

## Construction of ROW Green Infrastructure in Queens

### Various locations in Queens

The New York City Department of Design and Construction (NYCDDC) has completed an \$ 18,000,000 capital construction project involving the Construction of Right-Of-Way Green Infrastructure assets in various locations throughout Queens Community Boards 1, 2, 4, and 5.

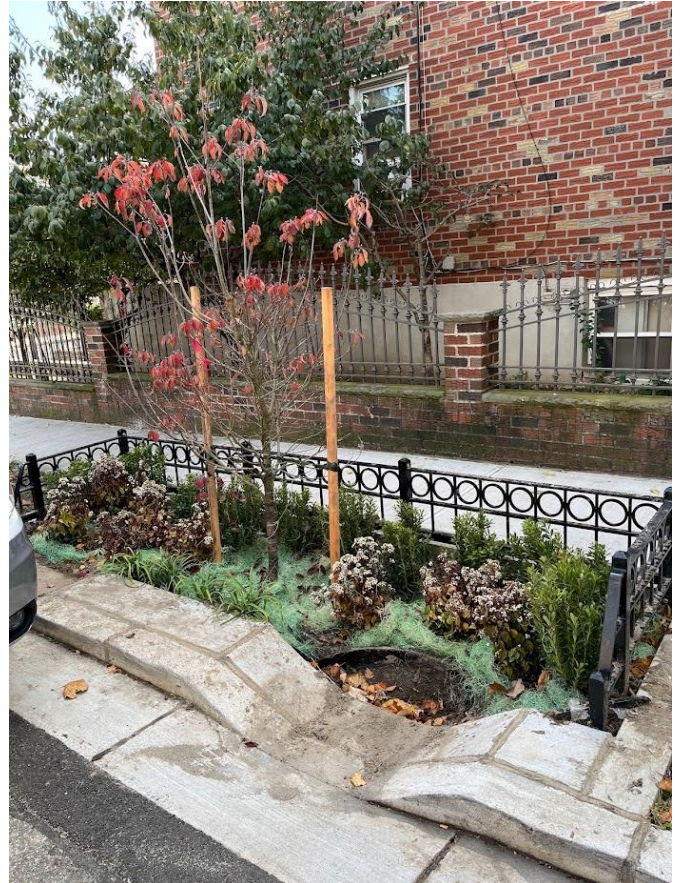

These green infrastructures were built to manage and control rainwater runoffs as well as collect and absorb rainwater before it enters the sewer system. By doing this, they reduce the amount of combined sewer overflow that enters the local waterways and decreases street flooding.

Assets installed were either Bioswales, Infiltration Basins (IB) with grass tops, or concrete tops.

### Work Completed:

- Installation of 252 Bioswales with landscaping.
- Installation of 174 Infiltration Basins with a concrete top.
- Installation of 13 Infiltration Basins with a grass top.
- Planted 42 new trees in various locations in Queens.
- Restored the curbs and sidewalks around the various green infrastructure assets.
- Restored the impacted roadway at all locations where assets were installed.

### Project # BB05-01-A

*Newly constructed bioswale at 70<sup>th</sup> St near Caldwell Ave.*

### Thank you:

On behalf of the New York City Department of Design and Construction (NYCDDC), I would like to thank the District Managers: Florence Koulouris (CB 1), Debra Markell Kleinert (CB 2), Christian Cassagnol, (CB 4).and Gary Giordano (CB 5) for their patience and cooperation throughout the lifetime of this project.
