APPENDIX D
REGULATORY DATABASE REPORT

TOXICS TARGETING

PHASE I

ENVIRONMENTAL DATABASE REPORT

**NEW YORK BLOOD CENTER
NEW YORK, NY 10065**

JULY 30, 2019

LIMITED WARRANTY AND DISCLAIMER OF LIABILITY

Who is Covered

This limited warranty is extended by Toxics Targeting, Inc. only to the original purchaser of the accompanying Environmental Report ("Report"). It may not be assigned to any other person.

What is Warranted

Toxics Targeting, Inc. warrants that it uses reasonable care to accurately transcribe the information contained in this Report from the sources from which it is obtained. This limited warranty is in lieu of all other express warranties which might otherwise arise with respect to the Report. No one is authorized to change or add to this limited warranty.

What We Will Do

If during the warranty period there is shown to be a material error in the transcription of the information contained in this Report from the sources from which it was obtained, Toxics Targeting, Inc. shall refund to the original purchaser the full purchase price paid for the Report. The remedy stated above is the exclusive remedy extended to the Purchaser by Toxics Targeting, Inc. for any failure of the Report to conform with this Warranty, or otherwise for breach of this Warranty or any other warranty, whether expressed or implied.

What We Won't Cover

Toxics Targeting, Inc. has not and can not verify the accuracy, correctness or completion of the information contained in this Report. Information is obtained from government agencies, site owners, and other sources, and errors are common in such information. Because Toxics Targeting, Inc. can not control the accuracy of the information contained in this Report, or the uses which may be made of the information, TOXICS TARGETING, INC. DISCLAIMS LIABILITY TO ANYONE FOR ANY EVENTS ARISING OUT OF THE USE OF THE INFORMATION. TOXICS TARGETING, INC. SHALL NOT BE LIABLE FOR ANY DAMAGE CAUSED BY THIS REPORT, WHETHER DIRECT OR INDIRECT, AND WHETHER OR NOT TOXICS TARGETING, INC. HAS BEEN ADVISED OF OR HAS KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES. TOXICS TARGETING, INC. EXPRESSLY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion or limitation may not apply to you.

Period of Warranty

The period of warranty coverage is ninety days from the date of purchase of this Report. There shall be no warranty after the period of coverage. ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR PARTICULAR USE SHALL HAVE NO GREATER DURATION THAN THE PERIOD OF WARRANTY STATED HERE, AND SHALL TERMINATE AUTOMATICALLY UPON THE EXPIRATION OF SUCH PERIOD. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above exclusion or limitation may not apply to you.

PLEASE REFER TO PAGES ONE AND FIVE FOR A DESCRIPTION OF SOME OF THE LIMITATIONS OF THIS ENVIRONMENTAL REPORT.

- *Table Two: Identified Toxic Sites By Direction*
- *Table Three: Identified Toxic Sites By Category*
- *Table Four: Identified Toxic Sites By Proximity*
- *Map One: One-Mile Radius Map*
- *Map Two: Half-Mile Radius Map*
- *Map Three: Eighth-Mile Radius Map*
- *Map Four: Eighth-Mile Radius Close-up Map*
- *Map Five: Tax Parcel Map*
- *Table Five: Tax Parcel Map Information Table*

Section Two: Toxic Site Profiles

Section Three: Appendices

- *USEPA ERNS Check*
- *Unmappable Sites*
- *Hazardous Waste Codes*
- *Information Source Guide*

Introduction

Toxics Targeting has combined environmental database searches, extensive regulatory analysis and sophisticated mapping techniques to produce your *Environmental Report*. It checks for the presence of 25 categories of government-reported toxic sites and provides detailed, up-to-date information on each identified site. The findings of your report are presented in an easy-to-understand format that:

1. ***Maps*** the approximate locations of selected government-reported toxic sites identified on or near a specified target address.
2. ***Estimates*** the distance and direction between the target address and each identified toxic site.
3. ***Reports*** air and water permit non-compliance and other regulatory violations.
4. ***Profiles*** some aspects of the usage, manufacture, storage, handling, transport or disposal of toxic chemicals at individual sites.
5. ***Summarizes*** some potential health effect information and drinking water standards for selected chemicals reported at individual sites.

The Three Sections Of Your Report

The first section highlights your report's findings by summarizing identified sites according to: **a)** distance intervals, **b)** direction, **c)** proximity to the target address and **d)** individual site categories. In addition, the locations of all identified toxic sites are illustrated on individual maps for each radius search distance used in your report. A close-up map illustrates the locations of all identified toxic sites, at the shortest radius search distance used in your report. Finally, a map of tax parcels and a table of selected information about those parcels are included.

The second section of your report contains *Toxic Site Profiles* that provide detailed information on each identified toxic site. The information in each *Toxic Site Profile* varies according to its source. Some toxic site categories have extensive information and some have limited information. All the information is updated on a regular basis.

The third section of the report contains appendices that identify: **1)** on-site spills reported to the national Emergency Response Notification System (ERNS), **2)** various toxic sites that cannot be mapped due to incomplete or erroneous addresses or other mapping problems, **3)** codes that characterize hazardous wastes reported at various facilities, **4)** methods used to map toxic sites identified in your report and **5)** information sources used in your report.

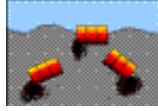

How to Use Your Report

- Check Table One to see the number of identified sites by distance intervals.
- Check Table Two to see identified sites sorted by direction.
- Check Table Three to see identified sites ranked by proximity to the target address.
- Check Table Four to see identified sites sorted by site categories.
- Use Table Five to get info for the subject parcel and every parcel found on the Tax Parcel Map
- Refer to the various maps to see the locations of identified toxic sites. Refer to the *Toxic Site Profile* and *Appendix* sections for additional information.

Toxic Site Databases Analyzed In Your Report

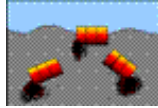

Search Radius

One-Mile

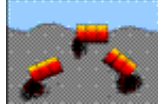

1) **National Priority List for Federal Superfund Cleanup**: a listing of sites known to pose environmental or health hazards that are being investigated or cleaned up under the Federal Superfund program.

Half-Mile

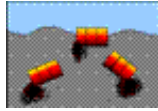

2) **Delisted National Priority List Sites**: a listing of NPL sites that have been removed from the National Priority List.

One-Mile

3) **New York Inactive Hazardous Waste Disposal Site Registry**: a state listing of sites that can pose environmental or public health hazards requiring investigation or clean up.

One-Mile

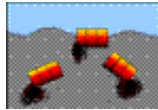

4) **New York Inactive Hazardous Waste Disposal Site Registry Qualifying**: a state listing of sites that qualify for possible inclusion to the NYS DEC Inactive Haz. Waste Disposal Site Registry.

One-Mile

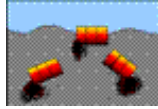

5) **New York and Federal RCRA Corrective Action Activity (CORRACTS)**: waste facilities with RCRA corrective action activity reported by the USEPA and NYS DEC.

Half-Mile

6) **CERCLIS** (Comprehensive Environmental Response, Compensation and Liability Information System): a federal listing of Non-NFRAP sites that can pose environmental or public health hazards requiring investigation or clean up.

Half-Mile

7) **CERCLIS NFRAP**: a federal listing of CERCLIS sites that have no further remedial action planned.

Half-Mile

8) **NYS & NYC Brownfield Program Sites**: a listing of sites that are abandoned, idled or under-used industrial and commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.

Half-Mile

9) **New York Solid Waste Facilities Registry**: active and inactive landfills, incinerators, transfer stations or other solid waste management facilities.

Half-Mile

10) **New York City 1934 Solid Waste Sites**: a listing of solid waste disposal sites operated by New York City municipal authorities circa 1934.

Half-Mile

11) ***New York and Federal Hazardous Waste Treatment, Storage or Disposal Facilities:*** sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRIS). Also includes the following database:

- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

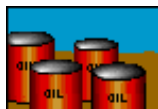

Half-Mile

12) ***Toxic Spills: active and inactive or closed*** spills reported to state environmental authorities, including *remediated* and *unremediated* leaking underground storage tanks. This database includes the following categories:

- Tank Failures
- Tank Test Failures
- Unknown Spill Cause or Other Spill Causes
- Miscellaneous Spill Causes

Eighth-Mile

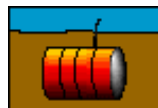

13) ***New York State Major Oil Storage Facilities:*** sites with more than a 400,000 gallon capacity for storing petroleum products.

Eighth-Mile

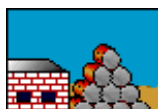

14) ***New York State Petroleum Bulk Storage Facilities:*** sites with more than an 1,100 gallon capacity for storing petroleum products.

Eighth-Mile

15) ***New York City Fire Dept Tank Data:*** tank data from 1997.

Eighth-Mile

16) ***New York and Federal Hazardous Waste Generators and Transporters:*** sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRA). Also includes the following database:

- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Eighth-Mile

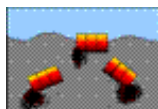

17) ***New York Chemical Bulk Storage Facilities:*** sites storing hazardous substances listed in 6 NYCRR Part 597 in aboveground tanks with capacities of 185 gallons or more and/or underground tanks of any size

Eighth-Mile

18) ***Historic New York City Utility Sites (1890's to 1940's):*** power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites.

Half-Mile

19) ***New York Hazardous Substance Disposal Site Draft Study:*** a state listing of sites contaminated with toxic substances that can pose environmental or public health hazards. These sites were not eligible for state clean up funding programs.

Eighth-Mile

20) ***Federal Toxic Release Inventory Facilities:*** discharges of selected toxic chemicals to air, land, water or treatment facilities.

Eighth-Mile

21) ***Federal Air Discharges:*** air pollution point sources monitored by U.S. EPA and/or state and local air regulatory agencies.

Eighth-Mile

22) ***Federal Permit Compliance System Toxic Wastewater Discharges:*** permitted toxic wastewater discharges.

Eighth-Mile

23) ***Federal Civil and Administrative Enforcement Docket:*** judiciary cases filed on behalf of the U. S. Environmental Protection Agency by the Department of Justice.

On-site only
(250 ft)

24) ***New York City Environmental Quality Review (CEQR) – E Designation Sites:*** parcels assigned a special environmental (“E”) designation under the CEQR process. E designation requires specific protocols that must be followed.

Property only

25) ***ERNS: Federal Emergency Response Notification System Spills:*** a listing of federally reported spills.

Limitations Of The Information In Your Report

The information presented in your *Environmental Report* has been obtained from various local, state and federal government agencies. Please be aware that: **1)** additional information on individual sites may be available, **2)** newly discovered sites are continually reported and **3)** all map locations are approximate. As a result, this report is intended to be the **FIRST STEP** in the process of identifying and evaluating possible environmental threats to specific properties and can only serve as a guide for conducting on-site visits or additional, more detailed toxic hazard research.

Toxics Targeting tries to ensure that the information in your report is presented accurately and with minimal alteration. Systematic changes are made to correct obvious address errors in order to allow sites to be mapped. Any address changes that are made are noted in the map information section at the top of each corresponding *Toxic Site Profile*. Some information that has been withheld by government authorities remains included in Toxic Site Profiles and is identified as archival information. Since the information presented in your report is not edited, please be aware that it can contain reporting errors or typographical mistakes made by the site owners/operators or government agencies that produced the information. Also please be aware of some other limitations of the information in your report:

- The digital map used by *Toxics Targeting* is the same one used by the U. S. Census or local authorities in New York City. While the map is generally accurate, no map is perfect. In addition, *Toxics Targeting's* mapping methods estimate where toxic site addresses are located if the address is not specifically designated. **FOR THESE REASONS, ALL MAP LOCATIONS OF ADDRESSES AND REPORTED TOXIC SITES SHOULD BE CONSIDERED APPROXIMATE AND SHOULD BE VERIFIED BY ON-SITE VISITS;**
- **UNDISCOVERED, UNREPORTED OR UNMAPPABLE TOXIC SITES MIGHT NOT BE IDENTIFIED BY THIS REPORT'S CHECK OF 25 TOXIC SITE CATEGORIES. TOXIC SITES REPORTED IN OTHER GOVERNMENT DATABASES MIGHT ALSO EXIST. FOR THESE REASONS, YOUR REPORT MIGHT NOT IDENTIFY ALL THE TOXIC SITES THAT EXIST IN THE AREA IT SEARCHES;**
- The appendix of your report contains a listing of sites that could not be mapped due to incomplete or erroneous address information or other mapping problems. This listing includes unmappable toxic sites in the zip codes searched for the report as well as toxic sites without zip codes reported in the same county. **IF YOU WOULD LIKE INFORMATION ON ANY OF THE LISTED SITES, PLEASE CONTACT *TOXICS TARGETING* AND REFER TO THE SITE ID NUMBER.**
- New York State Department of Environmental Conservation Remediation Site Borders are approximate and may not align with tax parcel boundaries mapped by local authorities or the digital map used by the US Census Bureau. As a result, Remediation Site Borders may overlap parcels that do not involve site remediation activities. Selected parcels also can involve multiple Remediation Site Borders. Refer to individual site profiles for more information. Sites without profiles include potential new sites or sites that have not yet been publicly listed by DEC.
- Some toxic sites identified in your report may be classified as **known hazards**. Most of the toxic sites identified in your report involve **potential hazards** related to the on-site use, manufacture, handling, storage, transport or disposal of toxic chemicals. Some of the toxic sites identified in your report may be the addresses of parties responsible for toxic sites located elsewhere. **YOU SHOULD ONLY CONCLUDE THAT TOXIC HAZARDS ACTUALLY EXIST AT A SPECIFIC SITE WHEN GOVERNMENT AUTHORITIES MAKE THAT DETERMINATION OR WHEN THAT CONCLUSION IS FULLY DOCUMENTED BY THE FINDINGS OF AN APPROPRIATE SITE INVESTIGATION UNDERTAKEN BY LICENSED PROFESSIONALS;**

- Compass directions and distances are approximate. Compass directions are calculated from the subject property address to the mapped location of each identified toxic site. The compass direction does not necessarily refer to the closest property boundary of an identified toxic site. The compass direction also can vary substantially for toxic sites that are located very close to the subject property address.
- The information presented in your report is a summary of the information that *Toxics Targeting* obtains from government agencies on reported toxic sites. **YOU MAY BE ABLE TO OBTAIN ADDITIONAL INFORMATION ABOUT REPORTED SITES WITH THE FREEDOM OF INFORMATION REQUEST FORM LETTERS THAT ARE PROVIDED ON THE INSIDE OF THE BACK COVER.**

Section Two: Toxic Site Profiles

The heading of each *Toxic Site Profile* refers to the site's map location and details:

- The facility name, address, city, state, and zip code.
- Any changes that were made to a site's address in order to map its location.
- The site mapping method that was used (see *How Sites are Located*, at the end of this section for more information).

Toxic Site Profiles summarize information provided by site owners or operators and government agencies regarding various toxic chemical activities reported at each site, such as:

- Whether chemicals were stored, produced, transported, discharged or disposed of.
- The name of chemicals and their Chemical Abstract Series (CAS) numbers.
- The amount of chemicals and the units (gallons/pounds) the chemical was measured in.
- Whether the site or storage tanks at the site are currently active or inactive.
- Special codes used by government agencies to regulate hazardous waste activities at some sites, or a complete description of the codes follows the profiles section.

For selected individual chemicals reported at various toxic sites, some potential health effect summary information appears below the site profile. Each potential health effect summary identifies chemicals by name and by Chemical Abstract Series (CAS) Number. An "x" under each potential health effect heading indicates positive toxicity testing results reported by the National Institute of Occupational Safety and Health's Registry of Toxic Effects of Chemical Substances (RTECS). Some chemicals (mostly appearing in profiles of Hazardous Waste facilities), are reported as mixtures, and RTECS health effect information is only available for individual chemicals. In addition, RTECS only provides information on approximately 100,000 common chemicals. Consequently, the absence of potential health effect summary information for a particular chemical identified in a Toxic Site Profile does not necessarily mean that the chemical does not pose potential health effects.

The Maximum Contaminant Level (MCL) in drinking water allowed for selected chemicals is also noted. In most cases, the only applicable MCL has been set by the New York State Department of Health (NYSDOH). Where NYSDOH has not set an MCL, the federal standard, if one exists, is listed and is marked by an asterisk.

Presented below are column headings that describe the health effect definitions used in RTECS and applicable New York State and federal drinking water standards. Reference sources for information presented in this section are also provided.

ACUTE TOX: **Acute Toxicity:** Short-term exposure to this chemical can cause lethal and non-lethal toxicity effects not included in the following four categories.

TUMOR TOX: **Tumorigenic Toxicity:** The chemical can cause an increase in the incidence of tumors.

MUTAG TOX: **Mutagenic Toxicity:** The chemical can cause genetic alterations that are passed from one generation to the next.

REPRO TOX: **Reproductive Toxicity:** May signify one of the following effects: maternal effects, paternal effects, effects on fertility, effects on the embryo or fetus, specific developmental abnormalities, tumorigenic effects, or effects on the newborn (only positive reproductive effects data for mammalian species are referenced).

IRRIT TOX: **Primary Irritant:** The chemical can cause eye or skin irritation.

MCL: **Drinking Water Standard - Maximum Contaminant Level (MCL)** listed under Drinking Water Supplies, 10 NYCRR Part 5, Subparts 1.51(f),(g), and (h) for NYDOH MCL's and under the Safe Drinking Water Act, 40 CFR 141, Subparts B and G, (* indicates value for total trihalomethanes) for federal MCL's.

Reference Source for Toxicity Information: Registry of Toxic Effects of Chemical Substances (RTECS), NIOSH (on-line database); For further information, contact: NIOSH, 4676 Columbia Parkway, Cincinnati, OH, 45226, 800/35-NIOSH.

Reference Source for Drinking Water Standards: New York State Department of Health, Bureau of Toxic Substances Assessment, 2 University Place, Room 240, Albany, NY 12203, 518/458-6373.

Inactive Hazardous Waste Disposal Site Classifications:

- 1 -- Causing or presenting an imminent danger of causing irreversible or irreparable damage to the public health or the environment -- immediate action required;
- 2 -- Significant threat to the public health or environment -- action required;
- 3 -- Does not Present a significant threat to the environment or public health -- action may be deferred;
- 4 -- Site properly closed --requires continued management;
- 5 -- Site properly closed, no evidence of present or potential adverse impact -- no further action required;
- 2a -- This temporary classification has been assigned to sites where there is inadequate data to assign them to the five classifications specified by law;
- A -- Work underway and not yet complete;
- P -- Potential Site;
- D₁, 2, 3 -- Delisted Site (1: hazardous waste not found; 2: remediated; 3: consolidated site or site incorrectly listed);
- C -- Remediation Complete (formerly D2).

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:

Location: The site is located at 1299 First Avenue in the Borough of New York, New York. It is located on the western quadrant of the intersection of East 70th Street and 1st Avenue. The site is surrounded by residential apartment buildings to the north and west with mixed commercial/ residential buildings to the south and east. The Site is designated as Block 1444, Lot 30. Site Features: This 1957-square feet site is developed with a 4-story mixed use commercial/ residential building. The first floor is used as a convenience store with the basement used as storage. The site is surrounded by residential and commercial buildings.

Current Zoning/ Uses: The site has a zoning code of C2-8, which allows mixed residential and commercial usage. The current use of the site conforms to the zoning code.

Historical Uses: Former Nu Brite Cleaners, a dry cleaning facility (EPA Generator ID NYD981075039), occupied the commercial space. The former dry cleaning operations may have contributed to the known contamination found in groundwater.

Site Geology and Hydrogeology: The site's elevation is approximately 50 feet above mean sea level. The vicinity of the Site is characterized by metamorphosed sequences of bedrock overlain by Pleistocene-aged glacial till deposits.

The regional groundwater flow direction in the vicinity of the Site is toward the east-northeast, in the direction of the East River. The depth to water at the Site ranges between 15 and 16 feet below grade.

CONFIRMED HAZARDOUS WASTE DISPOSED:

None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Nature and Extent of Contamination: Based on the investigations conducted to date, chlorinated solvents are known to present in the subsurface. These contaminants are impacting soil and groundwater. Previous investigations include two rounds of soil sampling events in November 2007 and August 2008 in addition to two Groundwater Investigation Reports dated May 2010 and July 2010. Soil - Chlorinated volatile organic compounds (cVOCs) such as tetrachloroethene (PCE) and trichloroethene (TCE) were detected in groundwater. PCE at 12,000 ppm was detected on site at SP-2. TCE at 3.1 ppm, PCE at 1,000 ppm were detected on site at SP-5. These concentrations exceeded applicable standards. The presence of chlorinated VOCs in soil is most likely due to former operation of the dry cleaner. Groundwater - cVOCs such as PCE, TCE, cis-1,2-dichloroethene (cis-1,2-DCE), and vinyl chloride (VC) were detected in groundwater. TCE at 120 ppb, PCE at 3,300 ppb, and cis-1,2-DCE at 140 ppb were detected in on-site MW-1 exceeding applicable standards. In addition, vinyl chloride was detected in cross/downgradient, off-site well MW-4 exceeding applicable standards. MW-3 was dry during the sampling event. The presence of chlorinated VOCs in groundwater is most

likely due to former operation of the dry cleaner. Significant Threat: NYSDEC has determined that this site poses a significant threat to the environment.

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:

Location: The former York Avenue Holder Station site is located on the west side of York Avenue, from East 61st to East 63rd Street, and on a portion of a parcel on the east side of York Avenue, between East 63rd and East 62nd Streets, in the Borough of Manhattan in New York City. The former site is made up of portions of three different tax parcels, identified as Blocks 1456, 1457, and 1475; totaling approximately 5.2 acres. Block 1456 is bounded by East 61st Street to the south, York Avenue to the east, East 62nd to the north, and 1st Avenue to the west. Block 1457 is bounded by East 62nd Street to the south, York Avenue to the east, East 63rd Street to the north, and 1st Avenue to the west. The final parcel, Block 1475, is bounded by York Avenue to the west, East 62nd Street to the south, FDR Drive to the east and East 63rd Street to the north. Site Features: The main site features on Block 1456 are a 12-story condominium/office building, a two-story museum, a 6-story commercial building with parking garage, and a 19-story cooperative residential building. On Block 1457 there are three 12-story residential buildings, with ground-level courtyards and a four-level underground parking garage. On Block 1475, the 26-story Rockefeller University housing tower with a separate 3-level partially underground parking structure currently occupies the property. Current Zoning and Land

Use: The site is currently zoned C1 and C8 (Block 1456), which allows for residential, commercial and manufacturing; R8 (Block 1457), which allows for residential and commercial; and R10 (Block 1475), which allows for residential and commercial. The surrounding parcels are mixed residential and commercial uses. Past Use of the Site: The first gas holders were constructed on Block 1457 between 1874 and 1879. A third holder was constructed on this parcel in 1889. Between 1905 and 1915 the original two holders were removed and replaced with a single large holder, and another large holder was built on Block 1456. All of the gas holders operated until 1948, when the structures were removed. Between 1949 and 1960, all of the parcels were redeveloped.

Site Geology and Hydrogeology: The site consists of three unconsolidated soil units varying widely in thickness and distribution across the site overlying the bedrock surface. The bedrock ranges from at or just below the ground surface at the western side of the site, to approximately 48 feet below ground surface along the east side. At some locations the native soils have been completely removed and replaced with fill material, which is found as thick as 12 feet. A sand unit lies below the fill material, in thicknesses from 5 to 60 feet. Below the sand are both gravel and sand units, and a coarse-grained gravel unit.

Groundwater was found at depths of 6 to 16 feet below ground surface. The flow direction is generally to the east. This site was previously tracked as #V00544 in the VCP, until July 13, 2018.

CONFIRMED HAZARDOUS WASTE DISPOSED:

None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Based on investigations conducted at the site to date, which included sampling for volatile organic compounds (VOCs), semi-volatile organic compound (SVOCs), and inorganics (metals), the primary contaminants of concern are benzene, toluene, ethylbenzene, and xylene (together known as BTEX), and styrene; polycyclic aromatic hydrocarbons (PAHs); and lead, mercury, arsenic and cyanide (inorganics).

Soil - In on-site surface soil, there were no detections of VOCs or cyanide above unrestricted use soil cleanup objectives (UUSCOs). The PAHs which exceeded UUSCOs were benzo(a)anthracene at 3.9 parts per million (ppm), benzo(a)pyrene at 3.8 ppm, and benzo(b)fluoranthene at 2.5 ppm (all with an SCO of 1.0 ppm); chrysene at 4.4 ppm (SCO of 3.9 ppm); and indeno(1,2,3-cd)pyrene at 1.2 ppm (SCO of 0.5 ppm). Inorganics found to exceed UUSCOs were arsenic (SCO of 13 ppm) at a maximum of 23.8 ppm; and lead (SCO of 63 ppm) at a maximum of 1,380 ppm.

In subsurface soils, the only VOC detected was benzene at a maximum concentration of 5.9 ppm (SCO of 0.06 ppm). PAHs found to exceed UUSCOs were benzo(a)anthracene at a maximum of 5.2 ppm, benzo(b)fluoranthene at a maximum of 5.8 ppm, benzo(a)pyrene at a maximum of 4.9 ppm, and chrysene at a maximum of 5.4 ppm (all with an SCO of 1 ppm); indeno(1,2,3-cd)pyrene at a maximum of 2.3 ppm (SCO of 0.5 ppm); dibenz(a,h)anthracene at a maximum of 0.66 ppm (SCO of 0.33 ppm); and naphthalene at a maximum of 210 ppm (SCO of 12 ppm). The only inorganics found to exceed UUSCOs were lead (SCO of 63 ppm) at a maximum of 23,100 ppm; total mercury (SCO of 0.18) at a maximum of 2.2 ppm; arsenic (SCO of 13 ppm) at a maximum of 17.5 ppm; and total cyanide (SCO of 27 ppm) at a maximum of 69.6 ppm.

Groundwater- In groundwater VOCs found to exceed standards and guidance values were benzene (GWQS of 1 parts per billion (ppb)) at a maximum concentration of 690 ppb; ethylbenzene (GWQS of 5 ppb) at a maximum of 140 ppb; toluene (GWQS of 5 ppb) at a maximum of 800 ppb; total xylenes (GWQS of 5 ppb); isopropylbenzene (GWQS of 5 ppb) at a maximum of 9.3 ppm; methylene chloride (GWQS of 5 ppb) at a maximum of 12 ppb; and styrene (GWQS of 5 ppb) at a maximum of 240 ppb. Two other compounds were found to exceed groundwater standards, but are not attributable to the former site operations. They are methyl tert-butyl ether, a gasoline

additive, at a maximum of 11 ppb, and 1,1,2-trichloroethane, a chlorinated solvent, at a maximum of 18 ppb. The PAHs found to exceed standards and guidance values were benzo(a)anthracene (GWQS of 0.002 ppb) at a maximum of 0.43 ppb; benzo(b)fluoranthene (GWQS of 0.002 ppb) at a maximum of 0.29 ppb; and naphthalene (GWQS of 10 ppb) at a maximum of 300 ppb. The only other SVOC detected was phenol (GWQS of 1 ppb) at a maximum of 100 ppb). Inorganics detected in groundwater were lead (GWQS of 25 ppb) at a maximum of 182 ppb; and total cyanide (GWQS of 200 ppb) at a maximum of 1,050 ppb. Soil Vapor- Soil vapor samples collected from the site contained elevated levels of both MGP-related and non-MGP-related compounds. The MGP-related detections included toluene at 9.1 ug/m3, ethylbenzene at 2.7 ug/m3, xylenes at 17 ug/m3, 1,2,4-trimethylbenzene at a maximum of 51 ug/m3, and 1,3,5-trimethylbenzene at 8.0 ug/m3. The non-MGP constituents included tetrachloroethene (PCE) at a maximum of 78 ug/m3, trichloroethane (TCA) at 1.7 ug/m3, trichloroethene (TCE) at 0.65 ug/m3, trichlorofluoromethane (Freon 11) at 10 ug/m3, and dichlorodifluoromethane (Freon 12) at 11 ug/m3.

ASSESSMENT OF HEALTH PROBLEMS:

NYSDOH has insufficient information to fully evaluate the potential for human exposures.

SITE DESCRIPTION:

Location: The East 60th Street Con Ed Steam Station Site is located in an urban area of New York County (Manhattan) in New York City. The site is partially located beneath the elevated section of the Ed Koch Queensboro Bridge (also known as the 59th Street Bridge) between East 59th and East 60th Streets. Site Features: The Site consists of the interior basement floor of the building which occupies the site. Current Zoning/Use(s): The on site building is in use as a steam generation plant by a utility company which distributes steam to utility customers. The Site parcel is in a manufacturing zone, with commercial zoning to the west and north, and residential zoning to the south of East 59th Street. The surrounding properties are currently used for a combination of uses, with a park/playground to the north across East 60th Street, residential to the south across East 59th

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:

Location: The site is located at the intersection of 1st Avenue and East 76th Street in Manhattan's Upper East Side. A site boundary was never established but generally, the site bounded by the Franklin D. Roosevelt East River Drive (FDR Drive) to the east, 2nd Avenue to the west, East 78th Street to the north and East 75th Street to the south. Site Features: The site represents a urban area with numerous residential/commercial buildings and heavily used streets. The topography drips gently to the east towards the East River. Current Zoning and Land Use: The site is zoned residential-R8B. Per the NYC Department of City Planning, "Apartment buildings in R8 districts can range from mid-rise, eight- to ten-story buildings to much taller buildings set back from the street on large zoning lots." Past Use of the Site: There is no specific property associated with the site. This site was created to investigate unrelated dissolved concentrations of tetrachloroethene (PCE) and trichloroethene (TCE) encountered during the investigation of Site No. 231057: Celebrity French Cleaners.

Geology: Soil boring logs indicated that unconsolidated materials at the site consisted of approximately 5 ft of silt, sand, gravel, and large cobbles. Schist bedrock was encountered between 3 and 10 ft. The schist bedrock was weathered in the upper layers (4-23 ft below grade) and became competent between 15 and 23 ft below grade. Depth to groundwater ranged from 10-16 ft below grade and flows southeast.

CONFIRMED HAZARDOUS WASTE DISPOSED:

None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Five groundwater monitoring wells were installed as part of the investigation. Tetrachlorethene (PCE) and its associated degradation products were detected above Ambient Water Quality Standards and Guidance Values. PCE was detected up to 120 micrograms per liter (ug/L) compared to a guidance value of 0.7ug/L. Trichloroethene (TCE) was detected up to 160ug/L compared to a standard of 5ug/L. Cis-1,2-dichloroethene was detected up to 510ug/L compared to a guidance value of 5ug/L. Vinyl chloride was detected up to 14ug/L compared to a standard of 2ug/L. No soil or soil vapor sampling was conducted as part of the investigation.

ASSESSMENT OF HEALTH PROBLEMS:

As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:

The site is an active dry cleaner located in an urban area on the west side of Manhattan. The cleaners is on the ground floor of a multi-story building. The investigation of nearby VCP site #V00425 indicted the presence of 200-300 ppb of PCE in a well immediately downgradient of Celebrity French Dry Cleaners. Celebrity French was designated a P site so a Site Characterization can be conducted to determine whether they are the source of this contamination. The site charactarization began in Fall 2008 and will include groundwater, sub-slab vapor, and soil sampling. Results indicate no contamination of significance.

NFA letter sent to owner 3/3/10.

CONFIRMED HAZARDOUS WASTE DISPOSED:

None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Investigation indicated only low level PCE contamination downgradient of the building at a concentration of 49 ppb in November 2008. A sub-slab PCE vapor sample taken at than time indicated PCE at 7,400 ug/m3. Indoor air samples taken in March 2009 found 170 ug/m3 of PCE in the basement and 150 ug/m3 of PCE in the 1st floor in the active dry cleaner. PCE concentration in 2nd floor air were 5.9 ug/m3. Indoor air sampling in adjacent buildings had a maximum concentration of 40 ug/m3.

SITE OWNER/OPERATOR/REPOSITORY INFORMATION:

CURRENT OWNER(S):

NAME: SE Ravenswood Trust
ADDRESS: 37-20 37th Avenue
Long Island City, NY 11101

OWNER(S) DURING DISPOSAL:

OPERATOR(S) DURING DISPOSAL:

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:

Location: The Ravenswood former MGP site is located at 38-54 Vernon Boulevard in the Long Island City section of the Borough of Queens. The property is noted as Tax Lot 1 in part of block 357 on the Tax Map of the City of New York, Queens County. The site is located within the boundary of a complex of active electric and steam generating facilities in a predominantly industrial and commercial area. The site is bordered on the east by light industrial and commercial buildings and on the west by the East River.

The site formerly housed a Manufactured Gas Plant operated by Con Edison and its predecessor companies. The precise location of the MGP structures has not been fully established because of the extensive reworking of the property associated with construction of the power plants which now occupy and surround the original MGP site. Remedial History: A portion of the site was remediated under the Voluntary Cleanup Program. See site V000368. The principal VCP issue was the presence of a No. 6 oil spill from an in-plant pipeline. Petroleum-impacted soil was excavated in 2005. No MGP tar-contaminated soil was identified at that time, but MGP related structures or soil contamination may remain in other portions of the site or at depth.

CONFIRMED HAZARDOUS WASTE DISPOSED:

None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Extensive soil removal has taken place on the site, both for the construction of the power plants that occupy the site, and for remediation of a No. 6 oil spill. Although it appears that significant portions of the former MGP have been excavated down to bedrock, it is not known to what extent MGP structures and MGP soil contamination may remain in the deep subsurface. A bedrock steam tunnel lies beneath the East River at this location, allowing waste steam from the turbine plants to be provided to the steam-heat distribution system in Manhattan. Tar from the former MGP can be seen dripping from the roof of this tunnel, roughly 150 feet below ground surface. The source of the tar has not been determined.

The tunnel can not be accessed by the public, and is only occasionally used by utility workers. Engineering controls are in place to prevent direct contact with the tar by utility workers.

ASSESSMENT OF HEALTH PROBLEMS:

As information for this site becomes available, it will be reviewed by the NYSDOH to determine if site contamination presents public health exposure concerns.

ADDRESS: 43-22 50th Street
Woodside, NY 11377

HAZARDOUS WASTE DISPOSAL PERIOD: from unknown to unknown

SITE DESCRIPTION:

LOCATION: The site is located in an urban/industrial section of Long Island City at the intersection of 9th Street between 38th Avenue and 40th Avenue. It is located on the east side of 9th Street, approximately 0.4 miles north of the Queensboro Bridge.

SITE FEATURES: The property extends 335 feet from north-to-south, and 117 feet from west-to-east. Building's 2 through 4 have been demolished in preparation for a hotel development project. Building 1/Lot 23 still has a slab-on-grade masonry building. The site and surrounding areas are generally level. CURRENT ZONING AND LAND USE: The site is currently zoned commercial. Lot 23 (Site consists of Lots 23, 14, and 19) is currently used as a marble fabrication shop. A developer purchased the entire site and is building a hotel on Lots 14 and 19. The tenant in Lot 23 will be operating at this building until they find another location to conduct their marble and granite cutting business.

PAST USE OF SITE: National Rubber Adhesives, Inc. operated a manufacturing facility for adhesives until 1995 and operated at this location for 62 years. (National Rubber Adhesives, Inc. occupied the northern two-thirds of the building.) Five underground storage tanks (USTs) were closed in-place, including one toluene, two gasoline, one methyl ethyl ketone (MEK) and one heptane UST. Six additional 500 gallon USTs, which were previously closed in place, were removed in April 2014. OPERABLE UNIT(S): The site is being managed through two operable units (OU). OU1 is for off-site work and OU2 is for on-site work. Each OU will include investigation of soil, groundwater, and soil vapor contamination. Building 1 was sold to the owner of the Marble fabrication business previously located in Building 2. Buildings 2-4 have been demolished, and 9th Street LIC LLC has signed a Consent Order with NYSDEC for remediation of Lots 14 and 19, but will ultimately be responsible for Lot 23 as well. SITE GEOLOGY AND HYDROGEOLOGY: The site is approximately 15 to 20 feet above mean sea level. The nearest surface water body is the East River, approximately one quarter mile west of the site. Groundwater was observed approximately 5 to 10 feet below ground surface and flows in a westerly direction toward the East River. The depth to bedrock varies across the investigation area from 10 to 15 feet below surface.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
-----	-----
TOLUENE	UNKNOWN
TOLUENE U-220 (F005 WASTE)	UNKNOWN
XYLENE (MIXED)	UNKNOWN
BENZENE	UNKNOWN
dichloroethene (cis-1,2-)	UNKNOWN
trichloroethene (TCE)	UNKNOWN
ethylbenzene	UNKNOWN
tetrachloroethene (PCE)	UNKNOWN
vinyl chloride	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Nature and Extent of Contamination: For OU 2: On-Site Areas Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, pesticides, and poly chlorinated biphenyls (PCBs). On-site soil vapor has been analyzed for VOCs. Groundwater - Based on investigations conducted to date, the primary contaminant of concern for OU 2 is toluene. However, BTEX and chlorinated solvents also have been found above standards on-site. Toluene has been detected at levels as high as 280,000,000 parts per billion (ppb) (NYSDEC groundwater quality standard is 5 ppb). Latest sampling results revealed the highest toluene concentrations at 749,000 ppb. Other wells have shown levels of toluene in the 10,000's ppb. Additional contaminants have been detected, including concentrations of benzene up to 607 ppb (standard is 1 ppb), ethylbenzene up to 288 ppb (standard is 5 ppb), and xylenes up to 850 ppb (standard is 5 ppb). The latest sampling results also revealed elevated concentrations of tetrachloroethene (PCE) up to 336 ppb (standard is 5 ppb), trichloroethene (TCE) up to 26 ppb (standard is 5 ppb), cis-1,2-dichloroethene (cis-1,2-DCE) up to 122 ppb (standard is 5 ppb), and vinyl chloride up to 77 ppb (standard is 2 ppb). Soil - Previous investigations have detected toluene at concentrations as high as 1,600 parts per million (ppm) (industrial use soil cleanup objective (IUSCO) is 1,000 ppm) in the vicinity of the 5 closed USTs at depths of 5 - 7 feet below ground surface (bgs). Toluene was also detected in the former location of the six 500 gallon USTs at concentrations as high as 500 ppm at 1.5 feet bgs. Soil Vapor - Elevated levels of benzene and toluene have been detected in on-site soil vapor. PCE and TCE have also been detected in indoor air, sub slab, and deeper soil vapor. The most recent data obtained in 2014 revealed indoor air concentrations of TCE inside building #2 at 10 micrograms per cubic meter (ug/m³), and PCE at 30 ug/m³. For OU 1: Off-Site Areas Soil and groundwater have been analyzed for VOCs, SVOCs, and metals. Off-site soil vapor has been analyzed for VOCs. Groundwater - Based on investigations conducted to date, the off-site (OU 1) groundwater plume appears to be migrating to the east, but has not reached the East River. The most recent data indicates toluene at a concentration of 42,000 ppb (standard is 5 ppb) in a down-gradient well across the street from OU 2. Off-site impacts have been delineated and regional geology/bedrock formations appear to be preventing widespread off-site migration of contaminated groundwater. Additional VOCs have been detected; latest sample results detected concentrations of benzene up to 610 ppb (standard is 1 ppb), cis-1,2-DCE up to 42 ppb (standard is 5 ppb), PCE up to 4.4 ppb (standard is 5 ppb), TCE up to 6.7 ppb (standard is 5 ppb), and vinyl chloride up to 16 ppb (standard is 2 ppb). Soil - No off-site soil impacts have been detected above standards. Soil Vapor - A soil vapor intrusion evaluation in nearby buildings was performed in March 2016. The buildings to the south east of OU2 are the most impacted with site-related VOCs (PCE and TCE), however indoor air concentrations do not warrant mitigation provided the on-site source is addressed.

ASSESSMENT OF HEALTH PROBLEMS:

Elevated levels of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals have been identified in soil and groundwater at this site. The area is paved and served by public water so exposures to contaminated soils and

groundwater are unlikely. Due to the high levels of VOCs in on-site groundwater, there is the potential for exposures related to soil vapor intrusion in surrounding buildings. A soil vapor investigation is planned as part of the ongoing remedial investigation.

328 East 67th Street
New York, NY 10065

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:

Location: The site is located in a commercial and residential area of the Upper East Side section of the Borough of Manhattan. The site is an approximate 1,957 square foot (.0449 acre) rectangular parcel making up the entirety of a tax lot identified on New York City tax maps as Block 1444, Lot 30. Block 1444 is bound to the north by E 70th Street, to the east by 1st Avenue, to the south by 69th Street, and to the west by 2nd Avenue. South and west adjacent properties include mixed use commercial and residential buildings. To the east is 1st Avenue beyond which are also commercial and residential buildings. To the north is E 70th Street beyond which is a senior center. Site Features: The site is currently developed with a 4-story commercial/residential building (measuring approximately 25' x 65'). The basement depth is approximately six feet (ft) below sidewalk grade (bsg) and is divided into two sections. Two 275-gallon above ground storage tanks (ASTs) containing number two fuel oil are located in the western section of the basement. Within the footprint of the site is a separate one-story building (measuring approximately 12' x 25') located west of the main site building. There is a small (10' x 20') space located beneath the one-story building that contains a boiler thought to service both on-site buildings. Current Zoning and Land Use: The Site is currently zoned C2-8 (commercial districts that are predominantly residential). The first floor of the main building is utilized as a convenience store and pharmacy while the basement is used for storage. Residential units occupy floors two through four. The separate 1-story building is occupied by a surgical and brace supplier. Surrounding properties include mixed use commercial and residential buildings to the south, west, and east; and a senior center to the north.

Past Use of the Site: Historic Sanborn Maps indicate that a drycleaner was present on-site between 1976 and 1996. City Directory search records list a drycleaner (NU Brite Cleaners) in operation at the site between 1950 and 1988. Nu Brite was identified as a Resource Conservation Recovery Act (RCRA) Non-Generator of hazardous wastes between 1999 and 2007. Between 2000 and 2005, the rear portion of the commercial space was leased to Global Entrepreneurship Inc., which provided dry cleaning services with off-site dry cleaning operations. It is unclear if the "rear portion" of the commercial space refers to the small one-story building located west of the main building or to another section of the main commercial space. The site was utilized as an auto body repair shop from 1927 to 1942. Site Geology and Hydrogeology: The site is fairly level and located approximately 50 feet above sea level (NGVD 1988). The shallow subsurface of the site consists of a mixture of fine to medium sands and silts with medium, sub angular gravel. Minimal debris (concrete and brick) was encountered during performance of a Remedial Investigation (RI). Native soils include occasional sandy clay lenses that are present around 15 to 20 feet below sidewalk grade (ft bsg) along with weathered gravel, quartz and schist. Bedrock geology in the vicinity of the Site is characterized as the Hartland Formation (Middle Ordovician to Lower Cambrian). The Hartland formation consists of interbedded units of fine grained quartz feldspar, fine to coarse grained quartzofeldspathic, muscovite biotite garnet schist, and quartz biotite hornblend amphibolite. Depth to bedrock was encountered at approximately 29 ft bsg. Groundwater is typically encountered approximately 15 to 20 feet below ground surface. Regional groundwater flow is east northeast towards the East River which located approximately 1,500 feet to the east.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
-----	-----
cis-1,2-Dichloroethene	UNKNOWN
tetrachloroethene (PCE)	UNKNOWN
VINYL CHLORIDE	UNKNOWN
TRICHLOROETHENE (TCE)	UNKNOWN
1,2,4-TRIMETHYLBENZENE	UNKNOWN
ETHENE, 1,2, Cis-Dichloro	UNKNOWN
TETRACHLOROETHYLENE (PCE)	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Nature and Extent of Contamination: Based on the investigations conducted to date, the primary contaminants of concern at the site are chlorinated solvents (PCE, TCE) and its breakdown products. on site oil, groundwater and soil vapor are impacted by these contaminants.

Soil - PCE and its breakdown products were detected in soil at concentration exceeding the unrestricted SCO with maximum PCE concentration of 12,000 parts per million (ppm). TCE was detected at a maximum concentration of 3.1 ppm

Groundwater - PCE and its breakdown products were detected in groundwater at concentration exceeding the groundwater standard with a maximum concentration of PCE at 5,500 parts per billion (ppb), TCE at a maximum concentration of 590 ppb, and cis 1,2-DCE at a maximum concentration of 3,000 ppb, VC at maximum concentration of 1,200 ppb.

Soil Vapor - PCE and TCE were detected in sub-slab soil vapor samples both on and off-site with concentrations up to 773,000 ug/m³ and 19,300 ug/m³, respectively; PCE and TCE were detected in on-site and off-site soil vapor samples with maximum concentrations of 4,630 ug/m³, and 2,710 ug/m³, respectively; PCE was detected in indoor air at maximum concentrations of 66 ug/m³ and TCE was at 1.7 ug/m³.

ASSESSMENT OF HEALTH PROBLEMS:

Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in soil vapor (air spaces within the soil) may move into overlying buildings and affect the indoor air quality. This process which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Actions have been taken on-site to address potential exposures associated with soil vapor intrusion. Additional investigation is needed to evaluate the potential for soil vapor intrusion off-site.

Building 136, 2nd Floor

Long Island City, NY 11105

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:

Location: The former York Avenue Holder Station site is located on the west side of York Avenue, from East 61st to East 63rd Street, and on a portion of a parcel on the east side of York Avenue, between East 63rd and East 62nd Streets, in the Borough of Manhattan in New York City. The former site is made up of portions of three different tax parcels, identified as Blocks 1456, 1457, and 1475; totaling approximately 5.2 acres. Block 1456 is bounded by East 61st Street to the south, York Avenue to the east, East 62nd to the north, and 1st Avenue to the west. Block 1457 is bounded by East 62nd Street to the south, York Avenue to the east, East 63rd Street to the north, and 1st Avenue to the west. The final parcel, Block 1475, is bounded by York Avenue to the west, East 62nd Street to the south, FDR Drive to the east and East 63rd Street to the north. Site Features: The main site features on Block 1456 are a 12-story condominium/office building, a two-story museum, a 6-story commercial building with parking garage, and a 19-story cooperative residential building. On Block 1457 there are three 12-story residential buildings, with ground-level courtyards and a four-level underground parking garage. On Block 1475, the 26-story Rockefeller University housing tower with a separate 3-level partially underground parking structure currently occupies the property. Current Zoning and Land Use: The site is currently zoned C1 and C8 (Block 1456), which allows for residential, commercial and manufacturing; R8 (Block 1457), which allows for residential and commercial; and R10 (Block 1475), which allows for residential and commercial. The surrounding parcels are mixed residential and commercial uses. Past Use of the Site: The first gas holders were constructed on Block 1457 between 1874 and 1879. A third holder was constructed on this parcel in 1889. Between 1905 and 1915 the original two holders were removed and replaced with a single large holder, and another large holder was built on Block 1456. All of the gas holders operated until 1948, when the structures were removed. Between 1949 and 1960, all of the parcels were redeveloped.

Site Geology and Hydrogeology: The site consists of three unconsolidated soil units varying widely in thickness and distribution

across the site overlying the bedrock surface. The bedrock ranges from at or just below the ground surface at the western side of the site, to approximately 48 feet below ground surface along the east side. At some locations the native soils have been completely removed and replaced with fill material, which is found as thick as 12 feet. A sand unit lies below the fill material, in thicknesses from 5 to 60 feet. Below the sand are both gravel and sand units, and a coarse-grained gravel unit.

Groundwater was found at depths of 6 to 16 feet below ground surface. The flow direction is generally to the east. This site was transferred to the SSF program on July 13, 2018, and is being tracked under #231117.

CONFIRMED HAZARDOUS WASTE DISPOSED:

COAL TAR

UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Based on investigations conducted at the site to date, which included sampling for volatile organic compounds (VOCs), semi-volatile organic compound (SVOCs), and inorganics (metals), the primary contaminants of concern are benzene, toluene, ethylbenzene, and xylene (together known as BTEX), and styrene; polycyclic aromatic hydrocarbons (PAHs); and lead, mercury, arsenic and cyanide (inorganics).

Soil - In on-site surface soil, there were no detections of VOCs or cyanide above unrestricted use soil cleanup objectives (UUSCOs). The PAHs which exceeded UUSCOs were benzo(a)anthracene at 3.9 parts per million (ppm), benzo(a)pyrene at 3.8 ppm, and benzo(b)fluoranthene at 2.5 ppm (all with an SCO of 1.0 ppm); chrysene at 4.4 ppm (SCO of 3.9 ppm); and indeno(1,2,3-cd)pyrene at 1.2 ppm (SCO of 0.5 ppm). Inorganics found to exceed UUSCOs were arsenic (SCO of 13 ppm) at a maximum of 23.8 ppm; and lead (SCO of 63 ppm) at a maximum of 1,380 ppm.

In subsurface soils, the only VOC detected was benzene at a maximum concentration of 5.9 ppm (SCO of 0.06 ppm). PAHs found to exceed UUSCOs were benzo(a)anthracene at a maximum of 5.2 ppm, benzo(b)fluoranthene at a maximum of 5.8 ppm, benzo(a)pyrene at a maximum of 4.9 ppm, and chrysene at a maximum of 5.4 ppm (all with an SCO of 1 ppm); indeno(1,2,3-cd)pyrene at a maximum of 2.3 ppm (SCO of 0.5 ppm); dibenz(a,h)anthracene at a maximum of 0.66 ppm (SCO of 0.33 ppm); and naphthalene at a maximum of 210 ppm (SCO of 12 ppm). The only inorganics found to exceed UUSCOs were lead (SCO of 63 ppm) at a maximum of 23,100 ppm; total mercury (SCO of 0.18) at a maximum of 2.2 ppm; arsenic (SCO of 13 ppm) at a maximum of 17.5 ppm; and total cyanide (SCO of 27 ppm) at a maximum of 69.6 ppm.

Groundwater- In groundwater VOCs found to exceed standards and guidance values were benzene (GWQS of 1 parts per billion (ppb)) at a maximum concentration of 690 ppb; ethylbenzene (GWQS of 5 ppb) at a maximum of 140 ppb; toluene (GWQS of 5 ppb) at a maximum of 800 ppb; total xylenes (GWQS of 5 ppb); isopropylbenzene (GWQS of 5 ppb) at a maximum of 9.3 ppm; methylene chloride (GWQS of 5 ppb) at a maximum of 12 ppb; and styrene (GWQS of 5 ppb) at a maximum of 240 ppb. Two other compounds were found to exceed groundwater standards, but are not attributable to the former site operations. They are methyl tert-butyl ether, a gasoline additive, at a maximum of 11 ppb, and 1,1,2-trichloroethane, a chlorinated solvent, at a maximum of 18 ppb. The PAHs found to exceed standards and guidance values were benzo(a)anthracene (GWQS of 0.002 ppb) at a maximum of 0.43 ppb; benzo(b)fluoranthene (GWQS of 0.002 ppb) at a maximum of 0.29 ppb; and naphthalene (GWQS of 10 ppb) at a maximum of 300 ppb. The only other SVOC detected was phenol (GWQS of 1 ppb) at a maximum of 100 ppb). Inorganics detected in groundwater were lead (GWQS of 25 ppb) at a maximum of 182 ppb; and total cyanide (GWQS of 200 ppb) at a maximum of 1,050 ppb. Soil Vapor- Soil vapor samples collected from

the site contained elevated levels of both MGP-related and non-MGP-related compounds. The MGP-related detections included toluene at 9.1 ug/m3, ethylbenzene at 2.7 ug/m3, xylenes at 17 ug/m3, 1,2,4-trimethylbenzene at a maximum of 51 ug/m3, and 1,3,5-trimethylbenzene at 8.0 ug/m3. The non-MGP constituents included tetrachloroethene (PCE) at a maximum of 78 ug/m3, trichloroethane (TCA) at 1.7 ug/m3, trichloroethene (TCE) at 0.65 ug/m3, trichlorofluoromethane (Freon 11) at 10 ug/m3, and dichlorodifluoromethane (Freon 12) at 11 ug/m3.

ASSESSMENT OF HEALTH PROBLEMS:

NYSDOH has insufficient information to fully evaluate the potential for human exposures.

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:

This BCP Application is for remediation of a 0.517-acre site located at 1113 York Avenue in the Lexox Hill section of Manhattan, New York. Once this vacant property is remediated, construction of a residential building and multi-level parking structure that will include a swimming pool and health club facility is proposed.

Known or suspected contaminants listed are petroleum, chlorinated solvents, SVOCs, metals, PCBs, as well as other VOCs, and they are impacting the soil, groundwater and soil gas.

This BCP Application was reviewed by Department of Environmental Conservation to determine the application's approval and eligibility. Denial letter signed by Dale Desnoyers 4/28/09. (See Spill # 0606853)

CONFIRMED HAZARDOUS WASTE DISPOSED:

None reported

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

This site was used for auto repair for 50+ years and contained 17 USTs. While excavating for redevelopment these tanks were found and removed. Approximately one half of the site was excavated to bedrock while the remaining (northern)half was only excavated in areas where tanks had been found. End-point sampling in the tank excavations found a number of SVOCs and metals that narrowly exceeded SCOs. Test pits in the northern half revealed petroleum staining (1-5 feet) and odors however no samples were taken.

Groundwater was not encountered on-site but may be present (based on regional data) in sections of the site where bedrock is not as shallow. (See Spill # 0606853)

 ADDRESS: 505 East 75th Street
 NEW YORK, NY 10021

Applicant Type: Innocent Owner NonRegistry-HazSubs

HAZARDOUS WASTE DISPOSAL PERIOD:

SITE DESCRIPTION:

Site Location: The site is located on the upper east side of Manhattan, between York Ave and the FDR Drive, in an urban area with mixed uses. The address is 505 East 75th Street. Prior addresses were 502-504 East 76th Street and 503-509 East 75th Street. The site is described on the Manhattan Tax map as Block 1487 Lots 4, 5, and 8. Site Features: The entire property, which covers 33,215 square feet, is covered by a building occupied by a private school (the Lycee Francais).

Current zoning: The site is zoned for commercial and residential use. The deed restriction allows restricted-residential use. Surrounding uses are residential, industrial, and commercial.

Past Uses of the Site: Four commercial buildings once existed on the site. Prior uses of the property were light industrial and commercial: an automobile repair shop, bakery, dry cleaner, and garage. Construction of the school's basement required excavating 30 feet below grade and into bedrock.

Geology and Hydrogeology: Groundwater was encountered at approx 15 ft bgs and bedrock was encountered at approx 5 ft bgs on East 75th Street and 18 ft bgs on East 76 St. Groundwater flows generally to the east and slightly to the north.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
TETRACHLOROETHYLENE (PCE)	UNKNOWN
TRICHLOROETHENE (TCE)	UNKNOWN
tetrachloroethene (PCE)	UNKNOWN

ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Nature and Extent of Contamination: The remediation of the site is complete and activities included removal of USTs, removal of soil impacted by petroleum. Construction required removal of all soil and removal of bedrock to 30 feet below grade. The groundwater at the site is contaminated with tetrachloroethylene. The foundation of the school building is lined with a vapor barrier. The groundwater is collected, treated, and discharged to the NYC sewer system. A discharge permit is issued by the NYCDEP.

An off-site exposure assessment and investigation was conducted. Soil gas and groundwater samples were collected from the sidewalks around the site with one result on the south side of E 76 St on the nw corner of the school was of concern. NYSDOH requested that indoor air sampling and sub slab samples be collected in the adjacent properties. The investigation concluded in March 2008 and no vapor intrusion was detected.

ASSESSMENT OF HEALTH PROBLEMS:

On-site groundwater is contaminated with tetrachloroethene. However, the area is served with public water; therefore, ingestion exposure is not expected. Currently, an activated carbon groundwater treatment system is in operation on-site. Contaminated soils have been removed and disposed of offsite. The site is covered by the onsite building and pavement. A vapor barrier was installed in the onsite building to minimize the potential for soil vapor intrusion. The evaluation of the potential for soil vapor intrusion into nearby off-site structures is complete.

HAZARDOUS MATERIAL SPILLS INTRODUCTION

The Hazardous Material Spills in this section are divided into eight spill cause groupings. These include:

Active Spills Section: Spills with incomplete paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

- 1) Tank Failures
- 2) Tank Test Failures
- 3) Unknown Spill Cause or Other Spill Cause Hazardous Spills
- 4) Miscellaneous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, Vandalism and Storms.

Closed Status Spills Section: Spills with completed paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

- 5) Tank Failures
- 6) Tank Test Failures
- 7) Unknown Spill Cause or Other Spill Cause Hazardous Spills
- 8) Miscellaneous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, Vandalism and Storms.

All spills within each spill cause category are presented in order of proximity to the subject site address.

Please note that spills reported within 0.25 mile (or one-eighth mile in New York City) are mapped and profiled.

Between 0.25 mile (or one-eighth mile in New York City) and 0.5 mile, only the following spills are mapped and profiled:

- * Tank Failures;
- * Tank Test Failures;
- * Unknown Spill Cause or Other Spill Cause;
- * Spills greater than 100 units of quantity; and
- * Spills reported in the NYSDEC Fall 1998 MTBE Survey.

A table at the end of each section presents a listing of reported Miscellaneous Spills with less than 100 units located between 0.25 mile (or one-eighth mile in Manhattan) and 0.5 mile. These spills are neither mapped nor profiled.

Caller Remarks:

Resident smelt oil in the basement and they investigated the smell and the tank is leaking. Unkown amount or why the tank is leaking. has not been cleaned up

DEC Investigator Remarks:

Original call came in from Mina Palmer, secretary to Dr. Kenneth Lynch. Dr. Lynch owns a 1 family house at 163 East 74th St. His wife smells oil in their basement and thinks it's coming from next door at 165 East 74th St. Sangesland looked up the address and found 165 East 74th St is a 2 family house owned by Marjorie Reed (212-535-6280). A message was left on Ms. Reed's machine asking her to investigate her basement area for an oil spill. Sangesland's desk phone number and the hotline phone

numbers were both left for contacts.

1/5/06 – Raphael Ketani. I made contact with Ms. Mina Palmer, Dr. Laub's secretary, at the doctor's office (212) 755–2333 [home (212) 288–6391]. She said the doctor will get back to me.

08/14/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. called to Lima Palmer she is not there today. Talked to Ms. Meridith she said she will convey my message to her regarding spill. –QA

08/21/06: Called Ms. Meridith At (212)755–2333 To remind about the closing confirmation letter of the spill She that said she will remind to Ms. Lina Palmer (office Manager) to fax the letter. –QA

09/25/06: Called at(212)755–2333 and talk to Ms. Leesa she said spill is at next door. She didn't give phone number. –QA

07/10/07: Called at doctor's residence to set the time for field inspection they said somebody will be in touch with you regarding inspection of the basement. –QA

08/29/07: Called at (212)288–6391 and left message to call me back regarding inspection of site. –QA

08/30/07: Called at (212)288–6391 and left message again regarding inspection of basement and to call me back to fix the time for inspection. –QA

09/11/07: Called at doctor's resident (212)288–6391 and talked to Mrs Lemchen she fixed time for inspection of basement on September 24 (Monday) at 11 O'Clock. –QA

07/03/08 Spill case transferred from Q. Abidi to J.A. Maisonave – JAM

12/14/11: This spill case transferred from J. Maisonave to J. Kolleeny. – JK

Caller Remarks:

New Construction came across contaminated soil that lead back to a source close to the new site. Tanks located and removed and confirmed as the source. Cleanup is underway.

DEC Investigator Remarks:

12/16/2015 – Feng– Duty Desk. Talked to Steve Grens (914–922–2371). They have knocked the old building already and doing excavation for the new building. The site foot print is 5,020 square feet. The bedrock is at 27 feet. They plan to excavate everything down to bedrock and then blast the bedrock to 47 feet, for cellar/basement. They did the waste classification 6/2015 and found soil contamination beneath the slab. A 1,080–gallon fuel oil tank was found in the southeast side of the site. The tank was subsequently removed in 8/2015 and no contamination. Another 1,000–gallon tank was found in the south portion of the site and was removed 10/2015. When they did the trench and shoring at the site, they then related the soil contamination to the 1,000–gallon tank. According to the plan, they will replace the flags of the sidewalk. They are at 15 feet below the former slab now. All the soil shall be out by next month 1/2016. The vapor mitigation effort is not proposed. No state/city program.

Consultants: AKRF Steve Grens 914–922–2371 SGrens@AKRF.com

Steve Grens's supervisor Michelle Lapin MLapin@AKRF.com

Talked to Ryan Piper and spill is assigned him.

12/18/2015 – Feng – Sent CSL letter to owner's representative Warren Elghanayan and copied AKRF Steve Grens/Michelle Lapin. The letter also requires development plans.

1/13/16– DEC Piper spoke with Steve at AKRF, he asked for 1 month extension. Granted.

Site will be dug down 10' into bedrock.

6/20/16– DEC piper received email form Steve at AKRF. They anticipate completing soil removal within the entire footprint of the site and spill closure reporting within two months. Following soil removal, they plan on taking top of bedrock elevations across the site. They'll include the survey elevations on a figure in the closure report to close out the spill.

2/23/17– DEC Piper sent email to Steve Grens at AKRS requesting update.

have been placed. Mr. Weeks will contact the GERC to mobilize a contractor to repair or tow the leaking step van to the 14th Street Yard.

dry leak test only tank failed tank has been pumped out clean up pending

DEC Investigator Remarks:

02/07/19 – Lakhani Concerns about the integrity of a 30,000 gallon #4 fuel UST at the property led Eastern Environmental to tightness the tank system. The system failed. The tank was isolated and tested and it failed with a dry leak. Fittings and the manway on top of the tank were found to be bad. The tank is located beneath the sidewalk. The UST was emptied. Eastern Environmental is proposing to perform a physical assessment of the inside of the tank and potentially repair it. The tank owner is:

Solo 9W57 9 West 57th Street, 45th Floor New York, NY 10019 212-715-0256 Anthony Calicchio acalicchio@solo9w57.com jarias@solo9w57.com

spill to outside paved area/clean up crew en route

DEC Investigator Remarks:

03/16/19–Hiralkumar Patel. 1:38 PM:– spoke with Chris. he mentioned that Approved Oil delivered oil for another company and caused overfill. Approved oil crew cleaned up surface spill, but oil company received complaint from customer so they retained Chris for follow–up inspection and any necessary cleanup. All Boro crew responded to the site and found some oil on street along curb and possible impact to ConEd’s manhole.

3/19/19–Lin–Responded to spill on 3/16/19. Upon arrival only stain remained on the road and sidewalk. Contractor is suppose to come back the following day to power wash the impacted area. Petrometer inside the building broke due to the overfill and a unknown amount of oil leaked out of the meter. Check tank vault and did not observe any oil in the vault. Made notification to Con Ed regarding two con ed manholes that were impacted from the spill.

DEC Lin responded.

Caller Remarks:

BELIEVES THEY MAY HAVE LOST 1000 GALLONS, WERE FILLED UP YESTERDAY AND NOW GONE, BUT CANT SEE LEAK: STILL INVESTIGATING

DEC Investigator Remarks:

5/19/05. J.Krimgold spoke to Mark (PTC). They cleaned nth tank 2 days ago, but the owner did not want to test it. Delivery (2500 gal of #6 oil) was made yesterday and the gage was checked before and after delivery. The gage showed 33 and today only 27.5 meaning that ~500 gal was not accounted for. Tank will be pumped out and tested. CSL letter has been sent.

5/23/05. According to Mark (PTC) the tank was pumped out on 5/19/05. No oil was coming back from outside the tank. Owner want to

replace/repair the tank, but refused to test the tank. YK.

Info: Neil Wichnia – Building Manager @ Maxwell-Kates, Inc. 9 East 38th Street, 6th Floor NY, NY 140016

10/17/05. J.Krimgold reviewed the letter report submitted by Eastmond & Sons dated 9/14/05. Based on the investigation results presented in the letter and previous investigation, no contamination was found around the UST. Moreover, it appears that spill was reported due to and erroneous reading to the tank gage. NFA letter.

 further investigation is underway now tank is being pumped out to start

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROSSAN/VOUGHT 8/8/2002-VOUGHT-Site visit by Sangesland and Vought on 12/12/2002. Building owner is Steven Malinowski (CA Rich Consultants 516-576-8844). Tank is 66 years old and is 5,000 gallon steel tank. Petroleum Tank Cleaners on-site and performing cleanup consisting of pumping remaining fuel from tank, pump out sump pump, powerwash floor and sump. A total of 600 gallons of oily water was removed from the tank (waste disposal manifest and work invoice provided to NYSDEC). Spill on concrete and DEP contacted regarding discharge to sump pump. No release to underlying soil due to excellent condition of concrete floor. Tank in secondary containment which failed. Malinowski will install entirely new system once bid package approved by tenant board.

2/12/2002-Receive call from Malinowski that tenant board has approved bid proposed by Eastmond & Sons to replace tank in same

containment vault (invoice sent to NYSDEC).

6/20/2002–Receive affidavit from Eastmond & Sons (Neil Tomasetti 718–378–3000) regarding installation of new AST verifying that new tank satisfies all NYC Building Department standards.

7/15/2002–Receive copy of signed contract between CA Rich and Eastmond & Sons to remove old tank and install new tank. Spill closed by Vought.

Caller Remarks:

tank leaked causing the spill.contimanited soil found by borings.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHTOMIRSKY Former York Hunter site. PBS #2-455784. YK.

3/09/06: This spill transferred from I. Islam. to Q.Abidi.

06/20/06: DEC Lead transferred from J. Kolleeny to J.A. Maisonave. JAM

6/21/06: Reviewed the Site Specific Investigation Plan proposed by LiRo for this site. URS has assumed management of this project and plans to perform this investigation. This is apparently the first investigative effort to evaluate potential impacts from petroleum USTs at the site. The site has 3 vehicle fuel tanks that were abandoned in place. Also on-site are 2 unregistered gasoline tanks that may have been abandoned in place. The investigation plan proposes drilling six soil borings and four monitoring wells. I spoke to Tim Burmeyer of URS (phone: (716) 923-1115) about the proposed soil borings and made adjustments to the locations of those borings. I will draft an approval letter summarizing the adjustments and comments. JAM

6/22/06: Approval letter for the SSIP was finalized and issued to:

Afsar Samani NYC Department of Design & Construction 30–30 Thompson Ave. Long Island City, NY 11101

The letter requested one extra soil boring at the north end of the site to evaluate the fill port for the 2 unregistered gasoline tanks. I am expecting URS to notify me of the work schedule. JAM

7/25/06 Received call from Tim Burmeyer at URS on 7/11/06. He informed us that the NYCDEP will be constructing a Distribution Chamber for a water tunnel in the area where the 3 USTs are supposed to be on the southern end of the site. The NYCDEP performed an environmental assessment on site and did not locate any USTs; however, the area where the USTs were supposed to be will be excavated to bedrock and all soil disposed of when the distribution chamber is constructed. The NYCDEP began drilling pilot holes to the water tunnel on July 24.

URS will review files in the NYCDDC archives to see if any maps include the locations of the USTs on the southern and northern ends of the site. URS will amend the SSIP if needed. JAM

8/25/06 Email message from T. Burmeyer of URS. They are scheduled to drill at the north end of the site on September 7 and 8. Work includes 4 soil borings and 1 monitoring well. – JAM

3/21/06 Reviewed Soil and Groundwater Sampling Results – Request for Spill Closure Report submitted by URS and dated Dec 12, 2006. Between Oct 4 and 6, 2006, URS advanced 4 soil borings and installed one well on the north end of the site in the area around unregistered gasoline tanks. During the advancement of each soil boring, PID readings ranged from 0 to 72 ppm and odors were detected. Soil Analytical results indicated that no VOCs were present at concentrations above TAGM. SVOC exceedences were detected at each soil sample. Groundwater analytical results showed that no SVOCs were detected and several VOCs were detected but concentrations were below criteria.

URS recommends closing this spill case because no VOCs were detected in soil or groundwater above their respective criteria and SVOCs detected in the soil pose no threat to human health or the environment.

I sent URS an email requesting additional information regarding the south end of the site where three tanks were registered. This area is under construction by NYCDEP for a water tunnel distribution chamber. URS will submit an addendum to this report. – JAM

4/27/07 Reviewed Shaft 33B Project Update Report, submitted by URS and dated March 26, 2007. Report summarizes work performed by the NYCDEP to construct a water tunnel distribution chamber at the southern end of the site where 3 2,000–gallon tanks were located. According to the report, 3 USTs were located in the current construction area but were removed by an unknown party before the project was initiated. No end–point samples were taken from the excavation however, the former tank locations and the surrounding area was excavated to bedrock for the distribution chamber. Soil samples taken near the former tank area for characterization prior to construction were analyzed for VOCs and SVOCs. No VOCs were detected and some PAHs were detected but are common of fill material. This information is located in the appendices of this Report. URS requests closure of this spill case.

Since the area surrounding the USTs in the southern portion of the site was excavated it is likely that if any contamination was

present it has been removed. This spill poses no threat to human health or the environment and was closed. An NFA was issued today. – JAM

Caller Remarks:

INSIDE THE TANK LEAKED AND IS CONTAINED: CALLER WOULD LIKE DEC TO CALL HIM BACK

DEC Investigator Remarks:

4/3/06–Vought–Daytime responder. Vought responded to site and spill was approximately 20–30 gallons of #6 fuel oil in secondary containment (no cracks) of UST. AL Eastmond(718–378–3000) and are removing oil from secondary containment, pumping UST dry and installing temporary tank on 73rd Street. Oil was first noted in secondary containment this morning. No effect to sump pit in adjacent boiler room. Tank is 15000–gallon partially buried UST with secondary containment on three sides of tank. Fourth side is buried in concrete. Site contact is Angel Pena and super is Kirk Corrigan (212–628–7919) and managing company is ACamp. Vought called Brown (212–508–7200) and they are not operating the building. Vought called emergency contact Bill Manion on PBS (212–628–7919) and Bill Manon no longer works at management company. Vought required: 1)tank tightness test 2)updated PBS registration. Letter should be sent to:

Tom Teeple c/o 374 Street 8 West 38th Street NY NY 10018 7th Floor Phone 212–986–0001x160 fax 212–986–0002

Further contact should be with Teeple. Vought sent out tank tightness test letter with additional requirements of: 1)submission of test results 2)updated PBS information.

05/17/06–Vought–Spill transferred from DEC Vought to DEC Ketani as per DEC Austin.

6/16/06 – Raphael Ketani. I tried to reach Mr. Teeple (212) 986–0001, ext. 160, but could only leave a message.

6/19/06 – Raphael Ketani. Mr. Teeple called me and said that the tank was tested twice and a small leak was detected. He added that they expect to start work wednesday after they meet with the co–op board and get approval.

7/18/06 – Raphael Ketani. I spoke to Mr. Teeple. He said that he will send me the tightness test results, the PBS application, and a cover letter describing what is taking place and what they plan to do. He said that, right now, Controlled Combustion has been contracted to replace the tank and do test borings. I will send a PBS form to:

Tom Teeple Director of Management Services AKAM Associates 8 W. 38 Street NY, NY 10018

8/4/06 – Raphael Ketani. Linda Andersen of AKAM (212) 986–0001, ext. 143 (7th Floor) called yesterday and requested the blank PBS Applications. I will send them to her today.

8/7/06 – Raphael Ketani. I received a package of documents containing both tank test results and the agreement for work between the contractor and the owners of the building.

8/23/06 – Raphael Ketani. I left messages for Mr. Teeple and Ms. Andersen.

Mr. Teeple called me back and said that they have received the permits to remove the old tank.

11/7/06 – Raphael Ketani. I tried to reach Mr. Teeple and Ms. Andersen, but could only leave voice mails.

The PBS case #2–113360 lists the 15000 gal. tank as still active.

Mr. Teeple called me back and said that they have taken soil samples, and installed the new tank and are waiting for some parts. I told him someone has to do the revised PBS form. He asked who. I told him it could be anyone, but I needed the original signature of the owners on the form. He said that even though I sent the form, he couldn't find it now and asked that I send another one. I sent the form to his attention today.

On 7/18/06, I sent the PBS form to Mr. Teeple. On 8/4/06, I sent another PBS form to Ms. Andersen.

3/22/07 – Raphael Ketani. Mr. Teeple called back. He said that the tank removal, room and soil cleanup, and tank reconstruction finished in January 2007. He said that he is sure Controlled Combustion has the soil results and he will have them send the results to me. He added that the PBS form is probably ready to go, but he has to contact his assistant, who is supposed to be working on it.

3/27/07 – Raphael Ketani. Ms. Linda Anderson (212) 986–0001, ext 143 called me back to confirm what documentation DEC needed to close the case. I told her that we must receive the revised PBS form with the original signature, the soil analytical results, manifests for the removed soil, and a cover letter describing what happened and what was done to clean up the spill. She said she will have this done.

4/11/07 – Raphael Ketani. Linda of AKAM called and requested a 1 week extension to get DEC all of the paperwork. I granted the extension.

5/23/07 – Raphael Ketani. I checked the PBS registration. It shows that the 15000 gal. tank was closed and removed and the 13000 gal. tank was put in service in 1/2007. I also received a FAXed package of documents from Linda Andersen of AKAM. The package contained analytical results, waste manifests, and bills from Allstate ORC. The analytical results showed that the VOCs from each of the 3 samples were either non–detect or very far below the RSCO. The results also showed that the SVOCs were from non–detect to nor more than several times the RSCO limit for benzo series analytes.

Based upon the analytical results for 10/25/06, the waste manifests and the paid bills, I am closing the spill case.

A OIL LINE LEAK AT THIS LOCATION: OIL GOING INTO TANK ROOM: CAN SEE CONTAMINATION UNDER SIDE WALK:

DEC Investigator Remarks:

3/29/05 – Austin – Previously unassigned spill; reassigned to Austin for transfer up to Central Office for review/closure

6/8/05 – Project transferred to TLGibbons in Central Office , Albany

7/6/05 – Spoke with Mark Salamick, the spill caller from Petroleum Tank Cleaners, 917-559-5519. He said they sent the owner, AKAM Associates, 212-986-0001, a proposal for work but did not get job. His AKAM contact was Tom Teeple. Said A.L. Eastmond also bid job. Said spill was @ SE corner of 74th and 2nd Avenue. Spoke with Teeple. Said A.L. Eastmond was hired to do work. Fuel oil leak (#6) related to fill line leak. Impacted beneath sidewalk, driveway and fuel tank. Tank test ok. Spoke with Kurt Corrigan, super @ building, 212-628-7919. He said he would have Renee Lewis, A.L. Eastmond call me.

7/6/05 – Spoke with Mr. Lewis, 917-299-7257 (cell) or 718-378-7000 (Ext. 15). They have cleaned what they can access of the #6 spill without risking structural problems. Arrange to meet @ site.

7/12/05 – Meet Rene and Kurt @ site. Went into basement tank vault area. Tank in cement vault. Clean except for minor spill along wall and within vault area. Partial removal of wall to access spill area from broken fill line. Cleaned up what they could, replaced fill line. He will send me final report.

10/25/05 – Tried unsuccessfully to get final report from AKAM and A.L. Eastmond. Close site based on visual inspection.

CLEAN UP IN PROCESS;

DEC Investigator Remarks:

12/26/06-Hiralkumar Patel. spoke with Rene at Eastmond. site has 10,000 gal aboveground tank on concrete cradle. found about 35-40 gal oil inside tank room. spilled oil is contained currently. Eastmond is installing temporary tank at site. they will pump out 10000 gal tank tomorrow morning and will investigate cause of release.

PBS#: 2-113743

spoke with Chas Slotterback (Fax: 718-585-5315, email: toni@leardonboilerworks.com), serviceman at building. he gave following info for management office:

Brown, Harris and Stevens 770 Lexington Avenue New York, NY 10021 Contact: Tom Burns Ph.: (212) 838-1848 Fax: (212) 888-6867

PBS record has different mailing address.

12/27/06-Hiralkumar Patel. left message at management office. spoke with Chas. he gave another contact in management office.

Carolyn Courtien 212-508-7286

left message for Ms. Courtien. Chas asked to send copy of PBS correction form to him in email. received call from Ms. Courtien. she gave her contact info:

Carolyn Courtien Brown Harris and Stevens 770 Lexington Avenue New York, NY 10021 Ph. (212) 508-7286 Fax (212) 319-2813 email: ccourtien@bhsusa.com

sent CSL to Ms. Courtien. sent email to Ms. Courtien and Chan with copy of letter and PBS correction form. faxed copy of letter to Rene at Eastmond.

01/03/07-Hiralkumar Patel. left message for Rene to know cause of release. 04/05/07-Hiralkumar Patel. spoke with Ms. Courtien. as per her, contractor found leak in tank itself. they have removed tank from location and all contaminated concrete/soil. new concrete pad has been built and waiting for permits to install new tank. asked Ms. Courtien to submit spill closure report with spill cause, site plan with sampling location, sample analyticals etc. as cleanup had done.

05/07/07-Hiralkumar Patel. spoke with Ms. Courtien. she will contact her contractor and will ask to submit report.

06/04/07-Hiralkumar Patel. left message for Ms. Courtein. 06/06/07-Hiralkumar Patel. sent email to Ms. Courtein requiring closure report. 07/25/07-Hiralkumar Patel. left message for Ms. Courtein.

08/14/07-Hiralkumar Patel. received email from Ms. Courtien (on 07/30/07) containing description of work done. as per Ms. Courtien tank was located on concrete craddle. they removed tank which was started leaking at craddle and also removed conatminated concrete. they removed 18 drums of contamianted material. email doesn't contain disposal manifests and letter doesn't have anybody's signature. sent email to Ms. Courtien and asked to send letter report with signature and disposal manifests.

received signed letter from Cardinal boiler.

based on available documents, case closed. NFA sent to Ms. Courtien. letter emailed to Ms. Courtien.

Caller Remarks:

caller was doing tank removal and found contaminated soil unknown what product is – caller cell phone 914–589–9402

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was MARTINKAT 1/11/2001 Sangesland spoke with Steve Grens (AKRF Environmental 718–949–7336)

AKRF pulled four 1,000 gallon tanks (gasoline?) from under the slab floor of a former garage building. Building is still on the site and has approx 12' to 15' foot ceilings over the tank area.

Bedrock at the site is at between 7' and 12' depth. Contamination was found in the excavation. Sangesland directed AKRF to excavate as much of the contaminated material as possible then take end point samples.

Because there were four large tanks at the site, the DEC will require the installation of at least 1 well at the site.

SEE 0130013

4/23/02 CLEANUP UNDER THE VOLUNTARY CLEANUP PROGRAM. SMM.

Caller Remarks:

7500 gallon tank leaking from bottom. this is a tank test failure. caller was not the tank tester and was unsure of the method,pbs number

DEC Investigator Remarks:

Tipple responded to spill//PTC cleaning spill, emptying tank, and setting up temp tank. Failed tank is square tank, will be rebuilt/ replaced by PTC and the documentation will be sent to DEC once a full system test is passed and disposal documentation is assembled. Boiler room floor appeared to be in good condition//freshly painted prior to the spill.

3/29/04 Tipple spoke with bld. super... he will send pictures of cleaned area////

05/05/05 digital photo//floor appears to be cleaned//nfa//

DEC Investigator Remarks:

TTF letter sent to PBS Contact:

Ms. Donna Weinberg Lawrence Properties 855 Ave. of the Americas New York, NY 10001 03/20/06-Sharif Rahman- Resent the letter to above address after spoken with Donna Weinberg,(212)868-8320, Fax:(212)279-2119 05/08/06 Sharif Rahman- I spoke with Ms. Georgia @ 212-868-8320 x 360 and she indicated that the former tank would be closed in place and new above ground tank will be installed.I emphasized her about the subsurface investigation before close out the tank. 05/17/06 Sharif Rahman- I spoke with Mr. Galdun,(646)542-3465 from GFE. He indicated that they did borings around the tank and found no contamination except at one location near the oil pump which is used to transfer oil from tank to boiler. 11/07/06 Rahman- Left a messege for Ms. Barton to follow up about the required investigation work which were outlined in Department's October 16'06 letter. 03/02/07 Rahman- Department rec'd response letter from Galdun Frankel Environmental, dated 01/29/07.GFE found no evidence indicating that the site UST had leaked petroleum to the environment.This conclusion is supported by the lack of any oil staining or seepage on the concrete vault walls that enclose the UST.The only area where physical evidence of petroleum release was found consisted of stained concrete flooring around the oil pumps located adjacent to the west side of the UST vault.The soil borings drilled near the oil pumps showed some evidence of petroleum impact within the thin layer of soil above bedrock.No free product was encountered.The findings of the discharge investigation pointed to intermittent leaks from the oil circulation pump as the cause of the release.GFE concluded that there is no potential for the conditions discovered beneath the floor slab to adversely impact ground water. 08/24/07 Galdun Frankel Environmental proposed to take soil sample from the bottom of the tank.Work plan dated April 13, 2007 is in file.(SR) The spill case is administratively closed as the RP failed to perform additional investigation to show the tank did not release any oil at the bottom.(SR)

DEC Investigator Remarks:

Obligado – Desk Duty – 3-9-16 – I spoke to GC Environmental Debbie Brown. She said it was a dry leak. They will repair and retest. I called MR. Ryan, who orded the test. He said it was in prep for a potential purchase of the property and he was not the owner. He said he would contact the owner to reach out to me.

3-10-16 – Obligado – I spoke to Rob Lonzar of Vinsu Corporation, who owns the tanks. He said he has hired Riteway to do the necessary repairs and will retest. The tank owner is:

Vinsu Corporation 1269 1st Avenue Suite 2e NY, NY 10065

Spill assigned to Mahat.

3/22/16: Mahat DEC Mahat received a call from Marcus and Miller Shop (Home Owner Rep – 212.450.5152) inquiring about the work that has been done on the site.

A closure report will be submitted to the Department shortly.

4/5/16: Mahat DEC Mahat received a passing pressure test result. It is uploaded on D2 for reference. Spill was called in as it failed the pressure test. A Repair was performed on the tank. The tank was welded. There was no spill. No other resourced were impacted. Based on the phone conversation, emails, and report, the Department does not warrant any further investigation on the spill case. It is closed on Spill Database.

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

The following DEC Investigator Remarks were available prior to 1/1/2002:

No action by DEC Sigona. Waiting for results of the tanks test

On May 29, 2001, DEC Sigona spoke with Mark Huber, Chief Operating Officer, Abilene Inc, 2402 Neptune Avenue, Brooklyn, NY 11224. (718) 372-4210 said that about ten (10) days ago, a new 7,500 gallon tank was installed at 301 East 63rd Street. According to PBS records the facility's registration expired on February 4, 2001. DEC Sigona informed Mr. Huber to have the owner contact DEC to disucc the options available. He was informed that a violation existed for failing to renew and notify DEC of tank installation.

DEC Sigona will send PBS & guidance to the contractor on May 29, 2001.

DEC Investigator Remarks:

TTF letter sent to PBS address -- PBS #2--031887

330 East 70th St Tenants Corp. c/o Goodstein Management, Inc. 211 East 46th St New York, NY 10017

Attn: Teresa Austin 09.20.05. SR//Teresa Austin replied by a letter stating they are going to install temp. tank to replace the existing tank and re test it. That work was scheduled to be done in August. 10.05.05 SR// Sharif reviewed and approved the site assesment work plan.

12/28/05 Sharif//Rec'd and reviewed investigation summary report prepared by Jade Environmental, Inc. Six soil borings were advanced around the tank and analyzed for VOC/SVOC. Soil analytical results shows exceedance for Xylene, Benzo(a)anthracene, Chrysene, Napthalene at the north end of the tank. Reason for not removing contaminated soil is not justified in the report. Removal of contaminated soil is recommended. Moreover, in case of closing the tank in place, samples should be taken by installing borings through the bottom of the tank to identify any underlying contamination that might exist. Mr. Dave Pelletier (845) 897-2188 and Ms. Laura Bruno (212) 376-8600 have been relayed the requirement for considering closure of the case. 10/11/06 Rahman-- Inspected the excavation work at the site. After removal of the contaminated, stained soil, end point sample will be collected. A new aboveground tank will be installed. 12/06/06 Rahman-- Closure report available on edocs. Contaminated soil was removed after breaking the concrete covering the tank. Approx. 48 tons of contaminated soil went out for disposal. Waste disposal manifest was provided. Six end point samples were sent to lab for analysis. VOC/SVOCs were below TAGM limit except Chrysene which is slightly above the limit. NFA required. New tank needs to be registered.

1	3000	Horner EZ Check I or II	0.00	UNKNOWN

Caller Remarks:

tank test failure of generator tank no spill unknown further action at this time

DEC Investigator Remarks:

9/21/05 spoke with James Wood from the hospital. Mr. Wood is seeking to close out spill. He was informed that he needs to submit 1) Copy of a work order saying either the lines had been repaired or replaced, 2) Copy of a new system test report showing the system passed. SR

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL C 6/30/99 Report forwarded to Sangesland. Caller stated that the building is being sold and the tanks were retested again and failed. System was isolated. Caller says the tank is OK, but both the supply and vent lines failed. Sangesland informed the caller that they need to submit 1) Copy of a work

order saying either the lines had been repaired or replaced, 2) Copy of a new system test report showing the system passed.

Caller says work will be done ASAP because it's holding up the building sale.

Ref: spill# 0002384.

4/12/04--Vought--Spill transferred from Sangesland to Rommel as per Rommel.

08/13/12 - LZ As Randy Austin requested, the spill has been reassigned to Tim DeMeo

3/5/13 TJD File review. Theresa Colabella from PW Grosser has contacted DEC R2 on multiple occasion in an attempt to have open spill file closed (TTF). Documentation provided is incomplete. Theresa states the hospital was sold in 2010 and under new ownership - limited records prior to sale are available. After multiple back and forth communication with PW Grosser DEC (DEMEO) contacted original tester (ProTest) in attempt to obtain necessary documentation in support of closure. Initial tank tightness test failure occurred on 1/9/98. Protest provided a letter previously sent to DEC on 11/6/00 detailing cause of failure - faulty petrometer fitting on tank top which was plugged. Tank (system) was then retested on 5/27/98 and passed. ProTest additionally reports in July 1999 they were retained to investigate another tightness test failure - tank and lines were tested seperately - tank passed suction and vent lines failed an isolation test. Spill 0002384 was assigned to this event. Protest reports the fill and vent pipes were then excavated and replaced, a total of 51 drums of contaminated soils were generated during this remedial work. A total of seven endpoints were reported to have been collected following remedial work. Suction and vent pipes were then replaced - the new suction line was installed within a double wall pipe as part of upgrade. Following piping replacement project a new system test was performed on 6/9/00 which passed. A review of Spill file 0002384 reveals no endpoint sample reults or disposal manifests are included with DEC records. Documentation provided by PW Grosser include subsequent passing tightness tests on 6/2/05, 6/2/10 & 4/9/12. Based upon the documentation provided by ProTest no further action is required associated with Spill #9711366.

#2 FUEL OIL	PETROLEUM	0	GALLONS	0	GALLONS	

Caller Remarks:

4000gal

DEC Investigator Remarks:

DECPiper spoke with Caller. Tank is a 4000gal #6 oil tank being converted to a #2 oil system. Tank was cleaned and tested. Tank failed. ABC is company that subbed caller. Repairs and retest to follow.

8/2/2013 – Sangesland reviewed a letter/test rpt from ABC Tank (718-272-2800) After the initial tank test failure, the tank was isolated and passed. Then all the lines were isolated and tested. Vent line failed. A visible section of the vent line was replaced and then the whole system was retested and passed. There was no visible sign of contamination in the area of the repaired vent line. Spill closed.

Caller Remarks:

20K TANK LOCATED IN GARAGE AREA, OIL LEAKING FROM TANK TO AREA BELOW, 4K TANK TRUCK PARKED OUTSIDE BEING USED INSTEAD OF TANK TO FEED BOILERTRUCK APPEARS TO BELONG TO STUYVESANT.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was M TIBBE

07/21/2005 1020 hrs: Called Ralph Ortiz, superintendent of building at 400 East 71st, referred to Lisa Bluttal at Transworld Equity (212-355-4900). Lisa will check files regarding cleanup of spill. A.L Eastmond (Carlos/Neal) apparently did the work to close the original 20k buried tank. NYC building permit indicates buried oil tank was replaced with an above-ground storage tank, also changed from #6 to #2 fuel oil, date 05/14/1991. PBS database (2-403458) indicates 05/01/1991 installation of a 5,800-gallon above ground tank for #4 oil. The 20k tank was closed in place.

08/18/2006: No additional written information is available, however conversations with owners indicate that spill was minor and cleaned up and the new tank has been in service with no difficulties. Given the age of the spill and its location in a parking garage, potential environmental impact is considered to be low. Spill should be closed. M.Brand NYSDEC DER Albany.

10/2/09 – Austin – Spill transferred from Albany staff to Ahmed, for further investigation to see if there is concurrence on closure for this spill – end

10/27/11 – Austin – Spill Transferred from Ahmed to Vought – end

1/6/12-Vought-Received call from Jocelyn Finney (Ph:631-753-0333) who noted that she was looking to get spill closed as quickly as possible and was inquiring about further DEC requirements. As per notes above site has a 20,000-gallon #6 fuel oil UST that was closed in place and replaced with a 5800-gallon #2 fuel oil UST in 1991. PERSONAL NOTE: Vought disagrees with notes of DEC Brand above that spill should be closed given the age of the spill and its location in a parking garage . Degradation of heavy

#6 fuel oil cannot be confirmed as well as location of UST in a parking garage may impact other residences given close proximity in Manhattan of other residences and basements. As such DEC requires investigation of the original 20,000-gallon #6 fuel oil UST. PBS registration notes former 20,000-gallon UST was diesel. Caller Remarks note that OIL LEAKING FROM TANK TO AREA BELOW. Vought called Finney and noted below requirements.

1/12/12-Vought-Conference call with owner Lisa Bluttal and owners tank rep (Chris Burge-Total tank Ph:917-841-3373). Vought explained requirements and Bluttal will submit investigation work plan via email to Vought for approval.

1/25/12-Vought-Received Subsurface Investigation Work Plan from Miller (Nick Marrone Ph:631-369-4900 Fax:631-369-4909) dated 1/23/12. Miller proposes to install four soil borings in the vicinity of the former 20K underground storage tank... Borings will be installed via Geoprobe until groundwater or refusal is encountered. The sample with the highest PID reading will be sent to lab and an ISR will be submitted to the DEC. It is our understanding that additional borings/monitoring wells and remedial action may be required upon review of the field and laboratory data by your office. Proposal was sent from:

Ms. Lisa Bluttal Manocherian Brothers 150 East 58th Street 28th Floor New York, NY 10155-2899 Ph: (212)355-4900 Fax: (212)355-3066

Vought sent review letter requiring submission of a site plan, performance of soil borings to at least five feet below tank invert and not to refusal or bedrock as proposed and correction of PBS 2-403458 20,000-gallon UST from diesel to #6 with above requirements to Bluttal with cc to Finney and Marrone.

1/31/12-Vought-Received email revision entitled Subsurface Investigation Work Plan (Revised January 27, 2012) from Miller Marrone. Work Plan proposes installation of six soil borings to at least tank bottom. If groundwater is encountered within 20-feet of the surface and there has been a suspected leak the installation of three monitoring wells to NYSDEC specifications cannot be completed at this location because of location of the 20K UST. If applicable, monitoring wells may be done outside of the building at a later date. AN Investigation Summary Report will be generated and submitted to NYSDEC. Proposal also includes submission of a surrounding area site map including piping and remote fill locations. Proposal also included site plan with UST and proposed boring locations. No investigation proposed are former remote fill as staining in boiler room (which is approximately 8' below grade) is adjacent to former UST location and not remote fill. Marrone also noted that PBS Registration will be amended by Controlled Combustion. Vought drafted and sent approval letter of Plan to all parties.

2/8/12-Vought-Received Subsurface Investigation Report dated 2/7/12 via email.

3/6/12-Vought-Reviewed Subsurface Investigation Report dated 2/17/12. Six Geoprobe borings installed on 1/31/12. Site is a 23 story residential building. PBS registration noted UST was closed in place on 5/1/91 and a 5800-gallon AST was installed in an adjacent tank room. Two schools located .25 miles from site. No. 6 staining was observed coming from the south boiler room wall. Upon inspection, a pump, separator drum and recovery drum was discovered at the parking garage lower level. Oil staining was present in the two sumps that were connected to the system. Refusal at 13-15'bg on schist bedrock and groundwater at depth of 10'bg. All soil samples exhibited No. 6 oil staining except boring B-5. Since the building is set onto the rock, perched groundwater on top of bedrock is likely traveling to the deepest point beneath the building sump areas. There was not enough groundwater for collection of a groundwater sample. Soil analyticals show: 1900ppb ethylbenzene(B1 9-12'bg), 1660ppb xylene(B1 9-12'bg), 17,000ppb naphthalene(B1 9-12'bg), 1500ppb ethylbenzene(B2 9-12'bg), 1300ppb xylene(B2 9-12'bg), 460ppb xylene(B3 9-12'bg), 1500ppb ethylbenzene(B4 9-12'bg), 1700ppb xylene(B4 9-12'bg), 13000ppb naphthalene(B4 9-12'bg), 2800ppb ethylbenzene(B6 9-12'bg), 2600ppb xylene(B6 9-12'bg), 26000ppb naphthalene(B6 9-12'bg). MEG believes that the No. 6 oil spill extent has not been

completely defined . Report recommends submission of a possible workplan. Vought called Marrone (Ph:845-569-1200) and agreed to installation of one monitoring well adjacent to former UST location with biweekly monitoring and quarterly sampling. Vought sent and e-doc'd letter requiring installation of one well next to former UST. Letter sent via email and mail and called and spoke to Bluttal and explained same.

4/19/12-Vought-Vought received call from and spoke to Marrone and one inch well was installed and on 4/9 well was gauged and inch of product in well. Well installed at former boring location B-3. Groundwater not at 10' bg as previously submitted but at 6 below grade. Marrone will submit site plan with well location and summary letter to DEC within two weeks.

6/5/12-Vought-Received call from and spoke to Jerry Williams (Controlled Combustion Ph:718-367-9800x204 email:j.williams@heatingny.com). Williams requested review.

6/19/12-Vought-Reviewed Groundwater Monitoring report dated 4/25 submitted by Miller (Marrone). One inch diameter well installed adjacent to UST with a total well depth of 13'. Viscous dark oily product was present measuring .10-feet in thickness. No groundwater sample collected due to presence of free product. Miller recommends installation of recovery wells or sumps to recover oil and active recovery techniques will be discussed in a later work plan. Vought called Miller (Marrone) and Miller is working for Controlled Combustion. Vought and Marrone discussed installation of recovery wells and/or sumps and interim remedial methods (eg manual bailing). VEFR may not be effective due to one inch well and viscous product. Vought called Williams and explained DEC requirements and Vought drafted letter with requirements as well and added to E-docs and sent to Bluttal with cc to Maronne and Williams.

9/4/12-Vought-Received call from Miller (Ferguson) requesting review of Work Plan.

1/6/12-Vought-Received numerous inquiries from Miller (Ferguson) with respect to review of 6/22/12 Work Plan. Vought unable to review Work Plan to date due to extreme workload associated with Hurricane Sandy and Boston 30 Spills.

1/7/12-Vought-Called and spoke to Miller (Ferguson) and he noted that an additional Work Plan with either sumps or recovery well installation proposal will be submitted to DEC upon installation of additional delineation wells. Vought sent approval letter for Work Plan dated 6/22/12 to owner with cc to Ferguson and added letter to e-docs.

10/1/12-Vought performed complete file review to date:

Work Plan (Miller)-6/22/12. Proposal to install three delineation monitoring wells (one inch diameter) west and south of MW1 and survey of surrounding buildings with DEC assistance. Deepest dry and highest PID soil samples will be collected for analysis. Proposal also includes recommendation for installation of two 4 recovery wells (or sumps). Proposal also for weekly recovery of product via bailer on MW1 and submission of interim remedial recovery records.

Quarterly Status Report (Miller)-May 2012 to July 2012-9/6/12. In Borings B1 thru B6, All soil samples exhibited No.6 oil staining except boring B-5 . Bedrock in all borings from 13.5-14.5' bg. Weekly bailing has been ongoing with latest product thickness on 8/31/12 at .01'. Report recommends continuation of bailing events. Report recommends continuation of hand bailing until DEC approves RAP.

5/3/13-Vought-Received call from and spoke to Ferguson and he will be installing one 4 recovery well next week and will perform additional delineation wells pending thickness of product in recovery well considering overhead limitations in underground

parking garage and effects of feasibility of well installation. Current file review to date:

Email from Ferguson to Vought-4/17/13. Email that Looking to move forward at the 71st street site ~ We are planning on setting a 4" recovery well at least a foot below the watertable, adjacent to the tank and setting up a belt skimmer system for the recovery of the product. Would you like me to prepare a quick work plan showing the location of the well and the system proposed? Thanks,

Email from Ferguson to Vought-4/24/13. Email that Hey Jeff, Looking to start the work at 71st street ~ we are going to install a 4" recovery well in the location of the 3/4" well currently on site. And install a belt skimmer system to recover the oil. You had wanted an update when we decided upon which way we were going to go. Give me a call when you get a chance so we can discuss. Thanks, Rob

5/8/13-Vought-Received email from Ferguson that Going to be installing the recovery well at 400 71st street On Monday May 13th ~ we will be on site between 1am and 9am, we will also be out there on Tuesday (same time) to install bollards. Once the well is installed and I get a good depth reading I will order the belt skimmer. Rob

4/3/14-Vought-To date file review by Vought:

8/16/13-Vought-Email from Ferguson that Hey Jeff, Just a heads up ~ I had written the system installation report for the above site and thought I sent it off to you ~ then got pulled out into the field for a few weeks and was wondering why I hadn't heard back from you. Ends up I never sent you the report ~ sorry. I am going to give it one final read and then send it to you on Monday ~ we may need a second well ~ I think the product may have moved. I will call you about mid-week to discuss. Thanks, Rob Vought received another email from Ferguson with attached Quarterly Status Report that described system installation.

Quarterly Status Report (Miller) December 2012 to May 2013. Miller still awaiting DEC Approval of RAP dated 6/22/12. Sensitive receptor survey also performed and noted surrounding properties were mixed residential commercial uses with two schools .25 miles from the site. Weekly bailing being performed as IRM shows depth to water from 5-8'bg and product thicknesses of trace to .1' thick. Report notes that in May 2013, a 4" recovery well was installed adjacent to MW1 and a belt skimmer will be installed in June 2013. Vought added report to e-docs.

Quarterly Status Report (Miller) October 2012 to December 2013. Miller still awaiting DEC Approval of RAP dated 6/22/12. Product thicknesses from trace to .02 to .03' thick in MW1 and no product in RW1 due to operational belt skimmer. Vought added report to e-docs. A belt skimmer was installed in June 2013 at RW1 as well as a 55-gallon drum for recovered product. Depth to water is 5-7'bg. During Quarter, site was visited three times (10/14, 11/1, 12/2) and the drum had the following thicknesses: (5.5, 6 and 6). Report recommends monthly OM&M visit and quarterly reporting. Vought no longer required appointment with consultant for surrounding building sump survey in lieu of off-site well installation as cone of depression of water table associated with sump would likely result in no off-site migration of contamination also characterized by high viscosity.

4/4/14-Vought-Sent approval letter for Work Plan dated 6/22/12 to Bluttal with cc to Miller Ferguson and added letter to e-docs.

2/10/15-Vought-Received email from Miller (Ferguson) that Jeff, Just cleaning up last years folders ~ did I send these over to you? If so please disregard ~ if not ~ sorry here you go Thanks. Attached to email was Quarterly Status Report dated 10/10/14 and Quarterly Status Report dated 1/30/15. Vought added both reports to D2.

Quarterly Status Report July to Sept 2014 (Miller)-10/10/14. In the interim, MEG has been going to the site weekly since June

26, 2012. Since the weekly bailing of the free product began, the thickness has been diminishing. The surrounding properties include residential apartments/co-ops and local commercial retail. Report includes sensitive receptor survey. On June 25, 2013, MEG installed a belt skimmer system at the recovery well (RW-1) location. Remediation system operation, maintenance, and product monitoring visits should be conducted on a monthly basis. Reporting to the NYSDEC will be done quarterly, which will include field observations, product recovery amounts, and disposal documentation. Monitoring results show .01' free product (MW1) and DTW of 5-9'bg.

Quarterly Status Report Oct to Dec 2014 (Miller)-1/30/15. In the interim, MEG has been going to the site weekly since June 26, 2012. Since the weekly bailing of the free product began, the thickness has been diminishing. The surrounding properties include residential apartments/co-ops and local commercial retail. Report includes sensitive receptor survey. On June 25, 2013, MEG installed a belt skimmer system at the recovery well (RW-1) location. Remediation system operation, maintenance, and product monitoring visits should be conducted on a monthly basis. Reporting to the NYSDEC will be done quarterly, which will include field observations, product recovery amounts, and disposal documentation. Monitoring results show thick free product (MW1) and DTW of 5-9'bg.

5/15/17-Vought-To date file review by Vought:

Quarterly Status Report Jan to March 2015 (Miller)-1/30/15. In the interim, MEG has been going to the site weekly since June 26, 2012. Since the weekly bailing of the free product began, the thickness has been diminishing. The surrounding properties include residential apartments/co-ops and local commercial retail. Report includes sensitive receptor survey. On June 25, 2013, MEG installed a belt skimmer system at the recovery well (RW-1) location. Remediation system operation, maintenance, and product monitoring visits should be conducted on a monthly basis. Reporting to the NYSDEC will be done quarterly, which will include field observations, product recovery amounts, and disposal documentation. Monitoring results show thick free product (MW1) and DTW of 6-9'bg. Vought added report to D2.

Quarterly Status Report April to June 2015 (Miller)-1/30/15. In the interim, MEG has been going to the site weekly since June 26, 2012. Since the weekly bailing of the free product began, the thickness has been diminishing. The surrounding properties include residential apartments/co-ops and local commercial retail. Report includes sensitive receptor survey. On June 25, 2013, MEG installed a belt skimmer system at the recovery well (RW-1) location. Remediation system operation, maintenance, and product monitoring visits should be conducted on a monthly basis. Reporting to the NYSDEC will be done quarterly, which will include field observations, product recovery amounts, and disposal documentation. Monitoring results show: .11' free product (MW1-5/2/15), .05' free product (MW1-6/3/15) and DTW of 6-9'bg. Vought added report to D2.

5/16/17-Vought-Received email from Ferguson on 5/9/17 that Morning Jeff, Just checking to see if you had a chance to review this site ~ the client is wanting to know if you would be will to close it. Also here is the most recent QMR ~ I've been out in the field a bunch lately and I do not think I sent it over to you yet. Thanks . Vought added attached QMR to D2 and reviewed:

Quarterly Status Report Jan to March 2017 (Miller)-4/28/17. Bedrock/refusal (Schist) was observed in all borings advanced ranging from 13-feet to 14.5-feet below grade. Due to the depths of the bedrock discovered, the building's footing is likely sitting on bedrock. Before the building was constructed, overburden and bedrock must have blasted/removed. Since the building is set onto the rock, perched groundwater on top of the bedrock is likely traveling to the deepest point beneath the building or to sump areas. Monitoring results show: Thick free product (MW1-1/23/17), .03' free product (MW1-2/22/17), .05' free product (MW1-3/27/17) and DTW of 6-9'bg. Remediation system operation, maintenance, and product monitoring visits should continue to be conducted on a monthly basis. Due to an increase in product within the recovery well, MEG recommends that the belt skimmer

not be relocated at this time. A new small belt should be placed on the belt skimmer in its current location in an attempt to reach a greater depth within the recovery well. Reporting to the NYSDEC will be done quarterly, which will include field observations, product recovery amounts, and disposal documentation.

5/16/17–Vought–Sent email to Miller(Ferguson) that Rob, I reviewed the QMR below as well as those from the prior emails and have the following questions/comments: 1) Any Quarterly Monitoring Reports between April–June 2015 and Jan–March 2017? 2) Correction of QMR statement that “On June 22, 2012, MEG provided a work plan to the NYSDEC. MEG is awaiting approval of the work plan from NYSDEC.” My spill notes are as follows: 4/4/14–Vought–Sent approval letter for Work Plan dated 6/22/12 to Bluttal with cc to Miller Ferguson and added letter to e–docs. 3) Please define “thick” oil. 4) Correction of Recommendation for continued monitoring as client is seeking closure, which DEC is willing to consider at this time pending possible submission of additional reports, if available, and definition of “thick” oil. QMR should include a request for closure. If you need me to formalize the above in a letter let me know. Feel free to forward this email onto the client as well. Thanks, Vought received reply from Ferguson that Jeff, Attached are the missing reports ~ let me know if you are missing any others. I will revise the next quarter’s QMR to include your comments below and will request the closure in there as well. No need to formalize it yet ~ the Patel closed out the York site (same client) so now he wants this one closed ~ told him I’d ask but that each site is different so not to get his hopes up. Thanks Again, . Vought added attached QMR’s dated 4/25/17 and 7/24/15. Upon review Vought realized this QMRs already added to D2 and reviewed by Vought above. Vought sent email to Miller(Ferguson) that Thanks Rob, I look forward to the updated QMR with the closure request, edits and clarifications.

DEC Requires resubmission of QMR including: 1)Any Quarterly Monitoring Reports between 2015 and 2017?. 2)Correction of QMR to reflect that another workplan was submitted and was approved by DEC after 6/22/12 workplan via using DEC Remarks above. 3)What is thick oil as noted in QMRs 4)Correction of recommendation for continued monitoring as Ferguson requested closure in email. 4)cc to Ferguson

12/18/17 – Austin – Project reassigned from Vought to Patel – end

01/03/18–Hiralkumar Patel. with DEC Austin’s approval, reviewed emails in DEC Vought’s account related to the subject spill case. DEC Vought received email from Robert Ferguson on 11/06/17 including quarterly reports for 2nd and 3rd quarters of 2017. maximum of 0.10 ft product (on 06/26/17) noted in well MW–1 during gauging from Apr. to Sep. 2017.

01/05/18–Hiralkumar Patel. 8:45 AM:– spoke with Robert Ferguson at Miller Env and asked him to correct information about work plan approval status in reports as DEC Vought asked earlier. also inquired him about ‘thick’ oil noted in wells. he stated that product must have coated probe sensor preventing product thickness measurements. Robert will submit 2017 4th Quarter report next week including corrections/clarifications. asked Robert to include a summary table with well gauging data since 2012.

Robert Ferguson Miller Environmental Group, Inc. Ph. (516) 876–7940 Ext. 311

(631) 603–6683 email: rferguson@millerenv.com

01/08/18–Hiralkumar Patel. 9:38 AM:– received email from Rob including 2017 4th Quarter report. during monthly gauging, 0.09 ft product noted in well MW–1 and ‘thick’ oil noted during gauging in Nov. and Dec. 2017. report also included a summary table including gauging data since 2012.

reviewed site map submitted with the quarterly report. the map does not show location of well MW–1. as per site history, a 1–inch

well (MW-1) was installed, on 04/02/12, adjacent to the UST at former boring location B-3. on 05/29/13, a 4-in recovery well (RW-1) was installed adjacent to well MW-1. the recovery well was installed to a depth of 8 ft below ground surface.

01/10/18-Hiralkumar Patel. 8:45 AM:- visited site and met building super. inspected boiler room. no signs of oil seepage noted from boiler room's southern wall. current/former tank was located in parking garage on south side of the boiler room. noted drum skimmer near southeast corner of the existing tank room.

11:32 AM:- sent email to (and left message for) Rob inquiring about location of well MW-1 which is not included in site map in the quarterly reports. 3:18 PM:- received email from Rob including report with revised site map. revised map includes location of well MW-1.

01/29/18-Hiralkumar Patel. 2:49 PM:- left message for Rob.

03/06/18-Hiralkumar Patel. 8:16 AM:- left message for Rob. 8:54 AM:- sent email to Rob and inquired him about next gauging event. 9:27 AM:- received email from Rob. he mentioned that crew from Miller was on-site last week for monthly gauging event (for Feb. 2018) and likes to schedule next event after two weeks (for Mar. 2018). 10:12 AM:- received email from Rob confirming next gauging at 8 AM on 03/21/18.

03/20/18-Hiralkumar Patel. 12:40 PM:- received email from Rob. monthly gauging event rescheduled for 03/27/18 due to snow storm forecast for tomorrow.

03/26/18-Hirakumar Patel. 2:35 PM:- spoke with Rob and cancelled tomorrow's scheduled site inspection due to ongoing emergency response at another spill site.

05/09/18-Hiralkumar Patel. 12:29 PM:- received email from Rob including quarterly status report for Jan.-Mar. 2018. no product noted in recovery well RW-1, but between 0.02 and 0.06 ft of product noted in well MW-1.

well gauging data shows that groundwater was mostly noted below 8.5 ft depth in recovery well RW-1, but measured mostly between 5.5 and 6 ft depth in monitoring well MW-1. as per text in the report, the recovery well was installed to a depth of 8 ft bg, but well gauging data shows water level below 8.5 ft depth.

06/14/18-Hiralkumar Patel. 3:03 PM:- sent email to Rob and asked him to submit construction log for RW-1 and MW-1.

10/23/18-Hiralkumar Patel. 8:45 AM:- visited site and met Thomas Cameron from Miller. inspected boiler room. no signs of petroleum seepage were noted. Tom gauged monitoring well MW-1 and recovery well RW-1 earlier in morning and found no product. two wells are located approx. 2 inch apart. Tom mentioned that the monitoring well MW-1 is actually a 3/4 in. dia. piezometer and top of piezometer is approx. 1 inch below parking garage floor. the recovery well is made of slotted PVC pipe from top to bottom and top of PVC is approx. 32.5 in. above the garage floor. bottom of recovery well RW-1 is 84.5 in. below garage floor (and 117 in. from top of PVC). groundwater was found at approx. 5.85 ft below top of piezometer well MW-1.

during inspection Tom showed an out-of-service oil recovery system located more than 80-100 ft away from existing RW-1 skimmer location. no oil was found in a sump adjacent to this out-of-service system. Tom mentioned that the system is off for long time and he has been checking the adjacent sump during each site visit and never observed any oil in it.

01/08/19–Hiralkumar Patel. after discussing with DEC Austin, case closed based on review of all available information (minimal impact to possibly perched groundwater on bedrock, no more oil seepage into boiler room, minimal product recovery (if any) from one recovery well).

Transworld Equities Co.

property owner c/o Manocherian Brothers 150 East 58th Street, 28th Floor New York, NY 10155 Attn.: Lisa Bluttal email: lbluttal@manocherianbrothers.com

10:59 AM:– sent spill closure letter to Ms. Bluttal. letter emailed to Ms. Bluttal and Rob.

2000 gallons remain in tank to be emptied – clean up pending

DEC Investigator Remarks:

8/04/2015: Rashad Spill transferred from Sengesland to Rashad as per RSE. As per NYC building records 311 East 71st Street has alternate address of 311–317 East 71 Street. According to PBS#2–147591, there is a 5,000 gallon #6 fuel oil underground tank. There are also 3 additional spill reports for this location. Spill #9912122 received 01/20/2000 was closed after defective gauge which caused spill was repaired. Spill #0502031 received on 05/19/2005 was closed after no contamination was found and investigation appeared to indicate erroneous reading to the tank gage . Spill #0509514 received on 11/08/2005 was closed after analytic report indicated there was no soil contamination.

8/06/2015: Rashad No documents found in D2. Owner information according to PBS report: 311/71 Owners Corporation 311 East 71 Street New York, NY 10021 212–684–8282

ACRIS: 31171 Owners Corp C/O Maxwell–Kates INC 9 East 38th Street New York NY 10016

8/11/2015: Rashad Sent email to ptciam@aol.com: After reviewing the failed tank test for 311 East 71st Street spill#1203017 dated 6/26/2012, I would like to request the following information: Copy of failed tank test report. Test results for supply/return and vent/fill lines. Current property owner and contact information. Marisol sent email stating scanner is not working, she will be faxing the information.

8/24/2015: Rashad Mark sent email: Omar...we were a sub on this job for Marlande Heating (718) 993–4351 I do not know who the building owner is, but after we tested that tank we never did go back...if I remember correctly the top of the tank was in really bad shape, the manhole attachment rotted off and not a candidate for repair...I don't know what they did after our involvement. <http://www.marlandeheating.com/contact.htm>

8/31/2015: Rashad Email sent to Frank from Marlande Heating: After reviewing the spill report for 311 East 71st Street, New York NY spill#1203017 dated 6/26/2012, I would like to request the following information: Failed tank test report. Test results for supply/return and vent/fill lines. Property owner information.

9/1/2015: Rashad – Frank emailed back on 8/31/2015: Pursuant to your email below, Marlande Heating is the service provider for 311 East 71st Street. In checking our records, on or about that time period Petroleum Tank Cleaners was our subcontractor who cleaned the oil tank. Any report of a spill would have been made by them and a remediation would have been there responsibility as Petroleum Tank Cleaners were contracted directly by the building. I am not certain if Petroleum completed the work at that time or if the building selected another contractor. Unfortunately I do not have any further information for you.

9/4/2015: Rashad Sending TTF letter to both addresses listed above. Documents uploaded to D2.

9/16/2015: Rashad Emailed Neil Wishnia: nwishnia@maxwellkates.com: I am currently reviewing an old spill case for 311 East 71st Street, New York NY 10021 dated 6/26/2012 spill#1203017 where a tank test failure was reported. I am trying to locate any information in regards to this tank test failure including reports or any repairs made. Any information would be appreciated. Neil responded Thank you for reaching out to me. I am in the process of following up with a representative of the oil tank company that worked on the case back in 2012 and expect that he or I will be back in touch with you very shortly to resolve this issue. This matter is definitely being prioritized. Responded back to Neil: I appreciate the update, please keep me informed as new information is available. Due to the age of the case I understand it will take some time to recover information.

9/28/2015: Rashad Received email from Neil Rashad, please see attached Final Report from the Oil Tank Company, A.L. Eastmond and Sons (2 pgs.) Kindly confirm receipt at your earliest convenience. The email contained a passing tank test dated July 30th

2012, the test also indicated a #2 fuel oil as product type. File has been uploaded to D2.

9/30/2015: Rashad Sent email to Neil: Do you have information on why the initial tank test failed or what repairs were made to produce a passing test? Also was any soil contamination found?. Neil responded: Rashad, I will follow-up with the contractor to try and obtain that information as quickly as possible. Received email from Neil Tomasetti of Eastmond & Sons: The tank test failure was due to a bad vent line. The fuel oil tank is buried below an elevated shrubbery box in the front of the building. The super waters the plants regularly. When the vent pipe was replaced all pipes in the area were replaced sleeved in water tight 4" flex pipe for protection. There was no contamination or product leakage

10/1/2015: Rashad Spoke to Tim, due to passing tank test as well as repair of vent line and no soil contamination as specified by Eastmond & Sons the case will be closed. Sent email to Neil to verify address: I will be sending out a spill closure letter for 311 East 71st Street. The address I have on file is 9 East 38th Street NY, NY 10016, is this correct or would you like me to send it to an alternate address? Neil confirmed address and spill closure letter uploaded to D2 and sent to owner.

NEED to send a TTF letter

Nov. 25, 2005 A Tank Test Failure Letter was sent to:

Mr. Mitchell Berg Maxwell-Kates Inc 9 East 38th Street- 6th Floor New York, NY 10016

05/17/06-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin.

6/15/06 - Raphael Ketani. I received the September 2, 2005 cover letter/narrative for the soil investigation at the site from Neil Tomasetti of A. L. Eastman & Sons and the 9/1/05 soil analytical results report. The analytical report indicated that there was no soil contamination. The letter 9/2/05 letter stated that no contamination was found.

Based upon the 9/2/05 letter and analytical results, I am closing this spill case.

DEC Investigator Remarks:

7/25/07 Called Gary Dorin of Edison Properties, LLC (973)849-2546. Left message requesting a call back. bf

8/17/07 Pasquale Soriano of Edison Properties called (973)849-2600 and left message. He is in charge of this building.

8/21/07 Mr. Soriano called and left message. I called him back. All Climate is handling repairs. Tank is AST. They are under contract to install new boilers. Sent ttf letter to: Pasquale Soriano Edison Properties, LLC 100 Washington St. Newark, NJ 7102

bf

9/6/07 Received message from Carol 718-894-7505. Tank was repaired (she's not sure of repairs made) and passed retest. She is requesting a two week extension. I told her that was fine. bf

9/14/07 received letter from Caroline Gallego of All Climate. Letter included 3 sheets from Petroleum Tank Cleaners showing that manhole was resealed with new nuts and bolts.

10/9/07 Received call from Caroline Gallego of All Climate Mechanical Corp. Wanted to know status because she sent in a report from PTC and she requested a NFA letter. I did not receive the report, so she faxed it to me. It was a tightness test report and not a closure report. Called Caroline back and explained that a response to my 8/21/07 letter is required. She said she will contact PTC and request a letter. Received another call from C. Gallego. She said that All Climate did the repair work. She faxed a letter to me stating no contamination found. NFA. Letter sent to: Christine Gallego All Climate Mechanical Corp. 565 Woodward Avenue Ridgewood, NY 11385

Caller Remarks:

Tank test failure on UST. Tank to be removed. Pending assessment. Request callback ASAP from Spill Responder.

DEC Investigator Remarks:

DEC Piper spoke with kristen. As per conversation tank failed a tightness test. It was first believed to be a wet leak though after retesting it was found to be dry. Possible oil in line gave false reading. ATEC will return tomorrow and pump out tank and investigate. Tank will be replaced. followup needed.

DEC Piper received documentation that tank was replaced. Endpoints show low level SVOC and VOC. Spill closed. See edocs if warranted.

Caller Remarks:

TYREE WILL MAKE REPAIRS AND CROMPCO WILL LATER RE-TEST.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 1/23/04 TJD Dave Yudelson called concerning site. A property transfer is pending on site. A work plan is being prepared by PW Grosser to investigate if any leak occurred from this tank. Dave states repairs and retest of tank occurred but is unable to produce any documentation. 10K UST tank is located beneath center of building, inside. The work plan will propose three borings along tank centerline.

2/5/2004 Sangesland spoke to Robert Bertlesman (leaseholder) He says the tank is in service and is under the floor in the middle of the building. Sangesland informed him that use of the tank was against the law until the spill number is closed out. The soil borings which are needed can be done adjacent to the tank, but a Test Plan for the location of the borings would need to be submitted to Tim DeMeo for approval prior to the work being done. Sangesland faxed a copy of this spill report to Mr. Bertlesman.

2/19/04 TJD Attorney Dave Yudelson (representing owner) contacted Demeo regarding access problems with site tenant (RCN). Dave states building owner wants to move forward with an investigation but tenant will not provide access. He further states that tank is still in use after failing the tightness test in September 2000. Standard TTF letter mailed to registered owner and faxed to Yudelson @ 212 906 9032.

3/18/04 TJD Tank test performed – passed. Subsurface investigation performed revealing low level SVOC contamination likely caused by historic fill. Site does not meet standards. Spill closed.

Demeo needs to send a TTF letter to property owner

10/18/12 TJD T/C with Greg Collins @ GC Environmental. Conversion from #6 >> #4 Fuel Oil. 3K AST tested after cleaning failed tightness test when empty. Concrete floor reported in good condition with no cracks or drains reported. Tank was installed with bottom in contact with soil – tank has been temporarily jacked and supported – no holes noted. GC Environmental has subcontracted with WCC Tank Technology of Newburgh (845 564 9555) for relining tank with fiberglass. DEC informed Greg Collins that PBS registration must be updated to reflect changes & appropriate standards must be followed in application and installation

of proposed liner. A minimum of (3) soil borings must be performed along centerline of tank bottom to a minimum depth of 2 ft bgs – samples should be field screened with a PID and endpoint samples are required to be analyzed at NYS ELAP approved laboratory utilizing EPA methods 8260/8270. Prior to the relining of tank a new concrete floor will be poured and tank will be placed on newly installed saddles. Following completion of repairs and prior to filling tank with product a system test must be performed. Greg was directed to provide DEC with an update of any significant findings identified during subsurface investigation prior to backfill. Photographs, boring logs, laboratory reports, and copies of both initial failed tank test and final tank test are required as part of closure documentation.

2/11/13 TJD File review. Greg Collins (GCI Environmental was notified via e–mail that closure report submitted was missing required information. As per DEC directive, consultant was required to include copy of failing tank tightness (dated 8/7/12) and following repairs to tank a system tightness test is required. Documentation contained in closure report does not include original failing tightness test and the 12/18/12 tightness test is listed as a tank only test. In addition, the PBS registration application contained in closure report does not accurately reflect tank system currently in operation. GCI has been requested to investigate discrepancies and resubmit an amended closure report. Awaiting revised report.

3/7/13 TJD File review. Revised report has been received. Initial failing tightness test is for a dry leak. A total of (3) soil borings were performed along centerline beneath AST – laboratory analysis of collected samples are within acceptable limits. Missing documentation has been provided. PBS registration included with revised report still appears to contain information inconsistent with tank system in operation at facility – PBS unit (BF) has been informed of potential discrepancies and will perform the necessary follow-up if warranted. No further action is required.

DEC Investigator Remarks:

5/8/07 – Raphael Ketani. I received a call from Dave Hermantan of P.W. Grosser (631) 589–6353 stating that his company is the consultant for the Bentley Hotel at 1150 York Avenue (500 E. 62 Street) in Manhattan. He stated that his company was putting together an environmental plan for the hotel and that there are gasoline odors in the lobby. He said that there is an Exxon–Mobil gas station next door at 1132 York Avenue. He said that this has been an ongoing problem for several months now.

A little while later, Mr. Hermantan called back to say that he had talked to his supervisor and there isn't an odor problem. I responded anyway and made a site visit in the morning. I met the assistant general manager of the hotel, Erika Cianciulli (212) 644–6000, and she showed me the lobby and the garage beneath the hotel and the gas station.

The vapor levels in the lobby were about 120 to 150 ppb, according to the PID meter. I didn't sense any odors. The garage ambient vapors were 170 to 200 ppb, and the odors were of exhaust. However, the southwest corner of the garage had vapor concentrations of about 300 ppb. I did not sense any gasoline odors. However, Ms. Cianciulli said that she does sense gas vapors on warm days and when the station gets a fill up.

I told Ms. Cianciulli about my findings and went to see the manager of the gas station. I met Eyaniman Palouki, manager (212) 935–7467, and told him why I was here. He gave me a copy of a letter from Gemstar and told me that some people from Exxon–Mobil had visited the gas station in March 2007, did some tests and left.

I contacted Gemstar (718) 442–8200, but could only leave a message.

5/10/07 – Raphael Ketani. Mike Meyerhoffer from Kleinfelder Inc. (631) 218–0612 contacted me in response to my call to Gemstar. He said that Thomas Gibbons in Albany DER was the case manager for the spill case involving the gas station. He said that a consultant from his company did a vapor survey in the garage with a ppm PID meter and detected 0.0 to 0.2 ppm total VOCs. He said that quarterly reports are submitted to Mr. Gibbons. Mr. Meyerhoffer added that there is a vapor abatement system in the vault for the gas tanks. I told him that since Mr. Gibbons was involved in the active spill case, then I will leave it up to him to monitor the situation.

May 2010 – The SVE system has been operating since November 30, 2005. OM&M is conducted monthly. It has been observed that during tank refills for this active service station that there is a spike in recovery volume, suggesting that there may be a tank leak, although pressure tests of the tanks have indicated that the tanks are sound. The Department requested that the USTs be reevaluated by an independent tank tester to determine the source of these recovery spikes. The tanks were tested on November 10, 2009 and found to be sound. Other options will be discussed with the consultant. The latest SSUR was issued May 25, 2010. OM&M and VES sampling continues every two months with results consistent with the previous SSUR. results. Nov.2010. Kleinfelder called to say that in January or February 2011 the tanks, tank vault, and associated Vapor Abatement System (VAS) will be removed as part of EM divesting itself from this property. EM wished to close the spill and the consent order at that time. July 2011. Tanks that were in a basement vault have been yanked. EM has submitted a request to close. It is being reviewed by staff.

Project transferred to J. Drumm on 11/22/11. (11/25/11)

Pea gravel surrounding the tanks tested positive for diesel range organics. PM from GES does not want to sample under the parking garage floor due to high water table. GES is reviewing options for determining whether any contamination exists under the former tank area. (1/27/12)

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 10/10/95: This is additional information about material spilled from the translation of the old spill file: TTF.

4/12/04–Vought–Spill transferred from Tang to Rommel as per Rommel.

11/29/05 – L. Alden – Site is the block (between 1st and 2nd Avenues and E. 59th and E. 60th Streets) situated beneath ramps to the Queensboro Bridge, formerly owned by York Hunter Construction Co. Refer to PBS # 2–601814. This site MAY be associated or combined with PBS # 2–455784 and spill #9513279, which are for 350 E. 60th Street, the property on the 60th Street side of the block. Search on property address turns up only one parcel for the entire block.

Property Shark search found 2 permits associated with the site:

3/9/94 – Conversion of two existing underground 2,000–gal. fuel storage tanks and ancillary systems from gasoline to diesel. Replacement of fuel pumping systems at these two tanks. Abandonment/decommissioning of one 2,000–gal. UST. 11/7/94 – one 550–gal. UST to be removed. One pump island and dispenser to be removed. All as per plans filed herewith.

Sent letter to NYCDOT requesting information. Vivian Marcovicci (718–793–7186) called back and informed me that this site is not a DOT facility. I am not totally convinced this is the case, due to the above comments on the other property on the block. Suggested action: attempt to contact the Dept. of Sanitation.

11/16/06 – Austin – Reassigned to Patel for followup/review – end

11/27/06–Hiralkumar Patel. found another open case at this site. spill #: 9513279. Joseph Maison in remediation group working on this case. after discussing with DEC Kolleeny, case closed. refer to 9513279.

DEC Investigator Remarks:

07/28/05 Reassigned to Dennis M. Pokrzywka for Spill Closure Initiative

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL. This spill was reassigned from DEC Sigona to Rommel on January 7, 2004.

DEC INVESTIGATED SPILL MET WITH SOIL MECHANICS CARL VERNICK ON 8/24/95 AT 11AM. MARKED OUT PROPOSED LOCATIONS FOR MONITORING WELLS/SOIL BORINGS AROUND ABANDONED 2- 550 GALLON USTS.

ASKED HIM TO TEST SOILS FOR VOLATILE ORGANICS.

ON OCTOBER 20, 1995 SOIL MECHANICS/ENVIRONMENTAL SERVICES-SUBMITTED RESULTS OF SOIL BORINGS 8 BORINGS TO A DEPTH OF 15 FEET. THEY USED TPH AND HEAD SPACE ANALYSIS TO EVALUATE SOIL SAMPLES. THE RESULTS INDICATED ELEVATED READINGS, REQUESTED TO RETEST SAMPLES FOR 8020 CONSTITUENTS. THE SAMPLES EXPIRED THE TIME PERIOD FOR VOLATILES BUT WE SUGGESTED THAT THEY TRY TO TEST THEM ANYWAY.

ON 10/24/95 SPOKE TO GORDON HAMM AT GMC TO REQUEST RE-TEST OF SOIL USING EPA METHOD 8021, THEY AGREED.

Foil Request received Michelle.Escobedo@2AveSubway.com

ON 11/15/95 DEC RECEIVED VOLATILE RESULTS. i.e. 210 PPM-XYLENE, 2.4 PPM BENZENE. THE RESULTS WERE RELATIVELY HIGH FOR SOIL.

ON 12/5/95 SENT CERTIFIED LETTER TO VIC CIZI REQUESTING FOLLOW-UP AT GARAGE MANAGEMENT. WILL FOLLOW-UP WITH LETTER FOR STIPULATION.

On January 3, 1996, sent certified letter requesting letter for commitment and request for stipulation. The stipulation is due on January 17th, 1996, and a corrective action plan is due on January 30, 1995.

On September 22, 1999, the DEC received a follow-up report on the effectiveness of the cleanup and to evaluate the groundwater at this site. DEC Sigona sent letter on November 26, 1999 requesting further operation of the SVES.

12/11/2006 - Correspondence with Katrina (Kathy) of Soil Mechanics.

Tried to emphasize Bullet Point 3 from November 26, 1999 letter (Sigona) several times in Email and conversation with Katrina (Soil Mechanics). Asked for some recent Air Reports from SVE systems, which is apparently still running. Told her, if we could simply get some soil samples we could likely bring this spill to closure. See Email transcript in Edocs.

Spoke with Gordon Hamm very briefly (Jan 10, 2007) and relayed the same info (above) to him.

June 26, 2008 - Contacted again by Steve Schmid, consultant with 2nd ave subway - www.2AveSubway.com, Construction consultant for MTA, wanting to do some subway work. He's trying to coordinate an on-site meeting with owners to prep for an exploratory drilling project in the garage, but is a little apprehensive. I told him spill is still open, and not his responsibility, but if, during excavation they encounter gross contamination, to call the spill hotline, but also have them refer, or make a note in reference to this spill. DMP

March 02, 2010 – Dan Marzano of Soil Mechanics called me, asking about this spill, and how / if we can bring it to a close. Mentioned something about the SVE system, which had been running up until about a month ago. He is interested in getting the latest status report, and following our latest recommendation to bring the spill to a close.

Nov 23, 2010 – Call From Dan Marzano at Soil Mechanics, Requesting closure. dmarzano@soilmechanicscorp.com – (516) 315–0574. He restated that Sub–Slab Soil borings / sampling would be too difficult, because of limitations getting a drill rig through an elevator shaft (only access). The area that was excavated is already sealed off (concrete). He is sending the latest Air Samples from the SVE system, and will send a letter requesting closure.

Follow –up call with Dan Marzano, letter, and Air Sampling reports, on its way. Spill is being closed administratively 11/29/2010. DMP

Dec 03, 2010, Fax (Letter Dec 06, 2010 via Mail) Received From Soil Mechanics from Dan Marzano. Letter requesting closure, along with latest air sampling reports associated with the soil vapor extraction system as requested.

Letter states that system has effectively remediated contamination and residual levels will naturally attenuate. Declining contaminant concentrations based on air samples indicate a diminishing point of return to keep running the SVE. No indication of off–site contaminant migration (i.e. in adjacent Subway), therefore spill is being closed.

Dec 08, 2010. UIS Comments updated, letter, and Email transcript added to Edocs. DMP

Re: NEW FOIL 12–1387 (Escobedo) Spill 9505495, New Spill discovered during excavation. 1201243

Michelle.Escobedo@2AveSubway.com – Michelle a contractor (Parsons, Brinkerhoff), Mobile: 646–467–2289

May 15, 2011, Sent (zipped) documents in Edocs out electronically and cc'ing to foil officers, but there's not much that they will find helpful in order to meet their more immediate objective. Their primary concern is they need to know if they can go forth with their construction / utility project. In order to do this they (contractor) needs to know

1.) Can they cut / plug / cap some of the old SVE systems lines in or do some excavation? Old SVE systems still is there, though not running. 2.) What should they do with the 2 wells that are still on–site (in the basement near the excavation site)

Thanks for calling Friday to explain your need to look at the Spill file. I am sending a few files in the embedded zip file attachment that I scanned in a couple of years ago. It contains more relevant, correspondences, site sketches, and most recent reports. The (paper) file is pretty thick with many pages of old air samples from a former SVE, that I don't think will have any relevance to keeping your project on schedule.

I am going to follow up with a call in a couple of minutes to discuss the your concerns about the SVE system and the 2 monitoring wells that remain on site.

May 15, 2012 PM Wrote back :

Michele,

As I mentioned during our discussion, Spill 9505495 is closed, and no further remedial action at this site from this spill is necessary. Any activities involving the former remedial system or any appurtenances to it must be coordinated with the owner of this property, Garage Management, Corp.

For your information, I have attached a subsurface investigation report, 9505495_Apr23_96.pdf with a site sketch (p4) illustrating soil boring locations and soil boring logs. I see no indication of any monitoring wells from this report, or any of the other reports in the file.

If further contamination is encountered during your upcoming site work, you can report it to the NY State Spill Hotline at 1800 457-7362.

4/1/13-Vought-See also spill #1201243 at sme site.

Caller Remarks:**TANK FAILED DUE TO HOLE IN TOP OF TANK: TEMP PATCH WAS PLACED, AND THEN TANK PASSED, REMOVING TWO DRUMS OF CONTAMINATED SOIL:**

DEC Investigator Remarks:

1/15/08 bf: Called Pro Test and left message with receptionist for John Leddy to call me back. Sent ttf letter to: Linda Andersen Akam Associates 8 West 38th Street, 7th Floor New York, NY 10018

Spoke with J. Leddy. Contaminated soil found. Temporary patch held system tight during 2nd test. Will make repairs for permanat patch. I told him they will need to do sampling because of the contaminated soil. Called L. Andersen, of Akam, left message on machine.

Received fax from J. Leddy. Tank is #6 fuel oil and contaminated soil was found in a concrete walled manway where the hole in the tank was found. He believes it was probably a past overfill that contaminated soil in manway. If there is any other contamination, they do not know. bf

1/31/08 On 1/29/08, Received fax from J. Leddy. Failing results from 1/14/08 and passing results from 1/14/08. Sent soil contamination letter to L. Andersen at above address. bf

2/11/08 Received letter from Jerry Williams of Controlled Combustion. Authorization has been given to install temporary tank and to pump out, clean and perform an ultrasonic inspection. Will install 12K UST Work to begin week of 2/11/08. bf

4/10/08 received closure report and letter. Samples taken from top of tank not from sides and/or bottom. Tank retested and passed. bf

6/18/08 Received email from Nicholas Marrone of Miller Environmental Group requesting update. Called him at (516)876-7940 x-318. Left message on voicemail for him to call me. bf

10/8/08 Received fax from Neil Tomassetti of Eastmond. They installed a steel lining for the tank. A 4' X 8' area where the tank patch (failure) revealed no contamination. Also, suction, return, vent, and fill lines werer replaced. All areas excavated were visibly clean with no odor or discoloration associated with oil. NFA. bf

Caller Remarks:

Tank test failure, underground. Unknown if anything leaked.

DEC Investigator Remarks:

7/28/14--Vought--Received inquiry from DEC Falvey who received call from Laura Noggle (Church of the Epiphany Ph:212-737-2720) PBS 2-283606 that tank was pumped out and manway was sealed and she wanted to know next step. Vought reassigned spill to Vought as spill was assigned to DEC Patel by DEC Demeo however DEC Patel is out of office for two months. Vought called and spoke to Laura who noted that they were still working with Petroleum Tank Cleaners (Mark Salamack) who had partially excavated the UST from a front garden of the Church by 74th Street and York Avenue. Noggle noted that she was not sure as to the future plans of the UST. Vought called and spoke to Salamack who noted that PTC was going to send the Church a proposal for installing soil borings through the UST. PTC Salamack also noted that he was not sure the of the status of the UST piping. Mailing address for owner is:

Laura Noggle/Chris Abit Church of the Epiphany 1393 York Avenue New York, NY 10021 email: noggle@epiphany.nyc.org

Vought drafted and sent TTF letter including requirements of 1)Delineation of contamination (via soil borings or endpoint samples upon excavation) 2)Submission of test results for UST piping. Vought also added letter to D2.

7/29/14--Vought--Received reply from PTC Salamack that Jeff...the tank tester tried to take a shortcu and did not test the lines (as he was instructed to do)...he is going back today to test lines...also the tank is empty...will keep you abreast of the situation...Mark . Vought sent reply that Mark, Thanks for the update and and as always will need a copy of the line test and investigation via soil borings or excavation with endpoints if the lines fail. Thanks.

7/30/14--Vought--Receivee email from PTC Salamack that Jeff...it turns out that the fill and vent come right off the tank, are exposed and no evidence of any contamination; the suction and return are copper, within secondary containment, for a short length, the remainder of the lines are visible..so it seem that it has to be the tank...don't know where on the tank.....it's a 2,000 gallon tank...probably between 15 and 20 feet long....should I continue with obtaining soil samples from underneath?...and how many...my thought is 3 samples from between 1 and 2 feet below tank bottom...Mark

8/4/14--Vought--Sent reply to PTC Salamack that Mark, Thanks for the update and I have entered the below notes in our database as well. Three samples from 1 to 2 feet below the tank bottom are acceptable. Please submit the analyses with a site plan and a brief narrative on the work as usual.

10/1/14–Vought–Received call from PTC Salamack on status of DEC review of email sent and as such Vought performed to date file review. Vought also noted open spill 9801907 (for failure of a 2,000–gallon fuel oil UST) at same site which was assigned to DEC Demeo who approved administrative consolidation and closure of that spill by Vought as PBS noted there was only one 2000–gallon UST at the site. File review:

Email from PTC Salmack to Vought with Attachments–8/27/14. PTC Salmack inquired if it was okay to fill tank with slurry. Attached was the Chain of Custody and Report. Vought added both to D2. Chain of Custody shows three soil samples collected however also shows that soil samples were preserved with sulfuric acid. Soil analyticals show no detections of VOCs and minor SVOCs attributable to possible fill material common at NYC properties. Vought called and left message for PTC to return call regarding use of sulfuric acid as preservation for soil samples.

10/6/14–Vought–Called and spoke to DEC LeBarron regarding use of sulfuric acid as preservative and as per LeBarron it was acceptable as per EPA Method 5035 which calls for bisulfate solution. Spill closed by Vought as no impact to soil and all piping aboveground as per PTC. Spill closure letter added to D2 and sent to:

Laura Noggle/Chris Abit Church of the Epiphany 1393 York Avenue New York, NY 10021 email: noggle@epiphany.nyc.org

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND TTF letter sent to

Mige Assoc. 408 West 57th St NY, NY 10019

3/31/2004 Sangesland contacted Marlboro Realty (212-757-5220) concerning the open tank test failure from September.

Frances said AL Eastmond abandoned the old tank in place & took the proper soil samples. A new tank has been installed and they are just about ready to start using it.

Sangesland called Rene at AL Eastmond. He said the soil samples were taken and the tank was properly closed out. He will prepare a report and submit it to the DEC soon

04/06/06-Hiralkumar Patel. spoke with Mr. Mungra at Eastmond and he will call back with information.

05/04/06-Hiralkumar Patel. called Eastmond, but Isaac and Rene both were in meeting. 05/05/06-Hiralkumar Patel. Spoke to Rene at Eastmond. he will call back with more information. 05/17/06-Hiralkumar Patel. Spoke to Isaac at Eastmond. he will call back with more information. 05/22/06-Hiralkumar Patel. Left message for Mr. Mungra. 06/06/06-Hiralkumar Patel. Spoke to Rene. he will call back with information. 06/09/06-Hiralkumar Patel. Left message for Ms. Mary, property manager (212-757-5220 Ext. 10). 06/19/06-Hiralkumar Patel. Left message for Ms. Mary. 06/22/06-Hiralkumar Patel. Spoke with Mary and asked her to call Eastmond for tank closure report. 06/29/06-Hiralkumar Patel. spoke to Maggie at management company. Mary is no longer working at this office. Maggie will talk to owner and will call back. 07/06/06-Hiralkumar Patel. received call from Ms. Gabriella. she will call Eastmond and will send final report. 07/31/06-Hiralkumar Patel. spoke with Ms. Garbriella. she will call Eastmond and will send documents. 08/17/06-Hiralkumar Patel. spoke with Garbriella Mineo. sent out CSL to Ms. Mineo at following address:

Garbriella Mineo 408 W 57th Street New York, NY 10019 Ph. (212) 757-5220 Ext. 10 FAX (212) 541-7549

letter faxed to Ms. Mineo and Mr. Mungra at Eastmond.

PBS#: 2-189375

08/31/06-Hiralkumar Patel. received fax from Rene from Eastmond. as per letter report from Eastmond: - observed corrosion around

tank manhole – clean tank and replace manhole and surrounding steel – retest tank and it passed – excavate and remove top portion of tank – pour cement base and install (1) 2,000 gal double walled tank inside old tank – backfilled area – no product release

fax contains passing system test result. based on available information, case closed.

REMOTE FILL FAILED

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY 4/7/03. Y.K. spoke to Nill Gallagher (BBM DOS).
 Leak in the fill line underground close to the tank #001. UST is still in service utilizing direct droop. Will excavate, repair
 and retest. Also, asked DOS to correct info. on PBS registration (single wall tank with interstitial monitoring ?).

11/05/03. J. Krimgold called Mr. Gallagher (718-334-9138) and left a message.

11/07/03. J. Krimgold spoke to Nill Gallagher. He stated that the failed tank has been out of service since 03/03. They started

excavation today. Will inform DEC Monday on the progress and also on the testing of other tanks at this site.

Tanfered to J. Kolleeny on 01/12/04 and subsequently to I. Islam.

5/16/05– The site is under active remediation by LiRo Engineers due to other open spills (# 0001929 & 9913369) at the site. Therefore, this spill is closed to consolidate with motor oil related spill # 0001929.– II.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY 1/12/04. Transferred to J. Kolleeny.

This spill location was wrongly identified as 5 Boro Garage (Randalls Island) in Nov. '04. Based on address, spill most likely occurred at Manhattan 5, 8, & 8A Garage (545 E. 73rd St., Manhattan). Spill transferred from Kolleeny to Imdadul Islam (case manager of Manh. 5, 8 & 8A) on 4/13/05. – JK

3/09/06: This spill transferred from I. Islam to Q. Abidi.

08/18/06: Transferred to SK. According to the URS Bimonthly updates, URS visited the site May 8, 2006 to gauge the wells for free product. Wells MW-05,09,11,19 exhibited free product. On June 29, 2006 URS returned and removed 105 gallons of product/water via vacuum truck from the four wells. – SK

10/27/06 Spill case transferred from S. Kraszewski to J. Maisonave. – JAM

8/29/07 Reviewed free product recovery data for monitoring period through March 2007 in a letter dated May 16, 2007. In May 2006, URS resumed product recovery using a vac truck. URS visited the site again in August and September 2006 and initiated monthly visits in December 2006. Product has been detected in wells MW-05, MW-09, MW-11 and MW-19 with MW-19 exhibiting the greatest product thickness levels (ranging from 0.25 to 1.15 feet). As stated in the URS letter, Since May 2006 URS has visited the site eight times with the vacuum truck and product levels have fluctuated but have not demonstrated a decreasing trend. February 8, 2007 product thickness levels ranged from 0.05 feet in MW-05 to 1.15 feet in MW-19. Well MW-11 was inadvertently omitted during the last two site visits but will be included in subsequent visits. URS plans to continue monthly visits using the vac truck until demolition of the facility begins in the Fall of 2007. Excavation and remediation in the tank area should be completed by Fall 2008. – JAM

9/4/07 Spoke to Vinny Alison (phone # (917) 913-1174; email dcaconstltd@verizon.net). He will be removing tanks and he asked what were the requirements. I emailed him the link to DER webpage Remediation Guidance and Policy Documents. – JAM

10/29/07 Visited the site to witness tank removal. Tanks are located in a former pit used by DOS to store material before it was loaded into the incinerator. The pit was fully enclosed with concrete. The tanks were installed on top of a layer of gravel and then fully encased in even more concrete. During the removal free product (fuel oil) was witnessed below the tanks. The pit should be completely excavated and contaminated material should be removed. I called Jane Staten from URS and left a message. – JAM

11/9/07 In correspondence with DDC, URS and DOS it has been determined that removal of contaminated soil and free product must wait until the demolition contractor has completed its activities, which is expected in June, 2008. At that point there would be 9 – 12 months time available for remedial work since the construction of the new garage will start in Spring of 2009. A site meeting was scheduled for Nov. 27, 2007 with DDC, URS and DEC.

I sent an email to Afsar Samani stating that once the site is accessible to DDC consultants, all contaminated soil and debris must be removed from the tank excavations that were backfilled, and from any future tank removals. Further, DEC is very concerned that UST removals at DDC consent order sites are being done under construction contracts rather than remediation contracts, with the construction contractor being specifically instructed to only remove the tanks and not perform any additional removal of obviously contaminated materials. We request that all UST removals at DDC consent order sites be coordinated with DDC's environmental consultants. At a minimum, provision should be made to have a vac truck on hand so that any product left in the tanks or in the tank excavations can be immediately pumped out, rather than buried under backfill. – JAM

11/27/07 A meeting was held at the site by project managers from URS and NYCDOS consultants. The schedule mentioned above has not changed. Site conditions may limit remediation and construction activities to be performed simultaneously.

I spoke with Harvey Robert from URS and Afsar Samani from DDC about the DEC's position regarding backfilling the tank pits with free product still present. Doing so is a violation of the Navigation Law and the Consent Order. Free product must be removed if present prior to backfilling. – JAM

9/4/08 Reviewed Proposed Product Recovery and Field Investigation Work Plan dated June 18, 2008 submitted by URS. URS proposes to install 13 monitoring wells, 8 in the former waste-receiving pit and 5 outside of the waste-receiving pit, to recover free product which was witnessed during the tank removal in late 2007.

I spoke to Jane Statten at URS, who told me that the demolition of the DOS facility is complete and investigation and remediation can begin. I spoke with Tony Aguero, URS construction manager for the demolition of the DOS facility, and he said three separate areas where USTs were removed also had floating product present which was not removed. I requested a Revised Work Plan from Jane Statten which also investigates those former UST areas along the FDR Drive. Awaiting revised work plan. The June 18th WP is uploaded to eDocs. – JAM

9/8/08 Reviewed Revised Proposed Product Recovery and Field Investigation Work Plan dated Sept. 5, 2008 submitted by URS. In addition to the 13 wells proposed in the June 18, 2008 proposed work plan, URS proposes 10 additional wells (totaling 23) in three separate areas where USTs were removed and free product was witnessed during removal.

I sent an approval letter today. Both the revised work plan and the approval letter are uploaded to eDocs. – JAM

9/30/08 Received a call from Jane Statten at URS on 9/25. Site access issues are delaying the work as per the approved work plan. I called Afsar Samani at DDC today and requested that DDC and URS coordinate with the DOS regarding site access to perform this field work. – JAM

11/10/08 Received an email from Jane Statten of URS. Email states that URS were just informed by Michael Murphy, DOS Chief of Facilities, that DOS intends to store salt on the western side of the site this winter. Consequently, URS will postpone the installation of the wells on west side of the site until the DOS removes the salt, presumably in the spring.

URS is currently preparing the bid package to install the wells on the east side of the site. This work must be bid because a new gate and ramp are required to access this area.

I sent an email response stating that the wells should be installed no later than the spring of 2009. – JAM

5/11/09 Received a call from Jane Staten at URS. Ten soil borings were advanced in the three former tank vaults located on the side of the site closest to the FDR Drive. Each boring hit refusal at around nine feet and no product or water was encountered. Only one boring had a low PID reading. Recovery wells were not installed in those borings.

I told J. Staten to wait until all of the borings were completed before sending me a report. The rest of the borings will be installed after July 1. – JAM

11/19/09 Reviewed the Free Product Recovery Data through December 2008 submitted by URS dated February 9, 2009. URS visited the site September 26 and December 17, 2008 to inspect the absorbent socks in wells MW-09 and MW-19. In September, both socks were saturated and were replaced. In December, well MW-09 was flooded and the well was not opened, MW-19 did not show any product on the sock and it was left in place.

Reviewed the Free Product Recovery Data through March 2009. URS visited the site on January 15, February 16 and March 16, 2009. No product was observed in January and March. A small amount of product, 0.01 ft, was measured in both wells during the February visit. Report is uploaded to eDocs.

Reviewed the Free Product Recovery Data through June 2009. URS and Franklin Co. advanced several soil borings on May 11, 2009 but no water or product was encountered so permanent recovery wells were not installed. Report uploaded to eDocs.

During this period URS visited the site to gauge wells MW-09 and MW-19 for product on April 16, May 14, and June 11, 2009. In April 0.01 ft of product was detected in MW-09. Approximately 0.25 gallons of product was recovered using a vac truck. In May, 0.06 ft of product was detected in well MW-19 and it was manually recovered; MW-09 was flooded. URS installed an absorbent sock in MW-19. In June, 0.96 ft of product was detected in MW-19 and the absorbent sock was replaced. If a significant amount of product is detected in July, URS will arrange for regular vac truck visits to recover. Report uploaded to eDocs. – JAM

12/22/09 Reviewed the Filed Investigation Summary and Free Product Recovery Data through October 2009 Report submitted by URS dated November 24, 2009. On May 11, 2009, nine soil borings were advanced, three in each of the three former tank vaults. The work plan called for the installation of product recovery wells; however no water or product was encountered so no wells were installed. Each boring was advanced to approx. eight feet, which was the depth of refusal on the apparent bottom of the tank vaults. No soil samples were collected.

Between September 27 and 22, 2009, 11 monitoring wells were installed throughout the site. Soil samples were collected from MW-33, MW-35, MW-36. Analytical results showed that Total Xylenes in boring MW-33 exceeded TAGM. Each of the three soil samples exhibited SVOCs at concentrations above TAGM. Groundwater samples were collected from 10 of the 15 wells (4 were flooded and one, MW-19, contained free product). Analytical results showed ND concentrations of VOCs and SVOCs in 5 wells. The remaining 5 wells had VOC concentrations ranging from 16ppb in MW-08 to 3,722ppb in MW-33. Naphthalene was detected above criteria in 3 wells. No other VOCs exceeded criteria.

URS conducted free product recovery from wells MW-09 to MW-19 throughout the months between July and October. Well MW-19 shows the highest levels of free product ranging from 0.29ft on July 14 to 6.08 feet on September 17.

URS concludes that since bedrock is shallow and available soil data show little contamination, there is a small dissolved phase plume located in the southwest region and product is observed in 2 wells, that the focus of future activities will be groundwater. This report is uploaded to eDocs. – JAM

11-10-2010 The spill was transferred from J. Maisonave to Alex Zhitomirsky, as per V. Brevdo/J. Kolleeny. AZ

4-5-2011 Reviewed Groundwater Monitoring and Free Product Recovery Data. Free product in MW-19 varied from 0.88' to 3.27'. VOCs were found in MW-04 at 1,302 ppb (total VOCs). An e-mail was sent to K. Shenahan/M. Asbagh and V. Brevdo: Dear Kevin, I have reviewed Groundwater Monitoring and Free Product Recovery Data for the above site. URS recommended installation of ORC socks in several wells. This recommendation is approved. AZ

4-6-2011 Reviewed Groundwater Monitoring and Free Product Recovery Data dated Feb. 14, 2011. The highest VOC contamination was found in wells MW-04, MW-22 and MW 33 ranging from 175 ppb to 769 ppb. An e-mail was sent to K. Shenahan: Kevin, Sampling at wells MW-15, MW-24, MW-35 and MW-26 could be discontinued.

Also, the following e-mail was sent to K. Shenahan, V. Brevdo and M Asbagh: Dear Kevin, This site has free has product. As per our February 17, 2011 meeting, a tank inventory should be compiled for this and other URS sites. The inventory should be compared to the PBS tank Registry and all discrepancies should be clarified. Excavation should be considered for tanks closed in place. If tanks are excavated, contaminated soil should be removed and post excavation samples taken. AZ

11-22-2011 An e-mail was sent to K. Shenahan/V. Brevdo/M. Asbagh: Dear Kevin, I have reviewed Groundwater Monitoring and Free Product Recovery Data for the monitoring period of December 2010 through February 2011 and received by DEC on August 9, 2011. The report stated that free phase has been detected in well MW-19 and varied from 0.3 feet to 1.88 feet. Concentrations of dissolved VOCs have increased. The highest concentrations were detected in well MW-33 at 2,400 ppb. Free phase product in MW-19 is not delineated. Delineation wells should be installed. Sampling from well MW-36 could be discontinued. There are fill ports located on East 73rd Street. These fill ports could be a source of free product. The fill ports should be removed and contaminated soil excavated, if feasible. Also, other fill ports at the site should be located and excavated, if feasible. All fill ports should be shown on a plan. In the email dated April 4, 2011, I requested that the tank inventory be completed and discrepancies clarified. As of October 2011, the status of many tanks is not clear. The reconciliation should be completed and all discrepancies resolved. Next monitoring report should contain full reconciliation of the USTs records. Corrected information should be submitted to DEC PBS Unit. Excavation should be considered for tanks closed in place. Sincerely, AZ

2-2-2012 Reviewed report dated October 18, 2011. Product thickness in well MW-19 varied from 0.13 feet to 1.11 feet. An estimated 14.75 gallons of product were removed from MW-19 during the three month period ending May 2011 compared to 4.25 gallons collected during the previous period. The following e-mail was sent to K. Shenahan/V. Brevdo/M. Asbagh: Dear Kevin,

I have reviewed a a monitoring report for this site for the period of March through May 2011 and dated October 18, 2011. The report stated that product thickness in well MW-19 varied from 0.13 feet to 1.11 feet.

In my previous e-mail dated November 22, 2011, I stated that there are fill ports located on East 73rd Street. These fill ports could be a source of free product. The fill ports should be removed and contaminated soil excavated, if feasible. Also, other fill ports at the site should be located and excavated, if feasible. All fill ports should be shown on a plan. I also reiterate this request.

In the email dated April 4, 2011, I requested that the tank inventory be completed and discrepancies clarified. As of February 2012, the status of some tanks is not clear. The reconciliation should be completed and all discrepancies resolved. Next monitoring report should contain full reconciliation of the USTs records. Corrected information should be submitted to DEC PBS

Unit. Excavation should be considered for tanks closed in place. Sincerely, Alexander Zhitomirsky

I also discussed this site with K. Shenahan over the phone including January 9, 2012 Monitoring Report. It was decided that URS will propose delineation wells south and west of MW-19 and north and west of well MW-5 (containing free product). URS has achieved some progress in USTs reconciliation. They will complete the reconciliation process. AZ

2-13-2012 Email from K. Shenahan: Alex, Harvey Roberts contacted the URS Project Manager who was in charge of the demolition of this site to inquire about the status of the fill ports/piping. These tank components were removed from the site (see below). In addition, we learned that all of the tanks were removed. We will revise the Petroleum Storage Tank Inventory section for future reports based on this information. Regards, Kevin J. Shanahan Project Manager URS Corporation ~ New York 77 Goodell Street Buffalo, New York 14203 kevin.shanahan@urs.com Office: 716-923-1215 Cell: 716-480-7352

From: Roberts, Harvey Sent: Friday, February 03, 2012 3:00 PM To: Shanahan, Kevin; English, Michael; McCall, Don; McDaid, Daniel; Burmeier, Tim; Ung, Leng Subject: RE: Manhattan East 5,8,8A sp.#0001929 Kevin, According to Tony Aguero, the URS employee who was the project manager for the URS CM demolition project at ME 5/8/8A, they removed every tank at the site, and removed every fill line and all associated tank piping.

Harvey Roberts (718) 786-3838 I asked Kevin Shenahan to locate the closure reports and see if they indicate that the fill ports and piping was removed. Also, an inspection might be needed to see if the fill ports located off site and indicated on the site maps are, in fact, removed.

7-5-2012 The following e-mail was sent to K. Shenahan/M. Asbagh/V. Brevdo: Dear Kevin,

I have received a groundwater monitoring report for the fourth quarter of 2011 and the first quarter of 2012, dated May 8, 2012. The report stated that free product is present in wells MW-05 and MW-19. At the request of the DEC, the work plan, included in the report, proposed installation of four additional wells to delineate the free product plume. This work plan is approved.

However, in order to fully delineate the off-site plume, wells should also be installed south of MW-19 (downgradient direction). Also, as per our telephone conversation on July 5, 2012, a modified site plan should be submitted to DEC. If soil or decomposed bedrock is encountered during drilling operations, it should be collected and analyzed in a laboratory for the presence of VOCs and SVOCs.

Please note that the Responsible Party and its contractor(s) are solely responsible for the safe execution of this work.

Sincerely,

Alexander Zhitomirsky Engineering Geologist 2 NYSDEC Region 2 Division of Environmental Remediation

3-1-2013 Reviewed report dated October 11, 2013. URS intends to complete the installation of four additional product delineation wells in accordance with the work plan approved by DEC. The installation was scheduled for the fourth quarter of 2012. DEC requested installation of a well downgradient of well MW-19. However, URS stated that the area of the proposed well appears to be owned by the adjacent apartment building. Due to the expected difficulties and delay in obtaining access to this area, URS will proceed with the installation of the four wells. The need for any additional delineation wells will be determined based on the findings in from the new wells and based on whether the product thickness at MW-19 and MW-05 continues to decrease, AZ

7-11-2013 Reviewed a report dated January 24, 2013. In December 2012 three wells were installed at the site. Soil sample collected from M-38 at the dept of 1.5'-2' exhibited 28,106 ppb of total VOC. The product thickness in well MW-19 ranged from 0.38' to 2.28' during this monitoring period. A total of 68 tanks are registered for this site. It is believed that there may be some duplication and/or other errors in the records. Eleven tanks are indicated as being closed in place on the PBS registration. URS believes that only four closed in place remain at the site. Fill ports have been removed. Future plans for the site include the construction of a hospital. AZ URS currently recovers product once or twice per month.

The following e-mail was sent to URS/V. Brevdo/ M. Asbagh: Dear Kevin,

I have reviewed a monitoring report for the above site dated January 24, 2013. The report stated that a total of 68 tanks are registered for this site. It is believed that there may be some duplication and/or other errors in the records. Eleven tanks are indicated as being closed in place on the PBS registration. URS believes that only four closed in place tanks remain at the site. The PBS data base should be updated to reflect the current PBS status of the site. The City should file the updates to the current PBS status with the PBS Unit of NYSDEC.

Sincerely,

Alexander Zhitomirsky

8-1-2013 According to URS's report dated January 24, 2013, the fourth proposed well (MW-37) was to to be installed across East 73rd Street from the former facility to help delineate the source/extent of product which is found at MW-19. The proposed location in in the sidewalk in front of a multi-level parking garage. URS monitored activities at the garage during the two days of installing the new monitoring wells on the site; the parking operations were too busy to allow adequate space and/or time for the well installation. URS currently recovers product once or twice per month using a peristaltic pump. Product has been detected in wells MW-05 and MW-19, product sheen was observed in wells MW-33 and MW-04. There is about 1' of overburden at the site consisting of asphalt/concrete underlain by sand and silt with some fill material. Depth to water is about 1'-11', depth to bedrock is about 2' - 4'. AZ

12-2-2013 Reviewed a Remedial Work Plan submitted by AKRF and dated October 2013. This property will be demolished and site-wide excavation to depths approximately 37 to 42 feet below grade with deeper excavation depths (46'-49') below grade for elevator/utility pits. A new ambulatory building and the Hunter College Building will be constructed. On-site contamination will be removed. Pretreatment of groundwater prior to the discharge will be performed. The plan includes on-site and off-site measures. A site cap and vapor barrier will be constructed to prevent vapor intrusion.

12-4-2013 Discussed the site with Neoma Chefalo (646)-388-9854. The following additions/corrections should be done: the Work Plan should propose a full delineation of the off-site plume, groundwater should be sampled in the excavation, if decomposed rock or soil is encountered in the excavation, post excavation samples should be taken. The Consultant will submit a revised Work Plan to DEC. AZ

12-23-2013 Discussed the site Neoma Chefalo. Additional investigation of the off-site plume is required. Also, free phase map should be included in the report. Free phase was encountered by a new geotechnical boring at the site. A monitoring well should be installed at his location. AKRF will submit a modified report to DEC. AZ

1-2-2014 Received an e-mail from Neoma Chefalo dated 12-31-2013:

Alexander, I did some research regarding the foundation dewatering procedures and the vaults to the southeast of the Site. Attached is a survey with the location of the Con Ed Vaults. It may be possible to set a well outside of the vaulted area, but there are also electrical and gas lines running through that area, which could make this difficult. Also, we reached out to Turner regarding the dewatering plan. Because the foundation will be constructed in a bathtub configuration with dewatering necessary, it will not likely be possible to obtain water samples directly from within the excavated area. Please see the language from the contractor below for further information.

URS latest report identified free product at wells MW-33 and MW-05 (SW corner of Site) and fluctuating levels of free product in MW-19 (off-site to the south of E 73rd Street) in the last 4 quarterly sample rounds. Of note, Sanborn maps identified a garage with gasoline tanks in the vicinity of MW-19. Dissolved VOCs were the highest on the southwest quadrant of the Site, with lower detections noted in wells on the northwest-adjacent E 74th Street sidewalk. Based on this information, per your request we will create a map depicting the approximate dissolved/free-phase plumes with an estimated gw flow directional arrow. For additional delineation work, it seems possible to attempt: a) install a monitor well west of MW-19, b) install monitor well MW-37 in its proposed location, c) potentially install a monitor well further east of MW-37 if subsurface utilities do not interfere, and d) set a monitor well in the vicinity of the previous geotechnical boring (B-102) to gauge for free product. Please call when you get a chance to discuss. Thank you.

from Turner:

With respect to groundwater seeping into the excavation, we and our subcontractors believe that there will be minimal groundwater entering into the site and that which will enter will be eliminated via the dewatering system.

The foundation footprint is approximately 78,750 SF and the excavation will be approximately 35' deep to accommodate two cellar levels. The foundations themselves will consist of a mud slab, a waterproofing membrane, a 4" thick concrete protection slab and then a 6'-9" thick mat slab with steel reinforcement along the CUNY side of the site and a 6'-0" mat slab with steel reinforcement on the MSK side of the site. Miscellaneous pits will have modified mat slab thicknesses that vary between 2' to 5' and regional footings go as deep as 8'-0". The foundation walls will consist of 3" of shotcrete, a concrete protection wall, a waterproofing membrane and a 1'-6" ~ 1'-8" thick foundation wall in most locations. 4'-0" foundation walls will be required at the CUNY auditorium areas only. Temporary rock anchors are used around the perimeter to support the foundation wall during excavation. A dewatering system will be implemented along the perimeter of the foundation walls to ensure that the following is maintained in accordance with the contract documents .

I have discussed the site with N.Chefalo. She will submit revised WP to DEC. AZ

1-15-2014 Reviewed a monitoring report dated July 2, 2013. URS believes that four closed in place tanks remain at the site. The groundwater monitoring data indicates the presence of a minor dissolved phase VOC plume and product in the southwestern corner of the site. Based on the elevated total VOC concentrations detected in monitoring wells MW-38 MW-39, ORC socks will be added to these wells. . URS will continue to recover free product from the affected wells monthly, Well MW-33 has persistent sheen detected over the past several quarters. URS will include his well in future recovery events. AZ

1-24-2014 The following e-mail was sent to Neoma Chefalo and V. Brevdo:

Dear Neoma,

I have reviewed a revised Remedial Work Plan for the above site dated January 17, 2014. This plan is approved.

The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site, and in particular, are responsible for identifying subsurface utilities and safeguarding the structural integrity of any excavations, buildings, utilities, and other structures both on- and off-site that may be adversely affected by the work. The Responsible Party and its contractors must obtain any local, state or federal permits or approvals that may be required to perform the work necessary to address this spill. Furthermore, the Responsible Party and its contractors are solely responsible for the implementation of all appropriate health and safety measures during the performance of this work.

Sincerely,

Alexander Zhitomirsky

6-9-2014 Reviewed Groundwater monitoring report for the second and third quarter 2013, dated November 12, 2014. The report stated that a total of 68 tanks are registered for the site. It is believed that there may be some duplication and/or other errors in the records. There are several discrepancies between PBS registration and URS' current understanding. The PBS database should be updated to reflect that there are no tanks remaining at the site. AZ

6-10-2014 E-Mail from Neoma Chefalo dated June 6, 2014: Alexander, AKRF completed the installation and gauging/sampling of on-site monitoring well MW-43 on the southeastern quadrant of the site (in the area of former geotechnical boring B-102). Attached is a memo summarizing the field activities and the sampling results. No free-phase product was encountered during installation and development activities or during subsequent sampling, and VOCs were not detected in the groundwater sample collected from this well.

As indicated in the memo, site-wide excavation is planned to begin on June 9 and will result in the removal of the on-site monitoring wells and the sidewalk permitting for the additional off-site wells is still underway. Please confirm receipt of this information and contact me with any questions or comments. Thank you,

Neoma

6-16-2014 E-mail:

Alexander,

Below grade excavation began on-site on June 10, 2014 on the eastern side of the site. Off-site soil disposal began the following day (June 11). On June 11th, an ejector pit tank (approx. 100 gallon capacity) was encountered on the northeastern portion of site. Minimal sludge was noted on the bottom of the tank. The surrounding soil was stockpiled separately for off-site disposal and endpoint samples were collected.

On June 12, 2014, a tank (suspected to be a 550-gallon motor oil tank based on figures showing the tank locations from the former sanitation garage), was encountered in the northwestern portion of site. The tank was partially covered with 6 feet of concrete. Oil was noted emanating from beneath the tank and is assumed to be associated with open Spill #0001929. It is anticipated that

the tank will be fully uncovered today (June 16th) and will be removed in accordance with the approved RAWP. Following removal of the tank and any associated contamination, endpoint samples will be collected. Following determination of the tank contents, the tanks records of both the former sanitation garage and NYSDEC tank registrations for the former facility will be reviewed to determine whether this was a known tank that had been closed in place, or whether this is an unknown tank with no registration. In either case, this tank will be properly closed (and registered/de-registered if required).

Photographs of the field work are attached. Please let me know if you have any questions regarding these tanks or the remedial efforts.

Michelle

Michelle Lapin, P.E. Senior Vice President

AKRF, INC. Environmental, Planning, and Engineering Consultants

440 Park Ave South , 7th Floor –

New York , NY 10016 P) 646.388.9520 – F) 212.213.3191

8–6–2014 Email from Neoma Chefalo: Alexander, as we discussed last week, it appears that we will be able to install two monitoring wells on the 73rd Street sidewalk due to underground utilities and transformer vaults identified in the geophysical study, at the locations shown on the attached figure. Please respond to this email approving this work. A summary of on– and off–site remedial activities is below.

The on–site remedial activities to date included:

On–site Monitoring Well AKRF completed the installation and gauging/sampling of on–site monitoring well MW–43 on the southeastern quadrant of the site (in the area of former geotechnical boring B–102) in April 2014. No free–phase product was encountered during installation and development activities or during subsequent sampling, and VOCs were not detected in the groundwater sample collected from this well.

Soil and Tank Removals Complete excavation and removal of on–site contamination was conducted via site–wide excavation of soil down to bedrock (approx. 6,300 cubic yards of soil were removed). No contamination (i.e., staining, odors or detections on the photoionization detector) remained on the bedrock surface. Tank removal activities included:

– During soil excavation, 14 underground storage tanks (UST) were encountered ranging in size from approximately 55 to 550 gallons in capacity (most tanks were found from the former tipping pit except for two small tanks proximal to an ejector pit on the NE portion of the Site) – All product/sludge was removed from the tanks along with small amounts of localized petroleum–contaminated soil for off–site disposal. All tanks were cleaned and disposed of in accordance with applicable regulations. – Five end point samples collected from the ejector pit indicated mainly undetected concentrations of VOCs, with only trace concentrations of three gasoline–related compounds (MTBE, naphthalene and 1,2,4–trimethylbenzene) ranging between 0.0012 and 0.0033 parts per million (ppm), well below NYSDEC CP–51 Criteria. End point samples were not collected from the former waste tipping pit as the excavation in this area could not be safely entered for sample collection.

Groundwater Treatment/Removal During tank/soil removal activities, localized areas of petroleum contamination (oily sheen and staining) were observed on the surface of the water table within the tank excavation areas. Booms and oil-absorbent pads were applied to the surface of the water table to absorb the sheen/staining. Groundwater was removed from these areas as part of dewatering activities required during construction excavation. A total of 24,380 gallons of groundwater were treated and discharged into the municipal sanitary sewer system during soil excavation. All contaminated water was pretreated in an on-site temporary treatment unit with an activated carbon filtration system prior to discharge in accordance with NYCDEP discharge permit/approval requirements.

Off-site Remedial Activities On July 3, 2014 AKRF conducted a geophysical survey along the southern side of the East 73rd Street sidewalk in the vicinity of the three proposed off-site monitoring wells requested by NYSDEC as outlined in the January 2014 RWP. Due to the presence of numerous underground utilities and transformer vaults within the sidewalk identified in the geophysical investigation, it appears that only two well locations are feasible (see attached figure for approximate well and underground utility locations). Access and sidewalk permitting are still being coordinated for the well installations and we will keep you updated on the schedule for this work.

Upon completion of off-site remedial activities, a final Spill Closure Report summarizing all on- and off-site remedial activities will be submitted to NYSDEC. Please contact me with comments/questions.

Thanks.

— Neoma Chefalo Environmental Scientist

AKRF, Inc. 440 Park Ave South 7th Floor New York, NY 10016 (P) (646) 388 – 9854 – (F) (212) 726 – 0942

1–12–2015 Reviewed URS report for the 4th Quarter 2013 and the 1st Quarter 2014 and dated June 4, 2014. The free product thickness in well MW–19 ranged from 0.43' to 1.37' during this period and an estimated total of 4.75 gallons of product were recovered from this well. The product thickness in MW–05 was 0.01', an estimated total of 0.75 gallons of product was collected from this well during the three events. Monitoring well MW–39 had the highest total VOC concentration at 2,608 ppb. AZ

5–1–2015 Reviewed URS report for the 2nd Quarter 2014 and dated September 16, 2014. The facility has been demolished. No active tanks remain at the site. 68 tanks are registered. It is believed that there may be some duplication and/or other errors in records. 11 tanks are closed in place. The free product thickness in well MW–19 ranged from 0.52' to 0.66' during this period and an estimated total of 1.75 gallons of product were recovered from this well. AZ

6–9–2015 The following e-mail was received from AKRF:

Alexander, AKRF has taken over the quarterly monitoring/spill closure activities now that MSKCC owns the property, which is currently under construction. A letter describing our planned scope is attached. The next round of monitoring will be completed this month, along with EFR and placement of an oil-absorbent sock in MW–19, as described in the letter. Once completed, AKRF will issue a quarterly monitoring report. Please call/email Neoma Chefalo or me if you have any questions/comments regarding our planned scope of work. Thank you, Michelle

Michelle Lapin, P.E. Senior Vice President AKRF, INC. Environmental, Planning, and Engineering Consultants

440 Park Ave South , 7th Floor –

New York , NY 10016 P) 646.388.9520 – F) 212.213.3191

10–5–2015 Reviewed a Monitoring Report for the Third and Fourth Quarter 2014 dated March 12, 2015. There are two minor dissolved VOC plumes in southwestern (this plume includes product) and northwest corners of the site. Construction of the proposed new facility will include excavation of the majority of the site to depths of 20'. AZ

10–28–2015 Reviewed a Quarterly Monitoring Report for September 2015 dated October 9, 2015. Discussed the report with Neoma Chefalo. There is no currently water in the wells. It could be due to dewatering performed at the site. Ms. Chefalo stated that dewatering is still performed but doesn't know the quantity of the pumped water and removal rate. She will collect this information. No Vacuum Enhanced Recovery will be performed. The absorbent sock will be removed. AKRF will monitor the wells for the presence of free product for at least two quarters. The gauging events will be scheduled while dewatering is not performed, if possible. The report is missing excavation soil data and groundwater testing data. Water in the excavation was tested during dewatering. This information will be included in the modified report. AZ

4–4–2016 Email from Neoma Chefalo:

Alexander, per our conversation on 3/31/16 for the 545 East 73rd Street site, AKRF will continue sampling/gauging of the off-site wells for 2 more quarters. If sampling/gauging results indicate generally decreasing or insubstantial concentrations of dissolved VOCs and the continued absence of free-phase petroleum product, AKRF will formally request closure of Spill No. 0001929. Attached is the pdf of the quarterly report and a hard copy will be sent to your office as requested.

Thanks and I hope your computer system is running smoothly this week. Neoma

4–5–2016 I have responded to Neoma Chefalo with the following e-mail: Thank you Neoma. One important addition: groundwater levels in contaminated wells should stabilize around levels that have existed before dewatering.

Thanks again,

Alex Zhitomirsky

4–7–2016 Reviewed a monitoring report issued by URS and dated August 19, 2015. The report stated that in June 2015 free phase (0.32') was encountered at monitoring well MW–19. Wells MW–08 and MW–20 were sampled. VOCs were non-detect. Well MW–33 used to have product but was removed in 2014 during construction. AZ

6–13–2016 Reviewed a monitoring report for the third quarter 2015, issued by URS and dated December 15, 2015. The report stated that in July 2015 free phase (0.32') was encountered at monitoring well MW–19. Since then, groundwater elevation at this well has dropped significantly and no product has been detected. Construction of the new facility began in May 2015. Majority of the site will be excavated to depths of 20 feet. Well MW–33 used to have product but was removed in 2014 during construction. AZ

10–11–2016 Reviewed a monitoring report covering December 2015 sampling results, issued by AKRF and dated January 2016. The report stated that groundwater measurements have indicated a steady and continuous drop in groundwater elevation ranging from 3 to 10 feet below grade (since June 2015) in wells MW–8, MW–41, MW–19 and MW–42 on East 73RD St. The drop in the groundwater

levels is attributed to the excavation and construction activities. No free product has been noted in MW-19 since the completion of the two VEFR activities. AZ

11-8-2016 Reviewed a monitoring report covering June 2016 sampling results, issued by AKRF and dated June 2016. The report stated that groundwater measurements have indicated a steady and continuous drop in groundwater elevation ranging from 3 to 10 feet below grade (since June 2015) in wells MW-8, MW-41, MW-19 and MW-42 on East 73RD St. The drop in the groundwater levels is attributed to the excavation and construction activities. No free product has been noted in MW-19 since the completion of the two VEFR activities. No Total VOCs are calculated. Submitted figures don't include VOC concentrations. AZ

11-9-2016 Reviewed a monitoring report covering September 2016 sampling results, issued by AKRF and dated September 2016, received on September 29, 2016. No total VOCs are calculated. Submitted figures didn't include VOC concentrations. I have contacted Naomi Chefalo and requested that total VOCs and naphthalene concentrations are calculated and presented. Also, drawings should contain VOC concentrations data. AKRF will resubmit the report with the requested information. AZ

12-19-2016 Reviewed a modified monitoring report covering September 2016 sampling results, issued by AKRF and received on December 2, 2016. According to the report, the site is currently being redeveloped by Memorial Sloan Kettering Center (MSKCG). Complete excavation and removal of contaminated soil was conducted via Site-wide excavation of soil to bedrock. About 24,000 gallons of groundwater were treated and discharged as part of dewatering. Free-phase product was encountered in off-site well MW-19. The consultant conducted vacuum-enhanced extraction events in MW-19. No product has been noted in MW-19 following since June 2015. Dissolved VOCs were limited to low level exceedances. Based on this information Consultants requested closure of this spill. AZ

12-20-2016 The following e-mail was sent to Neoma Chefalo (AKRF) and V. Brevdo: Dear Neoma,

I have reviewed a Quarterly Groundwater Monitoring Report and Request for Spill Closure dated November 2016. According to the report, the site is currently being redeveloped by Memorial Sloan Kettering Center (MSKCG). Complete excavation and removal of contaminated soil was conducted via Site-wide excavation of soil to bedrock. About 24,000 gallons of groundwater were treated and discharged as part of dewatering. Free-phase product was encountered in off-site well MW-19. The Consultant conducted vacuum-enhanced extraction events in MW-19. No product has been noted in MW-19 since June 2015. Dissolved VOCs in groundwater are limited to low level exceedances. AKRF requested closure of this spill.

Based on this information this spill is closed.

The Department hereby reserves all of its rights concerning, and such forbearance shall not extend to, any further investigation or remedial action the Department deems necessary due to:

- I. The off-site migration of petroleum contaminants that was unknown at the time of this closure.
- II. Environmental conditions related to this spill case which were unknown to the Department at the time of this closure.
- III. Information received, in whole or part, after the Department's spill case closure, which indicates that corrective action was not sufficiently protective of human health and/or the environment.
- IV. Fraud in obtaining this spill case closure determination.

As a precaution, we must bring your attention to our concerns for the future use of this site. If subsurface contamination is encountered while excavating for any construction activity, appropriate remedial and vapor mitigation efforts may need to be taken to fully prevent vapor intrusion into any site development and to ensure human health and safety. This spill closure does not exempt the Responsible Parties from compliance with any applicable laws and regulations.

Please be advised that you should maintain a permanent file of all documentation and correspondence regarding this case for future use as the Department's files may not be maintained indefinitely.

Sincerely,

Alex Zhitomirsky – Engineering Geologist 2 NYS Department of Environmental Conservation 47–40 21st Street, Long Island City, NY 11101 Phone: 718.482.6387 – Fax: 718.482.6390 Email: alexander.zhitomirsky@dec.ny.gov

12–22–2016 Email from Neoma Chefalo:

Hello Leszek, per our discussion yesterday, the following provides a list of the USTs that AKRF encountered during site excavation to bedrock in 2014. Additionally, we encountered three smaller containers (approx 55–gallons) of kerosene/water mixture that were removed/disposed of in conjunction with the USTs below. The remaining tanks listed under the PBS record appeared to have been previously removed prior to AKRF's oversight of remediation activities. Please let me know if you need any additional information to update your database records. Thank you.

Caller Remarks:

air leak in tank – no release – apartment building –replacing gasket

DEC Investigator Remarks:

3/1/12 Received call on 2/27/13 from Sal Vona, prospective buyer of the property. Today, I returned his call. He told me that the tank is AST and failed because of the manway gasket. No product escaped. Vault was inspected and no product was found. I told him to submit: 1. Passing ttt report. 2. Failing ttt report. 3. Letter from contractor that repaired tank which explains the reason for failure and stating that no contamination (if that is the case) was found. I told him that Tim Demeo is the case manager, but let him know that he can follow-up with me as needed. Mr. Vona stated that he hopes to have the documentation sent by overnight mail on Monday. bf

3/27/13 AFrischeisen intern TTF letter sent.

4/2/13 TJD File review. 2K FO AST (concrete encased) failed a tank tightness on 2/12/13 – reported as a dry leak, likely associated with a failed manway gasket. Property has a pending property transaction – following failed test the current owner retained Rockaway Fuel Oil Corp. to respond, investigate and repair reported condition. On 2/12/13, the contractor replaced the failed manway gasket and inspected tank system including the performance a new tightness test which reportedly passed (no documentation provided). The prospective purchaser then retained the original tank tester (ATS) to return for a subsequent tightness test on 2/25/13 – tank system passed tightness test. All required closure documentation has been received. No further action is required.

Tested 2 tank on site. Both failed test. Repair and retest being planned.

DEC Investigator Remarks:

4/7/2015 – Feng – Duty Desk. Talked to Tilak Ramautar (718-349-5752, TRamautar@schools.nyc.gov). He is in the regulation compliance unit. Their manager Munundra Sharma is out on vacation so he provided the information. There are two 10,000-gallon #6 oil USTs. There is a pipe connected these two tanks. The tank tester could not isolate the tank and tested these two tanks as one tank. The test failed. He believe it is not a wet leak but will confirm that. They are trying to covert from #6 to #4 oil by 6/2015, so they keep the low volume in the tanks. They will install the isolation valve and re-test the tanks individually. I advised him that if it is a wet leak, they will need to empty the tanks immediately.

Call from Tilak Ramautar. He talked to the tester and confirmed it is not a wet leak. The tester confirmed both of the tanks are not leaking. It is one of the pipes that connected the tanks leaked. When the vacuum was introduced, the tester could hear the air whistling so he was pretty sure it is from that particular pipe. They will fix the pipe tomorrow and re-test.

Caller Remarks:

Test failure. Repair or replacement is pending owner's action.

DEC Investigator Remarks:

10/18/12 TJD T/C with Greg Collins @ GC Environmental. Conversion from #6 >> #4 Fuel Oil. 15K AST tested after cleaning failed tightness test when empty. Discharge of #6 Oil was evident inside secondary containment (tank room). Product was scraped, floor was degreased and contaminants were drummed for disposal – unknown volume of discharge. Concrete floor reported in good condition with no cracks or drains reported. Hole in bottom of tank noted. GC Environmental has subcontracted with WCC Tank Technology of Newburgh (845 564 9555) for relining tank with fiberglass. DEC informed Greg Collins that PBS registration must be updated to reflect changes & appropriate standards must be followed in application and installation of proposed liner. A minimum of (3) soil borings must be performed along centerline of tank bottom to a minimum depth of 5 ft bgs – samples should be field screened with a PID and endpoint samples are required to be analyzed at NYS ELAP approved laboratory utilizing EPA methods 8260/8270. Following completion of repairs and prior to filling tank with product a system test must be performed. Greg was directed to provide DEC with an update of any significant findings identified during subsurface investigation prior to backfill. Photographs, boring logs, laboratory reports, and copies of both initial failed tank test and final tank test are required as part of closure documentation.

2/11/13 TJD File review. Greg Collins (GCI Environmental) was notified via e-mail that closure report submitted was missing required information. As per DEC directive, consultant was required to include copy of failing tank tightness (dated 7/25/12) and following repairs to tank a system tightness test is required. Documentation contained in closure report does not include

original failing tightness test and the 10/23/12 tightness test is listed as a tank only test. In addition, the PBS registration application contained in closure report does not accurately reflect tank system currently in operation. GCI has been requested to investigate discrepancies and resubmit an amended closure report. Awaiting revised report.

3/7/13 TJD File review. Revised report has been received. Initial failing tightness test is for a wet leak. A total of (3) soil borings were performed along centerline beneath AST – laboratory analysis of collected samples are within acceptable limits – minor exceedances for (7) SVOC compounds are noted. Missing documentation has been provided. As per GC Environmental report and revised PBS registration application the tank has been relined. PBS registration included with revised report still appears to contain information inconsistent with tank system in operation at facility – PBS unit (BF) has been informed of potential discrepancies and will perform the necessary follow-up if warranted. No disposal manifests were provided for disposal of drummed waste generated by GC Environmental during remedial work performed in September 2012 as detailed in closure report. No further action is required at this time.

DEC Investigator Remarks:

7/15/14-Zhune spoke to Chris from Petroleum Tank Cleaners. He said The tank is a 2500-gallons AST vaulted in the boiler room.

