Calculations for Construction Vibration

$PPV_{equioment} = PPV_{ref} * (25/D)^{1.5}$

where:

PPV_{equip} is the peak particle velocity in in/sec of the equipment at the receiver location

PPV_{ref} is the reference vibration level in in/sec at 25 feet

D is the distance from the equipment to the received location in feet

Equipment		PPVr	Criterion PPV	Impact Distance (ft)	PPVe
Pile Driver (Impact)	upper rang	1.518	0.5	50	0.5
Pile Driver (sonic)	upper rang	0.734	0.5	33	0.5
Clam Shovel Drop (slurry wall)		0.202	0.5	13	0.5
Vibratory Roller		0.210	0.5	15	0.5
Hoe Ram/Large Bulldozer/Caisson Drilling		0.089	0.5	8	0.5
Loaded Truck		0.076	0.5	8	0.5
Jackhammer		0.035	0.5	5	0.5

Calculations for Construction Ground-Boren Vibration

Lv(D) = Lv(25ft) - 30 log(D/25)

where:

L_v(D) is the vibration level in VdB of the equipment at the receiver location

L_v(ref) is the reference vibration level in VdB at 25 feet

D is the distance from the equipment to the receiver location in feet

Equipment		Lv(25ft)	Criterion PPV	Impact Distance (ft)	PPVe
Pile Driver (Impact)	upper rang	112	65	900	65
Pile Driver (sonic)	upper rang	105	65	550	65
Clam Shovel Drop (slurry wall)		94	65	230	65
Vibratory Roller		94	65	230	65
Hoe Ram/Large Bulldozer/Caisson Drilling		87	65	140	65
Loaded Truck		86	65	125	65
Jackhammer		79	65	75	65

Worst case

Appendix E-10: Bleecker Building Alternate Phasing Scenario Open Space Assessment

Upon completion of the Bleecker Building, there could be a population introduced by the Proposed Actions prior to the completion of the new open spaces surrounding the proposed Zipper Building (e.g., Toddler Playground and Greene Street Walk), and when the Zipper Building commences construction activities, several existing publicly accessible open spaces would be displaced (see **Figure E-10-1**). Overall, construction activities associated with the proposed Zipper Building would displace approximately 0.352 acres of publicly accessible open space (0.09 acres passive, 0.262 acres active). By 2016, NYU would introduce the Temporary LaGuardia Landscape Play Area, the Bleecker Seating Area, and the Temporary Mercer Plaza, which collectively would include approximately 0.783 acres of publicly accessible open space, for a net gain of approximately 0.431 acres of publicly accessible open space (a 0.504-acre increase in publicly accessible passive open space, and a 0.073-acre decrease in publicly accessible active space).

As described in Chapter 20, "Construction," during the construction of the Zipper Building, all construction engines would be located away from the west side of the construction site, so as to maintain a buffer from residential buildings and open spaces west of the Zipper Building, to the extent practicable. The results of the Phase 1 air quality analysis—which represented worst-case conditions during the construction of the Zipper Building—showed that construction activities during this phase would not result in any significant adverse air quality impacts at any sensitive receptors, which included areas such as public and private open spaces directly adjacent to construction activities.

During construction of the Zipper Building, there would be no temporary significant adverse noise impacts at any publicly accessible open spaces.

In terms of potential indirect open space effects under this scenario, as shown in **Table E-10-1**, while the active open space ratio in the residential study area would decrease by 0.9 percent during construction of the proposed Zipper Building, all other open space ratios would improve slightly as compared to future conditions without the Proposed Actions (between 1.7 and 3.8 percent increases). Therefore, during the first phase of construction, as existing open spaces are displaced to accommodate the temporary gym, Zipper Building, and project open spaces, the Proposed Actions would slightly improve passive open space ratios both in the residential and non-residential study areas, and result in a temporary decrease in the active open space ratio within the residential study area. According to the *CEQR Technical Manual*, in areas that are extremely lacking in open space, a reduction of open space ratios as small as 1 percent may be considered significant, as it may result in overburdening existing facilities or further exacerbating a deficiency in open space. Given that the Proposed Actions would not reduce the active open space ratio by 1 percent, the reduction would not be considered a significant adverse impact.

Table E-10-1
Open Space Ratios During Zipper Building Construction
(After Completion of Bleecker Building)

Ratio	DCP Guideline	Existing Ratio	Future Without the Proposed Project Ratio	Future With the Proposed Project Ratio	Percent Change (Future With vs. Future Without)
Non-Residential Study Area					
Passive/non-residents	0.15	0.101	0.097	0.100	3.5%
Passive/total population	0.23	0.076	0.073	0.076	3.8%
Residential Study Area					
Total/residents	2.5	0.243	0.229	0.233	1.7%
Passive/residents	0.5	0.138	0.129	0.134	3.7%
Active/residents	2.0	0.106	0.100	0.099	-0.9%
Passive/total population*	0.27	0.048	0.046	0.048	3.7%

Note:
* Weighted average combining 0.15 acres per 1,000 non-residents and 0.50 acres per 1,000 residents. Non-residents typically use passive spaces; therefore, for the non-residential study area, only passive open space ratios are calculated. For the residential study area, active, passive, and total park space ratios are calculated.
