

New York City Bicycle Lane and Trail Inventory (2007)

Overview:

This report is an inventory and analysis of the physical conditions of existing bicycle lanes and trails in New York City. Similar to the previous inventories, the goal of this project was to create an inventory of elements along the bicycle facilities of the city of New York. This required the collection of data about the location and condition of signs; the conditions of pavement, lane markings, and symbols. Additional data, such as information on bicycle accidents and bicycle ridership volumes, helped DCP draw a more complete and useful picture of the bicycle network. The fieldwork was done from June 2006 through March 2007, and the inventory represents conditions for this time period.

Report:

The master plan is available as [one complete document](#) (45.5 mb) or by chapters in PDF format:
