Tank Info:

Tank Number: 001
Tank Id: 19761
Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
B00 - Tank External Protection - None
F00 - Pipe External Protection - None
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser
I05 - Overfill - Vent Whistle

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - Removed
Pipe Model: Not reported
Install Date: Not reported
Capacity Gallons: 6000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 09/08/2006

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number: 36358
Tank Id: 58285
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

F00 - Pipe External Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
C01 - Pipe Location - Aboveground
I02 - Overfill - High Level Alarm
L09 - Piping Leak Detection - Exempt Suction Piping
G01 - Tank Secondary Containment - Diking (Aboveground)
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 04/04/1967
Capacity Gallons: 275
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Tank Info:

Tank Number: 34-46-S
Tank Id: 2815
Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
E00 - Piping Secondary Containment - None
G03 - Tank Secondary Containment - Vault (w/o access)
K00 - Spill Prevention - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
F01 - Pipe External Protection - Painted/Asphalt Coating
A00 - Tank Internal Protection - None
I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser
C03 - Pipe Location - Aboveground/Underground Combination

Tank Location: Aboveground in subterranean vault with access for inspections.....
Tank in subterranean vault but accessible for inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 12/01/1953

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Tank Info:

Tank Number: 2
Tank Id: 56908
Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

D01 - Pipe Type - Steel/Carbon Steel/Iron
A00 - Tank Internal Protection - None
F00 - Pipe External Protection - None
C01 - Pipe Location - Aboveground
L09 - Piping Leak Detection - Exempt Suction Piping
H00 - Tank Leak Detection - None
I02 - Overfill - High Level Alarm
G01 - Tank Secondary Containment - Diking (Aboveground)
J02 - Dispenser - Suction Dispenser
B05 - Tank External Protection - Jacketed

Tank Location: Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 06/01/2004
Capacity Gallons: 5000
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True

Tank Info:

Tank Number: 01
Tank Id: 60929
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

E00 - Piping Secondary Containment - None
G03 - Tank Secondary Containment - Vault (w/o access)
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
F00 - Pipe External Protection - None
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - contact with soil.... Tank bottom rests on soil, allowing no visual inspection.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 08/01/1995
Capacity Gallons: 5000

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

A100169033

Modified By: NRLOMBAR
Date Last Modified: 2014-04-09

Tank Info:

Tank Number: 001
Tank Id: 58433
Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
K00 - Spill Prevention - None
F00 - Pipe External Protection - None
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
L09 - Piping Leak Detection - Exempt Suction Piping
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)
G02 - Tank Secondary Containment - Vault (w/access)
I05 - Overfill - Vent Whistle
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 05/01/1971
Capacity Gallons: 7500
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True
Modified By: NTFREEMA
Last Modified: 04/14/2017
Material Name: #2 fuel oil (on-site consumption)

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 001
Tank Id: 14813
Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

K00 - Spill Prevention - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
I04 - Overfill - Product Level Gauge (A/G)
C01 - Pipe Location - Aboveground
L09 - Piping Leak Detection - Exempt Suction Piping
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
F00 - Pipe External Protection - None
J05 - Dispenser - On Site Heating System (Supply/Return)
G02 - Tank Secondary Containment - Vault (w/access)
I05 - Overfill - Vent Whistle

Tank Location: Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 10/01/1965

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

[Click Here:](#)

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Name: DAVID CHANG
Spiller Company: HERTZ RENT A CAR CORP
Spiller Address: 222 EAST 40TH STREET
Spiller County: 001
Spiller Contact: MATT DUPONT
Spiller Phone: (972) 488-2222
Spiller Extention: 233
DEC Region: 2
DER Facility ID: 89833
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 2/26/2002 - Aprox 60 gal of gasoline was pushed out the top of a tank during a delivery. Delivery port is on the sidewalk, but the overfill spill occurred inside the building basement. Site has 6 - 550 gal steel tanks installed under the basement garage floor. Gasoline came up through the stick Dip Ports on 2 of the tanks. This gasoline flowed into a puddle on the garage floor, moved approx 30 ft into a floor drain. This floor drain system eventually deposited into a 2ft x 2ft drain Trap in the car wash room. Contactor says they don't believe the gasoline went any further. Fire Dept on scene, area was vacuumed and drysol cleaned. Basement area was closed off from use. Concern is gasoline vapors. on 2/26, Contractor vacuumed out sump, flushed all drain lines and vacuumed out again. Hertz called Cura Emergency Services (Matt Dupont - 972-488-2222 ext 233) Cura Emergency hired Castleton Environmental (Bill Jacobson - 973-652-7752) to handle cleanup. 2/27/2002 Sangesland met NYFD Rep. Mike Reardon (718-999-2493) at the site and inspected the whole system. Hertz Branch Manager - Maxine Lawson-Adams 212-486-5060 Hertz Regional Environmental Rep: Jim Weingardner 201-307-2421 Apparently today the clean up is being organized by Tom Moritz of HMHTTC 908-558-0156 (cell 201-602-0306) Sangesland noted that the 6 tanks were installed in 1963, had been upgraded in 1998, but the Cathodic Protection system does not seem to have been operating. NYFD is requiring the tanks to be tested (last tested by Tanknology in Dec 2001 -Kenneth Gelor - 800-964-7311) -copy of this report is in the file. Apparently the leak detection (Veeder-Root) system was located in a back room where is was not normally visible. Sangesland spoke to Matt Dupont again from Cura Emergency. Cura will be providing the close out report documentation for this project. DEC requested: 1) Detail & Photos of spill cleanup (drains/sump pit) and soil samples where appropriate (8270/8021) 2) Discussion on changes to poor practices (not dipping a tank before filling, leaving the dip stick caps open on the tanks) 3)Fix/Test mechanical systems(overfill alarm/cathodic protection) Move alarms into an area where they can be seen/heard 4)Tank test results (tank was tested in Dec 2001, but may have been damaged during this event) 4)Plan to remediate any soil contamination around and under the buried tanks. (This is probably

the major portion of the work.) 2/28/2002 - Matt Dupont requested written guidance, so Sangesland faxed/e-mailed a copy of this report with the notes listed above. Sangesland will be out of the office from March 3 thru March 19. Any questions during that time should be directed to DEC Spills Rep. Tim DeMeo (718-482-4634) - Remember to state the spill number (0111214). 3/21/2002 - Sangesland received a copy of an Incident Report from Matt Dupont at Cura Emergency Services. The report outlines all of the basic facts listed above. One new item is the fact that Cura and it's subcontractor tried to dig out the contaminated soil near the buried tanks and were not able to get very much out because of underground piping and potential tank damage. The report does say that Cura will propose some method of addressing the contaminated soil issue. 7/1/2002 - Sangesland received a report from Cura titled Corrective Action Final Report . It once again repeats the information provided earlier, but does not address the size or scope of the problem in the soil around the tanks. This letter does request closure, but the DEC still requires information on the contamination around the tanks. 7/8/2002 - Sangesland called Cura to find that Matt Dupont no longer works there. The project will be reassigned and someone from Cura should call back within the next few days to get more details about what additional work the DEC needs. 7/8/2002 - Ted from Cura called back to say the contact for future work at this site will be: Sue Pinera 201-307-2547 at Hertz. 7/9/2002 - Roland Costanzo of Hertz (673-465-6942) called to say that Dave Winslow of ATC had been hired to conduct an investigation of the soil around the buried tanks and would be forwarding a report on that subject to the DEC later this week. 7/10/2002 - Sangesland reviewed a report submitted by Dave Winslow of ATC Associates (212-353-8280). The report shows that four GeoProbe soil borings were taken on May 9, 2002 within 2 to 3 feet of the subject petroleum tanks. Borings were advanced to a depth of 16 ft (10 ft below the bottom of the tanks). All soil samples came back Non Detect for VOC's and SVOC's. No water samples were taken because of the inability to get a larger drill rig in the garage space. DEC is satisfied with the investigation and the results. Spill Closed. "

I04 - Overfill - Product Level Gauge (A/G)
J02 - Dispenser - Suction Dispenser

SPILLS:

Name: HERTZ RENT A CAR
Address: 222 EAST 40TH STREET
City,State,Zip: NEW YORK, NY
Spill Number/Closed Date: 9209689 / 2006-09-18
Facility ID: 9209689
Facility Type: ER
DER Facility ID: 89833
Site ID: 233212
DEC Region: 2
Spill Cause: Unknown
Spill Class: D4
SWIS: 3101
Spill Date: 1992-11-19
Investigator: aaobliga
Referred To: Not reported
Reported to Dept: 1992-11-19
CID: Not reported
Water Affected: Not reported
Spill Source: Unknown
Spill Notifier: Other
Cleanup Ceased: Not reported
Cleanup Meets Std: False
Last Inspection: Not reported
Recommended Penalty: False
UST Trust: False
Remediation Phase: 0
Date Entered In Computer: 1992-11-19
Spill Record Last Update: 2006-09-18
Spiller Name: Not reported
Spiller Company: HERTZ RENT A CAR
Spiller Address: 225 BRAE BLVD
Spiller Company: 001
Contact Name: Not reported
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was
VOUGHT TRANSFERED FROM MILLER TO TIBBE. 4/12/04-Vought-Spill
transferred from Tibbe to Vought as per Rommel.
9/26/05-Obligado-Spill transferred from Vought to Obligado 9/19/06 -
Obligado - See also spill number 0111214. Which has been closed by
Sangesland. Sangesland was satisfied with a soil investigation. Close
this spill as well."

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 1/16/2002 - Sangesland spoke with John Kaub (212-715-4277) who is a facilities person at the Marriot Hotel. He said he noticed an oil smell this afternoon and looked in the containment room. There was a small spill of oil (about 2 gallons) coming out of a small hole near the bottom of the tank. Mr. Kaub called Petroleum Tank Cleaners. PTC responded and cleaned the 2 gallon spill and laid out speedie dry to absorb the continued drip. Marriot management is working out hiring someone to drain the tank ASAP and then they will determine if they repair or replace the tank. According to DEC PBS records, the tank holds #2 oil, is 15,000 gallons and was installed in 1978."

Spiller Name: VINNY LOVARI
Spiller Company: APARTMENT BUILDING GARAGE
Spiller Address: 250 EAST 39TH STREET
Spiller Company: 001
Contact Name: VINNY LOVARI
DEC Memo: "8/28/2006 Sangesland spoke to Vinny at Island Tank. He said they've been digging at the site for several days. Originally they thought it was just an isolated spill, but then they found an old #6 oil return line which had rotted under the garage floor. This line is now being removed. Work is moving slowly because they have to juggle cars being parked in the garage to make room to dig. So far they have removed 18 drums of #6 oil contaminated soil. By the end of this week they expect to be finished and to take end point samples. Vinny says they will send in a closure report with photos as soon as the endpoint sample results come back. 9/19/06 - Raphael Ketani. I tried to contact Vincent Lovari of Island Tank (718) 967-9424, but could only leave a message. 10/16/06 - Raphael Ketani. I tried to contact Mr. Lovari, but got his assistant. I left a message requesting a copy of the analyticals for the soil. His assistant said that they were still laying pipe at the site. 11/7/06 - Raphael Ketani. Mr. Lovari returned my call with a voice message. He said that they will move the drums on this thursday or friday and then take end-point samples on friday. He said they have to do things this way as the site is very tight. 3/7/07 - Raphael Ketani. I tried to reach Vinny or his assistant, but could only leave a voice mail. 3/8/07 - Raphael

Ketani. I spoke to Vinny of Island Tank (718) 708-3425. He said that 40 drums of soil have been removed so far from around the fill line and the return line. He said that it looks like the lines had been leaking for many years. Someone had even put a bucket with a pump under one leak in the fill line many years. He said that there still is some more soil to remove. Soil samples will start to be taken this friday. He said that it's a big mess at the site. 3/27/07 - Raphael Ketani. I received the update of work report for the site from Mr. Lovari. The report stated that the tank was relined, the 3 inch fill line was replaced, the 2 inch vent line was replaced, the suction/return line was replaced, a new vent alarm was installed, an overfill alarm was ordered, and a leak detection system will be installed. The report has soil manifests and sets of pictures of the work. End-point samples will be taken. The work is 75% completed, according to the report. A full report will be sent once all of the work is completed and the analyticals are received. 5/9/07 - Raphael Ketani. I spoke to Vinny. He said that he is now doing the fill line. He said that he will replace the line and then do soil samples. 7/25/07 - Raphael Ketani. I spoke to Vinny. He said the project is still ongoing. He said that the fill line is very long under the garage and they couldn't do the job in one shot. He said they did part of it and now have to wait for a truck to come with gravel. Then they will back fill and cement and then move over to do the other part. He said that the geologist and geoprobe are coming this friday to do the end-point samples. He doesn't think there is more soil to remove as he has already shipped out 40 drums of soil. He said they are also in the boiler room doing work. 10/17/07 - Raphael Ketani. I tried to reach Vinny, but could only leave a message. Vinny's wife called me back and said that there is a health emergency with Vinny's parents. She said that he will get back to me sometime later. 10/18/07 - Raphael Ketani. Vinny called me back. He said that the job is almost done. All he needs to do is take sidewall and bottom end point samples. 12/3/07 - Raphael Ketani. I spoke to Vinny. He said that he finished installing the fill line. He believes the job will finish soon. 1/31/08 - Raphael Ketani. I spoke to Vinny. He said that he is basically done. He said that DEC will get the paperwork next week. 3/31/08 - Raphael Ketani. I tried to contact Vinny (cell (718) 708-3425/(718) 967-9424), but could only leave a message. 4/4/08 - Raphael Ketani. Vinny called me back. He said that he had been out for awhile because he had family issues to deal with. He said that he had essentially completed the remediation report and that DEC should get it very soon. I told him that the DEC has been waiting for a long time for this report and that we're very anxious to get it. He said we'll get it soon. 6/10/08 - Raphael Ketani. Sharif Rahman of the DEC Region 2 Spills Unit approached me and told me that he is working on a case for the same tank and fill line as concerns this case. He said his case is #0505707. Vinny never informed us that there were two Spills people involved in the same case. As Mr. Rahman has the older case, I am closing this spill case and referring it back to his case of #0505707."

DEC Memo: "01/06/09-Hiralkumar Patel. spoke with Warren Robateau, building super. site has one 5000 gal #2 oil AST in contact with floor. Warren mentioned that oil spilled from fill line. last oil delivery was for 3000 gal on 01/02/09. he also mentioned that there is stain on wall where fill line enters into tank room. currently tank room has about 2 inches of oil/water inside tank room. no odors inside building. management company has hired cleanup company. Warren measured 2882 gal in tank this morning. PBS #: 2-197718. 146 East 49th Street Owners **property owner** c/o Carlton Management **property management** 87-47 Merengo Street Holliswood, NY 11423 Attn.: Steve Schwinder **property manager** Ph. (516) 609-8200 Ext. 11 01/07/08-Zhune spoke to Sheila from Property management (516 609-8200. She said there are people working there. PTC and ABC Tank are coming. 01/07/08-Zhune spoke to Steven Schwinder (516)609-8200, cell (917)747-5866 (Property manager). He said we are working on it. We are waiting for price. A CSL was sent to: 138 Glenwood Rd. Glenwood Landing NY 11547 Att: Steven Schwinder 01/07/08 Steven called to say that PTC has been hired to do the clean up. 01/07/08 Mark from PTC called to say that they get the approval to do the cleanup at 146 east 49th St. They are going to be pumping oil today and will continue with the cleanup tomorrow. 05/15/09-PTC sent the closure report dated 05/13/09. The report included a cover letter, copy of the disposal manifest for the drums, a disposal receipt for the liquid, a site plan and some photographs after the cleanup. The letter stated that on 06 January 2009 an oil delivery of #4 fuel oil was made to this building. After the delivery the building's superintendant checked the boiler and tank room and noticed oil on the floor. It is estimated that there was about 100 gallons of the #4 oil on the ground. The fill line was found to have a separation that caused the spill. The fill line is from the curb in a small tunnel that at one time served as a coal chute. The tunnel acted as secondary containment and prevented any oil from impacting the soil. It runs from the curbs, runs under the sidewalk, enters the tank room and is connected to the top of the 5000 gallon storage tank in the basement. The fill line was replaced without the need to performed any excavation of the sidewalk. The interior surface of the coal chute were cleaned and the materials on the floor was vacuumed into a vacuum truck and legally disposal. The solid material was placed into drums for disposal. After all the solid material was removed and as much liquid as possible removed, the floor was pressure washed. The

liquid from this operation was also collected into a vacuum truck for legal disposal. The floor turned to be a solid concrete surface free of any cracks or voids. For this reason, no samples were taken. The spilled was #4 fuel oil, not #2 oil as noted on the DEC website. Spill closed "

Remarks: "Caller states a line failure caused fuel to spill into the dirt floor. Spill was just discovered and process is ongoing."

Contact Name: ROB HILL
DEC Memo: "02/11/14-Zhune spoke to Robert Hill. He said fill line that enter the building was leaking and released 50-gallons of oil #6. Oil is contained in secondary containment in the basement. There is no Drain and soil impacted. Robert called one of his worker and find out that there is no vapors complaintment from tenents in the building.
02/11/14- Zhune spoke to the super of the building and as per the super oil is contained and no vapors in the building. Riteway is cleaning the spill. 02/20/14-Hiralkumar Patel. alternate address: 267-271 Lexington Ave PBS #: 2-113905. as per PBS record, the site has/had following tanks: - one (1) 5,000 gal #6 oil UST, closed in-place, in Dec. 1992 - one (1) 5,000 gal AST on saddles, installed in Dec. 1992 PBS registration expired on 03/24/12. other spill # 0109772 was reported on 01/09/2002 as #6 oil spilled from tank in basement. spill case was closed on 03/08/2005 with note: Spill was in basement, no release to environmental. OK to close. 136 East 36th Street Apartments Corp. **property owner** c/o Halstead Management, LLC. **property management** 770 Lexington Avenue, 7th Floor New York, NY 10021 Attn.: Peter Pantelic **property manager** Ph. (212) 396-8273 (O) (212) 508-7272 (O) (917) 714-9625 (C) Fax (212) 319-2372 email: ppantelic@halstead.com George **building super** Ph. (917) 952-4783 10:50 AM:- visited site. met building super. inspected tank room. site has one 5,000 gal #6 oil AST on legs, within secondary containment. the tank is located in room along the western foundation wall of the building. super showed closed fill pipe in western wall. he mentioned that after noticing spill from the fill line, they installed a new fill line with fill port located along the foundation wall. found concrete patched fill port along the Lexington Ave curb. found oil stains in tank containment. during inspection, found a french drain pipe along the north, east and south wall of tank room. found signs of oil seepage through walls and floor of tank room, in french drain area. the french drain pipe ends into a sump pit, located outside of tank's secondary containment wall. found oil in sump. asked super to unplug the sump pump to prevent discharge of

oily water into sewer system. he refused to do so. he mentioned that there was another larger spill around 12 years ago and oil seepage noted today may be result of spill in past. no vapors noted outside the tank room. 11:03 AM:- left message for Peter Pantelic, property manager. oil in sump was reported to NYC DEP (case #: C1-1-940658781). 1:05 PM:- received call from Mr. Pantelic. informed him about signs of oil seepage from tank room walls/floor. based on observations during the site visit this morning, informed him that the department requires subsurface investigation in tank room and investigation along portion of former fill line which is abandoned under the sidewalk. also asked him to disconnect sump pump to prevent discharge of oily water into city sewer system. 02/25/14-Hiralkumar Patel. 10:32 AM:- sent letter to Mr. Pantelic requiring weekly monitoring/product removal from tank room sump pit, investigation along abandoned remote fill line and delineation of contaminated noted in tank room. asked him to submit monthly record for sump pit monitoring/product recovery and investigation report by the end of 05/23/14. letter emailed to Mr. Pantelic. 05/23/14-Hiralkumar Patel. met with Alison Jacobs, property owner's attorney who came to office. she requested an unspecified time extension for submission of documents listed in letter dated 02/25/14. she mentioned that Riteway conducted cleanup and they are waiting for report. she was unaware of work conducted by Riteway. 10:30 AM:- spoke with Rob at Riteway regarding work done by Riteway at the site. he mentioned that they only did cleanup of spilled material in tank vault, from the fill line. he also confirmed that they have not done any investigation or sump monitoring as listed in letter dated 02/25/14. spoke with Ms. Jacobs and informed her about discussion with Riteway. informed her that prior to approving any time extension, the department requires update on required work. Alison Jacobs, Esq. **property owner's attorney** Cohen Hochman & Allen Ph. (212) 566-7081 Fax (212) 566-7406 email: aparker@violationlawyers.com 11:04 AM:- left message for Mr. Pantelic. 1:33 PM:- received call from Rob and Mr. Pantelic. Mr. Pantelic mentioned that the spill cleanup was completed by Riteway. informed him about discussion with Rob earlier today. asked him to refer to letter dated 02/25/14 for required investigation/remediation. 3:17 PM:- received email from Mr. Pantelic including copy of invoices and work proposal from contractors. Mr. Pantelic mentioned that building super was monitoring the water pit with absorbent pads, every tuesday. he also mentioned that no petroleum product was noted in pit during monitoring. he has contracted Riteway for required subsurface investigation. 05/27/14-Hiralkumar Patel. 11:54 AM:- sent email to Mr. Pantelic. asked him to submit spill cleanup report, instead of copy of invoices and work proposal from contractors. email copied to Rob and law firm representing property owner. 05/28/14-Hiralkumar Patel. 9:20 AM:- received email from Mr. Pantelic. he has hired Riteway to prepare and implement the necessary work and reports. 3:38 PM:- received call from Rob. he is working on report for fill line spill and will visit site tomorrow to start required investigation/monitoring. 09/12/14-Hiralkumar Patel. 1:51 PM:- spoke with Rob. they have been monitoring sump, but has not conducted any subsurface investigation. 1:55 PM:- left message for Mr. Pantelic. 2:15 PM:- received message from Mr. Pantelic. he mentioned that super is monitoring the sump and riteway will schedule geoprobe. as per the letter dated 02/25/14, the department required submission of monthly reports on interim remedial measures and an investigation report by the end of 05/23/14. as of

S105994870

today, the department has not received any such documents. 2:28 PM:- sent letter to Mr. Pantelic requiring submission of required documents by the end of 09/30/14. informed him that case will be referred to legal, if documents are not received by 09/30/14. letter emailed to Mr. Pantelic and Ms. Jacobs. 09/24/14-Hiralkumar Patel. 12:43 PM:- spoke with Rob at Riteway. he mentioned that they are conducting subsurface investigation today. 09/25/14-Hiralkumar Patel. 10:23 AM:- received call from Dave from Riteway. during geoprobe installation inside tank/boiler rooms, refusal encountered between 1.5 and 2.5 ft below surface. they also found heavily contaminated soil and oil on groundwater in the boreholes. groundwater was found about 6 to 9 inches below surface. as groundwater was at shallow depth, boreholes were resealed to prevent flooding. Riteway will schedule boring installation along remote fill line. asked Dave to schedule an on-site meeting with property owner/manager during next field activity. discussed with DEC Austin and DEC DeMeo. based on findings of free phase product underneath the tank/boiler room, it was decided to transfer the case to remediation after receiving results of fill line investigation. 09/29/14-Hiralkumar Patel. 1:40 PM:- received call from Scott from Riteway and scheduled a site meeting at 9 AM on 10/06/14. 09/30/14-Hiralkumar Patel. 10:01 AM:- received email from Rob including sump pit weekly monitoring log from 03/25/14 to 09/23/14. 10/06/14-Hiralkumar Patel. 9:00 AM:- visited site. met George (building super), Peter and Joe (Riteway) and Mr. Pantellic. due to improper marking and wrong permit location, no field work was conducted along the remote fill line. based on field observations, suggested Mr. Pantellic to excavate and remove the out of service remote fill line and any associated contamination. Mr. Pantellic has agreed to it and Riteway will get permit to open sidewalk flags. Peter brought oil/water mixture that was collected from boring in tank room. product was dark colored. asked Peter to send product sample for fingerprint analysis. inspected the subject building and adjacent building at 139 E 35th Street to locate possible location for borings surrounding the tank/boiler room in building 136. there is no place to install soil borings inside both buildings. inspected sump in boiler room in building 139, where no product was noted. building 139 has one square #6 oil AST in basement, which was installed about 10 years ago when previous AST (which is wrapped in concrete) was found leaking (spill #: 0512684). the previous AST in building 139 is closed-in-place. both ASTs in building 139 are away from tank in building 136. based on field observations, asked Mr. Pantellic to install three monitoring wells (two on Lexington Ave sidewalk and one on E 36th Street sidewalk) to investigate groundwater contamination. Riteway will conduct required groundwater investigation. 2:00 PM:- received email from Dave including site map and boring logs for borings installed in tank/boiler room. total 10 borings were installed in tank/boiler rooms. refusal encountered between 1.5 and 3.5 ft below surface. boring locations can not be read in the site plan. 10/14/14-Hiralkumar Patel. 10:09 AM:- sent email to Dave and asked him to resubmit boring location map. also asked him about update on installation of monitoring wells and removal of former fill line. 10/27/14-Hiralkumar Patel. received email from Dave (at 1:28 PM on 10/22/14) including fingerprint sample result. analysis shows product as #6 oil. 9:02 AM:- spoke with Rob at Riteway. they removed sidewalk flag by the building wall and found contamination. they have dug down about 8 ft, but there is more contamination. scheduled a site

S105994870

inspection at 9:30 AM tomorrow. Rob mentioned that they are waiting for a permit for well installation. 10/28/14-Hiralkumar Patel. 9:50 AM:- visited site. met Anthony from Riteway. Riteway crew has excavated to about 20-22 ft depth along building's foundation wall in the area of recently closed fill line. more contamination at the bottom of the excavation. crew will continue excavation, to feasible limits only. Anthony mentioned that no contamination has noted from the remote fill line (with fill port at the curb) which was closed in past. asked Anthony to collect endpoint bottom sample and to install a minimum of 4 inch diameter pipe in excavation, prior to backfilling. the pipe is needed to install a monitoring well in the area. 11/10/14-Hiralkumar Patel. received email from Scott (at 3:36 PM on 11/07/14) from Riteway. he mentioned that well installation will begin at 9 AM on 11/12/14. 11/12/14-Hiralkumar Patel. 2:54 PM:- received call from Scott from Riteway. he mentioned that the drilling equipment to install 4 inch well is big and Riteway does not have sidewalk obstruction permit. he will install 2 inch wells with smaller equipment, next week, and then based on findings, impacted well(s) will be replaced with bigger ones after holidays. 11/21/14-Hiralkumar Patel. 7:19 AM:- received email from Dave including site map and soil sample results. total of four (4) soil samples were collected on 10/28/14 from excavation by the foundation wall and three (3) soil samples were collected on 11/07/14 from excavation along curb in area of previously abandoned fill port. out of seven soil samples, some SVOCs were found in one soil sample which was collected from area close to foundation wall. a monitoring well has been installed near the foundation wall. 11/24/14-Hiralkumar Patel. 9:46 AM:- sent email to Dave inquiring about well installation status. 04/13/15-Hiralkumar Patel. 1:17 PM:- spoke with Dave and inquired him about well installation report. he will call back with update. 04/14/15-Hiralkumar Patel. received email from Sylvia (at 4:46 PM on 04/13/15) from Riteway. she is in process of getting street obstruction permit and will schedule the work, once permit is received. 10/29/15-Hiralkumar Patel. 9:40 AM:- received call from Rob. he mentioned that monitoring wells have been installed. he will submit report. 12/14/15-Hiralkumar Patel. 3:25 PM:- received email from David from Riteway including site map with well locations and pics of absorbent socks from the wells. he mentioned that all the absorbent socks are free from product. site map shows location of four monitoring wells. the department has not received complete groundwater investigation report. 12/24/15-Hiralkumar Patel. 8:58 AM:- spoke with Rob. informed him that the department has not received complete groundwater investigation report yet. he will submit report by next week. 9:54 AM:- received email from David. he mentioned that they did not sample four monitoring wells yet. they will collect samples soon. he also mentioned that they only did a 'fingerprint' sample in the area. 10:21 AM:- sent email to David. asked him where the product sample was collected from for fingerprint analysis and why absorbent socks were installed in the wells. 10:55 AM:- received email from David from Riteway including site map and fingerprint analysis. fingerprint result shows presence of #6 oil. he mentioned that fingerprint sample was taken from well #3. he also mentioned that absorbent socks were installed as general procedure. 11:25 AM:- sent email to David. asked him to provide information about date of monitoring, depth to water, depth to product, product thickness, amount recovered from the impacted well and observations during subsequent visits. email copied to Rob (Riteway), Peter

(Riteway) and Mr. Pantellic. as per chain-of-custody submitted with fingerprint analysis, the product sample was collected on 10/06/14, but based on previous notes, the monitoring wells were installed sometime after Apr. 2015. reviewed previous notes and noted that fingerprint result submitted today was previously submitted in Oct. 2014 which was for product collected from boring inside the tank room. 11:31 AM:- sent email to David again. informed him that fingerprint result submitted earlier today was previously submitted in Oct. 2014 and based on information provided, that product sample was collected from soil boring installed inside the building. asked him about result for product sample collected from well #3, installed outside the building. email copied to Rob (Riteway), Peter (Riteway) and Mr. Pantellic. 01/07/16-Hiralkumar Patel. 2:06 PM:- received email from David. they will sample four wells tomorrow. 01/21/16-Hiralkumar Patel. 11:01 AM:- received email from David. they recently went back to obtain water samples from four wells. they were able to retrieve water from three wells (# 1, 2 and 4), but well # 3 was completely dry. samples from three wells were clean based on visual and olfactory inspection. will send samples to lab. 02/29/16-Hiralkumar Patel. 12:19 PM:- sent email to David inquiring about results of groundwater samples and monthly reports for sump pit monitoring/product recovery. email copied to Rob, Mr. Pantellic, Charisma Hill (Riteway) and Peter. 12:54 PM:- received email from David including groundwater sampling results. groundwater samples were collected from wells # 1, 2 and 4 on 01/19/16. no contamination was noted in groundwater samples. 03/24/16-Hiralkumar Patel. 9:01 AM:- received email from Rob including pit monitoring logs and pics of absorbent pads taken on 03/09/16. as per monitoring logs, trace amount or no oil was found after 04/17/15. 04/29/16-Hiralkumar Patel. 9:50 AM:- visited site and met George. inspected tank room sump. no oil was found on water in the sump. 3:34 PM:- left message for Mr. Pantellic. 05/02/16-Hiralkumar Patel. 1:02 PM:- received call from Mr. Pantellic. suggested him to submit one detailed report including information about spill investigation and remediation. he will talk to Riteway. 07/08/19-Hiralkumar Patel. after discussing with DEC Austin, case closed based on following: - removal of contaminated soil along the former remote fill line - passive product recovery within tank room - no groundwater impact outside building foundation wall - building foundation possibly within bedrock preventing migration of remaining heavy product trapped beneath the tank/boiler room floor - no impact to indoor air"

Remarks: "on floor - cleanup pending"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL 2/26/99: On site with Joe Floryshak, Jerry Mele and Ken Toumey (Con Ed). Con Ed may want to remove all contaminated soil for slae of property. Joe Floryshak says that soil is still contaminated at least on south wall of excavation. Con Ed checked old blueprints - property used to be owned by UPS. It was a service station but pumps were west of where Con Ed's pumps were. POSSible contamination may have come from UPS system. Unknown where their tanks were. Con Ed is to talk to their real estate people and see if they are willing/prepared to excavate entire site because entire site may be contaminated. Told them that whoever disposes of soil must do it according to contamination levels. I explained that DEC could not determine what would be needed to inactivate/close spill until we see analytical data. Con Ed may want to do Geoprobes throughout the site to get an idea of what they are dealing with and what quantity of material they would have to dispose of if they are going to remove all contaminated soil. (CAE) 8/2/99: Con Ed submits Subsurface Investigation Report for the site. Results indicate that contaminated

soils (above STARS guidance values) remain in southeast portion of the site. Con Ed's plan is to continue soil removal in this area. 12/10/99: Plan is to install 3 wells on the property and one on sidewalk. Wells will be monitored for one year. For product, start weekly - if none found move to monthly then quarterly. For dissolved, do initial analysis then quarterly. If excavation for property development occurs before annual monitoring is completed, DEC will want to monitor the excavation. Free product or odors may start entering the excavation. If so, some type of vapor barrier may be necessary for new building. Alos, orinetation of fractures may provide info on where further investigation should take place. (CAE) 12/16/99:letter to Con Ed outlining requirements for additional investigation: 1) Conduct sensitive receptor survey (1/4 mile radius). 2) Determine extent of contamination beyond southeast corner of property. 3) Investigate bedrock fracture contamination (see plan above - wells are to be installed into bedrock). 1/1/00: Transferred from Engelhardt to O'Connell. 1/13/00: Con Ed submits work plan based on above requirements. 2/22/00: E-mail to Joe Floryshak approving worplan with following comments: 1. Will the core be a fixed core or rotating core? Care should be taken to maintain the orientation of the core during removal. 2. The single core should be taken in the source area (i.e., where the tanks were previously removed). 3. Since all of the overburden was removed previously and the current overburden consists of clean fill, it is not necessary to collect soil samples during the installation of these 3 wells. (JHO) 3/29/00: Met with Jaques Whitford Co. (consultant) on site - they are installing bedrock wells. One core was taken in source area - approx 6 to 8 of decomposed bedrock with slight odor, low PID hit. Competant (but fractured) bedrock to bottom of core. No evidence of contamination. Fractures don't appear to be water bearing. Core is to be shipped to White PLains office for further analysis. They installed a well in this location. They are in process of installing air-rotary boring/well at first downgradient location. Thus far no evidence of contamination. There is perched water above the bedrock - no odor or PID hits. (JHO) 4/20/00: call from Joe Floryshak - deep well (MW-3R, downgradient) along 39th St. checked today - found free product (gasoline). He will discuss with consultant and put together proposal for further delineation and remediation. (JHO) 7/18/00: Con Ed submits Site Investigation Report (SIR). Includes results of Sensitive Receptor Survey (possible vapor migration into subsurface sturtures, i.e., basements manholes, etc.); results of bailing and monitoring efforts on well MW-3R (decrease of product thickness with time, also baildown tests reveal low hydraulic conductivity of bedrock fractures); and resutls of soil and groundwater monitoring (residual soil and groundwater contamination extend off-site to the southeast). The SIR did not contain any recommendations for further remedial actions. (JHO) Mid-2000: Con Edison transfers ownership of the property to TRC Environmental for the purposes of entering the Voluntary Cleanup Program. TRC continues remedial activities, including additional soil/source removal and free product recovery (minimal), as well as application of Oxygen Releasing Compound (ORC) to speed remediation of impacted groundwater. This effort was overseen by Albany DER staff (Tom Gibbons). 3/12/03: Tom Gibbons issues letter to TRC indicating that remedial objectives for the property under the VCA have been met. Close out. "

Remarks: "leak from underground fuel tank - spill being cleaned up - tank is being removed "

| DEC Memo:                 | "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT CON ED E2MIS NOTES This incident has been updated and its status has been changed from De Minus report to Spill Transformer oil on 3-29-99 3-29-99 Transformer valve found leaking upon inspection. Approx. 6oz. of transformer oil was on the cement pad mixed with 2 gals. of water. Some oil appears to have run off the pad unto the bluestone. A small area of the bluestone was affected. The oil in all the transformers at E. 40th St. Substation is considered <1ppm given the age of manufacture and previous sample results. Cleanup wa initiated immediately. The cement area will be scrubbed with simple-green and pads. The affected bluestone wilbe removed. The valve will be tightened. Containment will be left under the leak until it is certain that the leak has stopped. 1430 hrs. Cleanup completed. 1 55 gal. drum of non hazardous oily debris was created." |
| Remarks:                  | "LEAKING VALVE FROM TRANSFORMER #7 SPILLED 6 OUNCES OF MATERIAL ONTO BLUE STONE-CON ED WILL MAKE ARRANGEMENTS FOR CLEAN UP. CON ED #102845-CALLER STATES IN JAN OF 97 THIS INCIDENT WAS ORIGINALLY NON REPORTABLE-HAD NOT SPILLED ONTO BLUESTONE TIL NOW."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ENGELHARDT 5-20-99 E-Mailed Con Ed ERTs for copy of E2MIS report. NOTE: This is the Master Spill Number for Transformer #3. It is to remain open until all repairs on this equipment are completed. (JHO, 3/10/06) 8/4/08: Cleanup completed. As per 9/18/06 agreement between NYSDEC and Con Edison, approved engineering controls (valve bags, drip pans, absorbents, etc.) are in place and are being maintained for minor drips and small leaks. Repairs to be tracked and completed under Con Ed s MAXIMO Work Order. See eDocs for final emis report. Close out. (JHO) ~~~~~ CON ED E2MIS 124630 (master) 5/4/99 0951hrs Approx. 1/4 oz. of transformer oil leaking from the secondary wiring junction box on transformer. The spill never hit the floor and was only on the transformer. A pail and diaper was placed under the leak to catch any additional oil. Final cleanup will be pending repairs. Contained, did not enter any sewers or waterways. No samples were taken, historical results show a non PCB oil in the transformer. 5/22/00 During station inspection on 5/16/00 GUW Anthony Natale reports leak is still active. Containment is still in place. ~~~~~ e2mis no. 134331 (sub): 11/10/00 1357 hrs Steven Tercovich #12959 sub-station operator reports to mcc Michael Crowe #71453 one gallon of transformer dielectric fluid leaked from transformer #3 at 320 e40th st Transformer dielectric fluid leaked onto concrete pad. Drip rate 2 drops per minute. Leak is from main body of transformer. Cleanup pending test result and repairs. During a station inspection on January 16, 2001 Sr. Env. Specialist S. Hanebuth - 85259, checked area for clean-up, it appears that the clean-up was completed, the spill is still leaking into containment pads. The PCB count for this unit is <1 PPM LSN 00-04870 4/21/05 Leak is still active, contained and controlled. Maximo # 304168."  
Remarks: "SPILL DID NOT AFFECT SEWERS OR WATERWAYS-AMT LESS THAN AN OUNCE CON ED #124630-EQUIPT THAT LEAKED IS ASSOCIATED W/TRANSFORMER #3 NON PCB " Not reported

"Prior to Sept, 2004 data translation this spill Lead\_DEC Field was  
ENGELHARDT DEC INSPECTOR NOTES 5-20-99 E-Mailed Con Ed ERTs for copy  
of E2MIS report. 5/6/04 Facility inspected - switch still weeping.  
(SKA) 10/7/04: Facility inspected - switch still weeping. (GDB)  
~~~~~ CON ED E2MIS NOTES Approx. 4 oz. of non  
PCB dielectric oil that leaked from 138 KV FDR#38M05 transformer #3
high pressure ladder. The spill was on the bluestone but did not
enter the waterways or sewers. The bluestone was removed and cleanup
completed. Pads and blankets were placed to contain any additional
leakage. 5/10/99 Operator Seguna reports that SSM Mechanic repaired
leak by tightening two loose fittings. Leak was stopped. All

Ed e2mis #127642: 9/7/99 2150hrs - 1oz transformer oil from temperature probe and neutral bushing. Drip rate 1drop/day. Installed pans, pads and pigs. 12/15/99 Mr. Chris Engelhardt (DEC) has requested information. Operator Seguna reports that the leak has not been stopped or repaired. Containment remains in place pending action by the Transformer Group. Station Operator J. Vele verified on Nov. 17, 2000 that the spill had been cleaned up and was still leaking into engineering controls. T. Belfor, Associate Specialist, SSO, #80482 received information from Stuart Hanebuth, Sr. Environmental Specialist SSO, #85259 that the cracked bushing was replaced with a new one. The Maximo work order number for this incident is 0000070220. This spill can be closed out as of 1:34 PM on 5/21/2002. T. Belfor, Associate Specialist, SSO, #80482 received information from Stuart Hanebuth, Sr. Environmental Specialist SSO, #85259 that the cracked bushing was replaced with a new one. The Maximo work order number for this incident is 0000070220. This spill can be closed, however, out as of 1:34 PM on 5/21/2002. However, still not resolved and pending DEC CLOSURE. 4/20/05 During substation spill inspections in March 2005, Darlene Wells confirmed that repairs and clean up complete."

Environmental Group, LLC, regarding the site. The letter was dated 11/18/05 and stated that the manhole cover on the empty tank was replaced and that the tank and lines passed the pressure test. The letter also said that COMCO (the remediation company) could not conduct its work until the asbestos removal project in the boiler room was finished. Lawrence Environmental is waiting for an NYCDEP variance approval before it starts the investigation/cleanup work. 12/21/05 - Raphael Ketani. I spoke to Peter Ellams, General Manager of Lawrence Environmental, regarding progress on the spill cleanup. He said that they got the variance for the asbestos from DEP and began the cleanup. He said a cleanup company, IER, cleaned out the #6 oil tank (about 3,000 gal. tank) and cleaned up the oil contaminated material on the tank room floor. The work ended last week. He said he will get me the cleanup report soon. 1/3/06 - Raphael Ketani. I talked to Mr. Ellams and asked him when I would receive the cleanup report. He said that the transit strike messed things up and they are still cleaning the site. I was told I will get the report within a week. 6/20/06 - Raphael Ketani. I received a package of documentation regarding the removal of the 1500 gal. tank and the cleaning, testing and putting back into service of the 6000 gal. tank. Everything looked alright, except PBS case #2-601407 doesn't show the existence and then removal of the 1500 gal. tank. I called up Mr. Ellams of Lawrence Environmental Group, LLC (718) 237-5125 and told him to submit a revised PBS application as this was the last item I needed to close the case. He said he would. 7/20/06 - Raphael Ketani. I talked to Mr. Ellams. He said he sent the owner the PBS application to sign. I told him I hadn't received anything. He said he would look into the matter and get me the form. 8/11/06 - Raphael Ketani. I contacted Mr. Ellams regarding the revised PBS registration form. He said he thought this had been sent out some weeks ago. I told him I hadn't received it. He said he will get on it. 8/30/06 - Raphael Ketani. I tried to contact Mr. Ellams regarding the unregistered and removed 1500 gal. tank (I checked the PBS today), but could only leave a message. 9/8/06 - Raphael Ketani. Nick Lombardo of the PBS Unit brought me a copy of the revised PBS registration form and indicated via a Post-It that he is processing the change. Based upon receipt of the revised PBS registration form, the 11/18/05 letter from Lawrence Environmental Group stating that the tank passed after the repairs, and the package of documentation received on 6/20/06, I am closing the spill case. "

Remarks: "TANK HAD BEEN LEAKING. CLEAN UP IN PROCESS."

DEC Memo: "5/31/05 MT// spill # 05-00615 closed and referred to this spill number// Large scale project found a few old tanks along perimeter of excavation, GCI has full time geologist field screening as excavation continues. Will submit report once the excavation has been completed. 08/07/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Contacted to Jim Grond (212)986-9460 he said that he did not take the soil sample because there is bed rock from the surface 40ft. He will fax me the document on August 8,2006 for closing the spill. -QA 10/26/06: Called Mr. James Bellessimo (800)282-8701 (Tradewinds Environmental Restoration, Inc. and left message to call me back regarding information of the spill. -QA 11/16/06: Called Mr. Jim Grond regarding information of spill and left message to call me back. Also called Mr. Frank Golden, left message to call me back. -QA 11/27/06: Called Mr. Jim Grond at (212)986-9460 regarding supporting documents to close the spill he said he will fax the report tomorrow. -QA 03/19/07: Called Mr. Jim Grond, he was not there. left message to call me back. -QA 03/20/07: Reviewed report of construction site (1 Bryant Park) dated March 29, 2006 received on November 28, 2006. Also talked to Mr. Jim Grond (Consultant) GCI Environmental, Advisory he also mentioned that he hired as a subcontractor to Mr. Frank Galdun, Project Manager Geologist for this work. They excavated the area up to 70 ft. They encountered the bedrock at 30 ft. Mr. Grond also reported that 215,000 tons of soil have been excavated. Soil samples are cleaned. So on the basis of information provided by Mr. Grond and the reference of the Spill # 0312591 (Closed by Mr. Richard Rutland) I closed this spill. -QA"

Remarks: "Leaking underground storage tank. Has not been cleaned up. SPill is associated with another spill #0212591 or #0312591. Michelle Tipple is covering this. Tank was discovered during excavation and Trade winds environmental responded to scene for purposes of emptying oil from tank. DSU in this time Trade winds found one or more holes in the tank and the spill occurred at an unknown date. Michelle Tipple will be at site tomorrow. Soils at site are all being screened with a PID and all contaminated soils are being disposed of. The site is being excavated at 60 ft. below ground."

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead\_DEC Field was GOERTZ/TIPPLE/VOUGHT 10/3/01: On this date, K.Goertz inspected the site. Goertz met with the super; Dave Pilchuk, who described what had happenned, what was done, and what was going to be done. The oil which leaked from the tank, spilled onto the concrete fflow, but this floor contained several drains which led to a sump pit which discharges to the sewer. Fortunately, there has been no precipitation over the last few days, so the sump pump did not discharge any oil to the sewer. The sump pump has been deactivated until the cleanup has reched its conclusion. Emteque was hired to supervise the cleanup. John Raguso (212-631-9000) arrived on site immediately after Goertz's inspection. They will continue to vacuum up remaining oil in the sump, and steam clean impacted areas. Mr.Raguso will take pictures at various staged of the cleanup and will forward a report to M. Tipple at the conclusion of the remediation. As of today, there does not seem to be any environmental impact as a result of this spill. (KG) 10/5/01: K.Goertz phoned John Reguso. He said cleanup is complete, and the basement looks better than it did before the spill occurred. He has taken several photos and will be sending a report to Michelle Tibble next week. (KG) 01/21/2002-VOUGHT-Received report from Emteque on 11/9/02. Eastmond & Sons did cleanup via vacuum truck by removing 100 gallons of product from the sump pit and 1000 gallons from the containment room floor and tank room. Room cleaned via degreaser. 11,000 gallon AST rusted beyond repair and was replaced with 7500 gallon AST. PBS application received 1/6/2002. Spill closed 1/21/2002."

Remarks: "caller notified of spill in basment from leak in tank. caller is supervising cleanup."

DEC Memo: "02/08/06. Feroze, PBS case is #2-603524. TTF letter is sent to. Albert Rosenberg Rose & Berg Realty. 131 west 35th Street, 7th Floor New York, NY 10001. 03/07/06 Feroze. Called Mr. Albert (212-981-6501), he informed that Eastman & sons 718-378-3000 is going to replace the fill line. They will test the tank after the replace work is done and will submit the documents to DEC soon. 03/15/06. Spill is transferred from Feroze to Kumer Patel. 03/29/06-Hiralkumar Patel. Spoke with Ms. Diania at Petroleum and she told me that petroleum tank did isolation test on Feb. 17 and found problems with fill line and vent line. they haven't done anything after that. REceived copy of tank test results from Alber Rosenberg from Rosenberg Realty, who is managing property. test results shows the system passed in test. Eastmond has replaced fill pipe and vent line. Spoke with Mr. Rosenberg and asked him to send me copy of previous tank test results. Spoke with Issac at Eastmond and he told me that the fill line was leaking at flange as it was passing through solid concrete into the building. eastmond has replaced the fill line from this flange to curb and also replaced the vent line. as per Isaac it was very little leak and there was no cotaminated soil. all cleaned up. no further action required. 03/31/06-Hiralkumar Patel. REceived clear copies of work invoices from Albert. based on available information from owner and from Isaac from EAstmond, case is closed. NFA letter sent out to owner. faxed to owner and Eastmond. Albert Rosenberg Ph. (212) 981-6517 FAX (212) 465-8122"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was DEMEO 12/22/2005 - Haggerty - Spoke with Albert Rosenberg from 32 West 39th Midtown Properties LLC (212-981-6517), current property manager, who would look for any records and call back 01/04/2006 - Haggerty - spoke with Phil Fazon from Crown Leak Detection (516-375-5890) who originally called in spill due to a tank test failure. I inquired as to whether Crown Leak did follow up testing. Crown Leak never returned to re-test. He gave me the # for ABC Tank who tested tank after Crown Leak 01/05/2006 - Haggerty - spoke with Robert from ABC Tank (718-272-2800), ABC was hired simply for a second opinion which again failed. 01/06/2006 - Haggerty - Tom Valentine from Albert Rosenberg's office called to tell me no retesting and no clean-up was ever performed. He will call (Sally Dewes) back when they contract an environmental company Previously assigned to M. Haggerty in Albany office. 10/11/06 - Austin - Reassigned from Central Office staff to Piper, for follow up and closure - end 10/17/06- DEC Piper left message at Rosenberg realty requesting callback. Refer to legal if no response. DEC Piper received call from Rosenberg. As per him there was a second spill # at the property Sp# 0512893. It was also a tank test failure. Notes from DEC Patel 03/31/06-Hiralkumar Patel. Received clear copies of work invoices from Albert. based on available information from owner and from Isaac from Eastmond, case is closed. NFA letter sent out to owner. faxed to owner and Eastmond. In light of this info, this spill is also closed. "

Material Code: 0001  
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Tightness Test Method: 21  
Date Test: 03/09/2006  
Next Test Date: 10/11/2016  
Pipe Model: Not reported  
Modified By: TankSys  
Last Modified: 04/27/2020

**Equipment Records:**

D03 - Pipe Type - Stainless Steel Alloy  
A01 - Tank Internal Protection - Epoxy Liner  
E00 - Piping Secondary Containment - None  
H00 - Tank Leak Detection - None  
L09 - Piping Leak Detection - Exempt Suction Piping  
B01 - Tank External Protection - Painted/Asphalt Coating

**Environmental Interest/Information System:**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2  
DER Facility ID: 413440  
DEC Memo: "1/19/2012- Sangesland spoke to ProTest: Work is not yet finished. ProTest returned to the site on 1/5/12 to isolate and retest. Tank passed. Vent line and Remote Fill Line both failed. Building accepted ProTest Proposal to do additional repairs - Work should be done by Feb 1st, 2012. 3/1/2012 Sangesland reviewed a letter/test report from ProTest dated Feb 7th which shows repairs to a small dry leak. isolated tank passed a test, but the vent and remote fill line failed. new lines were installed with a new vent alarm. The fill box was removed from the sidewalk and a new fill port installed at the building. System was retested on Feb 2nd and passed. No evidence of contamination within the excavation. 5-6-14 - Dupigny - notes from Sangesland 1/5 & 1/6 Isolate and retest - tank passed - vent -failed -remote fill, Failed. "  
Remarks: "unk retest"

DEC Memo: "12/05/16 - Lakhani Alternate addresses for the property include 333-335 Park Avenue South. There is one other spill case associated with the property (#1111100). PBS registration #2-333131 exists for a 1500 gallon #2 fuel oil AST on the property. As per PBS, the site owner info is: Watton Studio Corp. 333 Park Avenue South New York, NY 10010 Ph: 2122553664 For spill #1111100: Sangesland spoke to ProTest on 1/19/12: Work is not yet finished. ProTest returned to the site on 1/5/12 to isolate and retest. Tank passed. Vent line and Remote Fill Line both failed. Building accepted ProTest Proposal to do additional repairs - Work should be done by Feb 1st, 2012. On 3/1/2012, Sangesland reviewed a letter/test report from ProTest dated Feb 7th which shows repairs to a small dry leak. isolated tank passed a test, but the vent and remote fill line failed. new lines were installed with a new vent alarm. The fill box was removed from the sidewalk and a new fill port installed at the building. System was retested on Feb 2nd and passed. No evidence of contamination within the excavation. Spill #1111100 is closed. 5/18/18 TJD Spill reassigned to Sekhon as new project manager. 6/19/18- Sekhon Spill closed administratively reference to Spill # 1111100. 7/9/18- Sekhon Discussed with DEC Kumar, Spill closed by mistake on 6/19/18 by reviewing notes from spill #1111100 dated in 2014; Now spill is open for further review. " "retest planned"

DEC Memo: "8/3/07 - Raphael Ketani. I called up Joe Ostrowski at PTC (718) 624-4842 regarding the spill. He said that his crew is there now and they are emptying the tank. He said no drains or sumps are affected and that all of the 150 gals. spilled in the tank room. He said the tank is 10,000 gal. and it just gave way. The block and lot are 890 and 1. The site is 7 Park Avenue, NY, 10016. The management contact is Ellen Kornfeld, Lovett Co., 450 7 Avenue, rm. 1106, NY, 10123. The PBS case is #2-289213 with a 10,000 gal. tank containing #6 oil. I sent a CSL. 9/25/07 - Raphael Ketani. I received a call today from Eric Menjoya (718) 367-9800, ext 201 of Controlled Combustion. He said that the old tank has been removed and the site has been cleaned up. I told him to send me pictures and manifests for the work that was done and to update the PBS registration to show that the old tank was removed. He said he will do this. 9/28/07 - Raphael Ketani. I received a set of pictures by e-mail from Mr. Menjoya. The pictures showed the cleaned former tank room. I chose those pictures that weren't duplicates and that were clear and attached them to the e-Docs. I e-mailed Mr. Menjoya that DEC still needed a cover letter

Remarks: explaining what the situation was, how it was cleaned up and what the end result was. I also wrote that manifests were needed and that the PBS registration needed to be updated to reflect the changed status of the tank. Mr. Bendjouya e-mailed me that he had sent the manifest to Jeffrey Vought of Region 2 Spills. 10/1/07 - Raphael Ketani. I talked to Mr. Vought about the manifests. He found them and gave them to me. I checked the PBS registration. The tank is listed as closed and removed. Based upon the pictures that were sent that show a clean tank room with no cracks in the floor, and the manifests for the contaminated materials removed, I am closing the spill case."

Site Description: TRC Companies, Inc. (TRC) entered into a Voluntary Cleanup Order with the New York State Department of Environmental Conservation (NYSDEC) on June 27, 2001 for remediation of the First Avenue Properties, including the 700 First Avenue Property. The 700 First Avenue Property is currently owned by Consolidated Edison Companies of New York, Inc. (Con Edison) and is also known as the Waterside Generating Station. The Waterside Generating Station parcel consists of 5.4 acres located just west of the East River and FDR Drive and south of the UN Building in a highly developed commercial/residential area between East 38th and East 40th Streets. Since 1910, this site has been used as an oil/gas fired steam and electricity

generating facility until it was shut down in May 2005. In the late 1800s this property was used as a coal yard and wood mill, a storage yard and a MGP facility. By 1910, the former MGP structures on the site had been demolished, and the current on-site structures (Waterside Station No. 1 and No. 2) had been built. The property originally extended to the historical banks of the East River. Construction of the FDR Drive and Marginal Street added fill beyond the former eastern side of the property changing the area to its current dimensions. TRC has investigated environmental conditions at the site pursuant to a DEC-approved Supplemental Soil Investigation Work Plan, dated February 2001, and a Supplemental Soil Investigation Work Plan Addendum dated March 2002. The investigation found elevated levels of polychlorinated biphenyls (PCBs), polycyclic aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs) and metals in soils. In groundwater, several VOC, PCB and PAH compounds and metals were detected at concentrations exceeding NYSDEC Class GA water quality standards. These results are reflected in a Supplemental Soil Investigation Final Report, along with the Remediation Work Plan, dated September 2003. This property is currently undergoing demolition and has not been remediated to date, however, the preferred final remedy for this site calls for: 1) removing aboveground and subsurface structures; 2) excavated and offsite disposal of all on-site soils above the development depth (16 feet below ground surface, or to the groundwater or the bedrock, whichever is shallower); and 3) groundwater monitoring in accordance with NYSDEC requirements. Based on sampling results in the Supplemental Soil Investigation Final Report, dated September 2003, a deed restriction for groundwater below Development Depth will be required. FER and SMP approval letter were issued May 27, 2008. DEC approved the Tunnel Closure report on July 14, 2008. As of July 17, 2008, TRC returned possession of WGS (700 First Avenue) to the developer (ERRC). The deed restrictions were filed on May 14, 2009. Additional site information can be found in the UIS under the BCP Site number C231013.

DEC Memo: "TTF ltr sent to PBS address: Solil Management 640 Fifth Ave - 3rd Flr New York, NY 10019 12/28/05-Sharif// Ronald Lichtman,(212)506-0417 from Solil Management called to say they pumped out the old tank and going to install new 1500 gall. tank after replacing the old tank.According to him, there was no oil spill occurred as a result of the tank test fail.I suggested him to send DEC brief description of the job they have done, couple of photographs of the AST. I also told him to file paper work with DEC for installing the new tank. Cross reference to Spill # 9612022. 05/08/06 Sharif Rahman- I left a messege for Ronald Lichtman,(212)506-0425 to get back to DEC regarding the current status of the tank. 05/09/06 Sharif Rahman- Mr.Angel Reyes,(212)265-1577 called DEC to say he would send DEC the report and make sure pbs information is updated with the department. 07/24/06 Rahman- Ronald Lichtman to send DEC the report and take necessary actions to update the PBS certificate. 12/06/06 Rahman- Letter from Stephan Dejean, land lord's legal counsel, dated September 06,2005 states that there was no literal spill at the building in 1997 or anytime thereafter, and that the failing portion of the tank is at the very top of the tank.Again, letter, dated 11/15/06 signed by Stephan Dejean , reveals that the old tank was removed and a new tank was installed, but the registration has not been done yet. Spill is closed due to absence of oil contamination;site has been referred to PBS section for necessary action to correct the PBS violation/s."

maintenance and service vehicles from 1980 to 2001. Portions of the site were used by an upholstery and mattress factory from 1929 until the 1960 s. A United Parcel Service sorting center and garage was located on the site as early as 1950, and all former on-site structures were removed by 1970. Environmental impacts to soils, bedrock and groundwater are related to leaking gasoline USTs used for refueling Con Edison vehicles. Site Geology and Hydrogeology: The project site lies within the Manhattan Prong in the New England Upland Physiographic Province. The bedrock foundations of New York City consist of a sequence of dense and stable crystalline rocks consisting of schist, gneiss, and marble that outcrop mainly in Manhattan and the Bronx. The surficial fill consists of medium to fine sands, silty sands, bricks, concrete, coal fragments, and bedrock ranging from five to fifteen feet below grade. Bedrock generally lies beneath a mantle of weathered bedrock of varying thickness. For most of the Site, the thickness of the weathered bedrock was between one to two feet. The weathered bedrock was thicker and deeper toward the southeast corner of the Site, mirroring the topography of the competent bedrock surface. The competent bedrock surface forms a pronounced basin at the southeast end of the Site, with its center near monitoring well MW-3R and MW-3S, and its edges at the property line (sidewalk) along East 39th Street and First Avenue. Groundwater generally occurs within the bedrock across the Site from slightly more than six feet to more than fifteen feet below grade. The direction of groundwater flow is estimated to be to the southeast; however, it is likely that the number and degree of interconnected fractures exert a greater control upon the rate of horizontal groundwater flow than the hydraulic gradient. Based upon the limited number of open and connect fractures within the bedrock at the Site, the horizontal conductivity of the bedrock aquifer is very low.

Env Problem: Nature and Extent of Contamination: Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds, including benzene, toluene, ethylbenzene and xylenes (BTEX), plus methyl-tert-butyl ether (MTBE) and lead in shallow soil and weathered bedrock, and BTEX and MTBE in the fractured bedrock groundwater. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use to a depth defined as the Development Depth.

maintenance and service vehicles from 1980 to 2001. Portions of the site were used by an upholstery and mattress factory from 1929 until the 1960 s. A United Parcel Service sorting center and garage was located on the site as early as 1950, and all former on-site structures were removed by 1970. Environmental impacts to soils, bedrock and groundwater are related to leaking gasoline USTs used for refueling Con Edison vehicles. Site Geology and Hydrogeology: The project site lies within the Manhattan Prong in the New England Upland Physiographic Province. The bedrock foundations of New York City consist of a sequence of dense and stable crystalline rocks consisting of schist, gneiss, and marble that outcrop mainly in Manhattan and the Bronx. The surficial fill consists of medium to fine sands, silty sands, bricks, concrete, coal fragments, and bedrock ranging from five to fifteen feet below grade. Bedrock generally lies beneath a mantle of weathered bedrock of varying thickness. For most of the Site, the thickness of the weathered bedrock was between one to two feet. The weathered bedrock was thicker and deeper toward the southeast corner of the Site, mirroring the topography of the competent bedrock surface. The competent bedrock surface forms a pronounced basin at the southeast end of the Site, with its center near monitoring well MW-3R and MW-3S, and its edges at the property line (sidewalk) along East 39th Street and First Avenue. Groundwater generally occurs within the bedrock across the Site from slightly more than six feet to more than fifteen feet below grade. The direction of groundwater flow is estimated to be to the southeast; however, it is likely that the number and degree of interconnected fractures exert a greater control upon the rate of horizontal groundwater flow than the hydraulic gradient. Based upon the limited number of open and connect fractures within the bedrock at the Site, the horizontal conductivity of the bedrock aquifer is very low.

Env Problem: Nature and Extent of Contamination: Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds, including benzene, toluene, ethylbenzene and xylenes (BTEX), plus methyl-tert-butyl ether (MTBE) and lead in shallow soil and weathered bedrock, and BTEX and MTBE in the fractured bedrock groundwater. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use to a depth defined as the Development Depth.

including the 708 First Avenue Property. The 708 First Avenue Property is currently owned by Consolidated Edison Companies of New York, Inc. (Con Edison) and is also known as the 708 Office Building. Con Edison contracted with TRC Companies, Inc., to assume the liability and responsibility for abatement, decommissioning, demolition and remediation of the site. The 708 property consists of 2.0 acres located just west of the East River and FDR Drive and south of the UN Building in a highly developed commercial/ residential area between East 40th and East 41st Streets. The site was occupied by a 400,000 square feet 10-story Con Edison service building and two industrial buildings and, from the 1920's to 2001, was used as office space, electrical operations, a locker room, a test laboratory and parking. The building was constructed in 1924 and demolished (under the VC Order) in 2003. Prior to the construction of these buildings, from the 1890's to 1923, portions of the site were used for manufactured gas plant operations. TRC has investigated environmental conditions at the site pursuant to a DEC-approved Supplemental Soil Investigation Work Plan, dated March 2001. Additional work was undertaken pursuant to a DEC-approved Addendum to the Supplemental Soil Investigation Work Plan, dated October 2001. The investigation found elevated levels of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals in soils. In groundwater, slightly elevated levels of VOCs were found. These results are reflected in a Supplemental Soil Investigation Final Report, in conjunction with the Remediation Work Plan, dated January 2002. TRC completed an environmental cleanup pursuant to the NYSDEC-approved Remediation Work Plan. The Remediation Work Plan for this site included: 1) decommissioning and removing all underground storage tanks and associated structures; 2) excavated and offsite disposal of all on-site soils above the development depth (16 feet below ground surface, or to the groundwater or the bedrock, whichever is shallower); 3) excavation and offsite disposal of contaminated soils in the UST area down to a depth of 39 feet followed by application of ORC; and 4) monitored natural attenuation of VOCs in groundwater. In addition, based on the final post remediation sampling results, institutional controls, such as a deed restriction, will be required. The deed restrictions were filed on May 19, 2008. Additional site information can be found in the UIS under the BCP Site number C231013. BCA signed pursuant to litigation. VCA terminated.

**708 OFFICE BUILDING (FIRST AVE. PROP) (Continued)**

**S113917300**

Site Code: 57005

Site Description: TRC Companies, Inc. (TRC) entered into a Voluntary Cleanup Order with the New York State Department of Environmental Conservation (NYSDEC) on June 27, 2001 for remediation of the First Avenue Properties, including the 708 First Avenue Property. The 708 First Avenue Property is currently owned by Consolidated Edison Companies of New York, Inc. (Con Edison) and is also known as the 708 Office Building. Con Edison contracted with TRC Companies, Inc., to assume the liability and responsibility for abatement, decommissioning, demolition and remediation of the site. The 708 property consists of 2.0 acres located just west of the East River and FDR Drive and south of the UN Building in a highly developed commercial/ residential area between East 40th and East 41st Streets. The site was occupied by a 400,000 square foot 10-story Con Edison service building and two industrial buildings and, from the 1920's to 2001, was used as office space, electrical operations, a locker room, a test laboratory and parking. The building was constructed in 1924 and demolished (under the VC Order) in 2003. Prior to the construction of these buildings, from the 1890's to 1923, portions of the site were used for manufactured gas plant operations. TRC has investigated environmental conditions at the site pursuant to a DEC-approved Supplemental Soil Investigation Work Plan, dated March 2001. Additional work was undertaken pursuant to a DEC-approved Addendum to the Supplemental Soil Investigation Work Plan, dated October 2001. The investigation found elevated levels of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals in soils. In groundwater, slightly elevated levels of VOCs were found. These results are reflected in a Supplemental Soil Investigation Final Report, in conjunction with the Remediation Work Plan, dated January 2002. TRC completed an environmental cleanup pursuant to the NYSDEC-approved Remediation Work Plan. The Remediation Work Plan for this site included: 1) decommissioning and removing all underground storage tanks and associated structures; 2) excavated and offsite disposal of all on-site soils above the development depth (16 feet below ground surface, or to the groundwater or the bedrock, whichever is shallower); 3) excavation and offsite disposal of contaminated soils in the UST area down to a depth of 39 feet followed by application of ORC; and 4) monitored natural attenuation of VOCs in groundwater. In addition, based on the final post remediation sampling results, institutional controls, such as a deed restriction, will be required. The deed restrictions were filed on May 19, 2008. Additional site information can be found in the UIS under the BCP Site number C231013. BCA signed pursuant to litigation. VCA terminated.

Dt rec updated: 06/17/2019

Updated By: RSLEE

Site Code: 58858

Site Description: Location: The Greater Waterside Site located at 700-708 First Avenue, New York, NY is comprised of the former Waterside Generating Station located at 700 First Avenue, New York, NY and the former 708 Office Building located at 708 First Avenue, New York, NY. Site Features: All structures on the site have been demolished and removed, and the site has been backfilled (excluding over exposed bedrock) with clean sand and crushed stone and is surrounded by a security fence. Current Zoning/Use: The site is currently a fenced vacant lot, a portion of which is used for parking, and is zoned for commercial and residential use. The 700 - 708 First Avenue parcels are contiguous lots that collectively consists of approximately 6.4 acres (approximately 4.5 and 1.9 acres, respectively) located just west of the East River and FDR Drive and south of the United Nations Headquarters Complex in a highly developed commercial/ residential area between East 38th and East 41st Streets. Historical Uses: Since 1910, the 700 First Avenue portion of the site was used as an oil/gas-fired steam and electricity generating facility until it was shut down in May 2005. The generating facilities were demolished during the period from 2005 through 2007. Prior uses that may have also led to site contamination include a coal yard and wood mill in the late 1800s, and a storage yard for the Edison Electric Light Company (a predecessor company of Con Edison) in 1899. In addition, from the 1890s to 1923, portions of the site were used for manufactured gas plant (MGP) operations. In 1924, a 400,000-square foot 10-story Con Edison office/service building was constructed on the 708 First Avenue portion of the site. The building was demolished in 2003. In 2005, 700 First Realty Company, LLC acquired the 700 First Avenue portion of the site, and 708 First Realty Company, LLC acquired the 708 First Avenue portion of the site from Con Edison. Site Geology and Hydrogeology: The surficial fill material consists of course to fine sands, silty sands, medium-fine gravel, fill material, and weathered bedrock ranging from grade to approximately 50 to 60 feet below grade surface (bgs). Competent bedrock lies beneath a mantle of weathered bedrock of varying thickness. Generally, the thickness of the weathered bedrock ranges from 1 to 2 feet over much of the site. At the west end of the site, the bedrock surface is relatively shallow (e.g. 8 to 10 feet bgs in the area of 39th Street). The bedrock surface trends somewhat deeper toward the east end of the site where weathered bedrock is encountered at approximately 50 to 60 feet bgs and competent bedrock is encountered at depths ranging to approximately 70 feet bgs. Bedrock across the site is solely the Manhattan Schist, a foliated mica schist that contains pegmatite seams. Groundwater generally occurs within the fracture zones of the bedrock across the site ("Bedrock Aquifer") and in unconsolidated soil and fill along the eastern end of the site ("Unconsolidated Aquifer"). The depth to water in these shallow unconsolidated soils and fill material ranges from 7 to 8 feet below the existing FDR service road sidewalk grade. Additional site information can be found under the VCP Site numbers V00431 and V00432

Env Problem: Nature and Extent of Contamination: Post Remediation (Reclassified to C) Remediation of the site is complete. Prior to remediation, the primary contaminants of concern at the 708 First Avenue portion of the site were elevated levels of volatile organic compounds (VOCs),

semi-volatile organic compounds (SVOCs) and metals in soils, and VOCs in groundwater. Prior to remediation, the primary contaminants of concern at the 700 First Avenue portion of the site were elevated levels of polychlorinated biphenyls (PCBs), polycyclic aromatic hydrocarbons (PAHs), VOCs and metals in soils, and several VOC, PCB and PAH compounds and metals in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential and commercial use below the Development Depth. Remaining contamination in the soil and groundwater is being managed under a Site Management Plan.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Since contaminated soils have been removed to bedrock or the top of the water table and the excavated material was replaced with clean backfill, people are not expected to come in contact with contaminated material.

Updated By: RSLEE

Site Code: 58858

Site Description: Location: The Greater Waterside Site located at 700-708 First Avenue, New York, NY is comprised of the former Waterside Generating Station located at 700 First Avenue, New York, NY and the former 708 Office Building located at 708 First Avenue, New York, NY. Site Features: All structures on the site have been demolished and removed, and the site has been backfilled (excluding over exposed bedrock) with clean sand and crushed stone and is surrounded by a security fence. Current Zoning/Use: The site is currently a fenced vacant lot, a portion of which is used for parking, and is zoned for commercial and residential use. The 700 - 708 First Avenue parcels are contiguous lots that collectively consists of approximately 6.4 acres (approximately 4.5 and 1.9 acres, respectively) located just west of the East River and FDR Drive and south of the United Nations Headquarters Complex in a highly developed commercial/ residential area between East 38th and East 41st Streets. Historical Uses: Since 1910, the 700 First Avenue portion of the site was used as an oil/gas-fired steam and electricity generating facility until it was shut down in May 2005. The generating facilities were demolished during the period from 2005 through 2007. Prior uses that may have also led to site contamination include a coal yard and wood mill in the late 1800s, and a storage yard for the Edison Electric Light Company (a predecessor company of Con Edison) in 1899. In addition, from the 1890s to 1923, portions of the site were used for manufactured gas plant (MGP) operations. In 1924, a 400,000-square foot 10-story Con Edison office/service building was constructed on the 708 First Avenue portion of the site. The building was demolished in 2003. In 2005, 700 First Realty Company, LLC acquired the 700 First Avenue portion of the site, and 708 First Realty Company, LLC acquired the 708 First Avenue portion of the site from Con Edison. Site Geology and Hydrogeology: The surficial fill material consists of course to fine sands, silty sands, medium-fine gravel, fill material, and weathered bedrock ranging from grade to approximately 50 to 60 feet below grade surface (bgs). Competent bedrock lies beneath a mantle of weathered bedrock of varying thickness. Generally, the thickness of the weathered bedrock ranges from 1 to 2 feet over much of the site. At the west end of the site, the bedrock surface is relatively shallow (e.g. 8 to 10 feet bgs in the area of 39th Street). The bedrock surface trends somewhat deeper toward the east end of the site where weathered bedrock is encountered at approximately 50 to 60 feet bgs and competent bedrock is encountered at depths ranging to approximately 70 feet bgs. Bedrock across the site is solely the Manhattan Schist, a foliated mica schist that contains pegmatite seams. Groundwater generally occurs within the fracture zones of the bedrock across the site ("Bedrock Aquifer") and in unconsolidated soil and fill along the eastern end of the site ("Unconsolidated Aquifer"). The depth to water in these shallow unconsolidated soils and fill material ranges from 7 to 8 feet below the existing FDR service road sidewalk grade. Additional site information can be found under the VCP Site numbers V00431 and V00432

**THE GREATER WATERSIDE SITE (Continued)**

**S123159115**

Env Problem: Nature and Extent of Contamination: Post Remediation (Reclassified to C)  
Remediation of the site is complete. Prior to remediation, the primary contaminants of concern at the 708 First Avenue portion of the site were elevated levels of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals in soils, and VOCs in groundwater. Prior to remediation, the primary contaminants of concern at the 700 First Avenue portion of the site were elevated levels of polychlorinated biphenyls (PCBs), polycyclic aromatic hydrocarbons (PAHs), VOCs and metals in soils, and several VOC, PCB and PAH compounds and metals in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential and commercial use below the Development Depth. Remaining contamination in the soil and groundwater is being managed under a Site Management Plan.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Since contaminated soils have been removed to bedrock or the top of the water table and the excavated material was replaced with clean backfill, people are not expected to come in contact with contaminated material.

| Site Description:    | <p>Location: The Parking Lot property consists of 1.1 acres located on the western side of First Avenue, just west of the East River and FDR Drive and south of the UN Building in a highly developed commercial/residential area between East 39th and East 40th Streets. Current Zoning/Uses: The Parking Lot is currently used for parking, and is zoned for commercial use. Historical Uses: Formerly, Con Edison used the site as a gasoline filling station and/or parking facility for maintenance and service vehicles from 1980 to 2001. Portions of the site were used by an upholstery and mattress factory from 1929 until the 1960 s. A United Parcel Service sorting center and garage was located on the site as early as 1950, and all former on-site structures were removed by 1970. Environmental impacts to soils, bedrock and groundwater are related to leaking gasoline USTs used for refueling Con Edison vehicles. Site Geology and Hydrogeology: The project site lies within the Manhattan Prong in the New England Upland Physiographic Province. The bedrock foundations of New York City consist of a sequence of dense and stable crystalline rocks consisting of schist, gneiss, and marble that outcrop mainly in Manhattan and the Bronx. The surficial fill consists of medium to fine sands, silty sands, bricks, concrete, coal fragments, and bedrock ranging from five to fifteen feet below grade. Bedrock generally lies beneath a mantle of weathered bedrock of varying thickness. For most of the Site, the thickness of the weathered bedrock was between one to two feet. The weathered bedrock was thicker and deeper toward the southeast corner of the Site, mirroring the topography of the competent bedrock surface. The competent bedrock surface forms a pronounced basin at the southeast end of the Site, with its center near monitoring well MW-3R and MW-3S, and its edges at the property line (sidewalk) along East 39th Street and First Avenue. Groundwater generally occurs within the bedrock across the Site from slightly more than six feet to more than fifteen feet below grade. The direction of groundwater flow is estimated to be to the southeast; however, it is likely that the number and degree of interconnected fractures exert a greater control upon the rate of horizontal groundwater flow than the hydraulic gradient. Based upon the limited number of open and connect fractures within the bedrock at the Site, the horizontal conductivity of the bedrock aquifer is very low.</p> |

Env Problem: Nature and Extent of Contamination: Post-Remediation Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were volatile organic compounds, including benzene, toluene, ethylbenzene and xylenes (BTEX), plus methyl-tert-butyl ether (MTBE) and lead in shallow soil and weathered bedrock, and BTEX and MTBE in the fractured bedrock groundwater. Remedial actions have successfully achieved soil cleanup objectives for unrestricted use to a depth defined as the Development Depth.

**BROWNFIELDS:**

Name: THE GREATER WATERSIDE SITE  
Address: 700-708 FIRST AVENUE  
City,State,Zip: NEW YORK, NY 10016  
Program: BCP  
Site Code: 58858  
Acres: 6.34  
HW Code: C231013  
SWIS: 3101  
Town: New York City  
Record Added Date: 04/01/2004  
Record Updated Date: 01/07/2020  
Update By: GWBURKE

Site Description: Location: The Greater Waterside Site located at 700-708 First Avenue, New York, NY is comprised of the former Waterside Generating Station located at 700 First Avenue, New York, NY and the former 708 Office Building located at 708 First Avenue, New York, NY. Site Features: All structures on the site have been demolished and removed, and the site has been backfilled (excluding over exposed bedrock) with clean sand and crushed stone and is surrounded by a security fence. Current Zoning/Use: The site is currently a fenced vacant lot, a portion of which is used for parking, and is zoned for commercial and residential use. The 700 - 708 First Avenue parcels are contiguous lots that collectively consists of approximately 6.4 acres (approximately 4.5 and 1.9 acres, respectively) located just west of the East River and FDR Drive and south of the United Nations Headquarters Complex in a highly developed commercial/ residential area between East 38th and East 41st Streets. Historical Uses: Since 1910, the 700 First Avenue portion of the site was used as an oil/gas-fired steam and electricity generating facility until it was shut down in May 2005. The generating facilities were demolished during the period from 2005 through 2007. Prior uses that may have also led to site contamination include a coal yard and wood mill in the late 1800s, and a storage yard for the Edison Electric Light Company (a predecessor company of Con Edison) in 1899. In addition, from the 1890s to 1923, portions of the site were used for manufactured gas plant (MGP) operations. In 1924, a 400,000-square foot 10-story Con Edison office/service building was constructed on the 708 First Avenue portion of the site. The building was demolished in 2003. In 2005, 700 First Realty Company, LLC acquired the 700 First Avenue portion of the site, and 708 First Realty Company, LLC acquired the 708 First Avenue portion of the site from Con Edison. Site Geology and Hydrogeology: The surficial fill material consists of coarse to fine sands, silty sands, medium-fine gravel, fill material, and weathered bedrock ranging from grade to approximately 50 to 60 feet below grade surface (bgs). Competent bedrock lies beneath a mantle of weathered bedrock of varying thickness. Generally, the thickness of the weathered bedrock ranges from 1 to 2 feet over much of the site. At the west end of the site, the bedrock surface is relatively shallow (e.g. 8 to 10 feet bgs in the area of 39th Street). The bedrock surface trends somewhat deeper toward the east end of the site where weathered bedrock is encountered at

approximately 50 to 60 feet bgs and competent bedrock is encountered at depths ranging to approximately 70 feet bgs. Bedrock across the site is solely the Manhattan Schist, a foliated mica schist that contains pegmatite seams. Groundwater generally occurs within the fracture zones of the bedrock across the site ("Bedrock Aquifer") and in unconsolidated soil and fill along the eastern end of the site ("Unconsolidated Aquifer"). The depth to water in these shallow unconsolidated soils and fill material ranges from 7 to 8 feet below the existing FDR service road sidewalk grade. Additional site information can be found under the VCP Site numbers V00431 and V00432

Env Problem: Nature and Extent of Contamination: Post Remediation (Reclassified to C) Remediation of the site is complete. Prior to remediation, the primary contaminants of concern at the 708 First Avenue portion of the site were elevated levels of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals in soils, and VOCs in groundwater. Prior to remediation, the primary contaminants of concern at the 700 First Avenue portion of the site were elevated levels of polychlorinated biphenyls (PCBs), polycyclic aromatic hydrocarbons (PAHs), VOCs and metals in soils, and several VOC, PCB and PAH compounds and metals in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential and commercial use below the Development Depth. Remaining contamination in the soil and groundwater is being managed under a Site Management Plan.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Since contaminated soils have been removed to bedrock or the top of the water table and the excavated material was replaced with clean backfill, people are not expected to come in contact with contaminated material.

| Site Description:  | <p>Location: The Greater Waterside Site located at 700-708 First Avenue, New York, NY is comprised of the former Waterside Generating Station located at 700 First Avenue, New York, NY and the former 708 Office Building located at 708 First Avenue, New York, NY. Site Features: All structures on the site have been demolished and removed, and the site has been backfilled (excluding over exposed bedrock) with clean sand and crushed stone and is surrounded by a security fence. Current Zoning/Use: The site is currently a fenced vacant lot, a portion of which is used for parking, and is zoned for commercial and residential use. The 700 - 708 First Avenue parcels are contiguous lots that collectively consists of approximately 6.4 acres (approximately 4.5 and 1.9 acres, respectively) located just west of the East River and FDR Drive and south of the United Nations Headquarters Complex in a highly developed commercial/ residential area between East 38th and East 41st Streets. Historical Uses: Since 1910, the 700 First Avenue portion of the site was used as an oil/gas-fired steam and electricity generating facility until it was shut down in May 2005. The generating facilities were demolished during the period from 2005 through 2007. Prior uses that may have also led to site contamination include a coal yard and wood mill in the late 1800s, and a storage yard for the Edison Electric Light Company (a predecessor company of Con Edison) in 1899. In addition, from the 1890s to 1923, portions of the site were used for manufactured gas plant (MGP) operations. In 1924, a 400,000-square foot 10-story Con Edison office/service building was constructed on the 708 First Avenue portion of the site. The building was demolished in 2003. In 2005, 700 First Realty Company, LLC acquired the 700 First Avenue portion of the site, and 708 First Realty Company, LLC acquired the 708 First Avenue portion of the site from Con Edison. Site Geology and Hydrogeology: The surficial fill material consists of course to fine sands, silty sands, medium-fine gravel, fill material, and weathered bedrock ranging from grade to approximately 50 to 60 feet below grade surface (bgs). Competent bedrock lies</p> |

beneath a mantle of weathered bedrock of varying thickness. Generally, the thickness of the weathered bedrock ranges from 1 to 2 feet over much of the site. At the west end of the site, the bedrock surface is relatively shallow (e.g. 8 to 10 feet bgs in the area of 39th Street). The bedrock surface trends somewhat deeper toward the east end of the site where weathered bedrock is encountered at approximately 50 to 60 feet bgs and competent bedrock is encountered at depths ranging to approximately 70 feet bgs. Bedrock across the site is solely the Manhattan Schist, a foliated mica schist that contains pegmatite seams. Groundwater generally occurs within the fracture zones of the bedrock across the site ("Bedrock Aquifer") and in unconsolidated soil and fill along the eastern end of the site ("Unconsolidated Aquifer"). The depth to water in these shallow unconsolidated soils and fill material ranges from 7 to 8 feet below the existing FDR service road sidewalk grade. Additional site information can be found under the VCP Site numbers V00431 and V00432

Env Problem: Nature and Extent of Contamination: Post Remediation (Reclassified to C) Remediation of the site is complete. Prior to remediation, the primary contaminants of concern at the 708 First Avenue portion of the site were elevated levels of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals in soils, and VOCs in groundwater. Prior to remediation, the primary contaminants of concern at the 700 First Avenue portion of the site were elevated levels of polychlorinated biphenyls (PCBs), polycyclic aromatic hydrocarbons (PAHs), VOCs and metals in soils, and several VOC, PCB and PAH compounds and metals in groundwater. Remedial actions have successfully achieved soil cleanup objectives for restricted residential and commercial use below the Development Depth. Remaining contamination in the soil and groundwater is being managed under a Site Management Plan.

Health Problem: People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Since contaminated soils have been removed to bedrock or the top of the water table and the excavated material was replaced with clean backfill, people are not expected to come in contact with contaminated material.

Date Rec Updated: 02/12/2010  
Updated By: SRHEIGEL  
Site Description: TRC Companies, Inc. (TRC) entered into a Voluntary Cleanup Order with the New York State Department of Environmental Conservation (NYSDEC) on June 27, 2001 for remediation of the First Avenue Properties, including the 708 First Avenue Property. The 708 First Avenue Property is currently owned by Consolidated Edison Companies of New York, Inc. (Con Edison) and is also known as the 708 Office Building. Con Edison contracted with TRC Companies, Inc., to assume the liability and responsibility for abatement, decommissioning, demolition and remediation of the site. The 708 property consists of 2.0 acres located just west of the East River and FDR Drive and south of the UN Building in a highly developed commercial/ residential area between East 40th and East 41st Streets. The site was occupied by a 400,000 square feet 10-story Con Edison service building and two industrial buildings and, from the 1920's to 2001, was used as office space, electrical operations, a locker room, a test laboratory and parking. The building was constructed in 1924 and demolished (under the VC Order) in 2003. Prior to the construction of these buildings, from the 1890's to 1923, portions of the site were used for manufactured gas plant operations. TRC has investigated environmental conditions at the site pursuant to a DEC-approved Supplemental Soil Investigation Work Plan, dated March 2001. Additional work was undertaken pursuant to a DEC-approved Addendum to the Supplemental Soil Investigation Work Plan, dated October 2001. The investigation found elevated levels of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and metals in soils. In groundwater, slightly elevated levels of VOCs were found. These results are reflected in a Supplemental Soil Investigation Final Report, in conjunction with the Remediation Work Plan, dated January 2002. TRC completed an environmental cleanup pursuant to the NYSDEC-approved Remediation Work Plan. The Remediation Work Plan for this site included: 1) decommissioning and removing all underground storage tanks and associated structures; 2) excavated and offsite disposal of all on-site soils above the development depth (16 feet

below ground surface, or to the groundwater or the bedrock, whichever is shallower); 3) excavation and offsite disposal of contaminated soils in the UST area down to a depth of 39 feet followed by application of ORC; and 4) monitored natural attenuation of VOCs in groundwater. In addition, based on the final post remediation sampling results, institutional controls, such as a deed restriction, will be required. The deed restrictions were filed on May 19, 2008. Additional site information can be found in the UIS under the BCP Site number C231013. BCA signed pursuant to litigation. VCA terminated.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL APPENDIX B SITE NO. 18. BEING ADDRESSED AS PART OF FIRST AVENUE PROPERTIES VCA # V-00(429-432). ~~~~~ e2mis no. 129-581: Preliminary laboratory results indicate the presence of a historical petroleum spill (possibly diesel) in soils collected at a depth of 7-9 and 22-23 feet below grade in a soil boring (#708-1) installed in the basement slab at the northeast corner of the 708 First Ave building. The soil boring was installed as part of a subsurface investigation of the 708 First Avenue property by Foster Wheeler Environmental in preparation for the potential sale of the property. Preliminary laboratory results revealed concentrations of btx in the range of 14.8 ppb to 2480 ppb, and various semivolatile compounds up to 3,770 ppb (phenanthrene). Further discussion and evaluation of this historical spill, including the development of a remediation plan where needed, will be included in the Phase II ESA subsurface investigation report currently being drafted by Foster Wheeler Environmental. New information will be included in this spill report as it arrives. Please contact Joe Floryshak of EH&S - Remediation. 3/21/99 Foster Wheeler completed the Phase II ESA for this property and upon re-evaluation of the analytical data for this finding has indicated that the exceedances in soil observed at this location and discussed above may be associated with former MGP activities on site. Records research has indicated that the site was formerly occupied by a MGP site prior to construction of the 708 First Ave in the early 1900s. In addition, similar exceedances in soil were observed beneath Waterside #2 (boring FD-1 & FD-2), also formerly occupied by the same MGP site. Jane O'Connell of the NYSDEC was informed of this evaluation on 3/21/00. Following is the executive summary section from the final Phase II ESA which discusses this finding: Former MGP on the 708 First Avenue Property: Five borings were installed in the service garage of the Service Building. The Former MGP Area was located in the eastern portion of the Service Building (708 First Avenue). Historical evidence and borings indicated that bedrock was excavated from the western half of the building foundation prior to construction. Bedrock was encountered directly beneath the concrete floor slab in borings 708-4 and 708-5. No elevated PID readings were recorded and no visual evidence of contamination was observed. Samples were not collected from these two borings. Borings 708-1 and 708-2 were located at the Former MPG Area. Boring 708-1 encountered 10 inches of concrete and 22.5 feet of unconsolidated material beneath the slab above bedrock. Soil borings collected indicated petroleum odors throughout the soil column and elevated PID readings were recorded from 7 to 23 feet, with the highest reading (242 ppm) recorded at the water table at approximately 5 feet bts. Analytical results from boring 708-1 indicated BTEX, SVOCs, and SVOC TCLP exceedances in the 7-9 ft and 22-23 ft depth interval. Additionally, results indicated a mercury exceedance in the 22-23 ft depth interval. Soil boring 708-2 encountered 13 inches of concrete and 17.5 feet of unconsolidated material. No elevated PID readings were recorded and no visual evidence of contamination or odors were observed. Analytical results indicated SVOC exceedances in 9-11 ft and 15-16-ft depth interval. Boring 708-3 encountered 42 inches of concrete overlying 7 feet of dry unconsolidated material. No elevated PID readings were recorded

**S104509053**

and no visual evidence of contamination or odors were observed. Analytical results did not indicate any exceedances of regulatory criteria. The presence of contaminants at depth within the eastern unconsolidated area in sufficient concentration to exceed SVOC TCLP criteria indicates the possibility of impact associated with the former MGP or other site-related operations. This contrasts with results obtained for most of the other RECs for which it appears historic filling practices may have been responsible for non-leachable concentrations of contaminants in excess of NYSDEC RSCOLs. Based on the exceedances of NYSDEC regulatory criteria, remedial plans for this area should consider mitigation of risks from conditions in unconsolidated soils during site demolition or redevelopment. Floor Trenches in Waterside No. 2 Basement: The Floor Drain Area is located in the basement of Waterside No. . The western two thirds of the concrete slab are constructed directly on bedrock. Based upon review of historic Waterside No 2 design drawings, up to 15 feet of bedrock were excavated prior to construction along the western limit of the building (along First Avenue). Nine borings were completed to investigate the potential historical impact of the floor trench system in Waterside No. 2 and the former MGP on the property. Unconsolidated material was encountered beneath the slab in only two locations, FD2-1 and FD2-2. The other borings encountered bedrock directly beneath the slab or could not be completed to bedrock and were terminated in concrete. Some of the borings in concrete/bedrock exhibited zones of weathered bedrock underlying the concrete foundation. Fractures were present in some of the concrete cores, resulting from water flowing within the slab. No soil or concrete samples were collected from any of the borings installed in the western two thirds of Waterside No. 2. In general, odors and elevated PID readings were not found in any of these borings. Boring FD2-4 exhibited standing water within the concrete core. Temporary well TW-2 was installed to assess the standing water. The investigation findings related to the standing water are discussed in Section 4.1.18. (see E2mis report #129694) [DEC # 9912141]. Samples from the unconsolidated area were collected from borings FD2-1 and FD2-2. Analytical results for boring FD2-1 indicated SVOC, SVOC TCLP, and mercury exceedances at various depth intervals. Analytical results from FD2-2 indicated SVOC, arsenic, and mercury exceedances in the 3-4 ft depth interval. Based on the presence of concrete slabs poured directly on top of bedrock and the lack of evidence to support the presence of contaminants in concrete or bedrock, no further action is required for the western portion of this area during site demolition or redevelopment. However, remedial plans should consider construction dewatering and groundwater-related issues, as discussed in Section 4.1.18. The presence of the contaminant acenaphthene at depth within the eastern unconsolidated area in sufficient concentration to exceed SVOC TCLP criteria indicates the possibility of impact associated with the former MGP or other site-related operations. This contrasts the results obtained for most of the other RECs for which it appears that historic filling practices may be responsible for any non-leachable concentrations of contaminants in excess of NYSDEC RSCOLs. Based on the exceedances of NYSDEC regulatory criteria, remedial plans for this area should consider mitigation of risks from conditions in unconsolidated soils during site demolition or redevelopment. 11/21/00 The contract for the Cleanup is being negotiated with TRC. Phase II of the Site Assessment will be sent to the DEC in the next two weeks. Cleanup will be

The sheen was traced back to Tfmr #3 located overhead half block away from catch basin, found approx 2 gals. on transformer platform, leak from main body sample valve. 12:45 Env Mgr notifies CIG Operator Murphy of potential sheen to river 12:50 Discussed with ERT Pierre situation 12:55 checked discharge of catch basin: catch basin drains into manhole on 39th street. found no sign of sheen in manhole or on manhole walls. manhole drains to east river. water level in manhole above the drain pipe to river. 13:00 Closed Isolation valve on oil catch pan installed inside catch basin, stops flow of runoff from catch basin to manhole. Operations cleaned oil with pads and disposed. 13:05 Env Mgr called ERT and updated ; No sheen observed in manhole which drains into river. flow from catch basin isolated. transformer leak contained. "

Remarks: "leaking valve on transformer #3. conducted # 142622. cleanup in progress. oil sheen in catch basin, catch basin discharges to manhole , manhole discharges to east river. no oil observed in manhole."

DEC Memo: "10/23/06 - See eDocs for Con Ed report detailing cleanup and closure. Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL e2mis no. 151777: AT 23:55 ON 90 BOILER FEED PUMP TRISENE HOSE BROKE. APPROX. 30 GALLONS OF HYDRAULIC OIL SPILLED INTO TRENCH. SLUCE GATES HAVE BEEN INSTALLED OIL ABSORBANT PADS ARE DOWN. OIL WATER SEPERATOR IN SERVICE. WE HAVE AN OPERATOR STATIONED AT THE OUTLET OF OILY WATER SEPERATOR. CLEAN UP IS IN PROGRESS. After initial inspection by Maint , the cylinder was sent to Parker Co where the Al Nesterok, System Eng witnessed the rebuilding and testing of the cylinder at 2000psi. oil pressure. It was returned to Waterside and installed by Maintenance and I &C.  
~~~~~ DEC Responde notes: 1/20/04, 5:30 PM Spoke with Renato Derech (Env. Manager) - spill was on 4th floor of Waterside #1. Seal on o-ring let go. Oil got to floor drain, and then to basement trenches. They found oil in the trenches. Placed block in trench to prevent oil from reaching oil/water separator. Drain line from 4th floor to basement is 6 diameter - can't be flushed out. They will maintain pads and continue to monitor and clean up as necessary. (JHO)"  
Remarks: "BROKEN HOSE ON BOILER CAUSED RELEASE OF APPROX 30 GALS OF HYDRAULIC FLUID. SPILL IS ON CONCRETE. SPILL IS UNDER CONTROL AND IS CONTAINED. CLEAN UP IN PROGRESS."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was
ENGELHARDT 11/7/96, 1111 hrs: Mr. Furst - boom in discharge tunnel.
George Basil - divers working to modify boom found a froth in water.
They stuck an oil sorbent pad in water - no absorption. There was
some sheen between patches of froth. They feel it came from river.
Temporary boom has been put in. Divers to be done in a few hours.
After they are done and boom is in place, will put pads in tunnel and
observe tunnel. Asked them to give me update at the end of the day.
11/7/96, 1650 hrs: George Basile - Divers not finished yet. They put
down pads twice during operation - not much oil observed. Will look
again tomorrow. USCG went to scene - they requested report next
Tuesday. I did the same. 9/25/07: Spill closed. Remediation completed
under Voluntary Cleanup Agreement (site no. V00432) and Brownfield
Cleanup Program (C231016). (JHO)"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL 4/3/97 (Katz notes): called in during unannounced audit at Waterside Station. Saw foam in discharge canal at station. Proceeded to bulkhead to see what was entering the East River - saw possible dissolved solids emanating from the outfall. ~~~~~
e2mis 105930 WHILE ENVIRONMENTAL MGR. T.THATCHER WAS MAKING AN INSPECTION OF WATERSIDE DOCK HE OBSERVED A BROWN DISCOLORATION COMING OUT OF THE WATERSIDE #2 DISCHARGE TUNNEL. THE SUBSTANCE IS UNKNOWN, BUT A SAMPLE IS BEING TAKEN. UNTIL WE CAN GET THE RESULTS BACK WE ARE UNABLE TO GIVE AN EXACT AMOUNT. 05-apr-2004- G. Basile, Sr. Spec., 15937- The following information is provided as an explanation that this incident should be closed by DEC since the observed discoloration was from an approved process being discharged from the station's waste neutralization SPDES outfall as part of routine demineralizer resin bead maintenance (hereafter called brine washing). We have on file the following letters discussing this procedure- A June 4, 1997 letter from Mr. Richard Ramon, P.E., Sr. Engineer, EH&S to Mr. Richard L. Newman, P.E., Regional Water Program Director, NYSDEC, indicating the procedure that Con Edison will take during Anion Brine Washing at variousl Con Ed power plants. A May 9, 1997 letter from Mr. Newman to Richard Ramon requesting a plan describing how the brine wash liquids will be discharged through the Waste Neutralization System associated with this process. Waterside Station continues to perform all agreed upon discharge rates and sampling during the discharge of the brine wash operations. The description in the Causes section of this report substantiate the fact that the brown color observed in the river was caused by the normal maintenance procedure referred to as Brine washing and not related to any other unauthorized discharges. I have cut and pasted this section in the event that the DEC did not receive it as part of the initial report: Waterside Station has investigated the cause of the brownish-red plume that was observed in the East River on Thursday, April 3, 1997, at approximately 11:30 hrs. The investigation showed that it was caused by brine washing of the demineralizer anion beds. Waterside personnel obtained samples of the colored discharge water from Waterside 2 tunnel on 4/3/97 at approximately 1200 Hrs. Waterside personnel developed a set of analytical parameters after making a review of relevant Station procedures and discussion with water treatment engineers. The test results showed a total organic carbon (TOC) of 64 PPM in the discharge tunnel. A second sample was taken at the same time at the outfall of the oil water seperator showed a TOC concentration of 1.03 PPM. In addition, Waterside took samples from a second brine wash that was performed on 4/4/97. These samples were taken from waste neutralization system 1 and 2 hold up tanks and showed a TOC of 101.7

PPM and 125.1 PPM respectively. Finally, a comparison of the samples taken on 4/3/97 from the tunnel and the 4/4/97 samples taken from the brine wash showed they both had the same brownish red color. The above sample results suggest that the water quality associated with the colored discharge noticed on 4/3/97 and the brine wash water were similar. Furthermore, the sample results show that the quality of this water did not correspond to the quality of the water discharged from the station's floor drain system. Subsequent conversations with Con Edison waste water treatment engineers confirm that organic matter naturally occurs in the raw water source (Catskill drinking water). The organic matter tends to accumulate in the anion beds. The accumulated organic matter decreases the effectiveness of the anion resin. The use of an industry standard brine wash to remove the accumulated organic material restores anion attenuation and extends the usable life of the anion resin. "

Remarks: "BROWN SHEEN 4FT BY 6FT ON EAST RIVER COMING FROM THE DISCHARGE TUNNEL UNK SOURCE "

DEC Memo: "06/07/19 - Lakhani Approved Oil integrity tested a 4000 gallon #2 F.O. square tank wrapped in cement located in the basement of the commercial property. A leak was detected on the dry side of the tank. Approved removed the product from the tank and is set to remove it. No contamination has been found yet. The basement floor is cement. The property is currently running of gas. 6/18/19-Zhune spoke to Eric Stuphem. Eric said they are going to remove the tank and collect soil samples under the tank. They will either remove the lines or test them. "

