

Report on NYC 2020 Census Self-Response

Rates as Issued on July 9th, 2020

New York City Department of City Planning
Population Division

**Report on NYC 2020 Census Self-Response (Rates Issued on July 9th)
New York City Department of City Planning—Population Division**

The self-response rate measures the percentage of housing units that self-responded to the 2020 Census either online, by mail, or by phone.

Why We Care and the Task at Hand

If an area has a low self-response rate, it means census enumerators will need to knock on more doors to count residents in-person, and it is likely that people in the area may be missed or counted inaccurately.

With the Census Bureau set to start in-person visits on August 11th as part of the Nonresponse Follow-up (NRFU) operation, it is more important than ever to increase response rates. High self-response is the best way of ensuring a complete count, with data that truly reflect the neighborhoods of our city. Conducting a census in the middle of a pandemic continues to be an unprecedented challenge, virtually eliminating events that build a critical mass of awareness and curbing on-the-ground personal appeals that have proven to be effective in the past.

Yet, in the midst of this very constrained environment, there are opportunities. The self-response period has been extended well beyond the original schedule, allowing us to gain some ground on what could have been a catastrophically low level of self-response. The phased re-opening of the city may now permit a limited level of on-the-ground outreach – the physical neighborhood presence of community organizations and other trusted voices can make all the difference in boosting self-response. This is now the task at hand.

The new format of DCP's *Report on NYC 2020 Census Self-Response* is intended to support this next phase of outreach by moving the focus entirely to neighborhoods with the lowest levels of self-response, where targeted outreach efforts are most needed. We identify places where the current level of self-response is likely to have deleterious effects on the quality of data and on the count itself. With NRFU, the Census Bureau tries to fill the gap in data produced by low self-response. However NRFU and post-NRFU operations can introduce errors that compromise the enumeration. These include the use of responses from neighbors (i.e., proxy

respondents), the use of administrative records (e.g., Social Security, IRS tax records), and the creation of data through statistical means (i.e., imputation), none of which are good substitutes for self-response.

How Does New York City Compare to New York State and the U.S.?

New York City’s response rate stands at 53.2 percent, compared to 57.5 percent for New York State, and 62.0 percent for the U.S. (see Figure 1). Over the past week (July 2nd – July 9th), New York City was up 0.2 percentage points, compared to 0.2 for New York State, and 0.1 for the nation. Over the past two weeks (June 25th – July 9th), New York City was up 0.6 percentage points, compared to 0.4 for New York State, and 0.3 for the nation.

