Appendix H

Potential Modifications under Consideration by the New York City City Planning Commission (CPC)

(Appendix H is new to the FEIS)

Appendix H-1: Shadows with the Potential CPC Modifications*

A. INTRODUCTION

This appendix presents estimates the percentage of shadow coverage on project-generated open spaces in the future with the Potential CPC Modifications. The results of this analysis are very similar to the results presented in Appendix G, which analyzed the percent of shadow coverage on project-generated open spaces with the Proposed Actions.

For several of the project-generated open spaces, the analysis results were exactly the same with the Potential CPC Modifications as compared to the Proposed Actions. These spaces included three of the four project-generated open spaces on the South Block, and the Mercer Entry Plaza and LaGuardia Entry Plaza on the North Block. For the percentage coverage on those open spaces, see Appendix G.

The following five project-generated open spaces experience slight reductions in percent shadow coverage at certain time periods with the Proposed Modifications:

- Tricycle Garden (North Block)
- Public Lawn and Philosophy Garden (North Block)
- Washington Square Village Play Garden (North Block)
- LaGuardia Play Garden (North Block)
- Bleecker Seating Area (South Block)

As in Appendix G, the shadow coverage is estimated for each half-hour increment during the representative analysis days recommended under CEQR. Where the percentage coverage was slightly reduced as compared with the Proposed Actions, the entry for that time increment is in bold type. The shadow coverage estimates include all shadows that would occur in the Future with the Potential CPC Modifications—i.e., those shadows cast by the proposed project's buildings, as well as shadows cast by existing buildings. This cumulative information does not present the incremental project shadows as is done under CEQR as part of Chapter 6, "Shadows," and therefore is not used to determine the potential for significant shadow impacts. Rather, it provides additional information for characterizing the quality of the proposed project's open spaces for purposes of the open space assessment contained in Chapter 26, "Potential CPC Modifications Under Consideration by the CPC."

* Appendix H-1 is new to the FEIS.

Appendix H2-E: Bleecker Building Alternate Phasing Scenario
Open Space Assessment: Potential CPC Modifications

Upon completion of the Bleecker Building, as with the Proposed Actions, there could be a population introduced prior to the completion of the new open spaces surrounding the proposed Zipper Building. As compared to the Proposed Actions, the Proposed CPC Modification's Bleecker Building would not include a residential population, and the non-residential population associated with the building would be slightly less than the Proposed Actions. Therefore, as shown in **Table H2-E1**, under this scenario the open space ratios for the ¼-mile non-residential and ½-mile residential study area would be slightly improved as compared to the Proposed Actions. As with the Proposed Actions, during the first phase of construction, as new project-generated publicly accessible open spaces become available and as existing open spaces are displaced to accommodate the Zipper Building, the Potential CPC Modifications would slightly improve passive open space ratios both in the residential and non-residential study areas, and as with the Proposed Actions, would result in a temporary decrease in the active open space ratio within the residential study area, albeit to a slightly lesser extent (a 0.7 percent decrease with the Potential CPC Modifications, as compared to a 0.9 percent decrease with the Proposed Actions). According to the *CEQR Technical Manual*, in areas that are extremely lacking in open space, a reduction of open space ratios as small as 1 percent may be considered significant, as it may result in overburdening existing facilities or further exacerbating a deficiency in open space. Given that the Potential CPC Modifications would not reduce the active open space ratio by 1 percent, as with the Proposed Actions, the reduction would not be considered a significant adverse impact.