They performed the test and failed with a dry leak. They are in the process to do the isolation test.

7/29/14–Zhune spoke to Petroleum Tank Cleaners. She said they scheduled for Monday 8/4/14 to go back and perform the isolation test and the lines.

4/10/15– Mark Salamack from Petroleum Tank Cleaners sent an email, including the spill closure letter, waste manifest, site plan and the passed system test. The letter stated that on 15, July 2014 the 2,500 gallon fuel tank at the subject location was subjected to a precision tightness test and failed.

Subsequently, on 20, August 2014 Petroleum Tank Cleaners emptied the tank and pressur tested all the oil lines, to discover that there was an union on the vent line that was leaking. The union was simply tightened and the system retested and did pass. There was no contamination involved. Spill Closed.

TANK TO BE UNCOVERED AND RE-TESTED

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was M TIBBE

August 10, 2005 Jason Pelton, as part of spills backlog initiative, contacted responsible party (Roosevelt Island Management Corp) to obtain information on Spill#9802725. Initially spoke with Doryne Isley, with the Roosevelt Island Management Corp. Doryne faxed a copy of the invoice that Petroleum Tank Cleaners submitted for UST repair work following the tank test failure reported on 6/1/1998. The tank repair work included uncovering the UST along with the excavation, removal, and replacement of the UST piping. During this repair work, there was no evidence of a petroleum release and soil contamination. Doryne faxed a copy of the Petroleum Tank Cleaners invoice for the UST repair work and a tank tightness test completed on 9/14/1998. The September, 1998 tank tightness test passed.

Jason had a follow-up phone conversation with Bradley Cohen (Roosevelt Island Management Corp Director of Operations). Bradley sent a more recent (4/24/2003) tank tightness test completed by Controlled Combustion. This tank tightness test also passed and was reportedly faxed to the NYSDEC. Bradley indicated that A-1 Crown Leak completed the initial tank tightness test using air. This test failed and the spill was reported by A-1 Crown Leak. There was no actual petroleum spill, but a tightness test that did not pass.

Based on the exposure of the UST and the excavation, removal, and replacement of piping during the September 1998 repair work there was no evidence of a petroleum release. The two tank tightness tests (9/14/1998 and 4/24/2003) document that the repair work was effective and that there are no tank integrity concerns. Based on this information, Spill Number 9802725 was closed by Jason Pelton on August 11, 2005.

Remarks prepared by Jason Pelton

DEC Investigator Remarks:

3/26/2015– Ahmed– Received closure request from Mark Salamack at Petroleum Tank Cleaners (PTC). PTC was hired by the management company Buckbinder and Warren to clean a 4000 gal #4 oil UST. After the cleanup they did a tightness test and the tank system failed. Then they isolated the lines and tank, the tank, suction and return lines were tight but the fill and vent lines failed. They dug out the old line and found a small crack in the fill line where it entered in the building foundation. they didnot notice any contaminated soil at the bottom of the excavation for the fill line. They replaced the whole fill line. Asked mark if they took any pictures. he said they didn't notice and soil stain so they didn't take any pictures.

6/17/15–Ahmed based on the evidance submitted so far, the spill closed.

3000 gal outside storage tank is leaking

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was M TIBBE UST. Oil coming into bldg. HazMat & IWCS. Eastmond in route. 250gallons unaccounted for. Eastmond to Vacutest lines.

8/15/05 – Haggerty – spoke with Rene Lewis of AI Eastmond (718)–378–7000, he will send documents if they can be found

12/19/2005: Searched property shark and nycserv.nyc.gov. Could not find the owner. Site visit may help to close the spill. (Sadique)

06/07/2006: File transferred to John Grathwol. Possible to close after site visit. (Sadique)

Previous note by Sadique Ahmed

Spill transferred back to Region 2

3/10/08 – Austin – Spill assigned to Ahmed for followup – end

10/27/11 – Austin – Spill Transferred from Ahmed to Vought – end

3/31/2016: Rashad Spill reassigned to DEC Omar as per DEC Vought.

4/1/2016: Rashad 260 East 67th Street has multiple alternate address; 1261–1281 2nd Avenue, 251–265 East 66 Street, and 244–250 East 67 Street. No additional spills or PBS registrations found for site, no documents found in D2.

5/23/2016: Rashad PBS 2–244902 found for 265 East 66th Street which is an alternate address of 260 East 67th Street. There is a 30,000 gallon #4 fuel oil UST which was installed in 1960 (it is only tank on PBS registration). Edocs has passing tank system test from 2005 and 2010. Passing tank tests uploaded to D2.

Additional spill found for site #0207365 due to a tank test failure, in 2010 spill was closed after repairs, passing tightness test, and confirmation of no spillage.

Spill will be closed as per age of spill (tank leaked in 1997) and 2 passing tank system tests since then, one in 2005 and 2010 on same tank as well as relatively minor spill of 20 gallons and evidence of contractor response to site indicated in first entry of DEC Remarks.

Caller Remarks:

came upon contamination during excavation.

DEC Investigator Remarks:

1/4/2006 Sangesland spoke to Stewart Kanoop from Langin Engineering He said the site is a vacant lot (Manhattan) being excavated for a new building A small section of the lot (18' x 12' area) has visible sidewall contamination and has standing ponded water in the pit.

Samples were taken of both the sidewalls and standing water. Results came back with hits for SVOC & Toluene.

Langen wanted approval to pump out and properly dispose of the standing water and to then continue to excavate the contaminated sidewalls. Contaminated soil will be staged on the site on a plastic liner. Soil will be tested and properly disposed of.

After this work is done another sample will be taken of the new sidewalls and of the new groundwater that recharges into the excavation site.

1/9/2006 Sangesland spoke with Stuart Kanoop of Langen Engineering. Most of the excavation work has been done. There is still a problem with contaminated side walls, but there are structural problems with the sidewalk and the building next door. He has requested a site visit to determine what additional work will be needed.

Sharif is on vacation, Jeff Vought will visit the site on 1/10/06 at 10 AM.

1/10/06 – Raphael Ketani. I arrived on site at 10AM and met Stuart Knoop of Langan Engineering. We walked over to the northeast corner of the site and passed by a pile of oil soaked bricks, broken concrete, and broken wood mixed with soil that was sitting a

sheet of plastic. Odors were apparent only within 6 feet of the pile. At the northeast corner, Mr. Knoop showed me the area in question. I saw oil stained brick, broken concrete, broken wood, metal, and soil. The debris was sitting as one large pile with standing water with a sheen adjacent to it. The pile of debris had a slight oily odor and looked dark. Dark soil staining was seen on the west and south walls of the pit where the debris was sitting. Mr. Knoop told me that 20,000 gals. of contaminated water had already been sucked out from around the debris. He asked me what should be done. I suggested to him to remove all of the oil soaked debris, remove the oily soil from the west and south sidewalls, suck up all of the oily water and then break up the concrete slab (which Mr. Knoop said was below the debris, but which I couldn't see). I told him to take clean soil end point samples for the sidewalls and to take final water samples and to send the results to the Spills Unit. He said he will do this.

03/16/06 Sharif Rahman- I called Stewart Kanoop,(212)479-5461 of Langan Eng.He indicated that they have removed all the oil contaminated soil from the site and dug out approx. 70 ft below the grade to bedrock. There are couple of voc/svoc exceedances. GW samples have been taken. He will forward the report to DEC. 08/16/06 Rahman-Closure report prep'd by LANGAN Engineering is available. Approx. 10,000 cubic yards of fill material and native soil were excavated down to bedrock. In total, 33939 gallons of groundwater were removed from the site and transported to a disposal facility. The excavation extended to the property boundaries of the site, and continued into bedrock to a final depth of 70 ftbgs. All potential on-site source material for VOC and SVOC impacts to groundwater has been excavated and transported off-site. Post remediation soil sample results showed VOCs below RSCOs level. Six SVOCs showed slight exceedances which could be attributed to fill material. In the post remediation ground water samples- two VOCs (Naphthalene 323 ug/l and Ethylbenzene 15.2 ug/l) exceeded their respective limit slightly. Considering the structural impediments, bedrocks and nature of residual (minor) contaminants in ground water, this spill case is recommended for closure.

Caller Remarks:

DISCOVERED WHILE RETROFITTING UST'S. CONSULTANT – GROUND WATER TECHNOLOGY HIRED, PAUL MUSS (516)472-4000

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 4/12/04-Vought-Spill transferred from Miller to Rommel as per Rommel.

September/October 2005. Spoke to John Bolger, property manager (201-307-2561). He referred me to Susan Pinera, environmental person (201-307-2547). She was unable to find any files about the spill and had no information about it.

4/27/07: Case reassigned to Carlson. Received email from Timothy Egan (tegan@hertz.com): Regarding 64th Street site, we have identified some files for the UST upgrade that occurred in 1992, hopefully the file will shed some light on the subject. The dead storage files are not stored here, we have requested the box be sent to my attention, I expect to have it early next week.

6/5/07: Emailed Timothy Egan to followup.

Received email from Timothy Egan: I was able to locate files regarding this site. The release was reported related to a UST replacement that occurred at the site. It appears some petroleum-impacted soil was removed before the excavation was halted (in concurrence with the NYSDEC inspector on site) due to concerns about the stability of the building. I am reproducing the file and will forward it with a cover letter later this week.

6/11/07: Received old tank closure report dated 10/22/1992. Endpoint samples showed soil impact remained. Excavation was halted because additional excavation would have compromised the structural integrity of the building.

4/2/08: Sent stipulation agreement and assessment required letter to Timothy Egan of Hertz. Signed stipulation agreement due on 5/1/08.

5/8/08 – Carlson: Stipulation agreement effective 5/6/08.

5/29/08 – Carlson: Reviewed an Investigation Plan for the installation of four soil borings/monitoring wells around the tank field and remote fill. Plan approved.

6/30/08 – Carlson: Received email from Tom Bosshard. Delineation scheduled for July 7th.

7/14/08 – Carlson: Received email from Tom Bosshard. Wells were installed successfully.

8/28/08 – Carlson: Received phone call from Tom Bosshard.

9/4/08 – Carlson: Reviewed Subsurface Investigation Report, dated August 18, 2008. High dissolved concentrations. Sent letter requiring a delineation workplan and quarterly reporting. Due 12/4/08.

12/17/08 – Carlson: Reviewed October 2008 Groundwater Monitoring Report. Wells sampled on 10/16/08. Maximum BTEX concentration 5,145 ppb in MW-1. Three well locations proposed. Approved workplan.

3/20/09 – Carlson: Reviewed update report. Well installation delayed for DOT sidewalk permit. Wells sampled on 1/13/09. Maximum BTEX concentration 5,279 ppb (MW1).

4/24/09 – Carlson: Well installation scheduled for 4/28.

6/22/09 – Carlson: Reviewed Additional Subsurface Investigation Report dated 6/15/09. Three monitoring wells installed in April 2009. No soil or groundwater impact found. RAP due 8/3/09.

8/19/09 – Carlson: RAP approved – regenox application in three injection wells.

10/29/09 – Carlson: Reviewed August 2009 GW Monitoring Rpt. Wells sampled on 8/25/09. BTEX 1,701 ppb in MW1. Injection wells have not been installed yet, delayed for DOT permit.

1/20/2010 – Carlson: Reviewed November 2009 Monitoring Report. Wells sampled 11/9/2009. General decrease in contaminant concentrations. IP 1,2,3 were installed. Regenox injection planned for January 2010.

4/15/2010 – Carlson: Reviewed update report. Regenox injected in February 2010. Sells sampled in March. Slight increase in contaminant concentrations resulting from Regenox use. Additional Regenox injection planned for april 2010.

8/3/2010 – Carlson: Reviewed May 2010 update report. Regenox injected in April 2010, additional event planned in July 2010. ORC sock to be installed in MW2 in July 2010.

10/25/2010 – Breen. August 2010 G/W Monitoring Report received on 10/14 and filed in e-docs. Regenox injected on August 13 2010 through three injection points. Two ORC socks were installed in MW2 at the same time. Dissolved VOC concentrations in on-site

well 2 and off-site well 1 were detected at continued steady decreases as compared to the results of previous sampling events. Next sampling event is scheduled for November 2010.

4/4/2011 – Breen. Feb 2011 G/W Monitoring Report received on 4/1 and filed in e-docs.

04/22/11: This spill case transferred from G. Breen to J. Kolleeny. – JK

08/10/11: Reviewed GW Monitoring Rpt for May 2011 by EnviroTrac, submitted 6/15/11 (in eDocs). Rpt summarizes GW sampling event on 5/31/11, after add'l rounds of RegenOx injections were performed earlier on May 5 & 19, 2011 (injections were previously performed in February, April and August 2010). GW sample results show dramatic decline in contaminant concentrations in well MW-1, which has consistently been most significantly impacted well at site. Based on data, EnviroTrac recommends spill closure. I sent email (in eDocs) to Timothy Egan of Hertz, cc to Tom Bosshard of EnviroTrac, requesting an add'l round of GW sampling to confirm decrease in contaminant levels and demonstrate that levels will not rebound; I wrote that wells MW-4, MW-5 and MW-7 may be omitted from this sampling round, and that results should be presented in GW monitoring rpt with recommendations for further monitoring or spill closure as appropriate based on data. – J. Kolleeny

12/21/11: Reviewed GW Mon Rpt for August 2011 by EnviroTrac, submitted 10/5/11 (in eDocs). Rpt presents results of post-injection GW sampling performed in Aug. 2011. GW data show increase in worst well, MW-1, from 5.2 ug/L total BTEX in May 2011 (right after injections) to 436 ug/L tBTEX in Aug. 2011 (well had 2,148 ug/L tBTEX in Feb. 2011 prior to injections). No significant impacts in any other wells. Rpt states that monitoring/sampling of wells MW-1, MW-2, MW-3, & MW-6 will continue on quarterly basis to evaluate effectiveness of injections, and all site wells will be gauged quarterly. Next sampling event to be conducted in Nov. 2011. On 12/20/11, I sent email to Tom Bosshard of EnviroTrac: Tom, I've reviewed Aug. 2011 GW Monitoring Rpt for this site, and I noticed that in this rpt, as in many other EnviroTrac rpts, Table 2 – Summary of GW Sampling Analytical Results includes line for Total BTEX, but not for Total VOCs. (Table does include results for individual compounds other than BTEX.) Would it be possible to include a line for Total VOCs in GW sample results tables in future EnviroTrac rpts? On 12/21/11, received email reply from Tom: Jon, We can certainly add a Total VOCs row to our data tables. All rpts going forward will include this data. – JK

03/20/12: Reviewed Nov. 2011 GW Mon Rpt by EnviroTrac, dated 12/23/11 (in eDocs). Results of Nov. 2011 GW sampling show MW-1 (only well with significant impacts) had 3,048 ug/L total VOCs, up from 810 ug/L tVOCs in August 2011 (but below tVOCs of 3,973 ug/L in Feb. 2011 and initial sampling result of 18,180 ug/L tVOCs in July 2008). Contam does not appear to be migrating off-site. Rpt states that quarterly monitoring/sampling will continue to monitor long-term effectiveness of May 2011 RegenOx and ORC Advanced applications. Next quarterly sampling event scheduled for February 2012. – J. Kolleeny

06/27/12: Reviewed Feb. 2012 GW Mon Rpt by EnviroTrac, received 3/28/12 (no transmittal sheet or issuance date)(NOT in eDocs, await revised pdf). Results of Feb. 2012 GW sampling show MW-1 had 4,923 ug/L total VOCs (up from 3,048 ug/L in Nov. 2011); no other wells had significant contam. I contacted Gavin Zollo of EnviroTrac, asked that rpt be revised to include issuance date, to correct text in Conclusions section where November 2011 is referenced instead of Feb. 2012, to correct GW flow arrow on Fig. 3 (or if possible to include water table contour map in each rpt based on latest gauging data), and to include recommendation to address contam in MW-1. Gavin said they're currently preparing rpt for May 2012 GW sampling event, and will send revised Feb. 2012 rpt along with that rpt, addressing my comments. – J. Kolleeny

10/11/12: Reviewed GW Mon Rpt for May 2012 by EnviroTrac, dated 8/20/12 (in eDocs). Results of May 2012 GW sampling event showed MW-1 had 4,944 ug/L total VOCs (up slightly from 4,923 ug/L in Feb. 2012, however, total BTEX decreased from 4,343 ug/L in Feb.

2012 to 3,830 ug/L in May 2012); no other wells had significant contam. Rpt states that quarterly monitoring and sampling will continue; no remedial proposal for MW-1 is included. I sent email to Gavin Zollo of EnviroTrac: My notes for this site indicate that I asked that revised rpt [for Feb. 2012 GW sampling event] include a remedial proposal to address contamination in well MW-1. May 2012 rpt did not include any such recommendation, and I just looked at 3rd quarter 2012 rpt for August 29, 2012 sampling event, and I see that total VOCs in MW-1 increased to 6,652 ug/L in Aug. 2012, from 4,944 ug/L in May 2012, yet this rpt also does not include any remedial proposal. Unless EnviroTrac plans to prepare & submit remedial proposal as separate rpt, remedial proposal should be included in 4th quarter 2012 monitoring rpt. – J. Kolleeny

10/11/12: Sent email to Gavin Zollo of EnviroTrac: Gavin, I received 3rd quarter 2012 monitoring rpt, thanks. I don't see any rpt in our database for Feb. 2012 GW sampling event. I checked my notes and saw that I reviewed that rpt (received in March 2012), but I didn't upload pdf file into our database because I asked for revisions to rpt. My notes indicate that I spoke with you about this in June 2012 and you agreed to send revised pdf file of rpt for Feb. 2012 sampling event along with rpt for May 2012 sampling event (which was in prep at that time). I did not receive revised Feb. 2012 rpt with May 2012 rpt. Can you please check to confirm that revisions were made, and if so, please email me revised pdf file? P.S., My notes also indicate that I asked that revised rpt include remedial proposal to address contam in well MW-1. May 2012 rpt did not include such recommendation, and 3rd quarter 2012 rpt for Aug. 29, 2012 sampling event shows that total VOCs in MW-1 increased to 6,652 ug/L in Aug. 2012, from 4,944 ug/L in May 2012, yet this rpt also does not include any remedial proposal. Unless EnviroTrac plans to prepare & submit remedial proposal as separate rpt, a remedial proposal should be included in 4th quarter 2012 monitoring rpt. – J. Kolleeny

10/16/12: Reviewed GW Mon Rpt for 3rd Quarter 2012 by EnviroTrac, dated 10/9/12 (in eDocs). Results of 8/29/12 GW sampling event showed MW-1 had 6,652 ug/L total VOCs, up from 4,944 ug/L in May 2012; wells MW-2, MW-3 & MW-6 were ND; other wells were not sampled. Rpt conclusions state that recent trends for MW-1 indicate a correlation between significant drop in water table and increase in BTEX in that well. Rpt states that monitoring/sampling of wells MW-1, MW-2, MW-3 & MW-6 will continue, but there is no remedial proposal for MW-1. – JK

10/17/12: Received email from Gavin Zollo of EnviroTrac, responding to my email inquiry of 10/11/12: Jon, I was able to locate amended rpt [Feb. 2012]. Our computer system shows that Garrett Nintzel made requested changes in August but as he is no longer with company I have no way of knowing if he created a CD and/or hard copies and actually sent them out to you. Therefore I will print a hard copy and create a CD to be mailed tomorrow. In regards to a remedial plan for site, we are discussing options with Hertz and will either provide remedial plan as part of our 4th Quarter Update Rpt or under separate cover. – J. Kolleeny

10/23/12: Received revised version of Feb. 2012 GW Monitoring Rpt by EnviroTrac, original submittal date 3/28/12, revised submittal date 8/2/12 (in eDocs). Revised rpt addresses my comments on original submission. – J. Kolleeny

03/12/13: Reviewed GW Mon Rpt for 4th Quarter 2012 by EnviroTrac, dated 2/4/13 (in eDocs). Rpt presents results of Nov. 2012 GW sampling event showing worst well MW-1 had 1,658 ug/L total BTEX and 2,604 ug/L total VOCs, down from 4,814 ug/L tBTEX and 6,652 ug/L tVOCs in August 2012. However, Aug. 2012 results were an increase from May 2012 results, as noted above in entry for 10/16/12. I contacted Gavin Zollo of EnviroTrac, who said that prelim results of 1st quarter 2013 GW sampling showed comparable levels to Nov. 2012, with some increases. I asked that wells MW-4 and MW-5 be included in next sampling event to confirm that no contam migration in that direction is occurring, and also suggested that if contam in MW-1 does not show a clear decreasing trend in upcoming monitoring events, add'l remediation should be performed to address impacts in that well and move spill toward closure. As result of this discussion, I sent email (in eDocs) to Timothy Egan of Hertz, cc's to Gavin Zollo and Jeff Bohlen of EnviroTrac, with same requirements discussed with Gavin. – J. Kolleeny

07/16/13: Reviewed GW Mon Rpt for 1st Quarter 2013 by EnviroTrac, dated 4/12/13 (in eDocs). Cover letter to rpt states that Hertz no longer owns/occupies site, and that this will be last rpt submitted by EnviroTrac. Property is now owned by Memorial Sloan-Kettering Cancer Center, which has agreed to take over responsibility to address spill case. Sloan-Kettering contact person is:

Mr. Bryan Irving Environmental Compliance Manager Memorial Sloan-Kettering Cancer Center 1275 York Ave, Box 440, New York, NY 10065 IrvingB@mskcc Telephone 646-888-2282; Fax 646-422-0129

Rpt presents results of GW sampling in Feb. 2013, which show problem well MW-1 had 3,152 ug/L total VOCs, up from 2,604 ug/L in Nov. 2012. MW-3, located down-gradient of MW-1 according to EnviroTrac's well gauging data and water table contour map, had only 2 ug/L tVOCs (all MTBE), suggesting contam migration is not occurring. – J. Kolleeny

08/14/13: Received phone call from Bryan Irving of Memorial Sloan-Kettering, he stated that they plan to redevelop site, remove all USTs, piping, etc., over-excavate. I asked that he have his consultant prepare a RAP describing this, he agreed to do so. – J. Kolleeny

12/17/13: On 11/13/13, received email from Neoma Chefalo of AKRF (Sloan-Kettering's consultant), with attached RAP dated 11/12/13; on 11/14/13, received hard copy of RAP with CD (pdf file in eDocs). RAP proposes removal of all USTs, piping and associated equipment, and excavation of site to property boundaries to max depth of 50 ft. (but not including sidewalk area of fill port and well MW-1); new site bldg would have vapor barrier. Rpt mentions that AKRF did a Phase II at site in Feb. 2013; drilled borings, took soil samples, sampled GW from one boring and from existing wells (except MW-1). On 12/17/13, I contacted Ms. Chefalo and asked that she send Phase II soil & GW data, that well MW-1 be sampled again prior to implementing RAP, and that Sloan-Kettering consider excavating area of MW-1 and fill port in sidewalk to expedite spill closure. Ms. Chefalo said she would find and send data, and discuss add'l excavation request with her client. Later same day, she sent email: Jon, per our conversation, here are data tables for soil and GW. Lab data sheets are attached as pdfs. We will discuss sidewalk excavation plans with client and get back to you. Let me know if you need further information. Phase II data tables and lab rpt in eDocs. – J. Kolleeny

02/06/14: Received email from Neoma Chefalo of AKRF: Jon, I wanted to give you an update on this project. Contractor indicated that there would be excavation work/soil removal below sidewalk in these areas (including location of MW-1) for beam install'ns and new Con Ed electrical connections. I don't think there are any final plans at this point depicting cuts. Demolition work has not started (permitting issues still ongoing). I can call you if you would like to discuss further. – J. Kolleeny

03/05/14: Received email from Neoma Chefalo of AKRF: Jon, another update regarding MW-1. We went to sample it yesterday and found measurable product (approx 0.2 inches), therefore we did not collect a sample. Please call me to discuss further when you have time, thanks. I called Ms. Chefalo and asked that product be bailed before installing absorbent sock, and reiterated that RAP should include excavation of area of MW-1, she agreed and said she would continue to discuss with her client. – JK

04/18/14: Received email from Bryan Irving, Env't'l Compliance Mgr for Memorial Sloan-Kettering: Mr. Kolleeny, Just wanted to provide you an update on this site. Building is currently being demolished and excavation activities, including UST removal, are scheduled to begin week of May 5 or 12th, 2014. I sent email reply: Mr. Irving, Thank you for update. As I stated to Ms. Neoma Chefalo of AKRF, I would like to have an approved RAP in place prior to commencement of excavation activities. Ms. Chefalo submitted a RAP, but I asked if she would discuss with her client (i.e., Sloan-Kettering) if they would consider extending and deepening excavation in sidewalk, in vicinity of monitoring well MW-1 (which has been main problem well over years), to chase &

remove suspected smear-zone soil contam in that area, which I believe will allow GW quality to improve more quickly and lead to faster closure of this spill case. Is this something you can discuss with others at your organization who are involved with this project? Thanks again, and please continue to keep me posted. Mr. Irving sent reply: Mr. Kolleeny, I will discuss possibilities of extending excavation into sidewalk with engineering team here at MSKCC and AKRF. I'll let you what we come up with. – JK

05/02/14: On 4/25/14, received email from Ms. Neoma Chefalo of AKRF: Jon, we had a meeting with contractor today and they agreed to attempt to excavate in area of MW-1 when they are performing excavation for utilities. However, there are many subsurface utilities located in that area including Con Ed transformer equipment, electrical, sewer and gas lines so practicality and extent of excavation cannot be determined at this time (it may be a very limited area). We will perform oversight of this work that is anticipated to occur in June depending on permits etc. Based on that, with your approval I will draft an addendum letter to RAP stating that an attempt will be made to excavate well and any surrounding contaminated soil. Please let me know if you require anything further. I sent reply: Neoma, That would be great if you could draft that Addendum to RAP, and I fully understand of course that there will be constraints on extent to which you can chase contamination and excavate in that area of sidewalk, related to subsurface utilities. Neoma sent reply: OK, do we need to sample it again then (or maybe just install a sock for now until they are ready to excavate). Let me know your thoughts on that. Thanks. On 5/2/14, I sent reply: Neoma, Sorry for delay in responding. It would be good to check well once more; if there's free product, bail well and install a sock until they're ready to do excavation work; if there is no free product, collect a GW sample to provide up-to-date data that can later be compared with post-excavation GW monitoring data. Thanks and have a nice weekend. – J. Kolleeny

05/09/14: On 5/8/14, I sent email to Ms. Neoma Chefalo of AKRF: Neoma, I just wanted to check if there's anything to update me on regarding this site? Have you been able to check out well MW-1, to see if there is free product or collect a GW sample? Also, what is status of RAP addendum you mentioned regarding extending remedial excavation to sidewalk in area of MW-1, to extent permitted by subsurface utilities? I would like to be able to issue an approval for RAP prior to any site demolition/construction activities. Do you know if such activities have been scheduled yet? Please let me know. On 5/9/14, received reply from Ms. Chefalo: Jon, please see attached addendum letter and let me know if it is ok. We have not been out there yet but plan on going back to place sock and gauge next week. I asked contractor about excavation start date and am waiting to hear back, will give you an update when I get a response. Let me know if you need any further information, Thanks. Attached letter states that DEC requested that remedial excavation be extended to include area of well MW-1 in sidewalk, and states that as requested, an attempt will be made to excavate MW-1 along with any contaminated soil encountered during upcoming excavation work for install'n of utility points of entry, provided that existing subsurface utilities/vaults do not interfere with this effort. Addendum further states that end-pt soil samples will be collected from excavation area, and that prior to excavation, AKRF will deploy a petroleum-absorbent sock in MW-1 to address 0.2 inches of free product found there. – J. Kolleeny

05/13/14: I sent email to Ms. Neoma Chefalo of AKRF: Neoma, I have a couple of questions. First, addendum mentions that well MW-1 was found to have 0.2 inches of product. Can you tell me what you are using to measure product thickness? Interface probes I am familiar with measure in hundredths of a ft; are you sure product thickness was 0.2 inches, not 0.2 ft? Second, do you think you could add a site plan to Addendum, showing approx outlines of proposed area to be excavated around MW-1? Please let me know. Ms. Chefalo sent reply: Jon- I confirmed with technicians that were out there, it was a very thin layer of product, less than 0.25-inch. I will let you know when we go back to gauge. I will get you a figure with potential area of excavation (provided no utility interference). Thanks. – J. Kolleeny

05/16/14: Received email from Neoma Chefalo of AKRF with attached site plan showing proposed excavation area right around well MW-1, but not including adjacent fill port and vapor recovery port. I sent email to Ms. Chefalo: Neoma, Thanks for figure. I think you may have misunderstood my intent. It's not so much that I want well MW-1 itself to be dug out; what I'm most interested

in is having area of contamination associated with former fill port excavated, since I suspect that contam associated with that fill port/line is what's causing persistent GW impacts in MW-1. Can proposed excavation area be expanded to include former fill port/vapor recovery port area, and to extend a few ft beyond those features to SE? In fact, if contamination is observed along fill line, if it's possible to chase it back towards property itself, that would be beneficial for improving GW quality and getting spill case closed. Again, I fully understand that feasibility of excavating that area may be constrained by presence of subsurface utilities and/or other field conditions. But just for now, if you could revise fig by expanding proposed excavation area to include fill port, vapor recovery port, and a portion of lines heading back northeastward towards property, that would be great (and if there is still piping there, it should be pulled). Feel free to call to discuss. She wrote back: Ok, if it is possible we will try to excavate those areas & remove fill piping, please see attached revised plan. Thanks. Revised site plan shows proposed excavation area extended to SE to include fill & vapor recovery ports, and also includes portion of fill & vapor recovery lines extending back toward bldg. I combined site plan with 5/9/14 RAP Addendum letter and uploaded to DecDocs. – J. Kolleeny

05/19/14: Completed review of Nov. 2013 RAP and 5/9/14 Addendum Letter (both in DecDocs). RAP proposes removal of all USTs, piping & associated equipment from site and excavation of property to depth at which either clean soil is encountered or GW is reached. Post-exc soil samples will be collected from sides & bottom of excavation; dewatering may be performed as needed, and dust control measures and air monitoring will be implemented during excavation. Prior to excavation, all wells will be gauged to confirm GW flow direction; if GW flow is to east or north, then only well MW-1 (in 64th St sidewalk) will be sampled following site redevelopment; if GW flow is to south or southeast, then off-site well MW-6 will also be sampled following site development. A vapor barrier will be incorporated into new building. A closure rpt will be submitted to DEC summarizing these activities and requesting spill closure. As stated above, 5/9/14 Addendum to RAP proposes excavation of soil in area of well MW-1 and former fill and vapor recovery ports in sidewalk along East 64th St., noting that excavating there may be limited by presence of subsurface utilities. I sent letter (in DecDocs) to Bryan Irving (RP), cc to Neoma Chefalo of AKRF, approving remedial plan as outlined in Nov. 2013 RAP and 5/9/14 Addendum, but stating that (1) Assuming well MW-1 will be destroyed during excavation, a replacement well should be installed in same location (to extent feasible based on site conditions) for post-remediation GW monitoring, and (2) If proposed remedial actions do not succeed in removing measurable free product and reducing GW contaminant concentrations in area of well MW-1 to levels acceptable for spill closure, add'l remedial actions may be necessary. – J. Kolleeny

10/27/15: Received email from Neoma Chefalo of AKRF: Jon, Its been a while so I wanted to give a quick status update on this site. There was a trailer covering area of MW-1 for several months. Trailer was removed and immediately replaced with a crane pad which will be covering sidewalk area until at least March. Contractor allowed us to gauge well before crane pad was built over area on Oct 13. Findings were that well was dry (no NAPL or GW). There was some minimal staining and petroleum-like odor on absorbent sock that was in well so we replaced it. Of note, there were numerous utility/electrical mark-outs around monitoring well location, so we may have to reevaluate plausibility of our originally proposed excavation area once they remove crane. Let me know if you need add'l info. I sent reply: Neoma, Thanks for update. Regarding proposed excavation work and subsurface utilities, are there plans to install new utilities in that area as part of redevelopment of site? I'm still hoping that some sort of remedial action can be done to address area of MW-1 and former fill ports, in order to get spill case closed. Please continue to send updates when you can. Then Ms. Chefalo sent reply: I believe they will do some excavation work, but will ask contractor to clarify. Also, in order to close out a violation with FDNY, contractors had filled in fill and vent lines with cement (they did not contact us until after the fact). We explained that this would not be enough to close spill, but it was done as an interim measure until piping can be removed after superstructure work is completed. – J. Kolleeny

12/21/16: On 12/20/16, received email from Bryan Irving of Memorial Sloan-Kettering: Jon, MSKCC is scheduled to begin excavation

work at referenced facility on Jan. 3, 2017. Area of remote fill and MW-1 will be targeted as per May 9, 2014 Addendum to site RAP. I sent reply: Bryan, Thanks for your email, glad to hear work has finally been scheduled! Do you have any sense of how long work will take, will there be more than 1 day of digging before end-point samples can be collected? Please let me know if there are any changes in schedule. On 12/21/16, received reply from Irving: Jon, We are meeting tomorrow to discuss details of excavation so we'll get back to you after that. I anticipate first day to be uncovering utilities and determining how and where we can actually excavate. – J. Kolleeny

12/22/16: Received email from Neoma Chefalo of AKRF: Jon, below is a summary of action items discussed during our pre-excavation meeting today. Planned start date for excavation is Jan. 3rd. We expect excavation to last at least a few days and consist of hand digging due to extensive underground utility network, but we will have a better sense of this once area is uncovered. Please let us know if you have comments. Thanks.

Action items for spill closure activities:

*AKRF will send a technician to gauge monitor well MW-1 for free product and potentially collect a sample within next week. If free-phase product is detected in well, DEC will be notified and remedial actions (VEFR, etc.) will be discussed.

*After breaking up sidewalk, contractor will hand dig areas around monitor well and fill/vent piping. If technically feasible, contractor will remove any fill/vent piping and contaminated soil (if encountered) in vicinity of such piping and monitor well. AKRF will oversee excavation activities and field screen soil with a PID. *Site contractor will remove contaminated soil in excavation area to extent practical. Due to extensive utilities in area, extent of excavation may be limited. It is not anticipated that excavation would extend below any utility conduits. *Excavated soil will be stockpiled and covered with polyethylene sheeting or drummed on site and kept in a secure area prior to off-site disposal.

*AKRF will attempt to collect soil end-point samples from excavation area around monitor well and beneath fill and vent piping. Results will be discussed with DEC to determine appropriate measures to facilitate spill closure. *All disposal documentation (including end-point sampling results, bills of lading/disposal manifests) and vapor barrier details will be included in closure rpt. – J. Kolleeny

12/30/16: Received email from Neoma Chefalo of AKRF: Jon, just a brief update – Con Ed is currently replacing a gas main in roadway in front of site and no excavation work is planned for next week. AKRF attempted to gauge on-site well MW-1 and off-site MW-6 monitor well and both wells were dry and contained no measurable GW. This could be due to dewatering activity in area or seasonal GW fluctuations, we have seen conditions like this before on other sites in area. We will keep you updated as to excavation schedule. Thank you. – J. Kolleeny

01/13/17: Received email from Neoma Chefalo of AKRF: Jon, it looks like excavation work may start on 1/18, AKRF will be on site to monitor. We are not sure how far we will get on first day, but we can give you an update afterwards at end of work day and let you know when we anticipate to collect endpoint samples, if you would like to come to site at that point (it may take a few days before we collect endpoints). Let me know if this works, thanks. – JK

01/18/17: Received email from Neoma Chefalo of AKRF: Jon, as an update, we removed a lot of soil today and are nearing a point where we cannot continue to dig safely on eastern portion of excavation (we are up against a Con Ed vault), we will remove as much soil as we can (there are some odors and PID readings in this area) but we may not be able to chase all of soil with odors/readings due to utilities. Plan for now is to dig as much as we can tomorrow and collect endpoints. – J. Kolleeny

01/19/17: Received email from Neoma Chefalo of AKRF: Jon, excavation is wrapping up – due to subsurface conditions including an abutting Con Ed vault and subsurface utilities, we could not extend much to east and south. We did collect end–point samples. – J. Kolleeny

02/17/17: Received email from Neoma Chefalo of AKRF: Jon, as an update to remedial activities, fill/vent piping and approx 10–15 tons of contaminated soil was removed from sidewalk area prior to collecting endpoint samples (noted on sketch below). Water table (16–17 ft bg) was not encountered. No product was noted in excavation, though some odors and PID readings were noted. We received results from endpoint samples which looked good (see attached results and sample locations below). There were minor exceedances of some petroleum–related VOCs limited to 2 samples: in East (E) and South (S) endpoint samples above DEC Part 375 Unrestricted criteria – but below Restricted Residential criteria. West (W), Bottom (B) and North (N) endpoint samples did not exhibit any exceedances above UUSCOs and VOCs were primarily undetected in these samples. MW–1 remained dry after several sampling attempts. I checked well construction log and it appears that well sits directly on bedrock which may be attributed to this trend. Based on site conditions and favorable endpoint data, I would like to request permission to submit a closure rpt, including a summary of remedial activities, photos, endpoint sample figure, data tables, etc. Please call me if you would like to discuss. Thanks. Email with site plan and end pt sample data table uploaded to DecDocs. – JK

03/01/17: After receiving reminder email from Neoma Chefalo of AKRF, I sent email: Neoma, Sorry for delay in responding. One question, did you check well across street (I think MW–6), did it have water that could be sampled? I think having a recent sample from a down–gradient location showing no off–site migration of GW impacts would be helpful in making case for spill closure. Please let me know about that, and I'll get right back to you about whether you should put together a spill closure rpt.

Neoma sent reply: It did not have water in it when we checked. Also when we discussed it last, per my notes I think you mentioned that it may not be relevant for comparison purposes as it was off–site data. I sent reply: Neoma, Given choice, sure I'd rather have GW/product data from MW–1, to see if conditions there have improved as a result of soil excavation work. But if there's no water in MW–1 and you're contemplating compiling a spill closure request, GW data from off–site (presumably down–gradient) well would at least be helpful in showing that any residual impacts are more or less confined to site and are not migrating. I suggest checking well MW–6 again to see if it can be sampled, and checking MW–1 again also. Is there a time–sensitive reason for seeking spill closure now? I would prefer to wait another month or so to see if water table rises and you can get a sample from MW–1, and if well is still dry (say, by late April), then you should go ahead and prepare closure request rpt. Feel free to call to discuss this further, as I might be open to a different point of view. – J. Kolleeny

03/27/17: Received email from Neoma Chefalo of AKRF: Jon, as an update for 64th Street site, both on–site well MW–1 and off–site MW–6 were gauged on 3/17/17. MW–1 remained dry and MW–6 was almost completely dry, with only slightly moist conditions near bottom of well (not enough for sampling). No product was observed in either well. These conditions are consistent with last several rounds of gauging. Let me know if you need any add'l info – thanks. I sent email reply: Neoma, Thanks for update. As I wrote earlier, if you could check wells again in late April just in case water table rises (and if it does, check for product and/or collect sample(s) for dissolved–phase impacts), I think it would make for a more complete spill closure argument. But if there's a pressing reason for getting spill closed out sooner than that, please let me know, and you can proceed to prepare a remedial action summary & closure request rpt now. Neoma sent reply: Jon, we will check again in a few weeks and update you, thanks. – J. Kolleeny

04/19/17: Received email from Neoma Chefalo of AKRF: Jon, as an update for site, we gauged wells again today and conditions remained similar – some moisture in MW–1 (on–site) and MW–6 (off–site) and a few inches of water in MW–7 (off–site) but not nearly enough to sample. No product was noted in wells. This is consistent with last several rounds of gauging. We'd like to move

ahead with closure request rpt, with your approval. I sent reply: Neoma, Thanks for update. By all means, please proceed with preparing spill closure request rpt. – J. Kolleeny

05/03/17: Received email from Neoma Chefalo of AKRF with attached Spill Closure Rpt; email stated: Jon, I hope all is well. As discussed previously, we are submitting attached Spill Closure Rpt for 327 East 64th Street site to request closure of Spill No. 9111462. Please let me know if you have any questions. Thank you. Will review rpt. – J. Kolleeny

06/21/17: Reviewed Spill Closure Rpt by AKRF dated 5/3/17 (in DecDocs). Rpt summarizes site history, listing succession of remedial actions performed, including removal of 9 550–gal USTs in 1992 with excavation of some contaminated soil (limited by structural concerns); multiple rounds of ISCO injections, using RegenOx and ORC Advanced; in 2014 excavation of entire site (excluding sidewalk area in front of site) down to and into bedrock, to 50 ft bgs (total of 21,000 tons of soil/fill were removed), removal of three 1,000–gal USTs; and finally in Jan.–April 2017 excavation of fill port/MW–1 area in sidewalk in front of site, removing 18 tons of impacted soil. Five end–pt soil samples were collected from sidewalk excavation, two samples had some VOCs above Unrestricted Use Soil Cleanup Objectives (but below Restricted Residential SCOs), but contam could not be chased further to east due to Con Ed utility vaults, or further to south into East 64th Street. At DEC’s urging, AKRF made several attempts to gauge/sample MW–1 and off–site wells MW–6 & MW–7, but wells were dry or contained too little moisture for sample collection. Site is undergoing redevelopment by Sloan–Kettering Cancer Center as a new laboratory medical building; building incorporates vapor/moisture barrier which will prevent intrusion of any residual petroleum vapors. AKRF states that since no LNAPL has been detected in MW–1 for over 2 years and spill source area has been excavated to extent feasible, they recommend spill closure. I concur that spill has been remediated to extent feasible and site has been rendered protective of human health and environment. I sent spill closure letter (in DecDocs) to L. Ryan Kiefer of Memorial Sloan–Kettering Cancer Center, cc’s to Bryan Irving (also of MSKCC) & Neoma Chefalo of AKRF. – JK

ref # 143144 samples taken clean up pending. poss from the spill at teh east 63rd st sub station cr 0202268.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL Con Ed em2is #143144:

Jimmy Wilson #63304, Operating Supervisor, reported at 12:34 hrs. that he found at 12:00 hrs. approx. 10 gallons of unknown oil and approx. 100 gal water in manhole M12101 located in front of 320 East 64th Street between 1st & 2nd Avenue. This manhole is located on E 64th St. in front of the driveway of the entrance to the East 63rd Street Substation. Mr. Wilson and an underground crew responded to a request by the Manhattan Environmental Desk to inspect the manhole due to spill from the East 63rd Street

Substation. The possible source and cause of the spill is from an incident at East 63rd St. S/S. See Incident #143131 – Worksite is E 63rd Street Substation. Briefly the deluge system activated in transformer vault #5 flooding the moat around the transformer. The moat had oil in it. When the moat overflowed, oil and water spilled through the transformer louvers and down the station driveway into the street. The unknown oil & water is from this spill or possibly from another source. No private affected due to the spill discovered in the manhole. The oil was found on top of the water in the concrete manhole. There was no fire or smoke involved. There was release to the sewer from the substation spill but there is no evidence of release to sewer or waterway from the spill discovered in the manhole. There was no injuries related to the spill and no weather conditions contributed to the hazards of the spill. There is primary & secondary cables in the manhole. There is standing water but no visual movement. There is no sump pump and no substantial cracks. A sewer connection & concrete sump cannot be verified at this time. Spill tag #S00852 was installed. Samples will be taken from the spill for PCB and Oil ID by the Chem Lab. No initial cleanup action taken. Cleanup is pending test results and vendor.

3 OUNCES OF UNK LIQUID CAME OUT OF A NATURAL GAS PIPE LANDING ON 2 PEOPLE AND THE FLOOR – CLEAN UP PENDING – CASE #131210 – PCB SAMPLE TAKEN, ID & TCLP WASTE CHARACTERIZATION

DEC Investigator Remarks:

5/4/00: Referred from O'Connell to Arakhan for follow up. Sam scheduled to make site visit with Vic Basso (Gas Ops) tomorrow.

(JHO)

2/10/03: e-mail from O'Connell to Arakhan requesting info for closure: Sam:

Back in the Spring/Summer of 2000 I referred a number of gas condensate spills to you for follow up. I want to close them out, so I need some info from you.

2. 215 E. 68th St. – you were scheduled to make a site visit with Vic Basso on 5/5/00. That's all I have in our files. What was the outcome?

Arakhan's response: Jane:

My memory and notes recall the following:

2. 5 E. 68th St. – I met Vic Basso @ 10:15 on 5/5 at the site. Investigation revealed that a boiler booster had ruptured its seal and released lubricating oil into the gas main. Cleanup and repairs were completed. No follow up needed.

e2mis no. 131–210: Unknown liquid spilled on basement floor and on two non–company electricians. Unknown liquid came from gas flange spill contained on absorbant pads, also installed plastic around flange on gas pipe, chemist on location at 14:10 to take samples of liquid.

Basso reports that at 13:43 he interviewed Accard electrician Joe Desimone and that 2–weeks ago there was a leak on a gas booster that he had worked on. On 5–3–00 electricians worked on the booster changing wires and conduits to the booster and that's when they found oil in the electric panel box, when they removed box they spilled app. 2–3 ozs. onto floor. Edward Algarin dismantled the booster and cleaned same, the rags that was used to clean this booster have been collected, but the clothes that he was wearing he had gotten some oil on them and he threw them out into dumpster.

5–04–00 Ed and Joe cleaned booster again and the rags are on site.

14:00 chem–lab Tony Rivera on location the oil that was collected was to be sampled for P.C.B., oil I.D. flashpoint total TCLP less herb. and pest. There was not enough sample oil to do all that was requested so they are going to do P.C.B. and oil I.D.

15:15 Sam Arakhan from the N.Y.S/D.E.C. paged Basso who called him back and gave him an update. Sam will be out to the site on 5–5–00 at app. 10:30.

