**Re: Project Commodore
109 East 42nd Street
Block 1280, Lots 1, 30, 54, and 154
CEQR # 21DCP057M**

Dear Ms. Glass:

The New York City Department of Environmental Protection, Bureau of Sustainability (DEP) has reviewed the April 2021 Environmental Assessment Statement Hazardous Materials Chapter prepared by VHB, the January 2021 Phase I Environmental Site Assessment (Phase I) the February 2021 Phase II Summary Letter Report (Phase II) and the March 2021 Remedial Action Plan (RAP) and Construction Health and Safety Plan (CHASP) prepared by Roux Environmental Engineering and Geology, D.P.C. on behalf of Commodore Owner LLC (applicant) for the above referenced project. It is our understanding that the applicant is seeking several discretionary approvals from the New York City Department of City Planning (DCP) including special permits and zoning text amendments to facilitate a mixed-use development on Block 1280, Lot 30 (Development Site) containing approximately 2,108,820 gross square feet (gsf) of office space; an approximately 452,950 gsf, 500-room hotel; an approximately 16,000 square feet (sf) publicly accessible space; and approximately 43,370 gsf of retail on the cellar, ground, and second floors of the proposed building (Proposed Project). The Development Site currently contains the Grand Hyatt Hotel. The existing building is located directly above the Grand Central – 42nd Street subway station and Metropolitan Transportation Authority (MTA) Metro-North Railroad (MNR) tracks below grade. The Development Site is located immediately east of the Beaux Arts-style Grand Central Terminal on Block 1280, Lot 1. The building is immediately to the south of the Grand Central Market (Market) on Block 1280, Lots 54 and 154. The Terminal and Market are located on an existing merged zoning lot (Lots 1, 54, and 154) and contain approximately 322,664 sf of floor area. The MTA controls Lots 1, 54, and 154 as well as ground-floor and mezzanine-level circulation areas located on the Development Site. The Project Area—comprising the existing hotel, Terminal, and Market on Block 1280, Lots 1, 30, 54, and 154—has a combined area of 203,872 sf. In addition, a number of on- and off-site transit and public realm improvements would be introduced to enhance passenger circulation conditions at the 42nd Street – Grand Central

subway station. These improvements include the redesign and expansion of Fare Control Areas R238 and R238A, a new transit hall on the western side of the Development Site, a redesign of the FCA R240 area, removal of girders from the subway mezzanine level, and a “Short Loop Connection” construction to provide direct access for MNR and Long Island Railroad from Grand Central Terminal to the subway. The below-grade mezzanine level would continue to contain the existing subway station and rail station areas, with significant improvements. The ground floor would contain the hotel lobby and office lobby, a reconstructed Lexington Passage and MTA retail located along the passage, an approximately 6,350 sf Transit Hall (includes approximately 4,200 sf on Lot 30 and an additional approximately 1,200 sf of Transit Hall connections), and approximately 2,400 sf of additional area for subway entries off 42nd Street and Lexington Avenue. The hotel lobby would be located on the eastern frontage on Lexington Avenue, while the office lobby would be accessed from East 42nd Street. The second floor would contain office lobby and two open-air publicly accessible spaces, one of which would front on Lexington Avenue and one of which would face the eastern façade of Grand Central at the level of the Park Avenue Viaduct. Office space is planned to be located on floors 7-63, and the hotel on floors 65-83.

The January 2021 Phase I report revealed that historical on-site and surrounding area land uses consisted of a variety of residential and commercial uses including a hospital, stables, a hotel, an energy plant, a bank, a bakery, storefronts, apartments, offices, etc. Regulatory databases identified 59 spills, 5 E-Designation sites, 1 historical cleaner and 6 historical auto sites within 1/8 mile; 10 underground storage tank sites, 5 dry cleaners and 69 aboveground storage tank sites within 1/4 mile; 91 leaking storage tank sites within a 1/2 mile; and 4 manufactured gas plants within 1 mile of the subject property.

During the October and November 2020 fieldwork, 7 test pits were advanced to a maximum depth of 12 feet below grade surface (bgs). 10 soil samples and 3 soil vapor samples were collected. One surficial sample ranging from 0-2 feet bgs and one deeper sample were collected from the test pits. Groundwater was not observed above in the overburden as part of the field activities. Soil samples were analyzed for Target Compound List (TCL) volatile organic compounds (VOCs) by United States Environmental Protection Agency (EPA) Method 8260, TCL semivolatile organic compounds (SVOCs) by EPA Method 8270, pesticides by EPA Method 8081, polychlorinated biphenyls by EPA Method 8082, Target Analyte List metals plus mercury, hexavalent chromium, and cyanide. Soil vapor samples were analyzed for VOCs by EPA Method TO-15.

The soil analytical results revealed that one VOC (acetone), several SVOCs (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene), total PCBs, two pesticides (4,4'-DDE and 4,4'-DDT) and several metals (cadmium, chromium, copper, lead, mercury, nickel, and zinc) were detected above their New York State Department of Environmental Conservation (NYSDEC) 6 NYCRR Part 375 Unrestricted Use Soil Cleanup Objectives (SCOs), Restricted Residential Use SCOs, Commercial Use SCOs and/or Industrial Use SCOs.

The soil vapor analytical results revealed that several VOCs (1,2,4-trimethylbenzene, 2-hexanone, acetone, benzene, carbon disulfide, chloroform, chloromethane, cyclohexane,

dichlorodifluoromethane, ethanol, ethylbenzene, isopropanol, p/m-xylene, 2-butanone, n-hexane, o-xylene, styrene, tert-butyl alcohol, tetrachloroethylene, toluene, trans-1,2-dichloroethene and trichlorofluoromethane) were detected.

The March 2021 RAP proposes the excavation, transportation and off-site disposal of soil in accordance with all applicable federal, state and local regulations; if any underground storage tanks are encountered during demolition and construction activities, properly closed and/or removed in accordance with local, state, and federal laws; stockpiled soil will be covered with polyethylene sheeting; dust control; air monitoring; construction of a concrete cover system comprised of the concrete foundation slab (the areas of the Site where a cover system is not proposed do not have soil beneath the lowest level of the proposed Site building due to the presence of existing MTA or MNR infrastructure (tunnel) air space below); and installation of a minimum 20-mil vapor barrier system consisting of a Stego Wrap, Grace Florprufe or approved equal for under slab applications. The March 2021 CHASP addresses worker and community health and safety during construction.

Based upon our review of the submitted documentation, we have the following comments and recommendations to DCP:

RAP

- DCP should instruct the applicant that the manufacturer's specifications of the 20-mil Stego Wrap vapor barrier should be included in the RAP and submitted for DEP review and approval prior to installation.
- DCP should instruct the applicant that the proposed vapor barrier should be used unless an amendment is approved by DEP.
- DCP should instruct the applicant that the Community Air Monitoring Plan should be developed and implemented in accordance with the NYSDEC Division of Environmental Remediation DER-10 (May 2010), Appendix 1A - New York State Department of Health Generic Community Air Monitoring Plan (December 2009).

CHASP

- DCP should instruct the applicant to include information fact sheets and/or safety data sheets for potential contaminants of concern (VOCs, SVOCs, pesticides, PCBs, and heavy metals).
- DCP should instruct the applicant to include the names and phone numbers of the site safety personnel (i.e., Project Manager, Site Supervisor, Site Health and Safety Officer, and Alternate Site Health and Safety Officer, etc.) when they are appointed, prior to the start of any construction activities.

DEP finds the March 2021 RAP and CHASP for the proposed project acceptable as long as the aforementioned information is incorporated into the RAP and CHASP and the manufacturer's specifications of the 20-mil Stego Wrap vapor barrier is submitted for DEP review and approval

prior to installation. DCP should instruct the applicant that at the completion of the project, a Professional Engineer (P.E.) certified Remedial Closure Report should be submitted for DEP review and approval for the proposed project. The P.E. certified Remedial Closure Report should indicate that all remedial requirements have been properly implemented (i.e., transportation/disposal manifests for removal and disposal of soil in accordance with applicable local, state, and federal laws and regulations; installation of vapor barrier, etc.).

Future correspondence and submittals related to this project should include the following CEQR # **21DCP057M**. If you have any questions, you may contact Scott Davidow, P.G. at (718) 595-7716.

Sincerely,

**Re: Project Commodore
109 East 42nd Street
Block 1280, Lots 1, 30, 54, and 154
CEQR # 21DCP057M**

Dear Ms. Glass:

The New York City Department of Environmental Protection, Bureau of Sustainability (DEP) has reviewed the May 2021 Remedial Action Plan (RAP) and Construction Health and Safety Plan (CHASP) prepared by Roux Environmental Engineering and Geology, D.P.C. on behalf of Commodore Owner LLC (applicant) for the above referenced project. It is our understanding that the applicant is seeking several discretionary approvals from the New York City Department of City Planning (DCP) including special permits and zoning text amendments to facilitate a mixed-use development on Block 1280, Lot 30 (Development Site) containing approximately 2,108,820 gross square feet (gsf) of office space; an approximately 452,950 gsf, 500-room hotel; an approximately 16,000 square feet (sf) publicly accessible space; and approximately 43,370 gsf of retail on the cellar, ground, and second floors of the proposed building (Proposed Project). The Development Site currently contains the Grand Hyatt Hotel. The existing building is located directly above the Grand Central – 42nd Street subway station and Metropolitan Transportation Authority (MTA) Metro-North Railroad (MNR) tracks below grade. The Development Site is located immediately east of the Beaux Arts-style Grand Central Terminal on Block 1280, Lot 1. The building is immediately to the south of the Grand Central Market (Market) on Block 1280, Lots 54 and 154. The Terminal and Market are located on an existing merged zoning lot (Lots 1, 54, and 154) and contain approximately 322,664 sf of floor area. The MTA controls Lots 1, 54, and 154 as well as ground-floor and mezzanine-level circulation areas located on the Development Site. The Project Area—comprising the existing hotel, Terminal, and Market on Block 1280, Lots 1, 30, 54, and 154—has a combined area of 203,872 sf. In addition, a number of on- and off-site transit and public realm improvements would be introduced to enhance passenger circulation conditions at the 42nd Street – Grand Central subway station. These improvements include the redesign and expansion of Fare Control Areas R238 and R238A, a new transit hall on the western side of the Development Site, a redesign of the FCA R240 area, removal of girders

from the subway mezzanine level, and a “Short Loop Connection” construction to provide direct access for MNR and Long Island Railroad from Grand Central Terminal to the subway. The below-grade mezzanine level would continue to contain the existing subway station and rail station areas, with significant improvements. The ground floor would contain the hotel lobby and office lobby, a reconstructed Lexington Passage and MTA retail located along the passage, an approximately 6,350 sf Transit Hall (includes approximately 4,200 sf on Lot 30 and an additional approximately 1,200 sf of Transit Hall connections), and approximately 2,400 sf of additional area for subway entries off 42nd Street and Lexington Avenue. The hotel lobby would be located on the eastern frontage on Lexington Avenue, while the office lobby would be accessed from East 42nd Street. The second floor would contain office lobby and two open-air publicly accessible spaces, one of which would front on Lexington Avenue and one of which would face the eastern façade of Grand Central at the level of the Park Avenue Viaduct. Office space is planned to be located on floors 7-63, and the hotel on floors 65-83.

The May 2021 RAP proposes the excavation, transportation and off-site disposal of soil in accordance with all applicable federal, state and local regulations; if any underground storage tanks are encountered during demolition and construction activities, properly closed and/or removed in accordance with local, state, and federal laws; stockpiled soil will be covered with polyethylene sheeting; dust control; air monitoring; construction of a concrete cover system comprised of the concrete foundation slab (the areas of the Site where a cover system is not proposed do not have soil beneath the lowest level of the proposed Site building due to the presence of existing MTA or MNR infrastructure (tunnel) air space below); and installation of a minimum 20-mil vapor barrier system consisting of a Stego Wrap, Grace Florprufe or approved equal for under slab applications (If an alternative product is selected, an amendment with the new vapor barrier will be submitted to DEP. The proposed vapor barrier will only be used if the amendment is approved by DEP). The May 2021 CHASP addresses worker and community health and safety during construction.

Based upon our review of the submitted documentation, we have the following comments and recommendations to DCP:

CHASP

- DCP should instruct the applicant that Figure 1 should include a highlighted route to the nearest hospital.
- DCP should instruct the applicant to include the names and phone numbers of the site safety personnel (i.e., Project Manager, Site Supervisor, Site Health and Safety Officer, and Alternate Site Health and Safety Officer, etc.) when they are appointed, prior to the start of any construction activities.

DEP finds the May 2021 RAP and CHASP for the proposed project acceptable as long as the aforementioned information is incorporated into the CHASP. DCP should instruct the applicant that at the completion of the project, a Professional Engineer (P.E.) certified Remedial Closure Report should be submitted for DEP review and approval for the proposed project. The P.E. certified Remedial Closure Report should indicate that all remedial requirements have been

properly implemented (i.e., transportation/disposal manifests for removal and disposal of soil in accordance with applicable local, state, and federal laws and regulations; installation of vapor barrier, etc.).

Future correspondence and submittals related to this project should include the following CEQR # **21DCP057M**. If you have any questions, you may contact Scott Davidow, P.G. at (718) 595-7716.

Sincerely,

A handwritten signature in cursive script, appearing to read "Wei Yu".

EXECUTIVE SUMMARY

At the request of Commodore Owner LLC (Client and User), Roux Environmental Engineering and Geology, D.P.C. (Roux) performed a Phase I Environmental Site Assessment (ESA) of the real property identified as 109 East 42nd Street (Block 1280, Lot 30) in the Borough of Manhattan and the City and State of New York (Subject Property; Figure 1). A Subject Property Plan showing relevant features is provided as Figure 2. The Phase I ESA is intended to define the historical uses of the Subject Property and identify any potential Recognized Environmental Conditions (RECs) that could warrant further consideration, in accordance with ASTM International Standard Practice E1527-13 (Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process).

The Subject Property is improved by a 26-story building identified as the Grand Hyatt Hotel. The building is constructed of steel and glass with foundations that penetrate the Metro North Railroad (MNR) and Metropolitan Transit Authority (MTA) mezzanine and platform levels below grade. The first three levels of the building include a mezzanine area that contains the main amenity spaces of the hotel, a ground floor lobby, ballrooms, convention center spaces, and a restaurant. The remaining 23 floors contain approximately 1,300 guest rooms and 45 conference rooms. The building has three basement levels that serve as back-of-house spaces to support the day-to-day functions of the hotel. The basement was observed to be used for laundry services, storage, mechanical spaces, maintenance and porters' quarters, staff locker rooms and the security office. Based on building plans provided by the User, the second basement level (currently used for laundry services) historically included a dry-cleaning operation. The building was observed to be heated via steam utility which is provided by ConEdison. The hotel was observed to be vacant at the time of reconnaissance due to the ongoing COVID-19 pandemic. Vacant commercial spaces were located on the ground floor of the building. The building has direct access to Grand Central Station via the retail/commercial at-grade passage identified as "Lexington Passage".

The scope of this Phase I ESA covers the above-grade and basement structures associated with the Grand Hyatt Hotel, excluding the ground floor commercial and retail stores fronting East 42nd Street and Lexington Avenue. These commercial and retail stores were identified to be closed at the time of the Subject Property reconnaissance due to the ongoing COVID-19 pandemic and are not included in the scope of evaluation. The Lexington Passage and retail stores along Lexington Passage at grade are included within the scope of this Phase I ESA as they will be incorporated into the redevelopment. The Phase I ESA also includes the below grade structures associated with the MNR space beneath the Grand Hyatt Hotel as parts of this area proposed to be developed with foundation elements that will be used to support the future redevelopment. Subgrade property associated with the MTA near the intersection of East 42nd Street and Lexington Avenue is considered part of the scope of this Phase I ESA.

A review of historical sources, including historical aerial photographs, historical topographic maps, and a City Directory Abstract, as well as an interview with a Key Subject Property Representative, indicate that the Subject Property was originally developed prior to 1890 with the Warren Fuller & Co (Manufactory of Paper-Hangings) in the western portion, a hospital in the southeastern portion and multiple unspecified buildings in the northeastern portion and a structure identified as a wagon building. In approximately 1919, the former buildings were demolished, and the Subject Property was redeveloped with the 26-story Commodore Hotel. According to the Sanborn Maps, the Commodore Hotel was renovated into the Grand Hyatt Hotel between 1968 and 1980. Although the hotel changed ownership/names, the actual footprint of structures does not appear to have changed. The layout of the Subject Property described in the 1985 Sanborn Map was consistent with the structures and layout observed during the November 2020 reconnaissance.

Based on the information gathered during the Phase I ESA process, Roux has identified the following Recognized Environmental Conditions (RECs):

- Mass Transit Usage: The area upgradient to the northwest of the Site is developed with railroad/subway infrastructure associated with the MNR, including the adjoining Grand Central Terminal. Additional rail structures associated with the New York City Subway (MTA) are also noted to be present under the Subject Property; therefore, the mass transit/rail usage is considered both on-site and off-site. Railway infrastructure typically involves the usage of various hazardous substances and petroleum products in its operations including lubricants, hydraulic oil, heat resistant oils, brake fluid and other oils used in power generation. Railway infrastructure also requires electrical power conversion typically in the form of substations, which may involve the use of polychlorinated biphenyls (PCBs) in electrical transformers. Numerous New York State Department of Environmental Conservation (NYSDEC) spill listings are associated with the rail lines in this area. This spill has identified free product seeping into the nearby subway tunnels with a source unable to be identified. The spill and remediation efforts are ongoing and typically consist of cleaning up the material as it enters the subway tunnel. In addition, a sheen was observed on rainwater that had pooled between the tracks of the MNR during the Site Reconnaissance.

Roux has not identified any Historical RECs (HRECs) or Controlled RECs (CRECs) in connection with the Subject Property.

Roux has identified the following Business Environmental Risks (BERs) in connection with the Subject Property:

- Suspect Presence of Historic Fill Material: The Subject Property was historically redeveloped with the Commodore Hotel in 1919 as evidenced by Sanborn Maps and historical accounts and online resources for this time period. The redevelopment would have required demolition of the previous hospital and manufacturing related buildings present in the earlier Sanborn Maps dated 1890, 1899 and 1910. As the demolition occurred at a time where no environmental or waste management laws were enacted, there is potential for the Subject Property to be underlain by Historic Fill Material, which may contain glass, bricks, concrete, slag, ceramic and other non-native materials brought, deposited or demolished directly into the subsurface to facilitate redevelopment. The presence of this material should be considered when planning any future redevelopment requiring soil/material excavation and disposal.
- Suspect Presence Asbestos Containing Materials (ACMs): Based upon the age of construction of the current building (1919), there is potential for ACMs to be present in various pipe wrappings, joint wrappings and other building materials. The MNR and MTA mezzanine and platform levels below grade were also constructed on or before approximately 1915, with many renovations since initially built, so the potential for ACMs, including pipe insulations, tars, and electrical equipment, extends to these areas as well. The suspected presence of these materials should be considered prior to demolition of the building for redevelopment.

Roux has identified the following data gaps/data failures in connection with this Phase I ESA:

- Awaiting responses to Freedom of Information Act (FOIA) requests from the New York State Department of Health (NYSDOH) and the New York City Department of Environmental Protection (NYCDEP) pertaining to the Subject Property. Based on the records obtained and reviewed from other resources, this is not considered a significant data gap. If any pertinent information is obtained from responses to outstanding FOIA requests regarding the Subject Property, Roux will prepare a letter addendum summarizing these findings.
- Due to the current inactive and vacant nature of the Subject Property and ongoing COVID-19 pandemic, certain areas were locked, vacant and inaccessible during the Subject Property reconnaissance. Several of the commercial and retail stores along the Lexington Passage were vacant and inactive and no access was able to be provided to these areas. Additionally, the portions of the MNR subgrade area were inaccessible (storage area behind a locked wire partition). These areas were observed from the track side of the partition and appeared to be used as general back-of-house storage for the MNR operations. Areas of the MTA space that were not publicly accessible were not visually inspected. While a thorough inspection of these areas was unable to be performed,

the inaccessible areas are not considered significant data gaps as their inspection has a low probability of eliminating the transit related REC identified above.

