compounds, phenolic compounds, and PCBs. BTEX is found in soil from the ground surface to the water table throughout a significant portion of the site. Xylenes were detected at concentrations up to 560 parts per million (ppm)(unrestricted use soil cleanup objective [UUSCO] of 1.6 ppm); benzene was detected as high as 5.3 ppm (UUSCO of 0.06 ppm.) The highest concentrations of xylenes are located at the east side of building 14 and north of building 19. The SVOCs phenol;

2,4-dichlorophenol and naphthalene are found in soil from the ground surface to the water table throughout the center of the site. SVOCs, carcinogenic PAHs and metals are found throughout the site. Carcinogenic PAHs (up to 100 ppm) and metals (4,370 ppm for lead; 1,420 ppm for barium and 305 ppm for cadmium) were detected well above UUSCOs. PCBs are found in soil at concentrations as high as 320 ppm. PCB contamination is located near buildings 13 and 14 in the north and northwestern part of the property where the hot oil system was located and operated. Contaminated soil is a source of groundwater contamination. Benzene is found in groundwater above the groundwater standard of 1 part per billion (ppb) at concentrations as high as 3,400 ppb. SVOCs in soil from the use of tar in the manufacturing of tar paper are of a source of groundwater contamination. For example, naphthalene is found in groundwater as high as 5,500 ppb (groundwater standard 10 ppb.) Non-aqueous phase material, in the form of tar and less viscous oil, is found in the environment.

ASSESSMENT OF HEALTH PROBLEMS:
Access to the site is restricted. However, persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sampling indicates soil vapor intrusion is not occurring on-site and is not a concern for off-site buildings.

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:
Location: The site is located in an urban area. The site borders an access road referred to as Marginal Street (which parallels 1st Avenue), between 47th and 52nd Street. Site Features: The 17.3-acre site is along the Upper New York Bay, in the Sunset Park Section of Brooklyn, in the western part of Kings County, New York. It includes approximately 14 acres of urban land that was created by landfilling between four piers that were part of the former Bush Terminal warehouse complex. Partial filling between two piers (Piers 3 and 4) has resulted in the presence of two ponded areas in the northeastern portion of the site. While most of the landfilled areas are covered with grasses or barren soils, the westernmost fill area between Piers 2 and 3 supports an area of mature trees (referred to as the "existing wooded area").

Current Zoning/Use(s): The land immediately adjacent to the site is used for commercial and industrial purposes. Residential areas are located approximately 1,500 to 2,000 feet east of the site. Historical Uses: Prior to 1974, the site was an active port facility, with vessels that docked at the piers. In 1974, the City of New York Department of Ports and Terminals contracted with a private company to fill in the areas between the four piers with clean construction-related fill. In 1978, the private fill contractor was cited for violations related to the quality of the construction-related fill, in particular, the presence of wood that was not authorized for disposal. Filling operations at the landfill were halted at the request of New York City. During testimony presented before the New York State Legislature in 1982, the City learned of alleged illegal disposal of liquid wastes at the landfill including oils, oil sludges, and wastewaters. The City subsequently secured the property with perimeter fencing, cooperated with NYSDEC in its investigations to confirm the contamination and, in 1997, applied for Clean Water/Clean Air Bond Act funds to further characterize and delineate the site’s contamination. The Site Investigation (SI) was conducted between May 1999 and May 2001. The field activities and findings of the investigation are described in the SI report dated November 2001. Additional studies were conducted between March and July 2002 to support the evaluation of remedial alternatives and are described in the Remedial Alternatives Report (RAR). The Record of Decision presenting selected remedy was finalized in March 2004.

The State Assistance Contract between NYSDEC and NYCEDC was executed on November 9, 2001 and was amended on May 6, 2004 and on August 11, 2005 and again in late 2012. The NYC Economic Development Corporation prepared a detailed design, plans and specifications for the proposed remedy which were approved in January 2009. Remedial construction commenced in August 2009. The Site Management Plan (SMP) was completed in October 2014 and the Final Engineering Report (FER) was completed in April 2015. The Certificate of Completion is dated May 28, 2015 Site Geology and Hydrogeology: Subsurface investigations indicated that three stratigraphic units exist beneath the site. The uppermost unit consists of fill material which ranges in thickness from 30 feet in the northern portion of the site to 60 feet in the southern portion. The fill material consists of fine to coarse sand and cobbles, brick, concrete rubble, ash, and wood debris. The fill material contains many void spaces, consistent with the characteristics of a construction and demolition (C&D) landfill. Brown or black staining that exhibited a petroleum odor was observed at some locations at depths of greater than five feet. A brown silt unit, believed to be native material, underlies the fill layer and is approximately 30 feet thick. The silt is not present in the southern portion of the site. Beneath the silt unit, fine sand was found at depths of greater than 60 feet. The sand is believed to be the beginning of the Upper Glacial aquifer and is thought to be about 40 feet thick beneath the site. In the southern portion of the site, the sand unit is in direct contact with the fill layer. Horizontal groundwater flow direction at low tide in all three zones is generally westward, toward the Bay.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
LEAD	UNKNOWN
CADMIUM	UNKNOWN
ARSENIC	UNKNOWN
BENZ(A)ANTHRACENE	UNKNOWN
BENZO(A)PYRENE	UNKNOWN
BENZO(A)ANTHRACENE	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Nature and Extent of Contamination: Prior to Remediation The primary categories of contaminants of concern at the site (in groundwater, soils and sediments) that exceed their respective Standards, Criteria and Guidance (SCGs)are semivolatile organic compounds (SVOCs) and inorganics (metals). VOCs, the pesticide 4,4-DDT, and PCBs were also detected at levels exceeding SCGs, but to a much lesser extent than the SVOCs and metals. Surface Soil - SVOCs and metals are the main contaminants of concern in surface soil. SVOCs and iron are present at elevated levels throughout the site surface soils, with arsenic, cadmium, and/or lead also present at elevated levels at select locations.

Subsurface Soil - SVOCs and metals are the main contaminants of concern in both the unsaturated and saturated soils. PAHs are present at elevated levels throughout the subsurface soils, with arsenic and/or lead also present at elevated levels at select locations. Individual SVOCs were detected at levels as high as 140 ppm (fluoranthene in a saturated soil sample). The detection of 31,900 ppm lead at a soil boring prompted the subsequent installation of three additional borings, which did not confirm the presence of a lead hot spot at that location. In general, higher levels of contamination were detected in the saturated subsurface soils than in the unsaturated subsurface soils. Other metals commonly detected at elevated levels in the subsurface soils but not identified as constituents of concern include beryllium, cadmium, chromium, copper, iron, mercury, nickel and zinc.

Sediments - SVOCs and metals were the main contaminants of concern in the sediments. Groundwater - VOCs, SVOCs and metals are the main contaminants of concern in shallow, intermediate and deep groundwater when compared to the GA criteria. Surface Water - Zinc was the only constituent present in the surface water samples at a level exceeding SCGs. Soil Gas - Methane, a common landfill gas component, was detected in on-site soil gas samples. The detection of explosive soil gases at levels exceeding 25% of the LEL in site soil gas samples indicates a potential for future exceedances of these criteria once the site is covered and developed for future use. Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern in groundwater, soils and sediments were SVOCs and metals and zinc in the surface water. Remedial actions have successfully achieved soil cleanup objectives for restricted residential use, industrial use and commercial use. Residual contamination in the subsurface soil, surface water, groundwater, soil gas and sediment is being managed under a Site Management Plan.

ASSESSMENT OF HEALTH PROBLEMS:

The area is served by public water, therefore, exposure to contaminated groundwater is unlikely. There is a potential for direct contact expsoure with contaminated surface soil. However, a clean soil cover over the site and landfill gas control measures will minimize the potential for exposures to future park users. Site access is currently restricted by a fence minimizing the potential for exposure.

More than one waste code was reported for the following waste amount:		80	POUNDS	TSD	2016		
D003	Solid waste that exhibits the characteristic of reactivity						
D001	Solid waste that exhibits the characteristic of ignitability						
D035	Methyl ethyl ketone						
More than one waste code was reported for the following waste amount:		55	POUNDS	TSD	2016		
D003	Solid waste that exhibits the characteristic of reactivity						
D001	Solid waste that exhibits the characteristic of ignitability						
P101	Propanenitrile						
More than one waste code was reported for the following waste amount:		56	POUNDS	TSD	2016		
D003	Solid waste that exhibits the characteristic of reactivity						
D002	Solid waste that exhibits the characteristic of corrosivity						
D001	Solid waste that exhibits the characteristic of ignitability						
D008	Lead						
More than one waste code was reported for the following waste amount:		45	POUNDS	TSD	2016	60	2014
D003	Solid waste that exhibits the characteristic of reactivity						
D002	Solid waste that exhibits the characteristic of corrosivity						
D008	Lead						
D001	Solid waste that exhibits the characteristic of ignitability						
D007	Chromium						
More than one waste code was reported for the following waste amount:		5	POUNDS	TSD	2016		
D003	Solid waste that exhibits the characteristic of reactivity						
D002	Solid waste that exhibits the characteristic of corrosivity						
P030	Cyanides (soluble cyanide salts), not otherwise specified						
More than one waste code was reported for the following waste amount:		2	POUNDS	TSD	2016	151	2014
D003	Solid waste that exhibits the characteristic of reactivity						
D002	Solid waste that exhibits the characteristic of corrosivity						
U133	Hydrazine (R,T)						
More than one waste code was reported for the following waste amount:		5	POUNDS	TSD	2016	10	2015
D003	Solid waste that exhibits the characteristic of reactivity						
D008	Lead						
D005	Barium

U196	Pyridine						
More than one waste code was reported for the following waste amount:		30	POUNDS	TSD	2016		
U113	Ethyl acrylate (I)						
D001	Solid waste that exhibits the characteristic of ignitability						
U196	Pyridine						
D002	Solid waste that exhibits the characteristic of corrosivity						
More than one waste code was reported for the following waste amount:		10	POUNDS	TSD	2016		
U188	Phenol						
D005	Barium						
D011	Silver						
D001	Solid waste that exhibits the characteristic of ignitability						
D007	Chromium						
More than one waste code was reported for the following waste amount:		25	POUNDS	TSD	2016		
U188	Phenol						
D022	Chloroform						
D002	Solid waste that exhibits the characteristic of corrosivity						
D024	m−Cresol						
More than one waste code was reported for the following waste amount:		2	POUNDS	TSD	2016		
U205	Selenium sulfide SeS2 (R,T)						
P075	Nicotine, & salts						
D011	Silver						
U248	Warfarin						
D010	Selenium						
More than one waste code was reported for the following waste amount:		197	POUNDS	TSD	2016		
U240	Acetic acid, (2,4−dichlorophenoxy)−, salts & esters						
D039	Tetrachloroethylene						
D016	2,4−D, (2,4−Dichlorophenoxyacetic acid).						
More than one waste code was reported for the following waste amount:		25	KILOGRAMS	TSD	2016		
B007	Other PCB Wastes including contaminated soil, solids, sludges, clothing, etc.						
D005	Barium						
D007	Chromium

More than one waste code was reported for the following waste amount:		5	POUNDS	TSD	2015		
U205	Selenium sulfide SeS2 (R,T)						
D010	Selenium						
D008	Lead						
More than one waste code was reported for the following waste amount:		450	POUNDS	TSD	2015		
D001	Solid waste that exhibits the characteristic of ignitability						
D002	Solid waste that exhibits the characteristic of corrosivity						
D024	m−Cresol						
U188	Phenol						
U002	2−Propanone (I)						
More than one waste code was reported for the following waste amount:		400	POUNDS	TSD	2015		
D001	Solid waste that exhibits the characteristic of ignitability						
D005	Barium						
F003	Spent non−halogenated solvents						
F005	Spent non−halogenated solvents						
D008	Lead						
More than one waste code was reported for the following waste amount:		450	POUNDS	TSD	2015		
D001	Solid waste that exhibits the characteristic of ignitability						
D007	Chromium						
P188	Benzoic acid (OR) Physostigmine salicylate						
U038	Benzeneacetic acid, 4−chloro−alpha−(4−chlorophenyl)−alpha−hydroxy−, ethyl ester						
U129	Lindane						
More than one waste code was reported for the following waste amount:		2	POUNDS	TSD	2015		
D001	Solid waste that exhibits the characteristic of ignitability						
D007	Chromium						
U058	2H−1,3,2−Oxazaphosphorin−2−amine, N,N−bis(2−chloroethyl)tetrahydro−, 2−oxide						
D024	m−Cresol						
D022	Chloroform						
More than one waste code was reported for the following waste amount:		135	POUNDS	TSD	2015		
D001	Solid waste that exhibits the characteristic of ignitability						
D010	Selenium						
D011	Silver						
D024	m−Cresol						
U205	Selenium sulfide SeS2 (R,T)

WASTE CODE	WASTE DESCRIPTION	WASTE AMOUNT	WASTE UNITS	TRANSACTION TYPE	YEAR	HISTORIC MAXIMUM AMOUNT	HISTORIC MAXIMUM YEAR
More than one waste code was reported for the following waste amount:		125	POUNDS	TSD	2015		
D001	Solid waste that exhibits the characteristic of ignitability						
D010	Selenium						
P012	Arsenic oxide As2O3						
P075	Nicotine, & salts						
U188	Phenol						
More than one waste code was reported for the following waste amount:		100	POUNDS	TSD	2015		
D001	Solid waste that exhibits the characteristic of ignitability						
D010	Selenium						
U010	Mitomycin C						
U058	2H−1,3,2−Oxazaphosphorin−2−amine, N,N−bis(2−chloroethyl)tetrahydro−, 2−oxide						
More than one waste code was reported for the following waste amount:		1154	POUNDS	TSD	2015		
D001	Solid waste that exhibits the characteristic of ignitability						
D010	Selenium						
U035	Chlorambucil						
U058	2H−1,3,2−Oxazaphosphorin−2−amine, N,N−bis(2−chloroethyl)tetrahydro−, 2−oxide						
U129	Lindane						
More than one waste code was reported for the following waste amount:		200	POUNDS	TSD	2015		
D001	Solid waste that exhibits the characteristic of ignitability						
D021	Chlorbenzene						
U010	Mitomycin C						
U035	Chlorambucil						
U058	2H−1,3,2−Oxazaphosphorin−2−amine, N,N−bis(2−chloroethyl)tetrahydro−, 2−oxide						
More than one waste code was reported for the following waste amount:		12	POUNDS	TSD	2015		
D001	Solid waste that exhibits the characteristic of ignitability						
F003	Spent non−halogenated solvents						
F005	Spent non−halogenated solvents						
U080	Methane, dichloro−						
More than one waste code was reported for the following waste amount:		20	POUNDS	TSD	2015		
D001	Solid waste that exhibits the characteristic of ignitability						
U010	Mitomycin C						
U035	Chlorambucil						
U058	2H−1,3,2−Oxazaphosphorin−2−amine, N,N−bis(2−chloroethyl)tetrahydro−, 2−oxide						
U059	5,12−Naphthacenedione, 8−acetyl−10−((3−amino−2,3,6−trideoxy)−						
U150	L−Phenylalanine

U006	Acetyl chloride (C,R,T)						
More than one waste code was reported for the following waste amount:		120	POUNDS	TSD	2014		
D003	Solid waste that exhibits the characteristic of reactivity						
F005	Spent non−halogenated solvents						
F003	Spent non−halogenated solvents						
D001	Solid waste that exhibits the characteristic of ignitability						
More than one waste code was reported for the following waste amount:		60	POUNDS	TSD	2014		
D003	Solid waste that exhibits the characteristic of reactivity						
F009	Spent stripping and cleaning bath solutions from electroplating operations						
More than one waste code was reported for the following waste amount:		10	POUNDS	TSD	2014		
D003	Solid waste that exhibits the characteristic of reactivity						
U154	Methanol (I)						
D002	Solid waste that exhibits the characteristic of corrosivity						
F003	Spent non−halogenated solvents						
D001	Solid waste that exhibits the characteristic of ignitability						
More than one waste code was reported for the following waste amount:		150	POUNDS	TSD	2014		
D003	Solid waste that exhibits the characteristic of reactivity						
U404	Ethanamine, N,N−diethyl (OR) Triethylamine						
D002	Solid waste that exhibits the characteristic of corrosivity						
F003	Spent non−halogenated solvents						
D001	Solid waste that exhibits the characteristic of ignitability						
More than one waste code was reported for the following waste amount:		14	POUNDS	TSD	2014		
D003	Solid waste that exhibits the characteristic of reactivity						
U404	Ethanamine, N,N−diethyl (OR) Triethylamine						
D002	Solid waste that exhibits the characteristic of corrosivity						
U117	Ethane, 1,1−oxybis−(I)						
D001	Solid waste that exhibits the characteristic of ignitability						
More than one waste code was reported for the following waste amount:		350	POUNDS	TSD	2014		
D003	Solid waste that exhibits the characteristic of reactivity						
U404	Ethanamine, N,N−diethyl (OR) Triethylamine						
D002	Solid waste that exhibits the characteristic of corrosivity						
U196	Pyridine						
D001	Solid waste that exhibits the characteristic of ignitability

HAZARDOUS MATERIAL SPILLS INTRODUCTION

The Hazardous Material Spills in this section are divided into eight spill cause groupings. These include:

Active Spills Section: Spills with incomplete paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

1) Tank Failures
2) Tank Test Failures
3) Unknown Spill Cause or Other Spill Cause Hazardous Spills
4) Miscellanous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, Vandalism and Storms.

Closed Status Spills Section: Spills with completed paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

5) Tank Failures
6) Tank Test Failures
7) Unknown Spill Cause or Other Spill Cause Hazardous Spills
8) Miscellanous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, Vandalism and Storms.

All spills within each spill cause category are presented in order of proximity to the subject site address.

Please note that spills reported within 0.25 mile (or one−eighth mile in New York City) are mapped and profiled.

Between 0.25 mile (or one−eighth mile in New York City) and 0.5 mile, only the following spills are mapped and profiled:

* Tank Failures;

* Tank Test Failures;

* Unknown Spill Cause or Other Spill Cause;

* Spills greater than 100 units of quantity; and

* Spills reported in the NYSDEC Fall 1998 MTBE Survey.

A table at the end of each section presents a listing of reported Miscellanous Spills with less than 100 units located between 0.25 mile (or one−eighth mile in Manhattan) and 0.5 mile. These spills are neither mapped nor profiled.

NO ACTIVE TANK FAILURES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS

ACTIVE TANK TEST FAILURES IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS

PLEASE NOTE: * Compass directions can vary substantially for sites located very close to the subject property address.

TANK TEST INFORMATION

Tank Number	Tank Size	Tank Test Method	Leak Rate	Gross Leak or Failure
1	550	VacuTest	0.00	UNKNOWN

Caller Remarks:

Subsurface investigation identified soil and groundwater contamination.

DEC Investigator Remarks:

2/16/17 − Obligado − As part of an off−site investigation into 4th and 25th Spill cases #9305122, I conducted a complete file review and identified a tank test failure report for 207 25th street. According to the file, this site had a 550 gallon #2 diesel UST which failed a tightness test on 9/10/1993. As a result of this file review, the DEC under PIN # 93256 conducted a subsurface investigation around the former suspected tank with the current owner's permission. 4 borings were abvanced, 2 within the building, 1 in the sidewalk adjacent to the fill port and 1 down gradient on the 737 4th Avenue Duncan donuts property. Soil and groundwater contamination was identified in all 4 soil borings. Contamination was found as shallow as 8 ft bgs. The soil data and groundwater confirm that the 1993 tank test failure resulted in a petroleum discharge to soil and groundwater.

3/21/17 − Obligado − Final Phase II report received from Envirotrac. The report documents investigations at 3 properties − 207 25th Street, 213 25th Street, and 276 24th Street. The report concludes that the former UST system at the 207 25th Street property was a contributing source to the over all Spill. However, based upon prior investigations, prior laboratory analysis of product samples, the overall extent of the impated area and the volume of free product observed in the wells over the years, it is EnviroTrac's professional opinion that the property at 207 25th Street was not the sole source for the petroleum release.

With regards to the 276 −280 24th street building the subsurface investigation was inconclusive because although no evidence of soil contamination was observed, the soil probes were not installed deep enough to confirm the absence of soil contamination below the suspect tank. This was because the investigaiton was done with a small geoprobe due to access limitations which could not penetrate the tight clay formation below 10−12 ft.

With regards to the 213th 25th Street site the report concludes that based on the absence of contamination in the shallow 213 B−1 boring, the abandoned 1000 gallon #2 fuel UST had not leaked prior to its abandonment

4/4/17 − Obligado − I sent a letter to Sandi Fung of PSJC LLC, cc to DEC Vought, Austin, Urda and AOG Judith Karpen, requiring a UST assessment (via either geophysical or intrusive methods) in the vicinity of the suspected UST to determine if the source tank was still present beneath the site and acting as a continued source for soil and groundwater contamination. I required the report be submitted within 90 days of receipt of the correspondence.

4/5/07 − Obligado − I spoke with Sandi Fung. I provided her a list of tank contractors and the tank closure document from 1994.

5/19/17 − Obligado − Tom Gallanger, GEM (914) 382 8673. He has been hired by Sandi Fung to investigate the tank.

6/12/17 − Obligado − I got an email from Sandi requesting additional time to due the investigation as her contractor was not responsive. I told her that was fine.

TANK TEST INFORMATION

Tank Number	Tank Size	Tank Test Method	Leak Rate	Gross Leak or Failure
		Unknown	0.00	UNKNOWN

Caller Remarks:

TANK−TEST FAILURE. ISOLATE, REPAIR, AND RE−TEST.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004.

04/27/05− Bureau B, unassigned, due to low priority. Transferred from R−2.

12/20/06− reassigned to Chris Milack, Central Office (Milack)

12/29/06− Groundwater investigation work plan approved. Plan calls for sampling of 3 wells on property that were previously installed for the investigation of spill #93−05122. (Milack)

5/24/07− GW investigation report was received 5/18/07. Two wells were samplled, one well was dry. Both wells had concentrations of MTBE that exceeded standards. Consultant will be submitting an additional investigation WP. Quarterly sampling will continue.

7/2/08 − Haggerty: assumed project management from Chris Milack

9/19/08 − Haggerty: approved SI workplan

11/25/08 − Haggerty: SI workplan altered due to the presence of oil−cooled high pressure gas mains along 24th Street. See email and revised figure in edocs

4/20/09 − Haggerty: approved SIR with the following comments:

1. Add Tertiary Butyl Alcohol (TBA) to the groundwater sampling protocol.

2. The 12 abandoned 550gal tanks must be removed as well as the former dispenser areas. Provide a UST Removal work plan within 60 days of the receipt of this email.

3. I agree with waiting 2 quarters before further groundwater delineation, if any, is performed.

6/19/09 − Haggerty: had conference call with Ken Drake from ExxonMobil and Kleinfelder. ExxonMobil states they are not willing to remove the tanks because there is an issue of who owns the tanks. They will gather more information and get back to me. PM forwarded this spill to Scott Owens (OGC) for follow−up

May 2010 − Due to various underground utilities, off−site delineation is proving to be difficult. PM instructed Mobil to get access to a property across 24th Street to install a MW. This appears to be our only option of delineation at this time. Discontinued EFT events due to poor recovery, really tight soil

July 2010 − EM granted access to off−site location to complete delineation

August 2010 − Offsite well well installed 8/3

February 2011 − offsite well show high levels of gasoline contamination (20,000ppb BTEX) but little MTBE. On−site contamination predominately MTBE

June 2011 − SSUR overdue

July 2011 − reviewed SSUR. EM continues to only propose continued gw sampling when the site obviously needs active remediation. Left message with Jackie Fawcett, EM, to discuss

August 2011 − sent email requiring ExxonMobil to submit a Pilot Test work plan to address both soil and groundwater contamination within 45 days (due 9/17/11)

Sept. 2011 − approved Feasibility study work plan for SVE/AS

January 2012 − EM switched consultant's to GES. SVE/AS pilot test failed, not viable. Heavy BTEX dissolved concentrations encountered in new wells (50,000+ppb)

February 2012 − discussing the site on 2/28/12 when EM and GES come to Albany. My conceptual model changed since the new gw data

came in

April 2012 − EM's SVE pilot test was a complete failure based on the lithology. Tank/line removal, over−excavation is the only fiable solution to source removal. EM states they won't remove the tanks becuase some were sold to the owner. PM needs assistance from OGC

August 2012 − With OGC's involvement, EM has agreed to drill through the tanks which will only prove that EM is responsible for removing the tanks

December 2012 − Wells in the former tank area should have been installed at this point but I was unable to confirm with the GES PM.

January 2, 2012 − according to GES Project Manager, installation of tank field wells was delayed. Installation will begin 1/8/13

May 2013 − OGC and EM legal contacted regarding this site. The groundwater is grossly contaminated (80,000ppb of VOCs). Dept. required EM to exacavate the source (old tanks and associated contaminated soil) but EM won't sign a Consent Order or perform the work. EM already performed an SVE/AS pilot test which failed. Now, EM wants to perform another SVE pilot test

October 28 2013 − ExxonMobil has agreed to sign the Consent Order and remove the tanks and contaminated soil. Workplan due in 30 days

December 2013 − PM sent comment letter to ExxonMobil. The work plan was revised and resubmitted. Currently under review

January 6, 2014 − revised workplan approved

April 2014 − Excavation work plan approved in January but we are still waiting on the access agreement with the property owner

September 2014 − Haggerty: excavation per the RAP complete

January 2015 − Haggerty: post−excavation MWs installed. PM required 4 quarters of performance groundwater monitoring.

Caller Remarks:

CALLER RESPONDED TO ABOVE LOCATION TO PERFORM TESTING FOR A TEST UPGRADE. TEST REVEAL SOIL CONTAMINATION. FURTHER TESTING TO BE DONE AS WELL AS EXCAVATION AT SITE. NO CALL BACK REQUESTED.

DEC Investigator Remarks:

8/5/99 mtg: Initial approach will be to attempt High Vac on wells #3 & #4. If later testing shows little effect, 3 additional wells on the sidewalk will be installed and a more aggressive remediation plan will be prepared by EnviroTrac.

11/18/2002 Waste Oil tank was previously removed, end points for this excavation show SVOC exceed TAGM. On going SVE project.

06/16/03 Spoke to Ed Russo of Envirotrac. Hess is considering buying this property from Shell. Rommel

9/16/03 Meeting notes: continue running SVE.

12/2/03 Reassigned from Sangesland to Foley. Update report received. In 12/02, Shell ceased operations at site. All USTs were removed and site is vacant. SVE/AS system is currently off pending electric. Groundwater sampled 10/13/03. BTEX range is less than 4.0ppb(MW−10) to 16144ppb(MW−4). MTBE range is 3.3ppb(MW−3) to 1180ppb(MW−1). No product was detected during this period. Depth to water is 22−24'. Flow is southeast.

Sensitive receptors: houses and apt buildings with basements. Elementary school located north of site, across 30th St.

SVE/AS system will be reactivated and monthly system sampling will continue.

3/18/04 Received update report from NES. BTEX range less than 4ppb(MW−10) to 15037ppm(MW−4). MTBE from 3ppm(MW−3) to 1150ppm(MW−1).

6/8/04 Received update report (NES, 6/8/04). BTEX ranged from ND(MW−10) to 18982ppb(MW−4). MTBE ranged from ND(MW−3) to 1220ppb(MW−1). System off pending electric.

6/23/04 Spoke to Tom Bosshard, Envirotrac. Hess will be buying property. Shell to continue remediation.

9/9/04 Received update report. BTEX ranged from 3.6ppb(MW−9) to 19270ppb(MW−2). MTBE ranged from ND(MW−3, MW−6) to 621ppb(MW−1). System off pending electric.

11/23/04 Meeting held with M. Schneck, NES and R. Rule, Shell. SVE/AS has been off for an extended period of time. Had electric issues when divested. Expect electric and system back on within one month.

3/7/05 Update report received. Hess commenced with site redevlopment in 9/04 and is now operating as Hess. Approx 1953tons of suspected petroleum impacted soils were excavated. NES has secured a new electric service and the existing SVE system was reactivated on 1/13/05. A previously undocumented 550gal waste oil UST was discovered and removed. Sidewall and bottom wall samples had PAHs above cleanup objectives.

2/1/06 SVE/AS operating and levels decreasing. Historically GW flow to the SE. Will resurvey. DEC wells in front of apartment building, with DEC−1 increasing.

6/7/06 − Obligado − Transferred from Foley to Obligado.

2/9/07 − Obligado − Review 4Q06 Monitoring Report. 6 onsite and 2 offsite wells sampled on 12/19/06. DTW 22.67 to 24.38 ft. No LNAPL. BTEX 3.38 to 13652 ppb (MW4). MTBE ND to 32.7 ppb (MW4). AS/SVE not operation in December due to temporary disruptin of electrical service. Con Ed indicated electric will be restored in January 2007. Sysetm O&M sampling on 10/30/06 and 11/13/06. Max effluent benzene at 2.20 mg/m3 which is below most conservative STIP MOU value of 5.272 mg/m3.

10/5/07 − Obligado − REview 1Q07 monitoring report. During Jan 12 adn 31 AS/SVE OM&M visits, GES was unable to get system running. ON Feb 9, GES repaired electrical problems and restarted the system. On March 1, gugaed and sampled 8 monitoring wells. MW4 had LNAPL with thickness of 0.01 ft. BTEX was 2.82 to 6126 ug/L (MW8). MTBE was 5.44 to 16.6 ug/L (MW3). The

system uptime during this period was 54%.

2Q07 report.

ON JUne 5, 2007 8 wells were sampled. GW depth is 20 to 23 ft and flow is to south. BTEX from ND to 10,097 ug/L (MW4), MTBE is from ND to 19 ug/L (MW9). The system uptime during this period was 91% for SVe and 75% for AS. As sparge system exhibited some problems due to high temp alarm. Proposes installation of 2 wells in vicinity of MW2 which could not be located. Sent email approval of the well installations.

11/5/07 − Obligado − Email from Heather Cloud − As discussed on the phone, I would like to temporarily shut down the SVE/AS system at 833 4th Avenue in Brooklyn. During the past couple of visits, it has come to our attention that the blower is worn and will need to be replaced. Since we are scheduled to install additional delineation wells on the northern portion of the property (scheduled for November 19−20), and there is the potential that we will need to expand the system (based upon the results of the well install), I am requesting approval to temporarily shut down the system until we can further evaluate the need for system modifications (potentially upgrading the equipment) and/or expansion.

If it determined that system modifications and/or expansion is necessary, we will prepare a work plan outlining the system modifications and submit it to you for your approval. If an expansion of the system is not necessary, we will replace the blower based upon the existing conditions and re−start the system.

12/19/07 − Obligado − Review 3Q07 report. 0&M peformed bimonthly on AS/SVE ssystem. On each visit the system was down. SVE system run time is 85%, AS system run time is 32%. Benzene emmissions were below STIP Guidance. BTEX range from ND to 8,280 ug/L. Proposes to install 2 wells MW13 and MW14 on northern portion of property.

5/6/08 − Obligado − Review 4Q07 report. In November 2007, GES temporarily shut down the system to perform system modifications. In December 27, 5 soil boiings were advanced. Saturated zone impacts remain on site between 22 and 30 ft bgs. 2 monitoring wells were installed (MW12 and MW13) to a depth of 30 ft bgs. GW sampled on December 31, 2007. No Lnapl detected. BTEX range from ND to 10,246 ug/L (MW4). MTBE range from ND to 15.2 ug/L (MW8). Soil impacts at SB1 (28−30 ft) is 1,086,400 ug/m3.

Review 1Q08 report. BTEX Range from ND to 7711 ug/L (MW4). MTBE from ND to 15.6 ug/L (MW8). LNAPL not detected. Proposes replacing SVE blower and reactivated SVE/AS systems and continued O&M.

10/24/08 − Obligado − review System Modificaiton Workplan. It proposes installing 4 additional onsite wells and 1 off−site well. Also proposes overdrilling some ineffective AS/SVE wells and installing separate SVE and AS wells.

10/31/08 − Obligado − Approved workplan. Sent approval letter to Heather Cloud via email.

2/24/09 − Obligado − Meeting with GES, Shell, DEC. They are having problems doing additional work do to NYC MTA permitting issues with adjacent subway.

11/9/09 − Obligado − Meeting with Shell, DEC, GES. System modifications completed and start up scheduled for December 2009.

4/13/10 − Obligado − I completed my review of a Site Status Update Report, which documented the remedial system upgrade activites and the installation of 3 additional delineation wells. The plume appears to be adequately delineated. I sent an approval

letter for the investigation to Heather Cloud via email with a cc to Rob Rule.

8/25/10 − Obligado − Meeting with Shell/GES/DEC. They will continue to operate the onsite SVE−AS system. − Mark Tibbe to provide information on spills in the area with regards to the installation of offsite wells MW−8, MW−9 and MW−10. − Obtain a spills report for the area to evaluate historical spills at surrounding properties.

12/22/10 − Obligado − Review 3Q10 report. System experiencing mechanical issues. The system was down twice in July and once in August. The run time was only 41 percent for SVE and 13 percent for the AS. They plan to replace/repair the blower and the heat exchanger. Since the system was upgraded and restarted in 2009, there has been a significan increase in recovery, estimated at almost 3000 lbs of hydrocarbons in the past year.

3/15/11 − Obligado − 4th qtr report 2010 BTEx at 5,432 ug/L. NO system OMM samples were collected. No effluent PID readings were collected. An estimated 3,451 lbs of hydrocarbons recovered during this period. I emailed Christopher Guale requiring data to confirm the system is operating within permitted limits.

9/18/13 − Obligado − I received a Request to Turn off the Remediation System. According to the report, the system has reached asymptotic recoverly levels. The system has been having mechanical issues and needs significant repairs. Based on the low recovery, and system mechanical issues, they will be shutting down the system. They will conduct a post remedial soil boring investigation and potentially submit a spill closure request if the results are favorable.

3/28/14 − Obligado − I reviewed a confirmation soil boring workplan which proposed 4 soil borings to confirm remedial effectiveness. I required an additional boring adjacent to the residential building to the east.

4/1/14 − Obligado − I received the revised workplan with the additional boring. I approved the workplan. I also reviewed the 4Q14 update report. Elevated BTEX still present in MW8 (9556 ug/L BTEX) and MW14 (4417 ug/L BTEX). However, it does appear BTEX concentrations are steadily decreasing over time.

11/10/16 − Obligado − Shell Meeting with Rob Rule of Shell, Heather Cloud of GES, and Sarken Dressler of GES. BTEX as high as 7275 in MW14. MTBE ND in all wells.

Shell presented BTEX plume maps demonstrating the areal extent of the plume decrasing with time. Shell will submit an exposure assessment and a petition for spill closure.

Caller Remarks:

Caller advised received sample back and showing petroleum in the soil. CLean up is pending.

DEC Investigator Remarks:

8/23/13−Vought−Spill assigned to DEC Zhune as spill is soil contamination spill and Zhune is runner for the day.

1/14/16−Vought−This spill transferred from DEC Zhune to DEC Omar as per DEC Demeo.

1/15/2016: Rashad 822 4th Avenue has alternate addresses of 822−828 4th Avenue and 159−165 29th Street. Spill#0907094 found for neighboring property 149−157 29th Ave in 2009 for a potential buyer, a phase 2 was conducted by Langan and they had no samples above standards. 822−828 4th Avenue has a PBS registration# 2−604677, they had 12 550 gallon ASTs which were all converted to non regulated use in 2000. No documents found in D2.

1/19/2016: Rashad Sent email to Carlos: I have been reassigned 2 spills that list you as a contact, they are as follows: Spill#1305487 ˇ 822 4th Ave, Brooklyn 11232, date received was 8/21/2013, Spill#1506140 ˇ 4013 4th Ave, Brooklyn 11232, date received was 9/9/2015. I would appreciate any documentation/information you have on either of these sites.

1/20/2016: Rashad Carlos responded on 1/19 saying he will call me and give me an update on both sites.

1/13/2017 ˇ Austin ˇ This spill report is being transferred from Rashad Omar to Pratik Lakhani ˇ end.

02/15/17 − Lakhani HydroTech Carlos Quinonez 6314625866

03/07/17 − Lakhani Spoke to Hydrotech Carlos and he informed that Phase II ESA was done for the client, Signature Management Enterprise, LLC. The site is approx. 9015 sq. ft. in area and consists of a vacant lot. The investigation was accomplished through GPR and the installation and sampling of six (6) soil probes and three (3) groundwater probes. The six (6) soil probes, designated SP−1 through SP−6, were installed. All of the probes were installed to a depth of 14’bg and were continuously sampled

at consecutive 2' intervals. No visual evidence of petroleum was noted in any of the soil samples. No olfactory evidence and only trace organic vapors were noted throughout all of the soil probes, except for SP−4. A slight petroleum odor and a PID reading of 53.2ppm were detected in the 10'−12' sample from SP−4. One (1) soil sample from each probe was selected for lab analysis. Concentrations of VOCs are below CP−51 standards for all soil samples. Three (3) groundwater probes, designated GP−1 through GP−3, were installed. The groundwater probe consisted of a screen with a slot size of 0.020 . The screen was placed so that it bisected the water table, which was encountered at between 30'−32'bg. A groundwater sample was obtained and no free product was observed during sampling. Samples were analyzed and results were as follow: 1,2,4−trimethylbenzene 370 ug/L(GP−2), 1,3,5−trimethylbenzene 110 ug/L(GP−2), benzene 15 ug/L(GP−2), ethylbenzene 510 ug/L(GP−2), m,p−xylene 2110 ug/L(GP−2), o−xylene 730 ug/L(GP−2), toluene 150 ug/L(GP−2), trichloroethene 7.6 ug/L(GP−3).

Emailed Hydrotech Carlos Quinonez regarding the site. DEC Lakhani required delineation of groundwater via the determination of groundwater flow direction.

03/15/17 − Lakhani Jessica Lam from Advanced Cleanup Technologies emailed to inform that they will be conducting a Phase I ESA. Sent the following email to Jessica: Jessica, I am the project manager for the spill at 822 4th Avenue in Brooklyn (1305487). My knowledge of the spill is as follows:

There were twelve (12) 550−gallon ASTs registered on the property which were all converted to non−regulated use in 2000. Contaminated soil was encountered on this site in August 2013.

Hydro Tech Environmental was retained to perform a Phase II ESA. The investigation was accomplished through GPR and the installation and sampling of six (6) soil probes and three (3) groundwater probes. All of the soil probes were installed to a depth of 14' bg and were continuously sampled at consecutive 2' intervals. A slight petroleum odor and a PID reading of 53.2ppm were detected in the 10'−12' sample from one of the probes. One soil sample from each probe was selected for lab analysis. Concentrations of VOCs were below CP−51 standards for all soil samples.

Three (3) groundwater probes, designated GP−1 through GP−3, were installed. A groundwater sample was obtained and no free product was observed during sampling. Samples were analyzed and results were as follow: 1,2,4−trimethylbenzene 370 ug/L(GP−2), 1,3,5−trimethylbenzene 110 ug/L(GP−2), benzene 15 ug/L(GP−2), ethylbenzene 510 ug/L(GP−2), m,p−xylene 2110 ug/L(GP−2), o−xylene 730 ug/L(GP−2), toluene 150 ug/L(GP−2), TCE 7.6 ug/L(GP−3).

I require a delineation of groundwater contamination via the determination of groundwater flow since the groundwater probe data shows a medium to high level of impact. No remedial activities have been started on the site yet. If you have any questions, please contact me at (718) 482−4038.

04/07/17 − Lakhani Called Jessica Lam seeking an update. She informed that the Phase I is completed and the report was released to the client. However, Advanced Cleanup Technologies did not receive confirmation from the client to continue with the Phase II. Jessica will send Phase I report to DEC Lakhani.

File Review: Phase I Environmental Site Assessment (Advanced Cleanup Technologies [ACT], 03/17/17) − This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property, except an active petroleum spill at the subject property. The subject property is located in a residential, commercial, and industrial area in the western portion of Brooklyn. The immediate vicinity of the subject property contains commercial, industrial, and mixed−use buildings. As of 1888, the subject property consisted of undeveloped land. By 1926, two 1−story structures were constructed and two gasoline

tanks were identified. By 1951, the structures were replaced with a 1−story building and the property was identified as a filling station. By 1978, the building was identified as a auto repair shop. By 1982, a portion of the property was identified as used auto sales. The property remained substantially unchanged through 2007. No ASTs were observed at the property. No evidence of USTs, such as fill pipes or vent pipes, were observed at the property. No evidence of former USTs, such as asphalt or concrete patches, were observed at the property. During the course of this Phase I ESA, ACT has identified the active petroleum spill at the subject property as a known or suspected recognized environmental condition. ACT recommends installing three (3) groundwater wells and collecting one sample from each well.

04/25/17 − Lakhani Emailed Jessica Lam requesting an update on the status of the Phase II for the site. Jessica responded informing that their client has not engaged them on performing the Phase II.

05/19/17 − Lakhani Jessica Lam emailed to inform that ACT has been engaged to perform the Phase II in an effort to close the active spill. DEC Lakhani provided Jessica with well depth information from prior HydroTech Reports.

06/14/17 − Lakhani ACT Mark (516−441−5800 Ext: 104) called to inform that ACT would like to install three (3) groundwater wells on the site to delineate the groundwater contamination. Awaiting report detailing the work to install the wells.

ACT Mark Gelband (markg@act.earth) emailed the description of the methodology proposed to install the monitoring wells at the site. In accordance with DER−10, three (3) conventional groundwater monitoring wells will be installed at the locations indicated in an attached figure (uploaded to D2). These monitoring wells are placed to investigate the presumed downgradient direction of groundwater flow. Previously, groundwater was encountered at approx. 30’ to 32’bgs. Therefore, if similar conditions are encountered at a minimum the wells will be installed to 35’. Casing will be driven to the desired depth and PVC well material will be inserted within the casing. 10’ of screen will be installed at the bottom of the casing and blank PVC casing will extend to the surface. Sand will be placed in the annular space of the well from the bottom of the borehole to 2’ above the screen interval. A 2’ bentonite seal will be placed directly above the filter pack sand. The remaining portion of the borehole will be completed wit cuttings amended with bentonite. A flush mounted well cover will be installed in a concrete pad at the surface. The wells will be surveyed to determine the groundwater gradient and direction.

DEC Requires: 1) delineation of groundwater via determination of flow direction

Map Identification Number 46 **FORMER MIDAS FACILITY** **Spill Number: 1310167** **Close Date:**

contamination based on lab results/clean up pending

DEC Investigator Remarks:

01/19/14−Zhune spoke to John Schretzmayer from Associated Environmental (631) 234−4280. He said they did a Phase II. They collected soil and groundwater samples arround the former tank and the analytical results indicated elevated levels of VOCs in both soil and groundwater.

Spill reassigned to Hiralkumar Patel (project manager of spill # 1307501).

01/22/14−Hiralkumar Patel. alternate address: 801−807 4th Ave, 168−176 28th Street

other spill # 1307501 was reported on 10/21/13 due to oil spill on parking lot and sidewalk, during removal of hydaulic oil tanks for lifts located inside the repair shop. case closed administratively.

PBS #: 2−611065. as per PBS record, the site has two 280 gal ASTs in contact with imprevious barrier. both tanks were installed in Sep. 1998. one tank used for waste oil and the other tank used for lube oil.

2:37 PM:− spoke with John at Associated. they did Phase II investigation and found soil and groundwater contamination. he is going to meet property owner/representative on 01/27/14 and will submit Phase II report and investigation work plan after that.

801 Fourth Ave, LLC.

property owner 80 West Broadway Long Beach, NY 11561 Attn.: Adam Gever Ph. (516) 398−0172 email: adamg@alrosegroup.com

01/28/14−Hiralkumar Patel. 9:17 AM:− left message for John.

02/27/14−Hiralkumar Patel. 1:55 PM:− spoke with Mr. Gever and asked him to submit investigation report. he will talk to John.

04/08/14−Hiralkumar Patel. 9:24 AM:− left message for John.

04/18/14−Hiralkumar Patel. 8:40 AM:− received call from John. inquired him about Phase II report. he will submit it today. 9:50 AM:− received email from John including Phase II report. 10:55 AM:− spoke with Erica at Singer Environmental Group and requested copy of Phase I report. she will talk to property owner for authorization to release the report.

Erica Singer Environmental Group, Ltd. PH. (718) 437−9600 email: erica@singerenvironmental.com

10:59 AM:− left message for Mr. Gever. 11:04 AM:− sent email to Erica requesting copy of Phase I report. email copied to Mr. Gever and John. 11:27 AM:− received email from John including Phase I report. 11:31 AM:− sent email to John and asked to submit detailed boring logs. email copied to Mr. Gever.

abstract of Phase I: − property is situated on a square shaped parcel of land comprised of approx. 10,071 sq. ft. − property is one story building and associated parking lot − on−site building was built approx. 1986 − according to certificate of occupancy dated 1956, 1974: gasoline service station, car washing, office and sales, lubritorium, minor auto repairs − according to sanborn maps, property is depicted as vacant from th 1900's to the 1930's; filling station from the 1960's to 1987, auto repair from 1988 to 1995 −−−−−−−−−−−−−−−− − no aboveground fuel oil storage tanks were noted − no fuel oil vent or fill was noted − two 285 gal aboveground tanks in south corner of the parking lot (PBS #: 2−611065) − according to certificate of occupancy dated 1956, a fire department approval was issued for gasoline tanks and a fuel oil tank

−−−−−−−−−−−−−−−−−− − oil tanks for hydraulic lifts were aboveground

abstract of Phase II:

− no anomalies found during GPR survey − installed four borings (SB−1 through SB−4) in parking lot area − borings SB−1 through SB−3 were installed to approx. 20 ft bg at which depth the water table was encountered − boring SB−4 was installed in apparent former location of gasoline USTs, to approx. 10 ft bg where refusal was encountered − petroleum odors were evident throughout the subsurface unsaturated soil − PID readings were observed between 94.5 and 9,222 ppm in soil samples

−−−−−−−−−−−− − groundwater is located at 20 ft bg − based upon the regional topography and hydrology, the groundwater beneath the site is flowing to the west

−−−−−−−−−−−−−−−−−− − groundwater samples were collected from borings SB−1, SB−2 and SB−3, from 19−23 ft bg − subsurface lithology consisting of brown silty sand with gravel encountered to the terminal depth of the borings within the water table − one soil sample was collected from each boring (10−15 ft in SB−1, SB−2 and SB−3, 5−10 ft in SB−4) − soil samples were analyzed for VOCs only − groundwater samples were analyzed for VOCs and SVOCs

soil analyticals:

discussed with DEC Vought. for the following reasons, the spill case 1307501 is administratively closed and will be investigated under the subject spill case: − size and location of hydraulic oil tanks − area impacted during removal of hydraulic oil tanks: concrete surface in former repair shop, asphalt parking lot and concrete sidewalk − need for further investigation of contamination noted during Phase II investigation; which will include installation of permanet wells

3:15 PM:− left message for John and informed him that the spill case 1307501 will be investigated/remediated under spill #: 1310167. asked him to hold on any field activities and to submit detailed boring logs which are missing in Phase II report. 3:36 PM:− sent email to John and asked to hold on any field activities until further notice. asked him to submit boring logs. informed him that the department will issue a letter for required investigation, after reviewing the boring logs. email copied to Mr. Gever. 3:37 PM:− left message for Mr. Gever.

04/21/14−Hiralkumar Patel. 12:28 PM:− received message from John. he will submit boring logs. he also asked to keep both spills separate.

05/02/14−Hiralkumar Patel. 2:38 PM:− left message for John. 2:43 PM:− spoke with Steve at Alrose Group, at Mr. Gever’s phone number. Steve mentioned that Alrose Group is the management company for the subject site and Mr. Gever is the property manager. left message for Mr. Gever.

reviewed last deed document and found Richard Forrest as buyer.

3:00 PM:− left message for Mr. Forrest.

05/05/14−Hiralkumar Patel. 11:06 AM:− received message from Mr. Forrest. 11:31 AM:− spoke with Mr. Forrest, who purchased property in 1986. he mentioned that previous owner removed gas tank systems before his purchase in 1986. as per NYC ACRIS record, a lease agreement was signed between 801 Fourth Avenue LLC. (landlord) and Alrose 801 LLC. (tenant) on 02/20/2013. the lease expires on 06/30/2038. Mr. Forrest has no knowledge of spill incidents and requested copy of available Phase I and Phase II

reports.

4:25 PM:− sent letter to Mr. Forrest requiring PBS renewal and delineation of soil and groundwater contamination. asked him to submit PBS application immediately and investigation report by the end of 08/29/14. letter emailed to Mr. Forrest, Mr. Epstein, Mr. Gever, Mr. Rosenberg and John. 4:30 PM:− sent copy of available reports to Mr. Forrest and Mr. Epstein using the Department's file transfer service.

09/29/14−Hiralkumar Patel. 3:25 PM:− spoke with Mr. Forrest and inquired him about investigation report. he mentioned that tenant conducted an investigation. he will talk to tenant and will call back with update.

11/13/14−Hiralkumar Patel. 11:19 AM:− left message for John. 11:33 AM:− sent letter (including copy of letter dated 05/05/14) to Mr. Forrest requiring submission of required documents (as per letter dated 05/05/14) by the end of 12/05/14. informed him that the case will be referred to legal, if documents are not received by 12/05/14. letter emailed to Mr. Forrest, Mr. Epstein, Mr. Gever, Mr. Rosenberg and John.

11/25/14−Hiralkumar Patel. 10:06 AM:− received call from Mr. Forrest inquiring any response from his tenant who is handling the case. informed Mr. Forrest that the department has not received any documents since 11/13/14.

12/03/14−Hiralkumar Patel. received message from Maria Gonzalez (at 5:17 PM on 12/02/14). 10:57 AM:− spoke with Ms. Gonzalez, manager at Alrose Group. she mentioned that under a lease agreement with property owner, Alrose Group is handling required investigation/remediation. she will contact John to find out about report on further delineation as required in letter dated 05/05/14. she is also working on PBS renewal/correction. informed Ms. Gonzalez that required documents must be submitted by the end of 12/05/14.

Maria Gonzalez Manager The Alrose Group PH. (212) 370−3769 Ext. 6 email: maria@alrosegroup.com

12/04/14−Hiralkumar Patel. 10:11 AM:− received message from Mr. Forrest. 12:09 PM:− received message from Ms. Gonzalez. she inquired about any response from Associated Environmental regarding required documents.

12/05/14−Hiralkumar Patel. 9:40 AM:− left message for Ms. Gonzalez and informed her about no response from Associated Environmental. 9:40 AM:− spoke with Mr. Forrest and informed him that the required investigation report has not been received yet.

12/08/14−Hiralkumar Patel. 10:07 AM:− left message for Ms. Gonzalez. 10:08 AM:− spoke with Mr. Forrest and informed him that no documents received yet.

12/09/14−Hiralkumar Patel. 9:23 AM:− received email from Matt from Associated Environmental including an investigation work plan. abstract: − a PBS renewal application will be submitted − total of three monitoring wells will be installed − continuous soil sampling will be completed to the soil/water interface which is located approx. 20 ft bg − based on field observations, either two (deepest dry and highest PID) or one (deepest dry) soil sample(s) will be be collected for 8260/8270 analyses − borings will be completed as 2−inch wells, with 10 ft of screen below the water table and 5 ft of screen above the water table − water samples will be collected for 8260/8270 analyses

the work plan does not include a work schedule.

9:59 AM:− received call from Mr. Forrest inquiring about any response from Alrose Group. informed Mr. Forrest that the department received an investigation work plan at 9:23 AM today.

discussed with DEC attorney about case referral, who suggested to send a stipulation agreement to the Alrose Group, who is conducting the investigation work.

10:48 AM:− received call from John from Associated Env, inquiring about case referral. informed him about discussion with DEC attorney. John mentioned that Alrose Group is conducting work related to hydraulic oil spill and believes that Alrose Group is not responsible for historic spill at the site. he will discuss with his client.

10:59 AM:− left message for Ms. Gonzalez. 11:01 AM:− left message for Mr. Forrest. 11:48 AM:− received call from Mr. Forrest. he confirmed that Alrose Group is conducting spill investigation/remediation at the site.

12/10/14−Hiralkumar Patel. 9:42 AM:− left message for Ms. Gonzalez. 10:19 AM:− sent stipulation letter, including approval for the work plan, to Mr. Gever and Ms. Gonzalez. asked them to return signed stipulation by the end of 12/31/14. letter emailed to Mr. Gever, Ms. Gonzalez, Mr. Forrest and John. 12:51 PM:− received message from Ms. Gonzalez. 1:19 PM:− spoke with Ms. Gonzalez. she mentioned that Alrose Group takes responsibility of recent hydraulic oil spill, but has nothing to do with histrorical spill. she will discuss with Mr. Forrest and will call back.

01/08/15−Hiralkumar Patel. 10:31 AM:− spoke with Mr. Forrest inquiring about signed STIP. he will talk to the tenant and will call back. 10:35 AM:− left message for Ms. Gonzalez.

01/12/15−Hiralkumar Patel. 1:43 PM:− received email from Mr. Forrest. he claimed that he has no record of request of signed STIP. 1:45 PM:− sent email to Mr. Forrest and asked him to refer to email dated 12/10/14.

01/14/15−Hiralkumar Patel. 1:27 PM:− spoke with Mr. Forrest. he found email dated 12/10/14 which included a STIP agreement. he has discussed with his attorney and waiting for response from tenant.

03/31/15−Hiralkumar Patel. 1:46 PM:− received email from Jim DeMartinis. he mentioned that CDSP, Inc. and Seacliff Environmental have been retained to implement the approved work plan. they are planning to start work within next week.

Jim DeMartinis Seacliff Environmental, Inc. Ph. (631) 828−5994 (O)

(631) 742−6948 (C) email: seacliffenvironmental@aol.com

04/16/15−Hiralkumar Patel. 3:22 PM:− left message for Jim.

04/20/15−Hiralkumar Patel. received email from Jim (at 9:45 PM on 04/19/15). he mentioned that due to delay in signing the contract, well installation work will occur this week.

Dan Yarom CDSP, Inc. PH. (914) 224−3300 email: yaromdan@gmail.com

04/27/15−Hiralkumar Patel. 2:53 PM:− spoke with Dan at CDSP. he mentioned that wells will be installed by end of this week. he will call back with final schedule.

04/29/15−Hiralkumar Patel. 10:48 AM:− received email from Jim. he mentioned that investigation work will begin on 05/04/15.

07/10/15−Hiralkumar Patel. received email from Jim (at 4:08 PM on 06/09/15) including investigation report. abstract:

− three 2−inch monitoring wells installed to a depth of 25 ft bg − geologic deposits encountered were brown poorly graded sands − visual/olfactory evidence of contamination was observed in all three borings to a depth of 25 ft bg and sands became darker in color near the water table − groundwater found near 20 ft bg − PID readings started in the 5−10 ft bg samples and peaked in the 15−25 ft deep samples − two soil samples were collected from each borings: one from 10−11 ft depth and another from 18−19 ft depth − monitoring wells were installed with 10 ft of screen from 15 to 25 ft bg − found contamination in soil and groundwater samples

soil analyticals:

Jim recommended weekly VEFRing for three months.

2:18 PM:− spoke with Jim and asked him to submit site specific groundwater flow direction. informed him that the department may require additional investigation prior to authorizing any remedial approach. 2:20 PM:− sent email to Jim and asked him to submit site specific groundwater flow direction. email copied to Dan. 2:37 PM:− sent email to Jim and asked to submit a revised report as boring logs show collection of only one soil sample from each boring, but lab report shows two samples from each boring. email copied to Dan.

08/14/15−Hiralkumar Patel. received email from Jim (at 6:16 PM on 08/13/15) including revised report including corrected boring logs (confirming collection of two soil samples from each boring) and well survey/groundwater flow direction. Jim mentioned that based on well survey data, groundwater flows to the East. reviewed well survey table and could not confirm groundwater flow direction as wells were surveyed with reference to well MW−2.

10:28 AM:− spoke with Jim to discuss well survey/groundwater flow direction information. he mentioned that Dan did well survey. 10:30 AM:− spoke with Dan. he will submit revised table including groundwater depth in reference to sea level. 10:55 AM:− sent email to Jim and Dan to submit revised elevation survey table including groundwater depth in reference to sea level and to confirm site−specific groundwater flow direction.

08/18/15−Hiralkumar Patel. received email from Jim (at 6:36 PM on 08/17/15) including revised investigation report with well survey result. as per the well survey data, groundwater at the site flows to northwest towards Gowanus Bay.

based on groundwater flow direction and lab report, further delineation of groundwater contamination is needed. also PBS registration has expired on 04/28/2014.

after discussing with DEC Austin, sent email to him requesting case transfer to remediation due to groundwater contamination.

also refer to spill #: 1307501.

08−18−2015 − V. Brevdo.

As per e−mail from Randall Austin, Spill Case is transferred to Remediation Section B. VB

10−15−2015 − V. Brevdo Discussed project with Jim DeMartinis over the phone. Mr. DeMartinis will forward a report for review and approval and also will look into the UST issues − whether there is any unmitigated source of contamination that needs to be addressed. When I receive report and synopsis on UST status, I will review and get back to Mr. DeMartinis. Stated time frame for submission of the above to DEC is approximately one week from today. VB

10−15−2015 − V. Brevdo Former Midas Facility, 801 4th Avenue, Brooklyn (Spill No. 1310167) On October 21, 2013, the Department was notified that a petroleum release was discovered at the site, and a spill case was opened. The product release occurred during removal of hydraulic oil tanks located at the site. The Department reviewed a Phase 1 Environmental Site Assessment Report dated January 28, 2013 and a limited Phase II Subsurface Investigation Report dated January 20, 2014, and issued a letter dated May 5, 2014 requiring the RP to review PBS registration and to delineate the extent of soil and groundwater contamination. The Department subsequently approved a subsurface investigation work plan dated December 14, 2014. Subsurface investigation of the site was implemented from May through August 2015.

Due to high concentrations of dissolved VOCs in the samples collected from two wells, Seacliff Environmental recommended implementation of Vacuum Enhanced Fluid Recovery (VEFR) as an interim remedial measure (IRM). IRM proposal dated August 17, 2015 was approved by the Department on October 15, 2015. The Department also requested Seacliff to conduct additional evaluation of the status and conditions of the on−site tanks and determine potential presence of unmitigated sources of contamination.

VB

07−13−2016 V. Brevdo On July 13, 2016, Seacliff Environmental submitted groundwater monitoring report the VEFR and sampling data. From December 30, 2015 through March 22, 2016, 12 VEFR events were conducted and a total of 273 gallons of contaminated groundwater were removed from the three wells and properly disposed of. The groundwater samples from three wells showed a significant decrease in total VOC concentrations from 24,339 ppb to 116 ppb, from 223 ppb to 95 ppb, and from 36,960 ppb to 133 ppb, respectively. Seacliff intends to sample well again during July 2016 to confirm the improvement. Recommendations will be made based on these data. V.B.

1/17/2017: Colton McPartland Received a call to spills duty desk line from Richard Forrest. He asked for the status of the spill and confirmation that spill no. 1307501 had been closed. I emailed him a copy of the spill report form for spill no. 1307501 and provided him with the project manager’s contact info.

02/09/2017 − V. Brevdo Former Midas Facility, 801 4th Avenue, Brooklyn (Spill No. 1310167) On October 21, 2013, the Department was notified that a petroleum release was discovered at the site, and a spill case was opened. The product release occurred during removal of hydraulic oil tanks located at the site. The Department reviewed a Phase 1 Environmental Site Assessment Report dated January 28, 2013 and a limited Phase II Subsurface Investigation Report dated January 20, 2014, and issued a letter dated May 5, 2014 requiring the RP to review PBS registration and to delineate the extent of soil and groundwater contamination. The Department subsequently approved a subsurface investigation work plan dated December 14, 2014. Subsurface investigation of the site was implemented from May through August 2015.

Due to high concentrations of dissolved VOCs in the samples collected from two wells, Seacliff Environmental recommended

implementation of Vacuum Enhanced Fluid Recovery (VEFR) as an interim remedial measure (IRM). IRM proposal dated August 17, 2015 was approved by the Department on October 15, 2015. The Department also requested Seacliff to conduct additional evaluation of the status and conditions of the on−site tanks and determine potential presence of unmitigated sources of contamination.

On February 9, 2017, Seacliff Environmental submitted groundwater monitoring report and sampling data. From December 30, 2015 through March 22, 2016, 12 VEFR events were conducted and a total of 273 gallons of contaminated groundwater were removed from the three wells and properly disposed of. The groundwater samples from three wells showed a significant decrease in total VOC concentrations from 24,339 ppb to 11 ppb, from 223 ppb to 6 ppb, and from 36,960 ppb to 6 ppb, respectively. Seacliff intends to sample wells again during April 2017 to confirm the continuous improvement of the groundwater quality on the site. Seacliff intends to recommend spill case closure if aforementioned low level VOCs remain consistent. VB

Caller Remarks:

REMOVING OLD TANK & GROUND AREA. IT SMELLS BAD. PUTTING SOIL INTO WASTE. THEY WILL ANALYZE & PROCEDE FROM THERE. NO CALL BACK.

DEC Investigator Remarks:

10/10/95: This is additional information about material spilled from the translation of the old spill file: CONTAMINATED SOIL.

1/8/04 Reassigned from Zhitomirsky to K Foley. (KMF) 2/25/04 Met with B. Beck, National Environmental. He will provide UST closure report.

9/29/04 Met with B. Cohen(Certilman Balin Attorneys), B. Beck(Consultant, National Env.) with J. Rommel and L. Oliva. B. Beck to provide either a copy of the UST closure report or a site assessment by 2/11/05.

3/15/05 Received Subsurface Investigation Report prepared by National Env.

Site has been a gas station since at least the late 1950s or early 60s. The site has been owned by 3072 Cropsey Ave Corp. and operated by an independent dealer since the early 1970s.

Currently the station has (4) 4000gal gas tanks that were installed in 1994.

DTW is estimated at 65'bgs. Three sampling locations (B1,B2,B3) were selected adjacent to the suspected source area in the vicinity of the existing USTs. Termination depth was approx 12'bgs. Soil obtained at each location exhibited staining and petroleum odor. The probe met refusal at approx 28'bgs. A soil sample was obtained at the interval just above refusal(no staining/odors noted at 28'bgs). A soil sample was also collected from B2 and B3 from the depth of the existing tanks(12'bgs). They exhibited a slight petroleum odor. Refusal was encountered at 44'bgs. Soil samples were also collected at 44'bgs(no staining/odors noted at 44'bgs).

With the exception of MTBE, no VOCs were noted above objectives in the deeper samples. Several VOCs were present above objectives in each of the shallow samples (12−16'bgs). Among the highest concentrations noted m&p xylenes in B−1 (12−16') at 400,855ppb and 1,3,5−trimethylbenzene in B−2 and B−3(12−16') at 45,061ppb and 52,099ppb, respectively. In addition, MTBE was noted in every sample at concentrations up to 19,607ppb (B−3,12−16').

3/16/05 Required at least three monitoring wells be installed in the vicinity of the USTs. Summary report due 5/16/05.

2/2/06: Sent Bruce an email asking for status of mw installation and report.

3/13/06: Received a letter from Bruce Beck stating that they are currently soliciting quotes for drilling.

5/19/06: Consent order meeting with Wolf scheduled for June 2 at 11am.

6/8/06: Meeting with NYSDEC, Barry Cohen (Wolf's attorney's) and Bruce Beck (Wolf's consultant) regarding the consent order.

7/10/06: Emailed Bruce Beck to set up a meeting to discuss deliverables required for consent order.

8/6/07: Wolf consent order signed on 7/27/07. Investigation report due on 9/25/07. Spoke to Tracy Wall of NEMA, a workplan may be submitted.

8/7/07: Sent letter indicating a workplan is due 90 days after effective date of order − 10/27/07.

3/4/08: Conditionally approved workplan. Workplan proposed the installation of three wells. Required that a fourth well be installed to the west of the tankfield. ISR due on 5/4/08.

3/20/08 − Carlson: Meeting with Bruce Beck. Bruce Beck indicated wells will be installed next week, if they receive the necessary permit.

5/20/08 − Carlson: Emailed Bruce Beck regarding overdue Remedial Investigation Report.

5/22/08 − Carlson: Received email from Bruce Beck: The rock driller broke down with his equipment on−site for the second time two weeks ago but is planning to return late this week or early next week. Drilling conditions is very tough and as wells need to be 60− 70 feet deep it has not been an easy job. Additionally we are having difficulty with locations as utilities could not give us clearance for two of the locations. We are still exploring options for locations and will get back to you within the next couple of days.

7/7/08 − Carlson: The Department received a report dated June 30, 2008. The report indicated that well installation was not completed due to the high expense to install the monitoring wells with an air rotary rig. The report states that two soil samples were collected, but the soil sampling data, laboratory analytical data, and soil manifests were not included in the report. Sent email requiring that Wolf/NEMA resubmit the report with these items.

7/9/08 − Carlson: Received email from Bruce Beck. He will resubmit the report.

8/4/08 − Carlson: Reviewed revised sites status letter dated 7/21/08. Monitoring wells were not installed because water was not encoutered, depth to water is greater than 80 ft. Two samples were collected during soil boring at location MW1. VOCs were ND. Report recommends use of SVE. Received hard copy of report, it is dated July, 17, 2008, while the electronic copy is dated 7/21/08.

8/19/08 − Carlson: Meeting with Bruce Beck and Tracy Wall of NEMA.

9/11/08 − Carlson: Issued letter requiring soil and groundwater delineation workplan by 10/13/08.

11/14/08 − Carlson: Received delineation workplan.

11/19/08 − Carlson: Meeting with NEMA. Revised workplan required by 11/30/08.

12/1/08 − Carlson: Received revised workplan.

12/3/08 − Carlson: Reviewed revised workplan. Samples must be collected from the borehole instead of from the drill cuttings. Borings should be completed two two split−spoons below the maximum depth of contamination, instead of to 58 ft. Revised workplan required.

1/15/09 − Carlson: Received revised workplan. Borings must be completed to at least 10 feet below the maximum depth of contamination. Revised workplan required.

1/22/09 − Carlson: Received revised workplan. Issued approval letter.

4/29/09 − Carlson: Met with Bruce Beck. Work has not been started at this site yet. Spoke to DEC Urda regarding violation.

DEC Urda issued letter.

5/4/09 − Carlson: Extension for RIR to 5/22/09.

6/24/09 − Carlson: Reviewed Investigation Report. One monitoring well installed. Impact found in well. Delineation workplan required for additional groundwater delineaton, due 7/24/09.

8/7/09 − Carlson: Reviewed Investigation Work Plan. Two wells proposed. A third proposed well location is required in location B−3. Email Tracy Wall − Revised work plan due in 30 days.

9/24/09 − Carlson: Received quarterly report. MW1 sampled on 8/21/09. BTEX 393, MTBE 17,000 ppb. Revised work plan was not received.

11/1/09 − Carlson: Received email from Tracy Wall − they are obtaining a permit to install off−site well, looking into feasibility of installing well at B−3 location (may be too close to tanks).

11/18/2010 − Carlson: Meeting with Bruce Beck. Review case file internally.

2/17/2010 − Carlson: Meeting with Bruce Beck. Revised work plan required as per 8/7/09 email.

3/2/2010 − Carlson: Issued letter requiring revised work plan by 4/2/2010 (as per 8/7/2009 email).

4/22/2010 − Carlson: Reviewed update report. Approved extension to 5/2/2010 for IP submittal.

5/3/2010 − Carlson: Received email with Revised Investigation Work Plan and FOIL Request for Jackie Gleason Bus Depot. Well installation to the west of the USTS not possible because drilling may damage tanks/piping. Two well locations on the northern portion of property were proposed. Requested delay to implement work plan until after FOIL request is received. FOIL request fowarded to FOIL Officer.

5/11/2010 − Carlson: Received FOIL request for spill 9905769, fowarded to R. Leung;

6/4/2010 − Carlson: DEC Tibbe replied to 5/3/10 email − is there another method of drilling (besides sonic drilling) that will be less likely to damage utilities. How was existing well MW1 installed?

7/16/2010 − Carlson: Reviewed March 2010 − May 2010 Quarterly Monitoring Report. Wells sampled on May 17, 2010. MTBE concentration 8,900 ppb.

4/8/11 − Obligado − I received and reviewed an Investigation Work Plna. The plan proposes to install 3 additional wells at the site and advance 10 soil borings and collect soil and ground water samples. A report will be submitted within 60 days. I sent an email approval for the plan to Impact with cc to Wolf.

7/20/11 − Obligado − Meeting with DEC Obligado and O'Connell, Kevin Kleaka and Christine Camaradella of IMpact Enviromental, and Barry Cohen on behalf of Wolf. We discussed the results of the investigation. Significant MTBE impacts detected. They wanted to sample an additional round before submitting additional investation work plan.

9/26/11 − Obligado − The Investigation Report documented the installation of 3 additional wells. 64000 ug/L MTBE detected in MW2. 10,000 ug/L MTBE detected in MW4, and 9970 BTEX in MTBE. I spoke with Christine Camaradella over the phone. They said that in the most recent sampling they had questionable results. MW2 decreased to 4000 ug/L and MW4 increased to 30,000 ug/L. She wants to resample the wells in October prior to submitting an additional delineation workplan. I said that was ok.

1/12/12 − Carlson: Reviewed file. Investigation Report dated 7/14/11 documented the installation of 9 soil probes. Six soil probes were installed to 25 ft bg. Three soil probes were installed to 70 feet below grade, and were completed as monitoring wells. Many VOCs were detected, but all were below standard. Groundwater impact is present in all monitoring wells. An update report was submitted on 9/27/11. Monitoring wells were sampled on 8/30/11. Wells to be sampled in fourth quarter 2011 and then a work plan for additional investigation to be submitted. When will fourth quarter update report be submitted?

Meeting held on 1/30/2012 with Christine Camardella and Kevin Kleaka of Impact Environmental, Barry Cohen of Certilman Balin, and Carlson, Kolleeny and Urda of NYSDEC. Impact expressed concern that they are not the source. They will review historic files and potential off−site sources. Off−site delineation work plan, and results of off−site source investigation to be submitted in April 2012.000

3/16/2012 − Carlson: Reviewed update report dated 1/27/2012. Significant dissolved MTBE concentrations.

9/6/12 − Carlson: Reviewed 2nd quarterly update report dated 7/23/12. High MTBE groundwater contamination.

9/12/12 − Carlson: Issued RAWP required letter. RAWP due 10/12/12.

07/15/13 − Spill Case is transferred from Sarah Carlson (Section C) to Brevdo (Section B) as per DER Region 2 decision. V.B.

07/30/2013 − Spill Case is re−assigned to Alex Zhitomirsky. Re−assignment of Wolf cases to Alex Zhitomirsky discussed between Alex Zhitormirsky and Vadim Brevdo on 7/29/2013 and via Brevdo's e−mails of 7/17/2013 and 7/29/2013. VB

2−7−2014 Reviewed a quarterly monitoring report received on Aug. 20, 2013. Total VOCs ranged from below reporting limits to 57,590 ppb. Monitoring well MW−06 has a measurable thickness of 0.56'. Left a message for Christine Camardella. E−copy of the report has a different date from a hard copy report. Two e−copies of each report are placed on a disk. AZ

7−30−2014 Reviewed a quarterly monitoring report received on Nov.5,2013. MTBE ranged from 34ppb to 17,000 ppb. No free phase product was observed in any of the wells. AZ

12−10−2014 Reviewed a quarterly monitoring report received on June 17,2014. MTBE ranged from 11 ppb to 72,000 ppb in MW−2. No free phase product was observed in any of the wells. I left a message for C. Camardella. AZ

12−15−2014 Discussed the site with C. Camardella. There is trend of increasing MTBE concentrations: 9/2013 − 17,000 ppb, 12/2013 − 35,000 ppb, 3/2014 72,000 ppb. Also, the plume has not been delineated. I asked to submit to DEC proposals for the active system and delineate the plume. Ms. Camardella stated that this request has been previously made by S. Carlson of DEC and the

area has a lot of utilities. I asked to submit a map with the utilities mark out. I asked for a soil map and historical groundwater levels information. AZ

5−28−2015 Reviewed a report for this site dated April 29, 2015. The report proposed installation of two monitoring wells side gradient of the existing plume along 36th Street. Total VOC concentrations in MW−2 increased to 7,800 ppb. I have discussed the site with Christine Camardella. It was decided that installation of side gradient wells is not beneficial for the plume delineation. Impact will investigate if wells could be installed downgradient form the source west of the car wash. Also, I have requested that Impact submit remedial proposals for the existing groundwater contamination. AZ

9−09−2015 Reviewed a report for this site dated January 30, 2015. Concentrations of MTBE in groundwater is up to 9,500 ppb. AZ

3−07−2016 Reviewed a report for this site dated July 14, 2015. Concentrations of MTBE in groundwater ranged from 10 ppb to 11,000 ppb. DEC requested installation of additional side− and down−gradient monitoring wells. Impact is currently evaluating the feasibility of installing monitoring wells in the vicinity of the car wash and an appropriate remedial technology to address the MTBE. A revised WP will be submitted to the NYSDEC. AZ

3−16−2016 The following email was sent to C. Camardella and V. Brevdo:

Dear Christine,

I have reviewed a Quarterly Monitoring Report and Remedial Investigation Work Plan for this site dated February 2, 2016. Impact proposed installation of two additional monitoring wells and re−installation of monitoring well MW−1. I approve this Work Plan.

The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on− and off−site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work.

Sincerely,

Alex Zhitomirsky − Engineering Geologist 2

1−10−2017 Reviewed 1st quarter monitoring report dated 3/12/16. Two new off−site monitoring wells were installed. No free phase was observed. No remediation system is installed at the site. Total VOCs ranged from 68 ppb to 2,030 ppb in MW−2. AZ

8−18−2017 Reviewed the 4th quarter of 2016 Monitoring Report dated 2/27/2017. MTBE was detected in the six monitoring wells at concentrations ranging from 5.9 ppb to 32,000 ppb. No active remediation has been conducted at this Site to date.

The following e−mail was sent to Juliana de la Fuente:

Dear Juliana,

I have reviewed the latest monitoring report for this site. The report stated that MTBE was detected in the six monitoring wells at concentrations ranging from 5.9 ppb to 32,000 ppb. No active remediation has been conducted at this Site to date.

This contaminant plume should be addressed. I suggest that the tanks should be tested if the MTBE concentrations in groundwater continue to be of the same magnitude. A remediation plan for this site should be submitted to DEC.

Sincerely,

Alex Zhitomirsky − Engineering Geologist 2 NYS Department of Environmental Conservation 47−40 21st Street, Long Island City, NY 11101 Phone: 718.482.6387 − Fax: 718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov AZ

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ e2mis no. 143−479:

21−JUN−2002 @ 08:30Hrs.

Mary Moran, Area Planner, reports during inspection, historic contamination was found at PH 2. The flooring consists of a removable metal plate over a subfloor. By visual inspection there appears to be water with a sheen underneath the sub floor. The quantity released is unknown, however for reporting purposes the volume has been entered as −1 gallon. This plant is known to have a concrete moat. The substance is unknown, however it is likely to be identified as dielectric fluid. The source of contamination is unknown. The cause of contamination is unknown. There is no active fire/smoke at this time. Release to sewer/waterway is not verified at this time. No private property has been affected. A station remediation plan will be prepared to determine the priority order for addressing this and other historic incidents as per SSO's letter to NYSDEC region II dated February 20, 2002. Housekeeping and maintenance activities, as required, will be documented.

6/21/10 − changed Lead DEC to JMOCONNE (JOC)

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 8/00 transferred from tomasello to tipple

see also 9108033, 9313792, 9505109, 9705158, 9814652. MCT

2/19/2002 Tipple found this spill inadvertantly closed out in this database today and immediately re−opened it. This is currently one of the region's most active remediations today.

8/23/05 − Raphael Ketani. Case transferred to Jeff Vought.

09/02/2005 − Transferred to Mark Tibbe.

11/12/10 − spill re−assigned from Tibbe to Joe O'Connell

9/29/11 − Raphael Ketani. Case transferred from O'Connell to Ketani.

12/21/11 − Raphael Ketani. I reactivated the spill/PIN case. There are 5 other associated cases, but only #9108033 has any documentation. All of these cases have been closed and referred back to this one. There are 3 full file draws with documentation. However, very little of it has been e−doc'd.

The case started when oil (diesel fuel) was found to be dripping onto the R Line subway platform under 4th Avenue and between 25th Street and 26th Street, Brooklyn. The oil had also drained from the platform and onto the tracks. The DEC was notified by the NYCTA about the spill. The FDNY responded and put down absorbent sand. The date of the spill is 7/19/93. However, it wasn't called in until 7/24/93.

A fingerprint analysis indicated that the oil was a mix of weathered diesel and/or #2 oil between 10 and 15 years old. The pool

of oil was initially estimated to be greater than 100,000 gals. and was mostly being held in place by the subway wall. However, subsequent DEC contractors have indicated that the oil pool is much smaller. The recovery system was extensively damaged during the construction of the Dunkin Donuts. Mobile Hi−Vacs were used to collect the oil. Bright red #2 oil was detected entering the pool of oil from upgradient. So it is believed that there is an ongoing source of unknown origin. Recent excavation beneath the surface of the site revealed that the soil is free of diesel with only minor gasoline contamination. The sources of the #2 oil may be a warehouse that is directly upgradient or other locations. A knee wall was installed on the subway platform to catch the seepage, but is sometimes overwhelmed during rain events.

The source was eventually traced to the Eagle Service Station at 737 4th Avenue, Brooklyn, 11232. The site is owned by Ralph and Susan Guarino. Mr. Guarino bought the property during 1987. Though the new tanks that were installed by Mr. Guarino were not believed to be the source. The source was believed to be the old diesel tanks that were in existence when MOBIL owned the site up until 1987. Initially, Mr. Guarino was cooperative with the DEC contractors regarding the spill investigation.

According to an August 5, 2001 NY Daily News article, Ralph and Susan Guarino were determined to be the responsible parties. Mr. Guarino was an FBI informant. He twice turned off the recovery system, which resulted in diesel leaking onto the platform. He threatened to pour concrete down the monitoring wells and for 8 months prevented remediation staff from coming onto his property to do their work. Eventually in 1999, the Attorney General went to court to get an emergency injunction against Mr. Guarino to prevent him from interfering. In 1999, Mr. Guarino agreed to let the remediation staff onto his property. The gas station was demolished and the site is now a Dunkin Donuts.

According to the September 26, 2001 Second Demand Letter, Susan Guarino (128 Maitland Avenue, Altamonte Springs, FL, 32701−4902) is being held liable by the AG's office for $1,924,150.68. Though, $2,121,183 had been spent on the project by the DEC up to 2002.

One of the previous DEC case managers, Mark Tibbe, sent me an e−mail regarding the history of the spill case. He wrote that nothing significant happened between 2001 and 2011. The DEC contractors were monitoring and bailing wells because the recovery system wasn't working. It was too old to repair and replacing it was too expensive. The subway was being monitored to make sure that product wasn't showing up. In the early 2000s there wasn't much product, but it showed up again. It was believed that the former service station was the primary source and that there was a fresh source of #2 oil.

Later, I found the latest site report. It was written by Environmental Assessment and Remediations. The report was dated August 18, 2006 and covered the period from January 2006 to June 2006. Groundwater was generally found at 22 feet below grade. It was believed that the subway tunnel was affecting groundwater flow. The groundwater was moving through a layer of glacial till and outwash sediments. The outwash sediments contained sand and gravel. Discontinuous thin clay lenses were also present. During 2001, several wells showed increasing amounts of product. On 4/24/01, red oil appeared in well MW10A. Wells MW82, MW90, MW32B, and MW13A also had red oil at this time. At this time, MW9 showed signs of dark oil with sludge. There were several oil tanks in the neighborhood. The tank at 220 25th Street was a 2,500 gal. #2 oil UST. The system was tested and found to be sound. The property at 225 25th Street had a 10,000 gal. #6 oil AST. One private building at 228 25th Street had a 275 gal. oil tank, but nothing else was known. There was a 1,000 gal. UST at 217 25th Street, directly upgradient from the site, but it was never investigated. From 2002 and 2004, EAR continued to maintain the remediation system. In 2004, EAR received permission from the DEC to abandon 17 wells that weren't providing useful data. The wells were abandoned from April to June of 2004. Throughout 2005, EAR continued to maintain the remediation system. During August 2005, renovations were made to the subway oil containment system. Weekly visits were made and spent absorbent was removed and replaced. The wells continued to be monitored on a weekly basis. On April 20, 2006, the recovery system was shut down to see how much product would appear. The recovery system remained off during the reporting period. Wells MW9, MW10, MW13, MW13A, MW23, MW23A, MW31, MW32B and MW82 showed a rebound of product. From January

to April, a total of 26.99 gals. of liquids were recovered from all of the wells during. Product thickness on 6/22/06 was much less than 1 foot in the wells that were exhibiting oil.

12/22/11 − Raphael Ketani. Today I spoke to Dave Lorthioir of EnviroTrac (631) 924−3001, the DEC's consultant, regarding the project. He said that they have been monitoring and bailing wells on a weekly basis. However, they only deal with the wells in and immediately around the site. The water table is high right now and they haven't seen any product. However, in the spring of 2011, there had been a good amount of product. Before EnviroTrac took over the project a few years ago, they spoke to the previous DEC consultants. These consultants told them that there hadn't been any oil in the subway for some time. Mr. Lorthioir said that EnviroTrac hadn't seen oil in the subway, either. A report will be sent to the DEC soon.

Later, Mr. Lorthioir sent me the 2011 groundwater monitoring data tables. Very few of the wells had shows of oil. Wells MW−8, MW−8A, MW−9 and MW−31 all had periods of from 2 to 7 consecutive months during which there were weekly shows of oil during 2011. A small number of other wells had sporadic shows of oil consisting of about several weeks during which oil was seen, but the weeks were not consecutive. Wells MW−8, MW−8A, MW−9 and MW−31 are all in the southern corner of the Dunkin Donuts property. MW−9 is directly over a rectangular figure in the well location diagram. Wells MW−40 and MW−41 were abandoned earlier. According to the case notes, seventeen wells were abandoned some time ago.

Mr. Lorthioir also included a DRAFT 10/29/10 Status Report for the site. The report covered the years 2009 to 2010. I reviewed the report. The data inside indicated that the same wells that had oil in 2011 had oil during 2009 and 2010. There were also some other wells that had oil shows in and around the Dunkin Donuts store.

1/4/12 − Raphael Ketani. I received CAP 31 for EnviroTrac. The bill is DC2023.01−32 for the period 10/31/11 to 11/27/11. The date of the invoice is 12/13/11. The work consisted of project management, project coordination, generate internal work order, revise internal work order, prepare for monitoring event, travel to and from site, calls to technician at site, gauge 36 wells, bail product by hand, update product recovery tables and enter data, use of low value equipment, light duty vehicle and sonic probe, purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

1/30/12 − Raphael Ketani. I received CAP 32 for EnviroTrac. The bill is DC2023.01−33 for the period 11/28/11 to 1/1/12. The date of the invoice is 1/16/12. The work consisted of project management, review data from last monitoring event, generate internal work order, revise internal work order, prepare for monitoring event, project management communication with DEC, calls to technician at site, decontaminate equipment, gauge 34 wells, bail product by hand, update product recovery tables and enter data, use of low value equipment, light duty vehicle and sonic probe, travel to and from site, purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

2/21/12 − Raphael Ketani. I received CAP 33 for EnviroTrac. The bill is DC2023.01−34 for the period 1/2/11 to 1/29/12. The date of the invoice is 2/13/12. The work consisted of project management and coordination, prepare internal work order, do budget projections, project management communication with DEC, travel to and from site, calls to technician at site, well gauging and product recovery, tabulate gauging data from December 30, 2011 field activities, review and tabulate gauging and product recovery data from field activities during January 12, 2012, use of low value equipment, light duty vehicle and sonic probe, purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

4/10/12 − Raphael Ketani. I received CAP 35 for EnviroTrac. The bill is DC2023.01−35 for the period 2/1/12 to 2/26/12. The date of the invoice is 3/15/12. The work consisted of project coordination. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

7/26/12 − Raphael Ketani. I received a request to abandon 16 wells at the site. I asked Mr. Lorthioir where the oil had appeared and what it had looked like. He said that it was NOT red oil, but looked weathered. He added that the oil sometimes appears in well MW−46, in the alleyway behind 753 4th Avenue. This is across the street and to the south (side gradient) of the site. Mr. Lorthioir said that it is hard to get to this well as the alleyway is usually locked and so he hadn't been back in a long time. Getting in involves getting ahold of the owner, which is difficult. One time he went through the back of a store in order to get to the well.

8/8/12 − Raphael Ketani. I sent an e−mail to Sandy Camacho of the NYFD requesting his help in finding any oil tanks at 751, 753 and 755 4th Avenue, and at 204, 214−216 and 220 25th Street.

10/1/12 − Raphael Ketani. I received CAP 41 for EnviroTrac. The bill is DC2023.01−36 for the period 7/30/12 to 8/26/12. The date of the invoice is 9/13/12. The work consisted of project management, produce work order, create monitoring schedule, review results of site inspection, obtain DOT permits for well abandonment, gauge wells, replace socks, product recovery, travel to and from site, use of low value equipment, sonic interface probe and light duty vehicles, purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

10/25/12 − Raphael Ketani. I received CAP 42 for EnviroTrac. The bill is DC2023.01−37 for the period 8/27/12 to 9/30/12. The date of the invoice is 10/12/12. The work consisted of project management, calls to technician in the field, produce work order, review results of site inspection, compile and review data, gauge 37 wells, 1 well product recovery, hand bail wells as required, travel to and from site, use of low value equipment, sonic interface probe and light duty vehicles, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

11/29/12 − Raphael Ketani. I received CAP 43 for EnviroTrac. The bill is DC2023.01−38 for the period 10/1/12 to 10/28/12. The date of the invoice is 11/15/12. The work consisted of project management, prepare work order, obtain NYC DOT permits, prepare for well abandonment, travel to and from site, well gauging, product recovery, review and tabulate gauging and product recovery data, review latest monitoring data, abandon 11 wells, sidewalk restoration, calls to crew at site, use of light and heavy duty vehicles, low value equipment, sonic interface probe, generator, jack hammer, concrete cutter, concrete mixer and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

12/24/12 − Raphael Ketani. I received CAP 44 for EnviroTrac. The bill is DC2023.01−39 for the period 10/29/12 to 11/25/12. The date of the invoice is 12/11/12. The work consisted of project management, project coordination, tabulation of gauging data, review latest data from monitoring event, travel to and from site, well gauging, product recovery, use of light duty vehicle, low value equipment and sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

1/22/13 − Raphael Ketani. I received CAP 45 for EnviroTrac. The bill is DC2023.01−40 for the period 11/26/12 to 12/30/12. The date of the invoice is 1/14/13. The work consisted of project management, project coordination for upcoming activities, work order, generate internal work order, call to technician in the field, tabulation of gauging and product recovery data, review latest data from monitoring event, generate internal report, travel to and from site, gauging of 36 wells, product recovery from 3 wells, replaced 7 absorbent socks, use of light duty vehicle, low value equipment and sonic interface probe, and subcontractors and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

2/27/13 − Raphael Ketani. I received CAP 46 for EnviroTrac. The bill is DC2023.01−41 for the period 12/31/12 to 1/31/31. The date

of the invoice is 2/11/13. The work consisted of project management, call to technician in the field, well gauging and product recovery, tabulation of gauging and product recovery data, review latest data and data from last 3 monitoring events, generate internal work order, travel to and from site, gauging of 34 wells, product recovery from 2 wells, replaced 6 absorbent socks, use of light duty vehicle, low value equipment and sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

3/22/13 − Raphael Ketani. I received CAP 47 for EnviroTrac. The bill is DC2023.01−42 for the period 2/1/13 to 2/24/13. The date of the invoice is 3/13/13. The work consisted of project management, prepare internal work order, calls to technician in the field, well gauging and product recovery, calls regarding full drums, calculate product thickness for wells during 2011 and 2012, review and tabulate gauging and product recovery data, review 2011 and 2012 data, edit and prepare site map, generate internal work order, load vehicle, travel to and from site, gauging of 37 wells, use of light duty vehicle, low value equipment and sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

5/1/13 − Raphael Ketani. I received CAP 48 for EnviroTrac. The bill is DC2023.01−43 for the period 2/25/13 to 3/31/13. The date of the invoice is 4/15/13. The work consisted of project management, generate internal work order, well gauging, bailing wells, install socks, calls to technician in the field, review and tabulate gauging and product recovery data, respond to emergency call − leaking drum enclosure, calls for removal of drums, load vehicle, travel to and from site, use of light duty vehicle, low value equipment, sonic interface probe, 55 gallon drum and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

5/23/13 − Raphael Ketani. I received CAP 49 for EnviroTrac. The bill is DC2023.01−44 for the period 4/1/13 to 4/28/13. The date of the invoice is 5/14/13. The work consisted of project management, generate internal work order, gauged 33 wells, bailed product from 3 wells, calls to technician in the field, calls to manager of Dunkin Donuts regarding possible garbage issue at the site, calls regarding drum removal, review and tabulate gauging and product recovery data, travel to and from site, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

6/27/13 − Raphael Ketani. I received CAP 50 for EnviroTrac. The bill is DC2023.01−45 for the period 4/29/13 to 5/26/13. The date of the invoice is 5/26/13. The work consisted of project management, generate internal work order, gauged wells, bailed product from wells, calls to technician in the field, call to Dunkin Donuts tenant, review and tabulate gauging and product recovery data, travel to and from site, use of light duty vehicle, low value equipment, sonic interface probe, use of AARCO Environmental subcontractor for product collection services, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

7/29/13 − Raphael Ketani. I received CAP 51 for EnviroTrac. The bill is DC2023.01−46 for the period 5/27/13 to 6/30/13. The date of the invoice is 7/15/13. The work consisted of project management, generate internal work order, gauged 33 wells, bailed product from wells, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, use of light duty vehicle, low value equipment, sonic interface probe, PID meter, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

8/29/13 − Raphael Ketani. I received CAP 52 for EnviroTrac. The bill is DC2023.01−47 for the period 7/1/13 to 7/28/13. The date of the invoice is 8/14/13. The work consisted of project management, generate internal work order, gauged 37 wells, bailed product from wells, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be

acceptable and notified Steve Karwiel by e−mail.

10/2/13 − Raphael Ketani. I received CAP 53 for EnviroTrac. The bill is DC2023.01−48 for the period 7/29/13 to 8/25/13. The date of the invoice is 9/13/13. The work consisted of project management, generate internal work order, gauged 39 wells, bailed product from wells, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

10/28/13 − Raphael Ketani. I received CAP 54 for EnviroTrac. The bill is DC2023.01−49 for the period 8/26/13 to 9/29/13. The date of the invoice is 10/14/13. The work consisted of project management, generate internal work order, gauged 37 wells, bailed product from 3 wells, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

12/4/13 − Raphael Ketani. I received CAP 55 for EnviroTrac. The bill is DC2023.01−50 for the period 9/30/13 to 10/27/13. The date of the invoice is 11/12/13. The work consisted of project management, generate internal work order, gauged 34 wells, bailed product from 1 well, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

12/19/13 − Raphael Ketani. Mr. Lorthioir sent me two pictures of the cover for well MW−87. The cover had been damaged during the snow plowing of the Dunkin Donuts property. He wrote that he would like to fill in the void below ground which used to house equipment for the recovery system and then replace the large well cover with a small round one. I responded back that he should do this.

1/6/14 − Raphael Ketani. I received CAP 56 for EnviroTrac. The bill is DC2023.01−51 for the period 10/28/13 to 11/24/13. The date of the invoice is 12/13/13. The work consisted of project management, generate internal work order, gauged wells, bailed product from wells, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, call to landlord, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

1/17/14 − Raphael Ketani. Donna Amoscato of EnviroTrac sent an e−mail with pictures describing and showing a leaking drum. Speedi Dri was applied to the liquid (combination of water and product) which leaked in the drum storage area and which had spread to the sidewalk outside. Ms. Amoscato wrote that the spill was contained. Two pictures show Speedi Dri on the ground. The drum had leaked because it had become frozen. In the future, Ms. Amoscato wrote, the drums will be removed during the winter months. Some of the liquid had entered a vault nearby. I sent an e−mail to Ms. Amoscato stating that the vault had to be opened if it is not a Con Ed vault and cleaned out. If it is a Con Ed vault, then Con Ed must be notified about the incident.

2/4/14 − Raphael Ketani. I received CAP 57 for EnviroTrac. The bill is DC2023.01−52 for the period 11/25/13 to 12/29/13. The date of the invoice is 1/15/14. The work consisted of project management, generate internal work order for monitoring event, gauged wells, bailed product from wells, replaced collection socks, review and tabulate gauging and product recovery data, travel to and from site, calls to technician at site, call to landlord, arrangements for repair of well cover, installed new well pad, cleaned up containment area, use of light duty vehicle, low value equipment, sonic interface probe, 55 gallon drum and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

2/11/14 − Raphael Ketani. I reviewed the EnviroTrac Project Status Report dated 2/10/14 for the year 2013. During 2013, the product impacts to the wells were as follows:

MW−8A − product during all but 3 weekly visits; product thickness from 0.02' to 1.31'; MOST IMPACTED well of the monitoring array MW−8 − product during all but 11 weekly visits; product thickness 0.01' to 0.41' MW−9 − product during 9 visits; 0.01' to 0.07' MW−10A − product during 11 visits; 0.01' to 0.07' MW−31 − product during 11 visits; 0.01' to 0.65' MW−6A − product during 6 visits; 0.01' to 0.47' MW−46 − product during 2 visits (due to locked gate); 0.08' to 0.09' MW−82 − product during 1 visit; 0.02' The other 29 wells never had product and MW−15 was always dry during the year.

During 2013, gauging took place at 37 select wells. Wells MW−8A, MW−8 and MW−9 are located a little east of 4th Avenue and along the northern sidewalk for 25th Street. They are the main area for the occurrence of product. EnviroTrac recommends a trial period for EFRing wells MW−8A, MW−8 and MW−9. There would be EFR events every other week for 2 months (a total of 4 events). Then the wells would be gauged for the following 2 months and the data would be evaluated to see whether EFRing is effective in removing the product. Weekly gauging and product removal would continue for the other select wells.

3/4/14 − Raphael Ketani. I received CAP 58 for EnviroTrac. The bill is DC2023.01−53 for the period 12/30/13 to 1/31/14. The date of the invoice is 2/11/14. The work consisted of project management, project coordination, generate internal work order, gauged 33 wells, bailed product from wells, replaced collection socks, review and tabulate gauging and product recovery data, create data tables and enter data into them, update CADD figures, draft 2013 summary letter, draft portions of 2013 Annual Report, travel to and from site, calls to field staff at site, call to landlord, e−mail to DEC and upload pictures, cleaned up containment area, use of light duty vehicle, use of heavy duty vehicle, low value equipment, sonic interface probe, 55 gallon drum and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

3/26/14 − Raphael Ketani. I received CAP 59 for EnviroTrac. The bill is DC2023.01−54 for the period 2/1/14 to 2/28/14. The date of the invoice is 3/13/14. The work consisted of project management, project coordination, generate internal work order, gauged wells, bailed product from wells, replaced collection socks, review and tabulate gauging and product recovery data, create data tables and enter data into them, complete 2013 Annual Report and submit for internal review, travel to and from site, calls to field staff at site, generate internal work order, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

5/5/14 − Raphael Ketani. I received CAP 60 for EnviroTrac. The bill is DC2023.01−55 for the period 3/1/14 to 3/31/14. The date of the invoice is 4/17/14. The work consisted of project management, project coordination, generate internal work order, gauged wells, bailed product from wells, replaced collection socks, review and tabulate gauging and product recovery data, create data tables and enter data into them, travel to and from site, calls to field staff at site, generate internal work order, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

5/21/14 − Raphael Ketani. I received an e−mail from Mr. Lorthioir regarding the sudden increase in the thickness of product in well MW−31. Mr. Lorthioir wrote:

The attached scan has three items. The first is a hydrograph showing product thickness in well MW−31 for 2013, the second for 2014 (to date). The last is a site plan showing the location of MW−31 and general groundwater flow direction. There was not much product observed in MW−31 in 2013. Only intermittently at the beginning of the year and a small amount (0.2 feet) in October.

Since the beginning of 2014, however, and has twice been observed to be 10 inches or thicker. This re−appearance of product in MW−31 is what lead EnviroTrac to request the performance of EFR at the site. It is too early to tell if the EFR events have had the desired effect.

If you look at the site plan, you can see that MW−31 is located in a slightly upgradient part of the site. The other wells which have been exhibiting product are MW−8, MW−8A and MW−9. These wells are all located in the sidewalk along 25th Street. These wells, especially MW−8 and MW−8A, have been exhibiting varying amounts of product for the last several years. Wells MW−8, 8A and 9 were located near the former tank locations and, given this, I can understand why they might still exhibit product. But MW−31 is farther away from the former tanks and there was no product observed for quite a while. I know a rising and falling groundwater table can cause the re−appearance of free product, but to go from no product to over 10 inches is, in my opinion, fairly extreme. Also of note, the change in water table elevation has not caused the re−appearance of free product in any of the wells near MW−31. Some of these wells are less than 10 feet away and they should, in my opinion, also be exhibiting free product.

My concern is that there could be another site impacting upon the Dunkin Donuts property. I am proposing that we collect product samples from MW−31 and MW−8 and have them analyzed for composition and age.

We have been monitoring the upgradient wells on the street (MW−10, 10A and 11), and no product has been observed in them. The possibility exists, however, that petroleum is entering the site from underneath the building adjacent to the site, where there are no upgradient wells.

5/23/14 − Raphael Ketani. Mr. Lorthioir sent me an e−mail today. He stated that well VEFRing is taking place today. He remarked that well MW−31 had been free of product most of the year. So, it was surprising that 10 inches of product should suddenly appear. However, MW−8 (next to the subject well) has also often had some product. So Mr. Lorthioir does not believe this is a dumping incident. He added that his staff will knock on doors in order to find out whether someone has a fuel system problem nearby.

6/5/14 − Raphael Ketani. I received CAP 61 for EnviroTrac. The bill is DC2023.01−56 for the period 4/1/14 to 4/27/14. The date of the invoice is 5/13/14. The work consisted of project management, project coordination, generate internal work order, gauged wells, VEFR product from wells, review and tabulate gauging and product recovery data, create data tables and enter data into them, travel to and from site, calls to field staff at site, generate internal work order, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies, contracting with Metro Environmental Contracting for providing a vacuum truck for VEFRing the wells. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

6/10/14 − Raphael Ketani. Mr. Lorthioir called again (631) 924−3001. He said that they checked the wells last week that had shown the presence of product and found thick product again in some of the wells. The product was bailed. Mr. Lorthioir commented that he wanted to do two things to help resolve the sudden appearance of the product. One is to contact Mr. Comacho from the NYFD and find out whether the commercial facilities next door have or had fuel oil tanks. The other is to do Kryzinski tests on the wells with product in order to find out how thick the product may be outside the well bores. This test involves bailing out the product from a well and then measuring it every 30 seconds or so to see how fast it comes back. The results are put into a formula and the outside the well thickness measurement is generated. I told Mr. Lorthioir to go ahead with both tasks.

Later, Mr. Lorthioir sent me an e−mail as a carbon copy. The e−mail was addressed to Mr. Camacho of the NYFD and asked for his assistance in locating any fuel oil tanks that may be in buildings next to the site.

6/12/14 − Raphael Ketani. Mr. Camacho responded to Mr. Lorthioir by e−mail with a list of other places that have tanks near the site.

Later, Mr. Lorthioir sent me an e−mail with an attached map highlighting the addresses that Mr. Camacho had included in his list. The highlighted map showed a location at 209 25th Street which was only two properties upgradient from the site. Mr. Lorthioir stated that he thought this property may be the source of the newly appeared product in well MW−31 and the others.

6/13/14 − Raphael Ketani. I researched the following properties that are on 25th Street via the Spills database in order to see whether they had or do have spills: 207; 209; 217; 220; and 225. None of these properties appeared in the Spills database. So, all I could assume was that they never had a spill or that they had a spill, but it was unknown to the DEC.

Next, I checked the PBS database. The location of 207 25th Street was not listed. As it was not listed on Mr. Camacho's list as ever having had a tank, I assumed that there was little likelihood of a spill coming from this location. I found that the tanks for the locations 220 and 225 25th Street were both registered in the PBS database. However, the tanks at the locations 209 and 217 25th Street had never been registered.

I sent an e−mail to Mr. Lorthioir stating that the DEC will knock on doors and see what we can find out about the tank systems at the unregistered properties. Presently, 209 and 217 25th Street are in violation of the PBS regulations. I let Lezsek Zielinski, EE II and head of the PBS Unit, know about the unregistered tanks. He said that he will send someone out to inspect the properties in the very near future.

6/19/14 − Raphael Ketani. I spoke with Mr. Zielinski today. He stated that yesterday he had inspected the four facilities in question at 209, 217, 220 and 225 25th Street. He reported that the 220 and 225 25th Street facilities looked fine. Though, the 225 25th Street site may have more USTs than are listed on their PBS registration. So, he will have the owner come in for a meeting to settle this potential PBS violation.

However, he told me that the 209 and 217 25th Street facilities have just a complete concrete floor. Mr. Zielinski did not see any remote fill ports, nor any piping that would lead him to believe that USTs were present. The owners stated that they never knew of any USTs below their buildings (though the NYFD records show that tanks were present at least at some time). The DEC doesn't have any spill or PBS violations pertaining to the 209 and 217 locations. So, there doesn't appear to be any leverage that the DEC can use to get the owners to do GPR or electromagnetic surveys in order to possibly find any tanks. I sent an e−mail to Mr. Lorthioir with this information and told him to just continue to collect the product that appears.

7/1/14 − Raphael Ketani. Today I received a non−hazardous waste manifest for the disposal of oil contaminated debris at Republic Environmental Systems in Hatfield, Pennsylvania. The representative from the receiving facility signed the document on 6/10/14.

7/3/14 − Raphael Ketani. I received CAP 62 for EnviroTrac. The bill is DC2023.01−57 for the period 4/28/14 to 5/25/14. The date of the invoice is 6/11/14. The work consisted of project management, project coordination, generate internal work order, load vehicle, mobilization to site, gauged wells, VEFR product from wells, review and tabulate gauging, product recovery and EFR data, create data tables and enter data into them, create 2013 and 2014 hydrographs for select wells and complete hydrographs, travel to and from site, calls to field staff at site, call to lab regarding doing age dating, e−mail to DEC regarding proposed work, review old reports from DEC regarding product history, review proposal of Triassic Labs regarding age dating oil, e−mail to DEC regarding doing age dating of newly appeared product, generate internal work order and e−mail to DEC, coordinate drum pickup for full absorbent drums, use of light duty vehicle, low value equipment, sonic interface probe, and purchase supplies, contracting

with Metro Environmental Contracting for providing a vacuum truck for VEFRing the wells. I found the pay package to be acceptable and notified Steve Karwiel by e−mail.

7/15/14 − Austin − This PIN project is being transferred from Ketani to Vought, for porject consolidation and review purposes − end

8/5/14−Vought−Contract Payment Package (EnviroTrac)−(6/18/14 thru 6/29/14. Work performed included working on baildown test graphics/data entry and report writing, well monitoring and bailing, sock replacement, review and tabulation of gauging and EFR data, project coordination.

8/12/14−Vought−Called and spoke to NYSOAG Karpen and noted that DEC was performing full file review. NYSOAG noted a prior meeting with DEC where there was discussion of possible sources in addition to the Guarino site and the need for investigation of those possible additional sources. NYSOAG noted that Guarino still may be responsible for current onsite contamination if DEC still remediating that same contamination and as such no ISR was needed until additional responsible parties (if any) were found.

9/17/14−Vought−Contractor Application for Payment (EnviroTrac)−(6/30/14 thru 7/27/14). Gauged wells and bailed product, replaced absorbent socks, review and tabulation of gauging data, project coordination.

10/6/14−Vought−Contractor Application For Payment(EnviroTrac)− (7/28/14 thru 8/31/14). Work performed included: Site travel, monitoring and bailing of wells, review and tabulation of product recovery data, selecting and preparing files for submittal to NYSDEC, project coordination, File review by EnviroTrac at DEC offics from 8/11 thru 8/15, assembly of older data for submission to DEC, review of timeline generated by DEC, project management.

11/18/14−Vought−Contractor Application For Payment(EnviroTrac)− (9/1/14 thru 9/28/14). Work performed included: Site travel, monitoring and bailing of wells, review and tabulation of product recovery data, selecting and preparing files for submittal to NYSDEC, project coordination, project management.

12/9/14−Vought−Contractor Application For Payment(EnviroTrac)− (9/29/14 thru 10/26/14). Work performed included: Site travel, monitoring and bailing of wells, review and tabulation of product recovery data.

12/9/14−Vought−Contractor Application For Payment(EnviroTrac)− (10/27/14 thru 11/30/14). Work performed included: Site travel, monitoring and bailing of wells, review and tabulation of product recovery data, removing broken sock and other debris from MW8

1/26/15−Vought−Contractor Application For Payment(EnviroTrac)− (12/19/14 thru 1/31/15). Work performed included: Site travel, monitoring and bailing of wells, review and tabulation of product recovery data, project coordination.

3/10/15−Vought−Contractor Application For Payment(EnviroTrac)− (12/19/14 thru 1/31/15). Work performed included: Site travel, monitoring and bailing of wells, review and tabulation of product recovery data, project coordination.

4/7/15−Vought−Contractor Application For Payment(EnviroTrac)− (2/1/14 thru 2/28/15). Work performed included: Site travel, monitoring and bailing of wells, replaced socks, review and tabulation of product recovery data, project coordination.

4/30/15−Vought−Contractor Application For Payment(EnviroTrac)− (2/1/14 thru 2/28/15). Work performed included: Site travel, Replacing vault cover with manhole cover and cleaning enclosure area, filled vault with concrete, monitoring and bailing of

wells, review and tabulation of product recovery data, project coordination.

5/28/15−Vought−Contractor Application For Payment(EnviroTrac)− (3/30/14 thru 4/26/15). Work performed included: Site travel, monitoring and bailing of wells,changing absorbent socks, project management and coordination.

6/19/15 − Obligado − Spill reassigned from Vought to Obligado.

7/7/15−Vought−Contractor Application for Payment(EnviroTrac)− (4/27/15 thru 5/31/15). Work performed included: Site travel, monitoring and bailing of wells, bailed and drummed product , changing absorbent socks, project management and coordination.

8/5/15 − Obligado − Sent payment approval for CAP #75 for weekly monitoring and bailing of wells.

8/12/15 − Obligado − I spoke to Dave Lorthior and requested gauging and product bailing be reduced to biweekly, due to minimal product recovery.

9/15/15 − Obligado − I sent an email to David Lorthioir requesting that based on minimal product thickness less than 0.03 ft, monitoring be reduced to monthly.

11/17/15 − Obligado − Email from David Lorthioir on 11/16/15. Almost one foot of product found in MW31. Picture included. I called David and asked him to collect a product sample for forensics during the next visit.

11/20/15 − Obligado − Email to Lorthioir approving the workplan for repair of 4 damaged on−site well vaults. Corroded 2x2 Steel Vault covers to be removed. The vaults are to be filled with cement and a circular 10 Inch manhole to be installed around the well.

12/10/15 − Obligado − I inspected a potential source UST site at 276−280 24th Street. This site had a prior TTF failure, closed spill #0210214. According to the spill file, a 10k #2 fuel oil UST (empty since at least 1999) was abandoned in place in 2003. 3 soil samples were collected and below standards and the spill closed in 2006. The tank was never registered. I met Simon Liu, who is the current property owner. He runs a art supply warehouse/woodworking shop at the location. He recently purchased the property in 2013 and had no knowledge of any tanks at his property. Mr. Liu allowed me to inspect the basement, where I was able to discover an approx. 3 x 3 steel covered vault in the floor located towards the back of the basement of 276 24th St. MR. Liu had his workers open it for me with a crow bar. This vault was partially filled with concrete but contained piping which appeared to be remnants of a top of UST piping system. An apparent fill pipe was observed approximately 3 ft away from the sump. The fill pipe likely ran vertically to the ceiling than across the ceiling along the dividing/foundation wall between 276 and 280 24th St building pracels to the fill in the building wall. I informed Mr. Liu that the DEC would like to perform a geoprobe investigation in his basement around the suspect tank area. He had no objection and said the DEC could do whatever investigation we need to do. He signed a DEC access agreement form.

1/29/16 − Obligado − Conducted geoprobe investigation at 276−280 24th Street in vicinity of the 3 x 3 manhole. Prior to geoprobe a geophysical was done. Pipe runs which appeared to be related to fill piping were identified, however, no signal of the former tank was apparent in the basement. I inspected the vault and cleared out some of the debris in the vault and was able to more clearly see the piping components for the former tanks system. There were 2 transfer pumps inside the vault, which indicates that this 10k tank likely pumped product into 2 smaller tanks at some other location. No other tanks were identified on the premises. 4 geoprobe borings were conducted in the general area around the identified structures over the course of 2 days,

however, no evidence of petroleum impact was encountered in the subsurface. All soils were free of any odors, staining, or PID readings. Due to the limited power of the small geoprobe rig we were using in the basement, all borings met with refusal due to very tight soils at approximately 10 ft bgs. However, absence of any apparent petroleum impacts in he shallow soil in this area of the basement suggest no spill occurred at this location.

4/25/16 − Obligado − I was provided with the Product Recovery and Gauging Results by EnviroTrack.

1/29 through 3/18/16 − Max LNAPL thickness MW8 − 0.14 ft (bailed 1.5 gallons LNAPL, replaced sock) MW8A − 0.32 ft (Bailed 1 gallon, replaced sock) MW9 − 0.02 ft (Bailed 1 gallon, replaced sock) MW31 − 0.14 ft (Bailed 1.5 gallons)

6/17/16− Obligado − I was provided with an updated Product Recovery and Gauging Results table by Envirotrac: April to May 2016 maximum LNAPL thickness MW8 − 0.10 ft MW8A − 0.74 ft

MW9 − 0.05 ft

MW31 − ND

6/24/16 − Obligado − I re−reviewed the file to identify other potential sources. According to the file, 207 25th Street also had a 550 gal UST which failed a tank tightness test on 9−10−93. I looked further into this issue and found the actual tank tightness test report by Tanknology which was included in the April 11, 1994 Unico Subsurface Investigation Report. According to the test report, both bubble ingress and ullage ingress were detected. Bubble ingress indicates there was a leak below the tank product level and is indicative of a leaking tank. I tried to find additional information regarding investigation into this tank failure and identified a letter from State Environmental Services dated February 5, 1994 stating On February 5, 1994 State Environmental Services, Inc. permanently closed (1) 1000 gallon fuel oil storage tank. All work was done in accordance with DEC Regulations . No supporting documentation was included with the letter. It is not clear why this TTF was not investigated further. The file contained a correspondence between Unico and the DEC Project Manager proposing 3 monitoring wells around the suspect UST. No follow up to this correspondence could be found in the file. I also found photos of the 207 25th Street property taken on August 30, 1993 which show the location of the tank and 2 remote fills and 1 vent port. Red #2 heating oil spillage from overfills can be seen around and below the fill port on the wall and sidewalk. I searched the file for additional references to the 207 25th Street site and I found a Status Report dated May 1996−May 1997 prepared by F&N which documented an inspection performed by F&N personnel of up−gradient properties in search of potential sources. According to that report, 207 25th Street contained no UST on the property . I found another reference to 207 25th in a F&N Status Report dated December 28, 1999 which stated An inspection performed on February 28, 1997 identified that the properties located at 205, 207, and 215 25th Street did not contain fuel oil tanks and are therefore also not contributors to the contamination . These reports are clearly incorrect based on the photo documentation of the UST system in the file. The presence of this historic failed tank on the property and absence of any tank closure assessment warrants further investigation. I sent a letter to the current property owner requiring a GPR survey to identify the tank location and a subsurface investigation consisting of a minimum of 4 soil borings around the abandoned tank. A work plan is due to the Department within 30 days. Letter sent to the property owner listed on Acris: PSJC LLC, 207 25th Street, Brooklyn, NY via Certified Mail Receipt #7001 0320 0003 7416 8275.

6/27/16 − Obligado − Per USPS website, the item was delivered to an individual at the address at 12:40 pm on June 27, 2016 in BROOKLYN, NY 11232.

6/28/16 − Obligado − I received a phone call from Sandi Fung of PSJC who is the property owner of 207 25th Street, Brooklyn, NY

in response to my letter. She said they purchased the property in 2008 and they had a phase 1 and phase II reports. She said she was unaware of any tanks. She said she will send me the reports tomorrow. She inquired about the 30 day deadline. I told her I would review the reports and let her know if any thing else needed to be done.

6/29/16 − Obligado − I received an email from Sandi Fung. She will send me the Phase 1. She doesn't have a Phase II and she doesn't know if one was prepared.

I received Product Gauging Results from Envirotrac for June 2016 June 2016 LNAPL thickness MW8 − 0.02 ft MW8A − 0.03 ft

7/1/16− Obligado − I reviewed the invoice for the May gauging and bailing event provided by Envirotrac and found billing errors, which I relayed to Steve Karwiel. They billed us for a Hydrogeologist when the work was performed by a tech. Steve will make the adjustment on the payment.

7/13/16 − Obligado − I met Sandi Fung on the site. She provided me with access to the building. While the locations of the former fill ports were still apparent in the building exterior wall, no evidence of a UST could be seen inside the building. I provided her with the pictures of the tank and the failed tank tightess result from 1993. She said she had no knowledge of any tank when she purchased the property and the Phase 1 report did not identify any potential tanks or any need to do further investigation. We agree that she would provide access for the DEC to do a subsurface investigation around the former tank.

7/18/16 − Obligado − I met Dave Lorthioir at the site to discuss the planned investigation. 4 soil borings will be installed around the 550 UST area. 2 in the driveway, 1 in the sidewalk, and 1 downgradient on the D&D property. I provided Sandi with an access agreement.

7/25/16 − Obligado − I received the signed access agreement with Sandi.

7/26/16 − Obligado − Conference call with John Urda and Guarino's attorney Mr. Peterson. We requested access to put a well on the Guarino Property. Peterson said he saw no issues and would advise his client to sign and return the agreement. We discussed the status of the remediation and investigation. I told him there was residual free phase product in several wells in the southeast portion of the site which the DEC is removing via manual bailing once per month. He asked how long it would take to remove all the product, and I told him it would be impossible to know. He asked if it was ok if his client removed the former system enclosure. I told him the remedial system has been removed so there is no reason why they couldn't removed the fencing and the shed. I told him we just need a place to store one or two drums on the D&D property, which he said should not be a problem.

I made another site visit with Dave Lorthior and his markout sub contractor for the geophysical survey. According to the tech, it was not possible to survey the suspect UST area in the utility closet do to physical constraints. He marked out all the subsurface utility lines and we discuss proposed well locations.

8/10/16 − Obligado − I continue to investigate the other remaining potential source UST. I reviewed a Phase 1 Investigation Report and a Vapor Investigation Report for 213−219 25th Street. The reports were prepared by AKRF on behalf of NYCSCA who is planning to build a pre−K at the site. the reports document the presence of petroleum VOCs in soil vapor as well as TCE and recommends installation of a SSDS system. The phase 1 found no evidence of a tank at the site, which is not correct, based on DEC Records which document the presence of at least 1 1000 gal tank. I sent a property access letter request to the property owner Buono Enterprises to perform investigation of their former 1000 gallon #2 fuel oil UST. Sent via certified mail

#70142870000006085169. I emailed NYCSCA and recommended they submit SSDS plans to the DEC/DOH for review prior to construction.

8/22/16 − Letter returned undelivered.

8/29/16 − Obligado − Field Work − Met Envirotrac and Associated on site to install 4 borings/wells at and around the abandoned UST at 207 25th street. I observed evidence of petroleum impacted soil (based on odors and elevated PID readings) in all soil borings as shallow as 10 ft below grade and extending to the water table at ~23 ft. Evirotrac will install the 4 wells on the following day

8/30/16 − Obligado − I spoke to dave who said one of the 3 borings the hit refusal at 13 ft when trying to install the well. They will try again tomorrow

8/31/16 − Obligado − They hit refusal again at 13 ft. This well location will be abandoned.

9/8/16 − Obligado − Met Dave Lorthior on the site. Envirotrac was developing and sampling the 3 wells and repairing the sidewalk flag in front of 207 25th Street. Dave and I also met with Frank Buono at 217 25th Street. Representatives from SCA (MR. Ellis) were also at 217 25 to discuss issues related to their school construction. We looked at the former tank location went over potential boring locations. According to Frank, a tank closure assessment was performed in 1999 when he purchased the property, but he was unable to provide the soil boring results or the tank tightness testing results. He was only able to provide a tank closure affidavit and invoices of the work. Frank Buono signed the access agreement to allow DEC on site to perform soil boring investigation. I also requested SCA provide the SSDS plans.

9/9/16 − Obligado − I called Marisol at Riteway/PTC to inquire if they had any of the documentation of closure from 1999 for the 217 25th street site. They responded that all those files had been lost/purged when Riteway acquired PTC. I also sent an email to Frank Buono requesting the SSDS plans, at the request of SCA.

9/21/16 − Obligado − I met Envirotrac at 217 25th street site for the geoprobe investigation. At the time of the inspection, they were boring the location at the former UST. No evidence of contaminated soil (PID, odor, staining) was apparent in the vadose zone at B2 next to the tanks. Elevated PIDs and odors were apparent at the water table at 30 ft bgs. Based on the absence of contamination in the vicinity of the tank, this UST does not appear to be the source of Spill No. 9305122.

9/22/16 − Obligado − I sent an email to Frank Buono with cc to SCA notifying him that the UST at 217 25 this not the source of the spill. I still requested he provide the SSDS plans for the proposed school.

2/16/17 − Obligado − I completed my review of the data form the 207 25th street investigation. 4 borings were advanced, 2 within the building, 1 in the sidewalk adjacent to the fill port and 1 down gradient on the 737 4th Avenue Duncan donuts property. Soil contamination above Soil Clean UP Guidance was found in all borings. Soil contamination was found as shallow as 8 ft bgs. Groundwater contamination above TOGs was found in all wells. Free phase product was not encountered. The soil data and groundwater confirm that the 1993 tank test failure of the heating oil tank at 207 25th street resulted in a petroleum discharge to soil and groundwater. As such, a new spill was opened for the 207 25th street site − Spill No. 1610374.

2/17/17 − Obligado − I sent an email to Sandi Fung notifying him that based on the soil data, the tank at her property did leak and may have contributed to the spill.

3/21/17 − Obligado − Final Phase II report received from Envirotrac. The report documents investigations at 3 properties − 207 25th Street, 213 25th Street, and 276 24th Street. The report concludes that the former UST system at the 207 25th Street property was a contributing source to the over all Spill. However, based upon prior investigations, prior laboratory analysis of product samples, the overall extent of the impated area and the volume of free product observed in the wells over the years, it is EnviroTrac's professional opinion that the property at 207 25th Street was not the sole source for the petroleum release.

With regards to the 276 −280 24th street building the subsurface investigation was inconclusive because although no evidence of soil contamination was observed, the soil probes were not installed deep enough to confirm the absence of soil contamination below the suspect tank. This was because the investigaiton was done with a small geoprobe due to access limitations which could not penetrate the tight clay formation below 10−12 ft.

With regards to the 213th 25th Street site the report concludes that based on the absence of contamination in the shallow 213 B−1 boring, the abandoned 1000 gallon #2 fuel UST had not leaked prior to its abandonment

3/17/17 − Obligado − I received a DRAFT Remediation Alternatives Feasibility Study dated March 2017 which provides cost to closure estimates on various remedial alternatives to address the residual free product beneath the 4th and 25th Street site.

4/4/17 − Obligado − I sent a letter to Sandi Fung of PSJC LLC, cc to DEC Vought, Austin, Urda and AOG Judith Karpen, requiring a UST assessment (via either geophysical or intrusive methods) in the vicinity of the suspected UST to determine if the source tank was still present beneath the site and acting as a continued source for soil and groundwater contamination. I required the report be submitted within 90 days of receipt of the correspondence.

4/4/17 − Obligado − I sent an email to Erin Quell requesting EAR monitor and bail the product wells.

4/24/17 − Obligado − I received gauging results. Product thicknesses:

MW9 − 0.01 MW94 − 0.27 MW−31 − 1.53 MW−9 − 0.11 MW−8 − 1.73 MW−8a − 1.16

4/27/17 − Obligado − I got an email from Erin Quell that D&D complained of rats in the former equipment shed. After discussion with Randall Austin, DEC will remove the shed and fencing. I issued an amended callout to EAR with an increased budget to remove the system enclosure.

5/16/17 − Obligado − Erin Quell provided gauging results for May 5, 2017

MW−91 − 0.02 MW−94 − 0.31 MW−31 − 1.08 MW−9 − 0.08 MW−8 − 0.93 MW−8A − 1.23

Absorbent socks were placed in the wells.

ACTIVE HAZARDOUS SPILLS − MISC. SPILL CAUSES − EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, VANDALISM AND STORMS − IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS.
All spills mapped and profiled within 1/8 mile. Between 1/8 mile and 1/2 mile search radius, spills reported to be greater than 100 units and spills reported in the NYSDEC Fall 1998 MTBE Survey are mapped and profiled. Spills reported to be less than 100 units are listed in a table at the end of this section.

PLEASE NOTE: * Compass directions can vary substantially for sites located very close to the subject property address.

tank abandonedment done there − while geo−probing found product believes it is the piping

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHITOMIRSKY TRANSFERRED FROM Y.KRIMGOLD.

10−12−2005 SVE and pump and treat systems are operated at the site. SVE system is extracting significant concentrations from the vadose zone. AZ

1/13/2006 Reviewed system report. Analytical results showed total VOcs concentrations in air samples at 550 ppb and 44.7 ppb in lst sampling events. AZ

4−17−2006 Reviewed system report received in November 2006. Analytical results showed total VOcs concentrations in air samples at 1,832 ppb suggesting that SVE system continues to extract contaminants. URS recommended continuation of the groundwater extraction and treatment system. Groundwater sampling was performed. All wells except one showed exceedances ranging from 127 ppb to 19,100 ppb. Contaminant concentrations increased in wells MW−6,7,8,11 and 12. The average total VOC concentration increased from 6,297 ppb to 7,417 ppb. AZ

12/08/2006 Reviewed monitoring report dated September 22, 2006 and received on September 27, 2006. This report covers April − June 2006. On January 1, 2006 Greyhawk was assigned responsibility for this site. The site has SVE and GWET systems. VOCs were detected in all nine monitoring wells with concentrations ranging from 30 ppb to 14,700 ppb in MW−06. concentrations increased in two monitoring wells MW−01 and MW−08. It appears that the SVE system is not functioning efficiently as evidenced by relatively low VOC mass removal and restricted wellhead vacuum− 0.001 to 0.052 water column. The carbon unit should be replaced. Relatively low pumping rate limits the capture zone of 3 pumping wells. An increase in pumping rates would expand the size of the capture zone and might improve effectiveness of the SVE system. Significant VOC contamination persist in 7 of the 9 monitoring wells.

Roux suggested continue quarterly gw monitoring, verify depth and condition of the ventilation wells, collect samples from MW−3 which was previously removed from the sampling program but is located very close to two other wells with significant VOC concentrations. Evaluate methods to optimize SVE and GWET systems. DEC concurred. AZ

4/26/2007 Reviewed monitoring report for the period of July − September 2006, dated December 15, 2006, and received on December 21, 2006, and report for the period of October − December 2006, dated April 11, 2007, and received on April 26, 2007. October − December 2006 Report stated that the SVE system is approaching asymptotic levels. Vacuum levels in four observation wells are low − 0.01 −0.04 , GWET system has low pumping rate which limits the capture zone of of the three extraction wells. Roux stated that increase in pumping rates would expand the size of the capture zone and might also improve the effectiveness of the SVE system. The site has significant VOC concentrations ranging from 2,252 ppb to 71, 110 ppb. Significant increase in concentration was observed in MW−10 from 9,010 to 71,100 of total VOC. In the previous report dated December 21, 2006, Roux recommended investigation and evaluation of the extraction wells conditions, evaluation of the feasibility of improving GWET system and optimization of the SVE system operation. However, these recommendations were not fulfilled. In the report dated April 11, 2007, Roux listed as upcoming tasks evaluation of the conditions of extraction wells, SVE and GWET systems optimization. These tasks should be performed without delay. Pumping rates and vacuum levels in remedial systems must be increased. Performance of the SVE and GWET systems should be improved and systems modified, if necessary. Submitted work plan for the proposed soil sampling is approved. The following e−mail was sent to DDC/ROUX/Greyhawk: I have reviewed monitoring report for the period of October − December 2006, dated April 11, 2006, for this site. Vacuum levels in four observation wells of the SVE system are very low (0.01 −0.04). GWET system has low pumping rate which limits the capture zone of the three extraction wells. Roux stated that increase in pumping rates would expand the size of the capture zone and might also improve the effectiveness of the SVE system. The site has significant VOC concentrations in groundwater (up to 71, 100 ppb of total VOC in well MW−10). Significant increase

in total VOC concentrations was observed in MW−10 (from 9,010 ppb to 71,100 ppb). In the previous report dated December 21, 2006, Roux recommended investigation and evaluation of the extraction wells conditions, evaluation of the feasibility of improving GWET system and optimization of the SVE system operation. However, these recommendations were not fulfilled. In the report dated April 11, 2007, Roux listed as upcoming tasks evaluation of the conditions of extraction wells, SVE and GWET systems optimization. These tasks should be performed without delay. Pumping rates and vacuum levels in remedial systems must be increased. Performance of the SVE and GWET systems should be improved and the systems modified, if necessary. Submitted work plan for the proposed soil sampling is approved. AZ

1−22−2008 Reviewed January − September 2007 Report submitted on November 13, 2007. GWET is ineffective due to the restricted pumping rates. The SVE and GWET systems are not operating efficiently. Sheen was detected in MW−04 and MW−06 in April 2007. Soil investigation was performed in July− August 2007. The highest VOC concentrations in soil were detected in RXSB−04 75,000 ppb at 0 to 2 feet bls. RXSB−01 − 49,400 ppb of total VOC at 23−25 feet bls. MW−06 contained 9,980 ppb of total VOCs, MW−10−5,220 ppb of total VOCs. MW−02 was destroyed. Roux proposed shutting down SVE and GWET systems, implement enhanced bioremediation. Contacted Brian Morrissey. The site requires hydraulic control over migrating groundwater plume. Proposals for a new groundwater treatment system are required ASAP. Brian will get back to me with a timetable. AZ

1−23−2008 Conference call with Brian Morrissey and Andy Leddins. Bioremediation as main remediation strategy is rejected by DEC since the plume must be hydraulically controlled. I requested plume delineation along 29th street and establishing of hydraulic control over the groundwater plume. Roux will install delineation wells within next two weeks, perform high vac test and confirmation studies of DPE system within next three to four weeks. After the studies are completed a DPE system will be installed. Permo OX Plus injection will be performed along Th Street as an IRM simultaneously with constructing a DPE system. Timely quarterly should be submitted for this site. AZ

7−22−2008 Reviewed January − October 2007 through March 2008 Report submitted on April 21, 2008. The quarterly report submittal was significantly delayed. The SVE and GWET systems are not operating efficiently and high level residual soil and groundwater (up to 11,790 ppb of the total VOCs) contamination remains at the site. DEC requested installation of two additional monitoring wells to delineate offsite extent of groundwater contamination in January 2008 but the wells have yet to be installed. DEC requested and Greyhawk/Roux concurred that high vac test and confirmation studies of DPE system should be performed. The test has not been conducted and the DPE system has not been installed.

The remedial progress at the site is unsatisfactory. Quarterly Monitoring Reports should be submitted on time. DPE system should be installed, delineation wells and needed testing performed without delay. A timetable for the above activities should be submitted to DEC within a week. An e−mail describing the above requests was sent to DDC/Greyhawk/Roux/V.B. AZ

7−3−2008 Received an e−mail from Brian Morrissey/site update: 1.The 2 offsite wells (RXMW−01 and RXMW−02) were installed and developed in late June/early July. The well casings and building corners will be mapped by a licensed surveyor on Friday, July 25th. 2.Groundwater levels in on−site and off−site monitoring wells were gauged during the week on July 14th. 3.Groundwater samples were collected during the week on July 14th. We expect to see preliminary results during the first week of August. 4. We reviewed soil data from prior CMs and further evaluated subsurface conditions (contaminant levels in clay/silt areas). 5.We conducted a 2nd round of vacuum testing and vapor sampling on July 9th. 6.ADT installed 10 injection wells in late June/early July. Well development activities were completed during the week on July 7th. 7.PermeOx Plus injections commenced on July 21st (as an interim remedial measure). 8.Soil samples were collected for laboratory analyses during installation of the monitoring wells and injection wells. Samples at intervals with elevated PID readings were also sent for petroleum identification. Upon receipt of the results of the vapor sampling and soil analyses, Greyhawk and Roux Associates will develop the plan for modifying

the existing remedial systems. Due to the priority status of this site, I will contact you at that time to discuss future remedial actions and a timetable. AZ

6−16−2009 I have reviewed a Monitoring Report dated March 19−2009 for the above site for the period of April 2008 through January 2009. According to the report, URS recommended excavating the isolated area of shallow soil contamination around MW−02. Apparently, this excavation has not been performed. In 2007 VOCs were detected in soil shallow zone (0'−2') at concentrations up to 75,000 ppb. The SVE and GWET systems are not operating efficiently. Groundwater and soil contamination remains at the site. Free phase product was detected on January 12, 2008 in RXMW−06 and identified as a mixture of gasoline and No.2 fuel (diesel). One round of bioremediation injection was performed on July 21, 2008. Post−injection monitoring has not been performed. The contamination has migrated off−site in a northerly direction to the other side of 29th Street. However, VOCs were non−detect in two off−site wells (MW−13 and MW−14) installed at DEC request. Roux proposed modification of the SVE system by applying full vacuum to one or two extraction wells and using packers. This proposal is approved. On−site 1,000 gallon emergency generator diesel UST and onsite heating oil tanks should be tested without delay in order to determine a source of contamination at the site. DEC has not received results of the post−injection monitoring. These results should be submitted to DEC without delay. GWET or DPE system modification/installation plans should be submitted to DEC. Remediation recovery system (GWET or DPE) should be capable of capturing the contaminant plume and preventing off−site migration. Working groundwater recovery system should be installed at the site. Additional bioremediation injection could be used only as interim remedial measure. AZ

10−21−2010 The site was discussed at October 19, 2010, meeting with DDC/LIRO. The SVE system has not been modified and currently shut off. 1,000 gal emergency generator tank was not located by Roux. 8,000 heating oil tank should be tested. Shallow excavation should performed as it was discussed at the meeting. LiRo will develop low flow multi well groundwater remedial system. Geoprobe borings will be performed prior to the excavation. I called S. Frank on October 21, 2010, to confirm investigation details. Design report will be submitted in November 2010. AZ

10−25−2010 E−mail from S. Frank/ Liro: Alex, Thanks for your call on the 72nd precinct site status following up our discussion from the quarterly meeting on October 19, 2010. Just to make sure I didn´t miss anything, we discussed the following: 1ˇ You asked that the shallow excavation work near MW−02 that Roux/NYSDEC worked out, should be implemented. I advised you that we had recommended sampling at that location to confirm that contamination is still present. 2ˇ You asked that we implement modifications to the SVE system (i.e., packers and applying full vacuum to 1 or 2 wells) that Roux had recommended.

3ˇ You asked about the status 1,000−gallon diesel tank for the emergency generator. I advised you that Roux reported that they could not find the tank. 4ˇ You requested the status of tank testing for the 8,000 gallon heating oil tank. I found the tank tightness test report from August 2009 and have attached it. AZ

10−4−2010 An e−mail was sent to LiRo/V.Brevdo/F.Ashkan: Dear Steve,

I have reviewed Quarterly and Site Turn−Over Status Report with the proposals dated August 3, 2010. The report provides very detailed information and comprehensive analysis of the site status. According to the report, the SVE/GWET system is down since 2008. Roux conducted packer tests and recommended SVE system modifications. Groundwater contamination appears to have migrated off−site northeast across 29th Street. Roux performed two rounds of PermeOx injection after which VOC concentrations slightly decreased in groundwater. Heavy soil contamination and relatively high dissolved groundwater contamination exist at the site. There are four USTs closed in place.

Based on the above, DEC requires the following:

Actual USTs information should be reconciled with the Petroleum Bulk Storage (PBS) records and changes filed with the PBS section. I suggest that the tanks closed in place should be excavated, utilities and structures permitting. SVE/GWET system should be restarted. SVE portion of the system should be modified. Modifications should be based on the Roux's pilot test results. Hot spot excavation of soil should be performed around wells IP−09 and MW−02. Investigation of the piping associated with the former gasoline UST and the trench drain system should be performed. If additional soil investigation for the purpose of excavation is needed, it should be performed without delay. Additional rounds of in−situ chemical oxidation should be discontinued pending soil excavation and restart of the remedial system. The pump test is approved and should be performed if needed. Wells MW−05 and MW−15 should be added to the monitoring program. SVOC analysis of ground water could be performed, if LiRo considers it necessary. 600 gallon waste oil UST should be located.

A detailed work plan with the implementation schedule should be submitted to DEC no later than in 30 days. AZ

3−1−2011 Remedial Action Plan submitted on Dec. 1, 2010 was reviewed. The following e−mail was sent to S. Frank/ F. Ashkan/ V. Brevdo: Dear Steve,I have reviewed the Remedial Action Plan for the above site. A proposed excavation is approved. The excavation should include area around MW−07. The area of the excavation should be extended north, if feasible, to cover the contaminant plume. Tanks closed in place and associated piping should be excavated. Post excavation samples should be taken. Proposed GWET system should be modified to encompass contamination migrated across 29th Street. Contamination should be remediated on−site and off−site. SVE pilot test is approved. GWET system and SVE system should be developed after the excavation is performed and a monitoring round confirms the exact boundaries of contamination. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan. AZ

3−29−2011 Reviewed quarterly monitoring report dated Dec. 14, 2011. Well RXMW−05 was converted to injection but, nevertheless, sampled. Total VOC concentrations ranged from 73 ppb to 16,213 ppb. The pump test was conducted but on Sept. 2010, and indicated a limited flow capacity. Bioremediation sample results do not indicate a reduction of contaminate concentrations due to the bio−injections that were completed by Roux in July 2008 and September 2009. The results of the packer test were inconclusive. Soil contamination is present along the northern portion of the building and along 2nd St. (north side) extending 8' below the water table. MW−07 exhibit a significant increase in total VOCs. AZ

6−30−2011 Reviewed quarterly monitoring report dated March 1, 2011. Excavation in the vicinity of IP−09 and a former fill port is planned. Installation of SVE wells is scheduled. I contacted S. Frank and requested to repeat GPR test to locate closed in place tanks. GWET is being designed. The site has gross dissolved petroleum contamination (up to 18,634 ppb of total VOCs). This is the LiRo's highest priority site. AZ

10−25−2011 At the meeting with LiRo in−situ chemical oxidation (ISCO) pilot test described in a report dated October 13, 2011, was approved. An ISCO pilot plan will be prepared and submitted to DEC for review. AZ

10−25−2011 The following email was sent to S. Frank/F. Ashkan/V. Brevdo: Steve, You can request a FOIL information for sp.#0907094 and Langan's report related to this spill. The report stated that the source of the contamination at the site is 72nd Precinct. AZ

1−30−2012 Reviewed QMR and in−situ chemical oxidation pilot test work plan dated November 14, 2011. Second GPR survey was scheduled for November 2012. ISCO Pilot Test approved by DEC approved by DEC at October 25, 2011, meeting will be implemented. Two additional monitoring wells will be installed west/northwest of destroyed well MW−02. This area was previously inaccessible

due to the SVE/GWET system trailer. Wells RXMW−02, RXMW−04 and RXMW−05 will be replaced. AZ

11−15−2012 Reviewed a quarterly monitoring report (October 2011− April 2012). Dissolved contaminat concentration increased significantly in two wells MW−07 (from 6518 ppb to 12,930 ppb)and MW−10 (from 1677 ppb to 4973 ppb). Discussed the site with S. Frank.

11−16−2012 An email from S. Frank: Alex, Monitoring wells for the 72nd Pct work were replaced as follows: RXMW−02, replaced by RXMW−02R RXMW−04, replaced by RXMW−04R RXMW−05, replaced by RXMW−05R The wells were replaced in Feb−March 2012. The soil results from the well installations were reported in the previous quarterly report (dated 6−18−12). Groundwater results for the replacement wells are included in the latest quarterly report. AZ

11−16−2012 An email was sent to S. Frank/V. Brevdo/F.Ashkan: Dear Steve,

I have reviewed a quarterly monitoring report (October 2011− April 2012). LiRo completed the first ISCO injection on April 10, 2012. Nevertheless, dissolved contaminant concentrations increased significantly in two wells MW−07 (from 6,518 ppb to 12,930 ppb) and MW−10 (from 1,677 ppb to 4,973 ppb).

It seems that ISCO injections are not effective enough to treat existing offsite contamination. LiRo could proceed with the remaining ISCO injections. However, alternative plans for treatment of the offsite contamination should be developed and submitted to DEC.

Sincerely, Alexander Zhitomirsky

4−3−2013 Reviewed a quarterly monitoring report dated 11−13−2013. Post injection groundwater sampling indicates a reduction in total VOC concentrations in wells with the dissolved contaminant plume. Also, some total VOC spikes in post injection samples were recorded. The following e−mail was sent to S. Frank/V. brevdo/ F. Ashkan:

Dear Steve,

I have reviewed and discussed over the phone with you the above site. LiRo proposed to expand ISCO Pilot Test Program to the precinct side of 29th Street. This proposal is approved. If this remedial strategy is not effective, an alterative remedial strategy should be implemented.

The Responsible Party and Contractors are responsible for the safe execution of the Work Plan.

Sincerely,

Alex Zhitomirsky

10−9−2013 Reviewed Quarterly Monitoring Report dated March 4, 2013. LiRo will perform additional injections following re−evaluation of the calculated quantities of hydrogen peroxide and catalyst. On January 3, 2013, in a Progress Summary Meeting, DEC agreed with LiRo’s recommendation to complete an ISCO Pilot Test Program on the precinct side of 29th Street. AZ

10−18−2013 Reviewed Quarterly Monitoring Report dated June 4, 2013. A Work Plan for ISCO injection is included in the report.

Additional injections offsite (east side of 29th Street) were previously approved by DEC. An ISCO injection bid package has been approved by the City and is pending available NYCDDC funding. AZ

5−20−2014 Reviewed Quarterly Monitoring Report dated October 9, 2013. Additional injections offsite (east side of 29th Street) were previously approved by DEC. An ISCO injection bid package has been approved by the City and is tentatively scheduled. Potential off−site sources include the property of 149 29th Street and 822 4th Avenue, both located directly across (east) of the 72nd Precinct. The total VOC concentrations on site ranged from 7 ppb to 18,056 ppb. The total off−site VOC concentrations in off−site wells ranged from 302 ppb to 18,596 ppb. AZ

11−18−2014 Reviewed Quarterly Monitoring Report dated March 7, 2014 (Sept. 2013− January 2014). Additional injections offsite (east side of 29th Street) were previously approved by DEC. An ISCO injection bid package has been approved by the City. Potential off−site sources include the property of 149 29th Street and 822 4th Avenue, both located directly across (east) of the 72nd Precinct. In December 2013, LiRo collected soil and GW samples and sent them to FMC, as part of the treatability study (Klosur). The total VOC concentrations on site ranged from 11 ppb to 11,056 ppb. The total off−site VOC concentrations in off−site wells ranged from 19 ppb to 12,460 ppb.Free phase product was reported in injection well LIP−02 in January 2014. According to LiRo, there is a possibility that this free phase product could be attributed to the business located at LIP−02 (Address 149 29th Street. It belongs to active beverage distributor with constant truck traffic and trucks parked on sidewalk). AZ

12−24−2014 The following email was sent to S. Frank and V. Brevdo:

Dear Steve,

I have reviewed a Quarterly Monitoring Report and Klosur Injection Work Plan for the above site, received on October 6, 2014. The Work Plan proposed injection of Klosur Persulfate. This Work Plan is approved.

The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on and off site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work.

Alex Zhitomirsky − Engineering Geologist 2

2−26−2015 Reviewed a monitoring report dated 7/23/2014. The report stated that there is a possibility that an off−site source is present on the east side of 29th Street. LiRo has opened discussions with the 149 29th Street property owner (beverage center)and will attempt to reach an access agreement to complete an investigation within the building in the areas where previous investigation had identified petroleum impacts and a possible tank anomaly. AZ

5−05−2015 Reviewed a monitoring report dated 02/25/2015. The report stated that off−site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. The Klozur Persulfate Injection Work Plan was approved by NYSDEC, however, implementation is delayed due to NYC DDC budget issues. Five ISCO have been completed. Some total VOC concentrations reported increases. AZ

1−06−2016 Reviewed a monitoring report dated 05/28/2015. The report stated that off−site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. The Legal representative of this property was contacted in the first quarter of 2015 and stated, he had not reviewed the Investigation Work Plan to date. The Klozur Persulfate Injection first round was completed in April 2015. Five ISCO have been completed. Some total VOC concentrations reported increases. AZ

5−05−2016 Reviewed a monitoring report dated 09/16/2015. The report stated that off−site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. The Legal representative of this property was contacted in the first quarter of 2015 and stated, he had not reviewed the Investigation Work Plan to date. The Klozur Persulfate Injection first round was completed in April 2015. Four rounds of ISCO are anticipated. Some total VOC concentrations in groundwater reported significant increases. Total VOCs concentrations in groundwater were up to 12,000 ppb. Perdulfate liberated/broke down the VOC sorbed onto the soil particles AZ

4−19−2017 Reviewed a monitoring report dated 09/29/2016. Off−site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. In June 2016, the 149 29th Street property owner signed an access agreement. LiRo is scheduling a limited boring program. Additional off−site injections utilizing Klozur Persulfate may be initiated following completion of the on−site treatment regime. In May 2016, damaged injection well LIP−05 was replaced. Total VOCs concentrations in groundwater were up to 4,100 ppb. AZ

6−6−2017 Reviewed a monitoring report dated 12/20/2016. On−site Post injection groundwater sampling results (August 2016) indicated the highest VOC concentrations in MW−−06R2 (14,074 ppb). Off−site investigation consisting of the advancement of two soil borings/wells within the 149 29th Street building is on hold due to access restrictions. In June 2016, the 149 29th Street property owner signed an access agreement. LiRo is scheduling a limited boring program. Additional off−site injections utilizing Klozur Persulfate may be initiated following completion of the on−site treatment regime. AZ

04/12/04

TRANSFERRD FROM ODOWD TO ROMMEL.

1/10/2006 − Haggerty − Leigh Gutterman from NYC School Construction (718−472−8502) is locating necessary reports. She is requesting another week to find them

7/13/2006 − Haggerty − Leigh Gutterman from NYC School Construction mailed closure report on June 7, 2006. The report essentially is the original from 13 years ago. NYC School Construction included new groundwater samples (March 2006) to hopefully provide proof the site has been remediated. In 1993, 44 UST’s were removed along with 15,000 cubic yards of petroleum contaminated soil which were properly disposed of. Due to the N,R subway running underneath 4th Avenue to the west of the property, excavation was restricted. All accessible soil was excavated. Post−excavation soil samples contain VOC’s and SVOC’s above TAGM mostly in the area adjacent to 4th Avenue. However, the time passed since the soil samples were taken as well as the fact that the recent groundwater samples are below TAGM, DEC has decided to close the spill.

CONTAMINATION FOUND WHEN REMOVING TANKS ABOVE TANKS. 3 550 GAL TANKS

DEC Investigator Remarks:

November 16, 2005, Durnin: On about January 17, 1995, the Greenwood Cemetery removed 3 existing 550 gallon & 1 existing 4000 gallon motor fuel storage tanks & related pumps. They were replaced with 1 new 1000 gallon & 1 new 4000 gallon motor fuel storage tanks and 2 new BSA approved pumps on a concrete island with related piping and controls. Both tanks are Double−Walled Fiberglass. The 1000 gallon tank is for diesel. Nicholas Vislocky obtained a permit to do this work on July 25, 1994. Based on this information and that less than a liter of petroleum was apparently spilled, this spill is closed.

oil company deleivered fuel here two days ago and then customer called last night abnd said they were out of fuel: cross over split:

DEC Investigator Remarks:

3/24/06 − Raphael Ketani. I finally made contact with someone at the super's phone at (718) 851−1328. I had been trying since yesterday. Maria, a maintenance worker there, answered and said that Ms. Ohanna wasn't in, but would be back in the afternoon. I asked her if there were any odors in the building and she said she didn't smell anything. I asked her about the oil spill and she said she wasn't aware of any oil spill or any problems with the heat. I asked Maria where I can send a letter that would reach Ms. Ohanna. She said to send it to P.O. Box 200289, Brooklyn, 11220. I told her that I will make a site visit at 2PM and that I wanted access to the basement. She said that she will let Ms. Ohanna know.

I made the site visit. The odors were very strong (22 ppm) in the area of the twin 275 gallon tanks. However, there was only a slight indication that anything had ever spilled due to the absorbent sand on the floor below the front of the tanks. Ms. Ohana said that the service guy from Edward T. Miner Fuel Co. had stepped on a valve to one of the tanks and broke it. Later, I spoke to Mr. Chris Paulsen of the E.T. Miner Fuel Co. He said that there had been a leak from a broken cross over pipe and his crew had been over to repair it. He added that two days before, the tanks had held a large quantity of oil, but later they were dry. He suspected a 300 gal. loss.

4/24/06 − Raphael Ketani. I contacted Ms. Ohanna. I asked her what was the status of the cleanup. She said that her husband

cleaned up all of the absorbent material and there is no odor. I told her I wanted to check and see for myself. She said that would be alright and she will call me with a date and time this week that would be good for her for a site visit.

5/17/06 − Raphael Ketani. I called Ms. Ohana and made an appointment for a site visit on 5/22 at 10:30AM.

5/22/06 − Raphael Ketani. I made a site visit at 10:15AM today. Ms. Ohana showed me that the oil company had come to her basement, cleaned up the spent Speedi Dri and had cemented over the floor under and around the tanks. I still detected 3900 ppb of volatiles with the PID. I told her that, to start, at least several soil borings and soil samplings have to be done around the tanks − and then maybe bioremediation. She said she has no money to do the work. I explained to her to contact either the oil company's or her own insurance to possibly get them to hire someone. She said she will try.

5/23/06 − Raphael Ketani. I received a call from Ms. Ohana. She said that she had all of the oil system piping replaced because her new oil company told her that E.T. Miner Fuel didn't do the job right and that the oil was still leaking out. She asked me to take a look at the pipes and close the case. She said she has no money to do the borings. I told her that the issue wasn't the pipes, but the estimated 300 gals. of oil that leaked into the ground below the tanks. I asked her for the phone number of E.T. Miner Fuel (718) 439−5066 and spoke to Karen at Miner Fuel. She passed me to Christopher of Miner Fuel. He explained that he tried to work with her, but she didn't want to pay for an investigation and remediation.

5/24/06 − Raphael Ketani. I called Ms. Ohana and talked to her about having one soil sample taken above the water table, instead of a series of borings and samples. I told her the sample needs to be taken to find out if her oil spill reached the water table. I gave her a list of contractors over the phone without prefering anyone. She said she was willing to do this and that she will get back to me when she finds a contractor.

5/25/06 − Raphael Ketani. I received a message from Ms. Ohana and returned her call. She said she contacted an environmental company from the list I had given her regarding doing one soil boring and taking one soil sample. She said they wanted $3000. She said she doesn't have that kind of money and that I am driving her out of business. She claimed she may have to take out a loan and she needs the money to fix up her building. She asked that I come to her building one more time with the PID. She said I will not find any odors now as she and her husband have used ammonia and the deoderant powder and have cleaned everything up. I tried to explain to her, though she didn't seem to grasp the idea, that the issue is oil in the ground, not vapors. I told her I still needed one soil sample and to call Eastmond & Son who, I told her, were willing to give her a good price. I asked her whether she will call Eastmond, but she didn't respond to my question. She asked whether she can have her husband do the drilling and take the sample themselves to a laboratory. I told her that wouldn't be satisfactory as it has to be a sample taken with clean sampling equipment. I told her to call Eastmond, but she seemed to be more agitated. With that, she hung up the phone.

5/26/06 − Raphael Ketani. I sent a letter to Ms. Ohana explaining what she needs to do as the next step in the spill investigation and that the state will do the work if she doesn't and back bill her.

6/5/06 − Raphael Ketani. Received a call from Dennis Femia of NYC HPD (718) 802−4506. He asked what the situation in the building's basement was and what happened with the oil. I told him and he said Ms. Ohana takes his Section 8 clients so he will try to help her.

I spoke to Mr. Mungra of Eastmond after this. He said he will do one boring tomorrow in her basement. He will go down 4 feet and take a sample. If it's clean he'll stop if it's dirty he'll try at 6 feet down and then maybe 8 feet.

7/5/06 − Raphael Ketani. I left a message for Isaac of Eastmond (718) 378−3000 to call me regarding the results of the soil boring.

7/18/06 − Raphael Ketani. I spoke to Isaac of Eastmond. He said that he has the soil sample analytical results. He said he will FAC them to me.

7/20/06 − Raphael Ketani. I tried calling Isaac, but could only leave a message on his cell phone (646) 879−6703.

7/26/06 − Raphael Ketani. I received a FAX today from Isaac of Eastmond with the analytical results for the one soil boring that was taken. There were no VOC hits, and the SVOC hits were either below TAGM or just slightly above it. Based upon this document and the documents in the record, I am closing this case.

8/17/06 − Raphael Ketani. Ms. Ohanna called up to inquire as to whether the spill case was closed. I told her it was. She asked for a DEC letter stating that the spill case is closed. I sent her one today.

(2) 550 GALLON SYSTEM FAILED AIR PRESSURE TEST, NYCFD & OWNER NOTIIFED

DEC Investigator Remarks:

3/4/2003: CLOSED DUE TO LACK OF ANY RECENT INFO − DOES NOT MEET ANY CLEANUP REQUIREMENTS.

5/18/06: Case reopened because high napthalene found in downgradient MW8 on Verizon property. Assessment required letter sent, due back 7/18/06. PBS # 2−603597

5/31/06: Spoke to Commodore Manufacturing. He will send documents regarding legal closure of tanks three years ago.

6/5/06: Received letter with documentation that Action Environmental closed in place a 35,000 gallon heating oil tank that was previously abandoned in place. The tank was noted to have been properly abandoned in the late 1940's.

8/11/06: Spoke with Kevin O'Connor. Two 35,000 gallon USTs were abandoned in place. A third tank was found to be formerly abandoned in place with sand. All three tanks were in parrallel. Soil testing may have been completed by a different company. Contact owner for additional information. Called Abraham Damast (718−788−2600), he was not in the office.

8/21/06: Called Abraham Damast, the line was busy.

8/25/06: Left message with Abraham Damast's secretary to see if he has additional information regarding the tank removal/abandonment.

9/27/06: Sent letter to Abraham Damast requiring sampling results from the abandonment which occurred in September 2004.

10/11/06: Downgradient Verizon site Spill 9108899, located directly downgradient of Commodore manufacturing, was closed, although their upgradient well MW8 still shows high napthalene contamination from an unknown upgradient source. Include Verizon's well MW8 in possible future sampling of this plume.

9/16/14 − Raphael Ketani. The spill was opened on 2/6/90 as a result of an integrity test failure for a two tank system. According to the spill report, these were two 550 gal. gasoline USTs. However, there is no documentation indicating that gasoline USTs were ever at the site.

The site is owned by 4312 2nd Avenue Realty, LLC (zip code for site address is 11232). The contact is Abraham Damast at 19 Mitchell Drive, Kings Point, NY, 11024. The township for his home is North Hempstead. The general area of Nassau County is Great Neck. The block and lot for the site are 726 and 1. The information above came from a deed dated 12/31/2000 which was found in ACRIS.

The PBS registration is #2−603597. It shows three 35,000 gal. USTs. Two had #2 heating oil and one had #6 heating oil. The tanks were closed in place.

An investigation and tank closure report was sent on 5/12/99 by Action Remediation Co. It was produced for Action by Advanced

Cleanup Technologies and is dated 5/11/99. According to the report, 5 soil borings were performed. There were no PID detections. These borings were turned into wells TW−01 to TW−05. Groundwater samples were collected and analyzed (received by the lab on 4/19/99). All of the results were non−detect. The tanks were cleaned out and abandoned in place.

9/19/14 − Raphael Ketani. I presented the case for closure to Hassan Hussein, EE III and head of Unit C Remediation. He approved the closure.

The closure was based on the lack of evidence of soil and groundwater contamination as the PID results were all 0 ppm and the groundwater results were all non−detect for VOCs and SVOCs. The closure was also based upon the letter from Action Remediation Co. indicating that they had abandoned the tanks by cleaning out the tanks and filling them with sand.

Considering the information in the case file, it was determined that the spill was not a threat to the public or the environment. The spill case was closed today.

Caller Remarks:

TANK TEST FAILURE ON 1,500 GALLON UST

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE Site is a 2 Family house in Brooklyn.

DEC Sigona sent notice regarding the tank test failure on May 16, 2003.

4/23/2004 Sangesland −another TTF letter sent today

4/30/2004 Sangesland spoke to property owner Margie Alimonda. She said Bayside was hired to close out the buried 1500 gal tank and install a 550 in her garage.

Sangesland spoke to Fred Caputo at Bayside (718−946−4000). He said the whole job was contracted out to AL Eastmond. Eastmond was to close out the tank, install the new tank and take care of the PBS paperwork.

11/8/05 Spoke to Margie Alimonda she said Bayside filled in the below ground tank and installed several above ground tanks. She said Bayside was to send in the paperwork. Spoke with a Margie at Bayside now Petco she had no record of work. Gave me name of Phil Tanella their installer in the area of the spill. I callled Tanella and left a message. J Lister

11/9/05 Spoke to employee of Al Eastmond (718−378−7000)who left a message for Renee. JL

Open Issues:

1) Review of DEC database shows no PBS was ever filed (for a 1500 gal tank). − Question if this really was a 1500 gal tank on a 2 Family house in Brooklyn.

2) Apparently no soil boring samples were taken. Tank was just closed out and left.

09/6/06− Zhune sent TTF letter to: Fred Alimonda 357 40th Street Brooklyn, NY 11233

Margie Alimonda called to say that she will fax a copy of letter from Eastmond & Sons, Fuel Oil Tank Cleaning. Zhune got the fax but it was not visible. She will send it by mail.

Zhune. Margie sent a visible job ticket from A.L.Eastmond. Eastmond close the underground tank. They filled it with sand. They installed 2(275) gallons AST in the basement. Petro tested the tank and failed.

09/02/09−Randy Austin and Zhune review the case and found no evidence that will indicate of petroleum release. Other than that tank test failure. Since tank fail test are no presumption not prove of spill. Therefore spil has been closed.

(4) 550 GAL. TANKS WOULDNT HOLD PRESSURE, WILL EXCAVATE, ISOLATE, AND RETEST. CONTACT: STEVE TRIFFOLOTTI (516 371−0286.)

DEC Investigator Remarks:

On June 29, 2000, DEC (Sigona) along with Handex (Hoashi, Tonn, and DeVoe) conducted a site visit at Former Mobil S/S, 987 4th Avenue, Brooklyn, which is currently occupied by a Taco Bell. According toe Handex (Tonn) Mobil delivered a shipment of gasoline to the USTs which were partially decommissioned in 1988.

Fenely & Nicol performed an investigation in 1988, and prepared a report in December 1989. Fenely and Nicol recovered approximately 250 gallons using a pump and treatment system.

GTI became involved in 1992, and installed a groundwater sparging system to treat the remaining dissolved phased at the site. There were however, sporadic signs of free product over the years.

There were at least 10−12 wells at the site in the previous investigations. Currently, there are only four groundwater monitoring wells, and four sparging wells. There is also a vapor extraction system at the site. A Stipulation Agreement was issued by DEC on July 7, 1995.

The site is directly adjacent to a Subway which runs underneath 4th Avenue. There was no indications from Handex that the subway lines have ever been impacted.

The vapor from the SVES was shut down in 1998, and was teated with carbon. DEC (O'Dowd) requested a test of the vapor from the sparge wells. In September 1999, Handex found 11,000 ppb total BTEX in SP−2 and 2,900 ppb BTEX in SP−3 and nd in SP1 and SP4. MTBE was relatively low.

In November 1999, Handex found 3 feet of floating product in MW21 and has monitored on semi−annual basis only. The wells were last sampled in June 2000.

Since November 1999 performed 3 vacuum truck visits and recovered free product, gaged for free product before and after each visit.

Handex is not sure what the source of the free product in Well No. 21. Handex will continue to submit a semi−annual report which will be due in August 2000. Handex plans to conduct a soil investigation in Sept 2000. Handex will send the plan to DEC for review and approval.

Meanwhile, the system will be shut down until Handex can determine the proximity of the contamination. The depth of groundwater is 38 feet below grade.

4/27/10 − M. MacCabe − Reinstallation of AS/SVE system has been completed except for connection to the power grid. Soil and GW were sampled when AS/SVE wells were constructed. Soil and GW contamination remain on−site. 5/21/10 − no activities this month.

6/23/10 − No activities this month.

7/26/10 − The quarterly site status update report was received.

9/29/10 − The quarterly site status update report showed no changes in groundwater concentrations.

10/27/10 − Electrical work was conducted on the AS/SVE system in preparation for hook up to the power grid.

11/24/10 − The quarterly site status update report was received. Groundwater concentrations generally remain constant.

3/01/11 − The SVE component of the on−site remedial system was placed on−line on 12/29/10 then back off line on 1/10/11. The quarterly site status update report was received. Groundwater concentrations generally remain constant.

3/28/11 − The AS/SVE system is expected to go back on line in early April.

4/25/11 − Maintenance of the AS/SVE system was conducted in late April. This included change out of the carbon filter for the SVE effluent stack.

6/28/11 − The quarterly site status update report was received. The consultant estimates that four pounds of total BTEX and 26 pounds of total volatile petroleum hydrocarbons were removed with the SVE/AS system by the end of 2010.

7/05/11 − Periodic O&M was conducted and carbon filter was changed.

8/29/11 − Periodic O&M was conducted and the carbon filter was changed in August. The August site status update report states that approximately 10.6 lbs of BTEX and 64.9 lbs of total volatile petroleum hydrocarbons have been removed from the subsurface since the rebuilt AS/SVE system went on line in December 2010.

The AS/SVE system was temporarily shut down in anticipation of hurricane Irene.

9/12/11 − Periodic O&M was conducted and the carbon filter was changed in September.

12/20/11 − The quarterly report was received. The consultant states that approximately 18.72 pounds of total BTEX and approximately 93.77 pounds of total volatile petroleum hydrocarbons (TVPH) were recovered by the SVE/AS system during the entire operation period. However, the groundwater data are inconclusive.

12/27/11 − Effective January 1, 2012, the consultant working for ExxonMobil on this project will change from Kleinfelder to Groundwater and Environmental Services (GES).

2/29/12 − Staff met with representatives of ExxonMobil and GES on February 28 to discuss modifications to the AS/SVE system to improve its efficiency. Modifications of the system consist of installing a larger compressor and cycling the system to just two of the seven vapor extraction points at one time.

5/11/12 − The quarterly site status update report covering the last quarter of 2011 and the first quarter of 2012 saw received. Weekly O&M was conducted about once every two weeks. The AS and SVE points have been cycled to allow for larger flow rates in different areas. The data show continued decreases in BTEX concentration in on−site groundwater.

8/3/12 − The quarterly site status update report saw received. Periodic OM&M was conducted twice a month. Based on the sampling results from the June 15, 2012 groundwater sampling event, extraction wells SVE−3 and SVE−5 are the only wells on−site with dissolved−phase BTEX concentrations over 1,000 ug/L. Therefore, during the third quarter of 2012, sparging efforts will be focused on these areas, specifically utilizing sparge wells AS−1 & AS−2.

Quarterly groundwater sampling is scheduled for September 2012. Semi−monthly O&M will continue.

10/23/12 − The quarterly site status update report saw received. Periodic OM&M was conducted twice a month. The data continue to show decreases in BTEX concentrations in groundwater. The SSUR also contained a request to to pulse the AS/SVE system (alternating one month of system operation and one month of system inactivity). The request was accepted.

01/28/13 − The quarterly site status update report was received. Periodic OM&M was conducted twice a month. The SVE system is now operated with periodic pulsing. The pulsing consists of extracting from different points with others dormant and changing monthly.

4/12/13 − The quarterly site status update report was received. System O&M activities were conducted twice per month during system operation in the first quarter of 2013. The system was temporarily shut down between January 2 and February 6, 2013 as part of system pulsing activities and to observe any changes in hydrocarbon recovery. The data show continued decreases in contaminant concentrations in groundwater

The consultant states the approximately 147 lbs of hydrocarbons were recovered during this monitoring period and approximately 2,010 lbs of hydrocarbons have been recovered since system startup in December 2010.

5/23/13 − The groundwater data presented in the May 20, 2013 Groundwater & Environmental Services (GES) quarterly report and proceeding quarterly reports have shown consistent and significant decreases in BTEX concentrations throughout the operation of the existing AS/SVE system. Current BTEX concentrations in groundwater range from non−detect to 46 ppb.

SVE system effluent has shown limited recovery in the last three quarters; presumably due to the lower contaminant concentrations in groundwater.

Based on the findings, discontinuation of the AS/SVE system was deemed acceptable and the spill was closed.

CATCHING BUBBLES DURING TEST WHICH INDICATED A WET LEAK

DEC Investigator Remarks:

07/25/11−Hiralkumar Patel. 5:05 PM:− spoke with Chris. he mentioned that they tested tank system around 3 PM and found wet leak. he spoke with property owner and informed him about product removal from the tank. as owner is working to get gas line, he refused to pump out tank. site has 2,000 gal UST in courtyard, on right side of the building. Chris mentioned that tank had about 600 gal in it during testing. 5:11 PM:− spoke with Mr. Schwimmer, property owner. informed him that the tank must be pumped out tonight. he will talk to ABC tank. 6:42 PM:− received call from Chris. he mentioned that tank has been pumped out. they will install temp tank tomorrow.

07/26/11−Hiralkumar Patel. 11:38 AM:− spoke with Chris. asked him about current status. he mentioned that fill port was plugged with red cloth. he mentioned that tank is located in courtyard on right side of the building and tank top is about 5−6 ft below courtyard surface. courtyard is about 12 ft wide. he will send proposal for tank cleanout and investigation. he mentioned that owner refused to install temp tank as he applied for emergency permit to install natural gas line.

1:30 PM:− spoke with Mr. Schwimmer. informed him that the department requires soil (and groundwater, if applicable) investigation around the tank system. asked him about status of temp tank. he mentioned that he got all permits and will have gas supply availabe tomorrow morning. suggest him to have temporary tank installed to provide hot water to buiding residents. he mentioned that he has informed his tenants about new gas line installation tomorrow morning and he doesn’t want to spend money for

temporary tank. asked him to seal the fill port to prevent misdelivery. informed him that the tank must not be abandoned until approved by the department.

(917) 622−3820 (C) email: yms2047@aol.com

alternate addresses: none PBS #: 2−253006. as per PBS record, the site has 2,000 gal #2 oil UST. the PBS registration expired on 08/06/2007. other spill #: 9813577. spill was reported on 02/05/1999 due to tank test failure. case was closed in Mar. 2003 due to nature/extent of spill report.

3:50 PM:− sent CSL to Mr. Schwimmer requiring PBS renewal (form submitted by 08/10/11) and soil delineation around the tank system (report due on 08/31/11). letter emailed to Mr. Schwimmer and Donna (ABC Tank).

08/04/11−Hiralkumar Patel. 3:41 PM:− received call from Chris. they were hired for tank cleaning/inspection and investigation. ABC tank will clean the tank and will do visual inspection to find out leak area. he also mentioned that owner has decided to abandone the tank. as tank will be abandoned, asked him to drill through tank bottom and sidewalls to collect soil samples at least three feet beyond the tank surface. informed him that tank must not be abandoned until the department reviews the soil samples results. asked Chris to call to schedule a site inspection, once they expose the tank.

08/09/11−Hiralkumar Patel. 11:03 AM:− received call from Chris. they cleaned the tank. he requested a site visit. scheduled a site visit at 3:30 PM on 08/11/11.

08/11/11−Hiralkumar Patel. 3:35 PM:− visited site. met ABC crew at the site. inspected tank area. tank is located in 12 ft wide courtyard between the subject site and adjacent building at 536 40th street. fill port is located in 4 ft wide alleway and it is located behind the locked gate. found stockpile of contaminated soil in courtyard. this soil was removed from top of tank. found water in tank (half full). no sheen or oil droplets found on water. tank top is about 2 ft below grade. found old abandoned fill port on sidewalk. 3:51 PM:− spoke with Chris. he mentioned that tank is 12 ft long and 64 inch in diameter. based on observation during the site visit, asked him for following: − removal of stockpiled soil in courtyard − further excavation of soil from tank top until expose the tank sides (as suspecting more contamination on tank top) − total of six soil samples via borings through tank: two borings through each side of tank and two borings through tank bottom − collection (and analysis) of soil samples at least two ft beyond tank wall and two ft below tank bottom

08/17/11−Hiralkumar Patel. 12:56 PM:− received call from Chris. they finished removing soil from tank top. he mentioned that entire tank is full of rain water and no oil sheen or droplets observed on water. he suspect that wet leak noticed during tank test could be water bubbles from pipe joints on tank top. he requested a site visit. scheduled a site visit at 3:30 PM today. 3:35 PM:− visited site. met Chris and Mr. Schwimmer. inspected tank area. entire tank and 6 inches above tank was filled with water. no sheen or product observed on water. tank was holding water. Chris mentioned that no holes were found during tank cleaning.

based on available information and observations during site visits, case closed.

refer to spill # 9813577 also.

SAMPLES RETURNED CONTAMINATED, GROUNDWATER AND SOIL:'

DEC Investigator Remarks:

06/29/07−Hiralkumar Patel. spoke with Mr. Stewart. asked him to send analytical data and site map with sampling locations. Mr. Stewart mentioned that bank hired them to do Phase II investigation as owner applied for refinance. during GPR survey they found concrete patch on site, but no underground anomalies. Mr. Stewart collected water sample from borings, but no monitoring wells installed at site.

PBS #: 2−608193. site has one 250 gal waste oil AST.

Paul P. Stewart, President Advanced Cleaniup Technologies, Inc. Ph, (631) 293−4992 Ext. 12 Fax (631) 293−4986 email: PaulStewart@advancedcleanuptech.com

received soil/groundwater analytical data with site map from Mr. Stewart. they took four soil and four groundwater sample from four borings.

alternate addresses: 129−133 34th Street, 909 3rd Avenue

07/03/07−Hiralkumar Patel. visited site on 07/02/07. met Peter at site. site has five hydraulic lifts. four of these lifts are aboveground and one lift is underground. Peter is running auto repair shop at the site for about 15 years and never used underground hydraulic lift. as per Peter, there is underground hydraulic oil tank near lift. Peter also mentioned that they had heating oil AST in basement, but was removed when they started business and currently building is running on gas heating system. this site is in industrial/residential neighbourhood.

based on general observations and site location, groundwater flow could be in west direction.

important sites near subject site (129 34th Street):

1. Playground across 34th street on southwest side

2. 170 34th Street: NYC School Construction Site. this site is next to playground and in south to subject site. currently school site has been excavated to 16 ft bg and preparing for building footings. during construction activities, found benzene (58 ppb) in groundwater at school site. based on general observations, school site is about 50 ft crossgradient.

3. 143 34th Street. Spiro's Auto Repair Shop. this auto shop is on east side of suject site (upgradient from LL Auto repair with assumed groundwater flow direction) spoke with Mr. Spiro (718−369−0558). he has one underground waste oil tank (no PBS record found). this auto repair shop is exactly in front of school site. Mr. Spiro mentioned that building owner installed existing waste oil tank about five years ago and Mr. Spiro running business for three years now. no PBS registration found at site. sent email to Jacob and Brian regarding unregistered waste oil tank at repair shop.

4. 149 34th Street. Blue Diamond Fuel Co. site is on east side of suject site (east of Spiro's auto shop also). fuel company is in front of shcool site. spoke with manager at fuel company and as per him, there are no oil tanks at site.

5. 891 3rd Ave. A−One Car & Truck Repair. site is on north side of subject site (cross gradient) (PBS #: 2−610159)

6. 889 3rd Ave. Getty station across 33rd Street across A−One Car repair shop (north of subject site) (PBS #: 2−600483). found one open spill (9814914). spill reported as found oil on concrete dur to poor housekeeping.

07/05/07−Hiralkumar Patel. sent letter to Mr. Mar requiring tightness test, phase I investigation, soil and groundwater delineation and endpoint samples. letter emailed to Mr. Mar and Mr. Stewart.

07/10/07−Hiralkumar Patel. received message from Scott (908−296−2696) from Safety clean, who been hired by site owner. spoke with Scott. he will call back with owner to discuss what needs to be done.

07/12/07−Hiralkumar Patel. received call from Scott. he asked what needs to be done. explained to Scott that the Department requires immediate testing of underground tank and soil/groundwater delineation. spoke with Mr. Mar and informed him to do tank test immediately and asked to submit tank test result by end of July 13, 2007. if tank fails a test, then tank has to be emptied out by end of July 14, 2007. Mr. Mar will call Safety Clean for tank test.

07/13/07−Hiralkumar Patel. received call from Mr. Munroe. he has been hired by Mr. Mar for required investigation and remediation work. Mr. Munroe asked to extend deadline for tank test. explained to Mr. Munroe site has heavy soil and groundwater contamination and it has underground tank, which was not in use for about 15 years (as per owner), the department required immediately testing. the department can approve his request to test tank system on July 16, only if oil be removed from tank by end of today.

Dr. Norman Munroe Astem Labotaries Inc. PH. (305) 348−3556 (O)

(917) 497−0190 (C) Fax (305) 388−1469 email: munroen@fiu.edu

spoke with Mr. Mar. asked him to either empty out tank or do tank test by end of today. he agreed and will contact his consultant.

07/19/07−Hiralkumar Patel. spoke with Mr. Mar. they have tested tank and is waiting for result from consultant. asked Mr. Mar to submit tank test result with copy of contract for required investigation/remediation work.

07/23/07−Hiralkumar Patel. received fax from Dry As a Bone INc. they did hydraulic oil tank test and found tank system tight.
08/14/07−Hiralkumar Patel. received message from Mr. Mar (on 07/31/07). spoke with Mr. Mar. he hired contractor and has removed some contaminated soil. Mr. Mar will contact his contractor and ask him to call.

received call from Mr. Munroe. they started excavation and found two tanks in ground. and suspecting third one also. they found little oil in first tank and second tank was filled with concrete. currently they have excavated to 10 ft bg and found no groundwater. no odor complaints. asked Mr. Munroe to monitore excavation for any vapor issue.

08/20/07−Hiralkumar Patel. visited site. met Mr. Mar. observed excavated pit in area where hydraulic oil tank was. no odors noticed at site. till now no work has started regarding groundwater delineation.

08/24/07−Hiralkumar Patel. sent email to Mr. Munroe to send updates on investigation. spoke with Mark (718−926−8809), Mr. Munroe's assistant at site. Mark mentioned that they are installing wells and doing further excavation in tank area.

10/09/07−Hiralkumar Patel. left message for Mark. spoke with Mr. Mar. Mr. Mar will ask Mr. Munroe to call with updates. received call from Mr. Munroe. he is preparing tank closure report and will submit soon. they haven't took any groundwater samples from well that they installed. they will take groundwater sample on 10/11/07.

10/31/07−Hiralkumar Patel. spoke with Mr. Munroe. he is preparing report and will submit by end of Nov. 9, 2007.

11/29/07−Hiralkumar Patel. spoke with Mr. Munroe. he was out of office and will submit report by Dec. 7, 2007.

01/17/08−Hiralkumar Patel. spoke with Mr. Mar. asked him to submit report by Jan. 25, 2008. 01/29/08−Hiralkumar Patel. received report from Mr. Munroe. abstract:

− removed two 550 gal USTs that were previously filled with concrete and one 25 gal hydraulic fluid UST − soil from entire tank field (164.24 tons and 30 cubic yard of concrete) was excavated until no detectable odor was obtained − excavated area back−filled with clean soil − haven't excavated soil from fill box area as it was located on the sidewalk − three 2 inch wells (25 ft deep with 20 ft screened section) were installed − depth of groundwater at site ranged from 13.2 to 13.75 ft bg

<−−−−−−−−− − groundwater was determined to be flowing in westerly direction <−−−−−−−−− − five endpoint soil samples were taken from tank field excavation area (sidewall samples taken from depth 8−10 ft bg) − six soil samples were taken from borings for monitoring wells (two soil samples from each boring) − three groundwater samples collected − no contaminated found in any soil samples − only one groundwater sample from well MW−3 found contaminated − monitoring well (MW−3) located in the vicinity of the tank field and directly around the fill box area on the sidewalk found mostly contaminated; soil samples from this well area found non−contaminated − no floating product found in any monitoring wells − sheen was observed in water sample from MW−3

01/30/08−Hiralkumar Patel. spoke with Mr. Munroe. excavation bottom was about 12 ft bg. no groundwater encountered in excavation. asked Mr. Munroe for groundwater samples from previous excavation area and one from area inside building across overhead gate; on downgradient side of previous tank field. also asked to vacuum out MW−3. sent email to Mr. Munroe and Mr. Mar with same requirements.

02/08/08−Hiralkumar Patel. received email from Mr. Munroe with proposed well location map. MW−4 will be installed in previous tank field area. Mr. Munroe proposed to install MW−5 near overhead door close to office inside building. sent email to Munroe asking to move MW−5 location close to foundation wall along excavation area and close to mechanic bays area. left message for Mr. Munroe. asked to resubmit updated map. spoke with Mr. Mar and asked him to move MW−5. he will ask Mr. Munroe to call. received call from Mr. Munroe. asked him to move MW−5 location close to foundation wall towards mechanic bays area.

received revised site map including proposed well locations.

03/25/08−Hiralkumar Patel. spoke with Mr. Munroe. they installed well and collected samples. waiting for sample analyticals. will submit report by April 15, 2008.

04/30/08−Hiralkumar Patel. spoke with Mr. Munroe. he mentioned that lab received samples with higher temperature and out of acceptable limit. asked Mr. Munroe to resample wells and asked to submit report by 05/23/08.

left message for Mr. Mar to submit report by 05/23/08.

05/06/08−Hiralkumar Patel. received call Mr. Mar. asked him to submit report by 05/30/08.

05/23/08−Hiralkumar Patel. received message from Mr. Munroe. he mentioned that groundwater sample taken from recently installed well was left outside of lab by driver and then sample lost from there. Mr. Munroe didn’t mentioned about resampling of well.

left message for Mr. Mar.

received call from Mr. Mar. asked him to submit complete report by 05/30/08 as required earlier to avoid any legal actions.

06/02/08−Hiralkumar Patel. received report from Mr. Munroe. abstract:

− two additional monitoring wells (MW−4 and MW−5) installed (25 ft deep with 20 ft screen) − MW−4 was installed in the center of excavation from which tanks removed and MW−5 was installed in the north−eastern corner of property − water samples were collected from wells MW−3, MW−4 and MW−5 − no contamination found in any samples

based on submitted reports, case closed. NFA sent to Mr. Mar. letter emailed to Mr. Mar and Mr. Munroe.

Caller Remarks:

CALLER STATES GAS STATION IS VERY DIRTY − ALWAYS HAS OPEN BARRELLS OF OIL AND OIL IS ALWAYS SPILL ON PAVEMENT AND LEFT THERE.
CALLER STATES WHEN IT RAINS, ITS VERY SLIPPERY DUE TO THE SPILLAGE BEING LEFT THERE.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was SUN 03/16/1999 mmm: INSPECTED STATION AS A RESULT OF CALL.
FOUND NO EVIDENCE OF OIL DISCHARGE ONTO GROUND DUE TO POOR HOUSEKEEPING. SITE HAD 12x550 MOTOR FUEL TANKS REMOVED IN 95. WILL ASK FOR SITE ASSESSMENT. CURRENT CONTROLS ON TANKS, HIGH LEVEL ALARM AND LEAK DETECTOR WERE OFF AND NOT FUNCTIONING DAY OF INSPECTION.

3/17/1999 mmm: CALLED CHEEMA RESIDENCE − LEFT MESSAGE. CHEEMA CALLED BACK − TOLD HIM LEAK DETECTOR, HIGH LEVEL AND STAGE II NOT WORKING AND ASKED HIM TO SEND ME A REPORT FOR TANK CLOSURES. CHEEMA STATED HE WOULD HAVE MAINTENANCE CO. TAKE CARE OF TANK PROBLEMS. COPY OF PBS INSPECTION GIVEN TO P. HUANG.

1/2/2004 Reassigned from Mulqueen to Sun.

12/16/2005 − Feng − Reassigned from Sun to Feng as per Sun. (RJF)

10/30/06 Reassigned from Tang to Sun. (JS/MS)

11/17/06 Sun sent Tank Closure Request letter certified mail to Gurpal Cheema (916 Lawrence Court) registered owner of station at 889 Third Ave, Brooklyn on 11/17/06, requiring the following to be received by December 17, 2006: 1. Tank closure assessment report. 2. Locations of tank and/or line test failure. 3. Subsurface investigation report, including current and historical soil and groundwater analysis. 4. Surrounding property sketch: A surrounding property sketch including property layout and usage must be submitted to NYSDEC. (JS/MS)

2/8/07: As above letter was retuned as unclaimed, a second letter was sent to site address, attention Mr. Lal Singh, requiring that the same as above be submitted by 3/23/07. (JS/MS)

6/4/07: Site visit by JS and MS done on 5/31/07. Above letter was hand delivered to gas attendent, and signature confirming receipt was obtained. On 6/4/07 contact was made with Gurpal Cheema (516)474−6030 (wife's name is Kora). Mr Cheema said that Gordan Supply performed tank closure and site assessment activities, including soil analysis. He will contact company and have them send report to DEC by 6/15/07. (JS/MS)

7/25/07: Contact established. Owner does not speak English and wife is currently looking for TCR documents. (JS/MS)

8/29/07: MS called Kora, left message asking why documents had not been submitted and to call back DEC ASAP or legal action would be taken. (JS/MS)

11/19/07: Gordon Supply supposedly visited site and will need additional visit before preparing a work plan. Cheema's cell# is 516.474.6030. (JS/MS)

12/14/07: Gordon Supply supposedly just folded. MS faxed list of recommended consultants to Cheema today at Fax# 516.782.0125. (JS/MS)

12/20/07: Tried faxing on 12/18,19,20/07. Fax number given is not working. MS left message with Cheema to call back asap. (JS/MS)

4/11/08: Called Kora, has list from MS, knows to let consultant know to contact DEC for details (JS/MM)

7/7/08: No report received as of yet. 2nd TCR letter or refer to legal (JS/MM)

08/05/08: Transferred to Kolleeny/Mandac. − JK

10/15/08: Still no response. SIWP or SIR is overdue. Refer to OGC (JK/MM)

01/07/09: Final letter for TCR or site assessment sent to Lal Singh via certified/return receipt mail. Refer to legal if documents are not received by 03/09/09. (JK/KG)

1/12/09: Return receipt for 1/7/09 letter rec'd (letter signed for on 1/9/09). (JK/KG)

04/16/09: No documents rec'd. Called and spoke to Kora Cheema (516−474−6030). I told her the spill was still open and we have

not received any documents. She thought the spill was closed. I told her we need a tank closure assessment report or a work plan for a subsurface investigation with soil and groundwater samples. She said the company that performed the tank closure is out of business and she would hire a company to do the investigation. I told her I would re−send the letter that was sent in January with the requirements. (JK/KG)

4/20/09: Letter sent to Gurpal Cheema requiring a tank closure assessment report or subsurface investigation report be submitted. If such reports were not previoulsy prepared a work plan for a soil and groundwater investigation must be submitted by 5/22/09. (JK/KG)

05/11/09: Rec'd phone message from Kal Gil of EG&R Environmental on 5/8/09 (732−226−3201). Left message for him on 5/11/09. (JK/KG)

05/20/09: Spoke to Kal Gil and he said he can't find any records indicating the location of the former tank grave. The owner has an idea of the location, but is not sure. He was sure that the current tanks are not in the same location as the tanks removed in 1995. I told him to conduct soil borings where they beleive the former tanks were and at the perimeter of the property. Also, if the location of remote fill ports (if there were any) and dispenser islands is known, soil borings should be conducted in those locations as well. Kal Gil requested a two week extension to submit the work plan. The extension was granted and the new deadline is June 5, 2009. (JK/KG)

06/16/09: Spoke to Gurpal Cheema and informed him that the work plan has not been submitted. He said he would call the consultant. (JK/KG)

06/17/09: Kal Gil called and said the work plan would be submitted by 6/23/09. (JK/KG)

07/02/09: Kal Gil called and said the work plan will be submitted today. (JK/KG)

07/07/09: Rec'd pdf of Soil and Groundwater Investigation Work Plan dated 7/6/09. Under review. (JK/KG)

07/13/09: Work Plan proposes installation of soil borings and temporary monitoring wells, collection of soil and groundwater samples, and submission of a summary report to NYSDEC. The work plan was approved with the following modifications. A groundwater sample should be collected at SB−7 and soil must be sampled continuously and screened with a PID. The soil sample with the highest PID reading and deepest dry sample should be submitted for laboratory analysis. An investigation summary report is due 9/18/09. (JK/KG)

08/10/09: Kal Gil called and said site work had not been scheduled and was waiting for the RP to contact him to perform the investigation. Called Gurpal Cheema to remind him that the report was due next month and the work plan needs to be implemented. (JK/KG)

09/03/09: Spoke to Kal Gil. He said he spoke to Cheema recently and is still waiting for the proposal to be signed before initiating any site work. (JK/KG)

09/23/09: Spoke to Kal Gil and he said Cheema has signed the proposal and he needs to schedule the site work. (JK/KG)

09/30/09: Follow up with RP and Gil. The investigation report is past due. A request for an extension of the deadline should

be submitted. (JK/KG)

10/16/09: On 10/7/09, spoke with consultant Kal Gill, asked why investigation has not been performed yet, pointing out that summary rpt is long past due. He said he had to get approval from client, and then had difficulty getting driller. I asked him to send email explaining this and requesting deadline extension for summary rpt. On 10/8/09, received email from Kal: As per our discussions yesterday, we have been trying to expedite field work at 889 3rd Ave., Brooklyn. We received approval from our client on Sept. 3, '09 to proceed with work. Immediately, we contacted drilling companies to arrange for soil borings. Because of highly urban nature of surroundings and presence of numerous subsurface utility lines and over hanging electricals, many drillers refused to conduct drilling. Finally, we have lined up a driller to proceed with soil borings. We have scheduled drilling for Oct. 9th, to conduct soil borings and GW sampling as per approved work plan. At this time, we anticipate that we will be able to submit RI report on or before Nov. 15th. As we discussed this morning, soil and GW samples will be analyzed for NYStars list gasoline and fuel oil including MTBE. Thank you for your cooperation. On 10/16/09, I sent email to RP Mr. Gurpal Cheema: On Oct. 7, '09 I received an email from your consultant, EG & R Envt'l, explaining reasons why approved investig work plan for site has not yet been implemented and why required investig summary rpt was not submitted to NYSDEC by deadline of Sept. 18, '09. Your consultant Mr. Kal Gil requests an extension of deadline for submission of rpt until Nov, 15, '09. Request to extend deadline for submission of investig summary rpt is approved. New deadline is Nov. 15, '09. Please be advised that failure to comply with this deadline may result of referral of this spill case to our Office of General Counsel to initiate formal enforcement proceedings against you. Feel free to contact me if you have any questions. − J. Kolleeny

11/03/2009: This spill case was transferred to A. Doronova. − AD

12/17/2009: Summary report is due. Called and left a message to Mr. Gill. AD

12/18/2009: Received a phone call from Mr. Gill. He told me that investigation was performed at the site, and that a summary report was prepared. The site owner did not review the report yet. Mr. Gill will call back on Tuesday December 22, 2009 regarding the report submission date. AD

01/22/2010: Received an e−copy of the Soil and Groundwater Investigation report. DL to eDocs. AD

02/02/2010: Received a hard copy of the report. Will review. AD

04/14/2010: Reviewed the report. It states that investigation was performed at the site on October 9, 2009. EG&R advanced a total of seven soil borings around the former USTs field, followed by collection of soil samples. Fields PID readings were ND, so soil samples were collected just before the water table in each soil boring. None of the VOCs or SVOCs compounds analyzed were detected in any of the soil samples. Also, three GW samples were collected from the locations: SB−1, SB−4 and SB−7. Only Benzene was detected in SB−7 at a concentration of − 7 ppb. Because of very low concentration of Benzene on one sample and its biodegradability, EG&R recommend no further actions for this spill case. AD

04/22/2010: Discussed closure of this spill with J. Kolleeny of DEC. Based on the data, in was decided that case should be closed. AD

04/27/2010: Spill case is closed. AD

CALLER REPORTING A SPILL OF MATERIAL FROM AN UNK SOURCE CONED#132283 SAMPLES TAKEN CLEAN UP PENDING LAB RESULTS NO CALLBACK NECESSARY ON 150 GAL OF WATER

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Con Ed e2mis Notes:

7/10/00 On location to remove transformer. 1gal unknown oil on 150gal water. Historical records from 4/24/99 show 46ppm PCB. Pressure testing.

Transformer does not hold pressure and is below minimum. Cleanup to be done as 50−499ppm. Transformer reads 445gal. Tanker pumped 455gal.

Water is entering V2905 from adjacent vault V3471 from a hole at bottom of structure which had been capped but came off.

Sample returned 66ppm PCB. Found a drain in structure. No signs of oil in drain. Cemented drain.

CLeanup completed by double washing with slix. Liquids removed by tanker, solids by barrels. Leaking transformer was removed.

DEC WAS ALREADY ON SITE − UST REMOVALS BEING DONE ON SITE − SPILLAGE FOUND AROUND TANKS AND PUMPS

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY TRANSFERRED TO I. ISLAM 4/27/05− The site is under remediation by O'Brien−Kreitzberg (OBK). Reviewed the quarterly monitoring report (Oct.−Dec./04). There are only 2 groundwater monitoring wells (MW−B−04 & MW−D−05)under quarterly sampling. Sampling results from well MW−B−04 exhibited no exceedances of VOCs and SVOCs in three consecutive events and as such will be dropped from monitoring. The other monitoring well was not accessible during last two sampling events due to construction materials being stored over the well. However, effort is being made for sampling this well in the forthcoming quarterly event. No Free Product was observed in any of the monitoring wells.− II

7/6/05− Reviewed the monitoring report dt. May 24, 2005 where URS has presented the latest (Mar./05)GW sampling compliant results from the lone monitoring well MW−D−05 and requested for the Spill Closure . Based on the presented data and URS's request, the spill case is closed and NFA letter issued. − II.

CONDUCTING TEST PITS AND FOUND UNDERGROUND STORAGE TANK THAT HAS LEAKED:

DEC Investigator Remarks:

Sangesland spoke to Sharissa Singh with GEO Environmental (917−335−0687)

School Construction Administration (SCA) owns the lot and has hired Demattis Construction to build a new school on the site.
Once a problem with old tanks & contamination was found, SCA hired Shaw Environmental to take care of the remediation project.
Shaw Environmental main NYC office: 212−290−6000 − unknown who at Shaw is working this project. Call the main number and ask for whoever is working on NYC School Construction Administration projects.

7/2/07 − Raphael Ketani. I tried to contact Lee Gutterman of the School Construction Authority (SCA) (718) 472−8502 regarding the site. She is in charge of health and environmental issues for the SCA. I also tried to contact Bob Kanaparthi of the SCA (one of her assistants) (718) 472−8620. Both people were away from their desks. So I left messages.

07/05/07−Hiralkumar Patel. another spill reported at same site (spill #: 0613263). during construction at school site, NYC SCA has excavated entire site to about 16 ft depth and removed all old tanks and contaminated soil. case closed. refer to spill #: 613263.000

#6 FUEL OIL	PETROLEUM	500.00	GALLONS	0.00	GALLONS	SOIL

Caller Remarks:

CALLER STATES THAT THEY ARE STILL INVESTIGATING WHAT HAPPENED: ANTHONY IS TEH CONTACT ON THE SCENE, FROM PERTOLUEM TANK : IT IS INSIDE AND OUTSIDE THE BUILDING:

DEC Investigator Remarks:

03/22/05−Sharif// Sharif and Mr. Sawyer responded to the site.About 4000 gallons of #6 oil came out of vent line and top of the tank while the pump to the boiler was replaced and being tested.Oil had been contained in the secondary container(vault). Vent is located out of the building at the backside where about 20'by 20' open area adjacent to couple of abandoned railroad track line is impacted by the oil. Oil spreaded over one of the track of about 10 ft in length.Petrolium Tank Cleaners(PTC) has been called in to do the clean up. NYC Transit, Office of System Safety(Josephina Volyn/Richel Kron, 718−243−4581, Fax: 718−243−4309) has been notified of their property impact. 04/06/05−SR// PTC excavated the rail track, took sample, backfill soon with supervision from NYC Transit. Open lot between building and the track has been field screened. Contamination found.Property owner Mr. Merhige was contacted for revised work plan including tank vault and open lot.

9/8/05−Vought−File review as per DEC Austin due to inquiry by Rachel Kron (NYC Transit 646−252−5773). Spill out of vent pipe and also into tank room.

Letter from DEC Rahman to Commercial Realty Co (11 East 26th Street, 11th Floor attn: Richard Merhige)−3/23/05. Letter sent requiring: 1)excavation of all oil impacted soil and debris including railroad track area 2)removal of oil from secondary containment vault 3)submission of soil sampling results.

Scope of Work from Petroleum Tank Cleaners PTC(Anthony Lara 718−624−4842)−4/5/05. Scope of work includes: 1)product removal from vaults.

Soil analyticals from PTC−5/24/05. Water analyticals show no TAGM Soil Cleanup Objective exceedences except for minor PAH's attributable to fill material.

Letter from PTC (Lara) to DEC Rahman−6/27/05. PTC has removed all contaminated soil and debris from the vault, and as you agreed what was acceptable PTC has addressed any remaining contamination via the application of Biosolve biormediation accelerant to the soil beneath the existing vault floor . PTC plans to begin installing a new concrete floor as early as 7/6/05.

9/8/05−Vought−Called Rachel (646−252−5773) and left message with outstanding requirements: 1)endpoint soil samples from track excavation 2)site plan and locations of endpoint sampling. Vought called Commercial Realty (Richard Merhige 212−947−7500) and he tried to call Rachel who has not returned call. PTC still cleaning out second tank room. PTC collected soil samples from outside and two 20' foot containers were generated from soil excavation. Jerry Sobel will be contact for next seven weeks as Richard will be going on vacation. Vought left message for PTC to return call with status of soil excavation and endpoint sampling. 10.19.05 Sharif− I spoke with Anthony of PTC, 646−772−7180 who informed me they made formal request to NYCT's property to do geoprobe investigation. NYCT holding them regarding some insurance coverage issues which will possibly be simplified as they are working on it. NYCT is supposed to getback to PTC by this week. I'll call NYCT next week about their approval.

12/15/05 Sun reassigned from Rahman to Foley.

1/3/2005 − Feng − File reviewed by Feng and summarized:

1) some samples were collected the boiler room with site plan provided, but did not indicated out whether soil or groundwater samples. High SVOCs.

2) Track area inpacted, and removed the contaminated soil. DEC has been requested 1)endpoint soil samples from track excavation 2)site plan and locations of endpoint sampling. Nono were submitted on file.

3) DEC Rahman has assisted PTC to access the NYCT property and do the sampling.

Wait for sampling result report.

05/09/06 − spoke to Mr. Bob Lamirata of PTC, 718−624−2185. He said he will take care of disposing the contaminated soil pile at the site in a few days. I will find out more of the subsurface contamination. − KST

6/15/06 − Bob Lamirata of PTC called and advised that contaminated soil pile has been removed. Will fax end−point sampling results. − KST

6/26/06 − PTC sent in the report which only has the lab results, no write−up. The results look clean. Called Bob Lamirta and told him that DEC needs a report summarizing the contamination and the actions taken by the RP OR PTC in cleaning up the spill. Liz Deluca called and will be at the site on June 27, assessing the spill. She will call me to report if additional work is needed. − KST

11/9/06 − NYCT has not call to request additional cleanup work. Spill closed. − KST

UNKNOWN PETROLEUM	PETROLEUM	0	UNKNOWN	0	UNKNOWN	SURFACE WATER

Caller Remarks:

Caller advised the containment for oil on a barge had a small leak and a sheen had started to form. The leak has been fixed and booms have been deployed. The barge is located in Gowanus Bay.

DEC Investigator Remarks:

Sangesland spoke to Dan Lachman at US PowerGen. He said there was a fuel barge docked at the facility. Around the top of the barge is a rain water curb or containment wall which directs rainwater hitting the barge through an oil/water separator before going over the side of the vessel. There was a break in this curb and some of the rainwater (with oily residue) went directly into the Gowanus Bay and made a sheen. The curb on the boat has been repaired (re−welded) and booms/absorbant has been put in the water around the sheen.

Caller Remarks:

LAWRENCE CARR AMUSEMENT COMPANY PH# 917−653−3168 LARRY CARR CALLER REPORTS ONLY A STAIN LEFT ON PAVEMENT AT PUBLIC SCHOOL #24 UPON ARRIVAL TO SPILL.