Table H2-E1
Open Space Ratios During Zipper Building Construction
(After Completion of Bleecker Building)
Potential CPC Modifications

Ratio	DCP Guideline	Existing Ratio	No Build Condition	Future With the Proposed Project Modifications	Percent Change (Future With vs. Future Without the Potential CPC Modifications)	Future With the Proposed Actions Ratio/Percent Change vs. No Build
Non-Residential Study Area						
Passive/non-residents	0.15	0.101	0.097	0.100	3.6%	0.100/3.5%
Passive/total population	0.23	0.076	0.073	0.076	4.0%	0.076/3.8%
Residential Study Area						
Total/residents	2.5	0.243	0.229	0.233	1.9%	0.233/1.7%
Passive/residents	0.5	0.138	0.129	0.134	3.9%	0.134/3.7%
Active/residents	2.0	0.106	0.100	0.099	-0.7%	0.099/-0.9%
Passive/total population*	0.27	0.048	0.046	0.048	3.8%	0.048/3.7%

Note:
* Weighted average combining 0.15 acres per 1,000 non-residents and 0.50 acres per 1,000 residents. Non-residents typically use passive spaces; therefore, for the non-residential study area, only passive open space ratios are calculated. For the residential study area, active, passive, and total park space ratios are calculated.

Appendix H3
Alternative Quantified Open Space Assessment
Potential CPC Modifications

A. INTRODUCTION

This appendix section presents an alternative quantified assessment of the potential for significant adverse open space impacts with the Potential CPC Modifications for the 2021 (Phase 1) analysis year, and for full operations of the Potential CPC Modifications in 2031 (Phase 2) assuming that the following resources are publicly accessible passive open spaces:

Table H3-1
Additional Resources Assumed to be Publicly Accessible Passive Open Spaces
For Purposes of this Alternative Quantified Open Space Assessment

Fig 5-2 Map Letter	Name	Estimated SF/Acres	Agency with Jurisdiction	Condition	Features/Comments
A	LaGuardia Landscape	19,955/0.46*	NYCDOT	Good	Landscaping, paths, statue of LaGuardia. No formal or informal seating areas.
I		3,582/0.08*	NYCDOT		Landscaping that is separated from the sidewalk and adjacent Mercer Street Playground by tall fencing.
L_1, L_2, L_3	Bleecker Street Strip	8,320/0.19*	NYCDPR	Excellent	Landscaping, flowers, trees. Segments L1 and L2 include trees and landscaping within fenced-in areas (not publicly accessible); segment L3 (north of Coles Gym) includes flowers and trees and is not fenced.
Notes:	* Denotes open space acreage estimates based on survey data from Langan Engineering.				
Sources:	AKRF field visits conducted in November 2010 and May and June 2011; Langan Engineering.				

These resources are not considered quantitatively in the baseline assessment presented in Chapter 5, "Open Space," or in the open space analysis that is part of Chapter 26, "Potential CPC Modifications Under Consideration by the CPC," because they do not present "usable recreational areas" as defined by CEQR. All other analytical assumptions used in this alternative analysis are the same as described in Chapter 5.

As compared to the Proposed Actions, the existing conditions and future without the Proposed Actions (the "No Build condition") would be the same with the Potential CPC Modifications. Please see Appendix A for descriptions of the existing and No Build conditions under this alternative quantified assessment.

B. PRINCIPAL CONCLUSIONS

This alternative quantified open space analysis finds that as with the Proposed Actions, the Potential CPC Modifications would not result in significant adverse quantified impacts in the 2021 or 2031 analysis years.

As with the Proposed Actions, by 2021, even when accounting for the increased demands associated with the proposed project, all open space ratios would remain virtually the same as compared to No Build conditions (all changes in open space ratios would be less than 1 percent).

As compared to the Proposed Actions, under this alternative quantified analysis there would be slightly improved ratios for the both the non-residential and residential study areas with the Potential CPC Modifications, given its slightly reduced project-generated populations. As with the Proposed Actions, with the Potential CPC Modifications by 2031, all of the open space ratios would improve as compared to No Build conditions. Some of the improvements would be substantial; most notable are the approximately 17 percent increases in the open space ratios within the ¼-mile non-residential study area, compared to approximately 16 percent increases with the Proposed Actions.

C. FUTURE WITH THE POTENTIAL CPC MODIFICATIONS

The future With-Action assessment analyzes conditions in the study areas for the build years with the Potential CPC Modifications, i.e., 2021 (Phase 1) and 2031 (Phase 2).

2021 PHASE 1

ADEQUACY OF OPEN SPACES – QUANTIFIED INDIRECT EFFECTS ANALYSIS

Non-residential Study Area

Under RWCDS 1, the number of non-residents in the non-residential study area is forecast to increase to 98,066 and the total amount of publicly accessible open space is expected to increase to 14.81 acres, of which an estimated 4.66 acres would be active open space and 10.15 acres would be passive open space. As shown in **Table H3-2**, by 2021 the ratio of passive open space per 1,000 non-residents would be 0.104, which is below the City's guideline of 0.15 acres, but would be slightly greater than the 0.103 ratio in the No Build condition by 2021. For the combined residential and non-residential population, the passive open space ratio would be 0.079 acres per 1,000 people, which is much lower than the recommended weighted average ratio of 0.25 acres per 1,000 residents and workers, but would be slightly higher as compared to the 0.078 ratio for the future without the Proposed Actions by 2021.

Residential Study Area

The combined residential and non-residential passive open space ratio within the residential study area would be 0.048 acres per 1,000 residents and non-residents, which is much lower than the recommended weighted average ratio of 0.27 acres per 1,000 residents and workers, but would be virtually the same as the 0.048 ratio in the No Build condition. The active open space ratio would be 0.100 acres per 1,000 residents, which is notably less than the City's planning guideline of 2.0 acres per 1,000 residents, but is nearly the same as the 0.100 ratio in the No Build condition. The total open space ratio would be 0.236 acres per 1,000 residents, which is well below the City's planning guideline of 2.5 acres per 1,000 residents, but would be slightly higher than the total open space ratio in the No Build condition.

Overall, with the Potential CPC Modifications by 2021 all open space ratios would remain constant as compared to No Build conditions (between no change and 0.7 percent increases). As compared to the Proposed Actions, under this alternative quantified analysis there would be slightly improved ratios for the both the non-residential and residential study areas, given the slightly reduced project-generated populations with the Potential CPC Modifications. In particular, unlike the Proposed Actions, with the Potential CPC Modifications there would be no reduction in the active open space ratio for the residential study area because the Potential CPC Modifications would not be introducing the residential (dormitory) population as part of the proposed Bleecker Building. As with the Proposed Actions, when accounting for the displacement of public and private playground areas within the Proposed Development Area, by 2021 the Potential

CPC Modifications would result in a 0.18-acre net increase in the total amount of playground space within the Proposed Development Area.

As shown in **Table H3-2,** as with the Proposed Actions, even when accounting for the increased demands associated with the development on the South Block, all open space ratios would remain virtually the same as compared to No Build conditions. Therefore, as with the Proposed Actions, by 2021 the Potential CPC Modifications would not result in any quantified significant adverse open space impacts.

Table H3-2
2021 Open Space Ratios Summary
Potential CPC Modifications—Alternative Quantified Assessment

Ratio	DCP Guideline	Existing Ratio	Future No Build Condition	Future With the Potential CPC Modifications Ratio	Percent Change (Future With Modifications vs. No Build)	Future With the Proposed Actions Ratio/Percent Change vs. No Build
Non-Residential Study Area						
Passive/non-residents	0.15	0.109	0.103	0.104	0.4%	0.103/0.3%
Passive/total population	0.23*	0.082	0.078	0.079	0.7%	0.079/0.4%
Residential Study Area						
Total/residents	2.5	0.251	0.235	0.236	0.3%	0.235/0.1%
Passive/residents	0.5	0.145	0.135	0.136	0.4%	0.135/0.3%
Active/residents	2.0	0.106	0.100	0.100	0.0%	0.100/-0.2%
Passive/total population	0.27*	0.051	0.048	0.048	0.7%	0.048/0.6%

Note:
* Weighted average combining 0.15 acres per 1,000 non-residents and 0.50 acres per 1,000 residents. Non-residents typically use passive spaces; therefore, for the non-residential study area, only passive open space ratios are calculated. For the residential study area, active, passive, and total park space ratios are calculated.

