

# Recent West Nile Virus Activity\* in New York City, by Zip Code, August 1 to August 18, 2010

Date: 8/18/2010

**Legend**

 West Nile virus detected

Detection of West Nile virus can include positive tests in mosquitoes, dead birds, horses, other mammals, and/or humans.

Source: Adult mosquito and human West Nile virus surveillance data, New York City Department of Health and Mental Hygiene

\* The lack of detection of West Nile virus in a zip code does NOT mean that West Nile virus is not present. All New Yorkers should take precautions to avoid mosquito bites during peak mosquito season, July through October.
