Louis Walker, Chairperson
Christian Cassagnol, District Manager

March 2019

Date: Tuesday, March 12, 2019
Time: 7:30 pm
Location: VFW Post #150
51-11 108th Street
Corona, NY 11368

AGENDA

1. Pledge of Allegiance

2. Roll Call

3. Vote: Minutes of February 12th Meeting

4. Report of the Chairperson

5. Report of the District Manager

6. Report of the Treasurer

7. Public Forum
Good and Welfare of the District

8. Report of the Legislators

9. Speaker: Kathleen Cassino, Manager
Community Relations & Events, USTA
Update on USTA Programs and Initiatives
10. Report and Vote: Public Safety Committee
SLA Applications (See page 2)

11. Committee Reports
Consumer Affairs
Environmental
Health
Parks
Transportation
ULURP/Zoning
Youth

12. Adjournment

Important Dates to Remember

Saturday March 9th CM Dromm hosts Immigration Know Your Rights Forum - 6:00pm
(St. James Episcopal Church - 84-07 Broadway)

Sunday March 10th Daylight Savings Time begins

Tuesday March 12th Community Board 4 Meeting - 7:30pm
(VFW Post #150 - 51-11 108th Street)

Wednesday March 13th CM Dromm hosts Homeowners & Tenants Enrollment Event - 3:00pm
(St. James Episcopal Church - 84-07 Broadway)

Thursday March 14th 110th Precinct Community Council Monthly Meeting- 7:00pm
(St. Paul The Apostle Church - 98-16 55th Avenue)

Sunday March 17th Saint Patrick's Day

Wednesday March 20th First Day of Spring

- All W-2 1098 & 1099 Forms
- ITIN Number (If Applicable)
- Copy of Prior Tax Return
- Routing Number for Direct Deposit
- Education Tuitions Fees and Expenses Receipts

Homeowners Guide to Rain Event Preparedness

Tip 1: Consider Check Valves and Other Backwater Protection.
Under heavy rain conditions where the flow in the sewer rises and meets or exceeds the sewer's capacity, basement plumbing fixtures such as toilets, sinks, and drains are vulnerable to sewer backups. A backwater valve, also known as a check valve, can prevent sewer water from rising up from the city sewer into your home through basement plumbing. During heavy rain, if water from the city sewer rises to the level of basement plumbing, the check valve closes and blocks sewer water from entering your home. It is important to note that any wastewater from your toilets, sinks, or showers will not be able to leave your home while the valve is closed. You should not use these fixtures while the valve is closed because you can risk flooding your own property. Drain plugs can be another option to prevent sewer backups into floor drains if they are present on the property.

Tip 2: Reduce Stormwater Runoff
Water runs off concrete and asphalt almost immediately and can reach and exceed the design limits of sewers quickly during heavy rains. Retaining and creating green and unpaved spaces around your home can help reduce flows into the sewer by reducing the amount of stormwater runoff your property sends to the sewers. There are alternatives to concrete, such as porous paving stones, which could allow for uses like patios while creating less stormwater runoff.

Tip 3: Protect Areas Below Street Level
Water will flow to and pool in low areas. Below street level spaces such as underground garages, basement doors, and other low lying areas are the most vulnerable to flooding. Direct stormwater from your roof and porch away from low-lying areas. Reduce the risk of flooding by sealing cracks in foundation walls and considering the use of appropriate barriers. Sandbags can be a cost effective option to block water from entering some of the spaces in your home. Other barrier options may include window wells, flood walls around doors, and flood gates at driveway entrances. Be sure that any barriers or modifications do not interfere with appropriate exits from your home.

Tip 4: Keep Grease Out of the Sewers
As a homeowner, you are responsible for the sewer connection from your home to the city sewer. A clogged or cracked sewer connection can prevent wastewater from flowing out of your home properly. Improper disposal of grease and cooking oil can clog your home's internal pipes as well as city sewers. This can cause sewer backups in your neighborhood and home.

Tip 5: Keep Catch Basin Grates Clear
Keeping litter off the street helps stormwater drain and helps protect the city's water bodies. The City is constantly working to maintain our 7,500 miles of sewers and 148,000 catch basins. Street litter is captured in special catch basin collection areas which help keep it from entering into sewers and waterways. DEP cleans and maintains these collection areas on a regular cycle. When debris covers and mats the street level gratings, stormwater cannot enter the catch basin and can pool around the area causing street flooding, even before the sewer is full. You and your neighbors can help reduce this type of flooding by disposing of litter properly and by carefully removing leaves or trash from catch basin grates before or during a rain event.

Tip 6: Install Proper Roof Drainage
Directing stormwater from your roof away from the foundation walls of your home is critical in keeping your basement dry. Clean your gutters regularly to prevent stormwater from overflowing onto walls, and connect downspouts to appropriate drains. Consider installing a rain barrel as an alternative method to capturing stormwater. You can then use this stored water for activities such as watering the lawn or washing your car. Please note that rain barrels alone are not sufficient to reduce flooding during a heavy rain event but when used as a tool in a comprehensive strategy can improve the overall performance of a property.