2031 PHASE 2

ADEQUACY OF OPEN SPACES – QUANTIFIED INDIRECT EFFECTS ANALYSIS

Non-residential Study Area

Under RWCDS 1, by 2031 the number of non-residents in the non-residential study area is forecast to increase to 102,260 persons, and the total amount of publicly accessible open space is expected to increase to 17.18 acres, of which 5.15 acres would be active open space and 12.03 acres would be passive. In 2031, the ratio of passive open space per 1,000 non-residents would be approximately 0.118, substantially improving on conditions as compared to the No Build condition, and slightly improving conditions as compared to the Proposed Actions, but still falling below the City's guideline of 0.15 acres (see **Table H3-3**). For the combined residential and non-residential population, the passive open space ratio would be 0.090 acres per 1,000 people, which is also a substantial improvement as compared to No Build conditions and a slight improvement as compared to the Proposed Actions, but would still fall below the recommended weighted average ratio of 0.23 acres per 1,000 residents and workers.

Residential Study Area

The combined residential and non-residential passive open space ratio within the residential study area would be 0.055 acres per 1,000 residents and non-residents, which is a substantial improvement as compared to No Build conditions and a slight improvement as compared to the Proposed Actions, but would still fall below the recommended weighted average ratio of 0.27 acres per 1,000 residents and workers. The active open space ratio would be 0.105 acres per 1,000

residents, which is notably less than the City's planning guideline of 2.0 acres per 1,000 residents, but an improvement for the study area as compared to No Build conditions in 2031. As with the Proposed Actions, when accounting for the displacement of public and private playground areas within the Proposed Development Area, by 2031 the proposed project would result in a 0.06-acre net increase in the total amount of playground space within the Proposed Development Area.

Table H3-3
2031 Open Space Ratios Summary
Potential CPC Modifications—Alternative Quantified Assessment

Ratio	DCP Guideline	Existing Ratio	Future No Build Condition	Future With the Potential CPC Modifications Ratio	Percent Change (Future With Modifications vs. No Build)	Future With the Proposed Actions Ratio/Percent Change vs. No Build
Non-Residential Study Area						
Passive/non-residents	0.15	0.109	0.100	0.118	17.4%	0.117/16.6%
Passive/total population	0.23*	0.082	0.077	0.090	17.0%	0.089/16.2%
Residential Study Area						
Total/residents	2.5	0.251	0.235	0.259	10.0%	0.258/9.8%
Passive/residents	0.5	0.145	0.135	0.154	13.9%	0.154/13.7%
Active/residents	2.0	0.106	0.100	0.105	4.8%	0.105/4.6%
Passive/total population	0.27*	0.051	0.048	0.055	14.4%	0.054/14.1%

Note:
* Weighted average combining 0.15 acres per 1,000 non-residents and 0.50 acres per 1,000 residents. Non-residents typically use passive spaces; therefore, for the non-residential study area, only passive open space ratios are calculated. For the residential study area, active, passive, and total park space ratios are calculated.

As shown in **Table H3-3**, as with the Proposed Actions, even when accounting for the increased open space demands of the Potential CPC Modifications' project-generated population, all of the open space ratios would improve as compared to No Build conditions. Some of the improvements would be substantial; most notably the approximately 17 percent increases in the open space ratios within the ¼-mile non-residential study area, as compared to approximately 16 percent improvements with the Proposed Actions. Therefore, as with the Proposed Actions, by 2031 the Potential CPC Modifications Actions would not result in any quantified significant adverse open space impacts. ✷