CHEM LAB SAMPLED PCB AND OIL. REMOVED TEMP PROBE DOWNSTREAM–NO OIL FOUND. HEAD OF SERVICE DRY. BOOSTER OUTLET HAS OIL FILM. REMOVED FLANGES FROM CHECK VALVES DOWNSTREAM, 2OZ OIL IN BASE OF VALVES.

5/5/00–0515AM–ID ANALYSIS SHOWS LESS THAN 1 PPM PCB'S –INDICATES AN OIL SIMILAR TO THAT OF GAS CONDENSATE.

UPDATE – May 12, 2000 GDS mechanic tapped 1/2 hole in drip leg between head of service valve and meter valve. Drip was dry. No evidence of liquid. GDS mechanic removed temperature control fitting. Inside of pipe was moist, but no liquids present. GDS mechanic checked plug at bottom of meter. Plug was moist but no liquids present. GDS mechanic took off blank flange at booster inlet. Oil present in pipe. Oil was soaked up with pads. Pipe was wiped clean from booster inlet back to tee section of check

valve manifold.

UPDATE 05-24-00 On May 18th, Gary Windman, Environmental Coordinator met with representative (Joe Desimone) of Accardi Electric on location. Accardi Electric was in the process of repairing the electrical housing on the gas booster (location of gas leak forcing shutdown). Informed them that the oil which was found in pipe tested for lubricating oil and dielectric fluid #6. Advised to take precautions when cleaning piping and booster by wearing proper PPE. Also advised Accardi to open both check valves and wipe them dry.

Lab Sequence Number: 00-04690-001 Date Reported: 05/16/00 Sun#6 Cable Oil 100 % Lubricating Oils 100 % Petroleum Products/Dielectric Fluid – Sample contains lubricating oil and dielectric fluid. Therefore, there are similarities. Both lubricating oil (SAE#0) and dielectric fluid #6 are being reported.

5/24/00: Gary Windman received e-mail from Paul Mulqueen, Account Executive. Paul was informed by Rudin Management that repair and cleanup work has been completed at location. They are ready for gas.

leak from feeder line 69m06 --- clean up pending sample taking. con ed 130180.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL

Con Ed e2mis #130180:

2/29/00 Operator found 1pt unknown fluid sweating from insulating tape in bank #5 on secondary bushing (fdr 69M06). Area affected by this spill is a plate from the secondary throat of transformer. Plate will be removed and placed in drum for disposal pending results. Transformer is being replaced so the source of the leak will be eliminated.

Unit was replaced in March 2000.

1.6.04 In October of 2003 as per an agreement with the NYSDEC all bluestone was removed from the vault an an impervious moat was poured in concrete. A monitoring well has been installed in the vault as well. The old transformer was replaced in 2000.

**Caller Remarks:**

UNCAPPED UNUSED CABLE LEAKED PRODUCT ONTO CONCRETE PAD CONATINED WITH IN VAULT – 3 OZ OF PRODUCT UNK PCB COUNT NO CLEAN UP

---

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ENGELHARDT 5/22/98 e-mail from Con Ed ERT Lukshides: Cleanup complete May 18, 1998 with simple green degreaser and speedy dry. Cable ends sealed.

6/12/98 e-mail from ERT Lukshides responding to questions in e-mail from Engelhardt: PCB count cleaned as 50 –499. Spill Cleaned? How? yes, 18May98 @ 1145 using simple green (degreaser) and pads. Defective equipment repaired, replaced? cut cable ends properly sealed 15 May 98.

e2mis 116062

ENV. E. DE LA HOZ, 79237, REPORTED THAT APPROX 3 OZ OF CABLE OIL LEAKED FROM INACTIVE CABLE IN LIGHT & POWER TRANSFORMER 1 AREA, IN E 63RD ST SUBSTATION (INSIDE CAGE). THE OIL AFFECTED A SMALL AREA OF CONCRETE. NO DRAINS OR WATERWAYS WERE AFFECTED. THE LEAK IS NOT ACTIVE. A PAD WILL BE PLACED ON THE CONCRETE TO CONTAIN ANY FUTURE LEAK. THE INACTIVE CABLE, 1C 13KV, APPEARS TO BE PAPER & OIL INSULATED. IT WAS CUT IN THE CLEAR AND LEFT IN PLACE WHEN THE LIGHT & POWER TRANSFORMER WAS TRANSFERRED TO ANOTHER FEEDER. THE CABLE NEEDS TO BE PROPERLY CAPPED OR REMOVED. THE TRANSFORMER MUST BE DEENERGIZED FOR ACCESS TO THE LEAK AREA AND RESOLUTION OF THE PROBLEM. THE JOB WILL BE COORDINATED WITH THE UNDERGROUND. THE PCB COUNT IS UNKNOWN (ASSUME 50–499 PPM). A SAMPLE MAY BE TAKEN WHEN THE EQUIPMENT IS DEENERGIZED. 1406 HRS CIG ROMERO NOTIFIED.

15–MAY–98 R. O'NEIL REPORTS THAT THE ENDS WERE PROPERLY SEALED TODAY. THEY DECIDED NOT TO PERFORM THE CLEANUP BECAUSE THEY FELT SUBSTATION PEOPLE SHOULD DO IT. THIS WILL EXTEND THE TIME THE REPORT REMAINS OPEN. A SAMPLE WAS TAKEN AND WILL BE SENT TO ASTORIA LABS FOR ANALYSIS. 1–5 GAL DRUM OF WASTE WAS COLLECTED AND PLACED IN THE WASTE STORAGE AREA PENDING LAB RESULTS.

18–MAY–1998 11:45 THE AFFECTED AREA OF THE CEMENT FLOOR IN THE L&P #1 COMPARTMENT WAS CLEANED USING SIMPLE GREEN (A DEGREASER) AND SPEEDY DRY. THE INCIDENT WILL BE CLOSED.

Caller Remarks:

on going leak of dielectric fluid clean up is pending

DEC Investigator Remarks:

Emis # 240170

4/13/15–Zhune spoke to Con –Ed ERT–Jordan Hall. He said they reported because it’s still ongoing leak 10 drops/minute. It will be fixed tomorrow.

4/21/15–Zhune spoke to ConEd ERT–Christ Blaich. He said they fixed it and cleaned the spill.

5/14/15 – Austin – 1/2 gal dielectric fluid leaked from a transformer’s bushing onto bluestone –Con Ed contained and cleaned up the spill, and tightened bushing’s retaining bolts, which stopped the leak – See document files for further information – Spill closed – end

NO MATERIAL INFORMATION GIVEN FOR THIS SPILL

Caller Remarks:

pot head blew. insulatum ounces spilled. all other info basically unknown.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was RODRIGUEZ On 1/ @ 14:15 B Contino # 16863 of SSO reoprted to me that @ 14:10 he discovered a spill of insulatum while working on Light & Power # Cubicle. Three ounces of insulatum was found on the metal floor. The substance came from a leaky Pothead. Environmental tag # S 01714 was hung. Two samples will be taken for PCB and ID.

12/31/01 On the next shift Underground obtained the outage on the L&P and cleaned up the 3 ounces of Non PCB insulatum using pads and simple green. The pothead was clean and no further leaking evident. – P.keelan

Caller Remarks:

caller states that there is a sheen on 10,000 gallons of water – spill is contained to the vault – not cleaned up yet – vault is above ground – con ed 147259 – 50 ppm – clean up pending tanker availability

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was FOLEY See spills 0011488, 0009496, 0009089, 0007628

Con Ed e2mis #147259:

2/23 @ 15:57 At 15:30 P Keelan # 19995 of SSO reported a sheen of oil in Transformers 5 & 6 on standing water of 10,000 gallons. Feeder 69M06 is on these Units. No sewer/waterways affected, no injuries, no private property affected. The source and the cause of this spill is unknown The spill was on standing water. The Environmental tag # S 01716 was hung. Historic sample less than 50 with LSN # 03-0557. Cleanup pending tanker availability to Vacuum out Vault. Will try for tonight 2/23/2003 or Monday. There are two other open incidents on Transformer #5. # 133671 and # 135201.

Caller Remarks:

UNK CAUSE – MATERAL LEAKING ON BLUE STONE AT SITE -- THERE IS A DRIP THAT HAS NOT BEEN LOCATED YET – THERE WAS ALSO A SMOKE CONDITION AT THE SITE – CON ED SPILL NUMBER HAS NOT BEEN ASSIGNED LEAK IS AT TRANSFORMER #3 AT LOCATION – NO PRIVATE PROPERTY /SEWER OR WATERWAY AFFECTED – NO FIRE AT LOCATION – UNK IF THE MATERAL IS PCB OR NON PCB AT THIS TIME

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL 1948 – CALLED MCCARTHY. TRANSFORMER OFFLINE. SMOKE BUT NO FIRE. FDNY NOT CALLED. CREW CLEANING AND TRYING TO LOCATE SOURCE OF DRIP.

Con Ed e2mis #137951: 28-JUNE-2001 20:00 hrs Substation Operator M.Amerling #20393 was conducting an inspection in V3 Transformer #3 located @ E.63rd St Sub-Station Located @ 321 E.63rd St. when he discovered approximately (5) gallons of transformer oil spilled onto the bluestone in the structure. This vault is off the feeder run of 69M05. There is no dielectric-feeder in the structure. The station operator applied oil absorbant pads down in the structure. No sample was taken due to the station having a current PCB history report which is 10PPM. Yellow tag #S01196 was hung in the structure.

Clean Up was completed on Jun 29, 2001 by 0700. After the clean up was completed the oil was removed from the unit to repair the contactor which was damaged in the failure that caused this spill and possibly e2MIS #137911. The oily bluestone was removed and placed into drums and the oily surfaces of the transformer were wiped using simple green.

 DEC Investigator Remarks:

This incident was originally entered under the incorrect site Unit Substation–East 64th Street , e2MIS Number 135509. The incident has been re–entered under the correct site E.63rd St e2MIS 136081.

02/13/01 14:53 hrs. Mechanics Prandip Roopaiarine #189919 & Efrain Aroyo #52569 sub–station maintenance were conducting a routine inspection on feeder breaker 20m022 Pos.#2 when they discovered insulatum substance coming from the pothead they then reported the spill to senior operator Mitch Amerling #20393 Ph.#212–588–0296 the senior oper. reported that there was approximately 16oz. of insulatum substance that spilled onto the breakers concrete floor. A tag was hung tag #S01227 . The sub–station operator has contacted the chemlab to come & take samples of the substance. Oil absorbant pads were placed down in the structure & cleanup is pending test results. – Con Ed e2mis #136081:

Based on a reievew of the outlook folders it does not appear that samples were taken from this incident. S. Hanebuth – 85259

Station Supervisor W. Mowatt reports that the spill was cleaned up the same day by Station Operator R. Macknight, using simple green and rags. The waste was placed into a drum.

11.26.04 The pothead is not leaking. The repairs to the leaking potheads were made at the time of the incident by electrical distribution mechanics. P.Keelan \_\_\_\_\_

