

Pedestrian Ramps

Improved pedestrian ramps help to make New York City's pedestrian space safe and accessible for everyone, including aging residents and persons with disabilities.

Slopes and landings of the ramps will help people using wheelchairs, walkers, and scooters.

Detectable warning domes are felt with canes and feet, making the street corner safer for blind and low-vision pedestrians.

Contrasting colors, including red and white, are easier to see.

These pedestrian ramps will be designed and built to serve the community for approximately twenty-five years.

ADDITIONAL INFORMATION

We will inform you of all construction impacts, including any temporary parking restrictions, 72 hours ahead of time. Underground utilities and infrastructure may complicate the work. [This project is specific to accessibility needs, and therefore done at different times than the roadway projects.]

To learn more about the program, please visit nycpedramps.info or contact the project's CCL.