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Contact: RAY LARA
Spiller Phone: (646) 772-6884
Spiller Extention: Not reported
DEC Region: 2
DER Facility ID: 290873
DEC Memo: "4/27/05-Vought-Called Ray Lara (PTC) and AST is 15000gal #6 fuel oil. 6000-gallons delivered on 4/26/05 and currently 12000 gallons is AST. Leak is high on AST and tank will be pumped below leak line and spill cleaned using speedy dry. Superintendent of building is Dennis 347-203-2744. Vought called Ray Lara and leak was stopped and tank will be inspected on 4/27/05. Tank was pumped under leak and more adsorbent was applied. Salesmen will go to site today to determine whether AST will be repaired or replaced. Vought received call from Mark (PTC) and small hole in tank. Fill line is also in poor condition. PTC will send proposals for temporary tank. Owner is Tom Eschmann (347-203-2730) and building number is (212-684-3939). Vought called Tom Eschmann and required copies of work invoices. Vought referred spill to Rahman. 10.18.05 Sharif- Spoke with Tom Eschmann, 347-203-2730 and told him DEC have n't rec'd any documentation regarding the spill clean up. He informed me ABC tank is underway to remove the old tank and place a new one.As per him, no soil borings were advanced around the old tank to investigate the subsurface contamination occured due to the leak of the old tank.He is not sure whether they have filed any application to deregister the old tank. 11.30.05 Sharif//Rec'd closure report prepared by ATC associates.Spill was cleaned up by PTC at the level of no residual contamination observed. Waste disposal manifest is included.Following the clean up activities, A.B.C tank was retained to remove the damaged AST.Following the tank removal activities, ATC was retained to document the above activities and perform a limited post remedial action investigation.ATC did not observe any pathways for petroleum contamination as no evidence of damage including cracks or holes were observed on the concrete floor.PBS registration for new AST is not updated yet.Once they update the PBS registration, spill case will be closed. 01/13/06-Vought-Received and returned call to Ryan Sabbath (212-408-0619 cell 347-203-2744) and left message to return call to DEC Rahman on 1/18 to Shariff if issue is not immediate in nature. Vought spoke with Ryan and PBS was sent to Sangesland. 01/18/05-Sharif// PBS reg. was updated. NFA required. "

Remarks: "Apartment Building. So far between 50 and 100 gallons spilled. Continous leak. Ray's crew is enroute for cleanup."

per PBS record, building 208 had one (1) 2,500 gal #2 oil AST in contact with soil, which was closed prior to Mar. 1991. - 2-316032 for 210 E 34th St. as per PBS record, building 210 has one (1) 2,000 gal #2 oil AST in contact with soil, in-service, installed in Mar. 2002 as per NYC DOB record, a permit application was approved on 11/15/2006 for removal of existing boilers from buildings 206 and 208 and installation of new gas boiler in 206-208 combined building. 206 E. 34 LLC. **property owner of 206-208** 210 E. 34 LLC. **property owner of 210** 11/28/14 TJD File review. Based upon information provided by notifier it is unclear which address the reported tank test failure is associated with. A review of available documentation reveals the fuel oil burning tank system at 206/208 was replaced with a gas boiler in 2006 (DOB records). The tank system at 210 E 34th lists only a 2K AST installed in 2002. Previous attempts by Department staff to obtain historical information have been unsuccessful. Business records are required to be maintained for 7 years maximum. Due to lack of a correct address and age of reported spill no further information is available. An enforcement proceeding associated with a PBS inspection (1/26/10) @210 E34th resulted in a May 2012 consent order with no discussion of 1998 open spill file. Spill is administratively closed."

Updated By: JHOCONNE

Site Description: Location: The site is located at 27-35 West 24th Street in the Borough of New York, New York. It is located on the northern side of West 24th Street. The site is designated as Block 826, Lot 19. Site Features: The site is a rectangular shaped parcel of land measuring approximately 9,000 square feet and is improved with an one 11-story building with a basement. Current Zoning and Land Use: The building on site is used for office space and a restaurant/bar on the first floor and part of the basement. The site is zoned M1-6, which allows industrial and manufacturing. The current use of the site complies with the zoning code. Past Use of the Site: A dry cleaning facility formerly occupied the restaurant/bar space until approximately 1990. The former dry cleaning operations are believed to have contributed to the known contamination found in groundwater and soil vapor on the site. Site Geology and Hydrogeology: The subsurface lithology was homogenous throughout the site. The subsurface soil was noted to consist of urban fill material and brown coarse grain sand. Based upon boring logs from various site investigations, groundwater is encountered 8-10 feet beneath the basement slab except along the western property boundary where the water table is shallower, resulting in the need to actively pump out water entering the service elevator pit.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were chlorinated volatile organic compounds (VOCs) such as tetrachloroethene (PCE), trichloroethene (TCE), and cis-1,2-dichloroethene (DCE) which were detected in soil, groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.

Health Problem: Direct contact with contaminants in the soil or groundwater is unlikely because the site is entirely covered with a building. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system was installed

beneath the on-site building to prevent vapors beneath the slab from entering the building. Sampling at an adjacent structure indicates soil vapor intrusion is not a concern. Access to the other adjacent building was denied and soil vapor intrusion may be a potential exposure pathway at that structure.

West 24th Street. The site is designated as Block 826, Lot 19. Site Features: The site is a rectangular shaped parcel of land measuring approximately 9,000 square feet and is improved with an one 11-story building with a basement. Current Zoning and Land Use: The building on site is used for office space and a restaurant/bar on the first floor and part of the basement. The site is zoned M1-6, which allows industrial and manufacturing. The current use of the site complies with the zoning code. Past Use of the Site: A dry cleaning facility formerly occupied the restaurant/bar space until approximately 1990. The former dry cleaning operations are believed to have contributed to the known contamination found in groundwater and soil vapor on the site. Site Geology and Hydrogeology: The subsurface lithology was homogenous throughout the site. The subsurface soil was noted to consist of urban fill material and brown coarse grain sand. Based upon boring logs from various site investigations, groundwater is encountered 8-10 feet beneath the basement slab except along the western property boundary where the water table is shallower, resulting in the need to actively pump out water entering the service elevator pit.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were chlorinated volatile organic compounds (VOCs) such as tetrachloroethene (PCE), trichloroethene (TCE), and cis-1,2-dichloroethene (DCE) which were detected in soil, groundwater and soil vapor. Remedial actions have successfully achieved soil cleanup objectives for commercial use. Residual contamination in the soil and groundwater is being managed under a Site Management Plan.

Health Problem: Direct contact with contaminants in the soil or groundwater is unlikely because the site is entirely covered with a building. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system was installed beneath the on-site building to prevent vapors beneath the slab from entering the building. Sampling at an adjacent structure indicates soil vapor intrusion is not a concern. Access to the other adjacent building was denied and soil vapor intrusion may be a potential exposure pathway at that structure.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

NYC LEAD 2: Recent Lead Paint Violations

Pursuant to New York City's Housing Maintenance Code, the Department of Housing Preservation and Development (HPD) issues violations against conditions in rental dwelling units that have been verified to violate the New York City Housing Maintenance Code (HMC) or the New York State Multiple Dwelling Law (MDL). Violations are issued when an inspection verifies that a violation of the HMC or MDL exists. It is closed when the violation is corrected, as observed/verified by HPD or as certified by the landlord.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

| Version Date: | 2013 |
| Southeast Map: | 5940597 BROOKLYN, NY |
| Version Date: | 2013 |

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

| <u>Flood Plain Panel at Target Property</u> | <u>FEMA Source Type</u> |
|---|-------------------------|
| 3604970088F | FEMA FIRM Flood data |
| <u>Additional Panels in search area:</u> | <u>FEMA Source Type</u> |
| 3604970089F | FEMA FIRM Flood data |
| 3604970201F | FEMA FIRM Flood data |
| 3604970202F | FEMA FIRM Flood data |

NATIONAL WETLAND INVENTORY

| <u>NWI Quad at Target Property</u> | <u>NWI Electronic Data Coverage</u> |
|------------------------------------|--|
| CENTRAL PARK | YES - refer to the Overview Map and Detail Map |

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

| | |
|-----------------------------|---|
| Search Radius: | 1.25 miles |
| Location Relative to TP: | 1 - 2 Miles West |
| Site Name: | MANHATTAN GENERAL MAIL FACILITY |
| Site EPA ID Number: | NY6180000352 |
| Groundwater Flow Direction: | NOT AVAILABLE. |
| Inferred Depth to Water: | not available. Saturated layers impacted by salt water intrusion are present in the overburden. It is generally inferred that the depth to the uppermost 'aquifer' is greater than 70 feet at the surface of the bedrock/sediment interface. |
| Hydraulic Connection: | Detailed hydraulic connection information is not available. Glacial till and outwash deposit sediments overlie the Manhattan Schist, the uppermost bedrock unit at the site. The surface elevation of bedrock decreases to the southwest of the site. |
| Sole Source Aquifer: | No information about a sole source aquifer is available |
| Data Quality: | Information is inferred in the CERCLIS investigation report(s) |

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION</u>
<u>FROM TP</u> | <u>GENERAL DIRECTION</u>
<u>GROUNDWATER FLOW</u> |
|---------------|-----------------------------------|---|
| Not Reported | | |

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Ordovician
Series: Middle Ordovician (Mohawkian)
Code: O2 *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

| Soil Layer Information | | | | | | | |
|------------------------|----------|----------|--------------------|----------------|--------------|---------------------------|------------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Permeability Rate (in/hr) | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 6 inches | variable | Not reported | Not reported | Max: 0.00
Min: 0.00 | Max: 0.00
Min: 0.00 |

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

|-----------------------------|--|---|
| SPECIAL FLOOD HAZARD AREAS | | Without Base Flood Elevation (BFE)
Zone A, V, A99 |
| | | With BFE or Depth Zone AE, AO, AH, VE, AR |
| | | Regulatory Floodway |
| OTHER AREAS OF FLOOD HAZARD | | 0.2% Annual Chance Flood Hazard, Areas of 1% annual chance flood with average depth less than one foot or with drainage areas of less than one square mile Zone X |
| | | Future Conditions 1% Annual Chance Flood Hazard Zone X |
| | | Area with Reduced Flood Risk due to Levee. See Notes. Zone X |
| | | Area with Flood Risk due to Levee Zone D |
| OTHER AREAS | | NO SCREEN Area of Minimal Flood Hazard Zone X |
| | | Effective LOMRs |
| | | Area of Undetermined Flood Hazard Zone D |
| GENERAL STRUCTURES | | Channel, Culvert, or Storm Sewer |
| | | Levee, Dike, or Floodwall |
| OTHER FEATURES | | 20.2 Cross Sections with 1% Annual Chance Water Surface Elevation |
| | | 17.5 |
| | | Coastal Transect |
| | | Base Flood Elevation Line (BFE) |
| | | Limit of Study |
| | | Jurisdiction Boundary |
| | | Coastal Transect Baseline |
| MAP PANELS | | Digital Data Available |
| | | No Digital Data Available |
| | | Unmapped |
| | | The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location. |

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on **10/26/2020 at 3:02 PM** and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.