DEC Investigator Remarks:

7/7/2006 Sangeland spoke w/ Ray Lara of PTC. Ray stated that one 20’ diameter and one 10’ diameter stian that is sheening was present. PTC gave estimate though was not hired and was told by Alan Weiner that they were going to hire a guy with a power washer and wash it into the drain.

Piper spoke w/ Don Iaccarino from the school. 917.440.7067 office− 718.832.8720. As per him approximately 50 gal of hydraulic oil was left on the asphalt when they left in one location. There are other areas also affected with up to 20 gal in that location. They didn’t do much to clean it. DEC Piper called Alan 347.671.2482 who is director of amusement company. Owner, Larry Carr 917.653.3168. PO Box 83, Wintersville, GA 30683−0083 Piper asked what is being done. Al stated that PTC bid was very high and that he was going w/ AJ Pressure Washing. 718.256.1214. to clean it up. Piper called Anthony at AJ Press. He stated that he was asked to provide an estimate to provide pressure washing of area. Piper explained that the water generated would have to be vacced up and disposed of properly. Anthony stated that he will use a shop vac to collect the water and dispose of it properly. It might take a while for him to figure out how. Piper thanked him and ended conversation. Piper called Alan Weiner and stated that AJ PW is unacceptable for the cleanup requirements. Piper stated that he could fax a list of contractors to him for his use in finding a contractor who can do this other than PTC. Alan stated he will call me back with a fax number. 7/10/06− DEC Piper left message for Alan to call back. DEC Piper spoke w/ Don at school. There was nothing done over the weekend. DEC Piper responded to site. Upon arrival, Piper met w/ Robert (custodial)and its was observed that multiple large stains were present on basket ball court area. Tire marks smeared throughout court. Some staining observed entering storm drain on northwest side of property. Piper photodocumented site. Piper spoke w/ Principal of School Christina Fuentes in her office regarding spill. As per her, the canival lasted from June 212 to July 3. During their stay the carnival was very dirty, un responsive and un

professional. (blocked fire exits, sidewalk and harrassed women.) Principal Fuentes #.718.832.9366. Alan Weiner has been uncooperative w/ School and has given them runaround since they left. Spill was called in by PTC 4 days after they had left. DEC Piper mailed letter to LAwrence Carr Amusements adn faxed copy to Alan Weiner at 718.642.2861 7/12/06− DEC Piper spoke w/ Al;an Weiner regarding cleanup. As per him, he will be receiving estimates today and will inform me as to whne work will commence. DECP iper phoned Joe gallager w/ NYS Dept of LAbor, Health and Safety Div. 518.457.2131, regarding Amusement CO. HE is well aware of the type of Operation and has discontinued permitting for this Company. Joe stated He is one of the worst operators on record . However since city is not state juristiction, he operates within city limits. Joe forwarded me to City Ride Inspector, Jim Waters, 212.566.5539. Piper left message requesting callback and info.

07/13/06−Vought−Called Weiner for udpate on contractor as per DEC Piper. Vought called Weiner and he contacted four companies and only one returned call with high price as per Weiner. Weiner told Vought that he would call back by the end of the day with a contractor. Vought explained that if call was not received and ECO would be sent to the Carnival's current location(Northern Blvd and Junction Blvd).

07/14/06−Vought−Received message from Weiner and returned call and left message to return call. Vought received call from Weiner and he nobody has called him back, he will call back this morning with name of contractor.

07/17/06−Vought−Received message from Weiner on 7/14 that he had received estimates from PTC, Eastmond and ABC and was awaiting estimate from Tradewinds. Weiner willing to fax DEC copy of estimates. Vought referred case back to DEC Piper.

Piper spoke w/ Alan weiner, he will have Eastmond come and power wash affected area.

Piper confirmed w. Eastmond that pwer washing was done. Piper spoke w. Principal Fuentes to confirm. As per her, work was done though it is still bad. Piper resonded to site to inspect. Heavy stains still existed. DEC Piper required Carr AMusemnets to deal affected area.

DEC Piper made numerous attemts to caontact ALan to perform sealing.

9/13/06− DEC Piper spoke w. Don from school. aS per him, Don Merlo of Fuel Division inspercted and had PTC cleaners perform additional cleaning of area w/ more effective eqipment. As per son it is much better and school is more pleased. School may resurface in short while. Fuel spill is cleaned. Closed.

Caller Remarks:

caller reporting that spill is caused by a unknown leak possibly from a vehicle. clean up is pending

DEC Investigator Remarks:

10−24−2014

email from S. Frank:

Dear Alex,

We discovered material that has been identified as transmission fluid in well BW−1 at the 72nd Precinct site. The well location is shown on the attached site plan. The well is in the middle of the driveway area and there is no transmission fluid storage in this portion of the site so we suspect the fluid may have been introduced from the surface rather than migrating through the ground. We have a Vac Truck scheduled to evacuate the product next Wednesday. Let me know if you would like us to report a new spill for this finding.

Sincerely, Steve Frank

5−4−2015 Reviewed a report dated 2/26/2015. EFR via vacuum truck was performed at BW−01 on October 2014 and the product thickness was O.34' in BW−01. On November 6 2014, the product thickness was 0.02'. Approximately 8−gallons of oil groundwater mixture was removed from the well. On December 4 and December 19, 2014, no free phase was recorded. I called S. Frank and requested that more monitoring events needed in order to determine if all free phase product was removed from the well. AZ

1−6−2016 Reviewed a report dated 5/28/2015. No free−phase product was measured in BW−01 since November 2014. The free−phase

product was identified as transmission fluid. AZ

9−16−2016 Reviewed a report dated 3/10/2016. Spill Number 1407672 was reported as a result of free−phase product in well BW−01 which was identified as transmission fluid. LiRo performed fluid removal and has continued to monitor this well. No free−phase product was measured in BW−01 since November 2014. Based upon the monitoring data LiRo requested closure of Spill Number 1407672. I concur with this proposal.

The following letter email was sent to S. frank and V. Brevdo on 9−19−16: Dear Steve,

I have reviewed a Spill Closure Report dated March 3, 2016. The report stated that that spill #1407672 was reported as a result of discovery of free−phase product in well BW−01 which was identified as transmission oil. LiRo performed product removal and has continued to monitor this well. No free−phase product has been reported in well BW−01 since November 2014. Based upon this monitoring data, LiRo requested closure of this spill. This request is approved and the spill is closed.

The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to:

I. The off−site migration of petroleum contaminants that was unknown at the time of this closure.

II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure.

III. Information received, in whole or part, after the Department’s spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment.

IV. Fraud in obtaining this spill case closure determination.

As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts may need to be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations.

Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department’s files may not be maintained indefinitely.

Sincerely,

Alex Zhitomirsky − Engineering Geologist 2 NYS Department of Environmental Conservation 47−40 21st Street, Long Island City, NY 11101 Phone: 718.482.6387 − Fax: 718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov

DIELECTRIC FLUID	PETROLEUM	1000	GALLONS	0	GALLONS	SURFACE WATER

Caller Remarks:

Above material reporting leaking between above location and Gowanus substation. Boats have been dispatched and are searching for leak. Con ED #149276.

DEC Investigator Remarks:

7/14/03 ERT David Duke − Leak on feeder 25 (between Goethals and Gowanus Substations) was detected by USI leak detection system. Leak rate of 10gal/hr. Two Kens Marine boats left docks at 0945hrs with a 40min ETA. One to Goethals and one to Gowanus. Currently ebb tide. Feeder 25 is 345kV. This feeder is old and therefore is already injected with PFT tracer gas. PFT vans are tracing gas in streets. ERT will call with updated info. (KMF)

~~~~~~~~~~~~~~~~~~ E2MIS 149276

14−Jul−2003 @ 09:08 hours Leak committee convened and declares leak on Feeder 25. Leak declared due to U.S.I. leak detection system alarm indicating a 1000 gallon loss at a 10 gallon per hour rate.Underground Transmission and Gas Corrosion inspecting manholes and structures along feeder run. Chem Lab patrolling run of feeder with P.F.T. vans.Substation Operations inspecting all associated equipment.Feeder runs between the Goethals S/S and the Gowanus S/S. Feeder crosses the Narrows between Brooklyn and Staten Island. E.R.T. notified and Boat requested to patrol waterways at 09:25 hours.No fire or smoke involved. No waterways involved at this time.

DEC# . TO sent out 4 crews to begin manhole inspections. CGO sent out one crew to begin inspections in Staten Island. 2 PFT vans sent out to run feeder route. At 13:20 TO crews found dielectric fluid leak in MH66769 on 43rd St and 3rd Ave, Brooklyn. Liquid level is up to feeder pipe and movement can be seen by pipe entrance to manhole. Con Ed tanker dispatched, Clean Harbors notified to respond, Safeway notified to respond, chem lab notified to respond. CSD notified that leak was found.

Manhole was pumped out and temporary clamp was installed at 18:20 7/14/03. Manhole wall broken out and custom barrel fabricated on 11−7 shift 7/15/03. Chem lab reported 03−5801 <1.0ppm PCB. 2 Con Ed tankers were used to pump out the manhole. On 7/15/03 after settling the tankers were dipped to quantify the oil: 1st tanker had 767 gallons of dielectric fluid and 2766 gallons of water. 2nd tanker had 700 gallons of dielectric fluid and 80 gallons of water.

J. O'Connell 27858 of Transmission Operations reported that A. Rodriquez of NYSDEC and S. Martin of ERT requested on 07−15−03 that samples from the excavation be taken under the feeder.

USi reports that 1035 gallons were lost as per the leak detection system.

Update: July 24, 2003 At the request of Abraham Rodriquez of the NYSDEC, on July 15th soil samples were taken in the excavation north of manhole 66769, under feeder 25. Samples were analyzed for dielectric fluid by method 8100, benzene, and PCBs. The results are summarized below: Parameter

Results Benzene

<0.0054 ppm Dielectric Fluid
~~~~~~~~~~~~~~~~~~

165 ppm (by method 8100) PCBs

< 1ppm

On 7/25/03 Abraham Rodriguez of NYSDEC approved the above sample results and gave his OK to backfill the excavation.

Material Spilled	Material Class	Quantity Spilled	Units	Quantity Recovered	Units	Resource(s) Affected
GASOLINE	PETROLEUM	0	GALLONS	0	GALLONS	SOIL

Caller Remarks:

500 yards of contaminated soil removed

DEC Investigator Remarks:

8/11/06 − Bill Raven re−sampled the soil at the suspected contaminated area and the results show no TCLP Lead failure. Spill closed. − KST

5/25/06 − Reviewed the sampling results from Hygenetics who is working for Mr. Bill Raven of Grainger (847)535−0661. Accroding to the soil borings and analytical results, there is no petroleum release. However, there were 2 TCLP Lead failure. Told Mr. Raven that he needs to resample the 2 spots with the Lead failure, and hot spot removal might be needed.

Mr. Raven said that Grainger has plan to expand the building to area of concern. They will be sampling the area again for TCLP Lead in the next month or two, and will be digging up the area within 3 months. Told him that if the next sample confirms Lead failure, he needs to consider the soil as haz. waste for excavation and disposal. − KST

3/10/06, Dyber: Oversaw endpoint sampling at site. Next Step: Review Report when it arrives.

1/11/06, Dyber: Received work plan for endpoint samples from Hygienetics. Left message with Brendan Quealy (630−353−4480) to talk about TCLP test.

11/2/05, Dyber: Bill Raven (847−535−0661) has asked Hygenetics to prepare a scope of work for taking endpoint samples.

9/13/05, Dyber: Reviewed documentation from Grainger and spoke with Bill Raven. There was no documentation on endpoint sampling for the UST removal. Also, the other excavations may not have been deep enough to remove all of the contaminated soil.

8/31/05, Dyber: Bill Raven called and said I will receive records next week.

8/10/05, Dyber: Received message from Bill Raven at Grainger headquarters (847−535−0661). Left message for him.

7/28/05, Dyber: Phil Laterza, Branch Manager, will try to find reports and get back to me.

149−157 29th Street Brooklyn, NY 11232(sr)

10/14/09 Spoke with Mike Burke at Langan Engineering. Investigation was done on behalf of a potential purchaser, School Construction Authority. VOC concentration are elevated in ground water. Langan will forward summary report in two weeks.(sr)

08/15/11 Phase II report in edocs. The site consists of 12,000 sq ft lot that is improved with a one story warehouse building that spans the entire lot.The purpose of this investigation was to determine if the site was suitable as a potential propety acquisition for a new school facility. During the investigation, petroleum odor was observed in ground water samples on the southern portion of the site.The site consists of 12000 sq ft lot with a one story brick and concrete warehouse building that spans the entire lot. The investigation included a geophysical survey and soil and ground water samples from eleven soil borings and six temp monitoring wells through out the site.NYCSCA decided not to pursue this site for potential school facility. Ground water at 21 ft bgs.Field indication of contamination in soil samples were not observed.VOCs and SVOCs were below 6 NYCRR Part 375−6 unrestricted use soil clean up objectives(SCOs)in soil samples.The investigation did not reveal an obvious source of petroleum contamination in ground water on site.VOCs in ground water are not too high in concentration. An active spill 9515879 is located at the 72nd precinct of NYPD, which is immediately south of this site(across 29th street).The spill 9515879 originated from a leaking gasoline tank system and is currently undergoing remediation. NYCSCA decided not to persue this site for potential acquisition. (sr)

TRANSFORMER OIL	PETROLEUM	100.00	GALLONS	0.00	GALLONS	SOIL

Caller Remarks:

100 gal of oil found in the manhole − sample taken clean up pending it is possible that a sewer is involved − area outside of structure and the grading also has oil around it − call back at 22 :52 there is definately a sewer involved −nrc has been notified − update 1/19/01 @ 2307 hrs determined to be 100 gals of transformer oil in the manhole, but it did spray about 10’ out of the grading and approx 5gals entered the sewer − in process of cleaning it now

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY DEC INSPECTOR’S NOTES Cleanup completed on 1−22−01 Transformer was decon and removed from structure 1−22−01 (DEP was notified ref# 259053).

CON ED E2MIS REPORT 1−19−01 While on location for inspection of feeder #8B84 found a possible blown hamer head and 100gals. o funknown oil that had spilled out of TM255. TM grating wet with unknown oil, sewer grating wet with unknown oil, also concrete and asphalt. TM may contain soil/water. Private property may be affected. Cannot very sump or pump in TM. Engineering records indicate TM 255 is sewered, liquid sample to be taken from source. Historical records indicate 10ppm.

22:22hrs. Tanker ordered. 23:00hrs. Approx. 5gal. unknown oil sprayed onto sidewalk and sewer.

01−20−01 :0023hrs. Chris Hass of DEP issued commisioners order.

1:46hrs. Andrew Kelly of DEP also gave a commisioner order. 03:25hrs. Visual inspection of catch basin indicates no sign of escaped oil. 4:35hrs Tanker filled up while draining structure.. 4:55hrs. Clean Harbors was called . Tanker removed 400gals. of liquid wate from structure. Street ws double washed.

1725hrs. Dip sticked transformer, approx. 40gals.of oil was released from transformer. Delay in cleanup due to secondary to be denergized. Adjacent sewers checked, no visible sign of oil found, but double washed anyway. All solids removed from structure. remainder to be removed after transformer is removed. Found drains cemented but recemented to seal any gaps in sump.

2100hrs. Transformer drained and sample taken. Structure makes water.

LSN 01−00627 2ppm Chris hass of DEP was notified of fresh water leak in structure. He will contact his office to handle it.

1655hrs. Found no noise in hydrant or main. The sewer which is located in the nec of TM on stret is backed up. They will refer this job to the Sewer Crew to flush out and clean the line tonight.

1−22−01 100hrs. fresh water leak has been resolved by DEP during the midnight shift. No tanker necessary to complete this cleanup as of this time.

1230 Transformer decontaminated and removed from structure.

1440hrs. Cleanup complete, no sump but there was a sealed drain in structure, tag removed. Structure was double washed with slix. Solids were removed using diapers and coagulent. Incident is closed.

20x20 area of oil marks in soil and sidewalk. Reported by NYC DEP investigator.

DEC Investigator Remarks:

10/21/13−Hiralkumar Patel. 10:23 PM:− spoke with Alex at NYC DEP. he mentioned that DEP received oil spill complaint on 10/17/13, but case assigned to him today. Alex inspected facility and found oil stain on parking lot, sidewalk and street.

10/22/13−Hiralkumar Patel. alternate address: 801−807 4th Ave, 168−176 28th Street

no other spills found.

PBS #: 2−611065. as per PBS record, the site has two 280 gal ASTs in contact with imprevious barrier. both tanks were installed in Sep. 1998. one tank used for waste oil and the other tank used for lube oil.

9:00 AM:− visited site. found oil stain on street along the curb, on sidewalk and on parking lot. possible impact to parking lot drain as oil stain to the drain. found oil spill inside the repair facility, which was operated by Midas before. four (possibly more) hydraulic lifts noted in repair shop floor. found oil in one of the hydraulic lift structure. site has two rectangle tanks, located outside the buiding, in southeast corner.

met Armando Cao, facility supervisor at Time Warner Cable. Mr. Cao mentioned that Time Warner rented this site about a week ago. on 10/18/13, contractor removed a hydrulic oil tank, located inside the repair facility. during tank's removal, oil spilled on floor. they cleaned some oil with absorbent sand and then used street sweeper to wash remaining spill, which spread the spilled material.

asked Mr. Cao to provide company's name who removed hydraulic oil tank, to register tanks (two waste oil tanks and hydrulic oil tank) and clean spilled material and

Armando Cao Facility Supervisor Time Warner Cable 59 Paidge Avenue Brooklyn, NY 11222 PH. (646) 285−7455 email: armando.cao@twcable.com

10/23/13−Hiralkumar Patel. 10:22 AM:− left message for Mr. Cao. 10:24 AM:− received call from Mr. Cao. he asked to contact his supervisor, Angelo Digregorio. 10:28 AM:− spoke with Mr. Digregorio, senior facility manager at Time Warner Cable. he mentioned that ServPro is preparing plan for cleanup and proper disposal of contaminated material. asked Mr. Digregorio to submit plan, once ready. he provided property owner's contact information. Mr. Digregorio asked to send correspondence copy to Dennis Hunt also in Time Warner.

Angelo Digregorio Time Warner Cable Senior Facility Manager 41−61 Kissena Blvd Flushing, NY 11355 Ph. (718) 888−4185 (O)

(347) 925−0236 (C) email: angelo.digregorio@twcable.com

Mike Finizio ServPro Ph. (201) 656−0035 email: mfinizio@servprohobokenuc.com

10:42 AM:− spoke with Mr. Gever, property owner. informed him about oil spill at the site. he was unaware of this incident.

801 Fourth Ave, LLC.

property owner 80 West Broadway Long Beach, NY 11561 Attn.: Adam Gever Ph. (516) 398−0172 email: adamg@alrosegroup.com

10:51 AM:− sent email to Mr. Digregorio and asked to submit following: − contact information for Dennis Hunt (title, address, phone number, email address) − copy of plan for cleanup and disposal of contaminated material − contact information of company who removed tank last week email copied to Mr. Cao and Mr. Gever. informed them that the department requires investigation (and remediation, if needed) around lifts located at the site.

11:30 AM:− received email from Mr. Digregorio with above information. Mr. Digregorio mentioned that Nene Rordriguez removed tank on 10/17/13.

Nene Rordriguez Ph. (347) 866−6237

11:45 AM:− spoke with Mike at ServPro. he mentioned that sub−contractor will start cleanup tomorrow. 12:31 PM:− received message from Mr. Hunt. 12:42 PM:− left message for Mr. Hunt.

DEC Zhune spoke with Mr. Rordriguez due to language barrier. Mr. Rordriguez mentioned that he removed air compressor and hose on 10/17/13, but did not remove any oil tank. he also confirmed that he observed oil spill on floor on 10/17/13.

1:08 PM:− received call from Mr. Hunt. informed him about discussion with Mr. Rordriguez. asked him to find out cause of the spill.

10/24/13−Hiralkumar Patel. 8:30 AM:− visited site. met Mr. Hunt, Mr. Digregorio and Mr. Finizio. crew from Active Environmental Technologies were on−site. during visit, noted some metal pipes in ground, near each repair bay door, indicating possibility of one or more underground tanks. asked Mr. Hunt to clean and remove contaminated material as well as chemical/oil containers on property. also discussed about two tanks at the site, which needs to be re−registered with new owner’s info as currently registered by Midas.

informed Mr. Hunt that the department requires confirmation of hydraulic lift system’s (and other underground tank system’s) integrity. he will discuss with Mr. Gever.

asked Mr. Hunt to provide information about activities happened since Time Warner rented this place.

9:50 AM:− spoke with Mr. Gever. informed him about discussion at the site.

11/12/13−Hiralkumar Patel. 10:07 AM:− received call from John Curran, attorney for Time Warner Cable. he inquired about what documents needed to close the case. informed him that the department requires submission of spill cleanup report (including cause of release, summary of cleanup activities, disposal mnaifest and result of any sample needed) and confirmation of integrity of underground lifts. John mentioned that lifts will be removed soon.

John Curran

attorney representing Time Warner Cable Sive, Paget & Riesel, P.C. Ph. (646) 378−7215 email: jpcurran@sprlaw.com

12/06/13−Hiralkumar Patel. 3:20 PM:− spoke with Mr. Digregorio. he mentioned that property owner's consultant installed some borings yesterday, around undergrond lifts. Mr. Digregorio asked to contact Mr. Curran for further details. 3:24 PM:− left message for Mr. Curran. 3:37 PM:− received call from Mr. Curran. he is not aware of investigation by property owner. he will talk to owner's attorney.

12/09/13−Hiralkumar Patel. 1:50 PM:− received message from John from Associated Env.

John Schretzmayer

consultant working for property owner Associated Environmental Services, Ltd. PH. (631) 234−4280 Fax (631) 234−4297 email: johns@assocenvsvcs.com

12/10/13−Hiralkumar Patel. 10:37 AM:− spoke with John. discussed about spill noted in parking lot. asked him to investigate strom drain in parking lot. he already checked it and confirmed that it has hard bottom and connected to city sewer system. John collected some soil samples from parking lot area, as this site used to be a gas station. asked John to confirm integrity of underground lifts inside building.

01/21/14−Hiralkumar Patel. another spill reported (# 1310167 on 01/20/14) at the site due to subsurface contamination.

01/28/14−Hiralkumar Patel. 9:17 AM:− left message for John.

02/27/14−Hiralkumar Patel. 1:55 PM:− spoke with Mr. Gever and asked him to submit spill cleanup report. he will talk to John.

04/08/14−Hiralkumar Patel. received email from John (at 3:50 PM on 04/07/14). he is preparing a work plan to address hydraulic oil spill. he wanted to discuss the work plan. 9:24 AM:− left message for John. 11:24 AM:− received message from John. he mentioned that property owner wants to resolve hydraulic oil spill first and then submit work plan for subsurface contamination. John will call back to discuss further.

04/18/14−Hiralkumar Patel. 8:40 AM:− received call from John. discussed required investigation for hydraulic oil spill. he mentioned that lifts, that were removed last year, had aboveground oil tank and the trenches found in floor were not lift's oil reservoir. John will send email today with scope of work. he is planning to start subsurface investigation on 04/28/14. 9:49 AM:− received email from John including a site map with proposed boring locations. he proposed to collect soil samples from the

area of outside drain and in the trench/pit of each lift.

received Phase I and Phase II reports for spill #: 1310167. as per pictures attached in Phase I report, the hydraulic oil tanks were aboveground next to repair shop entrances. Phase II investigation shows petroleum contamination in soil and groundwater samples collected from outside parking area. based on result of Phase II investigation, further investigation is needed including installation of permanent monitoring wells.

discussed with DEC Vought. for the following reasons, the subject spill case is administratively closed and will be investigated under spill #: 1310167: − size and location of hydraulic oil tanks − area impacted during removal of hydraulic oil tanks: concrete surface in former repair shop, asphalt parking lot and concrete sidewalk − need for further investigation of contamination noted during Phase II investigation; which will include installation of permanet wells

3:15 PM:− left message for John and informed him that the subject spill will be investigated/remediated under spill #: 1310167. asked him to hold on any field activities and to submit detailed boring logs which are missing in Phase II report. 3:36 PM:− sent email to John and asked to hold on any field activities until further notice. asked him to submit boring logs. informed him that the department will issue a letter for required investigation, after reviewing the boring logs. email copied to Mr. Gever. 3:37 PM:− left message for Mr. Gever.

case closed administratively. refer to spill #: 1310167.

refer spill #: 1310167 also.

DEC Investigator Remarks:

e2mis no 159877

J. DELAROSA #19655 MECH A ENV OPS REPORTS FINDING APPROX 1 QT OF UNKNOWN OIL ON APPROX 100 GALS OF WATER IN M49287. NO SEWERS, WATERWAYS, OR PRIVATE PROPERTY AFFECTED. THE SOURCE AND CAUSE OF THE SPILL IS UNKNOWN, HOWEVER THERE IS A BLOWN JOINT IN THE STRUCTURE. THERE WERE NO SUBSTANTIAL CRACKS IN THE STRUCTURE AND THE STANDING WATER HAD NO MOVEMENT. THE EXISTENCE OF ANY SEWER CONNECTIONS, SUMPS, OR DRAINS COULD NOT BE VERIFIED AT THIS TIME. ENV STOP TAG# 46866 WAS PLACED AND ONE LIQUID SAMPLE TAKEN CLEANUP WILL BEGIN USING THE VACTOR AND THEN WAITING FOR LAB RESULTS.

UPDATE 7−20−05 14:15HRS AS PER A. WALKER, J. DELAROSA ENV OPS CONTAMINATED VACTOR TRUCK 60571, REMOVED BOTH SOLID DEBRIS. DOUBLE WASHED STRUCTURE, WILL CHECK DIRT SUMP AT ANOTHER TIME. ALSO ALL LIQUIDS WERE REMOVED. VACTOR WILL REMAIN ON LOCATION UNTIL RESULTS COME BACK.

7/20/05 2100HRS LAB RESULT RETURNED < 1.PPM LSN−05−07437−001

7/21/05 0200HRS Update for F/O 444 40 St. (Inc #159877): MH 49287 made water prior to UG working in the hole. 100 gals. of water were taken out of the structure by Astoria Tanker. Results of the structure came back as < 1 PPM PCB, and as a Water Grab. Because this result came back as a Water result, the directive was made to take another sample of the sludge in the vactor for PCB and a note was made on the sample request to sample as a solid, do not extract oil. Because this incident is pending sample results, MH 49287 and Vactor 60571 will be treated as 50−499 until results of this last sample is received. Vactor 60571 will remain on location until these final sample results are received.

7/21/2005 07:52 HRS. −− RECEIVED PCB RESULTS < 1.0 PPM, LAB SEQ # 05−07472−001, MATRIX: SOLID GRAB, DESCRIPTION: SLUDGE FROM VACTOR 60571.

7/21/2005 10:55 HRS. −− BROOKLYN ENV OPS. O/S A. WALKER REPORTS HE INSPECTED VACTOR 60571 AND FOUND NO FREE FLOWING OIL IN VEHICLE. TRUCK WILL BE DUMPED. −− W.W. #17344 −−

8/02/2005 13:13 HRS. −− D. BANKHEAD OF BROOKLYN ENV OPS REPORTS HE & J. CUADRADO DOUBLE WASHED STRUCTURE, FOUND SUMP SEALED AND

REMOVED ENV STOP TAG 46866. CLEANUP COMPLETE AS OF THIS TIME. BKLYN ENV OPS O/S E. WILLIAMS WAS NOTIFIED. −− W.W. #17344 −−

Closed. 9−26−05. GB.

GOWANUS SUBSTATION − SAMPLE TO BE TAKEN

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT DEC Inspector Notes:

Foley inspected manhole on 7/31/01 and found it to be clean. Oil sample result returned at 68ppm PCBs. Hole was double washed.
It was determined that there was no leak from any equipment.

Spill #0103165 occurred on 6/21/01 in same manhole. Oil sample result returned 70.4ppm PCBs. Hole was double washed.

Con Ed e2mis Notes:

3/2/99 Central Gas Dept doing inspections found undiaperable sheen of unknown fluid on 200gal water. Water sample taken returned <1ppm PCB. Oil sample returned 68ppm PCB.

3/8/99 Clean Harbors responded to spill event on 3/3/99 and evacuated manhole 67422 of oil/water mixture. Structure was double washed. MCUT inspected manhole and determined that no repairs were necessary and there was no leak.

CON ED #121129 REACTOR R18 LEAKING CLEAN UP TODAY BEING TREATED AS 50−499 PPM PCB.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT DEC Inspector Notes:

Foley inspected equipment on 7/31/01. Appeared that repairs were completed by applying epoxy. No visible leaks.

Con Ed e2mis Notes:

11/9/98 4oz dielectric fluid leaked from reactor R18 onto concrete pad. To be cleaned as 50−499ppm PCB. PCB count is 1ppm ,as per Mary Moran.

1/22/99 During field visit, Mary Moran reported that cleanup was completed on 1/6/99. Sample results indicate PCB count of 2ppm.

7/27/01 As per visual inspection , CT Pod looks repaired and there is no leak.

DEC Investigator Remarks:

02/20/08 − See eDocs for Con Ed report detailing cleanup and closure. 9/26/07: e−mail to Con Ed (Pete Sudol): Have you collected any samples to ID the material? What was the location of the trench (i.e., relative to what equipment, etc.)? (JHO)

10/2/07: Sudol called to give update/clarification. Crew was excavating to install a siamese connection and encountered stained soil with odor (no free product). They dug down about 4 to 5 feet to clean soil, but no post−excavation samples were collected.

Sudol said excavation was still open − told him to collect post−exc samples. He will submit results with revised emis report. (JHO)

10/15/07: Spill submitted for closure by Con Edison with no sample results. Request rejected, with following comment: Final entry in Corrective Action section states 'As per request by J O'Connell of NYSDEC, post excavation samples for TPH will be taken of soil in open excavation where any discoloration of soil is present.' Were any samples collected? Results? (JHO)

spill is at the substation − near a reactor − spill to bluestone only − not sure of exact source − − no sewers, water, smoke or fire con ed #142201

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #142201:

10−APR−2002 @ 14:50 Hrs.

Mary Moran, Area Planner, reports during Substation inspection historic contamination was found on bluestone around Reactor 6. By visual inspection the surface layer of the bluestone appears to be less than 10% stained/discolored. There is no active fire/smoke at this time. Release to sewer/waterway is not verified at this time. The substance is unknown, however it is likely to be identified as dielectric fluid. The quantity released is unknown, however for reporting purposes the volume has been entered as 1 gallon. The source of contamination is unknown. The cause of contamination is unknown. No private property has been affected. A station remediation plan will be prepared to determine the priority order for addressing this and other historic incidents as per SSO's letter to NYSDEC dated February 20, 2002. Housekeeping and maintenance activities, as required, will be documented.

C. Koehler 84220

UPDATE 12/27/04 1330 Hours As part of the historic housekeeping program, the bluestone around R6 was remediated. A new moat has been installed around the unit as part of the SPCC program for 2004. Since there are no active leaks on this bank, this incident will be submitted for closure to NYSDEC. P Sudol #80493

5 gals of product on 1500 gals water − sample taken clean up pending availability of tanker − con ed 140024 − no fire or smoke no sewers or waterways

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis Notes:

10/30/01 5gal dielectric fluid and 1500gal water in manhole. Found while searching for leak on feeder 25. Chem Lab will be

notified to take samples. The source of the leak is unknown at this time. Further inspection will be completed after manhole is pumped. Tag no. 048−0198 was hung.

Event Involved Material History and Event Detail Description was changed from dielectric fluid to unknown oil. They are looking for a leak but are not sure of the source at this time.

Astoria tanker removed 1500gal liquids from structure. Clean Harbors cleaned structure by double washing. Liquids and solids were removed. PCB count 15ppm.

Leak update: USi leak detection system showed 7.5gph on 10/30/01. USi contacted to review data and confirm. Flow meter and tank level readings being taken. USi called S&TE and confirmed that there was no leak. There was a modeling error due to the fact that fdr 26 was out of service on the weekend. The leak search was called off.

4 OUNCES ON 150 GALOONS WATER − ALL WATER IN MOAT ON SOIL AND BLUESTONE

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL reference spill #0111289

E2MIS NO. 139−268: M. ROSA # 58652 SSO GOWANUS S.S. 27 ST & 3 AVE REPORTS WHILE MAKING INSPECTION OF C.P. (COOLING PLANT # 4 ON HI−FDR. 42) HE FOUND APPROX 4 OZ UNKNOWN OIL (IT IS POSSIBLE OIL COULD HAVE COME FROM THE COOLING PLANT SYSTEM) ON 150 GALLONS WATER. OIL AND WATER IS CONTAINED TO MOAT ON SOIL & BLUE STONE IN STATION. THERE WAS NO SIGNS OF FIRE OR SMOKE. NO PRIVATE PROPERTY AFFECTED. LIQUID IS CONTAINED, NO SEWERS OR WATERWAYS AFFECTED. SINCE THEY DID NOT SEE WERE OIL CAME FROM AT THIS TIME , THEY CALL FOR CHEM LAB TO COME TO LOCATION AND TAKE A LIQUID SAMPLE AND REQUEST A EMERG PRIORITY FOR PCB SAMPLE RESULTS. CHEM LAB WILL GIVE US A CHAIN OF CUSTODY NUMBER. CLEANUP PENDING SAMPLE RESULTS. HE PLACED E.S.TAG # 048−0199.

UPDATE − 05−SEP−2001 09:52 HRS. LSN# 01−08790 , SAMPLE TYPE: OIL, AROCLOR: 1260, RESULT: < 1. PPM.

10/22/01 17:52 As per the clean up supervisor P. Vieira # 16791, clean harbors came in on 09/04/01 from 07:10 to 23:00 and removed/recovered any liquid/solids, also removed all traces of visible oils. The solid/liquid waste was vacuumed out, cleaned and any additional liquid was removed again. The waste genereated was solid and approximately 150 gallons. The operator noticed approximately 4 oz of oil in 150 gallons of water which was contained in the moat.

04/23/02 Under maximo work order 0000126713 the source of the, the water leak, was repaired by replacing the float device. This also covers incident # 139228 which was called in on aug 31,2002 and pertains to the same incident. The incident may be closed.

17−JUN−2002. Mary Moran, Area Planner, reports during inspection, historic contamination was found at C4. The flooring consists of a welded metal plate over a sub floor−however. Soiled bluestone was recently removed, however marriage roll is in place on bluestone and 2 small pools are in place underneath pumps. This plant is not known to have a concrete moat. The substance is unknown, however it is likely to be identified as dielectric fluid. The source of contamination is unknown. The cause of contamination is unknown. A station remediation plan will be prepared to determine the priority order for addressing this and other historic incidents as per SSO's letter to NYSDEC region II dated February 20, 2002. Housekeeping and maintenance activities, as required, will be documented.

8/26/02 The June 17, 2002 update above will be transferred to e2mis incident # 141551 − due to the fact that the DEC officially closed this incident on May 6, 2002 and therefore the update should never have been entered. The stop date and resolved date have been entered and the status has been changed to CLOSE. No additional updates will be entered in this incident.

Caller Remarks:

3/4 of a gallon spill of non pcb oil to bluestone − con ed #138584 clean up in progress

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY

~~~~~~~~~~~~~~~~~ e2mis no. 138564:

7/30/01=1430HRS SSO GIRACE #37876.REPORTS FOUND APPROX 3/4 GALLON OF NONE PCB OIL ON AN AREA 1−FOOT SQUARE.OF BLUE STONE THAT SPILLED FROM CIRCULATING PLANT #3 FROM FDR 41. NO SAMPLE OR TAG PLACED. MAINT.CREW IN PROGRESS OF CLEANUP AND WILL REPLACE BLUE STONE.

7/30/01−−1630HRS MR GIRACE REPORTS CLEANUP COMPLETED BLUESTONE REPLACED AND PLACED IN DRUM.

8/9/2001− 1255 hrs. There are no repairs required as the spill was the result of an error. The containment bucket was tipped over. Incident can be closed.

UPDATE 1/27/04 Incident was a returned close out request from the NYSDEC. As stated prior, the spill containment bucket had spilled over. The containment bucket is kept underneath one of the pumps as a precautionary measure. The leak originates from a mechanical seal on the pump that is designed to leak, so this type of preventive measure is commonly placed in case there is a drip from out of the containment tray that is built on to the pump.

WHILE BORING HOLES IN SOIL SPILL INITIALLY DISCOVERED ON 11−23−98 VENDOR DID NOT NOTIFY CON EDISON UNTIL 12−04−98 AT 10−45AM

SAMPLES TAKEN. CON ED #121707

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT 12/7/98: Spoke with Christine Kovari (Con Ed SSO) − Phase II investigation for 2 purposes: 1) divestiture 2) to confirm underground pipe which was source of Appendix B spills − may be some type of drainage conduit. Pipe was plugged up at discharge end. Con Ed has no idea what pipe is or where it comes from.

Phase II consisted of 6 borings along raodway and in vicinity of pipe. Two borings closest to entrance gate − found sheen in one. Three additional soil borings hit concrete refusal at 3 feet bg − they think it is the bulkhead structure. Don't know where to go from here.

Also putting in perimeter borings on adjacent substation property to see if anything is migrating off substation. Took one VOA groundwater sample from area where sheen was encountered in boring, but sample is likely to be rejected by lab due to suspended sediment. (JHO)

3/21/02: Draft Site Investigation Report dated May 4, 1999 found no evidence of soil or groundwater contamination related to historic use, storage or spillage of petroleum at the site. A well was installed at the SB−5 location − no free product was noted in a number of gauging events. (JHO)

Caller Remarks:

caller stated rain has washed oil from deck.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL 8/21 − JHO RESPONDED WITH AVERY TOM OF CON ED.

BILGE AREA OF TWO FLOATING GAS TURBINES OVERFLOWED DUE TO HEAVY RAINS. OIL/WATER SEPARATOR COULD NOT HANDLE THE VOLUME. BILGE WATER LEAKED FROM FOUR SPOTS: TWO ON EACH BARGE. COAST GUARD RESPONDED EARLY IN THE MORNING, ISSUED FINDINGS AND RECOMMENDATIONS TO MAKE REPAIRS TO FLANGE WELDS ON THE BARGES. ACCORDING TO CON ED, CONTRACTOR (S&D) TO PUMP DOWN WATER LEVEL IN BILGE TO ALLOW WELDERS TO WORK ON WELDS. SILVER SHEEN IS CONTAINED WITHIN BOOMED AREA, ALTHOUGH COAST GUARD REPORTED THAT A SHEEN WAS VISIBLE IN GOWANUS BAY − IT COULD BE ATTRIBUTED TO ANOTHER SOURCE. IMPACT TO WATER APPEARS MINIMAL.

Caller Remarks:

LIGHT OIL BUBBLING UP FROM BOTTOM OF CANAL. DRIVERS ENROUTE TO INVESTIGATE FURTHER. 10'X10' SHEEN. ABSORBANT BOOM IN PLACE. NRC ALSO NOTIFIED. FURTHER TO FOLLOW.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL 1/18/96: Glen Katz spoke with Ron Santapaola, Con Ed − sheen between barges, boom in place. Sheen dissipated as of 1425 hrs. Divers are to investigate futher, will inspect barge for source. Divers en route as of 1425 hrs. UPDATE: divers found no source but collected sample for analysis possibly from sheen. 1/24/9, Engelhardt notes: Call from Lisa Primeggia, Con Ed − divers inspected bottom of canal, saw nothing. Avery Tom is Con Ed Environmental Affairs person assigned to case. Note: this burping up of oil occurred last on 11/27/95 (see spill #9510745). Call Al Fillipi, Con ed to find out if this happens a lot.

3/21/02: Information provided by Orion Power New York indicates this storm drain was sealed on or about July1, 1996. No recurrences of sheen emanating from the storm drain have been noted since then. (JHO)

SHEEN FOUND AROUND 2 BARGES AFTER RAIN − CONTAINED BY BOOMS.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT 7/19/95: Al Fillipi − due to heavy rainfall could not handle water and overflowed newly installed lip around barge. They are going to raise the lip from 3 to 6 . All oil contained within permanent boom. Used sorbent pads to try to remove sheen. MEg called in to do clean up. No PCB analysis performed. Transformer is non−PCB. Mike O'Donnell (Con Ed) − source of oil was residual dripping from dressing coupling on #3 and 4 units. 10/10/95: This is additional information about material spilled from the translation of the old spill file: OIL SHEEN.

UNKNOWN PETROLEUM	PETROLEUM	1.00	GALLONS	0.00	GALLONS	GROUNDWATER

Caller Remarks:

drain line coming from con ed is leaking a black unknown material in the gowanus bay... Taking a sample to see what the material is..

DEC Investigator Remarks:

2/4/04 This spill is being handled under the sitewide investigation. ConEd is currently preparing a final workplan (response to DEC's comments on draft workplan) for subsurface investigation. (SKA)

12/1/04: Letter from Jim Gregory (Reliant) stating that drain line has been permanently capped. Letter also states: Although there was a considerable amount of research and investigation over the years as to the origin and responsibility for this drain, ther were no useful results to this effort. Close out. (JHO)

#2 FUEL OIL	PETROLEUM	150.00	GALLONS	0.00	GALLONS	SEWER

Caller Remarks:

tank was being filled − is a roof unit and 100 − 150 gals of oil were spilled in the filling process

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE

06/13/05: A heating contractor, Roy Kay, Inc., was modifying the roof top heating units to operate on duel fuel. While bleeding the lines of air, the operation was left unattended and an unknown amount of heating oil was released to the roof and apparently impacted a roof drain leading to a NYCDEP sewer. It is unsure how much was lost because of an unexplained inventory descrepency. At the time of the spill, both boilers were turned off but the facilities Dravo unit (another type of heating unit) and water heater were still active. Also, in order to bleed the roof top lines, an unknown amount of product was pumped off and most likely removed by the contractor; yet there was a descrepency of 242 gallons.

Also, the contractor did not inform NYCT or make notification to DEC of the spill at the time it happened. The contractor attempted to perform the cleanup without telling anyone. Once discovered, NYCT hired an emergency response contractor to remove all of the contaminated debris already generated by the heating contractor and to finish the remaining cleanup. This did not allow NYCT to accurately determine the extent of the spill, nor the possible amount lost.

The tank is and was at that time, a double walled fiberglass tank with interstitial monitoring and double walled piping with leak monitoring sump sensors. There is no record of any alarms from the intersttial or sumps sensors and no report of a loss of product in any of the log books.

It would appear that the tank was not leaking but that product was being with drawn from the tank for several reason and that the product was no accounted for.

GASOLINE	PETROLEUM	0	GALLONS	0	GALLONS	SEWER

Caller Remarks:

caller states there is a strong odor of gas in bldg − smell is coming into bldg through sewer vent − unk source

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

The following DEC Investigator Remarks were available prior to 1/1/2002:

DEC (Sigona) investigated complaint on 2/18/2000, and arrived at 2 :45 P.M. DEC contacted DEP (Cosmos) who said gasoline odor was confined to room where sprinkler system was located, possibly a floor drain. DEP inspected the surrounding sewers and could not pin point any source of pet vapors. DEC confirmened that there were no gasoline vapors. Recommended that 5−20 gallons of water placed into drain to prevent vapors from entering building through trap. left site at 3 :00 P.M.

3/24/06 Diaz − Next steps required − review file, track down contacts.

Spill transferred back to R−2

3/7/08 − Austin − Assigned to Ketani for further investigation − end

8/18/08 − Raphael Ketani. The case is being prepared for transfer due to a case realignment within the unit. I didn't have a chance to reactivate this case nor investigate it before the case realignment. The case file and any E−docs should be reviewed. The ownership should be investigated. A CSL needs to be sent to the owner(s).

10/27/11 − Austin − Spill Transferred from Ahmed to Vought − end

06/18/09−HRAHMED−Erica Hogan of Singer Environmental (718 437 9600) called to discuss about the requirements of DEC to close the spill. Ahmed will get back to Erica that after reviewing the two reports stored in eDocs. The information of the owner of the property is: Boris Motovich Alternative addresses: 4901 − 4907 1st Ave, Brooklyn, NY 101 − 135 50th St, Brooklyn, NY Lot Size Approx. 230' x 200'

06/30/09−HRAHMED− Spoke to Simon of Singer Environmental (718 437 9600). As per some photographs of an old report submitted by Law Environmental dated 11/28/1995, one UST was pulled out and one picture is showing petroleum impacted soil in the excavation. The Nov 1995 contains only partial analytical data for soil and groundwater analysis.

3/31/2016: Rashad Spill reassigned to DEC Omar as per DEC Vought.

4/1/2016: Rashad 4901 First Avenue is not registered as a property in ACRIS but as a star in the middle of the street. Address may be 4907 First Avenue, 4907 is on spill report also as per Longitude and Latitude from PBS, site address is 4907 First Avenue. No additional spills found for site, PBS#2−005444 found for site, there are two 12,000 gallon #2 fuel oil ASTs in contact with soil. Registration expired in 1998. Two documents found in D2. The first document was submitted on November 28, 1995 by Law engineering and environmental services, it is an Environmental Assessment report for Underground Storage Tank Closure. Review of the report is as follows: Law closed 16 tanks formerly located at the site, evidence of a petroleum release was uncovered during excavation activities associated with the closure of one 5,000 gallon UST. Petroleum stained black soils were encountered at the northern and eastern ends of the excavation. The DEC observed the excavation prior to the removal of the tank and provided guidance. As much impacted soil as possible was removed from the ground, however, the proximity of the excavation to a load

bearing wall precluded the removal of some visibly stained soils from the excavation. Backfilling and compaction of clean fill in the excavation followed post−excavation confirmatory soil sampling. Geoprobe soil and ground water sampling indicated only limited petroleum impacted soil remaining above the water table at the northeastern and eastern ends of the excavation. Soil sampling across the water table at the source area did not indicate the presence of free product. It is our opinion that the limited remaining petroleum−impacted soils will attenuate over time, and that further assessment or remediation is not warranted. Law recommends that future construction or excavation related activities, if any, in the area of the limited petroleum impacted soils provide for the appropriate handling of the soils. Fill material was encountered up to approximately 5−7 feet below grade. The water table apparently is located in the outwash sand and gravel deposits approximately 22−25 feet below grade. Groundwater flow is generally westward towards the Bay Ridge Channel. The leaking UST area is located in AREA D on site map, tanks T2 and T4 are located in this area, tank T2 is a 2000 gallon tank and T4 is a 5000 gallon tank. A manhole on tank T4 was opened to reveal liquid within the tank, the liquid did not exhibit a noticeable petroleum odor or sheen. Tank T4 was previously closed in place by being filled with what appeared to be water. Liquid was removed. Peak PID readings during excavation was recorded at 32ppm. On May 12, 1995 Mark Tibbe of the DEC observed the excavation and provided guidance with regard to the situation. He stated that as much of the contaminated soil as practically possible should be excavated prior to backfilling and provided guidance regarding the sampling of the excavation. The depth of the excavation was approximated to be 12 feet below grade. The eastern portion of the excavation adjacent to the end of the concrete pad was excavated to an approximate depth of 16 feet below grade. A total of four composite grab samples were collected, 8 additional grab samples were also collected.

4/4/2016: Rashad The soil results had exceedances, however they were sampled for comparison to TCLP extraction Guidelines. After the excavation was backfilled, a limited subsurface assessment was performed utilizing a truck mounted Geoprobe unit to provide for an evaluation of the vertical and horizontal extent of the remaining petroleum impacted soil and to characterize groundwater quality. One probe was located at the southeast end of the filled excavation (B−1), and three others (B−2 through B−4) were located outside the perimeter of the former excavation. Soil probes were advanced to depths of up to 26 feet below grade. The four soil samples obtained for lab analysis from probe B−1 were collected over 2 foot intervals from 18−26 feet. Probe B−2 was advanced to the southwest of probe B−1, 6 feet out of the limit of the former excavation. Similarily probe B−3 was advanced 7 feet from the excavation while probe B−4 was advanced 10 feet beyond probe B−3. The ground water sample was encountered at probe B−1, approximately 24 feet below grade, no free product was observed. Geoprobe sampling data has decreasing values by geoprobe depth as well as no TCLP exceedances in groundwater.

The report was created for the New York City Economic Development Corporation, LAW Environmental feels that Laboratory analysis of ground water did not indicate analytes above DEC water standards. Evidence of DEC guidance in submitted report as structural limitations were reached LAW requested a DEC site visit: At this point, LAW requested the DEC visit the site to observe site conditions in proximity to the load bearing wall. On May 12, 1995 Mr. Mark Tibbe of the DEC observed the excavation and provided guidance with regard to this situation. He stated that as much of the contaminated soil as practically possible should be excavated prior to backfilling and provided guidance regarding the sampling of the excavation.

The source of this contamination has been removed along with the majority of the impacted soil. the limited remaining petroleum−impacted soils will attenuate over time, and further assessment or remediation is not warranted. Site is currently bank, and has been exchanged numerous times, as per conversation with Jeff and report that stated DEC gave guidance, as well as geoprobe investigation showing no groundwater contamination, and no other complaints on site, spill will be administratively closed.

DEC Investigator Remarks:

8/6/2009 Steve Morse from Louis Berger is working on behalf of the NY City Economic Development Corp. Area has been excavated, material stockpiled and endpoint samples taken. They will test the samples and forward a report to DEC for review.

08/25/09−Hiralkumar Patel. 11:46 AM:− received message from Joe Nelson from Louis Berger. they are preparing closure report and will submit soon.

09/08/09−Hiralkumar Patel. 2:02 PM:− spoke with Sean at Louis Berger. he was on vacation and will check with his staff. will call back. 3:26 PM:− received call from Sean. report will be submitted before end of this week. he will be out of office, so asked to contact Steve Morse (212−612−7923) if have any questions regarding report.

09/14/09−Hiralkumar Patel. received report from Sean (at 5:54 PM on 09/11/09). abstract:

− encountered petroleum impacted soil and groundwater during excavation in support of repair work to be performed on the bulkhead bordering the site and upper New York bay − approx. 5 gal of unknown petroleum product were encountered and the point of release was noted near the southeastern wall of the excavation

<−−−−−−− − collected water sample from excavation for fingerprint analysis and analysis revealed that the spill was comprised of a combination of motor oil and hydraulic fluids − petroleum did not appear to extend into the upper new york bay; however as a precautionary measure, a containment boom was deployed along the bulkhead − to delineation contamination, excavated three adjacent test pits near the point of release − in total, the test pits measured approx. 40 ft long (east to west) by 12 ft wide (north to south) by 12 ft deep − approx. 40 tons of contaminated soil was removed − collected 7 soil samples from along the side walls of the test pits, 1 standing water sample from bottom of test pit and 1 composite waste classification sample from stockpiled soil − sidewall samples were analyzed for VOCs, SVOCs, metals, PCBs, pesticides and TPH; water sample was analyzed for VOCs and SVOCs; composite sample from stockpile was analyzed for VOCs, SVOCs, metals and PCBs via TCLP method and for TPH − soil samples collected indicated the presence of non−native fill material throughout the existing bulkhead; miscellaneous debris in form of wood, concrete, scrap metal and brick fragments were noted throughout − soil classified as non−hazardous urban fill

was reused as backfill material and was planned to be capped by a new, asphalt parking lot − high SVOCs (few compounds), mercury, lead and TPH found in all soil samples

SVOC values in soil (ppb):

discussed with DEC Austin. he asked for Phase I report.

2:33 PM:− left message for Mr. Morse at Louis Berger. 2:41 PM:− left message for Ms. Zias at NYC EDC.

NYC Economic Development Corp. 110 William Street, 16th Floor New York, NY 10038−3940 Attn.: Kay Zias PH. (212) 312−3752 email: kzias@nycedc.com

2:52 PM:− received call from Ms. Zias. she mentioned that Maritime Group has leased this property from them and site was being used for shipping purposes or ship making. site was empty for last couple of years and will be used for parking lot only by NYPD. Ms. Zias will send email with summary of historical use of the site.

discussed with DEC Austin. based on site location, historical use and future use, he will talk to DEC Jane for possible transfer in haz. waste unit.

3:51 PM:− received email from Ms. Zias with site history. site was originally used by Moore McCormack Lines, a steamship company. Continental Terminals used the piershed to store and distrbute cocoa beans into the late 1990s. the pier was torn down then used by American Warehousing for vehicle storage. the site does contain a garage that was used for vehicle maintance.

09/29/09−Hiralkumar Patel. 4:05 PM:− received message from Ms. Zias inquiring status.

10/01/09−Hiralkumar Patel. 1:42 PM:− left message for Ms. Zias and informed her that case may be transferred to another unit due to heavy metals.

discussed with DEC Jane and DEC Austin. due to heavy metals, Austin asked to set up conference call with DEC Bob Cozzy.

11/20/09−Hiralkumar Patel. 11:30 AM:− left message for DEC Cozzy.

7/30/10−Vought−Site transferred from DEC Patel to DEC Vought and DEC Vought with project transferred to Section A for further investigaiton and possible remediation due to presence of high heavy metals. Complete file review by Vought for purposes of further site classification:

See also closed spills #0307230 and 0010628 for Gowanus Power Plant immediately adjacent to site and operated by NY Power Authority. Both closed spill remarks noted elevated heavy metals. Closed spill #0010628 shows soil concentrations up to: 1043ppm lead, 2.28ppm mercury, 166ppm copper and 4869ppm zinc. Site also has alternate addresses as 106−112 23rd Street and 109−111 23rd Street as per Property Shark.

Final Spill Closure Report (Louis Berger−Sean McGonigal Ph:212−612−7900x1397 Fax:212−361−4341)−9/11/09. Spill opened due to discovery of petroleum contaminated soil during excavation activities to repair a bulkhead. Commercial properties to the north and south and Gowannus Expressway to the east. Five gallons of unknown petroleum found and point of release was noted near the southeastern wall of the excavation . NYC Economic Development Corporation (EDC)Daniel Zarrilli was notified. Two samples of petroleum impacted standing water in the excavation were collected for fingerprinting and analysis showed spill was combination of motor oil and hydraulic fluids. No visual evidence of oil in Bay beyond Bulkhead however boom deployed as precautionary. Free product recovered from groundwater using absorbent pads. Three test pits installed adjacent to petroleum excavation for delineation purposes. Contaminted soil based on visual evaluation was separated from impacted soil (160 tons of non impcted soil and 40 tons of impacted soil. Seven sidewall soil samples were collected from the test pit and one bottom groundwater sample was collected. No sidewalls however collected from northern portion of excavation. Soil analyticals show no VOC exceedences of either TAGM 4046 or Part 375 Unrestricted SCO's. Soil analyticals for SVOCs PAH's show up 4.6ppm benzo(a)anthracene, 4ppm benzo(a)pyrene, 4.8ppm benzo(b)fluoranthene, 4.8ppm chrysene and .81ppm benzo(a)anthracene. PAH exceedences of TAGM and Part 375 noted in all soil borings. Metal analyticals show up to 36ppm aresenic, 3.2ppm cadmium, 52ppm chromium, 330ppm copper, 1,100ppm lead, 17ppm mercury, 890ppm zinc. Note most contaminated samples diluted by 100 times in laboratory. Former site uses as per notes above 9/14/09 site used for former ship building and cocoa bean shipping. Report attributes elevated SVOC's to contaminants in urban fill material . Groundwater analytical shows non−detect for VOCs and SVOCs. ....wood, concrete, scrap metal and brick debris were noted in both the soil stockpiles and the sidewalls of the test pit . Report maintains that excavated soils may be exempt from solid waste regulations due to benfecial use as per 6 NYCRR 360−1.15b8 and that soils can be used as backfill material at the Site in areas with potentially similar materials and contaminants. Therefore, soil classified as non−hazardous urban fill was reused as backfill material and was planned to be capped by a new asphalt parking lot. The proposed end use is an open air paved parking lot for use by the NYPD. Approximately 40 tons of soil were removed and five 55−gallon drums filled with absorbent pads were removed from the site. Report request No Further Action.

8/5/10−Vought−Reviewed above results with DEC O'Connell and P−Site Memo will be issued and SC CO offered.

8/11/10−Vought−Left message with Zias to return call with confirmation of block and lot and owner of property and to discuss P−Site process and possible SC CO use. Vought received callback from and spoke to Zias and she noted that site was capped with concrete in preparation for NYPD Parking Lot. Zias was unsure of current status of site. Zias was familiar with BCP Program and noted she thought that P−Site process not needed as site is being used for industrial purposes and no redevelopment is planned. Vought noted that initial thoughts were that industrial use has to be approved by DEC via Haz Waste Program and that possible

easements required as well. Vought confirmed this with DEC O'Connell and sent email to Zias with avaialable times for conference call.

8/12/10−Vought received reply from Zias and conference call scheduled for 8/13 at 12:30pm. Vought received confirmation from O'Connell to send out P−Site Memo despite conference all scheduled for tomorrow. P−Site Memo sent by Vought. Vought received call from and spoke to Zias who indicated that site owner was NYC Department of Citywide Admisitration Services (DCAS) and EDC was property manager.

8/13/10−Vought−Conference call with O'Connell and EDC Zias. Discussion included applicability of P−Site designation. Zias agreed to meeting to discuss SC CO which will be in early September as per O'Connell and will also include DEC Legal, NYC Legal and DCAS. Also discussed possibilty of not listing site and completing remedy under IRM via SMP including easement.

8/13/10−Vought−Received email from EDC Zias with attachments of DCAS and NYPD Property Transfer Documents. Vought will send email to EDC Zias around 9/1 to schedule SC CO meeting. Vought reviewed attachment and added to E−docs. Document review:

Letter from NYPD Deputy Inspector (Thomas Pellegrino) to EDC Andrew Alper−9/23/04. NYPD wishes to obtain city owned vacant lot to store sea containers at the site . Request for approval by EDC.

Letter from NYC Dept of Small Business Services Deputy Commissoiner(DSBS−Andrew Schwartz) to DCAS Deputy Commissioner Lori Fierstein − 4/25/06. DSBS hereby transfers management of a portion of the above referenced property to DCAS.

Letter from DCAS Martha Hirst to NYC Commissioner of Small Business Services (Robert Walsh)− 7/14/06. DCAS received letter from Deputy Commissioner surrendering the subject property for assignment to the Police Department (NYPD) for storage of sea containers. Attached map has area of transfer. Accordingly, DCAS accepts the surrender of the referenced property and simultaneously assigns jurisdiction and management to NYPD. The assignment is effective immediately. With this assignment, DCAS relinquishes all associated rights and responsibilities .

8/23/10−Vought−Sent request for Site Code to DEC Barrie with block/lot, acreage and lat/long.

8/24/10−Vought−Confirmed P−Site status with DEC Cozzy due to Hg concentrations adjacent to Gowannus Bay.

8/25/10−Vought−This spill adminstrative closed and referred to open Remediation #C224143.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND

****This spill is associated with Spill # 0010628 *****

Sangesland spoke with Gene Grilli of DMJM Harris (718−369−3262)

He is a general contractor hired by NYCDEP to reroute a sewer line near the corner of 3rd Ave and 23rd St in Brooklyn.

Right now the existing sewer line travels northwest along 23rd st out to the Gowanas Canal. The New York Power Authority is putting in a new gas turbine power station in the area between 3rd Ave and the Gowanas Canal. The new plant will be over the existing sewer line, therefore the sewer line is being moved.

Problem came up when the contractor started excavations to install the new lines. The fill material was very poor quality. At a depth of 8' to 10', oil started coming into the hole from historical contamination. Contaminted soil has been staged by the contractor and will be dealt with by either DEP or NYPA.

By Oct 17th, and oil/water separator and a carbon filtration system will be installed on the dewatering system to take care of both oil and lead in the groundwater. These were regulations that were put in place earlier by DEC Permits when the power plant was proposed.

Mr. Grilli will be getting back in contact with the DEC when the site work has been completed.

4/13/2004 Sangesland spoke with Mr Grilli. He said a tremendous amount of soil was removed from the site and shipped to a plant in Buffalo. There is additional soil staged on the site ready for removal. When the work is done he will prepare a short report (memo) and forward it to the DEC for case closure.

3/6/2006 No report was ever submitted to the DEC, but the power plant is complete and the area has been resurfaced. There is no source on the site and much of the historical contaminated material has been removed.

While the DEC assumes that the area still has some remaining historical contamination, this spill case has been closed out.

#2 FUEL OIL	PETROLEUM	0	GALLONS	0	GALLONS	SOIL

Caller Remarks:

GZA Environmental, hired by NYS Power Authority to make soil borings on City owned property − found oil contamination in soil borings.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 12/21/2000 − NYC Power Authority hired GZA to conduct soil borings on a piece of property they are considering buying or taking over from the city. Borings indicate a contamination problem on the site.

Any contaminated soil removed during borings has been drummed and manifested by GZA.

Owner of property is New York City.

Contact is: Daniel Kurtz, Executive VP of NYC Economic Development Corporation. 10 Williams St, NY, NY 10038

(212−312−3800)

12/21/2000 Sangesland spoke with Daniel Kurtz. Discussed the problem of contamination on the site. Mr. Kurtz will contact NYPA to try to get a copy of the GZA report. Sangesland told Mr. Kurtz that his office needs to define what the problem is, delineate the contamination and develop a remediation for the site.

1/2/2001 Sangesland left a message with Mr. Kurtz again requesting an update on the cleanup status.

3/06 − Received several files with information from NYPA. Next step will depend on review of new information received.

4/2/09 − Austin − Transferred from Needs Reassignment to Patel for further work to remediate and close − end

06/08/09−Hiralkumar Patel. found disposal manifests and lab data in old file. only SVOC analyticals and metal analyticals available. looks like samples were taken from soil pile for waste characterization. no information about sampling results based on which this case was reported.

08/04/09−Hiralkumar Patel. 3:30 PM:− visited area. found power plant along water side at the end of 23rd street. commercial buildings around the site.

08/05/09−Hiralkumar Patel. 10:08 AM:− left message for Mr. Kahabka (914−681−6308) at NYPA. 11:36 AM:− received call from Mr. Kahabka. he has sent letter to project manager in Albany in 2003 with other documents (including Phase II). asked him to send all available documents along with new building footing depth.

08/07/09−Hiralkumar Patel. 2:51 PM:− received copy of Phase II report from Mr. Kahabka. no VOC contamination found in soil samples. only few SVOCs and some metals found in shallow soil which was removed during construction.

based on submitted documents, case closed.

Caller Remarks:

The caller didn't know the amount of the spill or the material. The cleanup is pending.

DEC Investigator Remarks:

7/5/16: J.Kann − Spoke with Abraham Rossman who indicated that as a part of bank refinancing, soil testing was done and based on the results a spill was called in. He said that he had very little information and that Kim Robinson should be contacted. A voicemail message was left for Kim Robinson. The spill will likely be assigned to Kumar Patel (I discussed it with him) after confirming with Kim that the spill is from a Phase II investigation.

7/7/16: J.Kann − spoke with Kim Robinson who said that an environmental report was done as part of a refinancing and that the results indicated contamination likely from an off−site source. I provided her with Kumar Patel's email address and she said she would forward the report directly to him. I also emailed Kumar to let him know. Spill assigned to Kumar.

07/14/16−Hiralkumar Patel. alternate address: 5001 First Ave, 102−136 50th Street

no other spills found.

PBS #: 2−600018. as per PBS record, the site has one (1) 5,000 gal tank that used to store #2 fuel oil. the tank converted to non−regulated use in Jan. 2001.

as per letter dated 02/18/1991 (on PBS database), the 5,000 gal UST was closed−in−place on 02/06/1991.

−−−−−−−−−−−−−−−

12:41 PM:− left message for Kim. 1:53 PM:− spoke with Mr. Rossman, property owner. he confirmed that there will be no redevelopment at the site. the phase II investigation was conducted as part of refinance process.

D.C. Properties, Inc.

property owner c/o Abraham Grossman 1569 49th Street Brooklyn, NY 11219 Ph. (917) 776−3380

1:56 PM:− spoke with Kim Robinson, who works with property owner. asked her about investigation report. she will contact environmental consultant for report. 1:59 PM:− sent email to Ms. Robinson and asked her to submit investigation report(s) for review.

Kimberly Robinson Ph. (917) 440−6021 email: kimrobinson70@gmail.com

07/20/16−Hiralkumar Patel. 1:45 PM:− left message for Ms. Robinson.

08/01/16−Hiralkumar Patel. 10:53 AM:− received email from Ms. Robinson including few pages of EDR report in Phase I, but not complete report.

09/15/16−Hrialkuamr Patel. 3:18 PM:− spoke with Ms. Robinson and asked her to submit complete copy of Phase I and Phase II reports. 3:26 PM:− sent email to Ms. Robinson and asked her to submit complete copy of Phase I and Phase II reports by the end of 09/23/16. email copied to stephanie.yi@capitalone.com, kolainu@aol.com, abraham.grossman@gmail.com, fstern@njslaw.com.

09/20/16−Hiralkumar Patel. 2:35 PM:− received email from Ms. Robinson including Phase I and Phase II reports.

abstract of Phase I dated 01/19/16:

− the property is identified as block 788, lot 9 − based on review of historical sources, the subject property was developed residentially as early as 1888. by 1906, the current site building was constructed and operated as a portion of Bush Terminal and later, in 1926 as part of David Smith and Son's Co. by 1951, the subject property was occupied by a grocery warehouse/office, a steel corporation, and a metal stamping company. in 1987, the property was occupied by Apsco Sport ENT, F&M Miracle, Milan York, Inc, Poseidon Pools, and Allstate Cold Storage. in 1992, the property was occupied by Poseidon Pools and Empire State Recycling − a CO for a garbage reduction station/transfer station was issued for the subject property in 1994 and between 1997 and 2003, the property was occupied by Empire State Recycling then Atlantic Waste of New York − the subject property is currently occupied by Progressive Waste Management − the site has single story slab−on grade masonry building with a small office area and mezzanine for storage and additional unused office space. the property is additionally equipped with a locker room, a maintenance shop, a machine repair area, and the main garbage storage/handling area − there is an oil/water separator in repair area, which was installed in 2001 − new engine oil, used oil, hydraulic oil, and lubrication oil were all observed stored within 55 gal drums − during site inspection, large portions of the site was not visible due to site's active use, and stored material − two rectangular drains noted on site: one drain is along the northeastern side of the building which discharges to the sewage ejector pit and second drain in area of oil/water separator which discharge fluids from repair shop into oil/water separator − an unused

railroad spur is located on the southwestern side of the building

abstract of Phase II dated 04/21/16:

− subject property is relatively flat at an elevation of approx. 19 ft above mean sea level − regional topographic gradient direction slopes toward the northwest, therefore, the direction of groundwater flow beneath the site is inferred to be to the northwest

−−−−−− − a GPR was conducted − due to the active waste hauling operations, large areas of the interior of the building were not accessible during GPR. additionally, numerous cars, garbage trucks, and tractor trailers were parking and/or moving along 50th street during GPR survey which impeded access to those areas − no USTs or other subsurface anomalies found in area surveyed − eight soil borings (SB1 through SB8) were installed to depth of 15 ft bg, except boring SB3 where refusal encountered at 13.5 ft bg − borings SB1, SB4, SB6 and SB7 were further extended to approx. 20 ft bg for installation of temporary wells − no staining or odors were observed and PID ranged from 20 to 60 ppm − slight sheen and strong petroleum odors were noted in groundwater sample from TW7 (but boing log does not include any information about sheen/odors in groundwater) − sediment encountered in each of the borings generally consisted of brown coarse sand − groundwater was encountered between 17 and 19 ft bg − no contamination noted in soil samples − minor petroleum VOCs (max: 120 ppb of Naphthalene only in TW7) and CVOCs (max 29 ppb TCE in TW6) noted in groundwater samples

based on assumed groundwater flow direction to northwest, temporary well points TW6 and TW7 are located in upgradient side of the site. the southeastern adjacent property (upgradient site) at 138−156 50th St (aka 129−159 51st St) is equipped with multiple petroleum USTs (PBS #: 2−456012, 2−606528) and multiple spill incidents (spill #: 9305613−admin. closed, 9305660−admin. closed, 9803531−open) reported in past.

09/23/16−Hiralkumar Patel. 12:45 PM:− spoke with Ms. Robinson regarding any planned change in site's use. she mentioned that Phase I and Phase II investigations were conducted as part of refinance process and site use will remain waste transfer station.

10/27/2016−Colton McPartland. 11:09 AM: Returned message at Duty Desk phone from Michael G. at Capital One (646−231−9176) with DEC Vought. They are holding $100,000 in escrow and they are looking for an update. Michael stated he can wait until DEC Patel returns on Tuesday. Left copy of this spill report on DEC Patel's desk so that he may address on his return.

11/04/16−Hiralkumar Patel. after discussing with DEC Austin, case closed based on review of all available information (no impact to soil, minor VOCs in gw and no change in future site use). 3:05 PM:− left message for Mike at Capital One and informed him about case closure.

Caller Remarks:

soil borings were done and soil was found to be contaminated. ORIGINAL SPILL ASSIGNED TO O'DOWD.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was VOUGHT Former Getty.

High Soil Contamination from endpoint soil samples from Tank excavation.

Tyree doing additional investigation. 3/13/03 REASSIGNED FROM ROMMEL TO VOUGHT.

08/31/2005 − Feng − Transferred from Vought to Feng.

11/1/2005 − Feng − Tank Closure Report, 12/3/1999. On 9/7−9/1999, Tyree performed removal activity for following tanks: (6)550−gallon gasoline concrete encased, good/no holes. (1) 4,000−gallon gasoline concrete encased, good/no holes. (1) 4,000−gallon diesel concrete encased, good/no holes. Soil excavated to 10' bg, no groundwater encountered. 7 soil endpoint samples were taken. Soil samples, S1 (7'), S5 (10'), S6 (13'), S7 (13') found very high contamination. 862.60 tons of impacted soil was disposed.

1/25/2006 − Feng − File reviewed again. Letter on 3/8/2001, Joseph Sica from GettyBurg Service Station requested a closure letter because the property was in the process selling the site. Since high VOCs in soil endpoint samples, groundwater samples will be needed. The site has a new owner now. Sent letter to Scott Hanley (Getty Marketing) and Sam Shen (C&L Pioneer Enterprise) requesting 1) delineation of soil and groundwater contamination, 2) surrounding properties sketch, due 4/5/2006. CC to Shawn Healey and Paul Hatcher (Tyree). (RJF)

2/2/2006 − Feng − Call from Paula Chan (C&L Pioneer), stating that gas station was sold from Getty to Joe (an Italian guy) and then to C&L. The site is vacant now and plan for development. The site is on top of the hill (7th Ave of Brooklyn), groundwater might be very deep. She mentioned that Getty installed new tanks after removing the 6 (550−gallon) tanks in 1999, and C&L removed all the tanks and did endpoint samples and found clean soil. Will send the Tank Closure Report. (RJF)

2/14/2006 − Feng − Received and reviewed the Site Plan and the Lab report sent by C&L Pioneer. The 4,000−gallon, 6,000−gallon and 8,000−gallon USTs were removed and 7 soil endpoint samples were taken. Soil analyticals show low VOCs concentration, but some SVOCs presented. (RJF)

3/17/2006 − Feng − Email from Shawn Healey saying that they are going to conduct soil and groundwater investigation on 3/27/2006 to 3/29/2006. Inform Glen Liu, lawyer representing C&L Pioneer (fax 718−492−5371) this coming activity. (RJF)

3/30/2006 − Feng − Sam from C&L called and said he kept the gate opened but nobody from Tyree showed up. Contacted Shawn Healey and he mentioned they had problems with their dirller. Reschedule to 4/21/−4/23/2006.

4/4/2006 − Feng − Called from Glen Liu and stated that C&L would start ground breaking this month, and they got all the permits for construction. But they will hold up one week for Tyree to do the investigation. (RJF)

4/5/2006 − Feng − Sent letter to developer recommened do not proceed construction until an RAP approved by DEC and warning the developer would be jointly liable for remediation of soil and groundwater contamination. cc to Shawn Healey and Glen Liu. Glen Liu called and he would advise the developer to hold up the construction and asked for a specific date that Tyree would do the investigation. Tyree schedule it on 4/11−4/12. (RJF)

4/6/2006 − Feng − Requested the workplan from Tyree. (RJF)

4/10/2006 − Feng − Received siteplan with the sampling location on. Tyree proposed 4 soil/groundwater samples. DEC added two more soil/groundwater samples in addition to the four Tyree proposed, one from the former tank field where the highest endpoint samples found during the tank closure in 12/1999, and one from the former pump island. Emailed siteplan to Shawn Healey. (RJF)

4/11/2006 − Feng − Email from Shawn Healey We attempted to install 6 soil borings, we had refusal at every boring. Refusal ranged from 20' to 30' bls, never encountering groundwater. The site will be fully excavated tomorrow. We will attempt to collect samples at the bottom of the excavation. If these samples come back clean, we may be able to rule out there being groundwater contamination.

It appears they are excavating 10−12 feet bls. Out of six borings only one showed deflection on the PID. We did collect one sample from two different borings. (sample depth 25' to 30' bls).

4/13/2006 − Feng − Sam Chen returned call and saying that they are installing the vapor barrier beneath the foundation. C&L has excavated part of the property already. Sam Chen agreed to wait for the lab result before construction. Feng emailed the DOH link for vapor barrier requirement to Sam Chen and asked him to check with his architect to make sure the one they designed is vapor barrier and will be installed properly. Feng also suggested don't pour the foundation before we know what's beneath the site. (RJF)