- The commercial and retail stores that were identified to be closed at the time of the Subject Property reconnaissance due to the ongoing COVID-19 pandemic were not accessible; however, given the types of uses (food service establishments, retail shops), they are not likely to store or use significant quantities of hazardous materials or petroleum products on premises. Therefore, this data failure is not considered a significant data gap that impacts our ability to identify RECs at the Site.

1. INTRODUCTION

At the request of Commodore Owner LLC (Client and User), Roux Environmental Engineering and Geology, D.P.C. (Roux) performed a Phase I Environmental Site Assessment (ESA) of the real property identified as 109 East 42nd Street (Block 1280, Lot 30) in the Borough of Manhattan and the City and State of New York (Subject Property; Figure 1). A Subject Property Plan showing relevant features is provided as Figure 2. The Phase I ESA is intended to define the historical uses of the Subject Property and identify any potential Recognized Environmental Conditions (RECs) that could warrant further consideration, in accordance with ASTM International Standard Practice E1527-13 (Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process).

The Subject Property is improved by a 26-story building identified as the Grand Hyatt Hotel. The building is constructed of steel and glass with foundations that penetrate the Metro North Railroad (MNR) and Metropolitan Transit Authority (MTA) mezzanine and platform levels below grade. The first three levels of the building include a mezzanine area that contains the main amenity spaces of the hotel, a ground floor lobby, ballrooms, convention center spaces, and a restaurant. The remaining 23 floors contain approximately 1,300 guest rooms and 45 conference rooms. The building has three basement levels that serve as back-of-house spaces to support the day-to-day functions of the hotel. The basement was observed to be used for laundry services, storage, mechanical spaces, maintenance and porters' quarters, staff locker rooms and the security office. Based on building plans provided by the User, the second basement level (currently used for laundry services) historically included a dry-cleaning operation. The building was observed to be heated via steam utility which is provided by ConEdison. The hotel was observed to be vacant at the time of reconnaissance due to the ongoing COVID-19 pandemic. Vacant commercial spaces were located on the ground floor of the building. The building has direct access to Grand Central Station via the retail/commercial at-grade passage identified as "Lexington Passage".

The scope of this Phase I ESA covers the above-grade and basement structures associated with the Grand Hyatt Hotel, excluding the ground floor commercial and retail stores fronting East 42nd Street and Lexington Avenue. These commercial and retail stores were identified to be closed at the time of the Subject Property reconnaissance due to the ongoing COVID-19 pandemic and were not accessible; however, given the types of uses (food service establishments, retail shops), they are not likely to store or use significant quantities of hazardous materials or petroleum products on premises. The Lexington Passage and retail stores along Lexington Passage at grade are included within the scope of this Phase I ESA as they will be incorporated into the redevelopment. The Phase I ESA also includes the below grade structures associated with the MNR space beneath the Grand Hyatt Hotel as parts of this area proposed to be developed with foundation elements that will be used to support the future redevelopment. Subgrade property associated with the MTA near the intersection of East 42nd Street and Lexington Avenue is considered part of the scope of this Phase I ESA.

The Phase I ESA was conducted in accordance with the June 19, 2020 Agreement for Professional Services between Commodore Owner LLC and Roux, the scope of work presented in Roux's Proposal for Environmental Services, dated August 25, 2020, and in general accordance with the ASTM International Standard Practice E1527-13 (Standard Practice for Environmental Site Assessments), consistent with the USEPA Standards and Practices for All Appropriate Inquiries (AAI) Rule (40 CFR Part 312, Standards and Practices for All Appropriate Inquiries; Final Rule¹). The preamble for the AAI Rule states:

¹ Final Rule and information available at www.epa.gov/swerosps/bf/reqneg.htm#final_rule, and <https://federalregister.gov/a/2013-31112>.

In today's final rule, EPA is referencing the standards and practices developed by ASTM International and known as Standard E1527-05 (entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process") and recognizing the E1527-05 standard as consistent with today's final rule. The Agency determined that this voluntary consensus standard is consistent with today's final rule and is compliant with the statutory criteria for all appropriate inquiries. Persons conducting all appropriate inquiries may use the procedures included in the ASTM E1527-05 standard to comply with today's final rule.²

This AAI Rule was subsequently amended in 2013, as indicated in the following "Background":

With today's action, EPA is establishing that parties seeking liability relief under CERCLA's landowner liability protections, as well as recipients of brownfields grants for conducting site assessments, will be considered to have met the standards and practices for all appropriate inquiries, as set forth in the Brownfields Amendments to CERCLA and 40 CFR Part 312, if such parties follow the procedures provided in the ASTM E1527-13 "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process." EPA made this determination based upon the Agency's finding that the ASTM E1527-13 standard is compliant with the All Appropriate Inquiries Rule. Therefore, parties conducting all appropriate inquiries may use the procedures in the newly issued ASTM E1527-13 standard when conducting all appropriate inquiries.³

The purpose of the Phase I ESA was to identify, to the extent feasible, RECs in connection with the Subject Property. ASTM Standard Practice E1527-13 defines RECs as:

the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

ASTM Standard Practice E1527-13 provides that identified RECs can be evaluated and classified into Controlled Recognized Environmental Conditions (CRECs) or Historical Recognized Environmental Conditions (HRECs) based on the following definitions. ASTM Standard Practice E1527-13 defines a CREC as:

a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

ASTM Standard Practice E1527-13 defines a HREC as:

a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

To assess the potential for RECs associated with the Subject Property, Roux utilized a variety of informational sources to perform the Phase I ESA, including a radial information search from federal, state, and local regulatory agency databases; Freedom of Information Act (FOIA)/public records responses from federal,

² Federal Register: November 1, 2005 (Volume 70, Number 210), page 66081.

³ Federal Register: December 30, 2013 (Volume 78, Number 250).

state, and local regulatory agencies; and readily available information from the following sources: historical aerial photographs, historical topographic maps, historical Certified Sanborn Maps and a City Directory Abstract. The historical research and interviews were conducted to develop an understanding of the following:

- Current and past uses of the Subject Property;
- Current and past uses of hazardous substances and/or petroleum at the Subject Property, if any;
- Waste management and disposal practices that might have potentially caused releases or threatened releases of hazardous substances and/or petroleum products at the Subject Property;
- Current and past corrective actions and response activities undertaken to address past and ongoing releases of hazardous substances and/or petroleum products at the Subject Property, if any;
- The existence of any engineering and/or institutional controls recorded for the Subject Property; and
- Current and past uses of adjoining properties that could have resulted in releases or threatened releases of hazardous substances and/or petroleum products to the Subject Property.

Mr. Frank Cherena and Mr. Adam Nasiatka served as the Environmental Professionals who conducted this Phase I ESA. As the Environmental Professionals, Mr. Cherena and Mr. Nasiatka possess sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases (as defined in §312.1(c) on, at, in, or to a Site, sufficient to meet the objectives and performance factors in §312.20(e) and (f)). Mr. Cherena's and Mr. Nasiatka's professional profiles are provided in Appendix A.

2. METHODS OF INVESTIGATION

The methods of investigation used to conduct this Phase I ESA are outlined in the following sections.

2.1 General

The activities performed in conjunction with the Phase I ESA of the Subject Property include:

- Review of federal, state, and local environmental regulatory agency databases provided by Environmental Data Resources (EDR), Inc. of Milford, Connecticut indicating locations of environmental concern within specified radii from the Subject Property (Appendix B);
- Submission of FOIA/public records requests and inquiries to federal, state, and local regulatory agencies for the Subject Property (Appendix C);
- Review of historical information for the Subject Property and surrounding area, including aerial photographs, topographic maps, and other relevant historical information sources;
- Conducted interviews with Key Subject Property Managers; and
- Reconnaissance of the Subject Property and surrounding area.

2.2 Review of Readily Available Information

The resources compiled and reviewed by Roux to date include the following:

- EDR Radius Map with GeoCheck, dated October 2, 2020 (EDR report) (Appendix B);
- Historical Certified Sanborn Fire Insurance Maps dated 1890, 1899, 1910, 1929, 1950, 1968, 1980, 1983, 1985, 1987, 1988, 1991 through 1996 and 2001 through 2005 (Appendix D);
- Historical Aerial Photographs 1924, 1951, 1954, 1961, 1966, 1974, 1976, 1980, 1984, 1991, 1995, 2006, 2010, 2013 and 2017 (Appendix E);
- United States Geological Survey (USGS) 15 Minute Topographic Maps, Brooklyn, New York Quadrangle dated 1897, 1898 and 1900; 15 Minute Topographic Maps, Harlem, New York Quadrangle dated 1897, 1898 and 1900; 15 Minute Topographic Maps, Staten Island, New York Quadrangle dated 1898 and 1900; 15 Minute Topographic Maps, Paterson, New Jersey Quadrangle dated 1898 and 1900; 7.5 Minute Topographic Maps, Brooklyn, New York Quadrangle dated 1947, 1956, 1966, 1967, 1979, 1995, 1997, 2013 and 2014; 7.5 Minute Topographic Maps, Central Park, New York Quadrangle dated 1947, 1956, 1966, 1967, 1979, 1995, 1997, 2013 and 2014; 7.5 Minute Topographic Maps, Jersey City, New Jersey Quadrangle dated 1947, 1966, 1967, 2013 and 2014; 7.5 Minute Topographic Maps, Weehawken, New Jersey Quadrangle dated 1966, 1967, 1995, 1997 2013 and 2014 (Appendix F); and
- A search of the City Directory Abstract conducted by EDR (Appendix G).

Pursuant to ASTM E1527-13, Roux contacted and reviewed additional environmental records provided by the following agencies:

Agency	Status
United States Environmental Protection Agency (USEPA)	Online database reviewed; no records identified.
New York State Department of Environmental Conservation (NYSDEC)	Response received; no records identified.
New York State Department of Health (NYSDOH)	Acknowledgement received; no records provided.
New York City Department of Environmental Protection (NYCDEP)	Acknowledgement received; no records provided.

Agency	Status
New York City Fire Department (FDNY)	Response received; records summarized in Section 5.2.
New York City Department of Buildings (NYCDOB)	Records accessed online.
New York City Department of Finance (NYCDOF)	Records accessed online.
New York City Department of City Planning (NYCDCP)	Records accessed online.

2.3 Subject Property and Surrounding Area Reconnaissance

Pursuant to ASTM Standard Practice E1527-13, Roux conducted a reconnaissance of the Subject Property and surrounding area on November 5 and 30, 2020 to identify, investigate, and assess potential RECs and other potential environmental concerns. The reconnaissance included observation of the Subject Property, including structures and buildings, and the surrounding area to determine the current use and condition of the Subject Property, indications of past uses of the Subject Property, and current uses of adjacent and adjoining properties and the surrounding area. During the Subject Property reconnaissance, Roux placed particular emphasis on identifying the following features, if present, in accordance with ASTM E1527-13:

- Hazardous substances and petroleum products in connection with identified uses;
- Storage tanks;
- Odors;
- Pools of liquid;
- Drums;
- Hazardous substances and petroleum products containers;
- Unidentified substance containers;
- Polychlorinated biphenyls (PCBs);
- Heating and cooling systems;
- Stains or corrosion;
- Drains and sumps;
- Pits, ponds, or lagoons;
- Stained soil or pavement;
- Stressed vegetation;
- Solid waste;
- Wastewater;
- Wells; and
- Septic systems.

In addition, observation of the general topographic setting of the Subject Property was made, and inquiry was made into the source of potable water for the Subject Property and other utilities, as presented in Section 6. Photographs from the Subject Property reconnaissance are presented in Appendix H.

2.4 Interview with Key Subject Property Manager

On November 5, 2020, in conjunction with the Subject Property reconnaissance, Mr. Nasiatka interviewed Mr. Owen Haye as the Key Subject Property Representative. Mr. Haye was identified as the Assistant Director of Engineering for the Grand Hyatt. During the interview, Mr. Nasiatka asked general questions regarding the current and historical use and conditions of the Subject Property and surrounding area and inquired about specific observations made during the Subject Property reconnaissance. Pertinent information obtained during the interview is presented in appropriate sections throughout this Phase I ESA report.

2.5 User-Provided Information

As of the date of this report, Roux was not provided with any environmental reports related to the Subject Property other than the Roux letter report titled “Summary of Sub-Slab Soil Vapor Investigation” dated November 20, 2020, which is provided in Appendix I.

3. SUBJECT PROPERTY DESCRIPTION

Descriptions of the Subject Property and surrounding properties are included in the following sections. The location of the Subject Property is presented in Figure 1. The Subject Property and surrounding properties are presented in Figure 2.

3.1 Subject Property Location and Description

The Subject Property is identified by the following addresses and parcels and represents a combined area of 57,282 square feet:

- 107-129 East 42nd Street, New York, New York 10017
- 406-412 Lexington Avenue, New York, New York 10017

The Subject Property is further defined as Manhattan Block 1280 and Lot 30 and is currently occupied by the Grand Hyatt Hotel. The Grand Hyatt Hotel is currently a 26-story steel and glass building with foundations that penetrate the MTA mezzanine and platform levels below grade. The Subject Property is part of Zoning District C5-3 (Commercial) and located within the Special Midtown District and Grand Central Core District. The first three levels include a mezzanine area that contains the main amenity spaces of the hotel, a ground floor lobby, ballroom and convention center spaces (approximately 60,000 square feet) and a restaurant that overhangs the sidewalk below. The hotel holds approximately 1,300 guest rooms, 45 conference rooms and has two below grade levels for back of house spaces that provide support for the hotel day-to-day functions. The hotel basement occupies the northwest portion of the Lot 30, and it contains three sub-levels that were observed to be used for laundry services, storage, mechanical spaces, maintenance and porters' quarters, staff locker rooms and the security office. The building was observed to be heated via steam utility which is provided by ConEdison. The hotel was observed to be vacant at the time of reconnaissance, which was conducted in November 2020. Vacant commercial spaces which appeared to be formerly jewelry stores and art galleries were located on the ground floor.

Beyond the hotel basement towards the southeast, the Subject Property is improved by the MNR platform and track levels. There are two sub-levels of the MNR space. Sub-level 1 is improved by Track 100 and various back of house spaces utilized by MNR. The deeper Sub-level 2 of the MNR space is improved by the "loop" track and general storage area for MNR. The track beds were separated from the storage areas by a locked wire partition. These storage areas could not be accessed during the Site Reconnaissance, but they were observed from the track side of the partition. This area appeared to be largely used as general storage for MNR operations, and it was where the water-supplied fire suppression system and its associated piping were installed. Continuing towards the southeast beyond the MNR space, the Subject Property is improved by the MTA mezzanine and track levels for the 4, 5, 6 and 7 subway trains.

The Lexington Passageway is improved by several retail tenant spaces that were occupied by L'Occitane, Grand Central Optical, TUMI, Jet Set Candy, Aveda Experience Center, Inaya, Jacques Torres Chocolate, Café Grumpy, diptyque, M•A•C Cosmetics, and Origins. At least four of the tenant spaces (Tenant Spaces 26, 33, 34 and 37) were vacant and inaccessible during Site reconnaissance.

Access to the Subject Property is provided via East 42nd Street to the southwest and Lexington Avenue to the southeast. The Subject Property and surrounding area were inspected during the Subject Property reconnaissance. The findings of the reconnaissance are summarized in Section 6.

3.2 Current Surrounding Property Usage

The areas surrounding the Subject Property are developed with mixed-use buildings. Table 3.2 below provides details on adjoining and adjacent properties.

Table 3.2 Surrounding Property Uses	
North	Passage to Grand Central Terminal (Grand Central Market); Beyond that is a 31-Story Mixed Use Building
South	Chanin Building (Apple Bank)
East	Chrysler Building (Chase Bank/ Amazon Store)
West	Park Avenue Elevated Car Viaduct (Banana Republic at Grade below Viaduct), beyond that is Grand Central Terminal

3.3 Topographic and Hydrogeologic Setting

The grade of the Subject Property is generally level. The average elevation of the Subject Property is approximately 49 feet above mean sea level (ft amsl) as shown in the USGS 7.5 Minute Series Topographic Map (Appendix F). According to the EDR Report and National Wetlands Inventory, the Subject Property is not located in or adjacent to any wetlands. According to FEMA Flood Maps, the Subject Property is not located in the 100-year or 500-year flood zones.

A formal groundwater flow direction study has not been conducted as part of this Phase I ESA. For purposes of investigating potential migration of off-Site groundwater impacts during this Phase I ESA, the regional direction of groundwater flow in the vicinity of the Subject Property is assumed to flow towards the east-southeast in the direction of the East River. This estimation was based on regional topographic and hydrogeological features.

4. SUBJECT PROPERTY HISTORY

The historical uses of the Subject Property are discussed below.

4.1 Historical Subject Property and Surrounding Property Usage

The historical uses of the Subject Property and surrounding properties were researched by examining historical Certified Sanborn Fire Insurance Maps (Appendix D); historical aerial photographs (Appendix E); historical USGS topographic maps (Appendix F); and the City Directory Abstract (Appendix G).

4.2 Historical Certified Sanborn Fire Insurance Maps

Roux reviewed historical Certified Sanborn Fire Insurance Maps (Sanborn Maps) for the Subject Property. Table 4.5 provides a summary of the Subject Property and surrounding area from 1890 to 2005, as determined from the Certified Sanborn Fire Insurance maps, which are included as Appendix D.

Table 4.2 Certified Sanborn Fire Insurance Maps	
Date	Description
1890	<p>Subject Property: Developed with the five-story Warren Fuller & Co (Manufactory of Paper Hangings) in the western portion of the lot with unspecified stores noted below. The five-story “Hospital for the Ruptured and Crippled” is present in the southeastern corner of the lot along the intersection of Lexington Avenue and East 42nd Street. Six four-story structures – one of which is noted as a wagon building – are present along Lexington Avenue in the eastern portion of the Subject Property. Multiple unspecified structures (four-story, three-story and a two-story) are present in the northern portion of the Subject Property.</p> <p>Surrounding Area: The area to the west is developed with Grand Central Station. East 43rd Street is noted to adjoin the Subject Property to the north and beyond that is the “Adams Express Co.,” which is noted as stabling for horses and wagons on the 2nd and 3rd floors and manufacturing on the floors above that. The area to the east is developed with a hotel and multiple unspecified five-story structures. The area to the south is developed with the Grand Union Hotel, a car house, and the Manhattan Storage & Warehouse Co.</p>
1899	<p>Subject Property: The 1899 Sanborn Map appears to be generally the same as the 1890 Sanborn Map, except the hospital is noted to expand northward and include five-story portions where the previous four-story structures were.</p> <p>Surrounding Area: The 1899 Sanborn Map appears to be generally the same as the 1890 Sanborn Map, except the building to the north across East 43rd Street is now noted as the “Grand Central Palace of Industry” and is noted to contain an auditorium.</p>
1910	<p>Subject Property: The 1910 Sanborn Map appears to be generally the same as the 1899 Sanborn Map, except the manufacturing operation in the western portion of the Subject Property is unspecified. Additionally, the hospital is identified to have an Independent Energy Plant (IEP) in the eastern central portion of the Subject Property.</p> <p>Surrounding Area: The 1910 Sanborn Map appears to be generally the same as the 1899 Sanborn Map, except the hotel to the southeast is noted as the Vanderbilt Hotel. The Grand Union Hotel is now noted to the southwest of the Subject Property, and the area to the south is noted as the “Manhattan Storage and Safe Deposit”.</p>