Figure 1. Comparison of 2020 Census Self-Response Rates

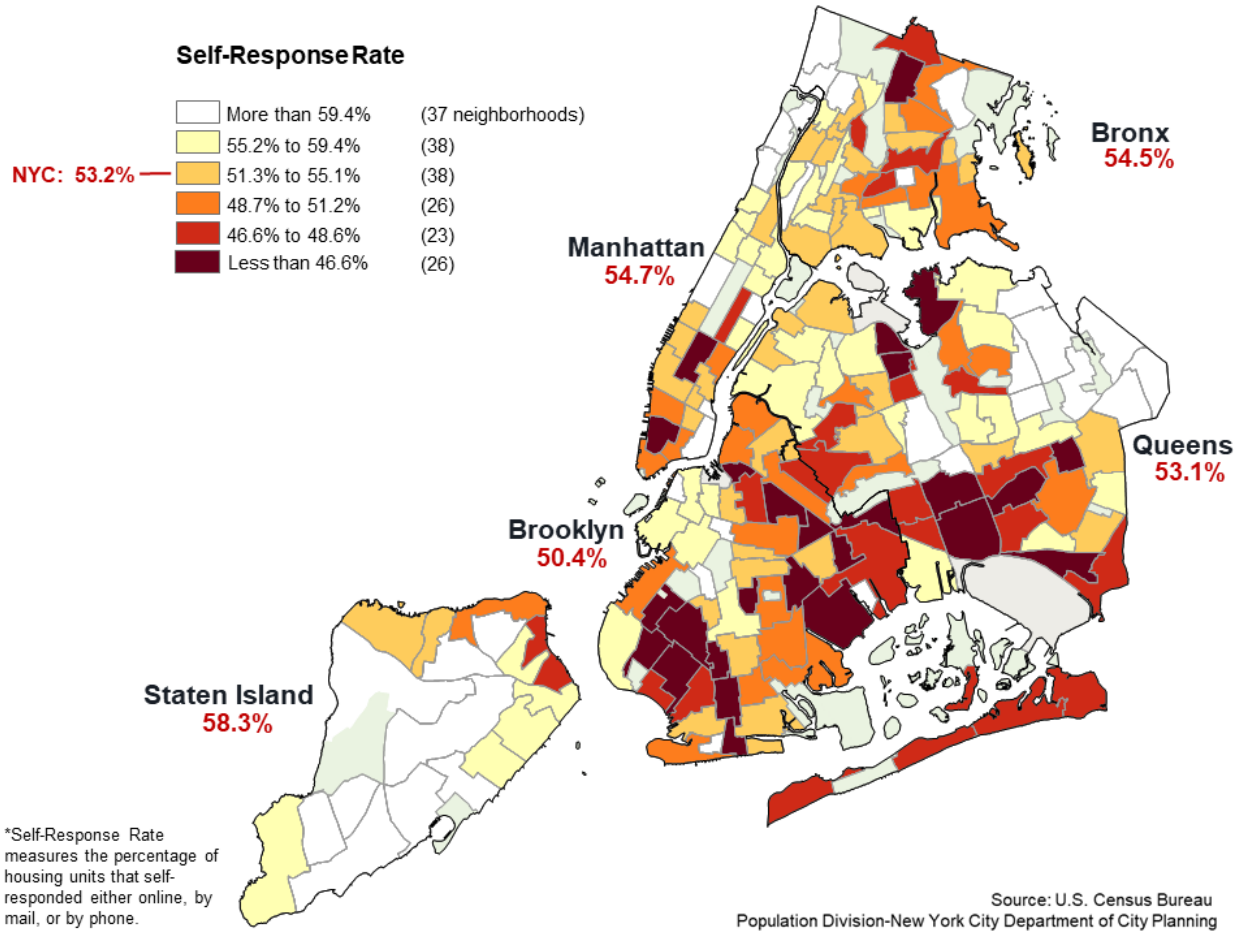

The city’s self-response rate is 8.8 percentage points lower than that of the nation. Growth in New York City’s self-response rate outpaced that of the U.S. throughout April and May, then in June was approximately the same as that for the nation. Over the past two weeks, growth in the response rate has been greater for the city than for the nation, though the increases in response rates are small. New York City’s response rate now stands at 85.8 percent of U.S. self-response (see Figure 2).

Figure 2. NYC Self-Response as a Percentage of U.S. Response Rate in 2020

Within New York City, Staten Island has the highest self-response rate, with 58.3 percent of housing units responding, while Brooklyn has the lowest, at 50.4 percent (see Figure 3). Response rates for Manhattan, the Bronx, and Queens stand at 54.7, 54.5, and 53.1 percent, respectively.

Figure 3. New York City 2020 Self-Response Rates* as Issued on July 9th by Neighborhood Tabulation Area**

**See Appendix A for a reference map of NTAs including NTA names.

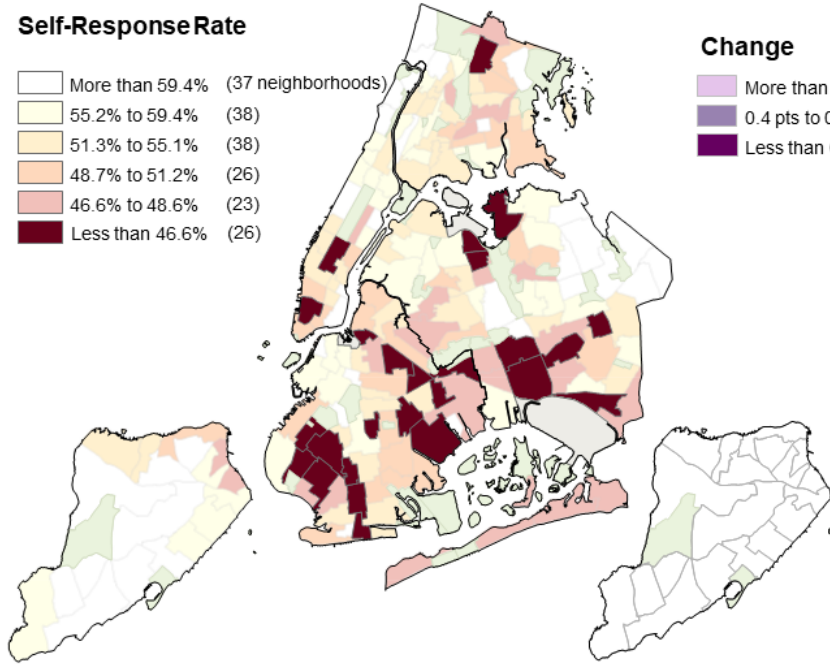

Figure 4. Overall Neighborhood Response Rates* and Change over Two Weeks for Neighborhoods with the Lowest Response Rates (Less than 46.6 Percent)

A. Response Rates as issued on July 9

New York City: 53.2%

Self-Response Rate

- More than 59.4% (37 neighborhoods)
- 55.2% to 59.4% (38)
- 51.3% to 55.1% (38)
- 48.7% to 51.2% (26)
- 46.6% to 48.6% (23)
- Less than 46.6% (26)

B. Change between June 25 and July 9

New York City: 0.6 pct. pts

Change

- More than 0.7 pts (5)
- 0.4 pts to 0.7 pts (19)
- Less than 0.4 pts (2)

*Self-Response Rate measures the percentage of housing units that self-responded either online, by mail, or by phone.

*See Appendix B for a complete table of NTA response rates, as well as one- and two-week changes.

Figure 5. New York City Self-Response Rates* as Issued on July 9th by Census Tract

Low Response Clusters

Neighborhood Tabulation Areas (NTA), while a very useful neighborhood template, may encompass census tracts across the self-response spectrum. This analysis identifies contiguous groupings of census tracts with low self-response in an effort to identify clusters of interest for outreach efforts. We have identified 28 clusters, some of which cross NTA boundaries, as the highest risk targets in the five boroughs. These designations build upon the *Borough Spotlights* presented in previous reports, where we identified subsets of areas of very low response. Our goal now is to track these clusters over the next several weeks, in an effort to inform outreach, and particularly on-the-ground outreach. Only areas that are likely to benefit from increased outreach efforts at the present time are included in this template. Areas where we suspect low rates are due to the temporary relocation of students or where a large number of housing units are seasonally or occasionally occupied are cases in point. Resolution of low rates in these areas will likely come by way of NRFU visits and the selective use of administrative records from colleges and universities, and thus are not included here as areas of interest for outreach efforts.

It is our hope that increased contact with households that have not yet responded to the census will make a real difference in boosting response. The clusters identified in this analysis are the places where this outreach, in all its forms, is most needed. Communicating key messages about the census via trusted community partners can make all the difference, and now is the time to do it.

Maps of low response clusters by borough, and one- and two-week changes in response rates for these clusters, are shown below. To identify the 2020 Census tracts in these clusters and place them in their neighborhood context, a reference map showing these clusters with major street names is available [here](https://arcg.is/X5miS) (<https://arcg.is/X5miS>).

Figure 6. Bronx Self-Response Rates* as Issued on July 9th for Clusters of Census Tracts with Low Self-Response

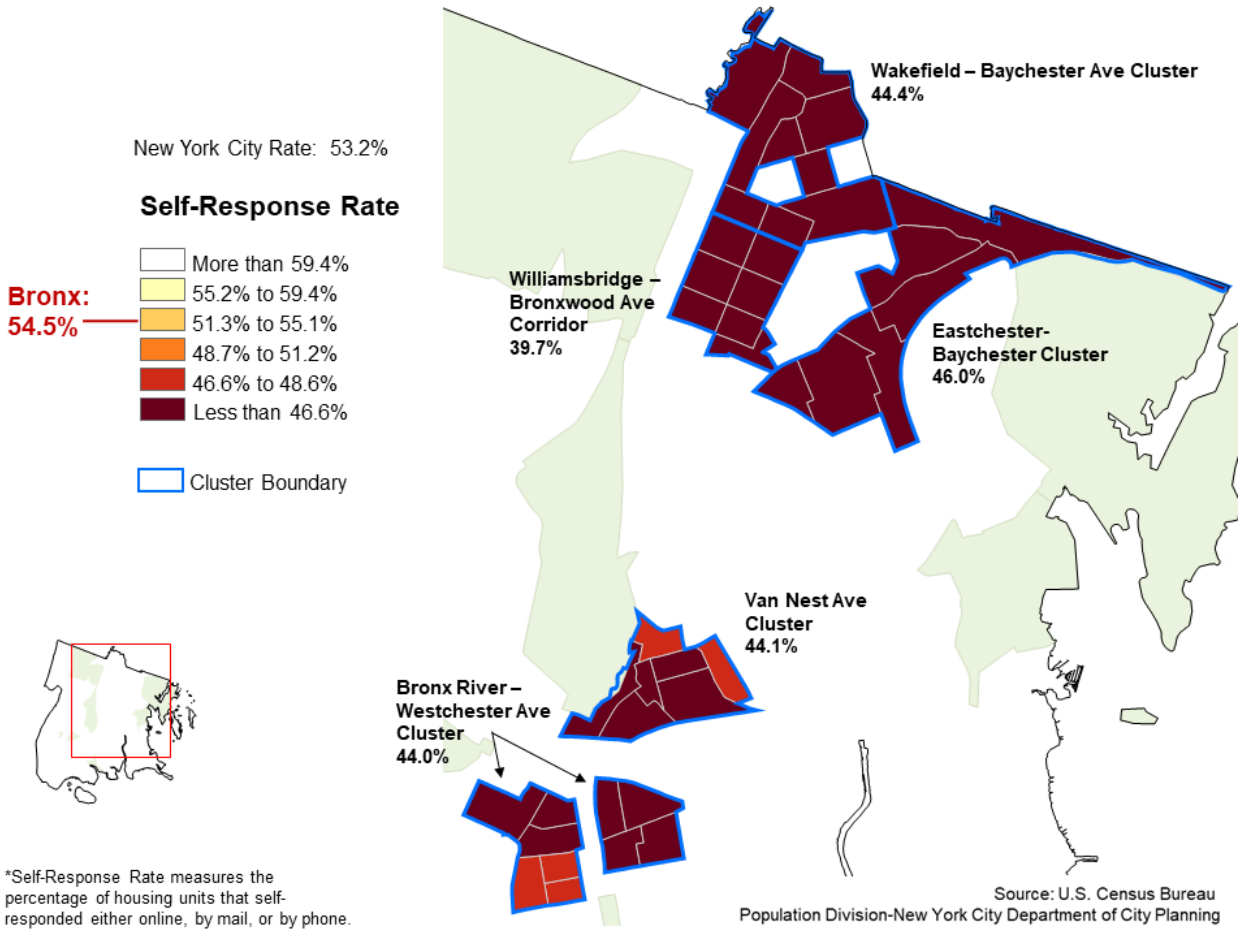

Table 2. Bronx Cluster Response Rates

	Resp. Rate June 25	Resp. Rate July 2	Resp. Rate July 9	One-Week Change (July 2 – July 9)	Two-Week Change (June 25 – July 9)
Bronx Total	54.1	54.3	54.5	0.2	0.4
Williamsbridge – Bronxwood Avenue Corridor	39.2	39.6	39.7	0.1	0.5
Bronx River – Westchester Avenue Cluster	43.6	43.9	44.0	0.1	0.4
Van Nest Ave Cluster	43.6	43.9	44.1	0.1	0.5
Wakefield – Baychester Avenue Cluster	43.8	44.2	44.4	0.2	0.5
Eastchester-Baychester Cluster *	44.9	45.3	45.5	0.2	0.6

*A previous version of this report erroneously listed the July 9th response rate for the Eastchester-Baychester Cluster as 46.0%. The response rate, along with the one- and two-week changes have been corrected here.

Appendices

Appendix A

New York City Neighborhood Tabulation Areas Reference Map

New York City Neighborhood Tabulation Areas*

* Neighborhood Tabulation Areas or NTAs, are aggregations of census tracts that are subsets of New York City's 55 Public Use Microdata Areas (PUMAs). Primarily due to these constraints, NTA boundaries and their associated names may not definitively represent neighborhoods.