6/22/07: spill submitted for closure by Con Ed. Request rejected, with comment: Awaiting futher information from SSO Pfeiffer and Cotronei regarding soil sampling. (JHO)

~~~~~ Con Ed e2mis #135201:

1/24/01 0840hrs Mitch Armstrong, substation operator, reports he found 1000gal oil and water in transformer vault 5. Operator was in the process of adjusting the bus voltage in station #1 via the tap changer on bank 5 when he discovered the spill. All of the bluestone in transformer vault 5 had been previously removed. Fluid is in a trough between the foundation support beam and the vault wall. It looks like black crude oil that has migrated into the station from the street or an adjacent building. Estimate approx 500gal oil and 500gal water. Source of fluid is unknown. Transformer is not leaking and is not the source of spill.

1/24/01 1446hrs LSN 01-00733, 18ppm PCB

1/24/01 2000hrs Clean Harbors arrived on site with a 3000gal vaccuum truck and were unable to access the site because of the position of the cars parked on 64th St. Cannot operate truck late tonight due to surrounding residential buildings. Will return in morning. Oil is in the bottom of the moat in an area separated by a concrete beam. Area is approx 18' wide and 40' long. Oil appears to be less than one inch deep on top of the 1' of water. The water on the other side of the beam only had some small drops of oil.

Oil ID results indicate oil is similar to dielectric fluid.

1/24/01 2123hrs Updated reports faxed to Jennifer Rommel, NYSDEC and Chris Haas, NYCDEP.

1/25/01 Clean Harbors removed the oil/water mixture from the west side of the grade beam and placed water into drums. Checked with operator at 2030hrs and no additional oil was present.

1/26/01 Station operator reported at 0800hrs that some additional oil was present in vault. SSO staff placed pads in vault to absorb oil.

1/30/01 0045hrs Operator reports that on 1/29/01 at 2345hrs, found approx 300–400gal of unknown oil in vault 5 pushing up from ground.

2/21/01 Stu Hanebuth, Env Spec, inspected vault and found that water now has much less oil floating on top than it did when incident was first reported. Area has been pumped out several times and absorbants have been placed on the water to collect the oil. Estimate oil is approx 8oz.

Soil borings and monitoring wells were installed by Jacques Whitford as per a DEC approved workplan. The following is a summary of the daily activities in transformer vault #5 provided by Jacques Whitford:

2/4/02: Five soil borings, designated T5–SB–1 through T5–SB–5 and one well, designated MW–1 were installed in the transformer No. 5 vault. The soil borings were installed using hand auger. Well installation was facilitated using a vacuum truck. Conditions encountered at each boring location and monitoring well construction details are summarized below.

Saturated soil conditions were encountered from approximately 0.5 to 1.0 foot below ground surface. Separate–phase product was observed floating on water in the open boreholes. The soil below the top of the saturated zone to the boring bottoms was saturated with water and oil. Clean soil, or soil that did not contain residual oil, was not encountered in any of the borings. However, soil in the bottom foot of boring T5–SB–3 appeared to be less impacted than the overlying soils and the soil in the bottoms of the other borings. This relatively clean interval also represented a change of lithology.

MW–1: Was installed in soil boring T5–SB–2. As a result of enlarging the soil boring, the surrounding soil subsided and created a depression with a radius of 1.5 to 2 feet around the well in which oil accumulated. The well was constructed using an 8–foot long screen with approximately three feet below the water table. Perforated 8–inch diameter outer casing was installed from the screen bottom to approximately 8 feet above ground surface. This casing was left in place as a protective barrier for the well during backfilling of the vault with bluestone.

2/6/02: MW–2 installation was completed in Transformer No. 5 vault at boring T5–SB–5. A four foot section of 8–inch diameter outer casing was added to the existing section of perforated casing previously installed to an elevation of 4 feet above ground surface. The 4–inch diameter well screen and casing extends to approximately 9.5 feet above ground surface. A 4–foot long section of outer casing was added to extend the outer casing to approximately 8 feet above ground surface. Sand pack was then added to the annulus between the well casing/screen and the outer casing to a height of approximately 4 feet above ground surface. A 1.5–foot thick layer of bentonite was placed above the sand pack.

Caller Remarks:

Broke a thermometer last night and attempted to clean it up. Still have some remnants on the surface of table. She states she also cut her finger on the glass and may have gotten mercury in her cut. Wants to talk to the REP

DEC Investigator Remarks:

DEC Piper spoke w/ Beth (caller) about cleanup. Caller stated mercury from thermometer was smeared into comforter and dresser after trying to properly clean. Piper contacted DEC Austin for advice on spill. Austin stated procedure which is what caller did. Piper spoke w/ caller about cleaning and that was done already though there are smears. Piper contacted FDNY Hazmat for advice. Hazmat stated that they have the capabilities to remove the mercury and caller should contact 911 directly due to SOP. Piper contacted caller and stated FDNY Hazmat instructions. Piper followed up with caller in pm. Caller stated 4 firetrucks, hazmat team and two ambulances showed up and shut down the road. Hazmat bagged comforter and rug and cleaned dresser. Bags were left at her residence. Caller taken to emergency room where while waiting DEP Dan Walsh tracked her down and issued commissioner's order to remove haz materials and gave # of 3 contractors. Doctors made comments why she was here due to small quantity of exposure. Disposal estimates ~\$2K. Piper stated to caller he will talk with supervisor on Mon am. 0900aPiper updated DEC Austin. Piper contacted DEP Dan Walsh. Dan issued notice due to haz. material and stated DEP hazmat should have been notified. This amount is an unregulated quantity. Walsh to speak with supervisor regarding disposal requirements. 1030-Dan Walsh returned phone call and stated that the material is considered Hazardous and must be disposed of by a contractor and the Order is still in effect. Piper

contacted Sanitation which said they will have supervisor call back.

1245 Piper recieved call from caller, stated she has contacted the Mayors office and would like me to contact Ms. Amy Miller. I was in field and would call upon additional info and return to office. 1345 Piper contacted Lt. Flynn at Sanitation. Lt stated if it is broken, then it must be cleaned and disposed of by a profesional. Sanitation does not take broken thermometers. Piperspoke w/ Mayors office Amy Miller. AS per conversation amy stated that caller was forced into ambulance. This is new to piper. Piper explained to Amy that DEC refers mercury spills to DEP and FDNY Hazmat. This issue is being dealt with by the city and owner of thermometer to dispose of properly. This case is closed.

Dr. Mark Reiner Reiner, Lau & Chin LLC. 80 Grand Avenue, Suite 810 Oakland, CA 94612 PH. (646) 734-2052 email: mreiner@aol.com

as per NYC DOB record, a permit application was approved on 08/05/2015 for GUT RENOVATIONS OF EXISTING BUILDING FOR A NEW AMBULATORY DIAGNOSTIC TREATMENT MEDICAL CENTER, EXCAVATE TO CREATE NEW SUB CELLAR AREA .

10:07 AM:– spoke with Ruijie at Hydrotech. she mentioned that the site is under redevelopment. while digging to extend basement, crew noted some gasoline odors in soil. currently, excavation is about 12 ft deep. Hydrotech drilled four soil borings through excavation bottom and collected soil and groundwater samples. Ruijie mentioned that bedrock was found at about 16 ft bg. even with strong odors in soil, soil sample results show no impact and only minor impact was noted in groundwater samples. Ruijie believes that site will be excavated down to 20 ft bg for new basement level. 10:16 AM:– received email from Ruijie including site map and sample result summary table. four soil and two groundwater samples were analyzed. no contamination noted in soil samples. minor VOCs noted in groundwater samples.

03/17/16–Hiralkumar Patel. 3:45 PM:– spoke with Ruijie. she spoke with contractor who mentioned that the entire site footprint will be excavated to total a depth of 26 ft bg (14 more ft beyond existing 12 ft depth). as per Ruijie, bedrock was found at around 16 ft bg and water samples collected previously represents perched groundwater. today, Hydrotech collected samples for waste characterization and soil excavation may begin after receiving results next week. asked her to provide contractor's contact info. 3:55 PM:– received email from Ruijie including contact info for owner's representative.

Jim Kavanagh Ph. (516) 790–7170 email: jim@jtlconstructioncorp.com

03/28/16–Hiralkumar Patel. 11:56 AM:– spoke with Ruijie. they have submitted waste sample results to owner/developer and further excavation will begin once they receive approval from disposal facility.

04/01/16–Hiralkumar Patel. 3:10 PM:– received email from Ruijie. she mentioned that their client is still working on getting the soil approval from the disposal facility and they are expecting it for next Monday. soil excavation will start once they get it and HydroTech will send their environmental technician for air monitoring at the same time.

04/08/16–Hiralkumar Patel. 3:45 PM:– sent email to Ruijie inquiring update.

04/12/16–Hiralkumar Patel. received email from Ruijie (at 4:05 PM on 04/08/16). she mentioned that excavation resumed on 04/08/16 in presence of air monitoring technician. Hydrotech is applying Biosolve onto the soil, but still had the issues with the odor. they are proposing to their client to have more Biosolve stations at the site and this is still under discussion. 2:04 PM:– spoke with Ruijie. she mentioned that after 04/08/16, owner has decided to hire a new demolition contractor and is in process of selecting one. she mentioned that during excavation on 04/08/16, there were strong odors in work area, but nothing recorded on PID meter (possibly not working at that time). she mentioned that they will have more biosolve stations to control odors in work zone. she confirmed that there are no odor complaints from neighbouring building on each side of the site.

2:48 PM:– spoke with John Lomio at JTL Construction. he mentioned that they are extending only 40% of existing basement to create sub-basement. the sub-basement will be in L-shape along west and south side of site. to create sub-basement, they need to excavate another 12–13 ft below existing basement level (which is about 20 ft below street level). Mr. Lomio mentioned that the site will be used as ambulatory surgical facility.

John Lomio JTL Construction Ph. (212) 647–7102 email: jl@jtlconstructioncorp.com

2:59 PM:– sent email to Mr. Lomio and asked him to submit copy of available environmental reports/plans related to the subject site. also asked him to submit contact information for the property owner.

04/15/16–Hiralkumar Patel. 12:14 PM:– received email from Ruijie including limited Phase II investigation report.

04/18/16–Hiralkumar Patel. 2:50 PM:– received email from Ruijie. she mentioned that their client would like to restart excavation tomorrow.

04/19/16–Hiralkumar Patel. after discussing with DEC Mahat, case assigned to him (day–time runner on 03/15/16). DEC Mahat will inspect site.

04/20/16–Hiralkumar Patel. forwarded limited Phase II report to DEC Mahat for review.

4/20/16: Mahat The limited Phase II report has been uploaded on D2 for a reference.

4/25/16: Mahat e/c : On 4/22/16, DEC Mahat received an email update from the contractor with proposed end point sample locations. Email:

Good afternoon, Mr. Mahat It was nice talking to you yesterday. Based upon our conversation, I draft this endpoint sampling plan for this site. Please note that the excavation area is limited to the foundation plan of the new sub–basement and elevator pits. EP–S1 through EP–s7 will be installed on the sidewalls and EP–B1 will be installed at the bottom of the excavation. The samples will be analyzed for VOCs and SVOCs. The clean area is defined based on the testing results from previous investigation. Since groundwater is quite shallow in this area, can we sample the groundwater instead as EP–B1 if the water is encountered at the bottom of the excavation? Please advise. So far, I haven't heard back from the owner's side regarding to the vapor barrier/moist barrier. I will keep you posted. Thank you! Regards, –Ruijie Ruijie Xu – Project Engineer

The proposed End Point sample document is uploaded on D2 for reference.

7/15/16: Mahat On 7/6/16, DEC Mahat received an email update on the spill case. All collected soil samples were below CP 51 Guidance Value. Based on the sample result, the Department does not warrant SSDS in the building. Here is an email from the hydro tech explaining the reasoning:

Hi, Mr. Mahat

Please find the testing results of endpoint samples we collected so far in the attachment. Based upon the findings, only trace levels of VOCs were detected at concentrations less than their respective regulatory standards; several SVOCs detected in two samples at concentrations exceeding their respective regulatory standards. These SVOCs are categorized as PAHs, which are commonly found in the urban fill materials and are not indicative of spill.

Hydro Tech believe that application of Aquafin in foundation and sidewall will be sufficient to prevent migration of contaminants from groundwater into the building. Thus Hydro Tech will not recommend the installation of vapor barrier at the site. As per our conversation over phone last week, I believe we have reached an agreement on this. But it will be very much appreciated if you could confirm this via replying to this email.

Once all the end–point sampling is completed, we will start preparing the spill closure report for above site and more details will be present in the report.

Thank you!

Regards, Ruijie Xu – Project Manager

An email was sent out to Ms. Xu confirming that the spill case is a candidate for a closure.

8/11/16: Mahat e/c: An email was sent out to Ms. Xu requesting the closure report.

8/12/16: Mahat e/c: DEC Mahat received an email mentioning that the closure report on the process and will be submitted to the Department as soon as is ready. DEC is waiting for closure report.

case assigned to DEC Patel.

09/29/16–Hiralkumar Patel. 9:20 AM:– left message for Ruijie to submit spill closure report. 9:59 AM:– sent email to Ruijie and asked her to submit report. email copied to Rachel at Hydrotech.

09/30/16–Hiralkumar Patel. 12:00 PM:– spoke with Ruijie and inquired her about the report. she mentioned that the report has not been submitted yet due to some payment issues with their client. 12:03 PM:– spoke with Jim at JTL Construction who provided contact information for site leasee. 12:06 PM:– spoke with Ashley Poulos, representative of site leasee. she mentioned that her organization is responsible to resolve environmental issues at the site. informed her about open spill case and pending cleanup report. informed her that a spill cleanup report must be submitted to the department by 10/14/16.

Ashley Poulos Ph. (646) 648–2149 email: apoulos@medicalforefronts.com

12:24 PM:– sent email to Ms. Poulos and asked her to submit spill cleanup report by the end of 10/14/16. email copied to Jim and Ruijie.

10/26/16–Hiralkumar Patel. 12:07 PM:– left message for Mr. Poulos. 12:10 PM:– sent email to Mr. Poulos and asked her to submit cleanup report immediately. email copied to Jim and Ruijie.

11/04/16–Hiralkumar Patel. 10:06 AM:– spoke with Ms. Poulos and asked her to submit report today.

11/10/17–Hiralkumar Patel. 10:49 AM:– spoke with Ms. Poulos and inquired her about cleanup report. she has asked to contact Don Curtis.

Don Curtis PH. (917) 361–6791 email: doncurtis923@gmail.com

10:55 AM:– left message for Mr. Curtis. 11:48 AM:– spoke with Mr. Reiner, site leasee and informed him about open spill case. he mentioned that cleanup was completed. asked him to submit cleanup report/document for review. 12:11 PM:– sent email to Mr. Reiner and asked him to submit spill cleanup/closure report for review.

11/13/17–Hiralkumar Patel. 8:47 AM:– received email from Mr. Curtis. 12:18 PM:– spoke with Mr. Curtis and asked him to submit spill closure report.

04/23/18–Hiralkumar Patel. 12:26 PM:– received email from Chad Coronato from Claremont Peconic including spill closure report. summary:

– prior to expansion, the site was a 2–story theater with a full basement – site converted to a 3–story building with full basement and partial sub–basement and operated as a plastic surgery center – portion of site expansion involved excavating for the new sub–basement to a depth of 24 to 25 ft bg and localized excavations to 35 ft for elevator pits – bedrock was encountered at 14 to 17 ft bg – waterproofing/vapor barrier system was installed as final part of the development – petroleum odors were encountered during excavation for the sub–basement – perched groundwater was encountered between 2.46 and 3.42 ft beneath the former basement level – total of 1,168.53 tons of soil was generated during excavation – total of seven (7) endpoint sidewall soil samples, two (2) bottom soil samples and one (1) perched groundwater samples were collected – no contamination noted in any sample

Chad Coronato, AIA Claremont Peconic LLC. Ph. (732)684–4949 (C) email: ccoronato@claremontpeconic.com

Caller Remarks:

20000 GALLON FUEL TANK IN THE BASEMENT AND THERE IS A FILM OF OIL ON TOP OF THE WATER. NEITHER ARE SUPPOSED TO BE ON THE FLOOR OF THE ROOM BUT THEY HAVE NO IDEA WHERE THE OIL CAME FROM. THEY THINK IT MIGHT BE A LEAK IN THE TANK. THERE IS A TRUCK ON THE WAY FROM PETROLIUM TANK TO ASSESS THE SITUATION.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 12/16/2003 Tipple made a site visit.

3/11/2004 Sangesland spoke to Mark at PTC. He said the tank and floor under the tank were cleaned. The tank system was tested and failed. PTC sent the owner a proposal to do a Tank Only test and a Lines test. The owner approved this work on 3/8/04. The tank is 20,000 gal and it's almost full. PTC told the owner to burn the tank level down over the next couple of weeks and he will test the tank around 3/20/2004.

Owner is running the building on Natural Gas.

7/13/04 Tipple spoke with Mark at PTC,

11/29/05 – L. Alden – Spoke with Mark Salamack, Petroleum Tank Cleaners (917–559–5519). He had pumped out oil and water on 12/17/03 and cleaned the top of the tank. 3/24/04 tank only test indicated that the problem was with the lines. 6/14/04 tank test was OK. Sent letter to site owner requesting documentation of cleanup.

4/14/06 – L. Alden – No reply from owner. Suggested action: attempt to contact owner again. If work done between 3/24/04 and 6/14/04 investigated possible leak in lines and removed any contaminated soil, this spill could be closed.

12/1/06 – Raphael Ketani. I called up PTC (718) 624–4842 and spoke to the receptionist. She said she remembered the site and the repair, but all of the documentation was sent to the condo corp.

I called up the ST Tropez Condominiums (212) 751–0293 and spoke to the receptionist. She said that she remembers the repair and cleanup job. She said that the new super., Jeff Syler, will get in touch with me.

12/11/06 – Raphael Ketani. Mr. Syler called me and said that he had the documents I needed and that he will send them to me. He FAXed over copies of the passing test for the tank and the fuel system, a letter from Michelle Tipple (the previous DEC case manager), a 12/23/03 letter from PTC stating what services they will provide, a copy of the bill for work performed, and a copy of the paid bill. I told Mr. Syler these were the needed documents, but that DEC also needed a copy of the manifests for any soil removed, end point sample results. He said he will get back to me.

1/11/07 – Raphael Ketani. I spoke to Mr. Syler and asked him where were my copies of the manifests and end point samples. He said that there never were any end point samples or soil removed. He said that the tank was determined to be alright and so no samples were needed there. I asked him about the vent line and the fill line. He said the fill line was the only thing replaced years ago. I told him that DEC needed the soil around the fill line to be investigated. I asked him how much of the fill line was under the sidewalk. He said 12 feet. I told him that end point samples will have to be taken along the fill line. He said that he had

to arrange this through the property agent and the management company. I asked who this was. He said it was Martin Brooks at Douglas Elliman Property Management (212) 455-4722. He said he will call Mr. Brooks very soon today.

Mr. Brooks called me back. He said that he will look for documentation regarding any investigation of the area along the route of the old fill line beneath sidewalk. He said that if he doesn't find anything, then he will have end points taken. I told him that he has one month to either get me the documentation or the results of end point samples. He said he understood.

4/12/07 – Raphael Ketani. I contacted Mr. Brooks. He said his company doesn't manage the building anymore, but he did have the documentation that DEC had requested regarding the work. He said he will FAX me the documentation today.

5/8/07 – Raphael Ketani. I tried to reach Mr. Brooks regarding the documents he was going to FAX me, but could only leave a message. I tried to reach Mr. Syler, the super, but could only leave a message.

Mr. Syler called back and asked what documentation I needed. I told him that I needed paperwork regarding the fill pipe repair and replacement and the passing tank system test. I told him I also needed to have soil borings done along the length of the fill line. He said that the fill line is now mounted on the side of the building. I told him that is fine, but DEC needs to have the soil tested where the old fill line used to be below the sidewalk. He said he will have this done.

I also told him that Mr. Brooks no longer manages the building. He said that the new manager is Keith Werny of Cooper Square Realty (212) 634-8913.

5/9/07 – Raphael Ketani. I received a FAX from Mr. Brooks containing copies of the paperwork he had on file for the site. The FAX contained the Fire Department Violation Order, a passing tank only tightness test from 3/29/04, a 12/17/03 DEC letter to the co-op board president regarding the oil release, 12/23/03, 4/1/04 and 2/27/04 letters from PTC regarding costs to clean, test and repair the tank and replace the lines. There was no documentation that soil samples had ever been taken along the length of the old fill line.

5/10/07 – Raphael Ketani. I tried to contact Mr. Werny, but could only leave a message.

Mr. Werny called me back and told me to send him an e-mail stating what has to be done. His e-mail address is keith.werny@coopersquare.com.

8/1/07 – Raphael Ketani. I tried to reach Mr. Werny, but could only leave a message and send an e-mail.

8/2/07 – Raphael Ketani. Mr. Werny called me back today and said that he is going to the condominium office to dig through the records and try to find the documentation DEC needs. He hopes to get it to DEC sometime in August. I told him that would be fine.

10/19/07 – Raphael Ketani. I spoke to Mr. Werny. I asked him why he hadn't sent me any documentation regarding the old fill line removal and soil contamination. He said that he will make this his number one priority. I told him that DEC is requiring that 3 soil borings be performed and 3 soil samples be taken along the trace of the old fill line. He said that he wanted to talk to the super. about the old fill line and then he will get back to me this monday afternoon. I told him that will be alright, but if he doesn't, then the state will send out a formal letter requesting the boring and sampling.

10/22/07 – Raphael Ketani. Mr. Syler called me back. He told me to FAX a quick note to Diana at PTC and to him that 3 borings

need to be performed along the trace of the old fill line and that soil samples need to be taken. I told him I would do so.

The FAX went out today to Mr. Syler (212) 826-3080 and to Diana (718) 858-4268. I also included that any contaminated soil will have to be removed.

11/30/07 – Raphael Ketani. Today, Mr. Syler FAXed me soil analytical data from the 3 end point samples that were taken along the trace of the old fill line. The results showed that there were very low hits for total xylenes in samples #1 to #3, and some low SVOC hits for samples #3.

Based upon the old fill line trace soil sample results, the passing tank test and tank system test, and the other documents in the case file, I am closing the spill case.

CON ED SPILL #147422 / WORKERS FOUND APPROX 1QT. OF UNKNOWN OIL FLOATING ON 40 GALS. OF WATER IN THE ABOVE MANHOLE – CLEANUP PENDING OIL SAMPLES

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ Con Ed e2mis #147422:

3-7-03 @ 10:20 G Woods #11346 reports that while working on enlarging m12655 @ 436 e 69 st , Danella Construction discovered 1 pint of an unknown oil ontop of 40 gallons of water in the structure. No oil filled equipment in the structure. Water is standing. No sewer . No sump. No dielectric filled feeder in the structure. I instructed G Woods # 11346 that he will need to apply a tag a.s.a.p. Samples are to be taken by chem lab. No initial cleanup action taken. Chem lab was notified to take samples.

Aroclor 1242 < 1.0 ppm EPA 608/8082 Aroclor 1254 < 1.0 ppm EPA 608/8082 Aroclor 1248 < 1.0 ppm EPA 608/8082 Aroclor 1260 < 1.0 ppm EPA 608/8082

3/13/03 11:00 R. Bruns #21106 of the environmental desk spoke to G. Woods # 11346 of C/M and verified as of this date no tag has been hung. He also states that this cleanup was given to A. Carucci # 16289 planner for Mtce/Construction to handle the cleanup. A. Carucci was then called & he will have crews on this job probably on 3/14/03.

Update 03/27/03 @ 07:30 hrs M Luongo of Construction Management reported to N Muldoon # 18723 that after his crew arrived on location discovered that there was no oil in the hole. This was found out after placing a pad and no oil showed on the pad. No spill tag was not installed since there was no evidence of oil. There was no cleanup action taken since there was no evidence of oil. Spoke to R Pellegrino about this incident.

WATER MAIN BRAKE – SOIL AFFECTED 0 CHRIS ENGLEHARDT CONTACTED

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT e2mis notes 118333

Steam manager Ed Conway reports at 15:00 of asbestos release in soil at water main break on E68 st & York Avenue. Water main break occurred at 0430 and DEP tests of soil tested positive at 0900. Cleanup is ongoing as of 1530. input by mctague 77472 Water main break exposed two abandoned 6 steam services and one 8 steam service. Bulk sampling from the 6 service tested positive for chrysotile asbestos. Bulk sampling from the 8 service tested positive for amosite. The 8 service was later exposed by City contractors digging to repair water main. Service was encased in a shell housing with some extremely small holes (possibly 1/4 inch) caused by corrosion, overall in good condition. It is unlikely that water main break affected this service. All samples indicate trace amounts of amosite, source of contamination could not be determined. Small amount of chrysotile (possibly .25 of an ounce) found on 8 steam casing. All insulation on services was intact.

inside building in wall – cleanup pending

DEC Investigator Remarks:

02/11/14–Zhune spoke to Ryan Kahn from EPL Environmental 212–330–7501. He said they were doing geotechnical survey in an area of the basement of the hospital to figure out the floor condition. They collected soil samples and sent them to the lab. The analytical results indicated motor fuel oil. They will do more investigation. The hospital is looking the possibility to renovate mechanical equipment and bring more power to the building.

Kay kahn RKahn@ESPL.com

6/28/17–Frank Castellano sent the following email. Any chance you're handling Spill No. 13–10708? Or know who is? We've been engaged by Northwell to address the issue. Spill report attached.

8/10/17–Frank Castellano sent the following email. Per our conversation last week, the contact person at Northwell Health is:

Kurt Jahrsdoerfer Director of Engineering

Lenox Hill Hospital 100 East 77th Street New York, New York 10075 Phone: (212) 434–2859 Fax: (212) 434–2966 Cell: (646) 235–1613 kjahrsdoerfer@northwell.edu

Northwell Health Visit us at Northwell.edu

10/18/17–Jessica Fergren from Castleton Environmental email the work plan dated 9/13/17 castleton proposes the following. 1. Geophysical Survey 2. Four Soil Boring Installation 3. Final Report.

10/18/17–Zhune sent email to Jessica The New York Department of Environmental Conservation (the Department) has received and reviewed the investigation work plan dated September 13, 2017, submitted by Castleton Environmental for the above reference site. The Department approves the investigation work plan.

11/27/17–Jessica email –As discussed, in reference to the opening of this spill at 210 E 64th St, it is my understanding that borings previously completed in the sub-basement in 2014 were part of a geotechnical investigation by ESPL to support construction plans to expand electrical power to the hospital. The sample results from 2014 are from one of the borings (picture of the boring attached provide by ESPL) where an odor was observed during the boring advancement.

Soil was collected from this boring and submitted for laboratory analysis. The analytical report in the on page 8 as part of the comments: ~TPH Comment:**Petroleum hydrocarbon chromatogram most closely resembles motor oil. The sample was quantitated against a C9–C36 alkane hydrocarbon standard.~

VOCs and SVOCs were reported as non-detect, however, according to the comments section as well: ~Semi-Volatile Comment: Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semivolatiles analysis.~ Limited soil recovery was observed during the most recent investigation as

well.

It is my understanding that the spill was called in once the analytical results were received. The analytical data package did not contain the complete data deliverable to review the chromatograms to determine if the interpretation of the presence of motor oil could be confirmed.

We have requested the additional laboratory information from ESPL, but have not received a response and do not believe that they can obtain this information.

11/17/27–Jessica emailed the Subsurface Investigation Report dated November 2017 the report stated that the geophysical survey identified no evidence of subsurface anomalies. The subsurface investigation consisted of five soil borings performed in an around the area of concern that initiate the initial report. Refusal was encountered at depth ranging from 0.5 feet to 2.0 feet below the concrete floor. groundwater was not encountered.

VOCs and SVOs quantified in the soil samples were reported at concentrations below applicable NYSDEC CP–51 CCLs in the four soil sample analyzed.

Results of the metal analyses are consistent with that typically associated with historic fill material.

Based upon the findings of the subsurface investigation and the result of the geotechnical investigation in 2014 this spill is closed.

Called into EPA as anonymous. Second phone number is: 212-308-0915

DEC Investigator Remarks:

03/06/06-Hiralkumar Patel. Spoke with Mr. Danny at Blair House Ass. as per him spill happened on solid concrete floor in property basement in boiler room while starting boiler. no cracks, no drain affected. not yet cleaned up. boiler has stopped and no more leaking. waiting to get boiler repaired. asked Mr. Danny to clean without waiting to get boiler fixed. Danny told me that it was around 1-2 gal of oil.

spoke with Mr. Jim Doyen, Super at building. he told me that there were 10-15 gal of oil spilled. all contained on concrete floor. they sucked out with sand and speedy dry. still they are using sand to remove more oil from stain on floor as it was # 6 oil. no odor complaints in building. all cleaned up. case closed.

Caller Remarks:

Private property undergoing renovations, contractor removed approximately 275 gallon tank, and at that time soil had staining.

DEC Investigator Remarks:

09/12/13- Vanessa Meer from Yu and Associates (201)791-0075) called and said they are doing redevelopment at this site while excavating they found a tank. The tank was removed and found out evidence of soil contaminated and groundwater.

4/2/14-Vought-Received call from and spoke to Vanessa (Yu Associates) and she sent a letter report that recommended a groundwater investigation. Tank was removed and DEC Zhune required a groundwater investigation. They installed two permanent wells and one temp well where building will be. Temp well hit bedrock. Groundwater for VOCs were non-detect and no exceedences for naphthalene. They submitted report to Zhune requesting closure. Excavation to bedrock in north and excavation in south due to structural integrity of adjacent building. Eight sidewall samples were collected and two bottom samples as well and showed no Unrestricted SCO exceedences. Vapor barrier was installed as foundation poured already. Report was sent to her on 3/25/14.

4/9/14–Vought–This spill transferred from Zhune to Vought as Zhune out of office until 5/7. Complete file review by Vought. No PBS registration and no other spills found at address.

Tank Closure Report (Yu & Associates)–10/29/13. UST discovered during redevelopment activities and spill called in due to “observed soil staining and elevated” PID readings. Excavation was already backfilled and report recommends NFA with respect to soil contamination and also notes that additional groundwater monitoring should occur. Redevelopment includes construction of a 7–story residential building with one–level cellar. The Site was formerly occupied by a former courtyard, former 3–story brick building, former 1–story brick building and a former 2–story brick building. Surrounding properties are commercial and multi–family residential. Immediately to the south is a school and to the west is a medical clinic. 275–gallon UST was uncovered in “southern portion of the site”. UST was pumped out in 9/13. Bedrock at approximately fifteen feet below grade and boring logs show water around this depth as well. Site as formerly used a residential buildings and a catholic school. UST excavation was a rough rectangle from “14 to 21 ft in the long dimension and about 5 to 17 ft on the short side”. Excavation to bedrock on north side and excavation to east was halted due to structural concerns and halted on western wall due to on–site retaining wall and ramp. Ten endpoint soil samples were collected from excavation. Soil analyticals show no Part 375 Soil Cleanup Objective exceedences. Some SVOCs noted (PAHs) which are commonly attributable to fill material. One groundwater sample was collected from the bottom of the trench excavation at a depth of 19’bg that showed: 110ppb benzene (GW1), 50ppb toluene(GW1), 15ppb ethylbenzene(GW1), 145ppb xylene(GW1), 27ppb naphthalene(GW1). 90 tons of soil were removed from the site and disposal manifests included. After removal of contaminated soil, excavated area was backfilled with 75 cubic yards of 3/4 inch stone and then site was filled with 20 yds of flowable grout as per Site Engineer . Vapor barrier and moisture barrier specifications included in report. CAMP also being performed during excavation activities. Fingerprint analysis on sample from UST showed gasoline. Report recommends installation of three monitoring wells to delineate downgradient contamination. Vought added report to E–docs.

Groundwater Investigation Report (Yu & Associates)–3/25/14. Report documents groundwater investigation activities from 10/13–2/14. Groundwater investigation required by DEC including determination of flow direction. Groundwater elevation in well was at 12–13’bg. Investigation included installation of one well and one temporary monitoring well in addition to an already installed well. Refusal (with four attempts) on temporary well in middle of site. Two groundwater samples were collected from wells in sidewalk in front of building and no TOGS 1.1.1 exceedence. Report recommends spill closure. Vought added report to e–docs.

4/10/14–Vought–Completed file review and spill closed and all contaminated soil removed as per endpoint samples (90 tons), minimal groundwater contamination within natural attenuation parameters in sample from excavation, development of entire site with concrete foundation including a moisture/vapor barrier as an engineering control. Vought left message for Yu Associates (Meer) to return call with address for Spill Closure Letter. Vought received email from Meer that Hi Jeffrey, Thank you for the good news! The owner’s information is below:

Mr. Shing Wah Yeung 337 East 62nd Street, LLC 15 Pike Street (basement) New York, NY 10012

4/11/14–Vought–Sent out closure letter to above address with cc via email to Meer and added letter to e–docs.

5/13/14–Vought–Received email from Yu Associates (Meer) that Hi Veronica and Jeffrey, Attached please find a copy of the well decommissioning report associated with the 337 East 62nd Street, NY, NY site. Please let us know if there are any questions or if there is anything else that you will require. Thanks again for all of your help on this! Sincerely, Vanessa Vought added report to D2 and replied to Meer that DEC had no further requirements.

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT E2MIS 121755

12/07/98 00:46 TATEKAWA REPORTS HE FOUND UNKNOWN 1PT OF OIL MIXED IN 400GAL'S OF WATER IN MH-45114 N/W/C E.64 ST 3 AVE. ITS CONTAINED,DID NOT ENTER ANY WATERWAY OR SEWER,DID NOT TAKE A SAMPLE OR HANG A SIGN IS WAITING FOR FOREMAN AND THAN HE WILL TAKE SAMPLE AND HANG A SIGN. HE WAS WORKING ON DC ELEMINATION AND THERE IS PRIMARY CABLE IN THE MANHOLE

If this is a Con Edison manhole it contains electrical cable and splices. Many manholes have a sealed sump in the floor which is used to allow runoff when pumping the structure. A hose is place in this sump and water on the floor will flow into the sump allowing the floor to be cleaned. If cleaned prior to analysis of the fluid, the structure will be cleaned as >50 PPM and all liquid and waste will be manifested accordingly. The structure will be double washed with a degreaser, i.e. Slix. All cleaning material and PPE will also be treated as >50. If any sludge is found within a manhole it is treated as lead contaminated and manifested accordingly. The spill identification tag will remain secured to the structure until the analysis is completed and if <500 PPM the signage will be removed. If the analysis is >499 PPM, a grid will be prepared for wipe testing the area. Until the analysis of the wipes are proven to be <10ugs/100cme2 all additional waste produced from the structure will be treated as the original analysis. If this spill occurred in a transformer vault containing a sump pump and there was a possible release, the drainpipe trap will be dismantled to determine if oil was released. Sludge found in a vault, through historical analysis, has been determined not to contain lead.

12/07/98 02:12 P.MCGRATH REPORTS SAMPLE TAKEN AND HUNG SIGN#21887 IN MH45114 N/E/C E.64 ST 3 AVEAVE...SAMPLE IS FOR PCB

Analysis received SA98-13500 = Aroclor 1260 / PCB <1.00 PPM ...

12-8-98 07:45 Cleanup complete 12-8-98 at 0600 hours supervised by J.McCabe 00305. 500 gallons oily water removed via tanker, mh was then double washed. 2-55 gallon drums hazardous waste generated, picked up by corporate transpotation. EPA#NYP004033056. Tag removed. Crew: J.Hinojosa 16383, L.Morales 74700, and S.Johnson 00394.

con ed # ???

material is in man hole on the surface of water in man hole

transformer in in man hole unk if water level is constant or not

sample have been taken clean up pending lab results

 DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ Con Ed e2mis #141957 Notes:

In V-5087 found an un-diaper able unknown oil sheen on top of approx 50 Gal of Water. His first call was at 14:45, and at this time this desk suggested that he try oil pads. At 16:20 he reported that this was not working. CIG was called at 16:22 hrs spoke to Mr A.Natale #86017, and at this time he was informed that this clean up will be pending lab results, and the possible removal of Transformer in V-5087. Sump pump not working. Tag 27124 placed in vault. Samples taken for PCB, ID, and flash point.

Lab Sequence #02-02488-001 Flash point, pmcc > 140 deg F Lab Sequence #02-02486-001 PCB 15 ppm

UPDATE: 3/26/02 @ 16:37 hrs. Operating Supervisor inspected this vault today (3/26/02) and stated that a Steam Jenny is required to clean the vault in addition to the tanker & Vactor truck due to the chicken fat and cooking oil/grease in the vault.

Clean Harbors arrived on site on 5/24/02 and setup traffic control & confined space entry equipemnt. Crew removed one yard of solids with bucket & Cusco vehicle. They applied sodium hypochlorite detergent to walls & floor. This was rinsed with hot water, pressure washed and repeated. Walls & floor were washed again with Citri-Kleen solution. Cleanup completed at approx. 16:00 hrs.

Caller Remarks:

unable to find active leak. clean up pending

DEC Investigator Remarks:

10/25/18 - Lakhani Transmission Operations was conducting manhole inspections during a leak search for EMIS 269792 when he discovered 12 gal of unknown oil on 500 gal of water in MH 59407. The feeders associated are 38M31 and 38M35. The employee sees a tide line and said the manhole is possibly tidal. He will hang Env Tag 129979 and take a sample for oil ID and PCB, COC HH31526. He will also take samples to determine if the manhole is tidal. Cleanup is pending.

12/14/18 – Austin – Labs came back as feeder oil – Con Ed contained and cleaned up the spill; no source found in vault – See document files for further information – Spill closed – end

 Caller Remarks:

Cleanup in progress

 DEC Investigator Remarks:

1/25/14: Mahat

Mr. Anthony Lara from Riteway informed DEC about the spill. There was leak on the feeder pipe that was supplying oil from tank to the boiler. The feeder line was running through concrete trenches. Since there was leak on the feeder line the trench was working as a secondary containment. Riteway was retained for the clean up. Mr. Lara also informed DEC that there is no soil and GW contamination since the spill is contained in the concrete vault.

Spill Case will be closed in DEC Spill Database as there is no impact on other resources. As per Mr. Lara description : No further investigation is warranted by the Department.

IN SUMP IN BOILER ROOM

DEC Investigator Remarks:

Sangesland spoke to Meredith Hayes at GZA. Oil was found in sump which appears to be coming from the tank vault area. Unknown if this oil is part of the old spill from pre-1990 #6 oil or from later newer #2 oil tanks. Old tanks were #6 and had an old DEC spill report – which was closed out. Six new #2 tanks were installed in early 1990's and are now in a vault (old tanks were not in a vault). GZA Plan – They will sample the sump and check if it's #2 or #6 oil. The sump will be pumped out and depending on the #2-#6 result, an investigation will be conducted to determine where the leak/spill/source is.

07/24/07-Hiralkumar Patel. spoke with Ms. Hayes at GZA. they have cleaned sump in basement. took oil sample for fingerprint and #6 oil kind of product. based on fingerprint analysis they are planning for further soil investigation around previous #6 oil tanks, which were located right under sidewalk.

Louis Wetstein Director of Facilities & Operation 525 East 68th Street New York, NY 10021 Ph. (212) 746-7559 Fax (212) 746-8930

Meredith Hayes GZA Ph. (212) 594-8140 email: mhayes@gza.com

asked Ms. Hayes to send updates on schedule for soil investigation and site map with tank location and proposed boring locations. also asked her to send list of any old oil spills.

08/27/07-Hiralkumar Patel. spoke with Ms. Hayes. they did GPR to find old tanks. Ms. Hayes is preparing work plan (most probably site plan with proposed sampling locations) and will submit by tomorrow.

received email from Mr. Hayes including fingerprint analysis result and site map with proposed well location. they proposing installation of two wells to depth of 35 ft bg. map doesn't include tank locations and sump location where oil was found. fingerprint analysis didn't identify material as such (as assumed #6 based on visual observation), probably due to age of spill and weathering of product.

sent email to Ms. Hayes requiring complete scaled site map with all existing and former ASTs/USTs system locations, sump location where oil was found and proposed well locations.

09/06/07-Hiralkumar Patel. left message for Ms. Hayes to submit site map with all existing and former tanks and sump pit where they found oil, including proposed well locations. sent email to Mr. Hayes with the same.

09/10/07-Hiralkumar Patel. received email from Ms. Hayes with current tank locations, sump location and proposed well locations. as per Ms. Hayes, previous tanks were at same location as new tanks are. sump is located in mechanical room and is positioned in east-south direction from tank location.

10/11/07-Hiralkumar Patel. spoke with Ms. Hayes. they scheduled well installation but due to holidays and conflicts with community, they cancelled it and haven't heard from hospital yet about rescheduling. she asked to contact George Pecovice (212-746-1782) in engineering department at hospital.

left message for George.

10/15/07-Hiralkumar Patel. received call from George. he or Ms. Hayes will call back once they schedule test pit work.

10/31/07-Hiralkumar Patel. left message for Ms. Hayes. 11/01/07-Hiralkumar Patel. received email from Ms. Hayes. they are installing wells currently. 11/06/07-Hiralkumar Patel. received email from Ms. Hayes. she is no longer working with GZA. she asked to contact David Winslow (dwinslow@gza.com).

11/30/07-Hiralkumar Patel. left message for David at GZA. 12/03/07-Hiralkumar Patel. received call from Mr. Kline, new project manager. they have installed two wells on north of existing tanks. screened soils during well installation and took soil samples. soil analyticals came back. they got groundwater sample from only one well. other well found dry. once get groundwater analyticals, will submit all data.

Steve Kline email: stephen.kline@gza.com

01/17/08–Hiralkumar Patel. sent email to Mr. Kline requiring updates. 03/21/08–Hiralkumar Patel. received investigatio report from Mr. Kline. abstract:

– currently, six 20,000 gal #2 oil USTs are located in a vault under truck loading area south of E 71st street – piping system currently drains stromwater/groundwater that accumulates in the tank vault to an oil/water seperator and sump location in the basement beneath teh Annex building mechanical room – local groundwater flow is expected to the east, towards the East river; mean river <-----elevation is reportedly 2.75 ft above mean sea level at the East river bulkhead – two soil borings were advanced in the south sidewalk along E 71st street – could not install borings within the truck loading area due to the presence of the vaulted USTs – groundwater was observed at 13 and 15 ft bg – MW–1 was installed to 25 ft bg and MW–2 was installed to 23 ft bg – fill material consisting of heterogeneous mix of fine to medium sand, some fine gravel and brick fragments was observed directly beneath the concrete sidewalk to between 14 (at MW–1) to 15 (at MW–2) ft bg – fill material under MW–2 is underlain by pieces of a boulder and then bedrock schist, which extended beyond the termination depth of boring – no visual or olfactory evidence of contamination was observed in any of the soils – competent bedrock was encountered at approx. 20 ft bg in MW–2; concrete backfill was observed from approx. 10 ft to 24 ft bg in MW–1 – two soil sample collected (one from each boring) – one week after installing wells, found MW–1 did not have any measurable water; MW–2 only had couple of inches of water – no contamiantion found in any soil or groundwater samples – soil samples collected from the borigns were at an elevation equal to the bottom of tank vault – petroleum contamination reported for the spill was observed in a sump located 20 ft below the bottom of tanks on the western (and upgradient) side of tanks – observation implies that the residual seperate phase product (#6 oil) is preferentially moving down through unsaturated or drained backfill materials near the foundation walls independent of groundwater flow directions – existing #2 oil tank installation includes automated tank monitoring and leak detection systems – no petroleum contamiantion has been observed on the north side of the tank vault, and buildings with deep foundations exist on the other three sides of the tank vault

based on submitted document, case closed.

04/15/08–Hiralkumar Patel. received call from Angelina from GZA requesting NFA. sent NFA to Mr. Wetstein. letter emailed to Ms. Hayes at GZA.

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

The following DEC Investigator Remarks were available prior to 1/1/2002:

con ed e2mis notes:

Found transformer leak 40 gals on concrete floor. Count .4 ppm

Transformer capacity is 285 gallons, historical sample show 10 ppm pcb. DEP requested immediate clean up dued to possibility of rain. Waiting for feeder to go out. Feeder is out. Crew is proceeding with cleanup. Photo in file. DEC and DEP are satisfied with cleanup and are going off location. Partial cleanup complete. Raymond Lo going off location. Tanker removed 260 gallons of oil from unit.

The cleanup is pending. 6 Oz. reported yesterday but got the results today

 DEC Investigator Remarks:

8/3/17 TJD EMIS report #260032/8. As per report, Manhattan Senior Field Operator J.Louis (22009), charging WR:3904682, opened sidewalk MH 48451 to identify cables when he discovered 6 ounces of unknown oil on 30 gallons of water. Environmental Tag 118989 was hung and samples were collected via C-of-C HH23543.

9/14/17 – Austin – 6 oz of unidentifiable oil atop 30 gals water in a Con Ed subsurface structure – Con Ed contained and cleaned up the spill; no source identified – See the document files for further information – Spill closed – end

Caller Remarks:1 QT OF UNKN OIL ON 5 GAL OF WATER IN MANHOLE. NO TO 5 QUESTIONS. CLEAN-UP PENDING RESOURCE AVAILABILITY. CON REF #158842

DEC Investigator Remarks:

e2mis no 158842

John A Burke found approx. 1 qt of unknown oil on top of approx. 5 gallons of water at this location. Two samples have been taken 1for pcb and 1 for id. No sewer or waterway was affected. The source and cause of the spill is unknown. Environmental tag #42678 was installed. There was standing water but no visual water movement. There was no sewer connection; no substantial cracks and a concrete sump could not be verified due to the amount of fluid in the hole.

Lab Sequence Number: 05-05070-001 – PCBs < 1 ppm; Analysis indicates the presence of a substance similar to a lubricating oil

Update: 05/29/05 @ 12:45 hrs Michael J Dunworth 76117 U.G O.S reports the following Clean Up Completion Date: 05/29/05 Time: 12:00 Details: Final Clean Up Solids Removed: To flush truck Type of solids: Some stone & sand Barrels used: None Liquids Removed: Yes approx. 5 gallons plus additional water from flush truck. Method Used to Clean: Simple Green was used, and was washed twice, and power washed with flush truck. Environmental tag removed: Yes #42678

Remediation Of Spill: Mr. Dunworth states that the only thing he was able to see was that there were visible cut marks around the metal casting of service box, and run off from street might have been the cause.

Caller Remarks:

appears to be ground water with an oil sheen. water entering basement, sump has been turned off. unknown source of oil

DEC Investigator Remarks:

1/31/19 – Sekhon

Notifier9 Peter) told that they occasionally get water, either groundwater or surface run off, into the basement of this walk-up apartment. There is a sump that drains the water to the sanitary sewer. This morning they noticed water entering the building through a penetration in the basement floor. The water had an oil sheen on it. Some oil contaminated water made it to the sump. They disconnected the sump pump and have a contractor, Rite-Way, on scene to do the cleanup.

Erika Blackman – 646-799-8843. Pete Cappel – 720- 635-6864 (peter.cappel@aimco.com)

DEC Piper responding to the spill.

DEC Piper inspected site. There was 1 small drop of what appeared to be 6 oil on top of 200+ gal of water. No visible sheen though there was a dirt/ dust film. Rite Way was on scene and was going to scim the surface of the water prior to turning sump back on. Spill closed.

Caller Remarks:

20 gallons of unknown liquid in a manhole. Smells like gasoline however. All contained to manhole.

DEC Investigator Remarks:

e2mis no 159653

L Morales # 74700 discovered 20 gallons of unknown liquid (possibly gasoline due to the strong odor) mixed with 10 gallons of water on the concrete floor of the structure. No sewer or waterway affected. Source and cause of spill are unknown. At this time there is no evidence of a release to a sewer however conduit plate 32-k-3 indicated that there is a sewer connection. No visual water movement. No substantial cracks observed. 3 liquid samples were taken by L Morales # 74700 1 for id, 1 for pcb and 1 for flashpoint on a priority basis. Chain of custody # ee08710. Cleanup is pending lab results.

Update 7-11-05 @ 02:10. M Daughtrey # 88151 reports that the source of the spill was an mta bus Q60 that had a fuel spill in f/o 303 e 60 st and traveled down the block into our structure. The substance is known to be diesel fuel.

Update 7-11-05 02:30. M Daughtrey # 88151 reports that he located a witness to the spill from the bus. Witness name is Harry Esposito, he is the doorman for evansview building which is located @ 303 e 60 st. Mr . Esposito states that the spill occurred @ 05:50 on 7-10-05

Update 7-11-05 @ 03:40. R Castro # 88889 reports that there is also 1 pint diesel fuel mixed with dirt from the same source that was found in s11599 b/l 313-315 e 60 st. Conduit plate # 32- k-1 indicates no sewer connection in this structure. No sewer or waterways affected. No injuries and weather had no affect. No smoke or fire involved. 2 samples taken from this spill by R Castro #88889, 1 for pcb and 1 for flashpoint. Chain of custody # ee08711. Environmental yellow tag # 48598 applied. As per report P Walsh, since the 2 spills are from the same source they can be combined in the same e2mis report.

7/11/05 08:08 Lab Sequence Number: 05-06797-001 < 1.0 ppm

7/11/05 08:24 Lab Sequence Number: 05-06797-002 Flash Point, PMCC > 176 deg F D93-00/EPA 1010.

7/11/05 12:28 Lab Sequence Number: 05-06807-001 Analysis indicates the presence of a substance similar to a light fuel oil.

Update 7-11-05 @ 09:51. Lab Sequence Number: 05-06798-001 < 1.0 ppm

7/12/05 08:34 E. Pearson # 50628 underground splicer called to report that at 04:00 manhole 11600 the cleanup was completed. the tanker removed 300 gallons of water & fuel oil the structure was double washed with BG 760 The spill tag # 48597 was removed. The cleanup was done by himself & his partner K. Williams # 00098. R. Castro was the supervisor # 88889. The cleanup will continue in servicebox -11599

7/12/05 13:46 O. Mcghie # 85993 reports that Allstate did the cleanup in service box 11599. They used a flush truck and removed all liquids & solids. As reported by Abdul at Allstate there was 20 gallons of water and 200 gallons of sludge. The structure was double washed with citrus cleaner The spill tag # 48597 was removed.

Caller Remarks:

Historical spill – clean up pending

DEC Investigator Remarks:

08/21/12 Langan Engineering prepared Investigation Summary Report. The investigation included collection of three indoor air, five soil and three groundwater samples from the sub-cellar area. A petroleum odor and sheen were noted in soil and ground water within a test pit excavated below the eastern knee wall during a geotechnical investigation in March 2012.

09/27/12 Closure report prepared by Langan Engineering. Langan conducted the investigation to delineate the lateral extent of petroleum contamination in soil and ground water and evaluate the potential for infiltration of petroleum contaminated soil vapor into the sub cellar of the site building. Petroleum related VOCs were not detected above CP-51 in soil samples. VOCs exceedances in ground water are minor. In indoor air samples, no detected compounds exceeded either the corresponding AGV or all background database. The detected concentrations in indoor air samples were consistent with those in the background exterior air samples. NFA required at this time. (sr)

10/15/12 Closure request in edocs. (sr)

VACANT LOT WHILE REMOVING TANKS FOUND CONTAMINATED SOIL;

DEC Investigator Remarks:

Sangesland spoke to Michael Burke of Langan Engineering. They were pulling tanks out of a vacant lot that once housed a car dealership. During the excavation process they found a series of gasoline USTs within a concrete vault. Vault was built directly on the bedrock. Apparently some gasoline left the vault over time and impacted the soil next to the vault. Langan has excavated the impacted soil (now staged and ready for removal). Endpoint samples (sidewall) have been taken (no bottom sample/bedrock). Disposal manifest/sample results/closure report will be sent to DEC. ***** Related Spill***** # 0606975 ***** This second spill number relates to a different location on the same property. There is evidence of a hydraulic oil spill from the former hydraulic lifts. Once again the site is being excavated and endpoint samples will be taken. Results for this spill will also be included in the closure report being prepared for this site.

10/05/06-Vought-Received call and spoke to Burke (Langan). Burke will be preparing report. One endpoint sample showed SVOC's by hydraulic area. VOC's were non-detect for gasoline area. No dispenser island or remote fills. All piping was removed site. Site will be high-rise and excavation will occur for development. Tanks were never registered and PBS registration was sent in.

Six test pits were performed. 80 yards of soil were removed. Vought inquired about extent of excavation for new building (whether excavation would include locations of possible dispenser islands and/or remote fills). Burke will return call to DEC.

10/11/06–Vought–Spoke to Burke after he left numerous messages for DEC and endpoint samples were clean for VOCs and SVOCs. Contaminated soil was discovered in southern of site (not known before), however no USTs were found. Clean endpoints from hydraulic location.

Excavation was dug to south and west and gasoline and may be entering from westside of site. Whole site will be excavated to bedrock.

11/7/06–Vought–Site visit by Vought on 10/13/06 with Langan Burke and George Rukaj (Solow Management Corporation 212–829–0600). Air monitoring in progress with PID and vapor suppression being achieved via use of EcoSorb misting due to odor complaints from adjacent building. Note that owners of adjacent building are also owners of this construction site (Solow Management). Site formerly contained eight (550–gallon) gasoline USTs, one (550–gallon) waste oil, one (1000–gallon) fuel oil, five hydraulic tanks. Two additional USTs were found at time of site visit. Site was formerly a parking garage. Discovered tanks will be removed and pumped dry. MTA ventilation shaft immediately adjacent to contaminated soil undersidewalk so delineation to the south is not possible. Site will be excavated to bedrock for construction of residential building. DEC requires: 1)collection of soil sidewall samples and one bottom groundwater sample. Approximately 20 endpoint soil samples were collected. Also received a copy of the following:

UST Closure Report (Langan Burke)–9/1/06. We are pleased to present this workplan for the decommissioning and closure of underground storage tanks (USTs) and remediation of petroleum impacted soil... . Proposed improvements at the Site include construction of residential building by Solow Realty and Development Company, LLC . Heavy petroleum odor was detected by Langan in southwestern and northeastern portions of site. The source of impacted soil in the southwestwern portion of the Site was identified to be five 25–gallon USTs used to store hydraulic fluid near the western property line. The source of petroleum impacted soil at the northeast corner was one 550–gallon fuel oil, one 1,500–gallon fuel oil, and eight 550–gallon gasoline USTs.

It is our understanding that the proposed construction scheme has a multi–level below grade parking structure up to about 30 ft below existing grade... A health club and pool will also be present in the below grade site. Work plan includes removal of USTs and remediation of UST–related impacts to the soil and vicinity... , collection of endpoint samples, excavation of contaminated soil to bedrock,

Langan will undertake necessary soil sampling to fully delineate the areas of petroleum contamination . Work will be limited adjacent to MTA structures to avoid structural damage. Sample collection and analysis procedurs also included in report. DEC requires: 1)collection of soil endpoint samples and one bottom groundwater sample via installation of bedrock well 2)installation of vapor barrier and possibly SSDS 3)PBS registration.

11/08/06–Vought–Called (Langan) for update prior to sending out letter and spoke to Burke. Contamination (stained soil) thinned out to the east but undermined area where clean bottom samples were collected. As such project is on hold until contractor decides whether to remove additional contaminated soil. Once soil is removed down to bedrock than a well will be installed into bedrock. PBS registration was sent in and a vapor barrier will be part of foundation plan.

11/15/06–Vought–Sent letter with DEC requirements: 1)endpoint samples including one soil sidewalls and bottom groundwater sample 2)installation of vapor barrier 3)submission of PBS registration 4)delineation of soil and groundwater contamination (if applicable). Vought sent letter with cc to Langan to:

George Rukaj Solow Management Corporation One Sutton Place North 420 East 61st Street New York, NY 10021 Phone: (212)829-0600 Fax: (212)829-0165

12/15/06-Vought-Received email from Langan (Burke) to resend letter to following address:

Mr. Robert Mawhirt Solow Realty and Development Company, LLC 9 West 57th Street New York, NY 10019

Vought sent letter and faxed copy to Burke.

03/21/07-Vought-Review of Draft Spill Closure Work Plan (Langan-Burke-212-479-5400)-3/12/07. Removal of nine (550-gallon) gasoline USTs, two (550-gallon) waste oil USTs, one (1000-gallon) No. 4 fuel oil UST and five 25-gallon hydraulic fluid USTs. Petroleum impacted soil covering the southern portion of the site was excavated to the top of bedrock . A total of 3938 tons of soil was removed from the site. Groundwater was not encountered at the site. Bottom endpoint samples not collected because excavation extended to the top of bedrock . The excavation area was backfilled both with uncontaminated soil from the site and imported recycled concrete aggregate . Proposal includes excavation of remaining contaminated soil from the site (roughly 1500 cubic yards), implementation of odor and dust suppression techniques, implementation of a CAMP and collection of endpoint samples, collection of one bedrock groundwater sample from the area of highest contamination and installation of one bedrock monitoring well more than 30 feet north of the southern property line at 60th Street so as not to interfere with the TA subway structures in the area of highest soil contamination. Langan will prepare a spill closure report including site plan, summary of cleanup activities, endpoint sample analyticals, vapor barrier design. After the vapor barrier is installed a supplemental report will be submitted to the NYSDEC to document the barrier's proper installation within the new structure . Called Burke and one additional well will be installed in northeast corner in overburden. Drilling expected to begin tomorrow as consultant is eager to begin construction.

DEC requires: 1)documentation of parking structure HVAC as alternative to SSDS.

Vought sent out letter approving plan pending inclusion of above requirement.

4/4/07-Vought-Received message from Burke and returned call and left message to return call. Vought received call and spoke to Burke and well was installed as per workplan and five feet of soil on top of rock with groundwater and cleanwater. Additional well will be installed downgradient. Upon remediation three wells will be installed, one bedrock and two overburden. Contractor being selected for further excavation and excavation tentatively scheduled for early May.

05/16/07-Vought-Received word from DEC Chawla that Langan submitted BCP application and he is currently reviewing it. Preliminary review of data by Chawla shows that site may not be eligible. He will refer application to DEC Albany for review.

06/01/07-Vought-Received call from DEC Deborah Maloney inquiring as to current BCP manager. Current BCP project manager is Chris Milack.

06/21/07-Vought-Received call from and spoke with Langan (Burke) and site is under BCP application and is being reviewed by Milack. Burke proposed installation of one groundwater monitoring well. Portion of site not eligible for BCP and may be eligible depending on groundwater investigation results. Boring will be installed in south portion of site where excavation has occurred to bedrock. Quick status summary will be submitted by 7/2/07.

06/28/07–Vought–Received email on 6/15 from DEC Cozzy inquiring as the following:1)Is soil excavation ongoing? 2)Is the spill cleanup on hold pending the BCP eligibility? 3)Are you still pushing them to do the cleanup and does it have a schedule? 4)Is the building construction continuing or is it being held up due to the contamination? Vought sent email response.

08/03/07–Vought–Received call from and spoke to Burke and wells were sampled and groundwater has low level VOCs and DEC will receive summary letter in a couple of days). DEP is reviewing data due to CEQR and may also require vapor barrier. Final spill closure plan will be submitted to DEC and remediation (additional soil excavation in north portion of site scheduled to begin by September.

08/09/07–Vought–Received call from Murry Winter (NYCDEP 718–595–4514 fax 718–595–4479). As per Winter, DEP asked for Phase II sampling. Langan denied Phase II sampling as they will be performing soil excavation. They submitted spill closure request to DEP. Current plan increases scope of work for excavation. DEP wishes to defer to DEC and Vought approved deferral of issue to DEC.

08/22/07–Vought–Received call from and spoke to Burke who requested DEC approval of ammended RAP submitted to DEC. Site will be developed with either five story doctors office with underground garage or 37 story mixed use residential building with below grade parking garage. Swimming pool and health club will also be present in basement of building. Work plan calls for excavation of petroleum contaminated soil to bedrock which is 5 to 27 feet below grade. Contaminated soil will be covered with plastic if stockpiled to prevent odors to surrounding neighborhood. CAMP will be implemented including odor and dust supression techniques. Sidewall samples will be collected however no bottom samples will be collected due to excavation to bedrock. Plan calls for installation of two monitoring wells (one shallow well near the northeast corner of the site and bedrock well will be installed 30' north of the southern property line at 60th Street. Plan also calls for installation of a vapor barrier and submission of a Spill Closure Report. Vought sent approval letter for plan with cc to NYCDEP.

09/26/07–Vought–Received call from and spoke to Burke. Groundwater samples were collected and were below TOGs 1.1. Two rounds of samples collected from three wells, all below TOGs. Burke will submit letter request to decomission wells. Samples were collected on 7/11 and 9/4. Burke will send in groundwater analyticals for DEC review.

10/4/07–Vought–Received call from and spoke to Burke and approved decomissioning of onsite monitoring wells due to all below TOGs and construction will occur over well locations.

1/24/08–Vought–Received call from Burke and excavation beginning and contaminated soil noted, CAMP stations set up and all is good so far. Excavation to bedrock.

04/18/08–Vought–Received call from and spoke to Burke and free product noted and fingerprint sample collected. Contamination is below UST vaults and source may be offsite. Free product in southwest corner of site. New building will be connected to building next door and areas between building will be excavated to bedrock. CAMP data showed that contractor ran out of odor suppressant and had exceedence for 48 minutes but no complaints received to date. Free product above water table and will removed with associated soil.

05/19/08–Vought–Received call from and spoke to Burke and soil contamination noted heaviest to the adjacent property to the west. Connecting tunnel will be installed between both buildings and he is looking to complete soil excavation within the next couple of weeks. Vought will review Rap for 1113 York and close if appropriate spill and new spill will be opened on source property to

the west.

07/17/08–Vought–Received email from Burke on 7/15/08 that proposed collection of groundwater sample from northwest corner of property. No collection from onsite monitoring well as entire site is excavated to bedrock and will be replaced with building foundation. DEC requires: 1) installation of waterproof membrane 2) confirmation that no soil remains onsite 3) new spill opened to west property. Vought spoke to Burke and first floor will be ventilated garage and waterproofing membrane will be installed. Entire site excavated to bedrock except for northeast corner. Both properties are on same lot and excavation on western portion will begin next week and a report will be submitted within approximately one month and contaminated soil still remains on western portion of lot and depth to bedrock is 2–3'. Waterproofing membrane report will be submitted under separate cover. Vought sent email to Burke approving of collection of groundwater sample from northwest portion of site. Vought reviewed:

Post Remediation Groundwater Sampling Results (Langan–Burke) dated 10/1/07 and received on 10/2/07. Groundwater sample collection from three bedrock monitoring wells. Endpoint soil samples collected from sidewalls and not bottom due to presence of bedrock. Monitoring wells were installed 2.5–5' into bedrock. Groundwater analyticals show: 11.6ppb 1,2,4–trimethylbenzene(MW1), 6.2ppb 1,3,5–trimethylbenzene(MW1), 7.1ppb ethylbenzene(MW1), 10.2ppb xylene(MW1), 5ppb isopropylbenzene(MW1), 5.2ppb sec–butylbenzene(MW1). Report concludes source removal is complete and DO concentrations are favorable for natural attenuation, therefore, residual levels of VOC contamination will attenuate over time. Spill closure report will be submitted to DEC upon completion of site remediation. Wells will be decommissioned as per DEC guidance.

07/18/08–Vought–DEC requires: 1) Results of excavation of western portion 2) Waterproofing membrane report submission.

10/31/08–Vought–Received email from DEC Cozzy that developer previously applied to BCP in 2007 and General Counsel requiring status of site. Vought called DEC Burke for status of construction on the site and developer stopped paying contractors and contractors just received payment. Few days of excavation left for ramp. 75% of foundation poured. Remediation of some petroleum contaminated soil mixed in with ramp will occur when ramp is excavated and rest of site (entire site) will be excavated to bedrock including ramp location. Developer hired waterproofing consultant and description will be put in final report to be submitted to DEC. Only work that remains is excavation of ramp to bedrock and submission of report to DEC including description of waterproofing membrane and excavation of entire site including ramp area to bedrock. Vought sent email reply to DEC Cozzy with copy of UIS notes.

8/6/10 – Raphael Ketani. I received the case from Jeff Vought who transferred to Unit A of Region 2 DER.

I spoke to Michael Burke (212) 479–5400 of Langan. He said that everything has been dug out and that the closure report is ready. He said that it covers the excavation results for the western portion of the site and describes the waterproofing membrane report. Mr. Burke said that DEC will receive it soon.

11/22/10 – Raphael Ketani. I tried to contact Mr. Burke regarding receipt of the closure report, but I could only leave a message.

11/23/10 – Raphael Ketani. I spoke to Mr. Burke. He said that they excavated to bedrock and cleaned the top of the bedrock. No contamination was seen. The owner is not going to build his apartment building yet, but will build a parking garage soon, instead. He said that the closure report has been written. He just has to proof read it. He said that he will get it to me by December 10.

12/14/10 – Raphael Ketani. I spoke to Mr. Burke. He said that the report was completed a year ago, but was not submitted because

Langan was owed a lot of money. The money has been paid. However, Mr. Burke stated that he hasn't been in communication with his client. The client gave the report to his lawyer for review. Mr. Burke stated that he will contact his client today and see where the review stands. I told him to get the report to the DEC as soon as possible.

2/7/11 – Raphael Ketani. I received the closure report dated February 4, 2011 from Langan Engineering for the property at 1113 York Avenue (aka 420 East 61st Street). I reviewed the closure report. Some PAH analytes were discovered in the soil, but they have concentrations that are characteristic of historical fill and not oil contamination. The groundwater results showed that there was minimal contamination. The data in the report suggested that all of the gross contamination had been removed.

Judging from the data in the closure report, I have determined that there is no threat to the public or the environment. Therefore, I am closing the spill case.

1 qt oil found on dirt in vault. clean up pending. con ed 129–378

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT CON ED E2 MIS REPORT 12/23/99

1qt. of an unknown fluid mixed with dirt on the floor of the vault. Spill contained , no water in structure, sump pump not running,sewer connection verified as per plate # 32–L–1. A PCB sample was taken Supervisor McGeever had checked the piping in this vault and discovered an oil residue. Oil had entered the waterway but te amount was undetermined at this time. He verified that at this timethe oil had come from the transformer. An emergency tanker had been ordered and we will treat the spill as 50 to 500 ppm at this time. The area infront of the transformer has been cleaned up.A second sample of pure oil was taken from the

transformer. (1) drum od debris generated pre-cleanup and to be transported to E 110 St. yard.

DEC INSPECTOR NOTES 12/23/99 4:00pm left message for Albert Gordo, DEP Copy to DSHM 12/28/99 Spoke with Ed Rotdke- he get updated info and call me back. 12/29/99 Voice mail from Lou First (212) 338-4370 Transformer has been drained but not removed from vault yet. capacity 265 gals. removed 167 gals. Max spilled 3 gals. Initial cleanup complete. Aaiting unit removal to do final.

12/29/99 Spoke with Lou First. Requested he fax updated E2MIS when final cleanup is done.

Caller Remarks:

spill from a feeder. ref #136392.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY DEC INSPECTOR'S NOTES Rich Zoller will recheck hole on Monday and will let me know.

4/16 9:15am No evidence of fuel oil . All cleaned up.

CON ED E2MIS REPORT 4-10-01 Discovered 3gals. of an unknown substance on the concrete in MH59866 on FDR-20M08. There was no mixture of oil and water. Oil absorbant pads were put down. There was no fire/smoke, no standing water. No environmental impact.

There is a dielectric filled feeder in the structure. Samples taken for ID and oil analysis.

4-11-01 15:50hrs. 24hr. deminimus clenaup. Spill will not be cleaned in the required time under the 24hr program, therefore the spill is being reclassified as a Spill-Fuel. The oil seem to be seeping from the west wall of the MH. Flush Sup. thinks the oil is coming from the oilspout that is located about 5' west of the manhole cover. He tried to get in touch with the building Sup. but there was no contact made.

LSN 01-03547-001 Analysis indicates the sample is similar to a heavy fuel oil. LSN 01-03546 Arcolor 1254;PCB 6ppm

20:40hrs. Removed 1,045gals. of water mixed with 3gals of oil, generated 3 barrels of solid waste including personal protective clothing. Structure was triple washed with slix, brushed & high pressure washed with flush truck high pressure hose. Waste was turned over to transportation for proper disposal.

cleanup completed at 19:00hrs.

Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ E2MIS NOTES 143702

Entered by Alice F. Williams, Employee # 75829, Transmission Operations Department. July 2, 2002 at 09:30 Hrs.: John Marsh, Employee # 52092, Splicer working for Transmission Operations Department, was inspecting pipes for corrosion in Manhole 59969, Feeder 38M35, when he discovered that the manhole contained approximately 10 gallons of oil on top of approximately 100 gallons of water. The spill is contained in the manhole. There are no injuries or outside impact, and there is no active fire or smoke. No sewers, waterways or private property are affected. Chem Lab will be sent out to collect and test samples of the substance; cleanup is not expected totake place within 24 hours. The cause of the spill is presently unknown. Supervisor Fred Acosta of Transmission Operations Department was notified of the incident.

A steam pipe is being removed and has the potential to release asbestos– no loss at this time.Measures are being taken to prevent loss nrc 969470

DEC Investigator Remarks:

3/8/11 – Raphael Ketani. A water main broke due to a failure on its own. I spoke to Dennis McLeetis at Con Ed ERT Desk (212) 580–6763. He said that the water main simply ruptured. Con Ed was not working on in the area. It is next to a Con Ed steam main. Once the water main broke the area filled with water and submerged the steam main. There was no release of asbestos, but Con Ed was required to report the incident. Right now (12:15PM), DEP has shut off the water to the main and the water is subsiding. Con Ed personnel will look at the steam main soon. Con Ed shut off the steam main as a precautionary measure.

I contacted Con Ed’s ERT Desk a little while later. The person at the Desk said that there would not be an EMIS number issued for this incident.

Later, I contacted Mr. McLeetis regarding the final details about the incident. He told me that the asbestos covering on the steam pipe was not affected by the flooding. He added that traffic has resumed through the area.

As the asbestos was not affected by the water main break, I have closed the spill case.

Caller Remarks:

A petro tech found a bucket in the sump pit with oil in the pit. Unknown how much might have leaked into the pit. Customer was notified.

DEC Investigator Remarks:

10/21/08-Vought-Called Evelyn Brown (914-997-6730) and left message to return call to Vought and DEC Ahmed responding to spill due to proximity to site from other separate site visit. Vought received call from Evelyn Brown (cell 516-652-7587) and she provided contact for onsite building engineer (Luis 646-239-9773).

10/21/2008-HRAHMED-Responded to the site. Noticed oil water mix in the sump near the boiler. Noticed pipes running from sewer and boiler to the sump. The oil water mix was contained in the sump. Luis called me later and told that he cleaned the sump and put the mix in a bucket. As per him there was no leak or crake in the sump. Talked to Evelyn and told her to hire somebody to clean up the site and dispose the oil water mix properly and send a letter report and disposal manifest.

10/31/11-Hiralkumar Patel. case transferred from DEC Hasan to DEC Patel.

case closed due to nature of the spill.

Caller Remarks:

no sewers or water effected aprx 150 gal of an unk green fluid samples taken clean up pending lab results coned#135421

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY e2mis Notes:

Upon entering MH-38809 to identify and place phase tags on feeder 31m59, R. Muccio found approx 150gal of a green unknown fluid mixed with water in structure. Samples were taken and returned as similar to lubricating fluid and <1ppm PCBs. Structure was double washed and primary cable ends were sealed.

3/13/01: As per conversation with Louis First, primary cables may have been the source of sheen. He indicated that the green substance may have been dye used by the DEP as a tracer or may have been some antifreeze. Con Ed completed cleanup by double washing structure. Repairs were made to cable ends. KMF 4/10/01

Caller Remarks:

Bore samples show petroleum contamination present. Location had a prior Spill case that was closed. Caller doing work for subcontractor. Cleanup is pending.

DEC Investigator Remarks:

This is a new report of soil contamination on a site that was recently worked (5/15/2012) on by a DEC Albany person (Dennis Pokrzywka 518-402-9543) Cross Ref #9505495 & read notes. Unknown if this should be a new spill or if the old one should be reopened.

3/20/13-Vought-Received call from and spoke to Kevin Eaphy (Parsons Brinkerhoff Environmental Ph:347-237-2980) and this is a second avenue subway contact for the 63rd street station and the ancillary (ventilation equipment and possible entrance) will be constructed in the garage. He also has contract manager John Sabarise. This spill as part of geotechnical investigation in the garage. Excavation will be by old tank area (excavation of abandoned tanks). He will submit a summary within possibly two weeks and site plan of work to be performed with collection of endpoint samples.

3/27/13-Vought-Received call from and spoke to John Savarese (MTA) and he is almost finalizing work plan for tank excavation with history and proposed work to be done and he requested email for work plan submission and Vought provided.

4/1/13-Vought-Received emailed Proposed Scope of Work from MTA Savarese on 3/29. Scope of work for removal of two abandoned 550-gallon USTs as part of reconstruction of the 63rd Street Subway Station as part of the Second Avenue Subway Construction Project. Removal of the USTs is deemed a critical path to maintaining the schedule of the work. USTs abandoned with slurry as per Closure Affidavit. Former SVE operational on-site under old spill #9505495. A portion of the piping was also located during test pit installation activities. Vought reviewed soil data from closed spill 9505495 for site and noted soil analyticals up to 2200 benzene and 24000ppb toluene in soil samples from 7-9'bg. Vought sent email to MTA Kevin Heaphy (email:Kevin.Heaphy@2AveSubway.com) that I had the opportunity to review the scope of work and would much appreciate if you or John could call me on my cell to discuss (Cell:917-577-1728). I am a bit confused about the site plan: Are the red dots designated soil vapor system and soil boring sampling location, endpoint sample locations or are additional borings being proposed? How deep will the excavation go? Is it expected to hit groundwater? Will there be any vapor mitigation efforts used in construction of the entrance? (eg moisture or vapor barrier) I know time is of the essence for the SAS and as such I am looking forward to your call.

4/1/13-Vought-Conference call with MTA Heaphy and Savarese and excavation for subway entrance to be excavated to 6'bg and groundwater will not be exposed. Site plan locations are prior soil samples collected to a depth of 6'bg as well and he will submit VOC analyticals for samples to assist Vought in possible vapor mitigation requirements. Five endpoint soil samples proposed to be collected from UST excavation.

4/5/13-Vought-Received email from MTA Savarese that Jeff I)Response to DEC questions: A)DEC: Are the red dots designated soil

vapor system and soil boring sampling location? Response: In order to clarify the revised site plan please observe the following modifications: 1) The decommissioned soil gas vapor system is identified with a black border box and is separate from any other identifiers. 2) All sampling events have been plotted and labeled by location ID and depth, these are: a. Red circle for AG-1 to AG-3 performed on 12/28/2011 b. Green triangle for TP-1 to TP-3 performed on 26/2012 (only environmental sampling performed by CCM office for lead (Pb) analysis) c. Brown square for BP-1 to BP-4 performed on 4/6/2012 (geotechnical borings) d. Blue circle for AG-4 to AG-6 performed on 6/22/2012 B) DEC: endpoint sample locations or are additional borings being proposed? Response: As stated in the memo previously provided, the Contractor will perform end point sampling. The five end point samples originally proposed in the scope has been modified to two end point samples: one side wall and one base. No additional sampling or borings are proposed beyond this. C) DEC: How deep will the excavation go? Response: Approx 6 ftbg, currently the excavation is at 5.5 ftbg. D) DEC: Is it expected to hit groundwater? Response: No. E) DEC: Will there be any vapor mitigation efforts used in construction of the entrance? (eg moisture or vapor barrier) Response: Yes, as illustrated in the attached photo, the Contractor is installing a waterproof membrane. II) Response to DEC questions In reference to Item A, below is a brief summary of sampling scope and purpose: A. red circle for AG-1 to AG-3 performed on 12/28/2011. The Contractor collected discrete samples from each of these boring from a depth of zero to three ftbg. The discrete samples were analyzed for VOCs. In addition, the three discrete samples were mixed to form a composite and analyzed for disposal facility parameters. There were low level semi-volatile compounds that exceeded the NYS DEC SCO. The composite sample indicated an exceedance of the EPA toxicity characteristics for hazardous lead. In an effort to isolate the hazardous lead area identified in bullet point one, the three discrete samples collected and analyzed for VOCs were rerun for TCLP lead. None of the samples exhibited a concentration of TCLP lead exceeding the EPA toxicity characteristic for lead. B. Green triangle for TP-1 to TP-3 performed on 26/2012 (only sampling performed by CCM office for lead (Pb) analysis). As a follow up, CCM collected samples from three new borings in the vicinity of AG-1 to AG-3 respectively. Discrete samples were collected from zero to one, one to two, and two to three ftbg from each boring (total of nine samples). Each sample was submitted for analysis of TCLP lead. None of the samples exceeded the EPA toxicity characteristic for lead. C. Brown square for BP-1 to BP-4 performed on 4/6/2012 (geotechnical borings). Four geotechnical test pit/borings were performed during the design options evaluation. The borings depths are identified on the attached table. The borings included drilling through soil and coring through rock. No environmental laboratory samples were collected. Based on field observation of odor and PID readings from these borings, the Contractor notified the NYSDEC spill hotline and Spill No. 1201243 was assigned. D. Blue circle for AG-4 to AG-6 performed on 6/22/2012. The Contractor collected additional pre-characterization samples from three test pits in preparation for excavation of soils from a future construction trench. The test pits were advanced to a depth of approximately 5.5 ftbg. Soil samples were collected between 3-6ftbg and submitted for analysis of lead and TPH. During this event, tank were located and partially uncovered. I hope that this email and attached document are sufficient to provide CCM with authorization to proceed with tank removal. Please forward any further questions or comments to our attention. Review of attachments:

Environmental Soil Sampling Report (Distinct Engineering Services Ram Tirumala)-1/19/12. Borings performed using stainless steel hand auger to facilitate evaluation of soil that will be excavated and disposed of. Three borings advanced (AG1 thru AG3) and three soil samples were collected from area that was expected highly impacted zone. One composite sample from all three borings analyzed for PCBs, SVOCs, metals and TCLP metals. Soil analyticals show no petroleum related VOC CP-51 Unrestricted SCO Objective exceedances however did show lead at 6.42mg/L. TCLP Lead analysis performed on same soil sample and levels did not exceed EPA toxicity characteristic for lead. Three test pit samples collected for analysis of TCLP lead (TP1 thru TP3) and no samples exceeded EPA limits. Four test pit borings were performed and no environmental samples collected but due to odor and PID Spill 1201243 was assigned. Borings summary table noted that odors detected during drilling operations at BP3 0-16 however no PID reading performed. 55ppm via PID also detected at BP2(10-12'bg). Vought sent email to all parties that John, Thanks for the summary below and I have also added the files to our e-doc system as well. The Department approves proceeding with the tank removal at the above site pending the following inclusions: 1) submission of specific moisture barrier specifications 2) collection

of five endpoint soil samples as opposed to two (you can call me as well if you wish to discuss this).Thanks

4/8/13–Vought–Received email from MTA Heaphy that Thank you. We appreciate your timely reviews and responses. We will respond to your question asap and collect the 5 samples after removal.

5/10/13–Vought–Received email from MTA Heaphy that Hello Jeff: We have a couple more questions as we are expediting plans to remove these tanks ASAP.We believe the tanks are entirely encased in concrete. Please let us know if endpoint soil samples (referenced below in your email) from the excavation are still required for these two scenarios after the tanks are removed.1. In the case where there is no visible petroleum staining on the concrete below the tank. 2. In the case where there is visible staining and/or product on the concrete (which will be cleaned), but none on the soil under or surrounding the concrete.Thanks in advance for your feedback. Please call me if you have any questions.

5/13/13–Vought–Vought sent email reply that Kevin, To address your questions:1. In the case where there is no visible petroleum staining on the concrete below the tank.–No sampling is needed however documentation of the lack of petroleum staining must be submitted to DEC2. In the case where there is visible staining and/or product on the concrete (which will be cleaned), but none on the soil under or surrounding the concrete: No sampling required however documentation of observations must be submitted to DEC. Please also include documentation of the presence/absence of cracks or pathways in the concrete.The Department recognizes that an full investigation is not needed due to prior characterization of the site under the closed spill. The Department also looks forward to the vapor barrier specs used in the construction of the building as well. Thanks,

11/13/13–Vought–Received call from and spoke to Frank Galdun (Ph:646–542–3465)and is representing the building.

1/28/14: Mahat

DEC Mahat received an email from Mr. Matt Collum (Garage Management Company @ 843.810.5240 email:mcollum@gmcparking.com) requesting more information about the case. Email is forward to PM DEC Vought. He has lease on parking garage and MTA went under agreement to take over garage. His building has part of ventilation needed for subway.

2/4/14–Vought–To date file review by Vought:

HPDE Membrane Waterproofing (Judlau Contracting)–2/28/12. Description of Preprufe Tape.

HPDE Membrane Waterproofing (Judlau Contracting)–2/28/12. Description of Preprufe 300R Moisture barrier to be installed.

HPDE Sheet Membrane Waterproofing (Judlau Contracting)–3/13/13. Description of Field Quality Control Procedure.

2/4/14–Vought–Sent email to MTA Heaphy that Kevin, I must apologize as I may have deleted a response or update since I sent the below email on the above site. Can you please resend me any updates or provide them if they have not been sent? Note that I have also copied Mathew Collum above who works for GMC parking who inquired about the case as some ventilation equipment for the new structure was run through his building.Looking forward to your update and thanks for your patience.

2/6/14–Vought–Received email reply from Heaphy that Jeff, No problem, I need to revisit the emails and get back to you. Thanks, Kevin .

3/3/14–Vought–To date file review by Vought:

Email from MTA Heaphy to Vought–2/14/14. Email with PDF attachment that entitled 124 East 63rd St Tank Removal Summary. Vought added Summary to E-docs. Report noted that This is a summary of the removal of two abandoned underground storage tanks (USTs) located at 124 East 63rd Street (the Site). The purpose of the report is to provide GMC with sufficient information needed to finalize their tank closure report and submit to the New York State Department of Environmental Conservation (NYSDEC) with the anticipated that the DEC will close Spill No. 1201243. The removal of two abandoned underground storage tanks (USTs) located at 124 East 63rd Street. These tanks were removed due to the reconstruction of the 63rd Street Subway Station as part of the Second Avenue Subway Construction project (SAS). The removal of the USTs was necessary to install a ventilation plenum, plumbing and electrical for the chiller on the roof being installed as part of the 63rd St station reconstruction. Included in report was photo logs, drawings, manifest and lab data. Report also notes that The tank removal was performed by AESI between 6/6/2013 and 6/11/2013. AESI cleaned the tank removed the tank, disposed of the residual product, and removed the hardened concrete (slurry) that was used to close the tank. The metal from the tank, the residual product and concrete slurry were removed from the site for disposal. There was no sign of contamination on the shell of the tank; therefore no post excavation samples were taken. Additional details include quantities removed, disposal site, and permits can be provided by AESI. Report also notes that Judlau excavated approximately 131 tons of petroleum impacted soils in the vicinity of the USTs and sent to Carteret for Disposal (Refer to Attachment E for manifests)Construction. The trench was completed to 5.5 feet below grade for the mechanical, electrical, and plumbing (MEP) trench, a mud mat was poured, a type A waterproofing membrane layer was applied. Specifications and design parameters of the waterproofing membrane were provided to the NYSDEC for review. Rebar was placed and concrete was poured to form the open and closed concrete troughs of the MEP utility structure. See drawings in Attachment B for further construction details.

Email from GMC Collum to Vought–3/3/13. Email that Hi Jeff, Are we able to close this spill number now?

3/3/14–Vought–Due to the: 1)known soil contamination from previous spill that was mitigated via SVE installation and closure of that spill by another DEC Project Manager 2)installation of a moisture barrier and vapor barrier under the new subway entrance 3)the statement in the Tank Removal Summary Report that There was no sign of contamination on the shell of the tank; therefore no post excavation samples were taken. this spill is closed by Vought. Vought sent email Heaphy and Collum that Kevin/Matt, I have reviewed the below attached report and have closed the spill. Please provide the address for the Closure Letter, Thanks for your patience. Vought received reply from GMC Collum that Please send it to me. See signature: Thanks.

Matt Collum Garage Management Company 770 Lexington Avenue 11th Floor New York, NY 10065 o. 212–888–7400 xt 7351 m. 843–810–5240 f. 212–980–0896

Vought sent Spill Closure letter to above address with cc via email to Heaphy and added letter to E-docs.

A CONTRACTOR WAS DIGGING A HOLE AT THE BOTTOM OF THE VAULT AND THERE IS FUEL OIL COMING OUT OF THE HOLE / CON ED SPILL #147620 – OIL BEING TESTED AT THIS TIME

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER Con Ed e2mis #147620:

On 3/21/03 at 11:35 J. Phelan # 06597 an inspector for constuction management reported that at 11:20 contractors that were working for Con-Ed reported to him a heavy odor & a sheen like oily substance in vault-6577. This structure is located at the north side of E. 60 St. 132' west of York Av. This is a new structure & is still under construction. He states that the substance smells like an oil or diesel fuel. he says that there is a hole in the bottom of the concrete structure that goes through to the soil this is where the substance is. The hole is there so that they could install a sump pump which is what they were going to do. He reports that there is 2 gallons of the oil like substance on top of 20 gallons of water. He will call chem lab to come out & take sample. The cleanup will be pending results.

8/13/03 liquid from the structrer was removed by Astoria and the hole was patched up. the liquid in the hole was non haz (lab seq. no. 03-02386).

~~~~~ 2127/04: Spill referred from Rodriguez to Sawyer to determine source, if possible.

DEC Investigator Remarks:

Emis# 237855

8/19/14–Zhune spoke to ConEd–ERT– Brian Deutch. He said the line runs from Queens to Manhattan. 1900 gallons of dielectric fluid missing at a rate of 1.8 gallons /hr. They are looking for the source.

8/20/14–The spill was updated at 9:21 PM. Discovered 500 gallons of oil in manhole # 57130 located at 73rd street and York Ave, Manhattan. The line runs from Queens to Manhattan.

8/20/14– Zhune spoke to Poul Di Domenico at 6:00 AM. Paul said they found 500 gallons of oil in a manhole located at 73rd street and York Ave, Manhattan. It's more probably that the source is around this area. They collected oil and PCB samples.

DEC–Ryan Piper responded.

Over the course of the past month this line was experincing small losses of product. Location of leak has finally been confirmed. They need to extend excavation into additional lane to put clamp on it and then barrel. Con ed has 3pm meeting. total loss should go up.

08–21–14– Upon excavating, it was discovered that electric distribution lines were located on top of the electric transmission feeder 38M33. The leak point on the transmission feeder was located on top of the feeder pipe, and was coming into contact with the distribution lines. This in turn acted as a conduit to the adjacent manhole where the oil was discovered, where approximately 500 gallons (awaiting final total) of oil were pumped out. The leak was clamped at 1641 hours on 20Aug14, which terminated the release. The approximate total loss is 2,100 gallons.

A crew is at the location today measuring for a barrel to make a permanent repair, and will also continue to remove impacted soils to prepare for post–excavation soil sampling.

**Caller Remarks:**

Above material discovered at above location on top of 2700 gallons of water. Clean Harbors is on scene and manhole is being pumped out. The spill is possibly affiliated with DEC #03-02463. Contact caller for further information. Con Ed #148645.

**DEC Investigator Remarks:**

E2MIS 148645

Alice F. Williams. Employee # 75829, Transmission Operations Department, reports:- June 9, 2003 @ 07:31 Hrs.: Dane Huggins, Employee # 14205, Supervisor working for Transmission Operations Department, was in search of a leak on Feeder 38M35 when he discovered approximately 500 gallons of dielectric fluid, on top of approximately 2700 gallons of water in Manhole 60636 – Feeder 38M35. The spill is contained in the manhole. There are no injuries or outside impact. There is no active fire or smoke, and no sewers, waterways or private property are affected. Chem Lab took samples of the substance for testing, Clean Harbors is in the process of pumping out the manhole.

 AREAS, Performed cleanup: CORP. TRANSPORTATION Contractor: CLEAN HARBORS Directing cleanup: D. HUGGINS SUPERVISOR, 06-09-03  
 Estimated amounts: RECOVERED OIL -500 GALLONS, RECOVERED WATER-2700 GALLONS Shipping papers: CLEAN HARBORS, CTF1180425, 6-9-03  
 CLEANUP COMPLETED AND SUBMITTED TO NYSDEC FOR APPROVAL

6/9/2003 Con Edison had a release of 500 gallons into manhole #60636 located in 73rd Street and York Ave. in Manhattan. At the time of arrival, Con Edison had already removed the oil from the manhole and cleaned it.

The feeder had corrosion at the bottom. Con Edison was evaluating the removal of the coal tar wrap which has PCBs and asbestos. The feeder was put on reduced pressure to prevent further leakage. Con Edison will install a clamp when the asbestos remediation is completed.

This is not related to the 1900 gallon spill reported over the weekend. Con Edison has not located the source of that spill (0302463). ARS

---

Caller Remarks:

cleanup pending test results – discovered by a crew looking for an unrelated leak on high power cable – mh #48538, con ed #138812

---

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was FOLEY 8/9/01: 300gal in manhole for 38M33 138kV feeder at E 73rd and York Ave. Met with S. Mahoney(ERT), DEP Chris Haas and G. Materazo (S&TO). Trying to locate feeder leak. PFT tracer gas injected. Took soil gas samples and analyzed using GC. Showed peak in intersection at E73rd and York. Con Ed started to excavate in this vicinity. G. Materazo is contact for System & Transmission Operations. (KMF)

e2mis no. 138–812:

Clean Harbors notified to respond and cleanup manhole on 8/9/01. Corp transportation tanker to pump out manhole. Manhattan Custom Service supervisor to respond and give guidance for cleanup (distribution cables are in manhole). Liquids to be treated as 50–499 since lab results have not been returned yet. Temp EPA ID # NYP004087722 received from ERT for cleanup.

8/9/01 13:32 hrs Received lab results, lab sequence # 01–08076–001 Aroclor 1260 < 1.0 ppm.

Clean Harbors onsite and clean up commenced after clamp was installed on Fdr 38M33 at 18:00. [SEE SPILL # 0104864] After clamp was installed, flow of fluid into manhole stopped. Manhattan CS on location to direct cleanup since TO personnel have no experience with distribution voltage cables in manholes. Clean Harbors removed 318 gallons of oil from manhole under manifest CTF0834908. On 8/10/01 meeting held with Jane O'Connel (DEC) and John Tranchina. Manhole cleaning was good but oil may still flow in through ducts. Pads to be left in POE to trap any oil still weeping in and cleaning of ducts to discussed with Manhattan CS.

UPDATE 9/7/01

R. Mockler, UG Planner, reported on 8/31/01 that M. Demodna #19654 inspected this manhole on 8/31/01 at 00:01 hrs. and discovered a residue of oil and 200 gallons of water still in the manhole. This manhole will have to be cleaned by Clean Harbors again. The Environmental Desk will coordinate with Transmission Operations and Clean Harbors to have this manhole re-cleaned.

Clean Harbors returned to location on 9/11/01. They were setting up when the WTC was attacked. With the traffic and the rush of people trying to leave Manhattan, the police would not let us open the manhole.

On 10/18/0 S&D returned to this location and washed and cleaned MH, treated as lead hazardous. Con Ed supervisor Peter Mullholland from Manhattan CS was on location to approve cleanup. Cleanup completed at 14:00 10/18/0. S&D removed 900 gallons of liquid.

3/13/03: CLOSE OUT – TRACK UNDER SPILL # 0111140. (JHO)

**Caller Remarks:**

caller states they have a 600 gallon tank discrepancy – not sure where the exactly the spill is –

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL Original leak reported between Rainey Substation (Queens) and West 110th St. Substation (Manhattan).

See also spills # 0104878, 0105022 and 0111140.

8/7/01: ERT reports leak located at E73rd St/York Ave. Clamp installed. They are doing calculations to see if there is another leak somewhere else on line. (ARS)

8/10/01: New leak amount estimated at 1500 gallons. 100 gallons recovered from manhole at W110th St/Amsterdam Ave (spill #0104878), 300+/- gallons recovered from manhole at E74th St/York Ave (spill #0105022). Total oil recovered = 400 gallons. (KMF)

2/16/02: after lengthy battle with City DOT, Con Ed was able to complete excavation of contaminated soils. A total of 13 samples were collected from trench floors and walls for TPH analysis. (JHO)

2/22/02: lab results received. High TPH values in 3 locations on floor of trench (beneath repair barrel). TPH came back as lubricating oil. However, according to Pat Keelan (Con Ed Chem Lab) chromatograms for cable oil and lube oil are very similar. (JHO)

2/22/02, 6:00 PM: Told John Tranchina and Leon Paretsky (Con Ed S&TO) to scrape some additional soil from area if possible (Tranchina reports he is down to bedrock), take photos and 2 more samples, then backfill. (JHO)

2/25/02: spoke with John Tranchina – they were able to remove another 1’ of soil beneath the repair area. Were only able to collect one sample (area 2 is down to bedrock). He took photos and backfilled. Also, in an adjacent electrical manhole they found a couple of gallons of oil on 250 gallons of water (spill #0111140). Sample indicates dielectric fluid. The oil probably came in through ducts. They found a concrete sump in the MH, but sump was all broken up – they will remove, dig down, sample and re-pour sump next weekend. Also, will put absorbents in the MH ducts to see if any residual oil is present. (JHO)

To be investigated as part of Appendix B site 7. SIWP submitted by Con Ed in January 2004. Comment letter sent to Con Ed 9/1/04.

Update 12/08/05 This spill is being closed based on site 7b investigation report found in eDocs link for spill # 0111140. (SKA)

**Caller Remarks:**

UNK WHERE OIL CAME FROM-DID GO INTO SEWER

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL 10/8/97, 0935 hrs: DEP, Coast Guard arrived on scene. Con Ed was trying to clean duct between two manholes using a flush truck rod. They hit an obstruction, forced some oil out – approximately 1 gallon got into french drain on bottom of manhole, and probably went to treatment plant. The manhole was cleaned yesterday, but the obstruction remains. 10/8/97, 0955 hrs: Called Ed Radkey, Con Ed Manhattan Environmental Field Manager (212) 338-4485. He will check on what group is doing the investigation and call back. 10/8/97, 1445 hrs: E. Radkey called back. Analysis of oil 66 ppm PCB – consistent with dielectric fluid, but no electric lines run through the manhole. Cable is paper/lead – could have some oil in it. Clean up completed.

Caller Remarks:

on 20 gallons of water in a service box. Sample taken – parking restrictions creating difficulty in removing. Should be done by Tuesday. Con Ed Reference #162108

-----  
DEC Investigator Remarks:

162108.000

On 12/2/05 at 12:01 E. Cox # 18594 of the Underground called to report that at 11:30 he discovered a spill of unknown oil. He states that while working on open mains he found 1 gallon of an unknown oil on top of 20 gallons of water in servicebox-12394. This is located in front of 114 E. 71 St. He was using acct # 42224 . He tried to diaper it up but stated it to be to much. He hung a tag # 00799 and took 2 samples 1 for ID and 1 for pcb with a chain of custody # EE-08739. There was no fire or smoke involved. No sewers or waterways were affected. No private property was affected. No injuries were related to the spill. R. Bruns # 21106 Lab Results 12/02/05 @ 19:55 hrs.

Lab Sequence Number: 05-12770-001 Analysis indicates the presence of a substance similar to a lubricating oil.

Lab Results 12/03/05 @ 00:15. Lab Sequence Number: 05-12769-001 < 1.0 ppm

Update : 12/03/5 @ 02:10 hrs. Due tp parking parking access this clean up can only be done on Tues or Fri 11:00 am – 12:30 pm. For this reason the incident type has been changed to Spill-Lubricating oil. This desk is setting up a clean up for 12/06/05 @ 11:00 am hrs. Logger F.Curtis 38078

Caller Remarks:

6 gal unk oil in service box – samples have been taken and clean up is pending clean up after secondary burn out are repaired in the service box – con ed tag #18730

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was RODRIGUEZ E2MIS 149873

8/19 @ 20:07 This incident is being input at this time due to a computer outage due to a VIRUS affecting all systems. At 18:15 F Simms # 66618 of Emergency reported to me that he discovered @ 18:05 approx 6 gallons of an unknown oil in SB-13323. There was no water in the structure. He was there for an Area-outage condition. No sewer/waterways affected, no injuries, weather did not contribute, No private property was affected. The source and the cause are unknown. There is no sewer connection, no sumps and no substantail cracks observed. Environmental tag # 18730 was hung. Three samples will be taken for PCB and ID and Flash point. The Chain of custody # CC 16387 will be used. Courier was called by Pagano @ 18:50 for sample pick-up. No cleanup action will be taken at this time due to Secondary burn-outs in the structure. This incident does not meet the requistes of a 24-hour clean-up and will need to have the burn-out condition cleared before work can commence. CIG was notified and spoke to P DiDonato # 01669 @ 18:29.

**Caller Remarks:**

fire dept on scene - it appears unk cleaning products are in sewer and giving off a chemical odor - callback at 22:32  
 ferroclean is the product - pumped through the hvac system - approx 60 gal has leaked from system in to sewer pete cachia - nyc  
 dept. of emerg. managment - building is being voluntary evacuated from 12 floor down - 718-422-8700

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was KRIMGOLD 11/23/03. 23:00. J.Krimgold @ site. FDNY, OEM and DEP responded to the spill. About 500 gal of Ferroclean (a cleaning chemical commonly used to remove rust from HVAC system) was pumped into the buildings HVAC system this afternoon. Apparently one of the utility pipes let go in the area of 12th floor and ~200 gal of liquid escaped the system between walls and find its way to apartments. According to MSDS this chemical consists of 90% of a weak organic acid and organic salts. Fumes could irritate eyes and throat. However, its not considered life threatening in concentrations presented in Ferroclean. However, some tenants voluntarily vacated apartments and were placed in provided by Red Cross buses. Building management took responsibility and dispatched a crew of their janitors and maintenance people, equipped with appropriate protective gear, to perform initial containment and cleanup. At 00:30 fumes throughout building gradually diminished since initial release and FDNY allowed tenants return to their apartments. NYC DEP Haz-Mat Unit collected samples and will follow up the next day with final recommendation.

clean up in process. Concrete trench has contained the spill. NRC has been notified. No to all five questions. Ref # 210949.

**DEC Investigator Remarks:**

10/20/08 – See eDocs for Con Ed report detailing cleanup and closure.

210949. see eDocs

Selvin Southwell concerned that mercury may be discharged through oil/water separator.

EPA Method 245.7 is new method for trace mercury, with detection limit of 5 ng/L. Breen.

5/2/08: Spoke with Con Ed Remediation Group Section Manager (Barry Cohen). He told me that cleanup of this incident was scheduled for this weekend. I told him that this was the first time i was hearing about this incident, and I requested that he prepare a summary of the facts of the incident, along with a proposal for remediation.

Later in the day on 5/2, Con Ed (B. Cohen) sent e-mail: As you requested during our meeting this morning, I am providing you

with summary information concerning (1) the mercury spill that Con Edison reported to the DEC on April 19, 2008, (2) actions Con Edison has taken to address this spill, (3) Con Edison's plans to perform additional cleanup this weekend, (4) Con Edison's proposed soil cleanup objectives (SCOs), and (5) Con Edison's post-excavation soil sampling plan to confirm that those are achieved. Please review this information, consult with other DEC staff as needed, and inform me as soon as possible whether the DEC agrees with our proposed SCOs. If the DEC disagrees with our proposed SCOs, please inform me as soon as possible of the SCOs that the DEC believes are appropriate. We would appreciate a response to the SCO issue ASAP, since we will be performing additional cleanup and taking post-excavation samples this weekend. Thanks in advance for your prompt attention to this matter. We appreciate that you will bring this to the right people at the DEC for a decision, even though this spill was not assigned to you and, until today, you were not aware of it.

1. Mercury Spill (DEC Spill No. 0800802) As part of Con Edison's floor trench investigation at its generating stations, the Company took water and sediment samples in late March for waste characterization purposes at the Company's E. 60th Street Steam Generating plant, which is located at 514 East 60th Street, between E. 59th St. on the south, E. 60th St. on the north, York Avenue on the west, and the FDR Drive on the east. The East River is located directly east of the FDR Drive. The sample results indicated the presence of mercury in the trench sediment. Based on those results, the Company took water samples at various locations in the trench, at the oil/water separator used to treat floor drainage, and at SPDES Outfall 001. Mercury was found in various water samples. Based on these findings, Con Edison submitted a Report of Noncompliance Event to the DEC on April 21. That report, a copy of which is attached, provides additional details of these initial findings.

> [NOTE – See eDocs]

On April 19, after power washing of the trenches was completed, Con Edison performed a trench system inspection, which consisted of visual observations and the use of a direct reading instrument for mercury in air. The inspection revealed the presence of a small number of mercury beads in the west trench. After additional water was removed from the trenches, more mercury beads were discovered. During cleanup using a HEPA vacuum, additional mercury beads appeared from under the concrete skin coat in the trench bottom. This skim coat was partially removed to facilitate further cleanup of the free mercury. Cleanup continued, and it was estimated that as of April 19 an estimated three pounds of mercury have been removed. Based on the findings of mercury, Con Edison notified the DEC, the NYCDEP and the National response Center. The DEC assigned number 0800802 to this spill.

The specific cause of the mercury contamination is unknown at this time. Con Edison conducted a review of past and present mercury containing equipment at the Station to determine possible sources of the mercury contamination found in the trench system. We identified mercury containing switches, thermometers, flow recorders and transmitters, and manometers, which were installed at the Station in the 1970s. Much of this equipment has been removed. Although it is difficult to determine the exact source of the mercury contamination, we believe the sources were probably the flow devices and manometers. However, there is no way to confirm that suspicion.

A figure showing the Station and floor trench layout, mercury vapor and sediment (referred to as sludge in the figure) sample locations and mercury vapor and sediment results, and mercury equipment locations is attached. Note that north is toward the bottom of the figure and the East River is to the left of this figure. > [NOTE – See eDocs]

2. Additional Actions Con Edison Has taken to Address the Mercury Spill After the spill was reported on April 19, cleanup activities continued until April 22, at which time it was determined that the boiler neutralization system piping had to be removed in order to effectively uncover trapped mercury. On April 26, the piping and the remaining thin concrete skim coat were removed from the trenches, after which cleanup continued. To date, an estimated 3.5 pounds of mercury have been recovered.

After this phase of the cleanup was completed, contact readings with a Jerome Analyzer (an instrument that provided direct readings of mercury in air) still indicated the presence of mercury in the east–west trench and the trench behind the waste neutralization tank. See the attachment in Section 1 above for vapor and sediment sample locations and results.

3. Con Edison's Plans to Perform Additional Cleanup this Weekend Cleanup activities will resume this weekend. This cleanup will consist of chipping away the impacted concrete–lined trenches and removing underlying impacted soil beneath the trenches for subsequent off–site disposal at a properly licensed commercial facility. Visual observation and Jerome Analyzer readings will be used to guide the extent of cleanup prior to taking post–excavation confirmatory soil samples. A schematic of the trench system is attached. In this schematic, the heavy gray line shows the impacted trench areas. Note that the primary affected trench area (~40 ft. long) runs in an east–west direction and that north is toward the left side of this figure. Although the title of the figure refers to trench system sample locations, such sample locations have been removed from the figure for clarity; sample locations are shown in the second figure attached in Section 1 above. > [NOTE – See eDocs]

4. Con Edison's Proposed Soil Cleanup Objectives (SCOs) Con Edison has identified mercury, cadmium and PCBs as potential substances/chemicals of concern for this cleanup, due to the obvious presence of mercury, the presence of cadmium in a TCLP result (much lower than the hazardous waste threshold) for one of the trench sediment samples, and the presence of low levels (0.1 ppb) of water in two trench water samples. We propose the following soil cleanup objectives for these substances/chemicals:

a. Mercury – 5.7 ppm. Basis: Industrial use SCO specified in 6 NYCRR Part 375–6.8(b). b. Cadmium – 60 ppm. Basis: Industrial use SCO specified in 6 NYCRR Part 375–6.8(b).

c. PCBs – 25 ppm. Basis: Industrial use SCO specified in 6 NYCRR Part 375–6.8(b), which is consistent with the USEPA SCO for low occupancy areas specified in 40 CFR 761.61(a)(4)(i)(B).

In the unlikely event petroleum contamination is observed by visual/olfactory means, that finding would be reported, post–excavation sampling would be performed for chemicals identified in the table of fuel oil constituents included with the DEC's 12/20/00

Determination of Soil Cleanup Levels memorandum that consolidated TAGM 4046 and STARS #1 guidance documents, and the results compared to the industrial use SCOs specified in 6 NYCRR Part 375–6.8(b).

5. Con Edison's Post–Excav

4/25/12 – see edocs for file information; spill closed effective today (JOC)

5/17/12 – modified language in regional use field; changed 17–1743 radio to no (it was 'notification made' which was not the case; this did not meet 17–1743 requirement for storage in bulk, and no such notification had been made). (JOC)

**Caller Remarks:**

LEAK NOTICED COMING INTO THE BUILDING SOME TIME AFTER TANK WAS FILLED. OIL COMPANY CONTACTED FOR CLERANUP.

**DEC Investigator Remarks:**

Etna is a cement company, Mario works there and is managing the project. Building owner called Mario to say there was a leak of oil into the building from the front of the building when the oil was delivered. Problem with oil fill line. ProTest doing the cleanup 631-321-4670 Bob Fred Smith Plumb 212-457-0967 Phil Krous DOT notified (inside city construction holiday moritorium area ) Thursday open sidewalk Friday Protest will dig out Friday Plumber will replace fill line Saturday they will repour cement

11/30/10-Hiralkumar Patel. 4:34 PM:- spoke with Bob at Protest. protest has been hired by Etna constructing. Bob mentioned that oil found seeping into building at location where fill line enters into building. Etna will open sidewalk on 12/02/10 and Bob will visit site at that time. based on observations during site visit, Protest will do soil excavation on 12/03/10. will collect endpoint samples, if gets to clean soil. asked Bob to call after site visit.

alternate address: 1009-1017 Lexington Ave no other spills found. PBS #: 2-113271. as per PBS record, site has one 5,000 gal #2 oil AST on legs. tank installed in Jan. 1965.

150 East 73 Street Corporation

\*\*property owner\*\* c/o Brown Harris Stevens

\*\*management company\*\* 770 Lexington Ave, 5th Floor New York, NY 10065 Attn.: Elizabeth Graham

\*\*property manager\*\* Ph. (212) 508-7309 email: egraham@bhsusa.com

12/01/10-Hiralkumar Patel. 3:53 PM:- spoke with James Quinn (212-288-5670), building super. asked him to seal the fill port to prevent more deliveries until the fill line is fixed. 3:59 PM:- spoke with Ms. Graham and asked her to seal the fill port.

12/02/10-Hiralkumar Patel. 4:31 PM:- left message for Tom at Protest. 4:34 PM:- left message for Mario at Etna. 4:40 PM:- received call from Mario. they opened sidewalk today and found that fill line was running to empty coal chute. Mairo mentioned that fill line goes vertical down in ground and then make 45 degree turn and runs in slope of coal chute. Mario also mentioned that the coal chute is completely empty and no dirt or any garbage found in it. they will change fill line and install new fill line in secondary containment.

Peter Etna Contracting Ph. (917) 731-8334 (C)

12/03/10-Hiralkumar Patel. 1:00 PM:- visited site. met crew from Protest and a plumber. found coal chute underneath the sidewalk curbline. as per protest technician, a fill line entered into ground vertically and then turned 45 degree and ran into coal chute. no contamination found in area under the sidewalk. site has one 5,000 gal AST on saddles. inspected coal chute from inside the building. found heavy contamination in lower end of coal chute towards the basement. inspected old fill line. found two holes in fill line. one of the hole was about 2 inches wide. protest is removing contaminated material from inside the coal chute. found heavy stain on foundation wall and floor in tank room. due to age of coal chute, no possibility of cleaning up by going into chute. asked crew to cleanup area from outside the chute and inspect a floor of the coal chute. also asked to powerwash the area inside the tank room. during inspection, found oil on side of the tank, in area where supply/return are connected to the tank. 1:50 PM:- left message for Bob at Protest. 1:53 PM:- spoke with Ms. Graham. asked her to call back once coal chute is cleaned for further inspection. also asked her to fix leaking supply or return line. Ms. Graham mentioned that cleanup will be done on 12/06/10.

12/06/10-Hiralkumar Patel. 10:30 AM:- spoke with Tony (631-827-7783), technician from Protest on-site. they are currently cleaning up coal chute and will call for inspection, once cleanup in chute is done.

12/07/10-Hiralkumar Patel. 2:15 PM:- visited site. met building super. inspected spill area. spill has been cleaned up. found speedy dry in entire coal chute. solid floor found in rear end of coal chute where leak started. solid floor found in tank room. 2:30 PM:- spoke with Tony at Protest. they cleaned entire chute and put speedy dry to soak any left over oil. he confirmed that they found solid concrete surface at the bottom of entire coal chute.

based on observations during site visits, case closed.

2 samples were taken, no to the 5 questions. clean up pending test results. con ed #156483

**DEC Investigator Remarks:**

On 12/7/04 12:24 R. Mahoney discovered a spill of unknown substance in vault-3038. He states that there is 20 gallons of a unknown substance mixed with 10 gallons of water. He says that the substance is different colors. He cannot tell if it is a petroleum based product. He will hang a tag # 44960. He will take two samples 1-PCB & 1- ID. He can not tell if there is any sewer connection & none shown on conduit plate 32-j-2 There is no movement of the liquid. The cause & source are unknown. The cleanup will be pending lab results.

12/7/04 13:16 Spoke to R. Mahoney and he stated that he unplugged a pump.

12/7/04 15:07 P. Walsh # 85713 reported to R. Pellegrino that M. Daughtry # 88151 was on location & states that the substance does not look like an oil it just looks like dirty water.

Lab Sequence Number: 04-10151-001 - PCBs < 1 ppm

Update: 12/12/04 @ 15:45 hrs I & A crew states that the ground has been removed and that due to the fact that this crew had no clean up material this clean up will be scheduled once again at 23:00 hrs tonight.

Update 12-13-04 @ 05:40 J Liguori # 14084 reports that the cleanup is complete as of 05:00. Double washed with slix and flushed. 100 gallons of liquid removed by vactor. Tag # 44960 removed. 1 bag of ppe generated from the cleanup.

CONTAINED IN MANHOLE - CASE #122644

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL e2mis no. 122-644:

On January 25, 1999, C. Carrillo, Mech A, 03309 and J. Mollahan, Splicer, 73867 was at manhole 63558, feeder 38M06 with contractor to cut the roof of the manhole, making the roof lower. A mall will be built in the area. They discovered approx 300 gallons of water and approx 4 gallons of unknown oil. All contained in manhole. Chem Lab will be called to take samples. No

injuries or outside impact. No sewer or waterway affected.

UPDATE Per V. Schaefer, Supervisor, 78367, samples were taken yesterday, 01/25/99 approx 15:00. Waiting for results from Chem Lab this morning, 01/26/99. As soon as lab results are in, arrangement for clean up will began.

Chem lab reports 99-00753 <1.00ppm PCBs. Clean Harbors notified to respond at 12:00 1/27/99 to clean up manhole. Chem Lab reports 99-00754 <1.0ppb benzene.

CLEANUP CHECKLIST X Removed/recovered liquid/solids. X Washed stained areas. X Name of contractor : CLEAN HARBORS Cleanup completed on Date: 01/27/99 Time\* : 15:00

2OZS ON WATER CLEANUP PENDING TEST RESULTS REF #132981

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was O'CONNELL UPDATE 8/23/00 17:00--RESULTS CAME BACK AS 56PPM

e2mis notes:

August 22, 2000 11:05 hours: 2 ounces of an unknown oil mixed with approximately 5 gallons of water in mh 48420. Sheen was attempted to be cleaned. There is no visible movement and the spill did not enter sewers or waterways. Conduit plate 31-I-2 shows no sump or sewer connection.

8/23/2000 17:05 hours

Arochlor 1254 PCB count 56 ppm.

8/24/2000 13:30 Oil and water removed via tanker over 50 ppm. Flush truck from environment operations used a high pressure hose

to triple wash the floor and walls with Bio genesis solution. manhole was then rinsed by flush truck. 1201 gallons of oil soil mixture removed.

**Caller Remarks:**

Caller states that there is a heavy odor of heating oil in her apartment and that allegedly a heating oil spill had occurred (possibly Tuesday the 16th) in the building next door to her building (425 E.58th St). When speaking with the superintendent, it was stated that a heating oil spill had occurred next door, which is causing the odor of hearing oil in the callers building.

**DEC Investigator Remarks:**

1/19/18– Zhune spoke to Linda Waterhouse. As per Linda there was an oil spill in the building adjacent (425 E. 58th St.)to her building. This probably occurred Tuesday 1/16/18 or Wednesday 1/17/18 night There is a heavy odor of heating oil in her apartment (1B) located at 30 Sutton Place in Manhattan. The odors are so strong that the apartment can not be occupied. She reported to his super who follow up on Friday morning and learned that has been an oil spill in the adjoining building.

1/24/18 – Raphael Ketani. I received an anonymous phone call today from a private individual regarding the cleanup of

contaminated soil from a spill. The call came in at 1:26 PM and I spoke to a male person who's voice sounded as if he was in his mid-twenties to early thirties. He explained that he was witnessing the cleanup of soil. According to him, the soil was being put in black plastic bags and loaded onto a pickup truck. I asked him whether these were 30 gallon regular garbage bags. He didn't respond. He asked whether the soil had to be put in drums. I told him that this would be a more secure way of loading and transporting the soil. I added that if there is a lot of soil – maybe 12 cubic yards or so, then the cleanup company should use a dump truck or roll-off container with a secure gate and a tarp. I also stated that anyone hauling oil contaminated soil must have a Part 364 permit to transport such waste. He said that he didn't know whether they had such a permit. After this, he asked me what to do. I told him to get the cleanup company name and address, if it is on the side of the truck. If there is no such I looked for Mr. Lakhani, but he was not in. So I spoke to Ryan Piper of the Region 2 Spills Unit. He told me that Riteway Tank was the cleanup company.

01/29/18 – Lakhani DEC Lakhani performed a site visit on 01/19/18 and met with management from the Sovereign Building (212-752-116) and management and tenant from the neighboring 30 Sutton Place. Mel, the superintendent at Sovereign, informed that the spill occurred on 01/16/18. He had approximated that roughly 4 gallons of #2 fuel oil had spilled to the sidewalk during delivery. ESF, who is the transport company for United Metro (oil company), spread absorbent on to the sidewalk to address the spill. DEC Lakhani then spoke to the tenant at 30 Sutton Place, Linda Waterhouse, who complained of odors in her second vacant apartment in the building. Upon further investigation, DEC Lakhani discovered that the vent line that protrudes from a garden planter on Sovereign's property had discharged oil to the surrounding soils and contaminated them. Coincidentally, the planter shares a wall with 30 Sutton Place and the Linda Waterhouse's apartment. DEC Lakhani directed Sovereign to excavate the planter and remove the contaminated soil. Since oil had discharged from the vent pipe, an overflow occurred. DEC Lakhani inspected the tank rooms since Sovereign has two (2) tanks: 12,000 gallons and 16,000 gallon #2 fuel oil ASTs (PBS #2-147036). Tank rooms showed no evidence of oil discharge. DEC Lakhani nevertheless required Sovereign to perform tightness tests on their tanks. DEC Lakhani performed a follow-up site visit and ESF was on-site completing the cleanup in conjunction with All Boro. Sovereign has contacted their insurance for cleanup coverage.

01/30/18 – Lakhani EMT Richard (914-906-4155)

02/02/18 – Lakhani DEC Lakhani met EMT Richard, Ms. Waterhouse, and superintendent Ageem at 30 Sutton Place. Ms. Waterhouse has still been experiencing vapors. Upon inspecting the apartment, DEC Lakhani did not observe any olfactory odors. NYCDOH performed a survey and reported maximum PID readings of 0.1 ppm in the apartment. EMT obtained similar readings. EMT suggested to 30 Sutton Place management that they drill into the 30 Sutton Place wall to determine if any oil is trapped in the concrete, beneath the metal sheathing. This was not required by the DEC. The Sovereign planter was completely excavated and power washed. There was no evidence of oil remaining in the planter. EMT is planning to begin drilling on 02/05/18.

02/09/18 – Lakhani NYCDOH Allan Friedman sent DEC Lakhani the report for the 30 Sutton Place investigation confirming that PID readings in the apartment ranged from 0/1 – 0.2 ppm. Report uploaded to D2.

03/01/18 – Lakhani All Boro Chris informed that All Boro replaced the vertical section of the vent line as it was found to be cracked. All Boro worked in conjunction with the buildings water proofing company and 30 Sutton Place hired an environmental consultant to check the subsurface conditions with a PID once the pipe was removed to determine if they had any issues to worry about. According to Chris, all readings were normal with no surface contamination found in the concrete that was opened. All Boro will not be restoring the concrete.

04/26/18 – Lakhani

Spill Closure Report (All Boro, 04/16/18) – On 01/20/18, All Boro dispatched an cleanup crew to the location to determine the extent of contamination contained within the planter box. The soil was screened using a PID. The findings were that the oil released from the vent line and rolled down the vent pipe and soaked straight down into the surrounding soil. The oil released from the vent line and rolled beneath the soil which also contained a weather matting to evenly distribute water to the greenery within the planter. Crews began to remove and separate the clean overburden and contaminated soils. In addition to the soil removed were the tree's and greenery inside the planter along with the sprinkler system contained within. All contaminated soil collected was placed in 55 gallon waste disposal drums. 29 drums were collected and disposed of. Once all remaining materials contained within the planter box were removed, All Boro began the process of properly cleaning the surface of the box, which was concrete. Degreasers were applied and the box was pressure washed. In addition to the exterior of the building, technicians also cleaned the interior of the building as well. The vent line inside the building had released a slight amount of oil during the overfill and a minor cleaning on the surface of both oil tanks took place. The tanks were wiped down and degreased. The 12000 gallons and 16000 gallon tanks were tightness tested. The initial tank tests resulted in failures due to an over abundant amount of oil in each tank from the overfill. The building burnt down a specific amount of oil in each tank to have the required ullage in each tank for testing. Additionally, new neo-prene gasket materials and seals were added to both tanks to ensure tightness in the systems. After a series of tests on both tanks were performed, all resulted in system failures, it was deemed necessary to isolate the vent line for each tank. The subsequent tests revealed passing results indicating that the shared vent line for both tanks was in fact leaking. The buildings management made the decision at that point to make the required repairs to the system and new vent whistles (Alarms) were installed inside both tanks along with a new section of vent line. Further testing of the vent line identified the vertical portion of the line to be leaking where it went from the basement through the concrete planter to the surface at the street level. All Boro Tank, along with others opened the concrete in the planter box to both replace the line and perform a limited subsurface investigation into the area directly by the leaking vent line. As you're aware a third party Environmental consultant evaluated that area using a (PID) and by extracting samples to be sent to a lab. The field data indicated no elevations of either the sample collected or the immediate area where the vent line was extracted from the concrete. The vent line replacement was completed and the concrete in the planter was repaired by others. In addition to the vent line replacement, management replaced the faulty oil tank gauges. New Petrometers and Copper Oil Tank Assemblies were installed and calibrated for accuracy. Once all the code compliant repairs were made to both tanks a final round of testing was performed. Our technicians tested and obtained passing results on both system wide tank tests.

Spill is closed.

Caller Remarks:

LINE TEST FAILURE, THE LINE COMES FROM A 20,000 GALLON TANK. LINE IS BEING REPLACED, DRUMMING UP CONTAMINATION

DEC Investigator Remarks:

Two tanks – filling one tank it entered a second tank – some sort of problem with fill lines. PTC opened up the sidewalk and found contaminated soil. Area is being dug out and new fill box & lines will be installed. PTC will take pictures, take endpoint samples and will forward a closure report to Sharif Rahman. 05/18/06 Sharif Rahman– Left a message for Mark Salamik(PTC) asking to send closure report to DEC. 05/31/06 Sharif Rahman– Rec'd closure report prepared by PTC. No 6 oil was leaking from one of the fill line that runs under sidewalk. The sidewalk was excavated and lines were exposed, contaminated soil was removed followed by end point sampling. Analytes were found to be below TAGM 4046. Photographs and waste disposal manifest were provided. NFA required.

Caller Remarks:

PRODUCT COMING OUT OF DISCHARGE TUNNEL FROM UNK SOURCE – MORE TESTING TO BE DONE 08–23–95 – THEY WILL CONTINUE TESTING TO DETERMINE THE SOURCE

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was ENGELHARDT Zhitomirsky (initial responder) notes: Called Mr. Devoti – USCG are on scene. Con Ed called contractor to boom off the area.

Engelhardt's notes: Spill called in on Saturday (soda ash, see spill # 9506204). On Tuesday @2:00, oil from south tunnel. Half hour later, appeared to be coming in from river. Ash pit has crack – USCG did dye test – poured dye into ash pit, but no dye showed up in water. They are going to put sorbent pads into manhole leading to tunnel to try to determine where oil came from. Took sample for analysis. Oil still periodically coming from tunnel. Tunnel is boomed off.

8/28/95: Len Gilford – oil is #6 oil leaked from open valve into soda ash solution used to neutralize acid solution in boiler which is used to remove oxidation. This solution was pumped into secondary containment which had crack – presently in process of repair.

Caller Remarks:

LOCATED IN A VAULT ON 1 GAL OF WATER. CLEAN UP IS PENDING DEENERGIZATION OF THE FEEDER.

DEC Investigator Remarks:

e2mis no 160600

Jose Rodriguez found approx 4 gallons of unknown oil on top of approx.1 gallon water. He also reports that the sump pump was found unplugged, and he reports that this unknown oil is also in sump as well. I&A will have to inspect unit when unit becomes de-energized. There was no fire or smoke involved and no sewer or waterway was affected. The source and cause of the spill is unknown. Environmental tag #47247 was installed. No substantial cracks and a concrete sump could not be verified due to the amount of fluid in vault. Clean up pending safe entry, after de-energizing, or further inspection of unit.

Also see 0506956.

Found @ 17:05. Called E/V desk @ 17:22 hrs. V3946 – E 74 ST 524 E/O YORK AVE. Jose Rodriguez 82289 Senior Field Operator was at this location working on feeder 24M81 and found approx 4 gallons of unknown oil on top of approx.1 gallon water. He also reports that the sump pump was found unplugged, and he reports that this unknown oil is also in sump as well. I&A will have to inspect unit when unit becomes de-energized. There was no fire or smoke involved and no sewer or waterway was affected. There were no injuries related to the spill and no weather conditions contributed to the hazards of the spill. There was no private property affected. The source and cause of the spill is unknown. Environmental tag #47247 was installed. There is sump pump found un-plugged; no substantial cracks and a concrete sump could not be verified due to the amount of fluid in vault. Clean up pending safe entry, after de-energizing, or further inspection of unit. Logger F.Curtis 38078

Update 8-20-05 @ 02:44 Lab Sequence Number: 05-08735-001. TOTAL

PCB 27 ppm

J Moran # 01182

Lab Results 08/20/05 10:09. Lab Sequence Number: 05-08742-001 Analysis indicates the presence of a transformer oil.

Update 09/08/05 @ 1237 hrs. S.Asfour 49908 was at this location to do a drain and disconnect and reports to this desk @ 12:20 hrs that the tanker was only able to pump 56 gallons from unit, and the total capacity for this 396 gallons At this point he reports that 300 gallons is missing and that pipe going from sump pump to drain was full water and oil this was found @ 12:15 hrs, and CIG was called @ 12:28 hrs spoke to T.Parker 87739 @ 12:28 hrs.

Update 09/08/05 @ 13:05 Mr. Asfour reports that a partial clean was done and crew is at location awaiting arrival of various agencies. Logger F.Curtis 38078

Update 09/08/05 @ 14:11 hrs D.Pontecorvo 85413 ERT was on location @ 13:15 hrs to meet I&A Dept. And he also reports that DEP A. Kelly arrived @ 13:30 hrs and issued a Commissioners Order Stating that a clean up of this vault be done immediately. Order # E-29465 Mr. Kelly states that this drain connects to a water treatment plant, and that no other city drains, or sewers or water way have been compromised. Also Mr. Pontecorvo has asked that upon completion of this clean up that ERT notified immediately as well. Logger F.Curtis 38078

 Caller Remarks:

DISTRIBUTION FEED LEAK 1 PINT ONTO ROADWAY. MOSTLY CLEANED UP. CON ED#133186  
 -----

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was FOLEY e2mis 133186

09/04/00 09:30 Queens Overhead Supervisor Matt Glasser reports distribution feeder between Manhattan and Roosevelt Island leaked approximately 1 pint of dielectric fluid on the east bound roadway (bicycle lane) of the Queensboro Bridge. The spill was 1 Oz. on the concrete and remainder to pads that were placed to catch drip. The drip rate was 1 drop per 2 minutes. The feeder is now wrapped in absorbant pads and a plastic bag.

Matt Glasser #85158 reported on 5/6/04 that he remembers this incident since it was very hot that day & a holiday weekend. He stated that the materials for the cleanup was supplied by Manhattan #9, but the actual cleanup was performed by Queens crews. The spot on the roadway of the Queensboro Bridge was double washed using Simple Green cleaning solution, brushes, absorbent granules and pads. The area of the cable that was leaking was repaired. Manhattan #9 crew installed heat shrink sleeves over the affected area and sealed the leak. The cleanup was completed at approx. 12:00 noon on 9/4/2000.