1929	<p>Subject Property: The Subject Property is now noted as the 26-story Commodore Hotel. An elevator bank is depicted centrally within the building with additional elevators located in the northwest and western portions of the Subject Property. There appears to be underground access directly to Grand Central Terminal to the west. Subway/railroad lines are also depicted directly underneath the hotel.</p> <p>Surrounding Area: An additional building has been constructed and adjoins to the north noted as the Commodore Loading Platform at what appears to be the termination of East 43rd Street. The building to the south is noted as the 23-story Pershing Square Building (built 1922), the 14-story Bowery Savings Bank Building (built 1921) and the 52-story Chanin Building (built 1928). A four-story bakery/restaurant is also depicted to the south. The 68-story Chrysler Building (built 1929) is depicted to the east. The area to the west is still developed with Grand Central Terminal. The former building to the north appears to have been replaced with the 28-story Graybar Building (built 1926), which is noted to contain offices, a NY Post Office, a restaurant and a walking path to Grand Central Terminal.</p>
1950	<p>Subject Property: No changes observed from the 1929 Sanborn Map.</p> <p>Surrounding Area: The 1950 Sanborn Map appears to be generally the same as the previous 1929 Sanborn Map, except the Pershing Square building is now noted as the Continental Can Building. The former bakery/restaurant to the south is now noted as a bank annex.</p>
1968	<p>Subject Property: No changes observed from the 1950 Sanborn Map.</p> <p>Surrounding Area: The 1968 Sanborn Map appears to be generally the same as the 1950 Sanborn Map, except the buildings to the east are noted as hotels, stores and flats.</p>
1980	<p>Subject Property: No changes observed from the 1968 Sanborn Map.</p> <p>Surrounding Area: The 1980 Sanborn Map appears to be generally the same as the 1968 Sanborn Map; however, an additional three-story unspecified commercial building (built 1975) is noted to adjoin the Subject Property to the north. This building was constructed on the former area of East 43rd Road and adjoins the Commodore Loading Platform to the east/southeast.</p>
1983	<p>Subject Property: The Subject Property is now noted as the Grand Hyatt Hotel with no changes to the structures noted.</p> <p>Surrounding Area: The 1983 Sanborn Map appears to be generally the same as the previous 1980 Sanborn Map.</p>
1985	<p>Subject Property: The 1985 Sanborn Map appears to be generally the same as the previous 1983 Sanborn Map, except a new restaurant is noted to overhang over the sidewalk on the southern portion of the Subject Property.</p> <p>Surrounding Area: The 1985 Sanborn Map appears to be generally the same towards the north, west and southern portions. The block to the east (across the intersection of East 43rd Street and Lexington Avenue) is now noted as vacant.</p>
1987-2005	<p>Subject Property: No changes observed from the 1985 Sanborn Map.</p> <p>Surrounding Area: The 1987 through 2005 Sanborn Maps are generally the same as the 1985 Sanborn Map towards the north, west and southern portions. A new 31-story building has been constructed to the east (built 1987) and is noted as offices.</p>

A review of the historical Certified Sanborn Fire Insurance Maps indicated that the Subject Property was developed prior to 1890 with the Warren Fuller & Co (Manufactory of Paper-Hangings) in the western portion, the "Hospital for the Ruptured and Crippled" (the Hospital) in the southeastern portion and multiple unspecified buildings in the northeastern portion with one structure noted as a wagon building. Between 1890 and 1899, the Hospital in the southeastern portion was noted to expand northward. The 1899 Sanborn Map

indicated that stores were present below the Warren Fuller & Co (Manufactory of Paper-Hangings). The Warren Fuller & Co (Manufactory of Paper-Hangings) was no longer noted to be present at the Site on the 1910 Sanborn Map, and this area of the Subject Property was noted as stores and manufacturing flats with specific usages not noted. In approximately 1919, the entire area of the Subject Property was redeveloped with the 26-story Hotel Commodore. The hotel was depicted with elevators, lobby, dining room, ball room and access to Grand Central Terminal in the northwestern portion of the Subject Property. According to the Sanborn Maps, the Commodore Hotel was renovated into the Grand Hyatt Hotel between 1968 and 1980. Although the hotel changed ownership/names, the actual structures do not appear to have changed. Sometime between 1983 and 1985, a restaurant was constructed of glass on the southern portion of the Subject Property and overhangs the sidewalk on East 42nd Street. The Subject Property generally remained consistent with the layout observed in the 1985 Sanborn Map until the most recent 2005 Sanborn Map. Due to the prior demolition of building predating the construction of the Commodore Hotel in 1919, the Subject Property may be underlain by Historic Fill Material from demolition debris of unknown quality, which is considered a BER.

MNR and MTA below-grade railway tunnels, station, and other facilities are present beneath the Site. In addition, the area surrounding the Subject Property to the west and northwest contained railroad/subway infrastructure including the western adjoining Grand Central Terminal. These operations typically involve the usage of various hazardous substances and petroleum products including lubricants, hydraulic oil, heat resistant oils, brake fluid and other oils used in power generation. Electrical power conversion typically involves substations which may involve the use of PCBs in electrical transformers. The potential for releases of these hazardous substances or petroleum products from the historical use of the subgrade portions of the Subject Property is considered a REC.

Other historical uses in the surrounding area consisted of hotels, stores, storage/warehouses and car/horse storage houses. Around the 1920s, the surrounding area was redeveloped with large-scale multi-story commercial/office buildings including the Grabar Building to the north (built 1926), the Bowery Savings Bank Building to the south (built 1921), the Chanin Building to the south (built 1928), the Pershing Square Building to the southwest (built 1922) and the Chrysler Building to the east (built 1929). These buildings were noted to contain commercial retail stores, banks, restaurants and offices. The area to the east/northeast was redeveloped in 1987 with a 31-story office building. Except for the previously mentioned railroad infrastructure usage, no other surrounding properties were identified to have potential to impact upon the environmental quality of the Subject Property.

4.3 Historical Aerial Photographs

Historical aerial photographs were obtained from EDR, and they are provided in Appendix E. Historical aeriels may indicate past activities at a property that may not have been documented by other means or observed during a reconnaissance visit. The aerial photographs reviewed were generally poor-quality images and specific Subject Property features were difficult to discern. The Subject Property appears developed with an "H" shaped building in the first 1924 aerial photograph. This building remains in all of the aerial photographs up to and including the most recent 2017 aerial photograph. No visible changes were able to be identified for the Subject Property in a review of all of the aerial photographs spanning 1924 through 2017.

4.4 Historical Topographic Maps

Historical topographic maps of the Subject Property were obtained from EDR, and they are provided in Appendix F. Elevation of the Subject Property was consistent in topographic maps reviewed from 1897 to 2013. No significant elevation changes that would suggest backfilling operations were identified.

4.5 City Directory Abstract

A City Directory Abstract of the Subject Property was obtained from EDR and is presented in Appendix G. Records reviewed from 1920 to 2017 were sourced from New York Telephone, Hill-Donnelly Information Services, Cole Information Services, NYNEX, NYNEX Telephone, R.L. Polk & Co., Manhattan and Bronx Directory Publishing Company Residential Directory and the EDR Digital Archive. The listings presented in the in the table below appear exactly as presented in the City Directory (inclusive of potential typographical errors or misspellings). No listings were identified in the City Directory for the Lexington Avenue address (406-412 Lexington Avenue, New York, New York 10017).

Listings for 107-129 East 42nd Street are provided in Table 4.5a below:

A review of the City Directory records dating back to 1920 indicate that the Subject Property was historically operated as a hotel with numerous and varying retail stores throughout its history. The retail stores were identified as multiple jewelers and beauty salons, newsstands, stationary stores, restaurants, shoe shiners and repair, locksmiths, offices associated with political campaigns, offices associated with universities and clubs, clothing stores, florists, liquor and wine shops, pharmacies, banks, coffee shops and bakeries. None of the historical uses identified in the City Directory records should impact upon the environmental quality of the Subject Property.

Listings for the properties surrounding the Subject Property were limited due to the immense volume of records associated with the Subject Property. The few listings available for the surrounding area are generally similar to that of the Subject Property and consist of retail stores, commercial office spaces, and restaurants. None of the surrounding uses identified in the City Directory records should impact upon the environmental quality of the Subject Property.

5. RECORDS REVIEW

This section summarizes the information regarding the Subject Property and potential environmental sites of concern that are contained in the standard and additional environmental record sources reviewed by Roux in accordance with ASTM Standard Practice E1527-13.

5.1 Environmental Database Review

Roux used a computerized environmental database and radius map report prepared by EDR to conduct a government records database search of properties of potential environmental concern within a maximum of one-mile radius of the Subject Property. Appendix B contains a complete copy of the EDR Radius Map Report with GeoCheck. A summary of the pertinent results is provided in Table 5.1. Table 5.1 tabulates all the search results with at least one environmental database entry.

Table 5.1 Environmental Database Listings

NR – Not Reported						

The Subject Property was identified in the RCRA-SQG, ERNS, FINDS, ECHO, NY MANIFEST, NJ MANIFEST and NY COOLING TOWERS databases. The listings are described in detail below:

1. **RCRA-SQG:** The Subject Property (Grand Hyatt New York) is identified as a Small-Quantity Generator (SQG) of hazardous waste in 2006 and 2007 and is associated with EPA ID: NYD986930675. The Subject Property was historically identified as a Conditionally Exempt Small Quantity Generator (CESQG) in 1990 and 2005. The waste streams associated with this listing include D001 (non-listed ignitable wastes), D009 (non-hazardous mercury), F002 (halogenated solvents and still bottoms) and K086 (solvent washes and sludges, caustic washes and sludges, or water washes and sludges from leaning tubs and equipment used in the formulation of ink from pigments, driers, soaps and stabilizers containing chromium and lead). Multiple RCRA violations were identified for this facility by the EPA spanning the 1990s and early 2000s. The RCRA listing appears to be related to former dry-cleaning operations that were conducted at the hotel. The Key Subject Property Representative indicated that dry cleaning is not currently conducted at the Subject Property during the interviews completed as part of this Phase I ESA. Additionally, based on review of historical drawings provided by the Client, all laundry and dry-cleaning operations were conducted

on the second level of the basement (not the lowest level of the basement), and therefore any operations are less likely to impact the subsurface as a Site. In addition, Roux collected soil vapor samples beneath the slab of the lowest basement level as part of a Phase II ESA completed at the Site. The analytical data from the soil vapor samples did not indicate elevated concentrations of any dry cleaner related solvents in the subsurface of the Site. This analytical data is provided in the Roux letter report titled “Summary of Sub-Slab Soil Vapor Investigation” dated November 20, 2020, which is provided in Appendix I.

2. **ERNS:** The Subject Property (109 East 42nd Street) is listed in the Emergency Response Notification System (ERNS) database and is associated with a public incident report. NRC Report No. 466855 is associated with an incident reported on December 9, 1998 in which a caller stated that they identified gasoline running down the street. The location of the report was noted at the entrance to Grand Central Terminal. No other information was provided in the ERNS database and due to the location of the spill in the public street, this spill will likely not impact upon the environmental quality of the Subject Property.
3. **FINDS/ECHO:** The Subject Property (Grand Hyatt New York) is identified in both the Facility Index System (FINDS) and Enforcement and Compliance History Online (ECHO) databases. These databases serve as data repositories for other databases such as the RCRA database and generally reiterate the same information previously discussed.
4. **NY & NJ MANIFEST:** The Subject Property (Grand Hyatt New York) is identified in both the NY and NJ Manifest databases. The manifests reviewed indicate shipments of D001 (corrosive) and D035 (methyl ethyl ketone) from the Subject Property between 2005 and 2007.
5. **NY COOLING TOWERS:** The Subject Property is listed in the NY Cooling Towers database nine times. According to listings in the EDR report, samples collected from these towers did not indicate the presence of legionella.

The Subject Property is not listed in any other environmental databases.

Off-site properties that meet the criteria presented below are discussed in this report:

- Facilities adjoining or adjacent to the Subject Property are examined due to their proximity and the potential for surface water discharges (e.g., stormwater runoff, surface water effluent discharges) to impact upon the environmental quality of the Subject Property; and
- Facilities located topographically or hydraulically upgradient of the Subject Property.

Groundwater flow direction is presumed east-southeast in the direction of the East River. Facilities that are located downgradient or cross gradient to the Subject Property—but not adjoining the Subject Property—are not discussed in this report because these facilities are considered to pose a low potential environmental concern to the Subject Property.

Adjoining Property Detail

Grand Central Terminal (Adjoins to the Northwest)

Grand Central Terminal adjoins the Subject Property upgradient to the northwest and is identified to have multiple NY SPILL listings which are discussed in detail below:

1. NY SPILL #0010574 occurred on December 20, 2000 and was reported initially as SPILL #1010077 which was related to seepage of several gallons of oil through the walls of the #7 subway line tubes. The NYSDEC memo states that this is a recurrence of an older spill (SPILL #1010077) that has been ongoing for approximately 10 years and is being actively managed under SPILL #0010574, therefore SPILL #1010077 was administratively closed by the NYSDEC as it was redundant. According to the EDR report, the seepage of oil was continuing to occur while being mopped up continually by MTA workers. The memo indicates that seepage is continuing to occur at a slow place and that a sump was impacted. A tube sealing and cleaning event was noted in the memo to occur in January 2015. The most recent update of August 2018 indicated additional cleaning events, which resulted in the generation of 30 bags of oiled absorbents and booms. As of the date of this Phase I report, this spill case is currently still open, and the source of the seepage has not been identified. This open spill case is considered a REC in connection with the surrounding and on-Site rail/ transit usage.
2. NY SPILL #9212241 occurred on January 26, 1993 and resulted from a punctured transformer on the underside of a passenger train car. The spill memo indicates that approximately 40 gallons of PCB oil was recovered and that approximately 90 gallons of PCB oil was spilled and will be cleaned up. The spill was subsequently closed to the satisfaction of the NYSDEC on January 28, 1993.
3. NY SPILL #9611752 occurred on December 27, 1996 at the MNR and resulted from a ruptured compressor hose, which released approximately 10 gallons of hydraulic oil. No further information was provided in the database, and the spill was subsequently closed to the satisfaction of the NYSDEC on December 8, 2003.
4. NY SPILL #0108498 occurred on November 21, 2001 and resulted from the identification of an unknown oil substance collecting within a pan collecting water above track #1. The NYSDEC spill memo indicates that the spill was cleaned up by the New York City Transit (NYCT) and that they will notify the NYSDEC if the material returns. The spill was subsequently closed to the satisfaction of the NYSDEC on July 30, 2002.
5. NY SPILL #1112519 occurred on January 29, 2012 and resulted from a release from a train. The NYSDEC spill memo indicates that approximately 10-gallons of lube oil was spilled to the gravel from the train and that cleanup was in progress. The spill was subsequently closed to the satisfaction of the NYSDEC the following day on January 30, 2012.
6. NY SPILL #1504856 occurred on August 5, 2015 and was reported to have occurred in the Grand Central Terminal boiler room. The spill resulted from the identification of mercury droplets on the floor of the boiler room. Since mercury is not regulated by the NYSDEC Spills unit the spill was subsequently closed to their satisfaction on August 5, 2015.
7. NY SPILL #1609639 occurred on January 18, 2017 and resulted from an equipment failure. The NYSDEC memo indicates that a hydraulic elevator was being taken out of service and a bleeder valve was removed prematurely which resulted in a release of approximately 50 gallons of hydraulic oil within the elevator pit. Approximately 1.5 drums of oil and absorbent material was collected from

the concrete pit which contained the spill. The NYSDEC reviewed the cleanup documentation, and the spill was subsequently closed to their satisfaction on January 20, 2017.

Grand Central Terminal is also identified in the RCRA-LQG and TANKS databases. The RCRA listing is associated with EPA ID: NYD981179773 and identifies the Site as a Large Quantity Generator (LQG) of hazardous waste. The waste codes associated with the Site include D001 (ignitable waste), D008 (lead), D009 (mercury), D018 (benzene), D035 (methyl ethyl ketone), F002 (spent halogenated solvents), F003/F005 (spent non-halogenated solvents). Numerous violations were identified to be associated with the RCRA listing. The TANKS database indicates that this Site is associated with Petroleum Bulk Storage (PBS) #2-613155. The TANKS database currently indicates that the Site has an unregistered status. Specific information about the quantity, type or location of tanks was identified to be withheld and not releasable under Freedom of Information Law which is likely related to security issues.

Based upon the numerous environmental listings associated with the rail transit (open spill #0010574 with free product identified seeping into rail tunnels, RCRA LQG status, presence in the TANKS database), the railroad operations at Grand Central Terminal involved the usage of hazardous substances and petroleum products, which have resulted in releases to the subsurface. As previously mentioned, the rail transit operations involved the use of hazardous substances and/ or petroleum products. Documented releases appear to may have impacted upon the environmental quality of the Subject Property and are considered a REC.

Graybar Building (Adjoins to the North-northeast)

The Graybar Building which adjoins the Subject Property to the north-northeast is identified to have two (2) NY SPILL listings which are discussed in detail below:

1. NY SPILL #0505448 occurred on August 3, 2005 and resulted from a broken blood pressure meter that spilled an unspecified amount of mercury. No additional cleanup details were provided other than the cleanup being planned. The spill was subsequently closed to the satisfaction of the NYSDEC on August 4, 2005.
2. NY SPILL #1605892 occurred on September 12, 2016 and resulted from human error related to dumping acrylic paints into a catch basin. The impacted catch basin was observed to have paints and sludges within it which were pumped out and triple washed and cleaned. Based upon a review of the closure documentation, the spill was subsequently closed to the satisfaction of the NYSDEC on September 19, 2016.

Due to the nature of the spills being limited in quantity and no reports of impacts to soil or groundwater, they should not impact upon the environmental quality of the Subject Property.

West 42nd Street Substation (Adjoins to the Southwest)

Several spills were noted on to occur at West 42nd Street Substation, which according to the EDR was noted to be adjoining to the Subject Property to the Southwest. It is likely that this substation is located west of 5th Avenue, which is 3 avenues west of Site (based on its address of West 42nd Street) and was incorrectly plotted in the EDR report. Furthermore, the three NY SPILL incidents associated with this listing are likely to not have impacted to the Subject Property, since they involved small quantities and were cleaned up to the satisfaction of the NYSDEC and subsequently closed.

Commercial Property – 405 Lexington Ave (Adjoins to the East-southeast)

The commercial property located at 405 Lexington Avenue is identified to have a single NY SPILL listing which is discussed in detail below:

1. NY SPILL #1202153 occurred on June 3, 2012 and resulted from a vehicle accident. The NYSDEC memo indicates that a defective gasoline tank released approximately one gallon of gasoline, which was contained to the spill area. No impacts to soil or groundwater were noted, and the spill was noted to be cleaned up. The spill was closed to the satisfaction of the NYSDEC on June 4, 2012.

Upgradient Property Detail

Gold JM & Co – 60 East 42nd Street (Approximately 635 feet to the West)

The above-referenced property is listed in the EDR HIST AUTO database for the years 1991 through 2008 as an automotive repair shop. As no other environmental listings are associated with the facility (NY SPILLS, LTANKS, RCRA), it is not likely that it will impact upon the environmental quality of the Subject Property.

One Vanderbilt – 10 Vanderbilt Avenue (Approximately 578 feet to the West-northwest)

The above-referenced facility is identified in the Voluntary Cleanup Program (VCP) database and is associated with New York City Mayor's Office of Environmental Remediation (NYCOER) project number 16CVCP053M. A review of online resources indicated that remediation of this Site is complete with the construction of the superstructure ongoing. A review of environmental summary notes collected during the Remedial Investigation (RI) indicated that the soil quality was generally impacted with semi-volatile organic compounds (SVOCs) and metals (including characteristically hazardous levels of leachable lead), which can occur in fill material in the New York City metropolitan area. Groundwater quality was generally impacted with SVOCs, metals and the single volatile organic compound (VOC) toluene at concentrations exceeding their respective groundwater standards. It was determined based on NYSDOH guidance that the soil vapor concentrations for both tetrachloroethylene and trichloroethylene exceeded the monitoring level ranges at one location. The cleanup at this facility included the removal of impacted soil to achieve a Track 1 cleanup and unrestricted use soil cleanup objectives. The waterproofing system installed at this facility would mitigate the potential for residual soil vapor contamination. Based upon a review of the environmental information publicly available for this facility, it appears that the elevated concentrations of tetrachloroethylene and trichloroethylene were limited to one localized area, and there were no significant detections of tetrachloroethylene and trichloroethylene on the eastern side of this facility that faces the Subject Property. It is not likely that this property will impact upon the environmental quality of the Subject Property. Although this property will not likely impact upon the Subject Property, the identification of fill material is likely indicative of general soil quality of the New York area and can be anticipated to be found at the Subject Property. The suspect presence of fill material is considered a BER in connection with the Subject Property.

5.2 Freedom of Information Act Letter Responses

FOIA requests were submitted to the NYSDEC, NYSDOH, NYCDEP and the FDNY requesting records associated with the Subject Property. Online USEPA, NYCDOB, NYCDOF and NYCDOP databases were searched for records related to the Subject Property. If any additional pertinent environmental information is received from the outstanding FOIA requests following the issuance of this report, Roux will provide a letter addendum to this report detailing this information. Information obtained from the Internet Databases and FOIA responses is included as Appendix C.

USEPA

The Subject Property was not identified within the online USEPA databases when searched.

NYSDEC

As of the date of this report, the NYSDEC has responded to our FOIA request and indicated that they do not maintain any records related to the Subject Property.

The online NYSDEC InfoLocator tool was also searched for records pertaining to the Subject Property and nearby properties. A search of this database did not indicate any information on the Subject Property or any adjoining Sites that may impact upon the environmental quality of the Subject Property.

NYSDOH

As of the date of this report, the NYSDOH has acknowledged our FOIA request in a letter dated October 28, 2020. The NYSDOH has not identified whether any records exist for the Subject Property. Any additional information provided by the NYSDOH will be provided as soon as it has been received and evaluated.

NYCDEP

As of the date of this report, the NYCDEP has acknowledged our FOIA request in an email response dated November 4, 2020. The NYCDEP has not identified whether any records exist for the Subject Property. Any additional information provided by the NYCDEP will be provided as soon as it has been received and evaluated.

FDNY

As of the date of this report, the FDNY has responded to our FOIA request and provided information related to the emergency generator and sprinkler violations. The tank account report identified the emergency generator to have a 275-gallon AST which is located on the 36th floor of the building⁴. This tank was identified during the Subject Property reconnaissance and is further discussed in Section 6.3 of this report. The specific type of product stored within the tank was not identified in the records provided; however, based on the Site reconnaissance, the tank was noted to contain diesel fuel. No other pertinent information was identified in the FDNY records.

NYCDOB

The Subject Property is associated with eighteen open DOB violations and one open Environmental Control Board (ECB) violation. The open DOB violations are related to electric signs, elevators, annual elevator inspection tests and elevator affirmations of correction. The open ECB violation is related to the failure to submit an architectural or engineering report certifying that the emergency exit signs are connected to an emergency power source. No environmental restrictions (E-designations) were identified to be associated with the Subject Property. The Subject Property is in a special district designated MID – Midtown.

Numerous Certificates of Occupancy (COs) were identified for the Subject Property, which generally identified it as a hotel with back of house mechanicals, storage, locker rooms, and laundry facilities in the basement. The upper floors were generally identified as occupant rooms except for the ground floor with retail spaces and lobbies.

⁴ It should be noted that the numbering of the floors in the building is not sequential. The floor identified as the “36th Floor” is actually the 26th above-grade floor of the building.

NYCDOF

The Subject Property has a NYCDOF building classification of H1- Hotels. The NYCDOF Automated City Register Information System (ACRIS) database was also searched for the Subject Property. The ACRIS generally contained deeds, mortgage agreements and lease agreements. According to the ACRIS files, the Subject Property is currently owned by the MTA.

NYCDCP

The New York City Zoning Resolution was searched for indications of Restrictive Declarations and Environmental Designations (E-designations) pertaining to the Subject Property. Appendix C Tables 1 and 2 of the Zoning Resolution were searched for the Subject Property Block and Lot. According to a review of both tables, the Subject Property does not appear to have restrictive declarations or e-designations.

6. SUBJECT PROPERTY RECONNAISSANCE

The findings of the Subject Property reconnaissance conducted on November 5 and 30, 2020 are discussed below.

6.1 Utilities

The Subject Property was observed to be connected to municipal water, sewer, electric, natural gas and steam utilities.

6.2 Hazardous Substances and Petroleum Products

Several flammable safety cages were identified throughout the building, which contained canned food heating gels, paints, lacquers, paint thinners, spray paints, crack sealant, adhesives and other spray products. The products were identified to be typical building maintenance materials, which were properly stored off the ground within the safety cages. No stains, odors or signs of spillage were identified near the flammable cages. Several 25-gallon plastic drums of corrosive laundry detergents were also observed at sub-level 2 of the basement in the vicinity of the laundry machines. No stains, odors or signs of spillage were identified in the vicinity of the drums and their presence should not impact upon the environmental quality of the Subject Property.

A diesel backup generator was identified at the Subject Property and additional information is provided in Section 6.3 below.

6.3 Storage Tanks

A diesel generator containing a 275-gallon belly diesel fuel tank was identified within the 36th floor of the building⁵. The belly tank was unavailable for direct inspection due to the placement behind various mechanical equipment which was identified to be operating. Small portions of the belly tank were visible, and it appeared to be in good condition with no petroleum odors noted in the room it was in. Based upon the lack of odors and placement of the AST on the 36th floor, its presence should not impact upon the environmental quality of the Subject Property.

6.4 Polychlorinated Biphenyls (PCBs)

Several electrical transformers were observed throughout the Subject Property, specifically near mechanical spaces associated with the elevators and heating equipment. All of the transformers inspected appear to be “dry-type” transformers with no liquid reservoirs. None of the equipment was marked as PCB-containing and no spills, odors or signs of spillage were identified in their vicinity. The presence of these transformers should not impact upon the environmental quality of the Subject Property. Elevators present at the Subject Property were observed to be powered electrically and not through hydraulics.

As previously mentioned, the historical usage of the Subject Property subgrade areas for rail transit may have involved the usage of PCB containing oils in power generation, lubricants and/ or electrical conversion. The historical and current onsite and off-site usage for rail transit is considered a REC.

⁵ It should be noted that the numbering of the floors in the building is not sequential. The floor identified as the “36th Floor” is actually the 26th above-grade floor of the building.

6.5 Staining and Stressed Vegetation

No staining or stressed vegetation was observed at the Subject Property. A sheen was observed on rainwater that had pooled between the tracks of the MNR. As previously mentioned, the historical usage of the Subject Property subgrade areas for rail transit may have involved the usage of hydraulic oils. The historical and current onsite and off-site usage for rail transit is considered a REC.

6.6 Floor Drains, Pits, and Sumps

Numerous floor drains were observed throughout the Subject Property in kitchen and food service areas. These drains are likely connected to the municipal sewer, and any discharges through them should not impact upon the environmental quality of the Subject Property.

6.7 Solid Waste

At the time of the reconnaissance the Grand Hyatt Hotel and associated commercial retail tenant spaces were vacant, and no solid waste storage was identified.

6.8 Wastewater and Stormwater

Wastewater generated at the Subject Property is limited to sanitary waste and is connected to the municipal sewer system. Stormwater is expected to flow off concrete areas into catch basins located in the publicly-managed streets.

6.9 Wells

No groundwater monitoring or potable water wells were observed at the Subject Property.

No groundwater monitoring wells were observed at nearby properties.

6.10 Asbestos Containing Materials (ACMs)

Due to the age of construction of the building, there is potential for the building structures to contain ACMs. A formal inspection and testing ACMs are not included under the ASTM 1527-13 standard and are considered out of scope; however, Roux observed various suspect ACMs in the form of roofing material, wall plasters, fireproofing material, and mastics, and therefore, the suspected presence of ACMs is considered a BER.

7. INTERVIEWS AND USER-PROVIDED INFORMATION

Pertinent findings from these sources are summarized in the following sections.

7.1 Interviews

On November 5, 2020, in conjunction with the Subject Property reconnaissance, Mr. Nasiatka interviewed Mr. Owen Haye as the Key Subject Property Representative. Mr. Haye was identified as the Assistant Director of Engineering for the Grand Hyatt. The following pertinent information was collected from the interview:

- Mr. Haye indicated that the Subject Property has been vacant as they have been struggling to maintain occupancy with the current pandemic.
- Mr. Haye indicated that the Subject Property elevators are powered electrically.
- Mr. Haye was unsure if the floor drains were connected to the sewer system.
- Mr. Haye indicated that he is unaware of any environmental issues connected with the Subject Property.
- Mr. Haye indicated that he is unaware of any historical environmental reports related to the Subject Property.
- Mr. Haye indicated that no dry cleaning is currently conducted at the Subject Property and was unable to provide any details on the possible historical dry cleaning.

7.2 User Questionnaire

As of the date of this report, Roux was provided with a completed environmental User Questionnaire. The questionnaire was completed by Mr. Greg Lowe. A review of the environmental questionnaire did not identify any pertinent information related to the Subject Property. A copy of the environmental questionnaire is provided in Appendix I.

8. SUMMARY OF FINDINGS

Based on the information gathered during the Phase I ESA process, Roux has identified the following REC:

- Mass Transit Usage: The area upgradient to the northwest of the Site is developed with railroad/subway infrastructure associated with the MNR, including the adjoining Grand Central Terminal. Additional rail structures associated with the New York City Subway (MTA) are also noted to be present under the Subject Property; therefore, the mass transit/rail usage is considered both on-site and off-site. Railway infrastructure typically involves the usage of various hazardous substances and petroleum products in its operations including lubricants, hydraulic oil, heat resistant oils, brake fluid and other oils used in power generation. Railway infrastructure also requires electrical power conversion typically in the form of substations, which may involve the use of polychlorinated biphenyls (PCBs) in electrical transformers. Numerous New York State Department of Environmental Conservation (NYSDEC) spill listings are associated with the rail lines in this area. This spill has identified free product seeping into the nearby subway tunnels with a source unable to be identified. The spill and remediation efforts are ongoing and typically consist of cleaning up the material as it enters the subway tunnel. In addition, a sheen was observed on rainwater that had pooled between the tracks of the MNR during the Site Reconnaissance.

Roux has not identified any HRECs or CRECs in connection with the Subject Property.

Roux has identified the following BERs in connection with the Subject Property:

- Suspect Presence of Historic Fill Material: The Subject Property was historically redeveloped with the Commodore Hotel in 1919 as evidenced by Sanborn Maps and historical accounts and online resources for this time period. The redevelopment would have required demolition of the previous hospital and manufacturing related buildings present in the earlier Sanborn Maps dated 1890, 1899 and 1910. As the demolition occurred at a time where no environmental or waste management laws were enacted, there is potential for the Subject Property to be underlain by Historic Fill Material, which may contain glass, bricks, concrete, slag, ceramic and other non-native materials brought, deposited or demolished directly into the subsurface to facilitate redevelopment. The presence of this material should be considered when planning any future redevelopment requiring soil/material excavation and disposal.
- Suspect Presence Asbestos Containing Materials (ACMs): Based upon the age of construction of the current building (1919), there is potential for ACMs to be present in various pipe wrappings, joint wrappings and other building materials. The MNR and MTA mezzanine and platform levels below grade were also constructed on or before approximately 1915, with many renovations since initially built, so the potential for ACMs, including pipe insulations, tars, and electrical equipment, extends to these areas as well. The suspected presence of these materials should be considered prior to demolition of the building for redevelopment.

Roux has identified the following data gaps in connection with this Phase I ESA:

Roux has identified the following data gaps/data failures in connection with this Phase I ESA:

- Awaiting responses to Freedom of Information Act (FOIA) requests from the New York State Department of Health (NYSDOH) and the New York City Department of Environmental Protection (NYCDEP) pertaining to the Subject Property. Based on the records obtained and reviewed from other resources, this is not considered a significant data gap. If any pertinent information is obtained from responses to outstanding FOIA requests regarding the Subject Property, Roux will prepare a letter addendum summarizing these findings.
- Due to the current inactive and vacant nature of the Subject Property and ongoing COVID-19 pandemic, certain areas were locked, vacant and inaccessible during the Subject Property reconnaissance. Several of the commercial and retail stores along the Lexington Passage were vacant and inactive and no access was able to be provided to these areas. Additionally, the portions of the MNR subgrade area were inaccessible (storage area behind a locked wire partition). These

areas were observed from the track side of the partition and appeared to be used as general back-of-house storage for the MNR operations. Areas of the MTA space that were not publicly accessible were not visually inspected. While a thorough inspection of these areas was unable to be performed, the inaccessible areas are not considered significant data gaps as their inspection has a low probability of eliminating the transit related REC identified above.

- The commercial and retail stores that were identified to be closed at the time of the Subject Property reconnaissance due to the ongoing COVID-19 pandemic were not accessible; however, given the types of uses (food service establishments, retail shops), they are not likely to store or use significant quantities of hazardous materials or petroleum products on premises. Therefore, this data failure is not considered a significant data gap that impacts our ability to identify RECs at the Site.

9. REPORT ASSUMPTIONS AND LIMITATIONS

This Phase I ESA Report, including the exhibits attached hereto, describes the results of Roux's initial investigation to identify the potential presence of RECs involving or affecting the Subject Property in accordance with ASTM Standard Practice E1527-13. This Phase I ESA was conducted by Roux in accordance with the regulatory requirements for conducting AAI as set forth in the USEPA AAI Rule, at 40 CFR Part 312. Specifically, the preamble to the AAI Rule states:

"In today's final rule, EPA is referencing the standards and practices developed by ASTM International and known as Standard E1527-13 (entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process") and recognizing the E1527-13 standard as consistent with today's final rule. The Agency determined that this voluntary consensus standard is consistent with today's final rule and is compliant with the statutory criteria for all appropriate inquiries. Persons conducting all appropriate inquiries may use the procedures included in the ASTM E1527-13 standard to comply with today's final rule."⁶

One of the requirements that a person acquiring real property must meet in order to qualify for either the innocent landowner, contiguous owner, or bona fide prospective purchaser (collectively hereinafter "Prospective Purchaser") defense to liability under the federal Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), is that person must conduct all appropriate inquiry in conformance with the AAI Rule (or the ASTM E1527-13) prior to acquisition of the property. Commodore Owner LLC understands that, under the AAI Rule, Roux' performance of the Phase I ESA in accordance with ASTM E1527-13 will not alone result in Commodore Owner LLC satisfying all requirements of the AAI Rule and provide a defense to CERCLA liability.

Commodore Owner LLC understands that the AAI Rule also requires that the Prospective Purchaser undertake certain additional inquiries and post-acquisition activities to satisfy the CERCLA AAI requirements. **ACCORDINGLY, ROUX MAKES NO GUARANTEES OR WARRANTIES, EXPRESSED OR IMPLIED, REGARDING THIS PHASE I ESA, INCLUDING WITHOUT LIMITATION, ANY WARRANTY THAT THIS PHASE I ESA WILL IN FACT QUALIFY THE CLIENT FOR A DEFENSE TO CERCLA LIABILITY.**

Roux has performed this Phase I ESA in a professional manner using the degree of skill and care exercised for similar projects under similar conditions by reputable and competent environmental consultants. Professional judgments expressed herein are based on the facts currently available to Roux.

The AAI Rule requires, and the conclusions and recommendations stated herein, represent the application of a variety of engineering and technical disciplines to material facts and conditions associated with the Subject Property. As such, these conclusions and recommendations are based on subjective interpretations and the exercise of discretion. Many of these facts and conditions are subject to change over time. Accordingly, the conclusions and recommendations must be considered within this context.

Commodore Owner LLC understands that Roux will not be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time the Phase I ESA was performed. To the extent practicable, Roux has identified data gaps and has evaluated the potential significance of such data gaps. Recommendations to address those data gaps are presented herein and are based on the data available at the time of the performance of the Phase I ESA. Implementation of the recommendations may not fully address the data gaps as the information obtained from execution of those

⁶ Federal Register: November 1, 2005 (Volume 70, Number 210) Page 66081.

recommendations may alter or modify the interpretation of the Subject Property conditions and conclusions regarding the data gaps.

It should be noted that Roux has not conducted any intrusive activities on the Subject Property and is relying on information presented by others, often in preliminary, draft, or verbal form. By referencing this information, Roux does not accept responsibility for the accuracy of the underlying data, sampling methods, laboratory analysis, or documentation.

This Phase I ESA Report should not be considered a legal interpretation of existing environmental laws and regulations. The Phase I ESA was conducted with a reasonable degree of inquiry to identify significant RECs, but uncertainty is not eliminated. No Phase I ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. The Phase I ESA process is intended to reduce, but not eliminate, the uncertainty involved with identifying RECs.

This Phase I ESA Report is not an appraisal or value judgment of the Subject Property. Commodore Owner LLC understands that Roux shall not be liable for any use of the Phase I ESA Report as an appraisal or value judgment of the Subject Property.

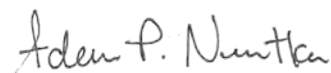

The Phase I ESA Report has been prepared for the exclusive Commodore Owner LLC for specific application to the Subject Property covered by the Phase I ESA Report. Commodore Owner LLC understands that any third-party use of this Phase I ESA Report is the sole responsibility and at the sole liability of Commodore Owner LLC.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312; and

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth on 40 CFR 312.

Respectfully Submitted,

ROUX ENVIRONMENTAL ENGINEERING AND GEOLOGY, D.P.C.

APPENDIX A

Professional Profiles

TECHNICAL SPECIALTIES

Conducted, managed, or overseen Phase I and Phase II investigations and remediation at contaminated sites, specializing in developing innovative cost-saving solutions that focus on integrating remedies into redevelopment scenarios. Experience working with multiple agencies and stakeholders including negotiation and coordination with lenders, tenants, and community stakeholders to secure funding and approvals.

EXPERIENCE SUMMARY

Seventeen years of experience: Principal Geologist with Roux Associates, Inc., Islandia, New York; Staff Geologist with RTP Environmental Associates, Inc., Green Brook, New Jersey.

CREDENTIALS

B.A., Geology, Colgate University, 2003
OSHA 40-Hour Hazardous Materials Training, 2003
OSHA 8-Hour Supervisor Training, 2004
Accredited AHERA Inspector, 2004
NJ UST Subsurface Evaluator Certification# 491925
New York Licensed Professional Geologist #720
Connecticut Licensed Environmental Professional #610

KEY PROJECTS

- Principal in charge of large university tech development project in New York City. The project consists of the demolition and decommissioning of a former hospital building, and excavation for redevelopment of four separate buildings for the first phase of campus construction. Environmental considerations on the project included site assessment, remediation design and oversight, SDPES permitting (construction dewatering and geothermal well discharge), soil characterization for reuse and capping of soils. Coordinated with NYCDEP, and other project stakeholders concerning community protection and monitoring concerns.
- Principal in charge of redevelopment of a former powerplant into an industrial arts complex. Remediation consisted of removal and containment of TSCA-regulated PCB-impacted soils, groundwater, and building material, and remediation waste. Successfully obtained Certificate of Completion for NYSDEC BCP, clean up and continue to coordinate Site redevelopment activities under a Site Management Plan. Included significant coordination and correspondence with USEPA to negotiate installation of a consent order for bulkhead installation along the Gowanus Canal Superfund Site.
- Principal in charge of redevelopment of shopping mall in Staten Island, New York. The Site will consist of the construction of two commercial out parcel buildings, a new parking deck, and an expansion of the existing mall

building. Areas of concern include historical fill, site-wide soil contamination (arsenic and pesticides). In addition, also responsible for agency coordination with FDNY, NYSDEC, and NYCOER for mitigation of methane and chlorinated volatile organic compounds vapor issues.

- Principal-in-Charge for the redevelopment of a 5-acre live-work-play campus in Hunts Point, Bronx. The residential component of the Project is comprised of 100% affordable housing, and is currently enrolled in the NYSDEC BCP. Mr. Cherena has also negotiated/coordinated with lenders, coordinated with multiple disciplines on the design team to create a RAP to comply with NYCOER air/noise requirements, and assisted in remedial design and estimation.
- Principal in charge for new development of a large regional mall in Norwalk, Connecticut with underground parking. The proposed redevelopment will result in the construction of a retail shops, restaurants, hotel, and entertainment. Previous usage of the property included over 30 different parcels including three establishments, gasoline filling stations, fuel oil terminal storage, hazardous waste disposal areas. The project includes investigation and subsequent remediation of petroleum and hazardous waste releases, filing of the Environmental Conditions Assessment Form (ECAf) associated with the three transfer act parcels, and coordination with the CT DEEP and CT DECd to obtain CT Brownfields Grant funds.
- Principal in charge for two adjoining multifamily NYSDEC BCP redevelopment sites in Mott Haven, Bronx, New York along the Harlem River. Project includes characterization, excavation, and disposal of over 40,000 tons of soil, support for obtaining a SPDES discharge permit for construction water, along with attending public meetings and creating public participation plans. Project task includes community air monitoring, shoreline permitting, and construction monitoring while minimize cost impact by sharing resources between both projects.
- Principal in charge for the largest redevelopment project in New York City (over \$4.5 billion). Project includes Phase I and Phase II ESAs (investigation of soil, groundwater, and soil vapor) at over 75 properties; Construction support for excavation of one million cubic yards of soil including implementing an *in situ* waste characterization program; Environmental support for demolition, asbestos and lead abatement, site remediation using *In Situ* Chemical Oxidation, and relocating of an active 9-acre 100-year old railyard; Property acquisition support throughout the project (7 city blocks); and Agency support for NYSDEC, NYCDEP, MTA (LIRR/NYCT), and ESDC. The environmental data was used as an integral

component of the New York State Environmental Quality Review Act (SEQRA) final Environmental Impact Statement (EIS). The project will encompass 336,000 sq ft of office space, 6.4 million sq ft of residential space, an 18,000 seat sports and entertainment venue - the Barclays Center (home of the Nets professional basketball team) - 247,000 sq ft of retail space, a 165,000 square-foot hotel, and over 8 acres of intricately designed publicly accessible open space.

- Principal in charge of redevelopment and rehabilitation of the Nassau Coliseum Event Center in Uniondale, Long Island, New York. Services included Phase I and Phase II ESA to obtain approvals and entitlements, along with providing consulting services for asbestos abatement and operations and maintenance. Also was responsible for diesel generator tank removal and replacement tank design and installation.
- Principal in charge for a remedial investigation and real estate transaction negotiation for a contaminated former industrial property in Glen Cove, Long Island, New York. Activities included due diligence including document review and historical research to develop and implement a cost efficient investigation scope that was able to identify presence of contamination that was used to negotiate property transaction. Investigation was also designed to develop red mediation and construction budget to support future mixed use redevelopment of the over 12 acre property.
- Principal in charge of numerous due diligence projects for owners, developers, managers, municipalities, and lenders at commercial and industrial properties throughout the Northeast. Activities included performance of UST evaluations and closures, hot spot remediations, Phase I and Phase II Site Assessments, vapor intrusion studies and mitigation, lead based paint, asbestos and hazardous materials surveys, interaction with regulatory agencies on behalf of clients and development of remedial cost estimates for planning and negotiation.
- Principal in charge for investigation and review of a former electroplating facility in Bay Shore, New York with chlorinated solvent DNAPL. Activities included historical document review, subsurface investigation, and coordination with outside legal counsel and NYSDEC.
- Project manager for a property transfer support project at a heavily contaminated state-of-the-art distribution facility in the Bronx, New York. The site was a former MGP being handled under the VCP in central office, the site had an open spill under the regional spills group and the site was attempting to apply to the BCP through the regional office. Roux performed a Phase I for the buyer, a Phase II and remedial cost estimate for the owner and negotiated

with the buyer's consultant and NYSDEC to limit the scope of the investigation and cleanup.

- Principal in charge of NYSDEC BCP redevelopment project in Island Park, Long Island, New York. Property was the location of a former oil terminal with extensive degraded petroleum contamination. Contracted services included, management of contaminated soil, import of recycled soil to bring the site above the flood plain, and negotiation with the NYSDEC. Project remediation schedule was extremely tight, and a COC was achieved before the requisite deadline.
- Served as Environmental Professional on hundreds of Phase I Environmental Site Assessments according to ASTM E1527-00, ASTM E1527-05, and ASTM E1527-13 for due diligence of large retail shopping centers, industrial facilities, and office buildings. Associated activities included agency contact, database management and interpretation, report preparation, and recommendations for additional work.
- Implemented GIS analysis and mapping for a remedial study and alternative analysis report (AAR) for an active petroleum storage terminal in Buffalo, New York under jurisdiction of the NYSDEC. The AAR required spatial analyses in order to categorize and analyze contaminant data from multiple investigations, investigate remedial alternatives, and to help focus ongoing additional investigations.

TECHNICAL EXPERIENCE

Phase I and II environmental site assessments, remedial construction oversight, Voluntary and Brownfield Cleanup Program requirements, Petroleum Bulk Storage regulations, mold assessment and remediation, soil vapor intrusion, drywell and storm drain investigation and remediation, regulatory coordination, Underground Storage Tank (UST) investigations and removal, engineering control (vapor barrier and sub-slab depressurization system) design and implementation.

EXPERIENCE SUMMARY:

Five years of experience: Project Geologist at Roux Environmental Engineering and Geology, D.P.C.; Project Manager at HydroTech Environmental Engineering and Geology, D.P.C.

OSHA 30-Hour Construction Safety, 2019
OSHA 10-Hour Construction Safety, 2018

PROFESSIONAL AFFILIATIONS:

Environmental Assessment Association

KEY PROJECTS

- Authored and assisted on over 200 Phase I Environmental Site Assessments for properties in the greater New York City area and Long Island. These assessments ranged from small residential properties to large scale industrial, commercial and manufacturing businesses. Responsible for maintaining report integrity and compliance with ASTM E1527-13 standards. Maintained client expectations and delivered accurate results in a timely manner to satisfy tight due diligence deadlines. Provided recommendations and cost estimates to clients if Phase II investigations were warranted.
- Performed a Phase I portfolio for 16 vacant parcels of land owned by the New York City Department of Housing Preservation and Development (NYCHPD). The developer was interested in purchasing and developing affordable housing on these lots. Several NYCHPD specific requirements were incorporated into each Phase I to satisfy the clients due diligence requirements in the allotted timeframe. The client ultimately purchased the lots and is in negotiations with subcontractors for development.
- Project Geologist for a VCP renovation of a 11,000 square foot 5-story former paint manufacturing building located in Brooklyn, New York. Designed and implemented a remedial action work plan that was

approved by the NYCOER which included excavation of lead hazardous and metal impacted soil exceeding industrial SCOs. Directed weekly construction meetings with the numerous subcontractors working at the Site regarding their environmental obligations. Coordinated with the NYSDOH regarding the vapor barrier and SSDS design as well as the NYSDEC upon the discovery of lacquer, paint and varnish product present in the soil. Performed hazardous lead delineation sampling to minimize overall costs of soil disposal, transportation and treatment for the client.

- Project Geologist for a VCP redevelopment of a vacant parcel in the middle of the Coney Island in Brooklyn, New York. Technical challenges included planning for construction in the busy summer months as well as the very active local community board. Meetings were held between the client, community board and the OER to convey the importance and goals of the environmental oversight as well as ease tensions of the local residents. Additional precautions were implemented to minimize trucking activities, sidewalk impact, noise pollution as well as dust production. Towards the end of the project, stockpiled soil was identified to be hazardous and was handled expeditiously with the disposal facility in order to minimize construction delays for the client.
- Project Geologist for a 12.5-acre waterfront property in Whitestone, Queens which was entered into the NYSDEC Brownfield Cleanup Program for a second time. The project had originally completed its remediation under a separate consultant but was not issued a Certificate of Completion (COC) due to the contractor importing approximately 35,000 tons of contaminated backfill onto the Site. The Site was purchased in 2015 with the intention of reentering the BCP under a new agreement and developing 51 single family residential homes and a waterfront park. Responsibilities included the characterization of 137 soil grids for contaminants of concern including SVOCs, metals and pesticides. Approvals were obtained from four separate disposal facilities and a disposal plan was established to ensure proper handling of the excavated soil. Mass excavation of approximately 45,000 tons of impacted material (including hazardous lead and cadmium soil) was conducted peaking at 130 trucks removed per day. Provided daily oversight and communicated directly with the NYSDEC case manager documenting the successful implementation of required storm water pollution prevention measures and remedial construction elements. The final phase included the coordination and sampling of soil source facilities to provide a clean 2-foot cover of soil over the excavated areas. Approximately 30,000 tons of clean material was imported to the Site. On-site soils were also sampled and reused to minimize the cost of clean fill importation. The COC for this Site was issued in December 2017.
- Project Geologist for the remediation and subsequent monitoring of a retail gasoline station in Valley Stream, New York. During underground storage tank replacement, impacted soil and groundwater were identified and a NYSDEC spill case was opened.

A remedial action work plan was submitted and approved by the NYSDEC and included source soil excavation, endpoint sampling, community air monitoring, odor suppression and backfilling. The work was completed within a month of the identification of the release and the monitoring phase was initiated. A subsurface investigation was conducted at the request of the NYSDEC to delineate any residual soil/groundwater impact. Dissolved VOCs and SVOCs were identified in the groundwater at concentrations exceeding regulatory standards and a monitoring/sampling program was proposed and approved. No additional soil contamination remained on Site. Concentrations of groundwater contaminants reduced significantly over time confirming source removal. Coordination was also provided with the law team representing the client and a new purchaser. An access agreement was also developed and executed following the client's sale of the Site to allow for the continuation of the required monitoring activities, meeting all the client's goals for this project.

- Project Geologist for the remediation of a 30,000-square foot former Rubber Adhesives manufacturer in Ravenswood, Queens. The project was enrolled in the BCP and operating under an approved Interim Remedial Measure (IRM) to be performed in conjunction with the development of a 13-story hotel. Due to zoning changes, a strict deadline for the foundation placement had to be met, which provided technical challenges for the entire development team. Five USTs containing a combination of gasoline, toluene, heptane and methyl ethyl ketone were identified, emptied and removed. The entire footprint of the hotel was dug down to bedrock which ranged from 3 to 16 feet below grade. Approximately 2,500 tons of hazardous toluene and 6,000 tons of VOC and metal impacted soil was excavated and disposed off-site. The development team consisting of architects, foundation engineers, developers, environmental consultants and stakeholders attended meetings every week to track progress, issues, environmental obligations and deadlines. Ultimately, the deadline was met and the IRM requirements were completed within time and budget constraints allowing the client to continue with the development of the hotel.
- Project Geologist for the investigation and remediation of stormwater drywells for a client who owned a chain of auto repair shops on Long Island. Drywells were split sampled with the health department and compared to Suffolk County Department of Health Services (SCDHS) Action Levels and several exceedances for VOCs, SVOCs and metals were identified. Coordinated a remediation strategy with the county, which included vacuum truck sediment removal and disposal, endpoint sampling and backfilling the structures with virgin sand.
- Project Geologist for the evaluation of a 25,000-gallon #6 fuel oil tank impacted from Hurricane Sandy located at a large residential complex in Rockaway, Queens. A combined Phase I/II was performed which identified the tank as a significant source of environmental risk. Several temporary monitoring wells and soil probes were

installed around the tank and identified significant VOC impacts and petroleum in the soil which prompted the opening of a NYSDEC spill case. The residual product and sludge were removed from the tank and the interior was cleaned and prepped for abandonment. Removal was not deemed technically feasible due to the tanks size and proximately to the foundation walls of the building. Additional soil disposal was conducted on the surface and surrounding the tank until no more product was identified and the NYSDEC spill was subsequently closed.

- Project Manager and Site Assessor for an extensive mold investigation conducted at a 27,000-square foot luxury condominium complex in DUMBO, Brooklyn. The investigation was conducted over several weeks and throughout approximately 20 residential units and common areas including the basement, hallways and amenity spaces. Excess moisture was documented throughout the entire building, accumulating in areas where HVAC ducting was located. Ultimately, it was identified that the HVAC ducts were not properly insulated, and condensation was forming on them and impacting drywall throughout the basement and residential areas. Mold growth was identified in several units throughout the complex, which was confirmed with both bulk and air samples. A remediation plan was provided for all the areas identified with mold impact. Replacement and insulation of the ductwork was recommended to prevent future moisture buildup and potential mold growth. Mold growth in one unit was extreme which required an outside contractor to perform remediation services. Oversight of this work was provided to assess the contractor's ability to follow the remediation work plan provided. Clearance assessment and sampling was also conducted which confirmed the remediation as successful.
- Performed oversight of foundation and general contractors installing various engineering controls including: concrete covers, vapor barriers and SSD systems to ensure appropriate installation methods. Audited and corrected installation methods to ensure strict adherence to engineering design. Performed yearly inspections of these systems for SMP compliance on OER projects and generated SMP inspection reports.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/29/2020 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2020 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 21 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 11 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQQ: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQQ list, as provided by EDR, and dated 06/15/2020 has revealed that there are 9 RCRA-VSQQ sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/12/2020 has revealed that there is 1 NY SHWS site within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/12/2020 has revealed that there are 91 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 10 NY UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/15/2020 has revealed that there are 340 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

FUSRAP: DOE established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations.

A review of the FUSRAP list, as provided by EDR, and dated 08/08/2017 has revealed that there is 1 FUSRAP site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
RADIATION APPLICATIO Site Status: Eliminated from consideration under FUSRAP Site ID: NY.57	370 LEXINGTON AVENUE	SSW 0 - 1/8 (0.094 mi.)	O159	389

FUELS PROGRAM: This listing includes facilities that are registered under the Part 80 (Code of Federal Regulations) EPA Fuels Programs. All companies now are required to submit new and updated registrations.

A review of the FUELS PROGRAM list, as provided by EDR, and dated 05/18/2020 has revealed that there are 12 FUELS PROGRAM sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 4 EDR MGP sites within approximately 1 mile of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL DEC INSPECTOR'S NOTES Arrived on site @2:30pm location is in center lane of 42nd. St. approx. 25' west of Lexington Ave. Oil is contained to this structure- oil level is below conduits, and adjacent structures are clean. Oil visibly appears to be dielectric cable oil. However there is no transformer feeder or transformer in structure, only distribution cables. Due to location on busy street in front of Grand Central Station, cleanup will begin on midnight shift. Samples were taken for PCB & Oil ID. Once structure has been cleaned the will be able to investigate the source. 5-10-01 0445hrs. Copy of notes to ECO Duty Officer. 5-17-01 Voice mail update from Lou First. Oil/water pumped out, total water 200gals. total oil 25-50gals. Found blown joint and cut cables in MH PCB count 28ppm. Measurement originally made in sump- actual thickness was less than 1 of oil. CON ED E2MIS REPORT 5-16-01 1,000gals. of unknown oil found at the C/O E. 42St. 30'W/O Lexington Ave. in MH 56570. No water in the structure, all oil. No sewer connection as per conduit plate 26-j-2. Took 2 samples 1 for oil ID and 1 for PCB. Aroclor 1254 ; <27.8ppm Analysis indicates a substance similar to dielectric fluid. 3:00am Tanker has removed approx. 250gals. of fluids, 220water & 25-30gals. of oil. The problem with the original estimate was that when the oil probe was put into the manhole it went into the sump that is directly below the opening. This gave the appearance that there was a considerably larger amount of oil. In reality there was only about two inches of fluid in the hole. They found a joint that had been cut out on the floor and the six cable ends uncapped. They were capping these ends, removing the old joint and cleaning the hole. 0900hrs. Approx. 40gals. of oil and approx. 250gals. of water was pumped out of the MH. Underground crews are presently cleaning the manhole. They expect to be completed during the day shift. 1030hrs. As of 10:15am cleanup is complete. Manhole was washed twice with slix cleaning agent, 3 cable joints washed and removed to 28th St. yard."

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis no. 132504: Bronx U.G. during manhole inspections for upcoming Telergy work, discovered a dielectric fluid spill. The spill was approximately 6 OZ. on the floor and down the south wall from duct BW-S due to a leaking feeder and 3C-350 cable from the aforementioned duct. There is no water involved. There is no sewer connection from this manhole as per conduit plate. The clean-up is pending sample analysis. lab-results 00-07088 PCB 74 ppm. date: 07-25-00 Time: 0530 am Cleanup Info: double washed mh with slix and water from fire hydrant, removed by over 50 tanker. Spill Source: oil from feeder cable ends. Involved Equip: dead feeder cable open ends.sealed same. Leak Abatement Proc: utilized shrink cap"

Remarks:

"clean up pending test results. ref #132504."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Tank Info:

Tank Number: 2003
Tank Id: 228967
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

K01 - Spill Prevention - Catch Basin
I02 - Overfill - High Level Alarm
E02 - Piping Secondary Containment - Vault (with Access)
L99 - Piping Leak Detection - Other
F01 - Pipe External Protection - Painted/Asphalt Coating
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
C01 - Pipe Location - Aboveground
G02 - Tank Secondary Containment - Vault (w/access)
H05 - Tank Leak Detection - In-Tank System (ATG)
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Tank Converted to Non-Regulated Use
Pipe Model: Not reported
Install Date: 02/23/2000
Capacity Gallons: 2000

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis 134937: 3/15/2001 While doing maintenance on Tranformer #1 at the W. 42 st Sub-station found a leak at the Pothead stand of Transf. #1 spilled onto the stand grating. This tranformer is connected to feeder 38m45. This oil spill is about 1 ounce. The leak is on C phase. UPDATE 3/15/2001 16:30 The cleanup is complete. The Porcein has been cleaned, the dry oil on the Pothead and surrounding area. W. 42ND ST S/S 38M45 C PHASE POTHEAD TOP AREA BLEEDING VALVE ON TOP OF POTHEAD Tightened valve. Removed visible traces of oil. RE-TORQUED POTHEAD On May 10, 2002 NYSDEC O'Connell and Foley, along with Con Ed Hanebuth, Susco inspected this leak and found that the leak had been repaired. This continues to leak into containment. 10/22/03 I inspected this leak and it has been repaired and the containment removed. P.Keelan "
Remarks: "leat from pot head stand on transformer #1...hx data less than 1 ppm.. ref # 135937."

DEC Memo: "9/12/16 TJD Teleconference with Bill Silveri at WCD Group (consultant). As per Mr. Silveri, building workers dumped paint into catch basin and consultant has been retained to hire contractor and oversee cleanup. Consultant to provide update once cleanup is complete. DDO provided consultant with NYCDEP contact information for notification to NYC sewers. 9/13/16 TJD DeMeo received email notification that cleanup has been completed. As per email, Summary of events that occurred this morning: 1. Enviro Waste mobilized to Site at 0700, 2. The catch basin of concern was located at the northernmost portion of roadway between Site building and west adjacent Grand Central (i.e. Catch Basin of Concern) 3. Paint and sludge were observed within the Catch Basin of Concern. 4. From 07:15 to 08:15, Catch Basin of Concern was pump out, then triple washed and cleaned. 5. After cleaning of the Catch Basin of Concern, two other catch basins to the north were similarly cleaned and washed (Note: no visible paint was observed inside these other catch basins. 6. Liquids and solids were captured from the Catch Basin of Concern and other catch basins were captured by the vacuum truck and will be disposed at an appropriate off-site facility based on sampling

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001
Tank Id: 180617
Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

E00 - Piping Secondary Containment - None
A00 - Tank Internal Protection - None
K00 - Spill Prevention - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
L00 - Piping Leak Detection - None
B00 - Tank External Protection - None
F00 - Pipe External Protection - None
C03 - Pipe Location - Aboveground/Underground Combination
G00 - Tank Secondary Containment - None
J02 - Dispenser - Suction Dispenser
I05 - Overfill - Vent Whistle

Tank Location: Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - In Place
Pipe Model: Not reported
Install Date: Not reported
Capacity Gallons: 20000

DEC Memo: "05/19/08 - See eDocs for Con Ed report detailing cleanup and closure. 207136. see eDocs 7/30/07 - Austin - On afternoon of 7/18/07, I received initial reports of a pipe explosion in midtown Manhattn via news reports. I monitored such reports for details of the event, and also spoke with Amar Nagi and RD Suzane Mattei. For DER/Spills, I formulated a plan to have staff check nearby PBS facilities and remediation sites for any disruptions/damage to tanks/pipes/remediation systems, once the area was reoccupied. On 7/19/07, I received a request to have personnel deployed to the scene of the event to act as a DEC relay for information and regulatory inquiries. Dispatched staff (Krimgold) to Command Post on E43 St. to assist in comms from event site, and had Jeff Vought act as office contact to relay requests and info to and from Jake Krimgold. Once the issues were identified for DEC's involvement (waste transport and disposal, material waste analysis and sampling, air monitoring for suspended particulate), DER went back to the original assignemt of checking and ascertaining the condition of the three PBS sites in the immediate vicinity of the explosion(#2-317616 @ 369 Lexington Ave., #2-601831 @ 425 Lexington Ave., and #2-610296 @ 450 Lexington Ave.)

STEAM PIPE RUPTURE WITH ASBESTOS (Continued)

S108762794

All three were apparently unfazed by the impact of the explosion. No remedial systems were installed/operating in the immediate vicinity. On 7/26/07, participated in RD debriefing regarding chronology and response to this event by DEC. - end 08/07/07-Vought-Notes entered for spill as per DEC Austin. In morning of 7/19/07 DEC Vought and DEC Krimgold notified that DEC Emergency Response center set up and DEC Gilmore is DEC On-scene coordinator. As per Gilmore, EPA sending response team to site. Concerns expressed included possible damage to adjacent PBS sites. DEC involvement being coordinated via DEC Shovelin and DEC Milstry. Also present at DEC center was DEC McDonald, DEC Krimgold, DEC Southwell, DEC Brezner, DEC Lieblich, DEC Nagi and DEC Mattei. DEC Krimgold will perform site visit to Command Center to obtain more information and return call to Vought to convey info to DEC Gilmore. Vought received call back from Krimgold who attended 1pm meeting at Command Center and as per Command, all debris will be treated at ACM (asbestos containing material) and will be handled and disposed of accordingly. As per DEC O'Connell no transformers were involved in explosion. Also as per Krimgold, FDNY will hose down buildings and ConEd will collect washwater for disposal. As per DEC Lieblich, DEC air monitoring stations show no impact but are also not monitored for asbestos. Vought received callback from DEC Krimgold at 2pm and debris sampling was completed and asbestos was found less than 0.5% but material will be treated as ACM nonetheless. Also as per Krimgold, 3rd avenue will be reopened and materials removed will be bagged and disposal location still unknown. Next meeting at Command Center scheduled for 3:30pm. DEC Mattei expressed concern over who is transporter, are they permitted and location of disposal. Soil being removed by Asbestos Transportation Corp. ECO Komanchek and ECO Matteri arrived at command center and ECO Komanchek will go to site to ensure Part 364 compliance. Decision made later by NYCDEP to allow washwater to enter sewers and DEC Southwell notified. DEC Brezner to handle all disposal issues as per DEC Gilmore and DEC Lieblich to handle any air concerns. Search of adjacent spill site and adjacent PBS sites show no adjacent spill sites and only one adjacent PBS site. Vought called all PBS sites as per DEC Austin and no problems observed with ASTs and USTs. "

Remarks:

"underground explosion poss asbestos release between 41 and 42 street-CON ED cleanhup ending-spill not assigned. 207136"

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 002
Tank Id: 165949
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

E00 - Piping Secondary Containment - None
I02 - Overfill - High Level Alarm
K01 - Spill Prevention - Catch Basin
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
I03 - Overfill - Automatic Shut-Off
L99 - Piping Leak Detection - Other
F00 - Pipe External Protection - None
J01 - Dispenser - Pressurized Dispenser
C01 - Pipe Location - Aboveground
G02 - Tank Secondary Containment - Vault (w/access)

Tank Location: Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/01/1987

Contact Name: DEAN
DEC Memo: "1/18/2017 - Feng - Duty Desk. Spoke to Dean of Master Piece US (914-563-7291, DeanS@MasterPieceCompanies.com). They have a contract with Metro North Rail Road to renovate the elevator, everything to be taken out. The bleeder valve was taken out prematurely and about 50 gallons of hydraulic oil leaked out onto the elevator pit. The pit is in concrete and was designed to take care of minor leak. The oil did not go anywhere. They applied SpeedyDry and absorbent pads to clean up the oil. Some SpeedyDry/granular still in place and will be drummed by the end of the day. About 1 and half drums were generated. CycleChem is their contractor to take care of the waste. Photos were taken. DEC required a report documenting the spill details, the work has been done to clean up the spill and the photos to be sent. 1/20/2017 - Feng - Received Spill Report. Spill has been cleaned up and no further action is required. Spill is closed. "

DEC Memo: "04/23/12- Zhune spoke to Tony Delgado from Con-Ed ERT. He said the spill is contained in the manhole. Nothing is going outside. The transformer is leaking from the bottom. They are going to take a sample and clean the spill. They are going to pump oil contained in manhole and the oil in the tranformer. 9/27/12 - Austin - Transformer lost 500 gals. into vault - Contained to only vault - Con Ed contained and cleaned up the spill, and removed the transformer - See eDocs files for further information - Spill closed - end"

Remarks: "Caller reporting a spill of 500 gallons of transformer oil to containment. Clean up pending."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT CON ED E2MIS NOTES Approx. 2 oz. of unknown oil mixed with approx. 2gals.of water found in V3841. Spill contained to Vault, no sewers or waterways affected. No foundational cracks although a sewer connection exists. The sump was not running, transformer was not leaking. 2 samples were takne and tag#01427 placed. Oil filled equipment in this structure is transformer#3841 Cleanup procedure 50-499 being used. 3-26-99 Transformer associated with V3841 was found with vacuum. Pressure tested-held pressure.4 transformers in nearby vaults dry and pressure tested ok, no sign of oil in other 4 vaults. Lab Results Seq# 99-03121 Aroclor 1260 PCB <1.00ppm 4-10-99 @1500 hrs. Cleanup completed"

Remarks: " 2 OZ OF UNK OIL MIXED WITH 2 GAL OF WATER IN VAULT - SAMPLES WERE TAKEN AND CLEAN UP PENDING RESULTS - SUMP PUMP IN VAULT IS DISCONNECTED AND TRANSFORMER IN VAULT IS NOT LEAKING"

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE See also 0203738. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 12/30/10 - Raphael Ketani. A new spill case was called into DEC on 12/22/10. It was assigned #1010077. The spill consisted of the seepage of several gallons of oil through the walls of the #7 subway line tubes. It is a reoccurrence of a historical spill that has been going on for over 10 years and is being managed through active spill case #0010754. As there is an older active spill case for the site, I have closed spill case #1010077. 1/4/11 - Raphael Ketani. Randy Austin, Chief of the Spills Unit, requested an update regarding the seepage. I tried to contact Haroon Aslam of the Environmental Protection Division (646) 252-5774 of the NYCTA, but I could only leave a message. Mr. Aslam returned my call and left a message. He said that workers are still going into the tunnels to mop up the seep with pads. Otherwise, noting else has changed. 4/24/14 - Obligado - I emailed Sherry Bulkey to get an update on this spill. 9/2/14-Vought-DEC Obligado out of office and Vought received email that Jeffrey and Santosh, There is an ongoing 3rd party spill that has been impacting the Steinway Tube (subway) on Track C-1. I am

trying to locate the historic spill number, and will send it to you when I retrieve it. Many inspectors, including one of my staff will be going out tonight to walk the tracks and try and identify at least the point of entry. I am extending an invitation to the DEC to see if anyone would like to join. Please keep in mind the DEC representative needs to be track qualified. It is my current understanding that there will be no power (third rail will be off) during the inspection. I will call Jeffrey about the message that was left Friday. Please see the invitation below (11:30 to 2am at Vernon-Jackson Tool Booth). Thank you, Francine. Vought sent reply that Francine, After our phone conversation, I was able to locate the open Spill Number referenced above and the case is currently assigned to Andre Obligado in my Spills Remediation Unit. Andre is out of the office on vacation and is also not NYCT track qualified. Myself and Santosh, however, are certified and will meet you at the Jackson Avenue station at 11:30pm. I also have the advantage of having personal experience with the prior cleanup efforts including personal observations of the fuel oil formerly seeping from the tunnel ceiling and walls as well as OM&M of our former recovery system. After discussing the site with Randy (copied above), who is also historically familiar with the site, we are hoping NYCT can provide some information on how long the current seepage event has been occurring. Also our contractor has recently changed and as such may not be NYCT certified which may take time and such, pending the schedule, it may be more feasible for NYCT to perform the initial cleanup. We can discuss further when we meet your team tonight. With respect to Ray Favis's note that DEC should investigate the source of the spill after all these years, DEC performed thorough searches of adjacent spills and PBS sites and had not been able to locate any direct sources. Unfortunately due to the depth of the seepage (bedrock at least 50' down), it is not cost feasible (as was determined by Central Office) to perform bedrock fracture trace analysis, borehole geophysics or other bedrock surveys over such a wide area. As such the decision was made by Central Office to use Spill Fund monies for remediation only and not further investigation. Finally, just a logistical note: When DEC and NYCT mobilized site and seepage location during my prior years, it was via the entrance by a doorway adjacent to the FDR at the base of the United Nations (that included a seven story stairway down that opened directly onto the location). Is this more feasible to avoid the long walk from the Queens side? Regardless, Santosh and I look forward to meeting your team at Jackson Avenue at 11:30pm unless we hear otherwise. Thanks 9/3/14-Vought-Site visit to inspect track with DEC Mahat and MTA team including Capital Project Management and Systems Safety (Richard Iyasere) and seepage at same location that Vought observed in prior years. Impact also to sump pump room #2. Vought spoke with RSE and due to logistical difficulties associated with work (eg general work orders, insurance requirements and training requirements), if seepage persists, DEC may ask MTA to use Spill Fund monies for the cleanup as they can use their contractors and only submit work plans and results to DEC. Vought called and spoke to MTA Maibauer and forwarded her photos from site visit and Maibauer noted MTA would perform the initial cleanup via simple green and barrels and will also clean Sump Pump #2. They will monitor and maintain after and if problem persists will approach DEC with either using a State contractor or making a claim to the Fund for cleanup costs. 9/10/14 - Obligado - C.Sastry to inquire about the status of the fuel entering the subway and the

GRAND CENTRAL STATION -NYCT (Continued)

S104881203

clean up. I left a message to call back the DEC. 9/12/14 - Obligado - Mr. Sastry called back and provided me with the phone number for Francine Maubuer who is the System Safety Manager and is in charge of the project. I spoke to Francine. She said MTA had an internal meeting yesterday and were not inclined to hire their own remediation contractor but rather train the DEC and DEC's contractor on track safety and request we do the work. We will schedule a conference call to discuss the issue further. She said she would provide 7 line tube as built drawings. 9/23/14 - Obligado- We (Obligado, Vought, and Austin) had a conference call with NYCT, including Francine Maubaier, Eric Jones, and others as well as CPM, the contractor who will be doing construction work in the tunnel. According to transit, the seepage is very slow, minor. They inspect the rail regularly. They have put socks in the sump to recover oil. According to NYCT they inspect the track weekly. The August appearance of free product is the first time it's been seen in several years according to NYCT. NYCT was not inclined to do the cleanup, and would rather DEC hire contractor. We discussed the scope moving forward. DEC contractors will do the initial cleaning. Following the cleaning, NYCT will inspect and monitor the area for additional seepage to determine if we need to reactivate the recovery system. DEC stated that if the amount of product is small, as it appears to be, it may not warrant restart of the full system and other recovery methods could be used. DEC and NYCT discussed potential sealing/grouting the tunnel walls to prevent further infiltration. DEC and NYCT set up a tentative dates of October 18th, 25, Nov, 8 to do the cleaning. There is a General Order on those weekends for CPM's work so the DEC contractor could piggy back on those GOs to do the cleaning. 10/6/14 - Obligado - I had email discussions with Francine regarding the inspection and cleaning. I suggested doing the initial inspection on the 18th and then do the cleaning on the 25th of October. Francine responded that she would not be able to get all Miller personnel track trained until mid Nov, so the cleaning would have to wait until mid Nov. However she agreed to move the initial inspection to the 18th. 10/8/14 - Obligado - PIN Callout for Miller, signed by Austin and sent to Rob Ferguson. 10/13/14 - Obligado - Obligado and Vought attended a pre-General Order (GO) meeting at NYCTransit offices with NYCT, in particular, Francine Maubauer, to discuss logistics for the 18th site visit. DEC PIN Contractor Miller environmental attended as well. Tentative inspection time/date of 10AM Sat 10/18. 10/17/14 - Obligado - Email from Francine, inspection scheduled for 7AM October 18 meeting at the Grand Central platform. 10/17/14 - Obligado - I reviewed design drawings of subway tunnels provided to me by transit to pin point the location of the seep. The reported seep locations I have in my file at 43 + 25, 44 +60 and 45 + 10, which based on the drawings provided puts the seep under the east river. I emailed Francine to see if there are more updated drawings with different survey markers. 1/17/15 - GO tube cleaning and wall sealing AO on site 645 Miller full crew on-site 720. 725 H and S meeting 730 ready to go. 740 talk to Richard. Still waiting for flaggers. 7328488420 you 6464631390 rich Flagger #14681 800 start work train 815 stop work train, still on platform Miller has one crew cleaning oil from trench with pads. Another crew scaling and grinding solidified oil from the walls and ceiling. Once cracks are exposed Miller applies epoflex. 1/18/15 - GO tube cleaning and wall sealing AO Onsite at 935. through the epoflex. Overnight flowed downWork train set up below leak area. Naminder subeda onsite for transit. We asked trNsit to provide another cement material DAN yu onsite as well. 1500 hours identify major oil infiltration 11 ties south of 432c wall oil seep. Oil flowing down trench. There is seepage at wall at that point but doesnt flow into the trench. Meaning oik may coming ing from the bottom of the trench. Miller cleans up additional oil with pads. Adjusts water capture shield device to capture dripping oil to prevent it from falling on the track. 1600 exit tunnel 1/25/15 -GO tube cleaning and wall sealing Work train on c2 6 Miller guys Cameron is the foreman dan yu from nyct 745 work train starts 800 drop trench guys down track to pad and bag 815 start scraping c2 seep area 10 ft east of 4450 10 am, walked the C2 trench. I identified another large seep in the trench at signal 461c. Oil actively seeping out the bottom of wood rail ties directly into trench Complete surface prep of C2 wall seep. 1015 break 1030 resume work. Crew starts to walk c1 trench I walk c1 trench. Signal 432 c 37 ties west of nyct marker 44 00. 1st smal seep 19 ties west of major seep. Oil still seeping. Walked to the second seep area on C1 north of major seep, appromimately 200 ft north. Primed and sealed areas were seeping oil through seal. Small seeps, approximately 4 or 5. 12pm finish 2nd coat 1/28/15 830 AM Inspect 300 East 40th Street Miker Tarku not on-site, at Jury Duty The assistant super showed me around I saw the abandoned 40,000 gallon #6 oil tank. The UST is located in the very bottom of the parking garage. The manhole was sealed shut. Photographs taken. The assistant showed me the current tank. Its an AST in the boiler room. The tank is shown to contain #2 fuel oil. According to the assistant, this tank is a temporary tank for when temperatures go below -10 F, otherwise, the boiler runs on gas. The system was converted last year. I asked him to show me the fill ports for both the old tank and the new tank. The fill port for the new tank is located on 40th St. I asked him where the old fill was, he did not know. We went into his office and he showed me paperwork, no info was available on the old fill port, but he showed me a letter from the withdrawing notice of complaint with regard to overdue tightness test.stating that no tightness testing was required. He called his supervisor Mike Tarku. I asked Mike what happened to the old fill line. He said it was in the same location as the new. They took the old line out and put a new fill port. 930 Andre Off-site. 12:28 - I emailed Mr. Lazarri and requested tank abandonment report. I later identified a closed spill report for 300 EAst 40th St due to a hole in the 40,000 gallon UST. Spill No. 0801691 closed by Vought. The 40,000 gallon tank had a cracked seam identified during the tank closure. A limited investigation was performed. 6 Borings were advance with a concrete coring machine on the sides of the tank. The borings were advanced to the tank at the midpoint depth. Laboratory samples of the soils reported no contamination. I later emailed Mr. lazarri and notified him that I found additional information in my files and that i did not need the abandonment report at this time but I would let him know if I needed additional info. 1/29/15 - I measured the elevation of the platform by counting steps - 101 steps. Each step is approximately 7.25 inches, equals 61 ft down to the north (aka east) side of the #7 platform. According to GIs, the elevation of the top of the stairwell is 37 ft above msl. I insepcted The Woodstock building on 42nd street. Pbs # 2-116440. The pbs lists a 10,000 gallon #6 oil tank. I met the super AI on-site. He showed me the tank. It was in a concrete vault with access to inspect concrete

S104881203

floors. No staining or evidence of spills. They switched to #2 oil last year. I advised him that his registration was not current and he should update the records with the DEC. He showed me the fill pipe, which runs above ground in the basement until it goes through the basement wall to the sidewalk fill port. No staining or spills were evident at the entry point. The schist bedrock was exposed at the north basement wall. The tank was installed in 1979. Prior to the use of the the tank, the heating equipment ran on city steam. HE showed me the old steeam pipes which were disconnected. No obvious signs of spills or tank/line failures were apparent at this location which would indicate this facility is the source of the spill #0010574.

1/31/15 - AO onsite 645 Miller onsite 7 AM As of 8 AM, still waiting for NYCIT flaggers 830. Start walking trench. Measure off from edge of platform to 1st seep on C2. 687.1 ft to start of first major bench seep. Identified a location where yhe bench was broken. 2 pipes run inside the trench. Suspect oil migrating through pipes east of the bench seep location and emptying at the trench seep area, where 2 pipes enter the trench 126.1 ft from edge of paint to first trench seep. Rob Cameron and helper apply final coat to the left side of C2 bench and epoxy to right side of C2 bench. Other crew switches up pads on C2. Francine will not let us keep pads in the trench due to fire hazard. All pads picked up. Bags from C2 brought to the GC 7 platform temporarily Finish up C2 work, move to C1 to switch pads along c1 trench and apply another top coat to the wall seeps. Major seep at C1 ceiling is 579.9 ft from edge of platform. 1017 ft to smaller wall seep area on the south wall of C1. significant oil still in trench at certain locations. Heavy oil accumulation in trench at 879.5 ft. Miller collects a product sample from the trench at this location for oil ID. We are not able to store bags of waste near system as planned. Francine spoke with another transit worker who said the system area is outside the assigned flagging area. Miller would need to take the bags back with them, however, they don't have a waste transporting vehicle. 2 guys will need to go back to the shop to get a truck to bring back. 2/2/14 - Obligado - Inspect 801 2nd Ave, PBS #2-600069. See spill number 1410622. 2/13/15 - Obligado - DEC Vought and Obligado inspect neighboring properties and pbs facilities around the seep location. PBS # - 2-6005823 - 212 East 42nd Street, Westen Hotel. - Met with Javier Reyes and Raphael. We inspected the 2 ASTs in the sub basement. The ASTs are 20,000 gallon #4 oil tanks in a large concrete vault. The tanks are on racks with the concrete bottom visible for inspection. A slight oil drip was observed from the union fitting above Tank #1, which dripped down the side of the tank, and formed a couple small stains on the tank vault floor. Other then this slight drippage, no evidence of significant oil spills was apparent in the vault. The vault was generally clean and well kept. The oil drip from the union was brought to the attention of Mr. Reyes. According to Mr. Reyes, this facility predominantly uses natural gas, and the #4 fuel oil tanks are back up fuel supplies. They have not run the boilers on #4 oil since last year. When they did use oil, according to Raphael, the oil was delivered by Hess, 10-13 K gallons every 10 days approximately. We inspected the sumps, and no oil was apparent. We inspected the remote fill. Their are 2 remote fill ports, 1 for each tank, in the sidewalk on 41st street. The fill lines run under the sidewalk. We advised Mr. Reyes that his registration needs to be updated and the certificate needs to be displayed. No obvious signs of spills or tank/line failures were apparent at this location which would indicate this

S104881203

facility is the source of the spill #0010574. PBS # 2-315484 - 333 East 41st street - We met the super, Aden Nefjalic. According to the super, they switched to #2 oil approximately 2 years ago. They have a dual fuel gas/#2 oil system. The #2 is a backup fuel. Prior to the switch, according to Aden, they used #4. We inspected the tank vault. Vought entered the vault. The tank is a rectangular with the bottom in direct contact with the vault floor. No oil spills were apparent in the vault. We inspected the sumps, which were dry. We inspected the boiler room which was clean. We inspected the fill port, which ran aboveground attached to the building wall. No obvious signs of spills or tank/line failures were apparent at this location which would indicate this facility is the source of the spill #0010574. PBS #2-359122 - Essex Owners Corp, 325 E. 41st Street. We met Louie Nieves, the super on site. The site has a 7500 gallon #2 fuel oil AST in a vault. We entered the vault and inspected around the tank. The tank is cylindrical in shape and the invert of the tank rests directly on the vault room floor, so it was not possible to see completely beneath the tank. However, there were no oil spills apparent anywhere on the tank vault floor. According to Louis, they had the tank completely cleaned out when they switched fuels. We inspected the pump room sump and found no oil. We inspected the remote fill, which was in the sidewalk on 41st street. According to Mr. Nieves, they have been running solely on gas since the switch, as they have a contract agreement to run gas only for 5 years after conversion. We advised Mr. Nieves that the building needs to update their PBS registration and display the certificate. No obvious signs of spills or tank/line failures were apparent at this location which would indicate this facility is the source of the spill #0010574. . 304 East 42nd Street - The Hilton Manhattan East. While walking on 41st street, a fill port and vent pipe was observed in the back of the building. We entered inside the building to inspect. They had a 275 gallon Diesel AST in the basement on a concrete floor. No significant spillage was observed. We inspected the basement sumps and elevator sumps. No oil was present in sumps. No current or historic source of #4 or #6 oil is present at this facility. No obvious signs of spills or tank/line failures were apparent at this location which would indicate this facility is the source of the spill #0010574. PBS #604594 - The News Building - 220 East 42nd Street. We met with Frank Paselli, the building manager. We inspected the sub basement and 3 sump pits. All pits were free of oil. We inspected the 1000 gallon diesel tank. The tank room was clean with no spills. The tank is for the emergency generator. We asked if they ever had oil intrusion, he said no, but they do get water seepage in some areas of hot water. The building is heated by Coned supplied Steam. We advised Mr. Paselli that his PBS certificate needs to be displayed. This site has no current or historic #4 or #6 oil storage/use and there were no obvious signs of spills or tank/line failures were apparent at this location which would indicate this facility is the source of the spill #0010574. PBS # 2-610034 - Pfizer Building - We met Mr. Paul Bryne, the Chief Engineer and Mr. Everett Jackson, the building manager. We inspected the basement sumps - no oil in the sumps. We inspected the diesel AST and it was in a vault and extremely clean with no oil spillage. The AST is for the emergency generator. The building runs on Coned supplied Steam. We asked if they every had any oil seepage into the basement. They said no. This site has no current or historic #4 or #6 oil storage/use and there were no obvious signs of spills or tank/line failures which

S104881203

were apparent at this location which would indicate this facility is the source of the spill #0010574. 675 3rd Ave/ 201 -205 E 42nd - These buildings do not have a PBS ID, however we inspected them anyway. According to the building manager, Angelo Maniello, they have no oil tanks and they have never used #4 or #6 to his knowledge. The 2 buildings are connected and have the same ownership. We inspected both basements. There was no oil storage in the basement. We inspected the sumps and found no evidence of oil in sumps. Both building heating systems run on Coned supplied steam. This site has no current or historic #4 or #6 oil storage/use and there were no obvious signs of spills or tank/line failures which were apparent at this location which would indicate this facility is the source of the spill #0010574. 2/28/15 - AO onsite for track cleaning and tunnel sealing. Miller onsite as well as NYCT system safety - Richard and NYCT Structural inspector to inspect integrity of the tunnel ceiling. We inspected the ceiling seeps and found the flow decreased significantly from previous visit. Milelr wiped of oil, cleaned the ceiling and applied a top coat of epoxy. I collected product samples from 3 different seep locations, 1 from the Track C1 Tunnel Ceiling SEep, 1 from the Track C1 South Wall seep area, and one from Track C2 wall seep. Milelr applied plug and seal to wall seeps on C1. We also inspected track C2 - Significant oil seepage through the prior epoxy layers. Oil puddles were evident on the floor. 3/1/15 - Obligado - returned to the Tunnel for additional track cleaning and sealing. DEC Obligado, Miller Crew, and NYCT Dan Yu. Inspect the ceiling seep. 3 Miller guys go down track with pads. 10 to 11 small drips of oil over night. Wiped the oil off and Miller applied plug and dyke at each seep point. Covered with shield. Inspected down gradient wall seep. No oil seep apparent over night. Estimated less than a 1 oz of oil seeped over 24 hours. 1 boom set down gradient of all seeps. On track C2 there is significantly more oil intrusion. One crew sets 3 booms. 1 down gradient from bench seep. 1 down gradient from trench seep. 1 down gradient of all oil in trench. Crew works to try to seal trench. Oil/water could be seen trapped in bubbles under epoxy seal - not permanent seal. When pierced oil and water seeps out. Prior to cement application, water flows in continuous stream out of a weep hole in the seam with a drop of oil every 10-20 seconds or so. Miller grinds out the whole length of bench seam. Applies an alternate hydraulic cement product to the seam. Upon leaving the site, no oil seep however water seeps present and oil likely to be able to bleed through eventually. 6/1/15 - Obligado - I emailed Francine regarding continuing clean up activities. We were trying to coordinate a date to get on both tracks to do a clean-up of any additional oil seepage since our last visit. NYCT responded that we would not be able to get on both tracks, but only one, since there is no GO. Also, any oil or oil impacted material removed from C2 would not be able to be stored in the system area and would need to be taken out of the tunnel the same day through Grand Central terminal. After discussion with Vought and Austin, I sent email to NYCT notifying them that we would perform clean up going forward on an as needed basis based on NYCT inspections. 7/17/15 - Obligado - I called Francine to inquire about the oil seepage and left a message on her voicemail. 7/24/15 - Obligado - I received an email from Francine - According to Francine, Hydraulics division has not indicated that there is an issue with the oil intrusion. 8/27/15 - Obligado - Inspection of Tunnel C2 scheduled for 9/9/15 3/22/17 - Obligado - As per NYCT System Safety's Daniel Yu, Hydraulics Staff inspected the tunnel on 3/16/17 and did not

S104881203

observe any recurring oil seepage. 8/10/17 - Obligado - Discussion with DEC Austin and Vought about the P&T system status in the subway and whether the System should be dismantled and removed due to the absence of oil intrusion for 2 years. Austin recommended investigate whether the system was properly decommissioned (all electrical equipment properly disconnected). It was agreed I would review the Spill and PIN file for documentation of proper system decommissioning. 9/8/17 - Obligado - No documentation of proper decommissioning was found. As per Austin, I sent an email to NYCT transit Michael Mandac, cc to Austin, Vought, and NYCT Daniel Yu inquiring about the status of the system and asking whether the electrical to the system and pumps had been disconnected by NYCT. 9/19/17 - Obligado - Email from Michael Mandac. I was able to get MOW to walk the Steinway tube on the 15th. It looks like oil seepage has stopped, the pumps removed, and electrical systems de-energized. Would this be enough to close out this spill? Thank you! 9/21/17 - Obligado - I emailed Michael Mandac that in order to close out the spill the DEC will need to decommission and remove the system. I requested access for DEC contractors to remove the system during an up coming GO. 9/22/17 - Obligado - Work Authorization signed by DEC Austin sent to Miller to decommission, break down, remove, and dispose of former system. 10/2/17 - Obligado - Closed out work Authorization to Miller since they do not have current NYCT track training and will not likely get the training in time for the upcoming GO. 4/30/18 - Obligado - I received an email from Daniel Yu, who indicated that the oil seepage had returned and the oil has entered the track bed and sump pump room. I requested the NYCT provide access to inspect and clean up the oil spill. 5/2/18 - Obligado - I received notification that there would be a General Order shut down on the weekend of May 11. 5/9/18 - Obligado - I attended a GO planning meeting at the NYCT offices. The 7 line train will be shutdown and access and flaggers will be provided for the DEC and our contractor WRS. It was indicated that up to 2500 feet of track on both the C1 and C2 were impacted in oil. 5/15/18 - Obligado - During the weekend of 5/12/18 through 5/14/18, the DEC mobilized our contractor WRS to perform cleanup of oil and contaminated sediment from the Steinway Tunnel. During the weekend, over 25 cubic yards of contaminated sediment/oil/water mixture was removed from the tunnel. Upon excavating the trench, at least 3 active oil seeps were observed entering the trench on both C1 and C2 tunnels. Additional remediation will be required during future GOs. 5/24/18 - Obligado - Meeting at NYSDEC offices with System Safety - Michael Mandac, Daniel Yu, and Dorein Boatwain. DEC attendees were Randall Austin and Andre Obligado. WRS Patrick McCloughlin also attended. We discussed the remediation which was performed and some obstacles to completing the remediation over the weekend. Specific issues which were discussed included the presence of construction debris in the trench which DEC's contractor did not have capability to remove dispose of at the time. Also, work trains were delayed 6.5 hours and flagmen were missing for several hours, resulted in lost time. DEC requested an additional weekend GO and to be provided access to 2 work trains, each Vactron unit and additional flat bed on each train for steel/concrete debris transport. Ms. Boatwain indicated that she would raise the issue up to the VP of System Safety and request special access to be provided and discuss diverting WRS personnel and equipment from the SAP project to the DEC Spill clean up. It was also stated that considering the active and on-going oil seepage, the DEC

GRAND CENTRAL STATION -NYCT (Continued)

S104881203

and WRS may need additional GOs to complete the work. We also discussed setting up a short weeknight GO recover free floating oil and change out absorbents as an interim remedial measure. Other issues raised included the status of the former remedial system. Additional access will need to be provided towards that effort, but that is lower priority. It was agreed that in order to maximize sediment removal and minimize water generation, water will be decanted and run through carbon filter socks prior to discharge back to trench. 6/6/18 - Obligado - I emailed Michael Mandac to inquire if any progress had been made on providing site access. He said the subject has been raised to upper management and he is awaiting an response. 8/15/18 - Obligado - Mobilized with WRS to perform interim oil clean up in the subway tunnel during an overnight GO. Approximately 30 bags of oiled absorbents and booms were removed from the tunnel."

Remarks: "CALLER STATES THERE IS SEEPAGE OF PRODUCT INTO TRACK AREA UNKNOWN SOURCE - NO CLEAN UP "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE See also 0203738. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 12/30/10 - Raphael Ketani. A new spill case was called into DEC on 12/22/10. It was assigned #1010077. The spill consisted of the seepage of several gallons of oil through the walls of the #7 subway line tubes. It is a reoccurrence of a historical spill that has been going on for over 10 years and is being managed through active spill case #0010754. As there is an older active spill case for the site, I have closed spill case #1010077. 1/4/11 - Raphael Ketani. Randy Austin, Chief of the Spills Unit, requested an update regarding the seepage. I tried to contact Haroon Aslam of the Environmental Protection Division (646) 252-5774 of the NYCTA, but I could only leave a message. Mr. Aslam returned my call and left a message. He said that workers are still going into the tunnels to mop up the seep with pads. Otherwise, noting else has changed. 4/24/14 - Obligado - I emailed Sherry Bulkey to get an update on this spill. 9/2/14-Vought-DEC Obligado out of office and Vought received email that Jeffrey and Santosh, There is an ongoing 3rd party spill that has been impacting the Steinway Tube (subway) on Track C-1. I am trying to locate the historic spill number, and will send it to you when I retrieve it. Many inspectors, including one of my staff will be going out tonight to walk the tracks and try and identify at least the point of entry. I am extending an invitation to the DEC to see if anyone would like to join. Please keep in mind the DEC representative needs to be track qualified. It is my current understanding that there will be no power (third rail will be off) during the inspection. I will call Jeffrey about the message that was left Friday. Please see the invitation below (11:30 to 2am at Vernon-Jackson Tool Booth). Thank you, Francine. Vought sent reply that Francine, After our phone conversation, I was able to locate the open Spill Number referenced above and the case is currently assigned to Andre Obligado in my Spills Remediation Unit. Andre is out of the office on vacation and is also not NYCT track qualified. Myself and Santosh, however, are certified and will meet you at the Jackson Avenue station at 11:30pm. I also have the advantage of having personal experience with the prior cleanup efforts including personal

GRAND CENTRAL STATION -NYCT (Continued)

S104881203

observations of the fuel oil formerly seeping from the tunnel ceiling and walls as well as OM&M of our former recovery system. After discussing the site with Randy (copied above), who is also historically familiar with the site, we are hoping NYCT can provide some information on how long the current seepage event has been occurring. Also our contractor has recently changed and as such may not be NYCT certified which may take time and such, pending the schedule, it may be more feasible for NYCT to perform the initial cleanup. We can discuss further when we meet your team tonight. With respect to Ray Favis's note that DEC should investigate the source of the spill after all these years, DEC performed thorough searches of adjacent spills and PBS sites and had not been able to locate any direct sources. Unfortunately due to the depth of the seepage (bedrock at least 50' down), it is not cost feasible (as was determined by Central Office) to perform bedrock fracture trace analysis, borehole geophysics or other bedrock surveys over such a wide area. As such the decision was made by Central Office to use Spill Fund monies for remediation only and not further investigation. Finally, just a logistical note: When DEC and NYCT mobilized site and seepage location during my prior years, it was via the entrance by a doorway adjacent to the FDR at the base of the United Nations (that included a seven story stairway down that opened directly onto the location). Is this more feasible to avoid the long walk from the Queens side? Regardless, Santosh and I look forward to meeting your team at Jackson Avenue at 11:30pm unless we hear otherwise. Thanks

9/3/14-Vought-Site visit to inspect track with DEC Mahat and MTA team including Capital Project Management and Systems Safety (Richard Iyasere) and seepage at same location that Vought observed in prior years. Impact also to sump pump room #2. Vought spoke with RSE and due to logistical difficulties associated with work (eg general work orders, insurance requirements and training requirements), if seepage persists, DEC may ask MTA to use Spill Fund monies for the cleanup as they can use their contractors and only submit work plans and results to DEC. Vought called and spoke to MTA Maibauer and forwarded her photos from site visit and Maibauer noted MTA would perform the initial cleanup via simple green and barrels and will also clean Sump Pump #2. They will monitor and maintain after and if problem persists will approach DEC with either using a State contractor or making a claim to the Fund for cleanup costs. 9/10/14 - Obligado - C.Sastry to inquire about the status of the fuel entering the subway and the clean up. I left a message to call back the DEC. 9/12/14 - Obligado - Mr. Sastry called back and provided me with the phone number for Francine Maubauer who is the System Safety Manager and is in charge of the project. I spoke to Francine. She said MTA had an internal meeting yesterday and were not inclined to hire their own remediation contractor but rather train the DEC and DEC's contractor on track safety and request we do the work. We will schedule a conference call to discuss the issue further. She said she would provide 7 line tube as built drawings. 9/23/14 - Obligado- We (Obligado,Vought, and Austin) had a conference call with NYCT, including Francine Maubauer, Eric Jones, and others as well as CPM, the contractor who will be doing construction work in the tunnel. According to transit, the seepage is very slow,minor. They inspect the rail regularly. They have put socks in the sump to recover oil. According to NYCT they inspect the track weekly. The August appearance of free product is the first time it's been seen in several years according to NYCT. NYCT was not inclined to do the cleanup, and would rather DEC hire

GRAND CENTRAL STATION -NYCT (Continued)

S104881203

contractor. We discussed the scope moving forward. DEC contractors will do the initial cleaning. Following the cleaning, NYCT will inspect and monitor the area for additional seepage to determine if we need to reactivate the recovery system. DEC stated that if the amount of product is small, as it appears to be, it may not warrant restart of the full system and other recovery methods could be used. DEC and NYCT discussed potential sealing/grouting the tunnel walls to prevent further infiltration. DEC and NYCT set up a tentative dates of October 18th, 25, Nov, 8 to do the cleaning. There is a General Order on those weekends for CPM's work so the DEC contractor could piggy back on those GOs to do the cleaning. 10/6/14 - Obligado - I had email discussions with Francine regarding the inspection and cleaning. I suggested doing the initial inspection on the 18th and then do the cleaning on the 25th of October. Francine responded that she would not be able to get all Miller personnel track trained until mid Nov, so the cleaning would have to wait until mid Nov. However she agreed to move the initial inspection to the 18th. 10/8/14 - Obligado - PIN Callout for Miller, signed by Austin and sent to Rob Ferguson. 10/13/14 - Obligado - Obligado and Vought attended a pre-General Order (GO) meeting at NYCTransit offices with NYCT, in particular, Francine Maibauer, to discuss logistics for the 18th site visit. DEC PIN Contractor Miller environmental attended as well. Tentative inspection time/date of 10AM Sat 10/18. 10/17/14 - Obligado - Email from Francine, inspection scheduled for 7AM October 18 meeting at the Grand Central platform. 10/17/14 - Obligado - I reviewed design drawings of subway tunnels provided to me by transit to pin point the location of the seep. The reported seep locations I have in my file at 43 + 25, 44 +60 and 45 + 10, which based on the drawings provided puts the seep under the east river. I emailed Francine to see if there are more updated drawings with different survey markers. 1/17/15 - GO tube cleaning and wall sealing AO on site 645 Miller full crew on-site 720. 725 H and S meeting 730 ready to go. 740 talk to Richard. Still waiting for flaggers. 7328488420 Yu 6464631390 Rich Flagger #14681 800 start work train 815 stop work train, still on platform Miller has one crew cleaning oil from trench with pads. Another crew scaling and grinding solidified oil from the walls and ceiling. Once cracks are exposed Miller applies epoflex. 1/18/15 - GO tube cleaning and wall sealing AO Onsite at 935. Walk out to c1 work train. Oil intrusion at the ceiling has gotten considerably worse. Oil slowly dripping from the Oil going right through the epoflex. Overnight flowed down Work train set up below leak area. Naminder Subeda onsite for transit. We asked Transit to provide another cement material DAN Yu onsite as well. 1500 hours identify major oil infiltration 11 ties south of 432c wall oil seep. Oil flowing down trench. There is seepage at wall at that point but doesn't flow into the trench. Meaning oil may be coming in from the bottom of the trench. Miller cleans up additional oil with pads. Adjusts water capture shield device to capture dripping oil to prevent it from falling on the track. 1600 exit tunnel 1/25/15 -GO tube cleaning and wall sealing Work train on c2 6 Miller guys Cameron is the foreman dan Yu from nyct 745 work train starts 800 drop trench guys down track to pad and bag 815 start scraping c2 seep area 10 ft east of 4450 10 am, walked the C2 trench. I identified another large seep in the trench at signal 461c. Oil actively seeping out the bottom of wood rail ties directly into trench Complete surface prep of C2 wall seep. 1015 break 1030 resume work. Crew starts to walk c1 trench I walk c1 trench. S104881203

00. 1st smal seep 19 ties west of major seep. Oil still seeping. Walked to the second seep area on C1 north of major seep, appromimately 200 ft north. Primed and sealed areas were seeping oil through seal. Small seeps, approximately 4 or 5. 12pm finish 2nd coat 1/28/15 830 AM Inspect 300 East 40th Street Miker Tarku not on-site, at Jury Duty The assistant super showed me around I saw the abandoned 40,000 gallon #6 oil tank. The UST is located in the very bottom of the parking garage. The manhole was sealed shut. Photographs taken. The assistant showed me the current tank. Its an AST in the boiler room. The tank is shown to contain #2 fuel oil. According to the assistant, this tank is a temporary tank for when temperatures go below -10 F, otherwise, the boiler runs on gas. The system was converted last year. I asked him to show me the fill ports for both the old tank and the new tank. The fill port for the new tank is located on 40th St. I asked him where the old fill was, he did not know. We went into his office and he showed me paperwork, no info was available on the old fill port, but he showed me a letter from the withdrawing notice of complaint with regard to overdue tightness test.stating that no tightness testing was required. He called his supervisor Mike Tarku. I asked Mike what happened to the old fill line. He said it was in the same location as the new. They took the old line out and put a new fill port. 930 Andre Off-site. 12:28 - I emailed Mr. Lazarri and requested tank abandonment report. I later identified a closed spill report for 300 EAst 40th St due to a hole in the 40,000 gallon UST. Spill No. 0801691 closed by Vought. The 40,000 gallon tank had a cracked seam identified during the tank closure. A limited investigation was performed. 6 Borings were advance with a concrete coring machine on the sides of the tank. The borings were advanced to the tank at the midpoint depth. Laboratory samples of the soils reported no contamination. I later emailed Mr. lazarri and notified him that I found additional information in my files and that i did not need the abandonment report at this time but I would let him know if I needed additional info. 1/29/15 - I measured the elevation of the platform by counting steps - 101 steps. Each step is approximately 7.25 inches, equals 61 ft down to the north (aka east) side of the #7 platform. According to GIs, the elevation of the top of the stairwell is 37 ft above msl. I insepcted The Woodstock building on 42nd street. Pbs # 2-116440. The pbs lists a 10,000 gallon #6 oil tank. I met the super AI on-site. He showed me the tank. It was in a concrete vault with access to inspect concrete floors. No staining or evidence of spills. They swithced to #2 oil last year. I advised him that his registration was not current and he should update the records with the DEC. He showed me the fill pipe, which runs above ground in the basement until it goes through the basement wall to the sidewalk fill port. No staining or spills were evident at the entry point. The shchist bedrock was exposed at the north basement wall. The tank was installed in 1979. Prior to the use of the the tank, the heating equipment ran on city steam. HE showed me the old steeam pipes which were disconnected. No obvious signs of spills or tank/line failures were apparent at this location which would indicate this facility is the source of the spill #0010574. 1/31/15 - AO onsite 645 Miller onsite 7 AM As of 8 AM, still waiting for NYCiT flaggers 830. Start walking trench. Measure off from edge of platform to 1st seep on C2. 687.1 ft to start of first major bench seep. Identified a location where yhe bench was broken. 2 pipes run inside the trench. Suspect oil migrating through pipes east of the bench seep location and emptying at the trench seep area, where 2

S104881203

pipes enter the trench 126.1 ft from edge of paint to first trench seep. Rob Cameron and helper apply final coat to the left side of C2 bench and epoxy to right side of C2 bench. Other crew switches up pads on C2. Francine will not let us keep pads in the trench due to fire hazard. All pads picked up. Bags from C2 brought to the GC 7 platform temporarily. Finish up C2 work, move to C1 to switch pads along c1 trench and apply another top coat to the wall seeps. Major seep at C1 ceiling is 579.9 ft from edge of platform. 1017 ft to smaller wall seep area on the south wall of C1. significant oil still in trench at certain locations. Heavy oil accumulation in trench at 879.5 ft. Miller collects a product sample from the trench at this location for oil ID. We are not able to store bags of waste near system as planned. Francine spoke with another transit worker who said the system area is outside the assigned flagging area. Miller would need to take the bags back with them, however, they don't have a waste transporting vehicle. 2 guys will need to go back to the shop to get a truck to bring back. 2/2/14 - Obligado - Inspect 801 2nd Ave, PBS #2-600069. See spill number 1410622. 2/13/15 - Obligado - DEC Vought and Obligado inspect neighboring properties and pbs facilities around the seep location. PBS # - 2-6005823 - 212 East 42nd Street, Westen Hotel. - Met with Javier Reyes and Raphael. We inspected the 2 ASTs in the sub basement. The ASTs are 20,000 gallon #4 oil tanks in a large concrete vault. The tanks are on racks with the concrete bottom visible for inspection. A slight oil drip was observed from the union fitting above Tank #1, which dripped down the side of the tank, and formed a couple small stains on the tank vault floor. Other than this slight drippage, no evidence of significant oil spills was apparent in the vault. The vault was generally clean and well kept. The oil drip from the union was brought to the attention of Mr. Reyes. According to Mr. Reyes, this facility predominantly uses natural gas, and the #4 fuel oil tanks are back up fuel supplies. They have not run the boilers on #4 oil since last year. When they did use oil, according to Raphael, the oil was delivered by Hess, 10-13 K gallons every 10 days approximately. We inspected the sumps, and no oil was apparent. We inspected the remote fill. There are 2 remote fill ports, 1 for each tank, in the sidewalk on 41st street. The fill lines run under the sidewalk. We advised Mr. Reyes that his registration needs to be updated and the certificate needs to be displayed. No obvious signs of spills or tank/line failures were apparent at this location which would indicate this facility is the source of the spill #0010574. PBS # 2-315484 - 333 East 41st street - We met the super, Aden Nefjalic. According to the super, they switched to #2 oil approximately 2 years ago. They have a dual fuel gas/#2 oil system. The #2 is a backup fuel. Prior to the switch, according to Aden, they used #4. We inspected the tank vault. Vought entered the vault. The tank is a rectangular with the bottom in direct contact with the vault floor. No oil spills were apparent in the vault. We inspected the sumps, which were dry. We inspected the boiler room which was clean. We inspected the fill port, which ran aboveground attached to the building wall. No obvious signs of spills or tank/line failures were apparent at this location which would indicate this facility is the source of the spill #0010574. PBS #2-359122 - Essex Owners Corp, 325 E. 41st Street. We met Louie Nieves, the super on site. The site has a 7500 gallon #2 fuel oil AST in a vault. We entered the vault and inspected around the tank. The tank is cylindrical in shape and the invert of the tank rests directly on the vault room floor, so it was not possible to see

completely beneath the tank. However, there were no oil spills apparent anywhere on the tank vault floor. According to Louis, they had the tank completely cleaned out when they switched fuels. We inspected the pump room sump and found no oil. We inspected the remote fill, which was in the sidewalk on 41st street. According to Mr. Nieves, they have been running solely on gas since the switch, as they have a contract agreement to run gas only for 5 years after conversion. We advised Mr. Nieves that the building needs to update their PBS registration and display the certificate. No obvious signs of spills or tank/line failures were apparent at this location which would indicate this facility is the source of the spill #0010574. . 304 East 42nd Street - The Hilton Manhattan East. While walking on 41st street, a fill port and vent pipe was observed in the back of the building. We entered inside the building to inspect. They had a 275 gallon Diesel AST in the basement on a concrete floor. No significant spillage was observed. We inspected the basement sumps and elevator sumps. No oil was present in sumps. No current or historic source of #4 or #6 oil is present at this facility. No obvious signs of spills or tank/line failures were apparent at this location which would indicate this facility is the source of the spill #0010574. PBS #604594 - The News Building - 220 East 42nd Street. We met with Frank Paselli, the building manager. We inspected the sub basement and 3 sump pits. All pits were free of oil. We inspected the 1000 gallon diesel tank. The tank room was clean with no spills. The tank is for the emergency generator. We asked if they ever had oil intrusion, he said no, but they do get water seepage in some areas of hot water. The building is heated by Coned supplied Steam. We advised Mr. Paselli that his PBS certificate needs to be displayed. This site has no current or historic #4 or #6 oil storage/use and there were no obvious signs of spills or tank/line failures were apparent at this location which would indicate this facility is the source of the spill #0010574. PBS # 2-610034 - Pfizer Building - We met Mr. Paul Bryne, the Chief Engineer and Mr. Everett Jackson, the building manager. We inspected the basement sumps - no oil in the sumps. We inspected the diesel AST and it was in a vault and extremely clean with no oil spillage. The AST is for the emergency generator. The building runs on Coned supplied Steam. We asked if they every had any oil seepage into the basement. They said no. This site has no current or historic #4 or #6 oil storage/use and there were no obvious signs of spills or tank/line failures which were apparent at this location which would indicate this facility is the source of the spill #0010574. 675 3rd Ave/ 201 -205 E 42nd - These buildings do not have a PBS ID, however we inspected them anyway. According to the building manager, Angelo Maniello, they have no oil tanks and they have never used #4 or #6 to his knowledge. The 2 buildings are connected and have the same ownership. We inspected both basements. There was no oil storage in the basement. We inspected the sumps and found no evidence of oil in sumps. Both building heating systems run on Coned supplied steam. This site has no current or historic #4 or #6 oil storage/use and there were no obvious signs of spills or tank/line failures which were apparent at this location which would indicate this facility is the source of the spill #0010574. 2/28/15 - AO onsite for track cleaning and tunnel sealing. Miller onsite as well as NYCT system safety - Richard and NYCT Structural inspector to inspect integrity of the tunnel ceiling. We inspected the ceiling seeps and found the flow decreased significantly from previous visit. Milelr wiped of oil, cleaned the

S104881203

ceiling and applied a top coat of epoxy. I collected product samples from 3 different seep locations, 1 from the Track C1 Tunnel Ceiling SEep, 1 from the Track C1 South Wall seep area, and one from Track C2 wall seep. Miller applied plug and seal to wall seeps on C1. We also inspected track C2 - Significant oil seepage through the prior epoxy layers. Oil puddles were evident on the floor. 3/1/15 - Obligado - returned to the Tunnel for additional track cleaning and sealing. DEC Obligado, Miller Crew, and NYCT Dan Yu. Inspect the ceiling seep. 3 Miller guys go down track with pads. 10 to 11 small drips of oil over night. Wiped the oil off and Miller applied plug and dyke at each seep point. Covered with shield. Inspected down gradient wall seep. No oil seep apparent over night. Estimated less than a 1 oz of oil seeped over 24 hours. 1 boom set down gradient of all seeps. On track C2 there is significantly more oil intrusion. One crew sets 3 booms. 1 down gradient from bench seep. 1 down gradient from trench seep. 1 down gradient of all oil in trench. Crew works to try to seal trench. Oil/water could be seen trapped in bubbles under epoxy seal - not permanent seal. When pierced oil and water seeps out. Prior to cement application, water flows in continuous stream out of a weep hole in the seam with a drop of oil every 10-20 seconds or so. Miller grinds out the whole length of bench seam. Applies an alternate hydraulic cement product to the seam. Upon leaving the site, no oil seep however water seeps present and oil likely to be able to bleed through eventually. 6/1/15 - Obligado - I emailed Francine regarding continuing clean up activities. We were trying to coordinate a date to get on both tracks to do a clean-up of any additional oil seepage since our last visit. NYCT responded that we would not be able to get on both tracks, but only one, since there is no GO. Also, any oil or oil impacted material removed from C2 would not be able to be stored in the system area and would need to be taken out of the tunnel the same day through Grand Central terminal. After discussion with Vought and Austin, I sent email to NYCT notifying them that we would perform clean up going forward on an as needed basis based on NYCT inspections. 7/17/15 - Obligado - I called Francine to inquire about the oil seepage and left a message on her voicemail. 7/24/15 - Obligado - I received an email from Francine - According to Francine, Hydraulics division has not indicated that there is an issue with the oil intrusion. 8/27/15 - Obligado - Inspection of Tunnel C2 scheduled for 9/9/15 3/22/17 - Obligado - As per NYCT System Safety's Daniel Yu, Hydraulics Staff inspected the tunnel on 3/16/17 and did not observe any recurring oil seepage. 8/10/17 - Obligado - Discussion with DEC Austin and Vought about the P&T system status in the subway and whether the System should be dismantled and removed due to the absence of oil intrusion for 2 years. Austin recommended investigate whether the system was properly decommissioned (all electrical equipment properly disconnected). It was agreed I would review the Spill and PIN file for documentation of proper system decommissioning. 9/8/17 - Obligado - No documentation of proper decommissioning was found. As per Austin, I sent an email to NYCT transit Michael Mandac, cc to Austin, Vought, and NYCT Daniel Yu inquiring about the status of the system and asking whether the electrical to the system and pumps had been disconnected by NYCT. 9/19/17 - Obligado - Email from Michael Mandac. I was able to get MOW to walk the Steinway tube on the 15th. It looks like oil seepage has stopped, the pumps removed, and electrical systems de-energized. Would this be enough to close out this spill? Thank you! 9/21/17 - Obligado - I emailed Michael Mandac that in order to close out the

S104881203

spill the DEC will need to decommission and remove the system. I requested access for DEC contractors to remove the system during an upcoming GO. 9/22/17 - Obligado - Work Authorization signed by DEC Austin sent to Miller to decommission, break down, remove, and dispose of former system. 10/2/17 - Obligado - Closed out work Authorization to Miller since they do not have current NYCT track training and will not likely get the training in time for the upcoming GO. 4/30/18 - Obligado - I received an email from Daniel Yu, who indicated that the oil seepage had returned and the oil has entered the track bed and sump pump room. I requested the NYCT provide access to inspect and clean up the oil spill. 5/2/18 - Obligado - I received notification that there would be a General Order shut down on the weekend of May 11. 5/9/18 - Obligado - I attended a GO planning meeting at the NYCT offices. The 7 line train will be shutdown and access and flaggers will be provided for the DEC and our contractor WRS. It was indicated that up to 2500 feet of track on both the C1 and C2 were impacted in oil. 5/15/18 - Obligado - During the weekend of 5/12/18 through 5/14/18, the DEC mobilized our contractor WRS to perform cleanup of oil and contaminated sediment from the Steinway Tunnel. During the weekend, over 25 cubic yards of contaminated sediment/oil/water mixture was removed from the tunnel. Upon excavating the trench, at least 3 active oil seeps were observed entering the trench on both C1 and C2 tunnels. Additional remediation will be required during future GOs. 5/24/18 - Obligado - Meeting at NYSDEC offices with System Safety - Michael Mandac, Daniel Yu, and Dorein Boatwain. DEC attendees were Randall Austin and Andre Obligado. WRS Patrick McCloughlin also attended. We discussed the remediation which was performed and some obstacles to completing the remediation over the weekend. Specific issues which were discussed included the presence of construction debris in the trench which DEC's contractor did not have capability to remove dispose of at the time. Also, work trains were delayed 6.5 hours and flagmen were missing for several hours, resulted in lost time. DEC requested an additional weekend GO and to be provided access to 2 work trains, each Vactron unit and additional flat bed on each train for steel/concrete debris transport. Ms. Boatwain indicated that she would raise the issue up to the VP of System Safety and request special access to be provided and discuss diverting WRS personnel and equipment from the SAP project to the DEC Spill clean up. It was also stated that considering the active and on-going oil seepage, the DEC and WRS may need additional GOs to complete the work. We also discussed setting up a short weeknight GO recover free floating oil and change out absorbents as an interim remedial measure. Other issues raised included the status of the former remedial system. Additional access will need to be provided towards that effort, but that is lower priority. It was agreed that in order to maximize sediment removal and minimize water generation, water will be decanted and run through carbon filter socks prior to discharge back to trench. 6/6/18 - Obligado - I emailed Michael Mandac to inquire if any progress had been made on providing site access. He said the subject has been raised to upper management and he is awaiting a response. 8/15/18 - Obligado - Mobilized with WRS to perform interim oil clean up in the subway tunnel during an overnight GO. Approximately 30 bags of oiled absorbents and booms were removed from the tunnel."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

S107521624

Supervisor reports that while doing a preinspect in vault 3571, located at 120 e 41 street, he discovered 10 gallons of dielectric fluid on the concrete floor of the vault. Work was being performed under acct # F3293. There was no fire or smoke involved and no release to sewers or water ways. No injuries were reported and weather conditions did not contribute to the hazard of the spill. Yellow tag # 44236 was installed and samples of oil were taken for PCB and ID. No private property was affected and the substance is owned by Con Ed. Brenseke will get back with chain of custody form # . CIG notified spoke to T Enright #48536 At 09:50 hrs. logged by : G Anelli 14059 "

Remarks: "NO TO 5 QUESTIONS, NO PRIVATE PROPERTY. HAS NOT BEEN CLEANED UP. 162390"

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: NORTH #1
Tank Id: 41240
Material Code: 0008
Common Name of Substance: Diesel

Equipment Records:

H00 - Tank Leak Detection - None
K01 - Spill Prevention - Catch Basin
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
L00 - Piping Leak Detection - None
C01 - Pipe Location - Aboveground
F05 - Pipe External Protection - Jacketed
I04 - Overfill - Product Level Gauge (A/G)
E12 - Piping Secondary Containment - Double-Walled (AG only)
J02 - Dispenser - Suction Dispenser
G02 - Tank Secondary Containment - Vault (w/access)

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110009467969

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller County: 001
Spiller Contact: GEORGE
Spiller Phone: (212) 687-4390
Spiller Extension: Not reported
DEC Region: 2
DER Facility ID: 244114
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was HINTON/SANGESLAND 9/18/2001 Sangesland spoke to Jim Simori (212-867-2120) He has a contractor who completed a Closure Report for the spill and he wanted to know what the correct process was to close the spill out. Sangesland told him to submit the report, color photos of the clean site along with a coverletter requesting that the spill be closed out. Overfill onto basement floor and vent line to sidewalk. 10/26/2001 - Spill was reviewed and closed out by Michael Hinton (DEC region #9) while he spent 1 week in NYC helping after WTC incident. According to a copy of a work report prepared by Eastmond & Sons Boiler Repair Inc., on 1/4/01 Eastmond was called to the site by Stuyvesant Fuel. Tank had been overfilled. 30 to 40 gallons spilled on the sidewalk. Speedie Dry was laid on the sidewalk and then it was pressure washed. Water/oil was vacuumed up. Eastmond provided a waste manifest for everything removed. Eastmond also provided color photos of the sidewalk and basement to confirm the cleanup. "

Remarks: "SUPERINTENDANT GAVE INACCURATE READING TO DRIVER. SUPER CLAIMED TANK WAS EMPTY AND TANK WAS NOT. EASTMAN ENROUTE TO CLEAN UP SPILL. PHOTOS AND CLEAN-UP REPORT SUBMITTED - SPILL CLEANED AND CLOSED - R. AUSTIN"

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001
Tank Id: 58595
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

F00 - Pipe External Protection - None
G03 - Tank Secondary Containment - Vault (w/o access)
I02 - Overfill - High Level Alarm
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
C01 - Pipe Location - Aboveground
H05 - Tank Leak Detection - In-Tank System (ATG)
Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Tank Converted to Non-Regulated Use
Pipe Model: Not reported
Install Date: 09/01/1999
Capacity Gallons: 1500
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 07/18/2008

DEC Memo: "L Roman # 27270 Operating Supervisor Manhattan I&A reported to N Muldoon # 18723 that @ 0:45 hrs M Pina # 11652 also of the I&A reported to him that while inspecting Vault 4638 located at F/O 354 Lexington Ave (40 -41 St) discovered approx 1 gallon of unknown oil (possible cooking oil) on top of 200 gallons of water. No private properties affected. The source and cause of the spill are unknown. There was no fire or smoke involved. There were no injuries related to the spill. There was no evidence of release to sewer or waterways as per Mr Roman. Weather conditions did not contribute to the hazard of the spill. There is oil filled equipment in the structure the transformer. There is standing water but no visual movement. A sewer connection, concrete sump and any substantial cracks could not be verified. No sump pump running. Spill tag # 17465 was installed Two liquid samples were taken one for OIL ID and one for PCB on a priority E basis. Chain of Custody # BB06626 was used. Account # 80484 is also used. Cleanup pending lab results and will try to get an over 50 tanker as soon as possible so I & A can see if there is a leak on the unit or it is cooking oil. This incident meets the criteria of a 24 Hr spill. Note: There is a scaffolding over the

vault. No parking anytime. Logger: N Muldoon #18723 Update 9-23-03 @ 18:25 S Brenseke # 05729 reports that a partial cleanup is complete , final cleanup is pending transformer removal. 250 gallons of oil and water mixed removed. Speedy dry applied , drain is clogged. Transformer is leaking from the fin and S Brenseke #05729 stated that he will request the transformer ooe-2. Cleanup crew and supervisor are listed in the event involved person screen. Incident is being re-classified from a 24 hour deminimis spill to a spill dielectric transformer. J Moran #01182 Lab Sequence Number: 03-07877-001 Analysis indicates the presence of a substance similar to a dielectric fluid. Lab Sequence Number: 03-07876-001 TOTAL PCB 17 ppm Update: Clean up complete as of 05/04/04 @ 05:00 hrs Reports V.Mirance 58484 O.S., and that flush truck removed approx. 55 gallons of mud,oil & water mix. V4638 was washed twice with slix,no barrels used,tag 17465 pulled. Old unit removed and was the source of the spill & new unit installed"

Remarks: "transformer oil and water mixed - total 250 gals - unk how much of each involved - removed 150465"

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number: 001
Tank Id: 222181
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

I02 - Overfill - High Level Alarm
K01 - Spill Prevention - Catch Basin
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
C01 - Pipe Location - Aboveground
F00 - Pipe External Protection - None
H05 - Tank Leak Detection - In-Tank System (ATG)
E12 - Piping Secondary Containment - Double-Walled (AG only)
J02 - Dispenser - Suction Dispenser
L01 - Piping Leak Detection - Interstitial - Electronic Monitoring
G02 - Tank Secondary Containment - Vault (w/access)

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/29/2008
Capacity Gallons: 5000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported

DEC Memo: "CSL sent to: John Witty The Durst Organization 1155 Ave of Americas NY NY 10036 They have found an 800 gal ast behind a wall. they are going to overexcavated and collect samples. will send report at later time. 9/25/07- DEC Piper recieved tan kclosure report. The 800 gal tankwas rmeoved along with500 gal of fuel in tank. Additionally 23 tons of soil was removed of and disposed of. Endpoint sampling of excavation revealed no VOC's over TAGM and slight exceedances in SVOC's, which may be related to fill material since construction debris was encountered in excavation. Based on efforts to date, this spill is closed. See e-docs if warranted."

Remarks: "CONTAMINATED SOIL AT ABOVE ADDRESS"

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click Here:](#)

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.