5/10/2006 − Feng − Subsurface Investigation Report, 4/2006, submitted by Tyree. On 4/11/2006, Tyree attempted 6 borings on site within the vicinity of the former USTs. All were refused at various deths. Groundwater was not encountered. SB−1A, refused at 19'. SB−1B, refused at 19'. SB−2, refused at 30', sample collected at 24'−28' and lab analyticals show low. SB−3, refused at 30', sample collected at 24'−28' and lab results show low. SB−4, refused at 24'. and SB−6, refused at 15'. Tyree also collect soil samples from the sidewalls of the excavation in the eastern portion of the property. Samples from Southwest and East wall show high C−18 and C−20. Southwest wall, 20,600 ppb Benzo(a)anthracene, 21,600 ppb Chrysene, 18,200 ppb Benzo(b)fluoranthene, 15,800 ppb Benzo(k)fluoranthene, 18,800 ppb Benzo(a)pyrene, 1,780 ppb Dibenzo(a,h)anthracene. East wall, 21,100ppb Benzo(a)anthracene, 21,700 ppb Chrysene, 18,000 ppb Benzo(b)fluoranthene, 15,200 ppb Benzo(k)fluoranthene, 19,500 ppb Benzo(a)pyrene, 2,670 ppb Dibenzo(a,h)anthracene.

Further excavation is warranted in the southwest and east. Soil samples will be required upon finish excavation. (RJF)

5/15/2006 − Feng − FOIL requst for Tyree's Site Investigation report, dated 4/2006. from Glen Liu (C&L's lawyer). Fax him the FOIL form (212−226−0835). (RJF)

5/15/2006 − Feng − Received FOIL request and gave the form to Robert Leung for FOIL #. Email Glen Liu the pdf file. (RJF)

6/1/2006 − Feng − Call from Glen Liu state that the foundation was poured in part of the property. The former tanks area hasn't touched yet. (RJF)

6/2/2006 − Feng − Stipulation Agreement sent to both Getty Marketing and C&L Pioneer. DEC also request to have a meeting with both RP's. STIP due 6/23/2006. (RJF)

6/7/2006 − Feng − Call from Glen Liu stating that the site is ready to sample. I inform Shawn Healey from Tyree.

6/8/2006 − Feng − Email from Shawn Healey stating that they have approval from Getty Marketing to collect samples. Will be onsite either today or tomorrow. (RJF)

6/9/2006 − Feng − Site visite conducted by DEC staff Sun and Feng. The footing was constructed in the east portion of the property. Soil was excavating in the former tank area. Called Sam Chen requiring construction detail and signing the STIP sent

previously. (RJF)

6/27/2006 − Feng − Called the architect who work for C&L for the construction detail. Sent the FOIL form to Glen Liu and remind him that DEC is still waiting for the construction detail and the STIP. (RJF)

6/28/2006 − Feng − Email from Glen Liu and stating that they want to know the investigation result before he can advise his client on the STIP. (RJF)

6/29/2006 − Feng − Updated Subsurface Investigation Report, 6/28/2006. Tyree collected 3 sidewall soil samples (about 5' bg) and 1 bottom sample (10' bg) from the excavation in the west portion of the property. No VOCs detected in the samples, but some SVOCs exceedance. Called Shawn Healey, soil excavation has been extended further to the sidewalk than as the time when first round of endpoint samples were taken in May 2006. Discussed with Joe Sun, installation of vapor barrier would be required. (RJF)

6/30/2006 − Feng − Received the construction detail and subslab design from the developer's architect. 4 mil of vapor barrier is proposed to be install between the gravel layer and the concrete slab and will extend to the foundation wall. Called architect and developer and required a thicker vapor barrier. (RJF)

7/14/2006 − Feng − Received construction drawing from the developer's architect. 8 mil vapor barrier extend to foundation wall is proposed. Approved the vapor barrier.

Spill closed for the reasons of: 1) no VOCs detected in endpoint samples, only SVOCs exceedance. 2) further site excavation has been done, which would remove the contaminated soil found during the first round of endpoint samples and no further excavation would be possible. 3) the water table is greater than 30' bg, 6 attempts to collect groundwater has been made and all got refusal. Soil sample collected in 24'−28' showed non−detected or low contamination, so groundwater is assumed to be not contaminated. 5) installation of vapor barrier. NFA issued to Getty Marketing and C&L. (RJF)

CALLER STATES THERE IS A FORMER GASOLINE STATION AND NOW IT IS DISCOVERED THAT THERE IS GAS LEAK FROM ONE OF THE TANKS. 20 YDS OF SOIL HAVE BEEN STOCK PILED SO FAR. ALL SOIL IS GOING TO BE REMOVED

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL This spill case was reassigned from DEC (Sigona) to Rommel on

01/07/2004.

06/05/2001 Zhao contacted Rick Spadalik at 1:45pm. 6 (550 gal) gasoline tanks and 1 (550 gal) waste oil tank were pulled out yesterday and found contamination soil which has been stock piled. Tanks were encased in concrete with concrete pad at bottom of tanks. American Environmental will possibly perform site assessment and will clean up site. At this time, DEC did not receive tank removal notification.

09/20/2001 Tank closure report from AEAC was received on 08/31.

10/15/2005 Called Russel Cararo (718−499−2121) but did not receive callback. Talked with Dan Hershberger at American Envt'l − he said that no further work was done at site by American Envt'l after tank removal. − Bishop

10/30/06 Reassigned from Bishop to Sun. (MS)

12/18/06 Sun sent letter to Russel Cascardo (4001 2nd Ave Inc.) at 4001 2nd Ave, Brooklyn, on 12/14/06 requiring that the following be submitted to the NYSDEC by 1/14/07:

ˆTo rectify this problem, a letter report asserting a cause of the release and summarizing the cleanup activities, observations, post−excavation sampling results (if necessary), and also including contaminated material disposal manifests or any other documentation (i.e. invoices, bills, etc.) of cleanup activities must be submitted to this office by January 14th, 2007, referencing the spill case number (see above) and the site address.˜ (JS/MS)

3/1/07: Second letter sent (same as above) to be submitted by 4/2/07. (JS/MS)

8/6/07: All letters are being returned. Will try ACRIS to identify RP and address and if not successful, will visit the site. (JS/MS)

8/14/07: Sun/Sellberg sent another letter to Russel Cascardo (4001 2nd Ave Inc.) at P.O. Box 200825, Brooklyn, on 8/13/07 requiring the same as above be submitted to the NYSDEC by 9/17/07. This address was found on public property documents found on ACRIS website as well as Property Shark. (JS/MS)

9/18/07: Mr. Cascardo hand delivered TCR. Slight exceedences in soil samples however, no GW sample was collected even though it was noted to have a slight petrol−like odor. Will require collection of GW sample from within middle of former tank excavation area. (JS/MS)

9/28/07: Mr Cascardo believes that a sample had been collected during a seperate field inspection. MS said he had 2 weeks to submit documentation proving this. If he cannot locate report, he understands he will have to conduct another sampling event. (JS/MS)

04/07/08: 2nd SIR letter send. Due 5/2/308. (JS/MM)

05/05/08: Zeb Youngman from PW Grosser called to notify the Department that PWG would be the consultant. Waiting for signed proposal and payment from Cascardo. (JS/MM)

06/18/08: Reviewing Subsurface Investigation/Spill Closure report. 3 MTBE hot spots (JS/MM)

07/02/08: Install 3 additional MW, implement groundwater monitoring program for a minimum of at least one year. (JS/MM)

08/05/08: Transferred to Kolleeny/Mandac. − JK

10/15/08: PWGrosser was not given permission to install additional wells by owner (JK/MM)

01/06/09: Spoke with Z. Youngman (PWGC), no work conducted on−site. Still needs permission from RP to move forward. Will need to send RP a letter. (JK/KG).

01/07/09: Letter sent to Russell Cascardo requesting work plan for supplemental subsurface investigation (3 wells to be installed and quarterly GW monitoring program implemented). SSIWP due 02/06/09. Letter sent via certified/return receipt mail. Return receipt rec'd (letter signed for on 1/12/09). (JK/KG)

01/12/09: Rec'd phone call from Zeb Youngman stating he had been given permission from RP to proceed with work. PWGC will submit the work plan. Four monitoring wells will be installed; 2 in the former UST area, 1 upgradient and 1 downgradient of the former USTs. (JK/KG)

01/20/09: Rec'd Monitoring Well Installation / Groundwater Monitoring Work Plan dated 01/19/09 from PWGC − under review. (JK/KG)

01/21/09: Work Plan reviewed. The scope of work includes installation of four monitoring wells, a groundwater elevation survey,

collection of groundwater samples quarterly for one year, and submission of quarterly groundwater monitoring reports to NYSDEC. The work plan was approved with one modification; soil samples from each well location must be collected and submitted for analysis of VOCs. Approval letter mailed to RP and emailed to PWGC. The first QMR is due 3/27/09.(JK/KG)

02/23/09: On 1/27/09 rec'd phone call from Youngman stating well installation was scheduled for 2/4/09. (JK/KG)

03/11/09: Rec'd Monitoring Well Installation/First Quarter Groundwater Monitoring Report dated 03/10/09 prepared by PWGC. Under review. (JK/KG)

03/12/09: Four monitoring wells were installed on 2/4/09. Groundwater samples were collected on 2/27/09. Monitoring well MW−2 revealed soil and groundwater contamination. Letter sent to Russell Cascardo approving PWGC's recommendation to continue with quarterly monitoring and reporting. If contamination levels do not decline significantly after 2 additional monitoring events a proposal for an active remedial approach will be necessary.

Soil: MW−1, MW−3, MW−4: All VOCs non−detect or below RSCOs MW−2: 1,2,4−Trimethylbenzene 24,300 ug/kg, 1,3,5−Trimethylbenzene 6,970 ug/kg, m&p xylene 9,400 ug/kg, n−propylbenzene 2,230 ug/kg Groundwater: MW−1: MTBE (33.2 ug/L) MW−2: Total VOCs (6,465.5 ug/L), Benzene (96.3 ug/L), Ethylbenzene (1,190 ug/L), m&p−Xylene (4,000 ug/L), MW−3: MTBE (30.2 ug/L) MW−4: MTBE (1.17 ug/L) (JK/KG)

05/19/09; Rec'd a message from Zeb Youngman stating that the next quarterly monitoring event will be performed next week. (JK/KG)

06/15/09: Rec'd Second Quarter Groundwater Monitoring Report dated 6/15/09 from PW Grosser. MW−1, 2, 3, and 4 were sampled on 5/26/09. Groundwater flow direction is to the west. Text states it is easterly, although the site plan and contours indicated it is to the west. Notified PWGC of discrepancy. Groundwater: MW−1: Total VOCs (46.5 ug/L), MTBE (21.2 ug/L), Benzene (1 ug/L), m&p−Xylene (24.3 ug/L) MW−2: Total VOCs (5,057 ug/L), Benzene (165 ug/L), Ethylbenzene (1,629 ug/L), m&p−Xylene (2,340 ug/L) MW−3: MTBE 40.5 ug/L MW−4: All VOCs non−detect (JK/KG)

06/17/09: Rec'd hard copy of QMR as well as pdf of report with correction to the groundwater flow direction on page 2. Groundwater flow is westerly. (JK/KG)

08/27/09: Rec'd Third Quarter Groundwater Monitoring Report dated 8/26/09 from PW Grosser. MW−1, 2, 3, and 4 were sampled on 8/21/09. PW Grosser recommends continued quarterly monitoring and reporting.

Groundwater: MW−1: Total VOCs (28.8 ug/L), MTBE (28 ug/L) MW−2: Total VOCs (2,259 ug/L), Benzene (111 ug/L), Ethylbenzene (1,020 ug/L), m&p−Xylene (642 ug/L) MW−3: MTBE 140 ug/L MW−4: 1,2,4−Trimethylbenzene (1.01 ug/L)

This site should be re−evaluated for closure or further action after next QMR is submitted. Work plan submitted in 01/2009 approved quarterly monitoring for one year. (JK/KG)

11/3/09 Spill case transferred from J. Kolleeny to J.A. Maisonave. − JAM

11/4/09 Spoke to Zeb Youngman. He will submit latest GW monitoring results. − JAM

12/15/09 Reviewed Fourth Quarter Groundwater Monitoring Rpt submitted by P.W Grosser Consulting (PWGC) dated December 3, 2009. Four on−site monitoring wells were sampled on Nov. 23, 2009. Sample results show total VOC concentration of 1,250 ug/L in MW−2 (decrease in Total VOCs in well MW−2 for 4th round in a row), MTBE concentrations of 18ug/L and 170ug/L in wells MW−1 and MW−3, respectively, and VOCs were below the detection limit in well MW−4 for the fourth round in a row. MW−4 is the most downgradient well, directly downgradient from well MW−2. PWGC states that the contamination seems to be localized to the former UST area around MW−2 and is not migrating off−site. The area is primarily industrial and there is very little exposure risk. They requested spill closure. Report uploaded to eDocs.

I issued a letter today stating that the spill cannot be closed at this time and that one more round of groundwater sampling should be conducted. If contaminant levels continue to decline, PWGC should perform a sensitive receptor survey to demonstrate that the residual contamination poses no threat to human health or the environment. If contaminant levels increase, then additional remedial action may be required. Letter uploaded to eDocs. − JAM

2/23/10 Received a call from Zeb Youngman yesterday. He emailed me the lab data for the last monitoring event, which showed an increase in VOC concentrations (double) in well MW−2. I issued an email and suggested that groundwater monitoring continue and a remedy should be proposed to expedite spill closure. A groundwater monitoring report will be submitted. − JAM

6/9/10 Reviewed the 1st and 2nd Quarter Groundwater Monitoring Reports submitted by P.W Grosser Consulting (PWGC) dated Feb 22, 2010 and May 28, 2010, respectively. Groundwater monitoring was conducted on February 16, 2010 and May 21, 2010. Total VOCs in well MW−2 increased from 1250ug/L in November 2009 to 2523ug/L in February 2010 to 3319ug/L in May 2010. Wells MW−1 and MW−3 have MTBE with concentrations of 5ug/L and 55ug/L, respectively. Well MW−4, which is located directly down−gradient of well MW−2, had ND levels of VOCs.

PWG recommend performing one more round of groundwater sampling and if VOC concentrations increase, then the will propose either chemical oxidation or enhanced bioremediation by injecting ORC. Reports are uploaded to eDocs. − JAM

8/26/10 Reviewed 3rd Quarter Groundwater Monitoring Rpt submitted by P.W Grosser Consulting (PWGC) dated Aug 23, 2010. Groundwater monitoring was conducted on Aug 20, 2010. Total VOCs in well MW−2 decreased slightly from 3,319 ug/L in May 2010 to 3,027 ug/L in Aug 2010. Wells MW−1 and MW−3 showed increase in MTBE with concentrations of 35 ug/L and 373 ug/L, resp. Well MW−4, which is located directly down−gradient of well MW−2, had ND levels of VOCs.

PWG recommend continuing groundwater sampling. Reports are uploaded to eDocs. − JAM

12/03/10: This spill case transferred from J. Maisonave to J. Kolleeny. Changed spill priority rank to P2, since GW monitoring is being performed. Received hard copy of 4th Quarter 2010 GW Mon Rpt by PW Grosser, dated 11/30/10; sent an email to Zeb Youngman of PWG requesting pdf file of rpt; he sent pdf file by email same day, in eDocs. Will review. − JK

01/04/11: Reviewed GW Monitoring Rpt − Fourth Quarter 2010 by PW Grosser Consulting, dated 11/30/10, received 12/3/10 (in eDocs). Rpt presents results of Nov. 2010 GW sampling event showing decreases in contam in several wells: MW−2 had total VOCs of 1,203 ug/L, down from 3,027 ug/L in Aug. 2010; MW−3 had 286 ug/L tVOCs, down from 373 ug/L in Aug. 2010; MW−1 had 25 ug/L tVOCs, down from 35 ug/L in Aug. 2010. Well down−gradient of worst well (MW−2), MW−4, had only minor exceedance for xylene (6 ug/L). PW Grosser recommends spill closure. I sent letter (in eDocs) to Mr. Russell Cascardo (Fleetrecovery@yahoo.com), cc to Zeb Youngman of PW Grosser, saying spill cannot be closed yet, requesting one or two more sampling events of wells MW−2 and MW−4 to confirm downward trend toward levels acceptable for closure. − JK

03/01/11: Reviewed GW Monitoring Rpt − 1st Quarter 2011 by PW Grosser Consulting, dated 2/22/11 (in eDocs). Rpt presents results of GW samples collected on 2/16/11 from wells MW−2 and MW−4, as requested in my 1/4/11 letter. Data show MW−2 had 1,193 ug/L total VOCs, down slightly from 1,203 ug/L in Nov. 2010; MW−4 was ND. PW Grosser notes that contam is not migrating off−site, and requests spill closure. I sent email (in eDocs) to Mr. Russell Cascardo, cc to Zeb Youngman of PW Grosser, stating that although contam levels appear stable and not migrating, overall levels are too high for spill closure; said DEC requires that GW monitoring (i.e., sampling of MW−2 & MW−4, gauging of all wells) continue until contam levels decrease toward concentrations appropriate for spill closure, and said if contam does not decline further by natural attenuation, some remedial action may be needed. − J. Kolleeny

06/01/11: Received & reviewed GW Monitoring Rpt − 2nd Quarter 2011 by PW Grosser Consulting, dated 5/31/11 (in eDocs). Rpt presents resulkts of GW gauging/sampling on 5/23/11, showing increases in contam in wells MW−2 and MW−3: MW−2 had 2,462 ug/L total VOCs (up from 1,193 ug/L in Feb. 2011) and MW−3 had 769 ug/L tVOCs (up from 286 ug/L when last sampled in Nov. 2010). PW Grosser recommended continued quarterly monitoring of wells MW−2 & MW−4 to document decreasing trend in VOC concentrations and obtain spill closure. I sent email (in eDocs) to RP, Russell Cascardo, stating that quarterly gauging of all 4 site wells and quarterly sampling of MW−2, MW−3 and MW−4, should continue, noting that fluctuating VOC levels may indicate presence of residual soil contam acting as ongoing source, and that if VOC levels remain elevated or increase, remedial action may be needed to move spill toward closure. − JK

12/09/11: Sent email to Zeb Youngman of PW Grosser: Hi Zeb, I was wondering if you have any updated information regarding this spill site? Was 3rd quarter 2011 GW sampling performed? Please let me know. Zeb sent reply: 3rd quarter was not performed. I had spoken to property owner in July about potential chemox/ORC injections to close spill file. He told me to hold off on everything. I then sent email to Mr. Russell Cascardo of Fleet Recovery (RP), cc to Zeb Youngman: Dear Mr. Cascardo: In reviewing my files, I realized that I have not received a monitoring rpt for 3rd quarter of 2011 for this spill site. I contacted consultant who had been working on this project (P.W. Grosser) and was informed that all work at site has been discontinued, at your direction. As I explained in email below, sent on June 1, 2011, latest available GW data for site show levels of dissolved contamination that are too high for spill closure, and data over last several sampling events do not demonstrate a clear downward trend in contaminant levels indicative of ongoing natural attenuation processes that might bring about timely spill closure. Addt'l GW monitoring is required, and if contaminant levels do not decrease, remedial actions may be necessary to expedite cleanup of spill case. DEC requires that GW monitoring (sampling and gauging of wells) resume immediately and that a rpt with up−to−date GW quality data be submitted by no later than Jan. 13, 2012. Rpt should include recommendations for further action as appropriate, based on data. Failure to comply with this requirement may result in referral of this spill case to our Office of General Counsel to initiate an enforcement action. Please confirm your receipt of this email, and feel free to contact me if you have any questions. Later that day, received email from RP, Russell Cascardo: Thank you for update, there must be a mix up, I never told anyone at that company to stop testing, I will notify them on Monday to start testing again, thank you. − JK

12/13/11: Received email from Zeb Youngman of P.W. Grosser: Jon, I have spoke with Mr. Cascardo and there had been some miscommunication on my end. We will resume monitoring program immediately. − J. Kolleeny

01/09/12: On 1/3/12, received email from Derek Ersbak of P.W. Grosser with attached pdf file of GW Monitoring Rpt for December 2011 (in eDocs). December 2011 GW data show total VOCs in well MW−2 decreased from 2,462 ug/L in May 2011 to 1,246 ug/L. GW flow map shows more northerly flow direction than previous rpts, which showed GW flow to NW. Rpt recommends spill closure. I sent email to Zeb Youngman of P.W. Grosser, cc's to Russell Cascardo of Fleet Recovery (RP) and Derek Ersbak of P.W. Grosser: I've looked over GW Monitoring Rpt for Dec. 2011 for this site. Rpt notes that total VOCs in well MW−2 (only well with significant

residual GW impacts) decreased from 2,462 ug/L in May 2011 to 1,246 ug/L in Dec. 2011. Rpt says that based on continuing downward trend of VOCs in MW−2 and fact that there are no impacts in down−gradient well MW−4, P.W. Grosser recommends spill closure. I am glad to see decrease in well MW−2, but I don't agree that this represents continuing downward trend. It's true that Dec. 2011 result was lower than May 2011 result, but samples for two events before May 2011 event, collected in Nov. 2010 and Feb. 2011, both had total VOCs of ~1,200 ug/L. In fact, latest result of 1,246 ug/L (Dec. 2011) can be seen as return to levels seen in Nov. 2009, when total VOCs in MW−2 were 1,250 ug/L. In other words, it seems to me that contamination in MW−2 has plateau−ed at ~1,200 ug/L, with occasional spikes up to 2,000−3,000 ug/L. I consider total VOCs of 1,200 ug/L to be too high to consider spill closure, especially in absence of clear downward trend. Also, GW flow contours for latest sampling event do not show MW−4 as being directly down−gradient of MW−2, but suggest potential gap in down−gradient well coverage, since MW−4 is northwest of MW−2 but latest contours indicate GW flow more directly to north. I have following suggestions for helping to move this spill case toward closure:

1. For next sampling event, re−develop well MW−2 before collecting samples and see if result is lower.

2. Apply chemical oxidant to area of MW−2 using several temporary injection points advanced immediately up−gradient of well, and continue GW monitoring to see if there is improvement.

3. Excavate well MW−2 and soil in its immediate vicinity (with collection of post−ex end−point soil samples), to remove potential residual soil contam which is keeping VOC levels in that well elevated, then backfill area, replace well and conduct follow−up monitoring to see if there is improvement.

It's my understanding that, although significant amount of contam soil was dug out at time of UST removal at site, GW contam was observed during tank pull (sheen and odors), but no actual GW remediation has been performed to date. Therefore, it may be appropriate to consider implementing suggestion 2 or 3. Of course, I am open to other remedial recommendations you might have. Feel free to contact me with any questions or comments. − J. Kolleeny

03/26/12: On 3/20/12, received CD with GW Mon Rpt for March 2012 by P.W. Grosser Consulting, Inc., dated 3/19/12 (in eDocs). Rpt presents GW data for 3/2/12 sampling event, plus historical data. March 2012 results show contaminant levels in worst well, MW−2, decreased significantly, with 254 ug/L total VOCs (down from 1,246 ug/L in Dec. 2011). Well MW−3 had 173 ug/L tVOCs (up from ND in Dec. 2011, but below 769 ug/L in May 2011 and 286 ug/L in Nov. 2010. Down−gradient well MW−4 was ND, consistent with earlier rounds showing ND or only traces of VOCs. PW Grosser concludes that GW contam is not migrating off−site and will naturally degrade over time. They recommend one more round of GW sampling in June 2012 to confirm that contaminant levels are remaining stable and confined to site, and suggest that request for spill closure be reconsidered based on results of June 2012 sampling. On 3/26/12, I sent email (in eDocs) to RP, Russell Cascardo, cc's to Derek Ersbak, James Rhodes and Bryan Devaux of PW Grosser, agreeing with this recommendation. − J. Kolleeny

06/20/12: Reviewed GW Monitoring Rpt − June 2012 by P.W. Grosser Consulting, Inc., dated 6/18/12 (in eDocs). Rpt presents results of GW sampling performed on 6/5/12, plus historical GW sampling data. Worst well, MW−2, had 1,230 ug/L total VOCs, up from 245 ug/L in March 2012 but consistent with Dec. 2011 result of 1,246 ug/L tVOCs. Well MW−3 had 14 ug/L MTBE, down from 173 ug/L MTBE in March 2012. Down−gradient well MW−4 was ND. PW Grosser concludes that residual contam is not migrating off site, contam has decreased from higher levels found when wells were first installed & sampled, and residual contam will naturally degrade over time. In addition, down−gradient properties are manufacturing−industrial, not residential − no schools, hospitals, day care ctrs, etc. Based on all these factors, PW Grosser recommends spill closure. I discussed with my supervisor Vadim Brevdo, and decided to close spill case. Issued spill closure letter (in eDocs) to RP Russell Cascardo, with cc's to Derek Ersbak, James

Rhodes and Bryan Devaux of PW Grosser. − J. Kolleeny

SPILL CASE TRANSFERRED TO I. ISLAM

6/1/05− SSIP and Addendum to SSIP were submitted by Ballard Engg. back in 1998. Soil samples from soil borings (mostly within 4' bgs) exceeded NYSDEC guidance values for VOCs, SVOCs and some TCLP metals, and Ballard Engg. recommended for installing three GW monitoring wells around the tank field as well. Subsequently, Shaw Envtl.& PMS Costn. Mgmt. took over the site and reviewed the DDC files under FOIL request in Jan/05. In a letter, dt. May 25/05 Shaw Envtl. stated the site history from FOIL review, requested DDC for a copy of SSIP prepared by Ballard Engg. and concluded for a site inspection, installation of monitoring wells, gauging the wells, monitoring for free−phase and sampling for the TAGM 4046 target list of VOCs and SVOCs. In fact, Shaw Envtl. & PMS so far did nothing physically at this site. However, talked to Mr. Jerry Aliberti, Proj. Mgr. at NYCDDC and advised for resuming further investigation at the site for both soil and GW in the light of Ballard's recommendation asap.− II.

07/31/06: Transferred to S.Kraszewski. − SK

10/27/06 Spill case transferred from S. Kraszewski to J. Maisonave. − JAM

11−10−2010 The spill was transferred from J. Maisonave to Alex Zhitomirsky, as per V. Brevdo/J. Kolleeny. AZ

10−20−2011 Reviewed Site Specific Investigation Plan submitted in Septemebr 2011. The plan suggested installation of 3 monitoring wells and 3 monitoring norings. The following e−mail was sent to S. Frank, V. Brevdo and F. Ashkan:

Dear Steve,

I have reviewed the Site Specific Investigation Plan (SSIP) for this site submitted in September 2011. The following changes should be made in the plan:

1. All borings should be finished as wells. 2. Borings should be advanced near fuel dispensers, fill ports and lines. 3.

Existing tank inventory should match the existing PBS records. If there are any discrepancies they should be corrected. Correct information should be submitted to the DEC PBS Section. 3. If contamination is found, LiRo should study the feasibility of the tanks removal.

Modified SSIP should be implemented without delay.

The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on− and off−site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work.

3−20−2013 The following e−mail was sent to S. Frank/V. Brevdo/F. Ashkan:

Dear Steve,

I have reviewed an investigation summary report dated November 29, 2012.

The report stated that six soil borings were completed as wells at the site. Soil sample results indicated no exceedances. One of the six groundwater samples reported p−Isopropytoluene of 28 ppb, above the criteria of 5 ppb for this compound. Based on results of the soil and groundwater sampling, LiRo recommended closure of this spill number.

Based on this information, spill number 9701133 is closed. All wells associated with these spills should be properly abandoned. Prior to the abandonment all wells should be checked for presence of free phase product.

The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to:

I. The off−site migration of petroleum contaminants that was not addressed by this evaluation.

II. Environmental conditions related to the Site which were unknown to the Department at the time of this approval.

III. Information received, in whole or in part, after the Department’s spill case closure, which indicates that the corrective action was not sufficiently protective of human health for the reasonably anticipated use(s) of the site; or

IV. Fraud in obtaining this approval for inactivation.

Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use. The Department’s files regarding this release may not be maintained indefinitely.

Sincerely, Alexander Zhitomirsky

Caller Remarks:

1 GALLON LEAKING FROM TRANSFORMER INVAULT. CLEAN UP PENDING. NO WATERWAYS AFFECTED. e2MIS # 155376.

DEC Investigator Remarks:

155376

Employee REPORTS FOUND 1 GALLON UNKNOWN OIL ON 150 GALLONS WATER IN TM60. FOUND WHILE SHOOTING FAULT ON FEEDER 8B88. ACCOUNT # C3. NO FIRE OR SMOKE . NO PRIVATE PROPERTY AFFECTED. NO INJURIES. NO SEWERS OR WATERWAYS APPEAR TO BE AFFECTED. IT APPEARS TO BE CONTAINED TO STRUCTURE. TOOK SAMPLE. CLEANUP PENDING RESULTS. PLACED ENVIROMENTAL STOP TAG # 40669. THIS IS ON THE COMPANY'S 24 HOUR DIMINIMIS PROGRAM. CHAIN OF CUSTODY # IS DD18520.

Update. THE TRANSFORMER FAILED THE PRESSURE TEST AND IS LEAKING FROM THE BOTTOM . THE OIL IN THE STRUCTURE CAME FROM THE TRANSFORMER. ROSADO WILL KEEP THE CREW ON LOCATION UNTIL THE TANKER ARRIVES TO DRAIN THE STRUCTURE AND THE UNIT. TRANSFORMER TO BE REPLACED BEFORE THE FINAL CLEANUP. ALSO DUE TO TRANSFORMER BEING REPLACED, THIS INCIDENT WILL BE TAKEN OFF THE 24 HOUR PROGRAM DUE TO TIME CONSTRAINTS.

Lab Sequence Number: 04−07334−001: TOTAL PCB 20 ppm

UPDATE 9/16/04 02:33 HRS ENV OPS A. GLODOWSKI REPORTS AN UNDER 50 TANKER REMOVED 500 GAL OF LIQUID, THE STRUCTURE WAS DOUBLE WASHED WITH BULLDOG, ALL DEBRIS PICKED UP WITH THE VACTOR, NO SUMPS WERE FOUND, ENV TAG LEFT IN PLACE PENDING REMOVAL OF UNIT.

UPDATE 16−SEP−2004 09:45 HRS. BQ&E SPLICER W.THORNGREN EMP# 14916 REPORTS: ASTORIA TANKER REMOVED 685 GAL'S OF LIQUID FROM UNIT. UNIT CAPACITY IS LISTED AS 575 GAL'S THEREFORE 110 GAL'S OVER UNIT CAPACITY WAS REMOVED FROM UNIT. MR.THORNGREN BELIEVES THE UNIT−CONTAINED WATER DUE TO THE HOLE IN THE UNIT.

UPDATE 16−SEP−2004 17:05 HRS. ENVIR. OPER J.DELAROSA EMP# 19655 REPORTS: NETWORKS REMOVED UNIT FROM STRUCTURE. DBL. WASHED STRUCTURE WITH BIO−GEN 760 & BLUE SOAP. NO SUMP IN STRUCTURE. ENVIR. TAG# 40669 REMOVED. CLEANUP COMPLETE 100%.

unable to reach a GSA contact. Possible remediation under 94−07229.

Previous note by RDDECAND on 3/15/06

Spill transferred back to R−2

3/5/08 − Austin − Assigned to Ketani for further investigation − end

3/13/08 − Raphael Ketani. I began working on the case. Spill number 93−12153 was monitored by a former spills worker, Kerri O'Dowd. She didn't put in any case notes into the database. The spill was a 200 gal. overfill. It happened because someone had the wrong tank size. DEP was contacted at 10:30AM and GSA arrived at 2:15PM. Sand and Speedi Dri were applied to the spill. The case was closed on 1/15/94. The site address is 850 3rd Avenue, Brklyn. (29 St. & 3rd Ave.).

Case 94−07229 was managed by Kerri O'Dowd. There were no case notes. Contaminated soil was discovered and was being removed as it was being excavated. She closed the case on 3/29/95.

3/17/08 − Raphael Ketani. A copy of the original August 1993 Site Characterization Report was found in the file cabinet. It was produced by Woodward−Clyde Consultants, Inc. It was prepared for Rose, Beaton & Rose, Architects and Engineers, 81 Main Street, Brooklyn (212) 926−2878/(212) 594−2118.

According to the soil analytical tables in the report, there was no significant contamination. Table 4−2 for the groundwater samples didn't list any significant contamination, either. There was a fold out site map which showed the locations of the six formerly active tanks.

The PBS case is #2−601672. It shows that six tanks were closed in place on either 8/1/94 or 9/1/94. Four other tanks were installed on 9/1/94. Tank #7 is in service and tanks #8 to #10 are temporarily out of service.

A note in the file that I did find said that there were records in the open file section of the storage area downstairs. I

checked the file storage room, but found nothing. I also asked around in the Division of Environmental Remediation, but no one had heard of the case for the site.

I checked the E−docs and found the following:

The E−docs contained a transmittal letter dated 8/10/93 stating that this was the second revision of th Site Characterization Report. An estimated 2050 cu. yds of soil will be excavated and an additional 450 cu. yds. of oil contaminated soil. Tanks #3 and #4 are scheduled to be removed, along with an 1100 gal. tank. Two 20,000 gal. tanks will be abandoned in place. Groundwater remediation is not necessary based upon the analytical results. A second round of groundwater sampling will take place August 1993.000

The parties involved are: Woodward−Clyde Consultants (212) 594−2118

Roy Feinzig (914) 682−4895, Rose, Beaton & Rose, Architects and Engineers, 81 Main Street, White Plains, NY, 10601

Charles Evans (718) 330−7474, Federal Building Manager, General Services Administration, Public Buildings Service, Contract Section, 26 Federal Plaza, rm. 1611, NY, 10278; GS0wP94CUC0055

A 10/4/93 E−doc note from Ms. O'Dowd states that they will install 3 new USTs. There are 6 USTs on site: 5 fuel oil (4 20,000 gal. tanks, 1 1100 gal. tank); 1 20,000 gal. gas tank. Groundwater is at 5.5' to 8.5' below grade. Nine soil borings will be done and 5 monitoring wells will be installed. MW−3G is in the area for the new UST. Groundwater is at 6' and dewatering will have to take place in order to install the new tank. USTs #3 and #4 are impacted. Fuel contaminated soil will have to be removed.

A 8/9/93 E−doc note from Ms. O'Dowd states that MW−1 has no VOC hits

MW−2 has less than 5 ppb

MW−3G has hexane 5.8 ppb, ethylbenzene <50 ppb, xylene ,50 ppb

MW−6 has 3 ppb of hexane

MW−9 has no VOCs

There was a 10/18/94 letter from Environmental Data Consultants to the GSA requesting well installation locations and regarding the NYCFD and NYC Building Department violations. Environmental Data Consultants, Inc., 55 Alder Street, Ste 2, South Yonkers, NY, 10701, (914) 968−1508. Dewatering took place to install the new tanks, but a SPDES permit wasn't needed as the discharge rate was below the permit lower limit and the water wasn't contaminated. Soil samples need to be taken at all of the closed tanks and the PBS record needs to be updated.

The 9/6/94 E−doc note states that there is 2 to 3 of oil in MW−3G. USTs #3 to #5 are to be removed. Wells MW−3 and MW−6 need to be replaced as they were destroyed. Many of the hits in Table 1 of the analyses summary table also appear in the blanks. So these analytes can be negated.

I tried to contact Charles Evans, but the phone number was not in service. I tried to reach Environmental Data Consultants, but

the phone number was not in service. I tried to reach Rose, Beaton & Rose, but the phone number belonged to another company. I tried to reach Woodward−Clyde, but the phone number belonged to another company.

3/18/08 − Raphael Ketani. I found a later case from 1999 for the same site − #9908767. It involves the test failure of three 30,000 gal. tanks. Contact people were listed on the spill report. They are: Steve Ferman (718) 340−5268, at the site; John Harris (718) 965−5147 of the General Services Administration; and Tom Burke (212) 264−0800 of the General Services Administration, Technical Services, 26 Federal Plaza, rm. 1611, NY.

I tried to contact Mr. Burke, but could only leave a message. I tried to contact Mr. Harris, but no one picked up. I tried to contact Mr. Ferman, but the number was no longer in service.

William (Bill) De Nyse (de−nice), Senior Industrial Hygienist, (212) 264−0506 called to ask what DEC had in the way of reports and documentation for the spill case. I told him we had the August 1993 Site Characterization Report that was produced by Woodward−Clyde, a Second Revision SCR and some small letters. He asked that DEC provide him the reports as he doesn't have them. He added that he was the contact person at the GSA and that he will try to help get the case closed. Mr. De Nyse asked what should happen if he can't find the closure reports. I told him that DEC will ask that a new investigation take place. I made copies of the reports and sent them to him.

4/11/08 − Raphael Ketani. I tried to contact Mr. De Nyse, but could only leave a message. His phone greeting said that he will be out until 4/21/08. I will try him then.

6/10/08 − Raphael Ketani. I tried to contact Mr. De Nyse, but could only leave a message.

I got ahold of Mr. Burke. He said that right now they are putting the contract out for bid. He said it will take some time in order to get a contractor lined up and get the investigation started. I told him to keep me updated. He added that Mr. De Nyse is the point of contact.

6/12/08 − Raphael Ketani. Mr. De Nyse called back. He said he is the regional engineer and the project is now being handled by a field (local) engineer at the site. The person is Rashid Mattoo (718) 254−7141 at 10 Metro Tech, Brklyn. Mr. De Nyse said that Mr. Mattoo is the contact person from now on. He added that right now they are trying to get funding to do the investigation. They have a scope of work, also.

8/12/08 − Raphael Ketani. I tried to contact Mr. Mattoo regarding the site investigation, but could only leave a message.

Mr. Burke called me back. He said that the contractor has been chosen and they expect to go to contract next week. He added that they will start in a week or two.

8/18/08 − Raphael Ketani. The case is being prepared for transfer due to a case realignment within the unit. The new case manager should probably call Mr. Mattoo or Mr. De Nyse in a week or two to find out the status of the investigation.

Caller Remarks:

School under construction; underground tank was hit. Tank was emptied and removed, as well as contaminated soil. Area was backfilled and end point sample was taken from excavation.

DEC Investigator Remarks:

03/12/07−Hiralkumar Patel. spoke with Mr. Sharma. they were hired by contractor who is working at school construction site. site owned by NYC shcool authority. during construction activities, they hit underground tank and punched hole in it. as per Mr. Sharma, tank was about 1000 gal capacity and had about 800 gal diesel in it. spill started about 7:30 am and Mr. Sharma reached with crew for cleanup about 10 am. they have removed underground diesel tank and removed associated contaminated soil. they dug about two ft below tank invert. excavation was backfilled with five endpoint sample taken. asked Mr. Sharma to submit site plan with sampling locations, disposal manifests and sample analyticals.

03/27/07−Hiralkumar Patel. received call from Amy Fonpana (845−492−3178). they are preaparing closure report and will send by 04/15/07.

04/24/07−Hiralkumar Patel. spoke with Ms. Fonpana. they are still waiting for some disposal manifests and other documents. she will send report soon.

06/19/07−Hiralkumar Patel. left message for Ms. Fonpana. 06/26/07−Hiralkumar Patel. received message from Ms. Fonpana. they are still working on−site and waiting for some documents. will send report once they get all documents.

06/27/07−Hiralkumar Patel. Mr. Sharma reported another spill at same site. (new spill #: 0703584). they did borings on property along 34th street and found soil and groundwater contamination. Mr. Sharma mentioned that site had multiple tanks. asked Mr. Sharma to send all analytical data (for all samples done on−site till date) and detailed scaled site map with all sampling

locations, tank locations and associated lines. also asked Mr. Sharma to send copy of phase I and phase II reports.

06/28/07−Hiralkumar Patel. meet Bob Kanaparthi and Drew Pardus from NYC SCA and Michael Sherwood from Shaw environmental. Mr. Sherwood mentioned that school construction site is combination of two sites known as large parcel and small parcel. received phase I and Phase II reports from Mr. Sherwood.

abstract of Phase I:

− the site is located in mixed commercial/residential area on the corner of 4th ave and 35th street − previous occupants of the site included private residences, a stationer, tool manufacturing facility, a garage and candy manufacturing. − large parcel of site had 5000 gal tank and history of spills (9210902, 9605304, 9211737) − site is approx. 20 ft above mean sea level − BASED ON phase II investigations conducted by Weston for the McDonalds restaurant site located at 968 4th ave, the depth of groundwater is approx. 37 ft bg and groundwater flow direction is to the northeast. <−−−−−−−−−−− − major spill sites in neighbourhood:

1. Greenwood Cemetery (Spill #s: 8710384, 8710694, 8902953, 9413808). all spill closed

2. Jackie Gleason Bus Depot (Spill #s: 9106350, 9507015, 9705882, 9803068, 9902851, 9908589, 0211807, 0402205, 0413523, 0702197)

3. 971−975 4th ave (spill #: 9207015). groundwater contamination reported <−−−−−−

4. Mobile service station, 89−14 4th ave (Spill #s: 0430002, 0330037, 8302631) reported groundwater contamination <−−−−−−−−−−

5. 987 4th AVe (spill #: 8706481). found groundwater contamination.

abstract of Phase II report:

− proposed design for school includes construction to a depth of approx. 18 ft bg − depth of groundwater was found to range from between 14 and 24 ft bg − total of 13 soil samples (LPB−1 to LPB−8, SPB−2,5,6,7 and 8) and 7 groundwater samples (LPB−1W, 5W and 8W, SPB−5,6,7 and 8)were collected for analysis − found heavy Tricholorethene (160,000 ppb) contamination in groundwater sample SPB−5 <−−−−−− − as found heavy TCE contamination in groundwater sample, did suplemental phase II − collected two soil sample from two borings (close to previous boring location SPB−5) and three groundwater sample from same two borings on−site and four groundwater sample from two off−site borings − also took 6 sub−slab soil−gas samples, because of heavy TCE contamination − found no contamination in any soil, groundwater or soil−gas samples during supplemental phase II investigation

Bob Kanaparthi NYC SCA Ph. (718) 472−8620

Drew Pardus NYC SCA Ph. (718) 752−5036 (O)

(646) 577−8280 (C)

during meeting Mr. Kanaparthi mentioned following: − entire site has been excavated to depth of 16 ft and groundwater is about two more feet deeper than existing excavation bottom. − during excavation, they removed total of five USTs (one 2000 gal fuel oil/diesel tank, one 1000 gal sugary mix tank, one 5000 gal tank, one 100 gal tank and one 1000 gal tank). − found contaminated soil around some tanks and has been removed − endpoint samples taken from contaminated zones − currently footing work for proposed building is going on at site − during construction found sheen on groundwater and gasoline odor − took groundwater samples from two different locations − found minor benzene (58 ppb) contamination in groundwate sample GW−1, along 35th street <−−− − there will be two elevator pits, partially merged in groundwater − to work on elevator pit, they need to dewater those areas − due to high concentration of TCE in groundwater sample during first set of sampling, they will put vapor barrier and active SSDS under BASEMENT floor

asked Mr. Pardus to do following:
